In a competition for the best design for the second bronze door, the one on the north side of the baptistery, Ghiberti carried off the prize offered by the merchants' guild of Florence in 1401; among his many rivals was Brunellesco. The designs presented by Ghiberti and Brunellesco, the subject

of which was the Sacrifice of Isaac, are preserved in the Museo Nazionale of Florence. The work of Andrea Pisano on the south portal served as a model for the north portal. The style of the Trecento (Italian Renaissance of the fourteenth century) is apparent in the typical heads, in the lines, and the somewhat stiff character of the action, but there is more freedom in the forms, the expression, and the handling of the spaces. The wings of the doors are divided by vertical and horizontal bands into twenty-eight panels, in each of which the relief is enclosed in a modified quatrefoil. The jambs, lintels and friezes are decorated with leaves and flowers. At the angles of the panels are the heads of prophets and of sibyls. The twenty upper scenes are taken from the life of Christ, the eight lower ones represent the four Evangelists and four Fathers of the Church. The whole composition is sober, pleasing, and harmonious. This portal finished (1403-1424), Ghiberti undertook the eastern, main portal, the work in this showing greater freedom in the treatment and an advance in style. It includes ten scenes from the Old Testament, most of which are subdivided into several subjects. The reliefs produce a pictorial effect by reason of the number of figures, perspective, grouping, landscape and architectural background. They were completed in 1452. Ghiberti here shows himself in the development of sculpture the rival of his contemporary Masaccio. In fact he compels the less responsive art of sculpture to vie with the more vivacious sister art of painting. His "Paradise", for instance, includes a number of lesser subjects from the creation of Adam to his expulsion from Eden; the foremost figures are almost in the round, the relief becoming less marked as the figures, that at the same time grow smaller, recede from the foreground. His effort to follow nature is furthermore shown by the character expressed in the faces and the action; there is withal no loss of grace or beauty. Ghiberti is a master of technic; its perfection is everywhere evident, even in details of ornament. Vases containing vines intertwined with fruits and supporting the figures of various animals, adorn the frames of the doors. Each wing has a separate frame ornamented with statuettes in niches divided from each other by decorative busts. Of this gate Michelangelo declared that it was worthy to be the entrance of Paradise. Ghiberti himself, in a description of the work found among his papers, pronounced it his foremost achievement. In one of the small medallions of the framework of the houses, doubtless with a just pride in his achievement, he has preserved his own portrait.

The same high art characterizes his treatment of the reliquary of St. Zenobius in the cathedral of Florence. On three sides are scenes descriptive of the miracles of the saint, the fourth is adorned with a wreath and angels. The reliquary of San Giacinto is decorated with hovering angels, but on the front only. Among the grave-slabs designed by Ghiberti the bas-relief of Leonardo Dati in Santa Maria Novella deserves especial mention. The church of Or San Michele possesses many specimens of the new plastic art of this era of the Renaissance, among them three statues by Ghiberti, the latest and best of the three being that of St. Stephen. Apart from their many great merits these large statues exhibit one weakness of the master, i. e. the treatment of draperies and the pose. Originally a goldsmith, and working mostly in relief, he lacked practice in the larger style of sculpture. In fact, from Vasari's time, Ghiberti was often unduly admired. He falls occasionally below some of his contemporaries in sharp characterization, in vigorous movement and unaffected naturalness. It

must, however, be admitted that in contrast to the harsh realism of Donatello he observed always the dictates of grace and beauty, approaching therein Lucca della Robbia. His art belongs to a period of transition. Clear traces of the earlier Gothic art survive in Ghiberti, e. g. the mannerism of his slender and pleasing rather than expressive figures, also a similar treatment of the background. On the other hand his study of classic art is visible in the draperies and often in the heads of his figures. His fidelity to nature, moreover, developed in him a strong drift towards realism.

His sense of the beautiful and his originality stamp Ghiberti as the precursor of Raphael. He was no pioneer like Donatello, yet his work, especially his bronze doors, had a lasting influence on his successors. In him native genius was aided by reflection and theory. In a certain sense, therefore, a new era in art may be said to date from him. In his "Commentaries" he critically reviewed the development of art from the time of Cimabue to his own day. While giving an account of his own works he clearly suggests that he consciously strove after a new art. He seems to characterize himself in his description of the second bronze gate, when he says: "In this work I sought to imitate nature as closely as possible, both in proportions and in perspective as well as in the beauty and picturesqueness of the composition and the numbers of figures; some of these scenes contain nearly one hundred figures, others less, but all were executed with the utmost care; the buildings appear as seen by the eye of one who gazes on them from a distance."

A. GIETMANN Richard Hemphill
Ghirlandajo

Ghirlandajo

(DOMENICO DI TOMMASO BIGORDI).

A famous Florentine painter; b. 1449; d. 11 Jan., 1494. His father, Tommaso di Curradi Bigordi, is spoken of as a dealer (*sensale*) in jewellery. According to Vasari he owes his surname Ghirlandajo, i. e. the "Garland-maker", to a branch of his trade of which he made a speciality, namely, the manufacture of silver or gold crowns or diadems, which formed a kind of head-dress affected by the young women of Florence. Like Verrocchio and the Pollaiuoli, Domenico began as a goldsmith. There existed once in the Florentine church of the Annunziata silver ex-votos and lamps of his workmanship, destroyed during the sack of 1530. Traces of his early training in the goldsmith's art are recognizable in the splendour of his ornamental decoration, the carving of his pilasters, also in his friezes and the garlands with which he adorns his work. Artistic ability seems to have run in the family, for Domenico had two brothers, slightly younger than himself, David and Benedetto, his collaborators in nearly all his great works. Together with their brother-in-law, Mainardi, who had married their sister Alessandra, the three Ghirlandajos conducted in their day, under the name and leadership of Domenico, the principal atelier of Florence for the production of works of art.

Domenico's master was that singularly distinguished collector and antiquary, Alessio Baldovinetti (1427-1499). By more than one characteristic, e.g. his straining after realism, his anxiety for a perfect expression of life, his taste for analysis, and his technical skill in the use of colours, Alessio was a precursor of Leonardo da Vinci. Domenico was much less impulsive and more fully master of himself, but he assuredly owed Alessio his success in fresco, in which many think him the most perfect painter of his age.

Ghirlandajo's earliest works, e.g. the frescoes of St. Andrea Brozzi, and those in the Vespucci chapel (discovered in 1898) of the church of Ognissanti at Florence, date perhaps from 1472 or 1473, and as yet exhibit little individuality. His "Descent from the Cross", executed when the artist was twenty-three years of age, is disfigured by the coarse realism of Castagno. His "Virgin Most Pitiful" (*Vergine della Misericordia*) follows yet the medieval conventionalism, but is remarkable for the beauty of its portraits, in which line Ghirlandajo always excelled. Henceforth his artistic genius seems to have taken a definite form and to have changed but little in its development. There was little time for anything except the regular pursuit of his work in the life of this tireless artist. His enormous output covers a space of little more than fifteen years (1475-1491), and owing to its steady progress can scarcely be divided into periods. Untroubled by passion or conflict his genius grew and expanded like a flower. Though one of the most accomplished artists of the fifteenth century, his life exhibits none of the troubles, complex situations, or contradictions that meet us in the stormy life of Botticelli. The first characteristic work of the young master was executed when he was twenty-five (1475) in the collegiate church of San Gimignano. He drew his inspiration from the life of Santa Fina, a maiden of that city who died in the odour of sanctity, 12 March, 1254 (*de' Medici, "Vita di Santa Fina"*, Siena, 1781), to whose memory a chapel had recently been erected (1468) by Giuliano and Benedetto da Majano. The two scenes treated by the artist, the "Vision" of the Saint and her "Burial", exhibit all the elements of his future great work. The first scene is on a large scale, is treated with much taste and in as familiar a manner as was permitted to an Italian artist. In the "Burial" of the Saint something more personal appeals to us. The simple local event, the mere absolution pronounced over the remains of a modest village maiden, is magnified and elevated to a lofty and powerful significance, in the treatment of the assembled multitude. It is no longer an ordinary burial; the entire city, represented by its clergy, magistrates, and citizens, assists at the function, while the beautiful towers of San Gimignano are shown as decoration of the background. In reality what he seeks to put before us is an entire society harmoniously grouped; the picture is a serene portrayal of national life and a triumph of national sentiment. Of a short journey to Rome about this time we possess no accurate information; the artist returned to Florence to paint the fresco of St. Jerome at Ognissanti and his famous fresco of the "Last Supper" in the refectory of the same convent (1480). This very noble composition is the most idealistic of the artist's works, the only one in which he deals with abstract concepts and does not depict contemporary life.

The series of his great works began with a second journey to Rome. From 27 October, 1481, to 15 March, 1482, the artist was at work in the Sistine Chapel. In these six months he painted six

portraits of popes and two large frescoes, the "Resurrection" (over which, in the sixteenth century, a mediocre Flemish work was painted), and the "Call of the Apostles". The latter, with Perugino's "Giving of the Keys to St. Peter", is yet the chief masterpiece of that period of Sistine decoration. On his way back to Florence, he painted an "Annunciation" (1482) at San Gimignano. The remainder of his life seems to have been passed at Florence, where three great undertakings absorbed his activity. From 1482 to 1484, he executed at the Palazzo della Signoria the "Maest=E0 di San Zenobio" and the noble figures of Roman statesmen, modelled after those of Taddeo di Bartolo in the Palazzo Publico of Siena. Of all the frescoes which made this town-hall of Florence the worthy companion of the Sistine Chapel, only those of Ghirlandajo have been preserved. In 1485, he completed in the Sassetti chapel at the Trinit=E0 six frescoes illustrative of the "Life of St. Francis". They were not finished when he received the order for his greatest work, the fifteen frescoes of the "Life of St. John the Baptist" and the "Life of the Virgin" which adorn the Tornabuoni chapel in Santa Maria Novella. These paintings, finished in 1490, are rightfully numbered among the most celebrated in Florence. They are Ghirlandajo's most popular work, and are reckoned among the greatest Italian masterpieces. Their merit is not owing to the subject. Dramatic emotion is entirely absent. Never did an artist, not even Michelangelo in his incident from the Pisan war, his tombs of the Medicis, permit himself such liberties with his ostensible subject; or presume in the face of all tradition and probability to substitute arbitrarily a subject chosen in conformity with his own tastes and preferences. Only rarely, and in uninteresting traits, does Ghirlandajo force himself to serious conformity with the conventional treatment of his subject.

As a rule Ghirlandajo avoids representing movement. His calm and clear imagination, well-ordered and harmonious, is better adapted to depicting neutral gestures and attitudes nearly always borrowed from daily life. In most of his scenes and those the most beautiful, e.g. the "Nativity of the Virgin" or the "Visitation", the historical *motif* and the actual event are of no moment. The gospel theme is reduced to a minimum, and becomes a mere pretext for a great and magnificently conceived "tableau de moeurs", or representation of contemporary life. The beautiful everywhere diffused, reality in its highest forms, the artistic setting of things, daily life with its infinite variety of subjects, constitute the inexhaustible charm of these marvellous scenes, in which one must not seek depth, emotion, or poetry. No one ever conceived the life about him under such graceful and noble forms as Ghirlandajo. Devoid of imagination, and compelled therefore to substitute for the great drama of the past the multitudinous spectacle of the present, he nevertheless attained, under the circumstances, the highest flights of fancy. Instead of the always hypothetical reconstruction of an imaginary scene, we have the thousand-fold more valuable representation of the very world in which the artist lived, and at one of the periods in which life seems to have been most agreeable. The Florentine republic, at its most dazzling height, lives again for us in these incomparable frescoes. Still earlier, in his "Call of the Apostles" (Sistine Chapel), the artist had introduced in a group of fifty figures foreign to the subject portraits of the principal Florentines then in Rome. In his "Visitation" we behold Florentine ladies of the middle class out walking. In "Zachary driven from the Temple" we admire the portrait of the charming Lorenzo Tornabuoni, prince of the Florentine

youth and husband of the beautiful Giovanna degli Albizzi, also those of the artist himself and of his brothers. But it is in the "Apparition of the Angel to Zachary" that this realism finds its fullest expression. This interview, which must have taken place in the retirement of the sanctuary, is presented by the artist before thirty members of the Tornabuoni family, magnificently staged on the steps of the Temple. It is in fact a solemn glorification of the great line of Florentine bankers who built this admirable chapel. In the aforesaid "Life of St. Francis" may be recognized the banker Sassetti, Lorenzo de'Medici, Agnolo Acciajuoli, Paolo Strozzi; in the Sistine Chapel fresco the scholar Argyropoulos, etc.

Behind these living persons it is Florence itself which forms the background of the scene, that admirable city of the end of the fifteenth century in which Botticelli, Leonardo, Angelo Poliziano, and the young Michelangelo were then living. In the "Life of St. Francis" are depicted the square of the Trinit=E0 with the old bridge of Taddeo Gaddi, the façades of the Spini and Gianfigliazzi palaces, the Signoria, with the Marzocco and the Loggia of Orcagna. In the "Visitation" the view of Florence is that seen from the terrace of San Miniato (background of the picture of the "Virgin of the Donor" by H. Van Eyck at the Louvre) with the dome of Brunelleschi, the campanile of Giotto, and the tower of the Signoria. Profusely scattered throughout these pictures are Renaissance ornaments, decorated pilasters, the "pretti" friezes like those of the famous tribune of Donatello - "Nativity of the Virgin", - terra-cottas of della Robbia, antique bas-reliefs - "Apparition of the Angel to Zachary", - quite a museum of the artistic fancies of Florence. In the "Preaching of St. John the Baptist", the figure of the saint is borrowed from Donatello, while in the audience the naked child seated among the hearers in the foreground is the reproduction of a celebrated antique, "the Child with the Goose". But he is most admirable in his power of creating new "antiques", i. e. of grasping at once their counterparts in actual life. Italian art possesses nothing more beautiful, more Attic, than certain of his "can=E9phores" or young girls of the people, e.g. who form the retinue in the "Marriage of the Virgin", or the exquisite figure filling a bronze water-basin in the "Nativity". In fact all this ideal summary of Florentine life breathes the pride and joy expressed, in the "Zachary and the Angel", by the inscription: "The year 1490, when the city beautiful among the beautiful, illustrious for her wealth, victories, arts and monuments, was sweetly enjoying abundance, health and peace."

Ghirlandajo executed several altar-pieces, e.g. the charming "Madonna Ingesnati" (Uffizi), the "Adoration of the Shepherds" (1485, Accademia), the "Adoration of the Magi" (1488, Hospital of the Innocents) and the "Visitation" of the Louvre (1491). His portraits, however, are the most thoroughly characteristic of his genius. The most exquisite of these, that of Giovanna degli Albizzi (1488, Paris, former Kann collection) has no equal in Florentine portraiture of the fifteenth century, and is far superior to Botticelli's famous "Bella Simonetta"; indeed, it can scarcely be compared with any other than that of Pollaiuolo at Chantilly. Finally, the "Old Man and the Child" at the Louvre is a work of incomparable ingenuity, displaying a cordiality perhaps unique in Italian art. The picture is one of those which most forcibly recall Flemish good nature; its tenderness and grace of sentiment compel us to overlook the ugliness of the model. About 1480 Ghirlandajo married

Costanza di Bartolommeo Nucci (d. 1485). By her he had two sons, Bartolommeo, b. 1481, who entered the Camaldolese Order; and Ridolfo, b. 5 Feb., 1483, who was, like his father, a painter. In 1488 the artist took as his second wife Antonia di ser Paolo di Simone Paoli. He died, almost suddenly, of a malignant fever, at the age of forty-five years. His serenity and his joy in life are typical of the Florentine genius prior to the mystical crisis and the deep emotions of that Counter-Renaissance, which was to let loose the wrath of Savonarola, and interfered so profoundly with the artistic vocation of a Botticelli and a Fra Bartolommeo. Ghirlandajo was a joyous soul, amiable, productive, somewhat impersonal, and had the rare good fortune to represent perfectly the Florentine spirit in its golden prime. Like Carpaccio at Venice he is perhaps the most national of the Italian masters. He was the instructor of Michelangelo.

LOUIS GILLET

St. Ghislain

St. Ghislain

Confessor and anchorite in Belgium; b. in the first half of the seventh century; d. at Saint-Ghislain (Ursidongus), 9 October, c. 680. He was probably of German origin. Ghislain lived in the province of Hainault (Belgium) in the time of St. Amand ((d. 679) and Saints Waudru, Aldegonde, and Madelberte. With two unknown disciples he made a clearing in the vicinity of Castrilocus (now Mons, in Hainault), taking up later his abode at a place called Ursidongus, where he built an oratory or chapel dedicated to Saints Peter and Paul. Aubert, Bishop of Cambrai, summoned him to the episcopal presence in order to sound the intentions of this almost unknown hermit, but he afterwards accorded him efficient protection. During his visit to Cambrai Ghislain spent some time in the villa of Roisin and received as a gift the estates of Celles and Hornu. He soon entered into relations with St. Waudru, who was induced by him to build a monastery at Castrilocus, his former place of refuge. It is probable that Ghislain influenced the religious vocation of St. Aldegonde, Abbess of Maubeuge, also of St. Madelberte and St. Aldetrude, of whom the first was the sister and the last two the daughters of St. Waudru. One day Aldegonde in her monastery of Maubeuge, had a vision in which, according to her biographer, the death of St. Amand, Bishop of Tongres, was revealed to her. Ghislain visited the saint in her villa of Mairieu, near Mabeuge, and explained to her that the vision was an announcement of her own approaching death. The intercourse between Ghislain and Aldegonde brought about a perfect understanding between Maubeuge and the monastery founded at Ursidongus under Ghislain's direction. St. Waudru rewarded her counsellor with a portion of the villa of Frameries and of the oratory of St-Quentin, comprised within the boundaries of the villa

of Quaregnon. Ghislain died at Ursidongus, and the monastery which he had founded took his name. The relics of the saint were first disinterred c. 929. They were transferred to Grandlieu, near Quaregnon, about the end of the tenth century or the beginning of the eleventh, and in 1025 Gerard I, Bishop of Cambrai, removed them to Cateau-Cambresis. They were visited several times in the course of the Middle Ages by the Bishops of Cambrai. In 1647 they were removed to St-Ghislain of which place our saint is patron. His feast is celebrated 9 October and his intercession is sought to ward off convulsions from children. In iconography he is frequently represented with a bear or bear's cub beside him. This is an allusion to the popular legend which relates that a bear, pursued in the chase by King Dagobert, sought refuge with Ghislain and later showed him the place where he should establish a monastery. Moreover, the site of the saint's cella was called *Ursidongus*, "bear's den".

L. VAN DER ESSEN

Ghost Dance

Ghost Dance

The principal ceremonial rite of a peculiar Indian religion which originated about 1887 with Wovoka, alias Jack Wilson, an Indian of the Piute tribe in Nevada. He claimed to have obtained his revelation in a vision in which he had been taken into the spirit world and talked with God, Who had promised a speedy return to the old Indian life through the reincarnation of all the dead Indians, the buffalo and other game, upon a new earth, which was already advancing from the west and would push before it the alien whites to their own proper country beyond the ocean, while the Indian believers would be taken up, as by wings, upon the new surface, and there reunited with their old-time friends. By performance of the prescribed dance and songs the consummation would be hastened, while in the frequent hypnotic trances brought about by the efforts of the priests the more sensitive subjects were enabled to anticipate the event in visions.

The belief spread among nearly all of the tribes eastward of the Missouri, and produced much excitement for several years, until several dates of the great change had passed without realization of the prophecy, when the ferment gradually subsided. In Dakota it led indirectly to an outbreak among the Sioux in the winter of 1890-1, notable events of which were the killing of Sitting Bull and the massacre at Wounded Knee. In the dance, men and women held hands, facing toward the centre, singing the ghost songs, without instrumental accompaniment, while the priests within the circle brought the more sensitive subjects into the trance condition by means of hypnotizing performances. An essential doctrine of the new religion was the brotherhood of man, and in consequence of this all acts or ceremonies of a warlike nature were prohibited.

Mooney, *The Ghost Dance Religion* in 14th Rept. Bur. Am. Ethn., II (Washington, 1896).

JAMES MOONEY

Pietro Giannone

Pietro Giannone

Italian historian, born 7 May, 1676, at Ischitella in the province of Capinata, Naples; died at Turin, 27 March, 1748. He received his first instruction in the house of his uncle, Gaetano Argento, a lawyer, and after having received the degree of Doctor of Law at Naples he began to practise his profession, following the example of his father. He devoted all his leisure time to the study of history. After preparatory work extending over a period of twenty years, he published under the title "Dell'istoria civile del regno di Napoli" (1723, 4 vols.), a work which caused a great sensation, especially on account of its bitter anti-ecclesiastical bias, which led to its repeated translation into English and German. In it Giannone combined a narrative of political matters, founded on historical sources, with an interesting description of the juridical and moral condition of the country; but as he ascribes all existing evils to the malignant influence of the Church, especially the Roman Curia, we may justly assume it a compilation of biased attacks and misstatements. It was immediately put on the Index and its author excommunicated and forced to leave Naples. He went to Vienna where he was pensioned by Emperor Charles VI. He was readmitted to the Church soon after by the Archbishop of Naples who was in Vienna at the time. Having forfeited his pension in 1744 Giannone went to Venice, but the Government, suspecting him on account of his political opinions, surrounded him with spies. He tried to gain the Government's goodwill by publishing a pamphlet entitled: "Lettera intorno al dominio del mare Adriatico", eulogizing Venice's conquest of the Adriatic; he was unsuccessful and was forcibly expelled in the following year. After wandering to and fro for a while he accepted the hospitality of an old book-dealer in Geneva. There he composed his intensely anti-clerical essay: "Il triregno ossia del regno del cielo, della terra e del papa" (Geneva, 1735, new ed. Rome, 1895, 3 vols.). Enticed to a village in Savoy, he was arrested, imprisoned in the fortress of Ceva, and transported thence to Turin, where he died. It is reported that before his death he was reconciled with the Church. Giannone's posthumous works are: "Opere postume" (Lausanne, 1760; enlarged, Venice, 1768; new ed., 2 vols., Capolago, 1841). The first volume contains: "Apologia dell'istoria civile del regno di Napoli; the second: "Indice generale dell'opera dei tre regni". His collected works appeared in Milan (5 vols., 1858). Later, Mancini published his posthumous works in two volumes (Turin, 1859), entitled "Opere inedite", containing the "Discorsi storici e politici sopra gli annali di Tito Livio"; "La chiesa sotto il pontificato di Gregorio il Grande". The autobiography of Giannone was published by Pierantoni (Rome, 1890).

PATRICIUS SCHLAGER

Gibail and Batrun

Gibail and Batrun

A Maronite residential see. Gibail is merely the modern name of Byblos (q.v.) a titular see of Phoenicia. The diocese, administered by the Maronite patriarch through auxiliary bishops, comprises

the civil districts of Ehden, Bcharra, Gibail and Batrun. It numbers 70,000 faithful, 470 priests, 277 churches and chapels, 14 convents of Baladites containing 177 religious, 2 of Aleppines containing 30 religious, and 2 of Isaites with 9 religious. There are also two religious houses in which there are 58 sisters. The patriarch resides at Bkerkey, where the patriarchal seminary of Saint-Jean-Marion is also situated, in which there are 30 students. Another seminary containing 32 students has been opened at Rumie. The question of dividing the diocese in such a manner that Gibail should form one diocese, and Batrun another, has been much discussed in recent years. Gibail is a town of about 1000 inhabitants, nearly all of whom are Christians, 650 being Maronites. There are 13 churches; three of them dating from the Crusades are very beautiful. The Catholic Melchite title of Gibail is united to that of Beirut; since 1902 the schismatic Melchite Diocese of Gibail is distinct from Beirut, and has jurisdiction over the mountainous region of Lebanon.

S. VAILHÉ

Pierre Gibault

Pierre Gibault

Missionary, b. at Montreal, Canada, 1737; d. at New Madrid, about 1804; son of Pierre Gibault and Marie Saint-Jean. He was educated at the seminary of Quebec, and ordained a priest 19 March, 1768. Shortly afterwards he was sent by Bishop Briand as missionary, with the title of Vicar-General, to Illinois. In July he arrived at Michilimackinac, where he spent a week attending to the religious wants of the Catholics, some of whom had not seen a priest for many years. By September he had fixed his residence at Kaskaskia. Later he resided successively at St. Genevieve, Vincennes, and Cahokia. In February, 1770, he visited Vincennes, where he found religion in a deplorable state. During his sojourn of two months at this place he converted a Presbyterian family, and revived religious practices among the Catholics. In this year also, he blessed the little wooden chapel that had been erected at Painscourt, the present site of St. Louis. In spite of many difficulties and in the face of grave dangers incident to long journeys, he succeeded in vastly improving religious conditions in the scattered missions of the surrounding country. His journeys led him to such distant points as Peoria, Ouiatenon, St. Joseph's, and Michilimackinac. In 1775 he wrote to the Bishop of Quebec: "This is the fourth voyage I have taken, the shortest of which was five hundred leagues." For a long time he was the only priest in Illinois and Indiana. When George Rogers Clark captured Kaskaskia, in 1778, it was largely owing to Father Gibault's influence that the inhabitants submitted without protest, and took the oath of allegiance to the Commonwealth of Virginia. Through his influence also the people of Cahokia took the same step. As a volunteer agent of Clark he then proceeded to Vincennes, and won the people of that post to the American cause. In consequence of these proceedings many of the Indian tribes now acknowledged the authority of the States. But the activity of "the patriot priest" did not cease here, for, a year later, when Clark marched upon Vincennes, which meanwhile had been taken by the English, there were among his forces two companies of the Catholic citizens of Illinois. Concerning the last years of Father Gibault's life, little is definitely

known. In 1791 he left Illinois, then a part of the Diocese of Baltimore, and retired to the Spanish territory beyond the Mississippi.

JOHN J. O'BRIEN

John Gibbons

John Gibbons

Jesuit theologian and controversialist; b. 1544, at or near Wells, Somersetshire; died 16 Aug. or 3 Dec., 1589, during a visit to the monastery of Himmelbrode, near Trier. He entered Lincoln College, Oxford, in 1561, but left the university without a degree. After studying philosophy and theology for seven years in the German College, Rome, he obtained the doctorate in both, 1576. Gregory XIII gave him a canonry in the Cathedral Church in Bonn, in Germany, but he resigned this on entering the Society of Jesus at Trier, in 1578. In the college of this latter place he filled successively the offices of confessor, professor of theology, professor of Sacred Scripture, prefect of studies, and rector. Though remarkable for his zeal, charity, and admirable administrative ability, he became more eminent on account of his controversial talents, which he displayed in frequent contests with the Lutherans of Germany. When Dr. Allen suggested Father Gibbons as a fit candidate for the English mission, the latter wrote both to the general of the Society and Dr. Allen, that he hoped he should give no disedification by saying that he had not the spiritual strength necessary for such an enterprise, but that he would lend it all the assistance in his power.

Among his literary works must be mentioned: "Concertatio Ecclesiæ Catholicæ in Anglica, adversus Calvinos-Papistas et Puritanos" (Trier, 1583). The work was republished on a larger scale in 1588 and 1594, by Dr. John Bridgewater, who numbered among his assistants Cardinal Allen and Dr. Humphrey Ely. Dr. Bridgewater also edited (see, however, Dict. Nat. Biog., s. v.) a posthumous work of Gibbons entitled "Confutatio virulentæ disputationis theologicæ in qua Georgius Sohn, Professor Academiæ Heidelbergensis, conatus est docere Pontificum Romanum esse Antichristum a prophetis et apostolis prædictum" (Trier, 1589). The Calvinist aspersions on the Roman pontiff are disposed of without much difficulty.

Cooper in Dict. Nat. Biog. s. v.; Hurter, Nomenclator, I, 56 (Innsbruck, 1892; Sommervogel, Bibliothèque de la Compagnie de Jésus, III; Southwell, Bibl. Script. Soc. Jesu, 453.

A.J. MAAS

Richard Gibbons

Richard Gibbons

Brother of Father John Gibbons, born at Winchester, 1550 or 1549; died at Douai, 23 June, 1632. After making his early studies in England, and completing a two years' course in philosophy at Louvain and in the German College at Rome, he entered the Society of Jesus, on 1 Sept., 1572, and continued his studies for three years. After his ordination he taught mathematics for thirteen

years, philosophy for ten, scholastic philosophy for three and for some time also Hebrew and Scripture, dividing his time between Italy, France, Portugal, Spain, and Belgium. For a while he occupied the offices of prefect of studies at Louvain, and of preacher at the Jesuit College at St-Omer. His later years were spent at Douai, in printing ancient manuscripts, and in translating, editing, and annotating various learned works. The following deserved to be noticed: "Historia admiranda de Jesu Christi stigmatibus ab Alphonso Paleato Archiepisc. II. Bononiensi explicata. Accessit tomus II . . . Historia admirandæ . . . complectens M. Vigerii S.R.E. Cardinalis de præcipuis Incarnati Verbi mysteriis decachordum Christianum" (Douai, 1616). "R. P. Francisci Riberæ . . . in librum Duodecim Prophetarum commentarii . . ." (Douai, 1612). "Historia Anglicana Ecclesiastica a primis gentis susceptæ fidei incunabulis ad nostra fere tempora deducta . . . auctore Nicolao Harpsfeldio" (Douai, 1622). "Luidovici de Ponte Meditationum de Vita et Passion Christe Libri II, ex Hispanico in Latinum versi" (Cologne, 1612). "A Spiritual Doctrine, conteining a Rule to Live Wel, with divers Praiers" (Louvain, 1599). "Meditations Uppon the Mysteries of our Holy Faith, with the Practise of Mental Praier . . ." (Douai?, 1610). "The First Part of the Meditations of the Passion and Resurrection of Christ our Saviour" (1614?). "Translation of Bellarmine's Christian Doctrine".

A.J. MAAS

Jean-Pierre Gibert

Jean-Pierre Gibert

Canonist; b. at Aix, Provence, in 1660; d. at Paris in 1736. He became a cleric at an early age, receiving the tonsure only; he studied at Aix, and became doctor of theology and canon law. He taught ecclesiastical law in the seminaries of Toulon and Aix, and settled in Paris in 1703, where he lived and worked in retirement.

His principal works are: "Doctrina canonum in corpore juris inclusorum, circa consensum parentum requisitum ad matrimonium filiorum minorum" (Paris, 1709); "Institutions ecclésiastiques et bénéficiales suivant les principes du droit commun et les usages de France" (Paris, 1720 and 1736); "Usages de l'Eglise gallicane concernant les consures et l'irrégularité considérées en général et en particulier" (Paris, 1724 and 1750); "Tradition ou Histoire de l'Eglise sur le sacrement de mariage" (Paris, 1725); "Consultations canoniques sur les sacrements" (Paris, 1721-1725 and 1750); "Corpus juris canonici per regulas naturali ordine digestas, usque temperates, ex eodem jure et conciliis, patribus atque aliunde desumptas" (Geneva, 1736; Lyons, 1737), a masterly work on canon law in which the writer deviates from the order of the *Corpus Juris*. Gilbert was a moderate Gallican.

A. BOUDINHON

Gian Matteo Giberti

Gian Matteo Giberti

Cardinal, and Bishop of Verona, the natural son of Francesco Giberti, a Genoese naval captain, b. at Palermo in 1495; d. at Verona, 30 Dec., 1543. In 1513 he was admitted to the household of Cardinal Giulio de' Medici, and advanced so rapidly in Latin and Greek that he soon became an eminent member of the "Accademia Romana". Later he was appointed the cardinal's secretary, and Leo X, with whom he had political dealings, valued his opinions and advice very highly. In 1521 he was chief intermediary with the envoy of Charles V. He used his great influence over the pope to protect and help struggling men of letters. The choicest intellects met at his house. He led a severely religious life, and was a member of the *Sodalitium Divini Amoris* of St. Cajetan and Cardinal Caraffa. After his ordination to the priesthood, and the death of Leo X, he was sent by Cardinal Giulio, his patron, on a mission to Charles V, and returned to Rome with the new pope, Adrian VI. Clement VII immediately after his election made him Datario (1523), and in 1524, at the request of the Doge of Venice, he was appointed Bishop of Verona. Being obliged, against his will, to remain in Rome, he had himself represented at Verona by a very zealous vicar-general. Giberti was chosen a member of the Reform Committee decreed by the Fifth Lateran Council, but political events soon put an end to these labours. At Pavia (1525) he tried to make peace between Francis I and Charles V. It was at his prompting that Clement VII espoused the cause of France; the League of Cognac (22 May, 1526) was also his work. After the sack of Rome (1527) he was made to feel the vengeance of the Imperialists; being one of the hostages, he was put in prison and barely escaped death. He succeeded in making his escape, and went to Verona (1528) intending to devote himself entirely to the ruling of his diocese. He was done with politics, all the more because the pope had gone over to the imperial cause. However, he appeared from time to time in the Curia. Paul III recalled him to Rome for the work of the Reform Committee; among other missions he was sent to Trent to make preparations for the council. His wise and unwearying efforts to reform his diocese, whose clergy were in a deplorable state, were crowned with unhoped-for success. In that see Tridentine reforms were put in force long before the council assembled. St. Charles Borromeo, before taking charge of his see at Milan, wished to study Giberti's system at Verona, and chose as his vicar-general a priest from Verona trained in Giberti's school. His first aim was to improve the standard of ecclesiastical knowledge. In his own palace he set up a printing-press which turned out many splendid editions of the Greek Fathers, in whose writings he was very learned. He reformed the choir-school of Verona which had long been famous; for the instruction of the young he had printed the catechism known as "Dialogus", the work of Tullio Crispoldi (Rome, 1539). At Verona, moreover, he gathered around him a group of learned men to assist him in his efforts at reform. His complete works were edited by the famous scholars Pietro and Girolamo Ballerini ("Constitutiones Gibertinae", "Costituzioni per le Monache", "Monitiones generales", "Edicta Selecta", "Lettere Scelte", etc., Verona, 1733, 1740), together with an appendix containing the story of his life, a "Dissertatio de restitutâ ante concilium Tridentinum per Jo. Matth. Giberti

ecclesiasticâ disciplina", and two panegyrics, one in Latin by Fumani, the other in Italian by Castiglione.

U. BENIGNI

Gibraltar

Gibraltar

VICARIATE APOSTOLIC OF GIBRALTAR.

Gibraltar is a rugged promontory in the province of Andalusia, Spain, about 6 miles in circumference. Its almost perpendicular walls rise to a height of 1396 feet. The town is on the west side; on the north a narrow isthmus (neutral ground) connects the fortress with the mainland of Spain. The great rock itself is the ancient Mount Calpe, which with Abyla (Ceuta) constituted the famous Pillars of Hercules. In antiquity Gibraltar belonged in turn to the Phoenicians, Carthaginians, Romans, and Visigoths. Scipio took it from the Carthaginians, and it remained Roman territory until A. D. 412, when the Goths became masters of Spain. Being Arians, they built two churches of their faith in the vicinity of Calpe; one at San Rocco, the other, a chapel, on the rock itself. In 710 the Visigothic kingdom in Spain, after an existence of 300 years, was torn with internal strife. Amid this dissension the Moors crossed from Africa, for the second time (711), under their leader Tarik-Ibn-Zeyad, who sent a detachment of soldiers to Mount Calpe, and had a castle built there, the ruins of which yet excite admiration. The mountain was thenceforth known as Gibel-Tarik, the mountain of Tarik, or Gibraltar. Thus began the Moorish conquest of Spain. Gibraltar was besieged, in 1309, and retaken from the Moors by Alonzo de Guzman. By 1462 it had sustained eight sieges, with varying fortune. The last of these was under Alonzo de Arcos, who captured it from the Moors in 1462, the surrender on this occasion taking place on 20 August, the feast of St. Bernard, in consequence of which he became the patron of Gibraltar. The Infante Don Alonzo gave the city and territory of Gibraltar to the Duke of Medina-Sidonia in absolute and perpetual possession for himself and his successors. Ferdinand and Isabella confirmed this gift, conferring on the Duke of Medina-Sedonia the title of Marquis of Gibraltar; at a later period, however, during the same reign, the place was annexed by the Crown.

During the War of Spanish Succession, which began in 1701, Gibraltar was besieged (1704) by a squadron commanded by Sir George Rooke and a land force of 1800 English and Dutch under Prince George of Hesse-Darmstadt; after three days the city was captured (24 July). The fortress had 100 cannon and ammunition, but a garrison of only 150 men; the inhabitants were reduced to 6000. After a bombardment of six hours the garrison surrendered.

Before a year had passed Spain endeavoured, with the help of France, to recapture Gibraltar. In this, the twelfth siege of Gibraltar, the attacking party had a great preponderance of numbers, but the fortress successfully resisted all their efforts to capture it. By a special decree of February, 1706, Queen Anne declared Gibraltar a free port. In 1713, by the Treaty of Utrecht, it became definitively a British possession, though many attempts were made by the Spaniards to regain it.

The last siege, the fourteenth in its history, began 14 July, 1779, and continued for 3 years, 7 months, and 12 days. In April, 1782, the French and Spaniards again bombarded Gibraltar by land and sea, but without success. A peace was finally concluded by which Spain received the island of Minorca in place of Gibraltar. When the city was occupied by the English in 1704, the Spaniards carried away whatever they could and settled in the neighbouring district of San Rocco. Scarcely a dozen persons remained in Gibraltar. It was subsequently populated by people of every nation, especially by Genoese and Maltese, as is evident from the various family names. Spanish is generally spoken by the people, though English is the tongue of public administration.

The population (1908) numbers about 25,000, of whom 16,000 to 18,000 are Catholics; and the rest Jews, Protestants, etc. The garrison varies in number from 3,000 to 5,000 men. Gibraltar is ruled by special laws; has a military governor, an admiral, and a colonial secretary. The Anglican Bishop of Gibraltar does not reside there. Until 1806 Gibraltar belonged to the See of Cadiz. In that year it was made a vicariate Apostolic (since 1840 the vicar is always a titular bishop). The Catholic clergy number 11 secular priests and 5 religious. There are 8 churches and chapels; 3 religious houses for men and 4 for women, with a total of 28 and 61 members respectively. There is but one parish, though three of the churches have each a resident priest. Catholic elementary education is provided for by 6 boys' schools (1136) under the Christian Brothers and the Brothers of St. John of God, and 8 girls' schools (1126). There is also an institute for the higher education of boys (141) and two similar ones for girls (174). There are many other private institutions and schools, the most important of which is the Rook Academy under the direction of M. Sitman. The poor are cared for in 3 asylums, and there are 2 orphan asylums (65); for the aged, also, there is a house of the Little Sisters of the Poor. Guido Remigio Barbieri, a former Benedictine, born in 1836, was consecrated Bishop of Theodosiopolis and Vicar Apostolic of Gibraltar in 1901.

Missiones Catholicae (Rome, 1907), 73-74; Statesman's Year-Book (London, 1909); English Catholic Directory (London, 1909).

REMIGIO GUIDO BARBIERI

Bonaventure Giffard

Bonaventure Giffard

Born at Wolverhampton, England, 1642; died at Hammersmith, Middlesex, 12 March, 1734; second son of Andrew Giffard, of Chillington, Staffordshire. His father, who married Catherine, daughter of Sir Walter Leveson, was slain in a skirmish near his own home, during the Civil War. Owing to the religious persecutions, Bonaventure was sent, with his younger brother Andrew, to Douai to be educated. From Douai, in October, 1667, he went to Paris to pursue his theological studies, and was ordained for the secular mission. Some years later, he received the degree of Doctor of Divinity at the Sorbonne. Having attracted the attention of King James II by his piety and learning, he was appointed preacher to the court. Religion had been in sore straits in England for the previous fifty years. Dr. Smith had been appointed vicar Apostolic of the whole country in 1625, but such

was the persecution that he was forced to withdraw to France in 1631, where he remained till his death (1655). For nearly thirty years more his place in England remained unfilled; finally, in 1685, Dr. Leyburn was appointed to succeed him. Pope Innocent XI now entered into negotiations with James II; and, as a result, four vicariates were formed, Dr. Giffard being put in charge of the Midlands. He was consecrated bishop, at Whitehall, by the nuncio, on 22 April, 1688. In religious matters James II displayed too little prudence, and by his high-handed actions gave great offence to the Protestants. Not only did he compel the authorities of Magdalen College, Oxford, to accept Bishop Parker as their president; but, on Parker's death (1688), he had twelve Catholic fellows appointed, and made Dr. Giffard president, despite the fact that the college electors had selected a Protestant, John Hough. The king's nominee took up his residence there on 15 June, 1688. A storm of opposition arose, and he was ejected about five months later. The Revolution followed, and the bishop was seized and imprisoned at Newgate, where he remained nearly two years. He was released on bail, in 1690, and for more than twenty-four years led a perilous life, being frequently compelled to hide from the pursuivants. When Dr. Leyburn died, in 1703, Bishop Giffard was charged to look after his district, and from 1708 to 1713 he had to govern the Western vicariate as well. In this he was aided by his brother Andrew, his vicar-general, till the latter died, 14 Sept., 1714. Henry Howard was nominated as coadjutor to Dr. Giffard in 1720; but, as he died before his consecration, Benjamin Petre was appointed. The old bishop passed away fourteen years later, in 1734, at the age of ninety-two. He was buried beside his brother Andrew, in the churchyard of St. Pancras. A few of his sermons have been preserved, and many of his interesting letters were printed in the "Catholic Miscellany", in 1826 and 1827.

A.A. MacERLEAN

Godfrey Giffard

Godfrey Giffard

Bishop of Worcester, b. about 1235; d. 26 Jan., 1301. He was the son of Hugh Giffard of Boyton in Wiltshire, and Sybil, the daughter and coheiress of Walter de Cormeilles. His elder brother Walter became Archbishop of York (d. 1279). During the earlier part of his life his success was bound up with that of his brother. When in May, 1264, Walter was elected Bishop of Bath and Wells, Godfrey became canon and subsequently archdeacon of Wells; he also held many other benefices, although only in minor orders, and, as his enemies alleged, not learned. When in August, 1265, Walter became chancellor, Godfrey in 1266 was appointed Chancellor of the Exchequer, with leave to appoint a substitute to act during his absence; and when in October, 1266, Walter was translated to York, Godfrey succeeded him as Chancellor of England, and received further benefices from the new Archbishop of York, becoming archdeacon of York and rector of Adlingfleet in 1267. When Bishop Nicholas of Ely was translated from the See of Worcester to that of Winchester, Godfrey was elected by the monks; he received the temporalities of his see in June, 1268. One of his first acts as bishop-elect was to obtain licence to continue the work, begun by Walter Cantelupe,

of building and fortifying Hartlebury Castle, which has ever since been the principal palace of the bishops of Worcester. His consecration took place at Canterbury, 23 Sept., 1268, and his enthronement 25 December. During his chancellorship a parliament was held at Marlbridge (52. H. 3) where many useful laws were passed for restraining the abuse of distresses, regulating the incidence of tenure, and improving civil and criminal procedure; the knowledge of general jurisprudence they display is remarkable, and if he did not frame them himself, he deserves credit for having had the wit to employ the superior men who did. He continued in office as chancellor until 28 Oct., 1269, when he handed over the seal to the king.

As bishop Giffard devoted himself to the care of his diocese which he ruled for nearly thirty-four years. In the course of those years two affairs caused him considerable trouble: the disputes with the monks of Worcester cathedral, and that with Malvern Priory. The Worcester feud lasted down to the bishop's death, and reached such a height that when, in 1300, Archbishop Winchelsey visited the priory, the monks presented a formal accusation against the bishop containing thirty-six articles of varying importance to which Giffard's satisfactory answers are still extant. The quarrel appears to date from 1288 when the monks considered that the rights of the church of Worcester had been infringed by the bishop's refusal to allow their precentor to summon those who were to be ordained at an ordination at Westbury. The feeling aroused was intensified by the bishop's attempt, in 1288, to annex the churches in his gift to the prebends in the church of Westbury. This was eventually decided in the bishop's favour in the Arches Court in 1297. Relations were, moreover, strained because of the unwillingness of the priory to admit the bishop's visitations. The difficulty with the priory at Great Malvern was even more complicated. The cause was a claim made by the priory to be independent of the bishops of Worcester, and dependent upon the Abbot of Westminster. The relations between the two houses had been settled in 1217. Giffard's predecessors had had continual trouble with the same priory. The present struggle with Richard of Ware, Abbot of Westminster lasted from 1279 until 1283 and was not really ended then. The climax was reached in September, 1282, when Giffard, as visitor, at the request of some of the monks, deposed the unworthy prior, William of Ledbury. A violent conflict followed, full of incidents, appeals, and counter-appeals and finally the king had to intervene to bring about a compromise.

Besides building the castle at Hartlebury, and rebuilding the church there, Giffard built magnificent mansions at Wick and Alvechurch. Moreover he ornamented the eastern part of the cathedral with the small columns of marble having joints of gilded brass, which form one of the most graceful characteristics of the present choir and Lady chapel. Even after retiring from the chancellorship he is still found exercising judicial functions, as when, in 1272, with Roger Mortimer he enquired into the injuries done by the townspeople of Oxford to the scholars; and, in 1278, he was at the head of the justices itinerant for the counties of Hereford, Hertford, and Kent. He was buried on 4 Feb. in his cathedral church (Ann. Monast., IV, 551).

EDWARD MYERS

William Giffard

William Giffard

Second Norman Bishop of Winchester from 1100 to 1129. Little is known of his history anterior to his episcopate, except that he was successively canon and dean of Rouen, and ably filled the office of chancellor to William the Conqueror (d. 1087), William Rufus (d. 1100), and Henry I. Since the death of Bishop Walkelin in 1098, no appointment had been made to the See of Winchester during the remaining two years of the reign of Rufus, and the revenues were appropriated by the king. The very first act of Henry I (Stubbs, "Const. Bist.", Oxford, 1891-5, I, 329), after his election as king at Winchester, in Aug., 1100 was to give a token of his goodwill to the Church by filling the See of Winchester, and he caused William Giffard, who was still only a deacon, to be duly elected bishop. Henry may have wished to provide himself with a strong supporter in the episcopal body, but, from the first, William would appear to have realized that the points at issue between the king and the Church had become part of the great European quarrel of investitures, and declined to accept the pastoral staff from the king's hands. At the moment, the support of churchmen was necessary to assure Henry's position; he was too prudent to force the acceptance of the sacred symbol, and Giffard was immediately invested with the temporalities of the see. It only remained to arrange for his consecration. Meanwhile St. Anselm had returned from exile, and, strengthened by the decision of the council held at the Vatican in 1099, declined to become the *homo* of a layman.

An uneasy time followed, and embassies were sent to Rome. As bishop-elect, Giffard assisted at the council held at Westminster, 20 Sept., 1102. In spite of his agreement with Anselm, Henry invested the Bishops-Elect of Salisbury and Hereford, and requested Anselm to consecrate them. Anselm was willing to consecrate Giffard, but in spite of the king's repeated insistence declined to consecrate the others. Gerard of York having undertaken to do so, one of the bishops-elect returned his crosier; the consecration ceremony of the remaining two had already begun when Giffard, conscience-stricken, declined to take further part in it. The king failed to intimidate him and he was sent into exile, and his goods confiscated. He had a constant friend and adviser in St. Anselm, and when the latter set out for Rome in April, 1103, Giffard went with him. Anselm's long stay at Lyons began about Christmas, 1103. In the meantime Giffard had been allowed to come back to England, for in 1105 he signed, together with the bishops, the petition begging Anselm to return. Eventually a compromise was effected, Anselm returned 1 Aug., 1107; the realities of feudal homage were retained, but the special form of the gift of ring and crosier was given up by the king. Giffard, who had been ordained priest quietly the day before, was consecrated by Anselm on 11 Aug., 1107.

He regained Henry's confidence and acted for him in several matters of ecclesiastical interest. As Bishop of Winchester one of his first duties was to act as chief commissioner in the completion of the Domesday Record of Winchester, that royal city having been omitted from the Domesday of the Conqueror. In 1110 he negotiated with the king and the community the removal of the so-called "New Minster" (or St. Grimbald's Abbey) founded by King Alfred, which stood in very inconvenient proximity to the cathedral on the north side, to a new site outside the city, under the name of Hyde Abbey.

Eventually this led to serious difficulties with the monks of the cathedral community, in consequence of the bishop's having alienated certain revenues which they conceived to belong to them. The difficulty culminated in 1122 in a strange symbolical pageant by the monks, and the interference of the king. Peace was made, and the bishop grew more and more attached to the community, spending most of his time among them, taking his meals with them, wearing the cowl, and eventually dying in their infirmary. The Canons Regular of St. Augustine were welcomed to England by him and a home was found for them at St. Mary Overy's (now St. Saviour's) in Southwark; near their stately church he built the town-house of the Bishops of Winchester. To him also belongs the honour of having given a first home in England to the monks of the Cistercian Order, by establishing, in Nov., 1128, the abbey of Waverley, near Farnham in Surrey, a filiation of L'Aumône in the Diocese of Chartres. He died on 25 Jan., 1129, and was buried in the nave of his cathedral church near his predecessor Walkelin.

EDWARD MYERS

William Gifford

William Gifford

Archbishop of Reims; b. in Hampshire, 1554; d. at Reims, 11 April, 1629. He was the son of John Gifford, Esquire, of Weston-under-Edge, Gloucestershire, and Elizabeth, daughter of Sir George Throckmorton, Knight, of Coughton, Warwickshire (Wood, "Athen. Oxon.", below). He was sent to Oxford in 1569, where he was entrusted to the care of John Bridgewater, President of Lincoln College, who was a Catholic at heart. Gifford remained at Oxford for about four years, part of which time he spent in the celebrated boarding school kept by the Catholic physician Etheridge, whither he had been removed on the compulsory retirement of Bridgewater for refusal to conform. After this period, Gifford, accompanied by his tutor, proceeded to Louvain (1573), resumed there his studies, and took the degree of M.A. (Athen. Oxon.). After having also obtained his baccalaureate in theology on the completion of a four year's course in that science under Bellarmine, Gifford was forced to quit Louvain owing to the disturbances in the Low Countries.

Proceeding thence, he pursued his ecclesiastical studies at Paris, at Reims, which he visited (1577) at the invitation of Dr. Allen, and at the English College at Rome, of which he was admitted a member on 15 Sept., 1579 [Foley, "Records of the English Province", etc., VI (London, 1880), 139; but compare statement there given as to age with date of birth above]. Having been ordained priest in March, 1582 (Foley, "Records", *loc. cit.*), he was recalled to Reims by Allen as professor of theology at the English College ("Douay Diaries", *infra*: *Diarium Primum*, 11; *Diarium Secundum*, 189 == note statement as to age). The degree of Doctor of Divinity was conferred on him in December of 1584 at Pont-à-Mousson in Lorraine, after which, returning to Reims, Gifford taught theology at intervals for nearly twelve years.

On Allen's elevation to the cardinalate, Gifford accompanied him to Rome in the capacity of chaplain, and it is said that during this visit he resided for a time in the household of St. Charles Borromeo. About this time (1597) Gifford was preferred to the deanery of Lille, which office Clement VIII conferred on him at the instance, it is alleged, of the Archbishop of Milan. This dignity he retained for about ten years, and, after his withdrawal from Lille (c. 1606), he was made "rector magnificus" of Reims University. In 1608, Gifford, who had always held the Benedictines in high esteem and befriended them in many ways, took the habit of that order and subsequently became prior at Dieulouard (Dieulewart). In 1811, Father Gabriel of St. Mary, as Gifford was known in religion, went into Brittany and laid the foundation of a small community of his order at St. Malo. He was favourably received by the bishop, and a chair of divinity was assigned to him (*Petre, op. cit. infra*). He was one of the nine definitors chosen in 1617 to arrange the terms of union among the Benedictine congregations in England, of which province he was elected first president in May of the same year. In 1618, Gifford was consecrated coadjutor to Cardinal Louis de Lorraine, Archbishop of Reims, with the title of *Episcopus Archidaliæ* (Bishop of Archidal). On the death of Guise, he succeeded to the archbishopric, becoming also, by virtue of his office, Duke of Reims and First Peer of France.

Before his death, which occurred in 1629 he had acquired a high reputation as a preacher. His writings include: "Oratio Funebri in exequiis venerabilis viri domini Maxæmiliani Manare præpositi ecclesiæ D. Petri oppidi Insulensis" (Douai, 1598); "Orationes diversæ" (Douai); "Calvino-Turcismus", etc. (Antwerp, 1597 and 1603). The latter work, begun by Dr. Reynolds, Clifford completed and edited. He translated from the French of Fronto-Ducæus, S.J., "The Inventory of Errors, Contradictions, and false Citations of Philip Mornay, Lord of Plessis and Mornay". He also wrote, at the request of the Duke of Guise, a treatise in favour of the League. The "Sermones Adventuales" (Reims, 1625) were a Latin rendering by Gifford of discourses originally delivered in French. He assisted Dr. Anthony Champney in his "Treatise on the Protestant Ordinations" (Douai, 1616); other of Gifford's MSS. were destroyed in the burning of the monastery at Dieulouard in 1717.

WOOD, *Athenæ Oxoniensis*, ed. BLISS, II (London, 1815). col, 453 sqq., essays an orderly narration of the events in Gifford's life; COOPER in *Dict. Nat. Biog.*, s. v.; *Records of the English catholics*, I == *Douay Diaries* (London, 1878), *passim*; GILLLOW, *Bibl. Dict. Eng. Cath.*, s. v.

P.J. MACAULY

Supernatural Gift

Supernatural Gift

A supernatural gift may be defined as something conferred on nature that is above all the powers (*vires*) of created nature. When God created man, He was not content with bestowing upon him the essential endowments required by man's nature. He raised him to a higher state, adding certain gifts to which his nature had no claim. They comprise qualities and perfections, forces and energies, dignities and rights, destination to final objects, of which the essential constitution of man is not the principle; which are not required for the attainment of the final perfection of the natural order of man; and which can only be communicated by the free operation of God's goodness and power. Some of these are absolutely supernatural, i.e. beyond the reach of all created nature (even of the angels), and elevate the creature to a dignity and perfection natural to God alone; others are only relatively supernatural (preternatural), i.e. above human nature only and elevate human nature to that state of higher perfection which is natural to the angels. The original state of man comprised both of these, and when he fell he lost both. Christ has restored to us the absolutely supernatural gifts, but the preternatural gifts He has not restored.

The absolutely supernatural gifts, which alone are the supernatural properly so called, are summed up in the divine adoption of man to be the son and heir of God. This expression, and the explanations given of it by the sacred writers, make it evident that the sonship is something far more than a relation founded upon the absence of sin; it is of a thoroughly intimate character, raising the creature from its naturally humble estate, and making it the object of a peculiar benevolence and complaisance on God's part, admitting it to filial love, and enabling it to become God's heir, i.e. a partaker of God's own beatitude. "God sent his Son . . . that he might redeem them who were under the law: that we might receive the adoption of sons (*ten ouiothesian*). And because you are sons, God hath sent the spirit of his son into your hearts, crying: Abba, Father. Therefore now he is (Gr. text: thou art) not a servant, but a son. And if a son, an heir also through God" (Gal., iv, 4-7) "Who hath blessed us with [all] spiritual blessings in heavenly places, in Christ . . . Who hath predestinated unto the adoption of children (*ouiothesian*) through Jesus Christ unto himself"

(Ephesians i, 3-5). "Behold what manner of charity the Father hath bestowed upon us, that we should be called, and should be the sons of God" (I John, iii, 1). Further, this exalted estate is described as a communication or partnership with the only-begotten Son of God, a participation in the privileges which are peculiar to Him in opposition to mere creatures. "That they all may be one, as thou, Father in me, and I in thee, that they also may be one in us. . . . And the glory which thou hast given me, I have given to them; that they may be one, as we also are one: I in thee; and thou in me; that they may be made perfect in one" (John, xvii, 21-23). It is also styled *fellowship* (*koinonia*) "with the Father, and with his Son" (1 John, i, 3), and "the communication (*he koinonia*) of the Holy Ghost" (II Cor., xiii, 13). Divine adoption is a new birth of the soul (John, i, 12, 13, iii, 5; I John, iii, 9; v, 1; I Pet., i, 3; and i, 23; James, i, 18; Titus, iii, 5, Eph., ii 5). This regeneration implies the foundation of a higher state of being and life, resulting from a special Divine influence, and admitting us to the dignity of sons of God. "For whom he foreknew, he also predestinated to be made conformable to the image of his Son; that he might be the firstborn amongst many brethren" (Rom., viii, 29). cf. also II Cor., iii, 18; Gal., iii, 26, 27; iv, 19, Rom., xiii, 14. As a consequence of this Divine adoption and new birth we are made "partakers of the divine nature" (*theias koinonoi physeos*, II Pet., i, 4). The whole context of this passage and the passages already quoted show that this expression is to be taken as literally as possible not, indeed, as a generation from the substance of God, but as a communication of Divine life by the power of God, and a most intimate indwelling of His substance in the creature. Hence, too, the inheritance is not confined to natural goods. It embraces the possession and fruition of the good which is the natural inheritance of the Son of God, viz., the beatific vision. "We are now the sons of God; and it hath not yet appeared what we shall be. We know that, when he shall appear, we shall be like to him because we shall see him as he is" (I John, iii, 2). "We see now through a glass in a dark manner; but then [in the beatific vision] face to face" (I Cor., xiii, 12). The Fathers have not hesitated to call supernatural union of the creature with God the deification of the creature. This is a favorite expression of St. Irenæus ("Adv. Haer.", III, xvii, xix; IV, xx, etc.), and is frequently used by St. Athanasius (see Newman, "St. Athanasius", II, 88). See also St. Augustine (? Serm. cxci, "In Nat. Dom."), quoted by St. Thomas (III:1:3).

In order to live worthy of our Divine dignity and to attain our Divine end, we stand in need of supernatural aid. This supernatural aid to a supernatural end is called grace (q.v.). For our present purpose it will be sufficient to note that grace is either habitual (i.e. sanctifying, making us pleasing to God) or actual (i.e. enabling us to produce works deserving of salvation). There are other aids sometimes bestowed less for our own benefit than for the benefit of others. These are called *gratiae gratis datae* (*charismata*). They do not directly and immediately help to the attainment of our end, but assist as it were from without. The theological virtues and the moral virtues are graces properly so called. So, too, are the gifts of the Holy Ghost (see HOLY GHOST).

It may be well here to say a few words on the preternatural (relatively supernatural) gifts bestowed on our first parents, which are sometimes confused with the supernatural gifts properly so called. In the beginning God exempted man from the inherent weakness of his nature, i.e. the

infirmities of the flesh and the consequent infirmities of the spirit. He made man immortal, impassible, free from concupiscence and ignorance, sinless, and lord of the earth. These privileges are beyond man's nature, but not beyond that of some higher creature (e.g. the angels); hence they are preternatural (*praeter naturam*). The Fathers look upon them as a glorification of nature, applying the words of Ps. viii, 5-9. In point of fact these gifts were not conferred apart from the supernatural gifts; a preternatural state is, however, conceivable, and the separability of the two sets of gifts is clear from our now possessing the supernatural without the preternatural gifts. "Although distinct and separable, unite into one harmonious and organic whole. The Fathers look upon this union in the original state of man as an anticipation of his state of final beatitude in the vision of God, so that grace bears to integrity the same relation which the future glory of the soul bears to the future glory of the body. Integrity and grace, when combined, elevate man to the most perfect likeness with God attainable in this life; they dispose and prepare him for the still more complete likeness of eternal life".

T.B. SCANNELL

Nicolas-Joseph-Laurent Gilbert

Nicolas-Joseph-Laurent Gilbert

Poet, b. at Fontenoy-le-Château, 1751; d. at Paris, 12 November, 1780. His parents were poor farmers. He pursued his studies at the Collège de l'Arc at Dôle, where the professor of literature boasted of having made poets of all his pupils except Gilbert. Upon leaving college in 1769, he settled at Nancy and tried to open a public course in literature. In 1772 he competed unsuccessfully for a prize at the French Academy. In 1774 he went to Paris, where Freron won for him the favour of the archbishop. Young and unknown, he had the courage to oppose the triumphant and all-powerful chiefs of the philosophical party. Although there is a little juvenile audacity in the fury of his attacks, the sincerity of his religious convictions cannot be doubted. He died of brain fever caused by a fall from his horse. His enemies reported that he died insane; his partisans claimed that he died in misery at the hospital. Neither report is true. After the accident which caused his death, he was taken to the Hotel-Dieu, but was soon removed to his own house, where he died. The story of his poverty is untrue, for at the time of his death he was drawing three pensions, which constituted for that time a rather large income. Gilbert's works consist of a Persian novel, "Les familles de Darius et d'Eridame" (Paris, 1770), a satire in prose, "Le carnaval des auteurs" (Paris, 1773), a few odes, and satires. Three pieces, one ode and two satires, have given him a lasting reputation: the "Ode imitée de plusieurs psaumes" (1788), usually known under the title of "Adieux à la vie", struck the first personal and melancholy notes which were the characteristic of the Romantic school; in the satires "Le dix-huitième siècle" (1775) and "Mon apologie" (1778) there is a force, movement, and eloquence which one does not find elsewhere in the poetry of that time. He vigorously opposes the manners of the time and castigates the philosophers and the Academy. His words are those of

a man who writes with freedom, emotion, and sincerity, though his style is not always equal to the thought.

LOUIS N. DELAMARRE

Sir John Thomas Gilbert

Sir John Thomas Gilbert

Irish archivist and historian, b. in Dublin, 23 January, 1829; d. there, 23 May, 1898. He was the son of John Gilbert, an English Protestant, Portuguese consul, at Dublin, and Marianne, an Irish Catholic, daughter of Henry Costello. From her the future historian inherited his ardent patriotism, which was surpassed only by a deep spirit of religion which characterized him through life. His early days were spent at Branackstown, Meath. He was educated at Dublin, and at Prior Park, near Bath, England. He received no university training, as his mother preferred to sacrifice that rather than allow his faith to be imperilled in the Protestant University of Dublin. In 1846 his family moved to Blackrock, a suburb of the Irish metropolis, where he resided till his death, fifty-two years later.

From his boyhood, he manifested a decided taste for history and archaeology. When only nineteen, he was elected to the Council of the Celtic Society, and thus became associated with some of the famous writers and orators of the age, Butt, Duffy, Ferguson, Mitchell, O'Hagan, and Smith O'Brien. In 1851 appeared his essay, "Historical Literature of Ireland". Four years later he became a Member of the Royal Irish Academy, and secretary of the Irish Archaeological Society, among whose members were O'Curry, O'Donovan, Graves, Todd, and Wilde. In 1854-9 he published his "History of the City of Dublin" in 3 vols., a work of remarkable erudition, which placed him among the greatest historians of the country. In 1863 his "History and Treatment of the Public Records of Ireland" caused considerable sensation by demonstrating to the government the futility of entrusting the publication of Irish State documents to men unskilled in the language and history of the nation. From this time till his death his pen was never idle, and he filled the most important posts in all the historical and antiquarian societies. He was librarian of the Royal Irish Academy for thirty-four years. In 1891 he married the brilliant Irish novelist, Rosa Mulholland. He received the honorary degree of LL.D. from the Royal University in 1892, and five years later was knighted for his services to archaeology and history. In addition to the works already mentioned his most important writings are the "History of the Viceroy's of Ireland" (1865), "Calendar of the Ancient Records of Dublin" (7 vols., 1889-98); "History of the Irish Confederation and the War in Ireland, 1641-9" (7 vols., 1882-91); "Jacobite Narrative of the War in Ireland, 1688-91" (1892). Celtic scholars are indebted to him for the photographic reproductions of the celebrated ancient Irish MSS., for the establishment of the Todd lectureship in Celtic, and also for editions of "Leabhar na h-Uidhre" and "Leabhar Breac."

A.A. MACERLEAN

Gilbert de la Porree

Gilbert de la Porrée

(Gilbertus Porretanus)

Bishop of Poitiers, philosopher, theologian and general scholar; b. at Poitiers in 1076; d. in 1154; studied under Hilary in Poitiers, under Bernard of Chartres at the famous school there, and finally under Anselm at Laon, where he probably first met Peter Abelard. Returning later to Chartres, he taught philosophy and the arts there for about fifteen years, receiving a canonry and holding at intervals the office of chancellor of the school. He was present at the Council of Sens (1141), at which Abelard was censured. The following year we find him teaching in Paris, with John of Salisbury among his pupils; but only for a brief space, for in 1142 he became Bishop of Chartres. His high character for learning and ecclesiastical zeal seems to have won for him the universal respect and veneration of his contemporaries. But his teaching regarding the Blessed Trinity involved him in trouble for a time. Two of his own archdeacons, alarmed at its novelty, reported it to Eugene III, and induced St. Bernard to oppose Gilbert's doctrines in the pope's presence at the Councils of Paris (1147) and Reims (1148). The dispute ended amicably without any very definite issue. Gilbert died universally regretted in the year 1154.

He lived and taught during the critical epoch when the great scholastic synthesis, both in and in theology, was just beginning to take shape. The principles, methods, and doctrines of purely rational research were being extended from philosophy to theology and applied — often rashly, as with Abelard — to the elucidation of revealed truth. Aristotle's philosophy was finding its way through Moorish and Jewish channels into the Christian schools of Europe, gradually to supplant Platonic influences there, and the discussion of the great central problem of the validity of knowledge — the controversy on the Universals, as it was then called — was waxing warm and vehement. Gilbert's place among his contemporaries was a leading and honoured one; while his philosophical writings secured for him a fame that long survived him. In his "Liber Sex Principiorum" he explained the last six categories of Aristotle, the latter having treated expressly only the first four. The work immediately took its place as a scholastic textbook, side by side with the "Isagoge" and the "Categories", and was studied and expounded for three centuries in the medieval schools. His "Commentary on the Four Books of Boethius", especially on the two "De Trinitate", contain those applications of his doctrine on the Universals which for a time brought his orthodoxy under suspicion.

Gilbert's attitude on the controverted question of the Universals has been very variously interpreted: as ontological realism (Prantl), empiric realism (Clerval, Zigliara), moderate realism ill-defined (de Wulf, Turner). The latter is, perhaps, nearest to the truth. Gilbert's doctrine, like that of Abelard, is an attempt, though only partially successful, to repudiate the extreme realism of the epoch, with its pantheistic tendencies. The universal concept (of the *genus* or class) has corresponding to it in the world of sense a number of similar singular objects. This similarity is, however, explained by Gilbert in away that brings it quite near identity. The created essence (*forma nativa, eidos*) of the individual member of a class is a copy of the Divine exemplar, "singularis in singularibus, sed

in omnibus universalis" (John of Salisbury, *Metal.*, II, xvii). He means that the *forma nativa* is not really (numerically) one and the same *in omnibus*, but only conceptually, i.e. by the consideration of the mind; so much is fairly evident from another reference of his to "universalia . . . quae ab ipsis individuis humana ratio quodammodo abstrahit" (P.L., LXIV, 1374). Yet there are grounds for supposing that he attributed to the *forma nativa*, as it is in the individual, the universality of the logical concept. In the actual individual he distinguishes between the common or class essence which he calls *subsistentia*, e.g. "humanity" or "human nature" in the abstract, and that which makes it an existing individual and which he calls *substantia* e.g. "Plato". This process of objectifying and dividing off the abstract from the concrete, in the individual, he carried so far as to allege that in it "universality" was a distinct *subsistentia*, different from "singularity", and that the "unity" of the individual was a *subsistentia* distinct from the individual which it made "one". He thus mistook mental distinctions for real; and he carried his error into theology. Between God and His Divinity, the Father and His Paternity, the Son and His Sonship, the Holy Ghost and His Procession, the Divine Persons and the Divine Nature, he saw a distinction which is really due to our human way of grasping reality as a concrete embodying an abstract, a singular containing a universal, an essence determined by an existence but which Gilbert, with his Platonizing tendency to model the ontological upon the logical, conceived to be due to a division and plurality in the Godhead Itself. This was an excessive reaction against the Pantheism which would submerge all the real distinctions of things in an identity with one indivisible Divine existence.

Gilbert's "Liber Sex Principiorum" and his "Commentary on Boethius" are in P.L., CLXXXIV and LXIV. He also left numerous commentaries on various books of the Old and New Testaments. A philosophical work called "Liber de Causis", sometimes attributed to him, is in reality an abridged Latin translation, through the Arabic, of the "Elevatio Theologica" of Proclus, a Greek Neo-Platonist of the fifth century.

P. COFFEY

Gilbert Foliot

Gilbert Foliot

Bishop of London, b. early in the twelfth century of an Anglo-Norman family and connected with the earls of Hereford; d. at London in 1186. He became a monk at Cluny in France, where he rose to the rank of prior; then he was abbot at Abbeville, and later at Gloucester. He became Bishop of Hereford in 1147. As abbot and bishop he took an important part in ecclesiastical and national affairs, was a supporter of Empress Matilda and a confidential adviser of Theobald, Archbishop of Canterbury. In 1163 he was transferred to the Bishopric of London, though such a translation was

very exceptional at the time; but he received the support of Becket and the special consent of Alexander III. Foliot was a man of learning and eloquence and a good administrator. The austerity of his life was almost too widely known. However, in the great struggle for the rights of the church between Henry II and St. Thomas of Canterbury he definitely took the king's side. In the stormy scenes at Clarendon and Northampton and during the prolonged negotiations of the years of St. Thomas's exile, his name is foremost among the opponents of his archbishop; and he was one of the prelates who, by their remonstrances against a renewed excommunication in 1170, brought about indirectly St. Thomas's martyrdom. It may be true that Gilbert was opposed to Becket's personality and methods more than to his aims, but Henry II would have been more than a match for a diplomatic bishop. A king who combined to such an extent intelligence and passion could have been checked only by a wave of popular enthusiasm. (See THOMAS BECKET, SAINT).

Gilbert Foliot's name appears on nearly every page of the Becket controversy and reference must be made to the bibliography of St. Thomas.

The treatment of Foliot's character is particularly full in LHULLIER, *St Thomas de Canterbury*, 2 vols. (Paris, 1891); see also PERRY in *Dict. Nat. Biog.*, XIX, 358 sqq.

F.F. URQUHART

Order of Gilbertines

Order of Gilbertines

Founded by St. Gilbert, about the year 1130, at Sempringham, Gilbert's native place, where he was then parish priest. His wish originally had been to found a monastery, but finding this impossible, he gave a rule of life to the seven young women whom as children he had taught at Sempringham, and built for them a convent and cloister to the north of his parish church. He received the support of his bishop, Alexander of Lincoln, and in a year's time the seven virgins of Sempringham made their profession. Gilbert seems to have been determined to copy the Cistercians as much as possible. At the suggestion of William, Abbot of Rievaulx, he instituted lay sisters to attend to the daily wants of the nuns, and soon added a company of lay brothers to do the rougher work in the farms and fields. These he recruited from among the poorest serfs of his parish and estates. For eight years the little community at Sempringham continued to flourish, and it was not till about 1139 that the infant order was increased by another foundation. Alexander of Lincoln gave to the nuns of Sempringham the island of Haverholm, near Sleaford, in Lincolnshire, the site of one of his castles destroyed in the contest between King Stephen and his barons. Alexander's deed of gift makes it clear that the nuns had by this time adopted the Cistercian rule "as far as the weakness of their sex allowed". The fame of Sempringham soon spread far and wide through that part of England, and the convent sent out several colonies to people new foundations. In 1148 Gilbert travelled to Cîteaux in Burgundy to ask the Cistercian abbots there assembled in chapter to take charge of his order. This they refused to do, declining to undertake the government of women, and so Gilbert returned to England, determined to add to each of his convents a community of canons regular,

who were to act as chaplains and spiritual directors to the nuns. To these he gave the Rule of St. Augustine. Each Gilbertine house now practically consisted of four communities, one of nuns, one of canons, one of lay sisters, and one of lay brothers. The popularity of the order was considerable, and for two years after Gilbert's return from France he was continually founding new houses on lands granted him by the nobles and prelates. These houses, with the exception of Watton and Malton, which were in Yorkshire, were situated in Lincolnshire, in the low-lying country of the fens. Thirteen houses were founded in St. Gilbert's life, four of which were for men only.

The habit of the Gilbertine canons consisted of a black tunic reaching to the ankles, covered with a white cloak and hood, which were lined with lamb's wool. The nuns were in white, and during the winter months were allowed to wear in choir a tippet of sheepskin and a black cap lined with white wool. The scapular was worn both by the canons and the nuns. The whole order was ruled by the "master", or prior general, who was not Prior of Sempringham, but was called "Prior of All". His authority was absolute, and the year formed for him a continual round of visitations to the various houses. He appointed to the chief offices, received the profession of novices, affixed his seal to all charters, etc. and gave or withheld his consent regarding sales, transfers, and the like. He was to be chosen by the general chapter, which could depose him if necessary. This general chapter assembled once a year, at Sempringham, on the rogation days, and was attended by the prior, cellarer, and prioress of each house.

St. Gilbert, soon finding the work of visitations too arduous, ordained that certain canons and nuns should assist him. These also appeared at the general chapter. A "priest of confession" was chosen to visit each house and to act as confessor extraordinary. A Gilbertine monastery had only one church: this was divided unevenly by a wall, the main part of the building being for the nuns, the lesser part, to the south, for the canons. These had access to the nuns' part only for the celebration of Mass. The nunnery lay to the north, the dwellings of the canons were usually to the south. At Sempringham itself, and at Watton, we find them at some distance to the north-east. The number of canons to be attached to each nunnery was fixed by St. Gilbert at seven. The chief difficulty Gilbert experienced was the government of the lay brothers. They were mostly rough and untamed spirits who needed the control and guidance of a firm man, and it would have been surprising had there been no cases of insubordination and scandal among them. Two instances especially claim our attention. The first is related by St. Ælred, Abbot of Rievaulx, and gives us an unpleasant story of a girl at Watton Priory who had been sent there to be brought up by the nuns; the second was an open revolt, for a time successful, of some of the lay brothers at Sempringham.

From their foundation till the dissolution of the monasteries the Crown showed great favour to the Gilbertines. They were the only purely English order and owed allegiance to no foreign superiors as did the Cluniacs and Cistercians. All the Gilbertine houses were situated in England, except two which were in Westmeath, Ireland. Notwithstanding the liberal charters granted by Henry II and his successors, the order had fallen into great poverty by the end of the fifteenth century. Henry VI exempted all its houses from payments of every kind — an exemption which could not and did not bind his successors. Heavy sums had occasionally to be paid to the Roman Curia, and expenses

were incurred in suits against the real or pretended encroachments of the bishops. By the time of the Dissolution there were twenty-six houses. They fared no better than the other monasteries, and no resistance whatever was made by the last Master of Sempringham, Robert Holgate, Bishop of Llandaff, a great favourite at court, who was promoted in 1545 to the Archbishopric of York. The Gilbertines are described as surrendering "of their own free will", each of the nuns and canons receiving "a reasonable yearly pension". Only four of their houses were ranked among the greater monasteries as having an income above £200 a year, and as the order appears to have preserved to the end the plainness and simplicity in church plate and vestments enjoined by St. Gilbert, the Crown did not reap a rich harvest by its suppression.

For bibliography see the article on Gilbert, Saint; also GASQUET, Henry VIII and the English Monasteries (London, 1899); P.L., CXCIV; Hélyot, Histoire des ordres religieux, II (Paris, 1792); Floyd, An Extinct Religious Order and Its Founder in the Catholic World, LXII (New York, 1896).

R. URBAN BUTLER

Gilbert Islands

Gilbert Islands

Vicariate apostolic; comprises the group of that name, besides the islands of Ellice and Panapa. The most important members of the group, which consists of sixteen low atolls, are Tapiteuca, Arorai, Apemama, Maiana, Marakei, and Nonouti, which cluster near the Equator, and constitute the most easterly link in the chain of islands which make up Micronesia. The natives are of Malay in type, and until the advent of the white man were given over to savagery and, in some instances, cannibalism. Nominally under the protection of Great Britain, the islands are practically self-governed, and a sort of republicanism prevails. The principal industry is the preparation and exportation of copra, which is very plentiful, although there is some little traffic in shark fins.

Upon the partition of the Vicariate of Micronesia, the Gilbert Islands were erected into an independent vicariate by a decree of the Sacred Congregation of Propaganda, dated 17 July, 1897, and the present vicar Apostolic, Mgr. Joseph Leray, titular bishop of Remesiana, was placed at its head, and, with several missionary priests from the Congregation of the Sacred Heart, he entered upon the evangelization of the islands. The population of the vicariate is estimated at between 30,000 and 40,000, of whom 14,000 are Catholics. There are 12 churches and 56 chapels under the care of 19 priests, 96 parochial schools, with an attendance of 1700 boys and 1500 girls, 2 schools for catechists with a combined attendance of 50, 12 orphanages which shelter 400 orphans, 11 houses of the Congregation of the Sacred Heart, with 35 religious, and 8 houses of Our Lady of the Sacred Heart with 20 nuns.

Miss. Cath. (Rome, 1907); HERDER, Konversations Lex; Ann. Eccl. (1909); Statesman's Year Book (1909); SPITZ, Catholic Progress in the Gilbert Islands in The Tablet (London, April, 1904).

STANLEY J. QUINN

St. Gilbert of Sempringham

St. Gilbert of Sempringham

Founder of the Order of Gilbertines, b. at Sempringham, on the border of the Lincolnshire fens, between Bourn and Heckington. The exact date of his birth is unknown, but it lies between 1083 and 1089; d. at Sempringham, 1189. His father, Jocelin, was a wealthy Norman knight holding lands in Lincolnshire; his mother, name unknown, was an Englishwoman of humble rank. Being ill-favoured and deformed, he was not destined for a military or knightly career, but was sent to France to study. After spending some time abroad, where he became a teacher, he returned as a young man to his Lincolnshire home, and was presented to the livings of Sempringham and Tirington, which were churches in his father's gift. Shortly afterwards he betook himself to the court of Robert Bloet, Bishop of Lincoln, where he became a clerk in the episcopal household. Robert was succeeded in 1123 by Alexander, who retained Gilbert in his service ordaining him deacon and priest much against his will. The revenues of Sempringham had to suffice for his maintenance in the court of the bishop; those of Tirington he devoted to the poor. Offered the archdeaconry of Lincoln, he refused, saying that he knew no surer way to perdition. In 1131 he returned to Sempringham and, his father being dead, became lord of the manor and lands. It was in this year that he founded the Gilbertine Order, which he was the first to call "Master", and constructed at Sempringham, with the help of Alexander, a dwelling and cloister for his nuns, at the north of the church of St. Andrew.

His life henceforth became one of extraordinary austerity, its strictness not diminishing as he grew older, though the activity and fatigue caused by the government of the order were considerable. In 1147 he travelled to Cîteaux, in Burgundy, where he met Eugene III, St Bernard, and St. Malachy, Archbishop of Armagh. The pope expressed regret at not having known of him some years previously when choosing a successor to the deposed Archbishop of York. In 1165 he was summoned before Henry II's justices at Westminster and was charged with having sent help to the exiled St. Thomas a Becket. To clear himself he was invited to take an oath that he had not done so. He refused, for, though as a matter of fact he had not sent help, an oath to that effect might make him appear an enemy to the archbishop. He was prepared for a sentence of exile, when letters came from the king in Normandy, ordering the judges to await his return. In 1170, when Gilbert was already a very old man, some of his lay-brothers revolted and spread serious calumnies against him. After some years of fierce controversy on the subject, in which Henry II took his part, Alexander III freed him from suspicion, and confirmed the privileges granted to the order. Advancing age induced Gilbert to give up the government of his order. He appointed as his successor Roger, prior of Malton. Very infirm and almost blind, he now made his religious profession, for though he had founded an order and ruled it for many years he had never become a religious in the strict sense. Twelve years after his death, at the earnest request of Hubert Walter, Archbishop of Canterbury, he was canonized by Innocent III, and his relics were solemnly translated to an honourable place in the church at Sempringham, his shrine becoming a centre of pilgrimage. Besides the compilation of his rule, he

has left in little treatise entitled "De constructione monasteriorum". His feast is kept in the Roman calendar on 11 February.

R. URBAN BUTLER

St. Gildas

St. Gildas

Surnamed the Wise; b. about 516; d. at Houat, Brittany, 570. Sometimes he is called "Badonicus" because, as he tells us, his birth took place the year the Britons gained a famous victory over the Saxons at Mount Badon, near Bath, Somersetshire (493 or 516). The biographies of Gildas exist -- one written by an unknown Breton monk of the Abbey of Rhuys in the eleventh century, the other by Caradoc, a Welshman in the twelfth century. Both biographies contain unchronological and misleading statements, which have led some critics to reject the lives as altogether valueless. Ussher, Ware, Bale, Pits, and Colgan endeavour to adjust the discrepancies by contending that there were at least two saints named Gildas, hence their invention of such distinctive surnames as "Albanicus", "Badonicus", "Hibernicus", "Historicus", etc. The more general opinion, however, adopted by Lanigan, Leland, Healy, Stingfleet, Mabilon, Bollandus, and O'Hanlon, is that there was but one St. Gildas. The discrepancies may be accounted for by the fact that the lives were drawn up in separate countries, and several centuries after the saint existed. As to Caradoc's statement that Gildas died at Glastonbury, O'Hanlon remarks that Glastonbury appropriated more saints than Gildas (*Lives of Irish Saints*, I, 493).

Both narratives agree in several striking details, and may thus be harmonized: Gildas was born in Scotland on the banks of the Clyde (possibly at Dumbarton), of a noble British family. His father's name was Cau or Nau; his brother's, Huel or Cuil. He was educated in Wales under St. Iltut, and was a companion of St. Samson and St. Peter of Léon. Having embraced the monastic state, he passed over to Ireland, where he was advanced to the priesthood. He is said to have lived some time in Armagh, and then to have crossed to North Britain, his teaching there being confirmed by miracles. On his return to Ireland, at the invitation of King Ainmire, he strengthened the faith of many, and built monasteries and churches. The Irish annalists associate him with David and Cadoc in giving a special liturgy or Mass to the second order of Irish saints. He is said to have made a pilgrimage to Rome. On the homeward journey his love of solitude caused him to retire to the Isle of Houat, off Brittany, where he lived a life of prayer, study and austerity. His place of retreat having become known, the Bretons induced him to establish a monastery at Rhuys on the mainland whither multitudes flocked (Marius Sepet, "St. Gildas de Rhuys", Paris, s.d.). It was at Rhuys he wrote his famous epistle to the British kings. His relics were venerated there till the tenth century, when they were carried for safety into Berry. In the eighteenth century they were said to be preserved in the cathedral of Vannes. He is the patron of several churches and monasteries in Brittany and elsewhere. His feast is locally observed on 29 January; another feast, 11 May, commemorates the translation of his relics.

The authentic work of St. Gildas, "De excidio Britannae liber querulus", is now usually divided into three parts: (1) The preface; (2) A sketch of British history from the Roman invasion to his own time; (3) An epistle of severe invective addressed to five petty British kings -- Constantine, Vortipor, Cyneglas, Cynan, and Maelgwn. In the same epistle he addresses and rebukes the clergy whom he accuses of sloth and simony. His writings are clearly the work of a man of no ordinary culture and sanctity, and indicate that the author was thoroughly acquainted with the Sacred Scriptures.

Gildas is regarded as the earliest British historian and is quoted by Bede and Alcuin. Two MSS. copies of his writings are preserved in Cambridge University library.

COLUMBA EDMONDS

Alvarez Carillo Gil de Albornoz

Alvarez Carillo Gil de Albornoz

A renowned cardinal, general, and statesman; b. about 1310 at Cuenca in New Castile; d. 23 Aug., 1367, at the Castle of Bonriposo, near Viterbo, in Italy. His father, Don Garcia, was a descendant of King Alfonso V of Leon, and his mother, Teresa de Luna, belonged to the royal house of Aragon. After studying law at Toulouse, he became royal almoner, soon after Archdeacon of Calatrava, and, finally, on 13 May, 1338, Archbishop of Toledo. In 1340 he accompanied King Alfonso XI on his campaign against the Moors, saved the life of the king in the battle of Rio Salado on 30 Oct., 1340, and took part in the siege of Algeciras in 1344. As Archbishop of Toledo he held two reform synods, one at Toledo in May, 1339 (Mansi, XXV, 1143-8), the other at Alcala, in April, 1347 (Mansi, XXVI, 123-6). In March, 1350, Alfonso XI was succeeded by his son Pedro "El Cruel", whom Albornoz on various occasions severely rebuked for his cruelty and lasciviousness. As a result the king conceived a deadly hatred of him and sought his life. The archbishop fled from Spain and took refuge at the papal court in Avignon, where Clement VI received him kindly and created him Cardinal-Priest of San Clemente, 17 Dec., 1350, whereupon Albornoz resigned as Archbishop of Toledo. Two years and a half later Innocent VI entrusted him with the restoration of papal authority in the ecclesiastical territories of Italy. The Bull appointing him legate and vicar-general of the Papal States with extraordinary powers was issued on 30 June, 1353. During the sojourn of the popes at Avignon the ecclesiastical territories of Italy had, to all intents and purposes, become lost to the popes. The intrepid cardinal set out for Italy in the autumn of 1353 at the head of a small army of mercenaries. After gaining the support of the influential Archbishop Giovanni Visconti of Milan and that of Pisa, Florence, and Siena, he began his military operations against the powerful Giovanni di Vico, Prefect of Rome, Lord of Viterbo and usurper of a large tract of papal territory. The latter was defeated in the battle of Orvieto, 10 March, 1354. A treaty was concluded at Montefiascone on 5 June, whereupon Giovanni di Vico made his submission to the cardinal at Orvieto. In order to gain the support of the prefect for the future, the cardinal appointed him Governor of Corneto for twelve years. Innocent VI was displeased at the easy terms of the

treaty, but the cardinal justified his act by pointing out the necessity of prudence for his final success. The pope had already previously sent Cola di Rienzi, the former tribune of Rome, to Italy to be used by the cardinal as he saw fit. The cardinal did not trust the visionary Rienzi, and for a time kept him at Perugia; but upon the repeated request of the Romans and of Rienzi himself, he finally appointed him Senator of Rome, to replace Guido dell' Isola who showed himself powerless against the intrigues of the Roman nobility. On 1 Aug., 1354, Rienzi entered Rome and was hailed by the people as a liberator. Soon, however, his cruelty, his oppressive taxes, and his costly revelries made him hated, and during a popular tumult on 8 Oct., 1354, he fell a victim to the fury of the mob. After the fall of Rienzi, the cardinal restored order in Rome.

The submission of Giovanni di Vico resulted in the return of the Papal States (in their narrow sense) and the Duchy of Spoleto to papal authority. Albornoz now turned his attention to the restoration of the March of Ancona and the Romagna. After gaining to his side Gentile da Mogliano of Fermo and Ridolfo da Varano of Camerino, he began military operations against the two powerful Malatestas of Rimini. The Malatestas allied themselves with their enemy, Francesco degli Ordelaffi, who had usurped a large part of the Romagna. They also won over the faithless Gentile da Mogliano. Ridolfo da Varano, to whom the cardinal had given the supreme command of the papal army, gained a signal victory over Galeotto de' Malatesta near Paterno, and on 2 June, 1355, a treaty was concluded with the Malatestas, which was approved by Innocent VI on 20 June. Henceforth the Malatestas were faithful allies of the papal forces. Their submission was soon followed by that of Montefeltro, which brought the districts of Urbino and Cagli under the power of the cardinal. Shortly after, the cities of Sinigaglia and Ancona, and the two brothers Bernardino and Guido da Polenta, Lords of Ravenna and Cervia, submitted to the cardinal. Towards the end of 1355 Albornoz was appointed Bishop of Sabina. Giovanni and Riniero de' Manfredi, of Faenza, and Francesco degli Ordelaffi, of the Romagna, stubbornly refused to submit. In 1356 a crusade was preached against them by order of the pope. The Manfredi surrendered Faenza to Albornoz, 10 Nov., 1356, but Ordelaffi and his wife, the warlike Marzia, were still unconquered. The cardinal had repeatedly asked Innocent VI to be recalled to Avignon. Now that all the usurpers of the Papal States with the exception of Ordelaffi had been subdued, the pope granted his request and sent Androin de la Roche, Abbot of Cluny, to replace him in Italy. Before returning to Avignon, the cardinal held a meeting of the vicars of the papal territory on 29 April, 1357, and the two following days. At this meeting he published his famous Constitutions for the Papal States, "*Constitutiones Sanctæ Matris Ecclesiæ*", generally known as the "Egidian Constitutions". When he made known to the assembled vicars his intention to return to Avignon, they all urged him to remain, at least till September. He reluctantly consented and at once began military operations against Ordelaffi. On 21 June he took Cesena, and Bertinoro fell into his hands on 25 July. When the cardinal departed for Avignon in September, Ordelaffi was still master of Forlì and a few other strongholds of the Romagna. On 23 October the cardinal arrived at Avignon, was received with high honours by the pope, and hailed as "*Pater Ecclesiæ*".

Albornoz remained only a short time at Avignon. His successor in Italy, the Abbot of Cluny, lacked the military training to contend successfully with the skilled and valiant Ordelaffi. Moreover, the intrigues of Giovanni di Vico in the Papal States and fresh disturbances in Rome required the presence of Albornoz in Italy. The pope ordered him to return thither in December, 1358. He at once began operations against Ordelaffi, whose endeavours to buy the Condottiere Lando and his Grand Company into his service he frustrated by a contract with Lando. Ordelaffi was finally compelled to surrender, and on 4 July, 1359, the cardinal took possession of Forlì. He allowed Ordelaffi to rule as papal vicar over Forlimpopoli and Castrocaro. In Rome, during the cardinal's absence, the people had established the *septemviri* to rule jointly with the senator. Deeming it imprudent to go against the will of the people, he consented to the new arrangement, but reserved the appointment of the senator to the pope. With the exception of Bologna, the entire pontifical territory now again acknowledged the sovereignty of the pope. Giovanni d'Ollegio, who had possession of Bologna, was engaged in a war with Bernabò Visconti of Milan, who attempted to become master of Bologna. Unable to contend with the powerful Bernabò, Giovanni d'Ollegio surrendered Bologna to the cardinal, who tried in vain to arrive at an amicable arrangement with Bernabò. Meanwhile Innocent VI had died (12 Sept., 1362). Albornoz refused the tiara which was offered him, and Urban V was elected pope. Under him Albornoz continued his military operations against Bernabò, whose stubborn resistance was the principal obstacle to the crusade which Urban V intended to undertake against the Turks. When all other attempts failed, the pope published a crusade against Bernabò in the spring of 1363. In April the cardinal gained a victory at Salaruolo, near Modena, and the complete subjection of this stubborn tyrant was now only a question of time. But the idea of a crusade against the Turks had so completely taken possession of the pope that on 13 March, 1364, a hurried peace was concluded, the conditions of which were extremely favourable to Bernabò, who received 500,000 gold florins for his surrender of the city and principality of Bologna.

The cardinal had now completed the difficult task that had been entrusted to him by Innocent VI. He had again subjected the whole pontifical territory to the papal authority and thereby made it possible for the pope to return to Rome. But he did not receive the gratitude which he had so well earned. Urban V gave credence to the cardinal's enemies who accused him of having misappropriated papal moneys. In consequence the management of the temporal affairs of the Romagna was taken from Albornoz and given to the Bishop of Ravenna. Hereupon the cardinal asked to be recalled from Italy and addressed a letter to the pope in which he gave an account of his management. The pope discovered his mistake and in his answer gave due credit for the inestimable service which Albornoz had performed for the papacy. In 1367 Urban V returned to Rome; Albornoz received him at Viterbo, but died before the pope came to Rome. In accordance with his wish he was buried in the church of St. Francis at Assisi, but four years later his remains were transferred to Toledo. His Constitutions for the Papal States were among the earliest books printed in Italy (Jesi, 1473); they remained in force until 1816. He is also the author of a compilation of all the documents relating to the subjection of the March of Ancona. They are preserved in the papal archives under

the title "Codex legationis Cardinalis Egidii Albornotii". In his will (29 Sept., 1364) he provided for the foundation of the Spanish College of St. Clement at Bologna (Collegium Albornotianum) with 24 Spanish students and 2 chaplains.

Rashdall (*Hist. of Universities*, Oxford, 1895, I, 200) says that it was the first Continental college "on a scale at all approaching that with which we are familiar in the English Universities", and was the model of many others in Italy and Spain. It still flourishes upon its ancient site, in sumptuously adorned sixteenth-century buildings, under control of the Spanish Government, which sends thither candidates for the diplomatic service who have the B.A. degree of a Spanish university.

WURM, *Cardinal Albornoz, der zweite Begründer des Kirchenstaats* (Paderborn, 1892); CHRISTOPHE, *Hist. de la papauté pendant le XIVe siècle* (Paris, 1853), II; SALVI, *Il Cardinale Egidio Albornoz e gli archivi di Sanginesio, documenti originali di sua legazione* (Camerino, 1890); MURATORI, *Annali d'Italia* (Venice, 1823), XIX; WERUNSKY, *Italienische Politik Papst Innocenz' VI. und König Karls IV.* (Vienna, 1878); SEPULVEDA, *De vitâ, et rebus gestis Ægidii Albornotii Carilli S. R. E. Cardinalis libri tres* (Rome, 1521), Sp. tr. by VELA (Toledo, 1566), and DOCAMPO (Bologna, 1612); It. tr. by STEPHANO (Bologna, 1590).

MICHAEL OTT

St. Giles

St. Giles

(Latin Ægidius.)

An Abbot, said to have been born of illustrious Athenian parentage about the middle of the seventh century. Early in life he devoted himself exclusively to spiritual things, but, finding his noble birth and high repute for sanctity in his native land an obstacle to his perfection, he passed over to Gaul, where he established himself first in a wilderness near the mouth of the Rhone and later by the River Gard. But here again the fame of his sanctity drew multitudes to him, so he withdrew to a dense forest near Nimes, where in the greatest solitude he spent many years, his sole companion being a hind. This last retreat was finally discovered by the king's hunters, who had pursued the hind to its place of refuge. The king [who according to the legend was Wamba (or Flavius?), King of the Visigoths, but who must have been a Frank, since the Franks had expelled the Visigoths from the neighbourhood of Nimes almost a century and a half earlier] conceived a high esteem for solitary, and would have heaped every honour upon him; but the humility of the saint was proof against all temptations. He consented, however, to receive thenceforth some disciples, and built a monastery in his valley, which he placed under the rule of St. Benedict. Here he died in the early part of the eighth century, with the highest repute for sanctity and miracles.

His cult spread rapidly far and wide throughout Europe in the Middle Ages, as is witnessed by the numberless churches and monasteries dedicated to him in France, Germany, Poland, Hungary, and the British Isles; by the numerous MSS. in prose and verse commemorating his virtues and miracles; and especially by the vast concourse of pilgrims who from all Europe flocked to his

shrine. In 1562 the relics of the saint were secretly transferred to Toulouse to save them from the hideous excesses of the Huguenots who were then ravaging France, and the pilgrimage in consequence declined. With the restoration of a great part of the relics to the church of St. Giles in 1862, and the discovery of his former tomb there in 1865, the pilgrimages have recommenced. Besides the city of St-Gilles, which sprang up around the abbey, nineteen other cities bear his name, St-Gilles, Toulouse, and a multitude of French cities, Antwerp, Bridges, and Tournai in Belgium, Cologne and Bamberg, in Germany, Prague and Gran in Austria-Hungary, Rome and Bologna in Italy, possess celebrated relics of St. Giles. In medieval art he is a frequent subject, being always depicted with his symbol, the hind. His feast is kept on 1 September. On this day there are also commemorated another St. Giles, an Italian hermit of the tenth century (*Acta SS.*, XLI, 305), and a Blessed Giles, d. about 1203, a Cistercian abbot of Castaneda in the Diocese of Astorga, Spain (*op. cit.* XLI, 308).

JOHN F.X. MURPHY

Eliza Maria Gillespie

Eliza Maria Gillespie

(In religion Mother Mary of St. Angela).

Born in Washington county, Pennsylvania, 21 February, 1824; died at St. Mary's convent, Notre Dame, Indiana, 4 March, 1887. She was the daughter of John Purcell Gillespie and Mary Madeleine Miers, the latter a convert to the Church. After her husband's death Mrs. Gillespie in 1838 went with her three children to her former home, Lancaster, Ohio. Eliza Maria first attended the school of the Dominican sisters at Somerset, Ohio, and completed her studies at the Visitation Convent at Georgetown, D.C., in 1844. Her kinsman, Thomas Ewing of Ohio, was then eminent in public life, and this fact, joined to her beauty and accomplishments, made her at once a prominent figure in the social life of Washington and of Ohio. Her sympathy was roused by the sufferings of the Irish people during the famine, and she and her cousin, Eleanor Ewing, by their joint efforts, collected a large sum of money for their relief. In 1853 she felt the call to the religious life and determined to enter the order of the Sisters of Mercy. She went to Notre Dame, Indiana, to bid farewell to her brother who was there engaged in his studies for the priesthood, and here she met Rev. Edward Sorin, provincial of the Congregation of the Holy Cross in the United States, through whose influence she was led to cast her lot with this small and struggling community. She received the religious habit in 1853, taking the name of Sister Mary of St. Angela. She was then sent to France, where she made her novitiate at the convent of the Sisters of Bon Secours, at Caen, making her religious profession by special dispensation 8 December, 1853, at the hands of Very Rev. Father Moreau, the founder of the congregation.

In January, 1850, Sister Angela returned to America and was made superior of St. Mary's Academy at Bertrand, Michigan. On 15 August, 1855, she transferred the academy to its present location near Notre Dame, Indiana, and procured for it a charter from the Indiana legislature. When

the Civil War broke out Mother Angela organized a corps of the Sisters of the Holy Cross to care for the sick and wounded soldiers. She established hospitals, both temporary and permanent, and, when generals failed to secure needed aid for the sick and wounded, she made flying trips to Washington on their behalf. Her headquarters were at Cairo, Illinois, in ill-provided buildings. The close of the war left her physically enfeebled, but she returned to St. Mary's and resumed her educational work, and compiled two series of readers for use in Catholic schools, the "Metropolitan" and "Excelsior".

In 1869, at the advice of Bishop Luers of Fort Wayne, the Sisters of the Holy Cross in the United States determined on a separation from the members of the congregation in France. This was effected with Mother Angela as superior of the new community. Under her rule thirty-five institutions were founded throughout the United States, among them St. Cecilia's and Holy Cross Academies, Washington, D. C.; St. Mary's Academy, Salt Lake City, Utah; St. Mary's Academy, Austin, Texas; St. Catherine's Normal Institute, Baltimore, Maryland; and Hawke's Hospital, Mt. Carmel, Columbus, Ohio. Mother Angela was the moving spirit in the establishment in 1865 of the "Ave Maria", to whose pages she made many contributions. On laying down the burdens of her superiorship, Mother Angela was chosen mistress of novices at St. Mary's, and in September, 1886, she was again made the head of St. Mary's Academy, at which post she remained until her death.

JOHN G. EWING

Neal Henry Gillespie

Neal Henry Gillespie

Brother of the foregoing; b. in Washington county, Pa., 19 January 1831; d. at St. Mary's, Notre Dame, Indiana, 12 November, 1874. He was one of the first students of the University of Notre Dame, Indiana, and in 1849 received the first degree conferred by that institution. On 1 September, 1851, he entered the novitiate of the Congregation of the Holy Cross at Notre Dame, Ind., made his religious profession 15 August, 1853, and was ordained priest 29 June, 1856, at Rome, where he had been sent to complete his theological studies. Returning to America, he filled the post of vice-president and director of studies at Notre Dame (1856-59), and then was appointed president of the College of St. Mary of the Lake, Chicago, Illinois. In 1863 he was called to the mother-house of the congregation at Le Mans, France, where he remained until 1866. He then returned to Notre Dame and assumed the editorship of the "Ave Maria", which position he filled until his death. In addition to his editorial labours, he was a frequent contributor to its pages, as well as to many other Catholic periodicals.

JOHN G. EWING

James Gillis

James Gillis

Scottish bishop; b. at Montreal, Canada, 7 April, 1802; d. at Edinburgh, 24 February 1864. He was the only son of a native of Banffshire, who had emigrated to Canada and married there. Educated in the Sulpician college at Montreal, where he acquired a perfect knowledge of French, he came to Scotland in 1816, and next year entered the seminary at Aquhorties, studying afterwards at St Nicholas's College in Paris, and at Issy. He was ordained priest on 9 June, 1827, and was stationed at Edinburgh, where he was preaching soon attracted attention. He visited France in 1829 to collect money for his church, and in 1831 to raise funds for the foundation of an Ursuline convent--the first religious house established in Scotland since the sixteenth century--which was opened in 1835.

In July, 1838, he was consecrated at Edinburgh as Bishop of Limyra and Coadjutor of the Eastern District. A subsequent visit to Paris, where he was much esteemed, resulted in the acquisition of what remained of the library of the Scotch College, and in the promise of an annual grant to Scotland from the Society for the Propagation of the Faith. In 1852 Bishop Gillis succeeded Bishop Carruthers as Vicar Apostolic of the Eastern District. During his twelve years tenure of this office he did much for the advancement of Catholicism, founding many new missions, introducing several religious orders (including Jesuits, Oblates of Mary, and Sisters of Mary) into his district, and receiving into the Church many converts, among them Viscount and Viscountess Feilding, afterwards Earl and Countess of Denbigh. In 1857 he preached in Orléans cathedral an eloquent panegyric, in French, of Joan of Arc (published in London in the same year), receiving in return from the Mayor of Orléans the heart of King Henry II of England, who had died at Chinon, on the Loire, in 1189. Bishop Gillis was buried in St. Margaret's convent, his own foundation, on 26 February, 1864. The nuns of St. Margaret's are in possession of his library.

D.O. HUNTER-BLAIR

Patrick Sarsfield Gilmore

Patrick Sarsfield Gilmore

A musician, born at Ballygar Galway, Ireland, 25 Dec., 1829; died at St. Louis, 24 Sept., 1892; a kinsman of Daniel O'Connell. In 1848 he arrived at Boston, Mass., becoming leader successively of the Suffolk, Boston Brigade, and Salem bands. In 1858 he founded "Gilmore's Band" in later years famous as the leading military and concert-band of America. When war was declared, Mr. Gilmore and band enlisted with the 24th Mass. Volunteers, accompanying General Burnside to South Carolina. After the temporary discharge of bands from the field, Governor Andrews placed their reorganization in Mr. Gilmore's hands, and General Banks created him bandmaster general. For patriotic and musical services at the inauguration of Governor Hahn of Louisiana, one hundred prominent representatives of the army, navy, and New Orleans civic government, tendered Mr. Gilmore a complementary banquet at the historic old St. Charles Hotel, representing him with an inscribed silver goblet containing five hundred gold pieces, and a letter from Governor Hahn to President Lincoln, introducing "P.S. Gilmore" as "a musician of the highest abilities and a true

gentleman, who had rendered important aid to the nation's cause by his faithful and patriotic services".

In celebration of the establishment of national peace, Mr. Gilmore organized and conducted two of the most gigantic popular festivals known in musical history -- the National and International Peace Jubilees, held at Boston in 1869 and 1872, in which thirty thousand singers, two thousand instrumentalists, the most famous composers, vocal and instrumental artists of the day, and the best military bands of Europe participated. Coliseums were erected for the occasions, holding respectively sixty thousand and one hundred and twenty thousand persons. In recognition of these achievements, Mr. Gilmore was presented by the citizens of Boston with gold medals and the sum of fifty thousand dollars. In 1873 he went to New York, as bandmaster of the 22nd Regiment. In 1878, during a concert-tour of the principal cities of Europe, he received a medal from the French government. In 1892, "Gilmore's Band", numbering one hundred men, were celebrating by a great national festival-tour the four-hundredth anniversary of America's discovery by Columbus, when his death occurred suddenly, consoled by the last Sacraments of the Church. Both civic and military honours were paid him in death, and memorial services were held over the entire country. Fourteen years after his death, on 15 May, 1906, under the auspices of an illustrious committee and directorship, a great Gilmore Memorial Concert was given in Madison Square Garden (originally Gilmore's Garden) and an audience of ten thousand honoured his memory. P.S. Gilmore won his title of "Father of Military Bands", by his elevation of the brass band to a dignified musical status. He was the first to mellow the brasses by the introduction of reeds, to claim a place for the band on the concert-platform, and to popularize classical music by adapting orchestral arrangements for reed-band intercession. From the quick-steps, marches, and dances characterizing band-music at its start, his unique personal effort attained in the single programme of his representative last concert, to the great works of the tone-masters, Bach, Schumann, Handel, Rubenstein, Wagner, and Liszt. He was at once a popular entertainer and an educator of the people. Many songs (words and music), marches, etc. were composed by Mr. Gilmore, who also wrote "The History of the Boston Peace Jubilee".

MARY G. CARTER

Blessed Gil of Santarem

Blessed Gil of Santarem

A Portuguese Dominican: b. at Vaozela, diocese of Viseu, about 1185; d. at Santarem, 14 May, 1265. His father, Rodrigo Pelayo Valladaris, was governor of Coimbra and councillor of Sancho I. It was the wish of his parents that Gil should enter the ecclesiastical state, and the king was very lavish in bestowing ecclesiastical benefices upon him. When he was still a boy, he already held prebends at Braga, Coimbra, Idanha, and Santarem. Gil, however, held no desire to be an ecclesiastic; his ambition was to become a famous physician. After devoting some time to the study of philosophy and medicine at Coimbra he set out for Paris, with the intention of perfecting himself in the science of medicine and obtaining the doctor's degree. If we may give credence to his unknown

contemporaneous biographer, he was accosted on his journey by a courteous stranger who promised to teach the art of magic at Toledo. As payment, so the legend runs, the stranger required that Gil should make over his soul to the devil and sign the compact with his blood. Gil obeyed and after devoting himself seven years to the study of magic under the direction of Satan, went to Paris, easily obtained the degree of doctor of medicine, and performed many wonderful cures. One night while he was locked up in his library a gigantic knight, armed head to foot, appeared to him and, with his sword drawn, demanded that Gil should change his wicked life. The same spectre appeared a second time, and threatened to kill Gil if he would not reform. Gil now repented of his evil ways, burnt his books of magic and returned to Portugal, where he took the habit of St. Dominic in the newly-erected monastery at Palencia, about 1221. Shortly after, his superiors sent him to the Dominican house at Scallabis, the present Santarem. Here he led a life of prayer and penance, and for seven years his mind was tormented by the thought of the compact which was still in the hands of Satan. Finally, his biographer narrates, the devil was compelled to surrender the compact and place it before the altar of the Blessed Virgin. Gil returned to Paris to study theology and on his return to Portugal became famous for his piety and learning. He was twice elected provincial of his order in Spain. Benedict XIV ratified his cult on 9 March, 1748.

MICHAEL OTT

Gindarus

Gindarus

A titular see of Syria Prima, in the Patriarchate of Antioch. Pliny (Hist. nat. V, 81) locates it in Cyrrhestica, as does Strabo (XVI, 2, 8) who says it was a celebrated haunt of brigands. Ptolemy (V, xiv) speaks of it as being in the region of Seleucia, and Stephen of Byzantium (s.v.) makes it a small town situated near Antioch. The first and only known Bishop of Gindarus was Peter, who assisted at the Council of Nicæa in 325 (Gelzer, *Patrum Nicænorum nomina*, p. 61) and at that of Antioch in 341 (Lequien, *Oriens Christ.*, II, 789). Yet the episcopal see is not mentioned in the sixth-century "Notitia" of Antioch (*Echos d' Orient*, 1907, 144), nor in that of the tenth century (*op. cit.*, 1907, 94); it is also missing from the list of cities of Syria given by the geographer Hierocles and George of Cyprus. It is probable that it was never an important town, and that its see, of early creation, soon disappeared. Under the Emperor Theodosius the Great, Gindarus was only a small village which he fortified (P.G., XCVII, 517), and in the time of Justinian I, when the relics of the martyr, St. Marinus, afterwards transferred to Antioch, were found there, Gindarus possessed only a *periodeutes* and not a bishop. It is now Djenderis, on the Afrin-Sou, in the vilayet and the sanjak of Aleppo, not far from Kal'at Semaan, the famous monastery of St. Simon Stylites.

S. VAILHÉ

Jacques-Marie-Achille Ginoulhiac

Jacques-Marie-Achille Ginoulhiac

A French bishop; b. at Montpellier (department of Herault) 3 Dec., 1806; d. there 17 Nov., 1875. Immediately after his ordination to the priesthood (1830) he was appointed professor in the seminary at Montpellier and later (1839) vicar-general at Aix. Consecrated Bishop of Grenoble in 1853, he was appointed the following year assistant to the pontifical throne, and knight of the Legion of Honour. At the Council of the Vatican, Ginoulhiac spoke publicly on philosophical errors (30 Dec., 1869), on the rule of faith (22 March and 1 April, 1870), and on the pope's infallibility (23 May and 28 June, 1870). On this latter point he sided with the minority and left Rome before the session of 18 July, in which the doctrine was defined. In 1870 he was transferred from Grenoble to the archiepiscopal See of Lyons. Fearing the Prussian invasion, the inhabitants of Lyons vowed to erect a basilica at Fourvieres if the city were spared. The written pledge, signed by thousands of inhabitants, was placed on the altar of the Blessed Virgin by the archbishop himself. In 1873, in fulfillment of this promise, he laid the corner-stone of the magnificent edifice which to-day stands on the hill of Fourvières. While at Grenoble, Bishop Ginoulhiac wrote and published several letters and pastorals, especially on the condition of the Pontifical States (1860), on Renan's "Life of Jesus" (1863) and on the accusations of the press against the Encyclical of 8 Dec., 1864, and the Syllabus (1865). His works are "Histoire du dogme catholique pendant les trois premiers siècles de l' Eglise et jusqu'au concile de Nicée" (Paris, 1852, 1865); "Les épîtres pastorales, ou reflexions dogmatiques et morales sur les epîtres de Saint Paul à Timothée et à Tite" (Paris, 1866); "Le concile oecuménique" (Paris, 1869); "Le sermon sur la montagne" (Lyons, 1872); "Les origines du christianisme", a posthumous work published by Canon Servonnet (Paris, 1878).

C.A. DUBRAY

Vincenzo Gioberti

Vincenzo Gioberti

An Italian statesman and philosopher; b. at Turin, 5 April, 1801; d. at Paris, 26 October, 1852. When still very young he lost his parents and at the age of sixteen he was admitted among the clerics of the court, he studied theology at the Turin University, and obtained there the doctorate; he was ordained priest in 1825 and appointed court chaplain and professor in the theological college. In 1828 he made a journey through Lombardy, and became friendly with Manzoni and other great men. He caused Rosmini's philosophy to be known in Piedmont, though at a later date he became its opponent. At this time under the pen-name "Demofilo" he was writing articles in Mazzini's "Giovane Italia", printed at Marseilles. In 1833 he resigned his court chaplaincy, and soon after was arrested on suspicion of political intrigues. Nothing could be proved against him, but he was

expelled from the country and went to Paris, where he made many friends. He now ceased contributing to the "Giovane Italia" and Cousin offered him a chair of philosophy on condition that he would not oppose Cousin's own philosophical system. Though financially in very straitened circumstances, Gioberti refused the offer. He then accepted an offer to teach philosophy in a private school at Brussels conducted by an Italian. During his stay in Brussels most of his works were published.

In 1841, on the appearance of his book "Del Buono", the Grand Duke of Tuscany offered him a chair in the Pisa University, but King Charles Albert objected, and the offer came to nothing. His fame in Italy dates from 1843 when he published his "Del primato morale e civile degli Italiani", which he dedicated to Silvio Pellico. Starting with the greatness of ancient Rome he traced history down through the splendours of the papacy, and recounting all that science and art owed to the genius of Italy, he declared that the Italian people were a model for all nations, and that their then insignificance was the result of their weakness politically, to remedy which he proposed a confederation of all the states of Italy with the pope as their head. It is curious that in this work he is very severe on the French, yet he has not a word to say about the Austrians who then occupied Lombardy and the Venetian territory. Pope and prince received the work very coldly, and a few Jesuits wrote against it. In 1845 he was once more in Paris and published the "Prolegomeni al Primato", in which he attacked the Jesuits; and in 1847 he printed "II Gesuita Moderno", a large sized pamphlet, full of vulgar invective, in 1848 this was followed by an "Apologia del Gesuita Moderno". These works were answered in 1849 by the Jesuit Father Curci's "Divinazione sulle tre ultime opere di V. Gioberti". Early in 1848, when Italy was burning with hopes of liberty and independence, Gioberti returned to his native land and was joyously received by his fellow-townsmen. Soon afterwards he went to Milan to calm the over-impetuous and to oppose Mazzini; from there he visited King Charles Albert at Sommacampagna. He received a mission for Rome, and on his arrival his reception was so enthusiastic that the pope became alarmed. On his return from Rome the king wanted to appoint him senator of the kingdom, but Gioberti preferred to be elected as deputy; he became president of the Chamber and, in July, he joined the Collegno cabinet. After the unfortunate Salasco armistice he broke up the cabinet, declared for a continuation of the war against Austria, and bitterly assailed the Revel ministry. He next founded a society to propagate the idea of a federated Italy, with the King of Piedmont and not the pope at its head. In December he became president of the ministry (with Rattazzi and other democrats) whereas the new cabinet was all for war, Gioberti had learned caution, and was anxious to reorganize the army. Moreover, he wanted Piedmont to re-establish in their estates the pope and the Grand Duke of Tuscany, who had been driven out by the revolution; so he quarrelled with his fellow-ministers and resigned on 20 February, 1849, but in the newspapers he carried on the quarrel. After the disastrous battle of Novara (23 March, 1849), Victor Emmanuel II offered him a portfolio; he agreed to join the ministry but would not take a portfolio. He was then sent as plenipotentiary minister to Paris to solicit French aid in Italy. He was unsuccessful, and finding he was out of favour at Turin he resigned his post, but remained in Paris, where, after three years passed in study, he died. In 1851

he published his "Rinnovamento civile d' Italia" which contains an impassioned criticism of political events from 1848 onwards. This last book, while it clings to the idea of a federated Italy, shows that Gioberti was a republican and that he hoped the loss of the papal temporal power would bring about the religious renovation of Italy. Thereupon all his works were put on the Index. His closing years were embittered by seeing his hopes shattered, and this bitterness finds an echo in his works.

Gioberti's philosophy is a mixture of pantheistic ontologism with Platonism and traditionalism. The ontologism of Malebranche, as modified by Cardinal Gerdil, had been taught him at the Turin University. His first principle is that the *primum cognitum* of the human intellect is idea or being; i.e. absolute and eternal truth as far as "human intuition" can grasp it is God Himself. "Being" he calls the *primum philosophicum*, because in the mental order it is the *primum psychologicum*, and in the order of existing things it is the *primum ontologicum*; it is the common foundation of all reality and all knowledge. Intuition of being embraces the judgment, "being exists or is necessarily", which is not the result of any mental process, but is the spontaneous effect produced when being presents itself to the mind. But in being we merely see its relative attributes, not its essence, we remains unknown (the superintelligible) and is the object of revealed religion. Among these relative attributes is comprised the creative act, by intuition of which, in being, we arrive at a knowledge of its results, namely, contingent things, and thus establish the *formula idealis*, "being creates existing things", *ens creat existentias*. This judgment is synthetical *a priori*, not in the Kantian sense, but by "objective synthesis" resulting from the revelation of being. However, intuition of the idea remains too indeterminate, and hence the necessity of speech which so circumscribes the idea that we can contemplate or re-think it (this is pure traditionalism).

His theory of creation is the most important part of his system and requires a longer explanation. He calls the idea also the *Esse Universale*, which is common to and identical in all things, and which is nothing more or less than their possibility itself. Before the creation idea (being, God) is *universalis* and abstract. It becomes concrete by its own act, individuating itself, making itself finite, and multiplying itself. "To create is therefore to individuate". In this process the intelligible that was absolute becomes relative; there are two cycles to the process, one descending, inasmuch as the idea infringes on the concrete (*mimesis*), and other ascending, it reaches out more and more towards the intelligible absolute (*methexis*), and participates of the Divine Being (this is pure Platonism). Thus he arrives at the conclusion that in the intellectual order the ideas of created things are so many steps in the scale of the Divine Essence. And as regards creation, he adopts the saying of Hegel that "logic . . . is nothing but creation". From all this, Gioberti's pantheism is evident. No doubt he is always asserting that God was distinct from His creatures; but the sincerity of these statements is not beyond question. As a matter of fact, after his separation from the Mazzinians they published a letter of his to the "Giovane Italia" in which he expressly stated that pantheism is the only true and sound philosophy". His theory of mimesis and methexis is also used to prove the immortality of the soul. Then again the idea of being is made the foundation of moral obligation as a binding force, and, inasmuch as it approves or disapproves, we have the concepts of merit and demerit. The aim of the moral law is to bring to pass the perfect union of existences and being, in

other words to complete the methexic cycle. Man endowed with freedom can approach or keep away from being; hence the origin of evil; and when such aversion from being is endless it becomes necessary and immanent. Later, however, recognizing that this would be an exception to the "logical" law of methexis, he denied this eternal immanence of evil.

It is noteworthy that, in politics, he denied the sovereignty of the people. In Gioberti's theory the object of religion is the supernatural and the superintelligible, which meant according to him the essence of being revealed by means of speech. On the other hand he treats at length of the harmony between religion and science or civilization. But as a rule all his vague theorizing was tinged with rationalism, and even in his latest works he writes: "science and civilization must go on throwing light on what is supernatural and superintelligible in religion", and again, "modern rationalism is destined to bring about the union of orthodoxy and science". His philosophical works are: "Teorica del sovranaturale" (1838; 2nd ed., with replies to critics, 1850); "Introduzione allo studio della filosofia" (1840); "Lettere sugli errori politico-religiosi di Lamennais" (1840); "Del Bello" and "Del Buono" (1841); "Errori filosofici di Antonio Rosmini." (1842). Mention should also be made of his posthumous works: "Riforma Cattolica"; "Filosofia della Rivelazione"; "Protologia". His complete works in thirty-five volumes were published at Naples, in 1877.

U. BENIGNI

Fra Giovanni Giocondo

Fra Giovanni Giocondo

An Italian architect, antiquary, archaeologist, and classical scholar, b. in Verona, c. 1445; d. in Venice (?), c. 1525. He became a Dominican at the age of eighteen and was one of the many of that order who became pioneers of the Renaissance, afterwards, however, he entered the Franciscan Order. Giocondo began his career as a teacher of Latin and Greek in Verona where Scaliger was one of his pupils. The young priest, a learned archaeologist and a superb draughtsman, early visited Rome, sketched its ancient buildings, wrote the story of its great monuments, and completed and explained many defaced inscriptions. He stimulated the revival of classical learning by making collections of ancient MSS., one of which, completed in 1492, he presented to Lorenzo de' Medici. Giocondo soon returned to his native town where he built bridges and planned fortifications for Treviso, acting as architect engineer, and even head-builder during the construction. The most beautiful building in Verona and one of the most perfect in all Europe, the Palazzo del Consiglio, the decorations of whose loggia are famous; was designed by Giocondo at the request of Emperor Maximilian, and de Quincey attributes also the church of Santa Maria della Scala to him. Venice then summoned him with other celebrated architects to discuss the protection of the lagoons against the rivers, Giocondo's plan of altering the Brenta's bed and leading this river to the sea was accepted by the Venetians, and the undertaking was a complete success.

Between 1496 and 1499 Giocondo was invited to France by the king, and made royal architect. There he built two bridges of remarkable beauty, the Pont Notre-Dame and the Petit Pont, and

designed the palace of the *Chambre des Comptes*, the Golden Room of the Parliament, and the Chateau of Gaillon (Normandy), one facade of which has been removed to the *Ecole des Beaux Arts* to serve as a model for students of architecture. In France Giocondo discovered a manuscript of Pliny the Younger, containing his correspondence with Trajan. He published this in Paris dedicating the work to Louis XII. Between 1506 and 1508 he returned to Italy, wrote four dissertations on the waters and waterways of Venice and constructed the splendid *Fondaco dei Tedeschi* (1508), decorated by Titian and Giorgione. When in 1513 the Rialto and its environs were burned, Giocondo was one who presented plans for a new bridge and surrounding structures, but he left Venice for Rome when the designs of a rival (Michelangelo?) were chosen by the republic for which he had done such monumental work. The Vatican welcomed him (1514) and on Bramante's death he superintended (with Raphael and son Gallo) the erection of St. Peter's; but it was Fra Giocondo alone who improved and strengthened the foundations of the great basilica and the piers inadequately supporting its dome.

Two Italian editions of Pliny's "Epistles" were published by Giocondo, one printed in Bologna (1498) and one from the press of Aldus Manutius (1608). He edited Caesar's "Commentaries" and made the first design (drawing) of Caesar's bridge across the Rhine. He was among the first to produce a correct edition of Vitruvius, printed at Venice in 1511, illustrated with figures and dedicated to Pope Julius II; and published the works of Julius Obsequens, Aurelius Victor, and Cato's "De re rusticâ". In addition to his classical and mathematical knowledge he was a master of scholastic theology. His last work was, probably, the rebuilding of the bridge of Verona (1521), for in a letter to Giuliano de' Medici, in 1513, Giocondo then called himself "an old man".

LEIGH HUNT

Tommaso Giordani

Tommaso Giordani

A composer, b. at Naples in 1738; d. at Dublin, Ireland, February 1806. The family came to London in 1752, and settled in Dublin in 1764. Tommaso was one of the leading musicians in the Irish capital from 1764 to 1781, when he returned to London; after two years, he came back to Dublin, where he spent the remainder of his life. He was concerned in an opera-house and in a music-shop, neither of which was financially successful. Among his compositions are a number of operas, an oratorio "Isaac" (1767), and a vast quantity of overtures, sonatas, concertos, quartets, songs, etc. He was organist of the pro-cathedral from 1784 to 1798, and conducted a *Te Deum* of his own at the celebration upon the recovery of King George III, 30 April, 1789. Among his pupils were Lady Morgan, Tom Cooke, and others, and it was at one of his Rotunda concerts that John Field, the inventor of the nocturne, made his debut (4 April 1792).. His last opera, "The Cottage, Festival", was produced at the Theatre Royal, Dublin, 28 Nov., 1796. His song "Caro mio ben" is still occasionally heard.

W.H. GRATTAN-FLOOD

Luca Giordano

Luca Giordano

Neapolitan painter; b. at Naples, 1632; d. in the same place, 12 Jan., 1705. He was esteemed the marvel of his age for the rapidity with which he covered with frescoes vast ceilings, domes and walls in Italy and Spain, and was known as Luca "Fa Presto" (make haste), as the demand for his work was so great that his father was continually urging him to greater dispatch, until at length he was able to work with extraordinary speed. He was undoubtedly the chief of the *Machinisti*, as the popular quick-painting decorators of Italy came to be called, and perhaps no other painter has left so many pictures. He was a pupil of Ribera, and then of Pietro da Cortona, and a constant copyist of the works of Raphael. Some of his earliest paintings were for the churches of Naples, but in 1679 he was invited to Florence, and in 1692 to Madrid, where he painted the immense ceiling and staircase of the Escorial, and an enormous number of Spain to Naples, and there he spent the last three years of his life. There are sixty of his pictures in Madrid, and about half that number in Naples, while the galleries of Dresden, Munich, Paris, Vienna, Rome, works. He executed several etchings, and is believed to have also worked in pastel.

GEORGE CHARLES WILLIAMSON

Giorgione

Giorgione

(GIORGIO BARBARELLI, ZORZO DA CASTELFRANCO)

Italian painter, b. at Castelfranco in or before 1477; d. in Venice in October or November, 1510. Little is known of his life. His very origin has been disputed, some authorities claiming his father to have been of the great Barbarelli family and his mother a peasant girl of Vedelago, while later investigators find no proof of this, call the Barbarelli tradition false, and make him the descendant of peasants from the March of Treviso. Giorgione means "big George"; Ruskin calls him "stout George"; all agree that he was a large, handsome man, of splendid and attractive presence. In Venice he studied under Giovanni Bellini, with Titian as a fellow-pupil. His great artistic talent developed rapidly, he outstripped his master, broke away from the timid and traditional style of the day, and became a great influence in art, even Titian following his teachings and imitating his colour, method, and style. To-day there is much confusion even in the great Continental galleries concerning the attribution of pictures to Titian and to Giorgione. With rare musical skill on the lute and with a fine voice, the talented youth was early admitted to the best Venetian society, and painted portraits of nearly all the great people; Caterina Cornaro, Gonzales (Gonzalvo) of Cordova, and two doges being a few of his sitters. His portraits were the first to be painted in the "modern manner", and are full of dignity, truth of characterization, simplicity, and a silvery quality unsurpassed even by Velazquez. The precocious and versatile young man was the first to paint landscapes with figures,

the first to paint genre — movable pictures in their own frames with no devotional, allegorical, or historical purpose — and the first whose colours possessed that ardent, glowing, and melting intensity which was so soon to typify the work of all the Venetian School. Giorgione was the first to discard detail and substitute breadth and boldness in the treatment of nature and architecture; and he was the first to recognize that the painter's chief aim is decorative effect. He never subordinated line and colour to architecture, nor an artistic effect to a sentimental presentation. He possessed the typical artistic temperament, and this, with his vigour and gaiety, made him the true poet-painter, a "lyrical genius" (Morelli). He is well called the "joyous herald of the Renaissance". The vigour of his chiaroscuro, the superb "relief" in his work, the "grand style", and his mastery of perspective may have come in part from a study of Leonardo da Vinci, who was in Venice when Giorgione was twenty-four years old; but no trustworthy records show that the two ever met. Giorgione painted the widest range of subjects from altar-piece to *fete-champetre*, employed few figures — usually three — in his compositions, and imitated the actual texture of draperies as none had ever done before. His method was to paint in tempera and then glaze in oil, a process contributing to great brilliance, transparency, and permanence of colour. Giorgione introduced into Venice the fashion of painting the fronts of houses in fresco (in 1507-08 he thus decorated, with Titian, the magnificent *Fondaco dei Tedeschi*); and *cassoni* (marriage-chests) and other pieces of furniture were not too humble for his magic brush. All his life was spent in Venice where his extraordinary personality started a School of Giorgione, and where his pictures, in great demand during his life-time, had a host of imitators and copyists. Very little of his work is authenticated, and only three paintings have never been called in question by any expert or critic. The first of these is the *Castelfranco* altar-piece, painted when he was twenty-seven years old for the church of his native town. Here are the Madonna and Child enthroned, with Sts. Liberale and Francis below, "one of the two most perfect pictures in existence" (Ruskin); it is full of reverie, serenity, and religious sentiment, the very landscape-background awakening devotional feelings. The other unquestioned works are the "*Adrastus and Hypsipyle*" (called for 350 years the "*Giovanelli Figures*" or the "*Stormy Landscape with Soldier and Gypsy*"), more sombre than the altar-piece but more romantic in treatment, and the "*Æneas, Evander, and Pallas*" (the "*Three Philosophers*" or the "*Chaldean Sages*"), probably completed by Sebastiano del Piombo, Giorgione's pupil. The greatest rival authorities are agreed that four other works are undoubted Giorgiones: the "*Knight of Malta*", "*Judgment of Solomon*", the "*Trial of Moses*" (all in the *Uffizi*), and "*Christ Bearing the Cross*" in Mrs. Gardner's collection (Boston, U.S.A.). Many great canvases are denied Giorgione by modern negative criticism simply because they do not quite attain the high standard of excellence arbitrarily set for this master by connoisseurs. Tradition says his death was due to grief because his lady-love proved false; probably the plague — then raging in Venice — carried him off. He was buried on the Island of *Poveglia*. Other works attributed to Giorgione are: "*The Concert*", *Pitti Gallery*, Florence; "*Venus*", *Dresden Gallery*; "*Fete Champetre*", *Louvre*; "*Madonna and Child*", *Prado*.

COOK, Giorgione (London, 1900); GRONAU, in *Gazette des Beaux-Arts* (1894); IDEM in *Repertorium fŸr Kunstwissenschaft*, Vol. XVIII, pt. IV; MORELLI, *Italian Painters*, tr. FFOULKES (London, 1892); ANONIMO, *Notes on Pictures . . . in Italy*, tr. MUSSI, ed. WILLIAMSON.

LEIGH HUNT

Giotto di Bondone

Giotto di Bondone

A Florentine painter, and founder of the Italian school of painting, b. most probably, in 1266 (not 1276), in the village of Vespignano near Florence, in the valley of the Mugello; d. at Milan, 8 Jan., 1337.

Very little is known of his early history. Vasari relates that Cimabue, rambling one day in the neighborhood of Colle, saw a young shepherd lad drawing one of his sheep on a piece of smooth slate with a pointed stone, and that Cimabue thereupon took the lad with him and instructed him. The story is a pretty bit of fancy. There is no reason for believing that Giotto was ever a shepherd. It is possible that his father was a peasant; if so, he was in easy circumstances and certainly a freeholder. A document dated 1320 styles him *vir praeclarus*; such an epithet would not be applied to a man in straitened circumstances. As a matter of fact nothing is known of Giotto until he was thirty years old. This unfortunate gap in his personal history robs us of a story which would be of intense interest as showing the growth of his genius, and reduces us to the merest conjectures. However, without in any way detracting from Giotto's pre-eminence in Italian art, it is impossible to accord him that quasi-miraculous, providential importance that Florentine nationalism soon raised to a kind of dogma in the history of art. According to Vasari he arose in a barbarous age and straightway revealed a fully developed art to a wondering world. This is not credible. The thirteenth century, the century of the great cathedrals and of the French school of carving whose numerous pupils were met with in all parts of Christendom, cannot be called a barbarous age. In Italy itself a widespread renaissance was taking place. At Naples and at Rome the admirable school of the *marmorarii* of which the Cosmati are the most illustrious, recalled to life much antique beauty of form. The mosaic-workers, with Jacopo Torriti and the artists who created the marvels of the Baptistery of Florence, likewise the painters, with Pietro Cavallini whose fresco cycles in Santa Maria in Trastevere (Rome) exhibit all Giotto's breadth of form, are satisfactory proof of an earlier renewal of artistic spirit and power. The "Rucellai Madonna" by Duccio dates from 1285. Twenty years earlier, perhaps the very year of Giotto's birth, NicolŸ Pisano had completed the pulpit in the Baptistery of Pisa. That of Siena followed in 1272. The lovely fountain at Perugia dates from 1278. Then came the works of Giovanni Pisano, whose sympathetic genius is in more than one way akin to that of Giotto. Amid this rich and wondrous development of art the young master grew up. Though he was by no means its creator, it certainly reached in him its highest expression.

As an artist Giotto is a true son of St. Francis. It is at Assisi that he is first found, in that very basilica which was the cradle of Italian painting, and which still enshrines the most perfect records

of its early history. There every master of note in the peninsula might have been seen at work. Giunta of Pisa was decorating the lower church, while Cavallini or one of his pupils was painting scenes from the Old Testament in the upper church. Cimabue was at the same time ornamenting the choir and the transept. It was doubtless in the train (*brigata*) of Cimabue that Giotto came to Assisi in 1294, and that he became acquainted with the works of the *marmorarii*, whose style so influenced his own. In 1296 Cimabue set out for Rome, whereupon Giovanni da Muro, General of the Franciscans (1296-1304), entrusted to Giotto the execution of the wonderful story of St. Francis which the painter accomplished in the famous twenty-eight scenes of the upper church. This is at once the source of Giotto's glory and the earliest example of the Italian School. In these scenes Giotto followed St. Bonaventure's life of St. Francis officially approved by the chapter of 1263 as the only official text. The first twenty-one frescoes are entirely by Giotto's hand; the remaining seven were finished from his designs by his pupils. All have suffered greatly from the humidity and from restorations. They are, nevertheless, incomparable monuments of art, and in many ways the very greatest for the history of modern painting. The intense impression created by St. Francis, the historical nearness of his truly evangelical personality, and his likeness to Jesus Christ borne out by the miracle of the *stigmata*, thenceforth influenced art to an incalculable degree. For the first time in centuries painters, until then limited to the repetition of consecrated themes, to an unvarying reproduction of hieratic patterns, were free to improvise and create. Painting was no longer an echo of tradition, but rose at once to all the dignity of invention. In the portrayal of the wonderful life-story of St. Francis, to his own age a real image of Jesus Christ, current events and the everyday life of the period were seized on and appropriated. Art no longer worked on conventional models, abstract and ideal; its models were to be the realities of nature, which the humblest intelligence is capable of appreciating. Representation of real life was to become the object of all painting. Henceforth there must always be a likeness between the painting and the object painted. The true portrait of St. Francis had to be given to the public, which must see his actions and the place where he lived, must also grasp all local peculiarities of topography, people, dress, and architecture. This principle of actuality and reality underlay the artistic revolution initiated by Giotto. Since the days of the catacombs nothing so important had occurred in the history of painting.

The germ of all this was to be found in the very earliest portrait of St. Francis, e.g. that of the "Sagro Speco" at Subiaco and in those of the lower church at Assisi and the church of Santa Maria degli Angeli, where the figure of the saint is inset between two rows of small panel-pictures descriptive of events in his life. To enlarge these vignettes into frescoes and thereby tell the story of Francis in heroic outlines was equivalent to equating the power of artistic expression and the new vastness of the pictorial framework; this prompted, in consequence, a background overflowing, so to speak, with contemporary life. This much Giotto undertook to do, and his success was marvellous. One is astounded at the multitude of things he suddenly brings within the domain of painting. Such an invasion of realism is not met with again till the seventeenth century, when Rubens gives us its counterpart in his life of Marie de' Medici. All Italy is there; cities and their environs, the walls of Arezzo, the temple of Minerva and the church of San Damiano at Assisi, the façade

of the Lateran, the graceful interior of the Greccio church, the landscapes of Alvernia and Subasio, rural scenes like St. Francis's sermon to the birds, domestic interiors as in the "Death of the Lord of Celano", scenes from ecclesiastical life, e.g. chapter meetings and choir services. Every type of existence is laid under tribute: monks, peasants, townfolk, burghers, popes, bishops, singers by the roadside, men at drink, at feasts, and funerals. No peculiarity of place, condition, costume, or person, escapes the far-sweeping eye of the painter. He has put into his paintings every phase of life, and it is all so genuine and accurate, so true to reality that in his work, after five centuries, the Italian *trecento* still lives for us, despite the deplorable state of the frescoes, the defects of his perspective, and the childlike archaism of certain technical formulæ. No painter has ever surpassed Giotto in his power of gathering details from real life, and of surrounding the commonplace with an artistic halo. Herein also lies the power of all literary creators of life, from Dante in his "Divina Commedia" to Balzac in the "Comédie Humaine". The genius of Giotto was brought into further prominence by the works he executed at Rome, whither he was called in 1298 by Cardinal Stefaneschi. It may be noted at once that the "Navicella", i.e. the famous mosaic that adorns the vestibule of St. Peter's, was done in collaboration with Cavallini; moreover, the original has long since disappeared beneath successive restorations. A fourteenth-century copy may be seen in the Spanish Chapel at Florence.

The frescoes from the life of Christ, which Giotto executed for St. Peter's, were destroyed in the time of Nicholas V, when the choir of the old St. Peter's was being remodelled. His Roman masterpieces, however, were the three frescoes ordered by Boniface VIII for the loggia or balcony of the Lateran to commemorate the famous jubilee of 1300. They represented the baptism of Constantine, the erection of the Lateran Basilica, and the proclamation of the jubilee. The first and second have perished, and only a fragment of the third remains, inset in the eighteenth century in one of the great pillars of the basilica, where it is yet visible. The pope stands between two acolytes, in the act of giving his blessing. The loss of this fresco is somewhat compensated for the by a seventeenth-century sketch (in the Ambrosian Library at Milan) which restores the ensemble of the original scene. It was a magnificent representation of an actual spectacle, a vast historical panorama of which the painter must have been an eyewitness, an immense portrait gallery showing the pope, the cardinals, the army, and the Roman people; all this on the occasion of a momentous event in the history of Christendom.

From Rome Giotto returned to Florence, perhaps in 1301, and painted the "Last Judgment" in the chapel of the Podestà. This fresco is in a way a political manifesto, being a kind of idealized grouping of all classes of Florentine society, somewhat after the manner of Dante's great poem. Therein can be recognized Dante himself, Brunetto Latini, Corso Donati, Cardinal d'Acquasparta, and Charles of Valois. The "Life of Mary Magdalen", which completed the chapel decorations, is now so faded and discoloured as to be beyond recognition. In 1306, Giotto was called to Padua to paint the Capella dell' Arena, built by Enrico Scrovegni in expiation of the crimes of his father, the famous usurer Reginaldo. On the lateral walls the artist treated in thirty-six frescoes scenes from the life of Christ and of the Blessed Virgin. Beneath these scenes he placed fourteen small cameo figures, allegories of the vices and virtues; on the end wall above the scene of the Annunciation,

he painted a "Last Judgment". With this work a new epoch opens in the career of Giotto. It is the first of those vast complete series, or great decorative poems, conceived by him with systematic thoroughness, and meant to develop fully a single great idea. It is truly a living organism, at once pictorial and theological, such as is met with later in the Spanish Chapel, on the ceiling of the Sistine Chapel, and in the Camera della Segnatura. This introduction of allegory, on an elevated and magnificent scale, is his new master-concept. His work is henceforth dominated by an attempt to bring out the moral meaning and by unity of purpose. The historical element, of course, still held the place of honour; it had not varied for centuries, had been the same since the mosaics of Sant' Apollinare Nuovo at Ravenna and Santa Maria Maggiore at Rome. Giotto, indeed, continued to use the earlier conceptions, but could not fail to imbue with his own wonderful realism the traditional treatment of these sacred scenes. There is, perhaps, no pictorial type more striking than Giotto's Judas in the scene of the kiss. Circumstances here forced the artist's genius into a new path. Since his imagination had not in these sacred scenes the freest play, he turned to the perfection of artistic style: consequently the Padua frescoes are a new phase in his realization of the beautiful. In the mind of Giotto life now appears conditioned by art. This preoccupation with the artistic presentation of things is striking at Padua from the earlier scenes, those depicting the story of St. Joachim and the marriage of the Blessed Virgin, where there are charming pastorals rarely equalled, such as "Joachim among the shepherds", the "Meeting at the Golden Gate". One scene in particular, the marriage cortège of the Blessed Virgin, is introduced merely that the artist may develop a beautiful plastic theme, a frieze of white-veiled girls, quite like the procession of Greek maidens in the Panathenæan festivals. Ghiberti mentions other paintings made by Giotto for the Friars Minor at Padua. However, the most perfect examples of the master's maturer skill are his frescoes at Assisi, between 1310 and 1320, in the lower church of the famous basilica of St. Francis. He began in the right transept with the addition of two miracles of the saint as a kind of appendix or supplement to the "Life" which he had painted twenty years earlier in the upper church. Facing these he painted nine frescoes of the Holy Childhood, a replica of the Padua frescoes but superior for delicacy and charm. In his quality of historian Giotto never rose above this work, the most exquisite of all his narrative frescoes. His crowning work, however, in this period, was the decoration of the roof-groining over the altar. In it he sets forth the "Triumph of St. Francis", together with the triumphs of the virtues which were the foundation of the order: poverty, chastity, obedience. This is the earliest example of those *trionfi* which from the Campo Santo at Pisa to Mantegna and Titian are a favourite theme of Italian art. It is moreover the earliest masterpiece of monumental art. The earlier "Psychomachia" of the poet Prudentius, so often treated by French sculptors and outlined by Giotto himself in the aforesaid tiny allegories of the Capella dell' Arena, takes on here a larger development. We seem to hear, as it were, an orchestration of incomparably greater variety and significance. The intimate meaning of life and thought, the power of plastic art, and the genius of beautiful symbols; the majesty of harmonious order, the beauty of the types, personifications and persons; the wondrous blending of fact and fancy; the perfect preservation of the original colours, all combine to make this magnificently planned ensemble one of the immortal works of painting.

It seems to breathe the puissant moral ideas of the Middle Ages, while one of its lovely figures, the well-known Lady Poverty, suggests from afar all the mystic and quaintly modern poetry of Botticelli's "Primavera".

The closing years of Giotto's life (1320-27) were spent at Florence. His work at this period in the church of Santa Maria del Carmine and the palace of the Podestà, where he painted an allegory of Good Government (a theme of Ambrogio Lorenzetti at Siena in 1337), has almost entirely perished. Of all his work in the Bardi and Peruzzi chapels in the Franciscan church of Santa Croce there survive but some remnants. The Bardi chapel contains in six scenes a new life of St. Francis, besides four figures of the greater Franciscan saints: St. Clare, St. Elizabeth, St. Louis IX, King of France, and St. Louis of Toulouse. (St. Louis of Toulouse was canonized in 1317; the decoration of the chapel must, therefore, be of later date.) The Peruzzi chapel contains six scenes from the lives of St. Paul and St. John the Evangelist. These frescoes were whitewashed over in the eighteenth century, were discovered in 1840, and have suffered much in the course of restoration. In this final evolution of his art, Giotto, now a master and sure of his own powers, seems to lean towards the abstract in the treatment of his subjects. He appears to subordinate all to the rhythm of the composition. An almost excessive desire for balance and symmetry gives to these later works an aspect of stiffness, somewhat the impression of bas-reliefs. They seem somewhat cold and academic. And yet they reveal incomparable beauty and figures of genuine sculptural perfection. In the "Resurrection of St. Paul" the group of the Disciples leaning over the empty sepulchre, though two centuries earlier than Raphael, is almost the same as the group of young geometricians in the latter's "School of Athens".

There is no evidence that Giotto ever visited Ferrara, Ravenna, or any of the other places where frescoes are attributed to him. King Robert of Anjou induced him to visit Naples in 1330, and he remained there three years, but left no trace of his influence on the local school. As for the pretended journey to Avignon and his death there, it is well known to be a fiction. Simone di Martino is the true author of the admirable frescoes in the papal palace at Avignon. In his later years Giotto, recognized as chief among Italian artists, was more or less *capomaestro* or Master of the Works for all public constructions in Florence. We are told that he aided in designing the Porta San Giovanni of the Baptistery, the work of Andrea Pisano (1330). It is certain that he drew the plans for the Campanile in 1334. Perhaps the designs for the fifty-eight bas-reliefs by Andrea are partly his, recalling as they do in more than one particular the "Virtues and Vices" at Padua. There are very few of Giotto's panels, properly so-called. One large "Madonna di Maestà" in the Accademia at Florence is interesting when compared with that of Duccio. A triptych of the "Life of St. Peter" painted in 1298 for Cardinal Stefaneschi is preserved in the sacristy of the canons at St. Peter's. Finally, his "St. Francis receiving the Stigmata", at the Louvre, is a youthful résumé of the noble frescoes at Assisi.

No painter ever made such an impression on his age as Giotto. All fourteenth-century art betrays his influence. No school was ever so numerous nor so homogeneous as the *Giotteschi*. Taddeo and Agnolo Gaddi, Orcagna, Spinello, and others, it is true, are weak imitators of their master. Indeed,

outside of Florence there is no originality save at Siena where Simone di Martino and the Lorenzetti worked, and later at Padua in the days of Jacopo Avanzo and Altichieri. The triumph of Giotto, and the thorough manner in which his successors imitated him, proved how fully he embodied the national genius. In painting he invented that *dolce stil nuovo*, that *vulgare eloquium* which Dante created in the realm of poetry. He is truly the founder of the art of painting in Italy.

He was not handsome, says Petrarch, who was his friend, as was also Dante, whose portrait he so often painted. Nor must it be imagined that this great painter of St. Francis was either a mystic or an ascetic. He loved life too well for that. He has left us in a canzone, mediocre enough as poetry, a satire on "Holy Poverty" and the excesses of the "Fratricelli", the radicals among the Franciscans of that time. Moreover, the Florentine novelists, Boccaccio and Sacchetti, tell many anecdotes of him in which he figures as a bon-vivant, jovial, good-natured, with a sense of humour and a pardonable eccentricity. He may have been wealthy, as he worked diligently and charged good prices for his work. He married Cinta di Lapo del Pela by whom he had eight children. The eldest, Francesco, registered in 1341 as a member of the guild of painters at Florence.

LOUIS GILLET
Ruggiero Giovanelli

Ruggiero Giovanelli

Composer, b. at Velletri, near Rome, in 1560; d. at Rome, 7 January, 1625. In 1584 he was appointed choir-master at the church of San Luigi de' Francesi in Rome, and subsequently at the Chiesa dell' Anima. As a composer of madrigals he was exceedingly fertile, and his six books of them, with one of canzonets and vilanelles, appeared between the years 1585 and 1606. So great was his fame as a choir-master and composer that on the death of the illustrious Palestrina, he was appointed his successor, 12 March, 1594. Among his sacred works are some beautiful masses for eight and twelve voices, and some pleasing motets. So little is known of his later years that biographers could formerly find no trace of Giovanelli after 1615, at which date he published the second volume of his new edition of the Graduale known as the "Medicean". However, thanks to the researches of W.H. Frey, of Berlin, it is now certain that Giovanelli lived ten years longer. He was buried in the church of Santa Marta.

W.H. GRATTAN-FLOOD

Giovanni Battista Giraldi

Giovanni Battista Giraldi

(Surnamed CINTIO)

Italian dramatist and novelist; b. at Ferrara, Italy, 1504; d. there, 1573. He studied philosophy and medicine in his native town. Under the patronage of the family ruling over his native region, he served for a while as secretary to the dukes of Ferrara, but wearying of his duties, he gave himself up to academic life as a professor in turn at the Universities of Mondovi, Turin, and Pavia. Among his minor works there is a disquisition on the methods to be observed in the composition of epic, romance, drama, etc. (*Discorsi intorno al compor romanzi, commedie e tragedie, ecc.*), which shows him to be one of the leading literary critics of the time. He essayed the pastoral drama with the "Egle", and the epic with the "Ercole". His dramatic labours extended further, to the production of one comedy, the "Eudemoni", and nine tragedies, among which are the "Didone", the "Cleopatra", the "Selene", and his best play, the "Orbecche". Even more than for the "Orbecche", a rather gory piece, Giraldi is remembered for his collection of tales, the "Ecatommiti" (Hecatommithi). In this he feigns, therein imitating the framework of Boccaccio's "Decameron", that a company of men and women, fleeing from the sack of Rome in 1527, take ship at Civitavecchia for Marseilles, and beguile the tedium of the journey by reciting a hundred tales, divided into ten decades. As a matter of fact there are 112 tales in the work. The style of the "Hecatommithi" has little to recommend it, being rather cold and colourless; and although the author announces his purpose of telling stories that shall stigmatize vice, and exalt virtue and religion, he does not wholly avoid the licentious and unbecoming. It is worthy of note that the seventh tale of the third decade tells the story of the Moor of Venice, later used in Shakespeare's "Othello".

Tragedie (ed. Venice, 1581-3); Ecatommiti (ed. Florence, 1834); BILANCINI, G. B. *Giraldi e la tragedia italiana nel sec. XVI* (Aquila, 1889); VECOLI, *L'intento morale degli Ecatommiti* (Camajore, 1890).

J.D.M. FORD

Ubaldo Giraldi

Ubaldo Giraldi

(UBALDUS A SANCTO CAJETANO).

An Italian canonist; b. in 1692; d. in 1775. He was a member of the Piarists (*Clerici regulares Scholarum piarum*), was twice assistant general-councillor of his congregation, was provincial of

the Roman province, rector of the Piarist college at Rome, and Apostolic examiner for the Roman clergy. He published an edition, with additions (Rome, 1757), of the "Institutiones Canonicae" of Remy Maschat, also a Piarist. The "Expositio juris pontificii" of Giraldi (Rome, 1769; re-edited, 1829-1830) is not a treatise on canon law. The author merely reproduces the principal texts of the Decretals and of the Council of Trent, adding thereto such papal documents as interpret or modify their meaning, with a brief commentary of his own. His last work, on which his reputation is chiefly based, was a new edition with notes and additions of Barbosa's great work on parish priests, "Animadversiones et additamenta ex posterioribus summorum pontificum constitutionibus et sacrarum congregationum decretis desumpta, ad Aug. Barbosa, de Officio et Potestate parochi" (Rome, 1773, new ed., 1831).

SCHULTE, *Geschichte der Quellen und Literatur des canonischen Rechtes* (Stuttgart, 1875-1880), III, 534-535; HURTER, *Nomenclator*.

A. VAN HOVE
Giraldus Cambrensis

Giraldus Cambrensis

Giraldus Cambrensis (Gerald de Barry) was a distinguished writer, historian, and ecclesiastic of the early Middle Ages; b. in Manorbeer, Pembrokeshire, about the year 1147; d. probably between the years 1216 and 1220. His father, William de Barry, was one of the most powerful of the Welsh nobility at the time. Though Gerald's brothers adopted the profession of arms he himself followed a more peaceful course, devoted himself to study, and, influenced by his uncle, the Bishop of St. David's, resolved to become an ecclesiastic. He went to Paris to continue his studies; and, if we are to believe his own account, he was looked upon here as a model of piety and learning. He returned to England about 1172, and was employed by the Archbishop of Canterbury on various ecclesiastical missions in Wales, where he distinguished himself for his efforts to remove the abuses then flourishing in the Welsh Church. He was appointed Archdeacon of Brecknock. On the death of his uncle, the Bishop of St. David's (1176), the chapter fixed upon Giraldus as the man most likely to withstand the aggressions of the Archbishop of Canterbury and submitted his name to Henry II. The king promptly rejected him in favour of one of his Norman retainers; the chapter acquiesced in the decision; and Giraldus, disappointed with the result, withdrew to Paris and here continued his studies. In 1180 he returned to Wales and received an appointment from the Bishop of St. David's, which he soon resigned, and was sent by Henry II to accompany Prince John on his Irish expedition (1184). While in Ireland he composed his work "Topographia Hibernica", which purports to give a description of the country, but is full of legends and tales, as well as the "Expugnatio Hibernica". The latter work is not entirely unreliable, but requires to be read with care. He left Ireland in 1186, and two years later accompanied Archbishop Baldwin in his journeys through Wales, preaching the crusade. Here, according to his own account ("Itinerarium Cambri"), his eloquence met with such a response that Wales was denuded of its fighting men. He went to France,

but was recalled to England in 1190, where he informs us he was offered the Bishopric of Bangor and, in 1191, that of Llandaff.

On the death of Peter de Leia, 1198, the chapter of St. David's again nominated Giraldus for the bishopric; but Hubert, Archbishop of Canterbury, refused confirmation. Representatives of the canons followed Richard to France, but before they could interview him he died; his successor, King John, received them kindly, and granted them permission to hold an election. They were unanimous in their selection of Giraldus; and, as Hubert still refused to confirm the election, Giraldus started for Rome, where he had an interview with Innocent III. The archbishop, however, had anticipated him, and, as the pope was not convinced that St. David's was independent of Canterbury, the mission of Giraldus proved a failure. It was in connexion with this that he wrote his book "*De jure Menevensis Ecclesiæ*". Giraldus returned, and was supported by the chieftains of Wales, while King John warmly espoused the cause of the Archbishop of Canterbury. After a long struggle the chapter of St. David's deserted Giraldus, and having been obliged to escape secretly from Wales he fled to Rome. Pope Innocent III annulled both elections, and Geoffrey Henlaw was appointed to the See of St. David's, despite the strenuous exertions of Giraldus, who afterwards reconciled with the king, and received from him a small pension. At the next election in St. David's, 1214, his name was passed over in silence. He was alive after 1216, as it is evident from the way in which he speaks of John that that king was already dead.

De Barry was a writer of remarkable brilliancy and force, a narrator rather than a historian, full of self-confidence, and at times courage, and on the whole neither the model of perfection which he proclaims himself to be, nor the despicable character which he is oftentimes painted. His works are published in the Rolls Series; and in the prefaces to the volumes indications as to probable dates of composition and publication. Appended is a list of de Barry's writings: "*Topographia Hibernica*"; "*Expugnatio Hibernica*"; "*Itinerarium Cambriæ*"; "*Gemma Ecclesiastica*"; "*De Instructione Principum*"; "*De Rebus a se gestis*"; "*Vita S. Davidis II episcopi Menevensis*" (which Brewer considers as, more probably, the work of Giraldus); "*Descriptio Cambriæ*" (published as the last); "*Vita Galfridi Arch. Eboracensis*"; "*Symbolum Electorum*"; "*Invectionum Libellus*"; "*Speculum Ecclesiæ*"; "*Vita S. Remigli*"; "*Vita S. Hugonis*"; "*Vita S. Davidis archiepiscopi Menevensis*"; "*Vita S. Ethelberti*"; "*Epistola ad Stephanum Langton*"; "*De Giraldo Archidiacono Menevensi*"; "*De Libris a se scriptis*"; "*Catalogus brevior librorum*"; "*Retractationes*"; "*De jure Menevensis Ecclesiæ*". See introduction to his works by the editors, Brewer and Dimock.

The works of Giraldus dealing especially with Ireland: the "*Topography*", and "*History of the Conquest*", though long regarded as possessing considerable authority, did not escape hostile criticism. In "*Cambrensis Eversus*" (1662), under the pseudonym of Gratianus Lucius, Dr. Lynch, of whose personal history little is known, produced a work which, though controversial in character, entitles the author to repute rather as a painstaking chronicler than as a controversialist of a high order. After criticizing the "*Topography*" adversely, and showing that the title of the second book, the "*Conquest of Ireland*", is a misnomer, the writer of "*Cambrensis Eversus*" disproves de Barry's title of historian, and meets his charges against the Irish people. Giraldus is impeached with ignorance

of the language, and unfamiliarity with the country; he is said to have embodied in his works unauthenticated narratives, with little regard for chronology; his own admission that he had "followed the popular rumours of the land" is extended in meaning, and perhaps unduly insisted upon.

Nor is the "Cambrensis Eversus" merely a collection of arbitrary accusations and unsubstantial rejoinders, made with a view to effect the discredit of de Barry as a writer of history. What might be urged as the greatest imperfection of Lynch's polemic, its too great wealth of detail, had not escaped the attention of the able author, who excuses the diffuseness to which he is compelled by asseverating his determination to follow Giraldus closely to the end. Whatever may be said as to the ability with which Lynch discharged his task of controversialist, there can be no denial of the thoroughness and, above all, the sincerity of his methods. He does not pick out the weak points in his opponent's armour, and never shirks the issue; but grapples with every difficulty, as the order of his opponent suggests.

Perhaps the most serious accusation levelled against Giraldus, next to the indictment of bias and dishonesty, is that wherein he is impeached of being addicted to the cult of the superstitious and the practice of witchcraft. If this be true, and Merlin would seem to have exercised a considerable sway over the mind of de Barry, then it would be vain to seek in the writings of the latter the reflex of that calm discrimination and sober balance of judgment which should characterize the historian. Finally, it may be said that the student of Irish history, by reading the works of Giraldus in the light of "Cambrensis Eversus", cannot fail to derive a helpful knowledge of the period which they embrace.

GIRALDUS, *De Rebus a se gestis*, and *De jure Menevensis Ecclesiæ*; Brewer's Introduction to vol. I of the edition of works of Giraldus in the Rolls Series; life of Giraldus in *Ininerary Cambriæ*, tr. HOARE (London, 1806); WHARTON, *Anglia Sacra*, II, 374; LYNCH, *Cambrensis Eversus*, ed. KELLY (3 vols., Dublin, 1848-51).

JAMES MACCAFFREY

Jean-Baptiste Girard

Jean-Baptiste Girard

Known as Père Girard, a Swiss pedagogue, b. at Fribourg, 17 December, 1765; d. there, 6 March, 1850. At sixteen he entered the novitiate of the Franciscans at Lucerne; after spending some time teaching in the colleges of the order, he went to Würzburg for his philosophical and theological studies, and was there ordained to the priesthood. Returning to Fribourg in 1789, he spent ten years in missionary work and in teaching philosophy to the young men of his order. His admiration for Kantian ideas, although restricted, was the occasion of suspicion of his orthodoxy. Upon the invitation of Stapfer, minister of arts and sciences, Girard wrote a plan for education in Switzerland and was called to Verne where he remained four years. In 1804 he was recalled to Fribourg, and took up work in the primary schools.

As director of the schools in Fribourg (1807-1823), Girard made education compulsory, organized the school administration, insisted on the adoption of good textbooks and methods, and introduced the monitorial system, avoiding the abuse of mere memory exercise and making every study converge to the child's complete education. These reforms, though crowned with success, were the occasion for bitter opposition from those who did not realize the importance of education, or adhered to the old routine methods. In 1809 Girard was sent to Yverdon to make a report to the Government on Pestalozzi's institution. He had met the latter in Berne and professed the greatest admiration for his ability as an educator, while differing from him on several important points, especially on the value of the monitorial system. This method, in fact, which Girard applied, was opposed by the bishop and the civil authorities of Fribourg, in 1823. Girard abandoned his school and went to Lucerne as professor of philosophy in the gymnasium. In 1834 he returned to Fribourg, where he remained till his death, engaged in educational pursuits and in the publication of some of his works. He had a great reputation in France, being a Knight of the Legion of Honour, and a corresponding member of the Académie des Sciences morales et politiques.

Besides many reports and memoirs, his principal writings are: "Cours de philosophie fait au Lycée de Lucerne" (1829- 31); "Des moyens de stimuler l'activité dans les écoles" (1835); "Parallèle entre la philosophie et la physique" (1840); and "Cours éducatif de langue maternelle" (Paris, 1840-48). These works banish abstractions that are above the child's intelligence, principles and rules being taught chiefly by means of concrete examples, and difficulties being introduced gradually. They contain the foundation of modern educational textbooks, and are still well worth studying. Père Girard ranks next to Pestalozzi among Swiss pedagogues.

C.A. DUBRAY

Francois Girardon

François Girardon

A noted sculptor of the reign of Louis XIV, b. at Troyes, France, 1630; d. at Paris, 1715. The son of a bronze-founder, he studied first under the sculptor François Anguier and afterwards at Rome. Returning to France he was taken into the service of the king, working under Lebrun, whose favourite he was. After Lebrun's death in 1690 he exerted great influence as professor of the academy of sculpture and painting, of which institution he later became the chancellor. Like the other sculptors of his time he followed in the footsteps of Bernini, but the influence of the old school of Fontainebleau was also perceptible in his work. The Louvre possesses the model of his spirited equestrian statue of the king which was erected in the Place Vendôme and destroyed during the Revolution. One of his finest works is the monument to Richelieu, in the church of the Sorbonne; the dying cardinal lies on a richly draped sarcophagus, supported by the figure of religion, while the figure of science mourns at his feet. Among his other sepulchral monuments are those in memory of his wife, the Princess de Conti, and the minister Louvois. The bust of Boileau is forceful but the wig on the beardless head reveals the tendency of the art of the age of Louis XIV to weaken its

stateliness by effeminacy. Both these qualities are seen in the "Rape of Proserpine", an imitation of Bernini, which relies on the effect of contrast. The "Nymphs Bathing", a relief intended, like the work just mentioned, for the park of Versailles is a good example of his decorative, voluptuous style. Among other figures in the park of Versailles, either produced by him or under his direction attention may be called to the allegorical statue, "Winter as an Old Man".

G. GIETMANN

Giraud de Borneil

Giraud de Borneil

A Provençal troubadour, b. about the middle of the twelfth century, at Excideuil in the Viscounty of Limoges. The precise dates of his life are not known, but according to the best authorities, it fell between 1160 and 1219. Although of humble birth Giraud de Borneil counted among his patrons many kings, as: Richard Coeur de Lion, whom he accompanied to Palestine, on the Third Crusade; Bohemond III, Prince of Antioch Fernando III of Castile; Alfonso IX of Leon; Pedro II of Aragon, to whom he addressed several poems, and Sancho, King of Navarre who did not deserve the admiration the poet bestowed upon him. With his feudal lord, Gui V, Viscount of Limoges, however, he was not always on good terms. His life was simple and studious. In winter he frequented the schools of learning and studied literature under the most celebrated teachers of the period. In summer, accompanied by two singers who recited his songs, he visited the courts of his royal patrons. He never married and at death divided his property between some poor relations and his parish church of Saint-Gervais. Giraud enjoyed in his time a very high reputation. Dante, in the "De vulgari eloquio" (II, 2), reckons him one of the three great troubadours, Arnaud Daniel and Bertrand de Born being the other two. An anonymous Provençal biographer of the thirteenth century goes so far as to say: "He was the best troubadour of those who lived before him or came after him, and for that reason was called the master of the troubadours, a title which is still applied to him in the opinion of those who know something about poetry and love." Dante, however, challenges this verdict and places Arnaud Daniel far above Giraud de Borneil (Purgatory XXVI). No complete edition of Giraud de Borneil's works has as yet appeared. The eighty poems ascribed to him with some certainty are scattered through various collections, including: Raynouard, "Choix des poésies originales des troubadours" (Paris 1816), and Millot "Histoire littéraire des troubadours" (Paris, 1774). His early poems, in which the influence of Arnaud Daniel is felt, belong to that form called in Provençal *trobar clus*, in which the meaning is involved and obscure. He soon rejected this manner and claimed in *tenson* (poem in form of a dialogue) that "easy and simple poetry is more esteemed and liked". Among the best of his poems are: an *alba* (song at daybreak) where he makes a graceful compromise between the popular and the studied forms of poetry, the love songs addressed to Alamanda d'Estanc; a few *sirventes* (political and satirical poems), in which the poet gives expression to the chivalrous ideals of the age, and some *pastoredas*.

LOUIS N. DELAMARRE

Girba

Girba

A titular see in the province of African Tripoli. It is an island, in ancient times called Meninx, and included three principal cities, Meninx, Tipasa and Girba, whence its present name. At least two bishops of Girba are known, Monnulus and Vincent, who assisted at the Councils, of Carthage in 255 and 525 (Toulotte, *Géographie de l'Afrique chrétienne Proconsulaire*, Paris, 1892, pp. 353 and 380). In the seventh century it is again found under the name of Terepiton, a corrupt form for Gergiton or Gerbiton (Byzant. *Zeitschrift*, II, 1893, 26, 31). During the Middle Ages the Christians of Sicily and Aragon disputed its possession with the Arabs, and the Spaniards seized upon it several times during the sixteenth century, notably in 1510 and 1535. In 1560 the Corsair Dragut surprised the Spanish fleet, which lost thirty vessels and five thousand men. The garrison was put to death and with the bones of the slain the Turks built a pyramid called Bordj-er-Rious, the fortress of the skulls which existed until the middle of the nineteenth century, when the bones were removed to the Christian cemetery of Hount-Souk. Today the island of Djerba numbers forty thousand souls, several hundreds of whom are Maltese Catholics who earn a livelihood as sponge-fishers. The climate is mild and the soil well cultivated. The island belongs to the regency of Tunis, which is under French protectorate.

SMITH, *Dict. of Gr. and Roman Geog.* (London, 1828) II, 329, s.v. Meninx.

S. VAILHÉ

Girgenti

Girgenti

DIOCESE OF GIRGENTI (AGRIGENTINA).

Girgenti is the capital of a province in Sicily and is situated about three miles from the sea, on a steep rock overlooking a rich plain watered by the Drago. Besides a trade in vegetables, fruits, and cereals, it is a mining centre for sulphur, soda, chalk, copper, and iron. Its marble quarries are also rich. The Greeks called it Acragas; the Romans Agrigentum. It was founded by a Greek colony from Gela about 582 B. C. The upper portion of the town was already in existence. It was called Camicum from its position on a platform of Mt. Camicus, and was surrounded by cyclopean walls. The Greeks settled at the foot of this acropolis, which they made the acropolis of their city; soon the town was doing a rich trade with the Carthaginians, and was reckoned, after Syracuse, the first town in Sicily. Like other Doric towns, it became a republic, but was often under the control of tyrants, e. g. Phalaris the Cruel (570-555), Theron (488-472), who with Gelon of Syracuse defeated the Carthaginians under Hamilcar near Himera (480 B. C.). The war of Thrasydeus, son and successor of Theron, on Hieron of Syracuse, brought Agrigentum under the tyrants of Syracuse (471 B. C.), but it soon regained its freedom. In 406 the Carthaginians under Hannibal and later under Himilco

besieged the city, captured it, slew the inhabitants, and despoiled the temples of their artistic treasures, which were carried off to Carthage. Once more it regained autonomy, only to fall under the tyranny of Phintias (288 B. C.). After this it became the centre of Carthaginian resistance to Rome. In 262 the Romans captured it for the first time, and in 210 they gained complete control. The wealth and splendour of the ancient city are attested by all writers, and by ruins that remain till this day. The principal antiquities are: the temple of Jupiter on the acropolis, of which seven columns of the peristyle remain; that of Minerva, to which many of the townsfolk fled in 406 B. C., seeking death under its ruins rather than fall into the hands of the Carthaginians; in the district known as Neapolis the temple of Hercules mentioned by Cicero in his "Oratio in Verrem"; the Temple of Concord, in old Ionic style, the best preserved of them all, because used as a church in later times; over one of the cornices was carved a treaty of alliance between Agrigentum and Lilybæum. There are, moreover: the temple of Juno Lacinia; the temple of Æsculapius, which contained a bronze statue of the god (this work of Myron was carried away to Carthage but restored by Scipio Africanus); the temple of Olympian Jove, according to Polybius the largest and most beautiful in Sicily. In 1401 three colossal caryatides supporting an architrave were discovered; the fact was commemorated in the coat of arms of Girgenti. Other edifices of the city were: the temple of Castor and Pollux, of which there remains an architrave supported on four pillars; the temple of Vulcan; that of Ceres and Proserpine; and the remains of a stadium. In 827 the Arabs, called in by the Byzantine tribune Euphemios, captured the city, and spread over the whole island. In the eleventh century Girgenti was the centre of Saracen resistance to the Normans, who finally captured it in 1087; thenceforth it shared the fortune of the Kingdom of the Two Sicilies.

In the roll of its illustrious citizens are found the names of the philosophers Empedocles and Acron; the historian Philinos; the musician Metellos, Plato's master; the dramatists Archion and Carenos; the orator Sophocles; the humanist Nicolò la Valle; and the dramatist Francesco del Carretto. Among the natural curiosities of note in the neighbourhood is the hill of Maccalubba, studded with small craters, about thirty inches deep, spouting cold water, carbonic acid, and hydrogen mixed with asphaltum, chalk, sulphate of lime, etc. The cathedral is built of ancient materials, and has a beautiful Madonna by Guido Reni, and paintings by Nunzio Magro. The church of S. Nicolò exhibits a very fine Norman doorway. Girgenti venerates St. Libertinus as its earliest apostle; he is said to have been sent thither by St. Peter. The earliest bishop of whose date we are certain is St. Potamius, a contemporary of Pope Agapetus I (535-36). St. Gregory I, Bishop of Agrigentum, said to have been martyred in 262, is probably only a double of the homonymous bishop who was a contemporary of St. Gregory the Great. The list of bishops, interrupted by the Saracen invasion, began again in 1093 with St. Gerlando. Other bishops of note are: Rinaldo di Acquaviva (1244), who restored the cathedral and crowned King Manfred, for which latter action he was excommunicated by Alexander IV; and Fra Matteo Gimmara, called the Blessed. Girgenti is a suffragan of Monreale, has 66 parishes and 381,000 souls, 10 religious houses for men, and 42 for women. It is also a centre for the Azione Cattolica Sociale in Sicily.

U. BENIGNI

Blaise Gisbert

Blaise Gisbert

French rhetorician and critic; born at Cahors, 21 February, 1657; died at Montpellier, 21 February, 1731. Having entered the Society of Jesus in 1672, he taught the humanities, rhetoric, and philosophy, after which he devoted himself for a long time to preaching. The pleasure which Gisbert took in discussing pulpit eloquence with Lamoignon, the intendant of Languedoc, impelled him to write an essay on sacred eloquence, which he entitles "Le bon goût de l'éloquence chrétienne" (Lyons, 1702). He spent ten years in retouching this essay, and augmented it considerably by adding to the rules examples drawn from Holy Scripture and the Fathers, especially St. John Chrysostom. The second edition appeared at Lyon in 1715 under the title "L'Eloquence chrétienne dans l'idée et dans la pratique". The work, which comprises twenty-three chapters, does not follow the rigorous order of a didactical treatise and is without the dryness of a scholastic manual. It has been rightly called "un livre éloquent sur l'éloquence". It contains a series of talks on the faults to be avoided in the matter and form of sermons, on oratorical action and decorum. Gisbert's book sufficed to make its author famous, not only among Catholic clergy, but even among Protestant pastors. One of them, Jacques Lenfant (1661-1728) carefully annotated it, and another, Kornrumpff, translated it into German. An Italian translation also appeared during Gisbert's lifetime, and later a Latin translation. The latest and best French edition is that of Crampon and Boucher (Paris, 1865). As a sort of supplement, Gisbert wrote reflections on the collections of sermons printed in France from 1570 to about 1670. In this he considers, according to the somewhat narrow ideals of his age, ten orators before Bossuet and Bourdaloue. The MS. of this interesting "Historie critique de la chaire française depuis François Ier" was lost but was finally recovered by Mgr Puyol and published by Fathers Chérot and Griselle, S.J., in the "Revue Bourdaloue", 1902-04.

PAUL DEBUCHY

Giulio Romano

Giulio Romano

Properly GIULIO DEI GIANNUZZI, also known as GIULIO PIPPI.

A famous architect and painter, the best-known of Raphael's pupils, and the unique representative of the so-called "Roman School"; b. at Rome in 1492; d. at Mantua in 1546. At the age of 19, Giulio

placed himself under Raphael, who had just finished after three years (1509-12) the Halls of the Segnatura and Heliodorus. In 1514, Raphael was appointed general overseer of works by Leo X, conducted in 1519 the excavations of ancient Rome, and found it difficult to carry out all his undertakings. It came thus to pass that the assistant was soon the factotum and right hand of the master, who during the later portion of his career seldom found time (except for a few portraits) to take a brush into his hands.

As an artist, Giulio has no originality; as a painter, he is merely a tempérament, a prodigious worker. His manual dexterity is unaccompanied by any greatness of conception or high moral principle. He enlarged and executed in fresco or on canvas the drawings and studies completed by Raphael for his pictures. In this way were completed, within eight years, "Fire in the Borgo" (1513), the cartons of the "Acts of the Apostles" (1512-14), the loggias of the Vatican (1514-1519), the frescoes of the Farnesina (1518), and many other famous works such as the "Lo Spasimo" (Christ bearing the Cross), the "Pearl", the "Virgin with the Fish" (Madrid), the "St. Michael" of the Louvre, and "The Holy Family" executed for Francis I (1518). With all his cleverness Giulio never caught the real glow of Raphael's genius; the master's divine ideas became vulgarized in passing through Giulio's more material brain. Moreover he was carried away by the power of Michelangelo's works (the Sistine Roof was uncovered in 1512), which, however, he misinterpreted as the brute force of physical strength. Thus Raphael's graceful figures often became in Giulio's hands coarse muscular giants like the "Ignudi" and the "Prophets". Giulio is also responsible for the brick-coloured tones and plaster flesh-tints of the men and women in Raphael's later works, the artistic defects of which are in many cases entirely due to Giulio. A number of the master's most beautiful conceptions have come down to us only under this imperfect form, spoiled for ever by the triviality and lack of delicacy of the execution, and the pity of it is that, on the strength of Raphael's signature, these works seemed to impress the seal of sanction on many serious defects in the French School of the seventeenth century. Much time and discussion would have been saved if in arguing over the famous "Transfiguration" (1520), for instance, it were admitted that in its present state, as completed by Giulio, it is impossible to say what the master's original idea was, since the secret of it is buried with him in the grave. As for the "Battle of Constantine", and the "Coronation of the Virgin", it would be as well to admit that they retain nothing whatever of Raphael.

Although the sole interest of this early portion of Giulio's career consists in the light it throws on Raphael's work, it is of greater artistic importance than all Giulio's subsequent independent efforts. Yet even they are not without interest. They show us Giulio developing, though with undoubted talent, some of the defects and deadly vices which lay hidden in the Renaissance movement. The most serious of these defects is dilettanteism, or virtuosity for its own sake. Giulio had not with impunity devoted ten years simply to the execution of another's ideas; he came to believe that in art the thought is of no account, the form everything. The necessary connexion between the idea and its expression, between art and life, quite escaped him. This was the grave defect of the Italian spirit -- the abuse of art, the worship of form, the indifference to subject, and it could hardly fail to prove fatal to an artist whom it had obsessed.

An opportunity of translating this erroneous principle to canvas on a large scale was afforded to Giulio by the Duke of Mantua. For 22 years (1524-1546) the artist was absolute master of all the works of art executed in that town. He entirely remodelled the interior decoration of the old palace (the Palazzo di Corte), lavishing on it all the resources of his inexhaustible fancy. He refashioned the interior of the cathedral; he raised the important church of San Benedetto, and he built from roof to cellar the famous Palace of Tajetto, near the gates of the town.

It is especially in these two palaces, which were almost entirely painted by him or his pupils, that Giulio marks an epoch in the history of art. His lively but superficial fancy, incapable of deep emotion, of religious feeling, or even of observation, attracted him to neutral subjects, to mythological paintings, and imaginary scenes from the world of fable. Therein under the cloak of humanism, he gave expression to a sensualism rather libertine than poetical, an epicureanism unredeemed by any elevated or noble quality. It is this that wins for Giulio his distinctive place in art. His conception of form was never quite original; it was always a clever and "bookish" compromise between Raphael and Michelangelo. His sense of colour grows ever louder and uglier, his ideas are void of finesse, whatever brilliancy they show is second-hand. His single distinctive characteristic is the doubtful ease with which he played with the commonplaces of pagandom. In this respect at least, paintings like those of the "Hall of Psyche" (1532) are historical landmarks. It is the first time (even if we include the Farnesina) that an appeal is made to the senses with all the brutal frankness of a modern work. Unlike Raphael's "Galatea" and his "Three Graces", examples of Elysian happiness in a race in the state of innocence, Giulio's decorations resemble saturnalia of lubricity itself. The vulgarity of the drawing leaves no illusion as to the nature of its intention; nothing remains of the ancient myth, thus stripped of all its ideal signification, but what serves to excite the senses. Thus art, losing all moral import, sinks inevitably to the level of a game of conventional rules, and the cloak of fiction serves only to disguise the grossness of the instincts, which have ousted every laudable ideal.

Such was the result of "art for art's sake" in his case, and the danger of such principles was aggravated by the superstitious reverence for the antique in the sixteenth century. The word antique was held to purify and sanctify everything: all things were lawful in the name of erudition, the antique became a fetish. In the Hall of Troy (1534-1538) in the Palazzo di Corte, and in his "Triumph of Titus and Vespasian" in the Louvre, Giulio, following in the footsteps of Mantegna, had given evidence that he too was among the learned, the connoisseurs, the men of disinterested culture, and no doubt concluded that he was thereby entitled to dispense with the claims of morality in the rest of his works. It was not long until the same specious reasoning became the fashion in Europe. Primaticci introduced it to the Court of Fontainebleau; and Rubens, who spent eight years (1600-1608) at the Court of Mantua, brought it back with him to Flanders. Giulio is the originator of those lascivious pictures, dating from 1630 to 1638, which are in the Prado and Torre de la Pareja galleries at Madrid. Mantua, Giulio's town, rather than Rome was the teacher of the seventeenth century. The consequences of these principles were disastrous. The antique, indeed, could only be the religion of the few, but, by constituting fable the sole vehicle of the beautiful, Giulio, vulgarian though he

was, fell into the error of "aristocratizing" art, and thus of severing its indispensable bond with the real. Henceforth its public became fewer; art, becoming the property of an intellectual class, was exposed to all the risks inherent in caste and party spirit. It was now a privileged possession, a code-language for use only among the initiated. Emancipated from morality (thanks to the sophism of the antique), deprived of the necessary support of reality, and immune from the common-sense verdict of the general public, it gave utterance only to aimless, useless, soulless, lifeless abstractions. As an example may be cited the most famous of Giulio's works, the "Hall of the Giants" (1532-1534) in the Palace of the Tajetto. It is difficult to say whether the artist was here the dupe of his imagination, or whether the work was the result of a jocose wager, for it is certainly a freak, a shock like those that used to startle the yokels in the Gardens of Castello and of Pratolino. But the effect here is brought about by such palpable illusion, the imposture is so enormous, it demands so many concessions from the spectator, it presupposes such a lack of all critical power on his part, that it is hard to understand such a pleasantry, though for Giulio's sake one would gladly wish it such. The effort is so out of proportion to the result that one cannot repress a feeling of pity. Such a lack of dignity comes as a shock. There is, of course, in the Italian genius a substratum of scepticism, of irony, of parody, which outsiders can never quite realize. But was it worth while to heap Pelion on Ossa, to shake the whole world, to create such a cataclysm of colour, merely to raise a smile? Or can it be that the logical outcome of the doctrine of "art for art's sake" is nothing more or less than the bizarre and the burlesque?

Distinguished by such characteristics and marked by such defects, Giulio Romano occupies nevertheless an important place in the history of art. More than any other, he aided in propogating the pseudo-classical, half-pagan style of art so fashionable during the seventeenth century, and it is mainly through his influence that after the year 1600 we find so few religious painters in Europe. It was reserved to a Dutchman -- Rembrandt -- to reconcile art and morality once more. By his influence as a pupil of Raphael, Giulio contributed to spread the evil germs of Italian art -- carelessness of finish, bravura, lack of sincerity, lack of truth, mannerism, love of the grotesque. He painted many altar-pieces; the best is the "Stoning of St. Stephen" in S. Stefano at Genoa, executed before leaving Rome, when the mantle of Raphael was still on him. His Madonnas, such as the "Madonna della Gatta" (Naples), the "Madonna della Catina" (Dresden), are mere genre pictures without feeling or religious depth, having the sort of abstract beauty we expect in bas-reliefs. The "Nativity" of the Louvre is an attempt to reproduce the chiaroscuro of Corregio.

LOUIS GILLET

Bl. Giuseppe Maria Tommasi

Bl. Giuseppe Maria Tommasi

A Cardinal, noted for his learning, humility, and zeal for reform; born at Licata, Sicily, of a princely family, 12 September, 1649; died in Rome, 1 January 1713. Though destined by his father for the Spanish Court, he joined the Clerks Regular of the Theatine Order at Palermo, 24 March, 1665, renouncing his primogeniture and the principedom in favour of his brother. He was professed 25 March, 1666. He studied philosophy, first at Messina, and later, owing to poor health, at Ferrara and Modena; and theology in Rome and Palermo. He was ordained priest on Christmas Day, 1673. To a wide knowledge of Greek, he united the study of Ethiopic, Arabic, Syriac, Chaldaic and Hebrew--converting his master a Jewish rabbi, to Christianity. From the Psalters in these different languages, he collected the titles of the Psalms. He devoted himself to the study of Scripture and the Fathers. Searching the chief libraries, archives, and monuments, he retraced the ancient ecclesiastical discipline and liturgy.

His valuable works (*Codici Tommasiani*), published chiefly from ancient codices in the Vatican and Vallicellian Libraries and the Library of Christina of Sweden, were highly praised by the different academies of Europe, even Protestant. Chief among his publications are the "Codices sacramentorum nongentis annis antiquiores" (Rome, 1680), partly transcribed by Mabillon in his "Liturgia Gallicana". Following these, in order of time, were: "Psalterium" (Rouse, 1683), according to the Roman and Gallican editions, published under the name of Giuseppe Maria Caro". In this work Tommasi introduced Origen's symbols (obeli and asterisks), obsolete for nine centuries. Under the same pen-name Tommasi wrote "Responsalia et Antiphonaria Rom. Eccl.", etc (Rome, 1686); "Sacrorum Bibliorum Tituli, sive capitula" (Rome, 1688); "Antiqui libri Missarum Rom. Eccl." or the Antiphonary of Pope Saint Gregory, entitled "Comes", written by Alcuin at the order of Charlemagae (Rome, 1691); "Officium Domicinae Passionis", used by the Greeks on Good Friday, translated into Latin (Rome, 1695). Under his proper name he published "Speculum" (Rome, 1679); "Exercitium Fidei, Spei et Caritatis" (Rome, 1683); "Breviarium psalterii (Rome, 1683); "Vera norma di glorificar Dio" (Rome, 1687); "Fermentum" (Rome, 1688); "Psalterium cum canticis" (Rome, 1697); "Indiculus institutionum theologiarum veterum Patrum" (3 vols., Rome, 1709, 1710; 1712), an exposition of theological theory and practice, derived from original patristic sources. Tommasi also wrote numerous *opuscula*, the last four published by G. Mercati (Rome, 1905). In 1753 Vezzosi published his works in eleven quarto volumes.

Tommasi's efforts at reform were directed not to the introduction of the new, but to the restoration and maintenance of the old. He was not always upheld and was sometimes rebuked for his zeal. Innocent XII made him examiner of the bishops, or of the clergy. Clement XI appointed him consultor of the Theatine Order, theologian of the "Congregatio super Disciplinâ Regulari" and other Congregations, consultor of the Congregations of Rites and Indulgences, and *qualificator* of the Holy Office. The same pope created him cardinal-priest of the Title of S. Martino ai Monti and compelled him to accept the honour. Taking St. Charles Borromeo for his model, Tommasi practised

humility and charity towards the poor. He taught catechism to the children of the poor in his titular church. He introduced the use of Gregorian chant in his church. On his death he was mourned by all, even by the pope, who so admired his sanctity that he consulted him before accepting the papacy. He was beatified by Pius VII, 5 June, 1803. Every year the Arcadians hold a religious and literary commemoration in his honour. His body rests in the church of S. Martino ai Monti.

FRANCESCO PAOLI

Giuseppe Giusti

Giuseppe Giusti

A poet and patriot; b. 1809, at Monsumano near Pescia, Italy; d. 31 March, 1850, at Florence. He received his early training under a private tutor and in an academy at Florence. Then he entered the University of Pisa to take up the study of jurisprudence. He did not give overmuch attention to his legal course, yet eventually he secured his degree, in 1834, after a delay due in part to a political satire written by him which displeased the authorities. Now establishing himself in Florence, ostensibly for the practice of law, he really devoted himself to literary pursuits. When his health began to fail, he travelled about the peninsula with the hope of recovering it, visiting Rome, Naples, Leghorn, Milan, Pisa, and other places. In the meantime he had been active as a poet, and, trusting in the reform promised by the grand duke, Leopold II. he addressed to him an encomiastic ode quite different from the satirical verses with which he had assailed him previously. He was admitted into membership in the Accademia della Crusca. Entering seriously into political life as a legislator, he was elected a deputy to the first and second Tuscan Legislative Assemblies, in which he signaled himself by his patriotic endeavours. At first he favoured the return of the grand dukes but when the latter came under Austrian auspices Giusti withdrew from public life. By this time tuberculosis, the fatal malady threatening him, began to assert itself all too plainly, and on 31 March, 1850, he died of it in the mansion of his friend, the Marquis Gino Capponi, who, like himself, was a sturdy Catholic and patriot.

Among his early compositions there figure his *scherzi*, as he called them, little lyrics of which some were amorous and others of varied import, and which were scattered broadcast through the land in manuscript form. In 1844 they were published at Leghorn with his sanction. It is obvious that he began his lyric career under the influence of Petrarch; later, however, he developed a romantic and elegiac strain of his own. Notable among his purely lyrical compositions is the "Fiducia in Dio", which sets forth his hope and faith as a Catholic Christian. With tremendous force does he express himself in his political satires, in which, departing from the conventional employment of the terza-rima and the blank verse, he uses a variety of lyric measures. Taken in their entirety, his political satires present a picture of Italy in his day. They are directed against social abuses of many sorts, and at the same time they express a longing for political and moral regeneration. In view of the frankness and the acridity with which he assailed the grand-ducal government and the Austrians, it is surprising that he escaped the dungeon to which so many other Italian patriots of the time were

condemned. In prose he published but little. Mention may be made, however, of his "Proverbi toscani" a collection of proverbs annotated by him, and his "Epistolario", a collection of his letters. These letters are rather too studied and polished in form, but they remain valuable for the autobiographical information that they contain. On the basis of them, the librarian, Guido Biagi, has prepared a volume entitled "Vita di Giuseppe Giusti, scritta da lui medesimo" (Florence, 1893).

J.D.M. FORD

Raoul Glaber

Raoul Glaber

Benedictine chronicler; b. in Burgundy before 1000; d. at Cluny about 1050. In early boyhood he was so wayward and mischievous that his uncle, a monk, to safeguard him, forced him to enter the monastery of St-Léger de Champeaux at the age of twenty. However, he adopted only the monastic habit. He tells us that through pride he resisted and disobeyed his superiors, and quarrelled with his brethren. Finally he was expelled. He then entered the monasteries of Notre-Dame du Moutier and St-Benignus at Dijon. Abbot William of Dijon, who appreciated Raoul's literary talents, became his warm friend and took him in 1028 as his companion on a journey to Suza in Italy. Yielding again to his roving disposition, Glaber quietly ran away and entered the monastery of St-Germain d'Auxerre. Thanks to his learning, he was sure of a refuge, as he tells us, wherever he chose to go. Judging, then, by the mediocre talent displayed in his writings, this fact alone shows us to what depths literary culture had sunk in his time. The monks at St-Germain got him to restore or compose the inscriptions on the numerous altars in their church, and on the tombs of the saints who were buried in it. When this was done his wanderings began again, and he tried the religious life at Beza, and at Cluny under St. Odilo. He seems at this time to have acquired with increasing years a disposition more in keeping with his profession, and he died at Cluny about 1050. His was a proud, indocile, restless spirit. From his writings we learn that he always had a lively faith, but was extraordinarily superstitious. Of his works there remain: "Wilhelmi abbatis gestorum liber", the life of his superior at Dijon, printed in Acta SS., 1 Jan., 57 sqq.; and his "Chronicle", for which he is chiefly remembered. This is a history of the world, as he knew it, from the year 900 till 1045. It was written in Latin, partly at Cluny and partly at St-Germain. Glaber is quite devoid of literary style; and critical spirit he has none, the most trivial events and tales being put on exactly the same plane as the most important facts. His chronology and geography are quite deficient; yet, despite all its faults, the work is interesting and useful, as it gives us an insight into the customs and morals of an age when Christianity on the continent had reached a very low ebb.

A.A. MacERLEAN

Manius Acilius Glabrio

Manius Acilius Glabrio

Consul at Rome during A.D. 91, with Trajan. He belonged to one of the noblest families of Rome, no fewer than nine of his name having held the consular office, the first being that Acilius Glabrio who was consul in A.U.C. 563 (191 B.C.), conquered the Macedonians at the battle of Thermopylae, and in whose honour the Temple of Piety, now the church of S. Nicola in Carcere, was erected. The family attained great wealth and power, and their gardens, in the early imperial period, covered the whole of what is now the Pincian Hill. The subject of the present memoir was put to death by Domitian in the year 95. Suetonius (Domit., c. x) tells us that the emperor caused several senators and ex-consuls to be executed on the charge of conspiring against the empire -- *quasi molitores rerum novarum*, "as contrivers of novelty" -- and among them he names "Acilius Glabrio, who had previously been banished from Rome". The charge of "contriving novelties" seems in this particular case -- not, however, in the others which are mentioned with it -- to denote adherence to the Christian religion. Dio Cassius (lxxvii, 12, 14) tells us, as also does Juvenal (Sat., iv, 94), that, during his consulship and before his banishment, Glabrio was forced by Domitian to fight with a lion and two bears in the amphitheatre adjoining the emperor's villa at Albanum. This amphitheatre still exists, and was excavated in 1887. It is partly hollowed out of the side of the mountain, and commands a remarkable view. Xiphilinus, speaking of the executions of 95, says that some members of the imperial family and other persons of importance were condemned for atheism, as having embraced "the customs and persuasions of the Jews", that is, of course, the Christian Faith. Among these he mentions Clemens and Domitilla, of whose Christianity there is no doubt. Glabrio was involved in this trial and suffered under this indictment, so that we could have little doubt that he too was a Christian, even if we had not the archaeological evidence of which we shall now speak.

Glabrio was put to death in his place of exile, concerning the location of which we have no knowledge. But his body was brought to Rome, and buried on the Via Salaria, in the catacomb of Priscilla. Here the crypt, in which he with many of his family and dependents was laid to rest, was discovered in 1888. Henceforth there can be no doubt of his religion, or concerning the cause of his execution. Unfortunately, the crypt had been wrecked by treasure-seekers, the date of whose vandalistic action can be fixed as the time of Clement VIII (1667-70). The hypogaeum was of very unusual form, consisting of a single large ambulatory or "cryptoporticus in gamma", that is turned at right angles with its own staircase. The places for tombs were all large "arcosolia", or niches for sarcophagi; there was not a single *loculus* of the usual cemeterial pattern in the walls. At the end of the longer arm of the gamma a passage was opened into a large hall, nine yards by four and a half, barrel-vaulted and with a square "lucernarium", which had apparently originally been a cistern for water. It had contained an altar, raised over a tomb, with spiral columns of giallo antico, and was at one time beautifully decorated, but had been entirely wrecked. In it, however, were found fragments of a marble sarcophagus, with the inscription *ACILIO GLABRIO . . . FILIO* still legible. Other fragments were afterwards discovered, which placed it beyond doubt that here was a burying-place of the Acilian family, round one of their race who apparently had been a martyr. The lettering of the chief inscription being of the time of Domitian or thereabouts, and the fact that the hypogaeum

itself belongs to the earliest age of Christianity, is sufficient to enable us to feel certain that we have here the tomb of the famous consul. The date and the circumstances connected with the translation of his relics to Rome from the place where he suffered are not known.

ARTHUR S. BARNES

Glagolitic

Glagolitic

(Or GLAGOLITSA; Slavonic *glagol*, a word; *glagolati*, to speak).

An ancient alphabet of the Slavic languages, also called in Russian *bukvitsa*. The ancient Slavonic when reduced to writing seems to have been originally written with a kind of runic letters, which, when formed into a regular alphabet, were called the Glagolitic, that is the signs which spoke. St. Cyril, who, together with his brother St. Methodius, translated the Greek liturgy into Slavonic when he converted the Bulgarians and Moravians, invented the form of letters derived from the Greek alphabet with which the church Slavonic is usually written. This is known as the Cyrillic alphabet or *Kirillitsa*. The Cyrillic form of letters is used in all the liturgical books of the Greek Churches, whether Catholic or schismatic, which use the Slavonic language in their liturgy, and even the present Russian alphabet, the *Grazhdanska*, is merely a modified form of the Cyrillic with a few letters omitted. The order of the letters of the alphabet in the Glagolitic and in the Cyrillic is nearly the same, but the letters bear no resemblance to each other, except possibly in one or two instances. Jacic upholds the theory that St. Cyril himself invented the Glagolitic, and that his disciple St. Clement transformed it into Cyrillic by imitating the Greek uncial letters of his day. There is a tradition, however, that St. Jerome, who was a Dalmatian, was the inventor. Some of the earliest Slavic manuscripts are written in the Glagolitic characters. The Cyrillic alphabet continued to be used for writing the Slavonic in Bulgaria, Russia, and Galicia, while the Southern and Western Slavs used the Glagolitic. These Slavs were converted to Christianity and to the Roman Rite by Latin missionaries, and gradually the Roman alphabet drove out the use of the Glagolitic, so that the Bohemians, Slovenians, Moravians, and part of the Croatians used Roman letters in writing their languages. In Southern Croatia and in Dalmatia (often treated as synonymous with Illyria in ancient times) the Glagolitic has continued in use as an ecclesiastical alphabet in writing the ancient Slavonic. Although the Slavic peoples bordering on the Adriatic Sea were converted to the Roman Rite, they received the privilege, as well as their brethren of the Greek Rite, of having the Mass and the offices of the Church said in their own tongue. Thus the Roman Mass was translated into the Slavonic, and, in order to more fully distinguish the Western Rite from the Eastern Rite among the Slavic peoples, the use of the Glagolitic alphabet was reserved exclusively for the service books of the Roman Rite, just as the Cyrillic was used for the Greek Rite.

The use of the Glagolitic Missal and office books, while permitted in general among the Slavs of Dalmatia and Croatia from the earliest times since the Slavonic became a liturgical language under Pope John VIII, was definitely settled by the Constitution of Urban VIII, dated 29 April,

1631, in which he provided for a new and corrected edition of the Slavic Missal conformable to the Roman editions. In 1648 Innocent X provided likewise for the Slavic Breviary, and by order of Innocent XI the new edition of the Roman-Illyrian Breviary was published in 1688. In the preface to this Breviary the pope speaks of the language and letters employed therein, and gives St. Jerome the credit for the invention of the Glagolitic characters: "Quum igitur Illyricarum gentium, quæ longe lateque per Europam diffusæ sunt, atque ab ipsis gloriosis Apostolorum Principibus Petro et Paulo potissimum Christi fidem edoctæ fuerunt, libros sanctos jam inde a S. Hieronymi temporibus, ut pervetusta ad nos detulit traditio, vel certe a Pontificatu fel. rec. Joannis Papæ VIII, prædecessoris nostri, uti ex ejusdem datâ super eâ re epistola constat, ritu quidem romano, sed idiomate slavonico, et caractere S. Hieronymi vulgo nuncupato conscriptos, opportunâ recognitione indigere compertum sit." The new edition of the Roman Ritual in Glagolitic form had previously been published in the year 1640.

The latest editions of the Missal and ritual are those of the Propaganda, "Missale Romanum, Slavicâ linguâ, glagolitico caractere" (Rome, 1893), and "Rimski Ritual (Obrednik) izdan za zapoviedi Sv. Otca Pape Paula V" (Rome, 1894). There was a former edition of the Glagolitic Missal, "Ordo et Canon Missæ, Slavice" (Rome, 1887), but on account of the numerous errors in printing and text it was destroyed, and only a few copies are in existence. The use of the Latin language in the Dalmatian seminaries since the year 1828 has had the effect of increasing the use of the Latin in the Roman Rite there, and the use of the Glagolitic books has accordingly diminished. Of course the non-Slavic inhabitants of Dalmatia and Croatia have always used the Slavonic language for the Roman Rite. At present the Slavonic language for the Roman Rite, printed in Glagolitic characters, is used in the Slavic churches of the Dioceses of Zengg, Veglia, Zara, and Spalato, and also by the Franciscans in their three churches in Veglia, one in Cherso, two in Zara, and one in Sebenico. Priests are forbidden to mingle the Slavonic and Latin languages in the celebration of the Mass, which must be said wholly in Slavonic or wholly in Latin.

Andrew J. Shipman
Jean-Baptiste Glaire

Jean-Baptiste Glaire

Priest, hebraist, and Biblical scholar; b. at Bordeaux, 1 April, 1798; d. at Issy, near Paris, 25 Feb., 1879. Having completed a course of serious study at Bordeaux, he went to the seminary of Saint-Sulpice at Paris, the courses of which he followed simultaneously with those of Oriental languages at the Sorbonne (State Faculty of Theology). After his ordination to priesthood, in 1822, he began to teach Hebrew at the seminary of Saint-Sulpice. In 1825 he was made assistant to the Abbe Chaunac de Lanzac, professor of Hebrew at the Sorbonne, and succeeded him as lecturer in 1831. He was professor of Sacred Scripture in 1836, became dean of the faculty in 1841, and retired

in 1851. His numerous works are out of date, but it should be remembered that he did much for the study of Holy Scripture, and, furthermore, in a very conservative way.

The following are his chief publications.— On Oriental languages: "Lexicon manuale hebraicum et chaldaicum", Paris, 1830 (correction of the "Lexicon" of Gesenius); "Principes de grammaire hébraïque et chaldaïque", Paris, 1832 and 1843; "Manuel de l'hébraïsant", Paris, 1850; "Principes de grammaire arabe", Paris, 1861. On Holy Scripture: "Introduction historique et critique aux livres de l'Ancien et du Nouveau Testament", Paris, 1836, several times re-edited; he summarized it in his "Abrégé d'introduction" etc., Paris, 1846, which also went through several editions; "Les Livres saints vengés, ou la vérité historique et divine de l'Ancien et du Nouveau Testament", Paris, 1845. The portion of his work which endures consists of his translations of the Bible: "La sainte Bible en latin et en français", Paris, 1834; "Torah Mosché, le Pentateuque", Hebrew text with translation and annotations; "La sainte Bible selon la Vulgate", Paris, 1871-1873, an exact but too literal version; the translation of the New Testament, also frequently published separately, was specially examined and approved at Rome. Glaire's translation was inserted in the "Bible polyglotte" of Vigouroux, Paris, 1889-1890. With Viscount Walsh, Glaire edited the "Encyclopédie catholique" (Paris, 1854—), to which he contributed a number of articles.

A. BOUDINHON

Ranulf de Glanville

Ranulf de Glanville

Chief Justiciar of England; b. at Stratford, Suffolk, England, date unknown; d. before Acre, Palestine, 1190. He was of a baronial house which got its name from Glanville, in Normandy, and which in England held property in Norfolk and Suffolk. His father was William de Glanville, of whom he was a younger son, though eventually, on the death of an elder brother, he inherited the family estates and honours. Both before and after his appointments to the judicial bench, he held the shrievalty of various counties, which seems to betoken employment in the Exchequer; in particular he was Sheriff of the great County of York from 1163 till the death of King Henry II, save a short break, and in 1173 he became Sheriff of Lancashire. In the latter year, in concert with William the Lion, King of Scots, and the French king, there broke out the great rebellion of King Henry's sons against their father, and in the following year the Scottish king entered England with a mighty host, King Henry being then in Poitou. However, in July, Robert Stuteville, Sheriff of Yorkshire, and Glanville, the latter doubtless at the head of the men of Lancashire, encountered the invaders near Alnwick and utterly routed them, King William himself becoming Glanville's prisoner.

In 1176 we find Glanville a justice itinerant, and in 1180 he became Chief Justiciar of England. He had now reached the zenith of royal favour, which position he kept throughout the remainder of Henry's reign, being on occasion employed on various embassies, negotiations, and warlike expeditions, and in 1182 was appointed an executor of the king's will. In 1189 Henry II died. At

the coronation of his successor, Richard I, the same year, Chief Justiciar Glanville was present, and when that prince took the cross, Glanville joined him, contributing a large sum towards the crusade. In the autumn of 1190 he died at the siege of Acre, a victim to the unwholesomeness of the climate. By his wife, Bertha, a daughter of a neighbouring Suffolk landowner, Theobald de Valognes, he left three daughters. Glanville is the reputed author of a celebrated work entitled "Tractatus de Legibus et de Consuetudinibus Regni Angliae", the oldest known treatise on English jurisprudence, more likely written by his illustrious nephew and secretary, Hubert Walter. Furthermore, he founded two abbeys, both in Suffolk, viz., Butley, for Black Canons, in 1171, and Leiston, for White Canons, in 1183; also a leper hospital at Somerton, in Norfolk.

C.T. BOOTHMAN

Henry Glarean

Henry Glarean

(LORITI)

The most distinguished of Swiss humanists, poet, philosopher, geographer, mathematician, and musician, was born at Mollis, near Glarus, Switzerland, in June, 1488, and died at Freiburg-im-Breisgau, 27 March, 1563. Loriti, or Glarean, as he came to be called after 1511, from the name of the town near which he was born, received his first instruction (as did Oswald Myconius, Rudolf Agricola, and others) from Michael Rubellus, at Rottweil. Rubellus also paid special attention to the development of his pupil's musical talent. In 1566 Glarean entered the University of Cologne, where he devoted himself to philosophical and theological studies, and learned music and mathematics, from Cochlaeus, and Greek from Caesarius. In 1510 he became a Licentiate and Master of Arts. In 1512 Maximilian I showed his appreciation of a poem which Glarean composed in his honour by raising its author to the dignity of poet laureate. In 1514 the University of Basle received him among its *Magistri* and licensed him to conduct a *bursa*, or students' hall. Among his pupils was Aegidius Tschudi, who was afterwards to become famous as an historian of Switzerland and as a zealous defender of Catholicism in the Canton of Glarus.

While at Basle Glarean formed a strong attachment for Erasmus who in turn, acting as *parens et proceptor*, remained to the last a devoted friend and no doubt influenced his attitude in the midst of religious agitation and troubles. Glarean carried a recommendation from him when he started for Paris in 1517; here too, he gathered pupils around him in a *bursa* and entered into close scientific intercourse with Budaeus, Faber Stapulensis, and Faustus Andrelinus. On the death of the last-named, Glarean became the recipient of a royal allowance, although he received no mandate to lecture publicly. In 1522 he settled at Basle, where he had a large following; but the continued advance of the religious movement which he, as an admirer of Luther's writings, and an intimate friend of Zwingli, Myconius, and Oecolompadius, had originally sympathized with, gave him little satisfaction. He severed his relations with the partisans of the Reformation and in 1529 emigrated with Ber,

Amerbach, and Erasmus, to Freiburg-im-Breisgau. He laboured in this university until his death, and was one of its most celebrated professors.

Glarean was the author of numerous and important works. In the course of his public and private teaching he produced a multitude of editions of, and commentaries on, ancient writers, among whom were Livy, Dionysius of Halicarnassus, Horace, Ovid, Donatus, Caesar, Sallust, Terence, Boethius, Lucan, Valerius Maximus, Eutropius, and Curtius. He made distinguished contributions to his favourite sciences, music and geography. He published at Basle, in 1547, his "Doekachordon," which was based on twenty years' study of ancient and ecclesiastical music, and introduced twelve tones, instead of the eight only which had been known until then. The "Dodekachordon" was recently published in the sixteenth volume of the "Publikation aelterer praktischer und theoretischer Musikwerke" (Leipzig, 1888-90). The standing of Glarean as a geographer rests on his "Helvetiae-Descriptio," a verse composition (Basle, 1515; also re-edited by Bernoulli in 1890), one of the earliest and most widely read descriptions of Switzerland; also on his "Liber de Geographia unus" (Basle, 1527), which is an exhaustive and specific study, in forty chapters, of the principles of mathematical geography. A find of historical interest was a manuscript map of the world, dated 1510, in which he, like Waldseemüller, used for the newly discovered continent the name of "Terra America." The library of Glarean eventually passed, through his friend, Bishop S.E. von Knoeringen, to the University of Ingolstadt, and is now at Munich.

Gesellsch., (Munich, 1892), s. 67-74; ELTER, de Henrico Glareano geographo (Bonn, 1896); HAYWOOD, Glareanus, His Geography and Maps in Geographical Journal (1905), XXV, 647-54.

OTTO HARTIG

Glasgow

Glasgow

I. ARCHDIOCESE OF GLASGOW (GLASGUENSIS)

Archdiocese in the south-west of Scotland, comprising at the present day the Counties of Lanark, Dumbarton, and Renfrew, part of Ayrshire north of Lugton Water, the district of Baldernock in Stirlingshire, and the Cumbrae Isles. The see was founded between 540 and 560 by St. Kentigern, or Mungo, who died 13 Jan., 601. He also established on the Welsh model a religious community, which served as a much needed centre to preserve the Faith among the surrounding Christian population. In his time Cathures, as the place was originally called, stood at the northern limit of the little kingdom of the Strathclyde Britons, which extended on the west of the island southwards as far as Carlisle in Cumberland. On the north-west were the Scots of Dalriada, and on the north-east the Picts, who were then being converted to Christianity by St. Columba and his missionary monks

from Iona. On the east the Strathclyde Britons, like their brethren in Wales, were pressed by the Angles and Saxons westward to the sea.

On account of the struggle of races for mastery and the confusion of the times that followed there appears to have been no regular succession of bishops till the time of Alexander I of Scotland, son of St. Margaret. His brother and successor on the throne, St. David, while prince of this region under the name of Cumbria, may be said to have restored the Diocese of Glasgow.

The first bishop of the restored see was John Eochy, or Achaius, who held it from 1115 till 1147. He had twenty-three successors in actual possession till 1560, when the Catholic Faith was abolished by act of the Scottish Parliament. Nearly all these bishops of Glasgow took an active share in the government of the country, whether as chancellors or treasurers of the kingdom or as members of regency during the minority of a sovereign. Robert Wishart (consecr. 1272, d. 1316) was conspicuous for his patriotism during the War of Independence, and was the close friend of Wallace and Bruce. William Turnbull (consecr. 1447, d. 1454) obtained in 1450 from Pope Nicholas V the charter of foundation for the University of Glasgow. On 9 January, 1492, Innocent VIII raised the see to metropolitan rank, attaching to it the suffragan dioceses of Argyle, Dumblane, Dunkeld, and Galloway. James Beaton, nephew of the celebrated cardinal of the same surname, was the fourth and last archbishop of the old hierarchy. In 1560, eight years after his nomination, he was forced to retire to France, where he acted as confidential agent of Queen Mary, and later openly as ambassador for James VI, till his death in Paris, 25 April, 1603. He carried away with him the diocesan records, two of which deserve special mention: (1) "Registrum Vetus Ecclesiae Cathedralis Glasguensis", in handwriting of the twelfth and thirteenth centuries, and (2) "Liber Ruber Ecclesiae Glasguensis", with entries from about 1400 to 1476. These, along with other records, were in 1843 printed in a handsome volume for the Maitland Club under the title: "Registrum Episcopatus Glasguensis: Munimenta Ecclesiae Metropolitanae Glasguensis a sede restauratâ saeculo ineunte XII ad reformatam religionem". A more splendid memorial of those times still remains in the old cathedral of St. Mungo, which was begun by Bishop Jocelyn (consecr. 1175, d. 1199) and received its last additions from Archbishop Blackader (consecr. 1484, d. 1508). The building as a national monument is administered by a department of Government, and the chancel is used for the Presbyterian worship of the State Church.

Glasgow did not again become a centre of Catholic life till about the beginning of the nineteenth century. The great industrial development which then began drew to the city and its neighbourhood Catholics from the Scottish Highlands and later, in far greater numbers, from Ireland. In 1828 the Holy See erected the Western District or Vicariate of Scotland, and the first vicar Apostolic to reside in Glasgow was Andrew Scott, Bishop of Eretria (b. 1772, d. 1846). He was succeeded by John Murdoch, Bishop of Castabala (b. 1796, d. 1865) and John Gray, Bishop of Hypsopolis (b. 1817, d. 1872). On the resignation of Bishop Gray in 1869 Charles Eyre (b. 1817, d. 1902) was consecrated Archbishop of Anazarba and appointed administrator Apostolic. On the restoration of the Scottish hierarchy by Leo XIII, 4 March, 1878, the Archbishopric of Glasgow was re-established, and Archbishop Eyre was transferred to the restored see. He had consolidated the work of his

predecessors in the former vicariate, and had laid the foundations for a complete diocesan organization. In 1884 he obtained from the Holy See the erection of a cathedral chapter with a provost and eleven canons. He introduced a thorough system of inspection in religious knowledge for the schools of the archdiocese. He was also the founder in 1874 of the diocesan college for higher studies, to house which he erected in 1892 at his own cost a building worthy of the purpose. He was succeeded in 1902 by John Aloysius Maguire (b. 1851), who had been consecrated as auxiliary bishop in 1894. The Catholics of the Glasgow district are computed at 380,000 out of a general population within the same bounds of 1,180,000. The number of Catholic baptisms in 1906 was 14,785. Taking the statistics available for 1908, there are 91 quasi-parishes, with 271 priests on active service distributed over 21 deaneries. There are 7 religious communities of men, and 16 of women. There are Catholic elementary schools in all the quasi-parishes, besides 14 upper-schools and a training college for female teachers. The teaching staff of the archdiocese numbers 1230. The number of children presented in 1907 for religious examination in the elementary schools was 55,350. There are 15 charitable institutions of various kinds, and there is a conference of the St. Vincent de Paul Society in nearly every quasi-parish.

II. GLASGOW UNIVERSITY

Forty years later than St. Andrews, Glasgow University was founded by Bull of Nicholas V, dated 7 January, 1450-1, granted at the request of James II, who acted on the advice of William Turnbull, Bishop of Glasgow. The bishop and his successors were to be ex-officio chancellors of the university; the foundation also provided for a rector, doctors and masters in the four faculties. Originally, it appears, most of the students enrolled were ecclesiastics, secular and regular, especially of the Dominican Order: "many of the Friars Predicators were diligent students" (Munim., i, 34) "and took a deep interest in the success of the university" (Stewart, p. xiii); and Bishop Turnbull warmly encouraged his clergy both to learn and to teach. He also procured from James II a royal charter in 1453. The Bull constituted a "studium generale, tam in theologia ac iure canonico et civili quam in artibus et quavis alia licita facultate", after the pattern of Bologna. The foundation of a college followed soon; it stood at first near Rotten Row; later, on a site given by Lord Hamilton in High Street, where it remained till 1870. The college (Paedagogium) was ruled by three "regents"; the students were distributed in four "nations", originally called Clidisdaliae, Thevidaliae, Albaniae, Rosay, now surviving as Glottiana, Loudoniana, Transforthana, Rothseiana. Among the most famous names in the early annals of the university are: William Elphinstone, afterwards Bishop of Aberdeen and founder (in 1494-5) of Aberdeen University; the poet Robert Henryson; John Knox; Cardinal Beaton; and James Beaton, his nephew, chancellor of the university and Archbishop of Glasgow in 1560, when, upon the establishment of Protestantism, he fled to France.

The university, almost destroyed in the religious troubles, was refounded by James VI, then a minor under Morton's regency, in 1577 (Nova Erectio), with increased endowments, and reorganized by Andrew Melville or Melvin. From that time it has continued to increase; Dr. Weir (op. cit.) calculated the number of students at various epochs as follows: at beginning of sixteenth century,

50; at beginning of seventeenth century, 100; at beginning of eighteenth century, 400; at beginning of nineteenth century, 700; in 1870-1, 1279; in 1889-90, 2180. In 1907-8 there were 1905 men students (arts, 691; science, 275; theology, 56; medicine, 623; law, 208). In 1892 a neighbouring institution, established in 1883, for the higher education of women (Queen Margaret College) was incorporated into the university, and there are now some 600 female students.

The development of the university kept pace with the growth of Glasgow, and the increasing commercial importance of the city was reflected in the advance of scientific studies. The brothers William and John Hunter, in medicine; the philosophers Francis Hutcheson, Thomas Reid, and Adam Smith, are the great names in the eighteenth century, as teachers; Tobias Smollett, James Boswell, Francis Jeffrey, and Thomas Campbell as students. The university was also made famous by the Foulis printing press and the mechanical experiments of James Watt, inventor of the steam-engine. But perhaps the most world-wide celebrity that Glasgow University can boast is the late William Thomson, Lord Kelvin, who taught and carried on his researches here for fifty years till his retirement in 1899. Sir Richard Jebb and Dr. Gilbert Murray were successively professors of Greek from 1874 to 1899; the Cairds, John and Edward, were great names in Scotland; and the medical faculty has been and is still graced by men of European reputation, such as Lord Lister and Sir W. MacEwen.

The government of the university has been subjected to revision by royal commission many times, particularly in 1830, 1858, 1889. The old college was abandoned in 1870 for the large, and still largely expanding, buildings on Gilmorehill. The teaching staff numbers 32 professors, 50 lecturers, and 40 assistants. The total revenues from all sources (including Government annual grant of £20,000) amount to about £80,000. Magnificent additions to the equipment of the scientific and medical faculties have recently been made, the cost of which has been defrayed partly by the Carnegie Trust and partly by special subscription.

ARCHDIOCESE: *Registrum Episcopatus Glasguensis*, with Introduction, printed for the Maitland Club (Edinburgh, 1843); *The Catholic Directory for Scotland* (Edinburgh, 1908); *The Western Catholic Calendar* (Glasgow, 1908).

UNIVERSITY: *Munimenta Universitatis Glasguensis* (Glasgow, 1854); REID, *Statistical Account of the University* (1799); BAILLIE, *Letters and Journals*; INNES, *Early Scottish History* (1861); WEIR, preface to *Memorials of the Old College* (Glasgow, 1871); STEWART, *University of Glasgow, Old and New* (1891); COUTTS, *A Short Account of the University of Glasgow* prepared in connexion with the Ninth Jubilee in 1901; the last author has a larger work in preparation. RAIT in *Transactions of the Glasgow Archaeol. Soc.*, V, 1908.

JOHN RITCHIE/J.S. PHILLIMORE
Glastonbury Abbey

Glastonbury Abbey

[GLESTINGABURH; called also YNISWITRIN (Isle of Glass) and AVALON (Isle of Apples)]

Benedictine monastery, Somersetshire, England, pre-eminently the centre of early Christian tradition in England. Though now thirteen miles inland from the Bristol Channel, it was anciently an island encircled by broad fens, the steep conical hill called Glastonbury Tor rising therefrom to a height of about four hundred feet. Thus, difficult of access and easy of defence, it formed a natural sanctuary round which has gradually clustered a mass of tradition, legend, and fiction so inextricably mingled with real and important facts that no power can now sift the truth from the falsehood with any certainty.

TRADITIONAL ACCOUNT OF FOUNDATION

For the early history of the foundation the chief authority is William of Malmesbury in his "De antiquitate Glastoniensis Ecclesiæ" and "De Gestis Regum" (lib. I). The former work, composed apparently about 1135, was written for the express glorification of Glastonbury and consequently gives the legendary history much more fully than the latter. Malmesbury's story of the foundation and early years is briefly as follows:

In the year 63 A.D. St. Joseph of Arimathea with eleven companions was sent to Britain from Gaul by St. Philip the Apostle. The king of the period, Aviragus, gave to these twelve holy men the Island of Ynyswitrin and there, in obedience to a vision, they built a church in honour of the Blessed Virgin Mary. This church, called the *vetusta ecclesia* or *lignea basilica*, from its being constructed of osiers wattled together, was found more than one hundred years later by Fagan and Deruvian, missionaries sent to Lucius, King of the Britons, by Pope Eleutherius. Here therefore the missionaries settled, repaired the *vetusta ecclesia*, and, on their departure, chose twelve of their converts to remain in the island as hermits in memory of the original twelve. This community of twelve hermits is described as continuing unmodified until the coming of St. Patrick, the Apostle of the Irish, in 433, who taught the hermits to live together as cenobites, himself became their abbot, and remained at Glastonbury until his death, when his body was buried in the *vetusta ecclesia*. After St. Patrick his disciple, St. Benignus, became abbot at Glastonbury, while St. Daid of Menevia is also stated to have come thither, built another church, and presented a famous jewel known as the Great Sapphire of Glastonbury. The chronicler then goes on to record the death and burial of King Arthur at Glastonbury and gives a list of British saints who either died and were buried at Glastonbury, or whose bodies were translated thither on the gradual western advance of the conquering English.

The first impression produced on a modern mind by William of Malmesbury's pages is that the whole is one barefaced invention, but on this point the late Professor Freeman may be quoted as an unbiased authority (Proc. of Somerset Archæological Soc., vol. XXVI): "We need not believe that the Glastonbury legends are facts; but the existence of those legends is a great fact.... The legends of the spot go back to the days of the Apostles. We are met at the very beginning with the names of St. Phillip and St. James, of their twelve disciples, with Joseph of Arimathea at their head,... we read the tale of Fagan and Deruvian; we read of Indractus and Gildas and Patrick and David and Columb and Bridget, all dwellers in or visitors to the first spot where the Gospel had

shone in Britain. No fiction, no dream could have dared to set down the names of so many worthies of the earlier races of the British Islands in the *Liber Vitæ* of Durham or Peterborough. Now I do not ask you to believe these legends; I do ask you to believe that there was some special cause why legends of this kind should grow, at all events why they should grow in such a shape and in such abundance, round Glastonbury alone of all the great monastic churches of Britain." And he explains the "special cause" as follows: "The simple truth then is this, that among all the greater churches of England, Glastonbury is the only one where we may be content to lay aside the name of England and fall back on the older name of Britain,... as I have often said, the talk about the ancient British Church, which is simply childish nonsense when it is talked at Canterbury or York or London, ceases to be childish nonsense when it is talked at Glastonbury." This much therefore seems certain, that when at last the West Saxons captured Glastonbury there already existed there, as at Glendalough or Clonmacnoise, a group of small churches built in typical Celtic fashion and occupied by the British monks. One of these, the oldest and most venerated of all, the *vetusta ecclesia* or *lignea basilica*, was preserved, and by its survival stamped the later buildings at Glastonbury with their special character. Indeed, its successor, falsely called the Chapel of St. Joseph, is the chief feature and loveliest fragment in the ruins that exist to-day.

With the coming of the English the mist clears. In the first years of the eighth century Ina, King of the West Saxons, founded the great church of the Apostles Sts. Peter and Paul, and endowed the monastery, granting certain charters which, in substance at any rate, are admitted as genuine (see Dugdale, "Monasticon Anglicanum", I). The monastery, thus firmly established, maintained a high reputation until the advance of the Danes in the ninth century, when it was ravaged and despoiled and sank into a low state. From this it was raised by the work of St. Dunstan who, as a boy, received his education in the cloister at Glastonbury, and later became abbot there, ruling the monastery, except for one brief period of banishment, until his elevation to the episcopate. (See **DUNSTAN**, **SAINT** .) There can be no doubt that St. Dunstan enforced the Rule of St. Benedict at Glastonbury as a part of his reform there, the fact being expressly recorded by his first biographer and intimate friend "the priest B.", who also tells us that in his day Irish pilgrims, learned men from whose books Dunstan himself learned much, were in the habit of coming to Glastonbury to worship at the tomb of one of their worthies, a Patrick, though doubtless not the Apostle of the Irish, which seems a clear proof of an independent Irish tradition confirming the local one mentioned above.

From St. Dunstan's date until the Normal Conquest the abbey prospered exceedingly, but in 1077 Egelnoth, the last Saxon abbot, was deposed by the Conqueror, and Thurstan, a Norman monk of Caen, installed in his place (Anglo- Saxon Chronicle, 1077). The new abbot at once began to change the local use as to the liturgy and chant for that of Fécamp. Violent disputes followed, which in 1083 ran so high that the abbot, to enforce obedience, called in armed soldiers, by whom two or three of the monks were slain and many more wounded. After this the king removed Thurstan, who was restored, however, by William Rufus and died as abbot in 1101. Under his successor Herlewin the abbey revived, but in 1184 a great fire destroyed almost the entire monastery, including the *vetusta ecclesia*. Rebuilding was begun at once. The beautiful stone chapel built on the site and in

the shape of the *lignea basilica* was finished and consecrated on St. Barnabas' day, 1186, and the *major ecclesia* and other buildings commenced. Soon after this, however, with the consent of King Richard I, the abbey with all its revenues was annexed to the See of Bath and Wells, the bishop styling himself Bishop of Bath and Glastonbury. This meant disaster to the abbey, and an appeal was made to the pope. After much costly litigation the monks were upheld by the Holy See on every point, and the abbey's independence secured. To this incident must be assigned the long delay in completing the great church, which was not consecrated until 1303, one hundred and nineteen years after the fire. From this date until its suppression the history of the abbey is without exceptional incident. It continued to be one of the greatest pilgrim centres of England, and its connexion with the ancient British and Saxon Churches seems to have created a tendency to regard it almost as the representative of the "nationalist" aspect of the Church in England, as distinct from, and at times opposed to, the "international" forces centred at Christchurch, Canterbury. This was accentuated and embittered by a personal rivalry due to the claim of both churches to possess the body of the great St. Dunstan. No one denied that the saint had been buried at Canterbury, but the Glastonbury claim was based on a pretended transfer, alleged to have taken place in 1012; the relics, on their arrival at Glastonbury, being hidden away and not produced for public veneration until after the great fire in 1184, when a shrine was erected. That the whole story was a fabrication is clear from a letter of Eadmer, a monk of Canterbury, who declares that he had himself been present when the body was moved during the building of Lanfranc's cathedral at Canterbury in 1074, and also from the formal search and finding of the body in the Canterbury shrine in 1508 by Archbishop Warham, who then ordered the suppression of the Glastonbury shrine under pain of excommunication (Wharton, *Anglia Sacra*, II, 222-33).

Second only to St. Dunstan's shrine as an attraction to pilgrims was the tomb of King Arthur. The claim that Arthur was buried at Glastonbury seems to be a late one. In the "*Gesta Regum*" (I, xxviii) William of Malmesbury says expressly that the burial-place of Arthur was unknown. However, in his "*De antiquitate Glastoniensis ecclesiæ*" (Cap. De nobilibus Glastoniæ sepultis), the text of which is in a very corrupt state, a passage asserts that Arthur was buried at Glastonbury *inter duas pyramides*. Professor Freeman rejects this as an interpolation added after Geoffrey of Monmouth's time, when the Arthurian legend had reached its final form through that writer's fabrications. There is clear evidence that the two pyramids did actually exist, and in 1191, we are told, Abbot Henry de Soliaco made a search for Arthur's body between them. Giraldus Cambrensis, who writes apparently as an eyewitness of the scene, relates (*Speculum Ecclesiæ*, dist. ii, cap. ix) that at a depth of seven feet a large flat stone was found, on the underside of which was fixed a leaden cross. This was removed from the stone and in rude characters facing the stone were the words *Hic jacet sepultus inclitus Rex Arturius in insula Avallonia*. Under this at a considerable depth was a large coffin of hollowed oak containing the bones of the king and his Queen Guinevere in separate compartments. These were later removed to a shrine in the great church. Leland (*Assertio Arthuri*, 43, 50, 51) records that he saw both the tomb and the leaden cross with the inscription,

and Camden (Britannia, Somerset) states that the latter still existed in his day, though he does not say where it was when he saw it.

SUPPRESSION OF THE ABBEY

In 1525 Abbot Bere died, and Richard Whiting, chamberlain of the abbey, was chosen for the post by Cardinal Wolsey, in whose hands the community had agreed to place the appointment. For ten years he ruled his monastery in peace, winning golden opinions on all hands for his learning, piety, and discreet administration. Then in August, 1535, came Dr. Richard Layton, the most contemptible of all the "visitors" appointed by Thomas Cromwell, to hold a visitation in the name of King Henry VIII. He found everything in perfect order, though he covers his disappointment with impudence. "At Bruton and Glastonbury", he writes to Cromwell, "there is nothing notable; the brethren be so straight kept that they cannot offend; but fain they would if they might, as they confess, and so the fault is not with them". But the end was not far distant. The lesser monasteries had gone already, and soon it was the turn of the greater houses. By January, 1539, Glastonbury was the only religious house left standing in all Somerset, and on 19 September, in the same year, the royal commissioners arrived without previous warning. Abbot Whiting was examined, arrested, and sent up to London to the Tower for Cromwell to examine in person. Meanwhile the commissioners, regarding Glastonbury as part of the royal possessions already in view of the intended attainder of the abbot, proceeded to "dispatch with the utmost celerity" both their business as spoilers and the monks themselves. Within six weeks all was accomplished, and they handed over to the royal treasurer the riches still remaining at the abbey, which had previously been relieved of what the king chose to call its "superfluous plate", among which is specially mentioned "a superaltar garnished with silver gilt and part gold, called the Great Sapphire of Glastonbury". The words of Layton, quoted above, bear witness to the admirable condition of the monastery as regards spirituals under Abbot Whiting. As one of the indictments brought against him was that of mismanagement in temporals, it is worth while to quote Cromwell's own note in his manuscript "Remembrances" as to the booty obtained from Glastonbury at this, the second, spoliation: "The plate of Glastonbury, 11,000 ounces and over, besides golden. The furniture of the house of Glaston. In ready money from Glaston £1,100 and over. The rich copes from Glaston. The debts of Glaston [evidently due to the abbey] £2,000 and above." While his monastery was being sacked and his community dispersed, Abbot Whiting was kept a prisoner in the Tower of London and subjected to secret examination by Cromwell. It is curious that the ordinary procedure of law, by which a bill of attainder should have been presented to and passed by Parliament, was utterly ignored in his case; indeed his execution was an accomplished fact before Parliament came together. His condemnation and execution and the appropriation of his monastery with its possessions to the Crown could only be justified legally by the abbot's attainder, but no trace that any trial did take place can be found. Such an omission, however, was not likely to trouble Cromwell, as is shown by the note in his autograph "Remembrances": "Item. The Abbot of Glaston to be tryed at Glaston and also executed there with his complycys." Accordingly Abbot Whiting was sent back to

Somersetshire, still apparently in ignorance of the fact that there was now no Glastonbury Abbey for him to return to. He reached Wells on 14 November, where some sort of a mock trial seems to have taken place, and the next day, Saturday, 15 November, he with two of his monks, John Thorne and Roger James, was carried from Wells to Glastonbury. At the outskirts of the town the three martyrs were fastened to hurdles and dragged by horses up the steep sides of Tor Hill to the foot of St. Michael's tower at its summit. Here all were hanged, their bodies beheaded and cut into quarters, Abbot Whiting's head being fixed over the great gateway of his ruined abbey as a ghastly warning of the punishment prepared for such as opposed the royal will (see **RICHARD WHITING, BLESSED**). There can be no doubt that a special example was deliberately made of Glastonbury, inasmuch as by its wealth, its vast landed possessions, its munificence, and the halo of sanctity with which its past history and present observance had crowned it, it was by far the greatest spiritual and temporal representative of Catholic interests still surviving in England. The savagery with which it was attacked and ruined was intended to and did strike terror into all the West of England, and during Henry's lifetime there was no further resistance to be feared from that part of his realm. During the brief restoration of Catholicism in Queen Mary's reign, some of the surviving monks petitioned the queen to restore their abbey again, as having been the most ancient in England. The queen's death, however, put an end to all hopes of restoration.

BUILDINGS

Very little of the vast pile of buildings now remains above ground, but in its main lines the abbey followed the usual plan, a vast cruciform church on the north side, with cloister, conventual buildings, abbot's lodgings, and rooms for guests all south of this. The one unique feature was at the west end of the great church, where the west door, instead of opening to the outer air in the usual way, gave entrance to a so-called "Galilee", which in turn led into the church of St. Mary, the westernmost part of the entire edifice. This famous church, now often called in error the Chapel of St. Joseph of Arimathea, was built between 1184 and 1186 to take the place of the original *vetusta ecclesia* which had been entirely destroyed in the great fire of 1184. It is said to preserve exactly the size and shape of the original building and measures sixty feet by twenty-four. The Galilee was added about a century later when the western part of the great church was being completed to form a connexion between the two churches, thus making the whole western extension about one hundred and nine feet long. This western part is the most perfect of all the ruins. The Norman work of 1184, exquisite in design and very richly decorated, has stood perfectly, although in the fifteenth century a crypt was excavated beneath it to the depth of some eleven feet. At the same period tracery in the Perpendicular style was inserted in the Norman windows at the west end, portions of which still remain. Of the great church (400 feet by 80), the piers of the chancel arch, some of the chapels at the east side of the transepts, and a large portion of outer wall of the choir aisles are practically all that remains. The nave consisted of ten bays; the transepts of three each, the outer two on either side being extended eastward to form chapels. The choir at first had four bays only, but was increased to six in the later fourteenth century, the chapels behind the high altar being again modified in the

fifteenth century. It is much to be regretted that so large a part of the buildings has been destroyed, but since the ruins were for long used as a kind of quarry, from which anyone might carry off materials at sixpence a cartload, the wonder is that anything at all is left. The ruins have recently been purchased at the cost of £30,000 (\$150,000) through the action of the Bishop of Bath and Wells (Anglican) and are now held by trustees as a kind of national monument. Every effort is being made to preserve what is left, and also, by means of excavation, to recover all possible knowledge of what has been destroyed.

One curious relic still exists. The church clock, formerly in the south transept of the great church, was removed in 1539, carried to Wells, and placed in the north transept of the cathedral there. It bears the inscription *Petrus Lightfoot monachus fecit hoc opus*, and was constructed in the time of Abbot de Sodbury (1322-35). The outer circle of the dial has twenty-four hours on it, another within this shows the minutes, and a third again gives the phases of the moon. Above the dial is an embattled tower in which knights on horseback revolve in opposite directions every hour as the clock strikes and represent a mimic tournament. The original works were removed from Wells some years ago and may be seen, still working, in the Victoria and Albert Museum at South Kensington. This, with Lightfoot's other clock at Wimborne Minster, Dorset, are commonly held to be the oldest known. Of the conventual buildings the abbot's kitchen and a small part of the hospice alone survive. The former is an octagon set within a square and crowned with an octagonal pyramid. Within it is square in plan, the roof rising in the centre to the height of seventy-two feet. The upper part forms a double lantern of stone, which was formerly fitted with movable wooden shutters so that the smoke might always be let out on the side away from the wind. Practically all the rest is level with the ground, but mention must be made of the library, of which Leland, who saw it in Abbot Whiting's time, declares that no sooner was he over the threshold but he was struck with astonishment at the sight of so many remains of antiquity; in truth he believed it had scarce an equal in all Britain. In the town, amongst other buildings erected by various abbots, are the court-house, the churches of St. Benignus and St. John the Baptist, the tithe barn, a fourteenth-century building and the finest existing specimen of this class of structure, also the Pilgrim's Inn, a late Perpendicular work built at the end of the fifteenth century, where, it is said, all visitors used to be treated as guests and entertained for two days at the abbot's expense.

Still in the neighbourhood, in many places, one sees the ruined abbey's coat of arms: *Vert*, a cross botonée *argent*; in the first quarter the Blessed Mother of God standing, on her right arm the Infant Saviour, a sceptre in her left hand.

THE GLASTONBURY THORN

The Glastonbury Thorn (*Crategus Oxyacantha Præcox*) is a variety of hawthorn, originally found only at Glastonbury, which has the peculiarity of flowering twice in the year, first about Christmas time and again in May. By a curious irony of fate the first mention of the Holy Thorn flowering at Christmas-tide is contained in a letter written by Dr. Layton to Thomas Cromwell from Bristol, dated 24 August, 1535. "By this bringer, my servant", he writes, "I send you Relicks:

First, two flowers wrapped in white and black sarsnet, that on Christen Mass Even, *hora ipsa qua Christus natus fuerat*, will spring and burge and bare blossoms. *Quod expertum est* saith the Prior of Mayden Bradley." In a life of St. Joseph of Arimathea, printed in 1520 by Richard Pyerson, a pupil of Caxton, there is, however, an earlier notice of its coming into leaf at Christmas:

The Hawthornes also, that groweth in Werall [Wearyall Hill]
Do burge and bere grene leaves at Christmas
As freshe as other yn May...

Later references to the fact abound, e. g. Sir Charles Sedley's verse:

Cornelia's charms inspire my lays,
Who, fair in nature's scorn,
Blooms in the winter of her days,
Like Glastonbury Thorn
and the lines in Tennyson's "Holy Grail":

...Glastonbury, where the winter thorn
Blossoms at Christmas, mindful of Our Lord.

The original thorn tree on Wearyall Hill was cut down in 1653 by some fanatical soldier of Cromwell's army, to the great annoyance of Bishop Goodman of Gloucester who wrote to the Lord Protector complaining of the outrage; but before that date slips had been taken from it, and many specimens now exist which blossom about Christmas time. The blossoms of the Christmas shoots are usually much smaller than the May ones and do not produce any haws. It is noteworthy also that plants grown from the haws do not retain the characteristics of the parent stem, and the Glastonbury gardeners propagate the thorn by budding and grafting only. Botanists are not yet agreed as to the origin of the Glastonbury thorn. Some have desired to identify it with the Morocco thorn, introduced into England about 1812, which puts forth its leaves very early in the year, sometimes even in January; while others claim it as the Siberian thorn, which begins to produce its shoots in January. Neither of these varieties, however, has the special peculiarity of the Glastonbury thorn, that of flowering twice. Possibly the truth may be that the Glastonbury thorn was originally an individual or "sport", and not a true variety; but if this is so it is certainly remarkable that for four hundred years the peculiarity of the tree has been preserved and transmitted to its progeny. The legend that the original tree grew from the staff of St. Joseph of Arimathea, which was thrust into the ground and took root, is found before the destruction of the abbey, but the date of its origin cannot now be ascertained.

Glebe

Glebe

Glebe (Lat. *gleba*) originally signified, in common law, any farm, estate, or parcel of land, and the word is so used in the Theodosian Code. But in ecclesiastical law it has become the technical

term for land permanently assigned for the maintenance of the incumbent of a parish, and is the oldest form of parochial endowment. This use of the word is found in numerous medieval charters, of which Du Cange gives a few examples, and formerly no church could be consecrated unless thus endowed with a house and glebe. The fee-simple was held to be in abeyance, that is, without an owner in the eyes of the law, but the freehold belonged to the incumbent. It could be leased, sold, or exchanged, with the bishop's consent, and was sometimes allowed to be mortgaged for the purpose of repairing the parsonage or church. In England and Scotland, where glebe is held by the established Churches of those countries, there are now special laws regarding the leasing, sale, or exchange of such property, and all such transactions are subject to the approval of the land commissioners. In the Catholic Church, glebe, where it exists, is regarded as mensal property, and canon law regulates the conditions which govern its possession. The alienation of mensal property is now held by most legists to require the special permission of the pope, and even then only certain justifying causes are recognized, viz: (1) necessity, as when a church is overburdened with debt; (2) utility, or the opening for an advantageous exchange; (3) to redeem captives or feed the poor in time of famine; (4) convenience, as when the land is so situated that its produce cannot be gathered without great expense. Certain specified formalities have also to be complied with. (See PROPERTY, ECCLESIASTICAL.)

School of Glendalough

School of Glendalough

Glendalough (the Valley of the Two Lakes) is a picturesque and lonely glen in the heart of the Wicklow Mountains. The fame of its monastic school is chiefly due to its founder, St. Kevin, and to Laurence O'Toole, the last of the canonized saints of Ireland. Kevin (Irish *Coemghen*, the fair-begotten) was born near Rathdrum towards the close of the fifth century, and lived to the age of 120 years. His earliest tutor was St. Petroc of Cornwall, who had come to Leinster about 492, and devoted himself with considerable ardour to the study of the Sacred Scriptures, in which his pupil also became proficient. Kevin next studied under his uncle, St. Eugenius, afterwards Bishop of Ardstraw, who at that time lived at Kilnamanagh in Wicklow, where he taught his pupils all the sacred learning which he had acquired in the famous British monastery of Rosnat.

Young Kevin was at this time a handsome youth, and had unconsciously won the affections of a beautiful maiden, who once followed him to the woods. The young saint perceiving her, threw himself into a bed of nettles, and then gathering a handful scourged the maiden with the burning weeds. "The fire without", says the biographer, "extinguished the fire within", and Kathleen repenting became a saint. There is no foundation for the story, which Moore has wedded to immortal verse,

that Kevin flung the unhappy Kathleen from his cave, in the face of Ludguff, into the depths of the lake below. Kevin then retired into the wilds of the Glendalough valley, where he spent many years in a narrow cave, living alone with God in the practice of extreme asceticism. In the course of time, holy men gathered round him, and induced him to build the monastery, whose ruins still remain lower down in the more open valley to the east. Here his fame as a saint and scholar attracted crowds of disciples, so that Glendalough became for the east of Ireland what the Arran Islands were for the west -- a great school of sacred learning, and a novitiate in which the young saints and clergy were trained in virtue and self-denial.

One of the most celebrated of the pupils of St. Kevin at Glendalough was St. Moling, founder of the well-known monastery called from him St. Mullins on the left bank of the Barrow in the southwest of the County Carlow. Like his master Kevin, he was a man of learning and extreme austerity, living, it is said, for a long time, as Kevin did, in a hollow tree. He was also an elegant writer both in Latin and in Irish. Several Irish poems have been attributed to him, his prophecies were in wide circulation, and the "Yellow Book of St. Moling" was one of those which Keating had in his hands, but which has since been unfortunately lost. Of all the scholars of Glendalough, however, St. Laurence O'Toole was by far the most distinguished. A great scholar, bishop, patriot, and saint, he owed his entire training in virtue and in learning to this school. So far did he carry his devotion to St. Kevin that, even after he had become Archbishop of Dublin, he made it a practice to retire from the city, and spend the whole Lent in the very cave in the face of the rock over the lake where St. Kevin had lived so long alone with God.

The existing ruins at Glendalough still form a very striking scene in that wildly beautiful mountain valley. Within the area of the original enclosure are the great church, a cathedral, built probably in the time of St. Kevin, a fine round tower still 110 feet in height, the building called St. Kevin's *Cro* or kitchen, and the Church of the Blessed Virgin, for whom Kevin, like most of the Irish saints, had a particular devotion. The building called St. Kevin's kitchen was doubtless the private oratory and sleeping chamber of the saint, the latter being in the croft overhead, as in St. Columba's house at Kells.

Gloria in Excelsis Deo

Gloria in Excelsis Deo

The great doxology (*hymnus angelicus*) in the Mass is a version of a very old Greek form". It begins with the words sung by the angels at Christ's birth (Luke, ii, 14). To this verse others were added very early, forming a doxology. In a slightly different form it occurs at the beginning of a "morning prayer (*proseuche eothine*)" in the "Apostolic Constitutions", VII, xlvi. This text, which has a subordination colouring (*su monos kyrios Iesou Christou*), will be found in Duchesne, "Origines

du Culte chretien" (2nd ed., Paris, 1898, p.158, n.I). It goes back at least to the third century; Probst (*Lehre und Gebet der drei ersten christl. Jahrhunderte*", Tübingen, 1870, p.290) thinks even to the first. A very similar form is found in the Codex Alexandrinus (fifth century) and in Pseudo-Athanasius, "de Virginitate", §20 (before the fourth century), in P.G. XXVIII, 275. Extended further and with every trace of subordinationism corrected, it is sung by the Byzantine Church at the Orthros. In this form it has more verses than in the Latin, and ends with the Trisagion (*horologion to mega*, Rome, 1876, p.57). It is not used in the Liturgy by any Eastern Church. Only the first clause (the text of Luke ii, 14) occurs as part of the people's answer to the words, "Holy things for the holy", at the elevation in the Liturgy of the Apostolic Constitutions (Brightman, *Eastern Liturgies*, Oxford, 1896, p. 25), as part of the Offertory and Communion prayers in St. James's Liturgy (*ibid.*, pp. 45, 64), at the kiss of peace in the Abyssinian Rite (p. 227), in the Nestorian Prothesis (p. 248) and again at the beginning of their Liturgy (p. 252), in the Byzantine Prothesis (p. 361). The tradition is that it was translated into Latin by St. Hilary of Poitiers (d. 366). It is quite possible that he learned it during his exile in the East (360) and brought back a version of it with him (so Beletus, "Rationale divinatorum officiorum", c. 36; Duandus "Rationale", IV, 13, who thinks that he only added from "Laudamus te" to the Mass, and notes that Innocent III attributes it to Telesphorus, others to Symmachus). In any case, the Latin version differs from the present Greek form. They correspond down to the end of the Latin, which however adds: "Tu solus altissimus" and "Cum sancto Spiritu". The Greek then goes on: "Every day I will bless thee and will glorify thy name for ever, and for ever and ever" and continues with ten more verses, chiefly from psalms, to the Trisagion and Gloria Patri.

The "Liber pontificalis" says "Pope Telesphorus [128-139?] ordered that . . . on the Birth of the Lord Masses should be said at night . . . and that the angelic hymn, that is Gloria in Excelsis Deo, should be said before the sacrifice" (ed. Duchesne, I, 129); also "that Pope Symmachus [498-514] ordered that the hymn, Gloria in excelsis, should be said every Sunday and on the feasts [natalicia] of martyrs." The Gloria is to be said in its present place, after the "Introit" and "Kyrie", but only by bishops (*ibid.*, 263). We see it then introduced first for Christmas, on the feast to which it specially belongs, then extended to Sundays and certain great feasts, but only for bishops. The "Ordo Romanus I" says that when the Kyrie is finished "the pontiff, turning towards the people, begins Gloria in Excelsis, if it be the occasion for it [si tempus fuerit]" and notes specially that priests may say it only at Easter (ed. C. Atchley, London, 1905, pp.130, 148). The "Ordo of St. Amand" (Duchesne, "Origines", appendix, p. 460) gives them leave to do so only on Easter Eve and on the day of their ordination. The Gregorian Sacramentary (*dicitur Gloria in excelsis Deo, si episcopus fuerit, tantummodo die dominico sive diebus festis; a presbyteris autem minime dicitur nisi solo in Pascha*) and Walafrid Strabo, "Liber de exordiis", c.22, in P.L., CXIV, 945, note the same thing. Berno of Constance thinks it a grievance still in the eleventh century (*Libellus de quibusdam rebus ad Missæ officium pertinentibus*, c.2, in P.L., CXLII, 1059). But towards the end of the same century the Gloria was said by priests as well as by bishops. The "Micrologus" (by the same Berno of Constance, 1048) tells us that "On every feast that has a full office, except in Advent

and Septuagesima, and on the feast of the Innocents both the priests and the bishop say Gloria in excelsis (c. ii). It then became, as it is now, an element of every Mass except in times of penance. Even in Advent, until it began to be considered such a time, it was said. As early as Amalarius of Metz (ninth century) (*De officiis eccl. libri IV*, IV, 30), it was said during Advent "in some places". This would apply, of course, to bishops' Masses on Sundays and feasts at that time. So also Honorius of Autun (1145) in the twelfth century, "*Gemma animæ*", III, 1. White vestments were used, and the Gloria said, in Rome during Advent to the end of the twelfth century, "*Ordo Romanus XI*", 4. After that, Advent was gradually considered a time of penance in imitation of Lent. The *Te Deum* and Gloria were left out during it, and the use of purple vestments introduced.

The so-called *farced* Glorias were a medieval development. As in the case of the Kyrie, verses were introduced into its text for special occasions. Such expanded forms were very popular, especially one for feasts of the Blessed Virgin that seems to have been used all over Europe. Thus in the Sarum Missal, after the words "Domine Fili unigenite, Jesu Christe", "Spiritus et alme orphanorum paraclyte" is added; after "Filius Patria" is inserted "Primogenitus Mariæ virginis matris". Again: "Suscipe deprecationem nostram, ad Mariæ gloriam", and the end: "Quoniam tu solus sanctus, Mariam sanctificans, Tu solus Dominus, Mariam gubernans. Tu solus altissimus, Mariam coronans, Jesu Christe" (ed. Burntisland, 1861-1883, col. 585-6). The following rubric says: "In omnibus aliis missis quando dicendum est, dicitur sine prosa"; that is, in other Masses than those of the B.V.M., the additional tropes -- called prosa -- are to be omitted. These tropes added to liturgical texts *ad libitum* were contained in special books, "*Libri troparii*". In spite of repeated commands to expunge them, they were still sung in places when the Missal was revised by order of Pius V in 1570. In the Bull "*Quo primum*" of that year (printed at the beginning of the Missal) the pope forbids anything to be added to, or changed in, the text of the books then published. The popularity of the forms about the Blessed Virgin accounts for the rubric in the Missal after the Gloria: "Sic dicitur Gloria in excelsis, etiam in missis B. Mariæ quando dicendum est." Since then these "farced" forms have happily disappeared. It may be noted here that the Gloria, originally foreign to the Milanese and Mozarabic Rites, has displaced the older Trisagion in them since the seventh century -- an obvious Roman importation (Duchesne, *op. cit.*, p.183 and note).

The present law about the use of the Gloria is given by the "*Rubricæ generales*" of the Missal, VIII, 3. It is to be said in Mass whenever the *Te Deum* is said at Matins -- with two exceptions. It is therefore omitted on ferias (except in Easter-tide), Ember days, vigils, during Advent, and from Septuagesima till Easter, when the Mass is *de tempore*. The feast of Holy Innocents, but not its octave, is kept with purple vestments and without the *Te Deum* or Gloria. We have seen this already in the "*Micrologus*" above). Nor is the Gloria said at Requiem or votive Masses, with three exceptions: votive Masses of the Blessed Virgin on Saturdays, of Angels, and those said "pro re gravi" or for a public cause of the Church, unless with purple vestments, have the Gloria. The two cases in which it occurs without the *Te Deum* in the Office are Maunday Thursday (when the whole Mass is an exception in Passion-tide and has no correspondence with the canonical hours) and Holy Saturday in the first Easter Mass. The Gloria always involves "*Ite missa est*" at the end of Mass.

When it is not said that versicle is changed to "Benedicamus Domino" or, in Requiems, to "Requiescant in pace."

The manner of saying it is described in the "Ritus celebrandi Missam", IV, 7. In the "Ordo Romanus I" (above) the celebrant turns to the people to say the first words. That is no longer observed. At high Mass as soon as the Kyrie is finished the celebrant facing the altar in the middle, intones: "Gloria in excelsis Deo", raising, joining, and lowering his hands and bowing his head at the word *Deo*. Meanwhile the deacon and subdeacon stand behind him in line. They then come to his right and left and with him continue the Gloria in a low voice. All bow at the holy name (it occurs twice) and at the words: "Adoramus te", "Gratias agimus tibi", "Suscipe deprecationem nostram" and make the sign of the cross at the last clause. They then go *per viam brevior* (genuflecting first, according to the usual rule) to the sedilia and sit. Meanwhile the choir immediately continues: "Et in terra pax", and sings the text straight through. In the former Missal four chants were printed for the celebrant's intonation (for Doubles, Masses of B.V.M., Sundays, and Simples). This intonation ought to be in every way part -- the beginning -- of the melody continued by the choir; so in the new ("Vatican") edition of the missal, eighteen alternative chants are given, one for each Gloria in the Gradual. Obviously, when a plain-song Mass is sung, the celebrant should intone the Gloria to the same chant (and at the same pitch) as its continuation by the choir. The ideal is for the choir to go on at once without any sort of prelude by the organ; "Et in terra pax" etc. is the second half of the same sentence as "Gloria in excelsis Deo". In a figured Mass so exact a correspondence is not possible. But in any case the choir may never repeat the celebrant's words. Every Gloria in a figured Mass must begin: "Et in terra pax". The custom -- once very common -- of ignoring the celebrant and beginning again "Gloria in excelsis" is an unpardonable abomination that should be put down without mercy, if it still exists anywhere. While the Gloria is sung, the celebrant, ministers, and servers bow (or uncover) at the holy name and the other clauses, as above. During the last clause the celebrant and ministers rise and go to the altar *per viam longior* (genuflecting at the foot, according to rule) and go to their places for the "Dominus vobiscum" before the Collect. At a sung Mass the same order is observed by the celebrant alone. At low Mass he recites the Gloria straight through *clara voce*, making the sign of the cross during the last clause (In gloria Dei Patris. Amen).

Mystic and edifying reflections on the Gloria will be found in Durandus and Gihl (see below). Durandus sees much symbolism in the fact that the Church (that is, men) continues the angels' hymn. By the birth of Christ who restores all things in heaven and on earth (Eph., i, 10), angels and men, separated by original sin, are now reconciled; men may now hope some day to join in the angels' hymns. Gihl gives a devotional commentary on the text, word for word. He sees a mystic reason for the order of the words: Laudamus, benedicimus, adoramus, glorificamus. One may be edified by such considerations without attributing so much subtlety to the unknown subordinationist who apparently first arranged them. It will be noticed that the Gloria is a hymn of praise addressed to each Person of the Holy Trinity in turn, although the clause about the Holy Ghost is very short (cum sancto Spiritu) and is evidently an afterthought. It does not occur in the text of the Apostolic

Constitutions. It will also be seen that the clauses are arranged in parallels with a certain loose rhythm. This rhythm is much more evident in the Greek original (measured of course by accent); for instance:

Kyrie basileu epouranie,
Thee pater pantokrator

Lastly, it would be difficult to find in any Liturgy a more beautiful example of poetry than our *hymnus angelicus*. The Gloria and the Te Deum are the only remains we now have of the *psalmi idiotici* (psalms composed by private persons instead of being taken from the Biblical Psalter) that were so popular in the second and third centuries. These private psalms easily became organs for heretical ideas, and so fell into disfavour by the fourth century (Batiffol, "Histoire du Bréviaire romain", Paris, 1895, 9-12). The extraordinary beauty of these two (to which one should add the *phos hilaron*) is a witness to the splendour of that outburst of lyric poetry among Christians during the time of persecution.

For texts and variations of the Gloria see BUNSEN, "Analecta ante-nicæna" (London, 1854), III; PROBST, "Lehre u. Gebet," p.289; WARREN, "The Liturgy and Ritual of the Celtic Church" (Oxford, 1881); "The Mass of Flacius Illyricus" in P.L. CXXXVIII,1314; DURANDUS, "Rationale divinatorum officiorum" IV, 13; BONA, "Rerum liturgicarum libri duo", II, 2; BENEDICT XIV, "De SS. sacrificio Missæ", II, iv, 9-17; DUCHESNE, "Origines du culte chretien" (2nd ed., Paris, 1898), 158; GIHR, "Das heilige Messopfer" (6th ed., Freiburg im Br., 1897), 361-374; CABROL "Le livre de la priere antique" (Paris, 1900), IX, 150-156; DE HERDT, "Sacra Liturgiæ praxis" (9th ed., Louvain, 1894). §§211, 314; THALHOFER, "Handbuch der kath. Liturgik" (Freiburg im Br., 1890), I, 361 sqq.

ADRIAN FORTESCUE

Glory

Glory

This word has many shades of meaning which lexicographers are somewhat puzzled to differentiate sharply. As our interest in it here centres around its ethical and religious significance, we shall treat it only with reference to the ideas attached to it in Holy Scripture and theology.

I. SCRIPTURE

In the English version of the Bible the word Glory, one of the commonest in the Scripture, is used to translate several Hebrew terms in the Old Testament, and the Greek *doxa* in the New Testament. Sometimes the Catholic versions employ brightness, where others use glory. When this occurs, the original signifies, as it frequently does elsewhere, a physical, visible phenomenon. This meaning is found for instance in Ex., xxiv, 16: "And the glory of the Lord dwelt upon Sinai"; in Luke, ii, 9, and in the account of the Transfiguration on Mount Thabor. In very many places the term is employed to signify the witness which the created universe bears to the nature of its Creator,

as an effect reveals the character of its cause. Frequently in the New Testament it signifies a manifestation of the Divine Majesty, truth, goodness or some other attribute through His incarnate Son, as, for instance, in John, I, 14: "(and we saw his glory, the glory as it were of the only begotten of the Father,) full of grace and truth"; Luke, ii, 32, "A light to the revelation of the Gentiles, and the glory of thy people Israel"; and throughout the prayer of Christ for his disciples, John, xvii. Here too, as elsewhere, we find the idea that the perception of this manifested truth works towards a union of man with God. In other passages glory is equivalent to praise rendered to God in acknowledgment of His majesty and perfections manifested objectively in the world, or through supernatural revelation: "Thou art worthy, O Lord our God, to receive glory, and honour, and power: because thou hast created all things", Apoc., iv, 11: "Give glory to the Lord, and call upon his name", Ps. Civ, 1 (cf. Ps. Cv, 1).

The term is used also to mean judgment on personal worth, in which sense the Greek *doxa* reflects the signification of the cognate verb *dokeo*: "How can you believe, who receive glory one from another: and the glory which is from God alone, you do not seek?" John, v, 44; and xii, 43: "For they loved the glory of men more than the glory of God". Lastly, glory is the name given to the blessedness of the future life in which the soul is united to God: "For I reckon that the sufferings of this time are not worthy to be compared with the glory to come", Rom., viii, 18. "Because the creature also itself shall be delivered from the servitude of corruption, into the liberty of the glory of the children of God", ib., 21. The texts cited above are representative of multitudes similar in tenor, scattered throughout the sacred writings.

II. THEOLOGICAL

The radical concept present under various modifications in all the above expressions is rendered by St. Augustine as *clara notitia cum laude*, "brilliant celebrity with praise". The philosopher and theologian have accepted this definition as the centre around which they correlate their doctrine regarding glory, divine and human.

1. Divine Glory

The Eternal God has by an act of His will created, that is, has brought into being from nothingness, all things that are. Infinite Intelligence, He could not act aimlessly; He had an objective for His action: He created with a purpose; He destined His creatures to some end. That end was, could be, no other than Himself; for nothing existed but Himself, nothing but Himself could be an end worthy of His action. "I am Alpha and Omega, the beginning and the end, saith the Lord God" (Apoc., I, 8); "The Lord hath made all things for himself" (Prov., xvi, 4). Did He, then, create in order that from His creatures He might derive some benefit? That, for example, as some present-day theories pretend, through the evolution of things toward a higher perfection the sum of His Being might be enlarged or perfected? Or that man by co-operating with Him might aid Him in the elimination of evil which He by Himself is unable to cast out? No; such conceits are incompatible with the true concept of God. Infinite, He possesses the plenitude of Being and Perfection; He needs

nothing, and can receive no complementary increment or superfluous accession of excellence from without. Omnipotent. He stands in need of no assistance to carry His will into execution.

But from His infinity He can and does give; and from His fullness have we all received. All things are, only because they have received of Him; and the measure of His giving constitutes the limitations of their being. Contemplating the boundless ocean of His reality, He perceives it as imitable ad extra, as an inexhaustible fund of exemplar ideas which may, if He so wills, be reproduced in an order of finite existence distinct from, yet dependent on His own, deriving their dower of actuality from His infinite fullness which in imparting sustains no diminution. He spoke and they were made. Everything which His fiat has called into existence is a copy — finite indeed and very imperfect, yet true as far as it goes — of some aspect of His infinite perfection. Each reflects in fixed limitation something of His nature and attributes. The heavens show forth His power; earth's oceans are

. . . the glorious mirror where the Almighty's form Glasses itself in tempests. . .

The summer flower, though only to itself it live and die, is a silent witness before Him of His power, goodness, truth, and unity; and the harmonious order which binds all the innumerable parts of creation into one cosmic whole is another reflection of His oneness and His wisdom. Yet, as each part of creation is finite, so too is the totality; and therefore its capacity to reflect the Divine Prototype must result in an infinitely inadequate representation of the Great Exemplar. Nevertheless, the unimaginable variety of existing things conveys a vague hint of that Infinite which must ever defy any complete expression external to Itself. Now this objective revelation of the Creator in terms of the existences of things is the glory of God. This doctrine is authoritatively formulated by the Council of the Vatican: "If any one shall say that the world was not created for the glory of God, let him be anathema" (Sess. III, C. I, can. 5).

This objective manifestation of the Divine nature constitutes the Universe — the book, one might say, in which God has recorded His greatness and majesty. As the mirror of the telescope presents an image of the star that shines and wheels in the immeasurably remote depths of space, so does this world reflect in its own fashion the nature of its Cause between Whom and it lies the gulf that separates the finite from the Infinite. The telescope, however, knows not of the image which its surface bears; the eye and mind of the astronomer must intervene in order that the significance of the shadow and its relation to the substance may be grasped. To praise, in the exact sense of the term, demands not alone that worth be manifest, but also that there be a mind to acknowledge. The unconscious testimony of the universe to its Creator is rather potential than actual glory. Hence, this glory which it renders to Him is called in theological phrase *gloria materialis*, to distinguish it from the *formal glory* rendered to God by His intelligent creatures. They can read the writing in the book of creation, understand its story, accept its lessons, and reverently praise the Majesty which it reveals. This praise involves not merely intellectual perception, but also the practical acknowledgment by heart and will which issues in obedience and loving service. The endowment of intelligence with all that it implies — spirituality and free-will —

renders man a higher and nobler image of the Creator than is any other being of this visible world. The gift of intellect also imposes on man the duty of returning to God that formal glory of which we have just spoken. The more perfectly he discharges this obligation, the more does he develop and perfect that initial resemblance to God which exists in his soul, and by the fulfilment of this duty serves the end for which he, like all else, has been created.

The natural revelation which God has vouchsafed of Himself through the world interpreted by reason has been supplemented by a higher supernatural manifestation which has culminated in the Incarnation of the Godhead in Jesus Christ: "and we saw his glory, the glory as it were of the Father, full of grace and truth". Similarly the natural resemblance to God and the relation of our being to His, as established by creation, are supplemented and carried into a higher order by His communication of sanctifying grace. To know God through the medium of this supernaturally revealed truth, to serve Him in love springing from this grace is to be "Filled with the fruit of justice, through Jesus Christ, unto the glory and praise of God" (Phil., I, 11). In manifesting the glory of God by the development of their proper powers and capacities, inanimate creatures reach that perfection or fulness of existence which God has prescribed for them. Likewise man achieves his perfection or subjective end by giving glory to God in the comprehensive sense above indicated. He attains the consummation of his perfection not in this life, but in the life to come. That perfection shall consist in a direct, immediate, intuitive perception of God; "We see now through a glass in a dark manner; but then face to face. Now I know in part; but then I shall know even as I am known" (I Cor., xiii, 12). In this transcendent knowledge the soul shall become, in a higher measure than that which obtains by virtue of creation alone, a participant and therefore an image of the Divine nature; so "we shall be like to him: because we shall see him as he is" (I John, iii, 2). So that objectively and actively the life in heaven shall be an unending ineffable manifestation and acknowledgment of the Divine majesty and perfections. Thus we understand the Scriptural language in which the future life of the blessed is described as a state in which "we all beholding the glory of the Lord with open face, are transformed into the same image from glory to glory, as by the Spirit of the Lord" (II Cor., iii, 18).

The Catholic doctrine on this subject is defined by the Council of Florence (see Denzinger, 588). (See CREATION; GOOD.)

2. Human Glory

To enjoy glory before men is to be known and honoured on account of one's character, qualities, possessions, position, or achievements, real or imaginary. The moral question arises, is the desire and pursuit of this glory lawful? The doctrine on the subject is succinctly stated by St. Thomas (II-II, Q. cxxxii). Posing the question whether the desire of glory is sinful, he proceeds to answer it in the following sense: Glory imports the manifestation of something which is estimated honourable, whether it be a spiritual or a corporal good. Glory does not necessarily require that a large number of persons shall acknowledge the excellence; the esteem of a few, or even of oneself, may suffice, as, for example, when one judges some good of his own to be worthy of praise. That any person esteem his own good or excellence to be worthy of praise is not in itself sinful; nor, in

like manner, is it sinful that we should desire to see our good works approved of men. "Let your light shine before men, that they may see your good works" (Matt., v, 16). Hence the desire of glory is not essentially vicious. But a vain, or perverse desire for renown, which is called vainglory, is wrong; desire of glory becomes perverse,

- when one seeks renown because of something not really worthy;
- when one seeks the esteem of those whose judgment is indiscriminating;
- when one desires glory before men without subordinating it to righteousness.

Vainglory may become a deadly sin, if one seek the esteem of men for something that is incompatible with the reverence due to God; or when the thing for which one desires to be esteemed is preferred in one's affections before God; or again, when the judgment of men is sought in preference to the judgment of God, as was the case with the Pharisees, who "loved the glory of men more than the glory of God" (John, xii, 43). The term "vainglory" denotes not alone the sinful act, but also the vicious habit or tendency engendered by a repetition of such acts. This habit is ranked among the capital sins, or, more properly vices, because it is prolific of other sins, viz., disobedience, boastfulness, hypocrisy, contentiousness, discord, and a presumptuous love of pernicious novelties in moral and religious doctrine.

JAMES J. FOX

Scriptural Glosses

Scriptural Glosses

I. ETYMOLOGY AND PRINCIPAL MEANINGS

The modern English word *gloss* is derived directly from the Latin *glossa*, itself a transcript of the Greek *glossa*. In classical Greek *glossa* (Attic *glotta*) means the tongue or organ of speech and figuratively a tongue or language. In the course of time Greek grammarians, commenting on the works of Greek authors, used the word *glossa* to designate first a word of the text which needed some explanation, and next the explanation itself. And it is in this last sense that Christian writers have principally employed the word *glossa*, gloss, in connexion with Holy Writ. Among them, as among Greek grammarians, a gloss meant an explanation of a purely verbal difficulty of the text, to the exclusion of explanations required by doctrinal, ritual, historical, and other obscurities; and the words which were commonly the subject of their glosses may be reduced to the following five classes:

1. foreign words;
2. provincial dialectical terms;
3. obsolete words;
4. technical terms; or
5. words actually employed in some unusual sense or in some peculiar grammatical form.

As these glosses consisted of a single explanatory word, they were easily written between the lines of the text or in the margin of manuscripts opposite the words of which they supplied the explanation. In the process of time the glosses naturally grew in number, and in consequence they were gathered in separate books where they appeared, first in the same order of succession as they would have had if written in the margin of the codices, and ultimately in a regular alphabetical order. These collections of glosses thus formed kinds of lexicons which gave the concrete meaning of the difficult words of the text and even historical, geographical, biographical, and other notices, which the collectors deemed necessary or useful to illustrate the text of the Sacred writings. A lexicon of the kind is usually called a glossary (from Lat. *glossarium*), but bears at times in English the simple name of a gloss. From a single explanatory word, interlined or placed in the margin, the word gloss has also been extended to denote an entire expository sentence, and in many instances even a sort of running commentary on an entire book of Sacred Scripture. Finally the term gloss designates a word or a remark, perhaps intended at first as an explanation of the text of Holy Writ, and inserted for some time either between the lines or in the margin of the Sacred Books, but now embodied in the text itself, into which it was inserted by owners or by transcribers of manuscripts, and in which it appears as if an integral part of the Word of God, whereas it is but a late interpolation.

II. GLOSSES AS MARGINAL NOTES

As is quite natural, the margin has always been the favourite place for recording explanatory words or remarks of various kinds concerning the text of the Bible. And in point of fact, marginal notes of varying nature and importance are found in nearly all manuscripts and printed editions of the Sacred Scriptures. With regard to the Hebrew text, these glosses or marginal notes are mostly extracts from the Masorah or collection of traditional remarks concerning Holy Writ. They usually bear on what was regarded as a questionable reading or spelling in the text, but yet was allowed to remain unmodified in the text itself through respect for its actual form. Thus, at times the margin bids the reader to transpose, interchange, restore, or remove a consonant, while at other times it directs him to omit or insert even an entire word. Some of these glosses are of considerable importance for the correct reading or understanding of the original Hebrew, while nearly all have effectually contributed to its uniform transmission since the eleventh century of our era. The marginal notes of Greek and Latin manuscripts and editions of the Scriptures are usually of a wider import. Annotations of all kinds, chiefly the results of exegetical and critical study, crowd the margins of these copies and printed texts far more than those of the manuscripts and editions of the original Hebrew. In regard to the Latin Vulgate, in particular, these glosses gradually exhibited to readers so large and so perplexing a number of various textual readings that to remedy the evil, Sixtus V, when publishing his official edition of the Vulgate in 1588, decreed that henceforth copies of it

should not be supplied with such variations recorded in the margin. This was plainly a wise rule, and its faithful observance by Catholic editors of the Vulgate and by its translators, notably by the authors of the Douay Version, has secured the object intended by Sixtus V. Despite the explicit resolve of James I that the Protestant Version of Holy Writ to be published during his reign should not have any marginal notes, that version -- the so-called Authorized Version appeared in 1611 with such notes, usually recording various readings. The glosses or marginal notes of the British Revised Version published 1881-85, are greatly in excess over those of the Version of 1611. They give various readings, alternate renderings, critical remarks, etc., and by their number and character have startled the Protestant public. The marginal notes of the American Standard Revised Version (1900-1901) are of the same general description as those found in the British Revised Version of Holy Writ.

III. GLOSSES AS TEXTUAL ADDITIONS

As stated above, the word gloss designates not only marginal notes, but also words or remarks inserted for various reasons in the very text of the Scriptures. The existence of such textual additions in Holy Writ is universally admitted by Biblical scholars with regard to the Hebrew text, although there is at times considerable disagreement among them as to the actual expressions that should be treated as glosses in the Sacred Writings. Besides the eighteen corrections of the Scribes which ancient Rabbis regard as made in the sacred text of the Old Testament before their time, and which were probably due to the fact that marginal explanations had of old been embodied in the text itself, recent scholars have treated as textual additions many words and expressions scattered throughout the Hebrew Bible. Thus the defenders of the Mosaic authorship of the Pentateuch naturally maintain that the more or less extensive notices found in the Mosaic writings and relative to matters geographical, historical, etc., decidedly later than Moses' time, should be regarded as post-Mosaic textual additions. Others, struck with the lack of smoothness of style noticeable in several passages of the original Hebrew, or with the apparent inconsistencies in its parallel statements, have appealed to textual additions as offering a natural and adequate explanation of the facts observed. Some have even admitted the view that Midrashim, or kinds of Jewish commentaries, were at an early date utilized in the framing or in the transcription of our present Hebrew text, and thus would account for what they consider as actual and extensive additions to its primitive form. And it can hardly be doubted that by means of the literary feature known as "parallelism" in Hebrew poetry, many textual additions can be detected in the Hebrew text of the poetical books, notably in that of Job. All scholars distinctly maintain, however, and indeed justly, that all such glosses, whether actually proved, or simply conjectured, do not interfere materially with the substantial integrity of the Hebrew text. The presence of similar textual additions in the text of the Septuagint, or oldest Greek translation of the Old Testament, is an established fact which was well known to the Roman editors of that version under Sixtus V. One has only to compare attentively the words of that ancient version with those of the original Hebrew to remain convinced that the Septuagint translators have time and again deliberately deviated from the text which they rendered into Greek, and thus made a

number of more or less important additions thereunto. These translators frequently manifest a desire to supply what the original had omitted or to clear up what appeared ambiguous. Frequently, too, they adopt paraphrastic renderings to avoid the most marked anthropomorphisms of the text before them: while at times they seem to be guided in their additions by Jewish Halacha and Haggadab. Glosses as textual additions exist also in manuscripts of the New Testament, owing to a variety of causes, the principal among which may be given as follows: copyists have embodied marginal notes in the text itself; at times they have supplemented the words of an Evangelist by means of the parallel passages in the other Gospels; sometimes they have completed the quotations from the Old Testament in the New. Finally, textual additions appear in the manuscripts and printed editions of the Latin Vulgate. Its author, St. Jerome, has freely enough inserted in his rendering of the original Hebrew historical, geographical, doctrinal remarks which he thought more or less necessary for the understanding of Scriptural passages by ordinary readers. He complains at times that during his own life copyists, instead of faithfully transcribing his translation, embodied in the text notes found in the margin. And after his death manuscripts of the Vulgate, especially those of the Spanish type, were supposedly enriched with all kinds of additional readings, which, together with other textual variations embodied in early printed copies of the Vulgate, led ultimately to the official editions of St. Jerome's work by Popes Sixtus V and Clement VIII. But however numerous and important all such glosses may actually be, they have never materially impaired the substantial integrity either of the Greek New Testament or of the Latin Vulgate.

IV. GLOSSES AS SCRIPTURAL LEXICONS

With regard to the Hebrew text of the Old Testament, most rabbinical commentaries are little more than collections of glosses, or "glossaries", as they are usually called, inasmuch as their chief object is to supply explanations of Hebrew words. A part of the Masorah may also be considered as a kind of glossary to the Hebrew Bible; and the same thing may be said in reference to the collections of Oriental and Western readings given in the sixth volume of the London Polyglot. As regards the Greek Bible texts, there are no separate collections of glosses; yet these texts are taken into account, together with the rest of the Greek literature, in a certain number of glossaries which afford explanations of difficult words in the Greek language. The following are the principal glossaries of that description:

1. the lexicon of Hesychius, a Greek grammarian of the fourth century of our era;
2. the "*Lexeon synagoge*" (collection of glosses) of the celebrated patriarch Photius (died 891);
3. the lexicon of Suidas, apparently an author of the tenth century;
4. the "Etymologium Magnum" by an unknown writer of the twelfth or the thirteenth century;
5. the "*Synagoge lexeon*" of the Byzantine monk Zonaras;
6. the "Dictionarium" of the Benedictine Varius Phavorinus, published early in the sixteenth century.

Most of the glosses illustrating the language of Scripture which are found in the works of Hesychius, Suidas, Phavorinus, and in the "Etymologium Magnum", were collected and published by J.C. Ernesti (Leipzig, 1785-86). The best separate gloss on the Latin Vulgate, as a collection of

explanations chiefly of its words, is that of St. Isidore of Seville, which he completed in 632, and which bears the title of "Originum sive Etymologiarum libri XX". It is found in Migne, P. L., LXXXII.

V. GLOSSES AS COMMENTARIES

As Scriptural commentaries there are two celebrated glosses on the Vulgate. The former is the "Glossa Ordinaria", thus called from its common use during the Middle Ages. Its author, the German Walafrid Strabo (died 849), had some knowledge of Greek and made extracts chiefly from the Latin Fathers and from the writings of his master, Rabanus Maurus, for the purpose of illustrating the various senses -- principally the literal sense -- of all the books of Holy Writ. This gloss is quoted as a high authority by St. Thomas Aquinas, and it was known as "the tongue of Scripture". Until the seventeenth century it remained the favourite commentary on the Bible; and it was only gradually superseded by more independent works of exegesis. The "Glossa Ordinaria" is found in vols. CXIII and CXIV of Migne, P. L. The second gloss, the "Glossa Interlinearis", derived its name from the fact that it was written over the words in the text of the Vulgate. It was the work of Anselm of Laon (died 1117), who had some acquaintance with Hebrew and Greek. After the twelfth century copies of the Vulgate were usually supplied with both these glosses, the "Glossa Ordinaria" being inserted in the margin, at the top and at the sides, and the "Glossa Interlinearis" being placed between the lines of the Vulgate text; while later, from the fourteenth century onward, the "Postilla" of Nicholas of Lyra and the "Additions" of Paulus Brugensis were added at the foot of each page. Some early printed editions of the Vulgate exhibit all this exegetical apparatus; and the latest and best among them is the one by Leander a S. Martino, O.S.B. (six vols. fol., Antwerp, 1634).

Glosses, Glossaries, Glossarists

Glosses, Glossaries, Glossarists

(IN CANON LAW)

A gloss (Gk. *glossa*, Lat. *glossa*, tongue, speech) is an interpretation or explanation of isolated words. To gloss is to interpret or explain a text by taking up its words one after another. A glossary is therefore a collection of words about which observations and notes have been gathered, and a glossarist is one who thus explains or illustrates given texts. In Canon law, glosses are short

elucidations attached to the important words in the juridical texts which make up the collections of the "Corpus Juris Canonici" (q.v.). But the term *gloss* is also given to the ensemble of such notes in any entire collection, e. g. the Gloss of the "Decretum" of Gratian, of the "Liber Sextus", etc. The Glossarists are those canonists who lived during the classic period of Canon law, from the twelfth to the fifteenth century, though many left works other than glosses. The canonists of Bologna in particular, favoured the method of the glossarists, and affixed to text and words the meaning which they should bear. In the beginning the masters noted down on their own copies of the "Decretum" of Gratian a few words by way of résumé, and as a help in their lectures; in course of time such notes passed into the copies of their pupils. These brief notes, at first inserted between the lines, soon overflowed the margins, and became copious enough to form a framework within which the real text was enshrined, as may be seen by an examination of ancient manuscripts and certain editions of the "Corpus Juris Canonici". Moreover, later glosses were of such ample proportions as to become at times small commentaries containing discussions on the opinions of previous canonists. As each master added his own gloss the notes began to swell in volume; but care was always taken to indicate the particular author by placing a significant abbreviation after his gloss, thus: Hug. or H. (Huguccio); Jo. Fa. or F. (Joannes Faventinus), etc. Gradually this mass of glosses took on in the schools a permanent form, a necessary condition to its usefulness in teaching; and became a kind of secondary canonical text, less authoritative, of course, than the original, but supplying material for oral commentary. Thus arose "ordinary gloss" (*glossa ordinaria*), endowed with a certain authority, not indeed official (as though it were actually the law on the point), but none the less real, since it represented the opinion and authority of the canonists who wrote it down, but chiefly because it expressed the teaching at the time. Hence it comes to pass that a medieval canonical gloss is often quoted even in our day; the quotation is made quite as the quotations from the canons or chapters of the "Corpus Juris Canonici", except that the word on which the gloss bears is always indicated, e. g. "Gl(ossa)" in c. Licet, v, De Crimine falsi, v^o (verbo) "Falsitatis" (the gloss on the word "falsitatis", in ch. Licet, fifth book of the Decretals).

It is not easy to illustrate in a few words the legal learning that lies hidden in the glosses of Canon law collections. The principal heads of information are as follows:

- résumé of the case;
- determination of the question to be solved;
- division of the text and statement of conclusions drawn;
- interpretation of important words;
- examples of real or fictitious cases showing the application of the law;
- discussion of the various readings of the same text as given in different manuscripts;
- countless references to parallel texts;
- axioms or mnemonic helps (*brocardica*) often in leonine hexameter verses;
- allusions to the teaching of various masters, and to solutions given on various occasions by pontifical letters.

Evidently the juridical value of these glosses for the teaching of canon law in our day has greatly lessened; historically, however, they still offer much precious information, The more eminent of

the glossarists will be treated biographically, in their own places among the canonists of renown. Attention will be confined here to what is strictly essential in this connection. The gloss of the "Decretum" of Gratian was the work of John Zimeke, called the Teutonic (Joannes Simeca Teutonicus), between 1211 and 1215; he profited by the notes of his predecessors as well as those which he had made himself. This work, remodelled and completed by Bartholomew of Brescia (Bartholomæus Brixiensis) in 1245 or 1246, became the "ordinary gloss" of the "Decretum". Before their incorporation in the collection of Gregory IX, the so-called Five Compilations of papal Decretals (Quinque compilationes antiquæ) had all been glossed. Tancredus, archdeacon of Bologna, had written on the first of these collections (the "Breviarium" of Bernard of Pavia) a gloss which was received as its "glossa ordinaria" until the appearance of the Decretals of Gregory IX in 1234. This last collection, as is known (see CORPUS JURIS CANONICI), caused the Five Compilations to disappear; in turn it was glossed by the masters of Bologna. The author of its "ordinary gloss" was Bernard of Botone, also known as Bernard of Parma (Bernardus Parmensis), who composed it shortly before 1263; afterwards it received many additions, especially from Joannes Andreae, identified by the prefix *Add.* and at the end the initials *Jo. Andr.* It is to this famous canonist we owe the "glossa ordinaria" of the "Liber Sextus"; he wrote this glossa about the year 1305. Many manuscripts contain also the gloss of Joannes Monachus, famous as Cardinal Lemoine, written also about 1305. The gloss of Joannes Andreae on the "Clementinæ", compiled soon after the appearance of this collection (1317), has become its "glossa ordinaria", with additions however by Franciscus de Zabarellis, later a cardinal, and Archbishop of Florence (died 1417). The "Extravagantes" of John XXII were glossed as early as 1325, by Zenzelin (Zenzelinus) de Cassanis. (See also CORPUS JURIS CANONICI; DECRETALS, PAPAL.) The "Extravagantes Communes" had no regular gloss, but when Jean Chappuis edited this collection, in 1500, he included glosses of many authors that he came across in his manuscripts. All the glosses of the Corpus Juris are given in the official edition of Gregory XIII (1582); since then they have not been revised, and recent critical editions of the text omit them.

Episcopal Gloves

Episcopal Gloves

Liturgical gloves (*chirothecæ*, called also at an earlier date *manicæ*, *wanti*.) are a liturgical adornment reserved for bishops and cardinals. Other ecclesiastics, including abbots, cannot use them without a special papal privilege. They are worn only at a pontifical Mass, never at any other function, and then only to the washing of the hands before the Sacrifice. Episcopal gloves at the present day are knitted by machine or hand from silk thread, and are ornamented on the back with

a cross; the border of the opening for the hand is also, as a rule, embellished. The colour of the gloves must correspond with the liturgical colour of the feast or day in the services of which they are worn; episcopal gloves, however, are never black, as they are not used on Good Friday nor at the celebration of Masses for the dead. When a bishop is consecrated the gloves are put on him by the consecrator, aided by the assisting bishops, just after the Blessing. The use of episcopal gloves became customary at Rome probably in the tenth century, outside of Rome they were employed somewhat earlier. Apparently they were first used in France, as the earliest traces of the custom are found in this country, whence it gradually spread into all other parts and even to Rome. The chief reason for the introduction of the usage was probably the desire to provide a suitable adornment for the hands of the bishop, rather than practical considerations such as the preservation of the cleanliness of the hands, etc. Episcopal gloves appertained originally to bishops, but at an early date their use was also granted to other ecclesiastics, thus no later than 1070 the abbot of the monastery of San Pietro in Cielo d'Oro at Pavia received this privilege, the first certain instance of such permission.

In the Middle Ages these gloves were either knitted or otherwise produced with the needle, or else they were made of woven material sewed together; the former way seems to have been the more usual. Gloves made by both methods are still in existence, as for example, in Saint-Sernin at Toulouse, at Brignoles, in S. Trinità at Florence, in the cathedrals of Halberstadt and Brixen, in New College at Oxford, Conflens in Savoy, and other places. In the later Middle Ages it became customary to enlarge the lower end, giving it the appearance of a cuff or gauntlet, and even to form the cuff with a long joint which hung downwards and was decorated with a tassel or little bell. The back of the glove was always ornamented, sometimes with an embroidered medallion or some other form of embroidery, sometimes with a metal disk having on it a representation of the Lamb of God, a cross, the Right Hand of God, saints, etc., the disk being sewn on to the glove, or, at times, the ornamentation was of pearls and precious stones. The gloves were generally made of silk thread or woven fabric, rarely of woollen thread, sometimes of linen woven material. Up to the end of the Middle Ages the usual colour was white, although the gloves at New College, Oxford, are red; apparently it was not until the sixteenth century that the ordinances as to liturgical colours were applied to episcopal gloves. Even in the Middle Ages the occasions on which the gloves were worn were not many, but their use was not so limited as to-day, for in the earlier period they were occasionally worn at the pontifical Mass after Communion, at solemn offices, and during processions. Episcopal gloves are symbolical of purity from sin, the performance of good works, and carefulness of procedure.

JOSEPH BRAUN.

Gluttony

Gluttony

(From Lat. *gluttire*, to swallow, to gulp down), the excessive indulgence in food and drink. The moral deformity discernible in this vice lies in its defiance of the order postulated by reason, which prescribes necessity as the measure of indulgence in eating and drinking. This deordination, according to the teaching of the Angelic Doctor, may happen in five ways which are set forth in the scholastic verse: "Prae-propere, laute, nimis, ardentem, studiosam" or, according to the apt rendering of Father Joseph Rickaby: too soon, too expensively, too much, too eagerly, too daintily. Clearly one who uses food or drink in such a way as to injure his health or impair the mental equipment needed for the discharge of his duties, is guilty of the sin of gluttony. It is incontrovertible that to eat or drink for the mere pleasure of the experience, and for that exclusively, is likewise to commit the sin of gluttony. Such a temper of soul is equivalently the direct and positive shutting out of that reference to our last end which must be found, at least implicitly, in all our actions. At the same time it must be noted that there is no obligation to formerly and explicitly have before one's mind a motive which will immediately relate our actions to God. It is enough that such an intention should be implied in the apprehension of the thing as lawful with a consequent virtual submission to Almighty God. Gluttony is in general a venial sin in so far forth as it is an undue indulgence in a thing which is in itself neither good nor bad. Of course it is obvious that a different estimate would have to be given of one so wedded to the pleasures of the table as to absolutely and without qualification live merely to eat and drink, so minded as to be of the number of those, described by the Apostle St. Paul, "whose god is their belly" (Phil., iii, 19). Such a one would be guilty of mortal sin. Likewise a person who, by excesses in eating and drinking, would have greatly impaired his health, or unfitted himself for duties for the performance of which he has a grave obligation, would be justly chargeable with mortal sin. St. John of the Cross, in his work "The Dark Night of the Soul" (I, vi), dissects what he calls spiritual gluttony. He explains that it is the disposition of those who, in prayer and other acts of religion, are always in search of sensible sweetness; they are those who "will feel and taste God, as if he were palpable and accessible to them not only in Communion but in all their other acts of devotion." This he declares is a very great imperfection and productive of great evils.

JOSEPH F. DELANY

Gnesen-Posen

Gnesen-Posen

Archdiocese in the Kingdom of Prussia. The archdiocese includes the Dioceses of Gnesen and Posen, which were separate up to 1821. Since that time they have been united under one archbishop. Besides these dioceses the ecclesiastical province also embraces the Bishopric of Culm.

I. HISTORY

The Bishopric of Posen (Lat. *Posania*; Polish, *Poznan*) was founded in 968 under Miecystaw or Mesko, Duke of Poland. Unable to cope with internal enemies, he sought the support of the German Emperor Otto I and became one of his vassals. Converted by his pious wife, Dubravka, daughter of Duke Boleslaw I of Bohemia, he was baptized, and, in order to promote the Christianization of his dominions, undertook to establish a permanent ecclesiastical organization. The first bishop was Jordan (968-82), who was appointed suffragan to the Archbishop of Magdeburg, in 970. Posen continued to be the only bishopric in Poland until the Diocese of Gnesen was created (Lat. *Gnesna*; Polish, Gniezno). The latter place was chosen by Duke Boleslaw as a suitable location for a shrine for the remains of St. Adalbert, who had suffered martyrdom at the hands of the heathen Prussians. When the Emperor Otto III made his pilgrimage to the grave of St. Adalbert in 1000, he established an archbishopric in Gnesen without consulting Bishop Unger of Posen (982-1012), and placed it under the jurisdiction of Radim or Gaudentius, brother of St. Adalbert. At the same time he created the Bishoprics of Cracow, Breslau, and Kolberg, and incorporated them in the new archdiocese. On the death of Boleslaw, Posen was severed from Magdeburg in the course of the strife engendered by the national opposition to Germanism. Bishop Paulinus elected in 1037, was the first bishop consecrated in Gnesen. St. Norbert, Archbishop of Magdeburg succeeded in obtaining a papal rescript in 1133, in which the metropolitan jurisdiction of his archepiscopal see over Posen was still recognised. But since the twelfth century, Posen has undisputedly been *de facto* a suffragan of Gnesen. Both bishoprics were dependent on the temporal rulers of the country, who nominated the bishops at will, disposed arbitrarily of the benefices and prebends, and confiscated the estates of the bishops on their death.

The archiepiscopal See of Gnesen, richly endowed with estates and tithes, soon surpassed the older Bishopric of Posen both in extent and importance, and grew to be the most influential bishopric in the dukedom. In the thirteenth century the archbishops acquired the Principality of Lowiez. The diocese was further augmented by the addition of the suffragan Bishoprics of Lebus, Wlockawek, and Plock in the thirteenth century; of Wilna and Lutzk in the fourteenth; of Samogitia in the fifteenth, and of Culm in the sixteenth. Its prelates also obtained many extremely valuable privileges, both ecclesiastical and temporal. At the Council of Constance they were given the rank and title of Primas Poloniae et Magni Ducatus Lithuaniae, thereby getting ecclesiastical jurisdiction over all the Bishops of Poland and Lithuania. At the Fifth Lateran Council in 1515 they were honoured with the title of papal *Legatus natus*. In 1741 they received the privilege of wearing cardinal's vestments with the exception of the hat. The primacy entitled them to rank as princes of the empire. From 1572 they held authority as regents of the empire during an interregnum, superintended the election of the king and crowned the successful candidate.

The domestic condition of both bishoprics left much to be desired during the first few centuries of their existence, even with respect to the spiritual and moral training of the clergy. Such was the charge made by Pope Innocent III in a letter to Henry I, Archbishop of Gnesen (1200-19), in 1207.

He censured the prelate on the ground that the majority of the priests were living in open matrimony, that the clergy were presenting frivolous plays before the laity, that theatrical performances were being given in churches, and so forth. Most of the credit for the improvement of both dioceses is due to the activities of the monasteries, mainly of German foundation. These included abbeys of the Benedictines, Cistercians, Dominicans, Franciscans, Augustinians, Knights Templar and Knights of St. John, and convents of Poor Clares, all of which became centres of prosperous development. Many of the bishops, also, displayed a beneficent solicitude for education, although on this point there is very little precise information to be obtained. But at least we know that in the synodical statutes of 1257 Archbishop Fulk of Gnesen (1232-58) directed the parish priests to establish and maintain schools; also that Bishop John VII (Lubranski) of Posen (1499-1520) founded a college at Posen, and other educational establishments.

Hussitism became widely disseminated throughout both dioceses in the fifteenth century. Its progress was mainly due to the fact that a great number of the sons of the Polish nobility attended the University of Prague. Bishop Stanislaus I (Ciolek) of Posen (1428-37) found himself at open variance with the city of Bentschen, whose inhabitants had become prevalingly Hussite, and was even compelled to fly from his diocese. His successor, on the other hand, Andreas of Bnin (1439-79), forced the city to deliver into his hands five Hussite preachers, whom he had burned at the stake in 1439. The further spread of the Hussite movement was checked by the recall of all Poles living in Bohemia, and by the prohibition of all commercial intercourse with that country. The doctrines of Luther, however, found some ready supporters amongst the inhabitants, thanks largely to feuds between the clergy and the nobility. They found acceptance first in the towns in Danzig as early as 1518. In Posen, Bishop John Lubranski (1499-1520) favoured the cause of the Reformation, sent to Leipzig for Christopher Endorf the humanist, and gave him an appointment in the high school. Petrus Tomicki (1520-25), the new bishop, seemed blind to the danger that menaced the Church. It was not until 1523 that strict measures for the preservation of the Faith were taken at the instance of the king. A kind of inquisition tribunal was instituted, and, at a synod convoked at Lenezye by Archbishop John Laski (1510-31) of Gnesen, the bull of Pope Leo X excommunicating Luther was published. In 1534 the young men of Poland were forbidden attend foreign schools. This restraint was somewhat relaxed under Laski's successors, Matthias Drzewicki (1531-35) and Andreas Krzycki (1535-37), the latter of whom was the composer of songs to Venus Vulgivaga and on other degrading themes. The conduct of Archbishop Jacob Uchanski (1562-81) in his attempts to establish a national church was marked by the greatest duplicity. The Moravian Brethren meanwhile obtained a footing in the Bishopric of Posen in spite of the opposition of Bishop Benedict Izdbiensi (1546-53).

The defeat of the Reformation in Poland was mainly due to the energy of Cardinal Hosius. He instigated the promulgation and execution of the decrees of the Council of Trent throughout the country, and had the Jesuits sent thither. Bishop Adam Konarski (1562-74) brought them into Posen in 1571, and in Gnesen Archbishop Stanislaus Karnkowski (1582-1603) entrusted them with the direction of the seminaries of Gnesen and Kalisch. From a national standpoint, the effect of the victory of the Counter Reformation was that the German element in both dioceses became almost

completely Polonized. Among the most important of the subsequent prelates may be mentioned: of the Archdiocese of Gnesen, Cardinal Bernhard Maciejowski (1604-08), Laurentius Gembicki (1616-24), Matthias Lubienski (1641-52), Cardinal Micliael Radziejowski (1687-1705), and Stanislaus Szembek (1706-22); of Posen, Andreas Opalenski (1607-23), Arldreas Szoldrski (1636-50), Bartholomew Tarto (1710-15), Prince Theodore Czartoryski (1739-68).

The decline of Poland resulted in its partition among Russia, Austria, and Prussia (1773, 1793, and 1795). The Archbishop of Gnesen retained jurisdiction only over that part of the kingdom that fell to the share of Prussia, and the Diocese of Posen was also reduced in extent. When the Prussian occupation took effect, the Church was assured of the continued enjoyment of all her possessions, but after the insurrection of 1797 all her estates were confiscated. Pius VII transferred the primacy to the Archbishop of Warsaw; but the title of prince was still attached to the Archbishopric of Gnesen until it too was withdrawn in 1829 by order of the cabinet. At the reorganization of ecclesiastical affairs in Prussia in 1821, the Russian-Polish part of the Diocese of Posen was cut off; the see was raised to an archbishopric, and joined to Gnesen under one prelate. Each bishopric, however, retained its own suffragan, its own cathedral chapter, and its own consistory. Timotheus Gorzenski (d. 1825) was consecrated first Archbishop of Gnesen-Posen, after he had been Bishop of Posen since 1809. The city of Posen, which in the interim had outstripped Gnesen in size and importance, was designated the official seat of the diocese. Since the Prussian regime began, both chapters have had the joint right of electing the archbishop. This right, however, has already proved illusory in several elections, the archiepiscopal throne having been left vacant on several occasions for lengthy periods. After the brief incumbency of Theophilus Wolicki (1828-29), the archdiocese was ruled by Martin Dunin (1831-42), a graduate of the Collegium Germanicum. Although he met the views of the government as far as possible on all questions concerning the schools and religious seminaries, he, with the Archbishop of Cologne, Clement August von Droste-Vischering, defended the discipline of the Church regarding mixed marriages so steadfastly that he was removed from his see, exiled from his diocese, and later, on his return to Gnesen, was arrested and confined in the fortress of Kolberg. It was only in 1840 that he was reinstated, as the result of the personal interposition of King Frederick William IV. Leo Przluski (1845-65) was succeeded by Miecislaus Halka Ledochowski (1866-86), one of the first victims of the "Kulturkampf". On the 24 November, 1873, he was requested to abdicate his office by the chief president of the Province of Posen. Upon his refusal, he was summoned to appear before the court, arrested on the 3 February, 1874, and kept in prison at Ostrowo until February, 1876. Forbidden to stay in Prussia, he went to Rome, and was raised to the cardinalate by Pius IX in March, 1876. The Prussian government had him deposed by the supreme court of the state, and ordered a new election. Both cathedral chapters refused to carry out this order, whereupon the Prussians confiscated the episcopal possessions. Both suffragan bishops, the official Korytkowski, and other clergymen were persecuted by the government, and had variously to suffer imprisonment, exile, fines, the suspension of stipends, and deposition. In 1883, 165 of the 555 parishes in the two dioceses were without a pastor, and of these 131, embracing 165, 000 souls, were absolutely without any clergyman whatsoever.

In the beginning of 1886 Ledochwski resigned his incumbency into the pope's hands. The latter appointed a German, Silius Dinder, to the archbishopric (1886-90). From the outset his German nationality inspired the distrust of the Poles. He was bitterly attacked by Polish newspapers and at public meetings, because he carried out the wishes of the administration in ordering religious instruction to be given to the higher classes of the secondary schools in the German tongue. Even his attitude in espousing in general the cause of the Poles wherever their rights were affected did nothing to mitigate his unpopularity. He was succeeded by a Pole, Florian von Stablewski (1891-1906), who, as in the case of Dinder, was nominated by the pope. He did his best to keep on good terms with the civil government, promoted the education and training of the clergy by founding seminaries and preparatory colleges in Gnesen and Posen, improved the Catholic unions and societies, and caused the publication of several Catholic daily and weekly journals. But in spite of his conciliatory policy he was subjected to the attacks of both the German and Polish elements as a result of the excessively obnoxious conditions that prevailed throughout the archdiocese. Since his death it has been without a spiritual head. The diocese is at present in a very troubled state. The Polish population is bitterly hostile to the administration in consequence of the exclusion of their language from the schools, and of a policy inaugurated by the Prussian government. The schools have been altogether removed from the influence of the archbishop, the clergy and the parents of the children; the intermediate schools are, for the most part, under the guidance of Protestant directors and teachers. In consequence of the plantation of German settlers, mostly of Protestant extraction, many parishes have been brought to the verge of ruin. The efforts of the government to Germanize the country and the consequent resistance of the Poles have, in many cases, exceeded all legitimate bounds, and have given rise to conditions which are very detrimental to the interests of the Catholic Church.

II. STATISTICS

The Archdiocese of Gnesen-Posen embraces the Prussian governmental department of Posen, the department of Bromberg (with the exception of the circle, or district, of Bromberg), the circles of Deutsch-Krone and the circle of Thorn in Western Prussia and several small places in Pomerania. The total population in 1900 consisted of 1, 272, 499 souls, of whom some 110, 000 were Germans. Each of the dioceses has a suffragan and its own cathedral chapter. During the vacancy of the see the administration of the Diocese of Posen is administered by the suffragan as capitular vicar and administrator general. The cathedral chapter is composed of a provost, a dean, eight canons and four honorary canons (1 vacant). At the beginning of 1909 the bishopric included 26 deaneries, 348 parish churches 104 chapels-of-ease, 91 oratories and public chapels, 69 private chapels, 554 priests, 97 clerics, 951, 020 souls. There is a clerical seminary (Seminarium Leoninum) at Posen with 5 professors and 97 alumni, and 2 preparatory colleges. There have been no male orders in either diocese since the Kulturkampf. The following, female orders and congregations have institutions in the diocese: the Sisters of Charity of St. Vincent de Paul have 13 convents with 112 sisters; the Grey Sisters of St. Elizabeth have 21 with 141 sisters; the Sisters of Mercy of St. Charles

Borromeo 3 with 28 sisters; the Servants of the Immaculate Conception, 8 with 42 sisters. The church at Posen is the official cathedral of the diocese. It was built between 1772 and 1775 on the site of an older structure. It contains numerous memorial tablets and monuments of former bishops, and also the famous golden chapel of Ranch. A collegiate chapter with a provost, a dean, and two canons is attached to the parish church ad Sanctam Mariam Magdalenam, formerly the church of the Jesuits. In the Diocese of Gnesen the provost of the cathedral chapter has jurisdiction as vicar capitular and administrator general. The chapter Consists of the provost and six canons. At the beginning of 1909 the diocese included 17 deaneries 207 parish churches, 29 chapels-of-ease, 64 oratories and chapels, 277 priests, 438, 425 Catholics. There is one seminary at Gnesen, with 3 professors and 31 students, one archiepiscopal preparatory college, and 9 ecclesiastical hospitals. There are 8 convents of the Sisters of St. Elizabeth with 38 sisters, 5 of the Sisters of Charity of St. Vincent de Paul with 33 inmates, and six of the Servants of the Immaculate Conception with 38 sisters. The Gothic cathedral at Gnesen, the largest religious sanctuary in all Poland, dates from the 14th century. It contains the silver sarcophagus enclosing the relics of St. Adalbert, to which thousands make pilgrimages each year. There are collegiate chapters attached to the Church of St. George in Gnesen, and to the parish church in Krusechwitz.

Bibliography in FINKEL, Bibliografla Historyi Polskie, i.e. Bibliography of Polish History (Cracow, 1876). Authorities in THEINER, *Velera Monumenta Poloniae et Lithuaniae* (4 vols., Rome, 1860-64); *Codex diplomaticus Majoris Poloniae, I* (Posen, 1877-81); *-Monumenta Poloniae historica, III* (Lemberg, 1878); ULANOWSKI, *Statta Capitulorum Gnesnensis et Posnaniensis* (Cracow, 1897); IDEM, *Acta iudiciorum ecclesiasticorum diocesium Plocensis, Wladislaviensis et Gnesnensis 1422-1533* (Cracow, 1909--) IDEM, *Acta capitulorum Posnaniensis et Wladislaviensis* (Cracow, 1909--). The earlier books on the Archbishops of Gnesen are surpassed by the authoritative work of KORYTKOWSKI, *Arcybiskupi Gnieznienscy prymasowie i polici polscy od roku 1000 az do roku 1821* (i.e. "The Archbishops of Gnesen, primates and metropolitans of Poland from the year 1000 to the year 1821", 5 vols., Posen, 1887-91); also IDEM, *Prafaci i kanonicy katedry metropolitanskiej gniezienskiej* (i.e. "The prelates and canons of the metropolitan cathedral at gnesen", 4vols., Gnesen, 1882-83). For the Bishops of Posen cf. RZEPNICKI, *Vitae praesulum Poloniae* (2 vols., Posen, 1761--), and KOZLOWSKI, *Zwoty prymasowi i arcybiskupow gnieznienskich i poznanskich w skroccniu* (i.e., "Brief biographies of the primates and Archbishops of Gnesen and Posen", Posen, 1887). On the docese itself, cf. LUKASZEWICZ, *Diocesi Poznanski* (3 vols., Posen, 1858), and KORYTKOWSKI, *Brevis descriptio archidiocesis Gnesnensis et Posnaniensis* (Gnesen, 1888); concerning the churches cf. Numerous essays dealing with both Dioceses can be found in the *Zeitschrift d Historischen Gesellschaft fur die Provinz Posen* (Posen, 1885--). Cf. also art. Poland.

JOSEPH LINS

Gnosticism

Gnosticism

The doctrine of salvation by knowledge. This definition, based on the etymology of the word (*gnosis* "knowledge", *gnostikos*, "good at knowing"), is correct as far as it goes, but it gives only one, though perhaps the predominant, characteristic of Gnostic systems of thought. Whereas Judaism and Christianity, and almost all pagan systems, hold that the soul attains its proper end by obedience of mind and will to the Supreme Power, i.e. by faith and works, it is markedly peculiar to Gnosticism that it places the salvation of the soul merely in the possession of a quasi-intuitive knowledge of the mysteries of the universe and of magic formulae indicative of that knowledge. Gnostics were "people who knew", and their knowledge at once constituted them a superior class of beings, whose present and future status was essentially different from that of those who, for whatever reason, did not know. A more complete and historical definition of Gnosticism would be:

A collective name for a large number of greatly-varying and pantheistic-idealistic sects, which flourished from some time before the Christian Era down to the fifth century, and which, while borrowing the phraseology and some of the tenets of the chief religions of the day, and especially of Christianity, held matter to be a deterioration of spirit, and the whole universe a depravation of the Deity, and taught the ultimate end of all being to be the overcoming of the grossness of matter and the return to the Parent-Spirit, which return they held to be inaugurated and facilitated by the appearance of some God-sent Saviour.

However unsatisfactory this definition may be, the obscurity, multiplicity, and wild confusion of Gnostic systems will hardly allow of another. Many scholars, moreover, would hold that every attempt to give a generic description of Gnostic sects is labour lost.

ORIGIN

The beginnings of Gnosticism have long been a matter of controversy and are still largely a subject of research. The more these origins are studied, the farther they seem to recede in the past. Whereas formerly Gnosticism was considered mostly a corruption of Christianity, it now seems clear that the first traces of Gnostic systems can be discerned some centuries before the Christian Era. Its Eastern origin was already maintained by Gieseler and Neander; F. Ch. Bauer (1831) and Lassen (1858) sought to prove its relation to the religions of India; Lipsius (1860) pointed to Syria and Phoenicia as its home, and Hilgenfeld (1884) thought it was connected with later Mazdeism. Joel (1880), Weingarten (1881), Koffmane (1881), Anrich (1894), and Wobbermin (1896) sought to account for the rise of Gnosticism by the influence of Greek Platonic philosophy and the Greek mysteries, while Harnack described it as "acute Hellenization of Christianity". For the past twenty-five years, however, the trend of scholarship has steadily moved towards proving the pre-Christian Oriental origins of Gnosticism. At the Fifth Congress of Orientalists (Berlin, 1882)

Kessler brought out the connection between Gnosis and the Babylonian religion. By this latter name, however, he meant not the original religion of Babylonia, but the syncretistic religion which arose after the conquest of Cyrus. The same idea is brought out in his "Mani" seven years later. In the same year F.W. Brandt published his "Mandäische Religion". This Mandaean religion is so unmistakably a form of Gnosticism that it seems beyond doubt that Gnosticism existed independent of, and anterior to, Christianity. In more recent years (1897) Wilhelm Anz pointed out the close similarity between Babylonian astrology and the Gnostic theories of the Hebdomad and Ogdoad. Though in many instances speculations on the Babylonian *Astrallehre* have gone beyond all sober scholarship, yet in this particular instance the inferences made by Anz seem sound and reliable. Researches in the same direction were continued and instituted on a wider scale by W. Bousset, in 1907, and led to carefully ascertained results. In 1898 the attempt was made by M. Friedländer to trace Gnosticism in pre-Christian Judaism. His opinion that the Rabbinic term *Minnim* designated not Christians, as was commonly believed, but Antinomian Gnostics, has not found universal acceptance. In fact, E. Schürer brought sufficient proof to show that *Minnim* is the exact Aramaean dialectic equivalent for *ethne*. Nevertheless Friedländer's essay retains its value in tracing strong antinomian tendencies with Gnostic colouring on Jewish soil. Not a few scholars have laboured to find the source of Gnostic theories on Hellenistic and, specifically, Alexandrian soil. In 1880 Joel sought to prove that the germ of all Gnostic theories was to be found in Plato. Though this may be dismissed as an exaggeration, some Greek influence on the birth, but especially on the growth, of Gnosticism cannot be denied. In Trismegistic literature, as pointed out by Reitzenstein (*Poimandres*, 1904), we find much that is strangely akin to Gnosticism. Its Egyptian origin was defended by E. Amélineau, in 1887, and illustrated by A. Dietrich, in 1891 (*Abraxas Studien*) and 1903 (*Mithrasliturgie*). The relation of Plotinus's philosophy to Gnosticism was brought out by C. Schmidt in 1901. That Alexandrian thought had some share at least in the development of Christian Gnosticism is clear from the fact that the bulk of Gnostic literature which we possess comes to us from Egyptian (Coptic) sources. That this share was not a predominant one is, however, acknowledged by O. Gruppe in his "Griechische Mythologie und Religionsgeschichte" (1902). It is true that the Greek mysteries, as G. Anrich pointed out in 1894, had much in common with esoteric Gnosticism; but there remains the further question, in how far these Greek mysteries, as they are known to us, were the genuine product of Greek thought, and not much rather due to the overpowering influence of Orientalism.

Although the origins of Gnosticism are still largely enveloped in obscurity, so much light has been shed on the problem by the combined labours of many scholars that it is possible to give the following tentative solution: Although Gnosticism may at first sight appear a mere thoughtless syncretism of well nigh all religious systems in antiquity, it has in reality one deep root-principle, which assimilated in every soil what is needed for its life and growth; this principle is philosophical and religious pessimism. The Gnostics, it is true, borrowed their terminology almost entirely from existing religions, but they only used it to illustrate their great idea of the essential evil of this present existence and the duty to escape it by the help of magic spells and a superhuman Saviour.

Whatever they borrowed, this pessimism they did not borrow -- not from Greek thought, which was a joyous acknowledgment of and homage to the beautiful and noble in this world, with a studied disregard of the element of sorrow; not from Egyptian thought, which did not allow its elaborate speculations on retribution and judgment in the netherworld to cast a gloom on this present existence, but considered the universe created or evolved under the presiding wisdom of Thoth; not from Iranian thought, which held to the absolute supremacy of Ahura Mazda and only allowed Ahriman a subordinate share in the creation, or rather counter-creation, of the world; not from Indian Brahminic thought, which was Pantheism pure and simple, or God dwelling in, nay identified with, the universe, rather than the Universe existing as the contradictory of God; not, lastly, from Semitic thought, for Semitic religions were strangely reticent as to the fate of the soul after death, and saw all practical wisdom in the worship of Baal, or Marduk, or Assur, or Hadad, that they might live long on this earth. This utter pessimism, bemoaning the existence of the whole universe as a corruption and a calamity, with a feverish craving to be freed from the body of this death and a mad hope that, if we only knew, we could by some mystic words undo the cursed spell of this existence -- this is the foundation of all Gnostic thought. It has the same parent-soil as Buddhism; but Buddhism is ethical, it endeavours to obtain its end by the extinction of all desire; Gnosticism is pseudo-intellectual, and trusts exclusively to magical knowledge. Moreover, Gnosticism, placed in other historical surroundings, developed from the first on other lines than Buddhism.

When Cyrus entered Babylon in 539 B.C., two great worlds of thought met, and syncretism in religion, as far as we know it, began. Iranian thought began to mix with the ancient civilization of Babylon. The idea of the great struggle between evil and good, ever continuing in this universe, is the parent idea of Mazdeism, or Iranian dualism. This, and the imagined existence of numberless intermediate spirits, angels and devas, as the conviction which overcame the contentedness of Semitism. On the other hand, the unshakable trust, in astrology, the persuasion that the planetary system had a fatalistic influence on this world's affairs, stood its ground on the soil of Chaldea. The greatness of the Seven -- the Moon, Mercury, Venus, Mars, the Sun, Jupiter, and Saturn -- the sacred Hebdomad, symbolized for millenniums by the staged towers of Babylonia, remained undiminished. They ceased, indeed, to be worshipped as deities, but they remained *archontes* and *dynameis*, rules and powers whose almost irresistible force was dreaded by man. Practically, they were changed from gods to devas, or evil spirits. The religions of the invaders and of the invaded effected a compromise: the astral faith of Babylon was true, but beyond the Hebdomad was the infinite light in the Ogdoad, and every human soul had to pass the adverse influence of the god or gods of the Hebdomad before it could ascend to the only good God beyond. This ascent of the soul through the planetary spheres to the heaven beyond (an idea not unknown even to ancient Babylonian speculations) began to be conceived as a struggle with adverse powers, and became the first and predominant idea in Gnosticism. The second great component of Gnostic thought is magic, properly so called, i.e. the power *ex opere operato* of weird names, sounds, gestures, and actions, as also the mixture of elements to produce effects totally disproportionate to the cause. These magic formulae, which caused laughter and disgust to outsiders, are not a later and accidental corruption,

but an essential part of Gnosticism, for they are found in all forms of Christian Gnosticism and likewise in Mandaëism. No Gnosis was essentially complete without the knowledge of the formulae, which, once pronounced, were the undoing of the higher hostile powers. Magic is the original sin of Gnosticism, nor is it difficult to guess whence it is inherited. To a certain extent it formed part of every pagan religion, especially the ancient mysteries, yet the thousands of magic tablets unearthed in Assyria and Babylonia show us where the rankest growth of magic was to be found. Moreover, the terms and names of earliest of Gnosticism bear an unmistakable similarity to Semitic sounds and words. Gnosticism came early into contact with Judaism, and it betrays a knowledge of the Old Testament, if only to reject it or borrow a few names from it. Considering the strong, well-organized, and highly-cultured Jewish colonies in the Euphrates valley, this early contact with Judaism is perfectly natural. Perhaps the Gnostic idea of a Redeemer is not unconnected with Jewish Messianic hopes. But from the first the Gnostic conception of a Saviour is more superhuman than that of popular Judaism; their *Manda d'Haye*, or *Soter*, is some immediate manifestation of the Deity, a Light-King, an Æon (*Aion*), and an emanation of the good God. When Gnosticism came in touch with Christianity, which must have happened almost immediately on its appearance, Gnosticism threw herself with strange rapidity into Christian forms of thought, borrowed its nomenclature, acknowledged Jesus as Saviour of the world, simulated its sacraments, pretended to be an esoteric revelation of Christ and His Apostles, flooded the world with apocryphal Gospels, and Acts, and Apocalypses, to substantiate its claim. As Christianity grew within and without the Roman Empire, Gnosticism spread as a fungus at its root, and claimed to be the only true form of Christianity, unfit, indeed, for the vulgar crowd, but set apart for the gifted and the elect. So rank was its poisonous growth that there seemed danger of its stifling Christianity altogether, and the earliest Fathers devoted their energies to uprooting it. Though in reality the spirit of Gnosticism is utterly alien to that of Christianity, it then seemed to the unwary merely a modification or refinement thereof. When domiciled on Greek soil, Gnosticism, slightly changing its barbarous and Seminitic terminology and giving its "emanations" and "syzygies" Greek names, sounded somewhat like neo-Platonism, thought it was strongly repudiated by Plotinus. In Egypt the national worship left its mark more on Gnostic practice than on its theories.

In dealing with the origins of Gnosticism, one might be tempted to mention Manichaeism, as a number of Gnostic ideas seem to be borrowed from Manichaeism, where they are obviously at home. This, however, would hardly be correct. Manichaeism, as historically connected with Mani, its founder, could not have arisen much earlier than A.D. 250, when Gnosticism was already in rapid decline. Manichaeism, however, in many of its elements dates back far beyond its commonly accepted founder; but then it is a parallel development with the Gnosis, rather than one of its sources. Sometimes Manichaeism is even classed as a form of Gnosticism and styled Parsee Gnosis, as distinguished from Syrian and Egyptian Gnosis. This classification, however, ignores the fact that the two systems, though they have the doctrine of the evil of matter in common, start from different principles, Manichaeism from dualism, while Gnosticism, as an idealistic Pantheism, proceeds from the conception of matter as a gradual deterioration of the Godhead.

DOCTRINES

Owing to the multiplicity and divergence of Gnostic theories, a detailed exposition in this article would be unsatisfactory and confusing and to a certain extent even misleading, since Gnosticism never possessed a nucleus of stable doctrine, or any sort of *depositum fidei* round which a number of varied developments and heresies or sects might be grouped; at most it had some leading ideas, which are more or less clearly traceable in different schools. Moreover, a fair idea of Gnostic doctrines can be obtained from the articles on leaders and phases of Gnostic thought (e.g. BASILIDES; VALENTINUS; MARCION; DOCETAE; DEMIURGE). We shall here only indicate some main phases of thought, which can be regarded as keys and which, though not fitting all systems, will unlock most of the mysteries of the Gnosis.

(a) Cosmogony

Gnosticism is thinly disguised Pantheism. In the beginning was the Depth; the Fulness of Being; the Not-Being God; the First Father, the Monad, the Man; the First Source, the unknown God (*Bythos pleroma, ouk on theos, propator, monas, anthropos, proarche, hagnostos theos*), or by whatever other name it might be called. This undefined infinite Something, though it might be addressed by the title of the Good God, was not a personal Being, but, like Tad of Brahma of the Hindus, the "Great Unknown" of modern thought. The Unknown God, however, was in the beginning pure spirituality; matter as yet was not. This source of all being causes to emanate (*proballei*) from itself a number of pure spirit forces. In the different systems these emanations are differently named, classified, and described, but the emanation theory itself is common to all forms of Gnosticism. In the Basilidian Gnosis they are called sonships (*uiotetes*), in Valentinianism they form antithetic pairs or "syzygies" (*syzygoi*); Depth and Silence produce Mind and Truth; these produce Reason and Life, these again Man and State (*ekklesia*). According to Marcus, they are numbers and sounds. These are the primary roots of the Æons. With bewildering fertility hierarchies of Æons are thus produced, sometimes to the number of thirty. These Æons belong to the purely ideal, noumenal, intelligible, or supersensible world; they are immaterial, they are hypostatic ideas. Together with the source from which they emanate they form the *pleroma*. The transition from the immaterial to the material, from the noumenal to the sensible, is brought about by a flaw, or a passion, or a sin, in one of the Æons. According to Basilides, it is a flaw in the last sonship; according to others it is the passion of the female Æon Sophia; according to others the sin of the Great Archon, or Æon-Creator, of the Universe. The ultimate end of all Gnosis is *metanoia*, or repentance, the undoing of the sin of material existence and the return to the Pleroma.

(b) Sophia-Myth

In the greater number of Gnostic systems an important role is played by the Æon Wisdom -- Sophia or Achamoth. In some sense she seems to represent the supreme female principle, as for instance in the Ptolemaic system, in which the mother of the seven heavens is called Achamoth, in the Valentinian system, in which *he ano Sophia*, the Wisdom above, is distinguished from *he kato Sophia*, or Achamoth, the former being the female principle of the noumenal world, and in the

Archotian system, where we find a "Lightsome Mother" (*he meter he photeine*), and in which beyond the heavens of the Archons is *he meter ton panton* and likewise in the Barbelognosis, where the female Barbelos is but the counterpart of the Unknown Father, which also occurs amongst the Ophites described by Irenaeus (*Adv. Haeres.*, III, vii, 4). Moreover, the Eucharistic prayer in the Acts of Thomas (ch. 1) seems addressed to this supreme female principle. W. Bousset's suggestion, that the Gnostic Sophia is nothing else than a disguise for the Dea Syra, the great goddess Istar, or Astarte, seems worthy of consideration. On the other hand, the Æon Sophia usually plays another role; she is *he Prouneikos* or "the Lustful One", once a virginal goddess, who by her fall from original purity is the cause of this sinful material world. One of the earliest forms of this myth is found in Simonian Gnosis, in which Simon, the Great Power, finds Helena, who during ten years had been a prostitute in Tyre, but who is Simon's *ennoia*, or understanding, and whom his followers worshipped under the form of Athena, the goddess of wisdom. According to Valentinus's system, as described by Hippolytus (Book VI, xxv-xxvi), Sophia is the youngest of the twenty-eight æons. Observing the multitude of æons and the power of begetting them, she hurries back into the depth of the Father, and seeks to emulate him by producing offspring without conjugal intercourse, but only projects an abortion, a formless substance. Upon this she is cast out of Pleroma. According to the Valentinian system as described by Irenaeus (*op. cit.*, I) and Tertullian (*Adv. Valent.*, ix), Sophia conceives a passion for the First Father himself, or rather, under pretext of love she seeks to know him, the Unknowable, and to comprehend his greatness. She should have suffered the consequence of her audacity by ultimate dissolution into the immensity of the Father, but for the Boundary Spirit. According to the Pistis Sophia (ch. xxix) Sophia, daughter of Barbelos, originally dwelt in the highest, or thirteenth heaven, but she is seduced by the demon Authades by means of a ray of light, which she mistook as an emanation from the First Father. Authades thus enticed her into Chaos below the twelve Æons, where she was imprisoned by evil powers. According to these ideas, matter is the fruit of the sin of Sophia; this, however, was but a Valentinian development; in the older speculations the existence of matter is tacitly presupposed as eternal with the Pleroma, and through her sin Sophia falls from the realm of light into Chaos or realm of darkness. This original dualism, however, was overcome by the predominant spirit of Gnosticism, pantheistic emanationism. The Sophia myth is completely absent from the Basilidian and kindred systems. It is suggested, with great verisimilitude, that the Egyptian myth of Isis was the original source of the Gnostic "lower wisdom". In many systems this *Kato Sophia* is sharply distinguished from the Higher Wisdom mentioned above; as, for instance, in the magic formula for the dead mentioned by Irenaeus (*op. cit.*, I, xxi, 5), in which the departed has to address the hostile archons thus: "I am a vessel more precious than the female who made you. If your mother ignores the source whence she is, I know myself, and I know whence I am and invoke the incorruptible Sophia, who is in the Father, the mother of your mother, who has neither father nor husband. A man-woman, born from a woman, has made you, not knowing her mother, but thinking herself alone. But I invoke her mother." This agrees with the system minutely described by Irenaeus (*op. cit.*, I, iv-v), where Sophia Achamoth, or Lower Wisdom, the daughter of Higher Wisdom, becomes the mother of the Demiurge;

she being the Ogdoad, her son the Hebdomad, they form a counterpart of the heavenly Ogdoad in the Pleromata. This is evidently a clumsy attempt to fuse into one two systems radically different, the Basilidian and the Valentinian; the ignorance of the Great Archon, which is the central idea of Basilides, is here transferred to Sophia, and the hybrid system ends in bewildering confusion.

(c) Soteriology

Gnostic salvation is not merely individual redemption of each human soul; it is a cosmic process. It is the return of all things to what they were before the flaw in the sphere of the Æons brought matter into existence and imprisoned some part of the Divine Light into the evil Hyle (*Hyle*). This setting free of the light sparks is the process of salvation; when all light shall have left Hyle, it will be burnt up, destroyed, or be a sort of everlasting hell for the Hylicoi. In Basilidianism it is the Third Filiation that is captive in matter, and is gradually being saved, now that the knowledge of its existence has been brought to the first Archon and then to the Second Archon, to each by his respective Son; and the news has been spread through the Hebdomad by Jesus the son of Mary, who died to redeem the Third Filiation. In Valentinianism the process is extraordinarily elaborate. When this world has been born from Sophia in consequence of her sin, Nous and Aletheia, two Æons, by command of the Father, produce two new Æons, Christ and the Holy Ghost; these restore order in the Pleroma, and in consequence all Æons together produce a new Æon, Jesus Logos, Soter, or Christ, whom they offer to the Father. Christ, the Son of Nous and Aletheia, has pity on the abortive substance born of Sophia and gives it essence and form. Whereupon Sophia tries to rise again to the Father, but in vain. Now the Æon Jesus-Soter is sent as second Saviour, he unites himself to the man Jesus, the son of Mary, at his baptism, and becomes the Saviour of men. Man is a creature of the Demiurge, a compound of soul, body, and spirit. His salvation consists in the return of his *pneuma* or spirit to the Pleroma; or if he be only a Psychicist, not a full Gnostic, his soul (*psyche*) shall return to Achamoth. There is no resurrection of the body. (For further details and differences see VALENTINUS.)

In Marcionism, the most dualistic phase of Gnosticism, salvation consisted in the possession of the knowledge of the Good God and the rejection of the Demiurge. The Good God revealed himself in Jesus and appeared as man in Judea; to know him, and to become entirely free from the yoke of the World-Creator or God of the Old Testament, is the end of all salvation. The Gnostic Saviour, therefore, is entirely different from the Christian one. For

- the Gnostic Saviour does not save. Gnosticism lacks the idea of atonement. There is no sin to be atoned for, except ignorance be that sin. Nor does the Saviour in any sense benefit the human race by vicarious sufferings. Nor, finally, does he immediately and actively affect any individual human soul by the power of grace or draw it to God. He was a teacher, he once brought into the world the truth, which alone can save. As a flame sets naphtha on fire, so the Saviour's light ignites predisposed souls moving down the stream of time. Of a real Saviour who with love human and Divine seeks out sinners to save them, Gnosticism knows nothing.
- The Gnostic Saviour has no human nature, he is an æon, not a man; he only *seemed* a man, as the three Angels who visited Abraham seemed to be men. (For a detailed exposition see DOCETAE.) The Æon Soter is brought into the strangest relation to Sophia: in some systems he is her brother,

in others her son, in other again her spouse. He is sometimes identified with Christ, sometimes with Jesus; sometimes Christ and Jesus are the same æon, sometimes they are different; sometimes Christ and the Holy Ghost are identified. Gnosticism did its best to utilize the Christian concept of the Holy Ghost, but never quite succeeded. She made him the Horos, or Methorion Pneuma (*Horos, Methorion Pneuma*), the Boundary-Spirit, the Sweet Odour of the Second Filiation, a companion æon with Christos, etc., etc. In some systems he is entirely left out.

(d) Eschatology

It is the merit of recent scholarship to have proved that Gnostic eschatology, consisting in the soul's struggle with hostile archons in its attempt to reach the Pleroma, is simply the soul's ascent, in Babylonian astrology, through the realms of the seven planets to Anu. Origen (*Contra Celsum*, VI, xxxi), referring to the Ophitic system, gives us the names of the seven archons as Jaldabaoth, Jao, Sabaoth, Adonaios, Astaphaios, Ailoaios, and Oraios, and tells us that Jaldabaoth is the planet Saturn. Astraphaios is beyond doubt the planet Venus, as there are gnostic gems with a female figure and the legend *ASTAPHE*, which name is also used in magic spells as the name of a goddess. In the Mandaean system Adonaios represents the Sun. Moreover, St. Irenaeus tells us: "Sanctam Hebdomadem VII stellas, quas dictunt planetas, esse volunt." It is safe, therefore, to take the above seven Gnostic names as designating the seven stars, then considered planets,

- Jaldabaoth (Child of Chaos? -- Saturn, called "the Lion-faced", *leontoeides*) is the outermost, and therefore the chief ruler, and later on the Demiurge par excellence.
- Jao (*Iao*, perhaps from Jahu, Jahveh, but possibly also from the magic cry *iao* in the mysteries) is Jupiter.
- Sabaoth (the Old-Testament title -- God of Hosts) was misunderstood; "of hosts" was thought a proper name, hence Jupiter Sabbas (*Jahve Sabaoth*) was Mars.
- Astaphaios (taken from magic tablets) was Venus.
- Adonaios (from the Hebrew term for "the Lord", used of God; Adonis of the Syrians representing the Winter sun in the cosmic tragedy of Tammuz) was the Sun;
- Ailoaios, or sometimes Ailoein (Elohim, God), Mercury;
- Oraios (Jaroah? or light?), the Moon.

In the hellenized form of Gnosticism either all or some of these names are replaced by personified vices. Authadia (*Authades*), or Audacity, is the obvious description of Jaldabaoth, the presumptuous Demiurge, who is lion-faced as the Archon Authadia. Of the Archons Kakia, Zelos, Phthonos, Errinnys, Epithymia, the last obviously represents Venus. The number seven is obtained by placing a proarchon or chief archon at the head. That these names are only a disguise for the Sancta Hebdomas is clear, for Sophia, the mother of them, retains the name of Ogdoas, Octonatio. Occasionally one meets with the Archon *Esaldaios*, which is evidently the El Shaddai of the Bible, and he is described as the Archon "number four" (*harithmo tetartos*) and must represent the Sun. In the system of the Gnostics mentioned by Epiphanius we find, as the Seven Archons, Iao, Saklas, Seth, David, Eloiein, Elilaios, and Jaldabaoth (or no. 6 Jaldabaoth, no. 7 Sabaoth). Of these, Saklas is the chief demon of Manichaeism; Elilaios is probably connected with En-lil, the Bel of Nippur, the ancient god of Babylonia. In this, as in several other systems, the traces of the planetary seven have been obscured, but hardly in any have they become totally effaced. What tended most to obliterate the sevenfold

distinction was the identification of the God of the Jews, the Lawgiver, with Jaldabaoth and his designation as World-creator, whereas formerly the seven planets together ruled the world. This confusion, however, was suggested by the very fact that at least five of the seven archons bore Old-Testament names for God -- El Shaddai, Adonai, Elohim, Jehovah, Sabaoth.

(e) Doctrine of the Primeval Man

The speculations on Primeval Man (*Protanthropos*, Adam) occupy a prominent place in several Gnostic systems. According to Irenaeus (I, xxix, 3) the Æon Autogenes emits the true and perfect Anthrôpos, also called Adamas; he has a helpmate, "Perfect Knowledge", and receives an irresistible force, so that all things rest in him. Others say (Irenaeus, I, xxx) there is a blessed and incorruptible and endless light in the power of Bythos; this is the Father of all things who is invoked as the First Man, who, with his Ennœa, emits "the Son of Man", or Euteranthrôpos. According to Valentinus, Adam was created in the name of Anthrôpos and overawes the demons by the fear of the pre-existent man (*tou proontos anthropou*). In the Valentinian syzygies and in the Marcosian system we meet in the fourth (originally the third) place Anthrôpos and Ecclesia. In the Pistis Sophia the Æon Jeu is called the First Man, he is the overseer of the Light, messenger of the First Precept, and constitutes the forces of the Heimarmene. In the Books of the Jeu this "great Man" is the King of the Light-treasure, he is enthroned above all things and is the goal of all souls. According to the Naassenes, the Protanthropos is the first element; the fundamental being before its differentiation into individuals. "The Son of Man" is the same being after it has been individualized into existing things and thus sunk into matter. The Gnostic Anthrôpos, therefore, or *Adamas*, as it is sometimes called, is a cosmogonic element, pure mind as distinct from matter, mind conceived hypostatically as emanating from God and not yet darkened by contact with matter. This mind is considered as the reason of humanity, or humanity itself, as a personified idea, a category without corporeality, the human reason conceived as the World-Soul. This speculation about the Anthrôpos is completely developed in Manichaeism, where, in fact, it is the basis of the whole system. God, in danger of the power of darkness, creates with the help of the Spirit, the five worlds, the twelve elements, and the Eternal Man, and makes him combat the darkness. But this Man is somehow overcome by evil and swallowed up by darkness. The present universe is in throes to deliver the captive Man from the powers of darkness. In the Clementine Homilies the cosmogonic Anthrôpos is strangely mixed up with the historical figure of the first man, Adam. Adam "was the true prophet, running through all ages, and hastening to rest"; "the Christ, who was from the beginning and is always, who was ever present to every generation in a hidden manner indeed, yet ever present". In fact Adam was, to use Modernist language, the Godhead immanent in the world and ever manifesting itself to the inner consciousness of the elect. The same idea, somewhat modified, occurs in Hermetic literature, especially the "Poimandres". It is elaborated by Philo, makes an ingenious distinction between the human being created first "after God's image and likeness" and the historic figures of Adam and Eve created afterwards. Adam *kat eikona* is: "Idea, Genus, Character, belonging to the world, of Understanding, without body, neither male nor female; he is the Beginning, the Name of God, the Logos, immortal, incorruptible" (De opif. mund., 134-148; De conf. ling., 146). These ideas in

Talmudism, Philonism, Gnosticism, and Trismegistic literature, all come from once source, the late Mazdaean development of the Gayomarthians, or worshipper of the Super-Man.

(f) The Barbelo

This Gnostic figure, appearing in a number of systems, the Nicolaites, the "Gnostics" of Epiphanius, the Sethians, the system of the "Evangelium Mariae" and that in Iren., I, xxix, 2 sq., remains to a certain extent an enigma. The name *barbelo*, *barbeloth*, *barthenos* has not been explained with certainty. In any case she represents the supreme female principle, is in fact the highest Godhead in its female aspect. Barbelo has most of the functions of the *ano Sophia* as described above. So prominent was her place amongst some Gnostics that some schools were designated as Barbeliote, Barbelo worshippers of Barbelognostics. She is probably none other than the Light-Maiden of the Pistis Sophia, the *thygater tou photos* or simply the Maiden, *parthenos*. In Epiphanius (Haer., xxvi, 1) and Philastrius (Haer., xxxiii) Parthenos (Barbelos) seems identical with Noria, who plays a great role as wife either of Noe or of Seth. The suggestion, that Noria is "Maiden", *parthenos*, Istar, Athena, Wisdom, Sophia, or Archamothe, seems worthy of consideration.

rites

We are not so well informed about the practical and ritual side of Gnosticism as we are about its doctrinal and theoretical side. However, St. Irenaeus's account of the Marcosians, Hippolytus's account of the Elcesaites, the liturgical portions of the "Acta Thomae", some passages in the Pseudo-Clementines, and above all Coptic Gnostic and Mandaean literature gives us at least some insight into their liturgical practices.

(a) Baptism

All Gnostic sects possessed this rite in some way; in Mandaeanism daily baptism is one of the great practices of the system. The formulae used by Christian Gnostics seem to have varied widely from that enjoyed by Christ. The Marcosians said: "In [*eis*] the name of the unknown Father of all, in [*eis*] the Truth, the Mother of all, in him, who came down on Jesus [*eis ton katelthonta eis Iesoun*]"'. The Elcesaites said: "In [*en*] the name of the great and highest God and in the name of his Son, the great King". In Iren. (I, xxi, 3) we find the formula: "In the name that was hidden from every divinity and lordship and truth, which [name] Jesus the Nazarene has put on in the regions of light" and several other formulae, which were sometimes pronounced in Hebrew or Aramaic. The Mandaeans said: "The name of the Life and the name of the Manda d'Haye is named over thee". In connection with Baptism the *Sphragis* was of great importance; in what the seal or sign consisted wherewith they were marked is not easy to say. There was also the tradition of a name either by utterance or by handing a tablet with some mystic word on it.

(b) Confirmation

The anointing of the candidate with chrism, or odoriferous ointment, is a Gnostic rite which overshadows the importance of baptism. In the "Acta Thomae", so some scholars maintain, it had completely replaced baptism, and was the sole sacrament of initiation. This however is not yet proven. The Marcosians went so far as to reject Christian baptism and to substitute a mixture of

oil and water which they poured over the head of the candidate. By confirmation the Gnostics intended not so much to give the Holy Ghost as to seal the candidates against the attacks of the archons, or to drive them away by the sweet odour which is above all things (*tes uter ta hola euodias*). The balsam was somehow supposed to have flowed from the Tree of Life, and this tree was again mystically connected with the Cross; for the chrism is in the "Acta Thomae" called "the hidden mystery in which the Cross is shown to us".

(c) The Eucharist

It is remarkable that so little is known of the Gnostic substitute for the Eucharist. In a number of passages we read of the breaking of the bread, but in what this consisted is not easy to determine. The use of salt in this rite seems to have been important (Clem., Hom. xiv), for we read distinctly how St. Peter broke the bread of the Eucharist and "putting salt thereon, he gave first to the mother and then to us". There is furthermore a great likelihood, though no certainty, that the Eucharist referred to in the "Acta Thomae" was merely a breaking of bread without the use of the cup. This point is strongly controverted, but the contrary can hardly be proven. It is beyond doubt that the Gnostics often substituted water for the wine (Acta Thomae, Baptism of Mygdonia, ch. cxxi). What formula of consecration was used we do not know, but the bread was certainly signed with the Cross. It is to be noted that the Gnostics called the Eucharist by Christian sacrificial terms -- *prospora*, "oblation", *Thysia* (II bk. of Jeû, 45). In the Coptic Books (Pistis Sophia, 142; II Jeû, 45-47) we find a long description of some apparently Eucharistic ceremonies carried out by Jesus Himself. In these fire and incense, two flasks, and also two cups, one with water, the other with wine, and branches of the vine are used. Christ crowns the Apostles with olive wreaths, begs Melchisedech to come and change wine into water for baptism, puts herbs in the Apostles' mouths and hands. Whether these actions in some sense reflect the ritual of Gnosticism, or are only imaginations of the author, cannot be decided. The Gnostics seem also to have used oil sacramentally for the healing of the sick, and even the dead were anointed by them to be rendered safe and invisible in their transit through the realms of the archons.

(d) The Nymphôn

They possessed a special Gnostic sacrament of the bridechamber (*nymphon*) in which, through some symbolical actions, their souls were wedded to their angels in the Pleroma. Details of its rites are not as yet known. Tertullian no doubt alluded to them in the words "Eleusinia fecerunt lenocinia".

(e) The Magic Vowels

An extraordinary prominence is given to the utterance of the vowels: *alpha, epsilon, eta, iota, omicron, upsilon, omega*. The Saviour and His disciples are supposed in the midst of their sentences to have broken out in an interminable gibberish of only vowels; magic spells have come down to us consisting of vowels by the fourscore; on amulets the seven vowels, repeated according to all sorts of artifices, form a very common inscription. Within the last few years these Gnostic vowels, so long a mystery, have been the object of careful study by Ruelle, Poirée, and Leclercq, and it may be considered proven that each vowel represents one of the seven planets, or archons; that the seven together represent the Universe, but without consonants they represent the Ideal and Infinite

not yet imprisoned and limited by matter; that they represent a musical scale, probably like the Gregorian 1 tone re-re, or d, e, f, g, a, b, c, and many a Gnostic sheet of vowels is in fact a sheet of music. But research on this subject has only just begun. Among the Gnostics the Ophites were particularly fond of representing their cosmogonic speculations by diagrams, circles within circles, squares, and parallel lines, and other mathematical figures combined, with names written within them. How far these sacred diagrams were used as symbols in their liturgy, we do not know.

SCHOOLS OF GNOSTICISM

Gnosticism possessed no central authority for either doctrine or discipline; considered as a whole it had no organization similar to the vast organization of the Catholic Church. It was but a large conglomeration of sects, of which Marcionism alone attempted in some way to rival the constitution of the Church, and even Marcionism had no unity. No other classification of these sects is possible than that according to their main trend of thought. We can therefore distinguish: (a) Syrian or Semitic; (b) Hellenistic or Alexandrian; (c) dualistic; (d) antinomian Gnostics.

(a) The Syrian School

This school represents the oldest phase of Gnosticism, as Western Asia was the birthplace of the movement. Dositheus, Simon Magus, Menander, Cerinthus, Cerdo, Saturninus Justin, the Bardesanites, Sevrians, Ebionites, Encratites, Ophites, Naassenes, the Gnostics of the "acts of Thomas", the Sethians, the Peratae, the Cainites may be said to belong to this school. The more fantastic elements and elaborate genealogies and syzygies of æons of the later Gnosis are still absent in these systems. The terminology is some barbarous form of Semitic; Egypt is the symbolic name for the soul's land of bondage. The opposition between the good God and the World-Creator is not eternal or cosmogonic, though there is strong ethical opposition to Jehovah the God of the Jews. He is the last of the seven angels who fashioned this world out of eternally pre-existent matter. The demiurgic angels, attempting to create man, created but a miserable worm, to which the Good God, however, gave the spark of divine life. The rule of the god of the Jews must pass away, for the good God calls us to his own immediate service through Christ his Son. We obey the Supreme Deity by abstaining from flesh meat and marriage, and by leading an ascetic life. Such was the system of Saturninus of Antioch, who taught during the reign of Hadrian (c. A.D. 120). The Naassenes (from *Nahas*, the Hebrew for serpent) were worshippers of the serpent as a symbol of wisdom, which the God of the Jews tried to hide from men. The Ophites (*ophianoï*, from *ophis*, serpent), who, when transplanted on Alexandrian soil, supplied the main ideas of Valentinianism, become one of the most widely spread sects of Gnosticism. Though not strictly serpent-worshippers, they recognized the serpent as symbol of the supreme emanation, Achamoth or Divine Wisdom. They were styled Gnostics *par excellence*. The Sethians saw in Seth the father of all spiritual (*pneumatikoi*) men; in Cain and Abel the father of the psychic (*psychikoi*) and hylic (*hylikoi*) men. According to the Peratae there exists a trinity of Father, Son, and Hyle (Matter). The Son is the Cosmic Serpent, who freed Eve from the power of the rule of Hyle. The universe they symbolized by a triangle enclosed in a circle. The number three is the key to all mysteries. There are three supreme principles: the

not-generated, the self-generated, the generated. There are three logoi, of gods; the Saviour has a threefold nature, threefold body, threefold power, etc. They are called Peretae (*peran*) because they have "crossed over" out of Egypt, through the Red Sea of generation. They are the true Hebrews, in fact (the word comes from the Hebrew meaning "to cross over"). The Peratae were founded by Euphrates and Celbes (Acembes?) and Ademes. This Euphrates, whose name is perhaps connected with the name Peratae itself, is said to be the founder of the Ophites mentioned by Celsus about A.D. 175. The Cainites were so called because they venerated Cain, and Esau, and the Sodomites, and Core, and Judas, because they had all resisted the god of the Jews.

(b) The Hellenistic or Alexandrian School

These systems were more abstract, and philosophical, and self-consistent than the Syrian. The Semitic nomenclature was almost entirely replaced by Greek names. The cosmogonic problem had outgrown all proportions, the ethical side was less prominent, asceticism less strictly enforced. The two great thinkers of this school were Basilides and Valentinus. Though born at Antioch, in Syria, Basilides founded his school in Alexandria (c. A.D. 130), and was followed by his son Isidorus. His system was the most consistent and sober emanationism that Gnosticism ever produced. His school never spread so widely as the next to be mentioned, but in Spain it survived for several centuries. Valentinus, who taught first at Alexandria and then at Rome (c. A.D. 160), elaborated a system of sexual duality in the process of emanation; a long series of male and female pairs of personified ideas is employed to bridge over the distance from the unknown God to this present world. His system is more confused than Basilidianism, especially as it is disturbed by the intrusion of the figure or figures of *Sophia* in the cosmogonic process. Being Syrian Ophitism in Egyptian guise, it can claim to be the true representative of the Gnostic spirit. The *reductio ad absurdum* of these unbridled speculations can be seen in the Pitis Sophia, which is light-maidens, paralemptores, spheres, Heimarmene, thirteen æons, light-treasures, realms of the midst, realms of the right and of the left, Jaldabaoth, Adamas, Michael, Gabriel, Christ, the Saviour, and mysteries without number whirl past and return like witches in a dance. The impression created on the same reader can only be fitly described in the words of "Jabberwocky": "gyre and gimble on the wabe". We learn from Hippolytus (*Adv. Haer.*, IV, xxxv), Tertullian (*Adv. Valent.*, iv) and Clemens Alex. (*Exc. ex Theod.*, title) that there were two main schools of Valentinianism, the Italian and the Anatolian or Asiatic. In the Italian school were teachers of note: Secundus, who divided the Ogdoad within the Pleroma into two tetrads, Right and Left; Epiphanes, who described this Tetras as Monotes, Henotes, Monas, and To Hen; and possibly Colorbasus, unless his name be a misreading of *Kol Arba* "All Four". But the most important were Ptolemy and Heracleon. Ptolemy is especially known to fame by his letter to Flora, a noble lady who had written to him as Prom Presbyter (*Texte u. Unters.*, N.S., XIII, *Anal. z. alt. Gesch. d. Chr.*) to explain the meaning of the Old Testament. This Ptolemy split up the names and numbers of the æons into personified substances outside the deity, as Tertullian relates. He was given to Biblical studies, and was a man of unbridled imagination. Clemens Alex. (*Strom.*, IV, ix, 73) calls Heracleon the most eminent teacher of the Valentinian school. Origen devotes a large part of his commentary on St. John to combating Heracleon's commentary on the

same Evangelist. Heracleon called the source of all being Anthropos, instead of Bythos, and rejected the immortality of the soul -- meaning, probably, the merely psychic element. He apparently stood nearer to the Catholic Church than Ptolemy and was a man of better judgment. Tertullian mentions two other names (Valent., iv), Theotimus and (De Carne Christ, xvii) Alexander. The Anatolian school had as a prominent teacher Axionicus (Tertullian, Adv. Valent., iv; Hipp., Adv. Haer., VI, 30) who had his *collegium* at Antioch about A.D. 220, "the master's most faithful disciple". Theodotus is only known to us from the fragment of his writings preserved by Clement of Alexandria. Marcus the Conjuror's system, an elaborate speculation with ciphers and numbers, is given by Irenaeus (I, 11-12) and also by Hippolytus (VI, 42). Irenaeus's account of Marcus was repudiated by the Marcosians, but Hippolytus asserts that they did so without reason. Marcus was probably an Egyptian and a contemporary of Irenaeus. A system not unlike that of the Marcosians was worked out by Monoimus the Arabian, to whom Hippolytus devotes chapters 5 to 8 of Book VIII, and who is mentioned only by Theodoret besides him. Hippolytus is right in calling these two Gnostics imitations of Pythagoras rather than Christians. According to the Epistles of Julian the Apostate, Valentinian *collegia* existed in Asia Minor up to his own times (d. 363).

(c) The Dualistic School

Some dualism was indeed congenital with Gnosticism, yet but rarely did it overcome the main tendency of Gnosticism, i.e. Pantheism. This, however, was certainly the case in the system of Marcion, who distinguished between the God of the New Testament and the God of the Old Testament, as between two eternal principles, the first being Good, *agathos*; the second merely *dikaios*, or just; yet even Marcion did not carry this system to its ultimate consequences. He may be considered rather as a forerunner of Mani than a pure Gnostic. Three of his disciples, Potitus, Basilicus, and Lucanus, are mentioned by Eusebius as being true to their master's dualism (H.E., V, xiii), but Apelles, his chief disciple, though he went farther than his master in rejecting the Old-Testament Scriptures, returned to monotheism by considering the Inspirer of Old-Testament prophecies to be not a god, but an evil angel. On the other hand, Syneros and Prepon, also his disciples, postulated three different principles. A somewhat different dualism was taught by Hermogenes in the beginning of the second century at Carthage. The opponent of the good God was not the God of the Jews, but Eternal Matter, the source of all evil. This Gnostic was combatted by Theophilus of Antioch and Tertullian.

(d) The Antinomian School

As a moral law was given by the God of the Jews, and opposition to the God of the Jews was a duty, the breaking of the moral law to spite its give was considered a solemn obligation. Such a sect, called the Nicolaites, existed in Apostolic times, their principle, according to Origen, was *parachresthai te sarki*. Carpocrates, whom Tertullian (De animâ, xxxv) calls a magician and a fornicator, was a contemporary of Basilides. One could only escape the cosmic powers through discharging one's obligations to them by infamous conduct. To disregard all law and sink oneself into the Monad by remembering one's pre-existence in the Cosmic Unit -- such was the Gnosis of Carpocrates. His son Epiphanes followed his father's doctrine so closely that he died in consequence

of his sins at the age of seventeen. Antinomian views were further maintained by the Prodicians and Antitactae. No more ghastly instance of insane immorality can be found than the one mentioned Pistis Sophia itself as practised by some Gnostics. St. Justin (Apol., I, xxvi), Irenaeus (I, xxv, 3) and Eusebius (H.E., IV, vii) make it clear that "the reputation of these men brought infamy upon the whole race of Christians".

LITERATURE

The Gnostics developed an astounding literary activity, which produced a quantity of writings far surpassing contemporary output of Catholic literature. They were most prolific in the sphere of fiction, as it is safe to say that three-fourths of the early Christians romances about Christ and His disciples emanated from Gnostic circles. Besides these -- often crude and clumsy -- romances they possessed what may be called "theosophic" treatises and revelations of a highly mystical character. These are best described as a stupefying roar of bombast occasionally interrupted by a few words of real sublimity. Traine remarks with justice: "Anyone who reads the teachings of the Gnostics breathes in an atmosphere of fever and fancies himself in a hospital, amongst delirious patients, who are lost in gazing at their own teeming thought and who fix their lustrous eyes on empty space" (Essais de crit. et d'histoire, Paris, 1904). Gnostic literature, therefore, possesses little or no intrinsic value, however great its value for history and psychology. It is of unparalleled importance in the study of the surroundings in which Christianity first arose. The bulk of it is unfortunately no longer extant. With the exception of some Coptic translations and some expurgated or Catholicized Syriac versions, we possess only a number of fragments of what once must have formed a large library. Most of this literature will be found catalogued under the names of Gnostic authors in the articles BASILIDES; BARDESANES; CERINTHUS; MARCION; SIMON MAGUS; PTOLEMY; VALENTINUS. We shall enumerate in the following paragraphs only anonymous Gnostic works and such writings as are not attributed to any of the above authors.

The Nicolaites possessed "some books under the name of Jaldabaoth", a book called "Nôria" (the mythical wife of Noe), prophecy of Barcabbas, who was a soothsayer among the Basilidians, a "Gospel of the Consummation", and a kind of apocalypse called "the Gospel of Eva" (Epiph., Adv. Haer., xxv, xxvi; Philastr., 33). The Ophites possessed "thousands" of apocrypha, as Epiphanius tells us; among these he specially mentions: "Questions of Mary, great and small" (some of these questions are perhaps extant in the Pistis Sophia); also many books under the name of "Seth", "Revelations of Adam", Apocryphal Gospels attributed to Apostles; an Apocalypse of Elias, and a book called "Genna Marias". Of these writings some revelations of Adam and Seth, eight in number, are probably extant in an Armenian translation, published in the Mechitarist collection of the Old-Testament apocrypha (Venice, 1896). See Preuschen "Die apocryph. Gnost. Adamschr." (Giessen, 1900). The Cainites possessed a "Gospel of Judas", an "Ascension of Paul" (*anabatikon Paulou*) and some other book, of which we do not know the title, but which, according to Epiphanius, was full of wickedness. The Prodicians, according to Clem. Alex., possessed apocrypha under the name of Zoroaster (Strom., I, xv, 69). The Antinomians had an apocryphon "full of audacity and

wickedness" (Strom., III, iv, 29; Origen, "In Matth.", xxviii). The Naassenes had a book out of which Hippolytus largely quotes, but of which we do not know the title. It contained a commentary on Bible texts, hymns, and psalms. The Peratae possessed a similar book. The Sethians possessed a "Paraphrasis Seth", consisting of seven books, explanatory of their system, a book called *Allogeneis*, or "Foreigners", an "Apocalypse of Adam", a book attributed to Moses, and others. The Archontians possessed a large and small book entitled "Symphonia"; this possibly extant in Pitra's "Analecta Sacra" (Paris, 1888). The Gnostics attacked by Plotinus possessed apocrypha attributed to Zoroaster, Zostrian, Nichotheus, Allogenes (the Sethian Book "Allogeneis"?), and others.

In addition to these writings the following apocrypha are evidently of Gnostic authorship:

- "The Gospel of the Twelve" -- This is first referred to by Origen (Hom. I, in Luc.), is identical with the Gospel of the Ebionites, and is also called the "Gospel according to Matthew", because in it Christ refers to St. Matthew in the second person, and the author speaks of the other Apostles and himself as "we". This Gospel was written before A.D. 200, and has no connection with the so-called Hebrew St. Matthew or the Gospel according to the Hebrews.
- "The Gospel according to the Egyptians", i.e. Christian countryfolk of Egypt, not Alexandrians. It was written about A.D. 150 and referred to by Clem. Alex. (Strom., III, ix, 63; xiii, 93) and Origen (Hom. I, in Luc), and was largely used in non-Catholic circles. Only small fragments are extant in Clem. Alex. (Strom. and Excerpt. ex Theod.). Some people have referred the Oxyrhynchus "Logia" and the Strasburg Coptic papyri to this Gospel, but this is a mere guess.
- "The Gospel of Peter", written about A.D. 140 in Antioch (see DOCETAE). Another Petrine Gospel, see description of the Ahmin Codex.
- A "Gospel of Matthias" written about A.D. 125, used in Basilidian circles (see BASILIDES).
- A "Gospel of Philip" and a "Gospel of Thomas". According to the Pistis Sophia, the three Apostles Matthew [read Matthias], Thomas, and Philip received a Divine commission to report all Christ's revelations after His Resurrection. The Gospel of Thomas must have been of considerable length (1300 lines); part of it, in an expurgated recension, is possibly extant in the once popular, but vulgar and foolish, "Stories of the Infancy of Our Lord by Thomas, an Israelite philosopher", of which two Greek, as Latin, a Syriac, and a Slavonic version exist.
- "Acts of Peter" (*Praxis Petrou*), written about A.D. 165. Large fragments of this Gnostic production have been preserved to us in the original Greek and also in a Latin translation under the title of "Martyrdom of the Holy Apostle Peter", to which the Latin adds, "a Lino episcopo conscriptum". Greater portions of this apocryphon are translated in the so-called "Actus Petri cum Simone", and likewise in Sahidic and Slavonic, Arabic, and Ethiopic versions. These fragments have been gathered by Lipsius and Bonnet in "Acta apostolorum apocr." (Leipzig, 1891), I. Though these recensions of the "Acts of Peter" have been somewhat Catholicized, their Gnostic character is unmistakable, and they are of value for Gnostic symbolism.
- Closely connected with the "Acts of Peter" are the "Acts of Andrew" and the "Acts of John", which three have perhaps one and the same author, a certain Leucius Charinus, and were written before A.D. 200. They have come down to us in a number of Catholic recensions and in different versions. For the Acts of Andrew see Bonnet, "Acta", as above (1898), II, 1, pp. 1-127; for "Acts of John", *ibid.*, pp. 151-216. To find the primitive Gnostic form in the bewildering variety and multiplicity of fragments and modifications is still a task for scholars.

•Of paramount importance for the understanding of Gnosticism are the "Acts of Thomas", as they have been preserved in their entirety and contain the earliest Gnostic ritual, poetry, and speculation. They exist in two recensions, the Greek and the Syriac. It seems most likely, though not certain, that the original was Syriac; it is suggested that they were written about A.D. 232, when the relics of St. Thomas were translated to Edessa. Of the greatest value are the two prayers of Consecration, the "Ode to Wisdom" and the "Hymn of the Soul", which are inserted in the Syriac narrative, and which are wanting in the Greek Acts, though independent Greek texts of these passages are extant (Syriac with English translation by W. Wright, "Apocr. Acts of the Apost.", London, 1871). The "Hymn to the Soul" has been translated many times into English, especially, by A. Bevan, "Texts and Studies", Cambridge 1897; cf. F. Burkitt in "Journal of Theological Studies" (Oxford, 1900). The most complete edition of the Greek Acts is by M. Bonnet in "Acta", as above, II, 2 (Leipzig, 1903; see BARDESANES). The Acts, though written in the service of Gnosticism, and full of the weirdest adventures, are not entirely without an historical background.

There are a number of other apocrypha in which scholars have claimed to find traces of Gnostic authorship, but these traces are mostly vague and unsatisfactory. In connection with these undoubtedly Gnostic apocrypha mention must be made of the Pseudo-Clementine Homilies. It is true that these are more often classed under Judaistic than under strictly Gnostic literature, but their affinity to Gnostic speculations is at least a first sight so close and their connection with the Book of Elxai (cf. ELCESAITES) so generally recognized that they cannot be omitted in a list of Gnostic writings. If the theory maintained by Dom Chapman in "The Date of the Clementines" (Zeitschrift f. N. Test. Wiss., 1908) and in the article CLEMENTINES in the Catholic Encyclopedia be correct, and consequently Pseudo-Clemens be a crypto-Arian who wrote A.D. 330, the "Homilies" might still have at least some value in the study of Gnosticism. But Dom Chapman's theory, though ingenious, is too daring and as yet too unsupported, to justify the omission of the "Homilies" in this place.

A great, if not the greatest, part of Gnostic literature, which has been saved from the general wreck of Gnostic writings, is preserved to us in three Coptic codices, commonly called the Askew, the Bruce, and the Akhmim Codex. The Askew Codex, of the fifth or sixth century, contains the lengthy treatise "Pistis Sophia", i.e. Faith-Wisdom. This is a work in four books, written between A.D. 250 and 300; the fourth book, however, is an adaptation of an earlier work. The first two books describe the fall of the Æon Sophia and her salvation by the Æon Soter; the last two books describe the origin of sin and evil and the need of Gnostic repentance. In fact the whole is a treatise on repentance, as the last two books only apply in practice the example of penance set by Sophia. The work consists of a number of questions and answers between Christ and His male and female disciples in which five "Ode of Solomon", followed by mystical adaptations of the same, are inserted. As the questioning is mostly done by Mary, the Pistis Sophia is probably identical with the "Questions of Mary" mentioned above. The codex also contains extracts from the "Book of the Saviour". The dreary monotony of these writings can only be realized by those who have read them. An English translation of the Latin translation of the Coptic, which itself is a translation of the Greek, was made by G.R.S. Mead (London, 1896). The Bruce papyrus is of about the same date as the Askew vellum codex and contains two treatises:

- the two books of Jeû, the first speculative and cosmogonic, the second practical, viz., the overcoming of the hostile world powers and the securing of salvation by the practice of certain rites: this latter book is styled "Of the Great Logos according to the mystery".
- A treatise with unknown title, as the first and last pages are lost. This work is of a purely speculative character and of great antiquity, written between A.D. 150 and 200 in Sethian or Archontian circles, and containing a reference to the prophets Marsanes, Nikotheus, and Phosilampes.

No complete English translations of these treatises exist; some passages, however, are translated in the aforesaid G.R.S. Mead's "Fragments of a Faith Forgotten". Both the Bruce and Askew Codices have been translated into German by C. Schmidt (1892) in "Texte u. Unters." and (1901) in the Berlin "Greek Fathers". A Latin translation exists of the "Pistis Sophia" by Schwartze and Petermann (Berlin, 1851) and a French one of the Bruce Codex by Amélineau (Paris, 1890). The Akhmim Codex of the fifth century, found in 1896, and now in the Egyptian Museum at Berlin, contains

- a "Gospel of Mary", called in the subscriptions "An Apocryphon of John": this Gospel must be of the highest antiquity, as St. Irenaeus, about A.D. 170, made use of it in his description of the Barbelo-Gnostics;

- a "Sophia Jesu Christi", containing revelations of Christ after His Resurrection;
- a "Praxis Petri", containing a fantastic relation of the miracle worked on Peter's daughter.

The study of Gnosticism is seriously retarded by the entirely unaccountable delay in the publication of these treatises; for these thirteen years past we possess only the brief account of this codex published in the "Sitzungsber. d. k. preus. Acad." (Berlin, 1896), pp. 839-847.

This account of Gnostic literature would be incomplete without reference to a treatise commonly published amongst the works of Clement of Alexandria and called "Excerpta ex Theodoto". It consists of a number of Gnostic extracts made by Clement for his own use with the idea of future refutation; and, with Clement's notes and remarks on the same, form a very confusing anthology. See O. Bibelius, "Studien zur Gesch. der Valent." in "Zeitschr. f. N. Nest. Wiss." (Giessen, 1908).

Oriental non-Christian Gnosticism has left us the sacred books of the Mandaeans, viz.,

- the "Genzâ rabâ" or "Great Treasure", a large collection of miscellaneous treatises of different date, some as late, probably, as the ninth, some as early, perhaps, as the third century. The Genzâ was translated into Latin, by Norberg (Copenhagen, 1817), and the most important treatises into German, by W. Brandt (Leipzig, 1892).
- Kolasta, Hymns and Instructions on baptism and the journey of the soul, published in Mandaean by J. Euting (Stuttgart, 1867).
- Drâshê d'Jahya, a biography of John the Baptist "ab utero usque ad tumulum" -- as Abraham Echellensis puts it -- not published.

Alexandrian non-Christian Gnosticism is perceptible in Trismegistic literature, published in English translation by G.R.S. Mead (London and Benares, 1902, three volumes). Specifically Jewish Gnosticism left no literature, but Gnostic speculations have an echo in several Jewish works, such as the Book of Enoch, the Zohar the Talmudic treatise Chagiga XV. See Gförer, "Philo", Vol. I, and Karppe, "Etudes sur. ore. nat. d. Zohar" (Paris, 1901).

REFUTATION OF GNOSTICISM

From the first Gnosticism met with the most determined opposition from the Catholic Church. The last words of the aged St. Paul in his First Epistle to Timothy are usually taken as referring to Gnosticism, which is described as "Profane novelties of words and oppositions of knowledge falsely so called [*antitheseis tes pseudonomou gnoseos* -- the antitheses of so-called Gnosis] which some professing have erred concerning the faith". Most probably St. Paul's use of the terms *pleroma*, *the æon of this world*, *the archon of the power of the air*, in Ephesians and Colossians, was suggested by the abuse of these terms by the Gnostics. Other allusions to Gnosticism in the New Testament are possible, but cannot be proven, such as Tit., iii, 9; I Tim., iv, 3; I John, iv, 1-3. The first anti-Gnostic writer was St. Justin Martyr (d. c. 165). His "Syntagma" (*Syntagma kata pason ton gegenemenon aireseon*), long thought lost, is substantially contained in the "Libellus adv. omn. haeres.", usually attached to Tertullian's "De Praescriptione"; such at least is the thesis of J. Kunze (1894) which is largely accepted. Of St. Justin's anti-Gnostic treatise on the Resurrection (*Peri anastaseos*) considerable fragments are extant in Methodius' "Dialogue on the Resurrection" and in St. John Damascene's "Sacra Parellela". St. Justin's "Comendium against Marcion", quoted by St. Irenaeus (IV, vi, 2; V, xxvi, 2), is possibly identical with his Syntagma". Immediately after St. Justin, Miltiades, a Christian philosopher of Asia Minor, is mentioned by Tertullian and Hippolytus (Adv. Valent., v, and Eus., H.E., V., xxviii, 4) as having combated the Gnostics and especially the Valentinians. His writings are lost. Theophilus of Antioch (d. c. 185) wrote against the heresy of Hermogenes, and also an excellent treatise against Marcion (*kata Markionos Logos*). The book against Marcion is probably extant in the "Dialogus de rectâ in Deum fide" of Pseudo-Origen. For Agrippa Castor see BASILIDES. Hegesippus, a Palestinian, traveled by way of Corinth to Rome, where he arrived under Anicetus (155-166), to ascertain the sound and orthodox faith from Apostolic tradition. He met many bishops on his way, who all taught the same faith and in Rome he made a list of the popes from Peter to Anicetus. In consequence he wrote five books of Memoirs (*Upomnemata*) "in a most simple style, giving the true tradition of Apostolic doctrine", becoming "a champion of the truth against the godless heresies" (Eus., H.E., IV, vii sqq., xxi sqq.). Of this work only a few fragments remain, and these are historical rather than theological. Rhodon, a disciple of Tatian, Philip, Bishop of Gortyna in Crete, and a certain Modestus wrote against Marcion, but their writings are lost. Irenaeus (Adv., Haer., I, xv, 6) and Epiphanius (xxxiv, 11) quote a short poem against the Oriental Valentinians and the conjuror Marcus by "an aged" but unknown author; and Zachaeus, Bishop of Caesarea, is said to have written against the Valentinians and especially Ptolemy.

Beyond all comparison most important is the great anti-Gnostic work of St. Irenaeus, *Elegchos kai anatrophe tes psudonymou gnoseos*, usually called "Adversus Haereses". It consists of five books, evidently not written at one time; the first three books about A.D. 180; the last two about a dozen years later. The greater part of the first book has come down to us in the original Greek, the rest in a very ancient and anxiously close Latin translation, and some fragments in Syriac. St. Irenaeus knew the Gnostics from personal intercourse and from their own writings and gives minute descriptions of their systems, especially of the Valentinians and Barbelo-Gnostics. A good test of

how St. Irenaeus employed his Gnostic sources can be made by comparing the newly found "Evangelium Mariae" with Adv. Haer., I, xxiv. Numerous attempts to discredit Irenaeus as a witness have proved failures (see SAINT IRENAEUS). Besides his great work, Irenaeus wrote an open letter to the Roman priest Florinus, who thought of joining the Valentinians; and when the unfortunate priest had apostatized, and had become a Gnostic, Irenaeus wrote on his account a treatise "On the Ogdoad", and also a letter to Pope Victor, begging him to use his authority against him. Only a few passages of these writings are extant. Eusebius (H.E., IV, xxiii, 4) mentions a letter of Dionysius of Corinth (c. 170) to the Nicomedians, in which he attacks the heresy of Marcion. The letter is not extant. Clement of Alexandria (d. c. 215) only indirectly combated Gnosticism by defending the true Christian Gnosis, especially in "Paedagogos", Bk. I, "Stromateis", Bk. II, III, V, and in the so-called eighth book or "Excerpta ex Theodoto". Origen devoted no work exclusively to the refutation of Gnosticism but his four books "On First Principles" (*Peri archon*), written about the year 230, and preserved to us only in some Greek fragments and a free Latin translation by Rufinus, is practically a refutation of Gnostic dualism, Doectism, and Emanationism. About the year 300 an unknown Syrian author, sometimes erroneously identified with Origen, and often called by the literary pseudonym Adamantius, or "The Man of Steel", wrote a long dialogue of which the title is lost, but which is usually designated by the words, "De rectâ in Deum fide". This dialogue, usually divided into five books, contains discussions with representatives of two sects of Marcionism, of Valentinianism, and of Bardesanism. The writer plagiarizes extensively from Theophilus of Antioch and Methodius of Olympus, especially the latter's anti-Gnostic dialogue "On Free Will" (*Peri tou autexousiou*).

The greatest anti-Gnostic controversialist of the early Christian Church is Tertullian (b. 169), who practically devoted his life to combating this dreadful sum of all heresies. We need but mention the titles of his anti-Gnostic works: "De Praescriptione haereticorum"; "Adversus Marcionem"; a book "Adversus Valentinianos"; "Scorpiace"; "De Carne Christi"; "De Resurrectione Carnis"; and finally "Adversus Praxeam". A storehouse of information rather than a refutation is the great work of Hippolytus, written some time after A.D. 234, once called "Philosophoumena" and ascribed to Origen, but since the discovery of Books IV-X, in 1842, known by the name of its true author and its true title, "Refutation of All Heresies" (*katapason aireseon elegchos*) The publication of the Athos Codex by E. Miller (Oxford, 1851) revolutionized the study of Gnosticism and rendered works published previous to that date antiquated and almost worthless. To students of Gnosticism this work is as indispensable as that of St. Irenaeus. There is an English translation by J. MacMahon in "The Ante-Nicene Library" (Edinburgh, 1868). Hippolytus tried to prove that all Gnosticism was derived from heathen philosophy; his speculations may be disregarded, but, as he was in possession of a great number of Gnostic writings from which he quotes, his information is priceless. As he wrote nearly fifty years after St. Irenaeus, whose disciple he had been, he describes a later development of Gnosis than the Bishop of Lyons. Besides his greater work, Hippolytus wrote, many years previously (before 217), a small compendium against all heresies, giving a list of the same, thirty-two in number, from Dositheus to Noetus; also a treatise against Marcion.

As, from the beginning of the fourth century, Gnosticism was in rapid decline, there was less need of champions of orthodoxy, hence there is a long interval between Adamantius's dialogue and St. Epiphanius's "Panarion", begun in the year 374. St. Epiphanius, who in his youth was brought into closest contact with Gnostic sects in Egypt, and especially the Phibionists, and perhaps even, as some hold, belonged to this sect himself, is still a first-class authority. With marvelous industry he gathered information on all sides, but his injudicious and too credulous acceptance of many details can hardly be excused. Philastrius of Brescia, a few years later (383), gave to the Latin Church what St. Epiphanius had given to the Greek. He counted and described no fewer than one hundred and twenty-eight heresies, but took the word in a somewhat wide and vague sense. Though dependent on the "Syntagma" of Hippolytus, his account is entirely independent of that of Epiphanius. Another Latin writer, who probably lived in the middle of the fifth century in Southern Gaul, and who is probably identical with Arnobius the Younger, left a work, commonly called "Praedestinatus", consisting of three books, in the first of which he describes ninety heresies from Simon Magus to the Praedestinationists. This work unfortunately contains many doubtful and fabulous statements. Some time after the Council of Chalcedon (451) Theodoret wrote a "Compendium of Heretical Fables" which is of considerable value for the history of Gnosticism, because it gives in a very concise and objective way the history of the heresies since the time of Simon Magus. St. Augustine's book "De Haeresibus" (written about 428) is too dependent on Philastrius and Epiphanius to be of much value. Amongst anti-Gnostic writers we must finally mention the neo-Platonist Plotinus (d. A.D. 270), who wrote a treatise "Against the Gnostics". These were evidently scholars who frequented his *collegia*, but whose Oriental and fantastic pessimism was irreconcilable with Plotinus's views.

CONCLUSION

The attempt to picture Gnosticism as a mighty movement of the human mind towards the noblest and highest truth, a movement in some way parallel to that of Christianity, has completely failed. It has been abandoned by recent unprejudiced scholars such as W. Bousset and O. Gruppe, and it is to be regretted that it should have been renewed by an English writer, G.R.S. Mead, in "Fragments of a Faith Forgotten", an unscholarly and misleading work, which in English-speaking countries may retard the sober and true appreciation of Gnosticism as it was in historical fact. Gnosticism was not an advance, it was a retrogression. It was born amidst the last throes of expiring cults and civilizations in Western Asia and Egypt. Though hellenized, these countries remained Oriental and Semitic to the core. This Oriental spirit -- Attis of Asia Minor, Istar of Babylonia, Isis of Egypt, with the astrological and cosmogonic lore of the Asiatic world -- first sore beset by Ahuramazda in the East, and then overwhelmed by the Divine greatness of Jesus Christ in the West, called a truce by the fusion of both Parseeism and Christianity with itself. It tried to do for the East what Neo-Platonism tried to do for the West. During at least two centuries it was a real danger to Christianity, though not so great as some modern writers would make us believe, as if the merest breath might have changed the fortunes of Gnostic, as against orthodox, Christianity. Similar things

are said of Mithraism and neo-Platonism as against the religion of Jesus Christ. But these sayings have more piquancy than objective truth. Christianity survived, and not Gnosticism, because the former was the fittest -- immeasurably, nay infinitely, so. Gnosticism died not by chance, but because it lacked vital power within itself; and no amount of theosophistic literature, flooding English and German markets, can give life to that which perished from intrinsic and essential defects. It is striking that the two earliest champions of Christianity against Gnosticism -- Hegesippus and Irenaeus -- brought out so clearly the method of warfare which alone was possible, but which also alone sufficed to secure the victory in the conflict, a method which Tertullian some years later scientifically explained in his "De Praescriptione". Both Hegesippus and Irenaeus proved that Gnostic doctrines did not belong to that deposit of faith which was taught by the true succession of bishops in the primary sees of Christendom; both in triumphant conclusion drew up a list of the Bishops of Rome, from Peter to the Roman bishop of their day; as Gnosticism was not taught by that Church with which the Christians everywhere must agree, it stood self-condemned. A just verdict on the Gnostics is that of O. Gruppe (*Ausführungen*, p. 162): the circumstances of the period gave them a certain importance. But a living force they never were, either in general history or in the history of Christendom. Gnosticism deserves attention as showing what mention dispositions Christianity found in existence, what obstacles it had to overcome to maintain its own life; but "means of mental progress it never was".

J.P. ARENDZEN

Archdiocese of Goa

Archdiocese of Goa

(GOANENSIS.)

Patriarchate of the East Indies, the chief see of the Portuguese dominions in the East; metropolitan to the present province of Goa, which comprises as suffragans the sees of Cochin, Mylapore, and Damão (or Damaun) in India, Macao in China, and Mozambique in East Africa. The archbishop, who resides at Panjim, or New Goa, has the honorary titles of Primate of the East and (from 1886) Patriarch of the East Indies. He enjoys the privilege of presiding over all national councils of the East Indies, which must originally be held at Goa (Concordat of 1886 between the Holy See and Portugal, art. 2). The Patronage of the see and of its suffragans belongs to the Crown of Portugal.

FOUNDATION AND HISTORY

The history of the Portuguese conquests in India dates from the arrival of Vasco da Gama in 1498, followed by the acquisition of Cranganore in 1500, Cochin in 1506, Goa in 1510, Chaul in 1512, Calicut in 1513, Damao in 1531, Bombay, Salsette, and Bassein in 1534, Diu in 1535, etc. From the year 1500, missionaries of the different orders (Franciscans, Dominicans, Jesuits, Augustinians, etc.) flocked out with the conquerors, and began at once to build churches along the coast districts wherever the Portuguese power made itself felt. In 1534 was created an episcopal

see suffragan to Funchal in the Madeiras, with a jurisdiction extending potentially over all past and future conquests from the Cape of Good Hope to China in 1557 it was made an independent archbishopric, and its first suffragan sees were erected at Cochin and Malacca. In 1576 the suffragan See of Macao (China) was added; and in 1588, that of Funai in Japan. In 1600 another suffragan see was erected at Angamale (transferred to Craganore in 1605) for the sake of the newly-united Thomas Christians (*see under* EASTERN CHURCHES, *Malabar Christians* and *Uniat Church of Malabar*); while, in 1606 a sixth suffragan see was established at San Thome, Mylapore, near the modern Madras. In 1612 the prelacy of Mozambique was added, and in 1690 two other sees at Peking and Nanking in China. By the Bulls establishing these sees the right of nomination was conferred in perpetuity on the King of Portugal, under the titles of foundation and endowment.

The limits between the various sees of India were defined by a papal Bull in 1616. The suffragan sees comprised roughly the south of the peninsula and the east coast, as far as Burma inclusive, the rest of India remaining potentially under the jurisdiction of the archdiocese and this potential jurisdiction was the actually exercised even outside Portuguese dominions wherever the Faith was extended by Portuguese missionaries. Missionary work progressed on a large scale and with great success along the western coasts, chiefly at Chaul, Bombay, Salsette, Bassein, Damao, and Diu; and on the eastern coasts at San Thome of Mylapore, and as far as Bengal etc. In the southern districts the Jesuit mission in Madura was the most famous. It extended to the Kistna river, with a number of outlying stations beyond it. The mission of Cochin, on the Malabar Coast, was also one of the most fruitful. Several missions were also established in the interior northwards, e.g., that of Agra and Lahore in 1570 and that of Tibet in 1624. Still, even with these efforts, the greater part even of the coast line was by no means fully worked, and many vast tracts of the interior northwards were practically untouched.

The decline of Portuguese power in the seventeenth century, followed as it was by a decline in the supply of missionaries, etc., soon put limits to the extension of missionary work; and it was sometimes with difficulty that the results actually achieved could be kept up. Consequently, about this time the Holy See began, through the Congregation of Propaganda to send out missionaries independently of Portugal--appointing vicars Apostolic over several districts (The Great Mogul, 1637; Verapoly, 1657; Burma, 1722; Karnatic and Madura, after the suppression of the Jesuits in 1773; Tibet, 1826; Bengal, Madras, and Ceylon, 1834, and others later). In certain places where these vicars Apostolic came into contact with the Portuguese clergy, there arose a conflict of jurisdiction. This was particularly the case in Bombay, which had been ceded to the British in 1661. Here the Portuguese clergy were at first allowed to remain in charge of the churches, but in 1720, on the ground that they caused disaffection among the people against the British power, they were expelled from the island, and the Vicar of the Great Mogul, with his Carmelite missionaries, was invited to take their place. The Holy See, in authorizing this arrangement, did not deny or abrogate the ordinary jurisdiction of the Archbishop of Goa, but merely intended to make a temporary provision till such time as the British Government should allow the Portuguese clergy to return. (See BOMBAY, ARCHDIOCESE OF). Efforts were made from time to time on the part of the

Goan party to recover their place, and this ultimately, through a division of the churches in 1794, gave rise to the existence of two rival jurisdictions in Bombay-- *Padroado* and *Propaganda*. The Holy See had for a long time been dissatisfied with the general situation, and especially with the opposition shown to the vicars Apostolic by the Goan prelates and clergy. After the revolution of 1834 in Portugal, the expulsion or abolition of the religious orders, and the severing of diplomatic relations with the Vatican came the famous Brief "Multa praeclare" on 24 April, 1838 provisionally withdrawing jurisdiction from the three suffragan sees of Cochin, cranganore, and Mylapore, and assigning their territories to the nearest vicars Apostolic--at the same time implicitly, or at least by subsequent interpretation and enactments, restricting the jurisdiction of the Archdiocese of Goa to actual Portuguese territory. This Brief was, however, rejected by the Goan party as spurious or at least surreptitious, since they contended that even the Holy See could not rightly legislate in this manner without the consent of the King of Portugal, as was declared in the original Bulls of foundation, etc. The principles underlying this dispute fall outside the scope of the present article, which is concerned solely with the main historical facts. The resistance which followed, both in Bombay and in other parts of India has uniformly been called the "Goan or Indo-Portuguese Schism" by writers outside the Padroado party; and the term *schism* occurs frequently in the pronouncements of the Holy See; but the Padroadists themselves have always resented this title on the ground that the fault lay with the Holy See misinformed by the vicars Apostolic, and that they were only contending for their canonical and natural rights, etc. In 1857 a concordat was entered into which gave peace for a time, but a final settlement was not arrived at till 1886, when a further concordat was drawn up, and a Bull ("Humanae Salutatis Auctor", 1 Sept., 1886) issued, by which the suspended jurisdiction of Cochin and Mylapore was restored, and a third suffragan diocese (that of Damão) added -- all in British territory; and after subsequent adjustments the present delimitations were agreed to. At the same time the Indian hierarchy was established, and the whole of the country divided into provinces, dioceses, and prefectures Apostolic.

In the following *List of Prelates of the See of Goa*, dates still under dispute are given in parentheses:

- João Affonso d'Albuquerque, 1538-1553;
- Gaspar de Leão Pereira, 1560-1567, and again 1574-1576;
- Henrique de Tavora, transferred from Cochin, 1578-1581;
- João Vicente da Fonseca, 1580-1586 (1581-1587);
- Matheus de Medina, transferred from Cochin, 1588-1592;
- Aleixo de Menezes, 1595-1610 (1612);
- Christovam de Sá e Lisboa, from the Bishopric of Malacca (1610) 1616-1622;
- Sebastião de S. Pedro, from the Bishopric of Mylapore (1623) 1625-1629;
- Manoel Telles de Brito, 1631 (died on voyage);
- Francisco dos Martyres, 1666-1652, Christovão da Silveira, 1671 or 1672 (died on voyage);
- Antonio de Brandão, 1675-1678;
- Manoel de Sousa e Menezes, 1681-1684;
- Alberto de silva, 1687-1688;
- Pedro de Silva, from the Bishohic of Cochin, 1689-1691;

- Agostino da Annuciacao, 1691-1713;
- Sebastião d'Andrado Pessanha, 1716-1721;
- Ignacio de Santa Thereza, 1721-1739;
- Eugenio Triguieros, 1741, from the Bishopric of Macao (died on voyage), Lourenço de Santa Maria e Mello 1744-1750;
- Antonio Taveira de Neiva Brum e Silveira, 1750-1775;
- Francisco de Assumpção e Brito, 1775-1780;
- Manoel de Santa catharina, transferred from Cochin (1780) 1784-1812, Manoel de São Gualdino, 1812-1831;
- José Maria de Silva Torres, 1844-1849;
- João chrysostome d'Amorim e Pessoa, 1863-1869 (1874), Ayres de Ornellas Vasconsellos, 1875-1880;
- Antonio Sebastião Valente (first patriarch) 1882-1908.
- The present prelate, Mathaeus d'Oliveira Xavier, transferred from Cochin, took possession of his see 1 July, 1909.

During the vacancies (some of which extended to 6, 7, 13, and one even to 23 years) the see was, according to the rules laid down by Gregory XIII in 1562 and Leo XII in 1826, administered by the Bishop of Cochin, or, failing him, by the Bishop of Mylapore; and failing both, sometimes by some prelate from elsewhere, sometimes by a coadjutor or vicar capitular, as circumstances allowed.

Synods

The first and second provincial synods were presided over by Dom Gaspar de Leão Pereira in 1567 and 1575 respectively, the third, in 1585, by Dom Vicente da Fonseca, the fourth, in 1592, by Dom Matheus de Medina; the fifth, in 1606, by Dom Aleixo de Menezes. In these five councils 316 decrees were framed relating to ecclesiastical discipline (Fonseca, p. 67). In recent times one provincial council was held (1894) by Dom Antonio S. Valente, in which seventy-nine decrees were framed. The special Synod of Diamper, held in 1599, had for its scope the reunion of the Thomas Christians, for whom the See of Angamale was established in the following year.

THE CITY OF GOA

The city of Goa, originally a fortress in the hands first of the Hindus and then of the Mohammedans, was taken by Albuquerque in 1510. As soon as he became master of the place he built the first church--that of St. Catherine, who thus became the patron of the new city. This was the beginning of a vast series of churches, large and small, numbering over fifty, with convents, hospices and other institutions attached, which made Goa one of the most interesting ecclesiastical cities in the world. The civil splendour was in keeping with the ecclesiastical. But the situation was an unfortunate one. Lying on a low stretch of coast-land, surrounded on two sides by shallow creeks and on the other two by miasmatic marshes, the place was soon found unhealthy to such a degree that, after several ravages by epidemics, it was gradually abandoned in favour of Panjim, five miles nearer the sea. The transfer of the Government in 1759 soon led to the total desertion of the old city. In consequence the civil buildings gradually fell into decay or were demolished for the sake

of building materials, and, especially after the expulsion of the religious orders in 1835, many churches and monasteries followed suit. In place of houses thick palmgroves gradually grew up, which now, with the exception of a few open spaces, occupy the whole area. The original city extended almost two miles from east to west along the river, and comprised three low hills crowned with religious edifices.

Most of the churches have disappeared, leaving nothing but a cross to mark their site. Others are in various stages of decay, while a few are kept in repair. The finest of those still standing are grouped about the great square: the cathedral (built 1571), in which alone the full liturgy is kept up by a body of resident canons, and adjoining which is an archiepiscopal palace, the Bom Jesus church (Jesuit, built c. 1586), containing the body of St. Francis Xavier incorrupt in a rich shrine; St. Cajetan's, built about 1655, belonging to the Theatines; the Franciscan church of St. Francis of Assisi, built on the site of a mosque 1517-21: and finally the little chapel of St. Catherine, built in 1510. Farther away, on the western hill, stand the great nunnery of St. Monica (1598), still in full repair, formerly occupied by a large community of native nuns --the only female religious in Goa; the Augustinian church and convent built in 1572, now in ruins; convent and church of St. John of God (1685), now partly in ruins; the Rosary church of the Dominicans, built before 1543; the viceregal chapel of St. Anthony, of about the same date. The last two are still in full repair. To the south are the ruins of the Jesuit college of St. Paul, built about 1541, and the Carmelite church and convent, built about 1612, occupied after 1707 by Oratorians. The chapel of St. Francis Xavier, the scene of the "Domine, satis est", built before 1542, is still in repair. The following either have entirely disappeared or their sites are marked only by ruins: the chapel of St. Martin, built shortly after 1547; college and church of St. Bonaventure (about 1602); Nossa Senhora de Serra (1513); convent and church of St. Dominic, built about 1548, rebuilt 1550, Santa Luzia at Daujim (about 1544); church of St. Thomas, built to receive the relics of St. Thomas brought from Mylapore in 1560; church of St. Alexis, built before 1600; church of the Holy Trinity, built about the same time; convent and church of Cruz dos Milagres, built after 1619; Nossa Senhora da Luz built before 1543; new college and church of St. Paul (*alias* convent of St. Roch) used as a college in 1610, church rebuilt later. From the church of Our Lady of the Mount, on the eastern hill, which is still in repair, a magnificent panorama is obtained.

Besides these convents and churches there were others attached to the Royal Hospital, the Santa Casa de Misericordia, the retreats of N.S. de Serra and Santa Maria Magdalene, the hospital of St. Lazarus, the hospital of All Saints, etc. to say nothing of a long list of churches and chapels in the suburbs.

The Inquisition, which was introduced into Goa in 1500, possessed a majestic building in the great square close to the cathedral. The staff (Dominicans) consisted originally of three principal officials. In 1565 there were five, whose joint salaries amounted only to about \$355 per annum. In 1682 their number was raised to thirty-two, in 1800 it had increased to forty-seven. This institution, which had been once debanded in 1774 and restored again in 1779, was finally abolished in 1812. The decaying building was pulled down in 1820, and at present only the site is preserved.

From a government list drawn up in 1804, we learn the number of convents and regulars existing under the Portuguese at that time. There were 3 convents of Observantine Franciscans, with 63 inmates; 7 of Reformed Franciscans, with 72 inmates; 10 of Dominicans, with 61 inmates; 9 of Augustinians, with 79 inmates; 1 of Carmelites, with 28 inmates; 1 of Theatines, with 13 inmates, 4 of St. John of God, with 30 inmates; 2 of Oratorians, with 61 inmates, and the convent of St. Monica, with 61 inmates; total, 38 houses, with 486 inmates. Collectively their funds at this time amounted to a capital of £96,378 (about \$491,000), with a resultant income of £5876 (about \$29,000) per year (Fonseca, p. 69). On the expulsion of the religious orders in 1835, their property, with an aggregate value of £122,566 (about \$610,000), was appropriated by the government, while the number of religious expelled was 248. Their missions were transferred to the secular clergy, who received some portion of the confiscated funds for their support. According to the budget of 1873-74 the state contribution to the maintenance of 110 missionaries was £2145, while the total ecclesiastical expenditure for the same year was £4955. (Fonseca, p. 70). These figures include the suffragan dioceses. In 1908 the total government expenditure amounted, it is said, to over £16,000.

PRESENT CONDITION OF THE ARCHDIOCESE

In accordance with the concordat of 1886 (with subsequent adjustments) the Archdiocese of Goa comprises the whole of the Portuguese territory of Goa, and in British territory the three districts of North Canara, Savantwadi, and Belgaum, besides one exempted church in Poona. The Archbishop of Goa is metropolitan over 3 province comprising the three suffragan Sees of Cochin, Mylapore, and Damao in India, Macao in China, and Mozambique in East Africa. The Portuguese territories consist of the Velhas Conquistas (Ilhas, Bardes, Salsette) and the Novas Conquistas. North Canara is under a vicar-general, and Belgaum, Poona, and the native State of Savantwadi etc., are under another called the Vicar-General of the Ghauts. The patriarchal residence is at Panjim, or New Goa. There is an episcopal seminary at Rachol containing at present about 534 students, of whom 82 are in the course of theology. There is also a smaller seminary at Mapuca. The total member of priests belonging to the archdiocese is about 724, of whom four (at Belgaum) belong to the Jesuit Order, the rest being secular clergy. Besides these there are 20 religious of the Hospitallers of St. Francis, who conduct a college for girls and an asylum at Panjim, and 10 Sisters of Charity of Canossa who have under them a asylum and orphanage at Belgaum. There are several schools affiliated to the seminary at Mapuca and also 145 elementary schools. The total Catholic population in Portuguese territory is reckoned at 293,628 out of a total population 365,291. In British territory the Catholic population is more scanty, numbering about 35,403. According to Madras Directory for 1908 the totals for the archdiocese are as follows: 102 parishes and 22 missions, 129 churches and 336 chapels, 619 priests, 312 confraternities, and 306 pious associations; 3879 children attending schools, and a total Catholic population of 335,031.

The map of Goa, representing an area of about a mile and a half by one mile, which accompanies this article is based on those of Cottineau de Kloguen and Fonseca, modified by personal observations

made in 1907. It claims to be a rough sketch only. The crosses represent objects of which no notable features remain.

ERNEST R. HULL

Goajira

Vicariate Apostolic of Goajira

Goajira is the most northern portion of South America is a peninsula running into the Caribbean Sea. It was the subject of a dispute between Venezuela and Colombia in 1891, and on arbitration was awarded to the latter and joined to the State of Magdalena. The area of the peninsula is about 5500 square miles. The scenery of Goajira is very picturesque; the temperature in the plains is very high, but temperate in the mountains. There is a good supply of cabinet wood in the country, but not much trade. The inhabitants, who number 80,000 (50,000 Catholics) are mostly of Indian or mixed race. They are tall and well made. Formerly they were very intractable, but the Capuchins, who are in charge of the Catholic missions, have had a great influence over them, and large numbers have been converted. The language spoken is an Indian dialect of the Arawak-Maypure group (see ARAWAKS). The chief towns are Paraguaipoa, Calabacito, Maricha, Marocaso, and Soldado. Goajira was erected by Pope Pius X, 17 January 1905, into a vicariate Apostolic, dependent on the Congregation of Extraordinary Ecclesiastical Affairs. Mgr Attanasio Maria Vincenzo Soler-Royo, O.F.M. Cap. was appointed to the vicariate, as titular Bishop of Citharizum 18 April, 1907. At the present time there are 16 Capuchin priests, 10 lay-brothers, 7 secular priests, 26 religious of other congregations, 5 nuns, 9 residences, 20 churches and chapels, 7 schools (300 children), 1 college (50 students) in Goajira.

Annuaire Pontifical, 1909.

A.A. MACERLEAN

St. Goar

St. Goar

An anchorite of Aquitaine; b. about 585; d. near Oberwesel (Germany), 6 July, 649. He came of a distinguished family, and at an early age gave evidence of sound piety. Prayer was the constant occupation of his heart, and meditation on the truths of religion that of his mind. Having received Holy orders, and being thus enabled to act with more authority, he laboured to secure the salvation of a great number of souls. But being above all solicitous for his own sanctification, he resolved to leave the world, and about 618 he took up his dwelling in a lonely place at the extremity of the Diocese of Trier and in the neighbourhood of the little town of Oberwesel. It was here that, near a little chapel which he built, he began to lead an existence completely detached from material and perishable things. Nevertheless it was impossible for him so to conceal himself that his reputation did not spread far and wide. Pilgrims flocked to him, thus furnishing him with occasions to exercise

the duties of hospitality in their behalf and to give them good advice. Two of them denounced him to Rusticus, Bishop of Trier, as a hypocrite and fond of good living and he was called upon by the bishop to defend himself. According to the legend, he did so with the help of a miracle which resulted in the bishop's confusion and in the manifestation of his unworthiness. King Sigebert III having learned of the occurrence summoned St. Goar to Metz and insisted that he should accept the episcopal see from which Resticus been driven. But the pious hermit was frightened by this offer, and asked time for reflection. On returning to his solitude he fell sick and died before the burden of the episcopal dignity had been imposed upon him. A small church was dedicated to him, in 1768, in the little town on the banks of the Rhine which bears his name (St-Goar).

LEON CLUGNET

Jacques Goar

Jacques Goar

A Dominican and hellenist, b. at Paris, 1601, d. 23 September, 1653. He entered the convent of the Annunciation in the Rue St. Honore 1619, and made his profession there 24 May, 1620. Although lector of philosophy and theology, he applied himself to the study of Greek, and was sent to the Orient by his superiors, that he might eventually render service to the Roman Church, through his knowledge of the ecclesiastical documents and the positive theology of the Greeks. He resided at Chios as missionary Apostolic and prior of the Convent of St. Sebastian (1613-39), and availed himself of his opportunities of travel to observe the various rites, to form the acquaintance of Orthodox scholars, and to study the points at issue between the Catholics and schismatics. About 1640 he returned to Rome bringing with him many manuscripts, some of which were valuable. Henceforth he was in communication with the most learned and celebrated Greeks, notably Leo Allatius, Basil Falasca, George Coresi, Pantaleon Ligardio, and others. In 1643 he returned to Paris and was made master of novices, but in November of that year went to Rome on business for the order. After his return to Paris (16 July, 1644) he devoted himself to putting in order the rich material he had brought from the East, which he had increased by visits to the libraries of France and Italy. Appointed vicar provincial in 1652, his health failed under so many labours, and he fell ill and died.

The most important work of Goar is his "Euchologion sive Rituale Graecorum complectens ritus et ordines divinae liturgiae" (Paris, 1667), a classic work for the study of Greek Liturgy; it is important for its original texts and for its learned commentaries; in the second edition (Venice, 1730) a number of errors were corrected. He also edited "Georgii Cedreni, compendium historiarum" (Paris, 1647); "Georgius Codinus curopalata, De officiis magnae Ecclesiae et aulae Constantinopolitanae (Paris, 1648); "Georgii Monachi et S.P.N. Tarasii Chronographia ab Adamo usque ad Diocletianum"; "Nicephori patriarchae Breviarium chronologicum" (Paris, 1652); "Theophanis Chronographia et Leonis grammatici Vitae" (Paris, 1655). This edition of Theophanes was finished by F. Combefis. Coar also left unfinished (in manuscript) a work of the Greek canonist

Blastares: "Collectio elementaris materiaram omnium sacris et divinis canonibus contentarum a Matthæo Blastare elucubrata simul et compacta", and a work of Silvester Syropulos. Finally we owe to Goar the "Historia universalis Joannis Zonarae ad MSS. codices recognita" (Paris, 1687); it was continued and completed by Du Cange.

H. LECLERCQ

George Gobat

George Gobat

Moral theologian; born at Charmoilles, in the Diocese of Basil, now in the Department of the Doubs, France, 1 July, 1600; died 23 March, 1679. He entered the Society of Jesus, 1 June, 1618. After teaching the humanities he was professor of sacred sciences at Fribourg, Switzerland (1631-41), and of moral theology at Halle (1641-44), at Munich (1644-47), rector at Halle (1647-51), professor of moral theology at Ratisbon (1651-54), rector at Fribourg (1654-56), professor of moral theology at Constance (1656-60), where he was also penitentiary of the cathedral, which post he retained until his death. Besides his "Disputationes in Aristotelem" (Fribourg, 1633-34), and the Latin translation, "Narratio historica eorum quæ Societatis Jesu in Nova Francia fortiter egit et passa est anno 1648-49", from the French of Father Raguenaud, S.J., there are mentioned smaller works on the Jubilee and on Indulgences, and a collection of practical cases on the Sacraments entitled "Alphabetum". Later these cases were republished under the title "Experientiæ Theologicæ sive experimentalis theologia" (Constance, 1670). The "Alphabetum quadruplex de voto, juramento, blasphemia, superstitione" appeared at Constance in 1672. These works were several times republished in three volumes under the heading "Opera Moralia", for instance, at Douai, 1701, the last edition being published at Venice, 1749.

Gobat follows the casuistic method, treating the different questions in a clear and simple style with solidity and erudition, applying them especially to existing conditions in Germany, conditions well known to him from the confessional and the numerous cases referred to him for settlement. He is, however, inclined to be too lenient. Several of his doctrines were later condemned by the Holy See, notably by Innocent XI in 1679, the year of Gobat's death. The Douai edition (1701) of the "Opera Moralia" drew from Mgr. Gui de Séves de Rochechouart, Bishop of Arras, the censure of thirty-two propositions. The adversaries of the Jesuits in France, Germany, and Holland, eagerly seized the occasion for an attack on the "Jesuit moral", but several apologies were published to refute the malignant exaggerations contained in their attacks; among these defenders of P. Gobat were Father Daniel, S. J., who wrote "Apologie pour la doctrine des Jésuites" (Liege, 1703) and Chr. Rassler, S.J., author of "Vindiciæ Gobatianæ" (Ingolstadt, 1706).

De Backer and Sommervogel, *Bibl. des écrivains de la comp. de Jésus*; Döllinger and Reusch, *Gesch. der moralstreitigkeiten in der röm.-kath. Kirche* (Nördlingen, 1889, I, 292 sqq.; Hurter, *Nomenclator*, s.v.; *Kirchenlexicon*, s.v.; *Kirchliches handlexicon*, s.v.

J. SALSMANS

Gobban Saer

Gobban Saer

Regarded in traditional lore as the greatest Irish architect of the seventh century, and popularly canonized as St. Gobban; b. at Turvey, near Malahide, Co. Dublin, about 560. He was employed by many Irish saints to build churches, oratories, and bell-towers, and he is alluded to in an eighth-century Irish poem, now in a monastery in Carinthia. So wonderful are the stories told of this great master-builder that many writers have gone so far as to regard him as a mythical personage, but he undoubtedly must be classed as an historical figure. He was much in advance of his time as an architect, and received commissions all over Ireland. In the "Life of St. Abban" it is prophetically said that "the fame of Gobban as a builder in wood as well as stone would exist in Ireland to the end of time." Certain it is that even at the present day innumerable stories in the Irish tongue are still current of the Gobban Saer, or Gobban the Builder. He lived into the first half of the seventh century, or even later, according to some writers, but he laboured as late as 645.

W.H. GRATTAN-FLOOD

Person Gobelinus

Person Gobelinus

(Persona.)

Born in 1358; died 17 November, 1421. He was a Westphalian and was known as an historian and an ardent reformer of monastic life in his native land. He received his first schooling at Paderborn. It may be that he came originally from this city; it is certain that he was from the neighbourhood. As a young man he went to Italy, where he studied theology and canon law, becoming cleric of the papal court, and later an official of the papal exchequer. This was in 1384, under Urban VI, of whom he was ever a loyal adherent. This position ceased to be agreeable when the Great Schism came to disturb the Roman court. He resigned, was ordained priest at Ancona in 1386, and returned to his native land. Papal influence secured for him a benefice from the church of the Holy Trinity and later the pastorate of St. Pancratius at Paderborn. He now attended the University of Erfurt, which he entered during the incumbency of its first rector (1392-1394). We glean from this that he was still pursuing his scientific studies. Wilhelm von Berg who had been chosen Bishop of Paderborn (1400-1415), selected Gobelinus for his court chaplain and induced him to enter his service. The latter availed himself of his position to labour for the further uplifting of religious life and particularly for the restoration of discipline in the cloisters which had drifted into an habitual disregard of their rules. The monastery of nuns at Böddeken near Paderborn where the abbess alone remained was changed into a convent for men and given over to the Augustinians. Not content with this, he undertook in spite of great difficulties to reform the Benedictine Abbey of Abdinghof, at Paderborn. But the opponents of his policy resisted it every way the interference

of the bishop, who transferred to Bielefeld that branch of the diocesan administration of which Gobelinus was a part. The latter had already in 1405 given up his parish church at Paderborn, owing to certain differences with the municipal authorities. The bishop appointed him dean of the collegiate church of Bielefeld. The Archbishop of Cologne, Dietrich von Mörs, who in 1415 received the See of Paderborn gave the dean authority to reform the religious life, not only in the monastery of Bielefeld but also in other institutions, a mission Gobelinus duly fulfilled.

But old age and illness undermined the strength of zealous divine. He resigned in 1418 and once more betook himself to the monastery of Böddeken. He did not don the monk's habit, but spent the remaining years of his life in the quiet of monastic solitude.

Gobelinus was also an historian. He wrote a history of the world entitled: "Cosmidromius, hoc est Chronicon universale complectens re ecclesiae et reipublicae". This work he brought down to the year 1418; from the year 1347 it is valuable as being an original source of information. The author accomplished his task with scrupulous care. The "Cosmidromius" was selected by Scheffer-Boichorst as his basis and starting-point when he set out to restore the "Annales Patherbrunnes", lost annals of the twelfth century which had been looked upon as an authority in its particular field. Another work of Gobelinus was his "Vita Meinulphi", a biography of Meinolf, a canon of the cathedral chapter of Paderborn in the first half of the ninth century, and the founder of the Böddeken monastery. The Cosmidromius of Gobelinus was first published by Meibom (Frankfort, 1599) in the "Scriptores rerum Germanicarum"; Max Jansen prepared a new edition (Münster, 1900). The "Vita Meinulphi" may be found in the "Acta SS." of the Bollandists, Oct. III, 216 sqq.

J.P. KIRCH

God

God

Etymology of the Word "God"

Discusses the root-meaning of the name "God", which is derived from Gothic and Sanskrit roots.

Existence of God

Formal dogmatic Atheism is self-refuting, and has never won the reasoned assent of any considerable number of men. Nor can Polytheism ever satisfy the mind of a philosopher. But there are several varieties of what may be described as virtual Atheism which cannot be dismissed so quickly.

Nature and Attributes of God

In this article, we proceed by deductive analysis to examine the nature and attributes of God to the extent required by our limited philosophical scope. We will treat accordingly of the infinity, unity, and simplicity of God, adding some remarks on Divine personality.

Relation of God to the Universe

The world is essentially dependent on God, and this dependence implies (1) that God is the Creator of the world -- the producer of its whole substance; and (2) that its continuance in being at every moment is due to His sustaining power.

The Blessed Trinity The Trinity is the term employed to signify the central doctrine of the Christian religion -- the truth that in the unity of the Godhead there are Three truly distinct Persons: the Father, the Son, and the Holy Spirit.
Existence of God

The Existence of God

The topic will be treated as follows:

I. As Known Through Natural Reason

A. The Problem Stated

1. Formal Anti-Theism
2. Types of Theism

B. Theistic Proofs

1. A Posteriori Argument
 - (a) The general causality argument
 - (b) The argument from design
 - (c) The argument from conscience
 - (d) The argument from universal consent
2. A Priori, or Ontological, Argument

II. As Known Through Faith

A. Sacred Scriptures

B. Church Councils

C. The Knowability of God

I. AS KNOWN THROUGH NATURAL REASON ("THE GOD OF THE PHILOSOPHERS")

A. THE PROBLEM STATED

1. Formal Anti-Theism

Had the Theist merely to face a blank Atheistic denial of God's existence, his task would be comparatively a light one. Formal dogmatic Atheism is self-refuting, and has never *de facto* won the reasoned assent of any considerable number of men. Nor can Polytheism, however easily it may take hold of the popular imagination, ever satisfy the mind of a philosopher. But there are several varieties of what may be described as virtual Atheism which cannot be dismissed so summarily.

There is the Agnosticism, for instance, of Herbert Spencer, which, while admitting the rational necessity of postulating the Absolute or Unconditioned behind the relative and conditioned objects of our knowledge declares that Absolute to be altogether unknowable, to be in fact the Unknowable,

about which without being guilty of contradiction we can predicate nothing at all, except perhaps that It exists; and there are other types of Agnosticism.

Then again there is Pantheism in an almost endless variety of forms, all of which, however, may be logically reduced to the three following types:

- the purely materialistic, which, making matter the only reality, would explain life by mechanics and chemistry, reduce abstract thought to the level of an organic process deny any higher ultimate moral value to the Ten Commandments than to Newton's law of gravitation, and, finally, identify God Himself with the universe thus interpreted (see MATERIALISM; MONISM);
- the purely idealistic, which, choosing the contrary alternative, would make mind the only reality, convert the material universe into an idea, and identify God with this all-embracing mind or idea, conceived as eternally evolving itself into passing phases or expressions of being and attaining self-consciousness in the souls of men; and
- the combined materialistic-idealistic, which tries to steer a middle course and without sacrificing mind to matter or matter to mind, would conceive the existing universe, with which God is identified, as some sort of "double-faced" single entity.

Thus to accomplish even the beginning of his task the Theist has to show, against Agnostics, that the knowledge of God attainable by rational inference -- however inadequate and imperfect it may be -- is as true and valid, as far as it goes, as any other piece of knowledge we possess; and against Pantheists that the God of reason is a supra-mundane personal God distinct both from matter and from the finite human mind -- that neither we ourselves nor the earth we tread upon enter into the constitution of His being.

2. Types of Theism

But passing from views that are formally anti-theistic, it is found that among Theists themselves certain differences exist which tend to complicate the problem, and increase the difficulty of stating it briefly and clearly. Some of these differences are brief and clear.

Some of these differences are merely formal and accidental and do not affect the substance of the theistic thesis, but others are of substantial importance, as, for instance, whether we can validly establish the truth of God's existence by the same kind of rational inference (e. g. from effect to cause) as we employ in other departments of knowledge, or whether, in order to justify our belief in this truth, we must not rather rely on some transcendental principle or axiom, superior and antecedent to dialectical reasoning; or on immediate intuition; or on some moral, sentimental, emotional, or aesthetic instinct or perception, which is voluntary rather than intellectual.

Kant denied in the name of "pure reason" the inferential validity of the classical theistic proofs, while in the name of "practical reason" he postulated God's existence as an implicate of the moral law, and Kant's method has been followed or imitated by many Theists -- by some who fully agree with him in rejecting the classical arguments; by others, who, without going so far, believe in the apologetical expediency of trying to persuade rather than convince men to be Theists. A moderate reaction against the too rigidly mathematical intellectualism of Descartes was to be welcomed, but the Kantian reaction by its excesses has injured the cause of Theism and helped forward the cause of anti-theistic philosophy. Herbert Spencer, as is well known, borrowed most of his arguments for

Agnosticism from Hamilton and Mansel, who had popularized Kantian criticism in England, while in trying to improve on Kant's reconstructive transcendentalism, his German disciples (Fichte, Schelling, Hegel) drifted into Pantheism. Kant also helped to prepare the way for the total disparagement of human reason in relation to religious truth, which constitutes the negative side of Traditionalism, while the appeal of that system on the positive side to the common consent and tradition of mankind as the chief or sole criterion of truth and more especially of religious truth -- its authority as a criterion being traced ultimately to a positive Divine revelation -- is, like Kant's refuge in practical reason, merely an illogical attempt to escape from Agnosticism.

Again, though Ontologism -- like that of Malebranche (d. 1715) -- is older than Kant, its revival in the nineteenth century (by Gioberti, Rosmini, and others) has been inspired to some extent by Kantian influences. This system maintains that we have naturally some immediate consciousness, however dim at first, or some intuitive knowledge of God -- not indeed that we see Him in His essence face to face but that we know Him in His relation to creatures by the same act of cognition -- according to Rosmini, as we become conscious of being in general -- and therefore that the truth of His existence is as much a datum of philosophy as is the abstract idea of being.

Finally, the philosophy of Modernism -- about which there has recently been such a stir -- is a somewhat complex medley of these various systems and tendencies; its main features as a system are:

- negatively, a thoroughgoing intellectual Agnosticism, and
- positively, the assertion of an immediate sense or experience of God as immanent in the life of the soul -- an experience which is at first only subconscious, but which, when the requisite moral dispositions are present, becomes an object of conscious certainty.

Now all these varying types of Theism, in so far as they are opposed to the classical and traditional type, may be reduced to one or other of the two following propositions:

- that we have naturally an immediate consciousness or intuition of God's existence and may therefore dispense with any attempt to prove this truth inferentially;
- that, though we do not know this truth intuitively and cannot prove it inferentially in such a way as to satisfy the speculative reason, we can, nevertheless, and must conscientiously believe it on other than strictly intellectual grounds.

But an appeal to experience, not to mention other objections, is sufficient to negative the first proposition -- and the second, which, as history has already made clear, is an illogical compromise with Agnosticism, is best refuted by a simple statement of the theistic Proofs. It is not the proofs that are found to be fallacious but the criticism which rejects them. It is true of course -- and no Theist denies it -- that for the proper intellectual appreciation of theistic proofs moral dispositions are required, and that moral consciousness, the aesthetic faculty, and whatever other powers or capacities belong to man's spiritual nature, constitute or supply so many data on which to base inferential proofs. But this is very different from holding that we possess any faculty or power which assures us of God's existence and which is independent of, and superior to, the intellectual laws that regulate our assent to truth in general -- that in the religious sphere we can transcend those laws without confessing our belief in God to be irrational. It is also true that a mere barren intellectual

assent to the truth of God's existence -- and such an assent is conceivable -- falls very far short of what religious assent ought to be; that what is taught in revealed religion about the worthlessness of faith uninformed by charity has its counterpart in natural religion; and that practical Theism, if it pretends to be adequate, must appeal not merely to the intellect but to the heart and conscience of mankind and be capable of winning the total allegiance of rational creatures. But here again we meet with exaggeration and confusion on the part of those Theists who would substitute for intellectual assent something that does not exclude but presupposes it and is only required to complement it. The truth and pertinency of these observations will be made clear by the following summary of the classical arguments for God's existence.

B. THEISTIC PROOFS

The arguments for God's existence are variously classified and entitled by different writers, but all agree in recognizing the distinction between *a priori*, or deductive, and *a posteriori*, or inductive reasoning in this connection. And while all admit the validity and sufficiency of the latter method, opinion is divided in regard to the former. Some maintain that a valid *a priori* proof (usually called the ontological) is available; others deny this completely; while some others maintain an attitude of compromise or neutrality. This difference, it should be observed, applies only to the question of proving God's actual existence; for, His self-existence being admitted, it is necessary to employ *a priori* or deductive inference in order to arrive at a knowledge of His nature and attributes, and as it is impossible to develop the arguments for His existence without some working notion of His nature, it is necessary to some extent to anticipate the deductive stage and combine the *a priori* with the *a posteriori* method. But no strictly *a priori* conclusion need be more than hypothetically assumed at this stage.

1. A Posteriori Argument

St. Thomas (*Summa Theologica* I:2:3; Cont. Gent., I, xiii) and after him many scholastic writers advance the five following arguments to prove the existence of God:

- Motion, i. e. the passing from power to act, as it takes place in the universe implies a first unmoved Mover (*primum movens immobile*), who is God; else we should postulate an infinite series of movers, which is inconceivable.
- For the same reason efficient causes, as we see them operating in this world, imply the existence of a First Cause that is uncaused, i.e. that possesses in itself the sufficient reason for its existence; and this is God.
- The fact that contingent beings exist, i.e. beings whose non-existence is recognized as possible, implies the existence of a necessary being, who is God.
- The graduated perfections of being actually existing in the universe can be understood only by comparison with an absolute standard that is also actual, i.e., an infinitely perfect Being such as God.
- The wonderful order or evidence of intelligent design which the universe exhibits implies the existence of a supramundane Designer, who is no other than God Himself.

To these many Theists add other arguments:

- the common consent of mankind (usually described by Catholic writers as the *moral* argument),

- from the internal witness of conscience to the supremacy of the moral law, and, therefore, to the existence of a supreme Lawgiver (this may be called the *ethical* argument, or
- from the existence and perception of beauty in the universe (the *aesthetical* argument).

One might go on, indeed, almost indefinitely multiplying and distinguishing arguments; but to do so would only lead to confusion.

The various arguments mentioned -- and the same is true of others that might be added -- are not in reality distinct and independent arguments, but only so many partial statements of one and the same general argument, which is perhaps best described as the cosmological. This argument assumes the validity of the principle of causality or sufficient reason and, stated in its most comprehensive form, amounts to this: that it is impossible according to the laws of human thought to give any ultimate rational explanation of the phenomena of external experience and of internal consciousness -- in other words to synthesize the data which the actual universe as a whole supplies (and this is the recognized aim of philosophy) -- unless by admitting the existence of a self-sufficient and self-explanatory cause or ground of being and activity, to which all these phenomena may be ultimately referred.

It is, therefore, mainly a question of method and expediency what particular points one may select from the multitude available to illustrate and enforce the general *a posteriori* argument. For our purpose it will suffice to state as briefly as possible

- the general argument proving the self-existence of a First Cause,
- the special arguments proving the existence of an intelligent Designer and
- of a Supreme Moral Ruler, and
- the confirmatory argument from the general Consent of mankind.

(a) *The general causality argument*

We must start by assuming the objective certainty and validity of the principle of causality or sufficient reason -- an assumption upon which the value of the physical sciences and of human knowledge generally is based. To question its objective certainty, as did Kant, and represent it as a mere mental *a priori*, or possessing only subjective validity, would open the door to subjectivism and universal scepticism. It is impossible to prove the principle of causality, just as it is impossible to prove the principle of contradiction; but it is not difficult to see that if the former is denied the latter may also be denied and the whole process of human reasoning declared fallacious. The principle states that whatever exists or happens must have a sufficient reason for its existence or occurrence either in itself or in something else; in other words that whatever does not exist of absolute necessity - whatever is not self-existent -- cannot exist without a proportionate cause external to itself; and if this principle is valid when employed by the scientist to explain the phenomena of physics it must be equally valid when employed by the philosopher for the ultimate explanation of the universe as a whole. In the universe we observe that certain things are effects, i.e. they depend for their existence on other things, and these again on others; but, however far back we may extend this series of effects and dependent causes, we must, if human reason is to be satisfied, come ultimately to a cause that is not itself an effect, in other words to an uncaused cause or self-existent being which is the ground and cause of all being. And this conclusion, as thus stated,

is virtually admitted by agnostics and Pantheists, all of whom are obliged to speak of an eternal something underlying the phenomenal universe, whether this something be the "Unknown", or the "Absolute", or the "Unconscious", or "Matter" itself, or the "Ego", or the "Idea" of being, or the "Will"; these are so many substitutes for the uncaused cause or self-existent being of Theism. What anti-Theists refuse to admit is not the existence of a First Cause in an indeterminate sense, but the existence of an intelligent and free First Cause, a personal God, distinct from the material universe and the human mind. But the very same reason that compels us to postulate a First Cause at all requires that this cause should be a free and intelligent being. The spiritual world of intellect and free will must be recognized by the sane philosopher to be as real as the world of matter; man knows that he has a spiritual nature and performs spiritual acts as clearly and as certainly as he knows that he has eyes to see with and ears to hear with; and the phenomena of man's spiritual nature can only be explained in one way -- by attributing spirituality, i.e. intelligence and free will, to the First Cause, in other words by recognizing a personal God. For the cause in all cases must be proportionate to the effect, i.e. must contain somehow in itself every perfection of being that is realized in the effect.

The cogency of this argument becomes more apparent if account be taken of the fact that the human species had its origin at a comparatively late period in the history of the actual universe. There was a time when neither man nor any other living thing inhabited this globe of ours; and without pressing the point regarding the origin of life itself from inanimate matter or the evolution of man's body from lower organic types, it may be maintained with absolute confidence that no explanation of the origin of man's soul can be made out on evolutionary lines, and that recourse must be had to the creative power of a spiritual or personal First Cause. It might also be urged, as an inference from the physical theories commonly accepted by present-day scientists, that the actual organization of the material universe had a definite beginning in time. If it be true that the goal towards which physical evolution is tending is the uniform distribution of heat and other forms of energy, it would follow clearly that the existing process has not been going on from eternity; else the goal would have been reached long ago. And if the process had a beginning, how did it originate? If the primal mass was inert and uniform, it is impossible to conceive how motion and differentiation were introduced except from without, while if these are held to be coeval with matter, the cosmic process, which is *ex hypothesi* is temporal, would be eternal, unless it be granted that matter itself had a definite beginning in time.

But the argument, strictly speaking, is conclusive even if it be granted that the world may have existed from eternity, in the sense, that is, that, no matter how far back one may go, no point of time can be reached at which created being was not already in existence. In this sense Aristotle held matter to be eternal and St. Thomas, while denying the fact, admitted the possibility of its being so. But such relative eternity is nothing more in reality than infinite or indefinite temporal duration and is altogether different from the eternity we attribute to God. Hence to admit that the world might possibly be eternal in this sense implies no denial of the essentially finite and contingent character of its existence. On the contrary it helps to emphasize this truth, for the same relation of

dependence upon a self-existing cause which is implied in the contingency of any single being is implied *a fortiori* in the existence of an infinite series of such beings, supposing such a series to be possible.

Nor can it be maintained with Pantheists that the world, whether of matter or of mind or of both, contains within itself the sufficient reason of its own existence. A self-existing world would exist of absolute necessity and would be infinite in every kind of perfection; but of nothing are we more certain than that the world as we know it, in its totality as well as in its parts, realizes only finite degrees of perfection. It is a mere contradiction in terms, however much one may try to cover up and conceal the contradiction by an ambiguous and confusing use of language, to predicate infinity of matter or of the human mind, and one or the other or both must be held by the Pantheist to be infinite. In other words the distinction between the finite and the infinite must be abolished and the principle of contradiction denied. This criticism applies to every variety of Pantheism strictly so called, while crude, materialistic Pantheism involves so many additional and more obvious absurdities that hardly any philosopher deserving of the name will be found to maintain it in our day. On the other hand, as regards idealistic Pantheism, which enjoys a considerable vogue in our day, it is to be observed in the first place that in many cases this is a tendency rather than a formal doctrine, that it is in fact nothing more than a confused and perverted form of Theism, based especially upon an exaggerated and one-sided view of Divine immanence (see below, iii). And this confusion works to the advantage of Pantheism by enabling it to make a specious appeal to the very arguments which justify Theism. Indeed the whole strength of the pantheistic position as against Atheism lies in what it holds in common with Theism; while, on the other hand, its weakness as a world theory becomes evident as soon as it diverges from or contradicts Theism. Whereas Theism, for example, safeguards such primary truths as the reality of human personality, freedom, and moral responsibility, Pantheism is obliged to sacrifice all these, to deny the existence of evil, whether physical or moral, to destroy the rational basis of religion, and, under pretence of making man his own God, to rob him of nearly all his plain, common sense convictions and of all his highest incentives to good conduct. The philosophy which leads to such results cannot but be radically unsound.

(b) The argument from design

The special argument based on the existence of order or design in the universe (also called the *teleological argument*) proves immediately the existence of a supramundane mind of vast intelligence, and ultimately the existence of God. This argument is capable of being developed at great length, but it must be stated here very briefly. It has always been a favourite argument both with philosophers and with popular apologists of Theism; and though, during the earlier excesses of enthusiasm for or against Darwinianism, it was often asserted or admitted that the evolutionary hypothesis had overthrown the teleological argument, it is now recognized that the very opposite is true, and that the evidences of design which the universe exhibits are not less but more impressive when viewed from the evolutionary standpoint. To begin with particular examples of adaptation which may be appealed to in countless number -- the eye, for instance, as an organ of sight is a

conspicuous embodiment of intelligent purpose -- and not less but more so when viewed as the product of an evolutionary process rather than the immediate handiwork of the Creator. There is no option in such cases between the hypothesis of a directing intelligence and that of blind chance, and the absurdity of supposing that the eye originated suddenly by a single blind chance is augmented a thousand-fold by suggesting that it may be the product of a progressive series of such chances. "Natural selection", "survival of the fittest", and similar terms merely describe certain phases in the supposed process of evolution without helping the least to explain it; and as opposed to teleology they mean nothing more than blind chance. The eye is only one of the countless examples of adaptation to particular ends discernible in every part of the universe, inorganic as well as organic; for the atom as well as the cell contributes to the evidence available. Nor is the argument weakened by our inability in many cases to explain the particular purpose of certain structures or organisms. Our knowledge of nature is too limited to be made the measure of nature's entire design, while as against our ignorance of some particular purposes we are entitled to maintain the presumption that if intelligence is anywhere apparent it is dominant everywhere. Moreover, in our search for particular instances of design we must not overlook the evidence supplied by the harmonious unity of nature as a whole. The universe as we know it is a cosmos, a vastly complex system of correlated and interdependent parts, each subject to particular laws, and all together subject to a common law or a combination of laws, as the result of which the pursuit of particular ends is made to contribute in a marvellous way to the attainment of a common purpose; and it is simply inconceivable that this cosmic unity should be the product of chance or accident. If it be objected that there is another side to the picture, that the universe abounds in imperfections -- maladjustments, failures, seemingly purposeless waste -- the reply is not far to seek. For it is not maintained that the existing world is the best possible, and it is only on the supposition of its being so that the imperfections referred to would be excluded. Admitting without exaggerating their reality -- admitting, that is, the existence of physical evil -- there still remains a large balance on the side of order and harmony, and to account for this there is required not only an intelligent mind but one that is good and benevolent, though so far as this special argument goes this mind might conceivably be finite. To prove the infinity of the world's Designer it is necessary to fall back on the general argument already explained and on the deductive argument to be explained below by which infinity is inferred from self-existence. Finally, by way of direct reply to the problem suggested by the objection, it is to be observed that, to appreciate fully the evidence for design, we must, in addition to particular instances of adaptation and to the cosmic unity observable in the world of today, consider the historical continuity of nature throughout indefinite ages in the past and indefinite ages to come. We do not and cannot comprehend the full scope of nature's design, for it is not a static universe we have to study but a universe that is progressively unfolding itself and moving towards the fulfilment of an ultimate purpose under the guidance of a master mind. And towards that purpose the imperfect as well as the perfect -- apparent evil and discord as well as obvious good order -- may contribute in ways which we can but dimly discern. The well-balanced philosopher, who realizes his own limitations in the presence of nature's Designer, so far from claiming that every detail of that

Designer's purpose should at present be plain to his inferior intelligence, will be content to await the final solution of enigmas which the hereafter promises to furnish.

(c) The argument from conscience

To Newman and others the argument from conscience, or the sense of moral responsibility, has seemed the most intimately persuasive of all the arguments for God's existence, while to it alone Kant allowed an absolute value. But this is not an independent argument, although, properly understood, it serves to emphasize a point in the general a posteriori proof which is calculated to appeal with particular force to many minds. It is not that conscience, as such, contains a direct revelation or intuition of God as the author of the moral law, but that, taking man's sense of moral responsibility as a phenomenon to be explained, no ultimate explanation can be given except by supposing the existence of a Superior and Lawgiver whom man is bound to obey. And just as the argument from design brings out prominently the attribute of intelligence, so the argument from science brings out the attribute of holiness in the First Cause and self-existent Personal Being with whom we must ultimately identify the Designer and the Lawgiver.

(d) The argument from universal consent

The confirmatory argument based on the consent of mankind may be stated briefly as follows: mankind as a whole has at all times and everywhere believed and continues to believe in the existence of some superior being or beings on whom the material world and man himself are dependent, and this fact cannot be accounted for except by admitting that this belief is true or at least contains a germ of truth. It is admitted of course that Polytheism, Dualism, Pantheism, and other forms of error and superstition have mingled with and disfigured this universal belief of mankind, but this does not destroy the force of the argument we are considering. For at least the germinal truth which consists in the recognition of some kind of deity is common to every form of religion and can therefore claim in its support the universal consent of mankind. And how can this consent be explained except as a result of the perception by the minds of men of the evidence for the existence of deity? It is too large a subject to be entered upon here -- the discussion of the various theories that have been advanced to account in some other way for the origin and universality of religion; but it may safely be said that, abstracting from revelation, which need not be discussed at this stage, no other theory will stand the test of criticism. And, assuming that this is the best explanation philosophy has to offer, it may further be maintained that this consent of mankind tells ultimately in favour of Theism. For it is clear from history that religion is liable to degenerate, and has in many instances degenerated instead of progressing; and even if it be impossible to prove conclusively that Monotheism was the primitive historical religion, there is nevertheless a good deal of positive evidence adducible in support of this contention. And if this be the true reading of history, it is permissible to interpret the universality of religion as witnessing implicitly to the original truth which, however much obscured it may have become, in many cases could never be entirely obliterated. But even if the history of religion is to read as a record of progressive development one ought in all fairness, in accordance with a well-recognized principle, to seek its true meaning and

significance not at the lowest but at the highest point of development; and it cannot be denied that Theism in the strict sense is the ultimate form which religion naturally tends to assume.

If there have been and are today atheistic philosophers who oppose the common belief of mankind, these are comparatively few and their dissent only serves to emphasize more strongly the consent of normal humanity. Their existence is an abnormality to be accounted for as such things usually are. Could it be claimed on their behalf, individually or collectively, that in ability, education, character, or life they excel the infinitely larger number of cultured men who adhere on conviction to what the race at large has believed, then indeed it might be admitted that their opposition would be somewhat formidable. But no such claim can be made; on the contrary, if a comparison were called for it would be easy to make out an overwhelming case for the other side. Or again, if it were true that the progress of knowledge had brought to light any new and serious difficulties against religion, there would, especially in view of the modern vogue of Agnosticism, be some reason for alarm as to the soundness of the traditional belief. But so far is this from being the case that in the words of Professor Huxley -- an unsuspected witness -- "not a solitary problem presents itself to the philosophical Theist at the present day which has not existed from the time that philosophers began to think out the logical grounds and the logical consequences of Theism" (Life and Letters of Ch. Darwin by F. Darwin, II, p. 203). Substantially the same arguments as are used today were employed by old-time sceptical Atheists in the effort to overthrow man's belief in the existence of the Divine, and the fact that this belief has withstood repeated assaults during so many ages in the past is the best guarantee of its permanency in the future. It is too firmly implanted in the depths of man's soul for little surface storms to uproot it.

2. A Priori, or Ontological, Argument

This argument undertakes to deduce the existence of God from the idea of Him as the Infinite which is present to the human mind; but as already stated, theistic philosophers are not agreed as to the logical validity of this deduction.

As stated by St. Anselm, the argument runs thus: The idea of God as the Infinite means the greatest Being that can be thought of, but unless actual existence outside the mind is included in this idea, God would not be the greatest conceivable Being since a Being that exists both in the mind as an object of thought, and outside the mind or objectively, would be greater than a Being that exists in the mind only; therefore God exists not only in the mind but outside of it.

Descartes states the argument in a slightly different way as follows: Whatever is contained in a clear and distinct idea of a thing must be predicated of that thing; but a clear and distinct idea of an absolutely perfect Being contains the notion of actual existence; therefore since we have the idea of an absolutely perfect Being such a Being must really exist.

To mention a third form of statement, Leibniz would put the argument thus: God is at least possible since the concept of Him as the Infinite implies no contradiction; but if He is possible He must exist because the concept of Him involves existence. In St. Anselm's own day this argument was objected to by Gaunilo, who maintained as a *reductio ad absurdum* that were it valid one could prove by means of it the actual existence somewhere of an ideal island far surpassing in riches and

delights the fabled Isles of the Blessed. But this criticism however smart it may seem is clearly unsound, for it overlooks the fact that the argument is not intended to apply to finite ideals but only to the strictly infinite; and if it is admitted that we possess a true idea of the infinite, and that this idea is not self-contradictory, it does not seem possible to find any flaw in the argument. Actual existence is certainly included in any true concept of the Infinite, and the person who admits that he has a concept of an Infinite Being cannot deny that he conceives it as actually existing. But the difficulty is with regard to this preliminary admission, which if challenged -- as it is in fact challenged by Agnostics -- requires to be justified by recurring to the *a posteriori* argument, i.e. to the inference by way of causality from contingency to self-existence and thence by way of deduction to infinity. Hence the great majority of scholastic philosophers have rejected the ontological argument as propounded by St. Anselm and Descartes nor as put forward by Leibniz does it escape the difficulty that has been stated.

II. AS KNOWN THROUGH FAITH ("THE GOD OF REVELATION")

A. Sacred Scriptures

Neither in the Old or New Testament do we find any elaborate argumentation devoted to proving that God exists. This truth is rather taken for granted, as being something, for example, that only the fool will deny in his heart [Ps. xiii (xiv), 1; lii (liii), 1]; and argumentation, when resorted to, is directed chiefly against polytheism and idolatry. But in several passages we have a cursory appeal to some phase of the general cosmological argument: v.g. Ps. xviii (xix), 1, xciii (xciv), 5 sqq., Is., xli, 26 sqq.; II Mach., vii, 28, etc.; and in some few others -- Wis. xiii, 1-9; Rom., i, 18,20 -- the argument is presented in a philosophical way, and men who reason rightly are held to be inexcusable for failing to recognize and worship the one true God, the Author and Ruler of the universe.

These two latter texts merit more than passing attention. Wis., xiii, 1-9 reads:

But all men are vain in whom there is not the knowledge of God: and who by these good things that are seen, could not understand him that is, neither by attending to the works have acknowledged who was the workman: but have imagined either the fire, or the wind, or the swift air or the circle of the stars, or the great water, or the sun and moon, to be the gods that rule the world. With whose beauty, if they, being delighted, took them to be gods: let them know how much the Lord of them is more beautiful than they: for the first author of beauty made all those things. Or if they admired their power and effects, let them understand by them that he that made them, is mightier than they: for by the greatness of the beauty, and of the creature, the creator of them may be seen, so as to be known thereby. But yet as to these they are less to be blamed. For they perhaps err, seeking God, and desirous to find him. For being conversant among his works, they search: and they are persuaded that the things are good which are seen. But then again they are not to be pardoned. For if

they were able to know so much as to make a judgment of the world: how did they not more easily find out the Lord thereof?

Here it is clearly taught

- that the phenomenal or contingent world -- the things that are seen -- requires a cause distinct from and greater than itself or any of its elements;
- that this cause who is God is not unknowable, but is known with certainty not only to exist but to possess in Himself, in a higher degree, whatever beauty, strength, or other perfections are realized in His works,
- that this conclusion is attainable by the right exercise of human reason, without reference to supernatural revelation, and that philosophers, therefore, who are able to interpret the world philosophically, are inexcusable for their ignorance of the true God, their failure, it is implied, being due rather to lack of good will than to the incapacity of the human mind.

Substantially the same doctrine is laid down more briefly by St. Paul in Rom., i, 18-20:

For the wrath of God is revealed from heaven against all ungodliness and injustice of those men that detain the truth of God in injustice: because that which is known of God is manifest in them. For God hath manifested it unto them. For the invisible things of him, from the creation of the world, are clearly seen, being understood by the things that are made, his eternal power also and divinity: so that they are inexcusable.

It is to be observed that the pagans of whom St. Paul is speaking are not blamed for their ignorance of supernatural revelation and the Mosaic law, but for failing to preserve or for corrupting that knowledge of God and of man's duty towards Him which nature itself ought to have taught them. Indeed it is not pure ignorance as such they are blamed for, but that wilful shirking of truth which renders ignorance culpable. Even under the corruptions of paganism St. Paul recognized the indestructible permanency of germinal religious truth (cf. Rom., ii, 14, 15).

It is clear from these passages that Agnosticism and Pantheism are condemned by revelation, while the validity of the general proof of God's existence given above is confirmed. It is also clear that the extreme form of Traditionalism (q.v.), which would hold that no certain knowledge of God's existence or nature is attainable by human reason without the aid of supernatural revelation, is condemned.

B. Church Councils

What the author of Wisdom and St. Paul and after them the Fathers and theologians had constantly taught, has been solemnly defined by the Vatican Council. In the first place, as against Agnosticism and Traditionalism, the council teaches (cap. ii, De revelat.)

that God, the first cause (*principium*) and last end of all things, can, from created things, be known with certainty by the natural light of human reason (Denz., 1785-old no. 1634)

and in the corresponding canon (can. i, De revelat.) it anathematizes anyone who would say that the one true God our Creator and Lord, cannot, through the things that are made, be known with certainty by the natural light of human reason (Denz., 1806-old no. 1653).

As against Agnosticism this definition needs no explanation. As against Traditionalism, it is to be observed that the definition is directed only against the extreme form of that theory, as held by Lamennais and others according to which -- taking human nature as it is -- there would not, and could not, have been any true or certain knowledge of God, among men, had there not been at least a primitive supernatural revelation -- in other words, natural religion as such is an impossibility. There is no reference to milder forms of Traditionalism which hold social tradition and education to be necessary for the development of man's rational powers, and consequently deny, for example, that an individual cut off from human society from his infancy, and left entirely to himself, could ever attain a certain knowledge of God, or any strictly rational knowledge at all. That is a psychological problem on which the council has nothing to say. Neither does it deny that even in case of the *homo socialis* a certain degree of education and culture may be required in order that he may, by independent reasoning, arrive at a knowledge of God; but it merely affirms the broad principle that by the proper use of their natural reasoning power, applied to the phenomena of the universe, men are able to know God with certainty.

In the next place, as against Pantheism, the council (cap. i, De Deo) teaches that God, "since He is one singular, altogether simple and incommutable spiritual substance, must be proclaimed to be really and essentially [re et essentia] distinct from the world most happy in and by Himself, and ineffably above and beyond all things, actual or possible, besides Himself" (Denzinger, 1782-old no. 1631); and in the corresponding canons (ii-iv, De Deo) anathema is pronounced against anyone who would say "that nothing exists but matter"; or "that the substance or essence of God and of all things is one and the same"; or "that finite things both corporeal and spiritual, or at least spiritual, have emanated from the Divine substance; or that the Divine essence by a manifestation or evolution of itself becomes all things; or that God is universal or indefinite being, which by determining itself constitutes the universe of things distinguished into genera, species and individuals" (Denzinger, 1802-4; old no. 1648).

These definitions are framed so as to cover and exclude every type of the pantheistic theory, and nobody will deny that they are in harmony with Scriptural teaching. The doctrine of creation, for example, than which none is more clearly taught or more frequently emphasized in Sacred Scripture, is radically opposed to Pantheism -- creation as the sacred writers understand it being the voluntary act of a free agent bringing creatures into being out of nothingness.

C. The Knowability of God

It will be observed that neither the Scriptural texts we have quoted nor the conciliar decrees say that God's existence can be *proved* or *demonstrated*; they merely affirm that it can be *known with certainty*. Now one may, if one wishes, insist on the distinction between what is *knowable* and

what is *demonstrable*, but in the present connection this distinction has little real import. It has never been claimed that God's existence can be proved mathematically, as a proposition in geometry is proved, and most Theists reject every form of the ontological or deductive proof. But if the term proof or demonstration may be, as it often is, applied to *a posteriori* or inductive inference, by means of which knowledge that is not innate or intuitive is acquired by the exercise of reason, then it cannot fairly be denied that Catholic teaching virtually asserts that God's existence can be *proved*. Certain knowledge of God is declared to be attainable "by the light of reason", i.e. of the reasoning faculty as such *from or through* "the things that are made"; and this clearly implies an inferential process such as in other connections men do not hesitate to call proof.

Hence it is fair to conclude that the Vatican Council, following Sacred Scripture, has virtually condemned the Scepticism which rejects the *a posteriori* proof. But it did not deal directly with Ontologism, although certain propositions of the Ontologists had already been condemned as unsafe (*tuto tradi non posse*) by a decree of the Holy Office (18 September, 1861), and among the propositions of Rosmini subsequently condemned (14 December, 1887) several reassert the ontologist principle. This condemnation by the Holy Office is quite sufficient to discredit Ontologism, regarding which it is enough to say here

- that, as already observed, experience contradicts the assumption that the human mind has naturally or necessarily an immediate consciousness or intuition of the Divine,
- that such a theory obscures, and tends to do away with, the difference, on which St. Paul insists (I Cor., xiii, 12), between our earthly knowledge of God ("through a glass in a dark manner") and the vision of Him which the blessed in heaven enjoy ("face to face") and seems irreconcilable with the Catholic doctrine, defined by the Council of Vienne, that, to be capable of the face to face or intuitive vision of God, the human intellect needs to be endowed with a special supernatural light, the *lumen gloriae* and
- finally that, in so far as it is clearly intelligible, the theory goes dangerously near to Pantheism.

In the decree "Lamentabili" (3 July, 1907) and the Encyclical "Pascendi" (7 September, 1907), issued by Pope Pius X, the Catholic position is once more reaffirmed and theological Agnosticism condemned. In its bearing on our subject, this act of Church authority is merely a restatement of the teaching of St. Paul and of the Vatican Council, and a reassertion of the principle which has been always maintained, that God must be naturally knowable if faith in Him and His revelation is to be reasonable; and if a concrete example be needed to show how, of logical necessity, the substance of Christianity vanishes into thin air once the agnostic principle is adopted, one has only to point the finger at Modernism. Rational theism is a necessary logical basis for revealed religion; and that the natural knowledge of God and natural religion, which Catholic teaching holds to be possible, are not necessarily the result of grace, i.e. of a supernatural aid given directly by God Himself, follows from the condemnation by Clement XI of one of the propositions of Quesnel (prop. 41) in which the contrary is asserted (Denzinger, 1391; old no. 1256).

P.J. TONER

Etymology of the Word God

Etymology of the Word "God"

(Anglo-Saxon *God*; German *Gott*; akin to Persian *khoda*; Hindu *khoda*).

God can variously be defined as:

- the proper name of the one Supreme and Infinite Personal Being, the Creator and Ruler of the universe, to whom man owes obedience and worship;
- the common or generic name of the several supposed beings to whom, in polytheistic religions, Divine attributes are ascribed and Divine worship rendered;
- the name sometimes applied to an idol as the image or dwelling-place of a god.

The root-meaning of the name (from Gothic root *gheu*; Sanskrit *hub* or *emu*, "to invoke or to sacrifice to") is either "the one invoked" or "the one sacrificed to." From different Indo-Germanic roots (*div*, "to shine" or "give light"; *thes* in *thessasthai* "to implore") come the Indo-Iranian *deva*, Sanskrit *dyaus* (gen. *divas*), Latin *deus*, Greek *theos*, Irish and Gaelic *dia*, all of which are generic names; also Greek *Zeus* (gen. *Dios*, Latin *Jupiter* (*iovpatēr*), Old Teutonic *Tiu* or *Tiw* (surviving in *Tuesday*), Latin *Janus*, *Diana*, and other proper names of pagan deities. The common name most widely used in Semitic occurs as *'el* in Hebrew, *'ilu* in Babylonian, *'ilah* in Arabic, etc.; and though scholars are not agreed on the point, the root-meaning most probably is "the strong or mighty one."

Nature and Attributes of God

The Nature and Attributes of God

I. As Known Through Natural Reason

- A. Infinity of God
- B. Unity or Unicity of God
- C. Simplicity of God
- D. Divine Personality

II. As Known Through Faith

- A. Eternity
- B. Immensity and Ubiquity, or Omnipresence
- C. Immutability
- D. The Divine Attributes
 1. Divine Knowledge
 2. The Divine Will
 3. Intellect and Will (Providence, Predestination, and Reprobation)

I. AS KNOWN THROUGH NATURAL REASON ("THE GOD OF THE PHILOSOPHERS")

Having established by inductive inference the self-existence of a personal First Cause distinct from matter and from the human mind (see EXISTENCE OF GOD), we now proceed by deductive

analysis to examine the nature and attributes of this Being to the extent required by our limited philosophical scope. We will treat accordingly of

- the infinity,
- unity or unicity, and
- simplicity of God, adding
- some remarks on Divine personality.

A. INFINITY OF GOD

When we say that God is infinite, we mean that He is unlimited in every kind of perfection or that every conceivable perfection belongs to Him in the highest conceivable way. In a different sense we sometimes speak, for instance, of infinite time or space, meaning thereby time of such indefinite duration or space of such indefinite extension that we cannot assign any fixed limit to one or the other. Care should be taken not to confound these two essentially different meanings of the term. Time and space, being made up of parts in duration or extension, are essentially finite by comparison with God's infinity. Now we assert that God is infinitely perfect in the sense explained, and that His infinity is deducible from His self-existence. For a self-existent being, if limited at all, could be limited only by itself; to be limited by another would imply causal dependence on that other, which the very notion of self-existence excludes. But the self-existing cannot be conceived as limiting itself, in the sense of curtailing its perfection of being, without ceasing to be self-existing. Whatever it is, it is necessarily; its own essence is the sole reason or explanation of its existence, so that its manner of existence must be as unchangeable as its essence, and to suggest the possibility of an increase or diminution of perfection would be to suggest the absurdity of a changeable essence. It only remains, then, to say that whatever perfection is compatible with its essence is actually realized in a self-existing being; but as there is no conceivable perfection as such -- that is, no expression of positive being as such -- that is not compatible with the essence of the self-existent, it follows that the self-existent must be infinite in all perfection. For self-existence itself is absolute positive being and positive being cannot contradict, and cannot therefore limit, positive being.

This general, and admittedly very abstract, conclusion, as well as the reasoning which supports it, will be rendered more intelligible by a brief specific illustration of what it involves.

(i) When, in speaking of the Infinite, we attribute all conceivable perfections to Him, we must not forget that the predicates we employ to describe perfections derive their meaning and connotation in the first instance from their application to finite beings; and on reflection it is seen that we must distinguish between different kinds of perfections, and that we cannot without palpable contradiction attribute all the perfections of creatures in the same way to God. Some perfections are such that even in the abstract, they necessarily imply or connote finiteness of being or imperfection; while some others do not of themselves necessarily connote imperfection. To the first class belong all material perfections -- extension, sensibility and the like -- and certain spiritual perfections such as rationality (as distinct from simple intelligence); to the second class belong such perfections as being truth, goodness, intelligence, wisdom, justice, holiness, etc. Now while it cannot be said that God is infinitely extended, or that He feels or reasons in an infinite way, it can be said that He is infinitely good, intelligent, wise, just, holy, etc. -- in other words, while perfections of the second

class are attributed to God formally (i.e., without any change in the proper meaning of the predicates which express them), those of the first class can only be attributed to Him eminently and equivalently, (i.e. whatever positive being they express belongs to God as their cause in a much higher and more excellent way than to the creatures in which they formally exist). By means of this important distinction, which Agnostics reject or neglect, we are able to think and to speak of the Infinite without being guilty of contradiction, and the fact that men generally -- even Agnostics themselves when off their guard -- recognize and use the distinction, is the best proof that it is pertinent and well founded. Ultimately it is only another way of saying that, given an infinite cause and finite effects, whatever pure perfection is discovered in the effects must first exist in the cause (*via affirmationis*) and at the same time that whatever imperfection is discovered in the effects must be excluded from the cause (*via negationis vel exclusionis*). These two principles do not contradict, but only balance and correct one another.

(ii) Yet sometimes men are led by a natural tendency to think and speak of God as if He were a magnified creature -- more especially a magnified man -- and this is known as anthropomorphism. Thus God is said to see or hear, as if He had physical organs, or to be angry or sorry, as if subject to human passions: and this perfectly legitimate and more or less unavoidable use of metaphor is often quite unfairly alleged to prove that the strictly Infinite is unthinkable and unknowable, and that it is really a finite anthropomorphic God that men worship. But whatever truth there may be in this charge as applied to Polytheistic religions, or even to the Theistic beliefs of rude and uncultured minds, it is untrue and unjust when directed against philosophical Theism. The same reasons that justify and recommend the use of metaphorical language in other connections justify and recommended it here, but no Theist of average intelligence ever thinks of understanding literally the metaphors he applies, or hears applied by others, to God, any more than he means to speak literally when he calls a brave man a lion, or a cunning one a fox.

(iii) Finally it should be observed that, while predicating pure perfections literally both of God and of creatures, it is always understood that these predicates are true in an infinitely higher sense of God than of creatures, and that there is no thought of coordinating or classifying God with creatures. This is technically expressed by saying that all our knowledge of God is *analogical*, and that all predicates applied to God and to creatures are used analogically, not univocally. I may look at a portrait or at its living original, and say of either, with literal truth, that is a beautiful face. And this is an example of analogical predication. Beauty is literally and truly realized both in the portrait and its living original, and retains its proper meaning as applied to either; there is sufficient likeness or analogy to justify literal predication but there is not that perfect likeness or identity between painted and living beauty which univocal predication would imply. And similarly in the case of God and creatures. What we contemplate directly is the portrait of Him painted, so to speak, by Himself on the canvas of the universe and exhibiting in a finite degree various perfections, which, without losing their proper meaning for us, are seen to be capable of being realized in an infinite degree; and our reason compels us to infer that they must be and are so realized in Him who is their ultimate cause.

Hence we admit, in conclusion, that our knowledge of the Infinite is *inadequate*, and necessarily so since our minds are only finite. But this is very different from the Agnostic contention that the Infinite is altogether unknowable, and that the statements of Theists regarding the nature and attributes of God are so many plain contradictions. It is only by ignoring the well-recognized rules of predication that have just been explained, and consequently by misunderstanding and misrepresenting the Theistic position, that Agnostics succeed in giving an air of superficial plausibility to their own philosophy of blank negation. Anyone who understands those rules, and has learned to think clearly, and trusts his own reason and common sense, will find it easy to meet and refute Agnostic arguments, most of which, in principle, have been anticipated in what precedes. Only one general observation need be made here -- that the principles to which the Agnostic philosopher must appeal in his attempt to invalidate religious knowledge would, if consistently applied, invalidate all human knowledge and lead to universal scepticism -- and it is safe to say that, unless absolute scepticism becomes the philosophy of mankind, Agnosticism will never supplant religion.

B. UNITY OR UNICITY OF GOD

Obviously there can be *only one* infinite being, only one God. If several were to exist, none of them would really be infinite, for, to have plurality of natures at all, each should have some perfection not possessed by the others. This will be readily granted by every one who admits the infinity of God, and there is no need to delay in developing what is perfectly clear. It should be noted, however, that some Theistic philosophers prefer to deduce unicity from self-existence and infinity from both combined, and in a matter so very abstract it is not surprising that slight differences of opinion should arise. But we have followed what seems to us to be the simpler and clearer line of argument. The metaphysical argument by which unicity, as distinct from infinity, is deduced from self-existence seems to be very obscure, while on the other hand infinity, as distinct from unicity, seems to be clearly implied in self-existence as such. If the question, for example, be asked: Why may there not be several self-existing beings? The only satisfactory answer, as it seems to us, is this: Because a self-existent being as such is necessarily infinite, and there cannot be several infinities. The unity of God as the First Cause might also be inductively inferred from the unity of the universe as we know it; but as the suggestion might be made, and could not be disproved, that there may be another or even several universes of which we have no knowledge, this argument would not be absolutely conclusive.

C. SIMPLICITY OF GOD

God is a simple being or substance excluding every kind of composition, physical or metaphysical. Physical or real composition is either substantial or accidental -- substantial, if the being in question consists of two or more substantial principles, forming parts of a composite whole, as man for example, consists of body and soul; accidental, if the being in question, although simple in its substance (as is the human soul), is capable of possessing accidental perfections (like the actual thoughts and volition of man's soul) not necessarily identical with its substance. Now it is clear that an infinite being cannot be substantially composite, for this would mean that infinity is

made up of the union or addition of finite parts -- a plain contradiction in terms. Nor can accidental composition be attributed to the infinite since even this would imply a capacity for increased perfection, which the very notion of the infinite excludes. There is not, therefore, and cannot be any physical or real composition in God.

Neither can there be that kind of composition which is known as metaphysical, and which results from "the union of diverse concepts referring to the same real thing in such a way that none of them by itself signifies either explicitly or even implicitly the whole reality signified by their combination." Thus every actual contingent being is a metaphysical compound of *essence* and *existence*, and man in particular, according to the definition, is a compound of animal and rational. Essence as such in relation to a contingent being merely implies its conceivableness or possibility, and abstracts from actual existence; existence as such must be added before we can speak of the being as actual. But this distinction, with the composition it implies, cannot be applied to the self-existent or infinite being in whom essence and existence are completely identified. We say of a contingent being that it *has* a certain nature or essence, but of the self-existent we say that it *is* its own nature or essence. There is no composition therefore of essence and existence -- or of potentiality and actuality -- in God, nor can the composition of genus and specific difference, implied for example in the definition of man as a rational animal, be attributed to Him. God cannot be classified or defined, as contingent beings are classified and defined; for there is no aspect of being in which He is *perfectly* similar to the finite, and consequently no genus in which He can be included. From this it follows that we cannot know God *adequately* in the way in which He knows Himself, but not, as the Agnostic contends, that our inadequate knowledge is not true as far as it goes. In speaking of a being who transcends the limitations of formal logical definition our propositions are an expression of real truth, provided that what we state is in itself intelligible and not self-contradictory; and there is nothing unintelligible or contradictory in what Theists predicate of God. It is true that no single predicate is adequate or exhaustive as a description of His infinite perfection, and that we need to employ a multitude of predicates, as if at first sight infinity could be reached by multiplication. But at the same time we recognize that this is not so -- being repugnant to the Divine simplicity; and that while truth, goodness, wisdom, holiness and other attributes, as we conceive and define them express perfections that are formally distinct, yet as applied to God they are all ultimately identical in meaning and describe the same ultimate reality -- the one infinitely perfect and simple being.

D. DIVINE PERSONALITY

When we say that God is a personal being we mean that He is intelligent and free and distinct from the created universe. Personality as such expresses perfection, and if human personality as such connotes imperfection, it must be remembered that, as in the case of similar predicates, this connotation is excluded when we attribute personality to God. It is principally by way of opposition to Pantheism that Divine personality is emphasized by the Theistic philosopher. Human personality, as we know it, is one of the primary data of consciousness, and it is one of those created perfections which must be realized formally (although only analogically) in the First Cause. But Pantheism

would require us to deny the reality of any such perfection, whether in creatures or in the Creator, and this is one of the fundamental objections to any form of Pantheistic teaching. Regarding the mystery of the Trinity or three Divine Persons in God, which can be known only by revelation, it is enough to say here that properly understood the mystery contains no contradiction, but on the contrary adds much that is helpful to our inadequate knowledge of the infinite.

II. AS KNOWN THROUGH FAITH ("THE GOD OF REVELATION")

Reason, as we have seen, teaches that God is one simple and infinitely perfect spiritual substance or nature. Sacred Scripture and the Church teach the same. The creeds, for example, usually begin with a profession of faith in the one true God, Who is the Creator and Lord of heaven and earth, and is also, in the words of the Vatican Council, "omnipotent, eternal, immense, incomprehensible, infinite in intellect and will and in every perfection" (Sess. III, cap. i, De Deo). The best way in which we can describe the Divine nature is to say that it is infinitely perfect, or that God is the infinitely perfect Being; but we must always remember that even *being* itself, the most abstract and universal term we possess, is predicated of God and of creatures not univocally or identically, but only analogically. But other predicates, which, as applied to creatures, express certain specific determinations of being, are also used of God -- analogically, if in themselves they express pure or unmixed perfection, but only metaphorically if they necessarily connote imperfection. Now of such predicates as applied to creatures we distinguish between those that are used in the concrete to denote *being as such* more or less determined (v.g., substance, spirit, etc.), and those that are used in the abstract or adjectively to denote *determinations*, or *qualities*, or *attributes* of being (v.g., good, goodness; intelligent, intelligence, etc.); and we find it useful to transfer this distinction to God, and to speak of the Divine *nature* or essence and Divine *attributes* being careful at the same time, by insisting on Divine simplicity, to avoid error or contradiction in its application. For, as applied to God, the distinction between nature and attributes, and between the attributes themselves, is merely logical and not real. The finite mind is not capable of comprehending the Infinite so as adequately to describe its essence by any single concept or term; but while using a multitude of terms, all of which are analogically true, we do not mean to imply that there is any kind of composition in God. Thus, as applied to creatures, goodness and justice, for example, are distinct from each other and from the nature or substance of the beings in whom they are found, and if finite limitations compel us to speak of such perfections in God as if they were similarly distinct, we know, nevertheless, and are ready, when needful, to explain, that this is not really so, but that all Divine attributes are really identical with one another and with the Divine essence.

The Divine attributes or perfections which may thus logically be distinguished are very numerous, and it would be a needless task to attempt to enumerate them fully. But among them some are recognized as being of fundamental importance, and to these in particular is the term *attributes* applied and special notice devoted by theologians -- though there is no rigid agreement as to the number or classification of such attributes. As good a classification as any other is that based on

the analogy of *entitative* and *operative* perfections in creatures -- the former qualifying nature or essence as such and abstracting from activity, the latter referring especially to the activity of the nature in question. Another distinction is often made between *physical*, and *moral* or *ethical*, attributes -- the former of themselves abstracting from, while the latter directly express, moral perfection. But without labouring with the question of classification, it will suffice to notice separately those attributes of leading importance that have not been already explained. Nothing need be added to what has been said above concerning *self-existence*, *infinity*, *unity*, and *simplicity* (which belong to the entitative class); but *eternity*, *immensity*, and *immutability* (also of the entitative class), together with the active attributes, whether physical or moral, connected with the Divine *intellect* and *will*, call for some explanation here.

A. ETERNITY

By saying that God is eternal we mean that in essence, life, and action He is altogether beyond temporal limits and relations. He has neither beginning, nor end, nor duration by way of sequence or succession of moments. There is no past or future for God -- but only an eternal present. If we say that He *was* or that He *acted*, or that He *will be* or *will act*, we mean in strictness that He *is* or that He *acts*; and this truth is well expressed by Christ when He says (John, viii, 58-A.V.): "Before Abraham *was*, I *am*." Eternity, therefore, as predicated of God, does not mean indefinite duration in time -- a meaning in which the term is sometimes used in other connections -- but it means the total exclusion of the finiteness which time implies. We are obliged to use negative language in describing it, but in itself eternity is a positive perfection, and as such may be best defined in the words of Boethius as being "interminabilis vitae tota simul et perfecta possessio," i.e. possession in full entirety and perfection of life without beginning, end, or succession.

The eternity of God is a corollary from His self-existence and infinity. Time being a measure of finite existence, the infinite must transcend it. God, it is true, coexists *with* time, as He coexists with creatures, but He does not exist *in* time, so as to be subject to temporal relations: His self-existence is timeless. Yet the positive perfection expressed by duration as such, i.e. persistence and permanence of being, belongs to God and is truly predicated of Him, as when He is spoken of, for example, as "Him that is, and that was and that is to come" (Apoc., i, 4); but the strictly temporal connotation of such predicates must always be corrected by recalling the true notion of eternity.

B. IMMENSITY AND UBIQUITY, OR OMNIPRESENCE

Space, like time, is one of the measures of the finite, and as by the attribute of eternity, we describe God's transcendence of all temporal limitations, so by the attribute of immensity we express His transcendent relation to space. There is this difference, however, to be noted between eternity and immensity, that the positive aspect of the latter is more easily realized by us, and is sometimes spoken of, under the name of omnipresence, or ubiquity, as if it were a distinct attribute. Divine immensity means on the one hand that God is necessarily present everywhere in space as the immanent cause and sustainer of creatures, and on the other hand that He transcends the limitations of actual and possible space, and cannot be circumscribed or measured or divided by any spatial relations. To say that God is immense is only another way of saying that He is both immanent and

transcendent in the sense already explained. As some one has metaphorically and paradoxically expressed it, "God's centre is everywhere, His circumference nowhere."

That God is not subject to spatial limitations follows from His infinite simplicity; and that He is truly present in every place or thing -- that He is omnipresent or ubiquitous -- follows from the fact that He is the cause and ground of all reality. According to our finite manner of thinking we conceive this presence of God in things spatial as being primarily a presence of power and operation -- immediate Divine efficiency being required to sustain created beings in existence and to enable them to act; but, as every kind of Divine action *ad extra* is really identical with the Divine nature or essence, it follows that God is really present everywhere in creation not merely *per virtutem et operationem*, but *per essentiam*. In other words God Himself, or the Divine nature, is in immediate contact with, or immanent in, every creature -- conserving it in being and enabling it to act. But while insisting on this truth we must, if we would avoid contradiction, reject every form of the pantheistic hypothesis. While emphasizing Divine immanence we must not overlook Divine transcendence.

There is no lack of Scriptural or ecclesiastical testimonies asserting God's immensity and ubiquity. It is enough to refer for example to:

- Heb. i, 3 iv, 12, 13
- Acts, xvii, 24, 27, 28;
- Eph., i, 23;
- Col., i,;6, 17,
- Ps. cxxxviii, 7-12;
- Job, xii, 10, etc.

C. IMMUTABILITY

In God "there is no change, nor shadow of alteration" (James, i, 17); "They [i.e. "the works of thy hands"] shall perish, but thou shalt continue: and they shall all grow old as a garment. And as a vesture shalt thou change them, and they shall be changed: but thou art the selfsame and thy years shall not fail" (Heb., i, 10-12, Ps. ci, 26-28. Cf. Mal., iii, 6; Heb., xiii, 8). These are some of the Scriptural texts which clearly teach Divine immutability or unchangeableness, and this attribute is likewise emphasized in church teaching, as by the Council of Nicaea against the Arians, who attributed mutability to the Logos (Denzinger, 54-old No. 18), and by the Vatican Council in its famous definition.

That the Divine nature is essentially immutable, or incapable of any internal change, is an obvious corollary from Divine infinity. Changeableness implies the capacity for increase or diminution of perfection, that is, it implies finiteness and imperfection. But God is infinitely perfect and is necessarily what He is. It is true that some attributes by which certain aspects of Divine perfection are described are hypothetical or relative, in the sense that they presuppose the contingent fact of creation: omnipresence, for example, presupposes the actual existence of spatial beings. But it is obvious that the mutability implied in this belongs to creatures, and not to the Creator; and it is a strange confusion of thought that has led some modern Theists -- even professing Christians -- to maintain that such attributes can be laid aside by God, and that the Logos in becoming incarnate

actually did lay them aside, or at least ceased from their active exercise. But as creation itself did not affect the immutability of God, so neither did the incarnation of a Divine Person; whatever change was involved in either case took place solely in the created nature.

D. THE DIVINE ATTRIBUTES

The so-called active Divine attributes are best treated in connection with the Divine Intellect and Will -- principles of Divine operation *ad extra* -- to which they are all ultimately reducible.

1. Divine Knowledge

Description of the Divine Knowledge

That God is omniscient or possesses the most perfect knowledge of all things, follows from His infinite perfection. In the first place He knows and comprehends Himself fully and adequately, and in the next place He knows all created objects and comprehends their finite and contingent mode of being. Hence He knows them individually or singularly in their finite multiplicity, knows everything possible as well as actual; knows what is bad as well as what is good. Everything, in a word, which to our finite minds signifies perfection and completeness of knowledge may be predicated of Divine omniscience, and it is further to be observed that it is on Himself alone that God depends for His knowledge. To make Him in any way dependent on creatures for knowledge of created objects would destroy His infinite perfection and supremacy. Hence it is in His eternal, unchangeable, comprehensive knowledge of Himself or of His own infinite being that God knows creatures and their acts, whether there is question of what is actual or merely possible. Indeed, Divine knowledge itself is really identical with Divine essence, as are all the attributes and acts of God; but according to our finite modes of thought we feel the need of conceiving them distinctly and of representing the Divine essence as the medium or mirror in which the Divine intellect sees all truth. Moreover, although the act of Divine knowledge is infinitely simple in itself, we feel the need of further distinctions -- not as regards the knowledge in itself, but as regards the multiplicity of finite objects which it embraces. Hence the universally recognized distinction between the knowledge of vision (*scientia visionis*) and that of simple intelligence (*simplicis intelligentiae*), and the famous controversy regarding the *scientia media*. We shall briefly explain this distinction and the chief difficulties involved in this controversy.

Distinctions in the Divine Knowledge

In classifying the objects of Divine omniscience the most obvious and fundamental distinction is between things that actually exist at any time, and those that are merely possible. And it is in reference to these two classes of objects that the distinction is made between knowledge "of vision" and "of simple intelligence"; the former referring to things actual, and the latter to the merely possible. This distinction might appear at first sight to be absolutely comprehensive and adequate to the purpose for which we introduce distinctions at all, but some difficulty is felt once the question is raised of God's knowledge of the acts of creatures endowed with free will. That God knows infallibly and from eternity what, for example, a certain man, in the exercise of free will, will do or actually does in any given circumstances, and what he might or would actually have done in different circumstances is beyond doubt -- being a corollary from the eternal actuality of Divine

knowledge. So to speak, God has not to wait on the contingent and temporal event of the man's free choice to know what the latter's action will be; He knows it from eternity. But the difficulty is: how, from our finite point of view, to interpret and explain the mysterious manner of God's knowledge of such events without at the same time sacrificing the free will of the creature.

The Dominican school has defended the view that the distinction between knowledge of "vision" and of "simple intelligence" is the only one we need or ought to employ in our effort to conceive and describe Divine omniscience, even in relation to the free acts of intelligent creatures. These acts, if they ever take place, are known or foreknown by God as if they were eternally actual -- and this is admitted by all; otherwise they remain in the category of the merely possible -- and this is what the Jesuit school denies, pointing for example to statements such as that of Christ regarding the people of Tyre and Sidon, who would have done penance had they received the same graces as the Jews (Matt., xi, 21). This school therefore maintains that to the actual as such and the purely possible we must add another category of objects: hypothetical facts that may never become actual, but would become actual were certain conditions realized. The hypothetical truth of such facts, it is rightly contended, is more than mere possibility, yet less than actuality; and since God knows such facts in their hypothetical character there is good reason for introducing a distinction to cover them -- and this is the *scientia media*. And it is clear that even acts that take place and as such fall finally under the knowledge of vision may be conceived as falling first under the knowledge of simple intelligence and then under the *scientia media*, the progressive formula would be:

- first, *it is possible* Peter would do so and so;
- second, Peter *would* do so and so, given certain conditions;
- third, Peter *will do* or *does* so and so.

Now, were it not for the differences that lie behind there would probably be no objection raised to *scientia media*, but the distinction itself is only the prelude to the real problem. Admitting that God knows from eternity the future free acts of creatures the question is how or in what way He knows them or rather how we are to conceive and explain by analogy the manner of the divine foreknowledge, which in itself is beyond our powers of comprehension? It is admitted that God knows them first as objects of the knowledge of simple intelligence; but does he know them also as objects of the *scientia media*, i.e. hypothetically and independently of any decree of His will, determining their actuality, or does He know them only in and through such decrees? The Dominican contention is that God's knowledge of future free acts depends on the decrees of His free will which predetermine their actuality by means of the *praemotio physica*. God knows, for example, that Peter will do so and so, because He has decreed from eternity so to move Peter's free will that the latter will infallibly, although freely, cooperate with, or consent to, the Divine premotion. In the case of good acts there is a physical and intrinsic connection between the motion given by God and the consent of Peter's will, while as regards morally bad acts, the immorality as such -- which is a privation and not a positive entity -- comes entirely from the created will.

The principal difficulties against this view are that in the first place it seems to do away with human free will, and in the next place to make God responsible for sin. Both consequences of course are denied by those who uphold it, but, making all due allowance for the mystery which shrouds

the subject, it is difficult to see how the denial of free will is not logically involved in the theory of the *praemotio physica*, how the will can be said to consent freely to a motion which is conceived as predetermining consent; such explanations as are offered merely amount to the assertion that, after all, the human will is free. The other difficulty consists in the twofold fact that God is represented as giving the *praemotio physica* in the natural order for the act of will by which the sinner embraces evil, and that He withholds the supernatural *praemotio* or efficacious grace which is essentially required for the performance of a salutary act. The Jesuit school, on the other hand -- with whom probably a majority of independent theologians agree -- using the *scientia media* maintains that we ought to conceive God's knowledge of future free acts not as being dependent and consequent upon decrees of His will, but in its character as hypothetical knowledge or being antecedent to them. God knows in the *scientia media* what Peter would do if in given circumstances he were to receive a certain aid, and this before any absolute decree to give that aid is supposed. Thus there is no predetermination by the Divine of what the human will freely chooses; it is not because God foreknows (having foredecreed) a certain free act that that act takes place, but God foreknows it in the first instance because as a matter of fact it is going to take place; He knows it as a hypothetical objective fact before it becomes an object of the *scientia visionis* -- or rather this is how, in order to safeguard human liberty, we must conceive Him as knowing it. It was thus, for example, that Christ knew what would have been the results of His ministry among the people of Tyre and Sidon. But one must be careful to avoid implying that God's knowledge is in any way dependent on creatures, as if He had, so to speak, to await the actual event in time before knowing infallibly what a free creature may choose to do. From eternity He knows, but does not predetermine the creature's choice. And if it be asked how we can conceive this knowledge to exist antecedently to and independently of some act of the Divine will, on which all things contingent depend, we can only say that the objective truth expressed by the hypothetical facts in question is somehow reflected in the Divine Essence, which is the mirror of all truth, and that in knowing Himself God knows these things also. Whichever way we turn we are bound ultimately to encounter a mystery, and, when there is a question of choosing between a theory which refers the mystery to God Himself and one which only saves the truth of human freedom by making free-will itself a mystery, most theologians naturally prefer the former alternative.

2. The Divine Will

Description of the Divine Will

(a) The highest perfections of creatures are reducible to functions of intellect and will, and, as these perfections are realized analogically in God, we naturally pass from considering Divine knowledge or intelligence to the study of Divine volition. The object of intellect as such is the true; the object of will as such, the good. In the case of God it is evident that His own infinite goodness is the primary and necessary object of His will, created goodness being but a secondary and contingent object. This is what the inspired writer means when he says: "The Lord hath made all things for himself" (Prov., xvi, 4). The Divine will of course, like the Divine intellect, is really identical with the Divine Essence but according to our finite modes of thought we are obliged to

speak of them as if they were distinct and, just as the Divine intellect cannot be dependent on created objects for its knowledge of them, neither can the Divine will be so dependent for its volition. Had no creature ever been created, God would have been the same self-sufficient being that He is, the Divine will as an appetitive faculty being satisfied with the infinite goodness of the Divine Essence itself. This is what the Vatican Council means by speaking of God as "most happy in and by Himself" -- not that He does not truly wish and love the goodness of creatures, which is a participation of His own, but that He has no need of creatures and is in no way dependent on them for His bliss.

(b) Hence it follows that God possesses the perfection of free will in an infinitely eminent degree. That is to say, without any change in Himself or in His eternal act of volition, He freely chooses whether or not creatures shall exist and what manner of existence shall be theirs, and this choice or determination is an exercise of that dominion which free will (liberty of indifference) essentially expresses. In itself free will is an absolute and positive perfection, and as such is most fully realized in God. Yet we are obliged to describe Divine liberty as we have done relatively to its effects in creation, and, by way of negation, we must exclude the imperfections associated with free will in creatures. These imperfections may be reduced to two:

- potentiality and mutability as opposed to immutable pure act, and
- the power of choosing what is evil.

Only the second need be noticed here.

(c) When a free creature chooses what is evil, he does not choose it formally as such, but only *sub specie boni*, i.e., what his will really embraces is some aspect of goodness which he truly or falsely believes to be discoverable in the evil act. Moral evil ultimately consists in choosing some such fancied good which is known more or less clearly to be opposed to the Supreme Good, and it is obvious that only a finite being can be capable of such a choice. God necessarily loves Himself, who is the Supreme Good, and cannot wish anything that would be opposed to Himself. Yet He permits the sins of creatures, and it has always been considered one of the gravest problems of theism to explain why this is so. We cannot enter on the Problem here, but must content ourselves with a few brief observations.

- First, however difficult or even mysterious, may be the problem of moral evil for the theist, it is many times more difficult for every kind of anti-theist.
- Secondly, so far as we can judge the possibility of moral defection seems to be a natural limitation of created free will, and can only be excluded supernaturally, and, even viewing the question from a purely rational standpoint, we are conscious on the whole that, whatever the final solution may be, it is better that God should have created free beings capable of sinning than that He should not have created free beings at all. Few men would resign the faculty of free will just to escape the danger of abusing it.
- Thirdly, some final solution, not at present apparent to our limited intelligence, may be expected on merely rational grounds from the infinite wisdom and justice of God, and supernatural revelation, which gives us glimpses of the Divine plan, goes a long way towards supplying a complete answer to the questions that most intimately concern us. The clearly perceived truth to be emphasized here is that sin is hateful to God and essentially opposed to His infinite holiness, and that the wilful

discord which sin introduces into the harmony of the universe will somehow be set right in the end.

There is no need to delay in discussing mere physical as distinct from moral evil, and it is enough to remark that such evil is not merely permitted, but willed by God, not indeed in its character as evil, but as being, in such a universe as the present, a means towards good and in itself relatively good.

Distinctions in the Divine Will

As distinctions are made in the Divine knowledge, so also in the Divine will, and one of these latter is of sufficient importance to deserve a passing notice here. This is the distinction between the *antecedent* and *consequent* will, and its principal application is to the question of man's salvation. God, according to St. Paul (I Tim., ii, 4), "wills that all men be saved", and this is explained to be an antecedent will; that is to say, abstracting from circumstances and conditions which may interfere with the fulfilment of God's will (e.g., sin on man's part, natural order in the universe, etc.), He has a sincere wish that all men should attain supernatural salvation, and this will is so far efficacious that He provides and intends the necessary means of salvation for all -- sufficient actual graces for those who are capable of cooperating with them and the Sacrament of Baptism for infants. On the other hand, the consequent will takes account of those circumstances and conditions and has reference to what God wills and executes in consequence of them. It is thus, for example, that He condemns the wicked to punishment after death and excludes unbaptized infants from the beatific vision.

3. Intellect and Will (Providence, Predestination, and Reprobation)

Several attributes and several aspects of Divine activity partake both of an intellectual and a volitional character and must be treated from the combined point of view. Such are omnipotence, holiness, justice, blessedness, and so forth, but it is unnecessary to delay on such attributes which are self-explanatory. Some notice, on the other hand, must be devoted to *providence* and to the particular aspects of providence which we call *predestination* and *reprobation*; and with a brief treatment of these which are elsewhere fully treated this article will be concluded.

Providence

Providence may be defined as the scheme in the Divine mind by which all things treated are ordered and guided efficiently to a common end or purpose (*ratio perductionis rerum in finem in mente divina existens*). It includes an act of intellect and an act of will, in other words knowledge and power. And that there is such a thing as Divine Providence by which the entire universe is ruled clearly follows from the fact that God is the author of all things and that order and purpose must characterize the action of an intelligent creator. Nor is any truth more insistently proclaimed in revelation. What the author of Wisdom (xiv, 3) says of a particular thing is applicable to the universe as a whole: "But your providence, O Father, governs it", and no more beautiful illustration of the same truth has ever been given than that given by Christ Himself when He instances God's care for the birds of the air and the lilies of the field (Matt., vi, 25 sq.). But to rational creatures God's providential care is extended in a very special way, yet not so as to do away with the utility and efficacy of prayer, whether for temporal or spiritual favours (Matt., vii, 8), nor to disturb or override

the efficiency of secondary causes. It is in and through secondary causes that providence ordinarily works, and no miracle, as a rule, is to be expected in answer to prayer

Predestination and reprobation

Predestination and reprobation are those special parts of Divine Providence which deal specially with man's salvation or damnation in the present supernatural order. Predestination is the foreknowledge on the part of God of those who will *de facto* be saved and the preparation and bestowal of the means by which salvation is obtained, while reprobation is the foreknowledge of those who will *de facto* be damned and the permission of this eventuality by God. In both cases an act of the intellect (infallible foreknowledge), and an act of the will are supposed; but whereas in predestination the antecedent and consequent will is the same, in reprobation God wills consequently what He does not antecedently will at all but only permits, namely, the eternal punishment of the sinner.

Many controversies have arisen on the subject of predestination and reprobation, into which we cannot enter here. But we shall briefly summarize the leading points on which Catholic theologians have agreed and the points on which they differ.

First, that predestination exists, i.e. that God knows from eternity with infallible certainty who will be saved and that He wills from eternity to give them the graces by which salvation will be secured, is obvious from reason and is taught by Christ Himself (John, x, 27), and by St. Paul (Rom., viii, 29, 30).

Second, while God has this infallible foreknowledge, we on our part cannot have an absolutely certain assurance that we are among the number of the predestined -- unless indeed by means of a special Divine revelation such as we know from experience is rarely, if ever, given. This follows from the Tridentine condemnation of the teaching of the Reformers that we could and ought to believe with the certainty of faith in our own justification and election (Sess. VI, cap. ix, can. xiii-xv).

Third, the principal controverted point regarding predestination between Catholic theologians is concerned with its gratuity, and in order to understand the controversy it is necessary to distinguish between predestination *in intention*, i.e. as it is a mere act of knowledge and of purpose in the Divine mind, and *in execution*, i.e. as it means the actual bestowal of grace and of glory; and also between predestination in the adequate sense, as referring both to grace and to glory, and in the *inadequate* sense, as referring particularly to one's destination to glory, and abstracting from the grace by which glory is obtained. Now,

- speaking of predestination in execution, all Catholic theologians maintain in opposition to Calvinists that it is not entirely gratuitous, but in the case of adults depends partly on the free mercy of God and partly on human cooperation; the actual bestowal of glory is at least partly a reward of true merit.
- Speaking of predestination in intention and in the adequate sense, Catholic theologians agree that it is gratuitous; so understood it includes the first grace which cannot be merited by man.
- But if we speak of predestination in intention and in the inadequate sense, i.e. to glory in abstraction from grace, there is no longer unanimity of opinion. Most Thomists and several other theologians

maintain that predestination in this sense is gratuitous, i.e. God first destines a man to glory antecedently to any foreseen merits, and consequently upon this decrees to give the efficacious grace by which it is obtained. Predestination to grace is the result of an entirely gratuitous predestination to glory, and with this is combined for those not included in the decree of election what is known as a negative reprobation. Other theologians maintain on the contrary that there is no such thing as negative reprobation, and that predestination to glory is not gratuitous but dependent on foreseen merits. The order of dependence, according to these theologians, is the same in predestination in intention as it is in predestination in execution, and as already stated, the bestowal of glory only follows upon actual merit in the case of adults. These have been the two prevailing opinions followed for the most part in the schools, but a third opinion, which is a somewhat subtle *via media*, has been put forward by certain other theologians and defended with great skill by such an authority as Billot. The gist of this view is that while negative reprobation must be rejected, gratuitous election to glory *ante praevisa merita* must be retained, and an effort is made to prove that these two may be logically separated, a possibility overlooked by the advocates of the first two opinions. Without entering into details here, it is enough to observe that the success of this subtle expedient is very questionable.

Fourth, as regards reprobation,

- all Catholic theologians are agreed that God foresees from eternity and permits the final defection of some, but that the decree of His will destining them to eternal damnation is not antecedent to but consequent upon foreknowledge of their sin and their death in the state of sin. The first part of this proposition is a simple corollary from Divine omniscience and supremacy, and the second part is directed against Calvinistic and Jansenistic teaching, according to which God expressly created some for the purpose of punishing them, or at least that subsequently to the fall of Adam, He leaves them in the state of damnation for the sake of exhibiting His wrath. Catholic teaching on this point reechoes II Peter, iii, 9, according to which God does not wish that any should perish but that all should return to penance, and it is the teaching implied in Christ's own description of the sentence that is to be pronounced on the damned, condemnation being grounded not on the antecedent will of God, but on the actual demerits of men themselves (e.g. Matt., xxv, 41).
- So-called negative reprobation, which is commonly defended by those who maintain election to glory antecedently to foreseen merits, means that simultaneously with the predestination of the elect God either positively excludes the damned from the decree of election to glory or at least fails to include them in it, without, however, destining them to positive punishment except consequently on their foreseen demerits. It is this last qualification that distinguishes the doctrine of negative reprobation from Calvinistic and Jansenistic teaching, leaving room, for instance, for a condition of perfect natural happiness for those dying with only original sin on their souls. But, notwithstanding this difference, the doctrine ought to be rejected, for it is opposed very plainly to the teaching of St. Paul regarding the universality of God's will to save all (I Tim., ii, 4), and from a rational point of view it is difficult to reconcile with a worthy concept of Divine justice.

Relation of God to the Universe

Relation of God to the Universe

1. Essential Dependence of the Universe on God (Creation and Conservation)

In developing the argument of the First Cause we have seen that the world is essentially dependent on God, and this dependence implies in the first place that God is the Creator of the world -- the producer of its whole being or substance -- and in the next place, supposing its production, that its continuance in being at every moment is due to His sustaining power. Creation (q.v.) means *the total production of a being out of nothing*, i.e. the bringing of a being into existence to replace absolute nonexistence, and the relation of Creator is the only conceivable relation in which the Infinite can stand to the finite. Pantheistic theories, which would represent the varieties of being in the universe as so many determinations or emanations or phases of one and the selfsame eternal reality -- Substance according to Spinoza, Pure Ego according to Fichte, the Absolute according to Schelling, the Pure Idea or Logical Concept according to Hegel -- simply bristle with contradictions, and involve, as has been stated already, a denial of the distinction between the finite and the infinite. And the relation of Creator to created remains the same even though the possibility of eternal creation be admitted; the Infinite must be the producer of the finite even though it be impossible to fix a time at which production may not already have taken place. For certain knowledge of the fact that created being, and time itself, had a definite beginning in the past we can afford to rely on revelation, although, as already stated, science suggests the same fact.

It is also clear that if the universe depends on God for its production, it must also depend on Him for its conservation or continuance in being; and this truth will perhaps be best presented by explaining the much talked-of principle of Divine *immanence* as corrected and counterbalanced by the equally important principle of Divine *transcendence*.

2. Divine Immanence and Transcendence

To Deists is attributed the view -- or at least a tendency towards the view -- that God, having created the universe, leaves it to pursue its own course according to fixed laws, and ceases, so to speak, to take any further interest in, or responsibility for what may happen; and Divine immanence is urged, sometimes too strongly, in opposition to this view. God is immanent, or intimately present, in the universe because His power is required at every moment to sustain creatures in being and to concur with them in their activities. Conservation and concursus are so to speak, continuations of creative activity, and imply an equally intimate relation of God towards creatures, or rather an equally intimate and unceasing dependence of creatures on God. Whatever creatures are, they are by virtue of God's conserving power; whatever they do, they do by virtue of God's concursus. It is not, of course, denied that creatures are true causes and produce real effects; but they are only secondary causes, their efficiency is always dependent and derived; God as the First Cause is an ever active cooperator in their actions. This is true even of the free acts of an intelligent creature like man; only it should be added in this case that Divine responsibility ceases at the point where sin or moral evil enters in. Since sin as such, however, is an imperfection, no limitation is thus imposed on God's supremacy.

But lest insistence on Divine immanence should degenerate into Pantheism -- and there is a tendency in this direction on the part of many modern writers -- it is important at the same time to

emphasize the truth of God's transcendence, to recall, in other words, what has been stated several times already, that God is one simple and infinitely perfect personal Being whose nature and action in their proper character as Divine infinitely transcend all possible modes of the finite, and cannot, without contradiction, be formally identified with these.

3. Possibility of the Supernatural

From a study of nature we have inferred the existence of God and deduced certain fundamental truths regarding His nature and attributes, and His relation to the created universe. And from these it is easy to deduce a further important truth, with a brief mention of which we may fittingly conclude this section. However wonderful we may consider the universe to be, we recognize that neither in its substance nor in the laws by which its order is maintained, in so far as unaided reason can come to know them, does it exhaust God's infinite power or perfectly reveal His nature. If then it be suggested that, to supplement what philosophy teaches of Himself and His purposes, God may be willing to favour rational creatures with an immediate personal revelation, in which He aids the natural powers of reason by confirming what they already know, and by imparting to them much that they could not otherwise know, it will be seen at once that this suggestion contains no impossibility. All that is required to realize it is that God should be able to communicate directly with the created mind, and that men should be able to recognize with sufficient certainty that the communication is really Divine -- and that both of these conditions are capable of being fulfilled no Theist can logically deny (see REVELATION; MIRACLES). This being so It will follow further that knowledge so obtained, being guaranteed by the authority of Him who is infinite Truth, is the most certain and reliable knowledge we can possess.

P.J. TONER

St. Godard

St. Godard

(Also spelled GOTHARD, GODEHARD).

Bishop of Hildesheim in Lower Saxony; born about the year 960, in a village of Upper Bavaria, near the Abbey of Altaich, in the Diocese of Passau; Nassau; died on 4 May, 1038 canonized by Innocent II in 1131.

After a lengthy course of studies he received the Benedictine habit in 991. Having entered the Abbey of Altaich, his learning and sanctity speedily procured his elevation to the dignity of prior, and afterwards that of abbot, in the discharge of which sacred duties Godard went far towards enforcing rigorous observance of rule among those placed under his care. His special fitness in this department led to his being chosen to effect the work of reform in the Abbeys of Hersfeld, in Hesse; Tegernsee, in the Diocese of Freising; and Kremsmunster, in the Diocese of Passau.

On the death of St. Bernard, Bishop of Hildesheim (1021), Godard was chosen to succeed him; but his modesty yielded only to the urgent admonitions of Emperor St. Henry II. His zeal and prudence kept up the high tradition of Godard's cloistered activity. The monastic observance was

established, as far as possible, in his cathedral chapter. He built schools for the education of youth in which he always manifested an active interest; maintained a rigorous personal surveillance over his seminary; and fostered a strict observance of the liturgy whilst attending to the building and upkeep of churches. He also exercised a paternal care for the material needs of his people. Many churches in Germany honour Godard as patron and several bear his name. His letters which have come down to us exhibit a lofty spiritual tone throughout. Godard was buried in his cathedral.

In 1132, the year following his canonization and the translation of his relics, the erection of a Benedictine monastery under the patronage of St. Godard, was begun, and two altars were dedicated to him in the cathedral church.

P.J. MACAULEY

Thomas Godden

Thomas Godden

(True name Tylden.)

Born at Addington, Kent, 1624; died in London, 1 Dec., 1688. His father, William Tylden, was able to provide a liberal education for his son and Thomas was sent first to a private school in Holburg, conducted by a Mr. Gill, and in his fifteenth year entered Queen's College, Oxford. The next year found him at St. John's College, Cambridge, and in 1640 he was made a Billingsley scholar. He proceeded B.A. in 1641, but the influence of John Sargeant, with whom he became acquainted during his college course, had induced him to enter the Catholic Church, and in 1642 the two set out for the English College at Lisbon. In due course Godden was ordained, and so distinguished himself by his scholarship and controversial ability that in 1650 we find him lecturing in philosophy in the college. He rapidly ascended the ladder of academic distinction, and after being successively professor of theology, prefect of studies, and vice-president, succeeded Dr. Clayton as president of the college in 1655. Five years later he was thought worthy of the degree of Doctor of Divinity, and had established so general a reputation for eloquence and piety that the Princess Catherine of Braganza, about to become the bride of Charles II, brought Godden to England with her, as her private chaplain. He was well received in his native country and enjoyed every evidence of royal favour.

The disturbances caused by Oates' plot, however, affected Godden very seriously. The perjured Miles Prance, upon being examined on the murder of Sir Edmund Barry Godfrey, swore that Godden and his servant Lawrence Hill had been concerned in the crime, and that Godfrey's corpse had been concealed for a time in Godden's apartments. Public indignation was running too high against everything Catholic to hope for a sober and impartial investigation, and Godden managed to escape to the Continent, and took refuge in Paris. His lodgings in Somerset House were searched and Hill, despite the testimony of witnesses who swore he was elsewhere at the time of the murder, was convicted and executed at Tyburn, 21 Feb., 1679. Later evidence, tending to show that Godden was in no way connected with Godfrey's death, altered public feeling, and in the reign of James II,

he returned to his former post as almoner to the queen dowager. From this time until his death he took a prominent part in the religious controversies in England, and in 1686, with Dr. Giffard, defended the doctrine of the Real Presence, before the king, against Dr. William Jane and Dr. Simon Patrick. He was buried under the royal chapel in Somerset House.

Godden's printed works are for the most part controversial and religious. They include: "Catholics no Idolaters; or a full refutation of Dr. Stillingfleet's Unjust Charge of Idolatry against the Church of Rome" (London, 1671); "A Just Discharge to Dr. Stillingfleet's Unjust Charge of Idolatry against the Church of Rome. With a discovery of the Vanity of his late Defence . . . By way of a dialogue between Eunomius, a Conformist and Catharinus, a non-Conformist" (Paris, 1677); "A Sermon of St. Peter, preached before the Queen Dowager . . . on 29 June, 1686" (London, 1686); "A Sermon on the Nativity of Our Lord, preached before the Queen Dowager . . . at Somerset House" (London, 1686). He also left a manuscript treatise on the Oath of Supremacy.

Gillow, *Bibl. Dict. Eng. Cath.*, II, 503; Paneani, *Memoirs*, p. 338; Wood, *Athenæ Ozon.*, IV, 93, 674; Luttrell, *Hist. Relations of State Affairs*, I, 391; *Cath. Mag.*, V, 621; VI, 59; *The Tablet*, 16 Feb., 1889, p. 257.

STANLEY J. QUINN

Antoine Godeau

Antoine Godeau

Bishop, poet and exegete; b. at Dreux in the diocese of Chartres, 1605; d. at Vence, 21 April, 1672. His facility in verse-writing early won the interest of a relative in Paris, M. Conrart, at whose house the elect of the literary world gathered to hear and discuss the productions of the young poet. The outcome of these meetings was the foundation of the French Academy, of which Godeau was one of the first members and the third whose lot it fell to deliver the weekly address to that body. He was induced to settle in Paris, where he soon became a favorite at the Hôtel Rambouillet, rivalling in the fecundity and ingenuity of his verse the most famous writers of his period. At that time to say of any work *c'est de Godeau* was to stamp it with the seal of approval. Perhaps best known among the works of his early days is his "Discours sur les oeuvres de Malherbe" (1629), which shows some critical power and is valuable for the history of the French prose of the seventeenth century. After some time Godeau forsook the company of gallants and the pursuit of literature for its own sake to devote himself to the service of God, and in 1636 was named Bishop of Grasse by Richelieu, to whom he had dedicated his first religious composition, a poetical paraphrase of the Psalm "Benedicite omnia opera Domini". He proved a model prelate, irreproachable in life, zealous for the interests of his flock, and unwearied in upholding ecclesiastical discipline among his clergy, whom he assembled in synods and admonished in sermons and pastoral letters. By a Bull of Innocent X he was empowered to unite the Diocese of Grasse and Vence under his administration, but seeing the dissatisfaction of the clergy of the latter diocese, he relinquished the former and established himself at Vence.

But Godeau by no means gave up his public and literary interests. In 1645 and 1655 he took a prominent part in the General Assembly of the French Clergy, and under the regency of Anne of Austria was deputy from the Estates of Provence. He turned his talent for versification to religious uses, his best known productions being a metrical version of the Psalms, poems on St. Paul, the assumption, St. Eustace, Mary Magdalen, and one of 15,000 lines on the annals of the Church. The monotony and mechanical arrangement of the poems are relieved at intervals by passages remarkable for thought or expression, among others those lines embodied by Corneille in his "Polyeucte":--

Leur gloire tombe par terre,
Et comme elle a l'éclat du verre,
Elle en a la fragilité.

The Jesuit Father Vavasseur published, in 1647, a satire on Godeau, "Antonius Godellus, episcopus Grassensis, and elogii Aureliani scriptor idoneus idemque utrum poeta", the verdict of which was echoed by Boileau in a letter to Maucroix.

The fame of Godeau's poetical works, however, has been quite overshadowed by that of his historical and exegetical works. His "Eloges des Eveques qui dans tous les Evêques de l'Eglise ont fleuri en doctrine et en piété" (Paris, 1665) was republished in 1802 by M. Sauffret. His "Histoire de l'église depuis la naissance de Jésus Christ, jusqu' à la fin du siècle" (Paris, 1633) was translated into Italian by Speroni and into German by Hyper and Groote (Augsburg, 1768-96), and is still cited. Of this work Alzog says that "although written in an attractive and popular style, it is lacking in solid worth and original research" (Manual of Universal History, I, Dublin, 1900, 33). It is related that during the publication of this work the author chanced one day in a library to engage in conversation with the Oratorian, Pè Le Cointe, who, ignorant of Godeau's identity, indicated some grave defects in the volumes which had already appeared, criticisms of which the author availed himself in correcting the work for a new edition. The same Père Le Cointe, later a stanch friend of Godeau's, while conceding to the complete work many excellencies, calls attention to its frequent inaccuracies and lac of critical balance. Minor writings of Godeau's include "Vie de M. de Cordes, conseiller au Châtelet" (1645) and "Eloges historiques des empereurs" (1667).

Among Godeau's works of a religious character are: "Prières, méditations" (Paris, 1643); "Avis à M. de Paris pour le culte du Saint-Sacrement dans les paroisses et de la façon de le porter aux malades" (1644); "Instructions et ordonnances synodales" (1644); "Vie de Saint Paul Apôtre" (1647); "La vie de saint Augustin" (1652); "La panégyrique de saint Augustin" (1653); "La vie de saint Charles Borromée" (1657); "L'Eloge de saint François de Sales" (1663). His chief title to fame, however, rests on his work in Holy Scripture. His paraphrases of the following books: Romans (Paris, 1635); Corinthians, Galatians, and Ephesians (1632); Thessalonians, Timothy, Titus, and Philemon (1641); Hebrews (1637); the Canonical Epistles (1640), are still recommended and useful, the sense and connexion of ideas being brought out clearly by the insertion of the fewest possible words (Simon in "Hist. Critique des principaux commentateurs du N.T.", c. lvii). His "Version expliquée du nouveau Testament" (1668) is something between a literal translation and a paraphrase. The greatest of all his works, according to Nicéron, is "La morale chrétienne pour l'instruction des

Curez et des Prêtres du diocèse de Vence" (Paris, 1709), intended to combat the Casuists, a model of force, clearness, and revealing a precision rarely to be found in the other writings of the same author. In the Latin translation which appeared at Augsburg in 1774 under the title "Theologia moralis ex purissimis s. Scripturæ, patrum ac conciliorum fontibus derivata, notis theologicis illustrata" the arrangement of the matter is greatly improved.

Although opinions vary as to the importance of Bishop Godeau among his contemporaries, it would seem that too much stress is laid on his achievements as a poet which are not at all commensurate in value with his work as a prelate and an exegete. He was stricken with apoplexy and died in his episcopal city at the age of sixty-seven.

Vie de Godeau in Godeau, *Eloges Eveques* (Metz, 1802); Speroni Degli alvarotti, *Vita de A. Godeau, vescovo di Vence* (Venice, 1761); Simon, *Histoire critique du Nouveau Testament* (1693); Dupin, *Bibl. Dis auteurs ecclésiastiques du XVIIe siècle* (1719); Nicéron, *Mémoires pour servir à l'histoire* (Paris, 1743), 1295, 314, 896; Racine, *Abrégé de l'histoire eccl.* (1748-56), XIII; Schrödl in *Kirchenlex.*, s.v.

F.M. RUDGE

St. Godeberta

St. Godeberta

Born about the year 640, at Boves, a few leagues from Amiens, in France; died about the beginning of the eighth century, at Noyon (Oise), the ancient Noviomagus. She was very carefully educated, her parents being of noble rank and attached to the court of King Clovis II. When the question of her marriage was being discussed in presence of the king, the saintly Bishop of Noyon, Eligius, as if by inspiration, presented Godeberta with a golden ring and expressed the hope that she might devote her life to the service of God. Godeberta, moved by the Holy Spirit and feeling her heart suddenly filled with Divine love, turned away from the bright prospects before her and refused the advantageous offers that had been made by her noble suitors. She declared her willingness to be the spouse of Christ and asked the holy prelate to allow her to assume the veil. In a short time all opposition to her wishes disappeared and she entered on her new life under the guidance of St. Eligius. The King of the Franks was impressed by her conduct and her zeal that he made her a present of the small palace which he had at Noyon, together with a little chapel dedicated to St. George. Godeberta's example inspired a number of young women to follow in the same path, and she founded in her new home a convent, of which she became the superioress. Here she passed the remainder of her life in prayer and solitude, save when the call of charity or religion brought her forth among the people, many of whom were still sunk in the vices of paganism. She was remarkable in particular for the constant penances and fasts to which she subjected herself. She had a wonderful faith in the efficacy of that ancient practice of the early Christians--the sign of the cross, and it is recorded, that on one occasion, in 676, during the episcopacy of St. Mommelinus, when the town was threatened with total destruction by fire, she made the sign of the cross over the flames, and

the conflagration was forthwith extinguished. The exact year of her death is unknown, but it is said to have occurred on 11 June, on which day her feast is marked in the Proprium of Beauvais. In Noyon, however, by virtue of an indult, dated 2 April, 1857, it is kept on the fifth Sunday after Easter. The body of the saint was interred in the church of St. George, which was afterwards called by her name.

In 1168 Godeberta's body was solemnly translated from the ruined church where it had rested for over 450 years by Bishop Baudoin to the cathedral of Noyon. Providentially her relics have escaped the ravages of time and fire, and the malice of the irreligious. At the period of the Revolution a pious townsman secretly buried them near the cathedral. When the storm had passed they were recovered from their hiding place and their authenticity being canonically established they were replaced in the church. A bell is still preserved which tradition avers to have been the one actually used by Godeberta in her convent. It is certainly very ancient and there seems no good reason, in particular from an archaeological point of view, for doubting the trustworthiness of the legend. In the treasury of the cathedral likewise may be seen a gold ring, said to have been that presented by St. Eligius to the saint. Mention is made in a record of the year 1167 of this relic having been then in the possession of the church of Noyon.

Unfortunately the most ancient documents we have giving details of Godeberta's life do not, in all probability, date back beyond the eleventh century, as the oldest "Vita", which, in truth, is rather a panegyric for her feast than a biography, is believed to have been composed by Radbodus, who became Bishop of Noyon in 1067. In those days, too, the aim of such writers was the edification rather than the instruction of the faithful, so we find in this life the usual wonders related in such pious works of that period with but few historic facts. It is certain, however, that St. Godeberta was looked upon as a protector in the time of plagues and catastrophes and we have every reason to hold that this practice was justified by the results that followed her solemn invocation. In 1866 a violent outbreak of typhoid fever occurred in Noyon, decimating the town. On 23 May in that year, one of the leading citizens, whose child had just been stricken down, approached the cure of the church and recalling the favours that had been granted in ages past to the clients of the saint, earnestly asked that the shrine containing her relics should be exposed and a novena of intercession begun. This was done the following day, and forthwith the scourge ceased; it was officially certified that not another case of typhoid occurred. In thanksgiving a solemn procession took place under the guidance of the bishop, Mgr Gignoux, a few weeks later, the relics of St. Godeberta being carried triumphantly through the town. A beautiful statue of the saint, the cathedral of Noyon, which was blessed by the bishop on 25 February, 1867, perpetuated the memory of this wonderful event.

A.A. MACERLEAN

St. Godelina

St. Godelina

(GODELINA.)

Born at Hondeforte-lez-Boulogne, c. 1049; died at Ghistelles, 6 July, 1070. The youngest of the three children born to Hemfrid, seigneur of Wierre-Effroy, and his wife Ogina, Godelina was accustomed as a child to exercises of piety and was soon distinguished for a solidity of virtue extraordinary for one of her years. The poor flocked from all sides to the young girl, whose desires to satisfy their necessities often involved her in difficulties with her father's steward and even with her pious father himself. By her eighteenth year the fame of her beauty and admirable qualities had spread far and wide through Artois and even into Flanders, and many suitors presented themselves; but, the decision being left with Godelina, she persisted in the resolution she had made of renouncing the world for the cloister. One of the young noblemen, Bertolf of Ghistelles, determined to leave nothing undone, invoked the influence of her father's suzerain, Eustache II, Count of Boulogne, whose representations proved successful. After the wedding Bertolf and his bride set out for Ghistelles, where, however, Godelina found a bitter and unrelenting enemy in Bertolf's mother, who induced her son to forsake his wife on the very day of their arrival, and immured Godelina in a narrow cell, with barely enough nourishment to support life. Even this, however, the saint contrived to share with the poor. Under the influence of his mother, Bertolf spread abroad foul calumnies about his bride. After some time Godelina managed to escape to the home of her father, who roused the Bishop of Tournai and Soissons and the Count of Flanders to threaten Bertolf with the terrors of Church and State. Seemingly repentant, he promised to restore his wife to her rightful position, but her return to Ghistelles was the signal for a renewal of persecution in an aggravated form. After about a year Bertolf, again feigning sorrow, easily effected a reconciliation, but only to avoid the suspicion of the crime he was mediating. During his absence two of his servants at his direction strangled Godelina causing it to appear that she had died a natural death. Bertolf soon contracted a second marriage, but the daughter born to him was blind from birth. Her miraculous recovery of sight through the intercession of St. Godelina so affected her father that, now truly converted he journeyed to Rome to obtain absolution for his crime, undertook a pilgrimage to the Holy Land, and finally entered the monastery of St-Winoc at Bergues, where he expiated his sins by a life of severe penance. At his desire his daughter erected at Ghistelles a Benedictine monastery dedicated to St. Godelina, which she entered as a religious. Devotion to St. Godelina dates from 1084, when her body was exhumed by the Bishop of Tournai and Noyon, and her relics, recognized at various times by ecclesiastical authority, are to be found in various cities of Belgium.

F.M. RUDGE

Paul Godet Des Marais

Paul Godet des Marais

Bishop of Chartres, France; b. at Talcy, near Blois, 1647; d. at Chartres, 1709. He studied at Saint-Sulpice, took the doctorate of theology at the Sorbonne, was ordained, and became (1677) superior of the "Séminaire des Trente-Trois". Louis XIV nominated him (1690) to the see of Chartres, but owing to difficulties between France and the Holy see the papal confirmation came

only on 21 Jan., 1692. As spiritual director of Mme de Maintenon for whom he wrote "Lettres de direction", Godet used his influence to have Mme Guyon removed from Saint-Cyr. A staunch opponent of Quietism, he signed with Noailles and Bossuet the famous "Declaratio" condemning Fénelon's "Maximes des saints" (1697), and wrote (1698) several *ordonnances*, or pastoral letters, against the pseudo-mystical theories of Molinos, Fénelon, and Mme Guyon. He also did much to destroy Jansenism in France, refuted the *cas de conscience* (1703), commanded obedience to the papal constitution of Clement XI (1705), and severely censured Juénin's "Institutions théologiques" (1708). His zeal and charity as well as his orthodoxy, were set forth in an epitaph written by his successor, Monstiers de Mérinville.

J.F. SOLLIER

Godfrey of Bouillon

Godfrey of Bouillon

Duke of Lower Lorraine and first King of Jerusalem, son of Eustache II, Count of Boulogne, and of Ida, daughter of Godfrey the Bearded, Duke of Lower Lorraine; b. probably at Boulogne-sur-Mer, 1060; d. at Jerusalem, 18 July, 1100 (according to a thirteenth-century chronicler, he was born at Baisy, in Brabant; see Haigneré, *Mémoires lus à la Sorbonne*, Paris, 1868, 213). The history of his early years has been distorted by legend, according to which he slew with his own hand the anti-king Rodolphe at the battle of Moelsen (1080), and was first to enter Rome after it had been besieged by Henry IV (1084). What appears certain is that he was chosen to succeed his uncle Godfrey the Hunchback, Duke of Lower Lorraine, who was assassinated in 1076. But Henry IV took Lorraine, leaving to Godfrey only the marquessate of Antwerp. As a vassal of the German Empire Godfrey took sides with the army of Henry IV in the War of the Investitures and followed the emperor on his expedition to Italy against Gregory VII (1080-1084). In the interval he was compelled to return in order to defend his possessions which had been attacked by the Count of Namur, and about 1089 Henry IV restored to him the legacy of Godfrey the Hunchback by creating him Duke of Lower Lorraine. The new duke's authority was extremely weak when opposed to the feudal power which had developed in the vicinity. At this time the whole north of France was aroused by the letter of Urban II, who besought the nobility of Flanders to go on the Crusade. Godfrey was among the first to take the cross, together with his two brothers, Eustache and Baldwin (1096). To procure resources he sold or pledged many of his estates. Many nobles at once arrayed themselves under his banner, and about 15 August, 1096, he departed at the head of 10,000 knights and 30,000 foot soldiers. His army was composed of Walloons and Flemings. "Born at the frontier of the two nations and himself speaking both languages", he served as the link between them, and by his authority appeased the quarrels provoked by their national self-esteem (Otto of Freisingen, *Mon. Germ. Hist.: Script.*, XX, 250).

The crusaders reached the valley of the Danube and in September, 1096, arrived at Tollenburch (Tulin, west of Vienna), on the frontier of Hungary, where they learned of the disaster that had

befallen the followers of Peter the Hermit. Before entering Hungary Godfrey negotiated with King Coloman for a free passage through his dominions. He himself met the king, who welcomed him warmly, but took Godfrey's brother Baldwin as a hostage, together with his wife. During the march through Hungary (October, 1096) the strictest disciplines prevailed among the crusaders, to whom the inhabitants furnished provisions in abundance. After crossing the Save, the army entered the territory of the Byzantine Empire. At Belgrade Godfrey received a letter from the Emperor Alexius I (Comnenus), promising him assistance if the crusaders would refrain from violence. At Nish and at Sterniz (Sofia), they found abundant provisions and presents from the emperor. After a halt of eight days at Philippopolis (26 Nov.-3 Dec.) the army approached Adrianople (8 December) and marched towards the Hellespont. Here occurred the first conflict between the crusaders and the imperial government. According to Albert of Aix, Godfrey, learning that the emperor held in captivity Hugues, a prince of France, demanded the latter's freedom, and on the emperor's refusal pillaged the neighborhood of Salabria (Selymbria). As a matter of fact, the French prince was not a prisoner, but Godfrey and his army arrived before Constantinople (23 Dec., 1096) in a hostile mood, and closely watched by the imperial troops. Warned against the emperor, Godfrey kept away from the imperial palace.

However, during the Christmas festivities, he consented to cross the Golden Horn, and went into camp at Pera (29 Dec.). The chief desire of Alexius was to prevent the junction of Godfrey's army with that of Bohemond, leader of the Normans of Italy; Alexius had hoped to induce Godfrey to swear fealty to him and then to remove his army to Asia. Throughout the winter Godfrey resisted the imperial demands. At last, 2 April, 1097 (the date given by Anna Comnena is preferable to 13 January given by Albert of Aix; see Chalandon, "Alexis Comnène", 179), on the approach of Bohemond, the emperor decided to act, and cut off the supplies of the crusaders. Several combats ensued, and, despite the contrary assertion of Albert of Aix, Godfrey must have been defeated. Anna Comnena states that he then consented to do homage to the emperor, promising to restore him any former imperial possessions which he might wrest from the infidels. Some days later the Lorraine army was conveyed to Pelekan on the Gulf of Nicomedia, and at the end of April all the leaders of the crusade were reunited. Godfrey appears to have acted as peacemaker, and he induced Raymond IV, of St-Gilles, Count of Toulouse, to swear fealty to the emperor. Far from directing the crusade, he appears to have taken an obscure part in the siege of Nicæa and the battle of Dorylæum (1 July, 1097).

During the crossing of Asia Minor he was seriously wounded while hunting. At the siege of Antioch he consented to obey the orders of Bohemond, and after the capture of the city he had to give up the castle which his followers had taken (July, 1098). On the way to Jerusalem, while others quarrelled, Godfrey marched towards Edessa, where his brother, Baldwin, had just established himself. He returned from this expedition in October, 1098, and before entering Antioch, with only twelve knights, put to flight one hundred and fifty Turks. According to the tradition repeated by Guibert de Nogent (*Gesta*, VII, 11), he had, with a stroke of the sword, hewn a Turkish horseman through the middle so that his body fell in two equal halves. Having returned to Antioch, he took

part, together with Robert Courte-Heuse, Duke of Normandy, in the council of arbitration assembled to reconcile Bohemond and Raymond of St-Gilles. After 23 November, 1098, a number of the crusaders left Antioch with Raymond, but Godfrey of Bouillon and Robert, Count of Flanders, began to march on Jerusalem only at the end of February, 1099. After besieging Gibelet they rejoined the main army before Arka (12 March), were at Tripoli (13 May), Beirut (19 May), Cæsarea (30 May), and reached Jerusalem on 7 June.

Godfrey and his army took an active part in the siege of the Holy City. His camp was pitched to the westward. On 15 July, 1099, about nine in the morning, Godfrey and his brother Eustache placed a movable tower against the walls and were the first to enter the city. During the ensuing massacre of Mussulmans, Godfrey, thinking only of his vow, stripped himself of his arms, and, barefooted and in his under-garments, made the rounds of the ramparts, and then went to pray at the Holy Sepulchre. The crusaders were soon intent on providing a new king for the conquest. Several bishops offered the crown to Raymond of St-Gilles, who refused, declaring "that the title of king seemed to him out of place in that city" (Raimond de Aguilers, *Histor. Occid. des Crois.*, III, 301). Robert Courte-Heuse being urged declined in like manner. All refused to accept the burden which the new royalty must prove. Finally, Godfrey, being unanimously elected, accepted "for the love of Christ" (22 July). According to the chronicles of those times, he refused to wear the crown "through respect for Him who had been crowned in that place with the Crown of Thorns". Indeed, he seems never to have borne the title of king (which only appears under his successor), and to have been content with that of *Duke* and *Advocate of the Holy Sepulchre*.

It may be that he acted in this manner through respect for the clergy, who regarded the new conquest as the property of all Christendom, and some of whom were averse to the election of a king (Raimond de Aguilers, *Hist. Occid. Crois.*, III, 295). Godfrey seems to have always considered himself the protector of the Church. Not only did he make so many donations that William of Tyre despairs of enumerating them, not only did he cede a fourth of Jaffa (Joppa), the city of Jerusalem, and the tower of David to the patriarch Daimbert, but he consented, as did Bohemond, to receive investiture from the patriarch (William of Tyre, *Historia*, IX, XV). Godfrey displayed great energy in meeting the many difficulties which threatened the new State, but he was destined to succumb to sickness. On 12 August, 1099, having rallied the crusading forces, he gained a victory at Ascalon, thus preserving Palestine from Egyptian invasion.

Assisted by the Pisans, he rebuilt the city of Jaffa, which became a port of arrival for crusaders. He signed a treaty of alliance with the Venetian fleet, agreeing to besiege Acre, but was attacked by the plague at Cæsarea, 10 June. After a short stay at the hospital which he had founded at Jaffa, he returned to Jerusalem, where he died on 18 July, having named his brother Baldwin as his successor. He was buried in the church of the Holy Sepulchre.

The tomb of Godfrey was destroyed in 1808, but at that time a large sword, said to have been his, was still shown. Legend soon laid claim to him; in the contemporary accounts of the First Crusade (*Gesta Francorum*, Raimond de Aguilers, Foucher de Chartres, Anna Comnena, etc.), he is portrayed as the perfect type of a Christian knight. Tall of stature, with pleasing countenance,

and with so courteous a manner "that he seemed more a monk than a knight" (Robert the Monk, *Hist. Occid. Crois.*, III, 731), in the hour of danger he showed admirable courage. As a zealous Christian, he was among the first to take the cross, accomplished his vow without the slightest deviation, and at great personal cost accepted the defence of the new conquest. Such is Godfrey as he appears in actual history. In the chronicle of Albert of Aix (d. 1120, edit. *Hist. Occid. Crois.*, IV), the author already exhibits a tendency to put the figure of Godfrey in the foreground and to attribute to him, to a certain extent, the direction of the crusade. Albert of Aix and Guibert de Nogent attribute to Godfrey exploits of an epic character (Guibert de Nogent, *Gesta*, VII, 11). When, in the thirteenth century, Jean d'Ibelin and Philip of Novara edited the "Assises" of Jerusalem, they referred to Godfrey as a law-making king, and attributed to him a code, the "Letters of the Holy Sepulchre", which never existed. Indeed, at that time, and perhaps as early as the twelfth century, Godfrey of Bouillon had become, like Roland and Arthur, a hero of the *chansons de geste*. The *trouvères* provided him with a mythical origin, making him a descendant of the legendary "King of the Swan", whose feats he is made to repeat, and, after relating the events of his childhood, continued his adventures to the taking of Jerusalem. Under Philip Augustus, Graindor of Douai reconstructed the works of a certain Richard the Pilgrim, and composed a complete history of this crusade: (1) "Elioxe", ed. Todd (Baltimore, 1889); (2) "Beatrix", ed. Hippeau (Paris, 1868); (3) "Antioche", ed. P. Paris (Paris, 1848); (4) "Jérusalem", ed. Hippeau (Paris, 1868); see L. Gautier, "Bibliographie des chansons de gestes" (Paris, 1897). In the fourteenth century, all these poems were collected under the title of "Roman du chevalier au Cygne" (ed. de Reiffenberg, Brussels, 1846-59).

LOUIS BRÉHIER
Godfrey of Fontaines

Godfrey of Fontaines

(GODEFRIDUS DE fontIBUS, DOCTOR VENERANDUS)

A scholastic philosopher and theologian; born near Liège within the first half of the thirteenth century, he became a canon of his native diocese, and also of Paris and Cologne, and was elected, in 1300, to the See of Tournai, which he declined. He taught theology at the University of Paris

during the last quarter of the century, was a Magister, or doctor, of theology and a member of the Sorbonne, to which he left a valuable collection of MSS. He is the author of a notable collection of disputations, "XIV Quodlibeta", which show him to have been not merely a distinguished theologian and philosopher, but also a canonist, jurist, moralist, and controversialist, who took an active part in the various ecclesiastical, doctrinal, and disciplinary disputes that stirred Paris at that period. In regard to the privileges of the mendicant orders, Godfrey opposed St. Thomas, but for the Angelic Doctor's teaching he professed a sincere admiration. The bold "innovations" of Thomism were just then on their trial; they were condemned by Tempier, Archbishop of Paris (1277), and opposed by Peckham and many others. Godfrey was a staunch supporter of Thomism, yet sufficiently original to differ in many things from the master's views, e.g., the principle of individuation, and the distinction between essence and existence in material things.

The "XIV Quodlibeta" of Godfrey, extensively studied and multiplied in MS. form in the medieval schools, are at present in course of being published for the first time. A critical edition of the first four of them has already appeared in the series "Les Philosophes Belges, Textes et Etudes" (II, "Les quatre premiers Quodlibets de Godefroid de Fontaines", by de Wulf and Pelzer, Louvain, 1904). The remaining Quodlibeta (V-XIV) will form vols. III and IV of the same series; vol. V is to contain studies on Godfrey by de Wulf, de Munnynck, and Van Roel.

DE WULF, *Etudes sur la vie les Oeuvres et l'influence de Godefroid de Fontaines* (Louvain and Paris, 1904); IDEM, *Histoire de la philosophie médiévale* (Louvain, 2nd ed., 1905); IDEM, *Histoire de la philosophie scolastique dans les Pays-Bas*, etc. (Louvain and Paris, 1895); TURNER, *History of Philosophy* (Boston, 1903).

P. COFFEY

Godfrey of Viterbo

Godfrey of Viterbo

German writer of the twelfth century. Nothing is known as to the place or date of his birth, but he received his education at Bamberg, whither he was taken by Lothair in 1133. At an early age he displayed great activity as one of the clergy at the court of Conrad III and later Frederick I, accompanying the latter on many of his campaigns, and frequently fulfilling for him diplomatic missions. As a reward for his services at Court, lands were bestowed on him in fief at Viterbo, probably in 1169. During his forty years as notary and chaplain to the Emperor Frederick, he displayed a multifarious activity at Court. Among the personages there he was particularly attracted towards the youthful Henry VI. He lived much in Italy, spending his last days at Viterbo. The year of his death has not been ascertained. In the politico-ecclesiastical conflicts of his time he sided with the emperor, without, however, declaring himself inimical to the pope. He blames Pope Alexander's predecessor, Hadrian, for the schism, inasmuch as the latter had allied himself with the Greeks and Normans against the emperor. His works were for the most part composed during journeys. About 1183 he compiled for the use of schools his "Speculum regum", a history of the

world beginning with the deluge, intended to reconcile the Romans with the Germans. His metrical account of the achievements of Frederick (*Gesta Friderici*), extending to 1181, is a separate work, which, though not free from confusion, contains some valuable information. His "*Memoria Sæculorum*" is a history of the world written partly in prose and partly in verse, and was completed in 1185. In the same year he began work on his "*Pantheon*", a history of the world which enjoyed an unmerited fame during the Middle Ages. The author, delighting as he does in fables, has gathered much material for the history of folk-lore. His works — some of them only in extracts — are to be found in the "*Monumenta Germaniæ historica: Scriptores*", XVII.

ULMANN, Gottfried von Viterbo, dissertation (Göttingen, 1863); WATTENBACH, *Deutschlands Geschichtsquellen im M. A.* (6th ed., Berlin, 1894), II, 290 sqq.

FRANZ KAMPERS

Godric

Godric

The name of two Abbots of Croyland.

Godric I (870-941)

He was the successor of the Abbot Theodore, who had been slain by the Danes. The heathen had sacked and destroyed the abbey, desecrating the shrines and driving out the monks. On their return they unanimously elected Godric abbot, in spite of his reluctance. Soon after his election, at the request of the prior of Ancarig, Godric went with his monks to clear away the ruins of Medehamsted Abbey (Peterborough), to bury the corpses of its abbot and eighty monks, whom the Danes had murdered, and to erect a memorial near their grave. Evil times fell on Croyland during his abbacy. Beorred, King of Mercia, under pretext of driving out the Danes, seized the lands and possessions of all the monasteries in his dominions, among which was Croyland. Beorred died in 874, and was succeeded by one of his servants, Ceowulf, who demanded a thousand pounds from the Abbey of Croyland, and reduced it to such poverty, that the monks were forced to sell nearly all their plate. So poor did the house become that none would join it, and, at Godric's death in 941, only five of its monks were left.

Godric II (1005-18)

Godric II was no less unfortunate than his namesake. King Ethelred the Redeless first exacted from it large sums of money, and in the fourth year of Godric's rule the Danish jarl, Turkil, arrived with a fleet, demanded a ransom, and ravaged the manors of the abbey. In 1013 the Danish king, Sweyn, devastated the neighbouring country. Croyland, which was luckily isolated by floods, became the refuge of monks, secular priests, and layfolk, whose support was a heavy burden on the resources of the abbey. Sweyn extorted two large ransoms within three months, while the king's officers threatened to complete its ruin because it supported the Danes. In despair Godric and his monks engaged as protector Leofwin, brother of Leofric, Earl of Leicester, who, in return for a

grant of lands, protected them till his death in 1017. The same year the accession of Cnut brought peace to England, and some relief to Croyland. Godric was buried in the chapter-house of his abbey.

LESLIE A. ST. L. TOKE

Marie Josephine Goetz

Marie Josephine Goetz

Second superior-general of the Society of the Sacred Heart, daughter of Joseph Goetz of Strasburg and Marie Anne Wagner; b. 7 March, 1817; d. 4 January, 1874; her parents dying early, her education was left to the care of an aunt who sent her to school at the Convent of the Sacred Heart, Besancon. At first her silent, observant, and distant attitude showed that she felt herself out of tune with her surroundings, but in the second year she threw herself into school life and carried all before her in lessons and play. At the age of seventeen she entered the novitiate of the Sacred Heart at Montet and took her first vows in 1837. In 1842 she was entrusted with the charge of the school at Besancon, which was going through a difficult phase. Her judicious management showed what might be expected of her in the future, and immediately after profession in 1847 she was appointed mistress of novices at Conflans. She continued in this charge, to which was afterwards added the government of the house as superior, until 1864, when she was named vicar-general. The failing strength of the foundress made it necessary for her to have some one at hand, to whom she could communicate her views for the future. She found a full understanding of them in Mother Josephine Goetz, who was elected superior-general in 1865 after the death of Blessed Madeleine Sophie Barat.

Mother Goetz governed as superior-general for nine years. Her work was principally one of consolidation and development of what had been established or projected by the foundress. She established a training school at Conflans to prepare the young religious for their duties as teachers, and entrusted to a small committee the revision and adaptation of the curriculum of studies to the growing needs of the order. During the Franco-Prussian war and the time of the siege and Commune in Paris, Reverend Mother Goetz was obliged to withdraw to Laval, that communications with her religious might not be cut off. She employed the enforced leisure of those months in collating and revising the summaries of decrees and decisions of the general congregations of the Society of the Sacred Heart. Reverend Mother Goetz made visitations of the houses then existing in Europe, as far as time and health permitted — but her strength rapidly failed and she died from a stroke of paralysis, after a few days' illness. The marking features of her personality were breadth of view and rapid intuition that appeared unerring as an instinct, directness of intention and strength of purpose which lay concealed under a timid exterior, but astonished by their force when circumstances

called for prompt decision and action — and a characteristic grace of humility which seemed to be her distinguishing supernatural gift.

J. STUART

Stephen Goffe

Stephen Goffe

(Or Gough)

Oratorian; b. 1605; d. at Paris, Christmas Day, 1681. He was the son of Stephen Goffe, Protestant rector of Stanmer in Sussex, and was educated at Merton College, Oxford, becoming M.A. in 1627. He took orders and became chaplain to Colonel Vere's regiment in the Low Countries. Subsequently the Earl of St. Alban's obtained his appointment as one of the chaplains to Charles I, in which capacity he was created D.D. in 1636. He was often employed in secret negotiations in France, Flanders, and Holland. During the Civil War he was arrested and charged with attempting to rescue the king, then a prisoner at Hampton Court. After the execution of the king (whose death-warrant was signed Stephen's brother William), he went to France, where he became a Catholic. Dodd and other Catholics have disproved the story that the Sorbonne admitted the validity of his Anglican orders. He became an Oratorian on 14 Jan., 1651, at Notre-Dame-des Vertues near Paris, where he became superior in 1655. Here he helped English exiles, both Protestants and Catholics, using his influence with Queen Henrietta Maria on their behalf; and on her appointment he acted as tutor to the young Duke of Monmouth. He was a learned man and maintained a correspondence with Vossius and other scholars. Some of his letters were printed by Colomesius in 1690, and others, still in manuscript, are in the British Museum (Addit. MS. 6394).

DODD, "Church History" (Brussels, 1737-41), III, 305; CLARENDON, "History of the Rebellion" (1702-04); LINGARD, "History of England" (London, 1849), VIII, 191; ESTCOURT, "Question of Anglican Orders Discussed" (London, 1973); GILLOW, "Bibl. Dict. Eng. Cath.", s.v.; COOPER in "Dict. Nat. Biog.", s.v. He also published in 1646 under the title "The Lord George Digby's Cabinet and Dr. Goff's negociations."

EDWIN BURTON

Leonard Goffine

Leonard Goffine

(Or GOFFINÉ).

Born at Cologne, or according to some, at Broich, 6 December, 1648; died 11 August, 1719. At the age of nineteen he entered the Norbertine Abbey of Steinfeld, in the Eifel district of Germany, and commenced his two years novitiate in July 1667. Having made his solemn profession on 16 July, 1667, he was sent for his course of philosophy and theology to the Norbertine college at Cologne. Ordained priest on Ember Saturday before Christmas, 1667, Goffine was sent to Dunwald

to assist the priests who were charged with the direction of the parish and the convent of the Norbertine canonesses. In the same capacity he was afterwards sent to Ellen, where there was also a convent of Norbertine nuns. Goffine remained four years in each of these places, being recalled by the abbot, 26 February, 1680, to fill the office of novice master in the abbey. He was next given charge of the parish of Clarholz, which was incorporated with the Norbertine abbey of the same name, in the diocese of Osnabrück, for owing to the dearth of priests due to the Lutheran heresy and the Thirty Year War, abbots and bishops were obliged to have recourse to other dioceses and religious orders to fill the vacancies.

Goffine remained at Clarholz five years (1680-85), and was sent thence to Niederehe, a priory which the Abbey of Steinfeld possessed in the Archdiocese of Trier. He remained in Niederehe but a very short time, being sent in 1685 to assist the clergy of St. Lambert's at Coesfeld, in the Diocese of Munster. He left Coesfeld in 1691, when, at the urgent request of the Archbishop of Trier, he undertook the charge of the parishes, first of Wehr (1691-94), then of Rheinbollen (1694-96), and afterwards of Oberstein on the Nahe, from December, 1696, until his death in 1719. While parish priest of Oberstein he had also to attend the Catholics living at Weiersbach, in the Diocese of Mayence. The inhabitants of Oberstein were mostly Protestants, and at times Goffine had much annoyance to bear from them. Animated with apostolic zeal, Goffine was all things to all men, and, as Dr. Joseph Prickartz, president of the Norbertine college at Cologne, wrote, in a sketch of his life, "Goffine was a truly apostolic pastor, filled with an untiring zeal for souls, who edified everyone by his word and by his example. The purity of his life, the integrity of his morals, the fervour of his sermons, the pleasing style of his writings, commanded the respect of even the enemies of his religion. From the rudest and most forward of these he had often to endure the bitterest insults, but at these he showed himself the more cheerful, since by them he became the more conformable to those who had the happiness to suffer insults for the name of Jesus". This is a character sketch of the saintly priest, not only during the twenty-three years he worked at Oberstein, but even from the day of his ordination to the priesthood.

In the month of July, 1719, he returned to the Abbey of Steinfeld in order to be present at the feast of St. Norbert (July 11), and to follow the spiritual exercises during the octave. On the Sunday during the octave he preached the panegyric of the holy founder, and on 16 July he celebrated the golden jubilee of his own religious profession.

After the octave he returned to Oberstein, and less than a month later he rendered his well-trying soul to God. Goffine himself states that he had taken St. Norbert, the founder of his order, as his model, "because St. Norbert cared and worked so much for the salvation of souls." Observing that so many had gone astray through ignorance of Catholic doctrine, he was most anxious and always ready to instruct the people, both old and young, for whose benefit he wrote and published no fewer than ten books. While he was at Coesfeld he wrote his well-known work, "Handpostille oder Christkatholische Unterrichtungen auf alle Sonn und Feyer-tagen des ganzen Jahrs" (brief commentaries in the form of question and answer on the Proper of the mass, principally on the Epistle and gospel of the day). This book was ready in 1687, and in 1688 it received the imprimatur

of the Vicar-General of Munster, and in 1690 the approbation of Rev. William Heimbach, Norbertine prior of Meer, and of Rev. John Dirking, Rector of the Jesuit college of Hildesheim. The first edition, printed at Mayence in 1690, was soon exhausted, and a second edition was printed at Cologne in 1692. Since then other editions have appeared at short intervals, and it is said that hardly any book, with the exception of the "Imitation of Christ" by Thomas a Kempis, has had as many editions and translations as Goffine's "Handpostille". As far as can be ascertained translations have been made into Moravian, Bohemian, Hungarian, English, French, Italian, and Flemish.

A writer in "Le Magasin Catholique Illustre", says of the worth of this book: "How many souls has this book not saved and preserved from error, during the last two centuries that it has been known in Germany? Here is an instance: whenever in this classical land of Protestantism this book has become popular, the door was shut to heresy. Goffine's instructions, the like of which we have nothing in France, gives the dogmatic, moral, and liturgical teaching of the Church", etc. As Father Hattler, S.J., writes: "the child reads from it, for father and mother; the bride is presented with it on the day of her wedding; it is given to the emigrant when he leaves his country for the New World." Goffine also published the following books: (1) "Auslegung der Regel des heiligen Augustinus" (Cologne, 1692); (2) "Trostbuch in Trübsalen" (Cologne); (3) "Cibus animæ matutinalis, etc." (Cologne, 1705); (4) "Sermons for the whole year", 2 vols. (Nuremberg, 1705); (5) "Erklärung des Katechismi Petri Canisii" (Cologne, 1712); (6) "Die Lehre Christi" (Cologne, 1715); (7) "Kleiner Kinder-katechismus" (Cologne, 1717); (8) "Der Wachter des gottlichen Worts" (Cologne, 1718); (9) "Præx Sacræ seu modus explicandi cæremonias per annum" (Frankfort, 1719).

F.M. GEUDENS

Gog and Magog

Gog and Magog

Names, respectively, of a king and of his supposed kingdom, mentioned several times in chapters 38 and 39 of the Book of Ezechiel, and once in the Apocalypse (20:7). In the first passage of Ezechiel we read the command of Yahweh to the prophet: "Son of man, set thy face against Gog the land of Magog...and prophesy of him...Behold, I come against thee, O Gog, the chief prince of Mosoch and Thubal" (38:2-3). A similar command is found also at the beginning of chapter 39. These two chapters contain repeated reference to Gog and Magog, but they furnish only vague and uncertain indications as to the identity of the ruler or the location of the country. In chapter 39 Gog is represented (verses 5 and 6) as being accompanied in his invasion of the land of Israel by the Persians, Ethiopians, and Libyans, Gomer, and...the house of Thogorma; and in verse 15 we read:

"And thou shalt come out of thy place from the northern parts." From the number and variety of the peoples mentioned in this connection some writers have inferred that the name Gog may be only a generic appellation, or figure, used in Ezechiel to designate the host of the enemies of Israel, and in the Apocalypse to denote the multitude of the foes of the Church. Others conjecture that it may be a local title expressing the royal dignity, such as the name *Pharaoh* in Egypt. But it seems more probable that both names are historical; and by some scholars Gog is identified with the Lydian king called by the Greeks Gyges, who appears as Gu-gu on the Assyrian inscriptions. If this be true, Magog should be identified with Lydia. On the other hand, as Mosoch and Thubal were nations belonging to Asia Minor, it would seem from the text of Ezechiel that Magog must be in that part of the world. Finally, Josephus and others identify Magog with Scythia, but in antiquity this name was used to designate vaguely any northern population.

JAMES F. DRISCOLL

Golden Calf

Golden Calf

An object of worship among the Hebrews, mention of which occurs principally in Ex., xxxii, where the story of the molten calf of Aaron is narrated, and in III Kings, xii (cf. II Par., xi), in connection with the policy of Jeroboam after the schism of the ten tribes. Various reasons make it probable that the rendering "calf" is not to be taken in a strict sense, for the Hebrew term has a wider signification, and it is likely that in the present case it stands for a young bullock just arrived at maturity. Waiving all critical discussion as to the sources embodied in Ex., xxxii, the main features of the present narrative are as follows: Becoming impatient at Moses' long delay on the mount, the people ask Aaron to make them a god or gods to go before them. He yields to their solicitations, and, making use of the golden earrings of the women and children, he causes a "molten calf" or bull to be fashioned. Shortly after its construction Moses returns, and, moved to wrath and indignation, destroys the idol, reducing it to dust and throwing it into the brook from which the Israelites are made to drink. After the schism of the ten tribes, Jeroboam, fearing that the regular pilgrimages of the people of the northern kingdom to Jerusalem would endanger their political allegiance to himself, resorted to the natural expedient of furnishing them with a substitute for the sanctuary of the Temple (III Kings, xii); and he set up two golden calves, one in Bethel and the other in Dan. As to their construction information is lacking, but it is likely that they were life-sized bull figures constructed after the fashion of the one mentioned above. It seems also probable that they were intended as symbols of Yahweh, for, thus considered, they would be more effective in attracting the pious Israelites who were accustomed to go to Jerusalem.

Most writers have accepted the view of Philo and the early Fathers, who regarded the worship of the golden calves as borrowed from the Egyptians, and in favour of this opinion is the fact that both Aaron and Jeroboam had sojourned in Egypt shortly before constructing their respective idols; this view, however, has its difficulties, among which is the improbability of an Egyptian deity being

set up as the god "who brought Israel out of the land of Egypt". Hence, some recent scholars are inclined to seek the origin of the Hebrew bull worship in the conditions and surroundings of the Israelites as an agricultural people, for whom the bull was naturally an appropriate symbol of strength and vital energy.

Golden Rose

Golden Rose

A precious and sacred ornament made of pure gold by skilled artificers, which the popes have been accustomed for centuries to bless each year, and occasionally confer upon illustrious churches and sanctuaries as a token of special reverence and devotion, upon Catholic kings or queens, princes or princesses, renowned generals or other distinguished personages, upon governments or cities conspicuous for their Catholic spirit and loyalty to the Holy See, as a mark of esteem and paternal affection.

The significations of the rose and Lætare Sunday (fourth of Lent), the day on which it is blessed, so blend that the Sunday is oftentimes called Rose Sunday, and rose-coloured vestments, altar and throne and chapel draperies (signs of hope and joy) are substituted for the penitential purple during the solemn function. The Church on this Sunday bids her children who have been so far engaged in prayer, fasting and other penitential works, as also in serious meditation upon the malice of sin and the terrible punishment exacted on account of it, to look up and beyond Calvary and see in the first rays of the Easter sun, the risen Christ, Who brings them redemption, and "Rejoice". The golden flower and its shining splendour show forth Christ and His Kingly Majesty, Who is heralded by the prophet as "the flower of the field and the lily of the valleys"; its fragrance shows the sweet odour of Christ which should be widely diffused by His faithful followers (Pope Leo XIII, *Acta*, vol. VI, 104); and the thorns and red tint tell of His Passion according to Isaias (Ixiii, 2): "Why then is thy apparel red, and thy garments like theirs that tread in the winepress?"

Among the many mystical significations, as set forth in the papal diplomas accompanying the gift, as also in sermons of the popes in conferring it, the following of Innocent III is worthy of note: As Lætare Sunday, the day set apart for the function, represents love after hate, joy after sorrow, and fullness after hunger, so does the rose designate by its colour, odour, and taste, love, joy, and satiety respectively. Adverting to the spiritual resemblance, he continues that the rose is the flower spoken of by Isaias (xi, 1), "there shall come forth a rod out of the root of Jesse, and a *flower* shall rise up out of his root". Prior to the pontificate of Sixtus IV (1471-84) it consisted of a simple and single rose made of pure gold and slightly tinted with red. For greater embellishment, yet still retaining the mystical meaning, a ruby placed in the heart of the rose, and afterwards many precious gems set in the petals, were used instead of the red colouring of the gold. Pope Sixtus IV substituted in place of the single rose a thorny branch with leaves and many roses (a half-score and sometimes more), the largest of which sprang from the top of the branch and the smaller ones clustered naturally

around it. In the centre of the principal rose was a tiny cup with a perforated cover, into which the pope, when he blessed the rose, poured the musk and balsam. The whole ornament was of pure gold. The Sixtine design has been maintained; but it has varied as to decoration, size, weight, and value. Originally it was little over six inches in height, and was easily carried in the left hand of the pope, whilst with his right he blessed the multitude through which he passed in procession from the church of Santa Croce in Gerusalemme (in Rome) to the Lateran Palace. Afterwards, and especially when a vase and large pedestal became part of the ornament, it required a robust cleric to carry it, who preceded the papal cross in the procession. The rose sent to Amelia of Brunswick, wife of Joseph I, afterwards emperor, by Innocent XI, weighed twenty pounds of gold. In height it was almost eighteen inches, and in form a bouquet; from the stem sprang three different branches which after many natural windings came together at the top, and supported the largest and principal rose in the midst of a beautiful cluster of leaves. The vase whence rises the shapely and elegant flower, as also the pedestal supporting the vase, varied as to material, weight, and form. In the beginning they were made of gold; but afterward of silver heavily gilt with gold. The pedestal was either triangular, quadrangular, or octangular, and was richly ornamented with various decorations and *bassorilievos*. In addition to the customary inscription, the coat of arms of the pope who had the ornament made, and that of him who blessed and conferred it, were engraved on the pedestal. Their value varied according to the munificence of the pontiffs or the economical circumstances of the times. Father Baldassari, S.J. (*De Rosa Mediana*, p. 190) says that the rose conferred about the year 1650 cost five hundred dollars. The two roses sent by Alexander VII were valued at eight and twelve hundred dollars respectively. Clement IX sent the Queen of France one costing twelve hundred dollars, the gold alone used weighing eight pounds. The workmanship on this rose was exceedingly fine, for which the artificer received three hundred dollars. Innocent IX caused eight and one-half pounds of gold to be formed into a rose, which was further embellished with many sapphires, costing in all fourteen hundred dollars. In the nineteenth century not a few of the roses cost two thousand dollars and more. The skill and workmanship of the papal artificers are something truly wonderful.

The custom of giving the rose supplanted the ancient practice of sending to Catholic rulers the Golden Keys from St. Peter's Confessional, a custom introduced either by St. Gregory II (716) or St. Gregory III (740). A certain analogy exists between the rose and the keys, inasmuch as both are of pure gold blessed and bestowed by the Vicar of Christ upon illustrious children of the Church, and further, both partake somewhat of the nature of a reliquary -- the rose containing musk and balsam, the keys filings from the Chair of St. Peter.

The exact date of the institution of the rose is unknown. According to some it is anterior to Charlemagne (742-814), according to others it had its origin at the end of the twelfth century. It is certain, however, that it antedates the year 1050, since Pope Leo IX (1051) speaks of the rose as of an ancient institution at his time. The blessing of the rose was not coeval with its institution. It was introduced to render the ceremony more solemn and induce greater reverence for it on the part of the recipient. According to Cardinal Petra (*Comment. in Constit. Apostolicas*, III, 2, col. 1),

Pope Innocent IV (1245-54) was the first to bless it. Innocent III (1198-1216) and Alexander III (1159-81) and Leo IX (1049-55) have each strenuous defenders of their respective claims to the authorship of the ceremony. Of the last it is said that he (A. D. 1051) imposed upon the monastery (nuns) of Bamberg in Franconia, then subject to the pope, the obligation of furnishing each year the Golden Rose to be blessed and carried by the pope on Lætare Sunday (Theop. Raynaud, *De rosa mediana a pontifice consecrata*, IV, 413). Pope Benedict XIV attests that the ceremony of blessing had its origin in the beginning of the fifteen or at the end of the fourteenth century. Catalanus, papal master of ceremonies, is of opinion that the use of musk and balsam was coeval with the institution, but the blessing with prayers, incense, and holy water had its inception later on, yet earlier than the pontificate of Julius II (1503-13). The pope blesses the rose every year, but it is not always a new and different rose; the old one is used until it has been given away.

Originally the rose was blessed in the Hall of Vestments (sacristy) in the palace where the pope was; but the solemn Mass and the donation of the rose took place in the Church of Santa Croce in Gerusalemme (a figure, according to Pope Innocent III, of the heavenly Jerusalem), and this was the practice until the popes removed to Avignon. The blessing was followed by a solemn Mass sung either by the pope himself or the first cardinal-priest; in the former case the rose was placed on a veil of rose-coloured silk richly embroidered with gold; in the latter the pope held the rose in his hand, unless when he knelt, or at the Introit, Confiteor, Elevation, and the singing of "Laudemus in Domino". Returning processionally to the Lateran Palace, he carried the rose in his hand, and arriving at the door of the palace, he gave to the Prefect of Rome who had led his horse by the bridle and had aided him to dismount, the rose as a recompense for acts of respect and homage. Prior to 1305 the rose was given in Rome to no outsider, except the emperor and to him only on the day of his coronation. Whilst residing at Avignon (1305-1375) the popes, unable to make visits to Roman churches and basilicas, performed many of their sacred functions, among them the blessing of the rose, in the private chapel of their palace (whence the origin of the Cappella Pontificia). On their return to Rome they (Sixtus V excepted) retained the custom thus begun.

The blessing of the rose now takes place in the Hall of Vestments (*camera dei parimenti*) and the solemn Mass in the papal chapel. The rose is placed on a table with lighted candles, and the pope, vested in alb and rose-coloured stole and cope with precious mitre on his head, begins the ceremony with the usual versicles and the following beautiful and expressive prayer: "O God! by Whose word and power all things have been created, by Whose will all things are directed, we humbly beseech Thy Majesty, Who art the joy and gladness of all the faithful, that Thou wouldst deign in Thy fatherly love to bless and sanctify this rose, most delightful in odour and appearance, which we this day carry in sign of spiritual joy, in order that the people consecrated by Thee and delivered from the yoke of Babylonian slavery through the favour of Thine only-begotten Son, Who is the glory and exultation of the people of Israel and of that Jerusalem which is our Heavenly mother, may with sincere hearts show forth their joy. Wherefore, O Lord, on this day, when the Church exults in Thy name and manifests her joy by this sign [the rose], confer upon us through her true and perfect joy and accepting her devotion of today; do Thou remit sin, strengthen faith,

increase piety, protect her in Thy mercy, drive away all things adverse to her and make her ways safe and prosperous, so that Thy Church, as the fruit of good works, may unite in giving forth the perfume of the ointment of that flower sprung from the root of Jesse and which is the mystical flower of the field and lily of the valleys, and remain happy without end in eternal glory together with all the saints." The prayer finished, the pope puts incense (handed by the cardinal-deacon) into the censer and incenses the balsam and then the musk, and afterwards puts the balsam and powdered musk into the tiny cup in the heart of the principal rose. He then incenses the rose and sprinkles it with holy water. It is then given to the youngest cleric of the Camera, who carries it in front of the pope to the chapel, where it is placed on the altar at the foot of the cross upon a richly embroidered silk veil, where it remains during the Mass sung by the first cardinal-priest. After the Mass, the rose is carried in procession before the pope to the sacristy, where it is carefully put away in a place set apart for it, until bestowed upon some worthy personage.

The custom initiated at Avignon of conferring the rose upon the most deserving prince present at the papal court was continued in Rome when the popes returned from Avignon. The recipient of the rose from the hands of the pope, after the solemn function, was accompanied by the College of Cardinals from the papal palace to his residence. From the beginning of the seventeenth century the rose was sent only to queens, princesses, and eminent noblemen; to emperors, kings, and princes were given a sword as a more suitable gift. It is true, however, that if a Catholic emperor, king, or some other great prince were present in Rome on Lætare Sunday, he would be presented with the rose if he were deserving. The office of carrying and conferring the rose upon those living outside of Rome was given by the pope to cardinal legates a latere, nuncios, inter-nuncios, and Apostolic ablegates. In 1895 a new office, called "Bearer of the Golden Rose", was instituted, and assigned to a secret chamberlain of sword and cloak participante.

Among the principal churches to which the rose has been presented are St. Peter's (five roses), St. John Lateran (four roses -- according to some two of the four were given to the basilica proper and two to the chapel called Sancta Sanctorum), St. Mary Major (two roses), St. Mary sopra Minerva (one rose), and St. Anthony of the Portuguese (one rose). It was also presented to the Archconfraternity of the Gonfalone. All these roses have been lost.

Among the many recipients of the gift, the following are noteworthy:

- Falcone, Count of Angers, who received it from Urban II (1096);
- Alfonso VII, King of Castile (Eugene III; 1148);
- Louis VII of France (Alexander III; 1163);
- Louis I of Hungary (Clement VI; 1348);
- Joanna I, Queen of Naples (1368);
- Emperor Sigismund (Eugene IV; 1435);
- Henry VI of England (Eugene IV; 1444);
- Casimir IV, King of Poland (Nicholas V; 1448);
- Emperor Frederick III and his wife Empress Eleonora, who were crowned on Lætare Sunday (1452) and received the Golden Rose next day from Nicholas V;
- Charles VII of France (Callistus III; 1457);
- James III of Scotland (Innocent VIII; 1486);

- Isabella I, Queen of Spain (Alexander VI; 1493);
- Alexander I of Poland (Julius II; 1505);
- Emanuel I of Portugal (Julius II; 1506);
- Henry VIII of England, who received one from Pope Julius II, one from Leo X, and one from Clement VII in year 1524;
- Frederick, Duke of Mantua (Paul III; 1537), because of his kindness towards the Fathers of the Council of Trent;
- Mary, Queen of England, daughter of Henry VIII (Paul IV; 1555);
- Henry of Anjou, King of Poland (Clement VIII; 1592);
- Margaret of Austria, Queen of Spain, on the day she was married to Philip III by proxy in presence of Pope Clement VIII (1598);
- Henrietta Maria, Queen of England, at Amiens (Urban VIII; 1625);
- Maria of Austria, Queen of Hungary (Urban VIII; 1630);
- Maria Theresa, Queen of France (1668), for her infant son, the Dauphin, for whom Pope Alexander VII was godfather;
- Eleonora, Queen of Poland (Clement X; 1671);
- Mary Casimir, wife of John III, King of Poland, Saviour of Vienna (Innocent XI; 1684);
- Amelia of Brunswick, empress (Innocent XII; 1699);
- Maria Louisa Gabriele of Savoy, Queen of Spain (Clement XI; 1701);
- Francesco Loredano, Doge of Venice (Clement XIII; 1759);
- Maria Christina, Archduchess of Austria (Pius VI; 1776);
- Maria Theresa, widowed Queen of Sardinia (Leo XII; 1825);
- Maria Anna, Queen of Hungary, afterwards empress (Gregory XVI; 1832);
- Maria II, Queen of Portugal (Gregory XVI; 1842);
- Maria Pia of Portugal, on the day of her baptism (Pius IX, her godfather, 1849);
- Isabella II of Spain (Pius IX; 1868);
- Maria Christina, Queen Regent of Spain (Leo XIII; 1886);
- Isabella, Princess Imperial of Brazil, then Regent of the Empire (Leo XIII; 1880);
- Maria Amélie, Queen of Portugal (Leo XIII; 1892);
- Marie Henriette, Queen of the Belgians (Leo XIII; 1893).

Carlo Goldoni

Carlo Goldoni

Dramatist; b. at Venice, 25 Feb., 1707; d. at Paris, 6 Jan., 1793. Goldoni is especially notable for the reform which he wrought in the Italian theatre by substituting for the drama of improvisation (*commedia dell' arte*) a fully elaborated character play inspired by the works of Molière, and yet replete with a realism due to his own keen observation of contemporary life in Italy. The story of

his life has been told with much detail in the autobiographical "Mémoires", which he wrote in French in 1787. This work is important also for the account which it gives of the vicissitudes attending his attempts to improve the dramatic repertory of his day, and of his eventual success despite the opposition of Chiari and Gozzi.

Born in Venice, he accompanied his father in his peregrinations to various Italian cities, among them Perugia and Rimini, where he practised as a physician. The boy was intended at first for his father's profession, but he early indicated his real tastes by running away from Rimini with a theatrical troupe. Later we find him at Venice studying law, and ere long he is seen occupying at Chioggia the post of assistant to the registrar or clerk of the criminal court. By this time he had begun the composition of plays. He finally took his degree in law and settled in Venice, practising as an advocate and continuing his literary work. But he did not remain at rest long. Associated with the diplomatic service for brief periods, he sojourned in Milan and in Genoa, and then for one reason or another shifted his domicile hither and thither in Northern Italy, making his longest stay in Pisa, where for five years he devoted himself to legal pursuits. In 1746 he received the appointment of dramatic poet to the theatre S. Angelo at Venice, and in the following year betook himself to his native city. In his new position he wrote many comedies which were performed successfully, and in 1752 he accepted a similar appointment to the Venetian theatre of San Luca, for which he provided additional pieces. All the while warfare was being waged against him by the partisans of the inartistic "Commedia dell' arte", and finally, although he had gained the day, he determined from sheer weariness to accept the offer made him in 1761 of the place of poet to the Théâtre Italien at Paris. Honourable though his post was, he never felt really happy in it, and when the time of his contract was finished, he meditated an instant return to his native land. This purpose he did not carry out, for an appointment as Italian tutor to the daughters of Louis XV induced him to remain in France. A pension was assigned to him, and it was paid to him regularly up to the year 1792. He died the next year on the day before that on which, at the recommendation of Joseph Chénier, the Convention restored his pension.

During his residence in the French capital, Goldoni produced two important comedies in French, the "Bourru bienfaisant" (which he himself translated into Italian), and the "Avare fastueux". Goldoni's dramatic pieces are about 150 in number. They fall readily into three groups: those written entirely in the Venetian dialect, of which there are about eleven; those written partly in dialect, which form the largest part; and those written wholly in pure Italian, of which some are in prose and some in Martellian verse. The earlier among them, the tragedies, tragi-comedies and melodramas are almost negligible; his fame rests on the comedies picturing the customs of his time. Notable among these are "La locandiera", "Un curioso accidente", "Il Bugiardo", "Pamela", "La bottega di caffè", "I Rusteghi", and "Il Burbero benefico" (the Italian form of the play performed at Paris in 1771). These and a few others still live on the Italian stage. His "Lettere", published in a collection at Bologna in 1880, contain interesting matter which adds to the information conveyed in the "Mémoires". The plays are given in the two Venice editions — 1788-95 in 44 vols., and 1817-22 in 46 vols.

J.D.M. FORD

Thomas Goldwell

Thomas Goldwell

Bishop of St. Asaph, the last survivor of the ancient hierarchy of England; b. probably at the family manor of Goldwell, in the parish of Great Chart, near Ashford, Kent, between 1501 and 1515; d. in Rome, 3 April, 1585. He was a member of a Kentish family of ancient lineage, long seated at Goldwell; and was educated at All Souls College, Oxford, where he graduated M. A. in 1531, and B. D. in 1534. While at Oxford he attained more eminence in mathematics, astronomy, and kindred sciences, than in divinity or the humanities, a point worth remembering in view of his future career. He stood out firmly against the innovations in religion brought about by Henry VIII. At an early date he became intimate with Reginald, afterwards Cardinal, Pole, a friendship which proved to be a lasting one, and which had considerable influence on Goldwell's subsequent career. Soon after 1535, when the king had begun his drastic measures of ecclesiastical spoliation, Goldwell became Pole's chaplain and joined him in exile, being included in the same Act of Attainder "for casting off his duty to the King, and submitting to the Bishop of Rome". He reached Rome in 1538, and shortly afterwards he was appointed *camerarius* of the English Hospital of the Holy Trinity. In 1547 he became a novice in the Theatine House of St. Paul, at Naples. On the death of Paul III, Pole, now a cardinal, asked and obtained permission for Goldwell to accompany him to Rome, and thus he was present at the long conclave of 1549-50 in the capacity of Pole's personal attendant. After the election of Julius III, Goldwell returned to Naples, and made his profession as a Theatine. In 1553, while Edward VI was still reigning an Act of General Pardon was passed, from which Goldwell had the signal honour of being specially excepted by name, along with Pole and some others. On the accession of Mary I there came an all too brief spell of prosperity for English Catholics. Pole, now papal legate, returned to England with Goldwell in his train, and the latter was soon nominated to the See of St. Asaph in North Wales (1555). While still only bishop-designate, he was sent to Rome (2 July, 1555) to make a report on the state of religion in England to Paul IV.

While at Rome, on this occasion, he was probably consecrated bishop; and he returned to England at the end of the year. In 1556 he assisted at the consecration of Pole to the Archbishopric of Canterbury. He was then for some time actively engaged in the affairs of his Diocese of St. Asaph. He issued numerous injunctions to his clergy, prohibiting married priests from saying Mass, and forbade the use of churches as poor-schools. He revived the pilgrimages to the miraculous well of St. Winefride, at Holywell, and obtained from the pope a renewal of the indulgences for pilgrims to that shrine. He also examined the heretic John Philpot, which fact is chronicled in no friendly

way by Foxe ("Acts and Monuments", ed. Townsend, VII, 620). It was about this time proposed, though without his knowledge or consent, to make him ambassador to the court of Rome, and to translate him to the See of Oxford; letters of credence to Paul IV had been actually made out; and on 5 Nov., 1558, he received the custody of the temporalities of the See of Oxford, Thomas Wood having received that of St. Asaph four days previously. But the death of Queen Mary on 17 November terminated all these arrangements. Just at this juncture Goldwell was at the deathbed of Cardinal Pole, to whom he gave the last sacraments.

The accession of Elizabeth was, of course, the signal for the final attack of Protestantism upon the ancient Faith. Goldwell strenuously resisted as far as in him lay. It is interesting to note by what dishonourable and underhand methods the queen's party put it out of his power to make his protest in a constitutional manner. It was alleged that, by his nomination to Oxford, he was no longer Bishop of St. Asaph; but that, as he had not done homage to the queen for Oxford, he was not yet bishop of that see. Accordingly, he did not receive the summons to Parliament which was undoubtedly his legal due. In May, 1559, however, he was summoned before the queen with the other bishops, and all of them were expelled from their sees for their refusal to take the oath of supremacy. He then resolved to leave the country, for, as he afterwards stated, he was not allowed to perform a bishop's office, say Mass, or administer the sacraments, as long as he remained in England.

Although the ports were being watched for him, he succeeded in making his escape. It was obviously impossible for him to have carried off the register and records of his see under such circumstances. This charge, however, has been maliciously made against him. He then became an active Catholic exile. He started at once for Rome, but was detained at Louvain by sickness. He refused the offer of an Italian bishopric, preferring to devote himself to his order (the Theatines) and to the conversion of England. In 1561 he was made superior of his old convent at Naples, and also warden of the English Hospital at Rome. He was the only English bishop at the Council of Trent, where he was treated with marked respect. He was there engaged in the revision of the Breviary and the Missal; and also urged the council to excommunicate Queen Elizabeth. His mere presence at Trent was a cause of such excessive annoyance to Elizabeth that she wrote the following extraordinary farrago of falsehood to her German envoy Mundt: "We think it may be that one Goldwell, a very simple and fond man, having in our late sister's time been named to a small bishopric in Wales called St. Asaph, *though never thereto admitted*, flying out of the realm upon our sister's death, is gone to Rome as a renegade, and there using the name of a bishop, *without order or title*, is perhaps gone *in the train of some Cardinal* to Trent, and so it is likely the speech hath arisen of a bishop of England being there." In 1563 Goldwell was vicar-general to the Archbishop of Milan, St. Charles Borromeo. In 1567 he was made vicar of the cardinal archpriest in the Lateran, and in 1574 the Cardinal Vicar Savelli made him his vicegerent; he thus became, so to speak, the "working" bishop of Rome. Hall, an English traveller in 1568, said that Goldwell was the only English Catholic in Rome who was courteous to him. In 1580, in spite of his advanced age, he set out for England at the head of the mission which included Campion and Persons, but

he was taken ill at Reims and obliged to return to Rome. One of the last acts of his long and strenuous career was to serve on the Congregation for the Revision of the Roman Martyrology, in 1582. On the death of the Bishop of Lincoln, in 1584, Goldwell became the sole survivor of the ancient English hierarchy. He died the next year, and was buried at St. Sylvester's. A portrait of him exists at the English College, Rome.

C.F. Wemyss Brown
Francisco Lopez de Gomara

Francisco Lopez de Gómara

(Or GOMORA.)

Born at Seville, Spain, in 1510; studied at the University of Alcalá, was ordained priest, made a journey to Rome, and upon his return in 1540, entered the service of Hernándo Cortés as private and domestic chaplain. He accompanied Cortes on the Algerian expedition and, after the death of his patron, it is known that he was at Valladolid in 1556 or 1557, after which he is supposed to have retired to his native city of Seville where he probably died. With the information given him by the conqueror and other persons who had returned from the New World (he himself cites Gonzalo de Tapia and Gonzalo de Umbria) he wrote his "Hispania Victrix; First and Second Parts of the General History of the Indies, with the whole discovery and notable things that have happened since they were acquired until the year 1551, with the conquest of Mexico and New Spain", a work published at Saragossa in the year 1552. It was translated into French by Martin Fumée and published at Paris in 1578; Augustin Gravaliz translated it into Italian and published it at Venice in 1560; lastly, Juan Bautista de San Anton Chimalpain Quanhalehuatzin translated it into Mexican. The author relates in the first part, which is dedicated "To Don Carlos, Emperor of Romans, King of Spain, Lord of the Indies and New World", the whole discovery and conquest of the Antilles, Peru (up to the pacification effected by Gasca), Chile and Central America, also the voyage of Magellan and the discovery of the Moluccas. In the second part he tells of the conquest of Mexico, and it is dedicated "To the very illustrious Lord Don Martin Cortés, Marques del Valle" -- the son and heir of the conqueror.

Whether through the desire to aggrandize his patron, or through relying on the first-hand information which the latter gave him (it is to be noted that Gómara was never in America) or from malice, or for some other reason Gómara fell into serious errors and in many instances sinned gravely against historical truth. It was perhaps for this reason that Prince Philip (afterwards Philip II), in a decree issued at Valladolid, 17 November, 1553, ordered all the copies of his work that could be found to be gathered in and imposed a penalty of 200,000 maravedis on anyone who

should reprint it. This prohibition was removed in 1727 through the efforts of Don Andreas Gonzalez Martial who included Gómara's work in his collection of early historians of the New World (Coleccion de historiadores primitivos de las Indias Occidentales). The "Verdadera historia de la Conquesta de Nueva Espana" (True History of the Conquest of New Spain) of Bernal Diaz del Castillo, a companion of Hernando Cortes, was written to refute Gómara. The latter's style is concise and agreeable, the narrative running on rapidly and gracefully, all of which has had the effect of attracting readers to the work. Among other works of his which have remained unpublished are "Batallas de mar de nuestros tiempos" (Contemporary Naval Battles) and "Historia de Harrue y Harradin Barbarroja".

CAMILLUS CRIVELLI

Francisco Gomes de Amorim

Francisco Gomes De Amorim

Portuguese poet, dramatist, and novelist; b. at Avelomar, near Oporto, 13 August, 1827; d. 4 November, 1891. His parents were respectable but so poor that Francisco had to leave school at the age of ten, when he went to Brazil and obtained a situation in a business house at Para. After some time he found an opportunity to study the manners and dialects of the Indian tribes of the Amazon forests. He returned to Portugal in his twentieth year, and two years later under the influence of the revolutionary ideas of 1848, he composed the poems "A liberdade", "A queda da Hungria" and "Garibaldi". Sympathizing as he did with the principles of romanticism, he, like so many other young writers, fell under the spell of Almeida Garrett, and, to help him to carry out his plan of establishing a national drama, he began to write plays. The first, "Ghigi" (1852), was performed at Lisbon with signal success. It was followed by a long series of dramas, among which the best known are, "Odio de raça", "Aleijões sociaes", "Figados de tigre," "A proibição", "A viuva", "A abnegação", and "Os herdeiros do millionario". For several years prior to 1851, in order to make a living, he worked in a hatter's establishment, but in that year he was appointed to a government post, and found leisure to compose his dramas, poems, and romances. In 1859 he was made librarian to the Minister of Marine.

His lyric fame was firmly fixed by the appearance in 1858 of two collections of poems, the "Cantos matutinos" and the "Ephemeros". As a novelist, he made himself favourably known by "Os selvagens" (1875) and its sequel "O remorso vivo" (1876), by the "Amor da patria" (1879), which is partly an historical novel and partly a romance of the sea, by the "Muita parra e poca uva" (1879) and by many others. In some of the novels, as in several of the plays, he draws upon his knowledge of Brazilian life. His admiration for his friend, Almeida Garret, who had constantly encouraged him in his literary endeavours, led him to compose his great work, "Garret, Memorias biographicas" (Lisbon, 1881), which not only deals with the public and private life of the greatest modern poet and orator of the country, but is also a history of Portugal from 1799 till 1854.

J.D.M. FORD

Gondulphus

Gondulphus

(GUNDULFUS).

The name of three saints, of whom one was Bishop of Tongres (Maestricht), the second Bishop of Metz, while the third is known as Gondulphus of Berry. We possess little information concerning any of the three, and the slight idea of each afforded us by the documents of the Middle Ages is reduced to the following.

1. Gondulphus of Metz

Gondulphus of Metz is the one concerning whom our information is most reliable. His feast is celebrated on 6 September. As bishop, Gondulphus succeeded Angilram, him who caused Paul the Deacon to write the "Liber de episcopis Mettensibus", and who died probably in 791. At the death of Angilram there was a vacancy in the episcopal See of Metz, which was terminated by the accession of Gondulphus. The "Annales S. Vincentii Mettenses" give the date as 819. But, as it is known, on the other hand, that since the time of Bishop Chrodegang episcopal ordination took place on Sunday, the date of the consecration of Bishop Gondulphus must be set down as 28 (?) December, 816. The old episcopal catalogue of the church of Metz informs us that Gondulphus occupied the see of this church for six years, eight months, and seven days, and that he died on the 7th of the Ides of September, which would be the sixth of that month, in the year 823. He was buried in the monastery of Gorze, where his relics are still honoured on 6 September. It is impossible to quote in this respect any special patronage, and with regard to his episcopal career, apart from the details furnished here, there exists no information.

2. Gondulphus of Tongres

Or, as he is commonly called "Gondulphus of Maastricht" because his predecessor, Bishop Monulphus, transferred the seat of the bishopric from Tongres to Maastricht, which thenceforth was the actual residence of the bishops of Tongres. However, the official title of the Bishop of Tongres, *episcopus Tungrorum*, was retained until the eleventh century, even when the episcopal see had been transferred from Maastricht to Liège.

Bishop Gondulphus is a somewhat enigmatic figure indeed, one is inclined to question whether he be not identical with Monulphus. But the two saints must nevertheless be distinguished. Monulphus must have occupied the See of Tongres until the end of the sixth or the beginning of the seventh century, while at the Council of Paris in 614 the presence is discovered of a Bishop of Maastricht named Betulphus. Gondulphus, then, probably comes between Monulphus and Betulphus, at least if this Betulphus must not be identified with Gondulphus on the grounds that the case is analogous to that of the episcopal list of Mainz, where Bertulfus and Crotoldus must be reckoned identical. Furthermore, the episcopal lists of the eleventh and twelfth centuries, whose value is, however, not very great, ignore Betulphus, and make Gondulphus the immediate successor of Monulphus. The biographies of Gondulphus, which are handed down to us from the Middle Ages,

are merely an extract from the "Vita Servatii" of the priest Jocundus. They are quite without value and are full of legends. If they are to be believed, Gondulphus endeavoured to rebuild the town of Tongres, which had been destroyed by the barbarian invasions. But heaven opposed his scheme, and miraculously manifested its desire to the saint. Furious wolves fell upon the pagan colonists of this region, and devoured them before the eyes of the horrified bishop. Thus has legend quite obscured the authentic history of St. Gondulphus, the fact of his episcopacy at Maastricht being the only one that is authentic. According to local tradition he occupied the episcopal see for seven years and died about 607. This last statement does not tally with his presence at Paris in 614, if he is to be considered identical with the Betulphus who assisted at that council. In any case he was buried in the nave of the church of Saint-Servais at Maastricht, which had been magnificently restored by his predecessor, St. Monulphus.

The bodies of Monulphus and Gondulphus were solemnly exhumed in 1039 by the Bishops Nithard of Liège and Gérard of Cambrai. An epitaph commemorating this event was afterwards misinterpreted, and gave rise to a legend according to which the two saints arose from their tomb in 1039 in order to assist at the dedication of the church of Aachen (Aix-la-Chapelle), and at the conclusion of the ceremony returned to their tomb to resume their eternal sleep. Together with St. Monulphus, St. Gondulphus is secondary patron of the city and church of Maastricht. His feast is kept on 16 July. The commemoration of the exhumation of 1039 is celebrated on 1 August.

3. St. Gondulphus (or Gondon) of Berry

St. Gondulphus of Berry, who is honoured with the title of bishop, is a person of whom history gives a still more legendary account than of his namesake of Maastricht. According to the biography in which he is comparatively lately treated by a monk of Berry, he was Archbishop of Milan in the seventh century. Not succeeding in appeasing the troubles which had arisen in his church, he resolved to submit to the inevitable, and retired to Berry with a number of his disciples. It is not known, however, that any Archbishop of Milan had to deal with these conditions. It is true that it has been thought that Gondulphus lived at the time of the Milanese schism regarding the affair of the Three Chapters, that he was consecrated in 555, but that he was never received as bishop in his diocese. These are merely hypotheses and in fact it must be said that the history of the St. Gondulphus who is honoured in Berry is unknown.

The attestation of his cult in Berry appears late among the additions to the martyrology of Usuard; it is cited in the Breviary of Bourges in 1625. He is the patron of St-Gondon, near Gien. His feast is kept on 17 June.

L. VAN DER ESSEN

Jean Baptiste Gonet

Jean Baptiste Gonet

Theologian, b. about 1616 at Beziers, in the province of Languedoc; d. there 24 Jan., 1681. From his early boyhood he was devout and fond of study. He received his primary education in his

native place, and there at the age of seventeen entered the Order of St. Dominic. After his religious profession he was sent to the University of Bordeaux, where with unusual ability he devoted himself to the study of philosophy and theology, winning all honours in the customary examinations before advancement. Having received the doctorate he was appointed to the chair of scholastic theology in the university, in which capacity he proved himself a brilliant theologian and an exceptionally gifted teacher. In 1671 he was elected provincial of his province; on the expiration of his term of office, he resumed the professorship of theology, holding it till 1678, when ill-health obliged him to return to his native place. As a theologian and academic disputant Gonet ranks among the most prominent figures of his time. An ardent defender and exponent of the teaching of St. Thomas and an illustrious representative of Neo-Thomism, he set forth the traditional teaching of his school with astonishing clearness and skill, with some bitterness against the representatives of different views. He lived at a time when theological discussion was rife, when men, weary of treading beaten paths, had set themselves to constructing systems of their own. His zeal, however, for the integrity of Thomistic teaching, and his bitter aversion from doctrinal novelty sometimes carried him beyond the teaching of his master, and led him to adopt opinions on certain questions of theology especially those dealing with predestination and reprobation which were rejected by many learned theologians of his own school. In 1669 he published a work on the morality of human acts, the purpose of which was to defend the Thomistic doctrine at once against what he calls the laxities of the modern casuists, and the rigorism of the Jansenists. In this treatise he defends the probabiliorism of his school, and in the heat of the controversy is unsparing in his denunciations of the doctrine of probabilism. His principal work is the "*Clypeus theologiae thomisticae contra novos ejus impugnatores*" (16 vols, Bordeaux, 1659-69). From 1669 to 1681 no less than nine editions of this work appeared, the latest is that of Paris 1875. Shortly before his death he published his "*Manuale thomistarum*", which is an abridgment of his larger work.

JOSEPH SCHROEDER

Jerome de Gonnellieu

Jérôme de Gonnellieu

Theologian, ascetical writer, and preacher; born at Soissons, 8 Sept., 1640; died at Paris, 28 Feb., 1715. At the age of seventeen he entered the Society of Jesus (4 Oct, 1657). Till the year 1674, when he pronounced his final vows, his services were requisitioned in various capacities, his work as a teacher being particularly efficient and valuable. From this date his abilities were long and actively directed toward the ministry of the pulpit, and many, attracted by the piety of learning of his discourse, looked to him as spiritual consoler and adviser. He attained to considerable repute as a sacred orator, the qualifications which he possessed in this way being altogether exceptional and peculiar; he had particularly, in a marked degree, the faculty of conveying spiritual thoughts of the loftiest and noblest import in a form that was readily assimilable by the people. His duties, of whatever order, were discharged with thoroughness and a laudable spirit of self-sacrifice; the

zeal and earnestness which he always displayed in the cause of religion entitle Gonnellieu to a very high place among the evangelical workers of that time who laboured most to advancement of men. Toward the latter end of his life he gave himself up almost exclusively to literary activity; and the renown which he acquired in this department was no less deserved than the celebrity with which his preaching was attended. The following is a list of his works: "Exercice de la vie spirituelle" (Paris, 1701); "De la Présence de Dieu qui renferme tous les principes de la vie intérieure" (Paris, 1703, 1709; Marseilles, 1827); "Méthode de bien prier" (Paris, 1710, 1769); "Pratique de la vie intérieure", etc. (Paris, 1710); "Instruction sur la Confession et la Communion" (Paris, 1710; printed with preceding work in Paris edition of 1713); "Sermon de Notre Seigneur à ses apôtres après la Cène, avec des réflexions" (Paris, 1712); "Nouvelle retraite de huit jours à l'usage des personnes de monde et du cloître" (Paris, 1736).

To the above, almost all the biographies add another work, of which the full title is "L'Imitation de Jesus-Christ, Traduction nouvelle: Avec une Pratique et une Pièce à la fin de chaque Chapitre" (Par. le R. P. de Gonnellieu, de la Compagnie de Jésus, Paris and Nancy, 1712); but a great majority of the bibliographies too, of somewhat arbitrarily, deny that *Traduction* (translation), as distinct from the *secours* (helps) at the end of each chapter, is by de Gonnellieu. the opinion of the negative critics seems to be based mainly on the statement of Calmet (op. cit. below), that "the translation is by John-Baptiste Cusson [printer at Nancy], and the rest by P. Gonnellieu". the most approved form of this theory is that which attributes the rendering, as made originally, to Jean Cusson, printer at Paris, and clerk to the Parliament, who, in his version published in 1673, had availed himself largely of the celebrated translation by Sacy. John-Baptiste Cusson, a man of culture and fine literary sense, after thoroughly revising and improving his father's work, had issued the amended version at Nancy in 1712. Gence, author of a notice on the principle French translations of "Imitation" (Journal des curés, Sept. 1810), substantially maintained this view; see also Barbier and Brunet (op cit, below). The "Journal des Sçavans" on the other hand, in a review written within one year after the publication of the work, whilst praising the zeal and piety of the translator, says expressly that the version is by P. Gonnellieu; and adds that "Sieur Cusson (one time printer of the Journal) has enriched this first edition by many copper-plates". The testimony of the "Mémoires de Trévoux" (see below) for August, 1713, is almost identical with the preceding; and in the same notice it is stated that "the name of P. de Gonnellieu was a 'préjugé infallible' in favour of the excellence of the work". Finally, if it be argued, with those who deny the Gonnellieu authorship of the rendering that the title of the "Traduction" is misleading, is it not more natural to assume that the Abbot of Senones, in his "Histoire des hommes illustres", written almost fifty years after the appearance of the version, was deceived by the ambiguity, than to assert such error on the part of those who were on terms of intimate relationship with Cusson, the printer, and Gonnellieu, the presumptive author?

Journals des Sçavans (Amsterdam, 1713), LIV, 181-82; Mémoires pour l'Histoire des Sciences et des beaux Arts (Trévoux, 1713), Art. cxvi, LI, 1403-04; Calmet, Bibliothèque Lorraine (Nancy, 1751), 318; Barbier, Dictionnaire des Anonymes, 2nd ed. (Paris, 1823), II, 160, 163, sqq; Brunet,

Manuel du Libraire (Paris, 1862), III, 426; Patouillet, Dictionnaire des livres jansénistes (1752), preface.

J.P. MACAULEY

Ercole Gonzaga

Ercole Gonzaga

(Hercules.)

Cardinal; b. at Mantua, 23 November, 1505; d. 2 March, 1563. He was the Son of the Marquess Francesco, and nephew of Cardinal Sigismondo Gonzaga (1469-1525). He studied philosophy at Bologna under Pomponazzi, and later took up theology. In 1520, or as some say, 1525, his uncle Sigismondo renounced in his favour the See of Mantua; in 1527 his mother Isabella brought him back from Rome the insignia of the cardinalate. Notwithstanding his youth, he showed great zeal for church reform, especially in his own diocese; and in this he received help and encouragement from his friend Cardinal Giberti, Bishop of Verona. His mode of life was stainless and a manuscript work of his, "Vitae Christianae institutio", bears witness to his piety. He published a Latin catechism for the use of the priests of his diocese and built the diocesan seminary, thus carrying out reforms urged by the Council of Trent, as his friends Contarini, Gilberti, Caraffa, and other bishops had done or were doing, even before the council had assembled. His charity was unbounded, and many young men of talent and genius had their university expenses paid by him. The popes employed him on many embassies, e.g. to Charles V in 1530. Because of his prudence and his business-like methods, he was a favourite with the popes, with Charles V, and Ferdinand I, and with the Kings of France, Francis I and Henry II. From 1540 to 1556 he was guardian to the young sons of his brother Federico II who had died, and in their name he governed the Duchy of Mantua. The elder of the boys, Francesco died in 1550 and was succeeded by his brother Guglielmo. In the conclave of 1559 it was thought he would certainly be made pope; but the cardinals would not choose as pope a scion of a ruling house. In 1561 Pius VI named him legate to the Council of Trent, for which he had from the beginning laboured by every means at his command, moral and material. In its early stages, owing to the fact that not a few considered he was in favour of Communion under both kinds, he met with many difficulties, and interested motives were attributed to him. Nothing but the express wish of the pope could have persuaded him to remain at his post, and the energy he displayed was unwearied. He contracted fever at Trent, where he died, attended by Father Lainez. His benefactions to the Jesuit college at Mantua and to the Monte di Pietà were very great, and his letters are invaluable to the historian of that period.

U. BENIGNI

Scipione Gonzaga

Scipione Gonzaga

Cardinal; b. at Mantua, 11 November, 1542; d. at San Martino, 11 January, 1593. He belonged to the family of the Dukes of Sabbioneta, passed his youth under the care of Cardinal Ercole (Hercules) Gonzaga, and made rapid progress in Greek and Latin studies. At Bologna, and later at Padua, he studied mathematics and philosophy, and, in the latter city, founded the *Accademia degli Etereî*, or Academy of the Ethereals. Throughout his life he patronized literature and men of letters, among the latter being Tasso, who sought his advice concerning his "*Gerusalemme Liberata*", and Guarino, who dedicated to him his "*Pastor Fido*". Having finished his theological studies he went to Rome, became *cameriere segreto* to Pius IV, and was ordained priest. In the early years of the reign of Gregory XIII Gonzaga had a serious lawsuit with Duke of Mantua over some property, but they were soon reconciled. Through the Guise party, whose cause he had aided, he became Bishop of Mende in France, but, Charles, Duke of Guise, pleaded unsuccessfully with Gregory XIII to have him made cardinal. Sixtus V, immediately on his elevation, appointed him Patriarch of Jerusalem, and in 1587, at the request of the Duke of Mantua, raised him to the cardinalate. Sixtus also made constant use of his services in the execution of his policies, domestic and foreign. Cardinal Gonzaga was a friend of Saint Charles Borromeo and Saint Philip Neri, and his cousin Saint Aloysius Gonzaga owed him eventual consent of his father to his entering the Society of Jesus. For a time Cardinal Gonzaga was governor of the Marquessate of Monferrato in the name of the Marquess Vincenzo. The three books of his "*Commentarii*", written in polished Latin, are an important source of information for the history of his cardinalate. He was buried in the church of St. Sebastian at Rome. His "*Commentarii*" were edited at Rome in 1791 by Marotti.

U. BENIGNI

Thyrsus Gonzalez de Santalla

Thyrsus González de Santalla

Theologian and thirteenth general of the Society of Jesus, b. at Arganda, Spain, 18 January, 1624; died at Rome, 27 October, 1705. He entered the Society of Jesus 3 March, 1643, and taught philosophy and theology at Salamanca from 1655 to 1665, and from 1676 to 1687, the intervening years having been devoted to preaching. When about to set out for Africa to convert the Mussulmans in 1687, he was sent as an elector to the thirteenth general congregation, by which he was chosen general, 6 July, 1687. As an ardent adversary of probabilism González had frequently asked his superiors to have some Jesuit write against the doctrine. He himself had composed a work in which he defended probabiliorism, assigning, however, an exaggerated importance to the subjective estimation of the degree of probability. The general revisors of the Society unanimously rendered an unfavorable opinion on the work, and accordingly, in 1674, Father-General Oliva refused permission for its publication. González received encouragement from Innocent XI, who had become pope in 1676, and by his order, the Holy Office issued a decree, in 1680, ordering the superiors of the Society to allow their subjects to defend probabiliorism, a permission that had never been denied. As general of the Society, González felt himself obliged to fight probabilism among his

subjects. In 1691, he had printed at Dillingen a modified edition of his former work, but, owing to the efforts of his assistants, this book was never published. Innocent XII ordered a new examination of it to be made, and with many corrections it finally appeared, in 1694, under the title "Fundamentum theologiæ moralis -- de recto usu opiniorum probilium" at Rome (three editions), Antwerp, Dillingen, Paris, Cologne, etc., and again at Antwerp in 1695. Migne has reproduced it in his "Cursus Theologiæ", XI. Bossuet said that nothing more formidable has ever been written against probabilism, and St. Alphonsus Ligouri found in it an exaggeration of rigorist tendencies.

We also have from the pen of González some apologetic works: "Selectarum disputationum tomi quattuor" (Salamanca, 1680) in which are found chapters against the Thomists, Jansenius, and some doctors of Louvain; treatises on the Immaculate Conception, and on papal infallibility. This last, directed against the Assembly of the Clergy of France in 1682, and printed by the order of Innocent XI, was afterwards suppressed by Alexander VIII, who feared new difficulties with the French court. The work appeared, in résumé only, in Barcelona, in 1691.

De Backer and Sommervogel, *Bibl. des écrivains de la comp. de Jésus*; Concina, *Aparatus ad theologiam christianam* (Rome, 1751), II; *Vindiciæ sociatatis Jesu usque doctrinæ purgatio* (Venice, 1769); Dollinger and Reusch, *Gesch. der Moralstreitigkeiten in der roem. kath. Kirche* (Nördlingen, 1889), I, 120-273; II, 49-219; Hurter, *Nomenclator*; Matignon, *Etudes religieuses* (Paris, 1866); Patuzzi, *Lettere teologico-morali*, VI (Trent, 1756); Reusch, *Index der verbotenen Bücher* (Bonn, 1885), pp. 506-10; *Preussischer Jahrbucher* (Berline 1888), *Eine Krisis in Jesuitenorden*; Streber in *Kirchenlex*; Bihlmeyer in *Kirchl. Handlex*. For controversies on the decree of Innocent IX on probabilism, see chiefly Brucker, (*Etudes religieuses*, 1901-02) who quotes the official communication of the only authentic text given by the Holy Office in 1902. Eccl.*, 1902; Cathrein in *Theol. prakt. Quartalschrift*, 1905; Franz in *Zeitschr. f. kath. theol.*, 1905; Mandonnet in *Revue Thomiste*, 1901-2.

J. SALISMANS

Gonzalo de Berceo

Gonzalo de Berceo

Spanish poet, active between 1220 and 1242. Born in the closing years on twelfth century, he appears to be the earliest Castilian author known to us by name. He became a priest and passed the whole of his life in or near the monastery of San Millán de la Cogolla. His compositions extend to more than 13,000 verses (Alexandrines), arranged in monorhymed quatrains (*cuaderna via*), and, at least in so far as the truly authentic are concerned, are religious and hagiographical in their nature. They are made up of lives of Spanish saints: "La vida de Santo Domingo de Silos", "La vida de San Millán", "La vida de Santa Oria"; of poems celebrating the Blessed Virgin: "Los Milagros de Nuestra Señora", "Los Loores de Nuestra Señora", "El duelo de la Virgen"; and of other pious and didactic works: "El sacrificio de la Misa", "Los Signos del juicio", and perhaps some hymns. In all

these compositions he manifests but little originality, abiding, wherever possible, by Latin sources that were doubtless in the monastic library. His manner and style, however, are decidedly interesting, because they evince his desire to appeal to all the lay reading public of Castile in his time. He writes, as he tells us, in the vernacular, so that he may be read by the common man; and he intentionally adopts the methods of the popular minstrel in order to reach more quickly the popular heart. In spite of his diffuseness, he can interest us today, and his quaint humour, heavy though it may be at times, has no little charm. If we are to believe the ascription contained in one of the two manuscripts of the old Spanish poem on Alexander the Great ("Libro de Alexandre") we must credit him with that secular work also; but scholars are not too prone to regard the ascription as correct.

J.D.M. FORD

Good

Good

"Good" is one of those primary ideas which cannot be strictly defined. In order to fix its philosophical significance we may begin by observing that the word is employed firstly as an adjective and secondly as a substantive. This distinction which is clearly marked in French by the two different terms, *bon* and *le bien*, may be preserved in English by prefixing an article to the term when it is employed substantively. We call a tool or instrument good, if it serves the purpose for which it is intended. That is to say, it is good because it is an efficient means to obtain a desired result. The result, in turn, may be desired for itself, or it may be sought as a means to some ulterior end. If it is sought for itself, it is or it is estimated by us to be a good, and therefore desirable on its own account. When we take some step to obtain it, it is the end of our action. The series of means and ends either stretches out indefinitely, or it must terminate in some desired object or objects which are ends in themselves. Again we sometimes call a thing good because it possesses completely, or in a high degree, the perfections proper to its nature, as a good painting, good respiration. Sometimes, too, things are termed good because they are of a nature to produce something desirable; that is, they are good casually. Finally, we speak of good conduct, a good man, a good intention, and here the adjective has for us a sense different from any of the foregoing, unless indeed, we are utilitarian philosophers, to whom morally good is but another term for useful.

Now in all these locutions the word conveys directly or indirectly the idea of desirability. The merely useful is desired for the end towards which it is employed; the end is desired on its own account. The latter is conceived as possessing some character, quality, power, which renders it an object of desire. Two questions now arise:

- What is it which, in the nature or being of any object, constitutes it desirable? Or, in more technical phrase, what, metaphysically speaking, constitutes the good or goodness in a thing, absolutely considered?
- What is the relationship existing between the good thus absolutely constituted and the subject to which it is desirable? Or what is implied by good, relatively considered?

These two questions may be combined in one: "What is the good in the ontological order?" In exposing the reply to this question we shall come across the moral good, and the ethical aspect of the problem, which shall be treated in the second place.

I. ONTOLOGICAL

In Greek philosophy no topic receives more attention than the nature of the good. The speculations of Plato and Aristotle, especially have had a notable influence on Christian thought; they were adopted, in eclectic fashion, by the early Fathers, who combined many of the ancient philosophic ideas with revealed truth, by correcting some and amplifying others. The synthesis was carried on by the earlier Scholastics, and took definitive form from the hand of St. Thomas. Some of his predecessors, as well as some of his followers, disagree with him on a few minor points, most of which, however, are of a character too subtle to call for attention in this article. We shall, therefore, present the doctrine of St. Thomas in outline as the approved teaching of our schools.

Plato

According to Plato, in the objective order corresponding to our thought, there are two different worlds: the world of things, and the incomparably higher, nobler world of ideas, which transcends the world of things. The objects corresponding directly to our universal concepts are not things, but ideas. The objective idea is not indwelling in the essences of those things which fall within the scope of our corresponding universal concept, but the thing borrows or derives something from the idea. While the being or existence proper to the world of things is imperfect, unstable, essentially transitory, and therefore not truly deserving of the name of being, which implies permanence, ideas on the contrary are incorruptible, unchangeable, and truly existence. Now, among ideas the noblest and highest is the idea good: it is the supreme and sovereign idea. Whatever things possess goodness have it only because they participate in or draw from, the Sovereign Good. Their goodness then, is something distinct from, and added to, their proper essences or being. What, in Plato's mind, is the nature of this participation we need not explain further than that he makes it consist in this, that the thing is a copy or imitation of the idea. This sovereign idea, the Good, is identical with God. It is not a synthesis of all other ideas but is unique, transcendent, and individual. Whether Plato held that other ideas exist in God as in their proper dwelling-place is not quite clear. Aristotle so interpreted Plato; and it is very likely that Aristotle was better qualified to understand Plato's meaning than were subsequent philosophers who have disputed his interpretation. The Supreme Good imparts to the intellect the power to perceive, and gives intelligibility to the intelligible. It is, therefore, the source of truth. God, the essential and supreme Good, can impart nothing that is not good. This view leads to the inference that the origin of evil lies beyond the control of God. The theory leans, therefore, to dualism, and its influence may be traced through the early Gnostic and Manichaeic heresies, and, in a minor degree, in the doctrines of the Priscillianists and Albigenses.

Aristotle

Starting from the Platonic definition, good is that which all desire, Aristotle, rejecting the Platonic doctrine of a transcendent world of ideas, holds that the good and being are identical; good

is not something added to being, it is being. Everything that is, is good because it is; the quantity, if one may use the word loosely, of being or existence which a thing possesses, is at the same time the stock of goodness. A diminution or an increase of its being is a diminution or increase of its goodness. Being and the good are, then, objectively the same, every being is good, every good is being. Our concepts, being and good differ formally: the first simply denotes existence; the second, existence as a perfection, or the power of contributing to the perfection of a being. It follows from this that evil is not being at all; it is, on the contrary, the privation of being. Again, while being, viewed as the object of tendency, appetite, or will, gives rise to the concept *good*, so, when considered as the proper object of the intellect, it is represented under the concept *true* or *truth*, and it is the beautiful, inasmuch as the knowledge of it is attended by that particular pleasurable emotion which we call aesthetic. As God is the fullness of being, so, therefore, the supreme, infinite Being is also the Supreme Good from which all creatures derive their being and goodness.

Neo-Platonism

The neo-Platonists perpetuated the Platonic theory, mixed with Aristotelean, Judaic, and other oriental ideas. Plotinus introduced the doctrine of a triple hypostasis, i.e. the one, the intelligence, and the universal soul, above the world of changing being, which is multiple. The intelligence is ordained to good; but, incapable of grasping it in its entirety, it breaks it up into parts, which constitute the essences. These essences by becoming united with a material principle constitute things. The Pseudo-Dionysius propagated the Platonic influence in his work "De Nominibus Divinis", the doctrine of which is based on the scriptures. God is supereminently being -- "I am who am" -- but in Him the good is anterior to being, and the ineffable name of God is above all His other names. The good is more universal than being, for it embraces the material principle which does not possess any being of its own. The bond which unites beings among themselves and to the Supreme Being is love, which has for its object the good. The trend of the Pseudo-Dionysius is away from the dualism which admits a principle of evil, but on the other hand, it inclines towards pantheism.

The Fathers

The Fathers, in general, treated the question of good from the standpoint of hermeneutics rather than from the philosophic. Their chief concern is to affirm that God is the Supreme Good, that He is the creator of all that exists, that creatures derive their goodness from Him, while they are distinct from Him; and that there is no supreme independent principle of evil. St. Augustine, however (De Natura boni, P.L., XLIII), examines the topic fully and in great detail. Some of his expressions seem tinged with the Platonic notion that good is antecedent to being; but elsewhere he makes the good, and being in God fundamentally identical. Boethius distinguishes a double goodness in things created; first, that which in them is one with their being; second, an accidental goodness added to their nature by God. In God these two elements of good, the essential and the accidental, are but one, since there are no accidents in God.

Scholastic Doctrine

St. Thomas starts from the Aristotelean principle that being and the good are objectively one. Being conceived as desirable is the good. The good differs from the true in this, that, while both are objectively nothing else than being, the good is being considered as the object of appetite, desire, and will, the true is being a the object of the intellect. God, the Supreme Being and the source of all other being is consequently the Supreme Good, and the goodness of creatures results from the diffusion of His goodness. In a creature, considered as a subject having existence, we distinguish several elements of the goodness which it possesses:

- Its existence or being, which is the ground of all the other elements.
- Its powers, activities, and capacities. These are the complement of the first, and they serve it to pursue and appropriate whatever is requisite for and contributory to sustaining its existence, and developing that existence into the fullness of perfection proper to it.
- Each perfection that is acquired is a further measure of existence for it, hence a good.
- The totality of these various elements, forming its total good subjectively, that is, its entire being in a state of normal perfection according to its mind, is its good complete. This is the sense of the axiom: *omne ens est bonum sibi* (every being is a good unto itself).

The privation of any of its powers or due perfections is an evil for it, as, for instance, blindness, the loss of the power of sight, is an evil for an animal. Hence evil is not something positive and does not exist in itself; as the axiom expresses it, *malum in bono fundatur* (evil has its base in good).

Let us pass now to good in the relative sense. Every being has a natural tendency to continue and to develop itself. This tendency brings its activities into play; each power has its proper object, and a conatus pushing it to action. The end to which action is directed is something that is of a nature to contribute, when obtained, to the well-being or perfection of the subject. For this reason it is needed, pursued, desired, and, because of its desirability, is designated good. For example, the plant for its existence and development requires light, air, heat, moisture, nutriment. It has various organs adapted to appropriate these things, which are good for it, and, when by the exercise of these functions it acquires and appropriates them, it reaches its perfection and runs its course in nature. Now if we look into the cosmos, we perceive that the innumerable varieties of being in it are bound together in an indescribably complex system of mutual action and inaction, as they obey the laws of their nature. One class contributes to the other in that orderly relationship which constitutes the harmony of the universe. True -- to change the metaphor -- with our limited powers of observation we are unable to follow the innumerable threads of this large and varied sweeps to warrant the induction that everything is good for some other thing, that everything has its proper end in the great whole. *Omne ens est bonum alteri*. Since this orderly correlation of things is necessary to them in order that they may obtain from one another the help which they need, it too is good for them. This order is also a good in itself, because it is a created reflection of the unity and harmony of the Divine being and goodness. When we consider the Supreme Being as the efficient cause, conserver, and director of this majestic order, we reach the conception of Divine providence. And then arises the question, what is the end towards which this Providence directs the universe? The end again is the good, i.e. God Himself. Not indeed that, as in the case of creatures He may derive any advantage or perfection from the world, but that it, by participating in His goodness, may

manifest it. This manifestation is what we understand by the expression, giving glory to God. God is the Alpha and the Omega of the good; the source from which it flows, the end to which it returns. I am the Beginning and I am the End. It must be remembered that, throughout the treatment of this subject, the term *good*, like all other terms which we predicate of God and of creatures is used not univocally but analogically when referred to God. (See ANALOGY.)

The defined doctrine on the good, ontologically considered, is formulated by the Vatican Council (Session III, Const. de Fide Catholica, cap.i):

This one, only, true God, of His own goodness and almighty power, not for the increase of His own happiness, not to acquire but to manifest His perfection by the blessings which He bestows on creatures, with absolute freedom of counsel created from the beginning of time both the spiritual and the corporeal creature, to wit, the angelic and the mundane; and afterwards the human creature.

In Canon 4 we read:

If anyone shall say that finite things, both corporeal and spiritual, or at least spiritual, have emanated from the Divine substance; or that the Divine essence, by the manifestation and evolution of itself, becomes all things; or lastly, that God is universal or indefinite being, which by determining itself constitutes the universality of things distinct according to genera species, and individuals, let him be anathema.

II. ETHICAL

The moral good is not a kind, distinct from the good viewed ontologically; it is one form of perfection proper to human life, but, because of its excellence and supreme practical importance, it demands special treatment with reference to its own distinctive character which differentiates it from all other goods and perfections of man. It is again, in Greek philosophy, that we find the principles which have supplied the school with a basis for rational speculations, controlled and supplemented by revelation.

Plato

The supreme good of man is, as we have seen, the idea *good*, identical with God. By union with God man attains his highest subjective good, which is happiness. This assimilation is effected by knowledge and love; the means to achieve it is to preserve in the soul a due harmony throughout its various parts in subordination to the intellect which is the highest faculty. The establishment of this harmony brings man to a participation in the Divine unity; and through this union man attains to happiness, which remains even though he suffers pain and the privation of perishable goods. To regulate our actions harmoniously we stand in need of true knowledge, i.e. wisdom. The highest duty of man, therefore, is to obtain wisdom, which leads to God.

Aristotle

The end of man, his highest subjective good, is happiness or well-being. Happiness is not pleasure; for pleasure is a feeling consequent upon action, while happiness is a state of activity. Happiness consists in perfect action, i.e. the actual exercise by man of his faculties -- especially of his highest faculty, the speculative intellect -- in perfect correspondence, with the norm which his nature itself prescribes. Action may deviate from this norm either by excess or defect. The golden mean is to be preserved, and in this consists virtue. The various faculties, higher and lower, are regulated by their respective virtues to carry on their activities in due order. Pleasure follows action duly performed, even the highest form of activity, i.e. speculative contemplation of truth; but, as has been noted, happiness consists in the very operation itself. A life of contemplation, however, cannot be enjoyed unless a man possesses enough goods of the lower orders to relieve him from the toils and the cares of life. Hence happiness is beyond the reach of many. It is to be observed therefore that, while both Plato and Aristotle, as well as the Scholastics, hold that happiness is the end of man, their conception of happiness is quite different from the hedonistic idea of happiness as presented in English utilitarianism. For the utilitarian happiness is the sum total of pleasurable feelings, from whatever source they may be derived. On the other hand, in our sense, happiness -- *eudaimonia*, *beatitudo* -- is a distinct state or condition of consciousness accompanying and dependent on the realization in conduct of one definite good or perfection, the nature of which is objectively fixed and not dependent on our individual preferences. (*See* UTILITARIANISM).

Hedonists

The supreme good of man according to Aristippus is pleasure or the enjoyment of the moment, and pleasure is essentially gentle motion. Pleasure can never be bad, and the primary form of it is bodily pleasure. But, in order to secure the maximum of pleasure, prudent self-control is necessary; and this is virtue. Epicurus held that pleasure is the chief good; but pleasure is rest, not motion; and the highest form of pleasure is freedom from pain and the absence of all desires or needs that we cannot satisfy. Hence an important means towards happiness is the control of our desires, and the extinction of those that we cannot gratify, which is brought about by virtue. (*See* CYRENAIC SCHOOL OF PHILOSOPHY; HEDONISM, HAPPINESS.)

The Stoics

Everything in the universe is regulated by law. Man's highest good, or happiness, is to conform his conduct to universal law, which is Divine in its origin. To pursue this end is virtue. Virtue is to be cultivated in scorn of consequences, whether pleasurable or painful. The Stoic principle, "duty for duty's sake alone", reappears in Kant, with the modification that the norm of right action is not to be regarded as imposed by a Divine will; its original source is the human mind, or the free spirit itself.

St. Thomas

The radical difference which distinguishes the nobler forms of ancient ethics from Christian ethics is that, whereas the former identifies virtuous life with happiness, that is, with the possession and enjoyment of the highest good, the Christian conception is that a virtuous life, while it is, indeed, the proximate end and good of man, is not, in itself, his ultimate end and supreme good. A

life of virtue, the moral good, leads him to the acquisition of an ulterior and ultimate end. Furthermore the happiness, which in an imperfect measure attends the virtuous life, may be accompanied with pain, sorrow, and the privation of terrestrial goods; complete happiness (*beatitudo*) is not to be found in earthly existence, but in the life to come, and will consist in union with God, the Supreme Good.

(A) *The Proximate End and Good (Bonum Morale)*

Like all creatures involved in the cosmic system, man requires and seeks for the conservation and perfection of his being a variety of things and conditions, all of which are, therefore, good for him. A composite being, partly corporeal and partly spiritual, he possesses two sets of tendencies and appetites. Rational, he employs contrivance in order to obtain goods not immediately within his reach. That he may attain the perfection of this highly complex nature, he must observe an order in the pursuit of different kinds of goods, lest the enjoyment of a good of lower value may cause him to lose or forfeit a higher one, in which case the former would be no true benefit to him at all. Besides, with a hierarchy of activities, capacities, and needs, he is a unity, an individual, a person; hence there exists for him a good in which all his other goods focus in harmonious correlation; and they are to be viewed and valued through the medium of this paramount good, not merely in isolated relation to their respective corresponding appetites.

There are, then, several divisions of good;

- corporeal good is whatever contributes to the perfection of the purely animal nature;
- spiritual good is that which perfects the spiritual faculty-knowledge, truth;
- useful good is that which is desired merely as a means to something else; the delectable or pleasurable good is any good regarded merely in the light of the pleasure it produces.

The moral good (*bonum honestum*) consists in the due ordering of free action or conduct according to the norm of reason, the highest faculty, to which it is to conform. This is the good which determines the true valuation of all other goods sought by the activities which make up conduct. Any lower good acquired to the detriment of this one is really but a loss (*bonum apparens*). While all other kinds of good may, in turn, be viewed as means, the moral good is good as an end and is not a mere means to other goods. The pleasurable, though not in the order of things an independent end in itself, may be deliberately chosen as an end of action, or object of pursuit. Now let us apply these distinctions. Good being the object of any tendency, man has as many kinds of goods as he has appetites, needs, and faculties. The normal exercise of his powers and the acquisition thereby of any good is followed by satisfaction, which, when it reaches a certain degree of intensity, is the feeling of pleasure. He may and sometimes does pursue things not on account of their intrinsic worth, but simply that he may obtain pleasure from them. On the other hand, he may seek a good on account of its intrinsic power to satisfy a need or to contribute to the perfection of his nature in some respect. This may be illustrated in the case of food; for as the old adage has it, "the wise man eats to live, the epicure lives to eat."

The faculty which is distinctively human is reason; man lives as a man properly speaking, when all his activities are directed by reason according to the law which reason reads in his very nature. This conformity of conduct to reason dictates is the highest natural perfection that his activities

can possess; it is what is meant by rectitude of conduct, righteousness, or the moral good. "Those actions", says St. Thomas, "are good which are conformable to reason. Those are bad which are contrary to reason" (I-II:18:5). "The proximate rule of free action is reason, the remote is the eternal law, that is, the Divine Nature" (I-II:21:1, I-II:19:4). The motive impelling us to seek the moral good is not self-interest, but the intrinsic worth of righteousness. Why does a just man pay his debts? Ask him and he will reply, perhaps, in the first instance, "Because it is my duty". But ask him further: "Why do you fulfill this duty?" He will answer: "Because it is *right* to do so". When other goods are pursued in violation of the rational order, action is deprived of its due moral perfection and, therefore, becomes wrong or bad, though it may retain all its other ontological goodness. The good which is the object of such an action, although it retains its particular relative goodness with regard to the want which it serves, is not a good for the whole personality. For example, if, on a day when flesh meat is forbidden, a man dines on roast-beef, the food is just as good physically as it would be on any other day, but this goodness is outweighed, because his action is a violation of reason which dictates that he ought to obey the command of lawful authority.

While the moral good is fixed by the Author of nature, yet, because man is endowed with free will or the power of electing which good he shall make the goal of action, he can, if he pleases, ignore the dictates of right reason and seek his other goods in a disorderly manner. He may pursue pleasure, riches, fame, or any other desirable end, though his conscience -- that is, his reason -- tells him that the means which he takes to satisfy his desire is wrong. He thereby frustrates his rational nature and deprives himself of his highest perfection. He cannot change the law of things, and this privation of his highest good is the immediate essential punishment incurred by his violation of the moral law. Another punishment is that the loss is attended, generally speaking, by that peculiar painful feeling called remorse; but this effect may cease to be perceived when the moral impulses of reason have been habitually disregarded.

In order that an action may possess in an essential degree -- no action is absolutely perfect -- its moral perfection, it must be in conformity with the law in three respects:

- The action, considered under the character by which it ranks as an element of conduct, must be good. The physical act of giving another person money may be either an act of justice, when one pays a debt, or it may be an act of mercy or benevolence, as it is if one give the money to relieve distress. Both, of these actions possess the fundamental element of goodness (*bonum ex objecto*).
- The motive, if there is a motive beyond the immediate object of the act, must also be good. If one pays a man some money that one owes him with the purpose, indeed, of paying one's debts, but also with the ulterior purpose of enabling him to carry out a plot to murder one's enemy, the end is bad, and the action is thereby vitiated. The end which is the motive must also be good (*bonum ex fine*). Thus, an action, otherwise good, is spoiled if directed to an immoral end; conversely, however, an action which in its fundamental character is bad is not rendered good by directing it to a good end. The end does not justify the means.
- The circumstances under which the action is performed should be in entire conformity with reason, otherwise it lacks something of moral completeness, though it may not be thereby rendered totally immoral. We frequently say that something which a person has done was right enough in itself, but he did not do it in the proper place or season.

This triple goodness is expressed in the axiom: *bonum ex integra causa, malum ex quocumque defectu* ("An action is good when good in every respect; it is wrong when wrong in any respect").

(B) *The Ultimate Good -- God -- Beatitude*

The perfection of life, then, is to realize the moral good. But now arises the question: "Is life its own end?" Or, in other words: "What is the ultimate end appointed for man?" To answer this question we must consider the good first under the aspect of end. We consider the good first under the aspect of end. "We do not act alone", says St. Thomas, "for an immediate end, but all our actions converge towards an ultimate end or good, otherwise the entire series would be aimless." The test by which we may determine whether any object of pursuit is the ultimate end is: "Does it satisfy all desire?" If it does not, it is not adequate to complete man's perfection and establish him in the possession of his highest good and consequent happiness. Here St. Thomas, following St. Augustine, examines the various objects of human desire -- pleasure, riches, power, fame, etc. -- and rejects them all as inadequate. What then is the highest good, the ultimate end? St. Thomas appeals to Revelation which teaches that in life to come the righteous shall possess and enjoy God himself in endless fruition. The argument is summed up in the well-known words of St. Augustine: "Thou has made us, O Lord, for Thyself, and our hearts are restless till they rest in Thee". The moral condition necessary to this future consummation is that our wills be here conformed to the Divine will as expressed in the moral law and in His revealed positive law. Thus the attainment of the proximate good in this life leads to the possession of the Supreme Good in the next. Another condition indispensable is that our actions be vivified by Divine grace (see GRACE). What precisely will be the act by which the soul will apprehend the Sovereign Good is a disputed question among theologians. The Thomist theory is that it will be an act of the intellect, while the Scotist opinion is that it will be an act of the will. However this may be, one thing is dogmatically certain: the soul in this assimilation shall not lose its selfhood, nor be absorbed according to the pantheistic sense in the Divine Substance.

A word or two may be added upon a point which owing to the prevalence of kantian ideas is of actual importance. As we have seen, the moral good and the supreme good are ends in themselves; they are not means, nor are they to be pursued merely as means to pleasure or agreeable feeling. But may we make the agreeable any part of our motive? Kant answers in the negative; for to allow this to enter into our motive is to vitiate the only moral motive, "right for right's sake," by self interest. This theory does not pay due regard to the order of things. The pleasurable feeling attendant upon action, in the order of nature, established by God, served as a motive to action, and its function is to guarantee that actions necessary welfare shall not be neglected. Why, then, should it be unlawful to aim at an end which God has attached to the good? Similarly as the attainment of our supreme good will be the cause of everlasting happiness, we may reasonably make this accompanying end the motive of our action, provided that we do not make it the sole or predominant motive.

In conclusion, we may now state in a word the central idea of our doctrine. God as Infinite Being is Infinite Good; creatures are good because they derive their measure of being from Him. This participation manifests His goodness, or glorifies God, which is the end for which he created

man. The rational creature is destined to be united to God as the Supreme End and Good in a special manner. In order that he may attain to this consummation, it is necessary that in this life, by conforming his conduct to conscience, the interpreter of the moral law, he realizes in himself the righteousness which is the true perfection of his nature. Thus God is the Supreme Good, as principle and as end. "I am the beginning and I am the end."

JAMES J FOX

The Highest Good

The Highest Good

"We always act with a view to some good. The good is the object which all pursue, and for the sake of which they always act", says Plato (Republic, I, vi). His disciple Aristotle repeats the same idea in other words when he declares (Ethics, I, i) that the good is "that which all aim at". This definition is, as St. Thomas observes, a posteriori. Yet, if appetibility does not constitute goodness, still it is our only means of identifying it; in practice, the good is the desirable. But experience soon teaches that all desires cannot be satisfied, that they are conflicting, and that some goods must be foregone in order to secure others. Hence the necessity of weighing the relative value of goods, of classifying them, and of ascertaining which of them must be procured even at the loss of others. The result is the division of goods into two great classes, the physical and the moral, happiness and virtue. Within either class it is comparatively easy to determine the relation of particular good things to one another, but it has proved far more difficult to fix the relative excellence of the two classes of virtue and happiness. Still the question is of supreme importance, since in it the reason and final destiny of our life is involved. As Cicero says (De Finibus, v, 6), "Summum autem bonum si ignoratur, vivendi rationem ignorari necesse est." If happiness and virtue are mutually exclusive, we have to choose between the two, and this choice is a momentous one. But their incompatibility may be only on the surface. Indeed the hope is ever recurring that the sovereign good includes both, and that there is some way of reconciling them.

It has been the task of moralists to sift the conditions on which this may be done.

- Some would reduce virtue to happiness;
- others teach that happiness is to be found in virtue;
- but, as both these solutions are ever found to be in contradiction with the facts of life, the consequent vacillations of opinion can be traced throughout the history of philosophy.

In the main, they can be classified under three heads, according as one or the other predominates, or both are made to blend: viz.:

- Eudæmonism or Utilitarianism, when the highest good is identified with happiness;
- Rational Deontology, when the highest good is identified with virtue or duty;
- Rational Eudæmonism, or tempered Deontology, when both virtue and happiness are combined in the highest good.

I. EUDÆMONISM

(a) Socrates (469-399 B.C.), the father of systematic Ethics, taught that happiness is the end of man; that it consists, not in external goods signs of the uncertain favours of fortune, or of the gods (*eutychia*) -- but in a rational joy, which implies the renunciation of common delights (*eupraxia*). He did not, however, carry this doctrine of moderation to the degree of asceticism, but rather insisted on the cultivation of the mind as being of greater importance. Knowledge is the only virtue, ignorance the only vice. Yet, from the Dialogues of Xenophon, it is seen that he descends to the common morality of Utilitarianism.

(b) This latter phase of Socratic teaching was adopted by Aristippus of Cyrene (435-356 B.C.), who as representative of the Hedonistic School among the ancients, and holding, on the one hand, with Socrates that knowledge is virtue, and, on the other, with Protagoras, that we can know only our sensations, and not that which causes them, concluded that that which produces in us the most pleasant feelings is the highest good. Culture and virtue are desirable only as a means to this end. As pleasure is conditioned by organic states, it can be produced only by motion, which, to be pleasant, must needs be gentle; hence according to the Cyrenaics, it is not the mere absence of pain, but a transient emotion which makes man happy and constitutes his highest good.

(c) Aristotle (384-322 B.C.) admits with Socrates and the ancient philosophers generally, that the highest good is to be identified with the highest happiness; and, in determining in what this highest happiness consists, he agrees with the Cyrenaics that it is not mere passing enjoyment, but action (*en to zen kai energein*, Eth, Nic., IX, ix, 5). Still it is not any and every kind of activity that man may find agreeable which constitutes this supreme happiness, but that which is proper to him (*okeion ergon -- oikeia arete*, Ibid., I, vii, 15). This cannot be merely the life which he shares with the plants and animals, or the sensibility, which he enjoys in common with the brutes, but thought, which is the distinctive characteristic of man. Moreover, as it is in the sphere of activity proper to each living being that its peculiar excellence is to be sought, it follows that man's rational activity (*psyches energeia meta logou*, Ibid., I, vii, 15) is at the same time honourable and virtuous (*psyches energeia kat areten*, loc. cit.). Since, however, there are several such activities, it must be the noblest and most perfect of these. This is none other than speculative thought, or that which has to do with the contemplation of "honourable and divine subjects" (*kalon kai theion*, Ibid., X, vii, 10), because

this belongs to the noblest faculty and tends to the noblest object; because it is the most continuous, the most pleasant, the most self-sufficing (*Ibid.*, I, x, 8).

In thus defining human happiness, Aristotle does not aim at determining which good is absolutely supreme, but only that which relatively is the highest for man in his present condition -- the highest attainable in this life (*to panton akrotaton ton prakton agathon*, *Ibid.*, I, iv, 16). Though Aristotle thus makes happiness and the highest good to consist in virtuous action, yet he does not exclude pleasure, but holds that pleasure in its keenest form springs from virtue. Pleasure completes an action, is added to it, as "to youth its bloom" (*oion tois akmaiois he ora*, *Ibid.*, X, iv, 8). Since, therefore, Aristotle places man's highest good in his perfection, which is identical with his happiness and carries with it pleasure, he is rightly accounted a Eudæmonist, though of a nobler sort.

(d) Epicurus (circa 340-270 B.C.), whilst accepting in substance the Hedonism of the Cyrenaics, does not admit with them that the highest good lies in the pleasure of motion (*hedone en kinesei*), but rather in the pleasure of rest (*hedone kataskematike*); not in the *voluptas in motu* but in the *stabilitas voluptatis*, says Cicero (*De Finibus*, II, v, 3) -- that state of deep peace and perfect contentment in which we feel secure against all the storms of life (*ataraxia*). To attain this is the paramount problem of Epicurus's philosophy, to which his empirical logic (canonics) and his theory of nature (the materialism of Democritus) are merely preliminaries. Thus the whole of his philosophy is constructed with a view to his Ethics, for which it prepares the way and which completes it.

In holding that the pleasures of the mind are preferable to voluptuousness, inasmuch as they endure, while those of the senses pass with the moment that gives them birth, he is not consistent, seeing that his materialism reduces all the operations of the mind to mere sensations. Finally, as virtue is according to him the tact which impels the wise man to do whatever contributes to his welfare, and makes him avoid the contrary, it cannot be the highest good, but only a means of realizing it. By his materialism Epicurus paved the way for modern Utilitarianism, which has assumed two forms, viz.:

(e) Individual Utilitarianism, which places man's highest good in his greatest personal welfare and pleasure. This is identical with the Greek Hedonism, and was revived in the eighteenth century by the Encyclopedists, De la Mettrie (1709-1751), Helvetius (1715-1771), Diderot (1713-1784), and De Volney (1757-1820). It was also advocated by the Sensists, Hartley (1704-1757), Priestley (1733-1804) and Hume (1711-1776); and in the nineteenth century by the German Materialists, Vogt (1817-1895), Moleschott (1822-1893), and Büchner (1824-1899);

(f) Social Utilitarianism, which is mainly of English origin. In its earliest stage, with Richard Cumberland (1632-1718), and Anthony Cooper, Earl of Shaftesbury (1671-1718), it still retained a somewhat subjective character, and placed the highest good in the practice of social benevolence. With Jeremy Bentham (1748-1832) and John Stuart Mill (1806-1873), it becomes wholly objective. The highest good, so they say, cannot be the happiness of the individual, but the happiness of the many, "the greatest happiness of the greatest number". Stated in these terms, the proposition is merely a truism. That in general, the happiness of a community is superior to the happiness of one of its members, is obvious; but, when it comes to be a personal affair, the individual is no longer

a part of the whole, but one party pitted against others, and it is by no means evident, from the positivistic point of view, that his personal happiness is not for him the highest good.

(g) This passage from self to non-self, from the individual to the community, Herbert Spencer (1820-1903) attempted to derive from the evolutionary principle of "the survival of the fittest". Those individuals have evidently a better chance to survive who oppose their enemies as a body, and therefore who live in societies (flocks, herds, human associations); and therefore, again, the social instincts are destined to survive and grow stronger, while the individualistic ones cannot but disappear. The highest good here is not the happiness of the individual, not even the happiness of the present generation, but the sum total of the conditions which make possible the survival and the constant progress of mankind at large. Hence in a system of elaborate synthetic philosophy Spencer discusses at great length the laws of life and those conditions of psychology and social existence from which, as from a prearranged premise, he gathers "The Data of Ethics", or Ethics emancipated from the notion of divine legislation.

II. DEONTOLOGISM

Under this head may be classed systems which place the highest human good in the conformity of conduct with reason. It assumes an exaggerated or tempered form, according as it excludes or admits regard for human perfection and happiness as one of the elements of morality.

(a) Plato, in common with Socrates and the minor Socratic schools, holds that happiness is the supreme and ultimate object of human endeavour, and that this happiness is identical with the highest good. But when he comes to determine in what this good or happiness consists, he does so in accordance with the presuppositions of his philosophical system. The soul in its true essence is declared to be an incorporeal spirit destined for the intuition of the Idea; hence its ultimate end and supreme good is to be attained by withdrawing from the life of sense and retiring into pure contemplation of the Idea, which is identical with God. Man must, therefore, rise to God and find his chief good in Him. This may be considered the highest good in the objective order, and is found inculcated in those passages of this philosopher's writings in which the solution of the supreme problem of life is sought in flight from sensuality (cf. *Theæt.*, 176, A; *Phædo*, 64, E; *Republic*, VII, 519, C sqq., apud Zeller, pp. 435-444). But inasmuch as this is practically unattainable in this life, man is told that the highest good here is to be found in making himself like God, and that this is to be brought about by the knowledge and the enthusiastic love of God, as the Supreme Good. In the knowledge, therefore, and love of God as the Supreme Good consists man's highest good in the subjective order. This is brought out in those passages in which even sensuous beauty is described as worthy of love, and external activity, sensible pleasure, is included among the component elements of the highest good (cf. *Republic*, X, 603, E sqq.; *Phil.*, 28, A sqq.; *Tim.*, 59, C).

(b) The Stoic school was founded by Zeno of Cittium (350-258 B.C.). According to its followers, the highest purpose (good) of human life is not to be found in contemplation (*theoria*), as Plato would have it, but in action. To live according to nature (*homologoumenos te physei zen*) was their supreme rule of conduct. By this they did not mean that individual nature of man, but the eternal

and divine law which manifests itself in nature as the measure to which all things in the universe should conform their action. For man to live according to nature, therefore, means to conform his will to the divine will, and in this consists virtue. Virtue alone is good in the highest sense of the word, and virtue alone is sufficient for happiness. As this law imposes itself through reason, the system is rightly called rational Deontologism.

(c) Kant agrees with the Stoics in placing the essence of the highest good in virtue, and not in happiness. Yet he thinks our conception of it is incomplete unless it is made to include happiness as well. The highest good may mean either the Supreme (*supremum*) or the Complete (*consummatum*). The Supreme is a condition which is itself unconditioned, or is not subordinate to anything else (*originarium*). The Complete, again, is a whole which is not itself a part of a larger whole of the same kind (*perfectissimum*). Virtue, or that disposition to act in conformity with the moral law, is not dependent on happiness, but itself makes man worthy of happiness. It is, therefore, the highest good, the supreme condition of whatever can be regarded as desirable. But it is not the whole, nor the supreme good, which finite rational beings crave; the complete good includes happiness. Hence the highest conceivable good must consist in the union of virtue and happiness proportioned to morality.

This is what Kant means by the whole or complete good. Of its two elements, virtue, having no higher condition and being itself the condition of happiness, is the supreme good. Happiness, however, while it is agreeable to the person who possesses it, is not good in itself and in all respects; it is good only under the condition that a man's conduct is in conformity with the moral law. This is why Kant was wont to say that "nothing can be called good without qualification, but good will"; and since the best it can do in this life is to strive after holiness, the struggle between the desire to obey and the impulse to transgress must continue for ever, making the highest good in this life unattainable.

III. RATIONAL EUDÆMONISM OR TEMPERED III. RATIONAL EUDÆMONISM OR TEMPERED

Christian philosophers, in dealing with the problem of the highest good, have necessarily kept in view the teachings of Faith; still they base their solution of it on motives of reason. Their system is neither strictly deontologico-rational, nor yet altogether eudemonistic, but a consistent blending of both. The ultimate end of man is to be placed in perfect rational activity, in ultimate perfection, and in happiness, not as in three different things, but as in one and the self-same, since the three conceptions are resolvable into one another, and each of them denotes a goal of human tendency, a limit beyond which no desire remains to be satisfied. Though they differ somewhat in their several ways of formulating it, at bottom they all agree:

- that in the blissful possession of God is to be found the rightful object of reason (man's deontologico-rational end), and of free will (his eudæmonistic end);
- that this eudæmonistic end -- the perfect satisfaction of the will in the possession of God -- is not merely an accidental result of the former, but is the positive determination of God, the author of our nature;

•that this eudæmonistic end may not be intended by the will for its own sake, to the exclusion of the deontologico-rational end, which, by its nature, it presupposes, and to which it is subordinated.

It is St. Thomas Aquinas who best harmonized this system with revelation. His teaching may be summarized thus:

(a) Man's highest happiness does not consist in pleasure, but in action, since, in the nature of things, action is not for pleasure, but pleasure for action. This activity, on which man's happiness rests, must, on the one hand, be the noblest and highest of which his nature is capable, and, on the other, it must be directed toward the noblest and the highest object.

(b) This noblest and highest object of human activity is not that of the will, which merely follows upon and is conditioned by knowledge; it must rather be knowledge itself. Consequently, the highest happiness of man consists in the knowledge of the highest truth, which is God. With the knowledge of God must, of course, be joined the love of God; but this love is not the essential element of perfect happiness; it is merely a necessary complement of it (*Summa Theol.*, I-II, Q. iii, a. 2, c; *Con. Gen.*, III, xxv, xxvi).

(c) Since the knowledge of God can be acquired in three ways -- by demonstration, by faith, and by intuition -- the further question arises: which of these three kinds of knowledge is the foundation of man's highest happiness? Not knowledge by demonstration, for happiness must be something universal and attainable by all men, whereas only a few can arrive at this knowledge by demonstration; neither can knowledge by faith be a basis for perfect happiness, seeing that this consists chiefly in the activity of the intellect, whilst in faith the will claims for itself the principal part, inasmuch as the will must here determine the intellect to give its assent. Consequently happiness can consist only in the intuitive knowledge of God; and since this is attainable only in the next life, it follows that the ultimate destiny of man -- and hence his highest good -- reaches beyond time into eternity. It must be everlasting, otherwise it would not be perfect (*Con. Gen.*, III, xxxviii, sqq.).

(d) This end is not merely a subjective one which the reason imposes upon itself. Just because it is an activity, it involves relation to some external object. The intellect essentially represents a truth distinct from itself, as the act of the will is an inclination towards some good not identical with itself. The truth to be represented, therefore, and the good to be attained or possessed, are objects to which happiness refers as to further ends, just as the image has reference to a model and motion to a goal. Truth, therefore, and good are objective ends to which formal happiness corresponds as a subjective end. The absolutely ultimate end, therefore, is in the objective order, beyond which nothing remains to be known and desired, and which, when it is known and possessed, gives rest to the rational faculties. This can be nothing else than the infinite truth and the infinite good, which is God. Hence the system is not a purely deontologico-rational one, constituting the reason a law to itself, the observance of which law would be the highest good.

(e) Still less is it purely eudæmonistic, since the ultimate end and highest good does not coincide with subjective happiness as Hedonism teaches, but with the object of the highest acts of contemplation and love. This object is God, not merely as beatifying us, but as the Absolute Truth and Goodness, infinitely perfect in itself.

Good Faith

Good Faith

A phrase employed to designate the mental and moral state of honest, even if objectively unfounded, conviction as to the truth or falsehood of a proposition or body of opinion, or as to the rectitude or depravity of a line of conduct. One who is in this condition, so far as the violation of positive law, or even, in certain junctures, of the natural law, is concerned, is said to labour under an invincible error, and hence to be guiltless. This consideration is often invoked in behalf of those who are outside of the visible affiliation of the Catholic Church. It is not unfrequently applied to determine the degree of right or obligation prevailing in the various forms of human engagements, such as contracts, etc. In the matter of prescription it is held to be an indispensable requirement whether there be question of acquiring dominion or freeing oneself from a burden. Likewise, in deciding the duty incumbent upon one who finds himself in possession of another's property, cognizance is taken of the good faith with which perchance the holding has been begun and accompanied. Finally, if a person, although in the actually in state of mortal sin, were in good faith to come to Holy Communion, such a one, according to the judgement of many theologians, would receive sanctifying grace. The reason alleged by them, although not regarded by other moralists as convincing, is that good faith saves the communicant from the conscious interposition of any obstacle to the productive activity of the Sacrament.

JOSEPH F. DELANY

Good Friday

Good Friday

Definition and etymology. Good Friday, called *Feria VI in Parasceve* in the Roman Missal, *he hagia kai megale paraskeue* (the Holy and Great Friday) in the Greek Liturgy, *Holy Friday* in Romance Languages, *Charfreitag* (Sorrowful Friday) in German, is the English designation of Friday in Holy Week -- that is, the Friday on which the Church keeps the anniversary of the Crucifixion of Jesus Christ.

Parasceve, the Latin equivalent of *paraskeue*, preparation (i.e. the preparation that was made on the sixth day for the Sabbath; see Mark, xv, 42), came by metonymy to signify the day on which the preparation was made; but while the Greeks retained this use of the word as applied to every Friday, the Latins confined its application to one Friday. Irenaeus and Tertullian speak of Good Friday as the day of the Pasch; but later writers distinguish between the *Pascha staurosimon* (the passage to death), and the *Pascha anastasimon* (the passage to life, i.e. the Resurrection). At present the word *Pasch* is used exclusively in the latter sense. The two Paschs are the oldest feasts in the calendar.

From the earliest times the Christians kept every Friday as a feast day; and the obvious reasons for those usages explain why Easter is the Sunday *par excellence*, and why the Friday which marks the anniversary of Christ's death came to be called the Great or the Holy or the Good Friday. The origin of the term *Good* is not clear. Some say it is from "God's Friday" (*Gottes Freitag*); others maintain that it is from the German *Gute Freitag*, and not specially English. Sometimes, too, the day was called *Long Friday* by the Anglo-Saxons; so today in Denmark.

Office and ceremonial. There is, perhaps, no office in the whole liturgy so peculiar, so interesting, so composite, so dramatic as the office and ceremonial of Good Friday.

About the vigil office, which in early times commenced at midnight in the Roman, and at 3 a.m. in the Gallican Church, it will suffice to remark that, for 400 years past, it has been anticipated by five or six hours, but retains those peculiar features of mourning which mark the evening offices of the preceding and following day, all three being known as the *Tenebrae*.

The morning office is in three distinct parts. The first part consists of three lessons from Sacred Scripture (two chants and a prayer being interposed) which are followed by a long series of prayers for various intentions; the second part includes the ceremony of unveiling and adoring the Cross, accompanied by the chanting of the *Improperia*; the third part is known as the Mass of the Presanctified, which is preceded by a procession and followed by vespers. Each of these parts will be briefly noticed here.

The Hour of *None* being finished, the celebrant and ministers, clothed in black vestments, come to the altar and prostrate themselves for a short time in prayer. In the meantime, the acolytes spread a single cloth on the denuded altar. No lights are used. When the celebrant and ministers ascend the altar, a lector takes his place on the epistle side, and reads a lesson from Osee 6. This is followed by a tract sung by the choir. Next comes a prayer sung by the celebrant, which is followed by another lesson from Exodus 12, chanted by the subdeacon. This is followed by another tract (Psalm 139), at the close of which the third lesson, viz. the Passion according to St. John, is sung by the deacons or recited from a bare pulpit -- "*dicitur passio super nudum pulpitem*". When this is finished, the celebrant sings a long series of prayers for different intentions, viz. for the Church, pope, bishop of the diocese, for the different orders in the Church, for the Roman Emperor (now omitted outside the dominions of Austria), for catechumens The above order of lessons, chants, and prayers for Good Friday is found in our earliest Roman Ordines, dating from about A.D. 800. It represents, according to Duchesne (234), "the exact order of the ancient Synaxes without a liturgy", i.e. the

order of the earliest Christian prayer meetings, at which, however, the liturgy proper, i.e. the Mass, was not celebrated. This kind of meeting for worship was derived from the Jewish Synagogue service, and consisted of lessons, chants, and prayers. In the course of time, as early perhaps as A. D. 150 (see Cabrol's "Origines Liturgiques" 137), the celebration of the Eucharist was combined with this purely eucharistical service to form one solemn act of Christian worship, which came to be called the Mass. It is to be noted that the Mass is still in two parts, the first consisting of lessons, chants, and prayers, and the second being the celebration of the Eucharist (including the Offertory, Canon, and Communion). While the Judica, introit, and the Gloria in Excelsis have been added to this first part of the Mass and the long series of prayers omitted from it, the oldest order of the Synaxis, or meeting without Mass, has been retained in the Good Friday service. The form of the prayers deserves to be noticed. Each prayer in three parts.

- The celebrant invites the congregation to pray for a specified intention.
- The deacon then says "Let us kneel" (Flectamus genua); then the people were supposed to pray for a time kneeling in silence, but at present immediately after the invitation to kneel the subdeacon invites them to stand up (Levate).
- The celebrant collects, as it were, all their prayers, and voices them aloud.

The modern collect is the representative of this old solemn form of prayer. The first part is reduced to the Oremus, the second part has disappeared, and the third part remains in its entirety and has come to be called the collect. It is curious to note in these very old Good Friday prayers that the second part is omitted in the prayers for the Jews, owing, it is said, to their having insulted Christ by bending the knee in mockery before Him. These prayers were not peculiar to Good Friday in the early ages (they were said on Spy Wednesday as late as the eighth century); their retention here, it is thought, was inspired by the idea that the Church should pray for all classes of men on the day that Christ died for all. Duchesne (172) is of opinion that the Oremus now said in every Mass before the Offertory, which is not a prayer, remains to show where this old series of prayers was once said in all Masses.

Adoration of the Cross. The dramatic unveiling and adoration of the Cross, which was introduced into the Latin Liturgy in the seventh or eighth century, had its origin in the Church of Jerusalem. The "Peregrinatio Sylvaniae" (the real name is Etheria) contains a description of the ceremony as it took place in Jerusalem towards the close of the fourth century.

Then a chair is placed for the Bishop in Golgotha behind the Cross... a table covered with a linen cloth is placed before him; the Deacons stand around the table, and a silver-gilt casket is brought in which is the wood of the holy Cross. The casket is opened and (the wood) is taken out, and both the wood of the Cross and the Title are placed upon the table. Now, when it has been put upon the table, the Bishop, as he sits, holds the extremities of the sacred wood firmly in his hands, while the Deacons who stand around guard it. It is guarded thus because the custom is that the people, both faithful and catechumens, come one by one and, bowing down at the table, kiss the sacred wood and pass on. (Duchesne, tr. McClure, 564)

Our present ceremony is an obvious development of this, the manner of worshipping the True Cross on Good Friday observed at Jerusalem. A veiled image of the Crucifix is gradually exposed to view, while the celebrant, accompanied by his assistants, sings three times the "Ecce lignum Crucis", etc. (Behold the wood of the Cross on which hung the salvation of the world), to which the choir answers, each time, "Venite adoremus" (Come let us adore). During the singing of this response the whole assembly (except the celebrant) kneel in adoration. When the Cross is completely unveiled the celebrant carries it to the foot of the altar, and places it in a cushion prepared for it. He then takes off his shoes and approaches the Cross (genuflecting three times on the way) and kisses it. The deacon and subdeacon also divest themselves of their shoes (the deacon and subdeacon may take off their shoes, if that be the custom of the place, S.C.R., n. 2769, ad X, q. 5), and act in like manner. For an account of the peculiarly impressive ceremony known as the "Creeping to the Cross", which was once observed in England, see article CROSS. The clergy two and two follow, while one or two priests vested in surplice and black stole take crosses and present them to the faithful present to be kissed. During this ceremony the choir sings what are called Improperia, the Trisagion (in Greek as well as Latin), if time permits the hymn *Crux fidelis* ... (Oh, Cross, our hope...). The Improperia are a series of reproaches supposed to be addressed by Christ to the Jews. They are not found in the old Roman Ordines. Duchesne (249) detects, he thinks, a Gallican ring in them; while Martene (III, 136) has found some of them alternating with the Trisagion in ninth century Gallican documents. They appear in a Roman Ordo, for the first time, in the fourteenth century, but the retention of the Trisagion in Greek goes to show that it had found a place in the Roman Good Friday service before the Photian schism (ninth century).

A non-Catholic may say that this is all very dramatic and interesting, but allege a grave deordination in the act of adoration of the Cross on bended knees. Is not adoration due to God alone? The answer may be found in our smallest catechism. The act in question is not intended as an expression of absolute supreme worship (*latreia*) which, of course, is due to God alone. The essential note of the ceremony is reverence (*proskynesis*) which has a relative character, and which may be best explained in the words of the Pseudo-Alcuin: "Prosternimur corpore ante crucem, mente ante Dominum. Veneramur crucem, per quam redempti sumus, et illum deprecamur, qui redemit" (While we bend down in body before the cross we bend down in spirit before God. While we reverence the cross as the instrument of our redemption, we pray to Him who redeemed us). It may be urged: why sing "Behold the wood of the Cross", in unveiling the image of the Cross? The reason is obvious. The ceremony originally had immediate connexion with the True Cross, which was found by St. Helena in Jerusalem about the year A.D. 326. Churches which procured a relic of the True Cross might imitate this ceremony to the letter, but other churches had to be with an image which in this particular ceremony represents the wood of the True Cross.

As might be expected, the ceremony of the unveiling and adoration of the Cross gave rise to peculiar usages in particular Churches. After describing the adoration and kissing of the Cross in the Anglo-Saxon Church, Rock (*The Church of Our Fathers*, IV, 103) goes on to say: "Though not insisted on for general observance, there was a rubric that allowed a rite, at this part of the office,

to be followed, which may be called *The Burial of the Rood*. At the hind part of the altar ... there was made a kind of sepulchre, hung all about with a curtain. Inside this recess...the cross, after the ceremony of kissing it had been done, was carried by its two deacons, who had, however, first wrapped it up in a linen cloth or winding-sheet. As they bore their burden along, they sang certain anthems till they reached this spot, and there they left the cross; and it lay thus entombed till Easter morn, watched all that while by two, three, or more monks, who chanted psalms through day and night. When the Burial was completed the deacon and subdeacon came from the sacristy with the reserved host. Then followed *The Mass of the Pre-sanctified*. A somewhat similar ceremony (called the *Apokathelosis*) is still observed in the Greek Church. An image of Christ, laid on a bier, is carried through the streets with a kind of funeral pomp, and is offered to those present to be worshipped and kissed.

Mass of the Presanctified. To return to the Roman Rite, when the ceremony of adoring and kissing the Cross is concluded, the Cross is placed aloft on the altar between lighted candles, a procession is formed which proceeds to the chapel of repose, where the second sacred host consecrated in yesterday's Mass has since lain entombed in a gorgeously decorated urn and surrounded by lights and flowers. This urn represents the sepulchre of Christ (decree of S.C.R., n. 3933, ad I). The Most Holy Sacrament is now carried back to the altar in solemn procession, during which is sung the hymn "Vexilla Regis prodeunt" (The standards of the King advance). Arrived in the sanctuary the clergy go to their places retaining lighted candles, while the celebrant and his ministers ascend the altar and celebrate what is called the Mass of the Presanctified. This is not a Mass in the strict sense of the word, as there is no consecration of the sacred species. The host which was consecrated in yesterday's Mass (hence the word *presanctified*) is placed on the altar, incensed, elevated ("that it may be seen by the people"), and consumed by the celebrant. It is substantially the Communion part of the Mass, beginning with the "Pater noster" which marks the end of the Canon. From the very earliest times it was the custom not to celebrate the Mass proper on Good Friday. Speaking about this ceremony Duchesne (249) says,

It is merely the Communion separated from the liturgical celebration of the Eucharist properly so called. The details of the ceremony are not found earlier than in books of the eighth or ninth century, but the service must belong to a much earlier period. At the time when synaxes without liturgy were frequent, the 'Mass of the Presanctified' must have been frequent also. In the Greek Church it was celebrated every day in Lent except on Saturdays and Sundays, but in the Latin Church it was confined to Good Friday.

At present [1909] the celebrant alone communicates, but it appears from the old Roman Ordines that formerly all present communicated (Martene, III, 367). The omission of the Mass proper marks in the mind of the Church the deep sorrow with which she keeps the anniversary of the Sacrifice of Calvary. Good Friday is a feast of grief. A black fast, black vestments, a denuded altar, the slow and solemn chanting of the sufferings of Christ, prayers for all those for whom He died, the unveiling and reverencing of the Crucifix, these take the place of the usual festal liturgy; while the lights in

the chapel of repose and the Mass of the Presanctified is followed by the recital of vespers, and the removal of the linen cloth from the altar ("Vespers are recited without chant and the altar is denuded").

Other ceremonies. The rubrics of the Roman Missal prescribe no further ceremonial for this day, but there are laudable customs in different churches which are allowed. For example, the custom (where it exists) of carrying in procession a statue of Our Lady of Sorrows is expressly permitted by decrees of the S. Con. of Rites (n. 2375, and n. 2682); also the custom (where it exists) of exposing a relic of the Holy Cross on the high altar (n. 2887), and the custom of carrying such a relic in procession within the walls of the church, not, however, during the usual ceremonies (n. 3466), are expressly permitted. Rock (*op. cit.* 279, 280) notes, with interesting detail, a custom followed at one time in England of submitting voluntarily to the rod of penance on Good Friday.

T.P. GILMARTIN

Eastern Vicariate of the Cape of Good Hope

Eastern Vicariate of the Cape of Good Hope

The Eastern Vicariate of the Cape of Good Hope was established in 1847, when the Vicariate of the Cape of Good Hope was divided into Eastern and Western. Later the Eastern Vicariate was subdivided three times. As now constituted, it is bounded on the north by the Orange River, on the west by the civil districts (included in the vicariate) of Hopetown, Richmond, Murraysberg, Britstown, Jansenville, Humansdorp, Aberdeen, and Uitenhage; on the south by the Indian Ocean; on the east by the western boundary of Tembuland, Griqualand East, and the southwestern boundary of Basutoland.

On 27 December, 1847, Dr. Devereux was consecrated, in Cape Town, Bishop of Paneas and first Vicar Apostolic of the Eastern Vicariate, by Dr. Griffith, under whom he had worked for nine years. Through the Dhanis family of Belgium the new vicar Apostolic received the first considerable funds to start work. But his life was spent in the turmoil of Kafir wars, and was a struggle with poverty and the dearth of priests. His successor, Dr. Moran, had been curate of Irishtown, Dublin, and arrived in the colony in November, 1856. He was a man of great energy, and a strenuous opponent of the grant of responsible government. The Sacred Congregation of Propaganda appointed him first Bishop of Dunedin, New Zealand, in 1870. Next year, the Rev. J. D. Ricards was consecrated bishop at Grahamstown, with the title *in partibus* of Retimo, by the Vicar Apostolic of Natal, Dr. Allard. Dr. Ricards had already spent twenty-two years in the country and, whether as a writer, or lecturer, or pastor, had left his mark in the land. He founded the "Cape Colonist", a paper which did a unique work in its day by its fearless advocacy of purity in public life and sane views on the native problems. Several of the bishop's larger controversial works are still read and highly appreciated. In 1880 he brought to South Africa the first contingent of Trappists, who were to teach the natives not only the Christian faith, but the much needed lesson of work. The expansion of this order (since transferred to the Natal Vicariate) has been remarkable. About two years before

Dr. Ricards's death a coadjutor was appointed in the person of Dr. Strobino, who, however, became a hopeless invalid soon after the death of Dr. Ricards. Dr. Strobino was succeeded in 1896 by his coadjutor, the Rt. Rev. Hugh MacSherry, formerly administrator of Dundalk in Ireland, who had been consecrated a few months before.

There are 74 churches, chapels, and stations in the Eastern Vicariate, served by 52 priests, of whom 18 belong to the Society of Jesus, and two are Trappists. There are 44 schools, mission and private, two orphanages, and one nursing home. The number of men not in Holy orders belonging to religious institutes is 37 -- Marists, de la Salle Brothers, and Jesuits. There are 331 religious women -- Dominicans, Sisters of Nazareth, of the Holy Cross, of the Little Company of Mary, of the Assumption. The Catholic population is more than 13,000, of whom only a few hundred are natives.

SIDNEY R. WELCH

Western Vicariate of the Cape of Good Hope

Western Vicariate of the Cape of Good Hope

The Western vicariate and the Central prefecture, although different in name, are virtually one. From 1874 to 1882 the Central prefecture was under the charge of the Missionary Fathers of Lyons; on their withdrawal part of it was committed to the Oblates of St. Francis de Sales, and became the Orange River prefecture; the rest was incorporated in the Western vicariate. This now has an area of 82,757 square miles. It is bounded on the north by the Olifants River, on the east by the Roggeveldt Mountains and the Gouritz River, on the south and west by the sea. The islands of St. Helena and Ascension are included in this vicariate. Bartolomeu Dias first planted the cross on South African soil at Croix Island, Algoa Bay, in 1486; and the Cape soon became a place of frequent call for Portuguese ships. From the well-known habits of this people we may conjecture that Mass was thenceforth celebrated frequently on these shores. The great missionary work of the Portuguese on the Zambesi did not extend to the Cape. The first Dutch governor, van Riebeeck, arrived at the Cape in 1652; but under his regime and that of his successors, the public profession of the Catholic faith was forbidden. A new spirit animated the Dutch high commissioner, de Mist, who, in terms of the Treaty of Amiens, took possession of the Cape, after a brief British occupation. Under very slight restrictions he issued an edict of religious toleration.

The first English governor reversed these measures, and later Lord Charles Somerset showed bitter hostility to Catholics. But through the good offices of Bishop Poynter of the English Midland District, the government agreed to salary a Catholic pastor for the Cape. On New Year's Day, 1820, Bishop Slater, Vicar Apostolic of Mauritius (which vicariate included the Cape), installed Father Scully in Cape Town. For the next eighteen years the ecclesiastical history of the colony is one of pitiful squabbles between pastors and people, with a short truce in the time of a Dutch priest named Wagenaar. On 6 June, 1837, Gregory XVI formed the Cape of Good Hope into a vicariate separate from Mauritius. In August following, Patrick Raymond Griffith, O.P., was consecrated Bishop of

Paleopolis, in the church of St. Andrew, Dublin; and on 20 April, 1838, he set foot in Cape Town with Fathers Burke and Corcoran. After his first visitation, which was made chiefly in the labouring ox-waggon, and extended as far as Port Elizabeth and Grahamstown, he estimated the Catholic population of the Country at 500. Worse than the paucity of numbers, were the lax morality and poor Catholic spirit of so many. A first painful duty of the bishop was to depose a body of churchwardens, who claimed to act as a board of directors of the vicariate. Some seceded, but this prompt action restored peace and Catholic order. In 1851 he completed the fine church which is still the cathedral of Cape Town. At his death in 1862 his flock was united and no longer ashamed of their faith, several schools and churches having been established throughout the vicariate.

Dr. Grimley was appointed coadjutor to the first vicar Apostolic in 1861, and succeeded him in 1862. He brought out the Dominican Sisters and Marist Brothers; and died in 1871, just after his return from the Vatican Council. The name which is connected with the greatest progress of the Western vicariate is that of the Right Rev. John Leonard, D.D., who was curate at Blanchardstown, Dublin, when appointed to succeed Dr. Grimley. Nearly all the works recorded in the next paragraph were accomplished during his episcopate of thirty-five years. He was succeeded in 1907, the year of his death, by the Right Rev. John Rooney, who had been his coadjutor for twenty-one years.

There are 33 priests in the Western vicariate, of whom three are regulars (Salesians). Out of 153 religious, 28 are Marist Brothers and Salesians; the rest are nuns — Dominicans, Sisters of Nazareth, and Sisters of the Holy Cross. There are 19 churches, 10 convents, an orphanage, an industrial school and 29 elementary schools. The only organ of Catholic opinion in South Africa is the Catholic Magazine for South Africa, founded in 1891 by Rev. Dr. Kolbe, now edited by the present writer. The Catholic population of the vicariate is over 8000 — mostly of European descent.

SIDNEY R. WELCH

Godfrey Goodman

Godfrey Goodman

Born at Ruthin, Denbighshire, 28 February, 1582-3; died at Westminster, 19 January, 1656. He was Anglican Bishop of Gloucester, and passed all his public life in the Protestant Church. His religious sympathies, however, inclined him to the old Faith, and when misfortune and ruin overtook him, late in life, he entered its fold. He was the son of Godfrey Goodman and his wife, Jane Croxton, landed gentry living in Wales. In 1593 he was sent to Westminster School, where he remained seven years under the protection of his uncle, Gabriel Goodman, Dean of Westminster. He was an earnest student and when only seventeen won a scholarship in Trinity College Cambridge. He graduated there in 1604 and was ordained at Bangor, Wales, shortly after. His first appointment was to the rectory of Stapleford Abbots, Essex, in 1606. From this time ecclesiastical dignities and lucrative emoluments fell rapidly to his share. He was made successively prebend of Westminster 1607, rector of West Ilsley, Berks, 1616, rector of Kinnerton, Gloucester, canon of Windsor, 1617, Dean of Rochester, 1620-1, and finally Bishop of Gloucester, 1694-5. In addition he held two

livings in Wales, at Llandyssil and Llanarmon. Even when he was a bishop, he was allowed to retain most of these appointments. He became one of the Court preachers and was chaplain to Queen Anne, wife of James I. His leaning towards Catholicity made enemies for him at Windsor and he was reprimanded by the King on Court sermons. A few years later he was severely blamed for having erected a crucifix at Windsor and used altar-cloths worked with a cross in his own cathedral at Gloucester, and further for having suspended a minister who insisted on preaching "that all who die papists go inevitably to hell." It is likely that at this time doubts were arising in his mind about the legitimacy of the separation from Rome, and he sought the society of the Catholic priests who were in hiding throughout the country. He was frequently at variance with Archbishop Laud, and in 1640 refused on conscientious grounds to sign the seventeen Articles drawn up by him. He was thereupon arrested, but after five weeks in prison he overcame his scruples. This, however, availed him little, as he was soon impeached by Parliament along with Laud and the ten other signatories of the Articles and was sent to prison for four months. In 1643 his episcopal palace was pillaged by the parliamentary soldiers and in a year or two he was stripped of all his emoluments. He withdrew now from public life to his small Welsh estate in Carnarvon. It was at this time too, most likely, that he was converted. About 1650 he came to London, and gave himself up to study and research; he was befriended by some Catholic royalists and lived in close connection with them till his death in 1656. Father Davenport, O.S.F., former chaplain to Queen Henrietta, was his confessor and attended him in his last illness. By his will, in which he made a profession of his Catholic Faith, he left most of his property to Ruthin his native town; his manuscripts and books, however, were given to Trinity College, Cambridge. His contemporaries describe him as being a hospitable, quiet man, and lavish in his charity to the poor.

His principal works are: (1) "The Fall of Man, or the Corruption of Nature proved by the light of his Natural Reason" (1616); (2) An account of his sufferings, 1650, (3) "The two mysteries of the Christian Religion, the Trinity and the Incarnation, explicated" (1653); (4) "Arguments and animadversions on Dr. George Hakewil's Apology", (5) "The Creatures praying God" (1622); (6) "The Court of King James the First by Sir A.W. reviewed".

A.A. MACERLEAN

Ven. John Goodman

Ven. John Goodman

Priest and martyr; born in the Diocese of Bangor, Wales, 1590; died 1642. He was educated at Oxford, and ordained a Protestant minister, but abandoning heresy, he crossed over to Paris, where he was received into the Church by Mr. Richard Ireland. Admitted to Douai College, 12 Feb., 1621, he continued his studies there until 1624, when he proceeded to St-Omer, in order to enter the Society of Jesus. Finding, however, that this was not his vocation, he was ordained a secular priest and sent on the English mission. He worked with unremitting zeal for some years, was twice apprehended and twice released. Once more a prisoner in 1642, he was brought to trial and

condemned to death, but at the queen's intercession was reprieved. When this act of Clemency on the part of Charles I excited the anger of Parliament, Goodman, with great magnanimity, protested his unwillingness to be a cause of dissension between Charles and his subjects, and begged that he might be sacrificed to appease the popular displeasure. This heroic act of generosity made a considerable sensation, and probably suggested to Wentworth, Lord Stratford, the idea of doing the same. Goodman, however, was left to languish in Newgate, but the hardships soon put an end to his life on Good Friday, 1642, not 1645, as is sometimes said.

Challoner, *Memoirs of Missionary Priests* (London, 1878), II, 79; *The Prisoners of Newgate's Condemnation*, (London, 1642); Gillow, *Bibl. Dict. Eng. Cath.*, s. v.; *State Papers, Dom.*, Chas I., 1635, cccviii, nn. 66, 66, i.

J.H. POLLEN

Sisters of the Good Samaritan

Sisters of the Good Samaritan

A congregation of Tertiaries Regular of St. Benedict, established 2 February, 1857, at Sydney, Australia. In 1859 a second community was established at Windsor, and thereafter frequent foundations were made, so that now in the Archdiocese of Sydney alone there are 21 houses, with 202 members, and all Australia 29 communities and 268 members. In the Archdiocese of Sydney the sisters conduct 14 superior schools, with an attendance of about 700. In the Archdiocese of Adelaide they founded a convent at Gawler in 1902, and in the Archdiocese of Melbourne a house at Northcote (1904) and a high school at South Yarra. In the Diocese of Port Augusta, where they established a house in 1890, they have charge of a boarding school and a day school; in the Diocese of Rockhampton also they have a boarding school, founded in 1890; and in the Vicariate Apostolic of Cooktown a day school, established in 1903. At Tempe, Arncliffe, in the Archdiocese of Sydney, the Sisters of the Good Samaritan have established St. Magdalen's Retreat, a home for penitent women of all creeds. It is supported entirely by voluntary contributions and the labour of the inmates, who number (1909) about 130, and are encouraged to remain at least two years in the institution.

F.M. RUDGE

Our Lady of Charity of the Good Shepherd

Our Lady of Charity of the Good Shepherd

The aim of this institute is to provide a shelter for girls and women of dissolute habits, who wish to do penance for their iniquities and to lead a truly christian life. Not only voluntary penitents but also those consigned by civil or parental authority are admitted. Many of these penitents desire to remain for life; they are admitted to take vows, and form the class of "magdalens", under the

direction of the Sisters of the Good Shepherd. They are an austere contemplative community, and follow the Rule of the Third Order of Mount Carmel. Prayer, penance and manual labour are their principal occupations. Many of these "magdalens" frequently rise to an eminent degree of sanctity. Besides girls and women of this class, the order also admits children who have been secured from danger, before they have fallen or been stained by serious crime. They are instructed in habits of industry and self-respect and in all the duties they owe to themselves and to society. The "penitents", "magdalens" and "preservates" form perfectly distinct classes, completely segregated from one another.

The Good Shepherd is a cloistered order and follows the Rule of St. Augustine. The constitutions are borrowed in great part from those given by St. Francis of Sales to the Visitation Sisters, but are modified to suit the nature of this work. Besides the three ordinary vows of poverty, chastity and obedience, the Sisters of the Good Shepherd take a fourth vow, namely, to work for the conversion and instruction of "penitents",--a vow which makes this order one of the most beautiful creations of Christian charity. The vows are renewed every year, for five years, before becoming perpetual. The order is composed of choir sisters, and lay or "converse" sisters. The choir sisters recite every day the Little Office of the Blessed Virgin. The habit is white, with white scapulars reminding them of the innocence of the life they should lead. The choir sisters wear a black veil; the "converse" sisters a white veil. Around their necks, they wear a silver heart, on one side of which is engraved an image of "The Good Shepherd" and on the other, the blessed virgin holding the Divine Infant, between a branch of roses and a branch of lilies. The heart represents that of the sister, consecrated to Mary and to her Divine Son and the roses and lilies are symbolical of the virtues of charity and purity. The order is dedicated in an especial manner to the Holy Heart of Mary and to the Sacred Heart of Jesus, which are its two patrons. Besides the choir sisters and the "converse" sisters, the order also admits "Tourière" Sisters, who attend to the door and perform necessary duties outside the cloister. Their habit is black, and they take only the three ordinary vows.

The Institute of the Good Shepherd is a branch of "Our Lady of Charity of the Refuge", founded by Blessed John Eudes, at Caen, France, in 1641, and approved by Alexander VII, 2 January, 1666, its constitutions being approved by Benedict XIV, in 1741. The order as primitively organized by blessed John Eudes still exists in a flourishing state, under the first title of "Our Lady of Charity of the Refuge", and counts about thirty-nine houses and about 1893 sisters. The distinction between the primitive order and its branch, the Institute of "Our Lady of Charity of the Good Shepherd", consists mainly in the administration. According to the custom of his time, the Blessed John Eudes ordained that "Our Lady of the Refuge" should have no mother-house, but that every house founded by this order should be a distinct community, having its own administration, and being united to the other houses only by bonds of fraternal charity.

Among the noble women who entered the ranks of the Sisters of the refuge in the nineteenth century was one whose name will be long remembered, Mother Mary Euphrasia Pelletier. She was born in the island of Noirmoutier of pious parents, on 31 July 1796, and received in baptism the name of Rose virginia. She entered the community of "The Refuge" of Tours, in 1814, and made

her profession in 1816, taking the name of Mary St. Euphrasia. She became first mistress of the penitents, a short time after her profession, and about eight years later was made superioress of the house of Tours. Desirous of extending the benefits of her order to the very extremities of the earth, she clearly saw that a central government, a mother-house, should be established.

The house of Angers, which she had founded, seemed destined by God for grand designs. He would decide, by the voice of His pontiff. Like many of God's elect, she was treated by her adversaries as an innovator, an ambitious person, impatient of authority. Only after incessant labours and formidable opposition did her cause triumph. The Brief in approval of the mother-house at Angers was signed 3 April, 1835, and published by Gregory XVI. The official title of the institute was henceforth "Our Lady of Charity of the Good Shepherd of Angers". It is directly subject to the Holy See, and Cardinal Odescalchi was its first cardinal-protector. Angers is authorized to send its sisters to the extremities of the earth. Mother Euphrasia heartily devoted herself to the work entrusted to her. She had been accused of ambition, of innovation, and of disobedience. Her sole ambition was to extend God's kingdom, and to offer the benefits of her institute to the whole world. Her innovations, in harmony with the spirit of the Gospel, with the fourth vow of her order, were approved by the Church, and gave in thirty-three years one hundred and ten soul-saving institutions to the Church and to society. Her institutions were all founded in obedience to the requests of ecclesiastical authorities in every part of the world. Thirty-three years she was mother-general of the Good Shepherd, and at her death 29 April 1868, she left 2067 professed sisters, 384 novices, 309 Touriere sisters, 962 "Magdalens", 6372 "penitents", and 8483 children of various classes. Angers had seen great changes since 1829, when Mother Euphrasia had come with five sisters to found the house. Within thirty-three years one hundred and ten convents had been founded, sixteen provinces established, in France, Belgium, Holland, Rome, Italy, Germany, Austria, England, Scotland, Ireland, Asia, Africa, the United States and Chili. Under her successor, Mother Mary St. Peter Coudenhove, in twenty-four years, eighty-five houses were founded, and thirteen new provinces established, making eleven in Europe, two in Africa, nine in North America, five in South America and one in the Oceania.

The cause of the beatification of Mother Euphrasia was inscribed by the postulator of the cause, 17 Nov., 1886. The preliminary examination terminated in 1890. Leo XIII received supplications from numerous cardinals, archbishops, bishops, several cathedral chapters, rectors of colleges, and universities, hundreds of priests, and many noble families, begging him to dispense from ordinary ten years' interval required before the continuation of the cause. On 11 Dec., 1897, Leo XIII declared her "Venerable", to the great joy of the whole world, and to the honour and glory of all the convents of the Good Shepherd.

The order glories also in the name of Mother Mary of the Divine Heart, who has been compared to the Blessed Margaret Mary Alacoque. The consecration of the universe to the Sacred Heart, 9 June, 1899, which Leo XIII referred to as the greatest act of his pontificate, was brought about by her suggestion. She died on the eve of the consecration (8 June, 1899), at Porto, Portugal, and already preparations are being made for her beatification.

CHARLES LEBRUN
Pierre-Lambert Goossens

Pierre-Lambert Goossens

Cardinal, Archbishop of Michlin (Belgium), b. at Perck, near Vilvorde, 18 July, 1827; d. at Michlin, 25 January, 1906.

After teaching at Bruel College at Michlin, he became, in 1856, curate at the cathedral and secretary of the archbishop, and, in April, 1878, vicar-general of Cardinal Dechamps. Meanwhile he had been appointed (1860) an honorary canon of the metropolitan chapter. In 1880 he was made a Roman prelate, and 24 June, 1883, was consecrated at Mechlin coadjutor-bishop to Mgr. Gravez whom he succeeded as Bishop of Namur 16 July following eight months later (24 March, 1884) he became Archbishop of Mechlin, and on 24 May, 1889, he was created Cardinal-Priest of the Title of Santa-Croce in Gerusalemme. Succeeding to the See of Mechlin just when the Belgian Catholics were about to depose the Masonic government which had oppressed them since 1879, he did much to perpetuate the strong hold on political power which the Catholic party has since possessed. In order to promote thorough Christian sentiments among the workmen of the great industrial centres of his diocese, also in distant country places he provided for them greater church facilities, caused many new churches to be built, and created eighty-six parishes in twenty-two years he founded in his diocese 840 primary schools, with an attendance of 120,000 children. He also multiplied high schools for girls and for boys, opened normal and professional schools, and founded ten colleges for the teaching of humanities. Tireless in promoting the economical interests of the working classes, he organized and presided over two general congresses and five district congresses in which the social question was the chief topic of discussion. On public occasions his manner was noble and stately, yet in his dealings with priests and people he was always amiable and unaffected, and had the secret of enlisting sacrifice and devotion. To kindness he joined prudence and discretion and was thus able to avoid conflicts with the State authorities. A talented writer, his style bore the impression of the masterpieces of French pulpit eloquence, of which he was an assiduous reader.

In his "Charges and Pastoral Letters" (five volumes) and his "Occasional Addresses" accuracy of ideas, delicacy of feeling, literary tact, and purity of diction are always predominant characteristics. Though not himself a savant, he was alive to scientific needs, and greatly encouraged scientific progress in the University of Louvain, of which he was the chief patron. He reorganized the archives of his archdiocese and encouraged historical research among his clergy by requiring each parish priest to furnish his with an historical monograph on his parish.

His published works are: "Collectio Epistolarum pastoralium, decretorum, aliorumque documentorum" (5 vols., Mechlin, 1889-1906); "Discours sur la question sociale" (Mechlin, 1894); "Choix de conférences, discours et allocutions" (Mechlin, 1906).

P. LADEUZE

Gordian

Gordian

(Lat. GORDIANUS.)

There were three Roman emperors of this name, who reigned between A.D. 237-44, and all of whom met with violent deaths.

The first, Marcus Antonius Africanus Gordianus, descended on the father's side from the Gracchi and on the mother's from Trajan, was chosen emperor in Africa in opposition to the usurper Maximin, and the choice was confirmed by the Senate. On account of his advanced age, his son was associated with him in the purple. Their reign lasted only thirty-six days, the son being slain in battle by Maximin's lieutenant, Capellianus, and the father putting an end to his own life (July, 237).

M. Antonius Gordianus Pius, the grandson of the elder and nephew of the younger Gordian, a boy of thirteen, was appointed to the dignity of Caesar under the joint-emperors Maximus and Balbinus. These latter were massacred in 238 by the Praetorian guards, and the youthful Gordian became sole emperor. After being for a time under the control of his mother's eunuchs, he married the daughter of Misiheus, his teacher of rhetoric. Misiheus proved to be a capable politician and general, and stirred up his young charge to march in person against the Persians. At first the expedition met with success, but the death of Misiheus put an end to Gordian's prosperity. His soldiers mutinied, at the instigation of Philip, the successor of Misiheus, and slew him (244).

Under the Gordians the Church enjoyed peace. Their rival, Maximin, had been a fierce persecutor of the Christians; hence they naturally cultivated the goodwill of those who had every reason to oppose his rule.

T.B. SCANNELL

Sts. Gordianus and Epimachus

Sts. Gordianus and Epimachus

Martyrs, suffered under Julian the Apostate, 362, commemorated on 10 May. Gordianus was a judge but was so moved by the sanctity and sufferings of the saintly priest, Januarius, he embraced Christianity with many of his household. Being accused before his successor, or as some say before the prefect of the city, Apronianus, he was cruelly tortured and finally beheaded. His body was carried off by the Christians, and laid in a crypt on the Latin Way beside the body of St. Epimachus, who had been recently interred there. The two saints gave their name to the cemetery, and have ever since been joined together in the veneration of the Church. There is another Gordianus who suffered martyrdom (place uncertain) with two companions, and commemorated 17 September (Acta SS., XLV, 483); and a third, commemorated on 13 Sept, who with several companions was martyred in Pontus or Galatia (Acta SS XLIV, 55).

There are also several martyrs named Epimachus, and, owing to the meagreness of the information possessed concerning them less careful writers have confounded them greatly while the greater hagiologists are unable to agree as to their number or identity. The Bollandists mention five saints of this name: A martyr commemorated by the Greeks on 6 July, (*Acta SS.*, XXIX, 280); (2) Epimachus and Azirianus martyrs venerated by the Copts and Abyssinians on on 31 Oct., (*Acta SS.*, LXI, 684); (3) Epimachus of Pelusium in Egypt, venerated by the Greeks on 31 Oct. (*Acta SS.*, LXI, 704); (4) Epimachus and Alexander, martyred at Alexandria in the persecution of Decius, commemorated in the Latin Church on 12 Dec.; Epimachus whose body with that of St. Gordianus, is honoured at Rome on 10 May. Most of the great writers have denied the existence of an Epimachus martyred at Rome, and account for the relics honoured there by asserting that the body of the Alexandrian Epimachus was transported thither shortly before the martyrdom of St. Gordianus Remi de Buck, the learned Bollandist, however, maintains that the evidence for the Roman Epimachus is too strong to be doubted, while he rejects the pretended translation of the relics of Epimachus of Alexandria.

JOHN F.X. MURPHY

Andrew Gordon

Andrew Gordon

A Benedictine monk, physicist; b. 15 June, 1712, at Cofforach in Forfarshire, Scotland; d. 22 August, 1751, at Erfurt, in Saxony. Having travelled extensively on the Continent, Gordon became a Benedictine and in 1737 was appointed professor of natural philosophy in the University of Erfurt. He soon acquired considerable reputation by his works on electricity, among which were his "*Phaenomena electricitatis exposita*" (1744); "*Philosophia utilis et jucunda*" (1745); "*Physicae experimentalis elementa*" (1751-52). For the sulphur ball of von Guericke (1671) and the glass globe of Newton (some say Hauksbee), Gordon substituted a glass cylinder which made an efficient frictional machine. Two other inventions of the Benedictine physicist are noteworthy: the first is the light metallic star supported on a sharp pivot with the pointed ends bent at right angles to the rays and commonly called the electrical whirl, the second is the beautiful device known as the electric chimes. Though these inventions are described in all textbooks of electricity, the name of Gordon is never mentioned, though both inventions are fully described by him in his "*Versuch einer Erklarung der Electricitat*" (Erfurt 1745). Franklin, who is usually credited with the latter invention, simply adopted the "German chimes" (described by Watson in his famous "Sequel", 1746) to serve as an electrical annunciator in connection with his experimental (lightning) rod of 1752. The "whirl" is of special interest because it was an electrostatic reaction motor, the earliest of its kind; while the second derives its theoretical importance from its being the first instance that we have of the application of what has come to be called "electric convection".

BROTHER POTAMIAN

Gordon Riots

Gordon Riots

This agitation, so called from the head and spirit of the movement, Lord George Gordon, convulsed the metropolis of England from 2 June till 9 June, 1780. The first English Catholic Relief Act of 1778 (18 George III, c. 60) was not due to any strong feeling in favour of Catholics. Of those mainly responsible for the measure, some were ashamed of the brutal intolerance of former days, some feared that the declaration of American independence might result in an Irish rebellion. The majority had been slow to act, and there was also a noisy minority, which filled the house with protest, while the bill was being debated, and, when it had become law, strove earnestly to prevent a like measure from being brought forward in the legislation for Scotland. To effect this a "Protestant Association" was formed which organized demonstrations of the mob against the Catholics at Perth and Edinburgh, where on 2 February, 1779, the chapel-houses in Chalmer's Close, near Leith Wynd and in Blackfriars Wynd were burned. Nor was peace restored until the Lord Provost weakly promised that no Catholic relief bill for Scotland should be introduced. Though some compensation for the damage done was afterwards ordered by the (government, the Association had gained such a victory that it was encouraged to found branches in England, in order to work for the repeal of the Relief Bill already passed there, as also for repeal of the Canada or Quebec bill, which granted freedom to the Canadian Catholics.

The president of both Scottish and English Associations was Lord George Gordon third son of the third Duke of Gordon, the Protestant head of the house. Lord George was eccentric, and unrestrained both in his fanaticism and in his passions; so much so that the *mot*, originally formed for Sir Fleetwood Sheherd, was adapted to him by Wilkes, "Nulla displicuit meretrix praeter Babylonicam" (R. Bisset, "George III", III, 167). This hero of the Protestant Association resolved on a great demonstration. He procured a petition for the repeal of Relief Bill, signed 30,000 to 40,000 names, carried it to the House of Commons, 2 June, 1780, in a huge procession, said in excitement of the time to have numbered 20,000 or even 40,000 men, all wearing blue cockades, and carrying blue flags with the legend: NO POPERY. In the House Lord George demanded an immediate vote, while his followers were pressing into the lobbies and maltreating all members whom they regarded as hostile to the repeal. The motion was postponed, however, and when evening fell attacks were made on the best known embassy chapels, the Sardinian chapel, near Lincoln's Inn Fields and the Bavarian chapel in Warwick Street. The method of attack was more or less the same on all occasions. First the windows were broken, then the doors forced, the house sacked and the furniture thrown out and burned in the street, thereby setting fire to the whole building. Warwick Street chapel was eventually saved by soldiers, who also arrested some bystanders. Two or three of these upon examination "appears to be Catholics, but of excellent characters against whom" as no material circumstances appeared, it was thought they would get off" ("Public Advertiser", 6 June. 1780). The prisoners, presumably mere spectators, were remanded for trial to Newgate, whence they "got off" on the following Tuesday without any further investigations. Some

disingenuous Protestants, however, have pretended that the burning of the chapels was really due to Catholics (cf. "Barnaby Rudge", lxxvli, end).

By Saturday morning there was a lull. On Sunday afternoon, however, there was a recrudescence of violence, the temporary repairs at the embassy chapels were torn down and burned. Worse would have followed but for the timely arrival of soldiers. Next day, Monday, the Privy Council met at St. James's; but so little was the Government moved by the many misfortunes of the Catholics, so little did it foresee the future, that no adequate or ensures were adopted to suppress disorder though in the city the blue cockades were asserting their power with ever growing boldness. On Tuesday, 6 June, Parliament again met; and again the mob pressed in, preventing the progress of business, and handling roughly all who displeased them. Lord North himself, the prime minister, only escaped that evening by putting his coach-horses to the gallop, having lost his hat in the fray, which was thereupon torn up, and the pieces distributed as trophies among the crowd. The mob was henceforth undisputed master of the situation. All shops were closed, money was exacted from passers by, and every one put on the blue cockade, and chalked NO POPERY on his door. The Catholics suffered much, but unpopular Protestants suffered no less. The house of Lord Chief Justice Mansfield was sacked and burned, so were those of the justices, and even of the witnesses who had given evidence against the rioters. The prisons of Newgate and Clerkenwell were fired, all the prisoners released. Next day the same fate befell Marshalsea. In other prisons, as the Poultry, all prisoners were discharged to prevent further disturbance. The large distillery in Holborn of Mr. Langdale, a Catholic, was burned, and all the stores of spirits wasted or drunk. The bridges across the Thames were seized; the Bank of England was twice attacked, and only saved by soldiers. On Wednesday night thirty-six different conflagrations might be counted from London Bridge. Fortunately the air was still, and the flames did not spread, or the consequence would have been terrible, for the mob had injured the fire-pumps and thrown the hoses into the burning buildings.

The delay in dealing with the mob violence was due to many causes. There had never been a tumult of this nature before and there was no special force to cope with it. The police of the city in those days consisted but of a few dozen watchmen and constables. Of the magistrates some were infatuated for the Protestant Association, some were cowards, nearly all were of opinion that the Riot Act must be read an hour before the military could be called upon to interfere. At last King George himself (it had been thought prudent for him to retire from the royal apartments to protected buildings in the rear of St. James) summoned a council on Wednesday evening active measures were ordered, and carried out that very night. Infantry and cavalry attacked the crowd wherever it made head, firing into their ranks, and charging them with sword and bayonet. Though the darkness and intricacies of the streets enabled the rioters to maintain themselves for a while, no serious resistance was, or could be, offered. By Thursday evening all organized disturbance was over, but 210 were killed in the streets, 75 died in hospital, and 173 were severely wounded. Of the prisoners taken, 52 were convicted, and of these between 20 and 30 executed. Lord George's trial, fortunately for him, had to be adjourned for some months. By then men's minds were cooler, he was admirably defended by the great advocate Thomas, afterwards Lord Erskine, and acquitted. There was, no

doubt, a miscarriage of justice here, but the formal indictment of "levying war on the king", could not be substantiated. Indeed it is certain that he did not at all foresee the results of his actions, and that he exerted himself, when it was too late, to stem the torrent of mischief which he had let loose. John Wesley is sometimes said to have assisted to arouse the religious fanaticism of the associates but this is neither true nor possible, for he was at this time, and had been for months before, engaged in a missionary circuit through the Northern countries. In the previous January, however, he had written a "Defence" of the "Appeal" issued by the Association, and obstinately maintained his narrow views in the "Freeman's Journal", though they were answered by Father Arthur O'Leary. The losses of Catholics were grave, and cannot be precisely scheduled. Claim for compensation was afterwards made for 57 houses destroyed (three of these chapels or mass-houses), besides two embassy chapels. Numbers, however, were constrained to fly in confusion by night, with their wives and children and little store of valuables. Their Protestant friends too often not daring to give them shelter, they fell in many instances into extreme distress. Others were shot by the soldiers in trying to escape from the mob; four are reported to have died from fear; Mr. Dillon of Moorfields, an old man, who had previously endured prosecution for his priesthood was wantonly thrown out of his sick-bed and died six weeks later. The sum eventually paid to the Catholics is said to have been 28,219 pounds from the city, and 5200 pounds from the Government. Mr. Langdale put his losses at 100,000 pounds, but refused compensation, receiving instead leave to distil spirits for a year free of impost, and thereby (so runs the story) made up handsomely the damage he had suffered.

The events of the riots were chronicled day by day in the papers e.g. The Morning Advertiser, the London Chronicle, the London Gazette; and were summarized in the monthly and annual periodicals, e.g. the Political Magazine and The Annual Register. See also the Lords' and the Commons' Journals; LORD MAHON, History of England (1858), III, lxi, lxiii; HOLCROFT, A Plain Narrative of the late Riots in London (1780); COBBETT, State Trials, xxi, 485-687. Dickens has described the riots in "Barnaby Rudge". The riots are also mentioned by all historians and memoir writers of the period.

For the misfortunes of the Catholics in particular, see BURTON, Life and Times of Bishop Challoner (London 1909); The Catholic Magazine for 1833, being papers and documents collected by "L.C."; Dolman's Review, vols. V and VI, ten contributions by EDWARD PRICE; ALEXIUS J.F. MILLS, The Riots in London in 1780 (London, 1883). The last two should be read with caution.

J.H. POLLEN

Gordos

Gordos

A titular see in the province of Lydia, suffragan of Sardis. The city is mentioned by Strabo, Hierocles, and Georgius Cypricus. Ptolemy locates it between the River Hermus, the modern Guediz Tchai, and Mt. Sipylus. Lequien (Or. chris., I, 881) names five of its bishops: John, known to Socrates (Hist. Eccl., VII, xxxvi), and who assisted at the Council of Ephesus in 431; Theodotus,

458; Theodore, 536; George, 787; and Leo, 878. Between the years 901 and 907, under Leo the Wise (*Ecthesis pseudo-Epiphanii*, ed. Gelzer, p. 553), Gordos is always mentioned as a suffragan of Sardis. It is not known when it was suppressed, but it no longer existed in the fifteenth century. Gordos, now Guerdiz, is the chief town of a *caza* of the sanjak of Saroukhan in the vilayet of Aidin. The city numbers four thousand inhabitants, six hundred of whom are Greek schismatics, the remainder being Mussulmans. It is the chief centre of the manufacture of Smyrna carpets.

S. VAILHÉ

St. Gorgonius

St. Gorgonius

Martyr, suffered in 304 at Nicomedia during the persecution of Diocletian. Gorgonius held a high position in the household of the emperor, and had often been entrusted with matters of the greatest importance. At the breaking out of the persecution he was consequently among the first to be charged, and, remaining constant in the profession of the Faith, was with his companions, Dorotheus, Peter and several others, subjected to the most frightful torments and finally strangled. Diocletian, determined that their bodies should not receive the extraordinary honours which the early Christians were wont to pay the relics of the martyrs (honours so great as to occasion the charge of idolatry), ordered them to be thrown into the sea. The Christians nevertheless obtained possession of them, and later the body of Gorgonius was carried to Rome, whence in the eighth century it was translated by St. Chrodegang, Bishop of Metz, and enshrined in the monastery of Gorze. Many French churches obtained portions of the saint's body from Gorze, but in the general pillage of the French Revolution, most of these relics were lost. Our chief sources of information regarding these martyrs are Lactantius and Eusebius. Their feast is kept on 9 Sept.

There are five other martyrs of this name venerated in the Church. The first is venerated at Nice on 10 March; the second, martyred at Antioch, is commemorated on 11 March; the third, martyred at Rome, is honoured at Tours on 11 March; the fourth, martyred at Nicomedia, is revered in the East on 12 March; while the fifth is one of the Forty Martyrs of Sebaste, whose feast is kept 10 March.

Acta SS., XLIII, 328; *Analecta Bollandiana*, XVIII, 5.

JOHN F.X. MURPHY

The Martyrs of Gorkum

The Martyrs of Gorkum

The year 1572, Luther and Calvin had already wrested from the Church a great part of Europe. The iconoclastic storm had swept through the Netherlands, and was followed by a struggle between Lutheranism and Calvinism in which the latter was victorious. In 1571 the Calvinists held their first synod, at Embden. On 1 April of the next year the *Watergeuzen* (Sea-beggars) conquered Briel

and later Vlissingen and other places. In June, Dortrecht and Gorkum fell into their hands and at Gorkum they captured nine Francisans. These were: Nicholas Pieck, guardian of Gorkum, Hieronymns of Weert, vicar, Theodorus van der Eem, of Amersfoort, Nicasius Janssen, of Heeze, Willehad of Denmark, Godefried of Mervel, Antonius Of weert, Antonius of Hoornaer, and Franciseus de Roye, of Brussels. To these were added two lay brothers from the same monastery, Petrus of Assche and Cornelius of Wyk near Duurstede. Almost at the same time the Calvinists laid their hands on the learned parish priest of Gorkum, Leonardus Vechel of Bois-le-Duc, who had made distinguished studies in Louvain, and also his assistant Nicolaas Janssen, surnamed Poppel, of Welde in Belgium. With the above, were also imprisoned Godefried van Duynsen, of Gorkum who was active as a priest in his native city, and Joannes Lenartz of Oisterwyljk, an Augustinian and director of the convent of Augustinian nuns in Gorkum. To these fifteen, who from the very first underwent all the sufferings and torments of the persecution, were later added four more companions: Joannes van Hoornaer, a Dominican of the Cologne province and parish priest not far from Gorkum, who, when apprised of the incarceration of the clergy of Gorkum, hastened to the city in order to administer the sacraments to them and was seized and imprisoned with the rest, Jacobus Lacops of Oudenaar, a Norbertine, who after leading a frivolous life, being disobedient to his order, and neglectful of his religious duties, reformed, became a curate in Monster, Holland and was imprisoned in 1572; Adrianus Janssen of Hilvarenbeek, at one time a Premonstratensian and parish priest in Monster, who was sent to Brielle with Jacobus Lacops; and lastly Andreas Wouters of Heynoord, whose conduct was not edifying up to the time of his arrest, but who made ample amends by his martyrdom.

After enduring much suffering and abuse in the prison at Gorkum (26 June-6 July) the first fifteen martyrs were transferred to Brielle. On their way to Dortrecht they were exhibited for money to the curious and arrived at Brielle 13 July. On the following day, Lumey, the commander of the *Watergeuzen*, caused the martyrs to be interrogated and ordered a sort of disputation. In the meantime the four other martyrs also arrived. It was exacted of each that he abandon his belief in the Blessed Sacrament and in papal supremacy. All remained firm in their faith. Meanwhile there came a letter from William of Orange which enjoined all those in authority to leave priests and religious unmolested. Nevertheless Lumey caused the martyrs to be hanged in the night of 9 July, in a turfshed amid cruel mutilations. Their beatification took place on 14 Nov., 1675, and their canonization on 29 June, 1865. For many years the place of their martyrdom in Brielle has been the scene of numerous pilgrimages and processions.

P. ALBERS

Guido Gorres

Guido Görres

Historian, publicist, and poet; b. at Coblenz on 28 May, 1805; d. at Munich on 14 July, 1852. He was the son of the great Johann Joseph Görres, and made his early classical studies in his native

town. During his father's banishment he went to Aarau and Strasburg to pursue his education. Reaching the University of Bonn in 1824, he devoted himself chiefly to the study of philology and history. In Munich he continued his linguistic studies, and in 1830 received a prize from the French Academy. In the meantime (1827) his father had received a call as professor of history to Munich, and Guido, influenced by his father's lectures, now took up history as his chief study. The fruit of these studies were "Nikolaus von der Flüe" (Ratisbon, 1831) and "Die Jungfrau von Orleans" (Ratisbon, 1834; 3rd ed., 1895). Jointly with Count Franz Pocci, he published from 1834-39 an illustrated serial on the festivals of the Church, the "Festkalender in Bildern und Liedern", the first illustrated magazine for the young in German. Still carrying on his historical work, he made a great tour of Investigation through France in search of further material relating to the Maid of Orléans. But before long his work took a different direction. He edited from 1838 the "Historisch-politische Blätter", a publication subsisting to this day, established to maintain the defense of the rights of the Catholic Church and to champion the Interests of German Catholics. Guido Görres took charge of the editorial management with Phillips, and continued at this post until his death. The writings published by him on this review were numerous and on various topics. At the same time his talents as a poet found expression in many beautiful compositions. He became one of the foremost lyricists among the modern Catholic poets of Germany. The tale "Schön Röslein" (Munich, 1838), the charming collection of "Marienlieder" (Munich, 1843), some of which are still sung by the people, besides "Das Weihnachtskripplein" (Schaffhausen, 1843), "Das Leben der hl. Cacilia in drei Gesängen" (Munich, 1843), and the widely-known and popular poems "Die Gottesfahrt nach Trier" (Coblenz, 1844), "Die arme Pilgerin zum hl. Rock" (Coblenz, 1845), the "Gedichte" (Munich, 1844), evince true art, deep perception, and delicate tenderness, combined with power of conception and vigour of form. His work "Der hübnene Siegfried und sein Kampf mit dem Drachen" (Schaffhausen, 1843) belongs to the domain of literary history. In 1846 he began with Count Pocci, as he had formerly done in the case of the Feast Calendar, the publication of an illustrated magazine called the "Deutsches Hausbuch", which however appeared for two years only. On the death of Klemens Brentano Görres edited his "Märchen" (2 vols., Stuttgart, 1846). He also produced an excellent German translation of the "Imitation of Christ" (St. Pölten, 1839, with illustrations by Steinle). In 1844 Görres married Maria Vespermann, who gave him three daughters. But his conjugal happiness was not to last more than eight years, for he died at Munich at the age of forty-seven years.

J.P. KIRSCH

Johann Joseph Goerres

Johann Joseph Görres

Born at Coblenz, in the heart of the Rhine country, 25 January, 1776; died at Munich, 29 January, 1848. He was the strongest and most gifted champion of Catholic Germany, from the religious and the political point of view, during the first half of the nineteenth century. His father, Morits Görres,

had been a timber merchant. His mother was descended from an Italian family named Mazza, which had settled in Coblenz. He made his secondary studies at the gymnasium of Coblenz, where, after the expulsion of the Jesuits, pedantic and superficial rationalistic methods prevailed. In his youth Görres was a republican and rationalist, and he looked upon the French Revolution as a movement to free the nations. His earliest writings, "Der allgemeine Friede, ein Ideal" (1789), likewise the monthly publication "Das rote Blatt", which was continued in "Der Rüberzahl in blauen Grunde" (1798-99), reflect this state of mind. He was one of several delegates sent by the Rhine and Moselle provinces to Paris in the fall of the year 1799, to protest against the conduct of the French general Leval in the Rhine country, and to remove the uncertainty hanging over his native country. His stay in Paris cured him of his enthusiasm for the French Revolution, and the city appeared to him as a "flower-bedecked quagmire". The pamphlet "Die Resultate meiner Sendung nach Paris" (1800) gives an account of his impressions. In it he closes the first period of his life, which was filled with plans and aspirations for the betterment of the human race and with bitter disappointments.

Returning from Paris, Görres became professor of physics at the *Sekundarschule* (college) at Coblenz, where he remained until 1806. On 14 September, 1801, he married Catherine von Lasaulx. As the fruits of his scientific studies at Coblenz he published a translation of Fourcroy's Synoptical Chemical Tables (1801) besides the two treatises "Aphorismen über Organonomie" (1803) and "Exposition der Phisiologie" (1805). At the same time under the influence of Schelling he became interested in natural philosophy, art, and poetry, as appears in his essays "Aphorismen über die Kunst" (1802); "Glauben und Wissen" (1805); and in his articles in Aretin's "Aurora". He identified himself with the Romantic movement, and in 1806 became Docent at the University of Heidelberg, where German romanticism flourished, and where he found himself thrown into close association with Achim von Arnim, Klemens Brentano, and Eichendorff. The last-named assisted him in the production of his "Teutschen Volksbücher" (1807). Later on came the "Alteutschen Volks- und Meisterlieder" (1817). He also contributed to the "Zeitung für Einsiedler" and the "Heidelberger Jahrbücher", the official organ of the Romanticists. But the hostility of the Protestants at Heidelberg, many of whom turned against the Romanticists when the latter recognized and proclaimed the greatness and nobility of the Catholic church, led Görres to quit Heidelberg (1808), and to return to his former position at Coblenz. He now devoted himself to Germanic and mythological studies, which enabled him to produce his work, "Mythengeschichte der Asiatischen Welt" (2 vols., 1810). The important political events of the following years compelled him once more to enter the political arena. In 1814 he founded the weekly "Der Rheinische Merkur", in which he violently attacked Napoleon, laboured for the advancement of Germany, and pleaded for the restoration of the old German Empire. Napoleon is said to have called this periodical the fifth of the great powers that were allied against him.

Görres at this period became superintendent of public instruction in the Rhine provinces. But his demand for the restoration of the old German Empire under the Emperor of Austria, and his courageous struggle on behalf of civil and political liberty, brought down upon him the hostility of the German princes, especially after the publication of his brochure: "Deutschlands künftige

Verfassung" (1816). The "Rheinische Merkur" was oppressed by the Prussian government in 1816, and Görres was dismissed from his post as superintendent of public instruction. He went back to Heidelberg, but in 1817 returned to Coblenz and founded a relief-society for the alleviation of distress in the Rhenish province. At the same time he continued his fearless work as a pamphleteer, as shown chiefly in his "Adresse der Stadt und Landschaft Koblenz und ihre Uebergabe beim Fürsten Hardenberg" (1818) and his brochure "Teutschland und die Revolution" (1819). The Prussian Government thereupon confiscated his papers and ordered his arrest. He escaped, however, to Frankfort, whence he made his way to Strasburg. Here he remained, save for a visit to Switzerland in 1821 until the year 1827. His written defence "In Sachen der Rheinprovinz und in eigener Angelegenheit" (1821) was a brilliant vindication of himself against the attitude of the Prussian Government. At the same time he addressed a warning to the princes and nations of Europe, which was published the same year, "Europa und die Revolution". In the following year he published "Die Heilige Allianz und die Völker auf dem Kongress von Verona" (1822).

Görres meanwhile turned again to his scientific studies, which now led him to give more attention to religious matters. He published during his stay in Strasburg "Firdudis Heldenbuch von Iran", and was a contributor to the magazine "Der Katholik", which had been founded in Mayence by Raess and Weiss, and in 1824 transferred to Strasburg. He contributed numerous articles to this review, among others the paper "Der hl. Franziskus von Assisi, ein Troubadour" (1826); 2nd ed., Ratisbon, 1879), the preface to Diepenbrock's edition of the works of Heinrich Suso, besides a study on Swedenborg. In this way Görres became more and more active as a champion and defender of religious interests.

Görres's nomination by King Ludwig I of Bavaria to a professorship at the University of Munich (1827) marked the opening of the last period of his life. His lectures attracted a number of distinguished students among whom we may mention Brunner, Haneberg, Sepp, Windischmann. But he became above all the head and front of a society of distinguished Catholic gentlemen who came to Munich under the patronage of King Ludwig I and who worked for the renovation of spiritual life, for the liberty of the Church, and for all things of interest to the Catholic Faith. Among the most eminent members of this circle we find the name of Arndts, Cornelius, Döllinger, Möhler, Phillips, Ringseis, and Streber. At intervals Görres was also visited by political and religious leaders of Catholicism, both in Germany and in other countries, among them Brentano, Böhmer, Lacordaire, Lamennais, and Montalembert. In Munich he also continued his fertile and versatile literary activity. He pleaded for a Christian interpretation of history in his "Grundlage, Gliederung und Zeitenfolge der Weltgeschichte" (1830, new ed., 1884), and in the publication issued under his direction since 1831, "Gott in der Geschichte, Bilder aus allen Jahrhunderten der Christlichen Zeitrechnung". Other historical productions of his pen at this period were: "Die Japhetiden und ihre gemeinsame Heimat Armenien" (1844), and "Die drei Grundwurzeln des Keltischen Stammes in Gallien und ihre Einwanderung" (1845). He treated political questions in the "Eos", a review founded by Herbst in 1828. His work "Der Dom zu Köln und das Münster zu Strassburg" (1842) properly belongs to the history of art.

But what engrossed Görres's attention above all since his stay in Strasburg was the study of mysticism. He carefully studied the mystical writers of the Middle Ages, observed partly in person the phenomena connected with the cases of the ecstatic young women of that time (Maria von Mörl and others), and strove to comprehend more thoroughly the nature of Christian mysticism, which stands in the strongest contrast to rationalism and naturalism. These studies led to his writing his great work: "Die christliche Mystik" (4 vols., 1836-42; 2nd ed., 5 vols., 1879), which notwithstanding its lack of historical criticism, and in spite of many incorrect views in matters of philosophy and theology, is a magnificent work. It proved a strong stimulant to Christian faith and dealt a decisive blow to superficial rationalism in religious matters.

The religious difficulties in Prussia, in the thirties, which culminated in the arrest of the Archbishop of Cologne, Clement August (1837), recalled Görres into the lists to champion once more the rights of the Church against the State. His "Athanasius" (1834), of which there appeared four editions that same year, written in defence of the Archbishop of Cologne, who was persecuted for doing his duty, produced a profound impression and a vigorous movement on behalf of the Archbishop. This was soon followed by his "Die Triarier" (1838), in which he opposed H. Leo, P. Marheinecke, and K. Bruno, as the advocates of liberalism in science. After the settlement of the Cologne troubles he reviewed the conflict in his treatise: "Kirche und Staat nach Ablauf der Kölner Irrung" (1842). This attack on the religious liberty and the religious interests of German Catholics led a number of Görres's friends in Munich, with his assistance, to found the "Historisch-politische Blätter", a periodical, intended to defend the rights of Catholics and to maintain Catholic interests. It began to appear in 1838, under the editorial management of Phillips and of Guido Görres, son of the great Görres. He himself was a zealous contributor to this publication for the first ten years of its existence and until the close of his life. We find in the very first volume an interesting article by him, "Die Weltlage", while there is not one of the first twenty volumes which does not contain something from his gifted pen.

An important occasion once more led Görres to come forward as the champion of Catholic life. In his "Die Wahlfahrt von Trier" (1854) he combatted the schism of the so-called German Catholics, set on foot by Johannes Ronge on the occasion of the exhibition of the Holy Coat of Trier, in 1844. The evening of his life was painfully saddened by the Lola Montez episode, in consequence of which several of the ablest Munich professors and Görres's friends were dismissed from their chairs by Ludwig I (1847). His writings were published in a collected form: "Gesammelte Werke, hg. von Marie Görres", 6 vols. (Munich, 1854-1860); also "Gesammelt Briefe, hg. von Marie Gerres u. Fr. Binder" (3 vols., Munich, 1858-74).

Joseph von Görres, eine Skizze seines Lebens (Ratisbon, 1848); Joseph von Görres in Historisch-Politische Blätter (1851), XXVII, 1-41; 89-126; 272-304; 1853, XXXII, 557-594; 637-680; 1860, LXV, 160-176, 249-261; Brühl, Joseph von Görres, ein Denkmal aus seinen Schriften aufbaut (Aachen, 1854); Heinrich, Jos. von Görres, Ein Lebensbild (Frankfort, 1867); Galland, John Joseph Görres (2nd ed., Freiburg im Br., 1877); Sepp, Görres und seine Zeitgenossen

J.P. KIRSCH

Gortyna

Gortyna

A titular see, and in the Greek Church metropolitan see, of the Island of Crete. The city, situated at the foot of Mount Ida, not far from the River Lethe, was first called Larissa, afterwards Cremnia, then Gortys, and finally Gortyna. Homer mentions it as a fortified city, which gives an idea of its great antiquity. Previous to the Roman occupation it was continually at war with the two neighbouring and rival cities of Cnossus and Cydonia, contending with them for supremacy. The result was desolation in an island predestined to happiness by its geographical position, climate, and soil. The Cretans, indeed, were ever the cause of their own distress, being at all times discontented with their government. Under Roman rule Gortyna became the civil and ecclesiastical metropolis of the island, which then prospered in a degree hitherto unknown. Its first bishop was St. Titus, the disciple to whom St. Paul addressed one of his Epistles. A basilica dedicated to St. Titus, discovered at Gortyna partly in ruins, dates from the fifth, perhaps from the fourth, century. Among the earliest occupants of the see were St. Philip, a contemporary of Marcus Aurelius, whose feast is kept 11 April; St. Myron, commemorated 8 August; St. Cyril, 9 July; St. Eumenius, 18 September, St. Peter the Younger, 14 July. In 170 St. Dionysius, Bishop of Corinth, addressed a letter to the community of Gortyna (Euseb., H. E., IV, xxiii), then probably the metropolitan see of Crete. Among its archbishops mention should also be made of St. Andrew of Crete (d. 740), a famous Byzantine poet and orator, and opponent of the Iconoclasts. In 825 the island was taken by the Arabs, Archbishop Cyril was slain for refusing to apostatize, and Gortyna so completely destroyed that it never rose from its ruins. Thenceforth, moreover, the metropolitan ceased to bear the title of Gortyna, took that of Crete, and resided elsewhere, probably at Candia, a city built by the Arabs and made capital of the island. In the tenth century Nicephorus Phocas reconquered Crete for the Byzantine Empire, which held it until 1204, when it fell into the hands of the Venetians, who retained the island until 1669, when the Turks took possession of it. The Venetians did not allow the Greek bishops to reside in Crete, while the Latin archbishop bore the title of Candia, not of Gortyna. Even yet the Latin diocese retains the name of Candia (q.v.), Gortyna being a titular archiepiscopal title. On the other hand the Greek Archbishop of Gortyna calls himself Metropolitan of Crete. The extensive ruins of Gortyna are located near the village of Hagioi Dekka. Among them are a temple of Apollo, several statues, the basilica of St. Titus, and numerous inscriptions, among which is the text of the so-called Laws of Gortyna, found in 1884, which afford us a good insight into Greek law of the fifth century B.C. AEsculapius was much honoured at Gortyna. Within an hour's distance of the ruins is an immense grotto, by many archaeologists considered identical with

the famous labyrinth. It is, however, only an ancient quarry out of which Gortyna was built; the labyrinth was situated near Cnossus.

S. VAILHÉ

Goerz

Görz

(It. GORIZIA; Slovene GORICA).

Capital of the Austrian crown-land Görz and Gradiska, has a population (1900) of 25,432, almost exclusively Catholic, of which 68 per cent are Italians, 20 per cent Slovenes, and 11.6 per cent Germans. Since 1751 Görz has been the seat of an archbishop, metropolitan of the ecclesiastical province of Illyria.

History

The territory surrounding Görz belonged originally to the old Roman Prefecture of Illyricum, on the division of which into East and West Illyricum in 379 it remained a part of the latter, and shared its fortunes until Emperor Otto III divided it in 1001 between the Patriarch of Aquileia and the Count of Friuli. The latter immediately assumed the title of Duke of Görz after the castle of that name, for the town of Görz was not recognized as such until 1307. In 1031 Görz passed to the Eppenstein family of Carinthia, and thence in 1090 to the Counts of Lurn, who in 1202, by arrangement with the patriarch, Pilgrim II, secured the territory belonging to the Patriarchate of Aquileia. By marriage Count Meinhard III came also into possession of the Tyrol. After his death (1258) the family divided into the Görz line, represented by Count Albert II, and the Tyrolese-Carinthian line, represented by Count Meinhard IV. The latter line became extinct in 1335 with Henry of Carinthia, who had been for a time King of Bohemia (1307-10); the Görz line reached the zenith of its power under Henry II (d. 1323), among whose possessions were included Lusatia, Pusterthal, and Istria, and who held the office of vicegerent of the empire in the March of Treviso. Unsuccessful wars, divisions of inheritance, etc. led to the decline of the house, and at the death of the last count, Leonhard, in 1500 without issue, his territory fell to Emperor Maximilian I, and, except for a brief interval of French occupation (1809-15), has since remained a possession of the reigning house of Austria.

Ecclesiastically, this territory was from the beginning under the jurisdiction of the Patriarch of Aquileia. The fact that the patriarchs for the most part resided at Udine on Venetian land, while the patriarchal cathedral was situated at Aquileia on Görz territory, caused constant friction with Venice. Accordingly, in 1560 Emperor Ferdinand I agitated at Rome the question of establishing an independent bishopric at Görz, an attempt which was repeated many times during the following centuries, but fruitlessly until at last Benedict XIV, yielding to Austrian urgency and overriding the claim of the Republic of Venice to the Austrian part of the Patriarchate of Aquileia, established a separate vicariate Apostolic with residence at Görz (29 Nov., 1749). On 6 June, 1751, the patriarchate was definitively suppressed and replaced by two archbishoprics (18 April, 1752), those

of Udine and Görz, the latter having as suffragans Trent, Triest, Como, and Pedena. The vicar Apostolic, Karl Michael, Count von Attems, was appointed first Archbishop of Görz, and in 1766 was raised to the dignity of a prince. After his death (1774) came Rudolf, Count of Edling, who was, however, deposed by Emperor Joseph II in 1784 for his opposition to the imperial patent of tolerance of 13 October of that year, and died in 1803 at Lodi. On 8 March, 1787, the emperor raised the Diocese of Laibach to the rank of an archdiocese, and on 20 August, 1788, in place of Görz established a new diocese in the adjacent province of Gradiska. Pius VI gave his sanction to the new arrangement on the condition that Gradiska should be regarded only as a co-episcopal seat (with Görz); by his Bull "Recti prudentisque consilii" of 12 September, 1797, however, he transferred the episcopal see and chapter back to Görz, and ordained that in future the bishop should bear both titles, Görz and Gradiska. By the Bull of 19 August, 1807, Pius VII reduced Laibach to the rank of a simple bishopric, and placed it with Görz and Triest under the immediate jurisdiction of the Holy See. Finally, on 27 August, 1830, Pius VIII raised Görz once more to the archiepiscopal rank, and assigned to it the Sees of Laibach, Triest-Capo d'Istria, Parenzo-Pola, and Veglia-Arbe as suffragans, Joseph Walland becoming archbishop. Since Archbishop Walland's death the archiepiscopal see has been occupied by: Franz Xaver Luschin (1835-54), distinguished for his apostolic zeal and unbounded charity; Andreas Gollmayr (1855-83), under whom the title of prince was restored to the archbishops; Alois Zorn (1883-97), previously Bishop of Parenzo-Pola; Jakob Missia (1898-1902), raised to the cardinalate, 19 June, 1899; Andreas Jordan (1902-05); and Franz Borgia Sedej, b. at Kirchheim, 10 October, 1854; ordained priest 26 August, 1877; appointed prince-archbishop by the emperor, 20 January, 1900; confirmed by the pope, 21 February of the same year, and consecrated on 25 March.

Statistics

The archdiocese embraces the northern part of the Austrian coast, that is the County of Görz and Gradiska, and numbers (1900) 17 deaneries, 86 parishes, 42 curacies, 65 vicarages, 13 benefices, 113 positions for assistant priests, 271 churches and chapels, 304 secular and 41 regular priests, 267,704 Catholics. The following religious congregations have foundations in the archdiocese: the Franciscans, who have the monastery of Castagnavizza, situated above the city of Görz, with an upper gymnasium for those desiring to enter the order; also houses on the Holy Mountain (*Heiliger Berg*) near Görz, and on the island of Barbana near Grado; the Capuchins at Görz and in the monastery of the Holy Cross near Haidenschaft; the Jesuits at Görz; the Brothers of Mercy of St. John of God, who have charge of the town hospital at Görz; the Ursulines at Görz; the Sisters of Mercy of St. Vincent de Paul, who have charge of the poor-house and the hospital for women at Görz, and of the orphan asylum at Contavalle, and have the domestic management of the preparatory seminaries of the prince-archbishopric at Görz; the School Sisters of Notre-Dame, who conduct a higher school for girls and St. Joseph's Asylum for girls at Görz; Sisters of Providence of St. Cajetan, with mother-house at Cormons and 5 branches; Sisters of Mercy of the Holy Cross, who are house-keepers in the central seminary of the prince-archbishopric at Görz. The cathedral chapter, established in 1751, and called the Capitulum Teresianum after Empress Maria Theresa, has 3

dignitaries (provost, dean, and scholasticus), 4 capitulary and 3 honorary canons, and at the present time (1909) one honorary canon *extra statum*. The patron of the diocese is St. Hermagoras. The theological seminary Carolinum, founded in 1757 by Archbishop von Attems as a *domus presbyterialis*, has been since 1818 the chief seminary for the whole ecclesiastical province of Görz, with the exception of the Diocese of Laibach, which has a seminary of its own. Besides the cathedral at Görz, completed about 1400, which exhibits various styles of architecture, mention should be made of the cathedral at Aquileia (basilican style), consecrated in 1031 by the Patriarch Popo; likewise the former patriarchal, now the parish, church in the city of Grado on the lagoons, ancient itself and rich in art treasures of the early Middle Ages, including sculptures, mosaics, etc., of the sixth century.

GREGOR REINHOLD

Goscelin

Goscelin

(Or GOTSELIN, according to the spelling in the earliest manuscripts of his works.)

A Benedictine biographical writer; died about 1099. He was born in the north of France and became a monk of St. Bertin's at Omer. Hermann, Bishop of Salisbury, brought him to England, but the exact date of his doing so is disputed. Wright gives 1058, on the authority of William of Malmesbury, but Goscelin himself states that he accompanied Hermann to Rome in 1049, shortly before the great Council of Reims in that year, and as that prelate returned to England in 1053, it seems likely that Goscelin came with him then. He remained in England to the end of his life, visiting many monasteries and cathedrals, and collecting, wherever he went, materials for his numerous biographies of English saints. William of Malmesbury praises his industry in the highest terms. He was at Ely about 1082, where he wrote a life of St. Etheldreda. Between 1087 and 1092

he was at Ramsey, and compiled there a life of St. Ivo, or Ives. In 1098 he went to Canterbury, where he wrote his account of the translation of the relics of St. Augustine and his companions, which had taken place in 1091. This he dedicated to St. Anselm, and it was probably his last work. The Canterbury Obituary, quoted by Wharton, gives 15 May as the day of his death but does not name the year. He was certainly alive in the beginning of the year 1099, but we hear nothing of him afterwards. His works consist of the lives of many English saints, chiefly of those connected with Canterbury, where he spent his last years. Some of them have been printed by the Bollandists, by Mabillon, and by Migne. Others are contained in manuscripts in the British Museum (London) and at Cambridge. A full list of his known writings is given in the eighth volume of the "Histoire littéraire de France". His chief work was a life of St. Augustine of Canterbury, professing to be based on older records and divided into two parts, -- an "Historia major" (in Mabillon, Acta SS. O.S.B., I) and an "Historia minor" (in Wharton, Anglia Sacra, I). His life of St. Swithun (in Bollandists, Acta SS., July) is also of some importance, but the majority of his writings have not much value at the present day. His method seems to have been usually to take some older writer as his basis and to reproduce his work, in a somewhat inflated style, with additions of his own, but critics are agreed that no very great reliance can be placed on these latter. According to William of Malmesbury, Goscelin was also a skilled musician.

Gospel and Gospels

Gospel and Gospels

The word *Gospel* usually designates a written record of Christ's words and deeds. It is very likely derived from the Anglo-Saxon *god* (good) and *spell* (to tell), and is generally treated as the exact equivalent of the Greek *euaggelion* (*eu* well, *aggello*, I bear a message), and the Latin *Evangelium*, which has passed into French, German, Italian, and other modern languages. The Greek *euaggelion* originally signified the "reward of good tidings" given to the messenger, and subsequently "good tidings". Its other important meanings will be set forth in the body of the present general article on the Gospels.

(1) *Titles of the Gospels*

The first four historical books of the New Testament are supplied with titles (*Euaggelion kata Matthaion*, *Euaggelion kata Markon*, etc.), which, however ancient, do not go back to the respective authors of those sacred writings. The Canon of Muratori, Clement of Alexandria, and St. Irenæus bear distinct witness to the existence of those headings in the latter part of the second century of our era. Indeed, the manner in which Clement (*Strom.*, I, xxi), and St. Irenæus (*Adv. Hær.*, III, xi,

7) employ them implies that, at that early date, our present titles to the Gospels had been in current use for some considerable time. Hence, it may be inferred that they were prefixed to the evangelical narratives as early as the first part of that same century. That, however, they do not go back to the first century of the Christian era, or at least that they are not original, is a position generally held at the present day. It is felt that since they are similar for the four Gospels, although the same Gospels were composed at some interval from each other, those titles were not framed, and consequently not prefixed to each individual narrative, before the collection of the four Gospels was actually made. Besides, as well pointed out by Prof. Bacon, "the historical books of the New Testament differ from its apocalyptic and epistolary literature, as those of the Old Testament differ from its prophecy, in being invariably anonymous, and for the same reason. Prophecies whether in the earlier or in the later sense, and letters, to have authority, must be referable to some individual; the greater his name, the better. But history was regarded as a common possession. Its facts spoke for themselves. Only as the springs of common recollection began to dwindle, and marked differences to appear between the well-informed and accurate Gospels and the untrustworthy . . . did it become worth while for the Christian teacher or apologist to specify whether the given representation of the current tradition was 'according to' this or that special compiler, and to state his qualifications". It thus appears that the present titles of the Gospels are not traceable to the Evangelists themselves.

The first word common to the headings of our four Gospels is *Euaggelion*, some meanings of which remain still to be set forth. The word, in the New Testament, has the specific meaning of "the good news of the kingdom" (cf. Matt., iv, 23; Mark, i, 15). In that sense, which may be considered as primary from the Christian standpoint, *Euaggelion* denotes the good tidings of salvation announced to the world in connexion with Jesus Christ, and, in a more general way, the whole revelation of Redemption by Christ (cf. Matt., ix, 35; xxiv, 14; etc.; Mark, i, 14; xiii, 10; xvi, 15; Acts, xx, 24; Rom., i, 1, 9, 16; x, 16; etc.). This was, of course, the sole meaning connected with the word, so long as no authentic record of the glad tidings of salvation by Christ had been drawn up. In point of fact, it remained the only one in use even after such written records had been for some time received in the Christian Church: as there could be but one Gospel, that is, but one revelation of salvation by Jesus Christ, so the several records of it were not regarded as several Gospels, but only as distinct accounts of one and the same Gospel. Gradually, however, a derived meaning was coupled with the word *Euaggelion*. Thus, in his first Apology (c. lxvi), St. Justin speaks of the "Memoirs of the Apostles which are called *Euaggelia*", clearly referring, in this way, not to the substance of the Evangelical history, but to the books themselves in which it is recorded. It is true that in this passage of St. Justin we have the first undoubted use of the term in that derived sense. But as the holy Doctor gives us to understand that in his day the word *Euaggelion* had currently that meaning, it is only natural to think that it had been thus employed for some time before. It seems, therefore, that Zahn is right in claiming that the use of the term *Euaggelion*, as denoting a written record of Christ's words and deeds, goes as far back as the beginning of the second century of the Christian era.

The second word common to the titles of the canonical Gospels is the preposition *kata*, "according to", the exact import of which has long been a matter of discussion among Biblical scholars. Apart from various secondary meanings connected with that Greek particle, two principal significations have been ascribed to it. Many authors have taken it to mean not "written by", but "drawn up according to the conception of", Matthew, Mark, etc. In their eyes, the titles of our Gospels were not intended to indicate authorship, but to state the authority guaranteeing what is related, in about the same way as "the Gospel according to the Hebrews", or "the Gospel according to the Egyptians", does not mean the Gospel *written by* the Hebrews or the Egyptians, but that peculiar form of Gospel which either the Hebrews or the Egyptians had accepted. Most scholars, however, have preferred to regard the preposition *kata* as denoting authorship, pretty much in the same way as, in Diodorus Siculus, the History of Herodotus is called *He kath Herodoton historia*. At the present day it is generally admitted that, had the titles to the canonical Gospels been intended to set forth the ultimate authority or guarantor, and not to indicate the writer, the Second Gospel would, in accordance with the belief of primitive times, have been called "the Gospel according to Peter", and the third, "the Gospel according to Paul". At the same time it is rightly felt that these titles denote authorship, with a peculiar shade of meaning which is not conveyed by the titles prefixed to the Epistles of St. Paul, the Apocalypse of St. John, etc.; The use of the genitive case in the latter titles (*Paulou Epistolai*, *Apokalypsis Ioannou*, etc.) has no other object than that of ascribing the contents of such works to the writer whose name they actually bear. The use of the preposition *kata* (according to), on the contrary, while referring the composition of the contents of the First Gospel to St. Matthew, of those of the second to St. Mark, etc., implies that practically the same contents, the same glad tidings or Gospel, have been set forth by more than one narrator. Thus, "the Gospel *according to* Matthew" is equivalent to the Gospel history in the form in which St. Matthew put it in writing; "the Gospel *according to* Mark" designates the same Gospel history in another form, viz, in that in which St. Mark presented it in writing, etc. (cf. Maldonatus, "In quatuor Evangelistas", cap .i).

(2) *Number of the Gospels*

The name gospel, as designating a written account of Christ's words and deeds, has been, and is still, applied to a large number of narratives connected with Christ's life, which circulated both before and after the composition of our Third Gospel (cf. Luke, i, 1-4). The titles of some fifty such works have come down to us, a fact which shows the intense interest which centred, at an early date, in the Person and work of Christ. It is only, however, in connexion with twenty of these "gospels" that some information has been preserved. Their names, as given by Harnack (*Chronologie*, I, 589 sqq.), are as follows: —

- 1-4. **The Canonical Gospels.**
5. The Gospel according to the Hebrews.
6. The Gospel of Peter.
7. The Gospel according to the Egyptians
8. The Gospel of Matthias.
9. The Gospel of Philip.

10. The Gospel of Thomas.
11. The *Proto-Evangelium* of James.
12. The Gospel of Nicodemus (*Acta Pilati*).
13. The Gospel of the Twelve Apostles.
14. The Gospel of Basilides.
15. The Gospel of Valentinus.
16. The Gospel of Marcion.
17. The Gospel of Eve.
18. The Gospel of Judas.
19. The writing *Genna Marias*.
20. The Gospel *Teleioseos*.

Despite the early date which is sometimes claimed for some of these works, it is not likely that any one of them, outside our canonical Gospels, should be reckoned among the attempts at narrating the life of Christ, of which St. Luke speaks in the prologue to his Gospel. Most of them, as far as can be made out are late productions, the apocryphal character of which is generally admitted by contemporary scholars (see APOCRYPHA).

It is indeed impossible, at the present day, to describe the precise manner in which out of the numerous works ascribed to some Apostle, or simply bearing the name of gospel, only four, two of which are not ascribed to Apostles, came to be considered as sacred and canonical. It remains true, however, that all the early testimony which has a distinct bearing on the number of the canonical Gospels recognizes four such Gospels and none besides. Thus, Eusebius (died 340), when sorting out the universally received books of the Canon, in distinction from those which some have questioned writes: "And here, among the first, must be placed the holy *quaternion* of the Gospels", while he ranks the "Gospel according to the Hebrews" among the second, that is, among the disputed writings (Hist. Eccl., III, xxv). Clement of Alexandria (died about 220) and Tertullian (died 220) were familiar with our four Gospels, frequently quoting and commenting on them. The last-named writer speaks also of the Old Latin version known to himself and to his readers, and by so doing carries us back beyond his time. The saintly Bishop of Lyons, Irenæus (died 202), who had known Polycarp in Asia Minor, not only admits and quotes our four Gospels, but argues that they must be just four, no more and no less. He says: "It is not possible that the Gospels be either more or fewer than they are. For since there are four zones of the world in which we live, and four principal winds, while the Church is scattered throughout the world, and the pillar and ground of the Church is the Gospel and the Spirit of life; it is fitting that we should have four pillars, breathing out immortality on every side and vivifying our flesh. . . The living creatures are quadriform, and the Gospel is quadriform, as is also the course followed by the Lord" (Adv. Hær., III, xi, 8). About the time when St. Irenæus gave this explicit testimony to our four Gospels, the Canon of Muratori bore likewise witness to them, as did also the Peshito and other early Syriac translations, and the various Coptic versions of the New Testament. The same thing must be said with regard to the Syriac harmony of the canonical Gospels, which was framed by St. Justin's disciple, Tatian, and which is usually referred to under its Greek name of *Diatessaron* (*To dia tessaron Euaggelion*). The recent discovery

of this work has allowed Harnack to infer, from some of its particulars, that it was based on a still earlier harmony, that made by St. Hippolytus of Antioch, of our four Gospels. It has also set at rest the vexed question as to St. Justin's use of the canonical Gospels. "For since Tatian was a disciple of Justin, it is inconceivable that he should have worked on quite different Gospels from those of his teacher, while each held the Gospels he used to be the books of primary importance" (Adeney). Indeed, even before the discovery of Tatian's "Diatessaron", an unbiased study of Justin's authentic writings had made it clear that the holy doctor used exclusively our canonical Gospels under the name of *Memoirs of the Apostles*.

Of these testimonies of the second century two are particularly worthy of notice, viz, those of St. Justin and St. Irenæus. As the former writer belongs to the first part of that century, and speaks of the canonical Gospels as a well-known and fully authentic collection, it is only natural to think that at his time of writing (about A.D. 145) the same Gospels, and they only, had been recognized as sacred records of Christ's life, and that they had been regarded as such at least as early as the beginning of the second century of our era. The testimony of the latter apologist is still more important. "The very absurdity of his reasoning testifies to the well-established position attained in his day by the four Gospels, to the exclusion of all others. Irenæus' bishop was Potinus who lived to the age of 90, and Irenæus had known Polycarp in Asia Minor. Here are links of connexion with the past which go back beyond the beginning of the second century" (Adeney).

In the writings of the Apostolic Fathers one does not, indeed, meet with unquestionable evidence in favour of only four canonical Gospels. But this is only what one might expect from the works of men who lived in the very century in which these inspired records were composed, and in which the word Gospel was yet applied to the glad tidings of salvation, and not to the written accounts thereof.

(3) *Chief Differences between Canonical and Apocryphal Gospels*

From the outset, the four Gospels, the sacred character of which was thus recognized very early, differed in several respects from the numerous uncanonical Gospels which circulated during the first centuries of the Church. First of all, they commended themselves by their tone of simplicity and truthfulness, which stood in striking contrast with the trivial, absurd, or manifestly legendary character of many of those uncanonical productions. In the next place, they had an earlier origin than most of their apocryphal rivals, and indeed many of the latter productions were directly based on the canonical Gospels. A third feature in favour of our canonical records of Christ's life was the purity of their teachings, dogmatic and moral, over against the Jewish, Gnostic, or other heretical views with which not a few of the apocryphal gospels were tainted, and on account of which these unsound writings found favour among heretical bodies and, on the contrary, discredit in the eyes of Catholics. Lastly, and more particularly, the canonical Gospels were regarded as of Apostolic authority, two of them being ascribed to the Apostles St. Matthew and St. John, respectively, and two to St. Mark and St. Luke, the respective companions of St. Peter and St. Paul. Many other gospels indeed claimed Apostolic authority, but to none of them was this claim universally allowed in the early Church. The only apocryphal work which was at all generally received, and relied upon,

in addition to our four canonical Gospels, is the "Gospel according to the Hebrews". It is a well-known fact that St. Jerome, speaking of this Gospel under the name of "The Gospel according to the Nazarenes", regards it as the Hebrew original of our Greek canonical Gospel according to St. Matthew. But, as far as can be judged from its fragments which have come down to us, it has no right to originality as compared with our first canonical Gospel. At a very early date, too, it was treated as devoid of Apostolic authority, and St. Jerome himself, who states that he had its Aramaic text at his disposal, does not assign it a place side by side with our canonical Gospels: all the authority which he ascribes to it is derived from his persuasion that it was the original text of our First Gospel, and not a distinct Gospel over and above the four universally received from time immemorial in the Catholic Church.

(4) *Order of the Gospels*

While the ancient lists, versions, and ecclesiastical writers agree in admitting the canonical character of only four Gospels, they are far from being at one with regard to the order of these sacred records of Christ's words and deeds. In early Christian literature, the canonical Gospels are given in no less than eight orders, besides the one (St. Matthew, St. Mark, St. Luke, St. John) with which we are familiar. The variations bear chiefly on the place given to St. John, then, secondarily, on the respective positions of St. Mark and St. Luke. St. John passes from the fourth place to the third to the second, or even to the first. As regards St. Luke and St. Mark, St. Luke's Gospel is often placed first, doubtless as being the longer of the two, but at times also second, perhaps to bring it in immediate connexion with the Acts, which are traditionally ascribed to the author of our Third Gospel.

Of these various orders, the one which St. Jerome embodied in the Latin Vulgate, whence it passed into our modern translations, and even into the Greek editions of the New Testament, is unquestionably the most ancient. It is found in the Canon of Muratori, in St. Irenæus, in St. Gregory of Nazianzus, in St. Athanasius, in the lists of the sacred books drawn up by the Councils of Laodicea and of Carthage, and also in the oldest Greek uncial Manuscripts.: the Vatican, the Sinaitic, and the Alexandrine. Its origin is best accounted for by the supposition that whoever formed the Gospel collection wished to arrange the Gospels in accordance with the respective date which tradition assigned to their composition. Thus, the first place was given to St. Matthew's Gospel, because a very early tradition described the work as originally written in Hebrew, that is, in the Aramaic language of Palestine. This, it was thought, proved that it had been composed for the Jewish believers in the Holy Land, at a date when the Apostles had not yet started to preach the glad tidings of salvation outside of Palestine, so that it must be prior to the other Gospels written in Greek and for converts in Greek-speaking countries. In like manner, it is clear that St. John's Gospel was assigned the last place, because tradition at a very early date looked upon it as the last in the order of time. As to St. Mark and St. Luke, tradition ever spoke of them as posterior to St. Matthew and anterior to St. John, so that their Gospels were naturally placed between those of St. Matthew and St. John. In this way, as it seems, was obtained the present general order of the Gospels in which we find,

at the beginning, an Apostle as author; at the end, the other Apostle; between the two, those who have to derive their authority from Apostles.

The numerous orders which are different from the one most ancient and most generally received can easily be explained by the fact that after the formation of the collection in which the four Gospels were for the first time united, these writings continued to be diffused, all four separately, in the various Churches, and might thus be found differently placed in the collections designed for public reading. It is likewise easy in most cases to make out the special reason for which a particular grouping of the four Gospels was adopted. The very ancient order, for instance, which places the two Apostles (St. Matthew, St. John) before the two disciples of Apostles (St. Mark, St. Luke) may be easily accounted for by the desire of paying a special honour to the Apostolic dignity. Again, such an ancient order as Matthew, Mark, John, Luke, bespeaks the intention of coupling each Apostle with an Apostolic assistant, and perhaps also that of bringing St. Luke nearer to the Acts, etc.

(5) *Classification of the Gospels*

The present order of the Gospels has the twofold advantage of not separating from one another those Evangelical records (St. Matthew, St. Mark, St. Luke) whose mutual resemblances are obvious and striking, and of placing at the end of the list of the Gospels the narrative (that of St. John) whose relations with the other three is that of dissimilarity rather than of likeness. It thus lends itself well to the classification of the Gospels which is now generally admitted by Biblical scholars. St. Matthew, St. Mark, and St. Luke are usually grouped together, and designated under the common name of the Synoptic Gospels. They derive this name from the fact that their narratives may be arranged and harmonized, section by section, so as to allow the eye to realize at a glance the numerous passages which are common to them, and also the portions which are peculiar either to only two, or even to only one, of them. The case stands very differently with regard to our Fourth Gospel. As it narrates but a few incidents in common with the Synoptists, and differs from them in respect to style, language, general plan, etc., its chief parts refuse to be included in a harmony such as may be framed by means of the first three Gospels. While, therefore, the Synoptic narratives are naturally put together into one group, St. John's record is rightly considered as standing apart and as, so to speak, making up a class by itself (see SYNOPTICS).

(6) *The Gospels and the Oral Gospel*

All recent critics admit that the contents of our four Gospels are intimately connected with more primitive accounts of Christ's life, which may be described, in a general way, as an *Oral Gospel*. They are well aware that Jesus Himself did not consign to writing His own teachings, and directed His Apostles not to write, but to preach, the Gospel to their fellow-men. They regard as an undoubted fact that these first disciples of the Master, faithful to the mission which He had entrusted to them, began, from the day of Pentecost on, boldly to declare by word of mouth what they had seen and heard (cf. Acts, iv, 2), considering as a special duty of theirs "the ministry of the word" (Acts, vi, 4). It is plain, too, that those whom the Apostles immediately selected to help them in the discharge of this most important mission had to be, like the Apostles themselves, able to bear witness to the

life and teachings of Christ (cf. Acts, i, 21 sq.). The substance of the Evangelical narratives would thus be repeated viva voce by the early teachers of Christianity, before any one of them bethought himself to set it down in writing. It can be readily seen that such Apostolic teaching was then inculcated in words which tended to assume a stereotyped form of expression, similar to that which we find in the Synoptic Gospels. In like manner, also, one can easily realize how the Apostles would not be concerned with the exact order of events narrated, and would not aim at completeness in telling what they "had seen and heard". Thus, according to this opinion, was gradually formed what may be called the "Oral Gospel", that is, a relation of Christ's words and deeds, parallel, in respect to matter and form, to our canonical Gospels. In view of this, critics have endeavoured to find out the general contents of this Oral Gospel by means of the second part of the Book of the Acts, by a study of the doctrinal contents of the Epistles of St. Paul, and more particularly by a close comparison of the Synoptic narratives; and it may be freely said that their efforts in that direction have met with considerable success. As regards, however, the precise relation which should be admitted between our canonical Gospels and the Oral Gospel, there is still, among contemporary scholars, a variety of views which will be set forth and examined in the special articles on the individual Gospels. Suffice it to say, here, that the theory which regards the canonical Gospels as embodying, in substance, the oral teaching of the Apostles concerning the words and deeds of Christ is in distinct harmony with the Catholic position, which affirms both the historical value of these sacred records and the authoritative character of the Apostolic traditions, whether these are actually consigned to writing or simply enforced by the ever living voice of the Church.

(7) *Divergences of the Gospels*

The existence of numerous and, at times, considerable differences between the four canonical Gospels is a fact which has long been noticed and which all scholars readily admit. Unbelievers of all ages have greatly exaggerated the importance of this fact, and have represented many of the actual variations between the Evangelical narratives as positive contradictions, in order to disprove the historical value and the inspired character of the sacred records of Christ's life. Over against this contention, sometimes maintained with a great display of erudition, the Church of God, which is "the pillar and ground of the truth" (I Tim., iii, 15), has always proclaimed her belief in the historical accuracy and consequent real harmony of the canonical Gospels; and her doctors (notably Eusebius of Cæsarea, St. Jerome, and St. Augustine) and commentators have invariably professed that belief. As can readily be seen, variations are naturally to be expected in four distinct, and in many ways independent, accounts of Christ's words and deeds, so that their presence, instead of going against, rather makes for the substantial value of the Evangelical narratives. From among the various answers which have been given to the alleged contradictions of the Evangelists we simply mention the following. Many a time the variations are due to the fact that not one but two really distinct events are described, or two distinct sayings recorded, in the parallel passages of the Gospels. At other times, as is indeed very often the case, the supposed contradictions, when closely examined, turn out to be simply differences naturally entailed, and therefore distinctly accounted for, by the literary methods of the sacred writers, and more particularly, by the respective purpose

of the Evangelists in setting forth Christ's words and deeds. Lastly, and in a more general way, the Gospels should manifestly be treated with the same fairness and equity as are invariably used with regard to other historical records.

To borrow an illustration from classical literature, the 'Memoirs' of the Apostles are treated [by unbelievers] by a method which no critic would apply to the 'Memoirs' of Xenophon. The [Rationalistic] scholar admits the truthfulness of the different pictures of Socrates which were drawn by the philosopher, the moralist, and the man of the world, and combines them into one figure instinct with a noble life, half hidden and half revealed, as men viewed it from different points; but he seems often to forget his art when he studies the records of the Saviour's work. Hence it is that superficial differences are detached from the context which explains them. It is urged as an objection that parallel narratives are not identical. Variety of details is taken for discrepancy. The evidence may be wanting which might harmonize narratives apparently discordant; but experience shows that it is as rash to deny the probability of reconciliation as it is to fix the exact method by which it may be made out. If, as a general rule, we can follow the law which regulates the characteristic peculiarities of each Evangelist, and see in what way they answer to different aspects of one truth, and combine as complementary elements in the full representation of it, we may be well contented to acquiesce in the existence of some difficulties which at present admit of no exact solution, though they may be a necessary consequence of that independence of the Gospels which, in other cases, is the source of their united power (Westcott).

FRANCIS E. GIGOT

Gospel in the Liturgy

Gospel in the Liturgy

I. HISTORY

From the very earliest times the public reading of parts of the Bible was an important element in the Liturgy inherited from the service of the Synagogue. The first part of that service, before the bread and wine were brought up to be offered and consecrated, was the Liturgy of the catechumens.

This consisted of prayers, litanies, hymns, and especially readings from Holy Scripture. The object of the readings was obviously to instruct the people. Books were rare and few could read. What the Christian of the first centuries knew of the Bible, of Old Testament history, St. Paul's theology, and Our Lord's life he had learned from hearing the lessons in church, and from the homilies that followed to explain them. In the first period the portions read were — like the rite — not yet stereotyped. St. Justin Martyr (died c. 167) in describing the rite he knew (apparently at Rome) begins by saying that: "On the day of the sun, as it is called, all the inhabitants of town and country come together in the same place, and the commentaries of the Apostles [*anamnemeumata ton apostolon* — gospels], or writings of the Prophets are read as long as time will allow. Then, when the reader has stopped, he who presides admonishes and exhorts all to imitate such glorious examples" (I Apol., 67). At this time, then, the text was read continuously from a Bible, till the president (the bishop who was celebrating) told the reader to stop. These readings varied in number. A common practice was to read first from the Old Testament (Prophetia), then from an Epistle (Apostolus) and lastly from a Gospel (Evangelium). In any case the Gospel was read last, as the fulfilment of all the rest. Origen calls it the crown of all the holy writings (In Johannem, i, 4, præf., P. G., XIV, 26). "We hear the Gospel as if God were present", says St. Augustine ("In Johannem", tract. xxx, 1, P. L. XXXV, 1632). It seems that in some places (in the West especially) for a time catechumens were not allowed to stay for the Gospel, which was considered part of the *disciplina arcani*. At the Synod of Orange, in 441, and at Valencia, in 524, they wanted to change this rule. On the other hand, in all Eastern Liturgies (e.g. that of the Apostolic Constitutions; Brightman, "Eastern Liturgies", Oxford, 1896, p. 5) the catechumens are dismissed after the Gospel.

The public reading of certain Gospels in churches was the most important factor in deciding which were to be considered canonical. The four that were received and read in the Liturgy everywhere were for that very reason admitted to the Canon of Scripture. We have evidences of this liturgical reading of the Gospel from every part of Christendom in the first centuries. For Syria, the Apostolic Constitutions tell us that when a bishop was ordained he blessed the people "after the reading of the law and prophets and our Epistles and Acts and Gospels" (VIII, 5), and the manner of reading the Gospel is described in II, 57 (Cabrol and Leclercq, "Monumenta eccl. liturgica", Paris, 1900, I, p. 225); the "Peregrinatio Silviae" (Etheriæ) describes the reading of the Gospel at Jerusalem (Duchesne: "Origines", 493). The homilies of St. Basil and St. John Chrysostom explain the Gospel as read at Cæsarea, Antioch, Constantinople. In Egypt, St. Cyril of Alexandria writes to the Emperor Theodosius II about the liturgical use of the Gospels (P. G., LXXVI, 471). In Africa, Tertullian mentions the same thing (adv. Marc., IV, 1) and tells us that the Roman Church "reads the Law and the Prophets together with the Gospels and Apostolic letters" (de præscr., VI, 36). St. Cyprian ordained a certain confessor named Aurelian that he might "read the Gospel that forms martyrs" (Ep. xxxiii, P. L., IV, 328). In every rite then, from the beginning, as now, the reading of the Gospel formed the chief feature, the cardinal point of the liturgy of the catechumens. It was not only read in the Liturgy. The "Peregrinatio Silviae" (loc. cit.) alludes to the Gospel read at cock-crow. So in the Byzantine Rite it still forms part of the Office of Orthros (Lauds). At Rome the Gospel

of the Liturgy was read first, with a homily, at Matins, of which use we have now only a fragment. But the monastic Office still contains the whole Gospel read after the Te Deum.

Gradually the portions to be read in the Liturgy became fixed. The steps in the development of the texts used are: first in the book of the Gospels (or complete Bible) marginal signs are added to show how much is to be read each time. Then indexes are drawn up to show which passages are appointed for each day. These indexes (generally written at the beginning or end of the Bible) are called *Synaxaria* in Greek, *Capitularia* in Latin; they give the first and last words of each lesson (*pericope*). The complete Capitularium giving references for all the Lessons to be read each day is a *Comes*, *Liber comitis*, or *comicus*. Later they are composed with the whole text, so as to dispense with searching for it; they have thus become *Evangelitaria*. The next step is to arrange together all the Lessons for each day, Prophecy, Epistle, Gospel, and even readings from non-canonical books. Such a compilation is a *Lectionarium*. Then, finally, when complete Missals are drawn up (about the tenth to the thirteenth centuries) the Lessons are included in them.

II. SELECTION OF GOSPELS

What portions were read? In the first place there was a difference as to the text used. Till about the fifth century it seems that in Syria, at any rate, compilations of the four Gospels made into one narrative were used. The famous "Diatessaron" of Tatian is supposed to have been composed for this purpose (Martin in *Revue des Quest. Hist.*, 1883, and Savi in *Revue bibl.*, 1893). The Mozarabic and Gallican Rites may have imitated this custom for a time (Cabrol, "Etude sur la Peregrinatio Silviae", Paris, 1895, 168-9). St. Augustine made an unsuccessful attempt to introduce it in Africa by inserting into one Gospel passages taken from the others (Sermo 232, P. L., XXXVIII, 1108). But the commoner use was to read the text of one of the Gospels as it stands (see Baudot, "Les Evangélistes", quoted below, 18-21). On great feasts the appropriate passage was taken. Thus, at Jerusalem, on Good Friday, "Legitur iam ille locus de evangelio cata Johannem, ubi reddidit Spiritum" (Per. Silviae, Duchesne, l. c., 492), on Easter Eve "denuo legitur ille locus evangelii resurrectionis" (ibid., 493), on Low Sunday they read the Gospel about St. Thomas "Non credo nisi videro" (494), and so on. The "Peregrinatio" gives us the Gospels thus read for a number of days throughout the year (Baudot, op. cit., 20). For the rest of the year it seems that originally the text was read straight through (probably with the omission of such special passages). At each Synaxis they began again where they had left off last time. Thus Gassian says that in his time the monks read the New Testament through (Coll. patr., X, 14). The homilies of certain Fathers (St. John Chrysostom, St. Augustine, etc.) show that the lessons followed each other in order (Bäumer, "Gesch. des Breviers", Freiburg, 1895, 271). In the Eastern Churches the principle obtained that the Four Gospels should be read right through in the course of each year (Scrivener in Smith, "Dict. of Christ. Antiquities", s. v. "Lectionary"). The Byzantine Church began reading St. Matthew immediately after Pentecost. St. Luke followed from September (when their new year begins), St. Mark began before Lent, and St. John was read during Eastertide. There were some exceptions, e.g. for certain feasts and anniversaries. A similar arrangement is still observed by them, as any

copy of their Gospel-book will show (*Euaggelion*, Venice, 1893). The Syrians have the same arrangement, the Copts a different order, but based on the same principle of continuous readings (Scrivener, "Introduction to the criticism of the N. Test.", London, 1894, I; Baudot, op. cit., 24-32). For the present arrangement of the Byzantine Church see Nilles, "Kalendarium manuale", Innsbruck, 2nd ed., 1897, pp. 444-52. It is well known that they name their Sundays after the Sunday Gospel, e. g., the fourth after Pentecost is "Sunday of the Centurion" because Matt., viii, 5 sqq., is read then. This brings us to a much-disputed question: what principle underlies the order of the Gospels in the Roman missal? It is clearly not that of continuous readings. Father Beissel, S.J., has made an exhaustive study of this question ("Entstehung der Perikopen", see below), in which he compares all manner of *Comites*, Eastern and Western. Shortly, his conclusions are these: The root of the order is the selection of appropriate Gospels for the chief feasts and seasons of the year; for these, the account that seemed most complete was chosen, without regard to the particular Evangelist. The intervals were then filled up so as to complete the picture of Our Lord's life, but without chronological order. First, Easter was considered with Holy Week. The lessons for this time are obvious. Working backwards, in Lent the Gospel of Our Lord's fast in the desert was put at the beginning, the entry to Jerusalem and the anointing by Mary (John, xii, 1, "six days before the Pasch") at the end. This led to the resurrection of Lazarus (in the East, too, always at this place). Some chief incidents from the end of Christ's life filled up the rest. The Epiphany suggested three Gospels about the Wise Men, the Baptism, and the first miracle, which events it commemorates (cf. Antiph. ad Magn., in 2 vesp.) and then events of Christ's childhood. Christmas and its feasts had obvious Gospels; Advent, those of the Day of Judgment and the preparation for Our Lord's coming by St. John Baptist. Forward from Easter, Ascension Day and Pentecost demanded certain passages clearly. The time between was filled with Our Lord's last messages before He left us (taken from His words on Maundy Thursday in St. John). There remains the most difficult set of Gospels of all — those for the Sundays after Pentecost. They seem to be meant to complete what has not yet been told about His life. Nevertheless, their order is very hard to understand. It has been suggested that they are meant to correspond to the lessons of Matins. In some cases, at any rate, such a comparison is tempting. Thus, on the third Sunday, in the first Nocturne, we read about Saul seeking his father's asses (I Kings, ix), in the Gospel (and therefore in the third Nocturne) about the man who loses one sheep, and the lost drachma (Luke, xv); on the fourth Sunday, David fights Goliath "in nomine Domini exercituum" (I Kings, xvii), in the Gospel, St. Peter throws out his net "in verbo tuo" (Luke, v); on the fifth, David mourns his enemy Saul (II Kings, i), in the Gospel we are told to be reconciled to our enemies (Matt., v). The eighth Sunday begins the Book of Wisdom (first Sunday in August), and in the Gospel the wise steward is commended (Luke, xvi). Perhaps the nearness of certain feasts had an influence, too. In some lists Luke, v, where our Lord says, "From henceforth thou shalt catch men", to St. Peter, came on the Sunday before his feast (29 June), and the story of St. Andrew and the multiplied bread (John, vi) before 30 November. Durandus notices this ("Rationale", VI, 142, "De dom. 25a post Pent."; see also Beissel, op. cit., 195-6). Beissel is disposed to think that much of the arrangement is accidental, and that no satisfactory

explanation of the order of Gospels after Pentecost has been found. In any case the order throughout the year is very old. A tradition says that St. Jerome arranged it by command of St. Damasus (Berno, "De officio missæ", i, P. L., CXLII, 1057; "Micrologus", xxxi, P. L., CLI, 999, 1003). Certainly the Lessons now sung in our churches are those that St. Gregory the Great's deacon chanted at Rome thirteen hundred years ago (Beissel, op. cit., 196).

III. CEREMONY OF SINGING THE GOSPEL

The Gospel has been for many centuries in East and West the privilege of the deacon. This was not always the case. At first a reader (*anagnostes*, lector) read all the lessons. We have seen a case of this in the story of St. Cyprian and Aurelian (see above). St. Jerome (died 420) speaks of the deacon as reader of the Gospel (Ep. cxlvii, n. 6), but the practice was not yet uniform in all churches. At Constantinople, on Easter day, the bishop did so (Sozom., H. E., vii, 19); in Alexandria, it was an archdeacon (ibid., he says that: "in other places deacons read the Gospel; in many churches only priests"). The Apostolic Constitutions refer the Gospel to the deacon; and in 527 a council, at Vaison, says deacons "are worthy to read the words that Christ spoke in the Gospel" (Baudot, op. cit., 51). This custom became gradually universal, as is shown by the formulæ that accompany the tradition of the Gospel-book at the deacon's ordination (the eleventh century Visigothic "Liber ordinum" has the form: "Ecce evangelium Christi, accipe, ex quo annunties bonam gratiam fidei populo", Baudot, p. 52). An exception that lasted through the Middle Ages was that at Christmas the emperor, dressed in a rochet and stole, sang the midnight Gospel: "Exiit edictum a Cæsare Augusto" etc. (Mabillon, "Musæum italicum", I, 256 sq.). Another mark of respect was that everyone stood to hear the Gospel, bareheaded, in the attitude of a servant receiving his master's orders (Apost. Const., II, 57, and Pope Anastasius I, 399-401, in the "Lib. Pontif."). Sozomenos (H. E., VII, 19) is indignant that the Patriarch of Alexandria sate ("a new and insolent practice"). The Grand Masters of the Knights of St. John drew their swords while the Gospel was read. This custom seems still to be observed by some great noblemen in Poland. If any one has a stick in his hand he is to lay it down (Baudot, 116), but the bishop holds his crosier (see below). The Gospel was sung from the ambo (*ambon*), a pulpit generally halfway down the church, from which it could be best heard by every one (Cabrol, Dict. d'archéol. chrét. et de liturgie, Paris, 1907, s.v. "Ambon", I, 1330-47). Often there were two ambos: one for the other lessons, on the left (looking from the altar); the other, for the Gospel, on the right. From here the deacon faced south, as the "Ordo Rom. II" says (Mabillon, Musæum italic., II, 46), noting that the men generally gather there. Later, when the ambo had disappeared, the deacon turned to the north. Micrologus (De missa, ix) notices this and explains it as an imitation of the celebrant's position at the altar at low Mass — one of the ways in which that service has reacted on to high Mass. The Byzantine Church still commands the deacon to sing the Gospel from the ambo (e.g. Brightman, op. cit., 372), though with them, too, it has generally become only a theoretical place in the middle of the floor. The deacon first asked the blessing of the bishop (or celebrant) then went to the ambo with the book, in procession, accompanied by lights and incense. Germanus of Paris (died 576) mentions this (Ep. 1, P. L., LXXII, 91; cf.

Durandus. "Ration.", IV, 24). See the ceremonies in the "Ordo Rom. I", 11, and "Ordo Rom. II", which are almost exactly ours. Meanwhile the Gradual was sung (see GRADUAL). The "Dominus vobiscum" at the beginning, the announcement of the Gospel ("Sequentia sancti Evangelii" etc.), and the answer, "Gloria tibi Domine", are also mentioned by the sixth-century Germanus (loc. cit.). At the end of the Gospel the people answered, "Amen", or "Deo Gratias", or "Benedictus qui venit in nomine Domini" (Durandus, "Rationale", IV, 24; Beleth, "Rationale", XXXIX; St. Benedict's Rule, XI). Our present answer, "Laus tibi Christe", seems to be a later one (Gihl, "Messopfer", 444). The elaborate care taken to decorate the book of the Gospels throughout the Middle Ages was also a sign of respect for its contents; St. Jerome speaks of this (Ep. xxii, 32). In a collection of manuscripts the Evangelia nearly always stand out from the rest by their special sumptuousness. They are not uncommonly written in gold and silver letters on vellum stained purple — the extreme limit of medieval splendour. The bindings, too, are nearly always adorned with special care. It is on Gospel books that one generally sees ivory carvings, metal-work, jewellery, enamel, sometimes relics. (For descriptions see Baudot, op. cit., 58-69.) The same tradition continues in the East. Allowing for doubtful modern taste in Greece, Russia, Syria, etc., the *Euaggelion* is still the handsomest book, often the handsomest object in a church. When it is not in use it generally displays the enamels of its cover on a desk outside the Iconostasis. To kiss the book was always from early times a sign of respect. This was done at one time not only by the celebrant and deacon, but by all the people present ("Ordo Rom. II", 8). Honorius III (1216-27) forbade this; but the book is still kissed by any high prelates who may be present (Cærim. epise., I, 30; Gihl, op. cit., 445). For this and similar ceremonies see Baudot (op. cit., 110-19). When the ambo disappeared in the West the sub-deacon held the book while the Gospel was sung by the deacon. He also carried it first to lay it on the altar (Amalarius of Metz: "De. Eccl. offic.", P. L., CV, 1112; Durandus, loc. cit.). The deacon made the sign of the cross first on the book and then on himself — taking a blessing from the book ("Ordo Rom. I", 11, "ut sigilletur"; Durandus, loc. cit., etc.; Beleth, XXXIX). The meaning of all these marks of reverence is that the Gospel-book, which contains Christ's words, was taken as a symbol of Christ himself. It was sometimes carried in the place of honour in various processions (Beissel, op. cit., 4); something of the same idea underlay the practice of putting it on a throne or altar in the middle of the synods (Baudot, 109-110. During provincial and general synods the Gospel is to be sung at each session. — Cær. Episc. I, xxxi, 16), and the superstitious abuses that afterwards developed, in which it was used for magic (ibid., 118; Catalani, "de codice S. Evangelii", III, see below). The Byzantine Church has developed the ceremony of carrying the Evangelion to the ambo into the elaborate rite of the "Little Entrance" (Fortescue, "Divine Liturgy of St. John Chrysostom", London, 1908, 68-74), and all the other Eastern Churches have similar stately ceremonies at this point of the Liturgy (Brightman, op. cit., for each rite). Another special practice that may be noticed here is that at a papal high Mass the Gospel (and the Epistle too) is read in Latin and Greek. This is already noticed by the first Roman Ordo (40). At Constantinople the Patriarch, on Easter Day, reads the Gospel in Greek, and it is then read by other persons (*oi agioi archiereis*) in various languages ("Typikon" for that day, ed. Athens, 1908, pp. 368, 372, Nilles, "Kal. man.", II, 314-15).

The same thing is done again at the Hesperinos. The little Synopsis (*Synopsis iera*) of Constantinople (1883) gives this Gospel of the Hesperinos (John, xx, 19-25) in Greek (with two poetic versions, hexameter and iambic), Slavonic, Bulgarian, Albanian, Latin, Italian, French, English, Arabic, Turkish, and Armenian (all in Greek characters, pp. 634-78). The same custom is observed in Russia (Prince Max of Saxony, "Prælectiones de liturgiis orientalibus", Freiburg im Br., 1908, I, 116-17), where the Gospel of the Liturgy (John, i) is read in Slavonic, Hebrew, Greek, and Latin.

IV. PRESENT CEREMONY OF THE GOSPEL

Except for the disappearance of the ambo, the rules of the Rubrics in the Missal (Rubr. gen., X, 6; Ritus cel., VI, 5) are still almost exactly those we have seen observed in the Roman Rite since the seventh or eighth centuries. After the Epistle the deacon puts the Gospel book in the middle of the altar (while the celebrant reads his Gospel from the Missal). Liturgical editors publish books containing the Epistles and Gospels, otherwise a second Missal is used (the subdeacon has already chanted the Epistle from the same book). The celebrant then puts incense into the thurible and blesses it as usual. The subdeacon goes down and waits below, before the middle of the altar. The deacon kneeling by the celebrant just behind him at his right says the "Munda cor meum". Then, rising and taking the book, he kneels with it before the celebrant (turning towards the north) and says "Jube domne benedicere". Jube with an infinitive is a common late Latin way of expressing a polite imperative (Ducange-Maigne d'Arnis, "Lexicon manuale", ed. Migne, Paris, 1890, s. v., col. 1235). *Domnus* is a medieval form instead of *dominus*, which got to be looked upon as a Divine title (so in Greek, *kyr* and *kyris* for *kyrios*). The celebrant blesses him with the form in the Missal (Dominus sit in corde tuo . . .) and the sign of the cross; he kisses the celebrant's hand laid on the Missal. The celebrant goes to the Epistle side, where he waits; he turns round towards the deacon when the Gospel begins. The deacon, holding the book lifted up with both hands, comes down to the subdeacon's side; they make the usual reverence to the altar, and the procession starts. The thurifer goes first with incense, then two acolytes, then the deacon and subdeacon side by side, the deacon on the right. We have seen the antiquity of lights and incense at the Gospel. All this time, of course, the Gradual is being sung. The procession arrives at the place that represents the old ambo. It is still to the right of the altar (north side), but now inside the sanctuary, so that, except in very large churches, there is hardly any way to go; often the old procession to the ambo (the Latin "little entrance") is represented only by an awkward turning round. Arrived at the place, the deacon and subdeacon face each other, the subdeacon receives the book and holds it up open before him. Originally the subdeacon (two are required by the "Ordo Rom. I", 11, one as thurifer) accompanied the deacon up into the ambo, helped him find his place in the book, and then stood back behind him by the steps. At Milan, where the ambo is still used, this is still done.

In the Roman Rite the subdeacon himself takes the place of the desk of the ambo. But the "Cærimoniale Episcoporum" still allows the use of "legilia vel ambones" if there be any in the church. In that case the subdeacon is to stand behind the desk or at the deacon's right and to turn over the pages if necessary (II, viii, 45). There is a difficulty about the way they stand. The "Ritus

celebrandi" says that the deacon is to stand "contra altare versus populum" (VI, 5). This must mean looking down the church. On the other hand the "Cærim. Episcoporum" (II, viii, 44) says that the subdeacon stands "vertens renes non quidem altari, sed versus ipsam partem dexteram quæ pro aquilone figuratur". This means the way in which they always stand now; namely, the deacon looks north or slightly north-east (supposing the church to be properly orientated); the book is in the same direction as the Missal for the Gospel at low Mass. The acolytes stand on either side of the subdeacon, the thurifer at the deacon's right. The deacon, *junctis manibus*, sings "Dominus vobiscum" (answered by the choir as usual), then, making the sign of the cross with the right thumb on the book (the cross marked at these words in the Missal is put there to show the place) and signing himself on forehead, lips, and breast, he sings "Sequentia [or Initium] sancti Evangelii secundum N . . ." It appears that *sequentia* is a neuter plural (Gühr, op. cit., 438, n. 3). While the choir answers, "Gloria tibi Domine", he incenses the book three times, in the middle, to its right, and left, bowing before and after. He gives the thurible back and sings the text of the Gospel straight through. He bows at the Holy Name, if it occur, and sometimes (on the Epiphany, at the third Christmas Mass, etc.) genuflects (towards the book). The tones for the Gospel are given at the end of the new (Vatican) Missal. The normal one is a recitative on *do* falling to *la* four syllables before the end of each phrase, with the cadence *si, la, si, si-do* for questions, and a scandicus *la, si (quilisma), do* before the end. Two others, more ornamented, are now added *ad libitum*. The celebrant, standing at the Epistle side, looking towards the deacon, hears the Gospel and bows or genuflects with him, but towards the altar. When the Gospel is over the subdeacon brings him the book to kiss, he says: "Per evangelica dicta", and he is incensed by the deacon. The Mass then continues. We have noted that the only other persons now allowed to kiss the book are the ordinary, if he be present, and other prelates above him in rank (Cær. Episcop., I, xxx, 1, 3). A bishop celebrating in his own diocese reads his Gospel sitting on his throne, and hears it standing there, holding his crosier with both hands (Cær. Episcop., II, viii, 41, 46). In this case no one else is ever to kiss the book (*ibid.*, I, xxix, 9).

In low Mass the ceremonies for the Gospel are, as usual, merely an abridgment and simplifying of those for high Mass. When the celebrant has finished reading the Gradual he says the "Munda cor meum", etc., in the middle of the altar (he says, "Jube *Domine* benedicere", because he is addressing God). Meanwhile the server brings the Missal to the north side (this is only an imitation of the deacon's place at high Mass). With the book turned slightly towards the people, the priest reads the Gospel with the same ceremonies (except, of course, for the incense) and kisses it at the end.

V. THE LAST GOSPEL

The Gospel read at the end of Mass is a late development. Originally (till about the twelfth century) the service ended with the words that still imply that, "Ite missa est". The prayer "Placeat tibi", the blessing, and the last Gospel are all private devotions that have been gradually absorbed by the liturgical service. The beginning of St. John's Gospel (I, 1-14) was much used as an object of special devotion throughout the Middle Ages. It was sometimes read at children's baptism or at

extreme unction (Benedict XIV, "De SS. Missæ sacrif.", II, xxiv, 8). There are curious cases of its use for various superstitious practices, written on amulets and charms. It then began to be recited by priests as part of their prayers after Mass. A trace of this is still left in the "Cærimoniale Episcoporum", which directs that a bishop at the end of his Mass shall begin the last Gospel at the altar and continue it (by heart) as he goes away to take off the vestments. It will also be noted that it is still not printed in the Ordinary of the Mass, though of course the rubric about it is there, and it will be found in the third Christmas Mass. By the thirteenth century it was sometimes said at the altar. But Durandus still supposes the Mass to be finished by the "Ite missa est" (Rationale, IV, 57); he adds the "Placeat" and blessing as a sort of supplement, and then goes on at once to describe the psalms said after Mass ("deinde statim dicuntur hymni illi: Benedicite et Laudate", IV, 59). Nevertheless, the practice of saying it at the altar grew; eventually Pius V made this practice universal for the Roman Rite in his edition of the Missal (1570). The fact that all these three additions after the "Ite missa est" are to be said, even at high Mass, without any special ceremony, preserves the memory of their more or less accidental connexion with the liturgy. The normal last Gospel is John, i, 1-14. It is read by the celebrant at the north side of the altar after the blessing. He reads from the altar-card with the usual introduction (Dominus vobiscum . . . Initium S. Evangelii, etc.), taking the sign of the cross from the altar. He genuflects at the words, "Et verbum caro factum est", and the server, at the end, answers "Deo gratias". At high Mass the deacon and subdeacon stand on either side, genuflect too, and answer. They do not read the Gospel; it is in no way to be sung by the deacon, like the essential Gospel of the Liturgy. Whenever an office is commemorated, whose Gospel is begun in the ninth lesson of Matins, that Gospel is substituted for John, i, at the end of Mass. In this case the Missal must be brought to the north side (at high Mass by the subdeacon). This applies to all Sundays, feriæ, and vigils that are commemorated. At the third Mass on Christmas day (since John, i, 1-14, forms the Gospel of the Mass) that of the Epiphany is read at the end; at low Mass on Palm Sunday the Gospel of the blessing of palms is read. Of Eastern Rites the Armenians alone have copied this practice of the last Gospel from the Latins.

All the medieval commentators (Durandus, Berno of Constance, Micrologus, etc.) discuss the Gospel at Mass and give mystic explanations of its use. See especially DURANDUS, *Rationale div. officiorum*, IV, 24, *De Evangelio*; BEISSEL, *Entstehungder Perikopen des römischen Messbuches* (supplement to the *Stimmen aus Maria-Laach*, 98) (Freiburg im Br., 1907); BAUDOT, *Les Evangélistes*, series *Liturgie* (Paris, 1908); BENEDICT XIV, *De Sacrosancto Sacrificio Missæ*, ed. SCHNEIDER (Mainz, 1879), II, 7, pp. 118-25, II, 24, p. 297; GIHR, *Das heilige Messopfer* (6th ed., Freiburg im Br., 1897), 400-406, 433-446, 723-724 (tr. St. Louis, 1903); DE HERDT, *Sacr liturgi praxis* (ed. 9, Louvain, 1894), I, 292-96, 438-46.

ADRIAN FORTESCUE

Alexander Goss

Alexander Goss

Second Bishop of Liverpool; born at Ormskirk, Lancashire, 5 July, 1814; died. at St. Edward's College, Liverpool, 3 Oct., 1872; connected on both sides with old Lancashire families who had always been Catholics; his father was descended from the Gooses or Gosses, his mother from the Rutters. His maternal uncle, the well-known priest, Rev. Henry Rutter, sent him to Ushaw College, 20 June, 1827, where he distinguished himself as a student. When he had completed his philosophy course he was appointed as a "minor professor" to teach one of the classes in the humanity schools. On the death of his uncle, he spent the legacy he received, in going to Rome, where he studied theology at the English College, and was ordained priest, 4 July, 1841. On his return to England, early in March, 1842, he was sent to St. Wilfrids Church, Manchester, but in the following October he was appointed vice-president of the newly founded college of St. Edward, Everton, near Liverpool. Fr. Goss held this office until he was chosen coadjutor-bishop to Dr. Brown, ten years later. He was consecrated by Cardinal Wiseman, at Liverpool, 25 Sept., 1853, and as there was no pressing need of his services, he took the opportunity to pay a long visit to Rome. On 25 January, 1856, he became Bishop of Liverpool by the death of Dr. Brown, and from that time his commanding personality made him a most prominent figure in that city. His lofty stature, dignified bearing, and vigorous speech were the fit accompaniments of a strong and straightforward character. He showed a vast amount of apostolic zeal in the duties of his sacred office, and was an eloquent preacher and a powerful controversialist. He was the beau-ideal of the rugged folk from which he derived -- the old recusants of Lancashire -- the mainstay of the old Faith in England; which character obtained for him the respect of his adversaries, the objection of his friends, and the admiration of the people at large, as being a typical Englishman, blunt, manly, and honest. He seldom used any words that were not of Anglo-Saxon origin, and he never indulged in any ambiguities of speech. In politics, he followed the Conservative party. Under his firm administration, Catholicity made great advances, many churches and schools were built, and the bishop proved an unflinching champion of Catholic education. His fearless denunciation of social evils, and his outspoken expression of opinion attracted the notice of the Press, and even "The Times" devoted special attention to his speeches. He was an accomplished scholar, not only in theology, but also in archæology, and he was an active member of the Chetham Holbein and Manx societies. For the first he edited "Abbott's Journal" and "The Tryalls at Manchester in 1694" (1864); for the Manx society, "Chronica Regum Manniæ et Insularum", to which he made valuable additions. An account of Harkirke burial-ground for recusants, and an introduction written by him were published by the Chetham Society in Crosby Records (M.S., 12, 1887). He also collected materials for a history of Catholicity in the north, and edited Drioux's "Sacred History, comprising the leading facts of the Old and New Testament". For many years he suffered so much that his friend, Rev. T.E. Gibson, wrote of him (Lydiat Hall and its Associations, Introd.): "A prey to disease during the greater part of his episcopate, his life was the struggle of a fearless soul with bodily ailments and with the harassing mental anxieties incidental to his position." He was seized with his last illness suddenly, and he passed away the same evening. There are two paintings of the bishop at St. Edward's College, Liverpool.

GIBBON, *Lydiat Hall and its Associations* (1876); GILLOW, *Bibl. Dict. Eng. Cath.* (London, 1886). s.v.; COOPER in *Dict. Nat. Biog.* (London, 1890), XXII, 256.

EDWIN BURTON

Jan Gossaert

Jan Gossaert

Called MABUSE from Maubeuge in Hainaut.

Flemish painter; b. about 1472; d. at Middelburg about 1533. Nothing is known of him till after the age of thirty. In 1508 he went to Rome with the embassy of Philip of Burgundy, Admiral of Holland and Abbot of Middelburg, sent to Julius II by the Archduchess Marguerite. The visit occupied a year. On his return, Mabuse remained in the service of Philip, who had become Bishop of Utrecht. Perhaps he also accompanied him to Copenhagen (1515). This prince was a collector, a lover of the beautiful, especially of elegant villas, fountains, and ornamental waterspouts. After his death in 1524 Mabuse entered the service of Adolphus of Burgundy, Marquess of Veere. He lived at his court, sharing his friendship and that of Christian of Denmark, a prisoner of the Archduchess, always enjoying the liberality and good-will of the great, and leading the free life of the artists of the country from Van Eyck to Van Dyck. The tales of Van Mander dealing with his manners and pranks must be regarded as trivial gossip. He had married Marguerite de Molenaer, by whom he had two children, Pierre, who was a painter like his father, and Gertrude, who married the painter, Henri van der Heyden.

The career of Mabuse is divided into two distinct periods by his visit to Rome. During the first period he is merely a noteworthy painter of the school of Memling and Gheeraert David. Good examples of this style are the panels of Antwerp, the "Holy Women returning from the Sepulchre", and the picture, incorrectly called "The Honest Judges", which represents the centurion and his escort descending from Calvary. These are beyond doubt the two wings of a lost "Crucifixion". The execution is bold, the painting compact and smooth, but the faces are wooden and slightly grimacing, the emotional portrayal being weak. What is most striking is the power of touch, the carving of the faces as with a chisel, the almost sculptural effect. They recall those clumsy Gothic groups of painted wood, so popular in the countries of the North during the fifteenth century. At Rome, on the contrary, he formed an entirely different conception of beauty, or rather he obtained an insight into absolute beauty. The revelation did not come to him through modern artists. In 1509 not one of the great works of Michael Angelo or Raphael was yet completed. But all Italy was filled with enthusiasm for the monuments of antiquity. Mabuse devoted his whole sojourn to studying and copying for Philip of Burgundy the ruins of Rome. The first result of this journey was a change in his decorative scheme, to which we owe the architectural backgrounds, the colonnades, the palaces, the visions of a world of marble with magnificent pediments, which raise their noble outlines in his pictures. It is plain that all this archaeology is quite destitute of scientific value. It is nevertheless of extreme importance, since it was by no mere chance that the great beginners of

the Renaissance movement — Brunellesco, Alberti, and Bramante — were architects. It was through them that the world of Vitruvius dethroned the Gothic world. With architecture the whole system of the arts altered its principles, and was reorganized on a rational basis and a monumental scale.

This revolution is readily apparent in the works of Mabuse. Statures grow taller, forms expand to preserve their proportion with the heroic scale of the decorative scheme; the nude banishes the flowing draperies; colour becomes thin; edges begin to merge into less rigid lines; the palette fades and assumes the cold tones of fresco. Mabuse's chief work, the triptych of the "Descent from the Cross" in the church of the Premonstratensians at Middelburg, which Dürer admired in December, 1520, was unfortunately burned in 1568. But the triptych of Prague, "St. Luke painting the Blessed Virgin" (1515), and above all the "Adoration of the Magi" of Howard Castle (Earl of Carlisle), with its twenty figures of life size, its animation, its breadth of conception, its vibrating life, enable us to understand the emotion produced in the Flemish school by such original conceptions. It was in fact the grand historical style of painting that Mabuse brought to his countrymen. As a decorator and as author of cartoons for tapestry ("Legend of Herkenbald", Brussels) he retains, nevertheless, mingled with the taste of the Renaissance something of the flamboyant imagination displayed in the cathedral of Brou. He seems less happy in his easel pictures, above all in the treatment of mythological subjects, which he was the first to treat and to spread throughout the North. His "Amphitrite" at Berlin (1516), his "Danaë" at Munich (1527), his "Lucretia" at the Colonna Gallery are paintings at once awkward and affected, unnatural, almost ridiculous. All the splendid sentiment of paganism escapes him. Yet it was this portion of his work which most impressed his contemporaries, and Guichard, as well as Van Mander, lauds him as the first to emancipate Flemish art from theology and transport it to the wholly natural sphere of humanism.

Finally, Mabuse was a portraitist of considerable importance. The "Children of Christian of Denmark" at Hampton Court, the "Carondelet" at the Louvre (1517), and the "Monk" at the same museum, are pieces of a vigour that has never been surpassed. The outline of the model here attains a relief comparable to high relief. The painting is in a silver tone, thin, almost without shadows. The design is less incisive but quite as accurate as that of Holbein. The "Virgins" of Mabuse are also portraits; the best, those of the Louvre and of Douai, already portray the beautiful Flemish type, the fleshy oval, the transparency of the skin, which subsequently constitute the uniform grace of the Madonnas of Rubens. The spiritual beauty of Memling is absent; the charm is that of a beautiful woman. The nimbus has lost its significance; the ideal nature is expressed only by a sweeter model and a more resplendent light. Mabuse's historical importance is very great. Although he trained no pupils, his influence was felt by all. At Flanders he pointed out the way of the future, the path of the Renaissance. He had the good fortune to be the first-comer, and to be preserved from the excesses of unintelligent and ridiculous imitation into which his successors fell, e.g. the Heemskirks, the Floris, and Martin de Vos. What he most lacked was feeling, true inspiration. He falls far below the exquisite poetry of Massys, but he realized much more clearly the trend of art. If his masterpiece, the picture at Howard Castle, were not almost inaccessible to the general public,

it would be seen that Rubens, throughout the sixteenth century, had no greater precursor in his country.

LOUIS GILLET Richard Hemphill
Jean-Edme-Auguste Gosselin

Jean-Edmé-Auguste Gosselin

Ecclesiastical author; b. at Rouen, France, 28 Sept., 1787; d. at Paris, 27 Nov., 1858. He studied philosophy and theology at St-Sulpice, Paris, 1806-11; became professor of dogma, while yet a subdeacon, after the expulsion of the Sulpicians from the seminary by Napoleon, 1811; was ordained priest, 1812. On the return of the Sulpicians (1814) he entered their society; was vice-president of the seminary at Issy, 1814-30; professor of theology to the candidates for the society, 1814-18; superior of the seminary from 1831 to 1844, when the feeble state of his health, which had always been delicate, obliged him to resign. His increasing infirmities from that time till his death permitted him to render little service except by his pen and the example of his piety, industry, and fortitude. A charming portrait of M. Gosselin has been left by Ernest Renan; in his "Lettres du Séminaire" we see the impression produced on the young man by his kindness, gentleness, sober piety, and prudence, his vast and varied erudition. And in the work of his old age, "Souvenirs d'enfance et de jeunesse", Renan says: "He was the most polished and amiable man whom I have ever known."

Besides many minor writings of service in their day, Gosselin left three works which are still of great value. The first is the standard edition of Fénelon in twenty-two volumes (1820-24), to which he added his correspondence in eleven volumes (1827-29), besides a corrected and enlarged edition of Bausset's "Histoire de Fénelon" and other smaller works devoted to the Archbishop of Cambrai. Gosselin's edition is valuable for its notes and discussions, but its accuracy has been somewhat marred by his partiality for Fénelon. Out of it grew his best-known work, "Pouvoir du Pape au moyen âge" (1839; 2nd edition, 1845; tr. as "The Power of the Popes during the Middle Ages", Baltimore, 1853). This remains the classic study of its subject, though in part superseded by Mgr Duchesne's researches. It proved beyond question that the popes exercised temporal power over sovereigns during the Middle Ages. Orestes Brownson, in several articles devoted to it, while admitting its great erudition, attacked its position (adopted from Fénelon), that this power was derived not from Divine authority, but from the public law of that period. Gosselin lived to complete his valuable "Vie de M. Emery" which was revised and published (1861) after his death.

JOHN F. FENLON

John Gother

John Gother

(Or JOHN GOTER)

Priest and controversialist; b. at Southampton, date unknown; d. at sea on a voyage to Lisbon, 2 October, 1704 (O.S.). Educated a strict Presbyterian, he became a convert and entered the English College at Lisbon in 1668. He was ordained priest in 1682, and then returned to England to work on the mission in London. He was of a very retiring disposition, and soon began to devote the most of his time to controversial writings, which he began in 1685. His famous work, "A Papist Misrepresented and Represented", contains a long list of the vulgar errors regarding Catholic doctrine and practice together with his masterly refutations of them, and is as appropriate for use in controversy to-day, as when it was written, with the solitary exception of his remarks about Papal infallibility, which need to be brought up to date. This work brought no less an antagonist than Stillingfleet into the lists, together with a host of the lesser lights of Anglican Divinity, and then there arose a prolonged series, without end, of Answers, Objections, Rejoinders, and Refutations, throughout which Gother single-handed more than maintained his position. His literary style was exceedingly pure, and was often a great factor in winning converts to the Church. His trenchant simplicity has often been compared to Swift at his best. Dryden once facetiously remarked that Gother was the only person, except himself, who knew how to write English.

He was afterwards chaplain to George Holman of Warkworth Castle, Northamptonshire, where he received into the Church and instructed Richard Challoner, then a youth, the future celebrated Bishop and Vicar Apostolic of the London District. Shortly before his death, Gother was proposed as a possible successor to Bishop Ellis of the Western District. He died at sea on a voyage to Lisbon, having received the last rites from a priest who chanced to be on board. The master of the vessel was so impressed with Gother's sanctity, that he preserved the body and delivered it to the English College at Lisbon, where it was interred. His principal works are "A Papist Misrepresented and Represented, or a two-fold Character of Popery" (original ed., London, 1665; has passed through numerous editions down to the present day; a good summary is that of Bishop Challoner which is also published as a tract by the Catholic Truth Society); "Nubes Testium, or a Collection of the Primitive Fathers" (London, 1686); "The Sincere Christian's Guide in the choice of a Religion" (London, 1804); "Instructions of the Epistles and Gospels of the Whole Year" (London, 1780); "The Sinner's Complaint to God" (London, 1839); "Principles and Rules of the Gospel" (London, 1718); "A Practical Catechism"; "Instructions and Devotions for Hearing Mass" (London, 1767); "Instructions for Confession, Communion and Confirmation" (Dublin, 1825); and many other similar works.

C.F. WEMYSS BROWN

Gothic Architecture

Gothic Architecture

The term *Gothic* was first used during the later Renaissance, and as a term of contempt. Says Vasari, "Then arose new architects who after the manner of their barbarous nations erected buildings in that style which we call Gothic", while Evelyn but expresses the mental attitude of his own time when he writes, "The ancient Greek and Roman architecture answered all the perfections required in a faultless and accomplished building" -- but the Goths and Vandals destroyed these and "introduced in their stead a certain fantastical and licentious manner of building: congestions of heavy, dark, melancholy, monkish piles, without any just proportion, use or beauty." For the first time, an attempt was made to destroy an instinctive and, so far as Europe was concerned, an almost universal form of art, and to substitute in its place another built up by artificial rules and premeditated theories; it was necessary, therefore, that the ground should be cleared of a once luxuriant growth that still showed signs of vitality, and to effect this the schools of Vignola, Palladio, and Wren were compelled to throw scorn on the art they were determined to discredit. As ignorant of the true habitat of the style as they were of its nature, the Italians of the Renaissance called it the "*maniera Tedesca*", and since to them the word *Goth* implied the perfection of barbarism, it is but natural that they should have applied it to a style they desired to destroy. The style ceased, for the particular type of civilization it expressed had come to an end; but the name remained, and when, early in the nineteenth century, the beginnings of a new epoch brought new apologists, the old title was taken over as the only one available, and since then constant efforts have been made to define it more exactly, to give it a new significance, or to substitute in its place a term more expressive of the idea to be conveyed.

The word itself, in its present application, is repugnant to any sense of exact thought; ethnically, the art so described is immediately Franco-Norman in its origins, and between the Arian Goths, on the one hand, and the Catholic Franks and Normans, on the other, lies a racial, religious, and chronological gulf. With the conquest of Italy and Sicily by Justinian (535-553) "the race and name of Ostrogoths perished for ever" (Bryce, "The Holy Roman Empire", III, 29) five centuries before the beginnings of the art that bears their name. Modern scholarship seeks deeper even than racial tendencies for the root impulses of art in any of its forms, and apart from the desirable correction of an historical anachronism it is felt that medieval art (of which Gothic architecture is but one category), since it owes its existence to influences and tendencies stronger than those of blood, demands a name that shall be exact and significant, and indicative of the more just estimation in which it now is held.

But little success has followed any of the attempts at definition. The effort has produced such varying results as the epithets of Vasari and Evelyn, the nebulous or sentimental paraphrases of the early nineteenth century romanticists, the narrow archeological definitions of De Caumont, and the rigid formalities of the more learned logicians and structural specialists, such as MM. Viollet le Duc, Anthyme St-Paul, and Enlart, and Professor Moore. The only scientific attempt is that of

which the first was the originator, the last the most scholarly and exact exponent. Concisely stated, the contention of this school is that

the whole scheme of the building is determined by, and its whole strength is made to reside in a finely organized and frankly confessed framework rather than in walls. This framework, made up of piers, arches and buttresses, is freed from every unnecessary incumbrance of wall and is rendered as light in all its parts as is compatible with strength -- the stability of the building depending not upon inert massiveness, except in the outermost abutment of active parts whose opposing forces neutralize each other and produce a perfect equilibrium. It is thus a system of balanced thrusts in contradistinction to the ancient system of inert stability. Gothic architecture is such a system carried out in a finely artistic spirit (Charles H. Moore, "Development and Character of Gothic Architecture", I, 8).

This is an admirable statement of the fundamental structural element in Gothic architecture, but, carried away by enthusiasm for the crowning achievement of the human intellect in the domain of construction, those who have most clearly demonstrated its pre-eminence have usually fallen into the error of declaring this one quality to be the touchstone of Gothic architecture, minimizing the importance of all aesthetic considerations, and so denying the name of Gothic to everything where the system of balanced thrusts, ribbed vaulting, and concentrated loads did not consistently appear. Even Professor Moore himself says, "Wherever a framework maintained on the principle of thrust and counter-thrust is wanting, we have not Gothic" (Moore, *op. cit.*, I, 8). The result is that all the medieval architects of Western Europe, with the exception of that produced during the space of a century and a half, and chiefly within the limits of the old Royal Domain of France, is denied the title of Gothic. Of the whole body of English architecture produced between 1066 and 1528 it is said, "The English claim to any share in the original development of Gothic, or to the consideration of the pointed architecture of the Island as properly Gothic at all, must be abandoned" (Moore, *op. cit.*, Preface to first ed., 8), and the same is said of the contemporary architecture of Germany, Italy, and Spain. Logically applied this rule would exclude also all the timber-roofed churches and the civil and military structures erected in France contemporaneously with the cathedrals and (though this point is not pressed) even the west fronts of such admittedly Gothic edifices as the cathedrals of Paris, Amiens, and Reims. As one commentator on Gothic architecture has said, "A definition so restricted carries with it its own condemnations" (Francis Bond, "Gothic Architecture in England", I, 10).

A still greater argument against the acceptance of this structural definition lies in the fact that while, as Professor Moore declares, "the Gothic monument, thought wonderful as a structural organism, is even more wonderful as a work of art" (*op. cit.*, V, 190), this great artistic element, which for more than three centuries was predominant throughout the greater part of Western Europe, existed quite independently of the supreme structural system, and varies only in minor details of racial bias and of presentation, whether it is found in France or Normandy, Spain or Italy, Germany, Flanders, or Great Britain -- this, which is in itself the manifestation of the underlying impulses

and the actual accomplishments of the era it connotes, is treated as an accessory to a structural evolution, and is left without a name except the perfunctory title of "Pointed", which is even less descriptive than the word *Gothic* itself.

The structural definition has failed of general acceptance, for the temper of the time is increasingly impatient of materialistic definitions, and there is a demand for broader interpretations that shall take cognizance of underlying impulses rather than of material manifestations. The fact is recognized that around and beyond the structural aspects of Gothic architecture lie other qualities of equal importance and greater comprehensiveness, and, if the word is still to be used in the general sense in which it always has been employed, viz., as denoting the definite architectural expression of certain peoples acting under definite impulses and within definite limitations of time, a completely evolved structural principle cannot be used as the sole test of orthodoxy, if it excludes the great body of work executed within that period, and which in all other respects has complete uniformity and a consistent significance.

It may be said of Gothic architecture that it is an impulse and a tendency rather than a perfectly rounded accomplishment; aesthetically, it never achieved perfection in any given monument, or group of monuments, nor were its possibilities ever fully worked out except in the category of structural science. Here alone, finality was achieved by the cathedral-builders of the Ile-de-France, but this fact cannot give to their work exclusive claim to the name of Gothic. The art of any given time is the expression of certain racial qualifications modified by inheritance, tradition, and environment, and working themselves out under the control of religious and secular impulses. When these elements are sound and vital, combined in the right proportions, and operating for a sufficient length of time, the result is a definite style in some one or more of the arts. Such a style is Gothic architecture, and it is to this style, regarded in its most inclusive aspect, that the term *Gothic* is applied by general consent, and in this sense the word is used here.

Gothic architecture and Gothic art are the aesthetic expression of that epoch of European history when paganism had been extinguished, the traditions of classical civilization destroyed, the hordes of barbarian invaders beaten back, or Christianized and assimilated; and when the Catholic Church had established itself not only as the sole spiritual power, supreme and almost unquestioned in authority, but also as the arbiter of the destinies of sovereigns and of peoples. During the first five centuries of the Christian Era the Church had been fighting for life, first against a dying imperialism, then against barbarian invasions. The removal of the temporal authority to Constantinople had continued the traditions of civilization where Greek, Roman, and Asiatic elements were fused in a curious alembic one result of which was an architectural style that later, and modified by many peoples, was to serve as the foundation-stone of the Catholic architecture of the West. Here, in the meantime, the condition had become one of complete chaos, but the end of the Dark Ages was at hand, and during the entire period of the sixth century events were occurring which could only have issue in the redemption of the West. The part played in the development of this new civilization by the Order of St. Benedict and by Pope St. Gregory the Great cannot be over estimated: through the former the Catholic Faith became a more living and personal attribute of the people, and began

as well to force its way across the frontiers of barbarism, while by its means the long-lost ideals of law and order were in a measure re-established. As for St. Gregory the Great, he may almost be considered the foundation-stone of the new epoch. The redemption of Europe was completed during the four centuries following his death, and largely at the hands of the monks of Cluny and Pope St. Gregory VII (1073-1085), who freed the Church from secular dominion. With the twelfth century were to come the Cistercian reformation, the revivifying and purification of the episcopate and the secular clergy by the canons regular, the development of the great schools founded in the preceding century, the communes, the military orders, and the Crusades; while the thirteenth century, with the aid of Pope Innocent III, Philip Augustus, St. Louis, and the Franciscans and Dominicans, was to raise to the highest point of achievement the spiritual and material potentialities developed in the immediate past.

This is the epoch of Gothic architecture. As we analyse the agencies that together were to make possible a civilization that could blossom only in some pre-eminent art, we find that they fall into certain definite categories. Ethnically the northern blood of the Lombards, Franks, and Norsemen was to furnish the physical vitality of the new epoch. Political the Holy Roman Empire, the Capetian sovereigns of the Franks, and the Dukes of Normandy were to restore that sense of nationality without which creative civilization is impossible, while the papacy, working through the irresistible influence of the monastic orders gave the underlying impulse. Normandy in the eleventh century was simply Cluny in action, and during this period the structural elements in Gothic architecture were brought into being. The twelfth century was that of the Cistercians, Carthusians, and Augustinians, the former infusing into all Europe a religious enthusiasm that clamoured for artistic expression, while by their antagonism to the over-rich art of the elder Benedictines, they turned attention from decoration to plan and form, and construction. The Cluniac and the Cistercian reforms through their own members and the other orders which they brought into being were the mobile and efficient arm of a reforming papacy, and from the day on which St. Benedict promulgated his rule, they became a visible manifestation of law and order. With the thirteenth century, the episcopate and the secular clergy joined in the labour of adequately expressing a united and unquestioned religious faith, and we may say, therefore, that the civilization of the Middle Ages was what the Catholic Faith organized and invincible had made it. We may, therefore, with good reason, substitute for the un-descriptive title "Gothic" the name "The Catholic Style" as being exact and reasonably inclusive.

The beginnings of the art that signaled the triumph of Catholic Christianity are to be found in Normandy. Certain elements may be traced back to the Carolingian builders, the Lombards in Italy and the Copts and Syrians of the fourth century, and so to the Greeks of Byzantium. They are but elements however, germs that did not develop until infused with the red blood of the Norsemen and quickened by the spirit of the Cluniac reform. The style developed in Normandy during the eleventh century contained the major part of these elemental norms, which were to be still further fused and co-ordinated by the Franks, raised to final perfection, and transfigured by a spirit which was that of the entire medieval world. Marvellous as was this achievement, that of the Normans

was even more remarkable, for in the style they handed on to the Franks was inherent every essential potentiality. At this moment Normandy was the focus of northern vitality and almost, for the moment, the religious centre of Europe. The founding of monasteries was very like a mania and the result a remarkable revival of learning; the Abbeys of Bec, Fécamps, and Jumièges became famous throughout all Europe, drawing to themselves students from every part of the continent; even Cluny herself had in this to take second place. It was a very vigorous and a very widespread civilization, and architectural expression became imperative. Convinced that

she was playing a part and a leading part in the civilization of Europe . . . Normandy perceived and imitated the architectural progress of nations even far removed from her own borders. At this time there was no other country in Europe that for architectural attainment could compare with Lombardy. Therefore it was to Lombardy that the Normans turned for inspiration for their own buildings. They adopted what was vital in the Lombard style, combined this with what they had already learned from their French neighbours, and added besides a large element of their own national character (Arthur Kingsley Porter, "Mediaeval Architecture", VI, 243, 244).

What are these elements which were borrowed from the Lombards and the Franks, and which were to form the foundations of Gothic architecture? They are, from the former:

- the compound pier and archivolt,
- the alternate system, and
- the ribbed and domed vault.

From the latter (i.e. from the Carolingian remains):

- the modified basilican plan with its triple aisles crossed by a projecting transept, and its three apses. This, the basis of the typical Norman and Gothic plan, was derived directly from the Church of the Nativity at Bethlehem, the date of which is unknown. It may have been built by Constantine, or by Justinian, or at any date between. In any case it is not earlier than A.D. 300, nor later than 550;
- the doubled western towers,
- the lantern or central tower over the crossing, and
- the threefold interior system of arcade, triforium, and clerestory.

It will be seen that the main dispositions of the Gothic plan are derived from Carolingian developments of Byzantine modifications of the early Christian basilica, itself but an adaptation of that of pagan Rome; from the Lombards, however, had been acquired three elements which were to lie at the base of Gothic construction. Many of the most characteristic features of Byzantine, Carolingian, and Lombard architecture had been permanently rejected, showing that the process followed was not one of slavish imitation but rather of conscious selection; the vast possibilities inherent in others had not been appreciated, as for instance the polygonal, domed motive of San Vitale and Aachen surrounded by its vaulted ambulatory, from which the Franks were to evolve

the Gothic chevet, while the pointed arch the Normans never used, though they must have known of, or imagined, its existence.

The actual steps in the development of what may be called the Gothic order, from the primitive basilica to the full perfection of Chartres, fortunately exist, and we may trace the progress year by year and at the hands of diverse peoples. By the beginning of the tenth century, the available supply of ancient columns having become exhausted, square piers built up of small stones had everywhere taken the place of circular monolithic shafts, but the old basilican system remained intact (except in the polygonal, Carolingian churches), arcades supporting roof-bearing walls pierced by narrow windows, and an enclosing wall independent in its construction and forming aisles covered by lean-to roofs of wood. In Sant' Eustorgio at Milan (c. 900) we find evidences that transverse arches were thrown from each pier of the arcade to the aisle wall, so necessitating the addition of a flat pilaster to each pier to take the spring of the arch. These arches may have been evolved for the purpose of strengthening the fabric, or for ornamental reasons, or in imitation of similar arches in the Carolingian domical churches; but whatever their source the fact remains that they form the first structural step towards the evolution of the Gothic system of construction. Next, transverse arches were thrown across the nave, the first recorded example being the church of SS. Felice e Fortunato at Vicenza, dated 985. Neither for structural nor aesthetic reasons was it necessary that these nave arches should spring from every pier, so every alternate pier was chosen, the intermediate transverse aisle arch being suppressed and the pier, that no longer had a lateral arch to support, reduced in size. To support the great nave arches, pilasters were of course attached to the nave face of the pier, and these, as well as the aisle pilasters, were made semicircular in plan. If we assume, as we may, that in other examples all the transverse arches of the aisle were retained, while only each alternate pier bore a nave arch, we shall have a plan made up of compound piers supporting longitudinal and transverse wall-bearing arches that divide the entire area into squares, large and small, the great square often being four times the area of each aisle square.

The next step for a people on the highway of progress would be the vaulting, in masonry, of these squares, for the wooden roofs were inflammable; moreover the Carolingian builders had constantly so vaulted their smaller square roof areas. The process began at once, and of course with the aisle squares, where the structural problem was simplest. The date is not recorded; no early examples remain in Lombardy, but in Normandy we find, about 1050, churches which possess aisles covered by square, groined vaults, with the transverse arches showing. The next step was of course the vaulting of the great squares of the nave, but before this was attempted the rib vault was devised, and the task rendered structurally more simple. The old transverse aisle arches had given the hint; where an aisle so spanned was to be vaulted, the arches already in place formed a very convenient shelf on which some of the vault stones might rest, and, by so much, a portion of the temporary centering might be dispensed with. Intelligence could not fail to suggest that an expedient useful in the case of the transverse arch might be equally useful in that of the diagonals, which were far more difficult of construction, as well the most liable to give way in the case of ribless, groined vaults. When did this era-making invention take place, and at the hands of what people? Where,

we shall probably never know, nor yet the exact date; but it could not have been earlier than 1025, nor later than 1075. San Flaviano at Montefiascone, authentically dated 1032, has aisles with rib vaults which are original and, if so, are the earliest on record, while the nave vault of Sant' Ambrogio at Milan (c.1060) is of fully developed rib construction. "The most recent authorities (such as Venturi, *Storia dell' Arte Italiana*, 1903, who cites Stiehl, 1898) accept the view that the vaults are of foreign fashion derived from Burgundy, and were about contemporaneous with the campanile [1129] It seems that on the evidence we are compelled to suppose that Sant' Ambrogio derived its scheme of construction from Normandy. It may be that the origin of the vault is to be sought for even in England; but there are many reasons for thinking that the seed idea, like so many others, came from the East." (W. R. Lethaby, "Mediaeval Art", IV, 100-111.)

In all probability the Lombards are the originators of this device so pregnant of future possibilities. The new vault, groined, ribbed, and domed, was in a class by itself, apart from anything that had gone before. Particularly did it differ from the Roman vault in that, while the latter had a level crown, obtained by using semicircular lateral and transverse arches and elliptical groin arches (naturally formed by the intersection of two semicircular barrel vaults of equal radius), the "Lombard" vault was constructed with semicircular diagonals, the result being that domical form which was always retained by the Gothic builders of France because of its intrinsic beauty. Finally, the new diagonals suggested new vertical supports in the angles of the pier, and so we obtain the fully developed compound pier, which later, at the hands of the English, was to be carried to such extremes of beauty, and to form a potent factor in the development of the Gothic structural system.

The last step in the working-out of the Gothic vaulting plan remained to be taken - the substitution of oblong for square vaulting areas. This was finally accomplished in the Ile-de-France after various Norman experiments, the evidences of which remain in the vaults of St-Georges de Bocherville and the two great abbeys of Caen. The sexpartite vaulting of the latter, together with that of the five other similarly vaulted Norman churches and of the choir of St-Denis at Paris, has always been an architectural puzzle, since it is manifestly a stage in the development of the oblong quadripartite vault, and yet is found in these cases some years after the latter system is known to have been fully understood in France, and nearly three-quarters of a century later than the vault of Sant' Ambrogio. There is reason to suppose that it is a revival of some of the earlier experiments in the development of the large, oblong, high vault from the small, square, aisle vault. It is conceivable that sexpartite vaults may once have existed in Lombardy and before the quadripartite vault was evolved; this would explain the persistence in Sant' Ambrogio of the vaulting shafts on the intermediate piers, for which no apparent reason exists. The vault of the Abbaye aux Dames may be considered either as a ribbed quadripartite vault of square plan, bisected and strengthened by a transverse arch with solid spandrels, or as a series of transverse arches, one on each pair of nave piers, with the roof spaces filled in by curved surfaces of stone supported on diagonal ribs meeting on the crown of each alternate transverse arch. In the first case would be indicated a fear to trust the stability of so large a quadripartite vault, until experiment proved its efficiency; in the second, a stage in the evolution of the great Sant' Ambrogio vault, all local evidence of which has been lost. The vault

of the Abbaye aux Hommes is one more stage in the development; here the vault spaces are curved both from the transverse arch and from the intermediate arch, which so becomes, not an arch -- as in the Abbaye aux Dames -- but a true vaulting rib. The result is a very strong vaulting system, particularly effective in its light and shade and its line composition, and it does not seem surprising that the Norman builders should have reverted to it from time to time, or that Abbot Suger himself should have borrowed it for his fine new abbey, choosing it for its strength or its beauty in place of the simpler and more open quadripartite vault.

In the meantime the second great structural problem, that of the abutment of the vault thrusts, had been solved by the Normans. In Roman construction the thrust of barrel vaults had been neutralized by walls of great thickness, that of groin vaults either by the same clumsy expedient or by transverse walls; when the Lombards first threw their transverse arches across narrow aisles, they added shallow exterior pilaster-strips at the point of contact, rather it would seem for decorative than for structural reasons, as the walls already were strong enough to take the slight thrust of the small arches. With the vaulting of the nave the problem became serious; in Sant' Ambrogio they dared not raise the spring of the high vault above the triforium floor, and the thrust of the vault was taken by two massive arches spanning the aisles, one below this floor, the other above, the latter being hidden under the wide, sloping roof of the nave which was continued unbroken to the aisle walls. This was, of course, but the transverse wall of the Romans, pierced by arched openings; the result was unbeautiful, and the task fell to the Normans of devising a better and more scientific method. At their hands the Lombard pilaster-strip became at once a functional buttress instead of a decorative adjunct, while the successive steps in the evolution of the flying buttress remain on record and are peculiarly interesting. In the Abbaye aux Hommes,

the expedient was adopted of constructing half-barrel vaults springing from the aisle walls and abutting against the vaults of the nave beneath the lean-to roof. These were in reality concealed flying buttresses, but they were flying buttresses of bad form; for only a small part of their action met the concentrated action of the vaults that they were designed to stay, the greater part of it operating against the walls between the piers where no abutments were required (Moore, *op. cit.*, I, 12, 13).

In the Abbaye aux Dames these defects were remedied, for all the barrel vault was cut away except that narrow part which abutted against, the spring of the vault. The flying buttress had been invented. As yet it was hidden under the triforium roof and did not declare itself to the eye. but functionally it was complete.

The fruit of the Cluniac reform working on Norman blood had been the evolution of the main lines of the Gothic plan (barring the eastern termination, or chevet) together with the development of the Gothic system of vaulting and the Gothic principle of concentrated thrusts met by pier buttresses and flying buttresses. The true "Gothic system" is therefore the product of Normandy. In the meantime what had been done towards the working-out of the other half of the Gothic idea -- the discovering anew of the underlying principles of pure beauty, their analysis into the elements

of form and composition, proportion, relation and rhythm, line and colour, and chiaroscuro and finally what had been accomplished in the direction of evolving that new quality of form-expression which, differing as it does from any school of the past, gives to Gothic art its peculiar personality? -- Nothing, so far as Normandy is concerned, except as regards certain large architectonic qualities first revealed in Jumièges, and, following this, in the Abbeys of Caen and St-Georges de Bocherville. The Abbaye aux Hommes is the norm of all French cathedrals; the Abbaye aux Dames, of the English order; while Jumièges, the first in date, remains one of the most astonishing buildings in history. If it had antecedents, if it came as the culmination of a long and progressive series of experiments in the development of architectonic form, the evidence is forever lost, for, as it now stands, it is isolated, almost preternatural. So far as we know, it had no precursors, and yet here are the majestical ruins of a monastic church larger than any since the time of Constantine and far in advance, so far as design and development are concerned, of any contemporary structure. Montier en Der, an abbey of Haute-Marne, built by Abbots Adso and Berenger (960, 998), is the only recorded structure which bears the least kinship to Jumièges, and the difference between the two separated by only fifty years -- is that between barbarism and civilization. All that was good in Lombard architecture has been assimilated, and in addition we find fixed for the whole Gothic period those lofty and monumental proportions, that masterly setting out of plan, the powerful grouping of lofty towers, the final organism of arcaded triforium, and clerestory that together were to set the type of Gothic architecture for its entire term and endure unchanged, though infinitely perfected, so long as the Christian civilization of the Middle Ages remained operative. After Jumièges the abbeys of Caen were easy, and, given a continuation of cultural conditions, Amiens and Lincoln inevitable.

During the latter half of the eleventh century these cultural conditions ceased in Normandy. After the death of William the Conqueror the duchy fell on evil times, and the working out to its logical and supreme conclusion of the great style fell into other hands, viz., those of the French of the old Royal Domain and of the transplanted Normans in England. In France the eleventh century had been marked by royal inefficiency, unchecked feudal tyranny, episcopal insubordination to papal control, indifference to the Cluniac reform, and general anarchy. By the middle of the century Cluny had done its immediate work and had begun to lapse from its lofty ideals, but others were to take its place and do its work, and in 1075 St. Robert of Molesme founded in Burgundy the first house of that Cistercian Order which was to play in the twelfth century the part that Cluny had played in the eleventh. The preliminary fight that was to clear the ground in France began with the Council of Reims called by Pope Leo IX (1049-1054), when the sovereign pontiff and the monastic orders made common cause against the simony, secularism, and independence of the French episcopate. The contest was carried on simultaneously with the even greater fight against the empire, and, as there, the victory remained with the papacy. With the close of the eleventh century conditions in France had become such that the torch that fell from the hands of the decadent Norman could be caught by the crescent Frank and carried on without a pause.

During the first half of the twelfth century the outburst of architectural vigour in the Ile-de-France is very remarkable. Soissons, Amiens, and Beauvais became simultaneously centres of activity, and the rib vault makes its appearance at the same time in many places.

During the first phase of the transition, 1100-40, the builders struggled to master the rib vault in its simpler problems: they learned to construct it on square and on oblong plans and even over the awkward curves of ambulatory aisles, but their experiments were always on a small scale. During the second phase (1140-80) the problem of vaulting great naves was attacked; the evolution centres in the peculiar development which the genius of the French builders gave to the concealed flying buttress and to the sexpartite vault, both borrowed from Normandy (Porter, *op. cit.*, II, 54).

The semicircular ambulatory of Morienvall (c. 1122), with its vaulting supported on ribs curved in plan, and the church of St-Etienne at Beauvais (c. 1130), of which Professor Moore says that with the exception of St-Louis of Poissy it is "the only Romanesque structure extant on the soil of France that was unmistakably designed for ribbed, groined vaulting over both nave and aisles", are valuable landmarks in the development. The second task of the French builders was simplified by the introduction of the pointed arch. As in the case of the ribbed vault, there is no means of knowing the exact source from whence this was derived. It had been in use in the East for nearly a thousand years before it appeared in the West; it was established in the South France as an effective and economical contour for barrel vaults by the year 1050, whence it migrated to Burgundy and so to Berry (where it appears in 1110), but always in connection with vaults rather than arches. The earliest structural pointed arch recorded in France is in the ambulatory of Morienvall, referred to above, and is dated 1122.

This form, so pregnant of structural and artistic possibilities, may have been brought from the Holy Land by returning pilgrims, or it may have been independently evolved. Whatever its source, its advantages were so great from a practical standpoint that it is hard to believe that the races that had produced Sant' Ambrogio and Jumièges should not have worked out independently the idea of the pointed arch. Its two great virtues are its slight thrust as compared with the round arch, and its infinite possibilities of variation in height. The elliptical diagonals of the Romans did not commend themselves to the builders of the North, and the doming that resulted from the uniform use of semicircular arches, while not offensive in the case of square areas, became impossible where oblong spaces were to be covered, the expedient of stiling the longitudinal arches not yet having suggested itself. With the pointed arch in use, all difficulties disappeared. Once introduced it became in a few years the universal form, and its beauty was such that it immediately won its way against the round arch for the spanning of all voids. Almost coincidentally with the acceptance of the pointed arch came the device of stiling, the transverse arches of Bury (c. 1125) being so treated. This would seem to indicate that to the Gothic builders the value of the pointed arch lay rather in its comparatively small thrust and in its intrinsic beauty than in the facility with which it might be

used for obtaining level crowns in oblong vaulting areas. This stiling of the longitudinal arches was from the beginning almost invariable in France; structurally, it concentrated the vault thrust on a comparatively narrow vertical line, where it could be easily handled by the flying buttress; it permitted the largest possible window area in the clerestory, while the composition of lines and the delicately waved or twisted surfaces were so beautiful in themselves that, once discovered, they could not be abandoned by the logical and beauty-loving Franks.

The structural and aesthetic advance was now headlong in its impetuosity. A few years after Bury, St-Germer de Fly was built, the date assigned by Professor Moore being about, 1130. Here we find a building almost as surprising as Jumièges; for if the date quoted above is correct, the church has no prototype, no promising stages of experiment. The vaulting, both of the ambulatory and of the apse, is stilted and has its full complement of ribs, the shafting throughout is finely articulated, the dimensions are stately, the proportions just and effective, while the easterly termination is a perfectly developed apse with rudimentary chapels -- a *chevet in posse*. The flying buttresses are still concealed under the triforium roof, and outwardly the building has no Gothic character whatever; but the Gothic organism is practically complete.

With Abbot Suger's St-Denis, the easterly termination of which is of original construction and is dated 1140, we come to what is almost the fully developed Gothic plan, order and system, together with the true chevet of double apsidal aisles and chapels. This last feature, perhaps the most brilliant in conception and splendid in effect of the several parts of a Gothic church, may have been derived either from the triapsidal termination of the Carolingian basilican church, or from the polygonal domed structures of the same epoch. Transitional forms are found throughout the eleventh century, and the development from such a plan as that of St. Generou, on the one hand, or Aachen, on the other, to St-Denis presupposes only that degree of inventive force and overflowing vitality which, as a matter of fact, existed during the eleventh and twelfth centuries.

With the *chevet* as fully developed as it now appears in St-Denis, there remains only the gradual perfection and refinement of the structural system and the giving it that quality of distinctive beauty in every aspect that was to be the very flowering of the Catholic civilization of the Middle Ages. From the middle of the twelfth century both processes went on apace and simultaneously. Noyon followed immediately, and here, it is maintained, the flying buttress for the first time emerged through the roof, displaying in logical fashion the system of construction, and at the same time bringing the abutment above the springing of the vault, where the greatest thrust actually occurred, while permitting the lowering of the triforium roof so that the clerestory window might be given great height and brought into better proportion with the arcade and triforium. Senlis, of the same date, exhibits a great advance in mechanical skill and logical exactitude, with an innovation that commands less admiration -- the substitution of cylindrical columns for the intermediate piers on the caps of which rest the shafts of the intermediate ribs of the sexpartite vault. Continued in Notre-Dame, Paris, this clever but unconvincing, device proved to be but an experimental form, and was abandoned as unsatisfactory in the greatest monuments of French Gothic, such Chartres, Reims, Bourges, and Amiens, where recourse was had to the specifically Gothic compound pier,

with the shafts of the transverse ribs, at least, of the vault brought frankly and firmly down to the pavement.

The cathedral of Paris was begun in 1163 with the choir, and completed in 1235 with the raising of the western towers. From East to West there is a steady growth in certainty of touch, in structural efficiency, and in the expression through beauty of form and line of the culminating civilization of medievalism. The interior order exhibits the defects of the imperfectly organized Norman system, particularly in the lofty, vaulted triforium or gallery, so great in size that there is no rhythm in the relationship of arcade, triforium and clerestory, together with the columnar scheme of Sens and Noyon (the imposing of the vault shafts on the caps of plain cylindrical columns), which must be regarded as falling back from the perfect articulation of the true Gothic system. The plan, however, is nobly developed, the general relations of height and breadth fine to a degree, while in the west front (1210-35) Gothic design reaches, perhaps, the highest point it ever achieved so far as classical simplicity, power, and proportion are concerned. The seed of Jumièges has developed into full fruition. The façade of Notre-Dame must rank as one of the few entirely perfect architectural accomplishments of man. With the cathedral of Paris, also, the new art shows itself in all its wonderful inclusiveness; design, as apart from constructive science, appears full flood in the entire treatment of the exterior; the Lombard rose window has been evolved to its final point; decorative detail, both in design and in placing, has become sure and perfectly competent; while sculpture, stained glass, and, we know from records, painting have all forged forward to a point at least even with the sister art of architecture. In sculpture especially the advance has been amazing. For many generations it was held that the restoration of sculpture as a fine art was due to Italy, and specifically to Niccolo Pisano, but as a matter of fact the task was accomplished in France a century before his time. The revival began in the South, where Byzantine remains were numerous and the tradition still lingered. At Clermont-Ferrand, by the end of the eleventh century, a school of competent sculptors had been developed; Toulouse and Moissac followed suit, and by 1140 the Ile-de-France was producing works which show "a grace and mastery of design, a truth and tenderness of sentiment, and a fineness and precision of chiselling that are unparalleled in any other schools save those of ancient Greece and of Italy in the fifteenth century" (Moore, *op. cit.*, XIII, 366). The sculptures of St-Denis, of Chartres, of Senlis, and of Paris are perfect examples of sculpture beyond criticism in itself and exquisitely adapted to its architectonic function; the statue of Our Lady in the portal of the north transept of Paris may be placed for comparison side by side with the masterpieces of Hellenic sculpture and lose nothing by the test. Of stained glass enough remains here and elsewhere to show how marvellous was the wholly new art brought into being by the genius of medievalism; and that the painting and gilding of all the interior surfaces was on a scale of equal perfection, we are compelled to believe. As the cathedrals and churches now remain to us -- much of the glass destroyed by savage iconoclasm and brutality, every trace of colour vanished from the walls, while the original altars themselves have been swept away together with their gorgeous hangings and decorations (monstrosities like that of Chartres, for instance, taking their places); shrines, screens, and tombs, all wonderfully wrought and glorious in colour and gold, shattered and cast into the

rubbish heap -- they can give but an inadequate idea at best of the nature of that Christian art which in the twelfth and thirteenth centuries came as the result of a fusion of all the arts, each one of which had been raised to the highest point of efficiency. Of the lost colour of Gothic art Mr. Prior says,

We can readily be assured that nothing of crudity found place in the colour scheme of the Middle Ages -- for have we not their illuminated manuscripts in evidence? For its pure and delicate harmony, a page of a thirteenth or fourteenth century manuscript may compete with the work of the greatest masters of colour that the world has known, and we cannot doubt that the same mastery of brilliant and harmonious tints was shown in the colour scheme of cathedral painting (op. cit., Introd., 19).

Some hint of what has been lost may be obtained from the faded frescoes of Cimabue and the painters of Siena, as they may be seen to-day at Assisi and Florence and Siena itself.

The defects of Paris are almost wholly absent in Chartres, which is the most nearly perfect of all Gothic cathedrals both in conception and in the details of its working out. It is unquestionably the noblest interior in Christendom, even though the lower portions of its choir have been ruined by the most aggressive vandalism known to the eighteenth century. Its relations of dimension are of the same final and classical type as are those of the west front of Paris, while it stands at that middle point of achievement when the defects of the Norman system had been eliminated, and those of the too exuberant vitality of the thirteenth century had not yet appeared. As has been said above, Gothic architecture is an impulse and a tendency rather than a perfectly rounded accomplishment; the element of personality entered into it as into no other of the great styles, and it was therefore subject not only to dazzling flights of spontaneous genius, but also to the misguided imaginings of daring innovators. The noble calm of the Paris facade was followed by the nervous complexity and lack of relation of Laon. Only five years after this same masterpiece of Notre-Dame was achieved, the flying buttresses of the *chevet* were reconstructed, and in place of the original fine simplicity and logic of the system of doubled arcs, announcing perfectly the fundamental plan, were substituted the present daring and superb, but illogical and ungainly arches soaring from the outer abutments across both aisles sheer to the spring of the high vault. Similarly, when Amiens was built, the just proportions of Chartres were sacrificed to the pride of structural ability, and a faultless harmony of parts and proportions yielded to wire drawn elegance and awe-inspiring altitudes, destined a little later, in Beauvais, to be the Nemesis of Gothic art. Finally, the system of concentrated loads, which made possible a structure of masonry that was but a skeleton, supporting vaults of stone and filled in by walls of glass, was so tempting to the sense of daring and to the inevitable logic of the French genius that it led to a recklessness in the reductions of solids to a minimum that, however much it may have justified itself structurally, however marvellous may have been the results it made possible in the line of glowing and translucent walls of Apocalyptic colour, must be considered as falling away from the justice and the grandeur of a classically architectonic scheme such as that of Chartres.

It was the Logic of the Parisian that brought to his Gothic both its extreme excellence and its decay: the science of vault construction fell in with his bent. The idea once having attracted him, his logical faculty compelled him to follow it to the end. His vaults rose higher and higher; his poise and counterpoise, his linkage of thrust and strain grew more complicated and daring, until material mass disappeared from his design and his cathedrals were chain-works of articulated stone pegged to the ground by pinnacles (Edward S. Prior, "A History of Gothic Art in England", I, 9).

The fact must not be ignored, that even in the culminating monuments of the thirteenth century in France the mania for skeleton construction led to unfortunate subterfuges. The reduction of masonry was carried beyond a possible minimum, and its insufficiency was supplemented by hidden bars, ties, and chains of iron.

The windows were sub-divided by strong grates of wrought-iron, some of the horizontal bars of which ran on through the piers continuously. At the Sainte Chapelle a chain was imbedded in the walls right round the building, and the stone vaulting ribs were reinforced by curved bands of iron placed on each side and bolted to them (W.R. Lethaby, "Mediaeval Art", VII, 161).

In spite of these errors of a too perfect mastery of the art of building, the great group of cathedrals that followed during the thirteenth century in France must always remain the crowning glory of Catholic architecture. Bourges, Reims, and Amiens, with the numberless other examples of a perfected art, from the Channel to the Pyrenees, the Alps to the sea, form the greatest cycle of buildings in a definite and highly developed style that has ever been produced by man, and is the most salient exposition in history of human capacity for evolving a material perfection with absolute beauty and spiritual significance, all under the control and by the impulse of a dominant and undivided religious faith.

There are three abstruse subjects connected with the nature and growth of Gothic architecture on which much has been written, yet nothing thus far that may be considered finally conclusive:

- the Commacini, or seventh-century guild of masons;
- the "structural refinements" to which Professor Goodyear has devoted so much study;
- the application of certain mystical numbers, and their relations to the solution of the problem of proportion.

Of the Commacini, whose name first appeals in a mid-fifth-century document, Mr. Lethaby says,

It is generally held by scholars that the word does not refer to a centre at Como, but should be understood as signifying an association or guild of masons, and that

the Magistri Commacini heard of in the seventh century were of no small importance. It does seem probable, however, that the expansion of N. Italian art over many parts of Europe, which appears to have taken place in the eleventh and twelfth centuries, may be traced to the fact that in Italy the guilds had privileges which made members free to travel at a time when Western masons were attached to manors or monasteries (W. R. Lethaby, "Mediaeval Art", IV, 114).

Professor Goodyear may be assumed to have proved that the irregularities in plan, the variations in spacing, the inclination of walls, and all the other manifold peculiarities of medieval building are in many ways premeditated, and not the result of negligence or accident. The aesthetic excuse he makes less obvious, however, nor has he yet established any general law which holds as consistently as do those governing architectural refinements in Greek architecture. The mystical deductions as to the persistence of certain numerical laws, the occult properties of numbers, and the angle called the "pi pitch" from the time of the builders of the pyramids, all of which are supposed to express certain fundamental laws governing the universe, and to have been transmitted from father to son for thousands of years, until they appear as the controlling principles of Gothic proportion, and the setting out of Gothic plans, may be found in "Ideal Metronomy" by the Rev. H. G. Wood (Boston, 1909).

When the chevet of Le Mans was finished, in 1254, the beginnings recorded in Jumièges two centuries before had worked themselves out to a point beyond which further wholesome development was impossible. The Franks had perfected what the Normans had initiated; the structural scheme inherent in Jumièges had progressed step by step to its conclusion; the great architectural harmonies of form and proportion and dimension, the mysterious and evocative powers of subtle and rhythmical relationship, had already achieved their highest fruition in Chartres and Reims, while an entirely new category of art, no sign of which had been accorded to the Normans, had by the Franks been brought again into being, viz., that of absolute beauty in decoration, whether in stone or glass or pigment, whether in itself as isolated detail or in regard to its placing and disposition. Moreover, this latter manifestation of art was in terms radically different to anything that had gone before, although the principles were identified with those of all great art: "In breadth of design, ordination of parts and measured recurrence of structural and ornamental elements, the Gothic artist obeyed, though in different form, the same primary laws that had governed the ancient Greek" (Moore, op. cit., I, 22). The same was true of his sense of abstract and concrete beauty; in the contours of his mouldings, the carving of his caps and crockets, bosses and spandrels, the development of his decorative compositions of mass and line, and light and shade, he fell in no respect behind his brothers of Greece, while he exceeded those of Byzantium. The forms were different, wholly his own and original, but the essential spirit was the same.

In the meantime Gothic architecture had been following a parallel course of development in England, borrowing directly from Normandy and France, assimilating what it so acquired, and giving to all a distinctly national character that tended from year to year further to separate English

Gothic from any other, both structurally and artistically. No sooner was the Conquest effected in 1066, than the building of Norman abbeys, cathedrals, and churches was put in hand. Actually the introduction of Norman Romanesque occurred sixteen years earlier, viz., in 1050, when St. Edward the Confessor began the building of Canterbury. The earliest work differs in no essential particular from that of Normandy, except as regards size, which in many cases was astonishing; not only were the abbeys often far larger than anything in Normandy, they were the greatest buildings in Europe. Winchester and St. Paul's were more than double the ground area of the Abbaye aux Hommes, while the London cathedral and Bury St. Edmund's were each a fourth larger even than the gigantic Cluny itself. From the first the English peculiarity of great length combined with comparatively narrow nave (30-35 feet in clear span) is conspicuous. As the Norman buildings were destroyed, and rebuilt under Gothic influence the original setting out was generally adhered to, and Gothic naves are seldom found of a width greater than that of the Norman. Very early, also, occurs the typical deep English choir, Canterbury in 1096, having one nine bays in depth. This excessive length of the eastern arm was due quite as much to practical considerations, as to those of beauty. Religion was popular in England for some centuries after the Conquest, and great quantities of worshippers had to be provided for. In Spain the choir of monks or secular clergy thrust itself through the nave half way to the west doors; in France it usually took in at least the crossing; the cathedrals of the Ile-de-France were secular and the very wide choirs easily accommodated the few canons. In England, however, the numbers of the monks and canons was so great, and so many of the cathedrals were monastic in their foundation, that enormously long choirs were necessary for the seating, in their narrow width, of those permanently attached to each church.

The great abbeys and cathedrals were seldom vaulted, being covered by timber roofs of low pitch, except as regards their easily vaulted aisles. Barrel vaults were occasionally used, groin vaults in innumerable cases; the groin vault with ribs first occurs in Durham in 1093, an astonishing date, since the earliest ribbed vault claimed for France is in the diminutive church of Rhuis, a structure the date of which is unknown, but is placed at about 1100. The earliest known rib vault is claimed by Rivoira to be that of San Flaviano, in Umbria, but there is some doubt as to whether this is the original vault of a church known to have been built in 1032. San Nazzaro Maggiore, at Milan, has an authentic rib vault of 1075, and it appears therefore that the choir vault of Durham is earlier than any certain example in France, however small, and that it was built within twenty years of the first dated rib vault in Lombardy. The vaults of Durham nave are pointed and ribbed, and are not later than 1128, six years after the pointed arch appears in the little French church of Morierval.

No further development towards Gothic in England until the middle of the twelfth century. Great abbeys in the fully developed Norman style, such as Kirkstall and Fountains, Malmesbury, Peterborough, Norwich, and Ely were reared all over England, but the prevailing monastic influence was Benedictine, and this was always architecturally conservative, and at the same time magnificent. Apses with encircling ambulatories were almost invariable, and there was frequently the western transept, as at Bury and Ely. Towards the end of the Norman period the Cluniac influence greatly intensified the native richness in decoration of Benedictine art, and to this we owe in great measure

the rich and intricate carving of the late Norman work that persisted down even to the chapel of Our Lady at Glastonbury, built in 1184. Before this date had occurred two events which were to initiate and, in varying degrees, control the growth of Gothic in England: the coming of the Cistercians and the rebuilding of Canterbury choir by William of Sens. The Cistercians always favoured Gothic, over the massive and grandiose Romanesque of the Benedictines and Cluniacs, because of its early austerity and the economies it made possible in building. Regular Canons, also, and for similar reasons, adopted the economical new form, and this double influence was constantly exerted toward structural and artistic simplicity -- a fortunate thing for the new style, since it prevented a too early flowering in the richness and luxuriance of beautiful detail.

That William of Sens introduced to England and set before English eyes so much as he could of so much as then existed of French Gothic is quite true, but it does not appear that his was the first Gothic done in England, or that it had a wide or lasting influence. Mr. Bond divides the local adaptation of Gothic into three schools -- that of the West, the North, and the South -- giving to the former priority in time. He says:

The first complete Gothic of England commences not with the choir of Lincoln, but of Wells, as begun by Reginald FitzBohun who was bishop from 1174 to 1191. . . . It was in the West of England that the art of Gothic vaulting was first mastered; first, so far as we know, at Worcester; and it was in the West, first apparently at Wells, that every arch was pointed, and the semicircular arch exterminated (op. cit., VII, 105).

This development was underway at Worcester, Dore, Wells, Shrewsbury, and Glastonbury, to name only a few of the examples quoted, by the time the work at Canterbury passed from the hands of William of Sens to those of William the Englishman, and there is little evidence that it had any particular effect on the progress already begun. In the North, Lincoln choir followed close after Canterbury and was manifestly influenced by it in many ways, but as Mr. Bond says, "it is equally plain that the obligation is almost wholly to the English and not to the French part of that design" (op. cit., VII, 111-12), for not all of Canterbury choir is French, even in the case of the work of William of Sens himself; the slender shafts of Purbeck marble, the springing of the vault ribs from the level of the triforium caps rather than from the string course above, the penetrations of the clerestory, the elaborately compound angle piers, with their ring of detached columns, are all English, and it precisely these features St. Hugh copied at Lincoln. Neither does there appear in the retro-choir of Chichester, begun about the time William of Sens went back to France, any evidence that his work had established a dominating precedent; here the work is of a distinctively native cast, the columns of the arcade in particular being original to a degree and of the most distinguished beauty.

The exotic element in Canterbury proved to be but an episode and English Gothic went on developing itself after its own independent fashion. The choir of Lincoln exerted far greater influence and became the general model for all parts of England. In some cases an attempt, and a successful

one, was made to dispense with the vault entirely, as at Hexham, Tynemouth, and Whitby, where in each instance the timber roof of the Anglo-Norman abbey was retained, and the chief attention was devoted to refining and improving the detail and composition of the wall design, where extremely beautiful results were obtained, as at Whitby, by the strictly English elaboration of the arch mouldings and the profiling of the pier sections. The flying buttress also was slow of acceptance and never, indeed, became the striking feature it was in all the buildings of thirteenth-century France. The English cared little for logic and less for structural brilliancy, or even consistency; the goals they aimed at were beauty in all its forms, individual expression, novelty, originality -- qualities they not seldom achieved at the expense of structural integrity. The Gothic of France was singularly consistent; it rapidly developed into a classical system from which no radical departures were made and into which the element of individual initiative hardly ever entered, once the body of laws and precedents had been established. The Gothic of England never possessed any such canon either of logic or of taste. Every bishop, abbot, or master-builder strove to outdo his fellows, to strike out some new and dazzling masterpiece, and if, as a result, the medieval building of England failed of the finality, the certainty, and the uniformity of that of France, it achieved a variety and personality far in advance of anything to be found across the channel. The second importation of French ideas, in the shape of Westminster Abbey, was apparently as helpless to change the English character as Canterbury choir had been; here also the French setting out, the *chevet*, the structural system, were overlaid with English qualities.

We may readily make the fullest allowance for French influence at Westminster, for so entirely is it translated into the terms of English detail that the result is triumphantly English. It is a remarkable thing indeed, that this church, which was so much influenced by French facts, should, *in spirit*, be one of the most English of English buildings (Lethaby: "Westminster Abbey and the King's Craftsmen", V, 125).

French "facts" were apparently as helpless to control the general building of a people as they had been to restrain English workmen in their detail, and after the great abbey was finished in all its beauty England went on as before. By this time the stylistic quality of English Gothic had been pretty well fixed in such works as Beverley choir and transepts; Christ Church and St. Patrick's, Dublin; Ely, presbytery, Southwell choir, Netley and Rievaulx Abbeys, together with the "Nine Altars" of Durham and Fountains, all completed between the years 1225 and 1250, the peculiar qualities of English work had taken on a definite and very beautiful form. This is the period usually denominated "Early English", and, it shows no particular advance in structural development, it records a notable change in point of design; nearly all the attention of the builders seems devoted to solving the problems of beauty in form and line, in detail and composition -- this chiefly in the interior treatment. The relations of the arcade, triforium, and clerestory, the varying designs of the latter with their subtle arrangements of slender shafts and delicate lancets; the beautiful pier sections and moulding profiles, together with the sculpture of capitals, bosses, crockets, and terminals --

varying as between the many sub-schools of the four main architectural provinces, yet always marked by a quality of pure beauty seldom attained even in the Ile-de-France -- all are significant of a distinctively national artistic development, even though it follows lines other than those that held across the Channel.

Coincidentally with the building of Westminster went on such works as the retro-choir of Exeter, the nave of Lichfield, and Tintern Abbey, wherein are the first signs of change from Early English to Geometrical. This process was continued up to the end of the century, and in the works of its last quarter are to be found the highest attainments of English art. Carlisle choir and east front, Peterborough and Pershore choirs, and St. Mary's Abbey, York, are all expressed in a type of art that rises to the level of the highest attainments of man. The exquisite line-composition of Pershore and of York Abbeys, the refinement combined with masculine strength, the swift, steel-like curves of the moulding profiles, the perfected beauty of the carved foliage, together with the masterly arrangement of the lines and spaces of light, the hollows and depths of shade -- all work together to build up a masterly art. Much of the product of this time has perished, and even of York Abbey, which seems to represent the high-water mark of pure English design, nothing remains except a shattered aisle wall, a crossing pier, and a few piles of marble fragments. Though at the beginning of the nineteenth century the greater portion of the fabric was intact, about 1820 it was sold to speculators to be burned into lime.

During the first half of the fourteenth century architectural progress was cumulative, reaching its apogee during the reign of Edward III. The fine simplicity and almost Hellenic feeling for line visible in the work of the preceding half century, and that gives it a place in this respect in advance of any other Gothic work of any time or people, has yielded to decorative richness, the multiplication of ornament and detail, and an intricate composition of light and shade. The incomparable carving of Lincoln and Wells, York Abbey, West Walton, and Llandaff, architectural yet with all the qualities of form that are found in the noblest sculpture, yields first to the lovely, but naturalistic, type of Southwell chapter house, then to the globular forms, the bulbous modelling, and the effete curves of Patrington, Heckington, and the fourteenth-century tombs of Beverley and Ely. Curvilinear window tracery, in all its suave grace, has taken the place of the fine and vigorous forms as of Netley, advanced a stage beyond the prototypes of France. Finally, the brilliantly articulated lierne vaulting, with its intermediate ribs emphasizing the verticality of the composition and carrying out to completion in the roof the fine drawing of multiple piers and moulded arches, is swerving towards the unjustifiable type that came just before the fan vault, i.e., the criss-crossing of a network of purely decorative ribs over the vault-surfaces in violation of structural principle.

Decadence and perfect achievement go hand in hand -- Exeter nave, the finest English interior remaining intact, on the one hand, Wells presbytery, on the other. But whatever the weaknesses that were showing themselves, they entered little into the make-up of the great parish churches, which represent, more than the episcopal and monastic structures, the genius of the period. This was one of the three great epochs of such parish architecture in England, and it is not to be forgotten that the true qualities of English Gothic art reveal themselves quite as fully in the minor as in the

major buildings of this country. For a full century, i.e. from 1350 until 1450, the history of English Gothic is largely a history of parish church-building. The Black Death, which in 1349 smote the land with a pestilence that cut its population almost in halves, was followed by the War of the Roses, and the peace and prosperity of Edward III did not wholly return until the accession of Henry VII. During this long period, however, the trend of stylistic development was wholly changed by the remarkable innovations initiated by Abbot Thokey at Gloucester in 1330, and carried on by William of Wykeham at Winchester from 1380.

The supreme importance of Gloucester in the history of the later Gothic has never been adequately recognized. She turned the current of English architecture in a wholly new direction. But for Gloucester, English Decorated work might well have developed into a Flamboyant as rich and fanciful as that of France. But to the remotest corners of the land, to cathedral, abbey church, collegiate and parish church, there was brought the influence of Gloucester by the countless pilgrims to the shrine of Edward the Second in her choir (Bond, *op. cit.*, VII, 134).

The manifest tendencies of the Decorated -- not, it must be confessed, of the most promising kind -- were terminated and instead a new progress was instituted toward development of what we now know as Perpendicular the first style of architecture that can properly be called "English". Hitherto English Gothic has been rather a lovely overlaying of Continental principles by a distinctively racial decoration and a certain fine fastidiousness of design, with minor modifications of plan and system that left the foundations intact, so far as they had been apprehended and assimilated. Now was to come a perfectly independent manifestation in which system, design, and decoration were all new and all exclusively English. The adoption of the French scheme of a structural framework, the walls being no longer of masonry, but of glass set in a thin scaffolding of stone mullions, was at last adopted, but its working-out bore almost no relation whatever to the French method. Before the architectural revolution there were signs that sense of proportion and composition was decaying, as for example in the Lady Chapel of Ely (1321), which has almost no architectonic qualities to commend it, but, whether William of Wykeham or profounder psychological influences are responsible, the fact remains that the danger was averted, and England recalled to sounder principles, which resulted in a new life in Gothic that persisted until Henry VIII and the regents under Edward VI brought the whole epoch of medieval civilization to an end and surrendered an unwilling people to the Reformation. Winchester nave and York choir; Westminster Hall, King's College Chapel, Cambridge, and St. George's Windsor; Sherborne and Malvern, the choir vault of Oxford cathedral and the chapel of Henry VII at Westminster, together with the major part of the Oxford and Cambridge colleges, the great central towers of many of the cathedrals and abbeys, and, finally, parish churches of all sizes and almost without number, are indicative of the surprising new life in art and therefore of the strength of the sound Catholic civilization of England. The beauty of the new style, its structural integrity, and its fecund variety are worthy of high admiration. What it lacked of the majesty of form and the serene reserve of an earlier time is almost made up

for by a fineness of line, a richness of design without opulence, and a splendour of colour that find few antecedents in history, while the fan vault takes its place as one of the very great inventions of architecture. "In these splendid vaultings of the fifteenth century we have indeed the last work of English monastic art" (Prior, *op. cit.*, VII, 95).

Step by step, from her point of departure from the Gothic of France, England had worked out to the full her own form of Gothic artistic expression. French precedents sat lightly upon her, and she was not favourably disposed to coercion. In plan the Norman and Burgundian type had been adhered to, and instead of that concentration which had produced in France a parallelogram with one end semicircular, there had been an expansion which resulted in the episcopal or archiepiscopal cross plans of Lincoln, Beverley, and Salisbury -- long, narrow naves, equally long choirs, widely-spreading, aisled transepts, and frequently choir transepts as well, with a deep Lady Chapel prolonging the main axis still further to the east. The plan of a French cathedral such as Paris or Amiens announces its ordonnance but indifferently; that of an English cathedral, exactly. Outwardly, the former is hardly more than a mountainous mass without composition; vast and awe-inspiring, but without emphasis or variety, except in regard to its western front when taken by itself. The latter -- with its long, lateral façade, its building-up by successive planes, both horizontal and vertical, its Lady Chapel, choir, central tower, and west towers, its bold transepts, porches, and chapels -- becomes an elaborate yet monumental composition of brilliant and infinitely varied light and shade. With the exception of Hales, Lincoln, and Beaulieu (now destroyed), Tewkesbury, and Westminster, the *chevet* gained no hold in England, nor did the apsidal termination widely commend itself; instead, the square east end became the established type, and when to this was added a retro-choir with a still lower Lady Chapel still further to the east, the result was an independent architectural scheme equally admirable to that complex glory of the French *chevet*.

Mr. Prior advances the interesting theory that the square east end was a fixed feature of both Saxon and Celtic church-buildings, that it was taken to Burgundy by St. Stephen Harding, the Englishman, who had been a monk of Sherborne in Dorset, where the old national tradition had survived the Norman invasion, and that it came back with the Cistercians, who, by their sheer dynamic force, were able to impose it at last on Benedictine abbey and secular cathedral alike, so bringing an originally local device to its own again. He says further:

In this matter the Canterbury choir of William of Sens was a survival rather than a pattern for English use. By the end of the twelfth century the small Keltic sanctuary had imposed itself on the choirs of our great Norman churches still more decisively than it had in the basilican introduction of St. Augustine (*A History of Gothic Art in England*, II, 79).

In height, as related to breadth, the earlier and more reserved French relations were never exceeded, while they were often discounted; until Tudor times the elimination of the wall in favour of skeleton construction combined with glass screens, found little following, and a grave and conservative relationship was preserved between solids and voids. The central tower, the culmination

and concentration of the composition, was almost invariable, while the west front was usually subordinated to the design as a whole. The elaborate articulation of piers and archivolt, until both became compositions of fine lines of light and shade, was carried further in England than elsewhere, and the introduction of tiercerons, or accessory vault ribs, with the ridge ribs to receive them, was in keeping with an instinct that felt the subtle beauty of these multiplied lines. The logical sense, that demanded the grounding of every downward thrust of vault rib either at the pavement or on the abacus of the pier or column caps, was not operative, and in most cases the vault shafts were stopped on corbels above the level of nave capitals. >From the Cistercian aversion to ornament, and perhaps also in part from the use of turned shafts of dark marble applied to the piers and bonded in by stone rings or bronze dowels, came the turned and moulded cap with the circular abacus. In its polygonal chapter houses England developed a brilliant conception all its own, and almost the same might be said of the parish church, while in the designing of tombs, chantries, reredoses, choir-screens, and chancel-fittings of wood, the delicate fancy of the English had full play in the creation of a mass of exquisite sculpture and joinery that has no counterpart elsewhere. If logic and consistency are the note of French Gothic, personality and daring are those of the Gothic of England. The west fronts of Peterborough, Bury St. Edmunds, Wells, Ely, and Lincoln; the chapter houses of York, Salisbury, Lincoln, and Westminster; the octagon of Ely, the fan vaulting of Gloucester, Sherborne, Oxford, and Westminster -- all are examples of a vitality of impulse, a fertility in conception, a soaring imagination, and a cheerful disregard of scholastic precedent that give English Gothic a quality of its own as important in the make-up of the art expression of Catholic Europe during the Middle Ages as is the masterly and final structural achievement of the Ile-de-France.

Outside France and England the racial adaptations of the Gothic impulse are much less vital and distinctive. Wales early evolved a school which had great influence in the development of style in the West of England, but it soon became merged therein and did not long preserve its identity: Ireland shows in its minor monastic work peculiar and very individual qualities. In Scotland French influence was more pronounced than in the South, and the Norman of Jedburgh and Kelso, the Gothic of Dryburgh, Melrose, and Edinburgh deserve more careful study than has yet been given them. In all essential particulars, however, they are of the English school, and show no radical departures from the type established in the South by the Benedictines, Cluniacs, Cistercians, Augustinians, and Friars. In Germany the Gothic expression was slow in establishing itself, few evidences appearing before the Gothic style had reached perfection in France and England.

A reason for this, may perhaps be found in the fact that Germany in the twelfth century possessed a Romanesque architecture which, especially in the important churches along the Rhine, was of a very admirable character and was well suited to the tastes of the German people (Moore, *op. cit.*, VII, 237).

Another reason may also be discovered in the further fact that the pressure of Cistercian influence during its great formative period was towards France and England rather than in the direction of Germany, while the impulse of creative civilization in the twelfth century was from Norman and

Frankish rather than Teutonic blood. When, about the middle of the thirteenth century, French architects began the construction of the cathedral of Cologne after the exaggerated manner of Beauvais, they might almost have claimed that theirs was the first Gothic structure in Germany. Pointed arches and ribbed vaults had appeared sporadically in some of the larger churches at the end of the twelfth century, such as Worms, Mainz, and Bamberg, but the lateral arches are not stilted, and so far as proportion, design, exterior treatment and detail are concerned, these churches are strictly of the Rhenish Romanesque type, as are indeed, awkwardly, the internally more Gothic Magdeburg and Limburg, St. Gereon, Cologne, and the Liebfrauenkirche, Trier, the first completed in 1227, the second begun in the same year, are churches of novel plan, each apparently having resulted from an effort, to turn a French *chevet* into a church by repeating its design, so producing a plan approximating a circle, and harking back in an indeterminate sort of way to the polygonal, domed churches of Charlemagne; in both cases French schemes and forms have been used rather superficially and with little appreciation. Cologne remains, in spite of these examples, the first church in Germany that is strictly Gothic in its idea and its setting out, but even here its detail and ornament are German rather than French. It had a considerable influence on the superficial development of style, and towards the end of the century such works as St. Elizabeth, Marburg, and the cathedrals of Strasburg and Freiburg show the spreading of a style that had come too late to reach any very complete fruition. Until the end of the Middle Ages, when curious fantasies in design and decoration gave to German Gothic a certain unquestioned individuality, the contributions to the development of this phase of art were not notable; the most conspicuous is the *Hallenbau* scheme which consists in raising one or more aisles on either side of the nave to an equal height therewith, or rather in building a great hall roofed with level vaulting supported on rows of slender shafts dividing it in aisles. Lübeck has five of these churches, others no less than seven. The *Hallenbau* church, whatever its width, was usually covered by one enormous roof, and the result, both internally and externally, is as far as possible from the Gothic idea of a logical assemblage of parts, each bearing a just and beautiful proportion to the others, all interrelated and forming a highly articulated organism, the exterior of which announced explicitly every structural form of plan and ordonnance. The "open-work" spire, such as that of Freiburg, is a German development of a Flamboyant idea, which had much aesthetically to commend it, its lacelike surfaces being often treated with great effectiveness.

Flemish Gothic is distinctly a sub-school of that of France rather than of Germany. The nave of Tournai, built in 1060 is still Rhenish Romanesque, though pointed arches and certain Burgundian qualities are creeping in; its proportions, however, partake of the finer feeling of the Franks, even though its general conception is Rhenish. During the first half of the thirteenth century such thoroughly strong and refined examples of true Gothic as St. Martin, Ypres, St. Bavon and St. Michael, Ghent, appear, widely divided in the quality from the halting efforts of Germany proper. The civic work of Flanders is perhaps its most distinctively national creation, and the Cloth Hall, Ypres, with the great group of fourteenth-century town halls -- Bruges, Brussels, Louvain,

Oudenarde, Alost, and Ghent -- while excessive in their flamboyant detail, yet retain the essential elements of fine composition and vigorous design.

In Italy the introduction of Gothic forms was as long delayed as in Germany, while, so far as native work is concerned, the fundamental principles of Gothic construction were never accepted at all. It was essentially a northern art, and in Italy neither the mental disposition of the people nor the spiritual and temporal conditions put a premium on ideas in themselves racially foreign. Nevertheless, once introduced, they produced in many cases very beautiful results, particularly in decoration and design, and Italian Gothic certainly contributes valuable elements to the total of medieval art. During the eleventh century one school after another had come into existence in almost every part of Italy, all based more or less on some local modification of the primitive basilican idea, yet varying in different directions as the peculiar influences of each section might direct. In Torcello, Murano, and Venice these were naturally Byzantine, more or less modified by the variations at Ravenna. In Sicily, Byzantine influence was mingled with strains from Mohammedan sources and with a strong influence brought in by King Roger and his Norman followers. Pisa and Florence worked on their own lines with some slight Lombardic admixture, while those portions of the peninsula under Lombard control developed their vital and inspiring style from the persisting Carolingian tradition. The abstract beauty much of this Italian product of the eleventh century is very pronounced, St. Mark's at Venice, San Miniato at Florence, Cefalu, Monreale, and the Capella Palatina in Sicily; Troja, Toscanella, San Michele at Pavia, San Zeno at Verona -- all possess elements of great art, but no one of the styles indicated by any of these buildings was destined to a final working-out under cultural conditions that made such a result inevitable. Development during the twelfth century was almost wholly local in its extent and decorative in its scope, and it was not until the coming of the Cistercians, with their Gothic of Burgundy, at the opening of the thirteenth century, that the incipient or reminiscent local modes were extinguished, and an attempt made at a general unification of style.

Apparently the Gothic influence had come too late. The era when architecture was to be the favourite mode for the artistic voicing of a civilization was, at least in the South, nearly at an end; painting and sculpture were to take its place, and therefore the Gothic architecture of Italy was to remain both racially alien and in its nature episodic. In the former class are those churches the designs of which were apparently imported almost bodily from Burgundy by the Cistercian monks, such as Fossanova, Casamari, and San Galgano, all works of great beauty of form and proportion, all vaulted in stone, the two former having fully developed rib vaults with stilted lateral arches in good Gothic form, though in none is the buttress system well developed. A little later come Sant' Andrea, Vercelli (1219-24), said to be the work of an English architect, but manifestly French, with a full system of flying buttresses, San Francesco at Assisi (1228-53), attributed by Vasari to a German architect, but also unmistakably French in its first inspiration, though considerably modified by what may well be local Franciscan influence, and San Francesco at Bologna, of which much the same may be said.

The first really local development of Gothic seems to have been at the hands of the friars, Sta. Croce and Sta. Maria Novella at Florence, dating from the end of the century, varying so widely from any contemporary form of Gothic that their peculiarities must be assigned either to the friars themselves or to the influx of Italian personality. One of the fundamental characteristics of Gothic is a sense of just proportion and a fine relationship of parts, combined with a passion for beauty of line, form, light and shade colour, and their relationships, not invariably achieved but always sought for with a consuming eagerness. These qualities are almost wholly lacking in the churches above named, as well as in the cathedral itself, which partakes of nearly all of their peculiarities. We know that in England, when the Franciscans and Dominicans built their own great, popular churches, while they worked for the same large open spaces and economy of material, they nevertheless regarded these considerations of proportion and pure beauty, therefore the conclusion seems inevitable that it is not to the nature of the Mendicant Orders, but to some incapacity in the race, as it then was, that we owe the radical shortcomings of the work of Arnolfo and his fellows in Italy. The fact remains, however, that the great churches of the friars are the chief offenders. San Giovanni e Paolo and the Frari at Venice, the cathedral of Arezzo, San Petronio, Bologna, and the cathedral of Florence are, with the friars' churches in the city last named, brilliant examples of the lamentable results that may be obtained when the structural and aesthetic laws of a great style are ignored or misunderstood. Siena and Orvieto cathedrals avoid the bald ugliness of this class of work, but in their structure they have no kinship with Gothic, while in respect to their façade the only quality they possess which is Gothic in any degree is a certain sense of beauty in ornament, itself derived from a recurrence to the forms of nature for inspiration, combined with an intense refinement of line and modelling and a blending of the arts of sculpture and colour in a poetic and lovely composition. Perhaps the nearest approach to true Gothic feeling and accomplishment is to be found in the unfinished front of Genoa cathedral; being of the twelfth century, it is sufficiently early to have received something of the first great Gothic impulse, and is a masterpiece of delicate relations and exquisite detail. The best Gothic work in Italy is not ecclesiastical, but secular, and is to be found in the palaces of Venice, Siena, Florence, and Bologna. The Doge's Palace and the innumerable private structures of the thirteenth and fourteenth centuries in the first-named city have all the qualities of pure beauty of design and detail, as well as the unerring sense of proportion and relationship, that are characteristic of Gothic art, while the forms through which these are expressed are wholly medieval, yet with a complete racial note that raises them almost to the dignity of a national school of Gothic design.

Spain, as a Christian State, was non-existent except as a small area of still unconquered territory near the Pyrenees, until the middle of the thirteenth century, when Ferdinand III, afterwards canonized, united the crowns of Castile and Leon, won back Seville and Cordova, and established the final victory of the Cross over the Crescent in the Iberian Peninsula. Until this time the Gothic spirit had hardly more than crossed the mountains and always as a direct importation from Burgundy and Aquitaine; Salamanca cathedral, St. Vincent of Avila, the cathedrals of Lerida, Tudela, and Tarragona, the Abbey of Verula, and the church of Las Huelgas at Burgos, all built between 1120

and 1180, show a very undeveloped type of early Gothic construction, combined with a rich and imaginative treatment of Southern Romanesque design in the exterior. Salamanca and St. Isidoro at Leon both possess domes or lanterns over the crossing, remarkable in point of structural ingenuity and beauty of design both internally and externally. If the scheme was borrowed from the other side of the Pyrenees, it has been wholly transformed and glorified, and this brilliant innovation, containing such possibilities of development that were never carried further, may justly be attributed to native Spanish genius. No progressive growth occurred, however, during the next fifty years, and it was not until the definitive victories of St. Ferdinand made Spanish nationality possible, and the coming of the Cistercians gave the necessary spiritual impulse, that Gothic architecture in any true sense appeared in Spain, and then as another direct importation from France rather than as a development of the latent racial qualities inherent in Salamanca. Burgos, Barcelona, Toledo, and Leon are closely French in their setting-out and ordonnance, but in detail they vary widely from all French precedents. There is a southern richness and romance both in the exterior and interior design and detail of Burgos, for example, as well as in the other Spanish work from the middle of the thirteenth century onward, that gives it a certain personality quite distinct from that of any other school of Gothic. This sumptuousness of detail and colour, and composition of light and shade, enters into every detail; altars and reredoses, the latter often vast in size and of the richest materials; grilles of intricately wrought and chiselled metal; sculptured tombs; stalls of the most elaborate carving; great pictures, tapestries, and statutes innumerable, together with a Flemish type of stained glass in the most brilliant colouring, were lavished on every church; and since Spain has escaped the pillage and destruction of religious revolutions, much of medieval completeness remains, though considerably overlaid with a thick coating of Renaissance, and therefore it is only in Spanish churches that one may obtain some idea of the general effect of a medieval church as it once was before it became subjected to the mishandling of revolutionists, iconoclasts, and restorers.

The end of Gothic architecture and of all Catholic art came with varying degrees of rapidity and at different times as between the several schools of Europe. Generally speaking, its death-knell was sounded when the work of St. Gregory the Great, St. Gregory VII, and Innocent III was temporarily undone, and the French Crown established a temporal control over the papacy. The exile at Avignon, begun in 1305, followed as it was by the Great Schism, broke the links that bound kings and peoples to the hitherto dominant Church, opened the doors of Italy to the influx of the neo-paganism that came from the East with the fall of Constantinople in 1453, permitted the uprising of heresy in all parts of Europe, and made possible the supremacy in Italy of the tyrants of the fourteenth century -- Visconti, Sforza, Medici. The Black Death, which scourged all Europe, and the Hundred Years War in France brought down from its high estate the civilization that had flowered at Chartres, and Reims, and Amiens, and when architecture began to recover itself in France after the return of peace, its advance was on lines suggested by the fourteenth century Gothic of England, which had continued to grow rich and fertile, the most vital school of Gothic art of the time. The seeds were sown during the war itself, the chapel of St. John Baptist of the cathedral of Amiens, built in 1375, being of a fully developed Flamboyant style. From now on the substitution was

complete; whatever building there was, was explicitly Flamboyant; the old logical system, the old breadth and nobility of design, detail always duly subordinated to just composition, were gone almost in a night. Says Enlart:

Ce style, qui est l'exagération et la décadence de l'art gothique, n'apporte presque aucun perfectionnement à l'art de bâtir ou de dessiner, mais seulement un système décoratif très particulier et plus ou moins arbitraire, qui, appliqué sans exception dans les moindres détails, produit beaucoup d'effet et beaucoup d'harmonie d'ensemble ("This style, which is the exaggeration and decadence of Gothic art, adds hardly any perfecting to the art of building or of designing, but only a very peculiar and more or less arbitrary system of decoration, which, when applied with thorough consistency to the minutest details, is very effective and produces a very harmonious general effect." -- "Manuel d'archéologie français", I, 586).

The delicate and fantastic beauty of Flamboyant detail is unquestionable, and, as decoration, the lacelike webs of thinness, graceful curving forms, and craftily spotted lights and shades, as they appear in Rouen, Troyes, and Abbeville west fronts and the transepts of Beauvais, in Louviers, Caudebec, Notre-Dame de l'Epine, St. Maclou, Rouen, St-Michel, and St-Germain, Amiens, are amongst the most charming creations of artistic fancy. It must be remembered, however, that it is all strictly a form of decoration, not an architectonic style, nor even a sub-school thereof, unless in such peculiarly admirable examples as the very Troyes ifaçade, the *chevet* of Mt. St-Michel, and the very wonderful St-Germain at Amiens, the still persisting quality of structural integrity combined with just proportions and a certain unusual restraint in the placing of decoration justify a dignity hardly argued by the unparalleled license of the general output of the Flamboyant period. To a certain extent it is an architectural mystery, for it is an excessive refinement of art appearing after the close of a period of sound and vigorous civilization, in the midst of war and anarchy, contemporaneously with religious degradation, growing side by side with tendencies that in a few years were to bring the civilization it connotes forever to an end. In this it was not alone, however. Similar conditions in Italy surrounded the culmination of the great arts of painting and sculpture, while in England the delicate and exquisite Perpendicular Gothic reached its highest development in the reign of Henry VIII. Says Mr. Porter, in considering this phenomenon:

Thus in the hour of political and economic misfortune, in the midst of the financial ruin and degradation of the Church, was born flamboyant architecture -- the last frail blossom of medieval genius. Did this art come into being as a prophetic manifestation of the great national awakening that was to produce Jeanne d'Arc and shake off the English yoke? I should hardly dare affirm it, for the history of architecture ever reflects, rather than presages, economic developments (op. cit., II, X, 368).

One may go further even than this, and say that the flowering of art is always a generation or more later than the causes of its being. Dante and Giotto are the last of the medieval epoch, rather than the forerunners of the Renaissance. Shakespeare is Elizabethan by accident of birth, but essentially he is the fruit of pre-Reformation England. The early Renaissance in Italy is the flowering of medievalism, rather than the germinating seed of the Renaissance, and similarly the poetic, if inorganic, Flamboyant art of France takes its colour not from the downfall of Catholic civilization in fifteenth-century France, but from the better days that preceded the great *débâcle*. The magic of fifteenth-century art is neither the unwholesome iridescence of decay nor the first brightening towards the dawn of a Renaissance, but the afterglow of a great day, in the brightness of which stood the creative personalities of Sts. Odo of Cluny and Robert of Molesme, Bernard and Norbert, Gregory VII and Innocent III, Philip Augustus, and King Louis IX.

Generally speaking, fifteenth-century architecture throughout Europe is secular as opposed to the Cluniac Romanesque and Norman, and the Cistercian Gothic of the three preceding centuries. Perpendicular Gothic in England and its derivative, Tudor, is largely the product of guilds of architects, sculptors, and masons working primarily for great merchants and the friars, the latter being the dominant religious influence of the time. In France and Flanders the Flamboyant style is peculiarly the product of the individualistic architect and the purveyor of artistic luxuries, and during the entire period the best and most significant work is to be sought amongst guild-halls, palaces, castles, manors, and colleges, and in the towers, chapels, tombs and other memorials paid for by the new orders of rich merchants and affluent courtiers.

The end now came rapidly. In Italy Gothic feeling as well as Gothic forms had disappeared altogether by the end of the fifteenth century, the last flicker of the instinctive art of medievalism, as distinguished from the premeditated artifice of the Renaissance, appearing in the work of the Lombardi in Venice, and in such structures as the church of Sta Maria dei Miracoli and the Scuola di San Marco (1480- 95). In France something of Gothic romance and intrinsic beauty continued down to 1550 in the *manoirs* and *châteaux*, while in Germany it dragged along a few decades longer in some isolated instances. In Spain the superb central tower of Burgos was built as late as 1567, though already full-fledged Renaissance work was in process in other parts of the Peninsula. In England the sumptuous Perpendicular of the Chapel of Henry VII at Westminster hardened rapidly into the formalities of later Tudor when, and ceased wholly as a definite style when the suppression of the monasteries, the separation of the English Church from the Roman obedience and the imposition of the principles of the dogmatic Reformation of Germany on the English people brought church-building to an end. With the final submission of the English during the reign of Elizabeth to a dogmatic revolution they had not invited, but were powerless to resist, came an influx of German influence that rapidly wiped out the very tradition of Gothic, except in the case of the universities and in that of the minor domestic building, substituting in its place the most unintelligent used classical forms anywhere to be found in the history of the Renaissance. At Oxford and Cambridge the cultural tradition was strong enough to withstand for a century the complete acceptance of the new fashion, and down to the middle of the seventeenth century the elder tradition

persisted in such work as St. John's, Cambridge, and Wadham, Oxford, while its compulsion was so strong as to coerce even Inigo Jones into building the fine garden front of St. John's, Oxford, in a style at least reminiscent of what had been universal two centuries before. The same instinctive impulse continued in the case of manors and farmsteads even to a later date, and to this day in certain portions of England the stone-mason, carpenter, and tile layer preserve the old rules and traditions of the craft that have been handed down from father to son for centuries.

From the year 1000 to the year 1500, Catholic Europe had slowly worked out its own form of artistic expression, largely through "the most consummate art of building which the world has achieved" (Prior, "History of Gothic Art in England", I, 7). As paganism had done in Greece, so, and equally, Christianity wrought in the North. Primarily it was an art of church-building and adornment for the Church was the one concrete and unmistakable fact in life. "While all else was unstable and changeable, she, with her unbroken tradition and her uninterrupted services vindicated the principle of order and the moral continuity of the race The services of monastic and secular clergy alike, their offices of faith, charity and labour in the field and the hovel, in the school and the hospital as well as in the church were for centuries, the chief witness of the spirit of human brotherhood (Norton, "Historical Studies of Church Building in the Middle Ages", I, 16). Therefore, on the heels of the tenth-century triumph of the Church came the eleventh-century passion for church-building; as says Rudolphus, the monk of Cluny, writing in the midst of it all, "Erat enim instar ac si mundus ipse excutiendo semet, rejecta vetustate, passim candidam ecclesiarum vestem indueret" (It was as if the world, shaking itself and putting off the old things, were putting on the white robe of churches). The old vesture was indeed cast away and the new "white robe of churches" was of other make. The underlying laws of the new style were identical with those of all other great styles, the vision of beauty was no different in any respect, the forms alone were absolutely new. For five centuries the artistic mode of Western Europe went on its way without a pause, one in spirit wherever it was found.

The motives which inspired these great buildings of this period, the principles which underlay their forms, the general character of the forms themselves were in their essential nature the same throughout Western Europe from Italy to England. The differences in the works of different lands are but local and external varieties (Norton, *op. cit.*, I, 10).

This universal mode was universally destroyed, and in the space of a few years. With the opening of the fifteenth century the victory of the Renaissance was definitely assured, while it was brought to its completion just a century later. Of the product of these five centuries of activity comparatively little remains intact. As Mr. Prior says, "Western Europe up to the middle of the sixteenth century might be called a treasure house filled with gems of Gothic genius. The desecrations and revolutions of two centuries wrecked one half, swept Gothic churches clear of their ornaments and then levelled to the ground many of the fabrics which they furnished. Of much that was not actually destroyed, carelessness and neglect and the necessities of rebuilding have since made equal havoc At its

worst this re-building, re-painting re-carving has been wanton and causeless substitution For the next generation to us any direct acquaintance with the great comprehensive Gothic genius, except by means of parodies, will be difficult" (A History of Gothic Art in England, I, 3, 4). Enough remains, however, to enable us to reconstruct, at least in imagination, an unique artistic product of Christian civilization of which it is possible for Professor Norton to say that "it advanced with constant increase of power of expression, of pliability and variety of adaptation, of beauty in design and skill in construction until at last, in the consummate splendour of such a cathedral as that of Our Lady of Chartres or of Amiens, it reached a height of achievement that has never been surpassed" (op. cit., I, 13).

RALPH ADAMS CRAM

Gottfried von Strasburg

Gottfried von Strasburg

One of the greatest of Middle High German epic poets. Of his life we know absolutely nothing; even from his poem we derive no information on this subject. The dates of his birth and death can not be accurately fixed, but a passage in the eighth book of his "Tristan und Isolt" furnishes a clue to the appropriate date of its composition. There Hartmann and Wolfram are mentioned as still living, while Reinmar of Hageau and Heinrich von Veldeke are spoken of as deceased. From this it may be inferred that the poem was written about 1210. The fact that Gottfried is referred to by contemporaries as *Meister*, not *Her*, has been cited as proof that he was of the burgher class. But this is not certain. The title was sometimes given to denote learning, and might then be applied even to one of noble birth, and Gottfried certainly was learned for his time, since he knew Latin and French. Moreover he shows himself thoroughly familiar with the life of courtly society. It would seem that he was in easy circumstances, since he indulges in no complaints, so frequent with medieval poets, about poverty and lack of patronage. The supposition that he was a town clerk at Strasburg has been given up as unsupported by convincing evidence.

His great poem "Tristan und Isolt" is one of the most finished products of Middle High German literature. The story is briefly as follows. Tristan is sent by his uncle King Marke of Kurnewal (Cornwall) to woo for him the princess Isolde. On the home voyage the two young people by mistake drink a love potion intended by Isolde's mother for King Marke and his bride. As a result they fall madly in love with each other, and their illicit relations continue after Isolde's marriage to Marke. Time and again they know how to allay suspicion, but at last Tristan has to flee. He meets and loves another Isolde, her of the white hands, but finds he cannot forget his former love. Here Gottfried's poem breaks off. A continuation was written by Ulrich von Türheim (c. 1246) and Heinrich von Freiburg (c.1300). According to this Tristan marries the second Isolde, but returns to Cornwall to enter on new love-adventures that culminate in the tragic death of the guilty pair. Whether the Tristan legend is of Celtic origin, as is generally believed, or whether it arose in France, has not been definitely settled. Its literary development certainly took place in Northern France,

where it was also loosely connected with the Arthurian cycle of romances. It was introduced into Germany about 1170 by Eilhart von Oberg, who based his poem on a French *jongleur* version. Gottfried cites as his source the poem of the trouvère Thomas of Brittany, of which only a few fragments are extant. They begin unfortunately where Gottfried breaks off, and hence do not afford us a clear idea of his original. But Thomas's version is preserved in a Norwegian translation made by a monk Robert in 1226 and in the Middle English poem of "Sir Tristrem" Gottfried followed this version rather closely, and hence the merit of his work lies not in its composition, but in its style. This style is that of the courtly epic in its perfection. The rhyme is well nigh perfect, and the diction clear and highly polished. Mannerisms are not wanting; antithesis, word-play, unnecessary repetitions, and an inordinate fondness for allegory foreshadow the decline of the epic that was to set in after Gottfried's death. Gottfried's poem is the most passionate love romance of the Middle Ages. Its wonderful psychologic art cannot be questioned, but its morality is open to severe criticism. Its theme is the sensuous love that defies moral law and tramples under foot the most sacred human obligations. That the pair act under the irresistible spell of a magic potion, to be sure, serves in a manner to attenuate their guilt. If Gottfried had lived to finish the poem, it may well be that he would have brought out more emphatically the tragic element of the story. In that case the poem would not have appeared to be a mere glorification of sensuous love.

Besides the Tristan nothing is preserved of Gottfried's poetry except a couple of lyrics. A lengthy song of praise in honour of the Blessed Virgin was formerly attributed to him, but has been proved to be of different authorship.

Editions of "Tristan und Isolt" have been given by R. Reichenstein (3rd ed, Leipzig, 1890) in "Deutsche Klassiker des Mittelalters", VII, VIII, and W. Golther in Kürschner's "Deutsche National Litteratur", IV (Berlin and Stuttgart, 1889). A critical edition has been published by K. Marold (Leipzig, 1906). Translations into modern German with additions to complete the story were made by H. Kurz (3rd ed., Stuttgart, 1877) and by W. Hertz (4th ed, Stuttgart, 1904). The legend also furnished to Richard Wagner the theme for his famous music-drama "Tristan und Isolde" (1859).

ARTHUR F.J. REMY

St. Gottschalk

St. Gottschalk

(GODESCALCUS).

Martyr Prince of the Wends; d. at Lenzen on the Elbe, 7 June 1066. His feast is noted for 7 June in the additions of the Carthusians at Brussels to the martyrology of Usuardus. He was the son of Udo, Prince of the Abrodites who remained a Christian, though a poor one ("male christianus", says Adam of Bremen, Mon. Germ. SS., VII, 329), after his father Mistiwoi had renounced the faith. He was sent to the monastery of St. Michael at Lenzen for his education. Udo, for some act of cruelty, was slain by a Saxon. At the news Gottschalk cast aside all Christian principles thinking only of revenge, he escaped from the monastery, crossed the Elbe, and gathered an army from his

own and the other Slavic tribes who then lived on the northern and eastern boundaries of Germany. It is said that thousands of Saxons were slaughtered before they were aware of the approach of an army. But his forces were not able to withstand those of Duke Bernard II. Gottschalk was taken prisoner and his lands were given to Ratibor. After some years he was released, and went to Denmark with many of his people. Canute of Denmark employed them in his wars in Norway, and afterwards sent them to England with his new Sweyn. In these expeditions Gottschalk was very successful. He had now returned to practice of his faith, and married Sigrith, a daughter, some say, Canute, others of King Magnus of Norway. After the death of Ratibor and his sons he returned to his home, and by his courage and prudence regained his princely position. Adam of Bremen calls him a pious and god-fearing man. But he was more; he was an organizer and an apostle. His object in life seems to have been to collect the scattered tribes of the Slavs into one kingdom, and to make that Christian. In the former he succeeded well. To effect the latter purpose he obtained priests from Germany. He would accompany the missionaries from place to place and would inculcate their words by his own explanations and instructions. He established monasteries at Oldenburg, Mecklenburg, Ratzeburg, Lubeck, and Lenzen; the first three he had erected into dioceses. He also contributed most generously to the building of churches and the support of the clergy. In all this he was ably seconded by Adalbert, Archbishop of Hamburg, and numerous conversions were the result of their efforts. But a reaction set in. Some of the tribes refused to adopt Christianity, and rose in rebellion; Gottschalk and many of the clergy and laity fell victims to the hatred of Christianity.

FRANCIS MERSHMAN

Gottschalk of Orbais

Gottschalk of Orbais

A medieval theologian; b. about 800, d. after 866, probable 30 October, 868 (or 869), in the monastery of Hautvilliers near Reims; son of a noble Saxon count named Berno, who presented him when still a child, as an oblate in the Benedictine monastery of Fulda. When Gottschalk came of age, he felt no vocation for the religious state, and asked to leave the monastery. But his abbot, Rabanus Maurus, following the prevailing opinion of the age, held that a child, who had been presented as an oblate by his parents, was bound to become a religious, and in consequence, Gottschalk was made a monk against his will. Before receiving major orders he fled from Fulda and obtained dispensation from his vows at the Council of Mainz, in June, 829. Rabanus Maurus, however, appealed to the emperor and defended his position in a special treatise: "De oblatione puerorum" (P.L., CVII, 419-440), whereupon Gottschalk was compelled to live the life of a monk but was granted the privilege of exchanging the monastery of Fulda for that of Orbais, in the Diocese of Soissons. In order to make his enforced life in the monastery more bearable, Gottschalk, who had brilliant talents, gave himself to the study of theology. He found great pleasure in the works of St. Augustine whose doctrine on grace and predestination attracted him in an especial manner.

If we may believe his opponents, Gottschalk misinterpreted some difficult some passages in the writings of St. Augustine and developed a false doctrine of double *complete* predestination for eternal salvation and for eternal reprobation. He left his monastery without permission, and under the pretence of a pilgrimage to Rome, traveled through Italy, spreading his doctrine wherever he went. In 840 Noting, the future bishop of Brescia, informed Rabanus Maurus of the rapid spread of Gottschalk's doctrine in Upper Italy, and asked him to write a treatise against it. The treatise is found in P.L., CIXII, 1530-53. After his return from Italy, Gottschalk had himself ordained priest, not by the bishop of Soissons, to whose diocese he belonged, but by the chorepiscopus Richbold of Reims, and again returned to Italy. In 846 Rabanus Maurus warned Count Eberhard of Friuli against Gottschalk, who was enjoying the count's hospitality. Gottschalk now returned to Germany by way of Dalmatia, Pannonia, and Noricum. On 1 October, 848, he appeared at the Council of Mainz, where his doctrine on predestination was condemned as heretical and he was delivered for punishment to his metropolitan, Hincmar Of Reims. At a synod held in Quierzy in the spring of 849, he was obliged to burn his writings, was deposed from his priestly office because he had been ordained by a chorepiscopus without the consent or knowledge of his own bishop, and was whipped in accordance with the rule of St. Benedict, which prescribes such punishment for refractory monks. He was then imprisoned for life in the monastery of Hautvilliers where he died obstinate and mentally deranged, after an imprisonment of about twenty years.

Most of Gottschalk's writings have been lost. There still remain two short treatises in defense of his doctrine on predestination, in the form of two confessions of faith (P.L., CXXI, 347-366); some fragments of a work against Rabanas Maurus (P.L. loc.cit. 365-368); and some well-written poems (Traube, loc. cit. below).

It is doubtful whether Gottschalk's doctrine on predestination was heretical. There is nothing in his extant writings that cannot be interpreted in a Catholic sense. He, indeed, taught that God does not wish all men to be saved, and that Christ died only for those who were predestined to be saved; but these doctrines are not necessarily heretical. He may have meant (and certain passages in his extant writings warrant the assumption) that, in consequence of God's foreknowing that that some men will die on sin, He does not wish these to be saved; and that Christ's death was of no avail to those who will be damned for their sins. Gottschalk's doctrine concerning the Trinity scarcely admits a Catholic interpretation. He appears to hold that the one and common nature of the three Persons in God is merely an abstract universal, which becomes individualized and receives concrete existence in the three Persons and that, hence, each Person has its own separate deity (see Hinckmars's "De una et non trina deitate" in P.L., CXXV, 473-618).

MICHAEL OTT
Abbey of Gottweig

Abbey of Göttweig

(GOTTWEIH, GOTTVICUM, GOTTVICENSE).

A Benedictine abbey situated on a hill of the same name, not quite four miles south of Krems, in Lower Austria. It was founded as a monastery for Canons Regular by Blessed Altmann, Bishop of Passau. In 1072 the high altar of the church was dedicated, but the solemn dedication of the monastery did not take place until 1083. The charter of foundation, issued 9 September, 1083, is still preserved in the archives of the monastery. In 1094 the discipline of the Canons Regular at Göttweig had become so lax that Bishop Ulrich of Passau, with the permission of Pope Urban II, introduced the Rule of St. Benedict. Prior Hartmann of St. Blasien in the Schwartzwald was elected abbot. He took with him from St. Blasien a number of chosen monks, among whom were Bl. Wirnto and Bl. Berthold, who later became Abbots of Formbach and Garsten respectively. Under Hartmann (1094-1114). Göttweig became a famous abode of learning and strict monastic observance. He founded a monastic school, organized a library, and built at the foot of the hill, a nunnery where Ava, the earliest German poetess (d. 1127), lived as a recluse. The nunnery which was afterwards transferred to the top of the hill, continued to exist until 1557.

The history of Göttweig, as might be expected, had its periods of decline as well as prosperity. During the fifteenth and sixteenth centuries it declined so rapidly that from 1556 to 1564 it had no abbot, and in 1564 not a single monk was left at the monastery. At this crisis an imperial deputation arrived at Göttweig, and elected Michael Herrlich a conventual of Melk, as abbot. The new abbot (1564-1604) restored the monastery spiritually and financially, and rebuilt it after it had been almost entirely destroyed by fire in 1580. Other famous abbots were: George Falb (1612-1631) and David Corner (1631-1648), who successfully opposed the spread of Protestantism in the district; Gottfried Bessel (q.v. 1714-1749), who rebuilt the monastery on a grander scale after it had burnt down in 1718, and inaugurated an era of great intellectual activity; and Magus Klein (1768-1783), during whose rule Göttweig became a centre of learning. The chief employment of the Benedictines of Göttweig has always consisted in parish work. Its present Abbot, Adalbert Dungal (b. 1842, abbot since 29 Sept., 1886) is also president of the Austrian Benedictine Congregation of the Immaculate Conception. To Göttweig belong (Dec., 1908) 65 priests, 5 clerics, 1 novice, 4 lay brothers, 31 parishes administered by Benedictines, 3 administered by secular priests, and 7 succursal churches. It has a library of 100,000 books and 1100 manuscripts, and valuable collections of coins, engravings, antiquities, and natural history.

MICHAEL OTT

Goulburn

Goulburn

(Gulburnensis).

One of the six suffragan sees of the ecclesiastical province of Sydney, New South Wales, Australia. Goulburn, the episcopal city (population in 1901, 10,612), bestrides the Sydney-Melbourne railroad at an elevation of 2071 feet above the sea. The diocese has an excellent climate, and a fertile soil, that is devoted to agricultural and pastoral pursuits, and to the cultivation of the vine,

for which it is eminently suited. It is watered by the three principal rivers of Australia, the Murrumbidgee, flowing through the middle of the diocese, and the Murray and the Lachlan on the southern and the northern boundaries respectively. The Barren Jack Reservoir (situated in the heart of the diocese) will, when completed, be among the largest bodies of conserved water in the world, with a capacity equal to that of Sydney Harbour, will be capable of irrigating several million acres of fertile land, and by promoting closer settlement and intensive cultivation, will in time make the Goulburn diocese the garden region of the great island-continent. The political and commercial importance of the region is also enhanced by the selection of the Yass-Canberra district, which is entirely within the diocesan borders, as the site of the future federal capital of the Australian commonwealth.

The two first resident priests of Goulburn were Fathers Fitzpatrick and Brennan, whose pastorate extended from the coast to the Murray River. Goulburn formed part of the See of Sydney (q.v.) till 1864, when it was formed into a separate diocese. Dr. Bonaventure Geoghegan was translated thereto from Adelaide, but died in Ireland in 1864, without having taken possession of the newly-created see. His successor was Dr. William Lanigan (consecrated at Goulburn, Pentecost Sunday, 1867). He was the first Australian bishop consecrated in his own cathedral, and was an ardent promoter of Catholic education. He died 13 June, 1900. His successor (consecrated coadjutor to Dr. Lanigan, 7 July, 1895), is Dr. John Gallagher, the first priest ordained for the diocese (2 Nov., 1869). On his arrival, in 1870, there were in the diocese five priests. In November, 1908, there were 59 priests (51 seculars, 8 regulars), 24 parochial districts, 8 Christian Brothers, 279 sisters (187 Sisters of Mercy, 49 Presentation Sisters, 43 Sisters of St. Joseph), 2 orphanages for girls and 1 for boys, 1 college for boys, 5 boarding-schools for girls, 64 primary Catholic schools (supported by voluntary contributions) with 4250 children in attendance, and a grand total of 5000 children receiving the benefits of religious education. There is a parochial school in every district throughout the diocese where over thirty children can be brought together. Catholics constitute one-third of the population of the diocese, which is one of the best equipped in Australia.

Moran, *History of the Catholic Church in Australia* (Sydney, s. d.); *The Australian Handbook*; Levey, *Hutchinson's Australasian Encyclopaedia* (London, 1892).

HENRY W. CLEARY

Charles-Francois Gounod

Charles-François Gounod

One of the most distinguished French musicians and composers of the nineteenth century, b. in Paris, on 17 June, 1818; d. there, 17 October, 1893. His father, a painter and architect of some distinction and a man of high character and sensitive nature, died when Charles was still in his childhood, and his education devolved upon his mother, a gifted pianist, who used her talents to provide for her two sons, Charles and Urbain. Gounod was sent early to the Lycée Saint-Louis, where he was one of the best scholars. His musical gifts, strikingly apparent from his earliest

childhood, were carefully developed by his mother. He received his first great musical impression at the age of thirteen, when his mother took him to hear Rossini's opera "Otello", the principal roles of which were presented by Malibran, Rubini, Lablache, and Tamburini, four of the greatest singers the world has ever heard. That same year he witnessed a performance of Mozart's "Don Juan" and was raised by it to a high pitch of enthusiasm. In fact Mozart remained Gounod's ideal throughout his career. Other works which he heard at this period and which left lasting effects upon his mind were Beethoven's Pastoral and Ninth Symphonies. Having taken his degree as *Bachelier-ès-lettres* at the Lycée, he was sent by his mother to the Conservatoire, where he entered the theory classes of Reicha and Lesueur. Subsequently he studied counterpoint and composition under Halévy and Paer, professors in the same institution.

In 1839 his cantata "Fernand" won for him the *Grand Prix de Rome*, carrying with it the privilege of a three years' sojourn in Rome and a year's travel in Germany at the expense of the Government. The stay in Rome was, for a young man like Gounod, with a mind receptive of general culture and a delicate artistic temperament, fruitful of results which remained with him for life. It was not alone the art works of the Christian Era which absorbed his attention, but the monuments of pagan antiquity seemed to draw him even more powerfully. The great works of classic polyphony which he heard, Sunday after Sunday, in the Sistine Chapel undoubtedly left an indelible impression upon Gounod's imagination and memory; still he does not seem to have penetrated to the life from which they sprang and the spirit which animated them, that is the spirit of the Church and her liturgy. This is easily accounted for when one considers that his favourite reading during this, the formative, period of his life was Goethe's "Faust" and the poems of Lamartine, and that the atmosphere in which he lived was not pronouncedly Christian. Throughout the greater part of the composer's career he seems to have been unable to rise above this dualism of principles and ideals. After leaving Italy, Gounod visited Vienna, where he wrote a requiem for chorus and orchestra and a mass *a capella*. Both works were performed under his direction in the church of St. Charles. In 1842 he returned to Paris and was soon appointed choirmaster at the church of the Missions Etrangères, a position which he held for four years and a half. It was during this period that Gounod thought he had a vocation for the priesthood, and for two semesters attended the lectures on theology at the Seminary of Saint-Sulpice. In 1848 he resigned his position as choirmaster. This seems to have been the turning point in the young musician's career. In his autobiography he takes us into his confidence:

For a composer, there is but one road to follow in order to make a name, and that is the theatre [the operatic stage]. The theatre is the place where one finds the opportunity and the way to speak every day to the public; it is a daily and permanent exposition opened to the musician. Religious music and the symphony are certainly of a higher order, abstractly considered, than dramatic music, but the opportunities and the means of making one's self known along those lines are rare and appeal only to an intermittent public rather than to a regular public like that of the theatre. And then what an infinite variety for a dramatic author in the choice of subjects. What a

field opened to fancy, to imagination, and to romance. The theatre tempted me. (pp. 166-67).

Gounod's main activity was, from now on, directed towards the operatic stage.

The subjects he chose for his compositions, and which he successfully interpreted, were not calculated to preserve in his heart and mind the conditions requisite for an adequate interpretation of liturgical texts. His music allied to the poetry of Emile Augier, Jules Barbier, and Michel Carré, who acted as his librettists at various times, became the most powerful and the most widely diffused expression of French Romanticism in its more lyrical, sentimental form. It was, in deed, rather the lyric, sentimental side of such works as Goethe's "Faust", Shakespeare's "Romeo and Juliet", Corneille's "Polyeucte" which he seized upon than their heroic or metaphysical aspects. Among the operatic works which have made Gounod's name famous throughout the musical world are to be mentioned: "Sapho" (1851), "La nonne sanglante" (1854), "Le médecin malgré lui" (1858), "La reine de Saba" (1862), "Mireille" (1864), "La Colombe" (1866), "Roméo et Juliette" (1867), "Cinq Mars" (1877), "Polyeucte" (1878), "Le tribut de Zamora" (1881). The Franco-Prussian War caused Gounod to abandon Paris and reside in London for several years. After his return in 1875, he devoted himself more and more to religious music. In 1882 he brought out his oratorio "The Redemption", for which he himself wrote the text and which he styled *opus vitae meae*. Three years later, in 1885, appeared "Mors et Vita", his last great work, the text for which he selected from Holy Scripture. In spite of Gounod's activity in the operatic field he never ceased writing to liturgical texts. His compositions of this character are numerous and varied. His "Messe Solennelle de Sainte-Cécile", "Messe de Pâques", "Messe du Sacré Coeur", and "Messe des Orphéonistes" have enjoyed great vogue in France, Belgium, England, and the United States. The mass in honour of Joan of Arc and the one in honour of St. John Baptist de la Salle are less widely known than the first three mentioned. Although these two works come nearer to the spirit of the liturgy than any of the earlier masses, nevertheless they bear the general character of all his compositions for the church. Gounod was a child of his time and of the France of the nineteenth century. His temperament, emotional to the point of sentimentality, his artistic education and environment bound him to the theatre and prevented him from penetrating into the spirit of the liturgy and from giving it adequate musical interpretation.

Autobiography, tr. Crocker (Chicago and New York, 1895); Bellaigue, Portraits and Silhouettes of Musicians (New York, 1897); Saint-Saens, Portraits et Souvenirs (Paris, s.d.); Pagnerre, Charles Gounod, sa vie et ses oeuvres (Paris, 1890)

JOSEPH OTTEN

Rene Goupil

René Goupil

Jesuit missionary; born 1607, in Anjou; martyred in New York State, 23 September, 1642. Health preventing him from joining the Society regularly, he volunteered to serve it gratis in Canada,

as a *donné*. After working two years as a surgeon in the hospitals of Quebec, he started (1642) for the Huron mission with Father Jogues, whose constant companion and disciple he remained until death. Captured by the Iroquois near lake St. Peter, he resignedly accepted his fate. Like the other captives, he was beaten, his nails torn out, and his finger-joints cut off. On the thirteen days' journey to the Iroquois country, he suffered from heat, hunger, and blows, his wounds festering and swarming with worms. Meeting half way a band of two hundred warriors, he was forced to march between their double ranks and almost beaten to death. Goupil might have escaped, but he stayed with Jogues. At Ossernenon, on the Mohawk, he was greeted with jeers, threats, and blows, and Goupil's face was so scarred that Jogues applied to him the words of Isaias (liii, 2) prophesying the disfigurement of Christ. He survived the fresh tortures inflicted on him at Andagaron, a neighbouring village, and, unable to instruct his captors in the faith, he taught the children the sign of the cross. This was the cause of his death. returning one evening to the village with Jogues, he was felled to the ground by a hatchet-blow from an Indian, and he expired invoking the name of Jesus. He was the first of the order in the Canadian missions to suffer martyrdom. He had previously bound himself to the Society by the religious vows pronounced in the presence of Father Jogues, who calls him in his letters "an angel of innocence and a martyr of Jesus Christ."

LIONEL LINDSAY

Thomas-Marie-Joseph Gousset

Thomas-Marie-Joseph Gousset

French cardinal and theologian; b. at Montigny-les-Charlieu, a village of Franche-Comté, in 1792; d. at Reims in 1866. The son of a vine-grower he at first laboured in the fields, and did not begin his studies till the age of seventeen. Ordained priest in 1817, he was a curate for several months, and was then charged with teaching moral theology at the Grand Séminaire of Besançon. He retained this chair until 1830, acquiring the reputation of an expert professor and consummate casuist. It was then he re-edited with accompanying notes and dissertations the "Conférences d'Angers" (26 vols., 1823), and the "Dictionnaire théologique" of Bergier (1826), of which he published another edition in 1843. From these years of his professorship date his clear exposition of the "Doctrine de l' Eglise sur le prêt à intérêt" (1825), "Le Code civil commenté dans ses rapports avec la théologie morale" (1827), and "Justification de la théologie du P. Liguori" (1829). Summoned to the post of vicar-general of Besançon by Cardinal de Rohan, he fulfilled the duties of post from 1830 to 1835. At this date he was named Bishop of Périgueux, and in the following year he presented to Villemain his "Observations sur la liberté d'enseignement", a protest against the monopoly of the university. In 1840 he was called to the Archdiocese of Reims, but his episcopal duties did not prevent him from completing important theological works. In 1844 appeared in French his "Théologie

morale a l'usage des curés et des confesseurs", which ran quickly through several editions. His treatise on dogmatic theology (2 Vols. 1848) had no less success. The dignity of cardinal, for which he was fitted by his wide knowledge and the soundness of his doctrine and numerous works, was conferred on him in 1850. In virtue of the Constitution of 1852 he became senator of the empire, and in 1858 commander of the Legion of Honour. His last works were "Exposition des principes de droit canonique" (1859); "Du droit de l'Eglise touchant le possession des biens destinés au culte et la souveraineté temporelle du Pape." (1862)

A. FOURNET

John Gower

John Gower

Poet; born between 1327-1330, probably in Kent; died October, 1408. He was of gentle blood and well connected. He may have been a merchant in London, but this cannot be authoritatively affirmed. It seems certain from his writings that, even if trained to the profession of the law, he did not practise it. Leland's statements that he frequented the law courts and studied the laws of his country for gain, and that he was chief judge of the Common Pleas, are no longer accepted as correct. The latter statement was, as a matter of fact, subsequently withdrawn by Leland, but the revival of it by Fuller gave it a wide vogue and a long-continued persistence. The poet was undoubtedly wealthy, being an owner of landed property in the Counties of Norfolk, Suffolk, and Kent, and possibly also in Essex. That he was a man of some standing at court, as well as a writer of acknowledged eminence, may be inferred from his statement in the first version of his "Confessio Amantis", (ll. 43-53), that on one occasion King Richard II recognized him in a boat on the Thames, invited him into the royal barge, and charged him to write some new thing for the monarch's own inspection and delectation. John Gower, the poet, has been by some writers identified with one John Gower, clerk, who by grant from King Richard II held the rectory of Great Braxted in Essex from 1390 to 1397. That the poet and the clerk were one and the same person may, however, reasonably be doubted. According to Gower himself he was not a clerk when he wrote the "Mirour de l'Omme" (l. 21772: *Pour ce que je ne suy pas clers*), and in the Prologus (l. 52) of the "Confessio Amantis" he calls himself a "burel clerk", that is, a man of simple learning or a layman. At all events we may safely conclude that he was not in full Holy orders, for in January, 1397-8, when he was about seventy years of age, he married Agnes Groundolf, and it might be inferred from some passages in his works that she was not his first wife. At that time he was living in the priory of St. Mary Overy (now St. Saviour), Southwark, to which he was a generous benefactor, and he continued to reside there after his marriage. About 1400 he became blind. He died in October, 1408, and was buried in the chapel of St. John the Baptist in St. Mary Overy. His tomb is still to be seen. His effigy lies under a canopy, with the head resting on a pillow formed of three folio volumes inscribed with the titles of his three best-known works, namely, the "Speculum Meditantis", the "Vox Clamantis", and the "Confessio Amantis."

Gower wrote in three languages, French, Latin, and English. His French works are the "Mirour de l'Omme", or "Speculum Hominis", which modern research has almost to a certainty identified with the "Speculum Meditantis", long supposed to be lost; the "Cinkante Balades"; and the "Traitié". The "Mirour de l'Omme", as we now have it, consists of 28,603 lines, but, as some leaves at the beginning, throughout the work, and at the end are missing from the manuscript, it probably consisted in its complete state of about 31,000 lines. It is written in twelve-line stanzas of octosyllabic verse, with two sets of rhymes in each stanza arranged *aab aab bba bba*. It is divided into ten parts, treats of vices and virtues and of the different grades of society, and endeavors to print out the path by which a sinner may return to God and obtain pardon through the aid of Our Lord Jesus Christ and of His sweet mother, the glorious Virgin. It concludes with a life of Our Lady, into which is also naturally introduced an account of the principal events in the life of Christ. It was probably written about 1376-1379.

The "Cinkante (i.e. Cinquante, Fifty) Balades" really contains fifty-two, or, if we count the two of the dedication, fifty-four. The first fifty-one deal in various ways with the passion of love; the last of the series is in honour of the Blessed Virgin, with a general envoi. The dedication to Henry IV comprises, besides the French verse, some Latin verse and two Latin prose quotations. Each *balade* contains normally either twenty-eight or twenty-five lines of ten-syllable verse, divided into three stanzas of eight or seven lines respectively, with an envoi of four lines; but there are occasional deviations from this model. There are different rhyming schemes in the work. It is likely that the "Balades" were written at various periods in the poet's life and that they were brought together, in the order and form in which we now have them, in 1399.

The "Traitié" deals with the married state and seeks to show by precept and example the obligation of observing the marriage vow. It is written in ten-syllable verse, and consists of eighteen balades, each balade containing three seven-line stanzas. The rhymes are arranged thus: *ab ab bcc*. It concludes with one stanza in the nature of an envoi -- "Al université de tout le monde" -- appended to the eighteenth balade, and this envoi-stanza is in turn followed by thirty-six rhymed Latin hexameters and pentameters. There are also Latin marginal explanations of the different points discussed. The "Traitié" was probably written in 1397.

The "Cinkante Balades" and the "Traitié" were printed by the Roxburghe Club in 1818 (ed. Earl Gower), and by Dr. Edmund Stengel in 1886. All the French works were printed by G.C. Macaulay in 1899, the "Mirour de l'Omme" for the first time.

The Latin works of Gower are the "Vox Clamantis", the "Cronica Tripertita", some eighteen shorter poems, the verses, and marginal and other summaries already mentioned or to be mentioned below, and probably a preface, found in several manuscripts, describing his three principal poems. The "Vox Clamantis" contains 10,265 lines of elegiac verse. It is in seven books, of which the first three have prologues, also in elegiacs. Prefixed to the whole there is a prose summary of each book. It deals with the rising of the peasants in 1381; the need of pure religious faith; the vices of the clergy of every degree, of the merchants, of the lawyers, and of the common people; and the duties of a king. It calls on Richard II to select wise consellers, to avoid heavy and oppressive taxation,

to abandon sensuality, to restore the laws, and to banish crime. In the last book the poet shows the evils of vice and the necessity of repentance. It was probably begun in 1381 or 1382 and completed about 1399.

The "Cronica Tripertita" is written in rhyming hexameters and is in three parts, containing 1055 lines, with Latin prose marginal summaries. It gives an account of King Richard's management of the affairs of the realm from 1387 until his deposition and the accession of Henry IV in 1399. It was probably written soon after the latter date. The "Vox Clamantis" and the "Cronica Tripertita", together with some of the minor Latin poems, were printed by the Roxburghe Club in 1850 (ed. H.O. Coxe); the "Cronica Tripertita" and some minor poems were printed in the "Political Poems", Rolls Series, by T. Wright; and four other minor poems were printed by Karl Meyer in his dissertation entitled "John Gower's Beziehungen Zu Chaucer und Richard II" (1889). All the Latin poems were printed by G.C. Macaulay in 1902.

Gower's English works are the "Confessio Amantis" and a poem addressed to King Henry IV, which from its subject has been called "In Praise of Peace". The "Confessio Amantis" is in a prologue and eight books. It is written throughout in octosyllabic rhyming couplets, with Latin verses interspersed and a Latin marginal summary of the text. It contains altogether 33,446 English lines. It was begun probably between 1383 and 1386, and finished in 1390, and it underwent two subsequent revisions about 1391 and 1393. In its plan, which was doubtless borrowed from the "Roman de la Rose", this work is a dialogue first between the poet, in the character of a lover, and Venus, and afterwards between the poet, in the character of a penitent, and Genius, whom Venus assigns to him as a confessor. In the conversation between the penitent and the confessor the seven deadly sins are discussed and illustrated by tales borrowed from Ovid, Josephus, Vincent de Beauvais, Statius, the "Gesta Romanorum", the Bible, and other sources. In the eighth book, having described the duty of a king and prayed for England, the poet bids farewell to earthly love.

The "Confessio Amantis" has come down to us in three classes of manuscripts. The principal deviations of the later from the earlier forms are the omissions (1) of the mention of Richard II in the prologue as the inspirer of the work, and (2) of complimentary references to Chaucer near the end of the eighth book. The reasons for these omissions are somewhat obscure. In the case of the king the change in the text may perhaps be set down to a disapproval of the royal policy which grew up in Gower's mind between the time he began and that at which he completed the work, and this view is made all the more probable when we remember the severe way in which he elsewhere treats the youthful monarch. In the case of Chaucer the omission may have been due to a feeling on the part of Gower that the lines were irrelevant; but it is more likely to have been the result of a literary quarrel.

"In Praise of Peace" is a poem in fifty-six stanzas of seven lines each, rhyming *ab ab bcc*. It is dedicated to Henry IV and was probably written in 1400. It is followed by fifty-six lines of elegiac Latin verse.

The "Confession Amantis" was translated into Portuguese by Robert Payn, canon of the city of Lisbon, and into Spanish prose by Juan de Cuenca in 1400. It was printed by Caxton in 1483,

by Berthelette in 1532 and 1554, by Chalmers in 1810, by Pauli in 1857, by Morley in 1899, and, with "In Praise of Peace", by G.C. Macaulay in 1901.

There are several manuscripts of Gower's works extant, ranging from forty-one (some of them imperfect) of the "Confessio Amantis" to one of the "Mirour de l'Omme", of the "Cinkante Balades", and of "In Praise of Peace". These manuscripts are to be found in various public and private libraries in London, Oxford, Cambridge, Glasgow, Lincoln, Dublin, Manchester, and elsewhere.

It is to be noted that while Gower on several occasions freely censures the vices of the clergy of every rank, secular and regular, he expressly disassociates himself from all sympathy with the Lollards, and strongly denounces "lollardie" in his later writings. He lived and died in full communion with the Catholic Church. It was unfortunate for Gower's reputation that for more than two centuries he was constantly associated with Chaucer and mentioned along with him, both being taken as typical writers of English verse of the fourteenth century. As the canons of criticism developed, it was inevitable that the minor poet should suffer from contrast with his great contemporary. Hence Gower has been generally relegated to an undeservedly inferior rank among poets. But in the "Cinkante Balades" at least he displays many true poetic qualities, and his art of telling a story in a natural way, as shown for example in the "Confession Amantis", is by no means slender, and in some respects will stand comparison with Chaucer's admittedly great gifts as a narrator.

G.C. Macaulay in his edition of *The Complete Works of John Gower* (4 vols., Oxford, 1899-1901) has given elaborate introductions, notes, and glossaries, and has discussed very fully and fairly many controverted points in connection with Gower. This may be regarded as the standard edition. Besides the editions already mentioned the following works may be consulted: Morley, *English Writers*, IV (London, 1893); Tait in *Dict. Nat. Biog.* s. v.; Easton, *Readings in Gower* (Boston, 1895); Stow, *A Survey of London* (ed. Morley, London); *The Retrospective Review and Historical and Antiquarian Magazine*, 2nd series, II (London, 1828); Todd, *Illustrations of the Lives and Writings of Gower and Chaucer* (London, 1810); Bale, *Scriptorum Illustrium majoris Britanniae, quam nunc Angliam et Scotiam vocant, Catalogus* (Basle, 1557); Leland, *Commentarii de Scriptoribus Britannicis* (ed. Hall, 1709); Idem, *Collectanea*, ed. Hearne (1715); Idem, *Itinerarium*, ed. Hearne (1710-12); Fuller, *The Worthies of England* (London, 1662); Gough, *Sepulchral Monuments*, II (London, 1796).

P.J. LENNOX

Francisco Jose de Goya y Lucientes

Francisco José de Goya y Lucientes

Painter and etcher, b. in Fuendetodos, Aragon, Spain, 31 March, 1746; d. in Bordeaux, 16 April, 1828. His father was a small landowner and could give only a meagre education to his son. It is more than probable that a monk of Santa Fé awakened the latent art in the boy; and certain it is that when fourteen, he painted frescoes in the Church of Fuendetodos, and a year later began regular

art studies with Martinez. Going to Saragossa he entered the San Louis Academy, where for four or five years he worked under Luxan, and then went to Madrid. When only twenty years old he left for Italy and worked his way to Rome as a bullfighter. In Italy he painted little, yet he won a prize at Paris for a "Hannibal seeing Italy from the Alps", and completed in a few hours a full length portrait of Pope Benedict XIV, now in the Vatican. On Goya's return to Spain (1775), Mengs was so impressed with his talents that he commissioned him to make sketches for the Prado and Escorial tapestries, and Goya was thereby brought into contact with the court, lived for the rest of his life among princes, and became the most brilliant member of the circle of the king's brother. He married (1775) Jovefa, daughter of Bayeu, painter to Charles III, by whom he had twenty children. Five small canvases (all in San Fernando) painted at this time are strikingly original in composition and have a marvellous silvery quality rivaling that of Velasquez. In 1780 he was made of the Fernando Academy in recognition of his "Christ Crucified" (Padro) and his "St. Francis on the Mountain". He was now the acknowledged leader of the Spanish School, and well named the last of the old masters and the first of the new. He painted portraits with the greatest facility and rapidity--all marvellous resemblances--and over two hundred grandees, poets, scholars, and great ladies of the court sat to him. Notable among these canvases are those of Queen Maria Luisa, Charles IV and his family, Dona Maria Josefa, and Queen Isabella of Sicily the last two celebrated for their beautiful and tender representation of maidenhood. In 1789 Goya was appointed *pintor de camera* of Charles IV with an income of 2500 dollars a year, and in 1795 was unanimously elected director of the Madrid Academy.

Goya painted frescos in the churches of Seville, Valencia, Saragossa, Toledo, and Madrid, those in S. Antonio de la Florida (Madrid) being especially notable for their grace and movements. His paintings other than portraits and religious works, portray the life of Spain, and exhibit his immense vitality, restlessness, energy, audacity and unaffectedness. His technique was a complete overthrow of tradition. Impetuous and intolerent, he sought etching as a means of expression. The "Capriccioso", begun in 1792, appeared in 1796. In this series, dedicated to the king, he pilloried the prevailing vices and absurdities with a subter and more bitter needle than Callot's and a spirit less common place than Hogarth's. He is often called the Spanish Rabelais. Goya almost invariably used aquaint to give "depth" and suggest planes in these etchings, and every one of these eighty plates Delacroix is said to have copied. The "Miseries of War" followed these and are far more serious in conception. Many of them suggest Rembrandt's methods. He began lithography in Madrid, and the first important artistic drawing ever made on stone was by Goya, and this, too, when he was seventy-three.

Ferdinand VII, at his restoration in 1814, invited Goya to his court; but, unhappy, totally deaf, and growing blind, he left Madrid on the completion of his most important ecclesiastical work, "St. Joseph of Calasanz", for the church of S. Anton Abad, and settled in Bordeaux. Here in his eightieth year he lithographed the notable series of bull-fights. Goya was the strongest figure in the age of tumult and change in which he lived, the last link between tradition and the great movement in art of the nineteenth century, which he epitomized when he said: "a picture, the effect of which is true, is finished." He was buried in Bordeaux. One son, of all his children, survived him. His other works

are: double portrait of La Maja, in the San Fernando Academy; portrait of Duchess of Alva, in the Louvre; a collection of etchings and aquatints in the British Museum; equestrian portrait of Charles IV, in Madrid; sanguine drawing of Duke of Wellington, in the British Museum.

LEIGH HUNT

Diocese of Goyaz

Diocese of Goyaz

(Goyasiensis). Co-extensive with the state of the same name, one of the twenty states which, with the Federal District, comprise the Republic of Brazil. It has an area of 288,546 square miles, or a little more than six times that of the State of New York. The longitudinal position of the capital (also called Goyaz) corresponds to about twenty-five degrees east of New York City; and as regards its latitude, it is about as far south of the Equator as, say, Acapulco in Southern Mexico is north of it. The diocese is suffragan of Bahia (the primatial see), and was founded in 1826 by Leo XII. The country is mountainous, one peak of the Serra dos Pyreneos being about 9600 feet high. The soil is naturally fertile and rich in precious metals, but for various reasons the resources of the state are practically undeveloped. Catalãs is at present (1909) the only town touched by a railway. Cattle-rearing is the chief industry. The population is about 400,000. Goyaz, the capital (15,000), founded in 1736 as Santa Anna, contains the cathedral, a lyceum, schools of classics and philosophy, and various elementary schools. The legislative assembly of the state sits here. According to an article of the constitution, the future federal capital of Brazil must occupy an elevated site on a central plateau of the country, and it is suggested that the state of Goyaz offers the most suitable location for the fulfillment of these conditions. The religious statistics are as follows: secular priests, 39; regular, 38; churches and chapels, 36; there is a mission-house of the Dominicans of Toulouse, and also a pension and school of the Dominican nuns.

Garnier, *Almanaque Brasileiro* (1903-4); Hazell's *Annual* (London, 1909); *Brazil at the Louisiana Purchase Exposition* (St. Louis, 1904).

T. HUNT

Diocese of Gozo

Diocese of Gozo

The diocese of Gozo (Goulos-Gaudisiensis), comprises the Island of Gozo in the Mediterranean Sea (seventeen miles west of the harbour of Valetta, Malta) and islet of Comino, and has a population of 22,700 souls. It is more picturesque than the sister island of Malta, and the country, covered as it is with conical hills, is more fertile in its plains and valleys. On a central plateau the ruined fortifications of an ancient town contain the cathedral church and public buildings, outside of which is a large suburb. Gozo is famed for its grotto of Calypso, at a little distance from which are the ruins of a Cyclopean temple, a most conspicuous monument of antiquity.

Up to the year 1864, Gozo formed part of the Diocese of Malta, but Pius IX, acceding to the repeated prayer of the clergy and the people, erected it into a separate diocese immediately subject to the Holy See. On 16 March, 1863, Monsignor Francesco Michele Butigieg, a native of Gozo, was appointed titular Bishop of Lita and deputy auxiliary of the Archbishop-Bishop of Malta, for the Island of Gozo. He was consecrated at Rome on 3 May of the same year, on 22 September, 1864, was created first bishop of the new Diocese of Gozo, and on the 23rd day of the following month made his solemn entry into the new cathedral. Through the efforts of Mgr. Pietro Pace, who was then vicar-general of the diocese (now Archbishop of Rhodes and Bishop of Malta), a diocesan seminary was established on the site formerly occupied by the San Giuliano Hospital, the revenues of which were appropriated to the new institution. This seminary was inaugurated 3 November, 1866, and, by the express desire of Pope Pius IX, was placed under the direction of the Jesuits. On the death of Mgr. Butigieg, Father Micallef, Superior General of the Augustinian Order, was made Bishop of Città di Castello and appointed administrator of the Diocese of Gozo. He left Gozo in May, 1867, and in 1871 became Archbishop of Pisa. His successor to the administration of the diocese was Mgr. Antonio Grech Delicata, titular Bishop of Chalcedon, a native of Malta, who, in 1868, was appointed Bishop of Gozo, and as such assisted at the Vatican Council. Mgr. Grech Delicata's charity towards the poor went so far that he even divested himself of his own patrimony. This worthy prelate died on the last day of the year 1876.

On 12 March, 1877, Mgr. Canon Professor Pietro Pace, native of Gozo, was appointed to succeed Mgr. Grech Delicata, and was consecrated at Rome by Cardinal Howard. Under his administration the seminary was augmented by the installation of a meteorological observatory, which was inaugurated by the celebrated Padre Denza, Director of the Vatican Observatory. During this administration an episcopal educational institute for girls was also established, under the care of the Sisters of St. Vincent de Paul, to whom was also entrusted the direction of the annexed orphan asylum. The same bishop provided the diocese with a new episcopal palace and new monasteries, besides laying out large sums of money on the cathedral. In 1889, Mgr. Pace was promoted Archbishop of Rhodes and Bishop of Malta. His successor in the See of Gozo (and actual bishop) is the Reverend G. M. Camilleri, O.S.A., a native of Valetta (b. 15 March, 1842). Under Mgr. Camilleri's administration the first diocesan synod was celebrated, in October, 1903. This synod was of absolute necessity, as the diocese was still governed under the rules of the Synod of Malta of 1703, and consequently lacked a safe guide adapted to the times. Constitutions and decrees were also promulgated and published which gave new life to the working of the diocese.

The cathedral church of Gozo was built in 1697-1703, by Lorenzo Gafa. Its ground plan is in the form of a Latin cross. Its interior is adorned with fine paintings. The "Massaggiere di Maria", an Italian periodical, is recognized in the Diocese of Gozo as the official organ of the sanctuary of the Bl. Virgin ta Pinu.

Ferris, *Ecclesiastical History of Malta* (1877); Idem, *Description of the Churches of Malta and Gozo* (1866); *Const. et Decret. Synod. Gaud. primae* (Malta, 1904).

ANTONIO VELLA

Carlo Gozzi

Carlo Gozzi

Italian author, born at Venice, 1720; died 1806. He spent in military service three years that ensued upon the completion of his school studies. Then impelled by real necessity, since the family means had been wasted away, he, like his brother Gasparo, directed his attention to literature. He became a member of the Accademia dei Granelleschi, whose conservative feelings with regard to the native literary traditions he shared, and ere long began an attack upon the dramatic methods of both of the leading playwrights of the time, Chiari and Goldoni. The ignorance and the bombast of the former had excited his ire, while the reform advocated by Goldoni seemed to him undesirable, inasmuch as it involved the abolishment of the eminently Italian *commedia dell' arte*. To illustrate his own views as to what was likely to be a popular form of the drama in Venice, he began the composition of his "Fiabe", for whose improbable plots he derived inspiration from various collections of fantastic tales, such as those contained in the Italian "Cunto de li cunti" of Basile, the "Cabinet des fées", and Oriental compilations. From Spanish plays of the sixteenth and seventeenth centuries he also drew no little matter, and withal he freely used his own fancy and indulged lavishly his own satirical powers. There is little order, and hardly any subordination to rule in his "Fiabe", which, it should be said, differ from the *commedie dell' arte*, whose manner they were intended to continue, in that they are often written out in full and are not merely sketchy scenarii. They preserve the stock characters of the *commedie dell' arte*, such as Truffaldino, Brighella, and Pantalone, and make them speak in dialect, a fact which stood in the way of their diffusion outside of the Venetian region; and they jumble together the heroic and the grotesque, the serious and the ridiculous, the real and the fantastic, bringing on the scene devils, necromancers, knights, fairies, monsters, and like figures. The high degree of popularity attained by the "Fiabe" in the author's time, and it was enough to enable him to drive Goldoni from Venice, is explained by the presence in them of many elements of contemporaneous and topical interest. At home they later fell into oblivion in so far as theatrical repertories are concerned; for some time they continued to attract attention abroad, as is evinced by the consideration given to them by Goethe, by Schiller, who made a version of one of them, the "Turandot", by Schopenhauer, by Wagner, by Mme de Staël, and others. As J. A. Symonds has said of them, and as Wagner seemed to apprehend, they have in them good material for operatic libretti. He prepared some plays based on Spanish dramas in opposition to the spread of the sentimental drama as represented by the *drame larmoyant* and *tragédie bourgeoise* of French origin. Among other works we have from him a chivalrous and romantic poem of satiric import, practically a mock-heroic, the "Marfisa bizzarra"; the almanac entitled "Tartana degl' Influssi", which has attacks on Goldoni and Chiari; and the autobiographical "Memorie della sua vita". This last rather entertaining document was called forth by the strictures put upon him by a rival, Pietro Antonio Gratarol, whom he had previously forced from Venice by the ridicule which he had brought upon him in a comedy, the "Droghe d'amore". The "Memorie"

have been translated into English by J. A. Symonds (London, 1890). The "Fiabe" have been edited by E. Masi (Bologna, 1885), with a bibliography of all Gozzi's writings, while his other works may be found in the edition published at Venice in 1802.

J.D.M. FORD

Gozzoli

Gozzoli

(BENOZZO DI LESE DI SANDRO, surnamed GOZZOLI).

Painter; b. at Florence, 1420; d. at Pisa 1497. He was a pupil of Fra Angelico, and assisted him in his work at Rome and at Orvieto. It was not until 1449 that Benozzo began to work independently. The principal centres of his artistic activity were Montefalco (1450-1452), Florence (1457-1463), San Gimignano (1464-1467), and Pisa (1469-1485). For the church of San Fortunato, near Montefalco in Umbria, he executed many frescoes, among them an Annunciation, a Madonna, and a few altar-pieces; the best-known are the "Glory of St. Fortunatus", and the "Madonna of the Holy Girdle" (now in the Lateran Museum). Fra Angelico's influence pervades all his work, but the pupil's own personal traits are always in evidence. In 1452 we find him at Montefalco decorating the church of St. Francis. The frescoes in the choir are the most noteworthy. The ceiling contains grandiose figures of saints; the end wall, the "Glory of St. Francis"; the side walls, the "Life of the Seraphic Patriarch of Assisi" in twelve scenes. At Florence Piero de Medici commissioned Benozzo to paint in fresco the chapel of the palace (afterwards known as the Riccardi Palace) which Michelozzo had just built. The altar had already been decorated by a "Nativity" from the hand of Filippo Lippi. On the three principal walls Gozzoli depicted the "Procession of the Magi in quest of the new-born King". This work which has kept all its original freshness of colouring is one of the most successful of the Renaissance period, and furnishes a very striking picture of the sumptuous life led in the fifteenth century. All the personages in the caravans are portraits, and include the Medici and their court. Along the sides of its single window are flustered rows of angels so exquisitely graceful in design as to be worthy of Fra Angelico.

In the "city of the beautiful towers" (La città delle belle torri), San Gimignano, (Gozzoli painted for the Collegiale a "Martyrdom of St. Sebastian" along the walls of the choir in San Agostino he set forth St. Augustine's life in a series of seventeen frescoes, which he employed as a means of introducing the world of learning in the fifteenth century, just as he made use of the Magi caravan to depict its lavish display and luxury in dress. His principal work is in the Campo Santo at Pisa: on its northern wall he painted twenty-three subjects, twenty-one of which are taken from the Old Testament, beginning with "Noe's discovery (or invention) of wine", and ending with the "Visit of the Queen of Sheba", a wonderful Biblical epic. During his sojourn at Pisa he found time to paint many other subjects, the principal one is the "Glory of St. Thomas Aquinas", now in the Louvre. It was, however, in fresco that Gozzoli won for himself an immortal name among Florentine painters. He had the honour of restoring narrative painting to the place it had won for itself in the fourteenth

century. Benozzo was a lover of nature, a skilful landscapist, an adept at representing animal life, and clever in the use of ornament. His lively imagination revels in brilliant costumes and splendid architectural detail. Imperfections due to negligence are occasionally met with in his work, also is of detail and awkwardness of grouping. These faults arise from the exuberance of his talent and are more than counterbalanced by the wonderful quality of his work. Benozzo remained true to the chaste ideals of his master, yet was able to combine in his work the sincerity the skill, and the veraciousness of a charming story-teller. Pisan gratitude voted Benozzo a tomb in the "gallery" of the Campo Santo he had so magnificently decorated.

GASTON SORTAIS

Grace

Grace

Actual Grace

Explains the concept of actual grace, which is defined in the article as "a supernatural help of God for salutary acts granted in consideration of the merits of Christ."

Sanctifying Grace

Describes the nature and characteristics of sanctifying grace; also treats of "justification", which is the preparation for sanctifying grace.

Controversies on Grace

Discusses the various grace-related controversies in history, with a focus on the heresies of the Reformers and the Jansenists. Outlines the various Catholic solutions -- including Thomism, Augustinianism, Molinism, Congruism, and Syncretism.

Supernatural Adoption Presents one of the most sublime of mysteries -- the gracious divinization of man, which enables him to partake of the inner life of the Most Blessed Trinity.

Actual Grace

Actual Grace

Grace (*gratia*, *Charis*), in general, is a supernatural gift of God to intellectual creatures (men, angels) for their eternal salvation, whether the latter be furthered and attained through salutary acts or a state of holiness.

Before the Council of Trent, the Schoolmen seldom distinguished actual grace from sanctifying grace. But, in consequence of modern controversies regarding grace, it has become usual and necessary in theology to draw a sharper distinction between the transient help to act (actual grace) and the permanent state of grace (sanctifying grace). For this reason we adopt this distinction as our principle of division in our exposition of the Catholic doctrine. In this article we shall treat only of actual grace. (See also SANCTIFYING GRACE.)

Actual grace derives its name, *actual*, from the Latin *actualis* (*ad actum*), for it is granted by God for the performance of salutary acts and is present and disappears with the action itself. Its opposite, therefore, is not *possible* grace, which is without usefulness or importance, but *habitual* grace, which causes a state of holiness, so that the mutual relations between these two kinds of grace are the relation between *action* and *state*, not those between *actuality* and *potentiality*. Later, we shall discuss habitual grace more fully under the name of sanctifying or justifying grace. As to actual grace, we have to examine: (1) its Nature; (2) its Properties. The third, and difficult, question of the relationship between grace and liberty shall be reserved for discussion in the article CONTROVERSIES ON GRACE.

I. NATURE OF ACTUAL GRACE

To know the nature of actual grace, we must consider both the comprehension and the extension of the term. Its comprehension is exhibited to us by (a) its definition; its extension, by the complete enumeration of all Divine helps of grace; in other words, by (b) the logical division of the idea, inasmuch as the sum of all the particulars represents, in every science, the logical extent of an idea or term.

A. The Definition of Actual Grace

The definition of actual grace is based on the idea of grace in general, which, in Biblical, classical, and modern language, admits of a fourfold meaning. In the first place, subjectively, grace signifies good will, benevolence; then, objectively, it designates every favour which proceeds from this benevolence and, consequently, every gratuitous gift (*donum gratuitum, beneficium*). In the former (subjective) sense, the king's *grace* grants life to the criminal condemned to death; in the latter (objective) sense the king distributes *graces* to his lieges. In this connection grace also stands for charm, attractiveness; as when we speak of the three Graces in mythology, or of the grace poured forth on the lips of the bridegroom (Ps. xlv, 3), because charm calls forth benevolent love in the giver and prompts him to the bestowal of benefactions. As the recipient of graces experiences, on his part, sentiments of gratefulness, and expresses these sentiments in thanks, the word *gratiae* (plural of *gratia*) also stands for thanksgiving in the expressions *gratias agere* and *Deo gratias*, which have their counterpart in the English, to say grace after meals.

A comparison of these four senses of the word *grace* reveals a clear relationship of analogy among them, since *grace*, in its objective signification of "gratuitous gift" or "favour", occupies a central position around which the other meanings may be logically grouped. For the attractiveness of the recipient as well as the benevolence of the giver is the cause, whereas the expression of thanks which proceeds from the grateful disposition is the effect, of the gratuitous gift of grace. This last-mentioned meaning is, consequently the fundamental one in grace. The characteristic idea of a free gift must be taken in the strict sense and exclude merit in every form, be it in the range of commutative justice as, e.g., in sale and purchase, or in that of distributive justice, as is the case in the so-called remunerations and gratuities. Hence St. Paul says: "If by grace, it is not now by works: otherwise grace is no more grace" (Rom., xi, 6).

True, even gratuitous Divine gifts may still fall within the range of mere nature. Thus we petition God, under the guidance of the Church, for mere natural graces, as health, favourable weather, deliverance from plague, famine, and war. Now such natural graces, which appear simultaneously as due and gratuitous, are by no means a contradiction in themselves. For, first, the whole creation is for mankind a gratuitous gift of the love of God, whom neither justice nor equity compelled to create the world. And secondly the individual man can, in virtue of his title of creation, lay a rightful claim only to the essential endowments of his nature. Goods granted over and above this class, though belonging to the just demands of human nature in general, have for him the significance of an actual grace, or favour, as, for example, eminent talents, robust health, perfect limbs, fortitude. We would have omitted mentioning this so-called "grace of creation", had not Pelagius, by emphasizing the gratuitous character of such natural graces, succeeded, at the Synod of Diospolis or Lydda (A.D. 415) in deluding the unsuspecting bishops in regard to the dangers of his heresy. The five African bishops, Augustine among them, in their report to Pope Innocent I, rightly called attention to the fact that Pelagius admitted only the grace through which we are men, but denied grace properly so called, through which we are Christians and children of God. Whenever Scripture and tradition speak simply of *grace*, reference is made to a supernatural grace which is opposed to natural grace as to its contrary and lies so far beyond all rightful claim and strenuous effort of the creature that it remains positively undue to the already existing nature, because it includes goods of a Divine order, as, e.g., Divine sonship, indwelling of the Spirit, vision of God. Actual grace is of this kind, because as a means, it stands in intrinsic and essential relation to these Divine goods which are the end. As a consequence, the most important element characteristic of its nature must be the supernatural.

As a further determining factor must be added its necessary derivation from the merits of Christ's redemption; for there is the question of Christian grace. In the Thomist theory of redemption, which considers not Christ, but the Trinity, as the cause of grace in the angels and in our first parents in Paradise, the addition of this new characteristic appears self-explanatory. As to the Scotists, they derive each and every supernatural grace in heaven and on earth solely from the merits of Christ, inasmuch as the God-Man would have appeared on earth even had Adam not sinned. But they, too, are compelled to introduce, in the present dispensation, a distinction between the "grace of Christ" and the "grace of the Redeemer" for the reason that, in their ideal theory, neither the angels nor the inhabitants of Paradise owe their holiness to the Redeemer. The addition, *ex meritis Christi*, must therefore be included in the notion of actual grace. But there are also merely external graces, which owe their existence to the merits of Christ's redemption -- as the Bible, preaching, the crucifix, the example of Christ. One of these, the hypostatic union, marks even the highest point of all possible graces. The Pelagians themselves sought to outdo one another in their encomiums on the excellency of Christ's example and its effectiveness in suggesting pious thoughts and salutary resolutions. They thus endeavoured to avoid the admission of interior graces inherent in the soul; for these alone were opposed to Pelagius' proudly virtuous supremacy of the free will (*liberum arbitrium*), the whole strength of which resided within itself. For this reason the Church all the more emphatically

proclaimed, and still proclaims, the necessity of interior grace for which exterior graces are merely a preparation. Yet there are also interior graces which do not procure the individual sanctification of the recipient, but the sanctification of others through the recipient. These, by the extension of the generic term to specifically designate a new subdivision, are, by antonomasia, called gratuitously given graces (*gratia gratis datae*). To this class belong the extraordinary charismata of the miracle-worker, the prophet, the speaker of tongues, etc. (see I Cor., xii, 4 sqq.), as well as the ordinary powers of the priest and confessor. As the object of these graces is, according to their nature, the spread of the Kingdom of God on earth and the sanctification of men, their possession in itself does not exclude personal unholiness. The will of God, however, is that personal righteousness and holiness should also distinguish the possessor. With regard to the personal holiness of man, only that interior grace is of importance which is interiorly inherent in the soul and renders it holy and pleasing to God. Hence its name, *ingratiating grace* (*gratia gratum faciens*). To this category belongs not only sanctifying, but also actual grace.

Taking into account, then, all the elements so far considered, we may define actual grace as *a supernatural help of God for salutary acts granted in consideration of the merits of Christ*.

It is called a "help of God for salutary acts", because, on the one hand, it differs from permanent sanctifying grace, in that it consists only in a passing influence of God on the soul, and, on the other, it is destined only for actions which have a necessary relation to man's eternal salvation. It is further called a "supernatural help" so as to exclude from its definition not only all merely natural graces, but also, in a special manner, ordinary Divine conservation and concurrence (*concursum generalis divinus*). Finally, the "merits of Christ" are named as its meritorious cause because all graces granted to fallen man are derived from this one source. It is for this reason that the prayers of the Church either invoke Christ directly or conclude with the words: *Through Jesus Christ Our Lord*.

We have laid down above, as the most important characteristic of the nature of actual (and of every Christian) grace, its supernatural character. This was done partly because a deeper insight into its nature may be gained from the analysis of this element. As pure nature is in itself completely incapable of performing salutary acts through its own strength, actual grace must come to the rescue of its incapacity and supply the deficient powers, without which no supernatural activity is possible. Actual grace thus becomes a special causal principle which communicates to impotent nature moral, and especially physical, powers. Grace, as a moral cause, presupposes the existence of obstacles which render the work of salvation so difficult that their removal is morally impossible without special Divine help. Grace must be brought into operation as healing grace (*gratia sanans, medicinalis*); free will, bent towards the earth and weakened by concupiscence, is yet filled with love of good and horror of evil. The consciousness of the necessity of this moral influence may become so perfect that we beg of God the grace of a violent victory over our evil nature; witness the celebrated prayer of the Church: "Ad te nostras, etiam rebelles, compelle propitius voluntates" (Vouchsafe to compel our wills to Thee albeit they resist). In the ordinary course of things the Divine inspiration of joy in virtue and aversion from sin will, no doubt, methodically lead to the

free performance of salutary acts; but the moral influence of grace can effect the temporary control of freedom in the sinner. The sudden conversion of the Apostle Paul is an illustration of this. It will be readily understood that the above-mentioned triumph over the obstacles to salvation demands in itself a grace which is natural only in substance, but supernatural in mode. Hence many theologians require even for the so-called state of pure nature (which never existed) such natural graces as are mere remedies against the *fomes peccati* of natural concupiscence. The end of supernatural bliss and the consequently necessary endowment with supernatural means of grace would not have existed in this state (*status natura purae*), but the disastrous results of an evil tendency unbridled would have been experienced to the same extent as after the fall.

More important than the moral causality of grace is its physical causality, for man must also receive from God the physical power to perform salutary works. Without it, activity in the order of salvation is not only more difficult and laborious, it is altogether impossible. The feet of a child, to draw a comparison from actual life, may be so weak that a mere moral influence, such as the holding out of a beautiful toy, will not suffice to enable it to walk without the physical support of the mother -- the use of the leading-strings. The latter situation is the one in which man is placed with regard to supernatural activity.

From the question which is to be discussed later, and which regards the metaphysical necessity of grace for all salutary acts, whether of an easy or difficult nature, it follows, with irresistible logic, that the incapacity of nature cannot be ascribed solely to a mere weakened condition and moral difficulties resulting from sin, but that it must be attributed also, and principally, to physical inability. The communication of the physical power to the soul admits, theologically, of only one interpretation, namely, that grace raises the faculties of the soul (intellect and will) above their natural constitution into a supernatural sphere of being, and thus renders them capable of substantially supernatural operations. The reason why, through our inner consciousness, we can gain no psychological knowledge of this higher activity of the soul lies in the fact that our self-consciousness extends solely to the acts, and in no wise to the substance, of the soul. From this same fact arises the philosophical necessity of proving the spirituality, the immortality, and the very existence of the human soul from the characteristic nature of its activity. Inexorable theological logic postulates the supernatural nature of the acts tending towards our salvation, because theological faith, for example, "the beginning, foundation, and source of all justification", must certainly be of the same supernatural order as the intuitive vision of God to which it ultimately leads. The necessity of the physical causality of grace, as is readily seen, is nowise dependent on the existence of concupiscence, but remains just as imperative for our first parents in their state of innocence and for the angels subject to no evil tendency. Actual grace, therefore, considered under this aspect, bears the name of "elevating grace" (*gratia elevans*), though not in a sense which would exclude from it the possibility of simultaneously fulfilling the moral function of healing grace in the present state of man. It is only after these considerations that the comprehension of the nature of actual grace in all its relations becomes possible, that we may say, with Perrone: Actual grace is that unmerited interior assistance which God, in virtue of the merits of Christ, confers upon fallen man in order to strengthen, on the

one hand, his infirmity resulting from sin and, on the other, to render him capable, by elevation to the supernatural order, of supernatural acts of the soul, so that he may attain justification, persevere in it to the end, and thus enter into everlasting life.

B. The Logical Division of Actual Grace

The logical division of actual grace should enumerate all the kinds to which the definition is universally applicable. If we adopt the different faculties of the soul as our principle of division, we shall have three kinds: graces of the intellect, of the will, and of the sensitive faculties. With regard to the consent of the will we distinguish two pairs of graces: first, preventing and co-operating; then efficacious and merely sufficient grace. It must be immediately shown that all these graces are no arbitrarily invented entities, but actually existing realities.

1. Graces of the Different Faculties of the Soul

The illuminating grace of the intellect (*gratia illuminationis, illustrationis*) first presents itself for consideration. It is that grace which in the work of salvation suggests good thoughts to the intellect. This may happen in a twofold manner, either mediately or immediately. The existence of mediate graces of the mind is not only vouched for a priori by the presence of merely external graces, as when a stirring sermon or the sight of the crucifix forces the sinner to earnest reflection; it is also explicitly attested by Holy Writ where the "commandment of the Lord" is represented as "enlightening the eyes" (Ps. xviii 9), and the external example of Christ as a model for our imitation (I Pet., ii, 21). But, as this mediate grace need neither interrupt the psychological course of the law governing the association of ideas nor be of a strictly supernatural nature, its sole object will be to prepare unostentatiously the way for a grace of greater importance and necessity, immediate illuminating grace. In the latter, the Holy Ghost Himself through immediate elevation and penetration of the powers of the mind prompts the soul and manifests to it in a supernatural light the eternal truths of salvation. Though our sacred discourses be perfect masterpieces of eloquence, though our picture of the wounds of the crucified Saviour be ever so vivid and realistic, they alone can never be the first step towards the conversion of a sinner, except when God by a vigorous impulse stirs the heart and, according to an expression of St. Fulgentius (Ep. xvii, De incarn. et grat., n. 67), "opens the ear of the interior man". St. Paul acknowledges, also, that the faith which his own preaching and that of his disciple Apollo had sown in Corinth, and which, under their "planting and watering" (mediate grace of preaching), had taken root, would have miserably perished, had not God himself given "the increase". (See I Cor., iii, 6: "Ego plantavi, Apollo rigavit, sed Deus incrementum dedit.") Among the Fathers of the Church none has more strongly emphasized the fruitlessness of preaching without interior illumination than the Doctor of Grace, Augustine, who says among other things: "Magisteria forinsecus adjutoria quaedam sunt et admonitiones; cathedram in caelo habet qui corda tenet" ("Instruction and admonition help somewhat externally, but he who reaches the heart has a place in heaven" -- Tract. III, 13, in I Joh.). The more speculative question may now be asked: Whether the mediate and immediate grace of the mind affects the idea, the judgment, or the reasoning. There can be no doubt that it primarily influences the judgment (*judicium*), be the latter theoretical (e.g. on the credibility of revelation) or practical (e.g. regarding

the hideous character of sin). But the reasoning process and the idea (*apprehensio*) may also become a grace of the mind, firstly, because they both belong to the essence of human knowledge, and grace always operates in a manner conformable to nature; secondly because ideas are in final analysis but the result and fruit of condensed judgments and reasonings.

Besides the grace of the mind, the strengthening grace of the will (generally called *gratia inspirationis*) plays not only the most important, but an indispensable, part, for no works of salvation are even thinkable without operations of the will. It may also be either mediate or immediate, according as the pious affections and wholesome resolutions are awakened in the soul by the immediately preceding illumination of the mind or by God Himself (by appropriation the Holy Ghost). Owing to the psychological interpenetration of cognition and volition, every (mediate or immediate) grace of the mind is in itself also a grace affecting the will. This twofold action -- on intellect and will -- has therefore the significance of two different acts of the soul, but of only one grace. Consequently, immediate elevation and motion of the will by the Holy Spirit can alone be considered a new grace. The Pelagians logically denied the existence especially of this grace, even if, according to the improbable opinion of some historians of dogma, they were forced by Augustine in the course of the debate to admit at least the immediate grace of the mind. Augustine threw in the whole weight of his personality in favour of the existence and necessity of the grace of the will, to which he applied the names, *delectatio caelestis*, *inspiratio dilectionis*, *cupiditas boni*, and the like. The celebrated Provincial Council of Carthage (A.D. 418) confirmed his teaching when it declared that grace does not simply consist in the manifestation of the Divine precepts whereby we may know our positive and negative duties, but it also confers upon us the power to love and accomplish whatever we have recognized as righteous in things pertaining to salvation (cf. Denzinger, "Enchiridion", 10th ed., n. 104, Freiburg, 1908). The Church has never shared the ethical optimism of Socrates, which made virtue consist in mere knowledge, and held that mere teaching was sufficient to inculcate it. If even natural virtue must be fought for, and is acquired only through energetic work and constant practice, how much more does not a supernatural life of virtue require the Divine help of grace with which the Christian must freely co-operate, and thus advance by slow degrees in perfection. The strengthening grace of the will, like the grace of the mind, assumes the form of vital acts of the soul and manifests itself chiefly in what are called affections of the will. Scholastic psychology enumerates eleven such affections, namely: love and hatred, delight and sadness, desire and aversion, hope and despair, daring and fear, finally, anger. This whole list of feelings has, with the sole exception of despair, which imperils the work of salvation, a practical significance in relation to good and evil; these affections may therefore develop into real graces of the will. But, inasmuch as all motions of the will may be ultimately reduced to love as fundamental feeling (cf. St. Thomas, Summa I-II:25:2), the functions of the grace of the will may be systematically focussed in love; hence the concise declaration of the above-mentioned Synod of Carthage (1. c.): "Cum sit utrumque donum Dei, et scire Quid facere debeamus et diligere ut faciamus" (Since both are gifts of God -- the knowing what we ought to do, and the desire to do it). But care must be taken not to understand immediately, by this "love", perfect love of God, which comes only at the end of the

process of justification as the crowning-stone of the edifice, even though Augustine (De Trinit., VIII, 10, and frequently) honours with the name *caritas* the mere love for good and any good motion of the will whatsoever. Berti (De theol. discipl., XIV, 7), therefore, is wrong when he asserts that, according to Augustine, the only grace properly so called is the theological virtue of charity. Are faith, hope, contrition, fear, only graces improperly so called, or do they become graces in the true sense only in connection with charity?

It cannot be determined with certainty of faith whether to the graces of mind and will so far spoken of should be added special actual graces affecting the sensitive faculties of the soul. But their existence may be asserted with great probability. For if, according to an appropriate remark of Aristotle (De anima, I, viii), it is true that thinking is impossible without imagination, supernatural thought also must find its originator and point of support in a corresponding phantasm to which, like the ivy on the wall, it clings and thus creeps upward. At any rate, the harmonious agreement of the grace of the intellect with the accompanying phantasm can but be of favourable influence on the soul visited by grace. It is likewise clear that in the rebellious motions of concupiscence, which reside in the sensitive faculties, the grace of the will has a dangerous enemy which must be overcome by the infusion of contrary dispositions, as aversion from sin, before the will is aroused to make firm resolutions. Paul, consequently, thrice besought the Lord that the sting of the flesh might depart from him, but was answered: "*Sufficit tibi gratia mea*" (II Cor. xii, 9).

2. *Graces regarding Free Will*

If we take the attitude of free will as the dividing principle of actual grace, we must first have a grace which precedes the free determination of the will and another which follows this determination and co-operates with the will. This is the first pair of graces, preventing and co-operating grace (*gratia praeveniens et cooperans*). Preventing grace must, according to its physical nature consist in unfree, indeliberate vital acts of the soul; co-operating grace, on the contrary, solely in free, deliberate actions of the will. The latter assume the character of actual graces, not only because they are immediately suggested by God, but also because they may become, after the achievement of success, the principle of new salutary acts. In this manner an intense act of perfect love of God may simultaneously effect and, as it were, assure by itself the observance of the Divine commandments. The existence of preventing grace, officially determined by the Council of Trent (Sess. VI, cap. v), must be admitted with the same certainty as the facts that the illuminating grace of the intellect belongs to a faculty not free in itself and that the grace of the will must first and foremost exhibit itself in spontaneous, indeliberate, unfree emotions. This is proved by the Biblical metaphors of the reluctant hearing of the voice of God (Jer., xvii, 23; Ps. xciv, 8), of the drawing by the Father (John, vi, 44), of the knocking at the gate (Apoc., iii, 20). The Fathers of the Church bear witness to the reality of preventing grace in their very appropriate formula: "*Gratia est in nobis, sed sine nobis*", that is, grace as a vital act is in the soul, but as an unfree, salutary act it does not proceed from the soul, but immediately from God. Thus Augustine (De grat. et lib. arbitr., xvii 33), Gregory the Great (Moral., XVI, x), Bernard of Clairvaux (De grat. et lib. arbitr., xiv), and others. As the unfree emotion of the will are by their very nature destined to elicit

free salutary acts, it is clear that preventing grace must develop into helping or co-operating grace as soon as free will gives its consent. These free salutary acts are, according to the Council of Trent (Sess. VI, cap. xvi), not only actual graces, but also meritorious actions (*actus meritorii*). There is just as little doubt possible regarding their existence as concerning the fact that many men freely follow the call of grace, work out their eternal salvation, and attain the beatific vision, so that the dogma of the Christian heaven proves simultaneously the reality of co-operating graces. Their principal advocate is Augustine (*De grat. et lib. arbitr.*, xvi, 32). If the more philosophical question of the co-operation of grace and liberty be raised, it will be easily perceived that the supernatural element of the free salutary act can be only from God, its vitality only from the will. The postulated unity of the action of the will could evidently not be safeguarded, if God and the will Performed either two separate acts or mere halves of an act. It can exist only when the supernatural power of grace transforms itself into the vital strength of the will, constitutes the latter as a free faculty *in actu primo* by elevation to the supernatural order, and simultaneously co-operates as supernatural Divine concurrence in the performance of the real salutary act or *actus secundus*. This co-operation is not unlike that of God with the creature in the natural order, in which both perform together one and the same act, God as first cause (*causa prima*), the creature as secondary cause (*causa secunda*). For further particulars see St. Thomas, "Contra Gent.", III, lxx.

A second pair of graces important for the understanding of the controversies on grace is that of efficacious and merely sufficient grace (*gratia efficax et mere sufficiens*). By efficacious grace is understood that Divine assistance which, considered even *in actu primo*, includes with infallible certainty, and consequently in its definition, the free salutary act; for did it remain inefficacious, it would cease to be efficacious and would therefore be self-contradictory. As to whether the infallibility of its success is the result of the physical nature of this grace or of the infallible foreknowledge of God (*scientia media*) is a much debated question between Thomists and Molinists which need not be further treated here. Its existence, however, is admitted as an article of faith by both sides and is established with the same firmness as the predestination of the elect or the existence of a heaven peopled with innumerable saints. As to "merely sufficient grace", Calvinists and Jansenists have, as is well known, eliminated it from their doctrinal system. They admitted only efficacious graces whose action overpowers the will and leaves no room for freedom. If Jansen (d. 1638) nominally admitted "sufficient grace", calling it "little grace" (*gratia parva*), he understood by it, in reality, only "insufficient grace", i.e. "one from which no action can result, except its insufficiency be removed by another grace" (*De grat. Christ.*, IV, x). He did not shrink from reviling sufficient grace, understood in the Catholic sense, as a monstrous conception and a means of filling hell with reprobates, while later Jansenists discovered in it such a pernicious character as to infer the appropriateness of the prayer: "a gratia sufficiente, libera nos Domine" ("From sufficient grace, O Lord deliver us". -- Cf. prop. 6 damn. ab Alex. VIII, a. 1690 in Denzinger, n. 1296). The Catholic idea of sufficient grace is obtained by the distinction of a twofold element in every actual grace, its intrinsic energy (*potestas agendi, vis*) and its extrinsic efficiency (*efficientia*). Under the former aspect there exists between sufficient and efficacious grace, both considered *in actu primo*, no real,

but only a logical, distinction; for sufficient grace also confers full power for action, but is condemned to unfruitfulness owing to the free resistance of the will. If, on the contrary, extrinsic efficiency be considered, it is evident that the will either co-operates freely or not. If it refuses its co-operation, even the strongest grace remains a merely sufficient one (*gratia mere sufficiens*) although by nature it would have been completely sufficient (*gratia vere sufficiens*) and with good will could have been efficacious. This ecclesiastical conception of the nature of sufficient grace, to which the Catholic systems of grace must invariably conform themselves, is nothing else but a reproduction of the teaching of the Bible. To cite only one text (Prov., i 24), the calling and the stretching-out of the hand of God certainly signifies the complete sufficiency of grace, just as the obstinate refusal of the sinner "to regard", is tantamount to the free rejection of the proffered hand. Augustine is in complete agreement with the constant tradition on this point, and Jansenists have vainly claimed him as one of their own. We have an example of his teaching in the following text: "Gratia Dei est quae hominum adjuvat voluntates; qua ut non adjuventur, in ipsis itidem causa est, non in Deo" ("It is the grace of God that helps the wills of men; and when they are not helped by it, the reason is in themselves, not in God." -- "De pecc. mer. et rem." II, xvii). On the Greek Fathers see Isaac Habert, *Theologia Graecor. Patrum*, II, 6 sq. (Paris, 1646).

II. PROPERTIES OF ACTUAL GRACE

After the treatment of the nature of actual grace, we come logically to the discussion of its properties. These are three in number: necessity, gratuity, and universality.

A. The Necessity of Actual Grace

With the early Protestants and Jansenists, the necessity of actual grace may be so exaggerated as to lead to the assertion of the absolute and complete incapacity of mere nature to do good; or, with the Pelagians and Semipelagians, it may be so understood as to extend the capacity of nature to each and every thing, even to supernatural activity, or at least to its essential elements. The three heresies of early Protestantism and Jansenism, Pelagianism, and Semipelagianism furnish us with the practical division which we adopt for the systematic exposition of the Catholic doctrine.

1. Early Protestantism and Jansenism

We maintain against early Protestantism and Jansenism the capacity of mere nature in regard to both religious knowledge and moral action. Fundamental for natural religion and ethics is the article of faith which asserts the power of mere reason to derive a certain natural knowledge of God from creation (Vatican., Sess. III, de revelat., can. i). This is a central truth which is most clearly attested by Scripture (Wisdom, xiii, 1 sqq.; Rom., I, 20 sq.; ii, 14 sq.) and tradition. Unswervingly adhering to this position, the Church has ever exhibited herself as a mighty defender of reason and its inherent powers against the ravages of scepticism so subversive of all truth. Through the whole course of centuries she has steadfastly clung to the unalterable conviction that a faculty of perception constituted for vision, like human reason, cannot possibly be condemned to blindness, and that its natural powers enable it to know, even in the fallen state, whatever is within its legitimate sphere. On the other hand, the Church also erected against presumptuous Rationalism and Theosophism a

bulwark for the defence of knowledge by faith, a knowledge superior to, and different in principle from rational knowledge. With Clement of Alexandria she drew a sharp distinction between *gnosis* and *pistis* -- knowledge and faith, philosophy and revelation, assigning to reason the double role of indispensable forerunner and docile handmaid (cf. Vatican., Sess. III, cap. iv). This noble struggle of the Church for the rights of reason and its true relation to faith explains historically her decidedly hostile attitude towards the scepticism of Nicholas de Ultricia (A.D. 1348), towards the Renaissance philosophy of Pomponatius (1513) defending a "twofold truth", towards the so-called "log-stick-and-stone" theory (*Klotz-Stock-und-Steintheorie*) of Martin Luther and his followers, so inimical to reason, towards the doctrine of the complete powerlessness of nature without grace defended by Baius and Jansen, towards the system of Hermes impregnated with Kantian criticism, towards traditionalism, which based all moral and religious knowledge on the authority of language and instruction, finally, against the modern Agnosticism of the Modernists, which undermines the very foundations of faith and which was only recently dealt so fatal a blow by Pope Pius X's condemnation. Documentary evidence has thus been produced that the Catholic Church far from being an "institution of obscurantism", has at all times fulfilled a powerful and far-reaching mission of civilization, since she took reason and science under her powerful patronage and defended their rights against those very oppressors of reason who are accustomed to bring against her the groundless charge of intellectual inferiority. A sound intellectualism is just as indispensable a condition of her life as the doctrine of a supernatural order raised above all the limits of nature. (cf. Chastel, "De la valeur de la raison humaine", Paris, 1854.)

Not less reasonable an attitude was assumed by the Church respecting the moral capabilities of fallen man in the domain of natural ethics. Against Baianism, the forerunner of Jansenism, she adhered in her teaching to the conviction confirmed by healthy experience, that natural man is capable of performing some naturally good works without actual grace, and particularly without the grace of faith, and that not all the deeds of infidels and pagans are sins. This is evidenced by the condemnation of two propositions of Baius by Pope Pius V in the year 1567: "Liberum arbitrium sine gratiae Dei adiutorio non nisi ad peccandum valet" ("Free will without the aid of God's grace avails for nothing but sin." -- Prop. xxvii), and again: "Omnia opera infidelium sunt peccata et philosophorum virtutes sunt vitia" ("All the acts of infidels are sins, and their virtues are vices." -- Prop. 25). The history of paganism and everyday experience condemn, moreover, with equal emphasis these extravagant exaggerations of Baius. Among the duties of the natural moral law some -- as love for parents or children, abstention from theft and drunkenness -- are of such an elementary character that it is impossible to perceive why they could not be fulfilled without grace and faith at least by judicious, cultured, and noble-minded pagans. Did not the Saviour himself recognize as something good natural human love and fraternal greeting, such as they exist also among publicans and pagans? He denied to them only a supernatural reward (*mercedem*, Matt., v, 46 sq.). And Paul has explicitly stated that "the Gentiles, who have not the [Mosaic] law, do by nature [*naturaliter, physei*] those things that are of the law" (Rom., ii, 14). The Fathers of the Church did not judge differently. Baius, it is true, adduced Augustine as his chief witness, and in the latter's

writings we find, to be sure, sentences which seem to favour him. Baius, however, overlooked the fact that the former rhetorician and Platonic idealist of Hippo does not always weigh every word as carefully as the wary Schoolman Thomas Aquinas, but consciously delights (cf. Enarr. in Ps. xcvi, n. 19) in antonomastically applying to the genus the designation which belongs only to the highest species. As he calls the least good motion of the will *caritas*, by anticipation, so he brands every unmeritorious work (*opus steriliter bonum*) as sin (*peccatum*) and false virtue (*falsa virtus*). In both cases it is an obvious use of the rhetorical figure called catachresis. With a strong perception for the ethically good, wherever it may be found, he eulogizes elsewhere the chastity of his heathen friend Alypius (Confess., VI, x) and of the pagan Polemo (Ep. cxl, 2), admires the civil virtues of the Romans, the masters of the world (Ep. cxxxviii, 3), and gives expression to the truth that even the most wicked man is not found completely wanting in naturally good works ("De Spiritu et litera", c. xxviii. -- Cf. Ripalda, "De Ente supernaturali", tom. III: "Adversus Baium et Baianos", Cologne, 1648; J. Ernst, "Werke und Tugenden der Unglaubigen nach Augustinus", Freiburg, 1871).

The ethical capacity of pure, and especially of fallen, nature has undoubtedly also its determined limits which it cannot overstep. In a general manner, the possibility of the observance of the easier natural precepts without the aid of natural or supernatural grace may be asserted, but not the possibility of the observance of the more difficult commandments and prohibitions of the natural law. The difficulty of determining where the easy ends and the difficult begins will naturally lead, in some secondary questions, to great diversity of opinion among theologians. In fundamental points, however, harmony is easily obtainable and exists in fact. In the first place, all without exception are agreed on the proposition that fallen man cannot of his own strength observe the natural law in its entirety and for a long time without occasional errors and lapses into grievous sin. And how could he? For, according to the council of Trent (Sess. VI, Cap. xiii), even the already justified man will be victorious in the "conflict with the flesh, the world, and the devil" only on condition that he co-operate with never-failing grace (cf. Rom., vii, 22 sqq.). Secondly, all theologians admit that the natural will, unaided by Divine assistance, succumbs, especially in the fallen state, with moral (not physical) necessity to the attack of vehement and enduring temptations against the Decalogue. For could it by its own strength decide the conflict in its own favour even at the most critical moments, that power which we have just eliminated would be restored to it, namely the power to observe unaided, through the prompt victory over vehement temptations, the whole natural law in all its extent. The practical significance of this second universally admitted proposition lies in the acknowledgment that, according to revelation, there is no man on earth who does not occasionally meet with this or that grievous temptation to mortal sin, and even the justified are no exception to this law; wherefore, even they are bound to constant vigilance in fear and trembling and to never-ceasing prayer for Divine assistance (cf. Council of Trent, 1. c.). In the third question, whether natural love of God, even in its highest form (*amor Dei naturalis perfectus*), is possible without grace, the opinions of theologians are still very divergent. Bellarmine denies this possibility on the ground that, without any grace, a mere natural justification could in such a case

be brought into being through the love of God. Scotus, on the contrary, spiritedly defends the attainability of the highest natural love for God. A golden middle course will easily open to the one who accurately distinguishes between affective and effective love. The affective element of the highest love is, as natural duty, accessible to the mere natural will with out grace. Effective love, on the contrary, since it supposes an unchanging, systematic, and active will, would entail the above-discarded possibility of triumphing over all temptations and of observing the whole moral law. (For further details on these interesting problems, see Pohle, "Lehrbuch der Dogmatik", 4th ed., II, 364-70, Paderborn, 1909.)

According to Jansenism, the mere absence of the state of grace and love (*status gratiae et caritatis*) branded as sins all the deeds of the sinner, even the ethically good ones (e.g., almsgiving). This was the lowest ebb in its disparagement and depreciation of the moral forces in man; and here, too, Baius had paved the way. The possession of sanctifying grace or theological love thus became the measure and criterion of natural morality. Taking as his basis the total corruption of nature through original sin (i.e. concupiscence) as taught by early Protestantism, Quesnel, especially (Prop. xliv in Denzinger, n. 1394), gave the above-expressed thought the alleged Augustinian form that there is no medium between love of God and love of the world, charity and concupiscence, so that even the prayers of the impious are nothing else but sins. (Cfr. Prop. xlix: "Oratio impiorum est novum peccatum et quod Deus illis concedit, est novum in eos iudicium"). The answer of the Church to such severe exaggerations was the dogmatic Bull, "Unigenitus" (1713), of Pope Clement XI. The Council of Trent (Sess. VI, can. vii) had however already decreed against Martin Luther: "Si quis dixerit, opera omnia quae ante justificationem fiunt . . . vere esse peccata . . . anathema sit" (If anyone shall say that all the works done before justification are indeed sins, let him be anathema). Moreover, what reasonable man would concede that the process of justification with its so-called dispositions consists in a long series of sins? And if the Bible, in order to effect the conversion of the sinner, frequently summons him to contrition and penance, to prayer and almsdeeds, shall we admit the blasphemy that the Most Holy summons him to the commission of so many sins?

The Catholic doctrine on this point obstinately adhered to through all the centuries, is so clear that even an Augustine could not have departed from it without becoming a public heretic. True, Baius and Quesnel succeeded in cleverly concealing their heresy in a phraseology similar to the Augustinian, but without penetrating the meaning of Augustine. The latter, it must be conceded, in the course of the struggle with self-confident Pelagianism, ultimately so strongly emphasized the opposition between grace and sin, love of God and love of the world, that the intermediary domain of naturally good works almost completely disappeared. But Scholasticism had long since applied the necessary correction to this exaggeration. That the sinner, in consequence of his habitual state of sin, must sin in everything, is not the doctrine of Augustine. The universality of sin in the world which he contemplated, is not for him the result of a fundamental necessity, but merely the manifestation of a general historical phenomenon which admits of exceptions (De spir. et lit., c. xxvii, n. 48). He specifically declares marital love, love of children and friends to be something lawful in all men, something commendable, natural and dutiful, even though Divine love alone

leads to heaven. He admits the possibility of these natural virtues also in the impious: "Sed videtis, istam caritatem esse posse et impiorum, i.e. paganorum, Judaeorum, haeticorum" (Serm. cccxlix de temp. in Migne, P.L., XXXIX, 1529).

2. *Pelagianism*

Pelagianism, which still survives under new forms, fell into the extreme directly opposed to the theories rejected above. It exaggerated the capacity of human nature to an incredible degree, and hardly left any room for Christian grace. It amounted to nothing less than the divinization of the moral forces of free will. Even when it was question of acts tending to supernatural salvation, natural will was declared able to rise by its own strength from justification to eternal life. Rank naturalism in its essence, Pelagianism contained, as a logical consequence, the suppression of original sin and the negation of grace. It laid down the proud assertion that the sovereign will may ultimately raise itself to complete holiness and impeccability (*impeccantia, anamartesia*) through the persevering observance of all the precepts, even the most difficult, and through the infallible triumph over every temptation, even the most vehement. This was an unmistakable reproduction of the ancient Stoic ideal of virtue. For the self-confident Pelagian, the petition of the Lord's Prayer, "Lead us not into temptation", served, properly speaking, no purpose: it was at most a proof of his humility, not a profession of the truth. In no other part of the system is the vanity of the Christian Diogenes so glaringly perceptible through the lacerated cloak of the philosopher. Hence the Provincial Synod of Carthage (418) insisted on the true doctrine on this very point (see Denzinger, nn. 106-8) and emphasized the absolute necessity of grace for all salutary acts. True, Pelagius (d. 405) and his disciple Caelestius, who found an active associate in the skilful and learned Bishop Julian of Eclanum, admitted from the beginning the improper creative grace, later also a merely external supernatural grace, such as the Bible and the example of Christ. But the heresiarch rejected with all the more obstinacy the inner grace of the Holy Ghost, especially for the will. The object of grace was, at the most, to facilitate the work of salvation, in no wise to make it fundamentally possible. Never before had a heretic dared to lay the axe so unsparingly to the deepest roots of Christianity. And never again did it occur in ecclesiastical history that one man alone, with the weapons of the mind and ecclesiastical science overthrew and annihilated in one generation an equally dangerous heresy. This man was Augustine. In the short period between A.D. 411 and A.D. 413 no fewer than twenty-four synods were held which considered the heresy of Pelagius. But the death-blow was dealt as early as 416 at Mileve, where fifty-nine bishops, under the leadership of St. Augustine, laid down the fundamental canons which were subsequently (418) repeated at Carthage and received, after the celebrated "Tractoria" of Pope Zosimus (418), the value of definitions of faith. It was there that the absolute necessity of grace for salvation triumphed over the Pelagian idea of its mere utility, and the absolute incapacity of nature over supreme self-sufficiency. When Augustine died, in 430, Pelagianism was dead. The decisions of faith issued at Mileve and Carthage were frequently renewed by ecumenical councils, as in 529 at Orange, lastly at Trent (Sess. VI, can. ii).

The beautiful parable of the vine and its branches (John xv, 1 sqq.) should have been sufficient to reveal to Pelagianism what a striking contrast there was between it and antecedent Christianity. Augustine and the synods time and again used it in the controversy as a very decisive proof out of the mouth of the Saviour Himself. Only when the supernatural vital union of the Apostles with the vine (Christ) planted by the Father is established, does it become possible to bring forth supernatural fruit; for "without me you can do nothing" (John, xv, 5). The categorical assertion of the necessity of grace for the holy Apostles themselves brings home to us still more forcibly the absolute incapacity of mere fallen nature in the performance of salutary acts. All supernatural activity may be concretely summed up in the three following elements: salutary thoughts, holy resolves, good actions. Now the Apostle Paul teaches that right thinking is from God (II Cor., iii, 5), that the righteous will must be based on Divine mercy (Rom. ix, 16), finally that it is God who works in us, "both to will and to accomplish" (Phil., ii, 13). The victorious struggle of St. Augustine, which earned for him the honourable title of "Doctor of Grace", was merely a struggle for the ancient Catholic truth. Pelagianism was immediately felt in the Christian community as a thorn in the flesh and as the poison of novelty. Before all the world Augustine could attest: "Talis est haeresis pelagiana, non antiqua, sed ante non multum tempus exorta" ("Such is the Pelagian heresy, not ancient, but having sprung up a short time ago." -- De grat., et lib. arbitr., c. iv). In fact, the teaching of the most ancient Fathers of the Church, e.g. Irenaeus (Adv. haer., III, xvii, 2), did not differ from that of Augustine, although it was less vigorous and explicit. The constant practice of prayer in the ancient Church pointed significantly to her lively faith in the necessity of grace, for prayer and grace are correlative ideas, which cannot be separated. Hence the celebrated axiom of Pope Celestine I (d. 432): "Ut legem credendi statuat lex supplicandi" ("That the law of prayer may determine the law of belief" -- See Denzinger, n. 139). It is clearly evident that the Fathers of the Church wished the universally expressed necessity of grace to be understood not merely a moral necessity for the strengthening of human weakness, but as a metaphysical one for the communication of physical powers. For in their comparisons they state that grace is not less necessary than are wings for flying, the eyes for seeing, the rain for the growth of plants, etc. In accordance with this, they also declare that, in as far as supernatural activity is concerned, grace is just as indispensable for the angels not subject to concupiscence, and was for man before the fall, as it is for man after the sin of Adam.

There is need of special refutation of Pelagius's presumptuous contention that man is capable of avoiding unaided during his whole lifetime all sins; nay, that he can even rise to impeccability. The Council of Trent (Sess. VI, can. xxiii), with much more precision than the Synod of Mileve (416), answered this monstrosity with the definition of faith: "Si quis hominem semel justificatum dixerit . . . posse in tota vita peccata omnia etiam venialia vitare, nisi ex speciali Dei privilegio, quemadmodum de beata Virgine tenet ecclesia, anathema sit" (If anyone shall say that a man once justified . . . can, throughout his life, avoid all sins, even venial, unless by a special privilege of God, as the Church believes of the Bl. Virgin Mary, let him be anathema).

This celebrated canon presents some difficulties of thought which must be briefly discussed. In its gist it is an affirmation that not even the justified, much less the sinner and infidel, can avoid

all sins, especially venial ones, through his whole life except by special privilege such as was granted to the Mother of God. The canon does not assert that besides Mary other saints, as St. Joseph or St. John the Baptist, possessed this privilege. Almost all theologians rightly consider this to be the sole exception, justified only by the dignity of the Divine maternity. Justice is done to the wording of the canon, if by *tota vita* we understand a long period, about a generation, and by *peccata venialia* chiefly the semi-deliberate venial sins due to surprise or precipitancy. It is in no way declared that a great saint is unable to keep free from all sin during a short interval, as the interval of a day; nor that he is incapable of avoiding for a long time with ordinary grace and without special privilege all venial sins committed with full deliberation or complete liberty. The same must be said with still greater reason of mortal sins, although the preservation of baptismal innocence may be of rare occurrence. The expression, *omnia peccata*, must be understood collectively, as applying to the sum, and not distributively, as meaning each individual sin, which would no longer be a sin if it could not be avoided in every instance. For the same reason the words, *non posse*, designate not a physical, but a moral impossibility of avoiding sin, i.e. a difficulty based on insuperable obstacles which only a special privilege could suppress. The meaning is, therefore: The observer of a long series of temptations in the life of a just man will find that at some time or other, today or tomorrow, the will held captive by concupiscence will succumb with moral necessity. This may be due to negligence, surprise, weariness, or moral weakness -- all of which are factors that do not completely destroy the freedom of the will and thus admit at least of a venial sin. This hard truth must naturally grieve a proud heart. But it is precisely to curb pride, that most dangerous enemy of our salvation, and to nourish in us the precious virtue of humility, that God permits these falls into sin. Nothing incites us more powerfully to vigilance and perseverance in prayer than the consciousness of our sinfulness and infirmity. Even the greatest saint must, therefore, pray daily not out of hypocrisy or self-deception, but out of an intimate knowledge of his heart: "Forgive us our debts, as we forgive our debtors" (Matt., vi, 12). A holy Apostle had to acknowledge of himself and his intimate friends: "In many things we all offend" (James, iii, 2). Boldly, could the hagiographer in the Old Testament raise the question not difficult of answer: "Who can say: My heart is clean, I am pure from sin?" (Proverbs, xx, 9). This view, defended by the Bible, was also the constant sentiment of the Fathers of the Church, to whom the proud language of the Pelagians was unknown. To the latter's consideration Augustine (*De nat. et grat.*, xxxvi) presents the impressive thoughts: "Could we bring together here in living form all the saints of both sexes and question them whether they were without sin, would they not exclaim unanimously: 'If we say that we have no sin, we deceive ourselves and the truth is not in us'?" (I John, i, 8.)

3. *Semipelagianism*

Semipelagianism is an unsuccessful attempt to effect a compromise between Pelagianism and Augustinism, attributing to mere nature and its capabilities a somewhat greater importance in matters pertaining to salvation than Augustine was willing to concede. Several pious monks of Marseilles (hence also the name of "Massilians"), John Cassian (d. 432) at their head, held (about A.D. 428) the following opinion of the relationship between nature and grace:

- A distinction must be established between "the beginning of faith" (*initium fidei*) and "increase in the faith" (*augmentum fidei*); the former may be referred to the natural power of free will, while increase in the faith and faith itself can only be the work of Christian grace.
- Nature can merit grace through its own efforts, but this natural merit (*meritum naturae*) is only founded in equity, it does not confer, as Pelagius contended, a right in strict justice.
- "Final perseverance" (*donum perseverantiae*) specifically can be secured by the justified with their own strength, and is therefore not a special grace.
- The bestowal or denial of baptismal grace in children is dependent on their conditional future merits or demerits, which the Omniscience of God foresaw not historically, but hypothetically from eternity.

Although this last proposition is philosophically false, the Church has never condemned it as heretical; the first three theses, on the contrary, have been rejected as opposed to Catholic teaching.

Informed by his disciples, Prosper and Hilary, of events at Marseilles, Augustine energetically set to work, in spite of his advanced age, and wrote his two books against the Semipelagians: "De Praedestinatione sanctorum" and "De dono perseverantiae". Simultaneously he humbly acknowledged that he had the misfortune of having professed similar errors previously to his episcopal consecration (A.D. 394). He attacked resolutely, though with mildness and moderation, all the positions of his adversaries, rightly looking upon their attitude as a relapse into the already defeated Pelagianism. After Augustine's death, his disciples resumed the struggle. They succeeded in interesting in their cause Pope Celestine I, who, in his dogmatic writing to the bishops of Gaul (431), laid down as a rule of faith the fundamental teaching of St. Augustine on original sin and grace. But as this so-called "Indiculus" was issued more as a papal instruction than as an *ex cathedra* definition, the controversy still continued for almost a century, until St. Caesarius of Arles convoked the Second Synod of Orange (A.D. 529). This synod received the solemn confirmation of Pope Boniface II (530) and was thus vested with aecumenical authority. (According to the opinion of Scheeben and Gutberlet this confirmation extended only to the first eight canons and the epilogue.) From now on Semipelagianism, also, was proscribed as heresy, and Augustinism was completely victorious.

In the refutation of Semipelagianism, in so far as the necessity of actual grace is concerned, it will not be amiss to follow an adult through all the stage on the way to salvation, from the state of unbelief and mortal sin to the state of grace and a happy death. With regard, first, to the period of unbelief, the Second Synod of Orange (can. v) decreed that prevenient grace is absolutely necessary to the infidel not only for faith itself, but also for the very beginning of faith. By the "beginning of faith", it intended to designate all the good aspirations and motions to believe which precede faith properly so called, as early dawn precedes sunrise. Consequently, the whole preparation for the faith is made under the influence of grace, e.g. the instruction of persons to be converted. The accuracy of this view is confirmed by the Bible. According to the assurance of the Saviour, external preaching is useless if the invisible influence of grace (the being drawn by the Father) does not set in to effect the gradual "coming" to Christ (John, vi, 44). Were faith rooted in mere nature, were it based on mere natural inclination to believe or on natural merit, nature could legitimately glory in its own achievement of the work of salvation in its entirety, from faith to justification--nay, to

beatific vision itself. And still Paul (I Cor., iv, 7; Eph., ii 8 sq.) abominates nothing so much as the "glorying" of nature. Although Augustine could substantiate his doctrine by references to the anterior Fathers of the Church, as Cyprian, Ambrose, and Gregory of Nazianzus, he seems to have been embarrassed by the Semipelagian appeal to the Greeks, chiefly Chrysostom. He pleaded the circumstances of the time (*De praed. sanctor.*, c. xiv). In fact, difference of doctrine between the East and the West cannot be denied. With delight could the Semipelagians quote from Chrysostom passages like the following: "We must first select good and then God adds what appertains to his office; he does not act antecedently to our will so as not to destroy our liberty" (*Hom. xii in Hebr.*, n. 3). How must this attitude of the Eastern Church be explained?

To gain a correct notion of the then existing circumstances, it must be remembered that the Greeks had to defend not only grace, but almost more so the freedom of the will. For the antichristian systems of Gnosticism, Manichaeism, and neo-Platonism--all products of the East--stood completely under the spell of the liberty-destroying philosophy of fatalism. In such an environment it was important to preserve intact the freedom of the will even under the influence of grace, to arouse slothful nature from the fatalistic sleep, and to recommend the ascetical maxim: "Help yourself, and Heaven will help you." It may have been imprudent to leave the necessity of prevenient grace altogether in the background because of false considerations of timeliness, and to insist almost exclusively on co-operating grace while silently presupposing the existence of prevenient grace. But was Chrysostom opposing a Pelagius or a Cassian? In fact he also knew and admitted prevenient grace, as when he writes: "You do not hold of yourself, but you have received from God. Hence you have received what you possess and not only this or that, but everything you have. For these are not your own merits, but the grace of God. Although you cite faith, you owe it nevertheless to call" (*Hom. xii in I Cor.*). Chrysostom was always orthodox in the doctrine on grace.

After the triumph over unbelief, the process of justification begins with faith and concludes only with the infusion of sanctifying grace and theological love. The question is whether, on this arduous road, grace must precede and co-operate with every salutary step of the believing sinner. The negative attitude of the semipelagians, who ascribed the dispositions for justification to the natural efforts of free will, was proscribed as heretical at Orange (*can. vii*) and again at Trent (*Sess. VI, can. iii*). Rightly so. For the thoroughly supernatural sonship of God (*filiatio adoptiva*), which ultimately terminates the process of justification, can be attained only through absolutely supernatural acts, for the performance of which nature without grace is physically incapable. Hence the Bible, besides faith, also refers other dispositions, as "hope" (*Rom.*, xv, 13) and "love" (*I John*, iv, 7) explicitly to God as their author; and tradition has unswervingly adhered to the priority of grace (*cf. St. Augustine, "Enchir."*, xxxii). Once the adult has finally reached the state of grace after a happy termination of the process of justification, the obligation devolves upon him of complying with many negative and positive duties in order to preserve sanctifying grace, persevere in virtue until the end, and gain heaven after a happy death. Will he be capable of accomplishing all this without a constant stream of actual graces? It might appear so. For the justified person is, through the possession of sanctifying grace and supernatural virtues, permanently maintained in the

supernatural order. It is not unnatural, therefore, to admit, prescinding from final perseverance, that he is enabled by his supernatural habit to perform salutary actions. This is in reality the teaching of Molina, Bellarmine, Billot, and others. But to this view Perrone (*De gratia*, n. 203) rightly objects that Holy Writ makes no distinction between the different degrees of the work of salvation, that Augustine (*De nat. et grat.*, xxiv) proclaims the constant need of grace also for the "healthy" and "justified", and finally that the Church requires an uninterrupted influence of grace even for the good works of the just and puts in the mouths of all Christians without exception the prayer: "Actiones nostras, quaesumus Domine, aspirando praeveni et adjuvando prosequere", etc. And does not concupiscence, which remains also in the justified, stand in need of at least healing grace? Moreover, no passive habit puts itself in motion, but, like a well-tuned harp, must be, as it were, brought into play by some external agency. It might be added that nature, raised to a permanent supernatural state, still retains its natural activity and consequently requires a supernatural impulse for supernatural actions.

The most important concern, however, which the just man must take to heart is final perseverance, because it is a decided characteristic of the predestined and assures entrance into heaven with infallible certainty. The Semipelagian delusion that this great grace may be due to the initiative and power of the just was refuted, after the Second Synod of Orange (can. x), chiefly by the Council of Trent (Sess. VI can. xxii) in the following proposition of faith: "Si quis dixerit, justificatum . . . sine speciali auxilio Dei in accepta justitia perseverare posse . . . , anathema sit." Here, also, the explanation of some difficulties will facilitate the correct interpretation of the canon. Final perseverance, in its most perfect sense, consists in the untarnished preservation of baptismal innocence until death. In a less strict sense it is the preservation of the state of grace from the last conversion until death. In both senses we have what is called perfect perseverance (*perseverantia perfecta*). By imperfect perseverance (*perseverantia imperfecta*) must be understood the temporary continuance in grace, e.g., for a month or a year, until the commission of the next mortal sin. We must distinguish also between passive and active perseverance, according as the justified dies in the state of grace, independently of his will, as baptized children and the insane, or actively co-operates with grace whenever the state of grace is imperilled by grievous temptations. The Council of Trent had, above all, this latter case in view, since it speaks of the necessity of a special assistance (*auxilium speciale*), which can designate nothing else but an actual grace or rather a whole series of these. This "special grace" is, consequently, not conferred with the possession of sanctifying grace, nor is it to be confounded with ordinary graces, nor finally to be looked upon as a result of the mere power of perseverance (*posse perseverare*). Hence, as a new and special grace, it ultimately is but a continuous series of efficacious (not merely sufficient) graces combined with a particular external protection of God against fall into sin and with the final experience of a happy death. The Council of Trent (Sess. VI, can. xvi) is therefore justified in speaking of it as a great gift --"magnum donum". The Bible extols final perseverance, now as a special grace not included in the bare notion of justification (Phil., i, 6; I Pet., i, 5), now as the precious fruit of special prayer (Matt., xxvi 41; John, xvii, 11; Col., iv, 12). Augustine (*De dono persev.*, c. iii) used the necessity

of such prayer as a basis of argumentation, but added, for the consolation of the faithful, that, while this great grace could not be merited by good works, it could by persevering genuine prayer be obtained with infallible certainty. Hence the practice of pious Christians to pray daily for a good death can never be too earnestly commended.

B. The Gratuity of Actual Grace

Beside the necessity of actual grace, its absolute gratuity stands out as the second fundamental question in the Christian doctrine on this subject. The very name of *grace* excludes the notion of merit. But the gratuity of specifically Christian grace is so great and of such a superior character that even mere natural petition for grace or positive natural dispositions cannot determine God to the bestowal of his supernatural assistance. A mere negative preparation or mere negative dispositions, on the contrary, which consist only in the natural removal of obstacles, are in all probability not essentially opposed to gratuity. Owing to its gratuitous character, grace cannot be earned by strictly natural merit either in strict justice (*meritum de condigno*) or as a matter of fitness (*meritum de congruo*). But is not this assertion in conflict with the dogma that the just man can, through supernatural works, merit *de condigno* an increase in the state of grace and eternal glory, just as the sinner can, through salutary acts, earn *de congruo* justification and all graces leading up to it? That it is not, will be clearly evident if it be remembered that the merits springing from supernatural grace are no longer natural, but supernatural (cf. Council of Trent, Sess. VI, cap. xvi). The absolute gratuity of grace is, therefore, safeguarded if it is referred to the initial grace (*prima gratia vocans*), with which the work of salvation begins, and which is preceded by pure and mere nature. For it then follows that the whole subsequent series of graces, up to justification, is not and cannot be merited any more than the initial grace. We shall now briefly examine the gratuity of grace in its several degrees as indicated above.

1. The gratuitous character of grace categorically excludes real and strict natural merit with a rightful claim to just compensation as well as merit improperly so called implying a claim to reward as a matter of fitness. The meritorious character of our actions in the former sense was defended by the Pelagians, while the Semipelagians advocated it in the latter meaning. To this twofold error the infallible teaching authority of the Church opposed the dogmatic declaration that the initial grace preparatory to justification is in no wise due to natural merit as a determining factor (cf. Second Synod of Orange, epilogue; Council of Trent, Sess. VI, cap. v). The categorical synodal expression, *nullis praecedentibus meritis*, wards off from grace, as a poisonous breath, not only the Pelagian condign merit, but also the Semipelagian congruous merit. The presupposition that grace can be merited by natural deeds involves a latent contradiction. For it would be attributing to nature the power to bridge over with its own strength the chasm lying between the natural and the supernatural order. In powerfully eloquent words does Paul, in the Epistle to the Romans, declare that the vocation to the Faith was not granted to the Jews in consequence of the works of the Mosaic Law, nor to the pagans because of the observance of the natural moral law, but that the concession was entirely gratuitous. He inserts the harsh statement: "Therefore he hath mercy on whom he will; and whom he will, he hardeneth" (Rom., ix, 18). The Doctor of Grace, Augustine (*De peccato orig.*,

xxiv, 28), like a second Paul, advocates the absolute gratuity of grace, when he writes: "Non enim gratia Dei erit ullo modo nisi gratuita fuerit omni modo" (For it will not be the grace of God in any way unless it has been gratuitous in every way). He lays stress on the fundamental principle: "Grace does not find the merits in existence, but causes them", and substantiates it decisively thus: "Non gratia ex merito, sed meritum ex gratia. Nam si gratia ex merito, emisti, non gratis accepisti" (Not grace by merit, but merit by grace. For if grace by merit, thou hast bought, not received *gratis*.--Serm. 169, c. II). Not even Chrysostom could be suspected of Semipelagianism, as he thought in this matter precisely like Paul and Augustine.

2. While natural merit suppresses the idea of gratuity in grace, the same cannot be affirmed of natural prayer (*preces naturae, oratio naturalis*), as long as we do not ascribe to it any intrinsic right to be heard and to God a duty to answer it--a right and duty which are undoubtedly implied in supernatural petitions (cf. John, xvi, 23 sq.). Prayer does not, like merit, appeal to the justice or equity of God, but to his liberality and mercy. The sphere of influence of prayer is consequently much more extensive than the power of merit. The gratuity of Christian grace is, nevertheless, to be understood so strictly that pure nature cannot obtain even the smallest grace by the most fervent prayer. Such is the doctrine asserted by the Second Synod of Orange (can. iii) against the Semipelagians. It is based on a positive Divine decree and can no longer be deduced from the intrinsic impossibility of the contrary. It is therefore permissible, without prejudice to the Faith, to adopt Ripalda's opinion (*De ente supernat., disp. xix, sect. 3*), which holds that, in an economy of salvation different from the present, natural prayer for grace would be entitled to be heard. How little this is the case in the present dispensation is best learned from the language of the Bible. We are told that in our infirmity "we know not what we should pray for as we ought; but the Spirit himself asketh for us with unspeakable groanings" (Rom. viii, 26; cf. I Cor., xii, 3). The supernatural union with Christ is, moreover, represented as the indispensable condition of every successful petition (John, xv, 7). Every wholesome prayer being in itself a salutary act, it must, according to antecedent statements, spring from prevenient grace. Augustine (*De dono persev. xxiii, 64*) in vivid descriptions brings home to the Semipelagians their delusion in thinking that true prayer comes from us and not from God who inspires it.

On an almost identical level with natural prayer stand the positive preparation and dispositions to grace (*capacitas, sive praeparatio positiva*). It often occurs in human life that the positive disposition to a natural good includes in itself a certain claim to satisfaction, as, e.g. thirst of itself calls for quenching. This is still more the case when the disposition has been acquired by a positive preparation for the good in question. Thus the student has acquired by his preparation for the examination a certain claim to be sooner or later admitted to it. But how about grace? Does there exist in man a positive disposition and a claim to grace in the sense that the withholding of this expected blessing would sensibly injure and bitterly disappoint the soul? Or can man, unaided, positively dispose himself for the reception of grace, confident that God will reward his natural efforts with the bestowal of supernatural grace? Both suppositions are untenable. For, according to the express teaching of the Apostle Paul and of the Fathers of the Church, the gratuity of grace

is rooted solely in the supreme freedom of the Divine will, and the nature of man possesses not even the slightest claim to grace. As a consequence, the relapse into Semipelagianism is unavoidable as soon as we seek in the positive disposition or preparation a cause for the bestowal of grace. It should be remembered, moreover, that nature is never found in its pure form, but that, from the beginning, mankind is defiled by original sin. This consideration still more forcibly puts before us the necessity of denying to sinful nature the power to draw down upon itself, like an arid region, the effusion of Divine grace, either by its natural constitution or its own endeavours.

3. Negative disposition or preparation (*capacitas sive praeparatio negativa*) designates, in general, the absence or removal of obstacles which are an impediment to the introduction of a new form, as green wood is dried up to become fit for burning. The question arises, whether the requirement of such merely negative natural preparation is reconcilable with the absolute gratuity of grace. Some of the earlier Schoolmen cited in answer the celebrated much-debated axiom: *Facienti quod in se est, Deus non denegat gratiam* (To the one who does what in him lies, God does not deny grace). If among the proposed interpretations of this proposition we adopt the one asserting that, in consequence of the commendable endeavours of the natural will, God does not withhold from anyone the first grace of vocation, we necessarily fall into the Semipelagian heresy refuted above. In order systematically to exclude this contingency, many Schoolmen thus interpreted the axiom with St. Thomas (Summa I-II:109:6): "To the one who accomplishes what he can with the help of supernatural grace God grants further and more powerful graces up to justification." But, interpreted in this manner the axiom offers nothing new and has nothing to do with the above-proposed question. There remains, therefore, a third interpretation: God, out of mere liberality, does not withhold His grace from the one who accomplishes what he can with his natural moral strength, i.e. from the one who, by deliberate abstention from offences, seeks to dispose God favourably towards him and thus prepares himself negatively for grace. Some theologians (e.g. Vasquez, Glossner) declared even this most mitigated and mildest interpretation to be Semipelagian. Most modern theological authorities, however, with Molina, Suarez, and Lessius, see in it nothing else but the expression of the truth: To the one who prepares himself negatively and places no obstacle to the ever-ready influence of grace, God in general is more inclined to offer his grace than to another who wallows in the mire of sin and thus neglects to accomplish what lies in his power. In this manner the cause of the distribution of grace is located not in the dignity of nature, but, conformably to orthodoxy, in the universal will of God to save mankind

The Universality of Actual Grace

The universality of grace does not conflict with its gratuity, if God, in virtue of his will to save all men, distributes with sovereign liberty his graces to all adults without exception. But if the universality of grace is only a result of the Divine will to save all mankind, we must first turn our attention to the latter as the basis of the former.

1. God's Will to Save All Men

By the "will to save" (*voluntas Dei salvifica*) theologians understand the earnest and sincere will of God to free all men from sin and lead them to supernatural happiness. As this will refers to

human nature as such, it is a merciful will, also called "first" or "antecedent will" (*voluntas prima sive antecedens*). It is not absolute, but conditional, inasmuch as no one is saved if he does not will it or does not comply with the conditions laid down by God for salvation. The "second" or "consequent will" (*voluntas secunda sive consequens*), on the contrary, can only be absolute, i.e. a will of justice, as God must simply reward or punish according as one has deserved by his works heaven or hell. We consider here solely the "antecedent will" to save; regarding the will of justice see PREDESTINATION.

Against the error of the Calvinists and Jansenists the ecclesiastical teaching authority (cf. Council of Trent, Sess. VI, can. xvii; Prop. v Jansenii damn., in Denzinger, n. 827, 1096) proclaimed in the first place the doctrine that God seriously wills the salvation not of the predestined only, but also of other men. As the Church obliged all her faithful to the recital of the passage of the creed, "Qui propter nos homines et propter nostram salutem descendit de caelis", it is also established with certainty of faith that at least all the faithful are included in the universality of salvation willed by God. Not to mention the touching scene in which Jesus weeps over the impenitent Jerusalem (cf. Matt., xxiii, 37), the following is the declaration of the Saviour himself respecting believers: "For God so loved the world, as to give his only-begotten Son; that whosoever believeth in him, may not perish, but may have life everlasting" (John, iii, 16). Far from limiting the will to save to these two classes of men, the predestined and believers, theologians adhere to the theological conclusion that God, without regard to original sin, wills the eternal salvation of all the posterity of Adam. The range of this will certainly extends further than the circle of believers, the eternal reprobation of many of whom is a notorious fact. For Pope Alexander VIII (1690) condemned the proposition that Christ died "for all the faithful and only for them" (*pro omnibus et solis fidelibus*.--See Denzinger, n. 1294). The foreknowledge of original sin is no reason for God to except some men from his will of redemption, as the Calvinist sect called Infralapsarians or Postlapsarians (from *infra*, or *post*, *lapsum*) asserted in Holland against the strictly Calvinist opinion of those called Supralapsarians or Antelapsarians (from *supra*, or *ante*, *lapsum*.--See ARMINIANISM). In proof of the Catholic contention, the Council of Trent (Sess. VI, cap. ii) rested on the Biblical text which exhibits the propitiatory sacrifice of Christ as offered not only for our sins, "but also for those of the whole world" (I John, ii, 2). We possess, besides, two classical Scriptural passages which exclude all doubt. The Book of Wisdom (xi, 24 sqq.) eulogizes in stirring language the all-exceeding mercy of God and bases its universality on the omnipotence of God (*quia omnia potes*), on his universal domination (*quoniam tua sunt; diligis omnia, quae fecisti*), and on his love for souls (*qui amat animas*). Wherever, therefore, Divine omnipotence and domination extend, wherever immortal souls are to be found, thither also the will to grant salvation extends, so that it cannot be exclusive of any human being. After St. Paul (I Tim., ii, 1 sqq.) has ordained prayers for all men and proclaimed them "acceptable in the sight of God our Saviour, who will have all men to be saved" (*omnes homines vult salvos fieri*), he adds a threefold motivation: "For there is one God, and one mediator of God and men, the man Christ Jesus: who gave himself a redemption for all" (1. c.). Hence it is just as true that the will to grant salvation extends to all men as it is that God is the God of all men,

and that Christ as mediator assumed the nature of all men and redeemed them on the Cross. In regard to tradition, Passaglia, as early as 1851, brilliantly demonstrated the universality of this Divine intention from two hundred Fathers of the Church and ecclesiastical writers. Augustine alone presents some difficulty. It may, however, be considered as certain to-day that the great Bishop of Hippo interpreted in the year 412 the Pauline text with all the other Fathers of the Church in the sense of a universal will to save all men without exception and that subsequently he never explicitly retracted this view (*De spir. et lit.*, xxiii, 58). But it is equally certain that from 421 onwards (cf. *Enchir.*, xxvii, 103; *Contr. Julian.*, IV, viii, 42; *De corr. et grat.*, xv, 47) he attempted such tortuous and violent interpretations of the clear, unmistakable text that the Divine will regarding human salvation was no longer universal, but particular. The mystery can only be solved by the admission that Augustine still believed in a plurality of literal senses in the Bible (cf. *Confes.* XII, xvii sqq.). To avoid the necessity of imputing to the Holy Ghost the inspiration of contradictions in the same text, he conceived in his three divergent interpretations the Divine will concerning salvation as the "second" or "consequent will", which, as absolute will destining men to eternal happiness, must naturally be particular, no less than the consequent will affecting the reprobate (of. J.B. Faure, "Notae in Enchir. s. Augustini", c. 103, p. 195 sqq., Naples, 1847). The most difficult problem concerning this Divine will to save all men, a real *crux theologorum* lies in the mysterious attitude of God towards children dying without baptism. Did God sincerely and earnestly will the salvation also of the little ones who, without fault of their own, fail to receive the baptism of water or blood and are thus forever deprived of the beatific vision? Only a few theologians (e.g. Bellarmine, Vasquez) are bold enough to answer this question in the negative. Either invincible ignorance, as among the pagans, or the physical order of nature, as in still-births, precludes the possibility of the administration of baptism without the least culpability on the part of the children. The difficulty lies, therefore, in the fact that God, the author of the natural order, eventually declines to remove the existing obstacles by means of a miracle. The well-meant opinion of some theologians (Arrubal, Kilber, Mannens) that the whole and full guilt falls in all instances not on God, but on men (for example, on the imprudence of the mothers), is evidently too airy an hypothesis to be entitled to consideration. The subterfuge of Klee, the writer on dogma, that self-consciousness is awakened for a short time in dying children, to render baptism of desire possible to them, is just as unsatisfactory and objectionable as Cardinal Cajetan's admission, disapproved of by Pius X, that the prayer of Christian parents, acting like a baptism of desire, saves their children for heaven. We are thus confronted with an unsolved mystery. Our ignorance of the manner does not destroy, however, the theological certainty of the fact. For the above-cited Biblical texts are of such unquestionable universality that it is impossible to exclude a priori millions of children from the Divine will to save humankind.--Cf. Bolgeni, "Stato dei bambini morti senza battesimo" (Rome, 1787); Didiot, "Ungetauft verstorbene Kinder, Dogmatische Trostbriefe" (Kempen, 1898); a. Seitz, "Die Heilsnotwendigkeit der Kirche" (Freiburg, 1903), pp. 301 sqq.

2. *The Universality of Grace*

The universality of grace is a necessary consequence of the will to save all men. For adults this will transforms itself into the concrete Divine will to distribute "sufficient" graces; it evidently involves no obligation on God to bestow only "efficacious" graces. If it can be established, therefore, that God grants to the three classes of the just, sinners, and infidels truly sufficient graces for their eternal salvation, the proof of the universality of grace will have been furnished. Without prejudice to this universality, God may either await the moment of its actual necessity before bestowing grace, or He may, even in time of need (e.g. in vehement temptation), grant immediately only the grace of prayer (*gratia orationis sive remote sufficiens*). But in the latter case he must be ever ready to confer immediate grace for action (*gr. operationis s. proxime sufficiens*), if the adult has made a faithful use of the grace of prayer.

So far as the category of the just is concerned, the heretical proposition of Jansen, that "the observance of some commandments of God is impossible to the just for want of grace" (see Denzinger, n. 1092), had already been exploded by the anathema of the Council of Trent (see Council of Trent, Sess. VI, can. xviii). In fact Holy Writ teaches concerning the just, that the yoke of Jesus is sweet, and His burden light (Matt., xi, 30), that the commandments of God are not heavy (I John, v, 3), that "God is faithful, who will not suffer you to be tempted above that which you are able: but will make also with temptation issue, that you may be able to bear it" (I Cor., x, 13). These statements warrant not only the full possibility of the observance of the Divine commandments and the triumph over vehement temptation; they virtually express simultaneously the concession of the necessary grace without which all these salutary acts are known to be absolutely impossible. It is true that in the polemical writings of some Fathers of the Church against the Pelagians and Semipelagians we read the proposition: "The grace of God is not granted to all." But a closer examination of the passages immediately reveals the fact that they speak of efficacious, not of sufficient, grace. This distinction is expressly stated by the anonymous writer of the fifth century whom Pope Gelasius commends as an "experienced ecclesiastical teacher" (*probatus ecclesiae magister*). In his excellent work "De vocatione gentium", he differentiates the "general" (*benignitas Dei generalis*) and the "particular" economy of grace (*specialis misericordia*), referring the former to the distribution of sufficient, the latter to that of efficacious, graces. We come to the second class, that of Christian sinners, among whom we reckon apostates and formal heretics, as these can hardly be placed on a par with the heathen. In their valuation of the distribution of grace, theologians distinguish somewhat sharply between ordinary sinners (among whom they include habitual and relapsing sinners) and those sinners whose intellect is blinded, and whose heart is hardened, the so-called obdurate sinners (*obcaecati et indurati, impaenitentes*). The bestowal of grace on the former group is, they say, of a higher degree of certainty than its concession to the latter, although for both the universality of sufficient grace is beyond any doubt. Not only is it said of sinners in general: "I desire not the death of the wicked, but that the wicked turn from his way, and live" (Ezech., xxxiii, 11), and again: "The Lord . . . dealeth patiently for your sake, not willing that any should perish, but that all should return to penance" (II Peter, iii, 9), but even the obdurate and impenitent sinners are energetically summoned by the Bible to dutiful penance or at least are most

vehemently are reprimanded because of their wickedness (Is. lxxv 2; Rom., ii, 4; Acts, vii, 51). Now where a duty of conversion exists, the necessary grace must be at hand without which no conversion is possible. For, as Augustine (De nat. et grat., xliiii, n. 50) affirms: "Deus impossibilia non jubet" (God does not give impossible orders). Obduracy, however, forms such a powerful obstacle to conversion that some ancient theologians embraced the untenable opinion that God finally completely withdraws from these sinners, a withdrawal due to His mercy, which desires to save them from a more severe punishment in hell. But St. Thomas Aquinas (De verit., Q. xxiv, a. 11) stated that "complete obduracy" (*obstinatio perfecta*), or absolute impossibility of conversion, begins only in hell itself "incomplete obduracy", on the contrary, ever presents on earth in the enfeebled moral affections of the heart a point of contact through which the appeal of grace may obtain entrance. Were the rigorist opinion of God's complete abandonment of the obdurate correct, despair of God's mercy would be perfectly justified in such souls. The Catholic catechism, however, presents this as a new grievous sin.

The third and last question arises: Is the grace of God also conceded to the heathen? The Divine readiness to grant assistance also to the heathen (see Denzinger, n. 1295, 1379) is a certain truth confirmed by the Church against the Jansenists Arnauld and Quesnel. To question it is to deny the above-demonstrated intention of God to save all men; for the overwhelming majority of mankind would fall outside its range. The Apostle of the Gentiles, Paul (Rom., ii, 6 sqq.), lays stress on God's impartiality towards Jews and Greeks, without "respect of persons", on the Day of Judgment, when he will reward also the Greek "that worketh good" with eternal life. The Fathers of the Church, as Clement of Rome (I ep. ad Cor. vii), Clement of Alexandria (Cohort. ad gent., 9), and Chrysostom (Hom. viii in John, n. 1), do not doubt the dispensation of sufficient graces to the nations "that sit in darkness and in the shadow of death". Orosius (De arbitr. libert., n. 19), a disciple of St. Augustine, proceeds so far in his optimism as to believe in this distribution of grace "quotidie per tempora, per dies, per momenta, per *atoma* et cunctis et singulis" (daily through the seasons, through the days, through the moments, through the smallest possible divisions of time, and to all men and every man). But the clearer the fact, the more obscure the manner. In what way, one instinctively asks, did God provide for the salvation of the heathen? Theologians to-day generally give the following presentation of the process: It is presupposed that, according to Hebr., xi, 6, the two dogmas of the existence of God and of future retribution must be, in all instances, believed not only, by necessity of means (*necessitate medii*), but also with explicit faith (*fide explicita*) before the process of justification can be initiated. As a consequence, God will not refrain in extraordinary cases from miraculous intervention in order to save a noble-minded heathen who conscientiously observes the natural moral law. He may either, in a miraculous manner, depute a missionary to him (Acts, i, 1 sqq.), or teach him the revealed truth through an angel (Cardinal Toletus), or he may come to his assistance by an interior private revelation. It is clear, nevertheless, that these different ways cannot be considered as everyday ordinary means. For the multitude of heathen this assistance must be found in a universal means of salvation equally independent of wonderful events and of the preaching of Christian missionaries. Some modern theologians discover it in the circumstance that the two

dogmas mentioned above were already contained in the primitive supernatural revelation made in Paradise for all mankind. These truths were subsequently spread over the whole world, survive, as a meagre remnant, in the traditions of the pagan nations, and are orally transmitted from generation to generation as supernatural truths of salvation. The knowableness of these dogmas by unaided reason does not constitute an objection, for they are simultaneously natural and revealed truths. Once the condition of external preaching (cf. Rom., x, 17: "fides ex auditu") has thus been fulfilled, it only remains for God to hasten to man's assistance with his supernatural illuminating and strengthening grace and to initiate with the faith in God and retribution (which implicitly includes all else necessary for salvation) the process of justification. In this manner the attainment of the state of grace and of eternal glory becomes possible for the heathen who faithfully co-operates with the grace of vocation. However all this may be, one thing is certain: every heathen who incurs eternal damnation will be forced on the last day to the honest confession: "It is not for want of grace, but through my own fault that I am lost."

(For the relation between grace and liberty, see CONTROVERSIES ON GRACE.)

J. POHLE

Sanctifying Grace

Sanctifying Grace

Grace (*gratia*, *Charis*), in general, is a supernatural gift of God to intellectual creatures (men, angels) for their eternal salvation, whether the latter be furthered and attained through salutary acts or a state of holiness. Eternal salvation itself consists in heavenly bliss resulting from the intuitive knowledge of the Triune God, who to the one not endowed with grace "inhabiteth light inaccessible" (I Tim., vi, 16). Christian grace is a fundamental idea of the Christian religion, the pillar on which, by a special ordination of God, the majestic edifice of Christianity rests in its entirety. Among the three fundamental ideas -- sin, redemption, and grace -- grace plays the part of the means, indispensable and Divinely ordained, to effect the redemption from sin through Christ and to lead men to their eternal destiny in heaven.

Before the Council of Trent, the Schoolmen seldom used the term *gratia actualis*, preferring *auxilium speciale*, *motio divina*, and similar designations; nor did they formally distinguish actual grace from sanctifying grace. But, in consequence of modern controversies regarding grace, it has become usual and necessary in theology to draw a sharper distinction between the transient help to act (actual grace) and the permanent state of grace (sanctifying grace). For this reason we adopt this distinction as our principle of division in our exposition of the Catholic doctrine. In this article, we shall treat only of sanctifying grace. (See also ACTUAL GRACE.)

Sanctifying grace

Since the end and aim of all efficacious grace is directed to the production of sanctifying grace where it does not already exist, or to retain and increase it where it is already present, its excellence, dignity, and importance become immediately apparent; for holiness and the sonship of God depend

solely upon the possession of sanctifying grace, wherefore it is frequently called simply *grace* without any qualifying word to accompany it as, for instance, in the phrases "to live in grace" or "to fall from grace".

All pertinent questions group themselves around three points of view from which the subject may be considered:

- I. The preparation for sanctifying grace, or the process of justification.
- II. The nature of sanctifying grace.
- III. The characteristics of sanctifying grace.

I. JUSTIFICATION: THE PREPARATION FOR SANCTIFYING I. JUSTIFICATION: THE PREPARATION FOR SANCTIFYING

(For an exhaustive treatment of justification, see the article JUSTIFICATION).

The word *justification* (*justificatio*, from *justum facere*) derives its name from justice (*justitia*), by which is not merely meant the cardinal virtue in the sense of a constant purpose to respect the rights of others (*suum cuique*), nor is the term taken in the concept of all those virtues which go to make up the moral law, but connotes, especially, the whole inner relation of man to God as to his supernatural end. Every adult soul stained either with original sin or with actual mortal sin (children are of course excepted) must, in order to arrive at the state of justification, pass through a short or long process of justification, which may be likened to the gradual development of the child in its mother's womb. This development attains its fullness in the birth of the child, accompanied by the anguish and suffering with which this birth is invariably attended; our rebirth in God is likewise preceded by great spiritual sufferings of fear and contrition.

In the process of justification we must distinguish two periods: first, the preparatory acts or dispositions (faith, fear, hope, etc.); then the last, decisive moment of the transformation of the sinner from the state of sin to that of justification or sanctifying grace, which may be called the active justification (*actus justificationis*) with this the real process comes to an end, and the state of habitual holiness and sonship of God begins. Touching both of these periods there has existed, and still exists, in part, a great conflict of opinion between Catholicism and Protestantism. This conflict may be reduced to four differences of teaching. By a justifying faith the Church understands qualitatively the theoretical faith in the truths of Revelation, and demands over and above this faith other acts of preparation for justification. Protestantism, on the other hand, reduces the process of justification to merely a fiduciary faith; and maintains that this faith, exclusive even of good works, is all-sufficient for justification, laying great stress upon the scriptural statement *sola fides justificat*. The Church teaches that justification consists of an actual obliteration of sin and an interior sanctification. Protestantism, on the other hand, makes of the forgiveness of sin merely a concealment of it, so to speak; and of the sanctification a forensic declaration of justification, or an external imputation of the justice of Christ. In the presentation of the process of justification, we will everywhere note this fourfold confessional conflict.

A. The Fiduciary Faith of the Protestants

The Council of Trent (Sess. VI, cap. vi, and can. xii) decrees that not the fiduciary faith, but a real mental act of faith, consisting of a firm belief in all revealed truths makes up the faith of justification and the "beginning, foundation, and source" (loc. cit., cap. viii) of justification. What did the Reformers with Luther understand by fiduciary faith? They understood thereby not the first or fundamental disposition or preparation for the (active) justification, but merely the spiritual grasp (*instrumentum*) with which we seize and lay hold of the external justice of Christ and with it, as with a mantle of grace, cover our sins (which still continue to exist interiorly) in the infallible, certain belief (*fiducia*) that God, for the sake of Christ, will no longer hold our sin against us. Hereby the seat of justifying faith is transferred from the intellect to the will; and faith itself, in as far as it still abides in the intellect, is converted into a certain belief in one's own justification. The main question is: "Is this conception Biblical?" Murray (*De gratia*, disp. x, n. 18, Dublin, 1877) states in his statistics that the word *fides* (*pistis*) occurs eighty times in the Epistle to the Romans and in the synoptic Gospels, and in only six of these can it be construed to mean *fiducia*. But neither here nor anywhere else does it ever mean the conviction of, or belief in, one's own justification, or the Lutheran fiduciary faith. Even in the leading text (Rom., iv, 5) the justifying faith of St. Paul is identical with the mental act of faith or belief in Divine truth; for Abraham was justified not by faith in his own justification, but by faith in the truth of the Divine promise that he would be the "father of many nations" (cf. Rom., iv, 9 sqq.). In strict accord with this is the Pauline teaching that the faith of justification, which we must profess "with heart and mouth", is identical with the mental act of faith in the Resurrection of Christ, the central dogma of Christianity (Rom., x, 9 sq.) and that the minimum expressly necessary for justification is contained in the two dogmas: the existence of God, and the doctrine of eternal reward (Heb., xi, 6).

The Redeemer Himself made belief in the teaching of the gospel a necessary condition for salvation, when he solemnly commanded the Apostles to preach the Gospel to the whole world (Mark, xvi, 15). St. John the Evangelist declares his Gospel has been written for the purpose of exciting belief in the Divine Sonship of Christ, and links to this faith the possession of eternal life (John, xx, 31). Such was the mind of the Christian Church from the beginning. To say nothing of the testimony of the Fathers (cf. Bellarmine, *De justific.*, I, 9), Saint Fulgentius, a disciple of St. Augustine, in his precious booklet, "De vera fide ad Petrum", does not understand by true faith a fiduciary faith, but the firm belief in all the truths contained in the Apostles' Creed, and he calls this faith the "Foundation of all good things", and the "Beginning of human salvation" (loc. cit., Prolog.). The practice of the Church in the earliest ages, as shown by the ancient custom, going back to Apostolic times, of giving the catechumens (*katechoumenoi* from *katechein*, *viva voce instruere*) a verbal instruction in the articles of faith and of directing them, shortly before baptism, to make a public recitation of the Apostles' Creed, strengthens this view. After this they were called not *fiduciales* but *fideles*, in contra-distinction to *infidels* and *haeretici* (from *aireisthai*, to select, to proceed eclectically) who rejected Revelation as a whole or in part.

In answer to the theological question: How many truths of faith must one expressly (*fide explicita*) believe under command (*necessitate praecepti*)? theologians say that an ordinary Catholic

must expressly know and believe the most important dogmas and the truths of the moral law, for instance, the Apostles' Creed, the Decalogue, the six precepts of the Church, the Seven Sacraments, the Our Father. Greater things are, of course, expected from the educated, especially from catechists, confessors, preachers wherefore upon these the study of theology rests as an obligation. If the question be put: In how many truths as a means (*necessitate medii*) must one believe to be saved? many catechists answer *Six things*: God's existence; an eternal reward; the Trinity; the Incarnation; the immortality of the soul; the necessity of Grace. But according to St. Paul (Heb., xi, 6) we can only be certain of the necessity of the first two dogmas, while the belief in the Trinity and the Incarnation could not of course be exacted from ante-Christian Judaism or from Paganism. Then, too, belief in the Trinity may be implicitly included in the dogma of God's existence, and belief in the Incarnation in the dogma of the Divine providence, just as the immortality of the soul is implicitly included in the dogma of an eternal reward. However, there arises for any one baptized in the name of the Holy Trinity, and entering thus the Church of Christ, the necessity of making an act of explicit faith (*fides explicita*). This necessity (*necessitas medii*) arises *per accidens*, and is suspended only by a Divine dispensation in cases of extreme necessity, where such an act of faith is either physically or morally impossible, as in the case of pagans or those dying in a state of unconsciousness. For further matter on this point see Pohle, "Lehrbuch der Dogmatik", 4th ed., II, 488 sqq. (Paderborn, 1909).

B. The "Sola Fides" Doctrine of the Protestants

The Council of Trent (Sess. VI, can. ix) decrees that over and above the faith which formally dwells in the intellect, other acts of predisposition, arising from the will, such as fear, hope, love, contrition, and good resolution (loc. cit., cap. vi), are necessary for the reception of the grace of justification. This definition was made by the council as against the second fundamental error of Protestantism, namely that "faith alone justifies" (*sola fides justificat*).

Martin Luther stands as the originator of the doctrine of justification by faith alone, for he hoped that in this way he might be able to calm his own conscience, which was in a state of great perturbation, and consequently he took refuge behind the assertion that the necessity of good works over and above mere faith was altogether a pharisaical supposition. Manifestly this did not bring him the peace and comfort for which he had hoped, and at least it brought no conviction to his mind; for many times, in a spirit of honesty and sheer good nature, he applauded good works, but recognized them only as necessary concomitants, not as efficient dispositions, for justification. This was also the tenor of Calvin's interpretation (Institute, III, 11, 19). Luther was surprised to find himself by his unprecedented doctrine in direct contradiction to the Bible, therefore he rejected the Epistle of St. James as "one of straw" and into the text of St. Paul to the Romans (iii, 28) he boldly inserted the word *alone*. This falsification of the Bible was certainly not done in the spirit of the Apostle's teaching, for nowhere does St. Paul teach that faith alone (without charity) will bring justification, even though we should accept as also Pauline the text given in a different context, that supernatural faith alone justifies but the fruitless works of the Jewish Law do not.

In this statement St. Paul emphasizes the fact that grace is purely gratuitous; that no merely natural good works can merit grace; but he does not state that no other acts in their nature and purport predisposing are necessary for justification over and above the requisite faith. Any other construction of the above passage would be violent and incorrect. If Luther's interpretation were allowed to stand, then St. Paul would come into direct contradiction not only with St. James (ii, 24 sqq.), but also with himself; for, except St. John, the favourite Apostle, he is the most outspoken of all Apostles in proclaiming the necessity and excellence of charity over faith in the matter of justification (cf. I Cor., xiii, 1 sqq.). Whenever faith justifies it is not faith alone, but faith made operative and replenished by charity (cf. Gal., v 6, "fides, quae per caritatem operatur"). In the plainest language the Apostle St. James says this: "ex operibus justificatur homo, et non ex fide tantum" (James, ii, 24); and here, by works, he does not understand the pagan good works to which St. Paul refers in the Epistle to the Romans, or the works done in fulfilment of the Jewish Law, but the-works of salvation made possible by the operation of supernatural grace, which was recognized by St. Augustine (lib. LXXXIII, Q. lxxvi n. 2). In conformity with this interpretation and with this only is the tenor of the Scriptural doctrine, namely, that over and above faith other acts are necessary for justification, such as fear (Ecclus., i, 28), and hope (Rom., viii, 24), charity (Luke, vii, 47), penance with contrition (Luke, xiii, 3; Acts, ii, 38; iii, 19), almsgiving (Dan., iv, 24; Tob., xii, 9). Without charity and the works of charity faith is dead. Faith receives life only from and through charity (James, ii, 26). Only to dead faith (*fides informis*) is the doctrine applied: "Faith alone does not justify". On the other hand, faith informed by charity (*fides formata*) has the power of justification. St. Augustine (De Trinit., XV, 18) expresses it pithily thus: "Sine caritate quippe fides potest quidem esse, sed non et prodesse." Hence we see that from the very beginning the Church has taught that not only faith but that a sincere conversion of heart effected by charity and contrition is also requisite for justification--witness the regular method of administering baptism and the discipline of penance in the early Church.

The Council of Trent (Sess. VI, cap. viii) has, in the light of Revelation, assigned to faith the only correct status in the process of justification, inasmuch as the council, by declaring it to be the "beginning, the foundation, and the root", has placed faith at the very front in the whole process.

Faith is the beginning of salvation, because no one can be converted to God unless he recognize Him as his supernatural end and aim, just as a mariner without an objective and without a compass wanders aimlessly over the sea at the mercy of wind and wave. Faith is not only the initiatory act of justification, but the foundation as well, because upon it all the other predisposing acts rest securely, not in geometric regularity or inert as the stones of a building rest upon a foundation, but organically and imbued with life as the branches and blossoms spring from a root or stem. Thus there is preserved to faith in the Catholic system its fundamental and co-ordinating significance in the matter of justification. A masterly, psychological description of the whole process of justification, which even Ad. Harnack styles "a magnificent work of art", will be found in the famous cap. vi, "Disponuntur" (Denzinger, n. 798). According to this the process of justification follows a regular order of progression in four stages: from faith to fear, from fear to hope, from hope to incipient

charity, from incipient charity to contrition with purpose of amendment. If the contrition be perfect (*contritio caritate perfecta*), then active justification results, that is, the soul is immediately placed in the state of grace even before the reception of the sacrament of baptism or penance, though not without the desire for the sacrament (*votum sacramenti*). If, on the other hand, the contrition be only an imperfect one (*attritio*), then the sanctifying grace can only be imparted by the actual reception of the sacrament (cf. Trent, Sess. VI, cc. iv and xiv). The Council of Trent had no intention, however, of making the sequence of the various stages in the process of justification, given above, inflexible; nor of making any one of the stages indispensable. Since a real conversion is inconceivable without faith and contrition, we naturally place faith at the beginning and contrition at the end of the process. In exceptional cases, however, for example in sudden conversions, it is quite possible for the sinner to overlap the intervening stages between faith and charity, in which case fear, hope, and contrition are virtually included in charity.

The "justification by faith alone" theory was by Luther styled the article of the standing and falling church (*articulus stantis et cadentis ecclesiae*), and by his followers was regarded as the material principle of Protestantism, just as the sufficiency of the Bible without tradition was considered its formal principle. Both of these principles are un-Biblical and are not accepted anywhere to-day in their original severity, save only in the very small circle of orthodox Lutherans.

The Lutheran Church of Scandinavia has, according to the Swedish theologian Krogh-Tonningh, experienced a silent reformation which in the lapse of the several centuries has gradually brought it back to the Catholic view of justification, which view alone can be supported by Revelation and Christian experience (cf. Dorner, "Geschichte der protestantischen Theologie", 361 sqq., Munich, 1867; Mohler, "Symbolik", 16, Mainz, 1890; "Realencyk. fur prot. Theol.", s.v. "Rechtfertigung").

C. The Protestant Theory of Non-Imputation

Embarrassed by the fatal notion that original sin wrought in man an utter destruction extending even to the annihilation of all moral freedom of election, and that it continues its existence even in the just man as sin in the shade of an ineradicable concupiscence, Martin Luther and Calvin taught very logically that a sinner is justified by fiduciary faith, in such a way, however, that sin is not absolutely removed or wiped out, but merely *covered up* or not held against the sinner. According to the teaching of the Catholic Church, however, in active justification an actual and real forgiveness of sins takes place so that the sin is really removed from the soul, not only original sin by baptism but also mortal sin by the sacrament of penance (Trent, Sess. V, can. v; Sess. VI, cap. xiv; Sess. XIV, cap. ii). This view is entirely consonant with the teaching of Holy Scripture, for the Biblical expressions: "blotting out" as applied to sin (Ps., 1, 3; Is., xliii, 25; xlv, 22; Acts, iii, 19), "exhausting" (Heb., ix, 28), "taking away" [II Kings, xii, 13; I Par., xxi, 8; Mich., vii, 18; Ps. x (Heb.), 15; cii, 12], cannot be reconciled with the idea of a mere covering up of sin which is supposed to continue its existence in a covert manner. Other Biblical expressions are just as irreconcilable with this Lutheran idea, for instance, the expression of "cleansing" and "washing away" the mire of sin (Ps., 1, 4, 9; Is., i, 18; Ezech., xxxvi, 25; I Cor., vi 11; Apoc., i, 5), that of coming "from death to life" (Col. ii., 13; I John, iii, 14); the removal from darkness to light (Eph., v, 9). Especially

these latter expressions are significant, because they characterize the justification as a movement from one thing to another which is directly contrary or opposed to the thing from which the movement is made. The opposites, black and white, night and day, darkness and light, life and death, have this peculiarity, that the presence of one means the extinction of its opposite. Just as the sun dispels all darkness, so does the advent of justifying grace drive away sin, which ceases from that on to have an existence at least in the ethical order of things, though in the knowledge of God it may have a shadowy kind of existence as something which once was, but has ceased to be. It becomes intelligible, therefore, that in him who is justified, though concupiscence remain, there is "no condemnation" (Rom., viii, 1); and why, according to James (i, 14 sqq.), concupiscence as such is really no sin; and it is apparent that St. Paul (Rom., vii, 17) is speaking only figuratively when he calls concupiscence sin, because it springs from sin and brings sin in its train. Where in the Bible the expressions "covering up" and "not imputing" sin occur, as for instance in Ps. xxxi, 1 sq., they must be interpreted in accordance with the Divine perfections, for it is repugnant that God should declare any one free from sin to whom sin is still actually cleaving. It is one of God's attributes always to substantiate His declarations; if He covers sin and does not impute it, this can only be effected by an utter extinction or blotting out of the sin. Tradition also has always taught this view of the forgiveness of sins. (See Denifle, "Die abendländischen Schriftausleger bis Luther uber justitia Dei and justificatio", Mainz, 1905)

4. The Protestant Theory of Imputation

Calvin rested his theory with the negative moment, holding that justification ends with the mere forgiveness of sin, in the sense of not imputing the sin; but other Reformers (Luther and Melancthon) demanded a positive moment as well, concerning the nature of which there was a very pronounced disagreement. At the time of Osiander (d. 1552) there were from fourteen to twenty opinions on the matter, each differing from every other; but they had this in common that they all denied the interior holiness and the inherent justification of the Catholic idea of the process. Among the adherents of the Augsburg Confession the following view was rather generally accepted: The person to be justified seizes by means of the fiduciary faith the exterior justice of Christ, and therewith covers his sins; this exterior justice is imputed to him as if it were his own, and he stands before God as having an outward justification, but in his inner self he remains the same sinner as of old. This exterior, forensic declaration of justification was received with great acclaim by the frenzied, fanatical masses of that time, and was given wide and vociferous expression in the cry: "Justitia Christi *extra nos*".

The Catholic idea maintains that the formal cause of justification does not consist in an exterior imputation of the justice of Christ, but in a real, interior sanctification effected by grace, which abounds in the soul and makes it permanently holy before God (cf. Trent, Sess. VI, cap. vii; can. xi). Although the sinner is justified by the justice of Christ, inasmuch as the Redeemer has merited for him the grace of justification (*causa meritoria*), nevertheless he is formally justified and made holy by his own personal justice and holiness (*causa formalis*), just as a philosopher by his own inherent learning becomes a scholar, not, however, by any exterior imputation of the wisdom of

God (Trent, Sess. VI, can. x). To this idea of inherent holiness which theologians call sanctifying grace are we safely conducted by the words of Holy Writ.

To prove this we may remark that the word *justificare* (Gr. *dikaioun*) in the Bible may have a fourfold meaning:

- The forensic declaration of justice by a tribunal or court (cf. Is., v, 23; Prov., xvii, 15).
- The interior growth in holiness (Apoc., xxii, 11).
- As a substantive, *justificatio*, the external law (Ps. cxviii, 8, and elsewhere).
- The inner, immanent sanctification of the sinner.

Only this last meaning can be intended where there is mention of passing to a new life (Eph., ii, 5; Col., ii, 13; I John, iii, 14); renovation in spirit (Eph., iv, 23 sq.); supernatural likeness to God (Rom., viii, 29; II Cor., iii, 18; II Pet., i, 4) a new creation (II Cor., v, 17; Gal., vi, 15); rebirth in God (John, iii, 5; Tit., iii, 5; James, i, 18), etc., all of which designations not only imply a setting aside of sin, but express as well a permanent state of holiness. All of these terms express not an aid to action, but rather a form of being; and this appears also from the fact that the grace of justification is described as being "poured forth in our hearts" (Rom., v, 5); as "the spirit of adoption of sons" of God (Rom., viii, 15); as the "spirit, born of the spirit" (John, iii, 6); making us "conformable to the image of the Son" (Rom., viii, 28); as a participation in the Divine nature (II Pet., i, 4); the abiding seed in us (I John, iii, 9), and so on. As regards the tradition of the Church, even Harnack admits that St. Augustine faithfully reproduces the teaching of St. Paul. Hence the Council of Trent need not go back to St. Paul, but only to St. Augustine, for the purpose of demonstrating that the Protestant theory of imputation is at once against St. Paul and St. Augustine.

Moreover, this theory must be rejected as not being in accordance with reason. For in a man who is at once sinful and just, half holy and half unholy, we cannot possibly recognize a masterpiece of God's omnipotence, but only a wretched caricature, the deformity of which is exaggerated all the more by the violent introduction of the justice of Christ. The logical consequences which follow from this system, and which have been deduced by the Reformers themselves, are indeed appalling to Catholics. It would follow that, since the justice of Christ is always and ever the same, every person justified, from the ordinary everyday person to the Blessed Virgin, the Mother of God, would possess precisely the same justification and would have, in degree and kind, the same holiness and justice. This deduction was expressly made by Luther. Can any man of sound mind accept it? If this be so, then the justification of children by baptism is impossible, for, not having come to the age of reason, they cannot have the fiduciary faith wherewith they must seize the justice of Christ to cover up their original sin. Very logically, therefore, the Anabaptists, Mennonites, and Baptists reject the validity of infant baptism. It would likewise follow that the justification acquired by faith alone could be forfeited only by infidelity, a most awful consequence which Luther (De Wette, II, 37) clothed in the following words, though he could hardly have meant them seriously: "Pecca fortiter et crede fortius et nihil nocebunt centum homicidia et mille stupra." Luckily this inexorable logic falls powerless against the decency and good morals of the Lutherans of our time, and is, therefore, harmless now, though it was not so at the time of the Peasants' War in the Reformation.

The Council of Trent (Sess. VI, cap. vii) defined that the inherent justice is not only the formal cause of justification, but as well the only formal cause (*unica formalis causa*); this was done as against the heretical teaching of the Reformer Bucer (d. 1551), who held that the inherent justice must be supplemented by the imputed justice of Christ. A further object of this decree was to check the Catholic theologian Albert Pighius and others, who seemed to doubt that the inner justice could be ample for justification without being supplemented by another favour of God (*favor Dei externus*) (cf. Pallavacini, Hist. Conc. Trident., VIII, 11, 12). This decree was well-founded, for the nature and operation of justification are determined by the infusion of sanctifying grace. In other words without the aid of other factors, sanctifying grace in itself possesses the power to effect the destruction of sin and the interior sanctification of the soul to be justified. For since sin and grace are diametrically opposed to each other, the mere advent of grace is sufficient to drive sin away; and thus grace, in its positive operations, immediately brings about holiness, kinship of God, and a renovation of spirit, etc. From this it follows that in the present process of justification, the remission of sin, both original and mortal, is linked to the infusion of sanctifying grace as a *conditio sine qua non*, and therefore a remission of sin without a simultaneous interior sanctification is theologically impossible. As to the interesting controversy whether the incompatibility of grace and sin rests on merely moral, or physical, or metaphysical contrariety, refer to Pohle ("Lehrbuch der Dogmatik", II 511 sqq., Paderborn, 1909); Scheeben ("Die Myst. des Christentums", 543 sqq., Freiburg, 1898).

II. THE NATURE OF SANCTIFYING GRACE

The real nature of sanctifying grace is, by reason of its direct invisibility, veiled in mystery, so that we can learn its nature better by a study of its formal operations in the soul than by a study of the grace itself. Indissolubly linked to the nature of this grace and to its formal operations are other manifestations of grace which are referable not to any intrinsic necessity but to the goodness of God; accordingly three questions present themselves for consideration:

- (a) The inner nature of sanctifying grace.
- (b) Its formal operations.
- (c) Its supernatural retinue.

A. The Inner Nature

1. As we have seen that sanctifying grace designates a grace producing a permanent condition, it follows that it must not be confounded with a particular actual grace nor with a series of actual graces, as some ante-Tridentine theologians seem to have held. This view is confirmed by the fact that the grace imparted to children in baptism does not differ essentially from the sanctifying grace imparted to adults, an opinion which was not considered as altogether certain under Pope Innocent III (1201), was regarded as having a high degree of probability by Pope Clement V (1311), and was defined as certain by the Council of Trent (Sess. V, can. iii-v). Baptized infants cannot be justified by the use of actual grace, but only by a grace which effects or produces a certain condition in the recipient. Is this grace of condition or state, as Peter Lombard (Sent., I, dist. xvii, 18) held,

identical with the Holy Spirit, whom we may call the permanent, uncreated grace (*gratia increata*)? It is quite impossible. For the person of the Holy Ghost cannot be poured out into our hearts (Rom., v, 5), nor does it cleave to the soul as inherent justice (Trent, sess. VI, can. xi), nor can it be increased by good works (loc. cit., can. xxiv), and all this is apart from the fact that the justifying grace in Holy Writ is expressly termed a "gift [or grace] of the Holy Ghost" (Acts, ii, 38; x, 45), and as the abiding seed of God (I John, iii, 9). From this it follows that the grace must be as distinct from the Holy Ghost as the gift from the giver and the seed from the sower; consequently the Holy Spirit is our holiness, not by the holiness by which He Himself is holy, but by that holiness by which He makes us holy. He is not, therefore, the *causa formalis*, but merely the *causa efficiens*, of our holiness.

Moreover, sanctifying grace as an active reality, and not a merely external relation, must be philosophically either substance or accident. Now, it is certainly not a substance which exists by itself, or apart from the soul, therefore it is a physical accident inhering in the soul, so that the soul becomes the subject in which grace inheres; but such an accident is in metaphysics called quality (*qualitas, poiotes*) therefore sanctifying grace may be philosophically termed a "permanent, supernatural quality of the soul", or, as the Roman Catechism (P. II, cap. ii, de bap., n. 50) says "divina qualitas in anima inhaerens".

2. Sanctifying grace cannot be termed a habit (*habitus*) with the same precision as it is called a quality. Metaphysicians enumerate four kinds of quality:

- habit and disposition;
- power and want of power;
- passion and passible quality, for example, to blush, pale with wrath;
- form and figure (cf. Aristotle, Categ. VI).

Manifestly sanctifying grace must be placed in the first of these four classes, namely habit or disposition; but as dispositions are fleeting things, and habit has a permanency theologians agree that sanctifying grace is undoubtedly a habit, hence the name: Habitual Grace (*gratia habitualis*). *Habitus* is subdivided into *habitus entitativus* and *habitus operativus*. A *habitus entitativus* is a quality or condition added to a substance by which condition or quality the substance is found permanently good or bad, for instance: sickness or health, beauty, deformity, etc. *Habitus operativus* is a disposition to produce certain operations or acts, for instance, moderation or extravagance; this *habitus* is called either virtue or vice just as the soul is inclined thereby to a moral good or to a moral evil. Now, since sanctifying grace does not of itself impart any such readiness, celerity, or facility in action, we must consider it primarily as a *habitus entitativus*, not as a *habitus operativus*. Therefore, since the popular concept of *habitus*, which usually designates a readiness, does not accurately express the idea of sanctifying grace, another term is employed, i.e. a quality after the manner of a habit (*qualitas per modum habitus*), and this term is applied with Bellarmine (De grat. et lib. arbit., I, iii). Grace, however, preserves an inner relation to a supernatural activity, because it does not impart to the soul the act but rather the disposition to perform supernatural and meritorious acts therefore grace is remotely and mediately a disposition to act (*habitus remote operativus*). On

account of this and other metaphysical subtleties the Council of Trent has refrained from applying the term *habitus* to sanctifying grace.

In the order of nature a distinction is made between natural and acquired habits (*habitus innatus*, and *habitus acquisitus*), to distinguish between natural instincts, such, for instance, as are common to the brute creation, and acquired habits such as we develop by practice, for instance skill in playing a musical instrument etc. But grace is supernatural, and cannot, therefore, be classed either as a natural or an acquired habit; it can only be received, accordingly, by infusion from above, therefore it is a supernatural infused habit (*habitus infusus*).

3. If theologians could succeed in establishing the identity sometimes maintained between the nature of grace and charity, a great step forward would be taken in the examination of the nature of grace, for we are more familiar with the infused virtue of charity than with the hidden mysterious nature of sanctifying grace. For the identity of grace and charity some of the older theologians have contended--Peter Lombard, Scotus, Bellarmine, Lessius, and others--declaring that, according to the Bible and the teaching of the Fathers, the process of justification may be at times attributable to sanctifying grace and at other times to the virtue of charity. Similar effects demand a similar cause; therefore there exists, in this view, merely a virtual distinction between the two, inasmuch as one and the same reality appears under one aspect as grace, and under another as charity. This similarity is confirmed by the further fact that the life or death of the soul is occasioned respectively by the presence in, or absence from, the soul of charity. Nevertheless, all these arguments may tend to establish a similarity, but do not prove a case of identity. Probably the correct view is that which sees a real distinction between grace and charity, and this view is held by most theologians, including St. Thomas Aquinas and Suarez. Many passages in Scripture and patrology and in the enactments of synods confirm this view. Often, indeed, grace and charity are placed side by side, which could not be done without a pleonasm if they were identical. Lastly, sanctifying grace is a *habitus entitativus*, and theological charity a *habitus operativus*: the former, namely sanctifying grace, being a *habitus entitativus*, informs and transforms the substance of the soul; the latter, namely charity, being a *habitus operativus*, supernaturally informs and influences the will (cf. Ripalda, "De ente sup.", disp. cxxiii; Billuart, "De gratia", disp. iv, 4).

4. The climax of the presentation of the nature of sanctifying grace is found in its character as a participation in the Divine nature, which in a measure indicates its specific difference. To this undeniable fact of the supernatural participation in the Divine nature is our attention directed not only by the express words of Holy Writ: *ut efficiamini divinae consortes naturae* (II Pet., i, 4), but also by the Biblical concept of "the issue and birth from God", since the begotten must receive of the nature of the progenitor, though in this case it only holds in an accidental and analogical sense. Since this same idea has been found in the writings of the Fathers, and is incorporated in the liturgy of the Mass, to dispute or reject it would be nothing short of temerity. It is difficult to excogitate a manner (*modus*) in which this participation of the Divine nature is effected. Two extremes must be avoided, so that the truth will be found.

An exaggerated theory was taught by certain mystics and quietists, a theory not free from pantheistic taint. In this view the soul is formally changed into God, an altogether untenable and impossible hypothesis, since concupiscence remains even after justification, and the presence of concupiscence is, of course, absolutely repugnant to the Divine nature.

Another theory, held by the Scotists, teaches that the participation is merely of a moral-juridical nature, and not in the least a physical participation. But since sanctifying grace is a physical accident in the soul, one cannot help referring such participation in the Divine nature to a physical and interior assimilation with God, by virtue of which we are permitted to share those goods of the Divine order to which God alone by His own nature can lay claim. In any event the "participatio divinae naturae" is not in any sense to be considered a deification, but only a making of the soul "like unto God". To the difficult question: Of which special attribute of God does this participation partake? Theologians can answer only by conjectures. Manifestly only the communicable attributes can at all be considered in the matter, wherefore Gonet (Clyp. thomist., IV, ii, x) was clearly wrong when he said that the attribute of participation was the *aseitas*, absolutely the most incommunicable of all the Divine attributes. Ripalda (loc. cit., disp. xx; sect. 14) is probably nearer the truth when he suggests Divine sanctity as the attribute, for the very idea of sanctifying grace brings the sanctity of God into the foreground.

The theory of Suarez (De grat., VII, i, xxx), which is also favoured by Scripture and the Fathers, is perhaps the most plausible. In this theory sanctifying grace imparts to the soul a participation in the Divine spirituality, which no rational creature can by its own unaided powers penetrate or comprehend. It is, therefore, the office of grace to impart to the soul, in a supernatural way, that degree of spirituality which is absolutely necessary to give us an idea of God and His spirit, either here below in the shadows of earthly existence, or there above in the unveiled splendour of Heaven. If we were asked to condense all that we have thus far been considering into a definition, we would formulate the following: Sanctifying grace is "a quality strictly supernatural, inherent in the soul as a *habitus*, by which we are made to participate in the divine nature".

B. Formal Operations

Sanctifying Grace has its formal operations, which are fundamentally nothing else than the formal cause considered in its various moments. These operations are made known by Revelation; therefore to children and to the faithful can the splendour of grace best be presented by a vivid description of its operations. These are: sanctity, beauty, friendship, and sonship of God.

1. Sanctity

The sanctity of the soul, as its first formal operation, is contained in the idea itself of sanctifying grace, inasmuch as the infusion of it makes the subject holy and inaugurates the state or condition of sanctity. So far it is, as to its nature, a *physical* adornment of the soul; it is also a *moral form* of sanctification, which of itself makes baptized children just and holy in the sight of God. This first operation is thrown into relief by the fact that the "new man", created in justice and holiness (Eph., iv, 24), was preceded by the "old man" of sin, and that grace changed the sinner into a saint (Trent, Sess. VI, cap. vii: *ex injusto fit justus*). The two moments of actual justification, namely the remission

of sin and the sanctification, are at the same time moments of habitual justification, and become the formal operations of grace. The mere infusion of the grace effects at once the remission of original and mortal sin, and inaugurates the condition or state of holiness. (See Pohle, *Lehrb. der Dogm.*, 527 sq.)

2. *Beauty*

Although the beauty of the soul is not mentioned by the teaching office of the Church as one of the operations of grace, nevertheless the Roman Catechism refers to it (P. II, cap. ii, de bap., n. 50). If it be permissible to understand by the spouse in the Canticle of Canticles a symbol of the soul decked in grace, then all the passages touching the ravishing beauty of the spouse may find a fitting application to the soul. Hence it is that the Fathers express the supernatural beauty of a soul in grace by the most splendid comparisons and figures of speech, for instance: "a divine picture" (Ambrose); "a golden statue" (Chrysostom); "a streaming light" (Basil), etc. Assuming that, apart from the material beauty expressed in the fine arts, there exists a purely spiritual beauty, we can safely state that grace as the participation in the Divine nature, calls forth in the soul a physical reflection of the uncreated beauty of God, which is not to be compared with the soul's natural likeness to God. We can attain to a more intimate idea of the Divine likeness in the soul adorned with grace, if we refer the picture not merely to the absolute Divine nature, as the prototype of all beauty, but more especially to the Trinity whose glorious nature is so charmingly mirrored in the soul by the Divine adoption and the inhabitation of the Holy Ghost (cf. H. Krug, *De pulchritudine divina*, Freiburg, 1902).

3. *Friendship*

The friendship of God is consequently, one of the most excellent of the effects of grace; Aristotle denied the possibility of such a friendship by reason of the great disparity between God and man. As a matter of fact man is, inasmuch as he is God's creature, His servant, and by reason of sin (original and mortal) he is God's enemy. This relation of service and enmity is transformed by sanctifying grace into one of friendship (Trent, Sess. VI, cap. vii: *ex inimico amicus*). According to the Scriptural concept (Wis., vii, 14; John, xv, 15) this friendship resembles a mystical matrimonial union between the soul and its Divine spouse (Matt., ix, 15; Apoc., xix, 7). Friendship consists in the mutual love and esteem of two persons based upon an exchange of service or good office (Aristot., "Eth. Nicom.", VIII sq.). True friendship resting only on virtue (*amicitia honesta*) demands undeniably a love of benevolence, which seeks only the happiness and well-being of the friend, whereas the friendly exchange of benefits rests upon a utilitarian basis (*amicitia utilis*) or one of pleasure (*amicitia delectabilis*), which presupposes a selfish love; still the benevolent love of friendship must be mutual, because an unrequited love becomes merely one of silent admiration, which is not friendship by any means. But the strong bond of union lies undeniably in the fact of a mutual benefit, by reason of which friend regards friend as his other self (*alter ego*). Finally, between friends an equality of position or station is demanded, and where this does not exist an elevation of the inferior's status (*amicitia excellentie*), as, for example, in the case of a friendship between a king and noble subject. It is easy to perceive that all these conditions are fulfilled in the

friendship between God and man effected by grace. For, just as God regards the just man with the pure love of benevolence, He likewise prepares him by the infusion of theological charity for the reception of a correspondingly pure and unselfish affection. Again, although man's knowledge of the love of God is very limited, while God's knowledge of love in man is perfect, this conjecture is sufficient--indeed in human friendships it alone is possible--to form the basis of a friendly relation. The exchange of gifts consists, on the part of God, in the bestowal of supernatural benefits, on the part of man, in the promotion of God's glory, and partly in the performance of works of fraternal charity. There is, indeed, in the first instance, a vast difference in the respective positions of God and man; but by the infusion of grace man receives a patent of nobility, and thus a friendship of excellency (*amicitia excellentiae*) is established between God and the just. (See Schiffini, "De gratia divina", 305 sqq., Freiburg, 1901.)

4. Sonship

In the Divine filiation of the soul the formal workings of sanctifying grace reach their culminating point; by it man is entitled to a share in the paternal inheritance, which consists in the beatific vision. This excellence of grace is not only mentioned countless times in Holy Writ (Rom., viii, 15 sq.; I John, iii, 1 sq., etc.), but is included in the Scriptural idea of a *re-birth in God* (cf. John, i, 12 sq.; iii, 5; Titus, iii, 5; James, i, 18, etc.). Since the re-birth in God is not effected by a substantial issuance from the substance of God, as in the case of the Son of God or *Logos (Christus)*, but is merely an analogical or accidental coming forth from God, our sonship of God is only of an adoptive kind, as we find it expressed in Scripture (Rom., viii, 15; Gal., iv, 5). This adoption was defined by St. Thomas (III:23:1): *personae extraneae in filium et heredem gratuita assumptio*. To the nature of this adoption there are four requisites;

- the original unrelatedness of the adopted person;
- fatherly love on the part of the adopting parent for the person adopted;
- the absolute gratuity of the choice to sonship and heirship;
- the consent of the adopted child to the act of adoption.

Applying these conditions to the adoption of man by God, we find that God's adoption exceeds man's in every point, for the sinner is not merely a stranger to God but is as one who has cast off His friendship and become an enemy. In the case of human adoption the mutual love is presumed as existing, in the case of God's adoption the love of God effects the requisite disposition in the soul to be adopted. The great and unfathomable love of God at once bestows the adoption and the consequent heirship to the kingdom of heaven, and the value of this inheritance is not diminished by the number of coheirs, as in the case of worldly inheritance.

God does not impose His favours upon any one, therefore a consent is expected from adult adopted sons of God (Trent, Sess. VI, cap. vii, *per voluntariam susceptionem gratiae et donorum*). It is quite in keeping with the excellence of the heavenly Father that He should supply for His children during the pilgrimage a fitting sustenance which will sustain the dignity of their position, and be to them a pledge of resurrection and eternal life; and this is the Bread of the Holy Eucharist (see EUCHARIST).

The Supernatural Retinue

This expression is derived from the Roman Catechism (P. II., c. i, n. 51), which teaches: "Huic (gratiae sanctificanti) additur nobilissimus omnium virtutum comitatus". As the concomitants of sanctifying grace, these infused virtues are not formal operations, but gifts really distinct from this grace, connected nevertheless with it by a physical, or rather a moral, indissoluble link--relationship. Therefore the Council of Vienne (1311) speaks of *informans gratia et virtutes*, and the Council of Trent, in a more general way, of *gratia et dona*. The three theological virtues, the moral virtues, the seven gifts of the Holy Ghost, and the personal indwelling of the Holy Spirit in the soul are all considered. The Council of Trent (Sess. VI, c. vii) teaches that the theological virtues of faith, hope, and charity are in the process of justification infused into the soul as supernatural habits. Concerning the time of infusion, it is an article of faith (Sess. VI, can. xi) that the virtue of charity is infused immediately with sanctifying grace, so that throughout the whole term of existence sanctifying grace and charity are found as inseparable companions. Concerning the *habitus* of faith and hope, Suarez is of the opinion (as against St. Thomas and St. Bonaventure) that, assuming a favourable disposition in the recipient, they are infused earlier in the process of justification. Universally known is the expression of St. Paul (I Cor., xiii, 13), "And now there remain faith, hope, and charity, these three: but the greatest of these is charity." Since, here, faith and hope are placed on a par with charity, but charity is considered as diffused in the soul (Rom., v, 5), conveying thus the idea of an infused habit, it will be seen that the doctrine of the Church so consonant with the teaching of the Fathers is also supported by Scripture. The theological virtues have God directly as their formal object, but the moral virtues are directed in their exercise to created things in their moral relations. All the special moral virtues can be reduced to the four cardinal virtues: prudence (*prudentia*), justice (*justitia*), fortitude (*fortitudo*), temperance (*temperantia*). The Church favours the opinion that along with grace and charity the four cardinal virtues (and, according to many theologians, their subsidiary virtues also) are communicated to the souls of the just as supernatural *habitus*, whose office it is to give to the intellect and the will, in their moral relations with created things, a supernatural direction and inclination. By reason of the opposition of the Scotists this view enjoys only a degree of probability, which, however, is supported by passages in Scripture (Prov., viii, 7; Ezech., xi, 19; II Pet., i, 3 sqq.) as well as the teaching of the Fathers (Augustine, Gregory the Great, and others). Some theologians add to the infusion of the theological and moral virtues also that of the seven gifts of the Holy Ghost, though this view cannot be called anything more than a mere opinion. There are difficulties in the way of the acceptance of this opinion which cannot be here discussed.

The article of faith goes only to this extent, that Christ as man possessed the seven gifts (cf. Is., xi, 1 sqq.; lxi, 1; Luke, iv, 18). Remembering, however, that St. Paul (Rom., viii, 9 sqq.) considers Christ, as man, the mystical head of mankind, and the August exemplar of our own justification, we may possibly assume that God gives in the process of justification also the seven gifts of the Holy Ghost.

The crowning point of justification is found in the personal indwelling of the Holy Spirit. It is the perfection and the supreme adornment of the justified soul. Adequately considered, the personal

indwelling of the Holy Spirit consists of a twofold grace, the created accidental grace (*gratia creata accidentalis*) and the uncreated substantial grace (*gratia increata substantialis*). The former is the basis and the indispensable assumption for the latter; for where God Himself erects His throne, there must be found a fitting and becoming adornment. The indwelling of the Holy Spirit in the soul must not be confounded with God's presence in all created things, by virtue of the Divine attribute of Omnipresence. The personal indwelling of the Holy Ghost in the soul rests so securely upon the teaching of Holy Writ and of the Fathers that to deny it would constitute a grave error. In fact, St. Paul (Rom., v, 5) says: "The charity of God is poured forth in our hearts, by the Holy Ghost, who is given to us". In this passage the Apostle distinguishes clearly between the accidental grace of theological charity and the Person of the Giver. From this it follows that the Holy Spirit has been given to us, and dwells within us (Rom., viii, 11), so that we really become temples of the Holy Ghost (I Cor., iii, 16 sq.; vi, 19). Among all the Fathers of the Church (excepting, perhaps, St. Augustine) it is the Greeks who are more especially noteworthy for their rapturous utterances touching the infusion of the Holy Ghost. Note the expressions: "The replenishing of the soul with balsamic odours", "a glow permeating the soul", "a gilding and refining of the soul". Against the Pneumatomachians they strive to prove the real Divinity of the Holy Spirit from His indwelling, maintaining that only God can establish Himself in the soul; surely no creature can inhabit any other creatures. But clear and undeniable as the fact of the indwelling is, equally difficult and perplexing is it in degree to explain the method and manner (*modus*) of this indwelling.

Theologians offer two explanations. The greater number hold that the indwelling must not be considered a substantial information, nor a hypostatic union, but that it really means an indwelling of the Trinity (John, xiv, 23), but is more specifically appropriated to the Holy Ghost by reason of His notional character as the Hypostatic Holiness and Personal Love.

Another small group of theologians (Petavius, Scheeben, Hurter, etc.), basing their opinion upon the teaching of the Fathers, especially the Greek, distinguish between the *inhabitatio totius Trinitatis*, and the *inhabitatio Spiritus Sancti*, and decide that this latter must be regarded as a union (*unio, enosis*) pertaining to the Holy Ghost alone, from which the other two Persons are excluded. It would be difficult, if not impossible to reconcile this theory, in spite of its deep mystical significance, with the recognized principles of the doctrine of the Trinity, namely the law of appropriation and Divine mission. Hence this theory is almost universally rejected (see Franzelin, "De Deo trino", thes. xliii-xlvi, Rome, 1881).

III. THE CHARACTERISTICS OF SANCTIFYING GRACE

The Protestant conception of justification boasts of three characteristics: absolute certainty (*certitudo*), complete uniformity in all the justified (*aequalitas*), unforfeitableness (*inamissibilitas*). According to the teaching of the Church, sanctifying grace has the opposite characteristics: uncertainty (*incertitudo*), inequality (*inaequalitas*), and amissibility (*amissibilitas*).

A. Uncertainty

The heretical doctrine of the Reformers, that man by a fiduciary faith knows with absolute certainty that he is justified, received the attention of the Council of Trent (Sess. VI, cap. ix), in one entire chapter (*De inani fiducia haereticorum*), three canons (loc. cit., can. xiii-xv) condemning the necessity, the alleged power, and the function of fiduciary faith. The object of the Church in defining the dogma was not to shatter the trust in God (*certitudo spei*) in the matter of personal salvation, but to repel the misleading assumptions of an unwarranted certainty of salvation (*certitudo fidei*). In doing this the Church is altogether obedient to the instruction of Holy Writ, for, since Scripture declares that we must work out our salvation "with fear and trembling" (Phil., ii, 12), it is impossible to regard our individual salvation as something fixed and certain. Why did St. Paul (I Cor., ix, 27) chastise his body if not afraid lest, having preached to others, he might himself "become a castaway"? He says expressly (I Cor., iv, 4): "For I am not conscious to myself of any thing, yet am I not hereby justified; but he that judgeth me, is the Lord." Tradition also rejects the Lutheran idea of certainty of justification. Pope Gregory the Great (lib. VII, ep. xxv) was asked by a pious lady of the court, named Gregoria, to say what was the state of her soul. He replied that she was putting to him a difficult and useless question, which he could not answer, because God had not vouchsafed to him any revelation concerning the state of her soul, and only after her death could she have any certain knowledge as to the forgiveness of her sins. No one can be absolutely certain of his or her salvation unless--as to Magdalen, to the man with the palsy, or to the penitent thief--a special revelation be given (Trent, Sess. VI, can. xvi). Nor can a theological certainty, any more than an absolute certainty of belief, be claimed regarding the matter of salvation, for the spirit of the Gospel is strongly opposed to anything like an unwarranted certainty of salvation. Therefore the rather hostile attitude to the Gospel spirit advanced by Ambrosius Catherinus (d. 1553), in his little work: "*De certitudine gratiae*", received such general opposition from other theologians. Since no metaphysical certainty can be cherished in the matter of justification in any particular case, we must content ourselves with a moral certainty, which, of course, is but warranted in the case of baptized children, and which, in the case of adults diminishes more or less, just as all the conditions of, salvation are complied with--not an easy matter to determine. Nevertheless any excessive anxiety and disturbance may be allayed (Rom., viii, 16, 38 sq.) by the subjective conviction that we are probably in the state of grace.

B. Inequality

If man, as the Protestant theory of justification teaches, is justified by faith alone, by the external justice of Christ, or God, the conclusion which Martin Luther (*Sermo de nat. Maria*) drew must follow, namely that "we are all equal to Mary the Mother of God and just as holy as she". But if on the other hand, according to the teaching of the Church, we are justified by the justice and merits of Christ in such fashion that this becomes formally our own justice and holiness, then there must result an inequality of grace in individuals, and for two reasons: first, because according to the generosity of God or the receptive condition of the soul an unequal amount of grace is infused; then, also, because the grace originally received can be increased by the performance of good works (Trent, Sess. VI, cap. vii, can. xxiv). This possibility of increase in grace by good works, whence

would follow its inequality in individuals, find its warrant in those Scriptural texts in which an increase of grace is either expressed or implied (Prov., iv, 18; Eccclus., xviii, 22; II Cor., ix, 10; Eph., iv, 7; II Pet., iii, 18; Apoc., xxii, 11). Tradition had occasion, as early as the close of the fourth century, to defend the old Faith of the Church against the heretic Jovinian, who strove to introduce into the Church the Stoic doctrine of the equality of all virtue and all vice. St. Jerome (Con. Jovin., II, xxiii) was the chief defender of orthodoxy in this instance. The Church never recognized any other teaching than that laid down by St. Augustine (Tract. in Jo., vi, 8): "Ipsi sancti in ecclesia sunt alii aliis sanctiores, alii aliis meliores." Indeed, this view should commend itself to every thinking man.

The increase of grace is by theologians justly called a *second* justification (*justificatio secunda*), as distinct from the first justification (*justificatio prima*), which is coupled with a remission of sin; for, though there be in the second justification no transit from sin to grace, there is an advance from grace to a more perfect sharing therein. If inquiry be made as to the mode of this increase, it can only be explained by the philosophical maxim: "Qualities are susceptible of increase and decrease"; for instance, light and heat by the varying degree of intensity increase or diminish. The question is not a theological but a philosophical one to decide whether the increase be effected by an addition of grade to grade (*additio gradus ad gradum*), as most theologians believe; or whether it be by a deeper and firmer taking of root in the soul (*major radicatio in subjecto*), as many Thomists claim. This question has a special connection with that concerning the multiplication of the *habitual* act.

But the last question that arises has decidedly a theological phase, namely, can the infusion of sanctifying grace be increased infinitely? Or is there a limit, a point at which it must be arrested? To maintain that the increase can go on to infinity, i.e. that man by successive advances in holiness can finally enter into the possession of an infinite endowment involves a manifest contradiction, for such a grade is as impossible as an infinite temperature in physics. Theoretically, therefore, we can consider only an increase without any real limit (*in indefinitum*). Practically however, two ideals of unattained and unattainable holiness have been determined, which nevertheless, are finite. The one is the inconceivably great holiness of the human soul of Christ, the other the fullness of grace which dwelt in the soul of the Virgin Mary.

C. Amissibility

In consonance with his doctrine of justification by faith alone, Luther made the loss or forfeiture of justification depend solely upon infidelity, while Calvin maintained that the predestined could not possibly lose their justification; as to those not predestined, he said, God merely aroused in them a deceitful show of faith and justification. On account of the grave moral dangers which lurked in the assertion that outside of unbelief there can be no serious sin destructive of Divine grace in the soul, the Council of Trent was obliged to condemn (Sess. VI, can. xxiii, xxvii) both these views. The lax principles of "evangelical liberty", the favourite catchword of the budding Reformation, were simply repudiated (Trent Sess. VI, can. xix-xxi). But the synod (Sess. VI cap. xi) added that not venial but only mortal sin involved the loss of grace. In this declaration there was a perfect accord with Scripture and Tradition. Even in the Old Testament the prophet Ezechiel (Ezech., xviii,

24) says of the godless: "All his justices which he hath done, shall not be remembered: in the prevarication, by which he hath prevaricated, and in his sin, which he hath committed, in them he shall die." Not in vain does St. Paul (I Cor., x, 12) warn the just: "Wherefore he that thinketh himself to stand, let him take heed lest he fall"; and state uncompromisingly: "The unjust shall not possess the kingdom of God...neither fornicators, nor idolaters, nor adulterers.... nor covetous, nor drunkards...shall possess the kingdom of God" (I Cor., vi, 9 sq.). Hence it is not by infidelity alone that the Kingdom of Heaven will be lost. Tradition shows that the discipline of confessors in the early Church proclaims the belief that grace and justification are lost by mortal sin. The principle of justification by faith alone is unknown to the Fathers. The fact that mortal sin takes the soul out of the state of grace is due to the very nature of mortal sin. Mortal sin is an absolute turning away from God, the supernatural end of the soul, and is an absolute turning to creatures; therefore, habitual mortal sin cannot exist with habitual grace any more than fire and water can co-exist in the same subject. But as venial sin does not constitute such an open rupture with God, and does not destroy the friendship of God, therefore venial sin does not expel sanctifying grace from the soul. Hence, St. Augustine says (*De spir. et lit.*, xxviii, 48): "Non impediunt a vita Aeterna justum quaedam peccata venialia, sine quibus haec vita non ducitur."

But does venial sin, without extinguishing grace, nevertheless diminish it, just as good works give an increase of grace? Denys the Carthusian (d. 1471) was of the opinion that it does, though St. Thomas rejects it (II-II:24:10). A gradual decrease of grace would only be possible on the supposition that either a definite number of venial sins amounted to a mortal sin, or that the supply of grace might be diminished, grade by grade, down to ultimate extinction. The first hypothesis is contrary to the nature of venial sin; the second leads to the heretical view that grace may be lost without the commission of mortal sin. Nevertheless, venial sins have an indirect influence on the state of grace, for they make a relapse into mortal sin easy (cf. *Ecclus.*, xix, 1). Does the loss of sanctifying grace bring with it the forfeiture of the supernatural retinue of infused virtues? Since the theological virtue of charity, though not identical, nevertheless is inseparably connected with grace, it is clear that both must stand or fall together, hence the expressions "to fall from grace" and "to lose charity" are equivalent. It is an article of faith (Trent, Sess. VI, can. xxviii, cap. xv) that theological faith may survive the Commission of mortal sin, and can be extinguished only by its diametrical opposite, namely, infidelity. It may be regarded as a matter of Church teaching that theological hope also survives mortal sin, unless this hope should be utterly killed by its extreme opposite, namely despair, though probably it is not destroyed by its second opposite, presumption. With regard to the moral virtues, the seven gifts and the indwelling of the Holy Ghost, which invariably accompany grace and charity, it is clear that when mortal sin enters into the soul they cease to exist (cf. Suarez, "*De gratia*", IX, 3 sqq.). As to the fruits of sanctifying grace, see MERIT.

J. POHLE

Controversies on Grace

Controversies on Grace

These are concerned chiefly with the relation between grace and free will. How can the all-persuasiveness of grace, which imposes such a potent influence on the human will and elicits therefrom such good works, reside harmoniously in the same subject with the simultaneous consent of the free will? Since merely sufficient grace (*gratia mere sufficiens*) in its very concept contains the idea of a withholding of consent on the part of free will, and is therefore at the very outset destined to inefficiency (*gratia inefficax*), the question in its last analysis reduces itself to the relation between free will and efficacious grace (*gratia efficax*), which contains the very idea that by it and with it the free will does precisely that which this grace desires should be done. The most radical solution would be simply to cut the Gordian knot, and with the Pelagians set aside supernatural grace, or with the Reformers and Jansenists banish entirely all free will. For whether we boldly set aside the first or the second alternative, in either case the great problem of the relation between grace and free will will have been disposed of, and the great mystery solved in the simplest manner possible. For if there be no grace, why, then, all things are accomplished by the *liberum arbitrium*; if there be no freedom, then grace reigns supreme. As against the Pelagians and Semipelagians the existence and necessity of efficacious grace for all meritorious acts was duly treated in the article GRACE. Here we propose to defend briefly the preservation of free will with grace as against the systems of the Reformers and Jansenists, which are hostile to free will.

I. HERETICAL SOLUTIONS

According to Luther's theory, man's free will was so impaired by original sin that like a horse it could perform good or bad acts only as "it was ridden either by God or the devil". Nor did the Redemption by Christ restore the will as it was enjoyed in Paradise; therefore the will influenced by grace must by an interior necessity follow in all things the coercion of grace. Of all the Reformers, Calvin (Instit., lib. II) has given the most consistent and scholarly theory of the loss of free will under grace. He maintains that the sin of Adam annihilated the freedom of the will; that the Redemption did not restore this primitive freedom, though it released man from the bondage of Satan; that, however, the will influenced by grace does not remain entirely passive, but preserves the spontaneity of its unfree acts. The later Lutherans, as well as those of the present time, scarcely ever emphasize as harshly as their master the moral impotence of nature in the domain of ethical good, but the followers of Calvin still cling stubbornly to his teaching. In opposition to both sects, the Council of Trent, (Sess. VI, can. iv-v) defined as dogma not only the survival of moral freedom in spite of original sin, but also the preservation of the freedom of the will acted upon and working with grace, especially efficacious grace.

The definition of Jansen (d. 1638) is not materially different from that of Luther and Calvin, save only that, in distinguishing more closely between freedom from external coercion (*libertas a coactione*) and freedom from intrinsic necessity (*libertas ab intrinseca necessitate*), he concedes

to the will under the influence of grace only the former kind of liberty, at the same time maintaining against all sound ethics that in our fallen state the mere freedom from external coercion is sufficient for merit and demerit, and that therefore the really decisive freedom from intrinsic necessity is not required. In its exterior form this system seeks to clothe itself completely in Augustinian attire, and to give the impression that even St. Augustine taught unqualified Jansenism. The system teaches that the will of fallen man sways like a reed between two delights, the heavenly delight of grace (*delectatio coelestis s. caritas*) and the earthly delight of concupiscence (*delectatio terrena s. concupiscentia*). Both are ever present in man; like hostile forces, each strives for the mastery, the irresistible will being necessarily overcome by whichever delight happens to be the stronger. If the heavenly delight be stronger than the opposing earthly one, it overcomes as efficacious grace (*gratia efficax s. magna*), the will with an irresistible impulse for good. If, on the other hand, the evil delight be the stronger, it compels the will to sin and this in spite of the likewise present heavenly delight, which as sufficient grace (*gratia sufficiens s. parva*) is just too weak to gain the ascendancy over the other. If both these delights are exactly equal in strength so as to maintain a perfect equilibrium, then the will remains trembling in the balance. It will be seen that this theory is conceived in perfect accord with the parallelogram of forces, and reduces itself in its last analysis to the most extreme determinism, and absolutely kills all freedom. Not the conquering power of the heavenly delight (*delectatio coelestis victrix*), which is emphasized in the Augustinian system also, but the idea that this delight cannot be resisted (*gratia irresistibilis*) was branded as heresy by Innocent X on 31 May, 1653 (cf. Denzinger, "Enchiridion Symbolorum", ed. Bannwart, S.J., 1908, n. 1093 and 1095).

The sources of our faith record a decided protest against the subjugation of free will by efficacious grace. For if grace, instead of elevating and ennobling free will, subverts it, then all the Biblical counsels and prohibitions relative to the affairs of salvation which can be accomplished only with the help of efficacious grace, become vain and meaningless. Only in the event of the will remaining free have the words of Christ any significance: "If thou wilt enter into life, keep the commandments" (Matt., xix, 17). Saint Paul presupposes the cooperation of free will when he writes to his disciple Timothy: "Exercise thyself (*exerce te ipsum*) unto godliness" (I Tim., iv, 7), and again when he says generally: "And every man shall receive his own reward, according to his own labour" (I Cor., iii, 8). Tradition, as Calvin candidly admits (Instit., II, 3, 10), regards freedom of will and the efficacy of grace not as antagonistic principles, but as harmonious factors. Like Jansen, however, Calvin believes that he can regard St. Augustine as a supporter of his heresy. How unfounded and mistaken is this claim has been clearly demonstrated in the article AUGUSTINE, SAINT.

II. CATHOLIC SYSTEMS OF GRACE

According as the theological examination of grace and free will in its efforts to demonstrate the mutual relations between the two took as its starting-point respectively either grace or free will, two pairs of closely related systems were evolved: Thomism and Augustinianism, which take grace as the starting-point, and Molinism and Congruism, which set out from free will. These are the

extremes. The middle ground is held by Syncretism, which may be regarded as an eclectic system making an effort at compromise.

(1) Thomism

This system rests upon thoughts to which St. Thomas himself in his time gave expression. It received its most significant development from the subtle Michael Bañez (1528-1604), a Dominican gifted with a remarkably clear and acute mind, who was the chief opponent of Molina. From the idea that God is the primal cause (*causa prima*) and the prime mover (*motor primus*), it is concluded that every act and every movement of the thoroughly contingent secondary causes (*causae secundae*) or creatures must emanate from the first cause, and that by the application of their potentiality to the act. But God, respecting the nature of things, moves necessary agents to necessary, and free agents to free, activity -- including sin, except that God is the originator only of its physical entity, not of its formal malice. Inasmuch as the Divine influence precedes all acts of the creature, not in the order of time, but in that of causality, the motion emanating from God and seconded by free intelligent agents takes on the character of a physical premotion (*proemotio physica*) of the free acts, which may also be called a physical predetermination (*proedeterminatio physica*), because the free determination of the will is accomplished only by virtue of the divine predetermination.

In this premotion or predetermination is also found the medium of the Divine knowledge by which God's omniscience foresees infallibly all the future acts, whether absolute or conditional, of intelligent creatures, and which explains away at once the undemonstrable and imaginary *scientia media* of the Molinists. For just as certainly as God in His predetermined decrees knows His own will, so certainly does He know all the necessarily included determinations of the free will of creatures, be they of absolute or conditional futurity. Now if we carry these philosophical principles from the domain of the natural to the supernatural, then efficacious grace (*gratia efficax*) must be regarded as a physical premotion of the supernaturally equipped will to the performance of a good act, for revelation undeniably refers back to grace not only the possibility, but also the willing and the actual performance of a good act. But the will predetermined to this free good act must with a metaphysical certainty correspond with grace, for it would be a contradiction to assert that the *consensus*, brought about by efficacious grace, can at the same time be an actual *dissensus*. This historical necessity (*necessitas consequentiae*), involved in every act of freedom and distinguishable from the compelling necessity (*necessitas consequentis*), does not destroy the freedom of the act.

For although it be true that a man who is freely sitting cannot at the same time be standing (*sensus compositus*), nevertheless his freedom in sitting is maintained by the fact that he might be standing instead of sitting (*sensus divisus*). So it remains true that grace is not efficacious because free will consents, but conversely the free will consents because grace efficaciously premoves it to the willing and performance of a good act. Here *gratia efficax* is intrinsically and by its nature (*ab intrinseco s. per se*) efficacious, and consequently intrinsically and extrinsically different from sufficient grace (*gratia sufficiens*), which imparts only the *posse*, not the *agere*. To make merely sufficient grace efficacious a new supplementary grace must needs be supplied. How then is such a grace really sufficient (*gratia vere sufficiens*)? To this most of the Thomists reply: If the free will

did not resist the grace offered, God would not hesitate to supply the efficacious grace so that the failure of the grace is to be referred to the sinful resistance of the free will.

A survey of the strictly regulated uniformity of this system, of the relentless and logical sequence of the idea of the *causa prima* and the *motor primus* in every natural and supernatural activity of creatures, and lastly of the lofty and resolute defense of the inalienable right of grace to be considered the chief factor in the affair of salvation, must instill into the minds of impartial and dispassionate students a deep respect for the Thomistic system. Nevertheless the Molinists claim that there are certain gaps and crevices in this majestic structure, and, by inserting the levers of criticism in these, they believe they can shake the foundations of the edifice and encompass its downfall. We shall here confine ourselves to the four greatest objections which Molinism marshals against Thomism.

The first objection is the danger that in the Thomistic system the freedom of the will cannot be maintained as against efficacious grace, a difficulty which by the way is not unperceived by the Thomists themselves. For since the essence of freedom does not lie in the contingency of the act nor in the merely passive indifference of the will, but rather in its active indifference -- to will or not to will, to will this and not that -- so it appears impossible to reconcile the physical predetermination of a particular act by an alien will and the active spontaneousness of the determination by the will itself; nay more, they seem to exclude each other as utterly as do determinism and indeterminism, necessity and freedom. The Thomists answer this objection by making a distinction between *sensus compositus* and *sensus divisus*, but the Molinists insist that this distinction is not correctly applicable here. For just as a man who is bound to a chair cannot be said to be sitting freely as long as his ability to stand is thwarted by indissoluble cords, so the will predetermined by efficacious grace to a certain thing cannot be said to retain the power to dissent, especially since the will, predetermined to this or that act, has not the option to receive or disregard the promotion, since this depends simply and solely on the will of God. And does not the Council of Trent (Sess. VI, cap. v, can. iv) describe efficacious grace as a grace which man "can reject", and from which he "can dissent"? Consequently, the very same grace, which *de facto* is efficacious, might under other circumstances be inefficacious.

Herein the second objection to the Thomistic distinction between *gratia efficax* and *gratia sufficiens* is already indicated. If both graces are in their nature and intrinsically different, it is difficult to see how a grace can be really sufficient which requires another grace to complete it. Hence, it would appear that the Thomistic *gratia sufficiens* is in reality a *gratia insufficiens*. The Thomists cannot well refer the inefficacy of this grace to the resistance of the free will, for this act of resistance must be traced to a *proemotio physica* as inevitable as the efficacious grace.

Moreover, a third great difficulty lies in the fact that sin, as an act, demands the predetermining activity of the "first mover", so that God would according to this system appear to be the originator of sinful acts. The Thomistic distinction between the entity of sin and its malice offers no solution of the difficulty. For since the Divine influence itself, which promotes *ad unum*, both introduces physically the sin as an act and entity, and also, by the simultaneous withholding of the opposite promotion to a good act, makes the sin itself an inescapable fatality, it is not easy to explain why

sin cannot be traced back to God as the originator. Furthermore, most sinners commit their misdeeds, not with a regard to the depravity, but for the sake of the physical entity of the acts, so that ethics must, together with the wickedness, condemn the physical entity of sin. The Molinists deny that this objection affects their own system, when they postulate the *concursum* of God in the sinful act, and help themselves out of the dilemma by drawing the distinction between the entity and malice of sin. They say that the Divine co-operation is a *concursum simultaneum*, which employs the co-operating arm of God only after the will by its own free determination has decided upon the commission of the sinful act, whereas the Thomistic co-operation is essentially a *concursum proevium* which as an inevitable physical pre-motion predetermines the act regardless of the fact whether the human will can resist or not.

From this consideration arises the fourth and last objection to the claim of the Thomists, that they have only apparently found in their physical pre-motion an infallible medium by which God knows in advance with absolute certainty all the free acts of his creatures, whether they be good or bad. For as these pre-motions, as has been shown above, must in their last analysis be considered the knell of freedom, they cannot well be considered as the means by which God obtains a foreknowledge of the free acts of rational agents. Consequently the claims and proper place of the *scientia media* in the system may be regarded as vindicated.

(2) Augustinianism

Just as Thomism appeals to the teachings of St. Thomas as its authority, Augustinianism appeals to St. Augustine. Both systems maintain that grace is intrinsically and by its very nature efficacious, but Augustinianism claims merely a *proedeterminatio moralis*, and proceed not from the concept of God as the first and universal cause and prime mover, but with Jansen builds upon the idea of a twofold delight in human nature. The exponents of this system are: Berti, Bellelli, Louis Habert, Bertieri, Brancatus de Lauria, and others. The greatest defender of the system is Laurentius Berti (1696-1766), who in his work "De theologicis disciplinis" (Rome, 1739-) propounded the theory with such boldness, that the Archbishop of Vienne, Jean d'Yse de Saléon, in his work entitled "Le Bajanisme et le Jansénisme resuscités dans les livres de Bellelli et Bertieri" (s. l., 1745), declares it to be nothing other than a revival of Jansenism. After an official investigation, however, Benedict XIV exonerated the system.

The foundation of the system is the same as that of Jansenism, though it claims to be thoroughly Augustinian. In Augustinianism also there is a ceaseless conflict between the heavenly delight and the evil delight of the flesh, and the stronger delight invariably gains the mastery over the will. Sufficient grace, as a weak delight, imparts merely the ability (*posse*), or such a feeble will that only the advent of the victorious delight of grace (*delectatio coelestis victrix, caritas*) can guarantee the will and the actual deed. Therefore, like Thomism, the system postulates an essential difference between sufficient and efficacious grace. The necessity of *gratia efficax* does not spring from the subordinate relation between *causa prima* and *causa secunda*, but from the inherited perversity of fallen human nature, whose evil inclinations can no longer, as once in Paradise, be overcome by

the converting grace (*gratia versatilis; adjutorium sine quo non*), but only by the intrinsically efficacious heavenly delight (*gratia efficax; adjutorium quo*).

Augustinianism differs, however, from Jansenism in its most distinctive feature, since it regards the influence of the victorious delight as not intrinsically coercive, nor irresistible. Though the will follows the relatively stronger influence of grace or concupiscence infallibly (*infallibiliter*), it never does so necessarily (*necessario*). Although it may be said with infallible certainty that a decent man of good morals will not walk through the public streets in a state of nudity, he nevertheless retains the physical possibility of doing so, since there is no intrinsic compulsion to the maintenance of decency. Similar to this is the efficacy of grace. We may refrain from a criticism of Augustinianism since it never really became a school, and since it has as little in common with true Augustinianism, as Jansenism has. (See the article AUGUSTINE, SAINT.)

(3) Molinism

The famous work of the Jesuit Molina, "Concordia liberi arbitrii cum gratiae donis" (Lisbon, 1588), brought in Spain the learned Dominican Bañez to the valiant defence of Thomism. In 1594 the dispute between the Thomists and the Molinists reached a fever heat. Pope Clement VIII in order to settle the dispute convened in Rome a *Congregatio de Auxiliis* (1598-1607), and to this the Dominicans and the Jesuits sent, at the pope's invitation, their ablest theologians. After the congregation had been in session for nine years without reaching a conclusion, Paul V, at the advice of St. Francis de Sales, permitted both systems, strongly forbidding the Jesuits to call the Dominicans Calvinists, or the Dominicans to call the Jesuits Pelagians. The deliberations of the congregation are fully set out in the article CONGREGATIO DE AUXILIIS.

It seems fitting to say a few words here concerning the celebrated Spanish Jesuit, Peter Arrubal, who took a leading part in the controversy between the Dominicans and the Jesuits (from 22 Feb., 1599, to 20 March, 1600) as well as in the disputations held before Clement VIII (1602-1606). Peter Arrubal was born in 1559 at Cenicero in the Diocese of Calahorra; he died at Salamanca on 22 Sept., 1608. On 21 April, 1579, he entered the Jesuit novitiate at Alcalá, Rome, and Salamanca. During the disputation on Grace, he distinguished himself by refuting the *Apologia* of the Dominicans, composed by them against the teachings of Molina. In the public disputations held before the Holy Father, he was the leader of the Jesuits. Successfully and impressively he demonstrated in these disputations that the teaching of Molina was altogether removed from Semipelagianism, and that he (Molina) merely taught the holdings of the Council of Trent and in no wise introduced into the Church any new doctrine. The Holy Father forbade the publication of any work on the disputed question by reason of the intense excitement then prevalent, consequently Arrubal's great work "De auxiliis gratiae divinae" remained unpublished. But two folio commentaries, "In primam partem Summae theol. S. Thomae" (Madrid, 1619, 1622); 2nd ed., Cologne, 1630), were prepared by him and published through the agency of P. De Villegas and P. De la Paz, both Jesuits.

The fundamental principles of the Molinistic system of grace are the following: efficacious grace and sufficient grace, considered in *actu primo*, are not in natura and intrinsically different

one from the other (as the Thomists hold), but only accidentally so and according to their external success, inasmuch as sufficient grace becomes efficacious just as soon as the free will corresponds to it. If the will withholds its consent then sufficient grace remains efficacious and is termed "merely sufficient grace" (*gratia mere sufficiens*). Now since one and the same grace may in one instance be efficacious, and in another inefficacious, it follows that the so-called *gratia efficax* must be conceived according to its essence as *efficax ab extrinseco*. In this conception there is no lessening of the dignity and priority of grace. For since the anticipatory grace invests the created will, quite irrespective of its consent in *actu primo*, supernaturally with moral and physical powers, and since moreover, as a supernatural *concursus*, it influences the *actus secundus* or good act and thus becomes efficacious grace, it follows that the good act itself is the joint product of grace and free will, or rather more the work of grace than of free will. For it is not the will which by its free consent determines the power of grace, but conversely it is grace which makes the free good act possible, prepares for it and co-operates in its execution. The infallibility of the success, which is contained in the very idea of efficacious grace, is not to be explained by the intrinsic nature of this grace, nor by a supernatural proemotio physica, but rather by the *Theologoumenon* of the *scientia media*, by virtue of which God foreknows from all eternity whether this particular will would freely co-operate with a certain grace or not. But since God by virtue of His *scientia media* has at His own disposal all the sufficient and efficacious grace, the infallibility of the successful outcome remains in perfect accord with the freedom of the will, and furthermore the dogma concerning final perseverance and predestination is entirely preserved.

It is apparent that above all Molinism is determined to throw a wall of security around the free will. The Thomists maintain that this is done at the expense of grace. Instead of making the free will dependent on the power of grace, it is will which freely determines the success or failure of grace. Thus in the last analysis it is human will which decides whether a particular grace shall prove efficacious or not, although revelation teaches that it is God, who with His grace gives both the willing and the doing of a good act. Even friends of Molina, notably Cardinal Bellarmine (*De grat. et lib. arbitr.*, I, 12), saw the force of this difficulty and declined to follow the extreme Molinism, which, by the way, was not taught by Molina. This explains the Instruction issued by Claudius Acquaviva, the General of the Jesuits in the year 1613, directing all the teaching body of the Society to lay increased stress on the fact that efficacious grace differs from sufficient grace not only *ab extrinseco*, but also in its moral (not its physical) nature even in *actu primo*, inasmuch as efficacious grace being a special gift of God has a higher moral value than merely sufficient grace, which according to the infallible foreknowledge of God recoils ineffectively in consequence of the resistance of the will. Thus it remains true that God Himself effects our good deeds, not that He merely supplies us with the potentiality.

(4) Congruism

Congruism is based on an unessentially modified form of Molinism, than which it is more carefully worked out in its details. It was endorsed by the Jesuit General Claudius Acquaviva (d. 1615) and by his successors Muzio Vitelleschi (d. 1645) and Piccolomini (d. 1651), and was made

the official system of the Society of Jesus. The system was really originated by Molina himself, but received its definitive form from the labours of Bellarmine, Suarez, Vasquez, and Lessius. It takes its name from the *gratia congrua*, that is, a grace suited to the circumstances of the case, which is opposed to the *gratia incongrua*, a grace namely which is not suited to the circumstances of a certain case. Both of these concepts are purely Augustinian, as a reference to Augustine (*Ad Simplicianum*, I, Q. ii, n. 13) will show.

It is quite obvious that *gratia congrua* corresponds with efficacious grace, and *gratia incongrua* with merely sufficient grace. Accordingly the efficacy of a grace depends upon its peculiar agreement or congruity with the interior and exterior disposition of the recipient, whereby a certain relationship of choice is established between grace and free will, which at the hand of God in the light of His *scientia media* becomes the infallible means of carrying out all His designs of grace in great things and small with certain success and without violence. Even a small grace, which by reason of its congruity is attended with success, has an incomparably greater sanctifying value than an ever so much more powerful grace, which by reason of unfavourable circumstances of inclination, training, and environment fails in its purpose, and therefore as a *gratia incongrua* appears to the Divine foreknowledge as merely sufficient. Concerning the method of operation of the efficacious, or the congruous grace, the Congruists like the Molinists make three divisions: the efficacy of power (*efficacia virtutis*); the efficacy of union (*efficacia connexionis*); the efficacy of infallibility (*efficacia infallibilitatis*).

The efficacy of the power to will and to do is peculiar to the efficacious and sufficient grace, that is to say, it is derived neither from the human will nor from the Divine foreknowledge. The efficacy of the union between act and grace depends upon the free will, because according to the dogma efficacious grace is not irresistible, but can be rejected at any time. The efficacy of infallibility springs not from the physical nature of grace but from the infallible foreknowledge of God (*scientia media*), which cannot be deceived. After due consideration of all the various phases of the Catholic doctrine of grace, it would seem that the congruistic remodelled Molinism comes fairly near the truth, because it is intelligently adjusted between the anti-grace Pelagianism and Semipelagianism on the one hand, and the anti-free-will Calvinism and Jansenism on the other. Nevertheless there are numerous critics who find much to object to in Congruism, and who fail to see in it a clear solution of the problem of grace and free will. They find it difficult to believe that grace adjusts itself slavishly to all the circumstances of the recipient, when the story of many a conversion shows that grace simply lays hold of man and without much parley leads him whithersoever it would have him go. Thus, grace does not depend for its efficacy on the congruity of the circumstances, but conversely the congruity of the circumstances is shaped and brought about by grace. Like all the other systems Congruism is forced to the confession: "We are standing before an unsolved mystery."

(5) Syncretism

In the conviction that in each of the four systems we have thus far considered there must be in spite of imperfections many grains of truth, the Syncretic system hopes by proceeding in an eclectic manner, by adopting the good points of the various systems and eliminating all that is improbable

and secondary, to evolve another or fifth system. The first incitement to the creation of this system came from the Paris Sorbonne (Ysambert, Isak, Habert, Duplessis d'Argentre, Tournely), whose views received a certain consecration from the fact that St. Alphonsus Liguori, the great Doctor of the Church, endorsed them ("Op. dogmat.", ed. Walter, I, 517 sqq.; II, 707, sqq.). Among more recent exponents of this system may be mentioned: Godfrey a Graun, Schwetz, Cardinal Katschthaler, Herrmann. The distinguishing trait of the Syncretic system is found in the acceptance of two quite distinct sorts of efficacious grace, namely, the (Thomistic-Augustinian) *gratia ab intrinseco efficax* and the (Molinistic-Congruistic) *gratia ab extrinseco efficax*. Their respective functions are so apportioned, that the intrinsically predetermining grace of the Thomists (i.e. of the Augustinians, as in e.g. in the writings of St. Alphonsus Liguori) is employed in the difficult works, e.g. in the patient endurance of great trials, in the overcoming of sever temptations, in the execution of difficult duties, etc.- while on the other hand the non-predetermining grace of the Molinists is reserved for the less difficult good works, such as a short prayer, a slight mortification, etc. Both these graces are given by God for the performance of their respective functions.

Prayer is placed a link joining the two, and as the proper and practically infallible means of obtaining the Thomistic grace necessary for the performance of the difficult works of salvation. Who prays will secure his eternal salvation; who does not pray will be lost forever. If any one thing is to be specially singled out for commendation in this Syncretic system of grace, it is its insistence on the fact, which cannot be too strongly emphasized, that prayer is our individual duty, an absolute necessity and an infallible means in the attainment of our eternal salvation. Our minds cannot be too thoroughly imbued with the truth of the statement that our present provision of grace is essentially and intrinsically a magnificent economy of prayer. Even though Syncretism had performed no other service than the vigorous proclamation of this great truth, it alone were sufficient to rescue the system from oblivion. The system has not, it is true, solved the real problem of the relation between grace and free will. On the contrary, the linking together of the two kinds of efficacious grace only increases the difficulties found in the other systems. Consequently this system ends like the others in the inevitable conviction that we are confronted by a great mystery.

J. POHLE

William Russell Grace

William Russell Grace

Philanthropist and merchant, born at Cork, Ireland, 10 May, 1832; died at New York, 21 March, 1904. His father was originally from Queen's County, where the Graces lived from the days of their ancestor, Raymond Le Gros, who went to Ireland with Strongbow; his mother, a Russell from Tipperary, was a convert to the Catholic Faith. James Grace, his father, went from Ireland to Peru in 1850, but not being successful there, returned to Ireland, while his son, William Russell, remained behind and in time became a partner with the firm of John Bryce at Callao. This firm became Grace Brothers & Co., and W. R. Grace & Co., with offices in New York, San Francisco, and every city

of importance on the west coast of South America. Grace also established, at New York, The New York and Pacific Steamship Co., and other financial enterprises. In 1859 he married Lillias Gilchrist of Thomaston, Maine.

He left Peru in the year 1864 and for a time lived in Brooklyn, then in 1878 moved to New York. At the time of the famine in Ireland in 1878 and 1879 his firm contributed to the relief fund one-fourth the cargo of provisions sent in the steamship *Constellation* for the famine stricken. This fact and others made him so popular that he was nominated for Mayor of New York, and, in spite of much opposition from bigoted sources, elected in 1880. He was the first Catholic to hold that office. He was re-elected in 1884 and served a second term. An attempt to induce him to accept a nomination for a third term was made, but he declined to run.

A fact that best shows the Christian character of the man is that during his two terms as mayor he went to Mass every morning in the neighbouring church of St. Agnes before going to official work. His chief benevolent work was the foundation of the Grace Institute in May, 1897, which he dedicated to the memory of his parents. The object of this institution was to give free tuition to women in dressmaking, stenography, typewriting, book-keeping, and domestic science. The poor are also generally helped by this institution. He was prompted to found and endow it after a study of the economic conditions of workmen's families during a strike among the employees of one of his enterprises. The institution is non-sectarian, and is under the charge of the Sisters of Charity.

HERY A. BRANN

Grace at Meals

Grace at Meals

In Apostolic times St. Paul counsels the faithful: "Whether you eat or drink, or whatsoever else you do, do all to the glory of God" (I Cor., x, 31). This precept did not cease to be observed. "Before taking nourishment", says Clement of Alexandria, "it is fitting to praise the Creator of all things, and it is fitting also to sing His praises when we take as nourishment the things created by Him" (Paed., II, iv). Tertullian, a contemporary of Clement, shows us the Christians of the beginning of the third century making the sign of the cross on taking their places at table (De cor. milit., iii). "Our repasts", says he, referring to the Agape, "are in nothing vile or immodest. We do not recline until we have prayed to God. In like manner prayer concludes the feast" (Apol., xxxi). Christian archaeology has collected a large number of cup-bases on which may be read a short prayer, e. g. "Drink in Christ", "Drink piously", "To the worthiest of friends, drink and live with all thine and in thy turn make a toast".

One of the most ancient formulae of prayer at meals is found in a treatise of the fourth century, attributed without foundation to Saint Athanasius. Having made the sign of the cross, the prayer followed: "We give Thee thanks, our Father, for the Resurrection which Thou hast manifested to us through Jesus, Thy Son; and even as this bread which is here on this table was formerly scattered abroad and has been made compact and one, so may Thy Church be reunited from the ends of the

earth for Thy Kingdom, for Thine is the power and glory for ever and ever. Amen." Apart from its intrinsic interest this formula possesses a certain importance because it reproduces in part the formula of the "Didache". The prayer said on raising from table is a little longer:

The merciful and compassionate Lord has given nourishment to those who fear Him. Glory be to the Father, to the Son, and to the Holy Ghost, now and forever and throughout the ages. Almighty God and Our Lord Jesus Christ, whose name is above all things, we give Thee thanks and praise Thee because Thou hast deigned to give us a portion of Thy goods and nourishment for our body. We pray and beseech Thee to give us in like manner heavenly nourishment. Make us fear and reverence Thy law and Thy terrible and glorious name, and grant that we may never disobey Thy precepts. Write in our hearts Thy law and Thy justice. Sanctify our mind, our soul, and our body through Thy dear Son, Jesus Christ Our Lord. To Whom with Thee belongs glory, dominion, honour, and adoration for ever and ever. Amen.

It is not difficult to find examples in the writings of the Fathers of the Church, in the collections of canons, and in the liturgical books, notably in the Gelasian Sacramentary and the Bobbio Sacramentary (Muratori, "Liturgia Romana vetus", I, col. 745; II, col. 949).

In the Roman Liturgy the Benedicite and the Graces are compositions in which Psalms cxlix and xxxiii are utilized, several versicles being omitted. From the most ancient times Psalm xxxiii has been pre-eminently the communion psalm. At the midday meal Ps.1 is recited, in the evening Ps. cxvi. The origin of these formulae is monastic, hence the pious commemorations of benefactors.

On the chief liturgical feasts: Easter, Pentecost, etc., a selection of verses recalling the solemnity of the day is substituted for the formulae in use at ordinary times. See also THANKSGIVING.

H. LECLERCQ

Gradual

Gradual

(Lat. *Graduale*, from *gradus*, a step)

Gradual, in English often called Grail, is the oldest and most important of the four chants that make up the choir's part of the Proper of the Mass. Whereas the three others (Introit, Offertory, and Communion) were introduced later, it fill up the time while something was being done, the Gradual (with its supplement, the Tract or Alleluia) represents the singing of psalms alternating with readings from the Bible, a custom that is as old as these readings themselves. Like them, the psalms at this place are an inheritance from the service of the Synagogue. Copied from that service, alternate readings and psalms filled up a great part of the first half of the Liturgy in every part of the Christian world from the beginning. Originally whole psalms were sung. In the "Apostolic Constitutions" they are chanted after the lessons from the Old Testament: "The readings by the two (lectors) being finished, let another one sing the hymns of David and the people sing the last words after him" (*ta aposticha hypopsalleto*, II, 57). This use of whole psalms went on till the fifth century. St. Augustine

says: "We have heard first the lesson from the Apostle. Then we sang a psalm. After that the lesson of the gospel showed us the ten lepers healed." (Serm. clxxvi, 1). These psalms were an essential part of the Liturgy, quite as much as the lessons. "They are sung for their own sake; meanwhile the celebrants and assistants have nothing to do but to listen to them" (Duchesne, "Origines du Culte chrétien", 2nd ed., Paris, 1898, p. 161). They were sung in the form of a *psalmus responsorius*, that is to say, the whole text was chanted by one person — a reader appointed for this purpose. [For some time before St. Gregory I, to sing these psalms was a privilege of deacons at Rome. It was suppressed by him in 595 (Ibid.)] The people answered each clause or verse by some acclamation. In the "Apostolic Constitutions" (above) they repeat his last modulations. Another way was to sing some ejaculation each time. An obvious model of this was Ps. cxxxv with its refrain: "quoniam in æternum misericordia eius"; from which we conclude that the Jews too knew the principle of the responsory psalm. We still have a classical example of it in the Invitatorium of Matins (and the same Ps. xciv in the third Nocturn of the Epiphany). It appears that originally, while the number of biblical lessons was still indefinite, one psalm was sung after each. When three lessons became the normal custom (a Prophecy, Epistle, and Gospel) they were separated by two psalms. During the fifth century (Duchesne, op. cit., p. 160) the lessons at Rome were reduced to two; but the psalms still remain two, although both are now joined together between the Epistle and Gospel, as we shall see. Meanwhile, as in the case of many parts of the Liturgy, the psalms were curtailed, till only fragments of them were left. This process, applied to the first of the two, produced our Gradual; the second became the Alleluia or Tract.

I. THE NAME

Gradual comes from the place where it was sung. In the First Roman Ordo (10) it is called *Responsum*; Amalarius of Metz (ninth century) calls it *Cantus Responsorius*; Isidore (seventh century) *Responsorium*, "quod uno canente chorus consonando respondet" ("De Eccl. Officiis", I, 8; Ordo Rom. II, 7. Cf. Mabillon, "Musæum Italic." II, 9, note f). This name was also used, as it still is, for the chants after the lessons at Matins; so the liturgical Responsorium was distinguished later by a special name. The reader who chanted the psalm stood on a higher place, originally on the steps of the ambo. He was not to go right up into the ambo, like the deacon who sang the Gospel, but to stand on the step from which the sub-deacon had read the Epistle (Ordo Roman. I, 10, II, 7: "he does not go up higher, but stands in the same place where the reader stood and begins the Responsorium alone; and all the choir answer and he alone sings the verse of the Responsorium." Cf. Ordo Rom. III, 9, VI, 5). Later in various local churches, when the ambo was disappearing, other places were chose, but the idea of a high place, raised on steps, persists. At Reims, the steps of the choir were used, sometimes a special pulpit was erected. Belet (twelfth century) says that on ordinary days the cantor stands on the altar-steps, on feasts on the ambo (Rationale, II, P.L., CCII); Durandus a little later writes: "dicitur Graduale a gradibus altaris, eo quod in festivis diebus in gradibus cantatur" (Gradual is so called from the steps of the altar, on which it was sung on holidays. — Rationale, IV, 19). There seems then to be no doubt that the name comes from the

place where it was sung; Cardinal Bellarmine's idea that the *gradus* in question are those the deacon is climbing for the Gospel while the Gradual is being chanted (De Missâ, II, 16) is a mistake. We have seen that this psalm was not sung to fill up time during the procession to the ambo. Originally the deacon and all the ministers would wait till it was over before beginning their preparation for the Gospel. The older name *Responsorium* lasted, as an alternative, into the Middle Ages. Durandus uses it constantly and gives a mystic explanation of the word ("Responsorium vero dicitur quia versui vel epistolæ correspondere debet", etc., loc. cit., i.e. "Responsory is so called because it ought to correspond to the verse or epistle.")

It is difficult to say exactly when the Gradual got its present form. We have seen that in St. Augustine's time, in Africa, a whole psalm was still sung. So also St. John Chrysostom alludes to whole psalms sung after the lessons (Hom. In Ps., cxlv); as late as the time of St. Leo I (d. 462), in Rome the psalm seems not yet to have been curtailed: "Wherefore we have sung the psalm of David with united voices, not for our honour, but for the glory of Christ the Lord" (Serm. ii in anniv. Assumpt.). Between this time and the early Middle Ages the process of curtailing brought about our present arrangement.

II. ORDER OF THE GRADUAL

If we open a Missal, at most of the days in the year (the exceptions will be described below), we find between the Epistle and Gospel a set of verses with some Alleluias marked *Graduale*. Although the whole text follows this heading, although we usually speak of it all as the Gradual, there are here two quite distinct liturgical texts, namely the first part, which is the old *psalmus responsorius* (now the Gradual in the strictly correct sense), and the Alleluia with its verse, the Alleluiatic verse (*versus alleluiaticus*). We have seen that these two chants came, originally, one after each of the lessons that preceded the Gospel. Now that we have only one such lesson as a rule (the epistle), the Gradual and Alleluiatic verse (or its substitute), are sung together. But there are still cases of their separation. In Lent, as we shall see, the Alleluia is replaced by the Tract. A number of Lenten Masses that have kept the old three lessons also keep the old arrangement, by which the Gradual follows the first, the Tract the second (e.g. Wednesdays in the Lenten Ember week and Holy Week), others (e.g. the Ember Saturday) that have more than three lessons have a Gradual after each of the former ones and a Tract after the Epistle. There are again others (e.g. Tuesday in Holy Week), in which there is no Tract at all, but only a Gradual after the first lesson. And even when they are sung together their essential separation is still marked by the fact that they have quite different melodies, in different modes. Thus, on the first Advent Sunday the Gradual is in the first and second modes mixed, the Alleluia in the eighth; the next Sunday has a fifth-mode Gradual followed by a first-mode Alleluia, and so on. The Gradual itself always consists of two verses, generally from the same psalm. There are however many cases of their being taken from different psalms; some, of verses from other books of Scripture (e.g. those for the Immaculate Conception are from Judith); and a few in which the text is not Scriptural. The feast of the Seven Dolours has such verses, "Dolorosa et lacrymabilis es Virgo Maria" . and "Virgo Dei Genitrix" .

So also "Benedicta et venerabilis es virgo Maria" for the Visitation (July 2) and other feasts of the B. V. M., and the first verse of the Gradual for Requiems ("Requiem æternam."). The first of these two verses keeps the old name *Responsorium*, the second is marked V (for *versus*). It may be that the first represents the former acclamation of the people (like the Invitorium of Matins), and that the second is the fragment of the psalm originally sung by the lector (Gühr, *Messopfer*, 410; and note 4 from Guyetus, *Heortologia*, Venice, 1726).

The second chant is normally the *versus alleluiaticus* (in this case the shorter one). The use of the word *Alleluia* in the Liturgy is also a very old inheritance from the Synagogue. It became a cry of joy without much reference to its exact meaning in a language no longer understood (as did *Hosanna*). Its place in the Liturgy varied considerably. In the Byzantine Rite it comes as the climax of the Cherubic Hymn at the Great Entrance (Brightman, *Eastern Liturgies*, Oxford, 1896, p. 379); in the Gallican Rite it was sung at the Offertory (Duchesne, *Origines du Culte Chrétien*, Paris, 1898, p. 160, n. 1). Its place here before the Gospel is peculiar to the Roman Rite. It appears that before the time of St. Gregory I (d. 604) it was sung only during Eastertide (Ep. ix — see Duchesne, loc. cit.; Atchley, *Ordo Rom.* I, 78- 9). Sozomen goes further: "At Rome, Alleluia is sung once a year, on the first day of the Paschal feast, so that many Romans use this oath: may they hear and sing that hymn!" (*Hist. Eccl.*, VII, xix). This connection with Easter (unknown in the East) afterwards led to additional Alleluias being scattered throughout the Mass in Eastertide (at the Introit, Offertory, Communion, etc.); but its old and essential place for the normal Liturgy is here, where it has displaced the former second *psalmus responsorius*. It will be noticed that the three great Alleluias that usher in Easter on Holy Saturday come here in the place of the Gradual. The change consists of two Alleluias sung to exactly the same melody. At the end of the second one its last sound (*a*) is continued in a long and complicated neum. This musical phrase (called variously *neuma*, *jubilatio*, *jubilus*, *cantilena*) is a very old and essential element of the Alleluia. A great number of medieval commentators insist on it, and explain it by various mystic reasons. For instance Rupert of Deutz (Rupertus Tuitiensis, O. S. B., twelfth century): "We rejoice rather than sing (*jubilamus magis quam canimus*) . and prolong the neums, that the mind be surprised and filled with the joyful sound, and be carried thither where the saints rejoice in glory" (*De Officiis*, I). So also Sicardus of Cremona: "Congrue quoque in Alleluia jubilans [this means sing the neum] ut mens illuc rapiatur ubi Sancti exsultabunt." (*Mitræ*, III, 3, P.L., CCXIII); Durandus: "Est etiam Alleluia modicum in sermone et multum in pneuma, quia gaudium illud majus est quam possit explicari sermone. Pneuma enim seu jubilus qui fit in fine exprimit gaudium et amorem credentium", that is, "the Alleluia is short in word and long in neum, because that joy is too great to be expressed in words. For the neum or *jubilus* at the end denotes the joy and love of the faithful" etc. (*Rationale*, IV, 20; see the whole chapter). The question of the neum is discussed and many authorities quoted in Pothier, "Les Mélodies Grégoriennes d'après la tradition" (Tournai, 1881), xi, 170-9. It should certainly never be omitted. In the case of a figured Gradual a jubilus in figured music should be supplied. After the jubilus of the second Alleluia a verse follows. This verse is by no means so commonly taken from the psalms as the verses of the Gradual, and there are a great many cases, especially on feasts

of saints, of a fragment of a Christian poem, or other verse not from the Bible. On St. Lawrence's feast (10 Aug.), for example, the Alleluatic verse is: "Levita Laurentius bonum operatus est, qui per signum crucis cæcos illuminavit" (The Levite Lawrence, who made the blind see by the sign of the Cross, worked a good work). This Alleluatic verse is a kind of continuation of the jubilus with a text fitted to the long-drawn neums. Then a third Alleluia, the same as the second with its jubilus, ends the chant.

There are two exceptions to this order. The first is when the Alleluia is replaced by the Tract. Since this word began to be looked upon as a special sign of joy, most suitable for Eastertide, it followed, as an obvious corollary, that it should not be sung in times of penance or mourning. There is no such idea in the East, where they sing Alleluia always, even in the Office for the Dead, as was once done at Rome too (Atchley, *Ordo Rom. I*, 78-9). That Latins sometimes avoid it was one of their many preposterous grievances at the time of Cæularius's schism (Card. Humbert's *Dialogus*, LVI-LVII, In Will, "Acta et Scripta de Controv. Eccl. Græcæ et Latinæ", Leipzig, 1861, pp. 122-3). In the West, from Septuagesima to Easter (even on Feasts), on Ember days, most vigils, and at Requiems, the Alleluatic verse disappears. The Vigils in question generally have only the Gradual (but some have the Alleluia, e.g. the eves of Epiphany, Ascension, Whitsunday). On the other days the Gradual is followed by the Tract. The Tract (*tractus*) is the second psalm sung between the lessons, which, although later displaced by the Alleluia on most days, has kept its place here. We find it as an alternative to the Alleluia in the First Roman Ordo: "Postquam legerit canto cum cantatoria adscendit et dicit responsum. Ac deinde per alium cantorem, si fuerit tempus ut dicatur Alleluia, concinitur, sin autem tractum, sin minus tantummodo responsum cantatur", i.e. "After the reading (of the Epistle) the cantor ascends with his book and chants the Response. Then, if it be the proper season, another cantor chants the Alleluia; but if the Alleluia have to be omitted [i.e. in times of penance] the Tract or at times [as still on vigils] only the Response is sung" (ed. Atchley, London, 1905, p. 130, supplemented by *Ordo Rom. III*). The name "Tract", *Psalmus tractus*, was given to it, because it was sung straight through without any answer by the choir (*in uno tractu*). This was the special note of the second psalm, that distinguished it from the first *psalmus responsorius* (Amalarius of Metz, *De eccl. Offic. III*, 12; Duchesne, *op. cit.*, 108). Later authors explain the word incorrectly as describing the slow and mournful way in which it was sung ("a *trahendo*, quia lente et lugubriter cantatur", "from trahendo, because it is sung slowly and mournfully". — De Carop, "Bibl. Liturg.", Pt. I, a. 2, quoted by Gühr, *op. cit.*, 416). Durandus gives this, with other symbolic reasons, for the name: "It is called tract from trahendo because it is sung drawn out (*quia tractum canitur*) and with a harshness of voice and length of words; since it implies the misery and labour of our present life" (*Rationale*, IV, 21. See the whole chapter). The text of the "Ordo Rom. I" quoted above shows that it was sung from the steps of the ambo, like the Gradual. We have still a few Masses in which the *Psalmus tractus* has kept its original nature as a whole psalm. On the first Sunday of Lent it is Ps. xc; on Palm Sunday, Ps. xxi; on Good Friday, Ps. cxxxix. Otherwise the Tract too has been shortened to two or three verses. It is nearly always taken from Scripture, but not seldom from other books than the Psalter; verses from various psalms or other

texts often follow one another, connected only by the common idea that runs through them. Mondays, Wednesdays, and Fridays in Lent are the old *feriæ legitimæ*, the official days of penance, that still keep certain peculiarities (in choir, on these days, the Office for the Dead, the penitential and gradual psalms are said). Except on Wednesday in Holy Week they have the same Tract, a prayer for forgiveness from Ps. cii and lxxviii. All feasts that may come between Septuagesima and Easter and all common and votive Masses have a Tract, to be used in that time. Good Friday has two Tracts, one after the Prophecy and one after the lesson from Exodus that takes the place of the Epistle; it has no Gradual. The first Easter Mass on Holy Saturday, among many other peculiarities, keeps so much of the nature of a Lenient vigil that it has, after the great Alleluia and its verse, a Tract. On Whitsun eve the characters of Eastertide and a vigil are combined. It has no Gradual, but first an Alleluia, then a Tract. It will be noticed that each verse in the Tracts is marked V. This calls attention to the nature of the old *psalmus tractus* that was sung straight through by the cantor. There are no responses for the choir.

The second exception to the usual order is in Eastertide (from the first Easter Mass to the Saturday after Pentecost). During this time the great Alleluia is sung; it has displaced the Gradual altogether. "Rightly during the fifty days in memory of this our most peaceful and happy deed, we are accustomed to sing Alleluia oftener and more joyfully" (St. Bede, II Hom., x). An exception in this season is the Easter octave. The greatest feasts have always kept older arrangements, so on Easter Day and till the Friday following the normal Gradual followed by the Alleluiatic verse (and a sequence) has remained. From White Saturday to the end of paschal time, including all feasts, instead of these two separate chants, one, the great Alleluia, is substituted. Two Alleluias are sung first as a sort of antiphon; the second has a jubilus. Two verses follow, each with an Alleluia and jubilus at the end. These last two Alleluias have the same melody, different from that of the first two. The verses are taken from all parts of the Bible, in the *Proprium temporis* chiefly from passages in the new Testament about the Resurrection. In this case too feasts and other Masses that may occur in Eastertide are provided with this great Alleluia, as an alternative to be used then. Lastly, five occasions (Easter, Whitsun, Corpus Christi, the Seven Dolours, and Requiems) have a sequence after the Gradual. These five are all that Pius V's reform left of the innumerable medieval poems once inserted at this place (see SEQUENCES).

III. THE GRADUAL IN OTHER RITES

In the East, too, there are fragments of the psalms once sung between the lessons, that therefore correspond to our Gradual. In the Byzantine Rite the reader of the epistle first chants "the Psalm of David" and then the "Prokeimenon [*prokeimenon*] of the Apostle". Both are short fragments of psalms. The Prokeimenon only is now usually read. It is printed before each Epistle in the "Apostolos". After the Epistle the reader should sing Alleluia and another fragment of a psalm (Brightman, op. cit., p. 370-1). This too is now always omitted by both Orthodox and Melchites; even the Prokeimenon seems to be said only on Sundays and feasts in many churches (Charon, *Le Rite byzantin*, Rome, 1908, 683-4; but I have found churches where it is still used every day). The

Armenian Rite, which is only a modified form of that of Constantinople, has however kept the older arrangement of three lessons. Before the Prophecy a fragment called the *Saghmos Jashu* (Psalm of dinnertime) is sung, before the Epistle the *Mesedi (mesodion)*, again a verse or two from a psalm, and before the Gospel the *Alelu Jashu* (Alleluia of dinner-time) consisting of two Alleluias and a verse (Brightman, op. cit., 425-6). Of the two older rites, that of St. James has the same arrangement as Constantinople (a Prokeimenon before and an Alleluia after the Epistle, Brightman, 36), that of St. mark has a verse and an Alleluia after it (ibid., 118). The Nestorians have hymns (not Biblical texts) before both Epistle and Gospel which they call *Turgama*, and three verses of psalms each followed by three Alleluias (this group is called *Zumara*) after the Epistle (Brightman, 257-260). The Gallican Rite in the time of St. Germanus of Paris (d. 576) had three lessons. The *Benedicite* canticle (which he calls *Benedictio*) was sung after the second, sometimes by boys, sometimes by a deacon (Duchesne, Origines, 185-7). The place of this canticle was not always the same. At times it followed the first lesson (ibid.). The present Ambrosian Rite sometimes has a Prophecy before the Epistle. In this case there follows the *Psalmellus*, two or three verses from a psalm. After the Epistle, Hallelujah is sung (on feasts of Christ, except in Octaves, twice), then a verse, then again Hallelujah. In Lent, on vigils and fast days, instead of this the *Cantus* (our Tract) is used. After the Gospel follows the *Antiphona post Evangelium*, from various books of Scripture (except in Lent and on fast days). And on certain great feasts there is also an antiphon before the Gospel (Rubr. Gen. Miss. Ambros., sect. 11). The Mozarabic Rite has three lessons. After the Prophecy follows a chant marked *Psallendo*. It has two verses, then a third marked V, then the second is repeated. The priest says: "Silentium facite" and the Epistle is read. Nothing is sung after the Epistle. In the seventh century a Council of Toledo (633) commanded under pain of excommunication that the Gospel should follow the Epistle immediately. After the Gospel follows the *Lauda*, consisting of an Alleluia, a verse, and a second Alleluia (Missale mixtum, P.L., LXXXV, e.g. for the first Sunday of Advent, col. 110, 112).

IV. RULES FOR THE GRADUAL

The nature and arrangement of the chants that form the Gradual in the Roman Rite have already been explained, so that little need be added here about its use. As a result of the reaction of low Mass upon high Mass (by which everything sung by anyone else must also be read by the priest at the altar), the celebrant at high Mass reads the Gradual with the Alleluia, Tract, or Sequence, according to the form for the day, immediately after he has read the Epistle and at the same place (this is just as at low Mass). As soon as the sub-deacon has finished chanting the Epistle, the Gradual (of course, again, in the complete form for the day) is sung by the choir. There is now no rule for the distribution of its parts. All may be sung straight through by the whole choir. It is however usual (partly for the sake of artistic effect) to divide the texts so that some are sung by one or two cantors. A common arrangement is for the cantors to sing the first words of the Gradual (to the asterisk in the choir-books), the choir continues, the cantors sing the versus and the first Alleluia, the choir the second, the cantors the Alleluiatic verse, and the choir the last Alleluia. Or,

all Alleluias are sung by the cantors, the choir only joining in the neum. Similar arrangements may be made easily for the Tract or the great Alleluia in Eastertide. Normally it is all sung to plain-song and, now that we have the Vatican edition, to the form in that book. But there is no law about this, and the Gradual may be sung to any figured music that satisfies the principles of the "Motu Proprio" of 22 Nov., 1903. There is a useful arrangement of all Propers of the Mass in simple figured music by Tozer (New York, 2 vols., 1906) against which the only objection is that the composer has ignored the jubilus at the end of the Alleluia.

V. GRADUAL-BOOK

The name Gradual (*Graduale Romanum*) is also used for the book that contains the music sung by the choir at Mass. The name comes from this most important chant, but the book contains the plain-song music for the Ordinary (this part is also published alone with the title *Ordinarium Missæ* or *Kyriale*) and all the Propers for the year. This book is one of the three parts of the old Roman Antiphonarium. Originally all the chants of the choir were contained in that. But by the ninth century it was already divided into three, the *Graduale* or *Cantatorium* for Mass, and the *Responsiale* and *Antiphonarium* (in a stricter sense) for the Office (Amalarius of Metz, *De Ordine Antiphonarii*, P.L. XCIX, in prolog.). The history of the book forms part of that of the development of plain-song. An authentic edition (the Medicæa) was issued at Rome in 1614. It is now supplanted by the Vatican edition (1908), of which reproductions are being issued by various publishers.

Among the medieval writers see especially DURANDUS, *Rationale divinatorum Officiorum*, IV, 19-21; GIHR, *Das heilige Messopfer* (6th ed., Freiburg im Br., 1897), 408-427; DUCHESNE, *Origines du Culte chrétien* (2nd ed., Paris, 1898), 107-8, 161-3; ATCHLEY, *Ordo Romanus primus* (London, 1905), 73-9; NIKEL, *Geschichte der katholischen Kirchenmusik* (Breslau, 1908), I, 83 sqq., and passim.

ADRIAN FORTESCUE

Gradual Psalms

Gradual Psalms

Fifteen psalms -- namely, Psalms 119-133 (in Hebrew 120-134) -- bear a Hebrew inscription which is rendered in the Vulgate as *canticum graduum*, and translated in the Douay Version as "a gradual canticle". The Authorized Version calls them "songs of degrees"; the Revised Version, "songs of ascents". Of the various conjectural explanations, the most probable regards them as psalms recited when going up to the annual festivals in Jerusalem, pilgrim-songs (see PSALMS). The days on which the Gradual psalms were formerly recited are still indicated in the Roman Breviary, but the obligation of reciting them was removed by St. Pius V.

JOHN CORBETT

Robert Gradwell

Robert Gradwell

Bishop; b. at Clifton-in-the-Fylde, Lancashire, 26 Jan., 1777; d. in London, 15 March, 1833; went to Douai in 1791. The college being suppressed by the French revolutionists, he was confined for some time, and was not allowed to return to England till 1795. With most of the Douai refugees, he went to Crook Hall, Durham, where he was ordained priest in 1802. He taught poetry and rhetoric for seven years at Crook Hall, and at the new college at Ushaw. About this time, Pius VII decided to reopen the English College at Rome, and on Dr. Lingard's recommendation, Gradwell was appointed rector (1818). Under his prudent administration the establishment flourished exceedingly. He also acted as Roman agent for the English vicars Apostolic, exhibiting tact and diplomacy in this office. In 1821 the pope made him a doctor of divinity. In 1828 he was consecrated Bishop of Lydda, as coadjutor to Bishop Bramston, the vicar Apostolic of the London district, and he came to London soon afterwards to take up his new duties. His engaging personality soon endeared him to both clergy and people. Had he lived longer, he might have been one of the most eminent of English bishops, but unfortunately his constitution, undermined by the Roman summers, was unable to withstand the rigours of the English climate. After some years of ill-health, he died of dropsy. His writings include: "A dissertation of the Fable of Papal Antichrists" (London, 1816); "A Winter Evening Dialogue . . . or, Thoughts on the Rule of Faith" (London, 1816); and various journals, letters, and MSS. in connexion with his residence in Rome; his notes on the old archives of the English College there are some of historical interest; all are in the Westminster archdiocesan archives.

C.F. WEMYSS BROWN

Graffiti

Graffiti

The term in common usage among archaeologists to designate a class of rude inscriptions scratched on the walls of ancient monuments, generally sepulchral, as distinguished from the formal inscriptions engraved on the tombs of the deceased. The inscriptions of this order traced by pilgrims, between the fourth and ninth centuries, on the walls of the galleries, proved invaluable to De Rossi and later archaeologists in their explorations of the Roman catacombs. At an early stage in his career De Rossi realized the importance of these graffiti. Their absence from the walls of a gallery signified that there was nothing of importance in the vicinity, whereas, on the other hand their presence meant that the explorer was in the immediate neighbourhood of an important crypt or other sepulchral monument which once contained the relics of a martyr. Here it was that a pious pilgrim of old, before leaving the venerated tomb, would take advantage of the occasion to scratch on the adjoining wall his name, sometimes the date of his visit, or a pious exclamation or prayer to the saint, as, e.g., that near the papal crypt of the catacomb of St. Callistus: "Sancte Suste in mente

habeas in orationes tuas Aureliu Repentinu" (Saint Sixtus, remember in thy prayers Aurelius Repentinus). Outside the catacombs the famous caricature of the Crucifixion found in the imperial palace on the Palatine is accompanied by a graffiti stating that the (supposed) Christian page, Alexamenos, is adoring his God, while, in a chamber adjoining, a second inscription of the same class proclaims Alexamenos a Christian (*Alexamenos fidelis*). In 1897 some Christian graffiti were discovered on the columns of the temple of Antoninus and Faustina, intermingled with pagan inscriptions of the third and fourth century. The great necropolis of the oasis in the Libyan desert also contains a number of interesting Christian graffiti. Graffiti are also found on ancient Christian altars of the fifth and later centuries.

MAURICE M. HASSETT

Patrick Graham

Patrick Graham

First Archbishop of St. Andrews and Metropolitan of Scotland, date of birth uncertain; d. 1478. He was a son of Mary, younger daughter of Robert III, by her third husband, Sir William Graham of Kincardine, ancestor of the dukes of Montrose. He was educated at the University of St. Andrews, where, in 1457, he held the position of dean of the Faculty of Arts. In 1463 he became Bishop of Brechin. In 1466 he succeeded his half-brother, the illustrious Bishop Kennedy, in the See of St. Andrews. He proceeded to Rome to receive the confirmation of Paul II, and remained abroad until 1469 to escape the avowed enmity of certain powerful nobles. While in Rome he obtained the erection of St. Andrews into an archbishopric and metropolitan church, to which the other twelve sees were subjected as suffragans. This was announced to the king, bishops, and diocesan chapters of Scotland by a Bull of Sixtus IV, dated 27 Aug., 1472. The announcement aroused a storm of opposition. The See of York ineffectually appealed against the loss of Galloway, its suffragan for more than five centuries, and the consequent deprivation of all future claim to jurisdiction in Scotland; that of Trondhjem as ineffectually resented the transference of the Dioceses of Argyle and the Isles; the king and the whole episcopate of Scotland set themselves to resist the innovation, rendered still more odious by the nomination of the new archbishop as Apostolic nuncio to raise subsidies for a crusade. James III, bribed by the bishops with an offering of 12,000 marks (according to some writers), joined them in appealing to Rome against his cousin the archbishop. Sixtus IV, in view of the extraordinary charges brought against Graham, sent a nuncio, John Huseman, to Scotland to investigate. The accusation included heresy, schism, simony, disobedience to the Holy See, with reviling and blasphemy against its authority; the claiming by the archbishop of the papacy, as imposed upon him by God for the reform of the Church; the appointment of legates, prothonotaries, and suchlike officials; the revoking of papal indulgences, because granted for lucre; the saying of Mass, even thrice a day, when under the ban of excommunication, suspension, and interdict. The nuncio, after examining numerous witnesses, sent a report to Rome, and, after its due consideration by a commission of cardinals, Graham was declared guilty of the alleged charges.

He was deprived of all dignities, degraded from orders, and subjected to imprisonment for life. He died in the Castle of Lochleven in 1478, and was buried in the old priory there. Many historians regard him as a zealous and good bishop, a victim to the persecution of his enemies, though this scarcely explains his condemnation. Whether he lost his reason under the stress of trouble, or whether he had become imbued with Lollardism (as Dickson suggests, though the charge concerning Mass seems to contradict this), it is impossible to say, in the absence of all official records except the Bull of deposition, dated 9 Jan., 1478.

MICHAEL BARRETT

The Holy Grail

The Holy Grail

The name of a legendary sacred vessel, variously identified with the chalice of the Eucharist or the dish of the Pascal lamb, and the theme of a famous medieval cycle of romance. In the romances the conception of the Grail varies considerably; its nature is often but vaguely indicated, and, in the case of Chrestien's *Perceval* poem, it is left wholly unexplained.

The meaning of the word has also been variously explained. The generally accepted meaning is that is given by the Cistercian chronicler Helinandus (d. about 1230), who, under the date of about 717, mentions of a vision, shown to a hermit concerning the dish used by Our Lord at the Last Supper, and about which the hermit then wrote a Latin book called "Gradale." "Now in French," so Helinandus informs us, "*Gradalis* or *Gradale* means a dish (*scutella*), wide and somewhat deep, in which costly viands are wont to be served to the rich in degrees (*gradatim*), one morsel after another in different rows. In popular speech it is also called "greal" because it is pleasant (*grata*) and acceptable to him eating therein" etc. The medieval Latin word "gradale" because in Old French "graal," or "greal," or "greel," whence the English "grail." Others derive the word from "garalis" or from "cratalis" (*crater*, a mixing bowl). It certainly means a dish, the derivation from "grata" in the latter part of the passage cited above or from "agr  er" (to please) in the French romances is secondary. The explanation of "San greal" as "sang real" (kingly blood) was not current until the later Middle Ages. Other etymologies that have been advanced may be passed over as obsolete.

When we come to examine the literary tradition concerning the Grail we notice at the outset that the Grail legend is closely connected with that of *Perceval* as well as that of King Arthur. Yet all these legends were originally independent of each other. The *Perceval* story may have a mythical origin, or it may be regarded as the tale of a simpleton (Fr., *nicelot*) who, however, in the end achieves great things. In all the versions that we have of it, it is a part of of the Arthurian legend, and, in almost all, it is furthermore connected with the Grail. So the reconstruction of the original Grail legend can be accomplished only by an analytical comparison of all extant versions, and is a task that has given rise to some of the most difficult problems in the whole range of literary history.

The great body of the Grail romances came into existence between the years 1180 and 1240. After the thirteenth century nothing new was added to the Grail legend. Most of these romances are in French, but there are versions in German, English, Norwegian, Italian, and Portuguese. These are of very unequal value as sources, some are mere translations or recasts of French romances. Now all of these romances may be conveniently divided into two classes: those which are concerned chiefly with the quest of the Grail, and with the adventures and personality of the hero of this quest; and those that are mainly concerned with the history of the sacred vessel itself. These two classes have been styled respectively the Quest and the Early History versions.

Of the first class is the "Conte del Graal" of Chrestien de Troyes and his continuators, a vast poetic compilation of some 60,000 verses, composed between 1180 and 1240, and the Middle High German epic poem "Parzival" of Wolfram von Eschenbach, written between 1205 and 1215, and based, according to Wolfram's statement, on the French poem of a certain Kyot (Guiot) of Provence, which, however, is not extant and the very existence of which is doubtful. To these may be added the Welsh folk-tales or "Mabinogion" known to us only from manuscripts of the thirteenth century, though the material is certainly older, and the English poem "Sir Percyvelle," of the fifteenth century. Of the Early History versions the oldest is the metrical trilogy of Robert de Boron, composed between 1170 and 1212, of which only the first part, the "Joseph d'Armathie," and a portion of the second, the "Merlin," are extant. We have, however, a complete prose version, preserved in the so-called Didot manuscript. The most detailed history of the Grail is in the "Grand St. Graal," a bulky French prose romance of the first half of the thirteenth century, where we are told that Christ Himself presented to a pious hermit the book concerning this history. Besides these versions we have three French prose romances, also from the thirteenth century, which, though concerned chiefly with the quest, give also an account of the history of the sacred vessel. Of these the most notable is the "Queste del St. Graal," well known to English readers because it was embodied almost entire in Malory's "Morte d' Arthur." The others are the so-called "Didot Perceval" or "La petite queste" and the lengthy and prolix "Perceval le Gallois," also known as "Perlesvaus."

The poem of Chrestien, regarded by many as the oldest known Grail romance, tells of Perceval's visit to the Grail castle, where he sees a *Graal* borne in by a damsel. Its accompaniments are a bleeding lance and a silver plate. It is a precious vessel set with jewels, and so resplendent as to eclipse the lights of the hall. All the assembled knights show it reverence. Mindful of an injunction not to inquire too much, Perceval does not ask concerning the significance of what he sees, and thereby incurs guilt and reproach. Undoubtly Chrestien meant to relate the hero's second visit to the castle, when he would have put the question and received the desired information. But the poet did not live to finish his story, whether the explanation of the *Graal*, offered by the continuators, is that which Chrestien what the *Graal* signifies; in his version it has no pronounced religious character. On the other hand, in the Early History versions it is invested with the greatest sanctity. It is explained as the dish from which Christ ate the Paschal lamb with his disciples, which passed into possession of Joseph of Arimathea, and was used by him to gather the Precious Blood of Our Saviour, when His body was taken from the Cross. It becomes identified with the Chalice of the

Eucharist. The lance is explained as the one with which Longinus pierced Our Lord's side, and the silver plate becomes the paten covering the chalice. The quest in these versions assumes a most sacred character, the atmosphere of chivalric adventure in Chrestien's poem yields to a militant asceticism, which insists not only on the purity of the quester, but, in some versions (*Queste*, *Perlesvaus*), on his virginity. In the "*Queste*" and "*Grand St. Graal*," moreover, the hero is not Perceval but the maiden-knight, Galaad. But the other knights of the Round Table are made to participate in the quest.

The early history of the Grail is intimately connected with the story of Joseph of Arimathea. When he is cast into prison by the Jews, Christ appears to him and gives him the vessel, through which he is miraculously sustained for forty-two years, until liberated by Vespasian. The Grail is then brought to the West, to Britain, either by Joseph and Josephes, his son (*Grand St. Graal*), or by Alain one of his kin (Robert de Boron). Galaad (or Perceval) achieves the quest; after the death of its keeper the Grail vanishes. According to the version of the "*Perlesvaus*" Perceval is removed, no one knows whither, by a ship with white sails on which is displayed a red cross. In the Guiot-Wolfram version we meet with a conception of the Grail wholly different from that of the French romances. Wolfram conceives of it as a precious stone, *lapsit ex illis* (i.e. *lapis* or *lapsi ex caelis*?) of special purity, possessing miraculous powers conferred upon it and sustained by a consecrated Host which, on every Good Friday, a dove brings down from heaven and lays down upon it. The angels who remained neutral during the rebellion of Lucifer were its first guardians; then it was brought to earth and entrusted to Titirel, the first Grail king. It is guarded in the splendid castle of Munsalvaesche (*mons salvationis* or *silvaticus*?) by itself and nourished by its miraculous food-giving power.

The relationship of the Grail versions to each other, especially that of Chrestien to those of Robert de Boron and the "*Queste*," is a matter of dispute. Nor is their relative chronology certain. But in all these versions the legend appears in an advanced state of development, the preceding phases of which are not attested by literary monuments, and therefore, can only be conjectured. The origin of the legend is involved in obscurity, and scholars are divided in their views on this point. An Oriental, a Celtic, and a purely Christian origin have been claimed. But the Oriental parallels, like the sun-table of the Ethiopians, the Persian cup of Jamshid, the Hindu paradise, Cridavana, are not very convincing, and Wolfram's statement, that Kyot's source was an Arabic manuscript of Toledo, is open to grave doubt. It is different with the Celtic story. There are undoubtedly Celtic elements in the legend as we have it; the Perceval story is probably, and the Arthurian legend certainly, of Celtic origin, and both of these legends intimately connected with the quest story. Talismans, such as magic lances and food-giving vessels figure prominently in Celtic myths and folk-tales. According to this theory the "*Mabinogion*," with its simple story of vengeance by means of talismans and devoid of religious significance, would yield the version nearest to the original form of the legend. Back of the quest-story would be some pre-Christian tale of a hero seeking to avenge the injury done to a kinsman. The religious element would then be of secondary origin, and

would have come into the legend when the old vengeance-tale was fused with the legend of Joseph of Arimathea, which is essentially a legend of the conversion of Britain.

Those who maintain the theory of a purely Christian origin regard the religious element in the story as fundamental and trace the leading *motifs* to Christian ideas and conceptions. It is derived from the apocryphal Gospel of Nicodemus, which is known to have had a great vogue in the twelfth century, particularly in Britain. There we read how Joseph, whom the Jews had imprisoned, is miraculously fed by Christ Himself. Additional traits were supplied by the "Vindicta Salvatoris," the legendary account of the destruction of Jerusalem. Furthermore, Joseph was confused with the Jewish historian, Josephus, whose liberation by Titus is narrated by Suetonius. The food-producing properties of the vessel can be explained, without resorting to Celtic parallels, by the association of the Grail with the Sacrament of the Eucharist, which gives spiritual nourishment to the faithful. The purely Christian legend which thus had arisen was brought into contact with the traditional evangelization of Britain, and then developed on British soil, in Wales, and thus the Celtic stamp, which it undeniably bears, is accounted for. In connection with the legendary conversion of Britain it is noteworthy that the literary accounts of this event are connected with the famous Abbey of Glastonbury, which is also intimately associated with the legend of Arthur, Glastonbury being identified in William of Malmesbury's account with the mythic Avalon. So scholars are inclined to connect this British sanctuary with the origin of the Grail romances. Possibly Walter Map, who died as Archdeacon of Oxford in 1210, and to whom is ascribed the authorship of a Grail-Lancelot cycle, got his information from that abbey. The first Grail romances was then probably written in Latin and became the basis for the work of Robert de Boron, who was an English knight under King Henry II, and a contemporary of Chrestien and of Map.

The fully developed Grail legend was later on still further connected with other legends, as in Wolfram's poem with that of Lohengrim, the swan-knight, and also with that of Prestor John, the fabled Christian monarch of the East. Here also the story of Klinschor, the magician, was added. After the Renaissance the Grail legend, together with most medieval legends, fell into oblivion, from which it was rescued when the Romantic movement set in at the beginning of the nineteenth century. The most famous modern versions are Tennyson's "Holy Grail" in the "Idylls of the King" (1869), and Wagner's music-drama, the festival-play, "Parsifal," produced for the first time at Bayreuth in 1882.

A word as to the attitude of the Church towards the legend. It would seem that a legend so distinctively Christian would find favour with the Church. Yet this was not the case. Excepting Helinandus, clerical writers do not mention the Grail, and the Church ignored the legend completely. After all, the legend contained the elements of which the Church could not approve. Its sources are in apocryphal, not in canonical, scripture, and the claims of sanctity made for the Grail were refuted by their very extravagance. Moreover, the legend claimed for the Church in Britain an origin well nigh as illustrious as that of the Church of Rome, and independent of Rome. It was thus calculated to encourage and to foster any separatist tendencies that might exist in Britain. As we have seen,

the whole tradition concerning the Grail is of late origin and on many points at variance with historical truth.

The "Queste" was edited by Furnivall, "La Queste del Saint Graal" (Roxburghe Club, London, 1864), also the Grand St. Graal under the title "Seynt Graal or the Sank Ryal", etc. (Roxburghe Club, London, 1861-63). The Perlesvaus is in Potvin's edition of Chrestien, I (Mons, 1866); the Didot Perceval in Hucher, "Le Saint Graal" (Le Mans, 1874-78). Robert de Boron's poem was edited by Michel, "Le roman du St. Graal" (Bordeaux, 1841), Malory's "Morte D'Arthur" by Sommer (London, 1889-91), and the Perlesvaus rendered into English by Evans, "The High History of the Holy Grail" (London, 1898). (See WOLFRAM VON ESCHENBACH.)

ARTHUR F.J. REMY

Eugenie de Gramont

Eugénie de Gramont

Religious of the Society of the Sacred Heart; b. at Versailles, 17 September, 1788; d. at Paris, 19 November, 1846. Her father, the Count de Gramont d'Aster, was attached to the Court of Louis XVI; he had married a daughter of the Count de Boisselin, maid of honour to Queen Marie Antoinette. The family was driven into exile by the fall of the monarchy and, after travelling in Germany and Italy, settled at Richmond in England. After the death of the Count de Gramont d'Aster his widow was for a time in straitened circumstances, and maintained herself and her child by teaching. She soon returned to France, where Eugénie learnt, at Amiens, to know the new Society of the Sacred Heart, of which she became a member in 1806. Her mother also joined it a few years afterwards, and made her novitiate under the guidance of her own daughter. In 1815, notwithstanding her youth and the drawback of a slight physical deformity, Mother de Gramont was placed in charge of the first school of the Sacred Heart, opened in Paris, Rue des Postes, afterwards transferred to the Rue de Varenne. The school flourished under her care and, after a short interruption of her work by the revolution of 1830, she was sent back to govern the house as superioress and continued to do so until her death in 1846. Mother de Gramont's remarkable intelligence and influence were of great value in the important work entrusted to her, and she established the school in the Rue de Varenne so firmly in its position that the only anxiety of the foundress of the society concerning it was the success, almost too brilliant for her love of hiddenness and simplicity, which attended the work. She knew the weak side of Mother de Gramont's character as well as her great gifts, and she was not deceived as to the dangers of a mind which was too receptive of strong influences and very difficult to disillusion. In a time of trial, during the first year of her religious life at Amiens, when the existence of the Society of the Sacred Heart was in great danger, Mother de Gramont was one of those who were misled by the action of M. de St. Esteve; and again, in another critical moment in 1839, she took a line of conduct in opposition to the foundress which she afterwards recognized and deplored to the end of her life; her sorrow for her error, it is said, hastened her death. She died in the most perfect union of affection with the foundress, Blessed Madeleine Sophie Barat, asking

pardon of her and of the whole society for the errors of judgment into which she had been led - her personal devotedness to the mother general had never wavered.

JANET STUART

Gran, Archdiocese of

Archdiocese of Gran

(Hungarian ESZTERGOM; Lat. STRIGONIUM, STRIGONIENSIS)

Located in Hungary. From the earliest time of its existence (eighth century) up to the beginning of the eleventh century, the Diocese of Gran embraced the greater part of Hungary, but as early as the beginning of the twelfth century its extent was considerably diminished by the founding of the Archdiocese of Bács. Gran, however, always remained the most important, and the Archbishop of Gran was looked upon as the Primate of Hungary. The jurisdiction of Gran extended originally over the whole of Upper Hungary to the territory of the Cumans beyond the Theiss. In 1766 two more dioceses were established in this territory, Neusohl (Besztercze-Bánya) and Rosenau (Rozsnyó), and in 1804 the Diocese of Erlau was separated from the Archdiocese of Gran, and raised to the archiepiscopal rank, with the suffragan sees of Rosenau, Szepes, Kaschau (Kassa), and Szatmár. In 1776 the Greek Ruthenian Bishoprics of Eperies, Munkács, and Kreuz (Körös) were placed under the jurisdiction of the Archdiocese of Gran; but in 1852 Kreuz was transferred to the Archdiocese of Agram, to which it had formerly belonged. The Archdiocese of Gran extends to-day over fourteen counties, and has as suffragans Neutra (Nyitra), Veszprém, Waitzen (Vác), Steinamanger (Szombathely), Stuhlweissenburg (Székes-Fehérvár), Raab (Győr), Fünfkirchen (Pécs), and Neusohl (Besztercze-Bánya) (Latin Rite), also the Greek Ruthenian Dioceses of Eperies and Munkács. There are three chapters, the metropolitan chapter at Gran with 22 members, the collegiate chapter of Presburg with 13 members, and the chapter at Tyrnau (Nagy-Szombat) with 6 members. The archdiocese is divided into three vicariates, Gran, Tyrnau, and Budapest; 8 archdeaneries, the cathedral deanery of Gran and those of Bars, Hont, Komorn (Komárom), Neograd (Nógrád), Neutra (Nyitra), Presburg (Pozsony), and Sassin (Sasvár); and 46 deaneries, of which 21 belong to the Vicariate of Gran, one to that of Budapest, and 24 to that of Tyrnau. There are also in the archdiocese 13 abbeys, and 24 exempt abbeys. At one time the parishes numbered over a thousand, and as late as the middle of the sixteenth century exceeded nine hundred. On account of the continued advance of the Turks and the spread of Protestantism, this number rapidly decreased, so that it was reduced to one hundred at the beginning of the seventeenth century. Under the great Peter Pázmány, the zealous opponent of Protestantism, conditions were improved, and after his death there were 185 parishes. To-day the number is given as 480, and the total number of clergy in the archdiocese 923, of whom 729 are occupied with the cure of souls. There are 5 seminaries for the training of priests, the central seminary at Budapest, that of Gran, the Pazmaneum at Vienna, and the preparatory seminaries at Presburg and Tyrnau. There is also an archiepiscopal gymnasium connected with the Tyrnau seminary. The students number about 262. There are in the archdiocese

134 religious houses of men and women, whose members number collectively 2487. In the three vicariates of the archdiocese (1909) there are 1,480,531 Catholics, and 1,057,282 members of other creeds.

The already existing See of Gran was raised to metropolitan rank by St. Stephen (c. 1000-38), first King of Hungary, who converted the country to the Catholic Faith and organized the Church there. He chose for the metropolitan see Gran, at that time the richest and most important city in Hungary and the royal residence. St. Adalbert, Bishop of Prague and martyr, was chosen patron of the archdiocese. It was Adalbert who converted the royal family to the Catholic Church and evangelized the country. The metropolitan church of Gran is dedicated to him, the titular patron being the Blessed Virgin. The first cathedral was begun by St. Stephen in 998. The foundation stone of the present building was laid by Alexander von Rudnay (archbishop 1819-31), and it was finished under Johann Simor (1866-92). In 1198 the royal palace at Gran was given to the archbishop for his residence. The first archbishop was Astericus Anastasius (Astrik-Anastaz) (990-c. 1036), who was the most loyal co-operator of King Stephen in organizing Catholic Hungary, and who was sent by Stephen to Rome to beg papal approval for the organization of the Church in Hungary, and to ask for the crown. It was also Astericus who, in the year 1000, crowned Stephen as first King of Hungary with the crown sent by Pope Sylvester II.

On account of the part played by its archbishops, the history of the Archdiocese of Gran is closely connected with that of Hungary. Up to the sixteenth century the archbishop resided at Gran, but when the Turks overran Hungary after the battle of Mohács, in which the primate, Ladislaus Szálkán (1524-26), was slain, Paul Várdai (1527-49) removed the seat to Presburg, and when Gran also fell into the hands of the Turks, to Tyrnau, which remained the seat of the archdiocese until 1820. This period is one of the saddest epochs in the history of the see. Ecclesiastical discipline became relaxed, and notwithstanding the efforts of Nikolaus Oláh (1553-68), Protestantism gained more and more territory. After the death of Anton Veranotius (1569-73), the episcopal see remained vacant for twenty-three years. It was the greatest of all the archbishops of Gran, Peter Pázmány (1616-37), who stemmed the decline of Catholicism in Gran. He succeeded in reconciling with the Church many influential families of Hungary, and thus brought about the ecclesiastical reorganization of the country. A pulpit orator of distinction, he earned imperishable fame by his cultivation of the Hungarian language and won a lasting place in the history of Hungarian literature. For the advancement of the Catholic religion and the promotion of learning, he founded at Vienna the Pazmaneum, a seminary for the training of priests. The University of Tyrnau was also founded by him, but was transferred to Budat (Ofen) by Maria Theresa. In 1891 Klaudius Vaszary was appointed archbishop.

In virtue of his dignity as Primate of Hungary, the Archbishop of Gran possesses a number of extraordinary privileges. Johann von Kanizsai (1387-1418) was the first to be mentioned as Primate of Hungary, though the primacy was connected with the Archdiocese of Gran as early as 1279. The primate is entitled to hold national synods, is Legatus Natus of the Holy Roman Church, has therefore the right, inside of his legation, to have the cross carried before him, and deals directly with the

Holy See. As primate he has the right to visit the episcopal sees and the religious houses in Hungary, with the exception of the exempt Archabbey of Pannonhalma (S. Martinus in Monte Pannoniæ). Since 1715 the primate has also been a Prince of the Holy Roman Empire, having the title of Prince Primate. He is the chief and privy chancellor of Hungary, and therefore keeper of the great seal of the kingdom. Formerly he was also a member of the supreme court, and in still earlier times, governor, viceroy, and First Count (*Erbobergespan*) of the County of Gran. To the primate also belonged the right to superintend the royal mint, and for this he received a certain sum out of its revenues (*jus piseti*). According to an ancient custom, he has the right of crowning the king and of anointing the queen. By a gift of archiepiscopal property he was at one time able to confer nobility (Prädialadel). The right to take an oath before a court of justice through his deputy, and not personally, was another privilege of the Primate of Hungary. The primate is also chief priest and chancellor of the Order of St. Stephen, established in 1764. As first banneret (*baro regni*) of Hungary, he is a member of the Upper House.

A. ALDASY.

Granada

Granada

Archdiocese of Granada (Granatensis).

Archdiocese in Spain, founded by St. Cecilius about the year 64, was made an archiepiscopal see by Alexander VI, 23 Jan., 1493. The history of this city, the long line of its prelates (uninterrupted until the twelfth century and restored in 1437), its illustrious men, and its famous monuments can hardly be summarized within the limits of this brief article. In the Roman period this city appears as Municipium Florentinum Eliberritanum. On its Iberian coins, minted in the Roman republican period, the city is called Ilurir; on Latin coins, Iliber and Florentia; on Visigothic coins, Iliberri, Eliberri, and Liberri. Pliny calls it Eliberri; Ptolemy, *Illiberis*; Herodotus, *Illiber*. Olerón and Elna, on the other side of the Pyrenees, were similarly called; the name seems derived from the Basque language, in which *iri-berri*, or *ili-berri*, signifies "new town". In the eighth century, under Arab domination, this name was changed to *Granada*, originally the name of that particular quarter of the city inhabited since the third century by the Jews, to whom the Musselman conquerors entrusted the custody of the city; it is worthy of note that several Palestinian peoples in the Old Testament are called *Rimmon*, "pomegranate" (in Spanish, *granada*).

The famous codex of San Millan (St. Emilian), written in the tenth century, and now preserved in the Escorial Library, supplies us with a catalogue of the bishops of Elliberis, sixty-two in number, from St. Cecilius to Agapius (64 to 957). The names of many of these and the periods of their reigns are also established by the Acts of councils, by their own writings, and by other authors, native and foreign. St. Cecilius, whose feast was kept by the Visigothic and Mozarabic Church on 1 May, was one of the seven Apostolic men sent from Rome by St. Peter and St. Paul to preach the Gospel in Hispania Baetica, where they suffered martyrdom. On 15 May, 301, the famous synod known as the Council of Elliberis assembled at Granada (see ELVIRA, COUNCIL OF), forty-three bishops being present, among them, besides Flavian of Granada, the great Hosius of Cordova, Liberius of Merida, Melantius of Toledo, Decentius of Leon, and Valerius of Saragossa. The eighty-one canons of this council reflect the state of dogma and church discipline in a time when persecution and antagonism were aroused by Roman imperial authority, the Jews, heretics, and schismatics. St. Gregory, Bishop of Elliberis, who assisted at the Councils of Sirmium and Rimini, and was the constant antagonist of the Arian heresy, bears witness to the purity of the Catholic faith which this see always maintained. Bishop Stephanus (Esteban) assisted at the Third Council of Toledo (589), which extinguished the Arian heresy in Spain; Bishop Bisinus at the Second of Seville (619); Bishop Felix at the Fourth of Toledo (633); the signatures of successive Bishops of Elliberis in later councils attest the accuracy of the aforesaid San Millan catalogue. In 777 Bishop Egila was honoured by letters of praise from Adrian I. St. Leovigild, who, in the year 852, suffered martyrdom at Cordova, was a native of Granada; and, not long after (858), the See of Granada was occupied by the wise Recesmund, memorable for his astronomical and literary achievements, as well as his embassies on behalf of Abd-er-Rahman III, Caliph of Cordova, to the Emperors of Germany and of Constantinople. It was to him that Liutprand dedicated his history of the kings and emperors of Europe.

The See of Granada remained inviolate until the middle of the twelfth century. The Christian (Mozarabic) population having called to their aid Alfonso the Fighter (*el Batallador*), King of Aragon and Navarre, and conqueror of Saragossa, he led his hosts within sight of Granada; but the expedition being defeated, some of the Christians departed with the king, and the Almohades carried off the remainder by force to Marrucos. Thenceforward the Christian population consisted of captives and foreigners, and no bishop held the title of Granada. Gams, in his "Series Episcoporum", makes St. Pedro Pascual (d. 6 Dec., 1300) a Bishop of Granada in the second half of the fourteenth century, an error which has been corrected since the publication of the "Regesta" of Boniface VIII (Paris, 1884). The new list of Bishops of Granada begins 13 Sept., 1437, and continues until 1492, according to the researches of Eubel in the Vatican registers.

With the surrender of the city to the Catholic sovereigns Ferdinand and Isabella (2 Jan., 1492), began a period of splendour for the See of Granada. A few days after that event, the Catholic sovereigns there ratified with Christopher Columbus the compact which was to result, before the end of that year, in the discovery of the New World. On 30 Jan. they issued the decree of expulsion against all Jews inhabiting their dominions in Spain and Italy.

It is to be noted that the first Archbishop of Granada, the queen's confessor, transferred from the See of Avila, was not hostile to Columbus, but his constant friend, as Don Antonio Sanchez Moguel, Member of the (Spanish) Royal Academy of History, has promised to demonstrate. In this modern period of more than four centuries' duration, Granada has been ruled by many archbishops eminent for learning and virtue, e.g. Cardinal Gaspar de Avalos, who founded the university (1531), Pedro Guerrero, a distinguished member of the Council of Trent, and Manuel Bonel y Orbe, Patriarch of the Indies; it has given birth to innumerable writers, among whom the Dominican Luis de Granada and the Jesuit Francisco Suárez are conspicuous; it was the cradle of the Order of St. John of God. Indeed, it has long been a centre of vigorous spiritual life, proof of which is abundantly furnished by its churches, its conventual buildings, and the vast material resources there devoted to works of charity. Its cathedral contains the tombs of Ferdinand and Isabella, and the Empress Isabella, wife of Charles V. Early in the present century, that famous monument of Spanish art, the Cartuja (Chartreuse) of Granada, from which its austere anchorites had been driven by the barbarous decree of exclaustation (1835), was acquired and restored by the Jesuits, who have established in it their novitiate for New Castile, Estremadura, and Andalusia, also a school of the sacred sciences, and a seismological and astronomical observatory which publishes a periodical bulletin highly valued in scientific circles both in the Old and the New World.

HUBNER, *Inscriptiones Hispaniae, latinae* (Berlin, 1869, 1892), 285-292, 882-885; *Inscriptiones Hispaniae christianae* (Berlin, 1871), 33, 34, Supplem. (Berlin, 1900), 58; 99-102; FITA, *Boletin de la Real Academia de la Historia* (Madrid, 1892), XXI, ii; *Espana Sagrada* (Madrid, 1754), XII, 79-220; GAMS, *Serioses episcoporum* (1873), 34-36, 38; Supplem. 84; Eubel, *Hierarchia ecclesiastica medii oevi* (Munich, 1901), 178; SIMONET, *Historia de los mozarabes de Espana* (Madrid, 1897-1903), 938; DE GALVEZ, *San Pedro Pascual obispo de Jaen y martir* (Jaen, 1903), 325-329; *Bulletin de la Societe belge d'Astronomie* (Jan., 1908); *Comptes rendus de la primera Asamblea general de Sismologia* (The Hague, Sept., 1907).

F. FITA

University of Granada

University of Granada

The origin of this university is to be traced to the Arab school at Cordova, which, when the city was captured by St. Ferdinand in 1236, was removed to Granada and there continued. When Granada in its turn fell into the hands of the Catholic sovereigns one of their earliest and chief cares was to secure the preservation of letters and the art of imparting knowledge, in which the Arabs had been so well-versed, and the school was taken under their protection. However, it did not receive the status of a university until the reign of Charles V, when a Bull of erection, dated 1531, was issued by Clement VII. The institution is endowed with privileges similar to those enjoyed by the Universities of Bologna, Paris, Salamanca, and Alcalá de Henares. The large building which it occupies was erected by the Jesuits and is admirably suited to its purpose. The curriculum covers

a wide field, the faculties including those of law, medicine, social science, etc. The university has a seismological station in the observatory of Cartuja. The magnificent library contains 40,000 volumes, and includes a polyglot Bible, several valuable works of theology, and some Arabic MSS.

BLANCHE M. KELLY

Jean Grancolas

Jean Grancolas

Doctor of the Sorbonne, theologian, liturgist; b. near Chateaudun, about 1660; d. at Paris, 1 August, 1732. Having received the degree of Doctor of Theology of the faculty of Paris in 1685, he became chaplain to the brother of Louis XIV. He pronounced the funeral oration of this prince, but his panegyric displeased the son of the deceased, the Duke of Orléans, future Regent of France, who dismissed him from his house. His unfortunate essay caused Grancolas to abandon official eloquence, and, having devoted much time to studying liturgical ceremonies and comparing the various usages with the text of the ancient writers who have given an account of them, he undertook to communicate to the public his observations on this head. His first work dealt with the antiquity of the ceremonies of the sacraments. The favourable reception accorded this endeavour led Grancolas to publish the next year a study of the custom of dipping the consecrated bread in the wine. However, the author was desirous of participating in less severe questions, and wished to engage in theological polemics. At that time the matter of Quietism was creating a great stir in the world, and Grancolas conceived the idea of plunging into the quarrel by a refutation of the heresy which he entitled "*Le Quiétisme contraire au doctrine des sacrements*" (Quietism contrary to the doctrine of the Sacraments), and which appeared in 1693.

This work contains a history of the life, doctrine, and condemnation of Molinos. Grancolas herein sets forth the principles of the Spanish mystic and of his followers, which principles he proceeds to refute from Scripture and the tradition of the Fathers. This new work attracted little attention, and shared the fate of so many other theological demonstrations called forth by the Quietist heresy and scarcely remembered to-day. However from his own point of view, Grancolas is master of his subject and handles it firmly, but he displays the usual qualities and defects found in his other works, namely, an erudition of the first order derived from original sources, a profound and wide acquaintance with the question he treats and germane topics, a too evident rudeness of expression and lack of culture, as well as an obvious disdain for composition.

His works offend chiefly in this last particular. Grancolas scarcely took the trouble to arrange and connect the points of an argument, being satisfied to throw them into a heap, and deprived them by this disorder of a part of their monstrative value. Despite these defects all works of Grancolas retain their value as books of reference. His collections of texts do not do away the necessity of having recourse to originals although the translations he gives are generally exact and very clear, but he is useful, inasmuch as he omits nothing essential and also, if necessary in determining the sense of a word. An original mind he belongs to the theological school of Thomassin and Petau

who readily replace discussion by the exposition of traditional opinions in chronological order, but he scarcely troubles to develop the sense of his texts. His real originality is as a liturgist, although even here he does not rise above the second rank. Ingenious without being systematic, imaginative without being adventurous, the commentary in most of his works is valuable, especially in the "Ancien sacramentaire de l'Eglise" and in the "Commentaire sur le Bréviaire romain".

His principal writings are: "Traité de l'antiquité des cérémonies des sacrements" (Paris, 1692); "De l'Intinction ou de la coutume de tremper le pain consacré dans le vin" (Paris, 1693); "Le Quiétisme contraire à la doctrine des sacrements" (Paris, 1693); "Instructions sur la religion tirées de l'Ecriture sainte" (Paris, 1693) "La Science des confesseurs ou la manière d'administrer le sacrement de Pénitence" (Paris, 1696); "Histoire de la communion sous une seule espèce, avec un Traité de la concomitance, ou de la Présence du Corps et du Sang de Jésus Christ sous chaque espèce" (Paris, 1696); "L'ancienne discipline de l'Eglise sur la Confession et sur les pratiques les plus importantes de la Pénitence" (Paris, 1697); "Heures sacrées ou exercice du chrétien pour entendre la messe et pour approcher des sacrements, tiré de l'Ecriture Sainte" (Paris, 1697); "Tradition de l'Eglise sur le péché originel et sur la réprobation des enfants morts sans baptême" (Paris, 1698); "L'ancien pénitentiel de l'Eglise ou les pénitences que l'on imposait autrefois pour chaque péché et les devoirs de tous les états et professions présents par les saints Peres et par les conciles" (Paris, 1698); "Les anciennes liturgies ou la manière dont on à dit la sainte Messe dans chaque siècle dans les Eglises d'Orient et dans celles d'Occident" (Paris, 1697); "L'ancienne sacramentaire de l'Eglise, où sont toutes les pratiques qui s'observaient dans l'administration des sacrements chez les Grecs et chez les Latins" (2 vols., Paris, 1690-99); "La morale pratique de l'Eglise sur les préceptes du Décalogue: ou la manière de conduire les âmes dans le sacrement de pénitence" (2 vols., Paris, 1701); "La tradition de l'Eglise dans le soulagement des esclaves" [J- G. (?)] (Paris, 1703); "Traité de la Messe et de l'office divin" (Paris, 1713); "Dissertations sur les messes quotidiennes et sur la confession" (Paris, 1715); "Le Bréviaire des laïques ou l'Office Divine abrégé" (Paris, 1715); "Les catechismes de Saint Cyrille de Jerusalem avec les notes et des dissertations" (Paris, 1715); "Commentaire historique sur le Bréviaire romain" (Paris, 1700, and Venice, 1734); "La critique abrégée des ouvrages des auteurs ecclésiastiques" (2 vols., Paris, 1716); "Instruction sur le Jubilé avec des résolutions de plusieurs cas sur cette matiere" (Paris, 1722); "Histoire abrege de l'Eglise de la Ville et de Université de Paris" (Paris, 1728); "L'imitation de la de Jésus Christ, traduction nouvelle précédée une Dissertation sur l'auteur de ce livre" (Paris, 1729). Grancolas favours the claims of Ubertino of Casale, a Franciscan who lived shortly before the fourteenth century, to the authorship of the Imitation.

DU PIN, Bibliotheque des auteurs eccl. (seventeenth century); MORERI, Grand dictionn. historique, IV, 179-80.

H. LECLERCQ
Theodor Granderath

Theodor Granderath

Born 19 June, 1839, at Giesenkirchen, Rhine Province; died 19 March, 1902, at Valkenburg, Holland. After completing the course in the gymnasium at Neuss, he studied theology in the University of Tübingen, and entered the Society of Jesus at Münster, Westphalia (3 April, 1860). Between 1862 and 1874 he finished his studies in the classics, philosophy, theology, and canon law. In 1874 he was appointed professor of canon law in the college of Ditton Hall, England, where from 1876 to 1887 he taught dogma and apologetics. In 1887 he was sent to the college of the Society at Exaeten, Holland, to succeed Father Schneemann in the preparation of the "Acta et Decreta Concilii Vaticani". In 1893 he was called to Rome, where Leo XIII placed the archives of the Vatican Council at his disposal, with a view to a history of that council. In 1897 and 1898 he replaced the professor of apologetics at the Gregorian University. In 1901 failing health compelled him to retire to the college at Valkenburg, where he prepared the first two volumes of his history of the Vatican Council.

Granderath's name will live for ever among scholars in connexion with his monumental labours on the Vatican Council. In preparation for them he first edited the "Acta et Decreta sacrosancti oecumenici Concilii Vaticani" (Freiburg im Br., 1890), the seventh volume of the "Acta et Decreta sacrorum Conciliorum recentiorum" in the "Collectio Lacensis". This was followed by "Constitutiones Dogmaticae ss. oecumenici Concilii Vaticani ex ipsis ejus actis explicatae atque illustratae" (Freiburg im Br., 1892). The publication of his "Geschichte des vaticanischen Konzils von seiner ersten Ankündigung bis zu seiner Vertagung, nach den authentischen Dokumenten dargestellt" was continued after the author's death by his fellow Jesuit Konrad Kirch. Two volumes of this work, which the author himself prepared for the press, were issued in 1903 at Freiburg im Breisgau, the first dealing with the preliminary history and the second with the proceedings of the council to the end of the third public sessions. The third and last volume was published in 1906 and treats of the final proceedings. A French translation is being issued at Brussels (1908—). The great merit of Granderath's work consists in his refutation of biased accounts of the council animated by hostility to the Church; he opposes to them a history based upon authentic materials. For the first time the unabridged text of the acts of the council, especially of the discourses delivered in the general congregations, was laid before the public. Granderath was also the author of many apologetic, dogmatic, and historical articles in the "Stimmen aus Maria-Laach" (1874-99), the "Zeitschrift für kath. Theologie" (1881-86), and the "Katholik" (1898). The second edition of the "Kirchenlexikon" contains also several lengthy articles from his pen, among others that on the Vatican Council (XII, 607-33).

FRIEDRICH LAUCHERT

Philippe-Andre Grandidier

Philippe-André Grandidier

Priest and historian, b. at Strasburg, Alsace, 9 Nov., 1752; d. at the Abbey of Luntzel (Lucelles), Sundgau, 11 Oct., 1787. This gifted scholar was appointed archivist of the Diocese of Strasburg at the early age of eighteen by the prince-archbishop, Cardinal de Rohan, and at twenty-five had been admitted to twenty-one scientific societies in France and Germany. His forte was critical investigation, but his intense application soon undermined his health, and he died at the early age of thirty-four. In recognition of his services he was made canon of Strasburg, and, shortly before his death, royal historiographer for Alsace. We owe to him two volumes of the "Histoire de l'église et des évêques-princes de Strasbourg depuis la fondation de l'évêché jusqu'à nos jours" (Strasburg, 1776-78), an account of the early ecclesiastical history of Alsace to 965. From the manuscripts of Grandidier Liblin continued this monumental work under the title: "Oeuvres historiques inédites de Ph.-A. Grandidier" (Colmar, 1865-67), in six volumes. Pius VI expressed his admiration of Grandidier's work and encouraged the young savant to further labours. The other canons of Strasburg therefore held themselves slighted and so opposed Grandidier's scientific methods - even questioning the soundness of his faith - that for a while he dropped all historical work. He soon yielded, however, to his love of science, and gave new evidence of his skill in historical research by the "Essais historiques et topographiques sur l'église cathédrale de Strasbourg" (Strasburg, 1782) and by the "Histoire ecclésiastique, militaire, civile et littéraire de la province d'Alsace" (Strasburg, 1787). Recently P. Ingold edited in five volumes the correspondence of this savant: "Nouvelles oeuvres inédites; Les Correspondants de Grandidier" (Paris, 1895-97).

PATRICIUS SCHLAGER

Grandmont

Abbey and Order of Grandmont

Abbey and Order in the department of Hte-Vienne, France. The exact date of the foundation of the order is very uncertain. The traditional story involves serious chronological difficulties, and is based on a Bull of Gregory VII now shown to be a forgery (see Martène and Durand, *Ampl. Coll.*, VI, Praef.). The founder, St. Stephen, is said to have settled in the valley of Muret near Limoges in 1076, but Martène considers that the origin of the order cannot be placed earlier than about 1100. The Order of Grandmont has been claimed by both Benedictines and Canons Regular as a branch of their respective institutes, although the Grandmontines always maintained that they formed a distinct order. Martène considers that St. Stephen modelled his institute upon the life of the Carthusians. The so-called "Rule of St. Stephen" was compiled at the request of the fourth prior, Etienne de Liciac, by Hugh of Lacerta, and embodies the customs of Grandmont some 20 or 30 years after St. Stephen's death. The founder himself left no authentic writings. His maxim was "There is no rule save the Gospel of Christ"; as this was the basis of all rules, to practise its morality

was to fulfil all the duties of a good religious. The early Grandmontines were noted for their extreme austerity. Poverty was most strictly observed; the rule forbade the possession of lands, cattle, revenue, or impropriate churches. Begging was only permitted when there was no food in the house, and even then the local bishop was first to be informed of their state. The law of silence was also very severe, as were the rules of fasting and abstinence.

After the founder's death in 1124 his disciples migrated to the neighbouring rocky desert of Grandmont, owing to a dispute about the ownership of Muret. Under Etienne de Liciac the order spread rapidly, and in 1170 numbered sixty monasteries, mostly in Aquitaine, Anjou, and Normandy. Under his successor, Bernard de Boschiac, eighty new foundations were made, and the "bons hommes" were to be found in nearly every diocese of France. The influence of the Grandmontines reached its height in the twelfth century. Their holy austerity roused the admiration of all beholders, and the kings of England and France vied with one another in bestowing favours upon them. Henry II of England had the monastery rebuilt, and St. Louis erected a Grandmontine house at Vincennes. The golden age of Grandmont however lasted only some sixty years after the founder's death. From that time onwards the history of the order is an almost uninterrupted series of disputes. Even in the twelfth century the ill-defined position of the lay brothers caused troubles. They were far more numerous than the choir-monks, and were given entire control of all temporalities in order that the latter might be entirely free to carry on their spiritual duties. Gradual relaxation of the rules of poverty led to great possessions, and thus increased the importance of the lay brothers, who now claimed equality with the choir-monks. This led to scandalous scenes. In 1185, the lay brothers at Grandmont rose in open revolt, expelled Prior Guillaume de Trahinac with 200 of the religious, and set up an intruder. The political situation embittered these dissensions, the order being divided into two parties, French and English. Successive popes tried to restore peace, but in vain. In 1219 the prior of Grandmont and forty monks were again expelled by the rebellious lay brothers. In 1244 the papal delegates advised a union of the order with the Cistercians as a means of ending the disputes. This threat and the expulsion of a large number of monks produced a certain degree of peace. Numbers, however, declined; about 1150, the order had over 1200 members, but towards the beginning of the fourteenth century only 800. Moreover, a relaxation of the rule (1224) led finally to the cessation of all observance.

In 1317 John XXII, sometimes said to have been a Grandmontine monk, issued the Bull "Exigente debito" to save the order from complete destruction. Its organization was altered and certain mitigations were approved. The number of houses was reduced from 149 to 39. The prior of Grandmont was made an abbot, and the superiors of the dependent houses, who had hitherto been known as "Correctors", were for the future to bear the title of Prior. The Abbot of Grandmont was to be elected by his own community, and not, as before, by the deputies of the whole order. A general chapter, to be attended by the prior and one monk from each dependent house, was to be held annually. These vigorous measures brought about a slight recovery, but, in spite of the vigilance of the Holy See and the good administration of the first abbots, the improvement was of short duration. The order suffered severely during the Hundred Years War. From 1471 till 1579 Grandmont

was held by commendatory abbots; shortly after the latter date there were only eight monks in the monastery. The Huguenots seized the abbey on one occasion, but were expelled by Abbot Rigaud de Lavaur in 1604. In 1643 Abbot Georges Barny (1635-1654) held a general chapter, the first for 134 years, at which Dom Charles Frémon was authorised to found the Strict Observance of the Order of Grandmont. This new branch, which remained under the jurisdiction of the abbot, was conspicuous for the primitive austerity of its observance, but never numbered more than eight houses. By the beginning of the eighteenth century the two Observances together numbered only about 150 members, but the quarries were as frequent and as bitter as ever. Grandmont was one of the first victims of the Commission des Réguliers. The religious of the Strict Observance were dispersed in 1780, but the struggle for existence was prolonged till 1787, when the last two monks were expelled from the mother-house. The monastery was finally destroyed at the beginning of the nineteenth century, and nothing but a few fragments of wall now remains.

Grandmont never produced any writers of importance. Apart from a number of lives of St. Stephen, the most important work issuing from Grandmont was Gérard Ithier's treatise "De institutione novitiorum" -- a favourite spiritual work in the Middle Ages, usually but erroneously attributed to Hugh of St. Victor. The original habit of Grandmont was a coarse tunic with scapular and hood, brown in the early days but changed later to black. The monks gradually laid aside scapular and hood in favour of rochet and biretta. The original habit was resumed by the Strict Observance. The founder had expressly forbidden the reception into the order of houses of religious women, nevertheless four small nunneries in the Diocese of Limoges were admitted. Outside France the order only possessed five houses, two in Spain and three in England. These latter, situated at Alberbury, Creswell, and Grosmont, never attained any importance and were occupied by a very small number of monks.

BEAUNIER, *Recueil historique des archevêchés*, etc. (Paris, 1900); GUIBERT, *Destruction de l'ordre de Grandmont* in *Bulletin de la Soc. Arch. et Hist. du Limousin*, XXII-XXV (Limoges, 1877); HEIMBUCHER, *Orden u. II, 247-57.

RAYMUND WEBSTER

Grand Rapids

Grand Rapids

(Grandormensis)

Diocese created 12 May, 1882 out of the diocese of Detroit, and made to include the lower peninsula of the State of Michigan, U.S.A., north of the southern line of the Counties of Ottawa, Montcalm, Gratiot, and Saginaw, and west of the eastern line of the Counties of Saginaw, Bay, and

the adjacent islands, an area of 22,561 square miles. In this section there were then about 50,000 Catholics attended by 34 priests. There were 33 churches, 33 missions, 41 stations, 11 parish schools, and an orphan asylum. In the rural regions colonies of Belgians and emigrants from Holland had settled, with an admixture of Irish; to these Poles have since been added. Henry Joseph Richter, appointed the first bishop, was consecrated at Grand Rapids, 22 April, 1883. He was born at Neuenkirchen, Duchy of Oldenburg, 9 April, 1838, and ordained priest at Rome, 10 June, 1865. Under his direction the diocese prospered steadily in all directions. Several religious communities of men are located there: Franciscans (both Minorites and Conventuals), Fathers of the Holy Ghost, Redemptorists, and Premonstratensians. The religious communities of women are: Sisters of St. Dominic, Sisters of Mercy, Little Sisters of the Poor, Sisters of Charity (Mt. St. Joseph, Ohio), School Sisters of Notre Dame, Ursuline Sisters, Sisters of Charity (Emmitsburg), Sisters of Providence, Felician Sisters, Sisters of the Good Shepherd, Sisters of the Immaculate Heart of Mary, Franciscan Sisters of Christian Charity.

THOMAS F. MEEHAN

Thomas Grant

Thomas Grant

First Bishop of Southwark; b. at Ligny-les-Aires, Arras, France, 25 Nov., 1816; d. at Rome, 1 June, 1870. He was the son of Bernard Grant, an Irishman who enlisted in the British army, became sergeant, and finally purchased a commission. His mother, Ann MacGowan, was also Irish by birth. In January, 1829, he was sent to Ushaw College, where he studied until 1836, when he went to the English College at Rome. There he was ordained priest, 28 Nov., 1841, was created doctor of divinity and appointed as secretary to Cardinal Acton, a position in which he acquired a thorough knowledge of canon law, and an intimate acquaintance with the method of conducting ecclesiastical affairs at Rome. In October, 1844, at the early age of twenty-eight, he became rector of the English College, and was made agent for the English bishops. In this capacity he was of great assistance to Dr. Ullathorne, who was then negotiating for the restoration of the English hierarchy. He also translated for Propaganda all English documents relating to the matter, and furnished the materials for the historical preface to the Decree of 1850. A year later, he was appointed to the new Diocese of Southwark, and was consecrated bishop on 6 July, 1851. Though he came to England almost as

a stranger, he soon won the confidence of Catholics and others. As the Government was shy of transacting business directly with Cardinal Wiseman, many negotiations were carried on by Dr. Grant, who was specially successful in obtaining from the Government the appointment of military and naval chaplains, as well as prison chaplains.

To the newly appointed hierarchy he was, as Bishop Ullathorne testified, most useful: "His acuteness of learning, readiness of resource and knowledge of the forms of ecclesiastical business made him invaluable to our joint counsels at home, whether in synods or in our yearly episcopal meetings; and his obligingness, his untiring spirit of work, and the expedition and accuracy with which he struck off documents in Latin, Italian, or English, naturally brought the greater part of such work on his shoulders." In the administration of his diocese he proved equal to the task of organization, which was necessary in an age of rapid expansion, while the remarkable sanctity of his private life led to his being generally regarded as a saint, and caused Pius IX, when he learned of his death, to exclaim "Another saint in heaven!" The virtues of charity and humility in particular were practised by him in an heroic degree. The last years of his life were spent in great suffering, caused by cancer, and when he set out to attend the Vatican Council at Rome in 1870, he knew that he would not return. He was appointed member of the Congregation for the Oriental Rites and the Apostolic Missions, but was too ill to take an active part in the proceedings. After death his body was brought back to England for burial. His works were a translation of the "Hidden Treasure" of Blessed Leonard of Port Maurice (Edinburgh, 1855), and "Meditations of the Sisters of Mercy before Renewal of Vows" (London, 1874)

EDWIN BURTON

Antoine Perrenot de Granvelle

Antoine Perrenot de Granvelle

Known in history as **CARDINAL DE GRANVELLE** (**GRANVELLA**).

Born at Ornans in Franche-Comté, 20 August, 1517; died at Madrid, 21 September, 1586. He was the son of Nicolas Perrenot, prime minister of Charles V, studied at Padua and Louvain, and at an early age was introduced by his father to political life. Ecclesiastical favours and benefices were showered upon the young man. He became prothonotary Apostolic in 1529, archdeacon of Besançon, archdeacon of Cambrai, and was made Bishop of Arras in 1538 at the age of twenty-one. He resided very little in his diocese and lived at Brussels, where he had an active share in his father's political negotiations. He was charged with addressing the Council of Trent in the name of the emperor (9 Jan., 1543), and took an active part in all the important affairs of Charles V, e.g. the interview of Nice, the Peace of Crepy (1544), the Interim, and the marriage of Philip II with Mary Tudor of England. In 1550 he succeeded his father as keeper of the emperor's seal, but did not bear the title of chancellor. His influence continued to grow under Philip II. he was name Archbishop of Mechlin in 1559 and cardinal in 1561.

As member of the Council of State of the Low Countries he was the most valued counsellor of the regent, Margaret of Parma; apropos of this it must be remembered that when leaving the country Philip II recommended his sister to refer all important affairs to a council of three, one of whom should be Granvelle. He was in direct correspondence with the king, and freely judged and criticized the regent. So much power aroused the jealousy of the nobility, especially that of the Prince of Orange and the Comté d'Egmont, the chief personages of the Low Countries, who were indignant at seeing Granvelle preferred before them. Every means was employed to stir up popular opinion against him, caricature, song, and pamphlet. The regent and even the king himself were besieged with protests. Finally the nobles declared that they would refrain from assisting at the Council of State as long as they should meet the cardinal there. The king believed it prudent to sacrifice his favourite in the face of such stubborn and fierce hostility. Accordingly Granvelle was "authorized to visit his mother in Burgundy" (1564). He was never to see the Low Countries again, though on his departure he left behind his papers, books, and pictures, in the hope of a speedy return. He withdrew to his native Besançon, whence he continued to correspond with the king. By the latter he was sent to Rome in 1565, where he took an active part in the formation of the Holy League, which resulted in the celebrated victory of Lepanto. In 1571 the king named him viceroy of Naples, which post he held until 1575 and then returned to Rome. In 1577 Philip II offered to allow him to return to the Low Countries under Margaret of Parma, but the cardinal refused to return to a country which he had left under such humiliating circumstances, and where he could not longer be of use. The king summoned him to Madrid (1579). At Madrid, as at Brussels, Besançon, Naples, and Rome, he was a faithful and valued counsellor, though towards the end his repute seems to have diminished. Having resigned from his Archdiocese of Mechlin, he received that of Besançon in 1584. He died at Madrid, and was buried at Besançon, but his remains were scattered during the French Revolution.

Comely of person, speaking seven languages, liberal, of an even disposition, unswervingly faithful to his masters, possessing great political penetration, and of an astonishing activity, Granvelle was moreover a generous and enlightened patron of arts and letters. He has been reproached with avarice; in fact he was never satiated with riches and honours, but was unskilled in the art of gaining popularity. Exclusively preoccupied with the service of his masters, he scorned to win the affection of the multitude, and was much detested in Germany as in the Netherlands. Owing to his great influence he was held responsible for everything that was done, even when he had advised against it. Worldly and ostentatious, and more than once accused of laxity of morals, Granvelle possessed the qualities and defects of a prelate of the Renaissance, with a superiority of intellect and sense of his duties as a statesman which deserve respect. His vast correspondence is an inexhaustible source of information concerning the history of the sixteenth century. It might also be said, writes the celebrated archivist, Gachard, that no minister ever wrote as much as the Cardinal de Granvelle. His correspondence has been edited partly in France by Weiss, "*Les papiers d'état de Granvelle*" (9 vols., 4to, 1841-52), partly in Belgium, "*La correspondance du cardinal Granvelle*" (12 vols., 4to, 1878-96), the first three volumes by E. Poulet, the remainder by Ch. Piat.

GODERFROID KURTH

Grasse

François-Joseph-Paul Grasse

Count and Marquess de Grasse-Tilly, lieutenant-general of the naval forces; b. near Toulon, 1723; d. at Paris, 11 January, 1788. His family was one of the oldest of the French nobility. His father, François de Grasse-Rouville, Marquess de Grasse, was a captain in the army. At the age of eleven, François-Joseph entered the naval service of the Knights of Malta (1734), and served during the Turkish and Moorish wars. In 1739 he entered the French navy, and, after serving on several vessels, was, in 1747, captured and taken prisoner to England, where he remained two years. Returning to France, he was made a lieutenant, and served under La Galissonnière during the Seven Years War, and under D'Ache in the East Indies. Promoted to captain in January, 1762, he received the brevet of Knight of St. Louis in 1764.

The treaty of alliance between France and the United States was signed 6 February, 1778. The first naval engagement after the signing of the treaty took place off Ushant, 27 July, 1778, between the French fleet under Count D'Orvilliers and the English under Admiral Keppel. Count de Grasse was in command of the "Robuste", and was severely engaged during the action, which was undecisive in its results. Promoted to the rank of rear-admiral, he sailed from Brest in 1779, in command of a squadron, to the West Indies to join the fleet under Count d'Estaing, who was subsequently succeeded in command by Count de Guichen.

Returning to France, he was promoted to lieutenant-g233;n233;ral des armées navales (admiral), and sailed from Brest for the West Indies on 24 March, 1781, with a fleet of 23 ships of the line and a large envoy under his command. He arrived off Martinique 28 April, 1781, and next day had an engagement with the English fleet under Admiral Hood, which resulted in Hood's withdrawal. On 2 June, 1781, he captured the Island of Tobago, and then proceeded to Cape François (now Cap Haitien), where he found awaiting him a French frigate bearing dispatches from Washington and Rochambeau, urging his co-operation in the proposed movement, by which it was hoped to strike a decisive blow at the English forces in Virginia. De Grasse acted promptly; the frigate that brought the dispatches was sent back to Newport, Rhode Island, and by 15 August, Washington and Rochambeau knew of the intended coming of the fleet. Three thousand five hundred soldiers under command of Marquess St-Simon were taken on board and also a large sum of money, urgently

needed by the Americans. On 30 August, 1781, De Grasse anchored in Lynn Haven Bay, just within the Capes of the Chesapeake, with 28 ships of the line. Three days before (27 August, 1781), the French squadron at Newport, consisting of four frigates and eighteen transports, under Count de Barras, sailed for the rendezvous, making a wide detour to avoid the English fleet then at New York. Immediately on learning of De Barras's departure, the English fleet under Admirals Graves and Hood sailed for the Chesapeake to intercept De Barras before he could join De Grasse. The English fleet arrived off the Chesapeake, 5 September, 1781. De Grasse got under way, went out to meet them, and, without bringing on a general engagement, managed his fleet so skilfully that many of the English ships were very severely damaged. De Grasse kept the English fleet engaged for five days, and then returning found De Barras safely at anchor.

Graves returned to New York, and with him disappeared all hope of relieving or reinforcing the English forces at Yorktown under Lord Cornwallis. The siege of Yorktown continued, but the control of the sea made only one issue possible, and with the surrender of Lord Cornwallis on 19 October, 1781, the independence of the United States was virtually decided. On receiving the news of the surrender, Congress named 13 December, 1781, a day of thanksgiving, and on 29 October, 1781, the thanks of Congress were tendered to Washington, to Rochambeau, and to De Grasse. It was also voted to present to Rochambeau and to De Grasse two pieces of the field ordnance taken from the British at the capitulation of Yorktown, to be engraved with a short memorandum. The day after the capitulation Washington wrote to De Grasse: "The surrender of Yorktown, the honour of which belongs to your Excellency, has greatly anticipated (in time) our most sanguine expectations".

On 5 November, 1781, De Grasse sailed from the Chesapeake, arriving at Martinique on the 25th. In January, 1782, he captured the Island of St. Kitts. On 8 April, 1782, the fleet under De Grasse was attacked by Admiral Rodney off Martinique, with no advantage resulting to either. On 12 April, however, the greatest naval battle of the century (known as the Battle of the Saints, from the adjacent islands of Les Saintes) was fought. Both fleets engaged in desperate action, which lasted from daylight until after 6 P. M., when De Grasse's flagship, the "Ville de Paris", struck her colours after a brilliant but hopeless defence; the other ships of the fleet, except those captured, scattered and fled for safety.

After the surrender, De Grasse was taken by Rodney to Jamaica, and thence a prisoner to England, where he received a great deal of flattering attention, which he accepted with such complacency as to irritate his countrymen, by whom he was accused of not having maintained the dignity and reserve becoming one who had been vanquished. While a prisoner on parole in London he published a defence of his conduct of the battle, and accused his captains of disobedience, etc., blaming them for his defeat. In 1783, after peace was proclaimed, he returned to France. A court martial was ordered (1784), which entirely exonerated every one whom he had attacked. De Grasse was not satisfied with the finding of the court, protested against it, and demanded a new trial. The minister of marine, in acknowledging the receipt of his protest, replied in the name of the king: "His Majesty, dissatisfied with your conduct in this respect, forbids you to present yourself before

him". Viewed with disfavour by the king, De Grasse went into retirement, and his public career was closed. Four years afterwards he died, 11 January, 1788.

He was married three times. His surviving children were driven into exile during the Revolution, and reached the United States. His son, Count Alexander de Grasse, Marquess de Tilly, was appointed by the United States Government engineer of Georgia and the Carolinas, and a pension of one thousand dollars a year was bestowed on his daughters. Two of the daughters died of yellow fever at Charleston, South Carolina, 1799, but the youngest, Madame de Pau, was long a resident of New York. She left two sons and five daughters; the daughters married leading merchants of New York.

John Furey.
Lorenz Grassel

Lorenz Grässel

Coadjutor-elect of Baltimore; born at Ruemannsfelden, Bavaria, 18 August, 1753; died at Philadelphia, U.S.A., October, 1793. He was a novice of the Society of Jesus at the time of its suppression and was subsequently ordained priest. In 1787 he left his native land for the American mission at Father Farmer's invitation, and in March, 1787, he was given charge of the German members of St. Mary's congregation in Philadelphia, and of the Catholics scattered through New Jersey. He spent six years in Philadelphia, and during that time became noted for his learning, zeal, and piety. When it became necessary, owing to the spread of the faith, to appoint a co-adjutor to Bishop Carroll of Baltimore Fr. Grässel was chosen for the office and the petition for his appointment was formally made to Rome, 24 September, 1793. The petition was granted, Grässel thus being the first German-born Catholic appointed to a bishopric in the United States, but before the arrival of the brief naming him titular bishop of Samosata (8 Dec., 1793), Grässel had succumbed to yellow fever contracted while attending the victims of the plague which that year ravaged Philadelphia.

BLANCHE M. KELLY
Paris de Grassis

Paris de Grassis

Master of ceremonies to Julius II and Leo X; b. at Bologna, about 1470; d. at Rome, 10 June, 1528. He was the nephew of Antonio de Grassis, nuncio to Frederick III, and Bishop of Tivoli. Cardinal Achille de Grassis, his brother, one of the confidential diplomats of Julius II, was appointed Archbishop of Bologna by Leo X, and died in 1523. In 1506 Paris de Grassis succeeded the famous Burchard, master of ceremonies to Alexander VI, and continued his "Diarium" (ed. Thuasne, Paris, 1883-84). The portion of the diary written by de Grassis covers the closing years of Julius II and the pontificate of Leo X, and is a precious reference work for the historian. De Grassis was not a historian, merely a chronicler; with pedantic fidelity he jotted down the minutiae of all pontifical ceremonies, trivial occurrences at the Curia, the consistories and processions, the coming and going of ambassadors, journeys, etc. He had no political prejudices, though he shows that he had but small sympathy for France or for various curial dignitaries. His sole interest was ceremonial and court etiquette. Nevertheless his eye was alert to catch all that went on around him; in consequence we owe him quite a number of anecdotes that throw much light on the characters of the two popes. Moreover, being the almost inseparable companion of both popes on their journeys, e.g. of Julius II during his campaign against the Romagna, he supplies us with many details that fill in or set off the narrative of the historian. Ordinarily his work offers more to the historian of Renaissance culture than to the student of ecclesiastico-political conditions. The sixteen manuscript copies of the "Diarium" are not all complete, the more important codices being those of the Vatican, and of the Rossiana Library at Vienna. Partial abbreviated editions are owing to Döllinger (*Beiträge zur Geschichte der letzten sechs Jahrhunderte*, 1882, 363) and to Frati (Bologna, 1886). Delicati (*Il diario di Leone X, da P. de Grassis*, Rome, 1884) edited a lengthy résumé of the work, with notes by Armellini. Some attribute to him an "Historia Leonis X" (Potthast, *Bible. Hist. Med. Aevi*, 2d ed., II, 894), and a treatise on papal elections, meant to combat the opinion of Barbatia that the pope was not bound by ante-election capitulations (Souchon, *Die Papst-wahlen*, Brunswick, 1888, 16). This treatise is in Döllinger's edition, pp. 343-346. To de Grassis also is attributed, perhaps on better grounds, a book entitled "De caeremoniis cardinalium et episcoporum in eorum dioecibus" (Rome, 1564). In 1515 Leo X made him Bishop of Pesaro, but he retained his office of master of ceremonies until the pope's death.

U. BENIGNI

Gratian

Gratian

Roman Emperor; son of Valentinian I; born at Sirmium, 359; died at Lyons, 383. Before he had attained his ninth year he received the purple robe and diadem, with the title of Augustus; and on the death of his father (375) he became Emperor of the West. His half-brother, Valentinian II,

an infant, was associated with him in the title. He fixed his residence at Trier, and devoted himself to opposing the advance of the Alamanni, whom he routed in the great battle of Colmar (378). His colleague in the east, Valens, was, however, defeated and slain by the Goths in the same year at the battle of Adrianople. Gratian, feeling himself unequal to the task of governing the whole empire alone, assigned the eastern portion to Theodosius I. Up to this time he had shown himself to be a wise ruler and a brave and skilful general, but now he began to neglect his duties and to devote himself to hunting and other sports. A rebellion which arose in Britain under Maximus, one of his generals, spread into Gaul. Gratian, who was residing at Paris, fled to Lyons, and was there treacherously slain (25 Aug., 383). Gratian's reign marks a distinct epoch in the transition of the empire from paganism to Christianity. At the time of his accession (375) he refused the insignia of pontifex maximus, which even Constantine and the other Christian emperors had always accepted. At the instance of St. Ambrose, who became his chief adviser, he caused the statue of Victory to be removed from the senate house at Rome (382). In this same year he abolished all the privileges of the pagan pontiffs and the grants for the support of pagan worship. Deprived of the assistance of the State, paganism rapidly lost influence. Gratian did not go so far as to confer upon the Church the privileges and emoluments which he took from the pagans, but he gave proof of his zeal by undoing the effects of Valens's persecution, and by taking measures for the suppression of various forms of heresy. Though in general his policy was one of toleration, he made apostasy a crime punishable by the State (383). It was for Gratian that St. Ambrose wrote his great treatise "De Fide".

T.B. SCANNELL

Jerome Gratian

Jerome Gratian

Spiritual director of St. Teresa and first Provincial of the Discalced Carmelites; born at Valladolid, 6 June, 1545; died at Brussels, 21 September, 1614. The son of Diego Gracian de Aldorete, secretary to Charles V and Philip II, and of Jane de Antisco, daughter of the Polish ambassador at the Spanish Court, he received his early education in his native town and at the Jesuit College in Madrid. He afterwards studied philosophy and theology at Alcala where he took his degrees and was ordained priest in 1569. The position of his family, his talents and virtues would have opened for him the door to the highest dignities, but, having become acquainted with some Teresian nuns, he took the habit of the Discalced Carmelites at Pastrana, 25 March, 1572, under the name of Jerome of the Mother of God. Even during his novitiate he was employed in the direction

of souls and the administration of the convent, and, almost immediately after his profession (28 March, 1573), was nominated pro-vicar apostolic of the Calced Carmelites of the Province of Andalusia. This province, which for many years had given trouble, resented the nomination of one who had only just entered the order, and offered a stubborn resistance to his regulations, even after his faculties had been confirmed and extended by the Nuncio Hormaneto. In virtue of these same faculties Gratian founded a convent of Discalced Carmelites at Seville, of which he became prior, and approved of the establishment of several other convents of friars as well as of nuns.

The chapter of 1575, listening to the complaints of the Andalusians, decided to dissolve the reformed convents, but the nuncio gave Gratian fresh powers, and for a while the reform continued to spread. Hormaneto was succeeded by Sega (June, 1577), who, prejudiced by false rumours, turned against the followers of St. Teresa. Gratian was censured and relegated to the convent of Alcalá, and the other leading members of the reform suffered similar punishments, until at length Philip II intervened. The next chapter general (1580) granted the Discalced Carmelites canonical approbation, and Gratian became their superior. Ever since he had first met St. Teresa (1575), he had remained her director, to whom, at the command of Our Lord, she made a personal vow of obedience, while Gratian in all his works guided himself by the lights of the saint. In her books and in numerous letters she bears testimony to their agreement in spiritual as well as administrative matters; they were also at one in favouring the active life, the care of souls, and missionary work. After St. Teresa's death a party, calling themselves *zelanti*, came into prominence, with Nicholas Doria at their head, whose ideal of religious life consisted in a rigid observance of the rule to the exclusion of exterior activity. Although St. John of the Cross and other prominent men were on Gratian's side, the opposite party came into office in 1585, and Gratian was charged with having introduced mitigations and novelties. In order to give effect to his views Doria introduced a new kind of government which concentrated all power, even in details, in the hands of a committee under his own presidency.

Great was the consternation among the moderate party, greater still that of the nuns, who resented any interference in their affairs. Through the instrumentality of St. John of the Cross and Father Gratian, the nuns obtained from Rome approval of St. Teresa's constitutions, whereupon Doria resolved to exclude the nuns from the order. He also understood that so long as the opposition was being led by Gratian (St. John of the Cross having meanwhile died) the new government could never come into force. On pretext, therefore, that his writings reflected unfavourably on the superiors, Gratian was summoned to Madrid, and, the informations taken against him having been materially altered by a personal enemy, he -- the director and right hand of St. Teresa, the soul of her reform, and for ten years its superior -- was expelled from the order on 17 February, 1592. This sentence, based on falsified evidence, was confirmed by the king, the nuncio, and even by the authorities at Rome, who commanded Gratian to enter some other order.

The Carthusians, Capuchins, and the Dominicans would not receive him, but the Augustinians consented to employ him in the foundation of some reformed convents. The ship, however, which was to carry him from Gaeta to Rome, was taken by pirates and he was made prisoner. Working

among the Christian slaves in the bagnio at Tunis, he strengthened those who were wavering, reconciled apostates at the risk of his life, and liberated many with the alms he succeeded in collecting. After eighteen months' captivity he obtained his freedom and returned to Rome. Clement VIII, to whom on a former occasion he had revealed secrets made known to him in prayer, hearing of his works and sufferings, exclaimed: "This man is a saint", and caused the process of expulsion to be reexamined and the sentence to be rescinded (6 March 1596). But, as his return to the Discalced Carmelites would have revived the former dissensions, Gratian was affiliated to the Calced Friars with all the honours and privileges, and the right to practise the Rule of the Reform. He was sent to Ceuta and Tetuan to preach the Jubilee (1600-1605), proceeded afterwards to Valladolid to assist his dying mother, and was finally called to Brussels by his friend and protector, Archduke Albers (1606). There he continued a life of self-abnegation and apostolic zeal. Buried in the chapter-house of the Calced Carmelites at Brussels, his remains were repeatedly transferred, but finally lost during the Revolution.

The list of Gratian's writing in Latin, Spanish, and Italian fills eighteen columns in ANTONIO, *Bibliotheca Hispana nova* (Madrid, 1783), 576 sqq.; the works printed during his lifetime and immediately after his death have become exceedingly rare. Within the last years there appeared for the first time his autobiography (*Peregrinaciones de Anastasio*, Burgos, 1905), and his *Memoirs of St. Teresa* (*Dialogos de Santa Teresa*, Burgos, 1909), while some other important manuscripts are ready for publication. Besides these sources see ST. TERESA, *Book of Foundations* (chapter xxiii), which should be compared with other portions of her writings and the annotations by various editors; *Biblioth. Carmelit.*, I, 645; GREGOIRE DE ST. JOSEPH, *Le P. Gratien et ses Juges* (Rome, 1904; also in Italian and Spanish).

B. ZIMMERMAN

Johannes Gratian

Johannes Gratian

(GRATIANUS).

The little that is known concerning the author of the "*Concordantia discordantium canonum*", more generally called the "*Decretum Gratiani*", is furnished by that work itself, its earliest copies, and its twelfth-century "*Summae*" or abridgments.

Gratian was born in Italy, perhaps at Chiusi, in Tuscany. He became a Camaldolese monk (some say a Benedictine), and taught at Bologna in the monastery of SS. Felix and Nabor. Later, it was said that he was a brother of Peter Lombard, author of the "*Liber Sententiarum*", and of Perter Comestor, author of the "*Historia Scholastica*". Mediaeval scholars united in this way, by a fictive kinship, the three great contemporaries who seemed as the fathers the canon law, theology, and Biblical history. It is no less false to assert that he was a bishop. Nor is it certain at what time he compiled the "*Decretum*". It did not exist previous to 1139; for it contains decrees of the Second Lateran Council held in that year. A common opinion places its completion in 1151. Recent research,

however, points to 1140, or to a date nearer thereto than to 1151. The "Decretum" was certainly known to Peter Lombard, for he makes use of it in his "Liber Sententiarum". Gratian died before the Third Lateran Council (1179), some say as early as 1160. It is not certain that he died at Bologna, though in that city a monument was erected to him in the church of St. Petronius. He is the true founder of the science of canon law.

See CORPUS JURIS CANONICI; DECRETALS, PAPAL. SARTI AND FATTORINI, *Declaris archigymnasii Bononiensis professoribus*, I (Bologna, 1896); SCHULTE, *Geschichte der Quellen und Literatur des canonischen Rechts* (Stuttgart, 1875-80), I, 46 sqq.; LAURIN, *Introductio in corpus juris canonici* (Freiburg im Br., 1889), 10 sqq.; FOURNIER, *Deux controverses sur les origines du decret de Gratien* in *Revue d'histoire et de litterature religieuses*, III (Paris, 1898), 97 sqq., 253 sqq.; MOCCI, *Nota storico giuridica sul Decreto di Graziano* (Sassari, 1904); GAUDENZI, *L'etat del Decreto di Graziano e l'antichissimo Ms. Cassinese di esso* in *Studi e memorie per la storia dell' Universita di Bologna*, I (Bologna, 1907); BRANDILEONE, *Notizie su Graziano e su Niccolo de Tudeschis*, *ibid.*

A. VAN HOVE

Gratianopolis

Gratianopolis

A titular see in Caesarea Mauretania, Africa. This city does not figure in a list of the bishoprics of the province preserved in a document of the sixth and seventh centuries, unless it be disguised under the native name (see "Byzantinische Zeitschrift", 1892, II, 26, 31). Its history, location, and present condition are unknown. Three of its bishops are known: Publicius (Catholic), Deuterius (Donatist), both at the Conference of Carthage in 411; and Thalassius, present at the Conference of 480.

S. VAILHÉ

Ortwin Gratius

Ortwin Gratius

(VAN GRAES)

Humanist; b. 1475 at Holtwick, near Coesfeld, Westphalia; d. at Cologne, 22 May, 1542. He belonged to an impoverished noble family, and was accordingly received in the house of his uncle Johannes van Graes at Deventer (wherefore he generally called himself Daventriensis), and was educated at the local school, where he received his first scientific instruction from the renowned Alexander Hegius. In 1501 he went to the University of Cologne to pursue his philosophical studies. As a member of the Kuyk Burse he became licentiate in 1505, *magister* in 1506, and *professor artium* in 1507. His salary as professor being insufficient, he accepted the position of skilled adviser and corrector in the world-famous Quentell printing establishment, where many classical authors

of the Middle Ages were published under his direction. These, according to usage, he provided with introductions and rhymed dedications. As a disciple of Hegius he was naturally a fanatical humanist and a devoted adherent of Peter of Ravenna; he also enjoyed the friendship of the most prominent scientific minds of his time. But things soon changed. He was attacked bitterly by the younger intellectual element, especially their leader, Hermann von dem Busche, on account of his taking the part of the Cologne University theologians and the Dominicans on the occasion of the Reuchlin controversy, as well as on account of his Latin translations of various writings of the Jewish convert, Pfefferkorn. Gratus had at that time just finished a literary tournament with von dem Busche, and had been made the laughing-stock of the literary world by the venomous "Epistolae obscurorum virorum", his adversaries succeeding in vilifying him from both the moral and scientific standpoints, denouncing him as a drunkard and guilty of other vices, and as an incompetent Latin and Greek scholar. This procedure was the more effective from the fact that he ignored attacks, and did not defend himself from the beginning. He only attacked his defamers when Leo X excommunicated the author, readers, and disseminators of the "Epistolae" (1517). His defence, entitled "Lamentationes obscurorum virorum", was very weak and missed its mark, so that the portrayal of his character remained distorted up to modern times and it is only of late that due credit is given him. In 1520 he was ordained to the priesthood and devoted himself thenceforth entirely to literary work. The *magnum opus* of his literary activity is: "Fasciculus rerum expetendarum ac fugiendarum" (Cologne, 1535), a collection of sixty-six more or less weighty treatises of various authors on ecclesiastical and profane history, dogma and canon law, compiled to expose the noxious elements in the Church's organism, and prepare a way for a future council to remedy them. It has been wrongly claimed that this work, put on the index on account of its anticlerical tendency, was not from the pen of Gratus.

PATRICIUS SCHLAGER

Auguste-Joseph-Alphonse Gratry

Auguste-Joseph-Alphonse Gratry

French priest and writer; b. at Lille, 30 March, 1805; d. at Montreux, Switzerland, 7 February, 1872. After brilliantly finishing his classical studies, he entered the polytechnic school at Paris. At the end of his course, (1828), he went to Strasburg, spent some months at the convent of Bischenberg, and decided to become a priest. He was ordained at Strasburg on 22 December, 1832, and remained there for several years with Bautain. In 1841, Gratry became director of the Collège Stanislas in Paris, but, in 1846, accepted the position of chaplain of the "Ecole normale supérieure". It was then that he published his first work: "Demandes et réponses sur les devoirs sociaux".

When Vacherot, director of studies at the Ecole normale, published the third volume of his "Histoire de l'Ecole d'Alexandrie", a polemic took place between him and Gratry; Vacherot was obliged to leave the school, and Gratry himself resigned his charge one year later (1851). After a year spent at Orléans as vicar-general of Bishop Dupanloup, Gratry united his efforts with Abbe

Pétitot, in Paris, for the restoration in France of the Oratory under the name of Oratoire de l'Immaculée Conception. In 1863, Gratry was appointed professor of moral theology in the faculty of theology of Paris; and in 1867 he was elected a member of the French Academy, succeeding Barante in the *fauteuil* once occupied by Voltaire. At the time of the Council of the Vatican (1870), he declared himself against the papal infallibility in several letters, edited under the title "Monseigneur l'Evêque d'Orléans et Monseigneur l'Archevêque de Malines". These were condemned by the Bishop of Strasburg, and Gratry, who had already lived for almost ten years outside of his community and had been publicly reproved by his superior in 1869 for his participation in a certain association, formed under the name of the International League for Peace, had to sever his connexion with the Oratory. After the proclamation of papal infallibility, Gratry gave his full and sincere adhesion to the dogma, and, when Archbishop Guibert had taken possession of the See of Paris in December, 1871, he wrote him a public letter wherein he retracted all that he had written against the infallibility of the pope. He was then suffering from an abscess on the neck; he went to Montreux, near the Lake of Geneva, and died there in 1872. Among the chief works of Gratry, besides those already named are: "Une Etude sur la sophistique contemporaine, ou Lettre à M. Vacherot" (Paris, 1851); "De la Connaissance de Dieu" (2 vols., Paris, 1853); "Logique" (2 vols., Paris, 1856); "De la Connaissance de l'Ame" (2 vols., Paris, 1858); "La Philosophie du Credo" (1861); "Les Sources" (1862); "Commentaire sur l'Evangile de Saint Matthieu" (2 vols., 1863); "Les Sophistes et la Critique" (Paris, 1864); "Henri Pereyve" (Paris, 1866); "La Morale et la Loi de l'Histoire" (2 vols., Paris, 1868); "Les Sources de la Régénération sociale" (a reprint with some changes of his first work); "Souvenirs de ma Jeunesse" (1874); "Meditations inédites" (1874).

Gratry exercised a great influence during his life by his personality -- distinguished for greatness of thought, generosity of heart, and optimistic enthusiasm -- and, after his death, by his works. In the last twenty years his books have been frequently reprinted. Among those who came under his influence, we may mention especially, Charles and Adolphe (later Cardinal) Perraud, Heinrich, de Margerie, Nourrisson, H. Pereyve, and Léon Ollé-Laprune. Concerning Gratry's philosophical conceptions we may say that the pregnant truth which underlies his philosophy is to be found in two of his fundamental principles: (1) that we must seek the truth with our whole soul, that is, with all the faculties and helps given to us by God -- our sensibility, imagination, reason, love, and the light of revelation -- and with the necessary moral condition. (2) That a thing is truly known only through its relation to God, its author and ruler, as man is truly developed only through his ascent toward God, his creator and his end. But when he comes to determine the respective values and relation of these faculties, Gratry, with a soul naturally sensitive, seems to yield too much to feeling and love, and the relations between reason and faith are not always clearly respected. God, for him, is felt or experienced rather than thought or known through reasoning. He is felt by the "divine sense" through the dialectical process which is analogous to the inductive process in physics and the infinitesimal process in mathematics; in presence of a certain degree of beauty and perfection perceived in nature, the soul develops in itself a capacity for exaltation, which raises it from the finite to the infinite. These indeed are high and inspiring thoughts, but the clear statement of truth

requires a stricter analysis and a more vigorous treatment. These characteristics, however, explain the feeling of attraction mixed with anxiety one feels on perusing Gratry's works; they help one to understand the ideal grandeur of the moral inspirations and the vague Utopian dreaminess one meets in such close juxtaposition on many of his pages.

Souvenirs de ma Jeunesse; PERRAUD, Le P. Gratry, Les derniers jours, son testament spirituel (Paris, 1872); IDEM, Le Père Gratry, sa vie et ses oeuvres (Paris, 1900); CHAUVIN, Le Père Gratry (Paris, 1901); OLLÉ-LAPRUNE, Eloge du P. Gratry (Paris, 1896).

GEORGE M. SAUVAGE

Peter Aloys Gratz

Peter Aloys Gratz

Schoolmaster and exegete, b. 17 Aug., 1769, at Mittelberg, Allgäu, Bavaria; d. at Darmstadt, 1 Nov., 1849; received his elementary training in the monastic school at Füssen, studied classics in Augsburg, and in 1788 entered the clerical seminary at Dillingen, to take up the study of philosophy and theology. His student years were characterized by deep piety and an intense love of study. After his ordination to the priesthood, in 1792, he held the office of private tutor, and in 1796 was placed in charge of the parish church of Unterthalheim, near Horb, on the Rhine. In spite of his manifold parochial duties he found time to prepare several textbooks and other small works on Christian instruction, for use in elementary schools. Besides, being of a literary turn of mind and urged, no doubt, by the spirit of the age, he at the same time turned his attention to other occupations, choosing for his special field of labour New Testament exegesis. In 1812 he published "Neuer Versuch, die Entstehung der drei ersten Evangelien zu erklären" (Stuttgart, 1812), in which he adopted the hypothesis of a Hebrew original as the basis of one of the synoptic Gospels. The learning and critical skill exhibited in this work attracted the attention of scholars, and won for him on 28 September of the same year the chairs of Greek language and Biblical hermeneutics in the University of Ellwangen. Recognizing his abilities and future usefulness, the University of Freiburg, in 1813, conferred on him the doctorate in theology.

During his professoriate in Ellwangen he published: (1) "Kritische Untersuchungen über Justins apostolische Denkwürdigkeiten" (Stuttgart, 1814); (2) "Über die Interpolationen in dem Briefe des Apostels Paulus an die Römer" (Ellwangen, 1814); (3) "Über die Grenzen der Freiheit, die einem Katholiken in der Erklärung der Schrift zusteht," (Ellwangen, 1817); (4) "Dissertatio in Pastorem Hermæ", in "Constanzer Archiv", 1817, II, 224 sqq. On the amalgamation of the University of Ellwangen with that of Tübingen, in 1817, he accompanied the theological faculty thither, and continued his lectures on hermeneutics. Here he published his "Kritische Untersuchungen über Marcions Evangelium" (Tübingen, 1818), and with the cooperation of his friends Drey, Herbst, and Hirscher, founded in 1819 the Tübingen "Theologische Quartalschrift", a publication which from its inception has enjoyed an uninterrupted existence.

The same year he received an invitation to the chair of Sacred Scripture in the newly erected faculty of theology in the University of Bonn. His reputation attended him here, and he lectured with great success. This, however, was of short duration. The university, though now free from the Rationalism and Febronianism which characterized the first period of its existence, was gradually undergoing the influence of a new movement known as Hermesianism, the originator of which was Georg Hermes, professor of theology and an intimate friend of Gratz. The high reputation of Hermes, the popular character of his lectures, as well as the fact that they were devoted to the examination of the philosophical systems of Kant and Fichte, induced Gratz to sympathize with his distinguished friend and associate himself with the new movement. The step was a fatal one. He regretted it deeply and desired to abandon his position in the university. All efforts to this effect failed, however, and at the instance of his more trustworthy friends he continued to lecture at Bonn till 1823. He remained a member of its theological faculty till 1826, and in 1828 was called to Trier, there to become a member of the municipal council and also of the school board. His success in this new field of activity was remarkable. He devoted all his time and energy to the reorganization of the studies, and to placing the schools generally on a higher scale of efficiency than they had hitherto attained. While in Bonn he published: (1) "Apologet des Katholicismus, Zeitschrift für Freunde der Wahrheit und der Bruderliebe" (Mainz, 1820-24, 9 fasc.); (2) "Novum Testamentum græco-latinum" (Tübingen, 1820; Mainz, 1827); and (8) "Kritischer Commentar über das Evangelium des Matthäus" (Tübingen, 1821-23). This commentary, owing to the extensive use the author made of Protestant works, was severely attacked by Binterim and Görres. Gratz replied in the sixth fascicle of his "Apologeten", while his friends published in his defence "Drei öffentliche Stimmen gegen die Angriffe des Pastors Binterim auf den Commentar des Professors Gratz, nebst drei Beilagen" (Bonn, 1825). He also undertook the continuation of the "Thesaurus juris ecclesiastici" of Aug. Schmidt, S.J., which, however, remained unfinished.

SCHULTE in Allgem. deut. Biogr., IX, 602; HURTER, Nomenclator; WERNER, Gesch. d. katk. Theologie, 206, 401, 484, 528; Theologische Quartalschr. (Tübingen, 1824), 293, 316, 464-505, Katholik, XIV (1824), 16-26.

JOSEPH SCHROEDER

Jacques Gravier

Jacques Gravier

Jesuit missionary; born 1651 at Moulins, where he studied classics and philosophy under the Jesuits; died in Louisiana in 1708. He joined the Jesuit Order in 1670, studied theology at the college of Louis-le-Grand, Paris, and was sent to Canada in 1685. In 1686 he went to Michilimackinac. In 1687 he succeeded Allouez in the Illinois mission begun by Marquette. He is the true founder of that mission, where he spent ten years of incredible hardship and suffering. He was the first to master the Illinois idiom, and reduced it to grammatical form. He grouped Kaskaskia and Peoria Indians, at the *Rocher*, near Ft. St. Louis, and despite the machinations of the medicine-men he

moulded his flock into a model Christian Church. In his task he was seconded by a saintly woman, daughter of a Kaskaskia chief. In 1696 he was superior at Michilimackinac, with the title of vicar-general of Bishop St. Vallier. In 1700 he returned to the Illinois mission. In 1706 the ungrateful Peorias attacked and cruelly wounded the missionary. An arrow-head imbedded in his arm could never be extracted even by the surgeons in Paris. In 1708 Gravier returned to Louisiana, where he died of his wound that same year.

Rochemonteix, *Les Jésuites et la Nouvelle France* (Montreal, 1896); Shea, *The Catholic Church in Colonial Days* (New York, 1886).

LIONEL LINDSAY

Dominic Gravina

Dominic Gravina

Theologian; b. in Sicily, about 1573; d. in the Minerva, at Rome, 26 Aug., 1643. He entered the Dominican Order at Naples, and made his classical and sacred studies in the order's schools. As professor of theology in the Dominican college of St. Dominic (Naples), in the Minerva, and in other schools of his order, he became the most celebrated theologian of his time in Italy. He was made master of sacred theology by a general chapter of the order held at Rome in 1608, and then became dean of the faculty of the theological college of Naples. In the pulpit also he gained great renown, and was frequently called upon to conduct Lenten courses and to preach before Pope Paul V. He displayed, moreover, a tireless activity in the administrative offices of prior and provincial in his own province, and of procurator general and vicar-general of the entire order. While discharging the duties of these two offices, to the latter of which he was raised by Pope Urban VII, who had caused the general to be removed, he was also Master of the Sacred Palace. Of his many writings on theological subjects, chiefly of an apologetic character, a large number have never been published. Of the published works the most important are: "*Catholicae praescriptiones adversus omnes haereticos*" (7 vols., Naples, 1619-39); "*Pro sacro ordinis sacramento vindiciae orthodoxae*" (Naples, 1634; Cologne, 1638); "*Apologeticus adversus novatorum calumnias*" (Naples, 1629; Cologne, 1638); "*Lapis Lydius ad discernendas veras a falsis revelationibus*" (2 vols., Naples, 1638), a mystical writing.

ARTHUR L. McMAHON

Giovanni Vincenzo Gravina

Giovanni Vincenzo Gravina

Italian jurist and *littérateur* of the seventeenth and eighteenth centuries; b. at Rogliano, Calabria, 21 January, 1664; d. at Rome, 6 January, 1718. At the age of sixteen years he went to Naples to study Latin, Greek, and law, not neglecting, however, his mother-tongue. He went to Rome in 1689, where he taught civil and canon law. He had just been called to an important chair of law at the

University of Turin when he was attacked by the illness of which he died. The juristic studies to which he devoted himself with more ardour than taste did not cause him to forget poetry. In 1690 he was co-founder, under the name of Opico Erimanto, of the "Accademia degli Arcadi" of Rome, specially devoted to poetry. Later he quarrelled with the members of this academy, and tried unsuccessfully to establish an "Anti-Arcadia". The freedom with which he spoke of everyone, the good opinion he entertained of himself, and the scorn he exhibited for many literary persons, made him many enemies. But he had the merit of having been the patron of the poet Metastasius. His work on canon law: "Institutiones canonicae" (Turin, 1732, 1742, etc.; ed., Rome, 1832) is a clear, but very elementary handbook. His chief work on civil law is "Originum juris civilis libri tres" (Naples, 1701, 1713; Venice, 1730). This was translated into French under the title "Esprit des lois romaines" (Paris, 1775). Another work is "De imperio Romano liber singularis", published in the editions of his "Originum juris civilis libri tres". Among his literary works the following are deserving of mention: "Delle antiche favole" (Rome, 1696); "Della Ragione Poetica libri due" (Rome, 1709; Naples, 1716); "Tragedie cinque" (Naples, 1712); "Orationes et Opuscula" (Naples, 1712; Utrescht, 1713); "Della tragedia libro uno" (Naples, 1715).

A. VAN HOVE

Gravina and Montepeloso

Gravina and Montepeloso

DIOCESE OF GRAVINA AND MONTEPELOSO (GRAVINENSIS ET MONTIS PELUSII).

Gravina is a town in the Province of Bari (Southern Italy) on a river of the same name, since the ninth century an episcopal see, suffragan of Acerenza and Matera. In 1818 it was united *aeque principaliter* with Montepeloso, which dates back to the twelfth century (some say the fifteenth) and was suffragan of Potenza. Montepeloso is situated on a hill in the Province of Potenza. In 975 it was defended against the Saracens; in 999 Gregorio Tracomonte, a native of Bari, defeated there the Byzantines. The cathedral of Gravina treasures in a splendid reliquary an arm of St. Thomas à Becket obtained by Bishop Roberto in 1179. The first known bishop of Gravina is Leo; other bishops of note are: Samuele (1215), who built at his own expense the church of the Madonna di Altamura, afterwards an archipresbyterate *nullius* (i.e. exempt from the jurisdiction of the neighbouring bishop; see EXEMPTION); Giacomo II (1302), who altered the rite from Greek to Latin by order of the Archbishop of Acerenza; Vincenzo Giustianiani (1593), a Genoese nobleman, who founded the seminary, the church of the Madonna delle Grazie, and the Capuccinelle convent; Domenico Cennini (1645), who built the episcopal residence; Fra Domenico Valvassori (1686), a patron of learning and founder of an "accademia teologica". The united dioceses, directly subject to the Holy See, contain 9 parishes and 28,000 souls, 7 convents for women, and 2 girls' schools.

U. BENIGNI

University of Graz

University of Graz

The University of Graz, located in the capital of the Province of Steiermark, owes its establishment to the Counter-Reformation and the efforts of Archduke Karl von Steiermark, who, in 1584, requested Pope Gregory XIII to grant autonomous university privileges to the Jesuit college of Graz, which had been founded in 1578 and was already possessed of a theological and philosophical school. The documents of the archducal foundation and of papal recognition are dated 1 January, 1584. The latter, however, was not made public until 15 April, 1586, the occasion being the dedication exercises of the institution as a university, and it bore the signature of the new pope, Sixtus V. The letter of recognition of Emperor Rudolf II followed soon after. The archduke endowed the seat of learning with a yearly income and set aside for its benefit a certain proportion of the products yielded by Government lands. The papal Bull directed the Jesuit priests in charge to give public instruction in theology, philosophy, and the liberal arts, as was customary in other advanced schools of a similar character. The first scholastic year of the university began in 1586.

Subsequent to the Counter-Reformation, Archduke Ferdinand signed on behalf of the institution which his father had created a second document of foundation, in which he confirmed its purpose as set forth in the original decree, declaring it to be "the service of the Holy Roman Catholic Religion", and placed it on a solid material basis. He enriched it with new buildings and presented it with the revenues and full ecclesiastical supremacy of Mühlstatt, in Carinthia, and of other estates of the Crown, including the right of independent jurisdiction and exemption from the payment of duties and taxes. He obtained from Pope Clement VIII a confirmation of the Mühlstatt grant, with which the college of Graz had been given diocesan rights over the whole of that principality. He founded a bursary for poor students, which was called the *Ferdinandeum*. Another and similar foundation was the Josephinum, which was raised by private subscriptions (1748-49). It was not long before the cathedral chapter of Salzburg claimed for itself diocesan powers in the district of Mühlstatt; but a settlement was reached at a trial held in 1659, whereby on the one hand the ordinariate powers and independent jurisdiction of the college of Graz were recognized, while on the other certain concessions were made to the Diocese of Salzburg. Legal proceedings with the Kärnten authorities regarding the exemption of the Mühlstatt district from property taxes, which proceedings lasted more than one hundred years, resulted in a defeat for the Jesuit Order in 1755.

This institution of Graz was the Jesuits' centre of activity in their labours for the reclaiming of Steiermark to Catholicity. Here was prepared all the material necessary for such a mission, here Catholic influence found a new source of strength in the founding of academic sodalities of Mary and other societies of like import. Its school festivals were celebrated with dramas of a spiritual as well as profane character and with farces and comedies in Latin and German, which were produced in the college theatre. The chief aim of these plays was to awaken sentiments of faith and patriotism, and they formed a notable addition to the dramatic literature of the day.

As early as the year 1604, Georg Stobäus von Palmburg, Bishop of Lavant, advocated the further broadening of the University of Graz by the addition to its staff of a faculty of jurisprudence. But though negotiations were undertaken to this end between the institution and the Government, the former's insistence that its autonomy should remain unimpaired caused these negotiations to be suspended until the dissolution of the Jesuit Order. After the establishment, in Graz, of private courses in jurisprudence outside of the university, and the execution of a reform in theological and philosophical studies by the appointment of State Directors of Studies and the altering of examination methods, the university was placed in 1760 under the supervision of a State Commission of Studies designated for this purpose, and therefore lost almost entirely its monastic character of the Josephine period. The year 1773 proved to be, owing to the suppression of the Jesuits, the last school year of the Jesuit college at Graz. The university became a State institution, its material possessions were seized upon for the public treasury, and its course of instruction was remodelled to conform with that laid down by the newly-established imperial Commission of Studies for the University of Vienna. The winter of 1778 saw the inauguration of a faculty of jurisprudence which consisted of two professors, while higher instruction in medicine was likewise introduced, which received gradual development. At the end of 1782 Joseph II issued a decree converting the university into a lyceum with four faculties and the right to award degrees in theology and philosophy. The number of instructors was restricted to twelve. But the Lyceum of Graz recovered in the summer of 1827 its former rank and name as a university, through a grant of the Emperor Francis. Its faculty of philosophy grew steadily, and a duly organized faculty of medicine was added by an imperial decree of January, 1868. The Alma Mater Græcensis has since then occupied the third place among the institutions of learning in German-speaking Austria. The technical high school which had been founded in 1814 was taken over by the State in 1874.

KARL HOEBER

Great Falls

Great Falls

DIOCESE OF GREAT FALLS (GREATORMENSIS).

Created by Pope Pius X, 18 May, 1904; comprises the following counties in the State of Montana: Carbon, Cascade, Chouteau, Custer, Dawson, Fergus, Park, Rosebud, Sweet Grass, Valley, and Yellowstone. It is in the eastern part of the State of Montana, U. S. A.; total area is 94,158 square miles.

The titular city, Great Falls, is most appropriately named, as the Missouri River at this point falls 533 feet in a series of cascades, giving an equivalent of 340,000 h.p., and thus ranking next to Niagara, both in scenic beauty and mechanical value. This cheap power is utilized by large manufacturing plants -- flour mills, plaster mills, iron works, smelting and reduction works, etc. The annual output of one smelter alone is over 100,000,000 pounds of copper, with large quantities

of silver and lead as by-products. Over 5,000,000 acres of rich farmland are tributary to the city; 1,000,000 acres being irrigated by the U.S. Reclamation Service and private enterprises. The region adjacent to the city is also rich in minerals -- copper, sapphires, gold, silver, lead, iron, gypsum, limestone, and bituminous coal (the output of this last for 1907 being 1,240,000 tons). Besides its importance as a manufacturing centre, Great Falls ranks next to Butte as most populous city in Montana, and is generally regarded as pre-eminently the home city of the Rocky Mountain region.

In the year 1850 Father De Smet, S.J., and his companions were the first missionaries to celebrate the Holy Sacrifice of the Mass in the territory now covered by the Diocese of Great Falls. This notable event took place at Fort Benton, the head of navigation of the Missouri River, 2600 miles from its junction with the Mississippi. The Jesuit Fathers established missions to the Indians in Montana as early as 1841, and most of these missions are still in a flourishing condition. At St. Peter's Mission, which is now the mother-house of the Ursuline Order of Montana, 2732 baptisms of Indians were recorded in the Baptismal Register from 1855 to 1879. The early missionaries made many converts among the different tribes of Indians, and established among the white settlers a healthy Catholic influence the effects of which are still noticeable. The non-Catholics are respectful, and most generous in contributing towards the erection of churches and charitable institutions. The Catholics are well represented in different sections, in the social, commercial, and professional life of the community. The Very Rev. Mathias Clement Lenihan, vicar forane and missionary rector, of Marshalltown, Iowa, was appointed first Bishop of Great Falls, 20 May, and consecrated 21 September, 1904, at Raphael's Cathedral, Dubuque, Iowa. He was born 6 October, 1854, at Dubuque, Iowa, U. S. A., was educated at St. Joseph's College, Dubuque, where he was a charter student, and at St. John's College, Prairie du Chien, Wisconsin, conducted by the Brothers of the Christian Schools, and made his theological studies at the Grand Seminary, Montreal, Canada, where he was ordained priest 21 December, 1879. Bishop Lenihan was the first native of the State of Iowa to be raised to the priesthood. His first appointment was at Vail; his second, at Marshalltown, where he built, besides a school and church, the St. Thomas Hospital in memory of his brother, the late Rt. Rev. Thomas M. Lenihan, D.D., Bishop of Cheyenne, Wyoming. Immediately after his installation Bishop Lenihan devoted his energies to temperance reform, to the installation of a parochial school system, and to the erection of a cathedral. The fine cut-stone edifice which now serves as the cathedral of Great Falls was completed and dedicated, 15 December, 1907, to St. Anne, the mother of the Blessed Virgin. Two more churches are now building at Great Falls, as well as a large orphans' home that will be conducted by the Sisters of Charity of Providence, who also have charge of Columbus Hospital and Maternity Home. The diocese is in a prosperous condition, both spiritually and materially. New parishes are being created and new churches are being erected in nearly every city.

Statistics

At the creation of the diocese (1904) the Catholic population was 10,000; the number of the clergy was 17 (12 diocesan, 5 regular). At present (1909) there is a Catholic population of 15,052; the number of clergy has doubled (24 diocesan, 8 regular); there are 45 churches, 44 stations, 9

chapels; 12 ecclesiastical students; 8 brothers; 98 religious women; 5 academies for young ladies (400 pupils); 5 parochial schools (680 pupils); 4 Indian schools (420 pupils); 4 hospitals (3200 patients annually). The religious communities in the diocese include: Jesuit Fathers, four charges; Brothers of the Christian Schools (Province of Quebec); Sisters of Charity of Providence (Montreal, Canada), three charges; Sisters of Charity, Leavenworth; Sisters of the Holy Humility of Mary (Ottumwa, Iowa); Daughters of Jesus; Ursuline Nuns, five charges.

JOSEPH MEDIN

Greece

Greece

Greece will be treated in this article under the following heads: I. The Land and the People; II. The Church in Greece before the Schism; III. The Orthodox Church in Greece; IV. Constitution of the Church of Greece; V. The Catholic Church in Greece; VI. Protestants and Other Sects; VII. The Church in Enslaved Greece.

I. THE LAND AND THE PEOPLE

The Greeks are a people who appear first in history as separated in various small States, but bound together by a common language, religion and civilization, in the south of the Balkan Peninsula, the islands around, and the coast of Asia Minor opposite. For about three centuries these States attained a perfection in every form of civilization that gives them the first place in the history of Europe. Then the Greek ideal--Hellenism--spread over Asia, Egypt, and westward to Italy. The original race gradually sinks in importance; the States have disappeared. But the power of the Greek language, Greek learning, Greek art is never exhausted; the magic of the old memories still works in every age; while political changes cause the rise and fall of other governments, Hellenism never ceases from its conquests. The great Roman Empire, having become too unwieldy, is divided, and Greece gradually swallows up the eastern half. For nearly ten centuries again Greece reigns from Constantinople. The flood of Islam sweeps over the lands she had moulded; instead of destroying her, this brings her to fresh conquests across the distant West. Last of all, chiefly because of the magic of her name, the land where Hellenism was born has succeeded in shaking off the tyrant and we have again a free Greece. But Hellas means more than this small country. It is that mighty force, undying from Homer to the present Phanar at Constantinople, that, through all changes of government, has been expressed in the same language, has evolved its own ideals, and, unbroken in its continuity for nearly thirty centuries, has moulded to its own likeness nearly every race it met. The barbarous tribes of Asia Minor--Macedonians, Christian Arabs, Egyptians and Slavs, Phoenicians and Italians, Wallachians and even some branches of the great Turkish race--met this

ideal in turn, learned to talk Greek and to call themselves Hellenes. And at the knees of this mother all Europe has stood.

It is not the object of this article to tell again the long story of Greece. One or two salient points only will clear the ground for an account of Christianity among this people.

First of all, what is Greece?--The question may easily be answered now. The Conference of London, in 1831, and the Treaty of 1897 have arranged the frontier of the modern kingdom. In the past it is less easy to answer. Greece was not united as one State even in classical times; Alexander's empire included all manner of nations; under Rome the scattered Greeks gradually learned to call themselves Romans. The only answer that can be given for any period is that Greece is the land where Greeks live; any country, any city where the people in the great majority spoke Greek, were conscious of being Greeks, was at that time at any rate a part of Hellas: Syracuse and Halicarnassus as much as Athens and Corinth. This only removes the question one step, since one now asks: What is a Greek? To demand evidence of pure descent from one of the original Dorian, Ionian, or Aeolian tribes would be hopeless. It has been the special mission of Hellas to impose her language and ideals, even the consciousness of being a Greek, on other races. Of the enormous number of people since Alexander who spoke Greek and called themselves Greeks the great majority were children of Hellenized barbarians. Moreover districts were inhabited by mixed populations. The great towns--Antioch and Alexandria, for instance--were more or less completely Hellenized, while the peasants around kept their original languages.

One must use the names *Greek* and *Greece* as comparative ones. Where a certain degree of Greek consciousness (shown most obviously in the use of the language) prevails, there we may call the people Greeks, more or less so according to the measure of their absorption by Hellas. The old Greek States covered about the territory included in the modern kingdom and the islands, with colonies around the coast of Asia Minor, Sicily, Southern Italy, Northern Egypt, even Southern Gaul. Alexander (336-23 B.C.) upset these limits altogether. Himself a Hellenized Macedonian, descended from people whom the old Greeks certainly considered barbarians (though Macedonians seem to have been akin to the Aeolians), his empire spread the Greek ideal and language throughout Asia and Egypt. When Rome conquered Greece (146 B.C.) there was no longer any question of a Greek political nation. But the race goes on, and the language never dies. Constantine (A.D. 324-37) meant his new city to be Roman. But here, too, Hellas gradually absorbed her conquerors. At least from the time of Justinian I (527-65) the Eastern Empire, in spite of its Roman name, must be counted a Greek State. The Byzantine period (roughly from 527 to 1453) is the direct continuation of the older Greek civilization. It is true that Byzantine civilization was influenced from other sides (from Rome and Asia Minor, for instance); but this would apply to the old Greek ideals too, on which Egypt, Persia, and Asia had their influence; it is the normal process of the development of any civilization to absorb foreign influences gradually, without breaking its own continuity. Only, in this period the centre of gravity has moved from Athens to Constantinople. It was a special characteristic of the Turkish conquest that it neither destroyed nor absorbed the races subject to the sultan. The difference of religion, involving in this case an entirely different kind of life and different

ideals in everything, prevented absorption; and the subject Christians were too valuable an asset as taxpayers to be wiped out by the Arabs. So, after 1453, except for the loss of independence and the persecution in a more or less acute form that they suffered, the older European races in the Balkans went on as before. No doubt numbers of Greeks did apostatize, learn to speak Turkish and help to build up that artificial confusion of races which we call the Turks. But the enormous majority kept their faith in spite of grievous disabilities. They kept their language, too, and their consciousness of being Greeks. They never called themselves Turks (a word that in the Balkans is still commonly used for Moslem), nor thought of themselves as part of the Turkish State. They were Greeks (which is what their name *Hromaioi* really meant), their land was Greece still, though unhappily held by a foreign tyrant, for whose removal they never ceased to pray.

The real danger to the ideal of Greater Greece covering all the Balkans was not, is not now, the Turk, who remains always only an unpleasant incident in the history of these lands; it is the presence of other Christian races, Slavs, who dispute the Greek ideal with their languages and national feeling. Were it not for these Slavs we could count Greece as having absorbed Macedonia and Thrace by the time of Alexander, and as covering nearly all the Balkans to the Danube ever since. But the Bulgar, the Serb, the Wallachian--and Albanian too--are there with their languages and nations to oppose the "Great Idea" of which every Greek dreams. So, we must still count Greece as a scattered and relative element among others. Under the Turk Constantinople was still the centre of this element. The oecumenical patriarch took the place of the emperor; his court, the Phanar, was the heart of Hellenism, where the purest Greek was spoken, the memory of the old Greek States most alive.

In the beginning of the nineteenth century the wave of enthusiasm for liberty started by the French Revolution reached the Rayahs, as the Christian subjects of the sultan were called by the Turks. The Rayahs had never ceased to hope for the day when "this so glorious and noble race should no longer have to submit to a godless turban" (Ph. Skuphos in his *Deesis pros ton Christon*); the Klephts and Armatoles had kept up a ceaseless, if hopeless, rebellion against the pashas and kaimakams. In 1814 the "Hetairia Philike" was founded at Odessa, to work for the freedom of Greece. In the revolution that followed, from 1821 to 1833, Greeks joined equally all over the Turkish Empire, in the islands and coast towns of Asia Minor, in Constantinople and Salonica as much as in Attica and the Peloponnesus. The treaty that finally gave freedom only to the lower part of the peninsula was a bitter disappointment to thousands of Greeks still subject to the Turk. No doubt a more generous concession was impossible; but one must remember that the modern Kingdom of Greece is only a fraction of what has an equal right to the name of Hellas. The merchants of Smyrna and Salonica, the Phanariots of Constantinople, the peasants of Crete, and even of distant Cyprus, hang out the blue and white flag on feast days, talk Greek to their wives, and are just as much conscious of being Greeks as the citizens of Athens. Outside of "free Greece" (*he eleuthera Hellas*), "captive Greece" (*he aichmalote Hellas*) waits and hopes. Of this scattered fatherland, considered as one country, whether now free or still captive, the real centre is still the Phanar at Constantinople. It is here, even more than at Athens, that the "Great Idea" of a Greece that shall

cover the Balkans is cherished; it is hither, to the Phanar and the patriarch, that the eyes of all Greeks are turned. King George, with his Danish family, takes his stipend and enjoys such slight authority as his turbulent Parliament allows to him, but the head of the nation, as a Greek told Dr. Gelzer in 1898, is not the king at Athens, but the oecumenical patriarch at Constantinople. (Gelzer, "Geistliches und Weltliches aus dem türk.-griech. Orient", Leipzig, 1900. See Fortescue, "The Orthodox Eastern Church", 240-244, 273-283.)

Something must be said about the name. The land and the people that we call Greece and Greeks are in their own language *Hellas* and *Hellenes*. *Greek* is a form of the Latin *Graecus*, which in various modifications (*griech*, *grec*, *greco*, etc.) is used in all Western languages. *Graecus* is *Graikos*, an older name for the people. *Graikos* was a mythical son of Thessalos. Or, since this should rather be understood as derived inversely (the person as an eponymous myth from the race), various other derivations have been proposed. *Graikos* (a form *Hraikos* also exists) is said to have meant originally "shaggy-haired", or "freeman", or "dweller in a valley" (W. Pape, "Wörterbuch der griechischen Eigennamen", 3rd ed., Brunswick, 1870, s.v. *Graikoi*). The first people so called were the people of Dodona in Epirus, then the Greeks in general. After the common use of the other name, *Hellene*, this one still survived. It occurs occasionally in classical writers; after Alexander it became common, especially among Greeks abroad (in Alexandria, etc.). From them it was adopted into Latin. But in Greek, too, it lasts through the Middle Ages as an alternative name for the *Hellenes* of classical times (Stephen of Byzantium, about A.D. 400: *Graikos, ho Hellen* quoted by Sophocles in "Greek Lexicon of the Roman and Byzantine Periods", New York, 1893, s.v. *Graikos*). Latins and other foreigners, as well as Greeks writing to such people, use it not seldom for any Greek, as "Graecus" in Latin.

The other names: *Hellas* and *Hellene* are the classical ones. *Hellas* was a city of Phthiotis in Thessaly. From there the name *Hellene* spread throughout Thessaly. Herodotus distinguishes in Thessaly "two chief people: the older Pelasgic, the other the Hellenic race", and tells how the *Hellenes* invaded that land under Dorus, son of Hellen--another eponymous mythical hero (I, lvi, cf. lviii). The elder Pliny applies the name further: "From the neck of the Isthmus [going north] *Hellas* begins, which is called by our people *Graecia*" ("Ab Isthmi angustiis *Hellas* incipit, nostris *Graecia* appellata. In ea prima Attice, antiquitus *Acte* vocata"--Nat. Hist., IV, vii). Long before the New Testament the names were used by every one in our sense of Greece and Greek. So in I Mach., viii, 9 and 18. *Hellas* occurs once (Acts, xx, 2), *Hellen* many times (e.g., Rom., x, 12), in the New Testament. In the partitions of the Roman Empire neither *Graecia* nor *Hellas* appears. The Peloponnesus and the land up to Thessaly formed the Province of Achaia, then came Thessalia and Epirus, then Macedonia and Thracia. But popular use kept the older name (e.g., Pausanias, VII, xvi); a Greek still called himself *Hellen*. As Christianity spread *Hellene* began to suggest pagan--a worshipper of the Hellenic gods. Eventually this evil flavour absorbed the word altogether. In the Greek Fathers it always means simply "a heathen". St. Athanasius wrote a treatise against the heathen and called it: *Logos kath Hellenon*, so all the others. Julian, in his hopeless attempt to revive the old gods, always uses it in this sense and makes the most of its honourable sound. But Christianity

was stronger than the memory of Hellas, so from this time the name falls into discredit till quite modern times.

All through the Middle Ages Greeks called themselves *Hromaioi*, meaning citizens of the Roman Empire brought by Constantine to his new capital. This strange adaptation of their conquerors' name lasted till the nineteenth century. Even now peasants call themselves *Hromaioi*, and (except in towns and among schoolmasters) the Greek for "Do you speak Greek?" is: *Homilete Hromaika*; It was during the great revival of political national feeling at the beginning of the nineteenth century that the classical name began to be used again, almost as a war-cry, by the people whose imagination was full of Pericles and Socrates. When the Morea, the islands, and part of the mainland succeeded in throwing off the Turk, the first provisional independent government naturally called its territory neither after the Turkish vilayets nor Roman province, but went back to the glorious name Hellas. And when things were settled by the London Conference, in 1832, the new kingdom was the *Basileia tes Hellados*, and Otto of Bavaria became (title unknown to history) *ho Basileus ton Hellenon*

II. THE CHURCH IN GREECE BEFORE THE SCHISM (52-1054)

Greece possesses by the most undisputed right an Apostolic Church. St. Paul, in his second missionary journey (52-53, with Silas and Timothy), while he was at Troas in Mysia, saw the vision ("Pass over into Macedonia, and help us", Acts, xvi, 9) that brought him for the first time to Europe. At Philippi in Macedonia he founded the first Christian Church on European soil (*ibid.*, 12 sq.). Thence he came to Thessalonica (xvii, 1), Berea (xvii, 10), and, travelling southwards, to Athens (xvii, 15). Here he preached about "the unknown God" on the Areopagus (xvii, 22-31), and went on to Corinth (xviii, 1). At Corinth he was brought before Gallio, "proconsul of Achaia" (xviii, 12); from Cenchrae, the port of Corinth, he sailed back to Ephesus with Priscilla and Aquila (xviii, 18). In the third journey (54-58) he came again to Macedonia (about the year 57--Acts, xx, 1), thence "to Greece" (*eis ten Hellada*, xx, 2), and stayed three months at Corinth (xx, 3), then back to Asia Minor (Troas) by Macedonia (xx, 4, 5). In all these places St. Paul preached, according to his custom, first to the colonies of Jews and then to Gentiles too; in all he left Christian communities from which others in the neighbourhood were formed by his disciples: "I have planted, Apollo watered, but God gave the increase" (I Cor., iii, 6). So that he could say: "From Jerusalem round about as far as unto Illyricum, I have replenished the gospel of Christ" (Rom., xv, 19). Among the Pauline Churches of Greece two stand out as the most important--those of Athens and Corinth. This is what one would expect from the Apostle's general practice of bringing his message first and most completely to the great cities. From these it would spread more easily to the country round. Athens, in St. Paul's time no longer of first importance politically or economically, still held a great place through her immortal memories. A number of Romans had settled there, such as T. Pomponius Atticus, Cicero's friend. These are apparently the "foreign dwellers" (*oi epidemountes xenoï*) of Acts, xvii, 21. There was also a colony of Jews, to whom St. Paul preached first. "He disputed, therefore, in the synagogue with the Jews, and with them that served God [*tois sebomenois*], and in the market-place, every day with them that were there" (the heathen--Acts, xvii, 17). Of far

greater practical importance was Corinth, then one of the chief commercial centres of the empire, the residence of Gallio, Proconsul of Achaia (Acts, xviii, 12). Corinth became the centre of the Apostle's work, the chief centre of Christianity in Greece. It is supposed that he wrote here his Epistle to the Romans (J. Belser, "Einleitung in das Neue Testament", Freiburg im Br., 1901, p. 507), both those to the Thessalonians (*ibid.*, 461 and 468), perhaps that to the Galatians (so Zahn). His care for the Church of Corinth is shown in his two Epistles to the Corinthians. For an account of this, the most typical of the Pauline Churches, see Belser, *op. cit.*, V, xl (pp. 476-489).

The alleged mission of other Apostles to Greece rests on a less firm footing. St. Andrew is said to have preached in Scythia, Thrace, Epirus, Macedonia, and Achaia, and to have been crucified (on a cross of the shape to which he has given his name) at Patras, by order of the Proconsul Aegeas. The story of his mission and martyrdom is as old as the second century. It formed part of a work on the Apostles written then by a heretic, Leucius Charinus (Leukios Chareinos.--cf. Epiphanius, "adv. Haer.", lxi, 1; lxiii, 2). There is an alleged contemporary encyclical letter of the priests and deacons of Achaia which tells the story, including speeches made by the saint in verse:--

O bona crux diu desiderata,
Iam concupiscenti animo praeparata,
Securus et gaudens venio ad te,
Et tu exsultans suscipias me,
Discipulum eius qui pependit in te.

The whole text is published by Tischendorf, "Acta Apostolorum apocrypha" (Leipzig, 1851, pp. 105-131), and Lipsius, "Die apokryph. Apostelgeschichten" (1883, I, 543 sq.), where the question of its origin is discussed. The lessons, antiphons, and responses for St. Andrew's day (30 Nov.) in the Roman Breviary are taken from this document. On account of the tradition that St. Andrew preached in Thrace, the Patriarchs of Constantinople claim him as their first predecessor; the Russians have enlarged his mission in Scythia into the conversion of their country (he came and preached as far as Kiev). St. Thomas and St. Matthew are also said to have visited Greece on missionary journeys.

The Church spread rapidly in Greece. We hear of bishops in various cities during the persecution. Under the Emperor Hadrian (117-38), Publius, Bishop of Athens, was martyred (Euseb., H. E., IV, xxiii). A certain Philip was Bishop of Gortyna (*ibid.*). Eusebius writes of Dionysius of Corinth and his works (*ibid.*). Publius at Athens was succeeded by Quadratus the apologist (Bardenhewer, "Altkirchl. Literaturgeschichte, I). Aristides of Athens was also a famous apologist (*ibid.*).

In this first period in Greece, as everywhere, the bishops of the chief towns have a certain precedence, even jurisdiction, over their fellow-bishops ("Orth. Eastern Church," pp. 7-8). Heraclea was the ecclesiastical metropolis of Thrace, Thessalonica of Macedonia, Corinth of Achaia. Domitius of Heraclea, under Antoninus Pius (138-61), witnessed the martyrdom of St. Glycera; his successor, Philip, was burnt to death at Adrianople under Diocletian (284-305). Pinytus, Bishop of Crete, corresponded with Dionysius of Corinth (Euseb., H. E., IV, xxiii). After Constantine (324-37) the local Churches were organized more systematically, according to Diocletian's division of the empire

(Orth. Eastern Church, pp. 21-23). Greece became part of the Prefecture of Illyricum, Thrace belonged to the "East" (Praefectura Orientis). The Prefectures of Gaul, Italy, and Illyricum made up the Roman Patriarchate (ibid., p. 21), so that, legally, Greece became part of that patriarchate. Normally it should have used the Roman Rite and belonged to Western Christendom. But Illyricum was an endless source of dispute between East and West, till the Great Schism (ibid., pp. 44-45, Duchesne, "L'Illyricum ecclesiastique", in "Eglises separees" (Paris, 2nd ed., 1905, pp. 229-79). In Thrace, Constantinople succeeded in displacing the old metropolis, Heraclea, and then in becoming a patriarchate, eventually claiming even the second place after Rome, at the Second and Fourth General Councils (Orth. Eastern Church, pp. 28-47). Since the Council of Ephesus (431) Cyprus has been an autocephalous Church (ibid., 47-50); Crete was part of Illyricum and shared in the disputes about it. In 379, under Gratian and Theodosius, Illyricum was divided politically into Eastern and Western Illyricum. The Western half (Pannonia Prima and Secunda, Pannonia Ripariensis, Dalmatia and Noricum Primum and Secundum) remained joined to the Italian prefecture; the eastern part (Macedonia, Thessalia, old Epirus, Achaia, New Epirus, Crete, Praevalitana--which is now Albania--Dacia Mediterranea, and Dardania--i.e. our Servia) became part of the eastern half of the empire, then of the Eastern Empire. The Patriarchs of Constantinople claimed this Eastern Illyricum as part of their patriarchate, and eventually, in spite of the popes' protests, succeeded in asserting their jurisdiction over it. Eastern Illyricum then included part of what we call Greece, the rest was occupied by the (civil) diocese of Thrace and Cyprus.

Lequien, in his "Oriens Christianus", I and II (Paris, 1740), gives lists of the Churches of these lands with their arrangement in provinces and the names of all their bishops, as far as they were known in his time. The Byzantine Patriarchate consisted of the (civil) dioceses of Pontus (I, 351-662), Asia (I, 663-1090), Thrace (I, 1091-1246), Eastern Illyricum (II, 1-26). Of these the diocese of Thrace, to some extent, and the diocese of Eastern Illyricum entirely, cover our Greece.

The diocese of Thrace had seven ecclesiastical provinces: (1) Europe, with Heraclea as metropolis (I, 1101-1154). This province once had twenty, in Lequien's time only five, sees, Rhedaestus, Parium, Metra-and-Athyra, Tzurloes and Myriophyta. (2) Thrace (as distinct from the diocese) with Philippopolis as metropolis (I, 1155-1170). (3) Haemimontum, metropolis Adrianople (I, 1171-1192). (4) Rhodopes, metropolis Trajanople (I, 1193-1210). (5) Scythia, metropolis Tomi (*Tomes* or *Tomis*, now extinct, I, 1211-1216). (6) Moesia (or Mysia) Inferior, Metropolis Marcianople (Preslav *Preslaba*), I, 1247-1251). (7) Walachia, metropolis Tergovite, is no longer in any sense Greek. Compare with this list the metropolitan sees (74) of the patriarchate, arranged in three classes, according to their place in the synod, in Silbernagl, "Verfassung u. gegenwartiger Bestand samtlicher Kirchen des Orients", Regensburg, 2nd ed., 1904, pp. 33-35). The title metropolitan is now given to almost every bishop.

In Lequien's list the second great diocese, Eastern Illyricum, whose capital was Thessalonica (vol. II, 1-318), covers practically all Greece. Before the division of Illyricum its capital was Sirmium. We have seen that Western Illyricum remained part of the Roman patriarchate and was in no sense Greece. The eastern diocese had nine provinces (see above); of these only the first seven

can be called Greek, and in many of them the Slav element was very powerful. The Slav invasions of the empire began under Anastasius I (491-518) in 493; various Slav tribes and the non-Aryan Bulgars (who soon adopted a Slav language and became practically Slavs too) pressed southward into Thrace, Macedonia, Thessaly, even Achaia, in increasing numbers, throughout the whole period of the empire at Constantinople; so that always, and still in our own time, they form a rival influence to the Greeks throughout these lands. The old sees of these seven more or less Greek provinces are, according to Lequien: (1) Province of Macedonia (II, 27-102), metropolis Thessalonica, with suffragan sees of Philippi, Berrhoea, Dium (*Dion*), Stobi (*Stoboi*), Parthicopolis, Doberus, Cassandria, Edessa, Pydna or Citrum, Heraclea Sintica, Amphipolis, Lemnos (the island), Thassus, Serra, Bargala, Theorium, Campania or Castrium, Poliana, Pogoiana, Zichnae, Drygobitzia, Melanias, Drama, Ardamerium, Rhendina, Deabolis, Hierissus, Lycostomium and Servia. (2) The Province of Thessaly (II, 102-132) had as metropolis, Larissa, as suffragan sees, Demetrias, Zetunium (*Zetounion* or *Zetonion*), Caesarea in Thessaly, Gomphi (*Gomphoi*), Echinus, Pharsalus Lamia, Scopelus, Tricca (*Trikke*, now Trikala), Hypata (neut. plur.), metropolis, Thebes of Phthiotis, Sciathus, New Patras, Ezerus, Demonicum-and-Elasso, Stagae, Thaumacus, Litz-and-Agraphorum, Pherae, Loedoricium, Marmaritzium, Bezena, Peparethi. (3) Old Epirus (II, 133-154) had for its metropolis Nicopolis, and for suffragan sees, Anchiasmum (or Onchisimus), Phoenices, Dodona, Buthrotus, Adrianople (in Epirus), Photica, Euroea (*Euroia*), Corcyra (the island, Corfu), Aetus, Ioannina (now Janina), Leucas, Achelous. (4) Hellas (II, 155-239) had as metropolis, Corinth, and for suffragan sees, Cenchreae (Vulg. Cenchrae, *Kenchreai*, the port of Corinth), Old Patras, Argos, Nauplia, Megalopolis in Arcadia, Lacedaemon, Coronea (*Koroneia* in Boeotia), Elis, or Elea, in Achaia, Tegea in Arcadia, Messene in the Peloponnesus, Carystus in Euboea, Naupactus, Arta (now Larta, formerly Ambracia), Oreus (*Oreos*), Porthmus, Marathon, Elatea, Megara (neut. plur.), Opus (*Opous*), Plataea, Thebes in Boeotia, Thespieae, Tanagra (both fem. sing. and neut. plur.), Scarphia, Chalcis, Monembasia (fem. sing.), Strategis, Pyrgus (or Pyrgium), Troezen, Elis in the Peloponnesus, Aegina (the island), Aulon, or Solon (the old Delphi), Amyclae, Olena, Methone, Scyrus (*Skyros*, the island), Zacynthus (Zante), Cephalenia, Diaulia, Pylus, Brestene, Andrusa, Mendinitza, Tzernitza, Ceos (the island). (5) New Epirus (II, 240-255) had for metropolis, Dyrrhacium (*Dyrrachion*), and for suffragan sees, Scampe, Apollonia-and-Bullidis, Amantia, Decatera (neut. plur., in Dalmatia), Aulon (*Aulon*), Listra (neut. plur.), Dribastus, Stephaniacum. (6) Crete (II, 256-274) had for metropolis Gortyna (of which St. Titus was first bishop), Gnossus, Arcadia, Hiera Petra, Lappa, Phoenix, Hieracleopolis, Subrita, Apollonia, Eleutherae, Chersonesus, Cydonia, Cissamus, Cantani.--The other provinces (Praevalitana, Dacia Mediterranea, and Dardania) do not concern Greece.

The remnants of these sees left to the oecumenical patriarch, after Turkish spoliation and the independence of the modern Greek Church, will be seen in Silbernagl's list.

III. THE ORTHODOX CHURCH IN GREECE

The Patriarchs of Constantinople had succeeded in asserting jurisdiction over all this vast territory, as well as over Asia Minor and the purely Slav lands to the North. After the schism of Caerularius (1054) these metropolitans and bishops followed their patriarch by striking the pope's name from their diptychs. They, too, like their chief, learned to abhor Latin customs, to look on the Latin Church under the pope as a fallen branch and a synagogue of Satan. There is no trace of independent action in any of these local Greek Churches. They all used the Byzantine Rite and followed the Byzantine Patriarch faithfully. During the short-lived unions of Lyons (1274) and Ferrara-Florence (1439) they became Uniats too. They cared for the union as little as did their leaders at Constantinople and fell away again as easily as they had joined. The Latin conquest of their lands (after the Fourth Crusade, in 1204) brought about a rival Latin hierarchy and something very like persecution for the Greeks. Naturally, they hated and scorned the Latin bishops and groaned under the disabilities they suffered from the Frankish princes and from Venice. The Slavs invaded their lands, destroyed many of their cities, so that Greek dioceses disappear because there are no more Greeks left in great tracts of what they still affect to call Greece; but the remnants that maintain themselves still look to Constantinople for orders and still keep the Byzantine Rite in Greek. The Turkish conquest brought about still greater hardships. Invited in the first instance as allies by the fatal policy of the Emperor John VI (Cantacuzene, 1341-55), the Turks first took hold of European soil by seizing Kallipolis (in the Thracian Chersonese) in 1356. From this time they steadily advanced, taking city after city, ravaging and plundering what they could not keep. In 1361 they took Adrianople and made it their capital in Europe till the fall of Constantinople. Then, moving north, they conquered the remnants of Stephen Dushan's great Servian Empire (Battle of Kossova, 1389). Lastly, nearly a century after they had first landed in Europe, they finished their work by taking Constantinople (29 May, 1453). From this time till the nineteenth century the Greeks and the Orthodox Church in Greece were subject to a Moslem government. The Sultans applied the usual terms of Moslem law regarding non-Moslem Theists to the Christian population of their empire (Orth. Eastern Church, 233-244). There was to be no active persecution. Christians suffer certain disabilities. They may not serve in the army, and they have to pay a poll-tax; they must dress differently from their masters, may not have as high houses, may put no sign of their faith (crosses) outside their churches, nor ring church bells, nor bear arms, nor ride on horses. Their evidence may not be accepted in a court of law against a Moslem. To convert a Moslem to their faith, seduce a Moslem woman, speak openly against Islam, make any treaty or alliance with people outside the Moslem empire is punished with death. As long as they keep these laws they are not to be molested further, and they are quite free with regard to their religion. Of course any Christian may turn Moslem at any time; if he does so it is death to go back. (During the last century the European Powers have forced the Porte to modify most of these laws.) The Orthodox were organized into a subject community under the name of *Roman Nation* (*rum millet*, a strange survival of the name of the old Roman Empire which the Turks had destroyed). Their civil head was the oecumenical patriarch. During the century after the Turkish conquest this patriarch reached the height of his power; then, in 1591, Russia became an independent Church--an example followed later by one

branch of the patriarchate after another, till he is now the merest shadow of what his predecessors were. During the centuries between the fall of Constantinople and the beginning of Greek independence the Greek Church (although it was certainly not happy) has no history, unless one counts as such the affairs of the Patriarchate (Cyril Lucaris and the Synod of Jerusalem in 1672, for instance, *op. cit.*, 264-268). The other Greek bishops paid their heavy fees to the patriarch and the government; the parish priests paid their heavy fees to the bishops. The hideous oppression of the Turk overshadowed all their lives. For the Turk has never kept his own fairly tolerant law. The tribute of children for the Janissary guard was levied till 1638. The Christians were always in a state of simmering rebellion and the Turks were always punishing their attempts by wholesale massacre. In Crete 50,000 Christian children, in the year 1670, were torn from their parents, circumcized, and brought up as Moslems; in Asia Minor thousands of Greeks had their tongues torn out for not talking Turkish (*op. cit.*, 237-238). Meanwhile the clergy celebrated the Holy Liturgy on Sundays, worked in the fields, and kept wine-shops on week-days. But for the *kamelaukion* (or *kalemaukion*--the tall hat without a brim) there was little to distinguish them from other peasants. But they kept alive faith in Christ and Hellas, prayed for better days, were generally at the bottom of each attempt at resisting the pasha's abominations, and bore silent but heroic witness for Christ during those dark centuries. And who can reproach them for being poor and ignorant? The schism (not the fault of these poor *Papades* at any rate) had cut them off from the West. Europe had forgotten them. They had everything in the world to gain by turning Turk; and yet they kept the Christian faith alive among their people, in spite of pashas, and soldiers, and massacres. Their little dark, dirty churches were the centres not only of Christianity but of Hellenism too. And while their wives poured out the strong resinous wine for whispering conspirators, their sons were out on the hills, *klephts* and *armatoloi* keeping up the hopeless war for Greece.

The Greek War of Independence brought a great change to the Church of the free kingdom. The clergy had taken a leading part in the revolution. In 1821, at the beginning of the movement, when Alexander Hypsilanti was making his absurd attempt to rouse the Vlachs, Gregory V of Constantinople, forced by the Turkish government, denounced the "Hetairia Philike" and excommunicated the rebels. But the Metropolitan of Patras, Germanos, the Archimandrite Dikaios (Pappa Phlesas), and other leading ecclesiastical persons openly took the side of the Greeks, helped them with their counsels, and in many cases even joined in the fighting. Dikaios made a heroic stand with 3000 men against Ibrahim Pasha's Egyptians at Maniaki on Mount Malia. In 1822 the Turks began their series of reprisals by barbarously murdering the Patriarch Gregory V in his vestments, after the Liturgy of Easter Day (22 April), although he, so far from being responsible, had obeyed them by excommunicating his fellow-countrymen. Throughout the war the Greek Church showed that the cause of her children was her cause too. But, in spite of Greek enthusiasm for Gregory V (his relics were buried with great honour at Athens in 1871), the court of the patriarch (the Phanar) was too much under the power of the sultan for the free Greeks to submit to its jurisdiction. The example of Russia showed that a national Church could remain Orthodox and keep the communion of the patriarch while being itself independent of his authority. As soon as

the affairs of free Greece began to be settled, one of the first acts of the national party was to throw off the jurisdiction of the Phanar. Alexander Koraes wrote at the time: "The clergy of that part of Hellas that is now free cannot submit to the authority of the Patriarch of Constantinople, who is under the power of the Turk; it must rule itself by a Synod of freely elected prelates" (*Politikai Paraineseis*, quoted by Kyriakos, *Ekkl. Historia*, Athens, 1898, III, para. 42, p. 154). The first National Assemblies (at Epidaurus and Troezen) in 1822 and 1827, while declaring that the Orthodox faith is the religion of Greece, had pointedly said nothing about the oecumenical patriarch. In July, 1833, the Greek Parliament at Nauplion drew up a constitution for the national Church. Imitating Russia, they declared their Church autocephalous--independent of any foreign authority--and proceeded to set up a "Holy Directing Synod" to govern it. They also suppressed, of the great number of almost deserted monasteries in Greece, all that had less than six monks as inmates. In 1844 the same thing was repeated, and copies of the law were sent to Constantinople and to the other Orthodox Churches. The patriarch was exceedingly indignant at what he, not unnaturally, described as an act of schism. The Greek Government had put off the evil moment of announcing to him its new arrangement as long as it dared. Between 1822 and 1844 the Greek Church considered itself autocephalous, managing its own affairs by its synod, but had sent no notice of the change to the Phanar. So the patriarch affected to ignore the change. But he showed his anger plainly enough in 1841, when he received notice from the Greek Church that she had excommunicated for heresy Theophilos Kaires, the founder of the "Theosebismos" sect, an imitation of French Deism. The patriarch (Anthimos IV) refused to accept, or even to answer, this letter. So also did his successor, Germanos IV, refuse to notice the declaration of their independence that he received from his former subjects in 1844. In 1849 the Greek Synod made another attempt. James Rizos, the Greek minister at Constantinople, had just died and the patriarch buried him with great honour. The Greek Government sent the Archimandrite Misael, then president of the synod, to Constantinople with the new Order of the Holy Saviour and a message of thanks to the patriarch (Anthimos IV restored) from the autocephalous Church of Greece. Anthimos took the order and then said that he knew nothing of an autocephalous Greek Church. The Greek Synod sent another circular to him and to all the other Orthodox Churches, explaining what had been done and proclaiming their independence. At last, in 1850, Anthimos IV summoned his synod to consider the matter. The result of its consultation was the famous Tomos. The Tomos at least acknowledged a certain limited independence of the Greek Holy Synod, but proceeded to lay down a number of rules for its guidance. Any sort of interference of the State is absolutely forbidden, there is to be no royal commissioner in the synod, the patriarch is to be named, as before, in the Holy Liturgy, the chrism is to be procured from him, and all important matters must still be referred to his judgment. The tone of the Tomos is still that of absolute authority; each clause begins with the words: "We command that . . ."

The document produced an uproar in Greece. Afraid of a formal schism, the Synod was at first disposed to accept it. There was also a conservative party led by Oikonomos (d. 1857), who were opposed to any change and inclined to submit to the patriarch in everything. But the feeling of the majority was strongly against any sort of submission. The free Greeks had determined to have

nothing more to do with the Phanar at all. Pharmakides (d. 1860), the leader of the Liberal party (with a distinct Protestantizing tendency), answered the Tomos by an indignant protest: "The [patriarchal] Synodical Tomos, or concerning Truth" (*ho Synodikos Tomos he peri aletheias*, Athens, 1852). And the Parliament (always the last court of appeal for these independent Orthodox Churches) rejected every kind of interference on the part of the patriarch. Eventually the Greek Church admitted two points from the Tomos: that the Metropolitan of Athens should be *ex officio* President of the Synod; and that the holy chrism should be sent from Constantinople. The first of these points has become a fixed rule; the second obtains so far, but there is in Greece a strong movement in favour of consecrating the chrism at Athens. For the rest the patriarch's rules were rejected. The royal commissioner sits in the Holy Synod, and the Greek Church is as Erastian as that of Russia. The Holy Synod is named in the Liturgy instead of the patriarch. Forced by Russia, the Phanar had to give in and to acknowledge yet another loss to its patriarchate and another "Sister in Christ", the "Holy Directing Synod" of the autocephalous Church of Hellas. Since then there has been no more question about this point; the common cause of all Greeks against Slavs in the Balkans has restored very friendly feeling between the free Greeks and their Phanariot brothers. Two political changes further diminished the jurisdiction of the patriarch and enlarged that of the Greek Synod. In 1866 England ceded the Ionian Isles to Greece. True to the now acknowledged principle that the Church must reflect the political situation, the Greek Government at once separated the dioceses of these islands from the patriarchate and joined them to the Church of Greece. The Phanar made an ineffectual protest, and for a short time there was an angry correspondence between Athens and Constantinople. But once more the patriarch had to give in and submit to his loss. In 1881 Thessaly and part of Epirus were added to Greece, and again their dioceses were made subject to the Greek Synod by the government. This time the patriarch did not even trouble to protest.

IV. CONSTITUTION OF THE CHURCH OF GREECE

The laws that fix the establishment, organization, and regulations of the Greek Church are those of 1852, in which the parliament, having finally rejected the patriarch's Tomos, repeated and codified the arrangements made by various governments since 1822:--

"The dominant religion in Hellas is the Eastern Orthodox Church of Christ. Every other known religion may be practised without hindrance and shall enjoy the protection of the laws, only Proselytism and all other attacks on the dominant Religion are forbidden."

"The Orthodox Church of Hellas acknowledges as her Head our Lord Jesus Christ. She is indissolubly united in faith with the Church of Constantinople and every other Christian Church of the same persuasion [as Constantinople]. She is autocephalous, uses her sovereign rights independently of any other Church, and is ruled by the members of the Holy Synod" (Arts. 1 and 2 of the Constitution of 1864).

There are now 32 sees in Greece of which the first is Athens, which includes the *Nomos* (political department) of Attica; further, (2) Corinth, (3) Patras, (4) Larissa, Pharsalus and Platamon, (5) Monembasia and Lacedaemonia, (6) Arta, (7) Corfu (Kerkyra), (8) Cephallenia, (9) Thebes and Livadia, (10) Demetrias, (11) Syros, Tenos and Andros, (12) Mantinia and Cynuria, (13) Chalcis and Carystia (for the island of Euboea), (14) Zante (Zakynthos), (15) Argolis, (16) Akarnania and Naupaktos, (17) Photis, (18) Tricala (Tricca, or Trikke) and Stagai, (19) Messenia, (20) Leucas and Ithaca, (21) Triphylia and Olympia, (22) Gytheios and Oitylos, (23) Phokis, (24) Ilia, (25) Phanarios and Thessaliotis, (26) Ercytania, (27) Kalabrytai and Aigialia, (28) Gortys and Megalopolis, (29) Kytherai, (30) Hydra and Spetzai, (31) Thera, (32) Paronaxia. Hitherto the bishops of all these sees have borne the quite meaningless title *Metropolitan*. The Government has declared that as the present incumbents die out their successors shall be called simply bishops; only Athens is to be a permanent metropolitical see.

The Holy Synod, to which all bishops are subject, meets at Athens. The Metropolitan of Athens is always president for life. Four other bishops are chosen by the Government as members from the hierarchy, in turn, according to the dates of their consecrations. They sit for one year, from the 1st of September, then return to their dioceses. But the Government may keep not more than two as members for a longer time. If the president is prevented from attending, the bishop next in seniority is to take his place. All members of the Synod must take an oath of fidelity to the king at their appointment. Besides these five bishops, the Synod is attended by a royal commissioner (a layman appointed by Government). He has no vote, but no act is valid unless he is present and signs the document. The Synod has two secretaries, two writers, and a servant, all appointed by Government. The secretaries and writers are clerks in Holy Orders. All affairs of the Synod with foreign Churches are controlled by the Government's Minister for Foreign Affairs. In questions that are not purely religious (ecclesiastical seminaries, marriage, divorce, etc.) the consent of the Government is required. The President of the Synod receives 3600 drachmai (\$720), the other bishops 2400 drachmai (\$480) yearly besides their episcopal salaries. The first secretary has 4800 drachmai, the second 2800 drachmai a year, the first writer 120 drachmai a month, the second 90 drachmai a month. The royal commissioner receives 6000 drachmai a year. The acts of the Synod are sealed with its official seal bearing a cross (practically the arms of the kingdom: Azure a cross coupé argent) and the inscription: *Hagia Synodos tes ekklesias Hellados*. Its jurisdiction is described as extending over questions of faith (only, of course, in the sense of preserving the Orthodox Faith of the Seven Councils), rites and canon law, religious instruction, duties of clerks in Holy orders, ecclesiastical discipline, examinations for ordination, consecration of churches, celebration of feasts and services. The Synod can appeal to the Government to put down heretics and refractory clergy (there have been cases of imprisonment for heresy among the Orthodox clergy), and dangerous books against faith or morals. Other matters, such as public processions, building of seminaries, extraordinary feasts on weekdays (involving public holidays), and all the points mentioned above that are described as "mixed" (ecclesiastical and political), must be arranged by the united action of the Synod and Government. In all services in the kingdom the Holy Synod is prayed for after

the king and queen (instead of the patriarch). But when the Metropolitan of Athens celebrates in Synod, all the patriarchs are prayed for. The royal commissioner is of course an imitation of the Russian "Procurator of the Holy Synod". The manner of appointing members to the Synod, the need of the Commissioner's signature for its acts, its dependence on the Government generally, as well as the way of appointing bishops and deciding all really important matters, show that, in spite of Diomedes Kyriakos's indignant protest (*Ekk. Historia*, III, 155-156), the Greek Church is quite hopelessly Erastian.

Bishops are appointed by the king (advised, of course, by his ministers). The Synod presents three names, of which he chooses one. A bishop must be thirty-five years old, a doctor of theology, and must have taught theology or preached for some time. Before consecration he takes an oath of obedience (and of his episcopal duties) to the Synod, after it an oath of allegiance to the king. He can only be deposed by the Synod with the royal consent. The Metropolitan of Athens receives an income of 6000 drachmai (\$1200), all other bishops 4000 drachmai. Besides this there are various stole-fees (see sub-title ALTARAGE, Vol. I, p. 359). Each bishop has a curia of eight members, namely, his *oikonomos* (who is responsible for property and financial questions), *sakellarios* (who looks after the monasteries), *chartophylax* (to take care of archives), *protekdikos* (lawyer), *skeuophylax* (Sacristan), *sakellion* (responsible for the manners of the clergy), *hypomnematographos* (secretary), and *hieromemnon* (master of ceremonies). These persons, who are all priests, form an advising council. All are paid by Government. When a see is vacant the Holy Synod recommends, and the State appoints, one of them to administer the diocese (vicar capitular) till the successor is appointed. A bishop who has resigned from old age or infirmity receives a pension of 200 drachmai a month. Parishes are divided officially into those of cities, small towns, and villages. Each group of from 25 to 70 families makes up a village parish, towns of 151 to 200 families form a parish of the second class, and those of 301 to 1000 families one of the first class. Parishes of the first and second class have at least one deacon and one parish priest. Larger areas are subdivided. The people elect, and the bishops appoint, the clergy. The priests have only their stole-fees as income, so that in the villages they nearly always have a trade or keep an inn as well. The last religious census, made in 1897, is published by Kophiniotos (*He Ekklesia en Helladi*, Athens, 1897). At that time there were 4025 parishes, with 5423 married and 242 unmarried priests. For their education there are four elementary seminaries: at Athens, Tripolis, Corfu, and Larissa. These satisfy the not very high demands of the village clergy, and 4116 priests had received only this amount of education, according to the census of 1897. A smattering of classical Greek, a little general education, knowledge of the catechism (it can hardly be called theology), and enough liturgical knowledge to perform their functions is all that any one expects of the village priests. They have no books except their service-books and perhaps a New Testament. What they read is one of the endless number of newspapers, and what they care about is the change of ministry and the wretched local politics that excite the passionate interest of all Greeks.

In 1856 the Government established higher schools for the clergy at Syros, Chalcis and Tripolis, in 1875 a fourth was begun at Corfu. It appears that all these institutions came to an end for want

of students (Kyriakos, *op. cit.*, III, sec. 50). Still higher in the scale is the Athenian seminary called the Rhizarion (founded by the brothers Rhizares in 1843) whose students attend lectures at the university besides those of their own institution. This is the only seminary that in any way comes up to our standard. Its students form the aristocracy of the clergy and become archimandrites, professors, and bishops.

There are a great many monasteries in Greece. In spite of the suppression, in 1833, of the small ones, 80 remained. There are now 250, with 1322 choir monks and 545 lay brothers, also 9 convents, with 152 nuns and 68 novices (census of 1897). The head of each monastery is the archimandrite, or *hegumenos* (abbot), elected by the monks and confirmed by the bishop of the diocese. He must be a priest-monk (*hieromonachos*). He is assisted by two counsellors, also elected by the community from among the monks who made their religious profession not less than six years ago. There is a new election of counsellors every five years. Over each convent an *oikonomos* is placed, a priest not less than sixty years old, chosen by the Synod; he is the real superior of the convent, keeps its keys, and is responsible for its state. Under his presidency the nuns elect an abbess (*hegoumenissa*). All monasteries and convents have endowments controlled and administered by consent of the Synod and Government. Monasteries whose revenues exceed 5000 drachmai a year have to spend part of it on the support of schools and preachers. Some monasteries are very rich. The first, the *laura* of the Falling Asleep of the Mother of God, at Pentelis, in the Diocese of Athens, has an income of 166,085 drachmai. A full list of monasteries and convents is given by Silbernagl, "Verfassung u. gegenw. Bestand," 2nd ed., pp. 78-85.

The political census of 1895 was destroyed in the war of 1897. The former one of 1889 counted 2,172,148 Orthodox Greeks out of a total population of 2,217,000. Though this number is certainly very much exaggerated (the Catholics alone claim more than the difference between the two figures), the Orthodox are the overwhelming majority. Their Church does much, according to its own ideas, for the better instruction and moral improvement of the laity. In 1875, the professors of the theological faculty at Athens formed a society called the "Brotherhood of the Friends of Christ" (*Adelphotes ton philochriston*) for this purpose. Other societies of the same kind are the "Society of St. Paul", "The Holy Union" (*ho hieros Syndesmos*) and "The Reform" (*he Anaplasis*). They publish popular works of religious instruction, prayer-books, and cheap editions of the Liturgy in great numbers, books of controversy, religious newspapers; and they hold meetings with free lectures and instructions. Almost every publisher in Greece (where every bookseller is a publisher) produces such little books of religious knowledge, accounts of Church History, anti-Roman controversy, and so on. And every Greek has read some little pamphlet of 32 pages against the pope or the Bulgars, so as to garnish his conversation with very loose references to the Byzantine Empire, Photius, and Pope Joan. One of the best popular compendiums is Nicholas Ch. Ambrazes: *He Orthodoxos Ekklesia* (constantly reprinted, e.g., Athens, 1906, etc.). Demetrios S. Balanos (*Mpalanos*), *He Ekklesia mas pou, tpos kai pote latreuetai ho Theos*, (Athens 1907), in the series "Useful Books", gives a good popular account of the Liturgy and Church Service generally.

Among the almost infinite number of Greek newspapers a great number are religious periodicals. The "Reform" society publishes a monthly with the same title: *He Anaplasis* (edited by M. Galanos). Some of the best known are the *Euaggelike Ealpigx*, *Euaggelikos Keryx*, *Hieromnemon*, *Orthodox Epitheoresis*, *Threskeutike phone*, *Echo tes Orthodoxias*, *Sion*, *Soter*, *Agape*, *philanthropia*, *Christianike*, etc.

For the more prominent theologians and writers of the Greek Church since its foundation see Kyriakos, op. cit., III, secs. 51, 52. The most important are the conservative Oikonomos (d. 1857) and the Liberal Theoklitos Pharmakides (d. 1860).

V. THE CATHOLIC CHURCH IN GREECE

With the exception of a very few scattered Uniat congregations, all Catholics in Greece are Latins. This is explained partly historically and also by the strictly legal position. After the Great Schism the first restoration of the Catholic Faith was made by the crusaders, the Frankish princes who ruled as their successors, and Venice. None of these authorities cared at all about the Byzantine Church or its rights. Wherever their power extended they set up Latin bishops, just as at home, and tried to persuade the people to turn Latin by harassing disabilities that often became real persecution. Whatever native Catholic communities now exist are the successors of those set up by the Franks and Venetians. They are strengthened by foreigners (French and Italian merchants, etc.) who are naturally Latins too. The legal justification of what seems an anomalous situation is that Greece is part of Illyricum, and Illyricum, according to the ancient right never abandoned by the popes, belongs to the Roman patriarchate. According to the general (but by no means quite universal) principle, that rite follows patriarchate, all Greeks should be not only Catholics but also Latins. On the other hand, there is no doubt that this circumstance is a great hindrance to the conversion of Greece. It would be much easier to persuade Greeks simply to return to the old allegiance of the first see, as Uniats have done elsewhere, than to make them go through so radical an upsetting of their lives as is involved in turning Latin. Throughout the East people are abnormally attached to their rites, the obvious visible things that they see mean much more to them than remote questions of jurisdiction and the actual names that may occur (whether pope, or patriarch, or synod) in the intercessory prayers. The foreign character of all Catholic missions in Greece is the great difficulty always; the authorities of these missions are nearly always not only Latins but foreigners--Italians. Undoubtedly the institution of a native Uniat hierarchy using the Byzantine Rite would be the first step towards converting Greece. Nor is the technical objection a really serious one. The Italo-Greeks show that people can use the Byzantine Rite in the Roman patriarchate. Or why not waive the whole question of Illyricum, as Rome eventually waived her objection to the rank of Constantinople, and set up a Uniat Byzantine Patriarch of Constantinople with jurisdiction all over the Balkans and Asia Minor? It was said that Leo XIII contemplated such a step before he died. The first great revival of Catholicity in the Levant was after the Fourth Crusade (1204). It is well known that the crusaders established not only a Latin emperor but a Latin patriarch and Latin bishops all over their empire. When the legitimate line of emperors took the city back (1261) the Latin patriarch fled. But the

Latin bishops went on under the protection of the Frankish States that lasted till the Turkish conquest. A complete and most satisfactory history of these Frankish States has now been written by Mr. William Miller (*The Latins in the Levant*, London, 1908). A mere glance at the maps of this volume will show the fluctuations of the various little principalities. In 1214 (p. 81) there were a principality of Achaia, a lordship of Athens, three baronies of Euboea, a duchy of the Archipelago and a county palatinate of Cephalonia. Venice held Modon in the Peloponnesus, and Chalcis in Euboea. By 1278 the Greeks have got back Euboea, Venice has Crete. In 1388 part of the Peloponnesus has returned to the emperor; Venice has taken part of Euboea. In 1462 the Turks have nearly all the mainland, the pope holds Monembasia, Venice keeps Crete, all Euboea (as a vassal state), and some islands of the Archipelago. In all these lands, then, there were Latin bishops; and parts of the population (notably in Syros and the Ionian Isles) had become Latin. Innocent III (1198-1216) established a Latin Archbishopric of Athens with eleven suffragan sees. Of these, three--Andros, Chios and Syros--remained, the others soon become titular sees. Till 1834 Catholics in the Peloponnesus were subject to the Bishop of Zante, all others to the patriarchal vicar at Constantinople. Gregory XVI, in 1834, established Aloysius M. Blancis, Bishop of Syros, as "Apostolic Delegate for the Kingdom of Greece". He had jurisdiction over all the kingdom, including parts of Thessaly added in 1882. The Turks gave the same toleration to the "Latin Nation" as to the "Roman [Orthodox] Nation". Since the independence of Greece Latin missionaries, especially Jesuits and Sisters of Charity, have opened schools all over the kingdom. Corfu forms a kind of basis, since here the population is very considerably Italianized and Catholic. Other schools are at Athens, Syros, Tenos, Naxos, etc. In 1890 the Latin Bishop of Athens opened a secondary school for boys that has had a great influence. The Italian Government has also founded schools in many of the chief towns. In 1869 and 1870 there were violent debates in the Greek Parliament about these schools. Many members wanted to close them and forbid all Catholic schools in the kingdom. Eventually the Government insisted that an Orthodox catechist should be appointed in all schools where there were any Orthodox children.

There are a number of laws in Greece made to hamper the work of Catholic missionaries. In 1830 the Parliament declared that the toleration granted to all religions does not involve allowing any damage to the state Church--a vague statement that opens the way to forbidding any proselytizing. In 1833 a law was passed requiring all papal Bulls, Briefs, etc., to be submitted to the Minister for Foreign Affairs before their publication. Five Catholic bishops (of Syros, Tenos and Mykonos, Naxos, Thera, and Corfu) are recognized by the Government; no other sees may be erected without its consent. The Latin Archbishop of Athens is not recognized by the State.

The present Catholic hierarchy is: (1) Archdiocese of Athens, established in 1875, when Bishop Marankos of Syros took up his seat there, in spite of the protest of the Government. By this act the metropolitan jurisdiction of Syros was practically transferred to Athens. In this diocese are 14 parishes, 13 priests, and about 18,000 Catholics. (2) Archdiocese of Corfu (Corcyra, Kerkyra), with 7 churches, 10 priests, and 4000 Catholics. (3) Zante (Zakynthos) and Cephalonia united (suffragan of Corfu), including the islands of Zante, Cephalonia, S. Maura, Ithaca, Cerigo, with 3 parishes, 7

priests, 1000 Catholics. (4) Archdiocese of Naxos with 1 parish, 6 priests, 350 Catholics. (5) Andros (suffragan of Naxos), administered by the Bishop of Tenos and Mykonos. (6) Santorin (Thera), suffragan of Naxos, with which is united the administration of Melos, 1 parish, 8 priests, 460 Catholics. (7) Chios (suffragan of Naxos), 3 churches, 8 priests, 300 Catholics. (8) Syros (now suffragan of Naxos), 6 parishes, 25 priests, 7000 Catholics. (9) Tenos and Mykonos (suffragan of Naxos), 26 churches, 26 priests and 5000 Catholics (Werner, "Orbis Terrarum Catholicus", Freiburg im Br., 1890, pp. 131-133).

These figures give a Catholic population of 36,110. Another census (quoted by W. Gotz, "Griechenland, Kirchliche Statistik", in "Realencykl. fur prot. Theologie", 3rd ed., Leipzig, 1899, VII, 168) gives 50,000 Catholics. On the other hand we have seen that the Government, in 1889, admitted only 14,687 other (not Orthodox) Christians altogether. A few congregations of Byzantine Uniats in the kingdom, served by priests of their own rite, depend on the Latin bishops (Echos d'Orient, 1906, p. 336).

VI. PROTESTANTS AND OTHER SECTS

There are a few small communities of Greeks who have left the Orthodox Church, either converted by Protestant missionaries or following some new protestantizing or rationalizing leader of their own. English and American missionaries have been at work here, disseminating bibles and holding prayer-meetings, since 1810. Protestant schools were opened by a certain Hildner in Syros in 1827, by King and Hill at Athens in 1832. At first the Orthodox seem to have watched their movements without suspicion. The British and Foreign Bible Society had even arranged with the Patriarch of Constantinople for the sale of their bibles. But these were found to exclude the deuterocanonical books and to be done into Modern Greek from the Massoretic text without reference to the Septuagint, the official text of the Orthodox Church. The missionaries also, not content with selling their bibles, held prayer-meetings in opposition to the liturgical services and preached against sacraments and ceremonies. So the Orthodox, led by the great conservative Oikonomos, became suspicious of them; they were denounced as disturbers of the public peace, and in some places their schools and conventicles were closed. King was expelled from Athens in 1852, but he soon came back and went on with his work. He formed a number of native Greek preachers and missionaries to propagate his ideas (Kalopathakes, Sakellarios, Konstantinos, and so on), and died in 1869. The end of this disturbance about the missionaries was that the Government granted entire toleration, but the Orthodox Church formally excommunicated them and their adherents. At first it had been a question of selling bibles and preaching to the Orthodox rather than of forming a new sect. Now the issue is quite clear; the Orthodox are forbidden to attend the missionaries' meetings, so these have built up regular congregations with ministers. People who join these leave the established Church and become Protestants. The first church of these Greek Protestants was opened at Athens in 1874. They call themselves *Euaggelikoi* and *Diamartyromenoi*. The church at Athens has about 100 attendants. In 1880 an attempt to build one at the Piraeus ended in a riot in which the building was destroyed. A few scattered Greek Protestants attend foreign Protestant churches. At Athens

there is a Lutheran church founded by King George to satisfy his religious needs and those of his Danish attendants. Its pastor (now a German, Hofprediger v. Schierstadt) preaches to about 200 Danes, Germans, and Swiss. There is an Anglican church with about 100 English and American attendants and another little meeting-house of an American sect nearly opposite Hadrian's Arch; also a Salvationist meeting-house. The number of Greeks attracted by all these people put together is infinitesimal.

There are also a few small sects that have arisen out of the Orthodox Church without the help of foreign Protestants. Theophilos Kaires, a priest, founded a kind of Deism on the lines of the French Encyclopedists which he called "God-worship" (*theosebismos*). In 1849 he published his Gospel, which he called *Gnostike*. He was considerably persecuted for a time, and twice put in prison, where he died in 1853. Andrew Laskaratos and one or two other writers made a desultory campaign against the established Church in favour of what they considered to be primitive Christianity. A. Papadiamantopoulos started a Positivist movement. The question of Darwinism brought about friction between the Holy Synod and the Government on one side, and certain university professors at Athens on the other. Plato Drakules wrote an amazing mystification of a Gnostic and Cabbalistic kind that he called "Light from within" (*Phos ek ton endon*). Except that of Kaires, these movements did not form organized sects. In the other direction a monk, Christopher Papulakis, and a layman, Makrakis, excited the people against the Holy Synod, the Government, and the university, in the name of the old faith. Papulakis (1852) was put into a monastery; Makrakis, after a long career of opposition, was excommunicated by the Holy Synod (1879) and imprisoned for two years by the Government. He had opened a church served by priests of his way of thinking; this was shut up. As soon as he came out of prison he began again a propaganda that now produced a formal sect, was again tried for heresy and sedition, and imprisoned. He has since his second release continued to form his sect and to lead a campaign of extreme opposition against the "apostate" State Church. His followers number about 5000; they follow lines very like those of the Russian Raskolniks--the official Church has fallen, her priests have lost all power of administering sacraments, her rites are schismatical; they, the Makrakists, alone are the really orthodox.

There are about 6000 Sephardim Jews in Greece, and in 1889 the census counted 24,165 Moslems, living chiefly in Thessaly. It is to the credit of the Government that these Moslems have always been treated with perfect toleration. They are excused from serving in the army under a flag marked with the cross. They have their mosques wherever they want them, and the muezzin still cries from the minaret, as loudly as when the sultan reigned here, that Mohammed is the prophet of God. Nevertheless, great numbers of Moslems crossed the frontier into Turkey when Greece became free; the addition of more territory in 1881 led to another great emigration, and the Moslem population of Greece is still steadily diminishing. Naturally, they find the changed conditions humiliating. At Larissa and thereabouts one finds Turkish quarters with their mosque, as across the frontier, but many more such villages are now deserted, and their mosques in ruins.

VII. THE CHURCH IN ENSLAVED GREECE

Greeks outside the kingdom are practically all Orthodox. They form a great part of the Patriarchate of Constantinople, the aristocracy of the Patriarchates of Alexandria, Antioch and Jerusalem, and the whole Orthodox population of Cyprus. In all these parts except Cyprus the same evolution is taking place. For many centuries the Greeks had it all their own way. All the important offices--those of patriarchs, metropolitans, archimandrites--were never given to the native Orthodox Christians, but were kept in the hands of a little group of Greeks generally sent out by the Phanar. In each case the awakening of national sentiment during the nineteenth century has produced this result: the natives (Slavs, or Wallachians, or Arabs) are making tremendous, and now always successful, efforts to throw off the yoke of these Greeks and to have bishops of their own races, the Liturgy in their own tongues. And everywhere the Greeks are waging a hopeless war in the name of Conservatism to keep their predominance. Russia steps in everywhere, always on the side of the natives; so each year the Greek element has to retire, and the Greeks get more and more angry. This has produced the appalling combination of schisms and the degrading wrangles that rend the Orthodox Church.

In the Patriarchate of Constantinople the Bulgars have made a formal schism since 1872. They have an exarch at Constantinople, and his exarchist bishops dispute the jurisdiction of the Greek (patriarchist) hierarchy all over Macedonia. There are now exarchist bishops at Ochrida, Uskub, Monastir, Nevrokop, Veles, Strumitza, Debra. In all the other dioceses, save five, they have priests and churches. This is the greatest schism. The Greek does not like Latins or Protestants; but he hates the Bulgarian schismatics far the most of all. For this question see R. von Mach, "Der Machtbereich des bulgarischen Exarchats in der Türkei" (Leipzig, 1906); D. M. Branco, "La Macedoine et sa population chretienne" (Paris, 1905); Fortescue, "Orth. Eastern Church", pp. 316-323. At Alexandria things are better. The Orthodox patriarch, Photios, is of course a Greek (he has had a stormy career--"Orth. East. Church", 285-286); but he has taken the trouble to learn Arabic and allows the Liturgy to be celebrated in Arabic to some extent; also he hates the Phanar and is unceasingly engaged in quarrels with his brother of Constantinople. So his subjects are fairly content. There is a schism at Antioch. After a long line of Phanariot patriarchs, the Arabs at last succeeded in getting an Arab patriarch, Meletios, in 1899. He was at once excommunicated by Constantinople, apparently for not being a Greek. He died in 1906 and again, in spite of frantic efforts of the Greeks, another Arab, Gregory Hadad, succeeded him. Gregory is excommunicate, too, for the same reason; and the See of Antioch, to the infinite scandal of all respectable Orthodox Christians, is still in schism with Constantinople ("Orth. E. Church", 287-288). The trouble at Jerusalem may be read in all the newspapers. The Patriarch Damianos is a Greek; he has always been disliked by the Arabs, now he has begun to try to conciliate them, so his Greek Synod has deposed him for being civil to Arabs, and the Arabs will not have him because he is a Greek. The latest reports say that he is still in the palace, guarded by Turkish soldiers; and his monks and Synod consider him no longer patriarch (op. cit., 289-290). In Cyprus, though they are all Greeks, they have a schism too. Since 1900 the quarrel of the two pretenders to the archiepiscopal see, Cyril of Cyrenia and Cyril of Kition, has disturbed the whole Orthodox world. There are endless ramifications

of this quarrel. For eight years every Cypriote newspaper has had a daily leader about *To ekklesiastikon Zetema*; the ludicrous scandal gets worse every month, and is likely to last so long as both the claimants survive.

In conclusion, it is just to say a word about the state of Greece now, compared with what it was under the Turk. Western Europeans are disappointed with the kingdom. They seem to have expected it to leap to our level at once. The muddled, and not always honest, finances of the Government, the ludicrous internal politics, a widespread and not altogether unjust suspicion of Greek honesty and the odious type of Levantine Greek that one meets, have produced a strong reaction since the burst of Philhellenism at the time of the War of Independence. Much of this is no doubt deserved. If one lands in Greece from Europe one will notice many things that excite one's indignation or laughter. But let anyone go to Greece after spending some time under the sultan's government; in spite of all Greek faults, the difference is simply enormous. Coming back from Asia or European Turkey, the traveller in Greece feels that he is in Europe. However unsatisfactory things may still be, he has crossed the chasm that separates Europe and Christendom from Asia and Islam. Greece may be a long way behind France or England, in the same class of country; she is simply part of another world compared with Turkey.

ADRIAN FORTESCUE

Greek Catholics in America

Greek Catholics in America

The Uniat churches of the Byzantine or Greek Rite were almost unknown to the United States some twenty-five years ago [1884]. Occasionally a priest of that rite from Syria came to America to ask assistance for his people who were struggling amid the Moslems, but while his visit was a matter of curiosity, his rite and the peoples who followed it were wholly unknown to American Catholics. To-day, however, emigration has increased to such an extent and is drawn from so many lands and peoples that there are representatives of most of the Eastern rites in America, and particularly those of the Greek Rite. These have lately arrived in large numbers and have erected their churches all over the country. The chief races which have brought the Greek Rite with them to the United States are the various Slavs of Austro-Hungary, and they are now approaching such a position of material well-being and intellectual development as to be reckoned with as one of the factors of Catholic life in the United States. Other races have also brought the Greek Rite with them and established it where they have settled. The advent of the Slavs into the United States really commenced about 1879-1880. Those of the Greek Rite came from the north-eastern portion of the Austro-Hungarian monarchy, where they inhabited chiefly the northern and southern slopes of the Carpathian Mountains, which form the boundary line between Galicia and Hungary. The first of the new-comers were miners in the coal districts. During the troublous times in Pennsylvania, from 1871 to 1879, when the "Molly Maguires" terrorized the mining districts and practically defied the authority of the State, the various coal companies determined to look abroad for foreign labour to

replace their lawless workmen, and so they introduced the Austrian Slav to the mining regions of Pennsylvania. His success in wage-earning induced his countrymen to follow, and the coal companies and iron-masters of Pennsylvania were quick to avail themselves of the new and less costly labour. This was before any of the present contract labour laws were enacted. The Slav was willing to work for longer hours than the English-speaking labourer, to perform heavier work, and to stolidly put up with inconveniences which his predecessor would not brook. He came from a land in which he had originally been a serf (serfdom was abolished in Austria-Hungary in 1848, and in Russia in 1861), then a degraded poverty-stricken peasant with hardly anything to call his own, and it was no wonder that America seemed to offer him boundless opportunity to earn a living and improve his condition. At first he was a cheap man; but in the course of a very short time the Slav became not a mere pair of strong hands, but a skilled worker, and as such he drove out his competitors, and his success drew still more of his countrymen across the sea. In the anthracite coal region of Pennsylvania there were in 1880 but some 1900 Slavs; in 1890, over 40,000; and in 1900, upwards of 81,000. The same proportion holds good of the bituminous coal-mining districts and of the iron regions in that and other states. Taking simply the past four years (1905-1908), the immigration of the Slovaks and Ruthenians, both of the Greek Catholic Rite, has amounted to 215,972. This leaves out of consideration the immigration (147,675) of the Croatians and Slavonians for the same period, though a considerable portion of them are also of the Greek Rite. These Slavs brought with them their Greek Catholic rites and practices, but they were illiterate, ignorant, the poorest of the poor, and knew nothing of the English language. Herding together in camps and settlements, and working like serfs at the most exhausting labour, they had but little opportunity to improve themselves or to learn the language, customs, and ways of the Americans around them, while both American and foreign-born Catholics failed to recognize in them fellow-Catholics, and so passed them scornfully by, and the American of the older stock and anti-Catholic prejudices too often held them in supreme contempt. Yet as soon as they gathered some little substance and formed a settled community they sent for their clergy. When these arrived, they, too, were often imbued with national and racial prejudices, and knew too little of the English language and American ideas and customs to initiate immediately the progress of their people, yet they created for them churches, schools, and a branch of their native literature upon American soil, and gradually brought them into touch with the people around them. In this they were seconded by many educated laymen who also followed their countrymen, and the result has been that the Greek Rite has now been established in the United States much more solidly and with greater virility than it is in many of the dioceses in south-eastern Europe. Other races and nationalities have also established themselves besides the Slavs; and there are in America also the Rumanians, the Syrians, and the Italians who follow the Greek Rite. But the people who have been foremost and most enthusiastic in the support of and devotion to their Oriental Rite are the so-called Ruthenians, a name used to designate the Ruthenians proper and also those Slovaks who are their immediate neighbours. In order to understand fully their position and relations in America, some of their history and peculiarities should be given.

I. RUTHENIAN GREEK CATHOLICS

The word Ruthenian is derived from the later Latin *Ruthenia*, the former name for Russia, and of course the Ruthenians might well be called Russians. Indeed, the present Ruthenians declare that they are the original Russians, and that the present Russia and Russians owe their name and nation to the accident of successful conquest and assimilation. Their own name for themselves is *Rusini*, and it is probable that Ruthenian was merely an attempt to put this word into Latin. The word *Rutheni* is first found in the writings of the Polish annalist, Martinus Gallus (1190), and the Danish historian, Saxo Grammaticus (1203). The original word *Rusini* is derived from *Rus*, the abstract word for Russian fatherland or dwelling-place of the Slavic people; and the English word "Russian" may therefore mean a derivative from the word *Rus*, as denominating the race, or it may mean a subject of the Russian Empire. The former is *russky* the latter *rossiisky*, in the Russian and Ruthenian languages, and hence, while the first word is translated either as *Russian* or *Ruthenian*, it carries no special reference to the Russian Empire. These people are also called "Little Russians" (an expression chiefly used for them in the Russian Empire), originally an allusion to their stature as contrasted with the Muscovites. Their language is known as Ruthenian or Little Russian, and is spoken in Northern Hungary, Galicia Bukowina, and in the Provinces of Volhynia, Podolia, Chelm, and Kiev in Russia. It is quite similar to the Russian language of the Russian Empire (sometimes called Great Russian), bearing about the same relation to it as Lowland Scotch does to English, or *Plattdeutsch* to German, and rather closer than Portuguese does to Spanish. The Ruthenians (in Austria) and Little Russians (in Russia) use the Russian alphabet and write their language in almost the same orthography as the Great Russians of St. Petersburg and Moscow, but they pronounce it in many cases very differently, quite as the French and English might pronounce differently a word written the same in each language. This fact has led in late years to a recension of the Russian alphabet in Galicia and Bukowina by the governmental authorities, and by dropping some letters and adding one or two more and then spelling all the words just as they are pronounced, they have produced a new language at least to the eye. This is the "phonetic" alphabet and orthography, and as thus introduced it differentiates the Ruthenian language of these provinces more than ever from the Russian. The phonetic system of orthography is still fiercely opposed at home and in America, and as an Austrian governmental measure it is regarded by many as an effort to detach the Ruthenians from the rest of the Russian race and in a measure to Polonize them. This battle of the reformed phonetic spelling rages as fiercely in the United States as in Austria. Indeed the Greek Catholic bishop here has found it necessary to issue his official documents in both the phonetic and the etymologic spelling (as the older form is called), so as to meet the views of both parties. The phonetic spelling has never been introduced among the Ruthenians in Hungary, and their section of the language is still written in the customary form, there and in the United States. Besides the Ruthenians there are also the Slovaks who live in Northern and North-western Hungary, close neighbours to the Ruthenians, who are Greek Catholics, and who speak a language almost like the Bohemian, yet similar to the Ruthenian. It is written, however, with Roman letters, and the pronunciation follows

the Bohemian more than the Ruthenian. These people seem to have been originally Ruthenian, but became gradually changed and moulded by the Bohemians and their language and for a long time wrote their language in the same manner as the Bohemian. The Bohemians, however, are in the Austrian part of the empire, while the Slovaks are in Hungary. They have emigrated to the United States in large numbers, and are about equally divided between the Greek and Roman Rites. This again necessitates the publication of church matters, prayer books, journals, etc., in the Slovak language. It illustrates the difficulties of the Greek Catholic priests in the United States, since they are likely to have in their parishes Ruthenians (of the old and new orthographies), Slovaks, and even those who speak only Hungarian, having lost their Slavic tongue. It is no uncommon thing to find a Greek Catholic priest capable of speaking five languages: Ruthenian, Slovak, Hungarian, German, and English. It is these people as a whole who are comprehended under the term Ruthenian, although that term applies strictly to those speaking Russian and using the Russian alphabet. After the eleventh century the larger portion of Russians fell away from the unity of the Church in the schism of Constantinople, while a minority continued faithful to the Catholic Church, and later many more returned to unity. The Holy See, therefore, made use of the ancient word *Ruthenian* to designate those Russians who followed the Greek Rite in unity with the Holy See, in order to distinguish them from the Northern Russians who adhered to the schism. Later on, those Russians who joined the union under the Polish kings received the same name, and the word *Ruthenian* is to-day used exclusively to designate the Russians of Austro-Hungary, who are Greek Catholics in contradistinction to the Russians of the Russian Empire, who are of the Greek Orthodox faith.

The language of the Mass and the other liturgical services according to the Byzantine Rite is the ancient Slavonic (*staroslavianski*), and the Greek Liturgy was originally translated by Sts. Cyril and Methodius about the year 868, and it has remained substantially the same ever since. It is curious to notice that the Ruthenian language is much closer, both in spelling and pronunciation, to the church Slavonic than the present Russian language of St. Petersburg and Moscow. The letters in which the church books are printed are the Cyrillic, or *Kirillitsa* said to have been invented or, rather, adapted by St. Cyril from the Greek alphabet, together with some additional letters of his own invention. It consists of forty-three letters of archaic form as used in the church books, but has been altered and reduced in modern Russian and Ruthenian to thirty-five letters. In the year 879 Pope John VIII formally authorized the use of the Slavonic language forever in the Mass and in the whole liturgy and offices of the Church, according to the Greek Rite, and its use has been continued ever since by the Catholic and the Orthodox (schismatic) Greeks of the Slavic races. This is the language used in the *Sluzhebnik* (Missal), *Trebnik* (Ritual), *Chasoslov* (Book of Hours), and other church books of the Ruthenian Greek Catholics in America.

After the schism of Constantinople (1054) most of the Russians became estranged from the unity of the Church. (See under GREEK CHURCH, Vol. VI, pp. 760-62.) In 1595 the Russian bishops of Lithuania and Little Russia determined to return to unity with the Holy See, and held a council at Brest-Litovsk, at which a decree of union was adopted, and where they chose two of their number, Ignatius Potzey and Cyril Terletzki, to go to Rome and take the oath of submission

to the pope. They declared that they desired to return to the full unity of the Church as it existed before the schism of Photius and Cærularius, so as to have in Russia one united Catholic Church again. No change in their rites or their calendar was required by Rome, but the whole of the ancient Greek Liturgy, service, and discipline (excepting a few schismatic saints' days and practices) was to go on as before. In December, 1595, Clement VIII solemnly ratified the union of the two Churches in the Bull "Magnus Dominus". On 6 October, 1596, the union between the Eastern and Western Churches was proclaimed and ratified in the Russian part of the Kingdom of Poland. A large number of the Russian bishops immediately went over to the union. In Chelm the Russian Bishop Zbiruiski led the way with his whole diocese, and his successor, Methodius Terletzki, was a valiant champion of the Uniat Church. This Greek Uniat Church even produced a martyr for the Faith, St. Josaphat, Archbishop of Polotzk, who was slain by the Orthodox partisans in 1633. In Galicia, however, the union was slower. While priests and congregations became Uniat, the Bishops of Peremyśl and Lemberg stood out for nearly a century. But on 23 June, 1691, Innocent Vinnitzki, Bishop of Peremyśl, joined the union, and in 1700 Joseph Shumlanski, Bishop of Lemberg (it was afterwards restored to metropolitan dignity by the pope in 1807), also took the oath of union with the Holy See. From that time till now the Russians on the northern slopes of the Carpathian Mountains and on both sides of the River Dniester have been united with Rome. On the southern side of the Carpathians the Russians also accepted the union. In the year 1636 Vassili Tarasovitch, Bishop of Munkács, acknowledged the pope as the head of the Church and for it he was persecuted, imprisoned and forced to resign his see. But union with the Holy See could not be stayed by such means, and on 24 April, 1646, it was accomplished in the city of Ungvar by Peter Rostoshinski; the then Bishop of Munkács, and George Yakusitch, Bishop of Agri (Erlau). These two bishops in solemn council, with sixty three priests, abjured the schism and confessed themselves Greek clergy holding the Faith of Sts. Cyril and Methodius in communion with Rome. Since that time the Ruthenian people (including the Greek Slovaks) in the Kingdom of Hungary have acknowledged the pope as the visible head of the undivided Catholic Church.

These Ruthenians have continued to practise their ancient Greek-Slavonic rites and usages, and their forms of worship introduced into the United States seem strange to the Catholic accustomed only to the Roman Rite, and have made them objects of distrust and even active dislike, so that a few of the most salient differences may be pointed out, although a full statement will be found in the various articles on the Eastern rites, ceremonies, and vestments. The Mass itself is said in ancient Slavonic, the altar is separated from the body of the church by a high partition called the *iconostasis*, upon which the pictures of Christ and His Mother, as well as various saints, are placed, and the vestments of the Mass are quite different. The stole is a broad band looped around the neck and hanging straight down in front, the chasuble is cut away at the front and closely resembles the Roman cope, and instead of the maniple two broad cuffs are worn, while a broad belt takes the place of the girdle or cincture. Married men may be ordained to the diaconate and priesthood; but bishops must be celibate, nor can a deacon or priest marry after ordination. Priests impart the Sacrament of Confirmation to children immediately after baptism, and Communion is given to the

laity under both forms, the consecrated species being mingled together in the chalice and administered to the communicant with a spoon. Organs are not used in their churches, and their church year follows the Julian Calendar, which is now thirteen days behind the Gregorian calendar in use in the United States and Western Europe. Besides this, the Ruthenians (and the Russian

Orthodox likewise), display the so-called "three-armed" (or Russian)  cross fashioned in this manner upon their churches and use it upon their missals, prayer-books, paintings and banners, as well as other objects. They make the sign of the cross in the reverse direction to the Roman method, and in their religious services the men and women are segregated from each other upon different sides of their churches.

It is from these people, inhabiting Galicia, Bukowina, and Hungary, that the Ruthenian Greek Catholic population has come. Their earliest immigration to the United States began in 1879, from the western portion of Galicia near the Carpathian Mountains, the so-called Lemkovschini, and then spread throughout the Galician and Hungarian sides of the mountains. At first it was hardly noticed, but it grew year by year, the earliest immigrants coming from Grybow, Gorlice, Jaslo, Neu Sandec, Krosno, and Sanok in Galicia, and from Szepes, Saros, Abauj, and Ung in Hungary, until finally the governmental authorities began to notice it. At the post offices in many of the mountain places in the Ruthenian portion of Galicia it was observed that the peasants were receiving large sums of money from their fathers, sons, or brothers in America. The news spread rapidly, the newspapers and officials taking it up, and so emigration was at once stimulated to the highest degree. Every year it has increased, and Ruthenian societies are formed here to assist their newly-arrived brethren to find employment and to give information to those at home about America.. It is impossible to tell exactly how many Ruthenian and Slovak Greek Catholics have come to the United States, because no statistics have been kept by the United States Government in regard to religious faith of immigrants, and not always accurate ones in regard to race or nationality. Still the immigration reports show that immigration from Austria-Hungary from 1861 to 1868 was annually in the hundreds; and from 1869 to 1879 it ranged from 1500 to 8000 annually; and in 1880 it suddenly rose to 17,000. From 1880 to 1908 the total immigration from Austria-Hungary to the United States amounted to 2,780,000, and about twenty percent of these were Ruthenians and Slovaks. Within the last four years (1905-1908) the immigration of the Slovaks and Ruthenians has amounted to 215,972. To this must be added the Croatians and Slavonians (117,695), a large proportion of whom are of the Greek Rite. It is estimated that there are at present in the United States between 350,000 and 400,000 Greek Catholic Ruthenians, including as such the Greek Catholic Slovaks and Croato-Slovenians. The largest number (over one-half) are in Pennsylvania, while New York, New Jersey, and Ohio have each a very large number of them, and the remainder are scattered all through the New England and Western states. From the best information obtainable in advance of the coming census of 1910 their distribution is as follows:--

Pennsylvania	190,000	Indiana	6,000
New York	50,500	Minnesota	3,000
New Jersey	40,000	Colorado, Dakota,	
Ohio	35,500	Nebraska and	8,000
Connecticut	10,000	Montana, about	
Illinois	8,000	West Virginia,	
Massachusetts	7,500	Virginia and the	5,000
Rhode Island	1,500	Southern States,	
Missouri	6,500	about	

After the Ruthenian immigration had begun in considerable numbers, it was but natural that they should desire to establish a Church of their own rite. At Shenandoah, Pennsylvania, the Ruthenian settlement had so increased that towards the end of 1884 they sent a petition to Archbishop (afterwards Cardinal) Sylvester Sembratovitch, Metropolitan of Lemberg praying that a Greek Catholic priest might be sent to them to found a parish of the Greek Rite at that place. The petitioners promised to build a church for him if he were sent. In the following year (1885) Rev. Ivan Volanski, of the Diocese of Lemberg, arrived in the United States, the first Greek Catholic priest to take up work among his people here. On his arrival he presented himself in Philadelphia with his letters but being a married priest, he encountered great difficulty in being recognized as a Catholic priest in good standing. However, he proceeded to Shenandoah, where under great difficulties and discouragements he organized his congregation and for about a year celebrated Mass and other services in a hired hall, for he was unable to obtain the use of the local Latin churches for Greek services. The matter of his regularity and his acceptance as a priest in Pennsylvania for the Ruthenians was finally arranged through Cardinal Sembratovitch. Early in 1886 he completed at Shenandoah a little frame church dedicated to St. Michael the Archangel, the first Greek Catholic church in America. He then organized there the first Greek Catholic Society, that of St. Nicholas, built and organized a small parochial school, and then proceeded to form congregations and to found churches in other places where the Ruthenians were thickly settled. During his stay he organized congregations and started churches at Hazleton (1887), Kingston (1888), and Olyphant (1888) in Pennsylvania, at Jersey City, New Jersey (1889), and at Minneapolis, Minnesota (1889). Finding his Ruthenian people without any reading-matter in their own language, he sent to Galicia for Russian type, and in the latter part of 1886 he obtained a few fonts from the Shevchenko printing office at Lemberg. He then commenced the publication in "phonetic" Ruthenian of a small paper issued every two weeks at Shenandoah under the name of "America". This paper lived until about 1890, but got involved in the labour troubles in the mining districts which destroyed much of its usefulness. In the spring of 1887 the Metropolitan of Lemberg sent him another priest, Rev. Zeno Lakovitch (unmarried), and a lay teacher, Volodimir Semenovitch from the University of Lemberg. Father Lakovitch laboured at Kingston and at Wilkesbarre, where he died a year later. In 1888 Rev. Constantine Andrukovitch was sent from Lemberg, and, in addition to his parochial work, he, with Father Volanski, undertook to establish a series of stores in several towns in Pennsylvania to sell goods to the Ruthenians and thus avoid the enormous prices which the mining companies charged

them. The business venture was unsuccessful, and, with other matters, it caused the recall of Father Volanski to Galicia. He remained there some time, then was sent as a missionary to Brazil, where his wife died, when he returned to Galicia, where he was a parish priest until his death in 1905. This business venture also caused the suspension of Father Andrukovitch, who returned to Galicia in 1892. The next three Greek clergymen were Rev. Theophan Obushkevitch (of Galicia), Rev. Cornelius Laurisin, and Rev. Augustin Laurisin (of Hungary), who took up their missionary work energetically. The first two are still Greek Catholic parish priests in this country. Since their coming there has been a constant accession of Ruthenian Greek priests from Galicia and Hungary, and the building of churches and schools has gone on with increasing success. Even quite costly churches have been built. In Jersey City the old church has given way to a fine stone and brick church, which is an excellent specimen of Russian architecture, while at Homestead and Shamokin, Pennsylvania, there are quite costly churches erected. Many of the Greek churches are purchases from Protestant denominations altered and rearranged for the necessities of their rite, while one or two are churches brought over from the schismatics. The first Greek Catholic Mass in New York City was celebrated in the basement of St. Brigid's church on Avenue A (which was put at the disposal of the Greeks by the late Archbishop Corrigan), on 19 April, 1890, by the Rev. Alexander Dzubay, who is still in active parish work in America. This Greek congregation afterwards bought a church in Brooklyn (St. Elias, 1892), and there was no Ruthenian church in Manhattan until the Greek Catholic church of St. George was opened in 1905. In February, 1909, the Greek Bishop Soter bought a Protestant Episcopal church in Philadelphia, Pennsylvania, refitted it, and consecrated it as the Greek Cathedral of St. Mary of the Immaculate Conception, and in the adjoining parish house and rectory will also open a seminary for the education of American priests of the Greek Rite. Of course many Ruthenian settlements in various localities are too poor to build and maintain a church, nor are there just at present sufficient priests in America to attend to their spiritual needs. Still there are at present (1909) about 140 Ruthenian Greek Catholic churches in the United States, and there are also ten more new ones projected for waiting congregations. Their churches are distributed as follows:--

Pennsylvania New	80	Indiana	3
York	14	Missouri	3
Ohio	12	West Virginia	2
New Jersey	10	Minnesota	2
Connecticut	4	Rhode Island	1
Illinois	4	Virginia	1
Massachusetts	4		

The Ruthenian Greek Catholic clergy in the United States consists (1909), of one bishop and 118 priests, originating from the following dioceses:--

Diocese	Monks	Secular Clergy		
		Celibates	Married	Widowers
Lemberg	4	8	5	5
Premysl		6	12	2

Stanislau		2	2	1
Eperies	2	1	13	10
Munkács		1	30	5
Kreutz		1		
Scranton		1	2	
Philadelphia		4		
Pittsburg		1

Several of these priests are converts from the Orthodox Greek Church in the United States. As has been said, men who are already married are ordained to the diaconate and priesthood in the Greek Church, and so it naturally followed that married priests were sent to America. While a married priesthood seems repugnant to a Catholic of the Latin Rite, yet it is strongly adhered to by the Greek Catholics as vaguely a part of their nationality and Eastern Rite. All American Greek Catholic priests will hereafter be ordained from celibate candidates only, according to the provisions of the Apostolic Letter "Ea semper", which will be referred to later. The growing importance of the Greek Rite in America, the dissensions arising out of old-country political factions among the Ruthenians, which will be mentioned later on, and which occasioned serious interference with the normal growth of the Greek Church, and the increasing intensity of the efforts of the Russian Orthodox to detach the Ruthenians in America from their faith and unity (see GREEK ORTHODOX CHURCH IN AMERICA) caused the Holy Father in 1907 to provide a Greek Catholic bishop for America. Previous to this (1902) the Holy See had sent the Right Rev. Andrew Hodobay, titular abbot and canon of the Greek Diocese of Eperies, as Apostolic visitor to the Ruthenians in America, who examined the conditions of the Catholics of the Greek Rite in all parts of the United States and returned to Europe in 1906 with his report. The choice of a bishop for the Ruthenian Greek Catholics fell upon the Right Rev. Stephen Soter Ortynski, a Basilian monk, hegumenos of the monastery of St. Paul, Michaelovka, Galicia. On 12 May, 1907 he was consecrated titular Bishop of Daulia by the Most Rev. Andrew Roman Ivanovitch Scheptitzky, Greek Metropolitan of Lemberg, and the other Greek bishops of Galicia, and he arrived in America on 27 August, 1907. Shortly after his arrival (September, 1907) the Apostolic Letter "Ea semper", concerning the new bishop for the Ruthenian Greek Catholics in the United States, his powers and duties, and the general constitution of the Greek Rite in America was published. It created considerable dissatisfaction among the Greek clergy and laity inasmuch as it did not provide for any diocesan power or authority for the new bishop, but placed him as an auxiliary to the Latin bishops, and as it modified several of their immemorial privileges in various ways. The Sacrament of Confirmation was thereafter to be withheld from infants at baptism, and was not to be conferred by priests, but was reserved for the bishop only (as in the Latin Rite and among the Greeks in Italy), and married priests were not thereafter to be ordained in America or to be sent thither from abroad, while the regulations as to

the marriage of persons of the two rites were also modified. The Greek Ruthenian laity saw in it an attack upon their Slavic nationality and Eastern Rite, an idea which the Russian Orthodox Church eagerly fostered and magnified. They were told by the Orthodox that the whole letter was a latinization of their Greek Rite in regard to confirmation and Holy orders, and was a nullification in America of the Decrees of the popes that their rite should be kept intact. This resulted in some losses (about 10,000) from the Ruthenians to the Russian Church, but already many of them are coming back. Matters, however, adjusted themselves, and the work of the new bishop is having good results. The whole matter of a Greek bishop in America is so far in an experimental stage, and it rests upon the extent of the current and future immigration, the stability and solidarity of the Ruthenians in their adherence to their faith and rite, as to what powers and authority their bishop shall ultimately have. Where there is an evident and actual need for it the Holy See has always granted the erection of Oriental dioceses, but where a minority of a population seems bound to become assimilated with, and eventually absorbed into, the surrounding population the case may be entirely otherwise. The newly appointed bishop has had success in establishing churches and parochial schools and in inducing his Ruthenian flock to become American citizens and identify themselves with American life while not abandoning their faith and their Eastern Rite. He aims to establish English-Ruthenian schools in each Greek parish and to open a Ruthenian American seminary at Philadelphia for the education of American-born Ruthenians as priests of the Greek Rite. There is already one American-Ruthenian priest, lately ordained. In purely theological matters they will be educated as in Latin seminaries, if not actually sent there for lectures, but in the Oriental church rites, discipline, liturgical language, music, and customs the proposed seminary will fill a place for the Ruthenians which our present diocesan seminaries do not fill. The number of church or parochial schools of the Ruthenians is about fifty, where instruction in English, Ruthenian, church catechism, and the elements of a general education is given. No organized Sunday-school system has as yet been established amongst them, nor are there any nuns or religious engaged in teaching in the United States.

In order to understand somewhat clearly the situation of the Ruthenians in America, account must be taken of their national home politics, which they bring with them and fight out often quite bitterly in this country. As already said, they are from the northern and southern slopes of the Carpathian Mountains. The northern Ruthenians derisively call their southern brethren "Hungarians" (*Madyari*), while the latter return the compliment by calling the former "Poles" (*Poliaki*). The point of this lies in the fact that each of the nationalities named is cordially detested by the Ruthenians on either side. But these are merely surface divisions between the two bodies of the same race. Their actual factional differences are much deeper. There may be said to be, broadly speaking, three Ruthenian parties or factions in the United States: (1) The *Moscophiles*, or *Moskalophiles* (*Moskal* is the Little Russian word for a Great Russian), who aim at an imitation, if not an actual adoption, of all things Russian as found in the present Empire of Russia looking towards Moscow as the seed and kernel of Russian or Slavic development, and who are strong supporters of Pan Slavism; (2) the *Ukraintzi*, or *Ukrainians* (the Ukraine is the adjoining border-land provinces

of Russia and Galicia), who stand for the interests of the Ruthenian people in Austria and of the Little Russians in Russia, as distinct and apart from the Great Russians, and who desire to develop the Ruthenian (Little Russian) language, literature, and race along their own lines, entirely distinct and apart from that of the present-day Russian Empire; and (3) the *Ugro-russki*, or Hungarian Ruthenians, who keep all the old Russian racial traditions, reverencing their Russian language, literature, and ancestry as models to follow in their development, but at the same time refusing to follow the ideas of Moscow and St. Petersburg in such development, either in Hungary or in the United States. The first two parties are Galicians, the last one Slovaks and Hungarian Ruthenians. These parties are sometimes divided into smaller factions, perplexing for an outsider to understand, such as those who desire to introduce the Hungarian language and customs, even using Hungarian in the liturgy of the Church. It is needless to say that none of these larger parties ever agree upon any one subject other than their Slavic nationality and Greek Rite. The Mosco-philes often unite with the Greek Orthodox and Russian societies upon the slightest pretext when Russo-Slavic ideals are to be proclaimed, and are fiercely against everything that does not look Russiaward, for Russia is their big brother. On the other hand the Ukraintzi will have nothing to do with modern Russia; it is behind the age and lags in the march of civilization; and they have besides offended both the other parties by adopting the "phonetic" style of spelling. This offence seems to be intensified because the new Greek bishop is somewhat of their way of thinking. The Ugro-russki are violently opposed to whatever does not accord with the racial views and traditions of the Ruthenian and Slovak people within the borders of Hungary, and do not agree with the views and actions of either of the other two parties. Consequently, the Greek Catholic bishop has to publish his official communications in Ruthenian, both phonetic and old-style, and in Slovak, in order to reach all his people.

Of course these Greek Catholics of such varied views have organized into societies. Each church has its own local religious and singing societies, but there are other and larger bodies known as "brotherhoods" or lodges (*bratstva*), which have been of great assistance in building up the Ruthenian churches. They are usually of the nature of mutual benefit societies, assist in finding work, helping in religious matters and the like, having always the Greek Rite and the Ruthenian race as their main inspiration. Some of them provide that their members must show that they have made their Easter communion or forfeit membership, and provide for the dropping of a member when he ceases to be a Catholic. These brotherhoods or lodges are combined into a general federation or union which takes in the whole United States. It has its annual convention composed of delegates from the various brotherhoods and always has some well-known Greek Catholic priest as its spiritual director. The largest and oldest of these federated societies is the "Soyedineniya Greko-Kaftolicheskikh Russkikh Bratstv" (Russian Greek Catholic Union), which was founded in Pennsylvania in February, 1892. It is almost wholly composed of Slovaks and South-Carpathian Ruthenians. It now (1909) has 542 brotherhoods and 22,490 members, and has besides a junior organization for young people in which there are 163 brotherhoods and 5400 members, and is in a flourishing condition in every way. It also publishes a weekly Greek Catholic newspaper at Homestead, Pennsylvania -- the

"Amerikansky Russky Viestnik (American Russian Messenger), printed both in the Russian and the Slovak languages. In Ruthenian politics it is the representative of the Ugro-russki party. The second of these federations is the "Russky Narodny Soyus" (Russian National Union), which was founded in 1894 and is a Galician offshoot from the preceding society. It is chiefly composed of Galicians who are Ukrainians, and who express themselves strongly against the Russian Empire and the Orthodox Church. It now has 249 brotherhoods and 12,760 members, and it likewise publishes a weekly newspaper, the "Svoboda" (Liberty), which is printed in New York City, in "phonetic" Little Russian. The third of these federations is the "Obshchestvo Russkikh Bratstv" (Society of Russian Brotherhoods), which was founded 1 July, 1900. It is composed almost wholly of Galicians of the Moscovite party, and a small minority of its membership is also made up of Galicians who are either Greek Orthodox or of Orthodox proclivities, for it is quite pro-Russian and opposed to the Ukrainians. It has now 120 brotherhoods and 6530 members, and publishes its weekly newspaper, Pravda (Truth) at Olyphant, Pennsylvania, in the Ruthenian old-style spelling. There is also the "Rimsko a Greko Katolicka Jednota" (Roman and Greek Catholic Union) of Pennsylvania, a Slavic organization which has some 175 brotherhoods and about 9000 members, and it is estimated that about one-third of these are Greek Catholic. This federation also publishes a weekly paper, "Bratstvo" (Brotherhood) in the Slovenian language. Besides these publications there is also the "Dushpastyr" (The Pastor), published in New York which is exclusively a religious periodical and devoted solely to the affairs of the Greek Catholic Church in America. In it the official utterances of the Greek bishop are usually published. There are also many other American Ruthenian papers and periodicals which have nothing whatever to do with church matters, but are devoted to labour questions, national issues, and to Socialism. Unfortunately, many of these publications, even the Catholic ones, exhibit too much of a tendency to attack their opponents in strong language and to belittle the efforts of those not of their party, and their usefulness for good is thereby lessened. From time to time various religious works and a number of booklets on church and national topics have been published in Slovak and Ruthenian, and every year there are issued a number of year-books or calendars containing a variety of information and illustrations concerning the Ruthenian Greek Catholics in America and abroad.

The immigration of the Ruthenian Greek Catholics into the United States and the organization of their churches and rite has been too recent to properly speak by name of any distinguished representatives of their clergy or laity. Nearly everyone who took a prominent part in their settlement and development is still alive and engaged in active work, while a vigorous younger generation born on American soil is now growing up. Among the Greek priests here in America are several who are authors of learned works upon the church language and ritual, others who have filled posts of considerable distinction in the dioceses in Hungary and Galicia whence they came, and many who have constantly employed their tongue and pen in the education and improvement of their fellow-countrymen in this country. There is, however, no religious order of women of the Greek Rite, nor an association whatever of women devoted to church service in the United States, nor has

any attempt been made so far, either on the part of the clergy or laity, to establish here anything of the kind.

In addition to the Ruthenian Greek Catholics in the United States, there are a large number of them in Canada. They are principally settled in the provinces of Manitoba, Alberta, and Saskatchewan, where they have devoted themselves to agricultural pursuits. It is said that a Ruthenian often works hard in the United States, saves up his money, and emigrates to Canada, where he can obtain cheap land under the homestead acts. There is besides a considerable direct immigration from Galicia and Hungary, but the majority of the Canadian Ruthenians are Galicians. Their first church (St. Nicholas) in Canada was built about 1900 at Winnipeg by the Basilian monks who are in charge of the Greek missions of the northwest. The Very Rev. Platonides Filas, O.S.B.M., who is now (1909) the superior of the order in Galicia, was the first missionary sent there. Afterwards, in 1905, another church (St. Josaphat) was built at Edmonton. Later on a monastery was established in Winnipeg, with a branch at Monaster, Alberta. From these central points, there are now (1909) over sixty missionary stations established with small Greek chapels at Oaknook, Swan River, Barrows, Ethelbert, Garland, Grand View, Minatonas, Yorkton, Beaverdale, Rabbit Hill, Star, Lamont, Nundare, and Skaro. In this section the Ruthenians have to contend with the Russian Orthodox missions, which are well provided for, and with certain schismatics from the Russian Orthodox known as the "Seraphimites", or independent Græco-Russian Church. There are three missionary communities of the Basilian monks: at Winnipeg, Edmonton, and Monaster. The Greek clergy in Canada consist of eight monks and four secular priests. The number of Ruthenian Greek Catholics is between 45,000 and 50,000, widely scattered through these northwest territories. In Canada there is a religious order of women of the Greek Rite, the Servants of Mary (14 in number), whose mother-house is in Lemberg, Galicia. They have schools at Winnipeg, Edmonton, Monaster, and in some outlying districts. The Canadian Ruthenians publish a small paper (Canadian Farmer) and have several societies on the pattern of those in the United States.

II. RUMANIAN GREEK CATHOLICS

These people come from the eastern provinces of Hungary known as Transylvania. They are of a nationality which claims to come down from the Roman colonists who were settled there by the Emperor Trajan, and hence they still call themselves *Romani*. These Transylvanians are really of an older political order and settlement than the independent country known as Rumania, which bounds Transylvania on the east. The inhabitants of both lands are of the same stock, but those in Hungary were organized and in possession of a fair amount of education and political rights under Hungarian rule whilst the present Kingdom of Rumania was still oppressed under Turkish rule. The latter only obtained its independence after the Russo-Turkish war of 1878, and in turn began the education and enlightenment of its people. The Rumanian language is a Latin tongue, some-what similar to Italian, but with a considerable mixture of Slavic, Greek, and Turkish words in it. It is also the language of the Mass and liturgical offices according to the Greek Rite among the Rumanians, and is an instance where the Church has made a modern tongue the liturgical language.

Owing to Slavonic influences, the Rumanian language was formerly written in Slavonic or Russian characters, and this continued until about 1825, when the Roman alphabet was adopted, first by the Catholic Rumanians and then by the Orthodox, and it has been used for the Rumanian language ever since. Even for church books the Slavonic letters (the Cyrillic alphabet) had to give way to the Latin letters, just as the Slavonic Liturgy in the church services had given away to the Rumanian, and now both the Catholic and the Orthodox Mass-books and Office-books are printed beautifully in Latin letters and modern Rumanian, whether for use in the churches of Transylvania or Rumania. The Rumanian Church, although Greek in rite, was originally under the jurisdiction of Rome up to the ninth century, when Constantinople assumed jurisdiction over it, and later on, when Constantinople fell into schism, the Rumanian Church went with it. Frequently, however, during the centuries that followed, partially successful attempts were made towards reunion. At the time of the so-called Reformation in Western Europe the Calvinists endeavoured to persuade a portion of the Rumanian clergy and their flocks to embrace the new doctrines. This naturally led to an examination of matters wherein the Roman Church differed from the Calvinists, and also to the points wherein it was in harmony with the Greek Church, and later to a desire for union with it. The union of the Rumanian Greek Church in Hungary (for the other Rumanians were subjects of Turkey) with the Holy See dates from 1700. The preliminaries for union had been in progress for several years before, and once or twice had been on the eve of success. In the year just mentioned the Metropolitan Athanasius held a general synod of the clergy of Transylvania at Alba Julia (Gyulyafehervar), which declared, on 5 September, 1700, that "freely and spontaneously moved thereto by the impulse of Divine Grace, we have entered upon a union with the Roman Catholic church". This decree was signed by the metropolitan, 54 arch-priests, and 1563 priests. The act of union was confirmed at Rome in the following year, and the Greek Catholic hierarchy was for a long time the only Greek hierarchy in Transylvania. Towards the middle of the last century the Greek Orthodox Rumanian hierarchy was also established. The Rumanian Greek Catholics are very proud of their union with Rome, and church documents are often dated not only by the year of our Lord (*pre anul Domnului*), but also by the year of the union (*pre anul de la santa unire*).

The Rumanian immigrant does not seem to have begun to come to the United States until about the beginning of the present century. In the year 1900 Rumanian immigration from Transylvania and Northern Hungary began to flow towards the United States, and lately has been followed by immigration from Rumania itself. It has steadily increased until now (1909) there are between 60,000 and 70,000 Rumanians in the United States. Nearly all these have come from Hungary; only a small minority are from the Kingdom of Rumania. Those from Hungary are from the southern and western counties of Transylvania, chiefly the counties of Szatmar, Szilagy, Fogaras, Bihar, and Temes. The Greek Catholics among them number about 45,000, and they are scattered through the United States from the Atlantic to the Pacific. The chief places where the Rumanian Greek Catholics are settled are Cleveland, Youngstown, Columbus, Newark, and Cincinnati, Ohio; Sharon, Erie, Pittsburg, Windber, and Scalp Level, Pennsylvania; Aurora, Indianapolis, Indiana Harbor, and Terre Haute, Indiana; Trenton, New Jersey; St. Louis, Missouri; and New York City. They are all

quite poor and are generally found, like all recent immigrants, in the humblest and poorest walks of life. They lack sufficient missionary priests of their own rite, and at present many additional priests would be welcome. The Rev. Dr. Epaminondas Lucaciu was the first Greek Catholic Rumanian priest to come to this country. He was sent here in 1904 by the Greek Catholic Bishop of Lugos, at the request of the late Bishop Horstmann of Cleveland, who was asked for a priest of their own rite by the Rumanians settled in Cleveland. When he came, he set about forming a congregation and building a church for his people of the Greek Rite. His energy and ability among his countrymen led to the erection and dedication, on 21 October, 1906, of the church of St. Helena in Cleveland -- the first Rumanian Greek Catholic church in America. His zeal also led to the formation of congregations in other localities which he visited regularly. In 1908 the second Rumanian church was built and dedicated at Scalp Level, Pennsylvania, which serves as the central point for missionary work among the Rumanians of Pennsylvania. In 1909 the third Rumanian church was completed and dedicated at Aurora, Illinois, and it serves in its turn as the centre of Greek Catholic work among the Rumanians of the Western States. A fourth has just been constructed at Youngstown, Ohio. There are now (1909) four Rumanian Greek Catholic priests in the United States, and more are shortly expected to arrive. Greek Catholic congregations have been formed in many localities, and they are regularly visited by the Greek Catholic priests who are here, and regular parishes will be formed and churches erected as soon as possible. A Rumanian Greek chapel is now in course of formation in New York City and awaits a priest from Transylvania. While they have a small Catholic church paper "Catholic American", they also publish a fine eight-page weekly, "Romanul", at Cleveland and New York, which gives a great deal of church news, and they also publish a little monthly magazine and an illustrated year-book in which many details of their churches, societies, and progress are given. The weekly paper was originally founded by Father Lucaciu to provide reading-matter and general news for his people, but it has since passed into other hands. Their societies are not strictly speaking church organizations, but are rather mutual benefit societies for Rumanians, and some even have a limited membership of the Orthodox, for the Rumanians of Hungary, whether Greek Catholic or Greek Orthodox, are very closely united upon racial and national feelings, and do not exhibit the hostility sometimes shown between the two Churches elsewhere. The principal societies are "Dacia Romana", "Ardealana", "Unirea Romana", and "Societatea Traian", numbering altogether about 3000 members, and generally identified with the church congregations.

III. SYRIAN (MELCHITE) GREEK CATHOLICS

About 1886 the first immigration from the Mediterranean coasts of Asia began to reach the shores of the United States, when the Armenians, Greeks, and Syrians began to swell the numbers of our immigrants. Among them came the Syrian Greeks, or those Syrians who were of the Byzantine Rite, whether Catholic or Orthodox. The name *Melchite* (see under GREEK CHURCH, Vol. VI, p. 755), is occasionally used to designate a Syrian of the Greek Orthodox Faith, but now it rarely has that meaning, since the schismatics prefer to be known as Syro-Arabians, at least in the United

States, where they are largely under Russian influence, for it is nearly always applied to the Catholics. After the Council of Chalcedon the Melchites followed the fortunes of the Greek Church of Constantinople. When it separated from Rome they also gradually became separated, merely through inertia. Occasionally a bishop became Catholic and there were sporadic attempts to reunite them with the Holy See. Cyril V, who was elected Patriarch of Antioch about the year 1700, decided to come back to unity and made his submission and profession of the Catholic Faith to Pope Clement XI, and his example was followed by the Archbishop of Tyre and Sidon, the Bishop of Beirut, and other prelates. From that time on the Syrian Greek Catholics have had a restored Catholic line of Patriarchs of Antioch. Strangely enough, the word *Melchite*, which had been used to designate those who adhered to the doctrines of the Church of Constantinople when it was Catholic and in unity, and who even followed it when it left the unity of the Church, came eventually to mean, after the union of Cyril V and his fellow-bishops, almost exclusively those Syrians of the Greek Rite who were Catholics and united with the Holy See. Their rite, of course, is the same as that of the other Greek Catholics, but the language used in the Mass and the administration of the sacraments and in the church offices is the Arabic, with the exception of certain prayer-endings and versicles of the Mass, which are still intoned in the original Greek. Still a Melchite priest may celebrate entirely in Greek if he so desires, and the Catholic Missal is printed in parallel columns in each language as to the parts which are to be intoned or said aloud.

At first these Syrians were in small numbers and were not distinguishable from the Arabic-speaking Maronites or from the Syro-Arabian Orthodox Greeks, all of whom began to come to this country about the same date. This Syrian immigration, as compared with that from other lands, has never been very large. The Greek Catholics came at first from the same localities as the Maronites -- Beirut and Mount Lebanon; but now they come from Damascus and other parts of Syria as well. In 1891 Rev. Abraham Bechewate, a Basilian monk of the Congregation of the Holy Saviour, from Saida in the Diocese of Zahleh and Farzul, Mount Lebanon, was sent to this country by the Patriarch of Antioch to take up missionary work among his countrymen. So far he has been instrumental in establishing missions and congregations in various cities and in having other priests sent to assist him. His first efforts were confined to New York City, and at present the Melchites in New York City use the basement of St. Peter's church on Barclay Street, but they have bought ground in Brooklyn with a view to erecting a Syrian Greek Catholic church there. After Father Bechewate other priests were sent to take up the work at various places throughout the United States. At the present time (1909) there are altogether fourteen Melchite churches or congregations in the United States and just across the border in Canada. Besides these there are many mission stations which the Melchite Greek priests visit periodically. These churches are situated at the following places: New York City; Boston and Lawrence, Massachusetts; Omaha, Nebraska; Cleveland, Ohio; Dubois and Scranton, Pennsylvania; Chicago and Joliet, Illinois; Rockley, South Dakota; La Crosse, Wisconsin; Pawtucket, Rhode Island; and Montreal and Toronto, Canada. So far they have erected four fair-sized churches in Lawrence, Cleveland, Dubois, and La Crosse. The cost of land in the large cities has prevented them from building, so that their congregations in the

other places are assembled either in the Latin churches or in rented premises. The number of the Syrian Greek Catholics in the United States (1909) is between 8000 and 10,000, and they are to be found chiefly in the New England States, Pennsylvania, Ohio, and Illinois. For their spiritual needs there are thirteen Syrian Greek Catholic priests, seven of them Basilian monks of the Congregation of the Holy Saviour from the Diocese of Zahleh and Farzul, four of them Basilian monks of the Congregation of St. John (Soarite) from the Dioceses of Aleppo and Zahleh, and two secular priests from the Diocese of Beirut. Owing to the poverty of most Syrian congregations, they have not maintained any schools and have no Sunday-school instruction, and the majority of the Syrian children attend the nearest Latin parochial school, if there be one. They have a small Arabic paper "Al-Kown" (The Universe), published in New York City, and have the church society of St. George.

IV. ITALIAN GREEK CATHOLICS

In the extreme southern part of Italy and in the Island of Sicily the Greek Rite has always flourished, even from Apostolic times. Three of the popes (5th. Eusebius, Agatho, and Zacharias) were Greeks from that region. Many of the Greek saints venerated by the Church were Southern Italians or Sicilians, and the great Greek monastery of Grottaferrata near Rome was founded by St. Nilus, a native of Rossano in Calabria. The Greek Rite in Southern Italy never fell into schism or separated from unity with Rome at the time of the great Schism of Constantinople. Although they held to their faith and rite, yet the fact that they were not thereafter closely allied with their fellow-Greeks of Constantinople caused the followers of their rite to diminish. After the schism an idea grew up among the Italians of the Roman Rite that the Greek language and ritual were in some indefinable way identified with the schism. This was intensified upon the failure of the Greeks after the Council of Florence (1428) to adhere to the union. Therefore, as the Greek language died out among the southern Italians, they gradually gave up their Greek Rite and adopted the Roman Rite instead. While the Greek Rite thus became gradually confined to monasteries, religious houses, and country towns, and would perhaps never have died out on Italian soil, yet it was reinforced in a singular manner by immigration from the Balkan peninsula in the period between 1450 and 1500. The Albanians, who were converted to Christianity and followed the Greek Rite, using the Greek language in their liturgy, were persecuted by the Turks, and, by reason of the many Turkish victories over the Albanians under their chieftain, George Castriota, also known by his Turkish name of Scanderbeg (Alexander Bey), were forced to leave their native land in large numbers. Scanderbeg applied to Pope Eugene IV for permission for his people to settle in Italy, so as to escape the Moslem persecutions. From time to time they settled in Calabria and Sicily, and received among other privileges that of retaining their Greek Rite wherever their colonies were established. Since that time they, like the Greek inhabitants of Southern Italy, have become entirely Italianized, but, together with them, have retained their Greek Rite quite distinct from their Latin neighbours down to the present day. All the Italians who follow the Greek Rite in Southern Italy are known as Albanese (Albanians), although only the elder generations of that race retain their knowledge of the Albanian tongue. The Mass and all the offices of the Church are of course said in Greek according

to the Rite of Constantinople, although a few Latinizing practices have crept in. The smaller churches do not have the *iconostasis*, priests do not confer confirmation, but it is given by the bishop, and they follow the Gregorian calendar instead of the Julian calendar followed by all the other Greeks.

When the immigration to America from the south of Italy and from Sicily began in large proportions, the Italo-Greeks came also. They are from Calabria, Apulia, and Basilicata in Italy, and from the Dioceses of Palermo, Monreale, and Messina in Sicily. They are settled in the United States chiefly in New York, Philadelphia, and Chicago, and throughout the States of Pennsylvania and Illinois. It is claimed that the Greek Catholic population of Italy has sent a third of its number to America, and some well-informed Albanese have even declared that there are perhaps more. They estimate that there are 20,000 of them in the United States, the greater part of whom are in the vicinity of New York and Philadelphia. As a rule they have not shown themselves in any wise as devoted church-attendants, but that may be because they have been in a measure neglected -- for everyone assumes that an Italian must be of the Roman Rite and ought to go to a Latin church. They have neither the means to construct churches of their own rite nor do they care to frequent churches of the Latin Rite, although their societies usually attend the Italian Catholic churches and celebrate their festivals according to the Latin Rite. In many places they attend the churches of the Ruthenian Greek Catholics, and in some few instances some have gone to the Hellenic churches of the Greek Orthodox, where the language of the ritual is Greek. During the year 1904 the first (and so far the only) Italian Greek Catholic priest, *Papas* (Rev.) *Ciro Pinnola*, was sent from Sicily by Cardinal Celesia of Palermo to the United States, to look after the scattered flock of Greek Catholics here and he is now a priest of the Archdiocese of New York. He found that these Italians, being accustomed to the language and rites of the Greek Church, as well as infected by the inertia of so many of the newcomers to these shores, had not attended the Latin Catholic churches, and that they had become the prey of all sorts of missionary experiments to draw them away from their allegiance to the Faith. Besides, they were among the poorest of the Italian immigrants and had been unable to establish or maintain a chapel or church of their rite. He took energetic steps to look after them and on Easter Day, 1906, had the pleasure of opening the first Italian Greek Catholic chapel on Broome Street in the City of New York. This has progressed so far that he has now a larger missionary chapel (Our Lady of Grace) on Stanton Street, with a congregation of about 400, where the Greek Rite in the Greek language is celebrated. He has also various missionary stations in Brooklyn and on Long Island, which he visits at regular intervals, but he has been unable to do anything for the Italian Greek Catholics in Pennsylvania and elsewhere. Other priests of their rite are needed. There is a small school attached to the Greek Catholic chapel in New York where the Church Catechism and Greek singing is taught, as well as several Italian and English branches, and children are instructed in their church duties. There is quite a large society of men, the "Fratellanza del Santissimo Crocefisso", a society for mutual benefit, religious instruction, and the building of an Italian Greek church. There are some ten or twelve Italo-Albanese societies, having branches in various parts of the United States, but devoted mostly to secular objects. There is also a small

weekly Italian paper, "L'Operaio", for the Italo-Albanese and their Greek Rite, but it is also devoted to Socialism and the wildest labour theories, so that its usefulness is doubtful.

Nothing, except a few newspaper and magazine articles, has been written in English or the Western European languages about the Greek Catholics in America; their own publications must be consulted.

Amerikansky Russky Kalendar (New York and Pittsburg, 1896-1909); *Russko-Amerkansky Kalenda Sojusa* (Scranton, 1897-1902); MATROSOFF, *Zaokeanskaya Rus* in the *Istorichesky Vestnik*, LXVII (St. Petersburg, 1897); *Kalendar dlia Amerikanskikh Rusiniv* (New York, 1907-1909); *Messiatoslov* (Ungvar, 1890-1909); *Charities*, XVI (May, New York, 1906); *Calendarul Ziarului Romanul* (Cleveland, 1909); *Annual Reports of Commissioner of Immigration* (Washington, 1890-1908); *The Messenger*, XLII (Sept.-Dec., 1904); XLV (Feb., 1906, New York); and the files of *Viestnik*, *Pravda*, and *Svoboda*.

Greek Church

Greek Church

This subject will be treated under the following heads:

- I. Explanation of Terms;
- II. The Greek Orthodox Church and Its Divisions;
- III. Greek Uniat Churches;
- IV. Greek-Church History, subdivided into:
 - (1) The First Five Centuries;
 - (2) Decay of the Greek Churches of the East and Rise of the Byzantine Hegemony (451-847);
 - (a) Internal Organization of the Byzantine Churches;
 - (b) The Emperor; Relations between East and West; Liturgy.
 - (3) The Greek Schism; Conversion of the Slavs (ninth to eleventh century);
 - (4) Efforts towards Reunion; the Crusades (eleventh to fifteenth century);
 - (a) Internal Organization;
 - (b) Hesychasm.
 - (5) From 1453 to the Present Time -- Relations with the Catholic Church, the Protestants, etc.

I. EXPLANATION OF TERMS

In the East, when a Church is spoken of, four things must be kept distinct: the race to which the adherents of the Church belong; the speech used in their everyday life, and in their public devotions; the ecclesiastical rite used in their liturgy, and their actual belief, Catholic or non-Catholic. It is because these distinctions have not been, and are not, even now, always observed that a great confusion has arisen in the terminology of those who write or speak of the Eastern (Oriental) Churches and of the Greek Church. As a matter of fact, the usual signification attached to the words *Eastern Churches* extends to all those Churches with a liturgical rite differing from the Latin Rite. Let them reject the authority of the pope or accept it, they are none the less Eastern Churches. Thus

the Russian Church, separated from Rome, is an Eastern Church; in the same way the Greek Catholics who live in Italy, and are known as Italo-Greeks, make up an Eastern Church also. The expression *Eastern Churches* is therefore the most comprehensive in use; it includes all believers who follow any of the six Eastern rites now in use: the Byzantine, Armenian, Syrian, Chaldean, Maronite, and Coptic.

What, then, do we mean when we speak of the Greek Church? -- Ordinarily we take it to mean all those Churches that use the Byzantine Rite, whether they are separated from Rome or in communion with the pope, whether they are by race and speech Greek or Slavs, Rumanians, Georgians, etc. The term *Greek Church* is, therefore, peculiarly inappropriate, though most commonly employed. For instance, if we mean to designate the rite, the term Greek Church is inaccurate, since there is really no Greek Rite properly so called, but only the Byzantine Rite. If, on the other hand, we wish to designate the nationality of the believers in the Churches following the Byzantine Rite, we find that out of fifteen or twenty Churches which use that rite, only three have any claim to be known as *The Greek Church*, viz., the Church of the Hellenic Kingdom, the Church of Constantinople, the Church of Cyprus. Again, it must be borne in mind that in the Church of Constantinople there are included a number of Slavs, Rumanians, and Albanians who rightly refuse to be known as Greeks.

The term *Orthodox Greek Church*, or even simply the *Orthodox Church*, designates, without distinction of speech, or race, or nationality, all the existing Churches of the Byzantine Rite, separated from Rome. They claim to be a unit and to have the same body of doctrine, which they say was that of the primitive Church. As a matter of fact, the orthodoxy of these Churches is what we call heterodoxy, since it rejects the Papal Infallibility, and the Papal Supremacy, the dogma of the Immaculate Conception, that of Purgatory, etc. However, by a polite fiction, educated Catholics give them the name of *Orthodox* which they have usurped. The term Schismatic Greek Church is synonymous with the above; nearly everybody uses it, but it is at times inexpedient to do so, if one would avoid wounding the feelings of those whose conversion is aimed at.

The term *United Greek Church* is generally used to designate all the Churches of the Byzantine Rite in communion with the See of Rome. Thus the Ruthenian Church of Galicia, the Rumanian Church of Austria-Hungary, the Bulgarian Church of Turkish Bulgaria, the Melchite Church of Syria, the Georgian Church, the Italo-Greek Church, and the Church of the Greeks in Turkey or in the Hellenic Kingdom -- all of them Catholic -- are often called the United Greek Churches. Again, the term is inappropriate, and belongs of right only to the last two Churches. As a matter of fact the Ruthenians and Bulgarians are Slavs who follow the Byzantine Rite, but use a Slavonic translation; whereas the Rumanians are Latins who follow the Byzantine Rite, but in a Rumanian translation, etc.

Instead of *United Greek Church*, the term *Uniat* (or *Uniate*) *Church* is often used; and in like manner the word *Uniats* is used instead of *United Greeks*. These words are by no means synonymous. *Uniat Church*, or *Uniats*, has a much wider signification than *United Greek Church* or *United Greeks*, and embraces all the Eastern Churches in communion with Rome, but following another

than the Latin rite, whether it be Byzantine, Armenian, Syrian, Chaldean, Maronite, or Coptic. The *Uniat Church* is therefore really synonymous with *Eastern Churches united to Rome*, and *Uniat* is synonymous with *Eastern Christians united with Rome*.

II. THE GREEK ORTHODOX CHURCH AND ITS DIVISIONS

The Greek Orthodox Churches are Churches separated from Rome and following the Byzantine Rite, i. e. the rite developed at Constantinople between the fourth and tenth centuries. In the beginning, the only language of this rite was Greek. Later, however (the exact date is uncertain), it was introduced among the Georgians, or Iberians, of the Caucasus and was translated into the Georgian vernacular of the country. In the ninth century, through the efforts of Sts. Cyril and Methodius and their disciples, the Moravians and the Bulgarians were converted to Christianity, and as the missionaries were Byzantines they introduced their own rite, but translated the Liturgy into Slav, the mother tongue of those nations. From Bulgaria this Byzantine-Slav Rite spread among the Servians and the Russians. In recent times the Byzantine Rite has been translated into Rumanian for use by the faithful of that nationality. Lastly, the Orthodox Syrians of Syria, Palestine, and Egypt have adopted a hybrid Byzantine Rite in which, according to the whim of the celebrant, either Greek or Arabic is used. Hence we have five divisions of the Byzantine Rite, and consequently five divisions of Orthodox Greek Churches: --

- (1) *The Greek-Byzantine Rite*, which includes the pure Greeks subject
 - (a) to the Patriarchate of Constantinople,
 - (b) to the Holy Synod of Athens, and
 - (c) to the Archbishopric of Cyprus.
- (2) *The Arabic-Byzantine Rite*, which includes the Christians under the Patriarchates of
 - (a) Antioch,
 - (b) Jerusalem,
 - (c) Alexandria, and
 - (d) the Archbishopric of Sinai.
- (3) *The Georgian-Byzantine Rite*, which, up to the beginning of the nineteenth century, included the Churches of the Caucasus Range now absorbed by the Russian Church and obliged to use the Slavonic Liturgy instead of their own native Georgian.
- (4) *The Slavonic-Byzantine Rite*, comprising
 - (a) the Russian,
 - (b) the Servian, and
 - (c) the Bulgarian Churches.
- (5) *The Rumanian-Byzantine Rite*, used by the Rumanian Churches.

(1) *Pure Greeks*

(a) **Patriarchate of Constantinople**

This Church is governed by a patriarch, a Holy Synod consisting of twelve metropolitans, and a mixed council of four metropolitans and eight laymen. It numbers in all 101 dioceses, of which 86 have metropolitan rank, and 15 are suffragan sees. Such were the official figures and were accurate until the month of October, 1908. As we write, however, this is no longer so. Since the

proclamation of Bulgarian independence the five Greek metropolitans in their country have been suppressed by the Bulgarians. Bosnia-Herzegovina had four metropolitans depending more or less on Constantinople, but since Austria-Hungary has annexed that country they will no longer be dependent. Lastly, the Island of Crete is now almost independent of Turkey, and in consequence its metropolitan and his seven suffragan bishops have gone over to the Holy Synod of Athens. From the 101 dioceses, therefore, we may deduct 17, viz., 10 metropolitan sees and 7 suffragan sees, which leaves a total of 84 dioceses, 76 being metropolitan and 8 suffragan. Of these 84 dioceses, not including Constantinople, 22 are in Asia Minor, 12 in the Archipelago, and 50 on European soil. For want of reliable statistics, it is difficult to form an estimate of their population. The Greeks in the Ottoman Empire claim to number 6,000,000, but this figure is exaggerated. We shall be nearer the truth in computing 1,000,000 Greeks in Asia Minor, 400,000 in the Archipelago, 1,500,000 in Turkey in Europe, including the Albanians and Bulgarians. There are, moreover, 600,000 Slavs, either Bulgarians or Servians, who belong to the œcumenical patriarchate. All this gives a grand total of 3,500,000 souls. In consequence of the independence of Bulgaria, of the annexation of Bosnia by Austria-Hungary, and the secession of Crete to Greece, the œcumenical patriarchate has recently lost nearly a million subjects -- namely, 700,000 in Bosnia, 200,000 in Crete, and from 70,000 to 80,000 in Bulgaria.

(b) The Church of Greece

This Church dates back to 1833, when 36 bishops proclaimed their independence of Constantinople and established a Holy Synod; its authority was not recognized until 11 July, 1850, by the œcumenical patriarch. At the present time this Church is controlled by a Holy Synod of five members: the Metropolitan of Athens as president and four bishops chosen in regular succession. The Hellenic Kingdom contains 32 dioceses, of which one -- that of Athens -- is a metropolitan see; it is not, however, rare to find one-third of the sees vacant for economic reasons. The Church of Greece numbers 2,500,000 members in Greece and many thousands of believers in other countries, especially in the United States. By an arrangement arrived at between Athens and Constantinople in 1908, all the Greek Churches of the dispersion, save that of Venice, must, look to Athens as their head.

(c) The Church of Cyprus

Ever since the Council of Ephesus, in 431, recognized its autonomy, which was confirmed in 488 by the Emperor Zeno, the Church of Cyprus has remained independent. The hierarchy consists of the Archbishop of Constantia and his three suffragans, the Bishops of Paphos, Cytion, and Cyrenia. Nearly ten years ago the archbishop died, and so far his successor has not been agreed on. The Church has about 200,000 adherents.

(2) Arabic Byzantines

(a) Patriarchate of Antioch

The Orthodox population of this patriarchate is hardly Greek any longer. They are a Syrian race whose speech is Arabic, and as a rule the liturgical offices are celebrated in Arabic. Since 1899 the Greek element, which had up to then monopolized the superior clerical positions, has been

definitively driven out of Syria. The patriarch lives at Damascus and governs with the aid of a Holy Synod and a mixed council. At the present time this Church has 13 dioceses, all of metropolitan rank, and numbers 250,000 souls.

(b) Patriarchate of Jerusalem

This patriarchate was cut off from that of Antioch in 451. If it were not for the sanctuaries of the Holy Places, which draw so many pilgrims and such considerable alms, its importance would be nil. All the superior clergy are Greek, and, in accordance with a rule made in the early part of the eighteenth century, the clergy of Syrian birth and Arabic speech are eligible for the lower clerical positions only, although the whole membership of this Church is Syrian. There has been a revolt recently against this slavery, and it is not unlikely that before long the Greeks will be expelled from Jerusalem as they have been already driven from Antioch. The only extant dioceses are Jerusalem, Nazareth, and St. Jean d'Acre, but a number of titular metropolitans and archbishops aid the patriarch in the administration of his Church. The liturgical languages in use are Greek and Arabic; the number of subjects of this patriarchate cannot exceed 50,000 souls.

(c) Patriarchate of Alexandria

This patriarchate is made up of only one diocese under the personal care of the patriarch. According to decisions arrived at in 1867 he ought to be assisted by a Holy Synod composed of four members who were to be honorary Metropolitans of Pelusium, the Thebaid, Pentapolis, and Lybia. This synod is being formed. Church-membership numbers about 80,000 persons, made up mostly of strangers from Syria and Greece, among whom far from harmonious relations prevail. The liturgy is celebrated in either Greek or Arabic, but for the most part in Greek.

(d) Archbishopric of Sinai

The titular of this see has jurisdiction over the convent of St. Catherine and about fifty Bedouins. Its autonomy was proclaimed in 1575 and confirmed in 1782. At the present time the tendency is to consider it rather as a diocese in the Patriarchate of Jerusalem.

(3) Orthodox Georgians

The various national Churches of Iberia, Mingrelia, and Imerethia no longer exist since Russia has extended her dominion over the Caucasus provinces. In the Liturgy the Georgian tongue has been replaced by the Slavonic. The number of dioceses was formerly twenty, but is now only four, all in the hands of the Russians. It has a metropolitan, with the title of Exarch of Georgia and three suffragan bishops. The number of the Orthodox in Georgia, including the Russian colonists, is reckoned at about 1,600,000.

(4) Orthodox Slavs

(a) The Synodal Church of St. Petersburg

This is but a continuation since 1721 of the Patriarchate of Moscow, which had been established in 1589 by the Greek Patriarch of Constantinople, Jeremias II, who up to that time had ruled the Russian Orthodox Church. The Holy Synod instituted by Peter the Great and composed of seven members, is the head of this Church. The Russian Church counts 63 dioceses, ruled by 3 metropolitans, 13 archbishops, and 47 bishops. In many of the dioceses, where the distances are

enormous, it is customary for the bishop to take one or more auxiliary bishops, known as episcopal vicars, for the governing of parts of the diocese. At the present time there are 44 of these episcopal vicars. The number of members of this Church must be about 70,000,000, or half the population of the Empire. There are at least 25,000,000 more believers who separated from the official church in the seventeenth century and make up the great Raskol sect (see RUSSIA). The remainder of the population of Russia is made up of about 12,000,000 Catholics, together with Protestants, Armenians, Jews, Mussulmans, Buddhists, and even pagans.

(b) The Servian Church of Servia

It was not till November, 1879, that this Church secured its independence of the Œcumenical Patriarchate of Constantinople. Since then it has been governed by a Holy Synod comprising the Metropolitan of Belgrade and the four suffragan Bishops of Nich, Uchitzé, Timok and Chabatz. Its members number about 2,500,000 souls, and its liturgical language is the Slavonic. -- The Servian Church of Montenegro. -- It is ruled by the Metropolitan of Cettinjé, who goes to Russia for consecration. Until 1852 the bishop, or *Vladika*, was temporal as well as spiritual head of the principality. Since then the authority has been divided. The membership is about 250,000. -- The Servian Patriarchate of Carlovitz in Hungary. -- This Church was founded in 1691 by Servian emigrants from Turkey. It became a patriarchate in 1848. Besides the patriarchal diocese, there are six others: Bracs, Buda, Carlstadt, Pakray, Temescz, and Versecz. Its membership numbers about 1,080,000 souls. It is governed by a Holy Synod and a national Parliament, or Assembly, of which one-third of the members are clerics and the remainder laymen. It meets every three years. -- The Servian Church of Bosnia-Herzegovina. -- Theoretically this Church still belongs to the Greek Patriarchate of Constantinople, but since the annexation of these provinces by Austria-Hungary (6 October, 1908) it may be looked on as autonomous. It has four metropolitan sees. Seraiero, Mostar, Doinja-Touzla, and Banialouka, and numbers 700,000 souls. -- Two other Servian groups have not yet acquired autonomy. That in Dalmatia belongs to the Rumanian Metropolitan of Tchernovitz; it has two dioceses, Zara and Cattaro, and numbers 110,000 souls. The other group, in Turkey, in the vilayet of Uskub, acknowledges the Greek Patriarch of Constantinople. It has two dioceses, Prizrend and Uskub, and numbers 250,000 souls.

(c) The Bulgarian Exarchate

After having concurrently two patriarchates, one at Tirnovo, suppressed in 1393, and another at Ochrida, suppressed in 1767, the Bulgarians have organized an independent Church, recognized by the Sublime Porte, 11 March, 1870. The exarch, head of all Bulgarians in Turkey and Bulgaria who may be disposed to admit his authority, resides in Constantinople. He has subject to him in Turkey 21 dioceses, of which about two-thirds are still waiting for the nomination of their bishops, and in Bulgaria 11 metropolitan dioceses. The faithful of the exarchate number about 4,000,000, of whom 2,900,000 are in the Kingdom of Bulgaria, and 1,000,000 in Turkey in Europe. The proclamation of Bulgaria as an independent kingdom will bring about modifications in the ecclesiastical domain, for it is hardly likely that Turkey will accept an outsider as spiritual head of its Ottoman subjects.

(5) *Orthodox Rumanians*

(a) *The Church of Rumania*

This church has existed since 1864, though it was not recognized by the Phanar as independent until 13 May, 1885. It obeys a Holy Synod composed of two metropolitans and six bishops -- its whole episcopate. Its membership numbers 4,800,000 souls.

(b) *The Rumanian Church of Sibiu*

This Church, formerly under the Servian Patriarchate of Carlovitz, secured its independence in 1864. It is governed by a national Assembly composed of 90 members (30 ecclesiastics and 60 laymen) who meet every three years. The Metropolitan of Sibiu has two suffragans, the Bishops of Arad and of Karambes. Its computed membership is 1,750,000. (c) Servo-Rumanian Church of Tchernovitz. -- This Church secured independence in 1873. It comprises three dioceses; Tchernovitz, the metropolitan see, situated in Bukovina, Zara and Cattaro in Dalmatia (its two suffragan sees). The population of this Church, which in Bukovina is mainly Servo-Rumanian and in Dalmatia Servian, is about 520,000 souls.

To sum up, there are seventeen Orthodox Churches of various tongues and nationalities, knit together more or less by a common Byzantine Rite and a vague basis of doctrine that becomes more and more imbued with Protestant ideas. Their total membership does not exceed 100,000,000 souls; the exact figure is 94,050,000, of whom about three quarters (70,000,000) are in the Russian dominions.

III. GREEK UNIAT CHURCHES

Nearly every one of the Orthodox Churches of the Byzantine Rite has a corresponding Greek Catholic Church in communion with Rome. As we saw in the majority of the Orthodox Churches, so in the case of the Uniat Churches, they are Greek only in name. Altogether eight divisions are recognized:

- (1) Pure Greeks,
- (2) Italo-Greeks,
- (3) Georgians,
- (4) Græeco-Arabs (or Melchites),
- (5) Ruthenians,
- (6) Servians,
- (7) Bulgarians, and
- (8) Rumanians.

The total membership of these various Churches does not exceed 6,000,000 souls; the exact figure is computed at 5,564,809, of whom 4,097,073 belong to the Ruthenians and Servians, 8488 to the Bulgarians, 1,271,333 to the Rumanians, 138,735 to the Melchites, and 49,180 to the Italo-Greeks and Pure Greeks. The number of Catholic Georgians is unknown, but it is small. These are the figures furnished by the 1907 edition of "Missiones Catholicæ", published at Rome (p. 743).

(1) *Pure Greeks*

Their Church has not yet been organized, it is under the Apostolic Delegate at Constantinople. Parishes and missions exist at Constantinople, Cadi-Keui, Peramos, Gallipoli, Malgara and Cæsarea in Cappadocia. The faithful number about 1000, under the care of a dozen priests, of whom seven are Assumptionists. There are also Catholics of this rite in Greece. They are subject to the Delegation at Athens.

(2) *The Italo-Greek Church*

These Catholics are of Greek or Albanian origin, and use the Byzantine Rite. They live mainly in Sicily and Calabria, and have some fixed colonies in Malta, at Algiers, Marseilles, and Carghese in Corsica. Their number is not more than 50,000. Ecclesiastics in Calabria and Sicily are ordained by two Italo-Greek bishops. Their liturgical language is Greek, but for the most part the vernacular of the faithful is Italian.

(3) *Georgian Churches*

Russia, unwilling to tolerate within her dominions an Orthodox Georgian Church distinct from the Russian, is all the more opposed to the creation of a Catholic Georgian Church. Out of from 30,000 to 35,000 Georgian Catholics, about 8000 follow the Armenian Rite, the remainder having adopted the Latin Rite. The only Catholic Georgian organization in existence is at Constantinople.

(4) *Græco-Arabs (or Melchites)*

All these are under a patriarch who bears the titles of Antioch, Alexandria and Jerusalem, and who, moreover, has jurisdiction over all the faithful of his rite in the Ottoman Empire. Their number amounts to about 140,000 and they are subject to twelve bishops or metropolitans. The liturgical language is either Arabic or Greek.

(5) *Ruthenians*

The Uniat Church of Russia has disappeared. Its last two bishoprics, those of Minsk and Chelm, were suppressed in 1869 and in 1875 respectively. Since the disorders of 1905 many have availed themselves of the liberty of returning to the Catholic Church, but as a precautionary measure they have adopted the Latin Rite.

(6) *Servians*

In Austria-Hungary the ancient Ruthenian Church has survived with a little more than 4,000,000 members. It has six dioceses, of which three are in Galicia (the Archbishopric of Lemberg, and the Bishoprics of Przemysl and of Stanislawow) and three in Hungary (the Bishoprics of Munkacs and of Eperies under the Latin Archbishop of Grau, and the Bishopric of Crisium, or Kreutz, in the archiepiscopal province of Agram, and of which the Catholic population is mainly Servian).

(7) *Bulgarians*

The movement for union with Rome, very strong in 1860, was, owing to political reasons, not a success. To-day there are hardly 10,000 Catholics between the two Apostolic vicariates of Thrace and Macedonia. The seminary of Thrace is under the care of the Assumptionists, that of Macedonia under the Lazarists.

(8) *Rumanians*

The Rumanian Catholic Church uses the Byzantine Rite, but the liturgical language is Rumanian. It is established only in Hungary and counts four dioceses, viz., the Archdiocese of Fogaras with the suffragan Dioceses of Armenopolis, Gross-Wardein, and Lugos, having in all 1,300,000 members.

The Uniat-Rumanians of the Kingdom of Rumania have no ecclesiastical organization. In this summary I have omitted the other Oriental Churches in communion with Rome, e. g. the Armenian, the Coptic, the Abyssinian, the Syriac, the Maronite, the Chaldean and Malabrian Churches, because they do not use the Byzantine rite, and have no claim to be considered as Greek Churches, even in the wider meaning of the word.

IV. GREEK-CHURCH HISTORY

(1) *The First Five Centuries*

The Gospel, preached by the Apostles and by their disciples, who were converts from Judaism, spread first of all among the Jewish communities of the Roman Empire. These Jewish settlements were mainly in the towns, and as a rule spoke the Greek tongue; and thus it came to pass that the earliest Christian communities were in the towns and used the Greek tongue in their liturgical services. Gradually, however, Christian converts from among the Gentiles began to increase and, as the author of the so-called Second Epistle of Clement says, "The children of the barren woman outnumbered those of the fruitful one". The original differences between the Judæo-Christian and Helleno-Christian communities quickly disappeared, and soon there existed only Christians, with a certain number of heretical sects which either held aloof of their own accord or were constrained to do so. At the end of the fourth century, at least in the East, nearly all the cities were Christian, but the villages and country places, as in the West, offered a more stubborn resistance to the new religion. The government of the Church was monarchical; as a rule every city had its bishop, and the priests were his assistants; the deacons and lower ministers attended to the ceremonial and to charitable works. Even before the Council of Nicæa (325) ecclesiastical provinces had begun to appear, each having a metropolitan and several suffragan bishops. The size of these provinces generally corresponded to the extent of the civil provinces.

The fourth canon of Nicæa expressly refers to such provinces. But were there also Churches whose high jurisdiction was recognized by a number of ecclesiastical provinces, and did they

correspond with the future patriarchates and exarchates? We must reach the third century before we find conclusive proof of this. At that time the Bishop of Alexandria was looked up to as the Primate or Patriarch of all Egypt. In a somewhat similar way, though in a lesser degree, the Bishop of Antioch had authority in the provinces of Syria and Asia Minor. For instance, at the end of the second century Serapion of Antioch exercised his authority at Rhossos, a town of Cilicia, and this same Serapion appears to have ordained Palout, the third Bishop of Edessa. During the latter half of the third century we see assembled at Antioch the bishops of all Syria and eastern Asia Minor, soon to become the civil diocese of Pontus. As early as 251. we know of a synod that was to be held at Antioch because Fabius, the bishop of that town, seemed to be leaning towards Novatianism. The promoters of this meeting were the Bishops of Tarsus, Cæsarea in Palestine, and Cæsarea in Cappadocia. A few years later, in 256, Dionysius of Alexandria, treating of the Eastern Churches that had been disturbed by this quarrel, mentions Antioch, Cæsarea in Palestine, Ælia (Jerusalem), Tyre, Laodicea in Syria, Tarsus and Cæsarea in Cappadocia. Somewhat later, again, from 264 to 268, the affair of Paul of Samosata was the occasion of many meetings of bishops at Antioch, and in the interests of that Church. They always came from the same provinces, viz., those extending from Polemoniac Pontus (Neo-cæsarea) and Lycaonia (Iconium) to Arabia (Bostra) and Palestine (Cæsarea and Ælia). "Immediately after the persecution of Galerius and Maximianus a celebrated council was held at Ancyra, presided over by the Bishop of Antioch, at which some fifteen bishops from the same countries, were again present; this time, however, the Provinces of Galatia, Bithynia, Phrygia, and Pamphylia are represented, but Asia, properly so called, still remained outside the group" (Duchesne, "Christian Worship", London, 1904, p. 20). On the other hand, in Proconsular Asia no Church had yet succeeded in asserting authority over the others; Ephesus, the most famous of them, had merely a primacy of honour over its rivals in influence and wealth, Smyrna, Pergamus, Sardis, and others.

To sum up, then, during the opening years of the fourth century we find three principal ecclesiastical groups in the Eastern Empire:

- (1) that of Alexandria, with authority over the whole of Egypt;
- (2) that of Antioch, with a more or less recognized jurisdiction over the whole Greek world, with the exception of Asia proper, and even over lands beyond the frontiers of the Roman Empire, e. g., Armenia and Persia;
- (3) Proconsular Asia, forming a group apart.

The Councils of Nicæa (325), Constantinople (381), Ephesus (431), and Chalcedon (451) legalized the existing state of things, created new Churches and established the ecclesiastical hierarchy as it has remained ever since. But in order to understand the situation properly, we must first briefly review the civil organization of the Roman Empire, which had such an influence over early Church organization.

From Diocletian to the accession of Theodosius the Great (379) the Empire of the East included the civil dioceses of Egypt (after its separation from Antioch), Asia, Pontus, and the two Mysias, or Thrace. The remaining dioceses formed part of the Empire of the West. On 19 January, 379, Gratian, Emperor of the West, ceded to his colleague, Theodosius I, the Prefecture of Eastern

Illyricum, which included the dioceses of Dacia and Macedonia. Soon afterwards, between 424 and 487, Western Illyricum, or the diocese of Pannonia, became part of the Empire of the East.

Among the canons of Nicæa (325) that do not specifically deal with the ordinary ecclesiastical provinces, canons 6 and 7 confirm the rights accorded by immemorial custom to certain great Churches, such as Alexandria, Antioch, Jerusalem, and the other eparchies. It is not easy at first sight to determine what rights the council referred to. Nevertheless it is a general opinion that the sixth canon aimed at securing to the Bishop of Alexandria an exceptional rank, and at endowing him with powers over the metropolitans and bishops of the four civil provinces of Egypt, Thebaid, Libya, and Pentapolis, as ample as those exercised by the Bishop of Rome over the various provinces of the Patriarchate of the West. Thus the Bishop of Alexandria had the right to consecrate all the metropolitans and bishops of Egypt, and from this some historians and canonists would have us conclude that he was, as a matter of fact, the only metropolitan in Egypt, and that his entire patriarchate was a single diocese. This is an evident exaggeration. At the Council of Nicæa there were four Egyptian metropolitans, one for each of the civil and ecclesiastical provinces; later their number rose to nine, or even ten, according as the emperors increased the number of civil provinces. The number of suffragan bishops rose at one time to a hundred. The organization of the Egyptian Church really followed the same lines as the others. But the Patriarch, or Bishop, of Alexandria had the right of consecrating all his bishops, once their election had been confirmed by the metropolitan, whereas in the other greater Churches the metropolitan himself discharged this function.

Although the sixth canon, in as far as it refers to Antioch, is far from clear, it would seem that the Nicene Council recognized and granted to the Bishop of Antioch the same jurisdiction over the provinces of the civil diocese of the East (*Diæcesis Orientis*) that it had recognized and granted to the Bishops of Rome and of Alexandria over the Provinces of the West and of Egypt respectively. Therefore it attributes to Antioch a supremacy over many provinces, each having its own metropolitan, in such a way as to constitute them into a patriarchate. It is thought that the jurisdiction of the Patriarchate of Antioch was coextensive with the aforesaid civil diocese of the East, but it may very likely have extended also over certain provinces in Pontus and Asia Minor.

The same canon requires that the rights of the other eparchies be maintained. The meaning of the word eparchies is not clear and has been variously interpreted. According to some, it refers to ordinary ecclesiastical provinces, but this is hardly probable, seeing that the council had already dealt with them in its fourth canon. Others are of opinion that the council intended to grant the Bishops of Heraclea, Ephesus, and Cæsarea the same privileges and rights over the provinces of the civil dioceses of Thrace, Asia, and Pontus that the Bishops of Alexandria and Antioch enjoyed over the provinces of the civil dioceses of Egypt and the East. The second canon of the Council of Constantinople (381) seems to support this interpretation, where it says: "The Bishops of the Diocese of Asia must watch over the concerns of Asia only; those of Pontus, over what concerns Pontus, and those of Thrace over what concerns Thrace." Perhaps the council simply meant to enfranchise the provinces of these three civil dioceses from the jurisdiction of Antioch, Alexandria, or any other

Church, without, however, raising any particular see -- Ephesus for instance, or Cæsarea -- to a particular rank like that of Antioch or Alexandria.

As for Jerusalem, or Ælia, according to the seventh canon, it remained a simple bishopric under the jurisdiction of Cæsarea Maritima, its metropolitan see, but enjoyed the right to certain honours on the occasion of œcumenical councils, when its bishops sat next to those of the greater Churches of the empire.

The Council of Constantinople (381) confirmed and defined, in its second canon, what the Council of Nicæa had attempted to outline. It was understood that the Bishop of Alexandria should be the head of the Church of Egypt, and the Bishop of Antioch head of the Church of the East. As for the remaining two Asiatic dioceses, those of Pontus and of Asia, the ambiguous phrases of the second canon, and the interpretation thereof given by the historian Socrates (*Hist. Eccl.*, V, c. viii, in P. G., LXVII, 580), do not permit us to infer the supremacy of any one Church over all the other Churches of a civil diocese. That Ephesus in Asia and Cæsarea in Pontus held privileged positions is certain, but that either Ephesus or Pontus was at the head of the episcopate of Asia or of Pontus, as Antioch was at the head of the Eastern episcopate, is a position which we have no documentary evidence to support. The third canon of this council of Constantinople brings another Church on the scene, that of the imperial capital itself, to which Nicæa had made no reference. The silence of the First Œcumenical Council is easily understood when we remember that in 325 Byzantium, or Constantinople, was still an undistinguished bishopric, with Heraclea, in Thrace, as its metropolitan, and that its first bishop, St. Metrophanes, had died as recently as 314. In consequence of the transfer of the seat of imperial government to Byzantium, the city increased in importance, even from an ecclesiastical point of view; in 339 and 360 we find two Arian bishops, Eusebius and Eudoxius, leaving their metropolitan Sees of Nicomedia and Antioch to occupy this bishopric, which they had already begun to consider the first episcopal see of the Empire. The Council of 381 encouraged this attitude, and its third canon asserts that "the Bishop of Constantinople ought to have a pre-eminence of honour next to the Bishop of Rome, for that city is the new Rome".

It would be hard to protest too strongly against the spirit of this canon, which attempts to measure the ecclesiastical dignity of a see by the civil importance of the city. But although the popes refused to recognize it, all the bishops of the East accepted it, and Constantinople considered itself henceforward as the premier see of the Empire of the East.

Novella cxxxix of Justinian approved this decision of the council: "*Ita sancimus . . . veteris Romæ papam primum esse omnium sacerdotum . . . archiepiscopum Constantinopolis, novæ Romæ, post sanctissimam apostolicam sedem veteris Romæ secundum locum habere.*" Did this honorary pre-eminence carry with it a wider jurisdiction? and can the Bishop of Constantinople be henceforward looked on as a patriarch? We have no juridical text in support of such a thing, but Socrates (*Hist. Eccl.*, V, viii) assures us that Constantinople did exercise authority over Thrace, while Theodoret of Cyrrihus (*Hist. Eccl.*, V, xxviii) attributes to St. John Chrysostom (398-404) a superior's authority over twenty-eight provinces. Now the "*Notitia dignitatum*", a document dating from about 410, reckons six provinces in Thrace, eleven in the diocese of Asia, and eleven in that

of Pontus. Constantinople was actually at the head of these three dioceses, whose twenty-eight provinces officially made up its patriarchate in 451. In any case, if a superior jurisdiction over these twenty-eight provinces did not belong *de jure* to the Bishops of Constantinople from 381 to 457, it is quite certain that *de facto* they exercised such jurisdiction. (For a number of instances in proof of this see the article "Constantinople" in Vacant and Mangenot, "Dictionnaire de théologie catholique", II, 1323-25.) Furthermore, their aim at this time was to have only one Eastern Church, only one patriarchate, of which they should be the chiefs, and this was to be brought about by the annexation of the provinces of Illyricum, subject to the pope, and the suppression of the rights enjoyed by the patriarchs of Antioch and Alexandria. Thus, on 14 July, 421, the Emperor Theodosius II issued a law whereby Illyricum was brought under the jurisdiction of the Bishop of Byzantium (Cod. Just., I, ii, vi; Cod. Theod., XVI, ii, xlvi), but in consequence of the protests of Pope Boniface I and of Honorius, Emperor of the West, this law never was enforced.

Again, according to Socrates (Hist. Eccl., VII, xxviii), Bishop Atticus of Constantinople obtained from Theodosius II a decree forbidding the consecration of a single bishop in the East without the consent of the Bishop of Constantinople, but, owing to the opposition it encountered, this decree was hardly ever observed, except in the civil dioceses of Thrace, Asia, and Pontus. The struggle undertaken against the See of Alexandria brought nothing but disaster for Constantinople. In less than fifty years three of its bishops, St. John Chrysostom in 403, Nestorius in 431, St. Flavian in 449, were deposed by the primates of Egypt, Theophilus, St. Cyril, and Dioscurus. On the other band, in the Patriarchate of Antioch the Byzantine interference became more and more successful, as was proved in the case of Ibas, in the partition of Phœnicia, and at the time of the consecration of the Patriarch Maximus. In 431, at the Council of Ephesus, a fourth Greek Church, that of Cyprus, took its place side by side with Constantinople, Alexandria, and Antioch. Its subjection to Antioch never having been clearly defined, it had profited by the Arian disputes and the famous schism of Antioch (330-415) to proclaim its own autonomy. Once the schism ended, the Patriarchs of Antioch tried to reassert their authority; Cyprus resisted and even took advantage of the absence of the Syrian patriarch to have its independence recognized by the œcumenical council. Later, this independence was reaffirmed by the Emperor Zeno and by a council held at Constantinople in 488. The head of the Cypriot Church has never had the title patriarch, but only that of Archbishop. The acknowledgment of an independent Cypriot Church was a serious loss for the Patriarchate of Antioch; following on this blow came two others in quick succession, the one beyond the frontiers of the Roman Empire, the other within those boundaries, which greatly diminished the influence of Antioch and the extent of its jurisdiction. Beyond the frontier, in the Persian kingdom of the Sassanides, were many Christians of Syrian speech, governed by a number of bishops. The Gospel had come to them from many points, principally from Edessa and other Churches subject to Antioch. There was, therefore, a certain bond of affection and gratitude between these Syrian Churches of the Persian Empire and those of the Roman Empire. In order to impose his authority on all the bishops of Persia, Papa bar Aggāi, Bishop of Seleucia Ctesiphon, the capital of the kingdom, had recourse to the Syrian bishops of the Roman Empire during the early years of the fourth century.

They hastened to aid him, and by methods whose nature is unknown to us succeeded in placing the Bishop of Seleucia Ctesiphon at the head of the Persian Church, and in bringing that Church under the jurisdiction of Antioch. The bishops of the other important sees in Persia accepted very unwillingly the primacy of the Bishop of Seleucia, and there were continuous revolts against it. The Bishop of Seleucia always fell back on the support of the western Syrian bishops subject to Antioch, especially in 410, when Marutas of Maiphergat in this way overcame all opposition. The Bishops of Seleucia had had recourse to Antioch only as an expedient for imposing their supremacy upon their Persian brethren; that end once attained, they, in their turn, shook off the tutelage of Antioch. The Council of Seleucia, held in 424 laid down that the bishops of Persia "could bring no complaint against their patriarch before the patriarch of the Westerns (Antioch), and that every cause which could not be settled by their own patriarch was to be reserved for the tribunal of Christ". That ended the matter. By this council the Church of Persia cut itself off definitively from the Greek Churches. The pity is that a few years later, by adopting Nestorianism as its national doctrine, it also cut itself off from the Catholic world.

In 451, at the Council of Chalcedon, another Church was set up to the detriment of Antiochene prestige, viz., that of Jerusalem. The bishop of the Holy City had obtained from the Council of Nicæa (325) the purely honorary rights which his successors had endeavoured to turn into tangible realities. St. Cyril of Jerusalem, and especially Juvenal, tried to shake off the yoke of Cæsarea Maritima, the religious capital of Palestine, and, after Cæsarea, the yoke of Antioch, the patriarchal see of the East. Juvenal, elected in 424, acted, indeed, as if he were already independent. Afterwards he sought official approbation for the usurpations he had been guilty of. He applied first to the Council of Ephesus (431) and put forward forged documents, which St. Cyril of Alexandria refused to admit. Next he turned to the "Robber Council" of Ephesus (449), and his demands were conceded. At the same time he extorted a decree from Theodosius II granting his Church jurisdiction over the three provinces of Palestine, also over Arabia, and a part of Phœnicia. Two years later, at Chalcedon, through fear of losing more, Maximus, Patriarch of Antioch, came to an understanding with Juvenal whereby the Church of Jerusalem was to remain in possession of the three provinces of Palestine. In consequence of this agreement, which was ratified by the council, Juvenal became patriarch of Jerusalem.

The same Council of Chalcedon, by its twenty-eighth Canon, drawn up in the absence of the papal legates, regularized the situation at Constantinople; it promulgated anew the third canon of the Second Œcumenical Council, which had made Byzantium the first see of the East and the second of the Christian world, giving it effective jurisdiction over the twenty-eight provinces of the three dioceses of Thrace, Asia, and Pontus, whose metropolitans it was to have the right of consecrating, and further authorizing it to ordain bishops for barbarian lands, which was the germ of its subsequent policy towards the Slav nations. Moreover, the council reserved to the bishop of the capital the right to decide on all appeals brought to his tribunal by the clergy of the three Eastern patriarchates and of the Archdiocese of Cyprus.

Beginning from the year 451, then, we find four Greek patriarchates (Constantinople, Alexandria, Antioch, Jerusalem) and one autocephalous Church (Cyprus) under the rule of an archbishop. Beyond and within the limits of the Roman Empire two other Churches had secured autonomy and broken with the Greek Churches; these were the Persian and the Armenian Churches, offshoots from the Church of Antioch. Lastly, in Europe the majority of the Greek-speaking Churches looked to the pope as their patriarch.

(2) Decay of the Greek Churches of the East and Rise of the Byzantine Hegemony (451-847)

The definition of faith of the Council of Chalcedon (451) had curiously agitated the Byzantine Empire. The condemnation of Eutyches, Dioscurus, and their adherents amounted in the eyes of many to a condemnation of St. Cyril of Alexandria and of the Council of Ephesus, if not to a victory for Nestorius. It happened that these religious disturbances reached their climax in the remotest provinces of the empire, in those which, while willingly or unwillingly subject to the Byzantines, had still retained a lively memory of their former national independence and glory, together with their own language, liturgy, art and literature. Egypt, Syria, Armenia became for the most part Monophysite; Palestine also. Even the episcopate of Asia Minor, with the Metropolitan of Ephesus, who resumed, about 474, the title of Patriarch, was bitterly opposed to the new definition; in the end, however, order and orthodoxy prevailed in Asia Minor. Until the reign of Justinian (527-65) the doctrine for or against the two natures in Christ was officially triumphant according as the emperor happened to be Monophysite or Dyophysite, and lent to the accepted doctrine the support of his sword. Justinian, the Byzantine Louis XIV, finally caused Dyophysitism to triumph, but the violence he had to use lost him the support of all the Eastern and African portions of the empire. The Church of Alexandria and that of Antioch nominated Monophysite patriarchs, and thus began the Coptic and Jacobite Churches which exist even yet. In Egypt nine out of every ten of the faithful declared against the faith of the imperial Court; in Syria the proportion was not so great. It may be said that about one-half of the subjects of Justinian accepted the faith of Chalcedon. Efforts to impose a heterodox patriarch on Palestine were in vain; except in the region of Garza, the monks were powerful enough to successfully resist the Monophysites. To sum up, then, we find that, as

early as the sixth century, of the Greek patriarchates in the East, one (Alexandria) had lost nearly all its subjects, another (Antioch) retained but one-half, while the third (Jerusalem) was too inconsiderable ever to dispute the primacy with Constantinople. The latter thus became the only real Greek patriarchate, to which the other three, surnamed Melchites (Imperialists), looked for favours and protection against Monophysite competition and later against the threatening domination of the Arabs.

This leads us to a consideration of the second cause that completely ruined the hopes of the three Greek Churches of Alexandria, Antioch, and Jerusalem, namely, Islam. It came from Arabia and spread like an oil-stain over Palestine, Syria, Mesopotamia, Persia, and finally Egypt. It even made great efforts to cross the Taurus range and enter the Greek world, but in this was everywhere defeated. For the moment its conquests were limited to provinces where the country folk had remained for the most part aloof from Hellenic speech and civilization. Thus the Syrian Jacobites gladly welcomed the Arab conquerors as their brethren in race and in speech, and, it would seem, often aided them in their conquests. Their complaisance towards the new régime brought them many favours not shown to the Melchites, who, because of their origin, or at least because of their relations with foreign Byzantium, were everywhere watched, hunted down, and proscribed. Without the help of Constantinople and Rome, from whom they begged help and assistance, it is very probable that these Melchite Churches would have disappeared. At the very time when the great Arab invasion and the spread of Islam was taking place, Byzantium was emerging from a disastrous war with Persia which had almost brought about the ruin of the Christian power, and its emperor was occupied in rallying the various Monophysite Churches to the official Church by means of the *ad captandum* formula of one will and one energy in Christ. The attempt failed owing to the splendid resistance set afoot by St. Sophronius of Jerusalem and St. Maximus of Constantinople; its net result was a fresh loss for the Melchite Patriarchate of Antioch, from which the monks of the convent of St. Maro on the Orontes seceded, to found, with the aid of the villagers of Syria and the Lebanon, the Maronite Church, Monothelite in doctrine, but which at a later date accepted Catholicism.

The growing weakness of the three eastern patriarchates and of the Archbishopric of Cyprus, whose titular had for a while to take refuge in Cyzicus, soon forced them to seek the moral and material support of Constantinople. It was eagerly granted, and Constantinople, thus freed from a rival in the East, turned its attention towards Rome in the West. As we have seen, the civil diocese of Thrace was the only one in Europe subject to the Patriarch of Constantinople; the provinces of Achaia, Macedonia, Thessalia, Epirus (old and new), which formed the civil dioceses of Macedonia, Dacia, and Pannonia, were included in the Patriarchate of Rome. Over these remote provinces the pope exercised his spiritual supremacy through the Bishop of Thessalonica, appointed vicar Apostolic about 380, and the Bishop of Justiniana Prima (Uskub), appointed in 535. Until the eighth century this arrangement worked without much opposition on the part of Constantinople, and the ecclesiastical provinces of Illyricum were considered as forming part of the Roman Patriarchate. The Emperor Leo III, the Isaurian, seems to have been the first to interfere with the custom, when, in 733, after his excommunication by the pope, he increased the tribute from Calabria and Sicily,

confiscated the patrimony of the Roman Church in those regions, and aimed a blow at the authority of the pope by depriving him of the obedience of Illyricum and Southern Italy, which were thenceforth attached to the Patriarchate of Constantinople. Such, at least, is the usual interpretation of an obscure text in the Chronicle of Theophanes (Hubert in "Revue Historique" (1899), I, 21-22); it is confirmed by an observation of the Armenian ecclesiastic Basil, who, in the ninth century, speaking of the metropolitan cities of Illyricum and Italy, asserts that they had been made subject to the authority of Constantinople "because the pope of ancient Rome had fallen into the hands of the Barbarians" (Georgii Cyprii Descriptio Orbis Romani, ed. Gelzer, p. 27). The popes protested against this high-handed robbery, but no attention was paid to their protests, and since about 733 Illyricum has been attached to the Byzantine Patriarchate. In this way it gained about one hundred bishoprics, nor was this all: starting with the principle that no bishopric in the Byzantine Empire could be in any way dependent on an outside patriarch, the Iconoclast emperors took away from the Patriarch of Antioch, on the plea that he was a subject of the Arab caliphs, the twenty-four episcopal sees of Byzantine Isauria, and from the pope of Rome the fifteen Greek bishoprics in Southern Italy. Consequently, the jurisdiction of the Patriarch of Constantinople became co-extensive with the limits of the Byzantine Empire.

Besides this increase of jurisdiction, the establishment of a permanent synod (*synodos endemousa*) and the addition to his title of the adjective *Œcumenical* rapidly placed the Patriarch of Byzantium in the front rank. The permanent synod dates most probably from the patriarchate of Nestorius (381-97). It was a sort of ecclesiastical tribunal permanently in session at Constantinople, made up, as a rule, of many bishops whom business or ambition had called to the capital; the patriarch himself presided over the tribunal. It attended to the solution of all ecclesiastical affairs submitted to the judgment of the emperor, so that the Patriarch of Constantinople, as its president, became *ex officio* arbiter between the Court and the bishops of the empire; it was a privileged position due to the very force of circumstances, and in the last resort it subjected all the great metropolitans, and even the patriarchs, of the East, to the judicial authority of the Byzantine Bishop. The ninth and seventeenth canons of Chalcedon confirmed and consolidated this state of things, and the insertion of those canons in the Civil Code gave them thenceforward equal authority with any other imperial decrees. The title *Œcumenical* was granted for the first time at the Robber Council of Ephesus (449) to the Patriarch Dioscurus of Alexandria, and at the time it looked like a dangerous innovation, and was repudiated at the Council of Chalcedon. Soon afterwards we find it applied to Popes St. Leo I, Hormisdas, and Agapitus, and to the Patriarchs of Constantinople, John II (518-520), Epiphanius (520-535), Anthimus (536), Menas (536-552). It was in 588, on the occasion of a council, that the Patriarch John VI, surnamed the Faster, seems to have restricted the use of the honorary title to his own see. This gave rise to a fresh quarrel with Rome, which saw therein a new evidence of ambition. Pope Pelagius II annulled the acts of this council and his successor, St. Gregory the Great (590-604), began a lengthy correspondence on the matter with the Byzantine Patriarchs John IV and Cyriacus, but nothing ever came of it. The popes went on protesting, but the Byzantine patriarchs, supported by the Court, the bishops, and the clergy, also

by the other Greek patriarchs, refused to forego the title, which they have borne ever since, and which has given them a colour of honorary supremacy over all the Churches of the East.

(a) Internal Organization of the Byzantine Churches

The superior hierarchy of a Greek Church at the period we are treating of, viz., from the fourth to the tenth century, was composed of a patriarch, a catholicos, the greater metropolitans, the autocephalous metropolitans, the archbishops and the bishops. The patriarch is at this period the highest prelate, at the head of a whole Church, and, as we have seen, there were only four such: Constantinople, Alexandria, Antioch, and Jerusalem. The catholicos exercised jurisdiction over a portion of the Church on an equality with the patriarch, save for the fact that he must originally have been consecrated by the patriarch. Such, we are told, was the position of the Catholicos of Seleucia-Ctesiphon, and of the Catholicos of Armenia, with reference to the See of Antioch, and towards the same see, but at a later period, of the Catholicoi of Romagyris, of Irenoupolis, and of Georgia. The other patriarchates, except perhaps Alexandria, never had such an ecclesiastical dignitary.

The greater metropolitans ruled each an ecclesiastical province and had under their authority a certain number of suffragan bishops. Their position was similar to that of the Latin archbishops. The number of these metropolitans varied in the various patriarchates according to the actual number of ecclesiastical provinces. For a long period Jerusalem had three, in the sixth century Antioch had twelve, in the fifth century Alexandria had ten, in that same century Constantinople had twenty-eight, which rose to thirty-two about 650, and to forty-nine about the beginning of the tenth century. The "autocephalous" metropolitans had no suffragan bishops, and depended directly on the patriarch. Latin canon law knows no such dignitary. These prelates had each his own diocese; they were not metropolitans *in partibus infidelium*. The number of these prelates, small at first, increased in the East to such a degree that at the present time one rarely meets with any of another rank. In the sixth century there was only one, that of Chalcedon, in the Patriarchate of Constantinople; in the tenth century only two, those of Chalcedon and Catania. We have no documentary evidence as to how things stood in this respect in the Patriarchates of Alexandria and of Jerusalem. The archbishops do not differ from autocephalous metropolitans, except as being inferior to them in the hierarchy. They depend directly on the patriarch, and have the real government of a diocese. This title, which corresponds to the exempt archbishoprics, was formerly very common in the Eastern Church. About 650 the Church of Constantinople reckoned thirty-four archdioceses of this sort; in the tenth century, we know, on the evidence of three documents, it had fifty-one; at the end of the eleventh century the number stood at thirty-nine, and since then it has gone on decreasing in the East, so that at present the Greek Patriarchate of Jerusalem alone possesses this institution.

The position of suffragan bishops is too well known to require any explanation. In the sixth century there were fifty-six of them in the three provinces of the Patriarchate of Jerusalem, one hundred and twenty-five in the twelve provinces of Antioch. About 650 there were three hundred and fifty-two in the thirty-two provinces of the Patriarchate of Constantinople, and in the early part of the tenth century, when the number of its provinces rose to forty-nine, Constantinople had five

hundred and twenty-two suffragan sees. As in the West, the number of suffragan sees in a province was not always the same in the same patriarchate. Thus, in 650 the provinces of Asia and of Lycia had each thirty-six such sees, but the province of Europe, or Rhodope, had only two. In the sixth century, again, in the Patriarchate of Antioch, the Metropolitan of Dara had three suffragans, while the Metropolitan of Seleucia in Isauria had twenty-four. To gain a collective idea of this hierarchy it should be remembered that in 650 the Patriarchate of Constantinople counted thirty-two metropolises, or capitals of ecclesiastical provinces, one autocephalous metropolis, thirty-four autocephalous archbishoprics, and three hundred and fifty-two bishoprics -- a grand total of four hundred and nineteen dioceses. A century earlier the Patriarchate of Antioch could boast of twelve metropolitans, five autocephalous metropolitans, two exempt bishoprics (a peculiar institution of this Church), and one hundred and twenty-five bishoprics -- a grand total of one hundred and forty-four dioceses. For want of accurate information it is impossible to give similar details for the Patriarchates of Jerusalem and Alexandria.

Below the bishops came the other ecclesiastical dignitaries -- priests, deacons, deaconesses, subdeacons, lectors, cantors, and others. Ecclesiastical functionaries were very numerous. After the patriarch in the capital, and in their dioceses after the metropolitans and bishops, the chief dignitary was the archdeacon, a sort of vicar-general having direct control over the clergy, if not over the faithful of the diocese. The title soon disappeared and was replaced by that of protosyncellus, which has remained to our own times. There were, moreover, referendaries who carried important messages and looked after the business of the diocese in the bishop's name; *apocrisarii* (in the Latin Church *responsales*, i. e. nuncios), or representatives of the patriarchs at the emperor's Court, of the metropolitans to their patriarch, and of the bishops to their metropolitans; *æconomoi*, or bursars, who looked after church property and who entrusted the administration of such property in outlying districts to delegates of various names and titles: a *kimeliarchos*, in charge of the church treasury and also known as the skeuophylax; a *chartophylax* or archivist; a chancellor, or master of ceremonies, etc.

During this period the Greek episcopate was, as a general rule, recruited by election. The notables united with the clergy drew up a list of three candidates which they submitted to the choice of the patriarch, the metropolitan, or the bishops, according as the see to be filled was a metropolitan see or a simple bishopric. In practice, the patriarch and, most of all, the emperor interfered in these elections. The nomination of a patriarch belonged in the first instance to the clergy of Constantinople, then to a committee of metropolitans and bishops; in reality the choice was always settled by the emperor. From the list of three candidates presented by the bishops he selected one as patriarch, and if none of the names presented was agreeable to him he put a new name before the electoral college, which the bishops could only confirm.

The status of the lower clergy was much the same as now. In the cities and populous centres there were many learned and often exemplary priests, who, for the most part, had been through the monastic schools; but in the rural districts they were generally ignorant and of evil repute. Because of their exemptions and their civil privileges, the clergy were numerous. Churches and chapels

abounded everywhere, especially in the cities; every *Basileus* (emperor), even the least religious-minded, was lavish with money for their construction. An idea of the personnel employed at this time in serving a church may be gathered from two churches in Constantinople. A law of Justinian (535) fixed the number of clerics at St. Sophia and its three adjacent churches at 425 -- viz., 60 priests, 100 deacons, 40 deaconesses, 90 subdeacons, 110 Lecters, 25 cantors, to which we must add 100 doorkeepers. From Justinian's reign to that of Heraclius this number increased, and in 627 the latter emperor was obliged to put a limit to the number of clerics serving this church. Unless subsequent endowments authorized otherwise, the regular number was to be 525, viz., 80 priests, 150 deacons, 40 deaconesses, 70 subdeacons, 160 lectors, 25 cantors, besides 75 doorkeepers, 2 syncelli, 12 chancellors, and 40 notaries. The little church of Blachernæ had a personnel at this period of 75 members, viz., 12 priests, 18 deacons, 6 deaconesses, 8 subdeacons, 20 lectors, 4 cantors, and 7 doorkeepers. From these two examples we may infer what the other smaller or larger churches must have required.

Benevolent institutions claimed a proportionate number of functionaries and titles; in Christian antiquity few social bodies were as much concerned with the diminution of social ills as was that of Constantinople. There were special charitable institutions to succour every form of physical and moral suffering; from the emperor to the humblest citizen all were interested in their maintenance. Hospices and shelters were found everywhere; there were also *xenodochia*, or hostelries for strangers; *gerontocomia*, or homes for the aged; *ptochotrophia*, or asylums for the poor; *nosocomia*, or hospitals for the sick; *orphanotrophia*, or foundling hospitals; *brephotrophia*, or crèches; and even *lobotrophia*, or homes for lepers. These institutions were mostly conducted by monks, which fact brings us to a consideration of the monastic system.

If we consider their rules, the monks may be divided into two classes: solitaries and cenobites. The solitaries had various names, according to their habitations or the exercises which they practised. They were known as hermits or recluses if they provided their own necessities of life or accepted them from strangers; *stylites* or *dendrites*, if they chose a pillar or a tree as the scene of their mortifications; *lauriotes* or *kelliotes*, if they lived together in a *laura*. These last belong rather to the Eastern world properly so called (Egypt, Palestine, Syria, Mesopotamia) than to the Greek, or Byzantine, world. On the other hand, the Greek Christian world was famous for its cenobites, who always and everywhere followed a community life. Solitary and cenobite had each a special dress, the names and uses of which are well known. The *lauræ*, and convents, had each its own superior, sometimes called archimandrite, and sometimes hegumenos, terms synonymous in the beginning, but soon differentiated. Gradually *archimandrite* came to mean the head of all the monasteries of a city or of a diocese. Below him came the *deutereuon* or prior, at least until the sixth century; after that the place was taken by the *æconomos*, or bursar. In the ninth century every diocese (presumably the cenobites of every diocese) or district formed a sort of federation under the presidency of a hegumenos known as the exarch or archimandrite. In the Archdiocese of Jerusalem this presidency over the laurites and hermits devolved on the Hegumenos of St. Sabas, and that of the cenobites on the Hegumenos of St. Theodosius. In the archdiocese of Constantinople the superior of the

convent, or monastery, of Dalmatia exercised this function. As soon as peace was definitively granted to the Church, and especially after the reign of Theodosius I (378-95), the religious life had its period of greatest splendour. Emperors, empresses, consuls, patricians, senators, patriarchs, bishops, private individuals vied in building conventual homes for "those who had put on the robe of the angels" and who had become "citizens of heaven". As early as 518, we find a petition to Pope Hormisdas signed by fifty-four superiors of monastic houses for men in Constantinople; in 536 no fewer than sixty-eight superiors of monasteries from the same city assisted at the council which deposed the patriarch Anthimos, while the neighbouring Diocese of Chalcedon alone sent forty more. In Palestine the Archdiocese of Jerusalem had at least 100 monasteries. And it must not be imagined that the number of their inmates was small. The laura of St. Sabas had 150 inmates; the convent of St. Theodosius, 400; the New Laura more than 600. It is true that all of the monasteries were not so populous, but if we place the average number of monks for each monastery at 50 we shall not, be far from the truth. Let it not be forgotten that 10,000 monks of Palestine assembled at Jerusalem in 516 to demand that the Council of Chalcedon be observed. It is worth noting that there never existed a religious congregation, properly speaking, in the Greek world; this Western form of monasticism was unknown to the East. There every convent was independent of its neighbour, and where many convents had the same founder their union rarely lasted beyond his lifetime. Again, in spite of a still prevalent Western belief, the Greek monks never had a religious rule, in the canonical sense of the word. Even the Rules of St. Basil, St. Anthony, and St. Pachomius were not canonical rules. The monks obeyed a whole series of precepts, or monastic regulations, either written or, more often, preserved by oral tradition, which were the same everywhere. But if they had no rule properly so called, they had an infinity of *typica* or regulations. In the liturgical offices the customs of St. Sabas at Jerusalem, i. e. the Palestine customs, were combined with those of the Studium at Constantinople or some other monastery, and thus all desired variations were obtained. For the monastic life itself the "Typica", i. e. original charters or constitutions of the monastery, were the guide. The most ancient of these "Typica" known to us is that of St. Athanasius the Athonite (or of Mount Athos), which dates from 969. In matters of jurisdiction all Greek monasteries were subject to the bishop or to the patriarch; the latter known as *stauropegiac*, because the patriarch asserted his rights over the monastery by placing a wooden cross (*stauros*) behind the altar. It was in the cloister almost exclusively that the more eminent ecclesiastics of all ranks were trained, and to it dethroned emperors and disgraced courtiers fled for refuge. The monks were the historians, the theologians, the poets of that time; the leaders of all heresies and their opponents were monks; councils were convened or prevented as the monks thought good. They assisted the bishops by their learning and disturbed the empire by their quarrels. In short, they held the whole foreground of the ecclesiastical stage, and absorbed all the intellectual and religious life of the Greek Church. And while their extensive possessions, exempt from taxes, drained the finances of the empire, the thousands upon thousands of young men who flocked to their monasteries robbed the land of its agricultural class and the army of its recruits. As it existed in the Greek world, the monastic life caused perhaps more evil than good, and it is undoubtedly to it we owe that narrow pietism, that

formalism and ritualism in devotion, consisting altogether in the externals of religion, which is even now so characteristic of the East.

(b) The Emperor; Relations, between East and West; Liturgy

In the foregoing sketch of the ecclesiastical body the Byzantine emperor has not appeared. Yet no one has a greater right to a place in that body: Heir of the Roman emperors, the Basileus had inherited also the office of *pontifex maximus*, and, though after the fifth century that title no longer appears on public documents, yet every Greek looked up to the Basileus as the head of the national religion. Moreover, the emperor was the chosen of God, Who had raised him above humanity in order to draw him nearer to Himself. As Eusebius of Cæsarea tells us, "His intelligence is a reflexion of the Divine intelligence, he is a partaker of the power of the Almighty." In his "Instruction" to the "most divine" Justinian, the deacon Agapetus reproduces under another form these ideas so prevalent at Byzantium: "It was a sign from God that pointed out the Basileus for the empire; he was predestined in the designs of God to rule the world, even as the eye is set within the head to control the body. God has need of no one; the emperor needs only God. Between the Deity and the emperor there is no intermediary" (P. G., LXXXVI, 1177). The Divine call to the empire gave the emperor a sacred character, and the anointing, the sign of priesthood, became his by Divine right. To take the life of the Basileus or attack his authority was to resist the will of heaven and to commit a sacrilege, unless the one who did so happened to be, like David of old, also the chosen one and the anointed of the Lord. This anointing and the priesthood which it conferred gave the emperor a high place among the ministers of the altar. He became the *Isapostolos*, the equal of the Apostles,

or even the thirteenth Apostle. Hence he held a special position between lay society and the ecclesiastical body. He dominated, and belonged to both, uniting in himself both elements of the social order, the civil and the ecclesiastical. Moreover, this special *sacerdotium* reserved for the emperor secured him special rights and powers. "I also am a bishop", said Constantine to the prelates of his day. "You are the bishops assigned to look after the domestic affairs of the Church; I am appointed by God to oversee all that lies outside." And Leo III, the Isaurian, wrote to Gregory II: "Do you not know that I am both priest and king?" -- Priest, bishop, *Isapostolos*, Apostle himself, the Basileus was placed there to guard the purity of dogma; he gave legal sanction to the decisions of councils and inserted their canons in the public code. He convened general councils, was present at their sessions, or sent his representative to them; he controlled their discussions, and only permitted the bishops to leave when they had defined and legislated according to the Faith and the canons, or even according to his own wishes. If he frequently chose patriarchs and bishops, he was not remiss in deposing them as soon as they stood in his way. Orthodox and virtuous patriarchs were the victims of wicked emperors, while immoral or heretical ones were cast out by orthodox emperors. But it was always a matter of politics, and the Church was merely a pawn in the despotic hands of the State. This condition has been happily described by an expressive barbarism as the rule of Cæsaropapism.

The relations that grew up between Rome and the Greek Churches during the long period from the death of Constantine the Great to the end of the Iconoclast persecutions (337-843) were far from cordial. In principle East and West were united; in fact they were separated during most of that time. During those 506 years the Greek Church was in open schism with Rome during seven periods aggregating at least 248 years. The sum total is reckoned thus:

- (1) The schism in connexion with St. Athanasius and Arianism, from the Council of Sardica (343) to the accession of St. John Chrysostom to the See of Constantinople (398) -- 55 years;
- (2) in connexion with the condemnation of St. John Chrysostom by the episcopate of the East (404-15) -- 11 years;
- (3) in regard to the Byzantine patriarch Acacius and the Emperor Zeno's "Henoticon" edict (484-519) -- 35 years;
- (4) arising out of the Monothelite movement of Sergius and Heraclius (640-81) -- 41 years;
- (5) arising out of the first Iconoclastic conflict, begun by Leo III, the Isaurian (726-87) -- 61 years;
- (6) arising out of the adulterous marriage contracted by the Emperor Constantine VI (795-811) -- 16 years;
- (7) in connexion with the second Iconoclastic persecution (814-43) -- 29 years.

This gives a total of 248 years of schism and heresy out of a period of 506 years, i. e. nearly one-half the time. Again, it must not be forgotten that divisions vexed certain individual Churches -- e. g., the Schism of Antioch (330-415), which had its effect not only on the Churches of the East but also on those of the West. It must also be confessed that when circumstances demanded strength of will and determination the Greek bishops were very often culpable. Of all these heresies and schisms they might at least have lessened the duration and importance, if not altogether avoided them, had they better understood and realized their duty. In the patriarchal See of Constantinople,

the premier see of the Greek Empire, we find nineteen heretical patriarchs, whom the first seven Œcumenical Councils, all held in the East, condemned by name, or who vehemently opposed the decisions of such councils. These nineteen were: Eusebius of Nicomedia, Macedonius, Eudoxius, Demophilos, all four Arians; Nestorius, Acacius, Timotheus, Anthimus, of whom the last three were Monophysites; Sergius, Pyrrhus, Paul, Peter, John VI, all Monothelites; Anastasius, Constantine II, Nicetas, Theodotus Cassiteras, Anthony, John VII Lecanomantos, all Iconoclasts. And this list might be increased, if we were to include the patriarchs who, though not formally heretics, would not condemn their heretical predecessors, and because of this weakness were unable to obtain communion with the Holy See. If in the two patriarchates of Alexandria and Antioch the number of excommunicated patriarchs is less, it is because there an almost immediate rupture took place between the Catholics and the Monophysites or Monothelites. Hence we meet fewer heretics in these patriarchal sees for the very good reason that in these places the heretics quickly set up their own separate churches, whereas in Byzantium, the seat of the central power, both Catholics and heretics either could not or did not dare set up ecclesiastical bodies distinct from the State Church, but were constrained to accept orthodox or heterodox teaching according to the bias of the emperors. Often were the Greek bishops constrained to stifle the voice of conscience. Probably no Church can furnish so many examples of the kind. In 449 more than two hundred bishops at the Robber Synod of Ephesus defined Monophysitism as a dogma, while two years later, at the Council of Chalcedon, six hundred and thirty bishops approved the dogma of the two natures. In 476 the Basileus made five hundred bishops sign a retractation of the teaching of the Council of Chalcedon, while in 458 Emperor Leo I obtained an equal number of signatures in favour of that same council. The same bishops said Yea and Nay within a few years of each other with a facility that, to say the least, is disconcerting. In 681 at the Sixth Œcumenical Council the whole Greek episcopate pronounced itself in favour of the two wills in Jesus Christ, yet, in 712, the same episcopate, with the exception of a few bishops, solemnly approved the condemnation of the former council pronounced by the Emperor Philippicus, and retracted its disapproval one year afterwards. In 753, at the conciliabulum of Hiéria, near Chalcedon, 388 Greek bishops applauded the Iconoclast edicts of Constantine Copronymus, and in 787, at the Seventh General Council, they condemned his memory and restored the cultus of images.

Degradation of will, and slavery of the whole episcopate to the whims of the emperors -- such are the main causes of these wretched tergiversations. No doubt there were some noble, though rare, exceptions among the bishops and among the monks. Be it understood, their knowledge is not in question. On this score bishops and monks, as a rule, were ahead of their brethren in the West. This is one of the things that startle the student of the ecclesiastical literature of the two Churches during this same period. In the East there is no such suspension of literary activity as we know to have lasted in the West from the period of the Germanic invasions to the magnificent efflorescence of the Middle Ages. But the Latin Church had one incontestable superiority over its rival: it had one centre of gravity, Rome, and always recognized the papacy as the visible head of the Church. The ecclesiological doctrine of the Eastern Church, on the contrary, is very rudimentary;

they do not appeal to Rome, and recognize its imprescriptible rights only very rarely and in extreme cases. With the exception of St. Gregory of Nazianzus, St. Theodore the Studite, and a few other rare examples, the bishops and theologians of the Greek Church never touch on the primacy of Rome, except when they are imploring the pope's help to bring a dangerous adversary to reason. The danger past -- the shock avoided -- they have forgotten everything.

The primitive Church, Græco-Syriac in speech, as we have said, adopted the liturgy of the synagogue, which consisted of readings from the Bible, hymns, homilies on some subject furnished by the reading, and prayers. To this was added the sacred banquet of the Supper instituted by Christ, with prayers and ritual forms borrowed for the most part from the synoptic Gospels and from St. Paul. We first find somewhat precise indications of this liturgy in the "Teaching of the Apostles", the Epistle of Pope St. Clement, and the First Apology of St. Justin. "From these", says Duchesne (*Origines du culte chrétien*, p. 53), "we must descend at once to the fourth century. It is about this period that we come upon documents, of a kind that may be made use of, bearing upon the liturgical usages which were afterwards completed and diversified until they became what we see them." This same author adds that from that period it is possible to classify all known liturgies under "four principal types: the Syriac, the Alexandrian, the Roman, and the Gallican. . . . The Syriac had already given way to many sub-types, each having its distinct characteristics." We shall here deal only with the Syriac and Alexandrian types, the only ones used in the East.

The Syriac type, properly so-called, followed in the Patriarchates of Antioch and Jerusalem, as well as in the Church of Cyprus, is mainly represented by the Greek or Syriac Liturgy of St. James and other analogous liturgies. Up to the Arabic invasion Mass was said in Greek, except in the country churches, where Syriac was used. This latter speech was adopted by the Jacobites as their liturgical language when they separated from the official Church. In our day these heretics and the Uniat Syrians are the only ones who retain the Syriac rite, with some modifications especially noteworthy in the Maronite Church.

A sub-type of the Syriac rite is represented by the liturgies used in the Syriac Churches of Mesopotamia and Persia; the liturgy of Sts. Addeus and Maris, still in use among the Nestorians and the Uniat Chaldeans, is another example. Another sub-type is represented by the Armenian Liturgy, also derived from that of Antioch, but modified since 491, when the Armenians separated from the Greek Churches and marked the separation by adding to the divergencies of their rites. Lastly, a third sub-type is represented by the Cappadoco-Byzantine liturgy which is in the main a copy of the Syriac. It was by bishops who were natives of Syria or Cappadocia -- Eusebius, Eudoxius, Gregory Nazianzen, Nectarius, John Chrysostom, and Nestorius -- that the Church of Constantinople was governed at the time of its foundation and definite organization, and it is this Byzantine liturgy that has survived in all Greek Churches, whether Orthodox or Uniat, in the Patriarchates of Alexandria and Jerusalem, in the Churches of Cyprus, Servia, Greece, Bulgaria, Russia, Rumania, and others, just as the Roman Liturgy has predominated in all the Latin Churches. It should be noted, however, that in the majority of these Churches Greek is not the liturgical language, but Arabic, or Slavonic, or Rumanian, into which the text of the Greek Liturgy has been literally

translated. For the Byzantine liturgy there exist, besides the Mass of the Presanctified, known to have existed since the year 615, two complete liturgies: that of St. Basil, in almost universal use in the East about the year 520 (P. L., LXV, 449), and that of St. John Chrysostom, which is the one mainly followed at present.

Of the Alexandrian Liturgy, omitting certain later or doubtful copies, we have three complete texts: the Greek Liturgy of St. Mark, which seems to have been drawn up by St. Cyril; the Coptic Liturgy, said to be by St. Cyril of Alexandria, and the Abyssinian Liturgy of the Twelve Apostles. Each of these represents a different group of the same rite, and all are fundamentally alike.

(3) The Greek Schism; Conversion of the Slavs (Ninth to Eleventh Century)

The Greek Schism, about which space permits us to say very little (see PHOTIUS; MICHAEL CALUBARIUS), was caused by something that must have seemed trivial at Constantinople. On 23 November, 858, the Patriarch Ignatius was deposed, and on 25 December in the same year Photius succeeded him. Ignatius was deposed because he had refused Communion to the Emperor Bardas, who was living openly in sin with his daughter-in-law. It was not the first time at Byzantium that for more or less lawful actions an orthodox patriarch had been deposed and another appointed in his place. Thus, among other examples, Macedonius II had succeeded Euphemius in 496; John III had succeeded Eutychius in 565; Cyrus had succeeded Callinicus in 706, and John VI had replaced Cyrus in 712, without causing any great commotion. Ignatius might then have let things take their course and waited in his retreat till fortune turned his way once more. This he did not do, and, if he was somewhat lacking in suppleness, his right was incontestable. Once he had refused to consent to his deposition, Pope Nicholas I was bound to uphold him and to condemn Photius, who was an outright usurper. Photius was clever enough to see that a rupture with Rome on this point would not satisfy even the Greeks, so he cast about for another issue. He took, one by one,

the many causes for separation that had been in the air for centuries and united them into a body of doctrine; then, confident in his learning and prestige, he decided to give battle. The insertion of the "Filioque" clause in the Creed, the procession of the Holy Ghost *ab utroque*, etc., were so many reasons which were bound to have their effect upon the leading minds when the question of the separation came up. Then again the popes' acknowledgment of the Frankish kings as Emperors of the West was bound to carry weight in Byzantine political circles. Moreover, it was evident by this time that between the Latin and Greek worlds there existed a chasm which must grow broader with the years. However, the Photius affair was arranged. Ignatius forgave his rival and, it appears, on his death-bed designated him as his successor. Pope John VIII sanctioned this choice, and if subsequent popes excommunicated Photius it was for special reasons not yet sufficiently known.

In 886, Photius was deposed by the Emperor Leo VI, who disliked him, and, between 893 and 901, a reconciliation of the two Churches was effected by Pope John IX and the Patriarch Antonius Cauleas. During the entire tenth century, and the first part of the eleventh, relations between the Roman and the Greek Churches were excellent. There were, no doubt, occasional difficulties, always unavoidable in societies different in customs, speech, and civilization, but we may almost go so far as to say that the union between the Churches was as deep and sincere as it was during the first three centuries of Christianity. Michael Cærularius, however, desired a schism for no other reason, apparently, than to satisfy his pride, and in 1054 he succeeded in making one at the very time when everything seemed to promise a lasting peace. For this purpose he brought forward, besides the theological reasons stated by Photius, many others that Photius had neglected or merely hinted at, and which were judged particularly fitted to catch the popular fancy. The use of azymes, or unleavened bread, in the liturgy, the celibacy imposed on all priests in the West, the warlike manners of Western bishops and priests, the shaven face and the tonsure, the Saturday fast, and other such divergencies of practice were used to discredit the Latin Church. Thoughtful men may not have been misled by these specious arguments, but the mass of the people and the monks were certainly influenced, and at Constantinople it was they who made up public opinion. For this very reason the policy of Michael Cærularius, petty and superficial as it was, was better fitted than that of Photius to bring about permanent results. Indeed, so thoroughly did it cut off the Greek peoples from Rome that since then she has never won them back.

Unfortunately, this movement of separation under Photius and Michael Cærularius was on foot at the very time when the Slavs were being converted to Christianity, a fact in the history of the evangelization of the nations second only in importance to the conversion of the Germanic races. The Servians and Croatians, settled by the Emperor Heraclius (610-41) on the lands they still inhabit, had adopted the Christian teaching of Roman priests and bishops. But the progress of the new religion was so slow that a second conversion was deemed necessary. It took place under the Emperor Basil the Macedonian (867-86); as it was entrusted to Byzantine missionaries the Greek Rite of Constantinople was adopted. This had no small weight in detaching from Rome whole provinces that were formerly subject to it, and when these numerous Servian Churches broke away from Byzantium, it was to organize autonomous ecclesiastical bodies independent of both Rome

and Constantinople. In this way a whole region was lost to Catholicism. The Bulgarians, who had crossed the Danube about the same time as the Servians, formed a more or less homogeneous nation with the Slavs and became a warrior people that more than once struck terror into the heart of the Byzantine Basileus. Towards the end of 864, or in the opening months of 865, their king, Boris, was baptized by a Greek bishop and took the name of Michael after his godfather, the Emperor of Byzantium. Photius, who was patriarch at the time, did not see his way to granting all the demands of King Boris, so, like a cunning politician, the latter turned to Rome and succeeded in obtaining successively several missionaries to organize the new-born Church within his territory. His next step was to send away all the German and Byzantine missionaries whom he found there. His real ambition was to have a patriarch of his own who would anoint him emperor just as the Greek patriarch anointed the Basileus at Constantinople, and as the pope anointed the Germanic emperor of the West. Whether he got his patriarch from Rome or from Constantinople mattered little; the main thing was to have one at any cost. Rome did not fall in with his plan, and Boris turned again to Constantinople, thereby initiating a serious misunderstanding between Rome and Constantinople which considerably added to the strain occasioned by the affairs of Ignatius and Photius. Rome claimed the Bulgarians as inhabitants of ancient Illyricum (her former ecclesiastical territory) and as having been baptized by her missionaries; Constantinople claimed that its priests had converted the Bulgarians, that the land was once imperial territory, and that the Council of Chalcedon had given Constantinople the right to consecrate bishops for all barbarian countries. Between the two Churches the Bulgarians did not know which way to turn. They retained the Byzantine Rite, which, with its elaborate ceremonial, made a deep impression upon their child-like imaginations, and, formally, they submitted to Greek bishops, until they should have bishops and a patriarch of their own. When, in 886, the disciples of Sts. Cyril and Methodius, expelled from Moravia by King Swiatopluk, took refuge in Bulgaria, they were received with open arms. The newcomers introduced into Bulgaria the Byzantine Liturgy, but in the Slavonic tongue, whereas hitherto the Bulgarian priests had used the Greek language. From Bulgaria this Byzantino-Slavonic Liturgy spread among the Servians, the Russians, and all the Slav peoples.

The first Bulgarian patriarchate was originally established at Pereiaslaf, then was transferred to various centres in Western Bulgaria, finally to Ochrida (see ACHRIDA). In 1019 it was suppressed, when the town of Ochrida fell into the hands of the Byzantines, or rather it was converted into an independent archbishopric. As such it lasted until 1767 when it was definitively suppressed. However, independent patriarchate or autonomous archdiocese, the Bulgarian Church was from its foundation powerfully influenced by Constantinople; the long series of its Greek or Hellenistic archbishops shared at all times the anti-Roman feelings of that city. The Russian Church is also a spiritual daughter of Constantinople (see RUSSIA). We need not relate here the conversion of that nation; it probably took place about 853, perhaps a little earlier, and both Latins and Greeks probably participated in it. Progress was very slow, however, and when the Czarina Olga wished to become a Christian she had to go to Constantinople for instruction and baptism, on which occasion she took the name of Helena (c. 956 or 957). Olga's conversion had no great influence; the czar, Sviatoslav

(964-972), refused to yield to her wishes that he should also be a Christian. It was not till 989 that Prince Vladimir allowed himself to be baptized, and ordered that his subjects should ever afterwards receive baptism.

The Russian Church was probably organized at this time, and a Greek metropolitan sent by the Byzantine patriarch was installed at Kiev, the Russian capital. Unfortunately, we have no "Notitia Episcopatum" of the Byzantine Church contemporary with this event. The "Notitia" of 980 naturally makes no reference to Kiev, and the next "Notitia" goes from 1081 to 1118 only; in that year the metropolitan See of Kiev appears as number 60; similarly, in the "Notitia" of Manuel Comnenus which appeared about 1170. In this document Kiev appears as presiding over eleven suffragan sees, and this is the earliest information we have concerning the hierarchy of the Russian Church. The head of this Church had a rather inferior place in the Byzantine hierarchy, but exercised the prerogatives of an exarch (q. v.) and, once installed, administered freely his ecclesiastical province. He consecrated its bishops, crowned its czars, and he usually resided at Kiev. Generally, a Greek was chosen for the office so that the medieval Russian Church was but an extension of the Byzantine Church, sharing the liturgy, the dogmatic teaching, and the ecclesiastical antipathies of the latter.

(4) Efforts towards Reunion; The Crusades (Eleventh to Fifteenth Century)

In spite of the emperor and the Court, who favoured an understanding with Rome and the West, Michael Cæularius proclaimed his schism in 1054. He was followed by most of the clergy, also by the monks and the Greek people. Peter, the Patriarch of Antioch, held aloof from this violent

measure, but died soon afterwards, and his successor went over to Cæularius. The Patriarch of Alexandria, usually resident at Constantinople, sided with the bishop of the capital; the Greek Archbishop of Ochrida was devoted to Cæularius and was one of the first to stir up the question of the azymes as a grievance against Rome. Lastly, the head of the Russian Church was only a metropolitan dependent on the Byzantine Church. Therefore, with the exception of the insignificant Patriarch of Jerusalem, who at first tried to agree with both parties, all the Greek Churches had taken sides against Catholicism about the end of the eleventh century. In the years that elapsed from the death of Photius (891) to the fall of Constantinople (1453) the anti-Roman doctrine of the Greek Church took definite shape. Photius was the first who attempted to co-ordinate all possible reasons of complaint against the Latins. He enumerated seven chief grievances: the procession of the Holy Spirit from the Father and the Son, the insertion of the "Filioque" clause in the Creed, the primacy of the pope, the reconfirmation of those confirmed by Greek priests, the Saturday fast, the use of milk foods during the first week of Lent, the obligation of celibacy on the priests. The last three do not in any way affect dogma, and as much might be said of the second. The reconfirmation of those already confirmed seems to have been a false accusation, unless some Latin missionaries sinned through excess of zeal. The primacy of the pope had always been recognized by the patriarchs of the East, and by Photius himself, as long as the pope was willing to condescend to their wishes. The first letter of Photius to Pope Nicholas I does not differ from those of his predecessors, save for its more submissive tone and more humble diction. Appeals to the pope from the East between the second and ninth centuries are very numerous. And as for the Greek theory of the procession of the Holy Ghost, it was no new thing in the ninth century; St. John Damascene and St. Maximus of Chrysopolis had favoured this doctrine long before Photius and were never accused of heresy. It would, therefore, have been easy to find a common ground or compromise that would have harmonized the teaching of both schools. Passing from Photius to Michael Cæularius, we find only one new complaint directed against the Latins, and that liturgical: the use of unleavened bread (see AZYMES). On this point the dispute was impossible of settlement, since each Church had been using its own particular kind of bread from time immemorial. Fresh differences in the meantime arose: the placing (about the thirteenth century) of the Epiclesis before the Consecration; Purgatory, which the Greeks would not admit, although they prayed for the dead and mortified themselves in their behalf; the full glorification of the just prior to the general judgment; the general judgment itself, which they rejected, as did also some Latin medieval theologians; the giving of communion to the laity under one species; baptism by infusion. To all these differences were to be added in the nineteenth century the dogma of the Immaculate Conception and that of Papal Infallibility. Merely for the sake of recording them, we may mention liturgical differences, as the manner of fasting in Lent, the adoption of a new calendar, the manner of making the sign of the cross -- causes of offence which the Greek clergy took pleasure in keeping alive, and which made a deep impression on a people devoted to trifles and, generally, very ignorant.

Papal Efforts at Reunion

The breach declared in 1054 has never been repaired. Yet this has not been the fault of the popes. As early as 1072 we find Alexander II eager for reunion. This attempt failed because of the unflinching opposition of the philosopher Michael Psellos, the Patriarch Xiphilinos, and their fanatical friends. Thenceforth until the fall of Constantinople (1453) the popes multiplied letters, embassies, and paternal advice to win back the erring Greeks to the fold of orthodoxy, and to keep them there on their return. All in vain. The two reconciliations effected by the Councils of Lyons (1274) and of Florence (1439) were solely due to the efforts of the popes and the Byzantine emperors. At Lyons Michael VIII, Palæologus, a clever politician, proclaimed himself and his people Catholics in order to save his crown and to stay the formidable armament of Charles of Anjou. At Florence John VII, Palæologus, came to beg men and arms from Europe to save his capital from the threatening Turks. It would be difficult for an impartial historian to affirm the sincerity of their desire for religious union. One thing is certain, their clergy followed them with the greatest reluctance, and at Lyons the Greek clergy kept aloof from any union with Rome, and would not listen to it at any price. Michael Palæologus was hardly dead (1282) when his son Andronicus undid all that he had accomplished, and even denied religious burial to his father; moreover, the Catholic patriarch, John Veccos, was deposed together with all his friends.

John VII, Palæologus, who had agreed to the union at Florence, either could not, or did not dare, proclaim it in his capital. He feared either the anathemas or the intrigues of men like Mark of Ephesus, or George Scholarios. His brother, Constantine Dragases, the last of the Byzantine emperors, died heroically for his country. He, also, feared at the beginning of his reign to impose the union on his clergy and people. He had to wait until 12 December, 1452, hardly six months before the entry of the Turks into the capital, when Cardinal Isidore solemnly proclaimed the union of Florence in the church of Saint Sophia. Admiral Notaras cynically observed that the Greeks preferred the turban of the prophet to the tiara of the pope. It must, however, be acknowledged that the seeds of union sown by the missionaries and by the envoys of Rome have never been completely stifled. There have always been Greeks who were sincerely Catholics, even in the darkest days of their country's history. Among them some have always defended with their pens, and often at the risk of their lives, the unity of the Church and the primacy of Rome. Demetracopoulos, it is true, has published a lengthy list of the principal anti-Roman writers among the Greeks, but it would be easy to prepare another very large work of the same kind exhibiting the pro-Catholic activity of many Greeks. John Veccos (Beccos), George Acropolites, Isidore of Kiev, Bessarion, Arcudius, Allatius, are names that carry weight with any unbiassed historian, and they had many disciples and imitators.

With few exceptions the popes have always leaned to the religious policy of recovering the East by every means of pacification and, when necessary, by theological controversy. This last means, however, was as a rule foredoomed to failure. Polemics have rarely converted anyone, and when carried on, as in the Middle Ages, with syllogisms and, above all, with insults and outrages, then, instead of conciliating and calming angry souls, they leave behind them only bitterness, asperity, and sometimes hate. If the popes, however, were misled in their choice of weapons, or

rather, if their religious representatives in the East abused controversy and polemic, it must be conceded that the popes stopped there. The violent solution of the Eastern question by the sword -- the crusade which was to profit only the Westerns -- was no doing of the popes. In his stirring appeal at Clermont-Ferrand that set afoot the first armed enterprise, Urban II exhorted the Christians of the West to save their brethren in the East, even before undertaking to free Jerusalem and the Holy Sepulchre. Moreover -- it is almost too well known to need repeating here -- Innocent III denounced vigorously the diversion of the Fourth Crusade to an attack on Zara and Constantinople for the almost exclusive profit of Venice. From 1261 to 1282 (the Sicilian Vespers) Charles of Anjou was hindered from making war on Michael Palæologus and recapturing Constantinople solely by the influence of the Roman Curia. It would therefore be an injustice to blame the popes for the abortive issue of the Crusades. Had they been supported earnestly by East and West alike, Christendom would have fared immeasurably better. Unfortunately, the Catholic States, especially the Italian Republics, were too selfish to grasp the high moral and religious significance of the conduct and aims of the popes. As a rule, the only success of contemporary politicians was in embarrassing the popes. The East, moreover, it must be admitted, did its share in frustrating the work of the Crusades. Far from assisting the generous West in its sublime effort to save Christendom, the Greeks saw in the Crusades only sources of profit for themselves or attempted to hinder their success. While their theologians and polemical writers showed more rudeness and spleen in controversy than did the Latins, their princes and emperors were likewise less disinterested than the leaders of the Crusades. It is to be carefully noted that the crusading movement was by no means a complete failure. At the time of the First Crusade, in the eleventh century, the Turks were in possession of Nicæa, within a stone's throw of Constantinople. Before the Frankish knights Islam retreated, or at least ceased its conquests, in Asia Minor, in Syria, and even in Egypt. And if in the fourteenth century it was enabled to resume its conquering march and cross into Europe, a menace to Christian civilization, it was in consequence of the cessation of the Crusades. Nor must the foundation of the many Catholic institutions in the East, which long outlasted the Crusades, be reckoned as useless. It was their slow but continuous efforts that paved the way for the emancipation of many Christian peoples from the Turkish yoke, and brought about in those countries that increasing influence of the Catholic religion which we now behold. "More important perhaps", says M. Bréhier in "L'Eglise et l'Orient au moyen âge: les Croisades" (Paris, 1907), p. 354, "are the results which the Crusades never dreamed of and which sprang from the contact of Christendom and the Orient. The very complex question as to what European civilization owes to the East cannot be discussed here; yet every day we find traces of the charm which the culture of the East exercised on Europe before and during the Crusades. What we are most concerned with is the advance thus made in geographical knowledge and, in consequence, in the spread of European civilization by expeditions and travels in the East. Asia was really discovered in the thirteenth century by those Italian missionaries and merchants who were the guests of the Mongolian Khans. For the first time since the expedition of Alexander, countries which until then had remained in the penumbra of legend appeared as a reality." Literature, finally, owes much to the Crusades, which, by the literary relations

they established between the Latin and Greek worlds, called forth the magnificent movement of the Renaissance.

(a) Internal Organization of Byzantine Churches

We have already spoken of the Bulgarian Patriarchate of Ochrida, which about 1020 was changed into an autonomous Græco-Bulgarian archbishopric more or less Hellenized, and which, until its suppression in 1767, remained under the influence of Constantinople. Another Bulgarian patriarchate, that of Tirnovo, was established in 1204 by legates from Innocent III and remained Catholic for a long time. Gradually, however, it began to lean towards the Greeks, till it finally disappeared in 1393, and its bishops all passed under the authority of the œcumenical patriarch. Something similar happened to the Servians. Up to about 1204 they were on the most cordial relations with Rome, although it is probable that they recognized the jurisdiction of Constantinople. In 1217 Sabas the Younger crowned his brother king in the pope's name, and established a Servian Church which was at first composed of six dioceses. It was recognized by the Byzantines in 1219. In 1346 King Stephen Douchan threw off all ecclesiastical dependence on Constantinople and set up the Servian Patriarchate of Ipek, which, after many changes of fortune, was suppressed in 1766 and incorporated in the Byzantine Church. The Russian Church continued to depend on Constantinople through its metropolitans at Kiev and at Moscow until 23 January, 1589, when the Byzantine patriarch, Jeremias II, publicly recognized its autonomy, and consecrated Job the first patriarch of Moscow. From that date the Russian Church passes out of the purview of this article. It was not till the fourteenth century that the Church of Constantinople succeeded in imposing upon the Rumanian people, who occupied the north bank of the Danube, a Greek ecclesiastical hierarchy

subject to itself. This was done through the metropolitan sees of Alania and Bitzina, or Soteropolis, with the later sees of Hungaro-Wallachia, Mauro-Wallachia (Moldavia), and Wallachia.

During that troubled period which saw the establishment of the Franks in the East, the Greek patriarchates of Alexandria, Antioch, and Jerusalem suffered especially. As long as the Latins remained undisputed masters of these regions, their Latin patriarchs stubbornly opposed the coexistence of Greek patriarchs, so that the latter had no choice left but to take refuge in Constantinople at the Byzantine Court and to govern their Churches from there as best they could. This method soon became customary, and even after 1453 the patriarchs continued to reside at the Phanar. The Patriarch of Antioch alone returned soon afterwards to his own territory. In the seventeenth century the Patriarch of Jerusalem ventured into Palestine, but it was not till the nineteenth century that the Patriarch of Alexandria left the shores of the Bosphorus. It must also be remembered that Cyprus and Crete (the latter being directly under Constantinople) were unable to have Greek bishops during the long centuries that those islands remained in the hands of the Latins. It would be impossible within the limits at our disposal to give an exact description of the hierarchy of the patriarchate of Constantinople from the tenth to the fifteenth century. A "Notitia Episcopatum" drawn up soon after 1453 reckons 72 metropolitan sees, 8 autocephalous archbishoprics, and 78 suffragan sees divided among 21 ecclesiastical provinces or a grand total of 158 dioceses. This relatively small number of dioceses is explained by the fact that Asia Minor was then but an immense ruin, and that in Europe, in the majority of the Venetian or Frankish possessions, the presence of Greek bishops was not tolerated.

Space forbids us saying more than a few words on the domestic history of the Greek Church. The election of the patriarch belonged by right to the Holy Synod; *de facto*, as we have seen, it was the Basileus or emperor, who elected him. Limited as was the authority of the Holy Synod, it could not always exercise what authority it had, and, on the death of a patriarch, the Basileus often appointed his successor without any previous consultation with the Synod. Nicephorus Phocas attempted to nullify any ecclesiastical nomination not approved by him, an abuse of power which lasted during his lifetime only. The metropolitans were elected by the Holy Synod, the bishops by the metropolitan and his suffragans, if they were sufficiently numerous, or, if not, with the assistance of bishops from another province. The clergy had undergone no change since the earlier period, except that after the twelfth century we hear of no more deaconesses, though some religious women bear that title without any right to it. Moreover, with the exception of Thebes and Bœotia, religious women no longer wore a lay habit or dress. "Commendation" and "charisticariats" were as common as in the West, with their train of simony and vices still more hideous. The *mensa episcopalis* often found its way to the officials of the treasury or some other court functionary, and servility towards the State was the order of the day in all the ranks of the clergy. The patriarchs were obedient tools of the emperors. Yet there were not wanting patriarchs formed in the monastic schools who had the courage to defend their rights and the rights of the Church against the encroachment of the civil power.

Monasticism was more and more popular throughout the Greek world. In Constantinople there were hundreds of monasteries, and every provincial town tried to rival the capital, so that the Byzantine empire became one vast Thebaid. Outside of Byzantium the monasteries formed into groups which surpassed the fame of the ancient solitudes of Egypt and of Palestine. Without speaking of Southern Italy, rich in Greek convents, we must not omit to mention the famous monasteries of Mount Ossa, of the Meteora, of Phocis, and of the Peloponnesus. On Mount Olympus in Bithynia (the neighbourhood of Broussa, Nicæa, and Ghemlek) many religious centres sprang up. On a little corner of land, with a maximum length of 63 miles and a width of from 12 to 20 miles, a veritable oasis of monasticism came into existence, comprising at that time more than a hundred convents. These convents, usually very well filled, sheltered a number of saints and ecclesiastical celebrities. Beginning from the tenth century, the peninsula of Athos saw the rise of monasteries properly so called, and saw the cenobitic usage (community life) supplant the hap-hazard methods of earlier days. Then it was that vocations abounded, and the holy mountain was transformed into an earthly paradise of monks. The convents known to have existed at Mount Athos between the tenth century and the thirteenth numbered more than a hundred. It was at this period, too, that the holy mountain played a preponderating part in the religious history of Constantinople, and in the fourteenth century the Hesychastic controversy, stirred up by its religious, became the dominating preoccupation of the time. There were many other active, though not so well-known, monastic centres -- e. g. Mount Latrus near Miletus, Mount Ganus, and Mount Galesius, Mount St. Auxentius near Chalcedon, the islands of the Archipelago and of the Gulf of Nicomedia, the region of Trebizond, and especially the vicinity of Cæsarea in Cappadocia, with its picturesque lauræ clinging to the slopes of the hills.

The constant controversies with the Latins did not prevent the rise of other controversies that sometimes divided the Byzantine Empire into opposing camps just as in the heart of the Arian and Monophysite conflicts. We shall mention but a few. In 1082 a council condemned the philosopher Italos, a subtle logician whose errors had been refuted by the Emperor Alexius I, Comnenus. Four years later, Leo, metropolitan of Chalcedon, was accused of giving to images the cultus of *latria*, due only to the Deity. In reality he had merely defended the property of his Church and prevented the emperor from carrying off the ornaments of beaten gold and silver from the statues and images. After Leo came Nilos, a monk who had expressed some heterodox views concerning the mystery of the Trinity and the Divinity of Christ. In a council of 20 August, 1143, the Bogomiles were condemned, together with many bishops who favoured them. In 1156 and 1157 two councils anathematized Sotericus Pantengenius, Patriarch-elect of Antioch, who maintained that the Sacrifice of the Mass was not offered up to the Word, but only to the Father and to the Holy Spirit. Two other councils, held in 1166 and in 1170, explained the text, "The Father is greater than I", apropos of which many bishops were again falling into the errors of Arius. The monk Irenicus, suspected of various dogmatic errors was condemned in 1170. The thirteenth century is filled with the quarrel of the Arsenites or partisans of the Patriarch Arsenius, who had been deposed for condemning the assassination of young Lascaris by Michael VIII, Palæologus. Originally a personal affair, it grew eventually into a theological and canonical controversy.

(b) *Hesychasm*

With the fourteenth century we come upon Hesychasm (*hesychia*, "quiet"), the greatest theological conflict of the Greek Church since the old times of Iconoclasm. Gregory Sinaita first spread this doctrine, which he had learned from Arsenius of Crete.

Intrinsically, it offers nothing very remarkable. It is based upon the well-known distinction between the practical religious life, which purifies the soul by cleansing it from its passions, and the contemplative life, which unites the soul to God by contemplation, and is thus the ideal and end of religious perfection. Four or five successive stages lead the disciple from the practical to the contemplative mode of life. But while there was nothing startling in the theological principles of the new teaching, the method pointed out for arriving at perfect contemplation recalled the practices of Hindu fakirs, and was no more than a crude form of auto-suggestion. The alleged Divine splendour which appeared to the hypnotized subject, and was identified with that which surrounded the Apostles on Thabor, was really nothing hut a commonplace illusion. Yet this Thaboric brightness, and the omphalopsychic method of inducing it, gave a widespread reputation to the Hesychasts. No doubt the leaders of the party held aloof from these vulgar practices of the more ignorant monks, but on the other hand they scattered broadcast perilous theological theories. Palamas taught that by asceticism one could attain a corporal, i. e. a sense view, or perception, of the Divinity. He also held that in God there was a real distinction between the Divine Essence and Its attributes, and he identified grace as one of the Divine *propria* making it something uncreated and infinite. These monstrous errors were denounced by the Calabrian Barlaam, by Nicephorus Gregoras, and by Acthyndinus. The conflict began in 1338 and ended only in 1368, with the solemn canonization of Palamas and the official recognition of his heresies. He was declared the "holy doctor" and "one of the greatest among the Fathers of the Church", and his writings were proclaimed "the infallible guide of the Christian Faith". Thirty years of incessant controversy and discordant councils ended with a resurrection of polytheism.

Among the medieval Greek theologians the most famous are the ninth-century Photius, well-known for his anti-Latinism; Michael Psellos, in the eleventh century, an all-round capable writer, theologian, exegete, philologist, historian, scientist, poet, and, above all, philosopher; Euthymius Zigabenos, who composed, at the request of Alexius Comnenus, his "Dogmatic Panoply, or Armoury, Against all Errors"; Nicholas of Methona, Andronicus Cameterus, anti-Latin polemical writers, particularly Nicetas Acominatus (Akominatos), noted for his "Treasure of Orthodoxy". John Veccos (Beccos) and George Acropolites tried to reconcile the teachings of both Latins and Greeks while other Greeks opposed the Latins with all their might. Among the opponents of Palamas were Barlaam, Gregoras, Akyndinos, John the Cypriot, and Manuel Calecas. The theological conflict went on both before and after the Council of Florence (1439); Mark of Ephesus and George Scholarios repudiated the Roman theology, which on the other hand, was adopted and upheld by Bessarion, Isidore of Kiev, Joseph of Methone, and Gregory Mammas.

(5) From 1453 to the Present Time

Relations with the Catholic Church, the Protestants, etc.

The capture of Constantinople by the Turks marks the apogee of the œcumenical patriarchate and the Greek Churches subject to it. By establishing Gennadius Scholarius as the only patriarch of the Orthodox Churches within the Ottoman Empire, Mohammed II placed all the other peoples -- Servians, Bulgarians, Rumanians, Albanians, and Anatolians -- under the exclusive domination of Greek bishops. No doubt the Servian and Bulgarian Churches of Ipek and Ochrida still existed, but; pending their final suppression in 1766 and 1767 respectively, they were hellenized and under Greek control, so that they were in reality but an extension of the Greek Patriarchate of Constantinople. Moreover, the conquest of Egypt and Syria by Sultan Selim in the sixteenth century enabled the Greeks to control the honours and emoluments of the Patriarchates of Jerusalem and Antioch. In the seventeenth century the Patriarchate of Jerusalem was hellenized, and that of Antioch in the opening years of the eighteenth century. As for Alexandria, where the faithful were very few, its Greek titular always resided at Constantinople. In this way the Greek Church gained gradual possession of the immense Ottoman Empire; as the Turks extended their conquests the jurisdiction of the Greek patriarchs extended with them. This situation lasted until the first half of the nineteenth century. The whole Orthodox world was at that time Greek, save in Russia, whose religious autonomy had been recognized in 1589, and in the Austro-Hungarian Empire, where Servians and Rumanians constituted, from the end of the seventeenth century, autonomous Churches, either Catholic or Orthodox. During the greater part of the nineteenth century the principle of nationality -- long cherished at Constantinople, which had employed it against the popes when robbing them of jurisdiction over Illyricum and at one time over Southern Italy -- was turned against the Greeks themselves, especially against the Church of Constantinople. Every province or kingdom that shook off the Turkish suzerainty freed itself at the same time from the ecclesiastical yoke of the Phanar. Curiously enough, it was the Greeks of the Hellenic Kingdom who first set up, in the nineteenth century, an autonomous Church. The Servians and Rumanians were not slow to imitate them. The Bulgarians went farther and, while remaining Ottoman subjects *de jure* until October, 1908, they established about forty years ago an exarchate of their own, independent of the Phanar, with

jurisdiction not only over all Bulgarians in Bulgaria, but also over Bulgarians in Turkey. It is to be expected that the recent proclamation of a Bulgarian kingdom will modify this state of things. A Bulgarian Church may be established within the limits of that kingdom, and a second Bulgarian Church within the limits of Turkey in Europe. The creation of a Servian Church for the Servians in Turkey is also projected, so that the œcumenical patriarchate seems on the eve of dismemberment. In recent times, also, the rivalry of nationalities has passed over from Europe into Asia. In 1899 the Greeks were ejected by the Syrians from the Patriarchate of Antioch; in the same way they may soon lose Jerusalem. In Egypt similar divisions exist between the Greek- and Arabic-speaking elements; the latter, aided by their Mussulman fellow-countrymen, may eventually cast off the ecclesiastical control of the Greeks. In short, at no very distant date the Greeks, who have so long ruled the Orthodox world, will have to be content with the Church of Athens, that of Cyprus, and the sadly weakened Church of Constantinople.

If we look at the domestic situation of the Greek Church during the period from 1453 to 1901, the year of the present titular's accession, we find that, of a total of one hundred and two patriarchs, only twenty-nine have died in possession of their see, and that the seventy-three others either resigned or were deposed. It is a strange phenomenon, seldom met except among the Greeks, that, whereas a patriarch was nominated for life, as a rule he was deposed or forced to resign. It sometimes happened that the same man became patriarch more than once. In this way, while between 1453 and 1901 there were only one hundred and two patriarchs, there were some one hundred and sixty patriarchal elections; thirty-five patriarchs having been elected several times (twenty-one twice, nine three times, two four times, two five times, and one seven times). The last of these records is that of Cyril Lucaris, the famous seventeenth-century Calvinistic patriarch. These continual changes gave rise to some amusing incidents. Thus on 19 October, 1848, Anthimus IV succeeded Anthimus VI, who was deprived of office the day before; at present Joachim III is œcumenical patriarch for the second time, twenty-three years after the death of Joachim IV who had succeeded him. This confusion is by no means peculiar to the Church of Constantinople. In the hellenized Church of Ochrida. we find between the years 1650 and 1700 no fewer than nineteen forced resignations or depositions of archbishops. The two main causes of these sudden changes are the cupidity of the Turks and the ambition of the Greek clergy covetous of the patriarchal throne. The cupidity of the Turks might never have been a factor, had it not been for the intrigues and cabals of the Greek clergy themselves, who put up their patriarchate at auction. On 20 November, 1726, Païsios paid out 145,000 francs for the office of patriarch, and in 1759 the Sultan Mustapha III fixed the tax on the office at 120,000 francs. And yet in many instances the patriarchs did not remain even a year in office. Later, when the Turks had taken off the tax, depositions and resignations went on, and go on to this day as in the past, so much so that the laity now come forward and ask that the duration of a patriarch's term in office be limited, e. g. to three or four years. However, in the Kingdom of Greece, where the Church depends mainly on the State, these scandals do not occur. What has been said of the patriarchs might be even more truly said of the metropolitans and bishops. Though, according to Greek canon law, transfers from one diocese to another are forbidden or ought to be

very rare, as a matter of fact every bishop has administered before his death four or five different dioceses. Either the bishops did not find their dioceses suited to their dignity or the people did not find the bishop suited to their taste. Of late the custom of lay interference in the nomination of bishops is growing, and hardly a year goes by in which seven or eight bishops are not removed at the request of their flocks. Nor must it be forgotten that the bishops busy themselves mainly with anti-Bulgarian or anti-Servian politics and other secular affairs. The Turkish government often has to request the withdrawal of some over-compromised prelate.

It may be noted that the Greek bishops -- those of to-day at least-have received a fairly good education in the secondary schools, followed by a very ordinary course of theology in the seminary of Halki or that of Santa Croce, near Jerusalem. Some of them have spent a few years in the Protestant universities of Germany, or in the ecclesiastical academies of Russia. Their theology is usually limited to a knowledge of the points of controversy between Latins and Greeks from the beginning of their Church until recent times; they use it to bias the minds of their people against the missionary efforts of Catholics. They are more tolerant of Protestants. With the exception of the clergy in the towns, who aim at the higher offices, the Greek priesthood is very ignorant; the priests can hardly get through the Mass and the other services in a fitting manner. Although married, they retain great influence over the illiterate but pious members of their flocks, who are attached to Christianity by tradition or patriotism, and whose ill-instructed religious sense shows itself mainly in ritual observances and superstitious practices. With the exception of two or three seminaries, having about fifty pupils in all, there is no training school for the lower clergy.

The dioceses are divided, as with us, into parishes of various classes. Preaching is neglected and in many places is omitted altogether. For this reason in 1893 some laymen at Smyrna founded the Eusebia Society for the diffusion and explanation of the Word of God. This example has been followed in other places, especially at Serræ, Magnesia, and Constantinople, where laymen preach in the churches as is the custom in some Protestant sects. The higher clergy, far from favouring this movement, which is a reproach for them, do all they can to hinder it. Feast days are the same as in the Latin Church; so are the sacraments, The latter are rarely received, and rather as a matter of custom than of genuine conviction. Communion is received four times a year after the four great fasts: at Easter, on St. Peter's day, on the Assumption, and at Christmas. Confession ought to precede this solemn act, but as a rule it is omitted or treated so slightly by priests and people that it is better not to speak of it. The priests and bishops do not go to confession. Mass is heard on Sundays and Feast-days, or, rather, on those days the people go and say some prayers before the icons, or holy images, the services being generally so long that very few remain to the end. In any case there is no definite teaching on this point any more than on others, everything remaining vague and uncertain in the minds of the people.

(For Feasts and Fasts of the Greek Church, Service Books, Vestments, Church Furniture, etc., see, under CONSTANTINOPLE, THE RITE OF, Vol. IV, pp. 315 sqq.)

The music of the Greek Church began with the ecphonic chant, a sort of recitative based on the laws of accent in prosody. Through the early melodists, or Syriac liturgical poets, this musical

notation may reach back to the ancient liturgical chant of the Jews. The musical characters or signs are Greek. The notation, known as that of St. John Damascene, is merely a development of ecphonic notation. It increased the number of signs from nineteen to twenty-four. In medieval times a monk of Athos, John Koukouzeles, raised it to sixty or more; but in the early part of the nineteenth century Chrysanthos modified or simplified this excessively complicated notation; his "Theoretikon", a very instructive work, has become the basis or guide for all liturgical chants and scientific works thereon. Gregory Lampadarios and Chourmouzios aided Chrysanthos in his reform, which can hardly be called successful. It seems that all three misinterpreted certain old musical signs; moreover, they are responsible for the horrible nasal intonation so abhorrent to Europeans. However, musical reform is in the air; during the past thirty years it has been talked of, and plans have often been submitted, but so far without results. The religious music of the Russians is the only one that expresses any true piety. Its gravity, unctio, and sweetness are beyond question. If a religious music truly Christian ever existed, the Russians have inherited it. Between Russian and Byzantine music there is no connexion whatever. (See also under CONSTANTINOPLE, THE RITE OF, Vol. IV, p. 316.)

Even after the taking of Constantinople by the Turks and the apostasy of the Greeks, the one aim of the popes was to drive back the Turks into Asia and to save the Byzantines in spite of themselves. Nicholas V, Callistus III, Pius II, Paul II, Sixtus IV, Innocent VIII, and Alexander VI

all followed this policy. Julius II sought to convert the Shah of Persia, and to draw him into an alliance against the Sultan; the struggle against the Turks was the great concern of the whole pontifical life of Leo X. If the plan to drive back the Turks into Asia finally failed, the fault lay not with the popes, but with the nations of Christendom, jealous of each other and attentive to their own private gain rather than the interests of Christianity. It must not be forgotten that the victory of Lepanto (1571) was the work of a pope; that a pope worked for the preservation of Candia (1669), and that, had it not been for another pope, John Sobieski would never have relieved Vienna (1683).

From 1453 until the French Revolution the relations between the popes and the Greek patriarchs were very different from what we find to-day. Cordial letters passed frequently between them; priests of either rite were recommended to one another's care and the popes often intervened in the internal affairs of the Greek Church. Many Greek Patriarchs of Constantinople -- among others, Cyril II -- and the Greek Archbishops of Ochrida, Porphyrius about 1600, Athanasius in 1606, Abraham in 1629, Melecius in 1640, Athanasius about 1660, professed the Catholic Faith; at different times many Greek bishops did in like manner. It would be impossible to say how far their conversion was sincere. Possibly the need of monetary help or the wish to make a stand against Protestantism was the motive power. It must at least be acknowledged that their conduct and attitude towards Catholics gave evidence of genuine good will. Thus, to take some well-known examples, in the seventeenth and eighteenth centuries the Jesuits and Capuchins were allowed to preach and hear confessions in the Greek Churches, by the express permission of the patriarch and the bishops. That they made use of this privilege we learn from their correspondence. It is hard to explain the exact reason for the changed attitude of Catholic missionaries since the end of the eighteenth century. Perhaps the change came with the suppression of the Jesuits and the outburst of the French Revolution, which led to the substitution of a new body of missionaries in the East. To-day, as a matter of fact, missionaries of all religious orders and every nationality observe rigidly the rules of Propaganda concerning *communicatio in sacris*. They practically ignore the higher Greek clergy -- not the best way, perhaps, to break down prejudice and win esteem. It is no doubt true that as a rule the higher Greek clergy are noted for their anti-Catholic fanaticism and are never weary of railing against Roman missionaries and of insulting Catholics. Then, too, the Greek people do not distinguish between religion and nationality, a confusion mainly due to the teaching of their clergy; consequently, a Greek will refuse to become a Catholic lest he should cease to be a Greek. Yet great progress has been made during the past twenty or thirty years, thanks to the schools of the French congregations which have been opened in nearly every town in Turkey. In spite of the anathemas of the Greek clergy, boys and girls flock to these Catholic schools, and the consequence is a growing spirit of toleration and sympathy towards Catholics everywhere.

Pius IX and Leo XIII tried to reopen official relations with the Greeks, but unsuccessfully. The reply of the Patriarch Anthimus VI to the Encyclical of Pius IX (1848) was far from friendly; the invitation to assist at the Vatican Council the Patriarch Gregory VI refused even to accept. During his long pontificate Leo XIII was unceasing in his efforts to bring back the Greeks to unity, but they remained unmoved, and when, on 20 June, 1894, in the Encyclical "Præclara", he invited the

Greek Church in all charity to recognize the successor of Peter, the answering encyclical from the Patriarch Anthimus VII was remarkable for its rudeness. The present patriarch, Joachim III, opened a purely theoretical consultation with his subjects on the matter a few years ago, but his attempt was not well received.

The first Protestants with whom the Greek Church sought to unite were the Lutherans. About 1560 the Greek deacon Demetrius Mysos visited Wittenberg to learn at first hand the doctrines of Luther, but his visit had no result. In 1573 two professors of Tübingen, Andreæ and Crusius, assisted by the chaplain, Gerlach, opened a correspondence with the Greek patriarch Jeremias II, which lasted until December, 1581. The patriarch and his theologians set forth over and over again very courteously and very fully the many dogmatic differences between their Church and that of the Reformers. At last Jeremias II refused to answer further letters and wrote to Pope Gregory XIII in June, 1582, that he "detested those men and their like as enemies of Christ and of the Catholic and Apostolic Church." Later on Calvinist doctrines found favour with the patriarch himself, Cyril Lucaris, who occupied the œcumenical throne seven times between 1612 and 1638. The French and Austrian Embassies sided with the Orthodox Greeks; Geneva and Holland favoured the Calvinisers. The conflict lasted through the greater part of the seventeenth century. The main quarrel was over Lucaris's confession of faith, drawn up in Latin, which appeared at Geneva in March, 1629, and in the West stirred up both Catholics and Protestants. Many councils of the Greek Church, especially those of Constantinople in 1638 and 1642, of Jassy in 1642, and of Jerusalem in 1672, extirpated the Calvinist heresy from the Orthodox Churches. Through Peter Mohila, Metropolitan of Kiev, the Russian Church took an active part in the controversy. The personalities that disfigured these disputes embittered the whole of the seventeenth century, and made it the most repulsive in the existence of the Church of Constantinople. Four patriarchs at least were strangled, while in the space of one hundred years there were twenty-nine patriarchs and fifty-four patriarchal elections, i. e. an average of one election every twenty-two months.

After the Lutherans and Calvinists came the Anglicans, or that section of them known as the Non-jurors. Negotiations set on foot with the Greek and Russian Churches lasted from 1716 to 1725, but nothing ever came of them. Then came Zinzendorf, founder of the Moravian Brethren, (1740). Finally, in the nineteenth century we find the Protestant Episcopal Church of England and of the United States coquetting with the Greeks. In several Anglican synods -- e. g., 1866, 1867, 1868 -- a desire for union with the Greeks was expressed, and the Patriarch Gregory VI showed sympathy, but did not hide the difficulties in the way of its immediate realization. At the Synod of Bonn (1874) the Anglicans resolved to remove the "Filioque" from the Creed, to insert the formula "the Holy Spirit proceeds from the Father through the Son", to recognize tradition as a source of revelation, to maintain that the Eucharist was a sacrifice, to admit prayers for the dead, and other points. But the Greeks would not make any concessions. In 1897 the 36th decision of the synod assembled at Lambeth Palace (London) charged the chief representatives of Anglicanism to seek an understanding with Constantinople. The Bishop of Salisbury, the Archbishop of Canterbury, and the Bishop of Gibraltar (who pays an annual visit to the œcumenical patriarch) were to be the

principal negotiators. But the much-desired union is not yet a fact, the great drawback being the difficulty which both Churches find in defining exactly what they hold to be of faith, and what is only theological truth. In 1902 the Patriarch Joachim III consulted the Orthodox Churches as to the usefulness of an understanding with the Protestant Churches; nearly all those who thought it worth while to reply were opposed to the suggestion. Nevertheless there are several union societies in existence -- e. g., the Anglo-Continental Society, founded in 1862, the Eastern Church Association, and others similar -- but so far they have effected nothing. On the other hand, Evangelical societies of various countries have been very active in the East, and have often called forth protests from the higher Greek clergy. While their success among the Greeks has not yet equalled their success among the Armenians, their unceasing propaganda in Asia Minor has ended by creating Greek centres of Protestantism, something hitherto unheard of.

The Old-Catholics from the beginning aimed at union with the Orthodox Church. Theological conferences were held at Bonn in 1874 and 1875 with that object in view, and both parties made concessions, but nothing came of these efforts. Although frequent conferences have since been held, an Old-Catholic Committee instituted at Rotterdam, and the "Revue Internationale de Théologie," established at Berne (1893), the negotiations for union have not made the slightest advance.

With all the Orthodox churches, except the Bulgarian exarchate and the Syrian Patriarchate of Antioch -- both of them considered schismatic for substituting a native episcopate to a Greek one -- the Greek Churches are on terms of union arising from a common faith and a common orthodoxy. By the canons of the œcumenical councils of 381 and 451 the Church of Constantinople enjoys a sort of pre-eminence over the other Churches. But this must not be understood to mean a pontifical primacy so that the head of the Orthodox Church may command with authority the faithful of all other Churches. The Byzantine patriarch has a primacy of honour but not of jurisdiction; he is foremost among his equals -- *primus inter pares* -- and no more. This oft-repeated declaration was renewed at the Council of Jerusalem in 1867, which proclaimed that the Orthodox Churches recognized only an œcumenical council as their supreme master and sovereign judge. When Joachim III, in 1902, wished to consult the other Churches on matters concerning the whole Orthodox party -- e. g., union with the Catholics or Protestants or Old-Catholics, the reform of the calendar, and other matters -- out of thirteen Churches five were not consulted, being in schism or manifestly unfavourable; two did not reply; six replied in the negative. Again in Cyprus, since 1900, the attempts of the œcumenical patriarch to put an end to the schism of that Church are resented; at the present time (1909) his authority is being overthrown at Jerusalem, just as at Alexandria. There is therefore no unity of authority among the Orthodox Churches. Nor is there any unity of faith or discipline. The Bulgarians and the Syrians of Antioch, who are looked on as schismatics by the various Greek Churches, are not such in the eyes of the other Orthodox Churches. The Russians uphold the validity of baptism administered by Catholics or Protestants; the Greeks say such baptism is invalid. The Russians do not admit the deuterocanonical books of the Old Testament, but the Greeks, until quite recently, accepted them. It would be easy to multiply examples. Formerly the

Church of Constantinople claimed the right to send the chrism to all Orthodox Churches as a sign of Orthodox unity and of their dependence on Constantinople. But since the seventeenth century, at least, the Russian Church blesses its own chrism, and sends it in our day to the Churches of Montenegro, Bulgaria, and Antioch. The three Orthodox Churches within the Austro-Hungarian Empire bless their own chrism, as does also the Rumanian Church since 1882. So that the only Churches now receiving the chrism from Constantinople are those of Alexandria, Jerusalem, Cyprus, Greece, and Servia. The moral authority of the œcumenical patriarch over the other Churches is null; consequently it stands to reason he has no dogmatic privileges. The decrees of the first seven œcumenical councils alone have force of law. As a rule, a number of creeds are also considered as instructive concerning faith, e. g., the confession of the Patriarch Gennadius, that of Peter Mohila, the decrees of the Council of Jerusalem in 1672, the confession of Metrophanes Critopoulos. At present these confessions are not held to be infallible, but merely guides in matters of faith.

Greek religious literature since 1453 is mainly polemical, against Catholics and Protestants. Literary interests, once so popular at Byzantium, have long been quite secondary. Greek theologians re-edit continually the most fiery controversial treatises, accentuate the causes of separation between the two Churches, and on occasion invent others. Such, in the fifteenth century, are the writings of Maximus of Peloponnesus and George Scholarius; in the sixteenth century, of Maximus Margunius, Bishop of Cythera, and of Gabriel Severus, Archbishop of Philadelphia; in the seventeenth century of the Calvinist, Cyril Lucaris, of George Coresios, Theophilos Corydaleos, half pagan and half Protestant, Meletius Syrigos, Doritheus of Jerusalem, Nicholas Kerameus of Janina, and Païsios Ligarides; in the eighteenth century the writings of the brothers Joannikios and Sophronius Lichoudes, who laboured especially in Russia, Chrysanthus of Jerusalem, Elias Miniates, Eustratios Argentis, etc. Apart from this truculent school, always fairly numerous among the Greeks, there are but few historians and chroniclers, e. g., Manuel Malaxos, who wrote a history of the Patriarchate of Constantinople from 1458 to 1578; Dorotheus of Monembasia, who drew up a chronological table from the creation to 1629, and Meletius of Janina or of Athens (died 1714), their only historian of note. The monks were the most conscientious workers and tireless editors: Nicodemos the Hagiographer, of amazing productivity; Agapios Landos, his rival; Eugenios Bulgaris, the most learned Greek of the eighteenth century; Œconomos, Meletius Typaldos, Gregory of Chios, and many others.

There are few living theological writers of note in the Greek church. Philotheos Bryennios, Metropolitan of Nicomedia, who rediscovered and edited the "Teaching of the Twelve Apostles", is the only one deserving of mention. It is no less strange than true, that within nearly a century only one manual of dogmatic theology has appeared in Greek, a volume of about 450 pages published at Athens in 1907 by a layman, M. Androutsos -- an index of the esteem that theology enjoys in the Greek Churches. They have, however, translations of Russian, German, or English works, and in this way Protestant ideas are creeping in. The same might be said of other branches of ecclesiastical knowledge. The only good manual of canon law is by a Servian bishop, Mgr. Milasch; the manuals of church history by an Athenian layman, Diomedes Kyriakos, and by Mgr. Philaretos, Metropolitan

of Dimotika, are merely translations or adaptations of Protestant works. Among the laity there are some learned men, e. g., Spiridion Lambros, C. Sathas, A. Papadopoulos-Kerameus, and M. Gedeon. The clergy take no interest in theology, nor, as a rule, in anything intellectual. Politics and dull personal intrigues are their only concern. In this respect the coming generation will perhaps differ from their predecessors. Two reviews have been started: the "Nea Sion" (New Sion) at Jerusalem, and the "Church Beacon" at Alexandria, but both are carried on in a spirit of controversy, and the impartiality and scientific honesty of many of the editors are not above question. The Phanar review, "Ecclesiastical Truth", is only a church weekly.

I have not touched on the religious spirit of the Greek clergy, for as a rule it is sadly deficient; nor on its missions, for there are none; nor its present monastic life, confined to Athos and no more than a recitation of endless prayers interspersed with local intrigues. Other religious houses exist only in name; they are now, for the most part, farms managed by a so-called monk and supplying funds to Athos or elsewhere. Owing to the energy of the lay element, who take an active interest in education, there are many well-conducted primary schools. We have only praise for the efforts of both sexes to create and support works of charity and of benevolence. On this score the Greeks are inferior to no people.

Greek Orthodox Church in America

Greek Orthodox Church in America

The name *Orthodox Church* is generally used to distinguish those of the Greek Rite who are not in communion with the Holy See. It is a name common to the official designation of both Churches of the Greek Rite, but the schismatic or dissenting Churches lay great stress upon the word *Orthodox*, and its implied meaning of correctness of doctrine, while the Uniat Churches lay equal emphasis upon the word *Catholic*. Hence these divisions of the Greek Church are respectively called the "Greek Orthodox" and the "Greek Catholic" for convenience in designation. The Greek Orthodox Church is now well established in America, and nearly every city of considerable size has one or more churches of the various nationalities belonging to that communion. There is no unity among them nor any obedience to a central authority; they conform to the general usages and discipline of the Byzantine Rite, but look to their respective Holy Synods in their home countries for governing authority and direction. Seven nationalities have their churches here, using the Old Slavonic, the Greek, the Arabic, and the Rumanian as their liturgical languages and of these the Russian is the oldest and best established.

I. RUSSIAN ORTHODOX CHURCH

The Russian Church has been established upon American (formerly Russian) territory for over, a century. In this connexion the word *Russian* refers to *rossiisky* (of the Empire of Russia), and not *russky*, which may be translated either Russian or Ruthenian. In 1793 a band of eight missionary monks was sent out from St. Petersburg to Alaska, and the first Russian church was built on Kodiak Island in 1794. In 1798 the first missionary bishop, Joasaph, was consecrated. In 1804 the fort and city of New Archangel (now Sitka) was founded on the island of Sitka. In 1812 the Russians made a settlement in California; Russian Hill, in San Francisco, is still a reminder of them. In Alaska they converted many of the Eskimo and Indians, and the success of their missions was such that in 1840 the monk Ivan Veniaminoff was made the first bishop of "Kamchatka, the Kuriles and Aleutians", and took up his see at Sitka. In 1867, just before Alaska was sold to the United States, he was made Metropolitan of Moscow, and in Russia his advice was of great assistance in the negotiations for the transfer of Alaska. After him the title of the see was changed to "Aleutia and Alaska". In 1872 the see was changed from Sitka to San Francisco, and a Russian cathedral built there. The Russian bishops in America have been Paul (1867-70), John (1870-79), Nestor (1879-82), Vladimir (1883-91), Nicholas (1891-97), and Tikhon (1897-1907). In 1900 the title of the see was changed to "Aleutia and North America", and an assistant bishop was appointed for Alaska. In 1905 Bishop Tikhon changed his see from San Francisco to New York City, and in the year 1906 the Russian Holy Synod raised him to the dignity of archbishop with the suffragan Bishop of Alaska

and a new Bishop of Brooklyn. In 1907 he was succeeded by the present Archbishop Platon, a former member of the Russian Duma.

Until within the last twelve years the Russian Church was hardly known in the United States, being wholly confined to its Pacific shores. In New York between 1870 and 1880 there was a Russian Orthodox chapel on Second Avenue, established by the Rev. Nicholas Bjerring, but it failed for lack of a congregation and support by the Russian authorities. Father Bjerring became a Catholic before his death. The first great impulse to the establishment of the Russian Church in the United States on a large scale was given in 1891, when the late Rev. Alexis Toth, then a Ruthenian Greek Catholic priest in Minneapolis, disobeyed the instructions of Archbishop Ireland and, when threatened with a recall to his native country, left his parish, went to San Francisco, turned Orthodox, and submitted to Bishop Nicholas, and on returning to Minneapolis took over his whole parish to the Russian Orthodox Church. He afterwards tried, in 1892, to take over the entire congregation and church property of St. Mary's Greek Catholic church in Scranton, Pennsylvania. The transfer of the church property was prevented by the courts, but over half the congregation seceded. Toth became an able and energetic advocate of the Russian Orthodox Church among the Ruthenians of America, succeeded in arousing the Holy Governing Synod of Russia to the opportunity to spread Orthodoxy and Panslavism among the Ruthenians in America, and became a most bitter opponent of Catholicism. He was made a mitred protopriest for his efforts and is said to have been the cause of nearly 10,000 secessions from the Greek Catholic to the Russian Orthodox Church. In 1900 the whole Orthodox movement was put under the direction of the "Orthodox Missionary Society of All-Russia", which, together with the Holy Synod, supplies extensive funds and numerous priests for its development here. In 1902 a fine Russian cathedral (St. Nicholas) was built in New York City, and Russian churches have begun to spring up everywhere in the Atlantic States, particularly in Pennsylvania. Numerous priests and lower clergy were brought from Russia, a theological seminary opened in Minneapolis, a monastery in South Canaan, Pennsylvania, the rites of the Greek Church were celebrated with a magnificence and splendour before unknown in America, and the Church itself put on a solid basis. In 1908 the whole United States and Canada were divided into five great *blagochinnia*, or deaneries: New York, Pennsylvania, Pittsburg, the Western States, and Canada, each one having from ten to twenty churches, and there was besides the Diocese of Alaska. In March, 1909, the Russian Church adopted an elaborate Constitution (*Normalny Ustav*) of sixty-four paragraphs, defining the rights of clergy, laity, and parishes, thus creating a local canon law for the United States, subject to the Holy Synod in Russia. This is the more remarkable when there are but few Russians (from Russia) in the United States. The latest figures (1909) for the Russian Orthodox Church in America are: Russians, 7974; Galician Ruthenians, 11,045; Hungarian Ruthenians, 5820; Bukovinians, 4180; making a total of 29,019. Besides these there are in Alaska: Indians, 1891; Aleutians, 2149; Eskimo, 3666. The Orthodox Russian clergy (1909) consist of one archbishop, one bishop, 2 archimandrites, 2 protopriests, 2 hegumens, 15 monastic priests, 70 secular priests, 2 deacons, and 40 cantors. Three of these are in Canada, and fifteen in Alaska. They have 60 churches in the United States, 10 in Canada, and 17 churches and chapels in Alaska. They

have a large church society very much like the Ruthenian ones, the "Pravoslavnoe Obshchestvo Vzaimopomoshchi" (Orthodox Mutual Aid Society), with 133 brotherhoods and 3950 members. Two church journals are published, "Amerikansky Pravoslavny Viestnik" (American Orthodox Messenger), in Great Russian, and "Svit" (Light), in Ruthenian. Their tone is bitter towards Greek Catholics and in many Uniat parishes they excite dissension.

II. GREEK HELLENIC ORTHODOX CHURCH

Greek immigration was confined to the hundreds until 1890; the immigration figures for 1905-08 are: Greece, 77,607; Turkey, 19,032. The first Greek church (Holy Trinity) was opened in New York City in 1891 by Rev. P. Ferentinos from Greece. Subsequently the new church on East 72nd Street was acquired, in which they have erected one of the finest Greek interiors — the altar, iconostasis and throne being of Pentelic marble. The Greeks have begun to build fine churches. There are (1909) about 130,000 Greeks in the United States, chiefly in the Eastern and Middle States, and they publish eighteen newspapers, including two dailies. They have 32 churches in the United States and 2 in Canada, some — like Holy Trinity of Lowell, Mass., and Holy Trinity of New York City — of considerable importance. Their clergy consist of 7 archimandrites, 3 monks, and 25 secular priests, but the churches are in the main governed by the lay trustees and particularly by the president of the board. Of these Greek clergy, 15 are subject to the Œcumenical Patriarch of Constantinople and 20 to the Holy Synod of Athens. This circumstance and the fact that a part of the Greeks come from the Turkish Empire and the other part from the Kingdom of Greece have given rise to many dissensions and prevented the nomination of a Greek bishop for the United States, neither the patriarch nor the Synod wishing to cede such an appointment to the other. On the other hand, they both decline to admit or recognize the authority of the Russian bishops here.

III. SYRO-ARABIAN ORTHODOX CHURCH

These are Syrians of the schismatic Greek Rite who use the Arabic language in their liturgy. They are nearly all from the Patriarchate of Antioch, which just now is quasi-schismatic towards Constantinople but closely affiliated with Russia. They of course began to immigrate to the United States at the time that the other Syrians, Melchites, and Maronites, came. The Russians have greatly assisted them in building churches and establishing missions here, and their bishop, Raphael of Brooklyn, is a Syrian educated in Russia. The first Syro-Arabian church (St. Nicholas) was built in Brooklyn in 1902, and has since become their cathedral church. Their clergy consist of the Syro-Arabian bishop and twelve priests, of whom three are monks. They have (1909) churches in the following localities: Brooklyn and Glens Falls, New York; Boston, Worcester, and Lawrence, Massachusetts; Pittsburg, Johnstown, and Wilkesbarre, Pennsylvania; Grand Rapids, Michigan; Kearney, Nebraska; Beaumont, Texas. There are said to be about 50,000 Orthodox Syrians in the United States, but they are quite scattered. They have frequent dissensions with their fellow-Syrians, the Melchites and Maronites, who are Uniats. They publish two Arabic newspapers in the interest of the Orthodox Church, and have a number of societies in New York and elsewhere.

IV. SERVIAN ORTHODOX CHURCH

This is composed of immigrants from Serbia, Dalmatia, Hungary, and Montenegro. They all speak that southern Slavic language, the Servian, which is identical with the Croatian, except that it is written in the Russian alphabet to which are added two or three letters unknown to Russian, whilst the Croatian (used by, the Roman Catholics) is written with Roman letters. The Russian, the Servian, and the Bulgarian Churches use the Old Slavonic language in the Mass and church offices. The Servians are mainly in Pennsylvania and the West, and the first church was built by the Archimandrite Sebastian Dabovitch in Jackson, Cal. (1894). The Servian Orthodox Church is closely affiliated to the Russian Church in this country, except that some of their churches do not recognize the jurisdiction or authority of the Russian archbishop. There are about 70,000 or 80,000 Servians in the United States, from Pennsylvania to California, Wyoming, and Washington. Their clergy consist of one archimandrite, five monks, and four secular priests, and they have churches in Chicago, Illinois; Pittsburg, McKeesport, Wilmerding, Steelton, and Johnstown, Pennsylvania; Kansas City, Kansas; Denver, Colorado; Jackson and Los Angeles, California; Butte, Montana; St. Louis, Missouri. They also publish three Servian papers, and have several church societies, the chief one "Srbobrar".

V. RUMANIAN ORTHODOX CHURCH

About half the Orthodox Rumanians in the United States come from Rumania and half from Transylvania in Hungary. Their immigration has been all within the past decade, both in the United States and in Canada. They are also under divided jurisdiction, those from Rumania being under the Holy Synod of Rumania and those from Transylvania under the Metropolitan of Hermannstadt. There are about 30,000 Orthodox Rumanians at the present time (1909) in America, including Canada. Their first church was St. Mary's, built in 1907 at Cleveland, Ohio. They have, besides several missionary stations, five churches situated at the following places: Indiana Harbor, Illinois; Cleveland and Youngstown, Ohio; Sawyer, North Dakota; Regina, Canada. Of their clergy — one archimandrite and four secular priests — three are from Transylvania and two from Rumania. It is a noticeable fact that these two branches of the Greek Rite, Catholic and Orthodox, have harmonious relations and attend all Rumanian celebrations together, where matters of their race and language are concerned.

VI. BULGARIAN ORTHODOX CHURCH

Bulgarian immigration into the United States has only recently been in any considerable numbers. While the majority come from the Kingdom of Bulgaria, a great many are also from Macedonia, in Turkey. They dislike the Greeks very much, and while the Turkish contingent of them is nominally under the Patriarch of Constantinople, they recognize only the Exarch of Bulgaria. Neither will they affiliate with the Russian Church authorities here. While there are considerable numbers in New York City, yet they have settled chiefly in Illinois and Missouri, and are scattered also farther

westward. The first Bulgarian Church (Sts. Cyril and Methodius) was built in 1908 by the Bulgarian monk Theophylact at Granite City, Illinois. There is also another one near St. Louis, Missouri, and one is being built at Madison, Illinois, while there are several mission stations. There are about 20,000 Bulgarians and three priests in this country. They publish two papers in their language and have several church societies, but have no national organization.

VII. ALBANIAN ORTHODOX CHURCH

The Albanians use the Greek language in their liturgy, there having been no version into their very difficult tongue. They come from Albania in the southern Balkans and from Epirus and northern Greece. They are also known as Arnauts and call themselves in their own language *skipetar*, "mountaineers" (see ALBANIA). They are, of course, the same race which formerly emigrated into Italy, and whose descendants now form the majority of the Italian Greek Catholics. Albanian immigration to America has been quite recent, but there are now some 15,000 here, mostly settled in the vicinity of New York City and in New England. Although they use the Greek language in their liturgy and have attended the Hellenic Orthodox Church, they have no love for the Greeks. In February, 1908, the Russian Archbishop of Aleutia and North America ordained the Rev. F. S. Noli, a young Albanian, in New York City as an Orthodox priest and established him as missionary for his people in the United States. The Russian Holy Synod has taken steps on his initiative towards translating the Greek Liturgy into Albanian. They have a small chapel in Brooklyn and missions in New England, Pennsylvania, and Missouri. Endeavours have been made by them to attract the Italo-Greeks from their Uniat rite, on the ground of their being also of the Albanian race in America.

Pravoslavny Kalendar (New York, 1903-09); MATROSOFF, *Zaokeanskaya Rus in Istorichesky Viestnik*, LXVII (St. Petersburg, 1897); *Svit* and *Pravoslavny Viestnik* (New York, 1902-09); *Helleno-Amerikanikos Hodegos* (New York, 1909); *Calendarul Ziarul Romanul* (Cleveland, 1909); *The Messenger*, XLII (New York, 1904), for December; *Echos d' Orient*, VII (Paris, 1904), for May and July.

ANDREW J. SHIPMAN.

Greek Rites

Greek Rites

(1) *Rite, Language, Religion*

These are three things that must always be distinguished. A rite is a certain uniform arrangement of formulæ and ceremonies used for the Holy Eucharist, the Canonical Hours, the administration of other sacraments and sacramentals. These offices, as far as we know, have never been performed in the same way throughout Christendom. There are now, apparently there always have been, different rites, equally legitimate, used in different places both by Catholics and other Christians. Obviously each rite was originally composed in some language. But rite is not language; the various rites cannot be classified according to their languages. There are many different rites in the same

language; on the other hand the same rite, remaining the same in every detail, is constantly translated. Thus, in the West, the Roman and Gallican Uses are both written in Latin, but they are completely different rites. The Roman Rite is used in Dalmatia in an Old Slavonic version (written in Glagolitic letters), occasionally in Greek in Italy; but in any language it is always the Roman Rite. In the East this want of correspondence between rite and language is still more remarkable. Except those of the Armenians, Nestorians, and Abyssinians, all Eastern liturgies were originally written in Greek. Even the exceptions are only modified derivations from Greek originals. If, then, we take the language in which a rite was originally composed as our test, we must describe all Eastern liturgies as Greek. Indeed, the two great Western parent rites (of Rome and Gaul) represent, as a matter of fact, modified developments from Greek originals too. So we should come to the conclusion that every rite in the Church, every historic liturgy in Christendom is a Greek Rite. If, on the other hand, we make our test present use in the Greek language, we must separate the Byzantine Liturgy said in Greek at Constantinople from what is word for word the same service said in Old Slavonic at St. Petersburg. It is clear then that language is no clue as to rite. At the head of all Eastern liturgies, foundations of two great classes, are the Liturgies of Alexandria and Antioch. They are not only different rites, their difference underlies the fundamental distinction by which we divide all others into two main groups; and both are Greek. And the same Byzantine Liturgy is used unchanged in about fourteen different languages. A second false criterion that must be eliminated is that of *religion*. It would be convenient for classification if members of each Church used the same rite different from that of any other Church. But this is by no means the case. The historic origin and legal position of the various rites is a much more complicated question. Catholics, joined of course entirely by the same faith, obeying the same laws (though in details there are different laws for different branches of the Church), united visibly to the same great hierarchy under the supreme rule of the pope at Rome, are divided according to rite, so that every Eastern liturgy is used by some of them. The same liturgies (but for a few modifications made by the Roman authorities in the interest of dogma) are shared by the various schismatical Churches. Indeed, Catholics and Schismatics often use the same books. The Orthodox Church, that has for many centuries aimed at an ideal of uniformity in the Byzantine Rite (in different languages), till the thirteenth century used those of Alexandria and Antioch too. Now she has restored the Antiochene Liturgy for certain rare occasions, and there are signs that the Alexandrine Rite may soon be restored too. Other schismatical bodies have, it is true, each its own rite, though this rite generally contains alternative liturgies. It will be seen then that these three points are three quite different questions that must not be confused. In the case of any Christian bishop or priest we may ask: what is his Church or sect, what rite does he use and in what language? And the answers may represent all kinds of combinations. A Catholic may use the Roman Rite in Old Slavonic, the Alexandrine Rite in Coptic, the Byzantine in Georgian. An Orthodox priest may use the Byzantine Rite in Arabic or Japanese.

(2) *The Essential Note of a Rite*

We have seen then that neither its language nor the sect of people who use it can be taken as essential to a rite. The real note that defines it is the *place* where it was composed. All rites had

their origin in some one place or city that was an ecclesiastical centre for the country round. After the service had been put together and used here, by a natural process of imitation churches around began to copy the order observed in the great town. The greater the influence of the city where the rite arose, the more widely the rite spread. It was not a question of inherent advantages. No one thought of choosing the rite that seemed most edifying or beautiful or suitable. People simply copied their chief. The rites were formed at first in the patriarchal cities: Rome, Alexandria, Antioch, Constantinople. Jerusalem had already given hers to Antioch. The bishops of each patriarchate naturally thought that they could not do better than celebrate the holy mysteries in the same way as their patriarch. We know in the West how, long before there were any laws on the subject, every one began to copy what was done at Rome. It seemed safest to follow Rome in the matter. The Frankish Church in the eighth century gave up the Gallican Rite, and adopted that of the patriarchal see. The "*Liber sacramentorum Romanæ Ecclesiæ*" spread throughout Western Europe till it had displaced all other uses, except in one or two remote districts. We see the same tendency at work still — uniformity in accordance with Roman customs, even in such details as the shape of vestments and the pronounciation of Latin. So it was in the East with regard to their patriarchal sees. Local customs are gradually suppressed in favour of the patriarch's way of doing things. Schisms and heresies accentuate this uniformity among Catholics. It was a sign of adherence to the Catholic centre — Alexandria, Constantinople, or whichever it might be — to agree entirely with it in rite. Lastly come laws determining this tendency; and so we have the principle that (with exceptions) obtains still throughout Christendom, namely: "Rite follows Patriarchate". The Roman Rite is used throughout the Roman patriarchate, by the clergy subject to the pope as their patriarch, and only by them; the Alexandrine Rite belongs to Egypt — where the patriarch of Alexandria has jurisdiction; that of Antioch to Syria; that of Constantinople to the Byzantine territory. The National Nestorian (East-Syrian) and Armenian patriarchates have their own rites. Such was the principle for many centuries everywhere. Except for the two remnants of other Western rites at Milan and Toledo, it may still be taken as a fairly safe one in the Catholic Church; and among all Eastern sects, except the Orthodox. Since the thirteenth century, however, the Orthodox, regardless of the older tradition, use the Byzantine Rite everywhere, even in their Alexandrine, Antiochene, and Jerusalem patriarchates. In their case, then, the principle cannot be applied. But the exception is rather apparent than real. This spread of the use of the Rite of Constantinople meant an assertion of that patriarch's jurisdiction throughout the Orthodox Church. In this case, too, rite really followed patriarchate; the disappearance of the Liturgies of Alexandria and Antioch among the Orthodox meant, as was intended, the practical disappearance of any real authority in those places save that of the prelate who nearly succeeded in justifying his pompous title of Œcumenical Patriarch. Now that his attempt has failed, and the other patriarchs are becoming more and more conscious of their independence of him, there are signs of a near restoration of their own liturgies, to be used, as before, where their jurisdiction extends.

But a rite in spreading out from the patriarchal city where it was composed does not itself change. Since the invention of printing, especially, and the later tendency to stereotype every detail

of the sacred functions, each rite, wherever used, is made to conform rigidly with its standard form as used in the central church. The Liturgy of Jerusalem-Antioch contains, as the first member of its Great Intercession, a prayer for "the holy and glorious Sion, mother of all Churches", plainly a local touch intended originally for use in Jerusalem, where the rite was written (Brightman, "Eastern Liturgies", 54, 90). The Alexandrine Rite, even if used in far countries, makes the priest pray that God may "draw up the waters of the river to their proper measure" (op. cit., 127, 167) — a local allusion to the flood of the Nile on which fertility in Egypt depends. And the Roman Rite, too, used in every continent, still contains unmistakable evidence that it was composed for use in that one city. The lists of saints ("Communicantes" and "Nobis quoque") contain the Apostles and then local Roman saints, or those, like St. Cyprian, specially honoured at Rome; the Calendar with its Rogation and emberdays supposes the Italian climate; the special heroes of Rome, as St. Laurence, are those that have the oldest great feasts. Of course Rome, like all Churches, honours the Blessed Virgin, the Apostles, the Baptist, St. Stephen, the œcumenical saints of Christendom. After them she naturally honours first her own saints, whose relics hallow her basilicas. The stations at the Roman basilicas affect her year throughout; and on the feast of the Princes of the Apostles she remembers specially "happy Rome purple with their glorious blood". From all this, then, it is clear that the real distinction of rites is not by language nor by the religion of those who may use them, but according to the places where they were composed. The correct and scientific way of describing any rite, therefore, is always by the name of a place. Thus we have the Roman and Gallican Rites in the West; in the East the Rites of Alexandria, Antioch, Constantinople, etc. This is the really essential note of any rite, that it keeps even when translated into other languages.

(3) *What is a Greek Rite?*

An obvious corollary of what has been said is that we had much better never speak of a "Greek Rite" at all. Like the cognate expression "Greek Church" it is a confused and unscientific term, the use of which argues that the speaker has a mistaken conception of the subject. What is called a Greek Rite will always be the rite of some city — Alexandria or Constantinople, and so on. If one wishes to emphasize the fact that the Greek language is used for it, that statement may be added. At Athens and Constantinople they use the Byzantine Liturgy; it may be worth while to add that they use it in Greek, since at St. Petersburg and Sofia they follow exactly the same rite in Old Slavonic. When people further distinguish "pure Greek" and "Græco-Arabic", "Græco-Slavonic" Rites, the confusion is greater than ever. By these last terms they mean rites translated into Arabic and Slavonic out of the Greek. Now, the evidence on the whole tends to show that every ancient rite in Christendom was first used in the Greek language; those of the Copts, Syrians, and Romans certainly were. So that if one calls the Russian service "Græco-Slavonic", one may just as well describe the pope's Mass as "Græco-Latin". It would then be enormously to the advantage of clear ideas if people would stop using this expression and would describe each rite by the name of its place of origin. The name Greek Rites, however, still too commonly used, applies to the three classical Eastern uses whose original forms in Greek are still extant. These are the parent rites of Alexandria and Antioch and the widely spread Byzantine Rite. The Alexandrine Liturgy, ascribed

to St. Mark, is no longer said in Greek anywhere. It is the source of the Coptic and Abyssinian Rites. The Greek text, which was used by the Orthodox of Egypt down to the thirteenth century, will be found in Brightman's "Eastern Liturgies", 113-143; an English translation of the Coptic form follows, 144-188; the Abyssinian Liturgy, 194-244. For a further account see ALEXANDRINE LITURGY. The other parent rite of Antioch stands at the head of a very great family of liturgies. In the original Greek it is represented in two obviously cognate forms, that of the eighth book of the "Apostolic Constitutions" (Brightman, *op. cit.*, 3-27; compare the fragments of the liturgy in the second book, *ib.*, 28-30), and the Liturgy of St. James (*ib.*, 31-68). Its place of origin was not Antioch but Jerusalem. Till the thirteenth century, the Liturgy of St. James was used throughout both patriarchates. It still survives in Greek among the Orthodox for two occasions in the year, on St. James's feast (23 Oct.) at Zacynthus (Zante) and on 31 Dec. at Jerusalem. Translated into Syriac it is used by the Jacobites and Syrian Uniats (text in English in Brightman, 69-110); with further (Romanizing) modifications it forms the Maronite Rite (a Latin version has been edited by Prince Max of Saxony: "Missa Syro-Marunitica", Ratisbon, 1907). The Chaldean Rite, used by Nestorians and Uniat Chaldees (Brightman, 247-305), appears also to be derived, if remotely, from St. James's Liturgy. The Byzantine Use is further derived from this, and the Armenian Liturgy from that of the Byzantines. So, except for the services of Egypt and her daughter-Church of Abyssinia, the Greek Liturgy of St. James stands at the head of all Eastern rites (see article ANTIOCHENE RITE).

People who speak of the Greek Rite generally mean that of Constantinople. The name is an unfortunate example of false analogy. We have all learnt in school of Greek and Roman history, Greek and Roman classics and architecture, and we know the Roman Rite. It is tempting to balance it with a Greek Rite, just as Homer balances Virgil. How different the real situation is this article shows. The Byzantine Rite, to which should always be given its own name, is the most wide-spread in Christendom after that of Rome. It was formed first in Cappadocia, then at Constantinople, by a gradual process of development from that of Antioch. The names of St. Basil (died 379) and St. John Chrysostom (died 407) are, not altogether wrongly, attached to the chief periods of this development. From Constantinople the rite then spread throughout by far the greater part of Eastern Christendom. As the power of the patriarchs of the imperial city grew, so did they gradually succeed in imposing their use on all bishops in communion with them. Now, except for the two insignificant exceptions noted above, the Byzantine Rite is used throughout the Orthodox Church. It seems that this abuse will not last much longer. Since the authority of the œcumenical patriarch outside of his own patriarchate has already come to an end, we may live to see the old rites restored in Egypt and Syria, according to the traditional principle that rite follows patriarchate. The Use of Constantinople is also followed by a great number of Catholic Uniats, Melchites in Syria and Egypt and others in the Balkans, the Austro-Hungarian monarchy, Italy, etc. These people represent the old Patriarchate of Constantinople in the Catholic Church; but that Church has never, like her Orthodox rival, set up a principle of uniformity in rite. There are, besides the Latins, Uniats of every rite. The text of the Byzantine Liturgy in Greek will be found in Brightman, 309-411. It is also used, translated into many languages. The older classical versions are Arabic and Old Slavonic (Syriac is no longer

used, Georgian only by a handful of Uniats). Then come Rumanian and a number of modern languages used chiefly by Russian missionaries in Siberia, China, Japan, and America (list in Brightman, pp. lxxxii-lxxxiii). Uniats recognize as liturgical languages for this rite only Greek, Arabic, Old Slavonic, and Georgian. It is these versions of the Byzantine Rite that people mean when they speak of "mixed Greek" rites. There are no changes of any importance in them. The Old Slavonic books contain some local feasts, and a few quite insignificant variants of the text; the same applies to the Arabic versions. Otherwise they are mere translations. The student of this rite (except in the case of very specialized study) should always turn to the Greek original. For further description see CONSTANTINOPLE, THE RITE OF.

Kirche des Morgenlandes* (Berlin, 1893); ENGD AHL, *Beiträge zur Kenntnis der Byzantinischen Liturgie* (Berlin, 1908. the Greek text and a Latin version of the liturgy from a manuscript in the Grand-ducal Library at Baden, probably of the fifteenth century); PRINCE MAX OF SAXONY, *Ritus Missæ Ecclesiarum Orientalium S. Ram. Eccl. unitarum* (Ratisbon, 1907-), i. e. Latin versions of Uniat liturgies.

ADRIAN FORTESCUE.

Hugh Green

Hugh Green

Martyr; born about 1584; martyred 19 August, 1642. His parents, who were Protestants, sent him to Peterhouse, Cambridge, where he took his degree in 1605, but was afterwards converted and entered Douai College in 1610. He left again in 1612 to try his vocation among the Capuchins. From want of health or some other cause, he was unable to continue, and became a chaplain at Chideock Castle, Dorsetshire, the home of Lady Arundell of Lanherne. On 8 March, 1641, Charles I, to placate the Puritan Parliament, issued a proclamation banishing all priests from England, and Green resolved to obey this order. Unfortunately the news had been late in reaching him, and when he embarked the month of grace given for departure was just over. He was therefore arrested, tried, and condemned to death in August. In prison his constancy so affected his fellow-captives that two or three women sentenced to die with him sent him word that they would ask his absolution before death. They did so after confessing their sins to the people, and were absolved by the martyr. A providential reward for his zeal immediately followed. A Jesuit Father, despite the danger, rode up in disguise on horseback, and at a given sign absolved the martyr, who made a noble confession of faith before death. As the executioner was quite unskilled, he could not find the martyr's heart, and the butchery with appalling cruelty was prolonged for nearly half an hour. After this the Puritans played football with his head, a barbarity happily not repeated in the history of the English martyrs.

J. H. POLLEN.

Thomas Louis Green

Thomas Louis Green

Priest and controversialist; b. at Stourbridge, Worcestershire, 1799; d. at Newport, Shropshire, 27 Feb., 1883. He was the son of Francis Green of Solihull Lodge, Warwickshire, and as a boy was entrusted to the care of Bishop Milner, by whom he was sent to Sedgley Park School, and afterwards in 1813 to Oscott. Having completed his theological studies there, he was ordained priest in Feb., 1825, and remained at the college as procurator. In 1828 he succeeded the Rev. J. McDonnell at Norwich, where he became known as a controversialist. Challenged to a public disputation, Green declined on the ground that no real good would be effected, but harm would arise owing to the excited and prejudiced feelings prevalent. He, however, undertook to meet all charges in a course of sermons, which he did successfully. After two years he went to Tixall, Staffordshire, as chaplain to Sir Clifford Constable, Baronet, and while there was engaged in a controversy with the Anglican clergyman, in which he strove, though fruitlessly, to have the Anglican burial service omitted in cases of the interment of Catholics in the parish churchyard. In 1846 he went back to Oscott as prefect of discipline, a post which he held for two years before becoming chaplain to St. Mary's Priory, Princethorpe, near Coventry. He was priest at Mawley, Shropshire, in 1858, and at Madeley, Shropshire, in 1859, while in 1860 he became chaplain to Lord Acton at Aldenham Park, near Bridgnorth, Shropshire, where he remained for the rest of his active life. In 1868 Pius IX granted him the honorary degree of Doctor of Divinity in recognition of his services. He retired shortly before he died to Salter's Hall, Newport, Shropshire.

His works were: "A series of discourses on the principal controverted points of Catholic Doctrine delivered at . . . Norwich" (Norwich, 1830), reprinted under the title "Argumentative Discourses" in 1837; "A Correspondence between the Protestant Rector of Tixall and the Catholic Chaplain of Sir Clifford Constable" (Stafford, 1834); "A Letter addressed to Rev. Clement Leigh" (London, 1836); "The Truth, the Whole Truth, and Nothing but the Truth" (London, 1838); "The Secular Clergy Fund of the late Midland District" (London, 1853, privately printed); "Rome, Purgatory, Indulgences, Idolatry, etc." (Bridgnorth, 1863); "Indulgences, Sacramental Absolutions and Tax Tables of the Roman Chancery and Penitentiary considered in reply to the charge of Venality" (London, 1872, 1880). He also contributed to the "Orthodox Journal", "Catholic Magazine" and "True Tablet".

EDWIN BURTON

Green Bay (Wisconsin)

Green Bay

(SINUS VIRIDIS)

The Diocese of Greenbay — established 3 March, 1868, from the territory of the Diocese of Milwaukee — comprises sixteen counties of the State of Wisconsin, U.S.A.: Brown, Calumet, Door, Florence, Forest, Kewaunee, Langlade, Manitowoc, Marinette, Oconto, Outagamie, Portage, Shawano, Waupaca, Waushara, and Winnebago; an area of 15,387 square miles.

At that time there were in this district thirty-one churches and forty-two stations, with thirty-one priests and fifty-five ecclesiastical students; eleven parish schools and seven convents of the School Sisters of Notre Dame, the Ursulines, Sisters of St. Agnes, the Third Order of St. Dominic, and the Third Order of St. Francis, with a Catholic population of about 50,000. It was mixed Irish-American, German, Belgian, and Dutch, with a few Indians, Poles and Bohemians are now to be added to this classification.

BISHOPS

(1) Joseph Melcher

Joseph Melcher was appointed the first bishop, and consecrated at St. Louis, Missouri, 12 July, 1868. In 1855 he had been appointed Bishop of the proposed See of Quincy, Illinois, but declined the appointment. The See of Quincy was soon after suppressed and the title transferred to Alton. Bishop Melcher was born, 19 March, 1806, at Vienna, Austria, and ordained priest at Modena, Italy, 12 March, 1830. He died at Green Bay, 20 Dec., 1873.

(2) Francis Xavier Krautbauer

Francis Xavier Krautbauer, second bishop, was consecrated 29 June, 1875, at Milwaukee, Wisconsin. A native of Bruck, Bavaria, where he was born, 12 January, 1824, he was ordained priest, 16 July, 1850, at Ratisbon. He died suddenly, 17 December, 1885, at Green Bay.

(3) Frederic Xavier Katzer

Frederic Xavier Katzer, third bishop, had been vicar-general of the diocese. He was born, 7 February, 1844, at Ebensee, Upper Austria, and in the last year of his collegiate course at Friedberg he volunteered for the American mission. Arriving in the United States in May, 1864, he entered the Salesianum at St. Francis, near Milwaukee, where he completed his theological course and was ordained priest, December, 1866. He taught in the Milwaukee Seminary until 1875, when Bishop Krautbauer made him his secretary, and three years later vicar-general of Green Bay. On 30 January, 1891, he was promoted archbishop and transferred to Milwaukee, where he died, 20 July, 1903.

(4) Sebastian Gebhard Messmer

Sebastian Gebhard Messmer, fourth bishop, was consecrated at Newark, New Jersey, 27 March, 1892. He was born 29 August, 1847, at St. Gall, Switzerland, and ordained priest, 23 July, 1871, at Innsbruck, Austria. He was professor of theology at Seton Hall College, New Jersey, from 1871

to 1889, and was professor of canon law at the Catholic University, Washington, when chosen bishop. He was promoted to the Archbishopric of Milwaukee, 28 November, 1903.

Joseph J. Fox

Joseph J. Fox, fifth bishop, was consecrated, 25 July, 1904. He was born in Green Bay, 2 August, 1855, and made his theological studies at Louvain. He was ordained priest, 7 June, 1870, and served as secretary to Bishop Krautbauer, vicar-general of the diocese, and pastor of Marinette, before he was appointed bishop, 27 May, 1904.

RELIGIOUS COMMUNITIES

The religious communities located in the diocese are: -- Men: -- Capuchins, Franciscans, Premonstratensians, Fathers of the Society of the Divine Saviour, Oblates of Mary Immaculate, and the Alexian Brothers. Women: -- Sisters of St. Agnes, Sisters of St. Dominic, Felicians, Third Order of St. Dominic, Sisters of Charity, Sisters of Christian Charity, Hospital Sisters of St. Francis, Little Sisters of the Poor, Sisters of Mercy, Polish Sisters of St. Joseph, School Sisters of St. Francis, Sisters of St. Francis, Sisters of Our Lady of Christ, Sisters of Misericorde, School Sisters of Notre Dame, Sisters of the Sorrowful Mother, Sisters of the Society of the Divine Saviour, Sisters of the Third Order of St. Francis.

STATISTICS [1910]

202 priests (47 regulars), 25 ecclesiastical students, 54 brothers, 45 churches, 65 missions, 3 stations, 3 chapels, 104 parish schools (16,482 pupils), 1 academy (95 pupils), 2 colleges (109 students), 1 Indian school (224 pupils), 1 orphan asylum (227 inmates), 1 industrial and reform school (66 inmates), 1 infant home and asylum (50 inmates), 17,418 young people under Catholic care, 8 hospitals, Catholic population 135,000.

Catholic Directory (Milwaukee, 1909); Catholic Home Almanac (New York, 1892); REUSS, Biog. Encycl. Cath. Hierarchy U.S. (Milwaukee, 1898); Catholic Citizen (Milwaukee), files.

THOMAS F. MEEHAN

Greenland

Greenland

An island stretching from within the Arctic Circle south to about 59 degrees N. latitude, being between 20 degrees and 75 degrees W. longitude. In shape it more or less resembles a triangle, its apex pointing south, its base facing north, in which direction its extent has not been precisely ascertained. It is bounded on the north by the Arctic Ocean; on the west, by Smith Sound, Baffin's Bay and Davis Strait; on the east by the Arctic and the Atlantic Oceans. Its area has been estimated at about 512 square miles. The interior of this huge island is a plateau rising gradually towards the east, above which a few mountain peaks tower to a height of more than 13,100 feet. Immense fields of ice, varying in thickness, are lodged on the island, and, on the coast here and there, form steep

walls launching mighty glaciers towards the ocean, where, caught by the currents, they drift southwards. These ice-fields and the continually moving masses of ice, which are diminished only in the month of July, constitute the main difficulty in approaching the coast, which is indented with numerous fiords and lined with small islands. The mineralogical composition of Greenland is varied and comprises granite, sandstone, syenite, porphyry, and some brown coal, tin and iron. Ivigtut is the only locality outside of Siberia which is known to produce the mineral kryolite (or kryolith) used in the manufacture of aluminum. The valleys in the south-west, traversed by rivers, and the hills facing towards the south-west, are the only sections of the country where vegetation finds a soil to nourish it, hence, as well as by reason of the severity of the long winters, the flora is comparatively insignificant. In the north the only vegetation consists of lichens and mosses, in the milder regions of the south berries and various dwarfed plants are met with, while the most sheltered localities produce willow, alder, and birch trees, which, however, seldom attain the height of twelve to fifteen feet. Farming is not to be thought of; even the hardy potato yields only here and there a small return. On the other hand, some vegetables, especially lettuce and cabbage, thrive comparatively well. The dog is the only domesticated animal. Chickens, sheep, goats, and horned cattle are bred only occasionally. For game there are the reindeer, moose, and arctic hare, besides numberless bears and foxes which are constantly hunted for their valuable skins. Numerous species of birds furnish the habitants with food -- the flesh of the ptarmigan and the eggs of the sea gull -- while the eider duck yields its down. Whaling, seal-hunting, and fishing are of vital importance. Navigation on any considerable scale is possible only during the summer. Communication between the different settlements is maintained by means of the *umiak*, a boat made of sealskin generally about thirty feet in length. For hunting and fishing the Greenlander uses the "kajak", a boat propelled by means of paddles. The staple exports of Greenland are whale-oil, the skins of seals, bears, and foxes, eiderdown, and kryolith, all amounting to about 500,000 *kronen*. The value of the imports-coal, foodstuffs, and articles of common use-is about double that of the exports.

The original inhabitants of Greenland, the Eskimos, belong to the Mongolian race and are for the most part at least nominal Christians, under the jurisdiction of the Bishop of Zealand. A number of the inhabitants residing on the east coast are still pagans. The creed of the latter shows pantheistic tendencies, and the exercise of their religion consists in certain forms of prayer and curious ceremonies. Without any clear conception of their responsibility to a supreme being they have, nevertheless, rude notions of heaven and hell. Their priests are at the same time teachers, judges, and doctors. Naturally amiable, though somewhat irascible and vindictive, and careless of cleanliness, the Christian Eskimos need constant guidance to prevent their relapsing into the general disregard for morality, which formerly obtained among them. The lords of the land are some 300 Danes. Politically, the country is divided into the North and South Inspectorates. The most notable settlements are: Godthaab, Neuherrenhut, Christianehaab, Jakobshavn, Fredrikshaab, Claushavn, Fiskernas, Sukkertoppen, Ritenbenk, Sydbay, Nosoak, Holstenborg, Egedeminde, Upernivik.

HISTORY

Greenland can hardly be said to possess any political history as the small number of its inhabitants precluded its exerting any influence on the destiny of other countries. Although many historians claim that the Norse colony, which flourished there during the Middle Ages, was destroyed by the Skralings (Eskimos), proof is wanting, and, considering the pacific character of the Eskimos, it is more probable that the colonists, relatively few in number, lost their identity by intermarriage with the aborigines. It is, however, an established fact that the Eskimos were in Greenland (at least transiently) at the time the Norseman Gunnbjorn set foot on the island and when Eric the Red of Iceland settled there (983). Eric gave the island its name. In the "Islendingabok", written about a century later by Are Frothi, it is stated that there were found on the island numerous deserted huts, parts of boats, and various stone implements such as are in use even unto this day in the north-east and the west around Disko Bay and the Umanak Fiord. Eric named his first settlement (the site is unknown) Brattahild. Kinsmen and friends soon joined him, and in a short time the Norse population grew considerably. With Christianity a higher civilization entered the island. When Norway took possession of Greenland there were more than three hundred farms, supporting a population of over three thousand, partly in Ostrabygd, partly in Westrabygd (both places on the western coast.). The means of subsistence were practically the same as those of to-day, except that cattle-raising was more general.

Greenland was considered a possession of the Norwegian Crown as late as the time of the Union of Kalmar (see Styffre, Skandinavien under Unionstiden, II, Stockholm, 1880, p. 355). The continued disturbances in the Scandinavian kingdoms caused these remote colonies to be forgotten. Eventually, all relations between the Norse settlers and their mother country ceased, and Greenland kept only a shadowy existence in the European geographies. Tradition had it that the island was rich in game (reindeer, polar bears, sables, marten, fish, and certain monsters" -- perhaps walrus), and that it abounded in marble, crystals, and so on. Its inhabitants were unhappily lost to Christianity. The efforts of Archbishop Walkendorf of Trondhjem, to assist the lost Norse brethren, ended in failure. A general permission to settle there, granted by King Christian III, was also fruitless; the perils of the sea journey deterred his subjects. The honour of having practically rediscovered Greenland belongs to the English. Commissioned by Queen Elizabeth, Frobisher made several voyages northwards, between 1576 and 1578, and at last succeeded in reaching his goal. The work begun by him was continued by his countryman, Davis. The Danish Kings, who, as sovereigns of Norway, claimed Greenland, also sent expeditions there, the most successful of which was that of Dannels (1652-54). In the beginning of the eighteenth century the settlement and Christianization of Greenland recommenced. Factories were erected in Christianehaab (1734), Jacobshavn (1741) and Fredrikshaab (1742). Commerce was developed partly by individuals (e.g. the merchant Severin, 1734) and partly by commercial companies (*allmindelig Handelskompani*, 1774). Since then the Government itself has assumed control of the Greenland trade. In addition to the settlements established by the Government, the Moravian Brethren have founded several stations. The eastern coast of Greenland was not properly explored and described until the nineteenth century -- by Scoresby (1822), Clavering (1823), Graah (1829), the German expedition (1869), and the Danish expedition (1883-85).

The church history of Greenland naturally divides itself into two periods: the Catholic period, from about 1000 to 1450, and the Protestant period, since 1721. Leif the Happy (Hepni), son of Erik the Red, visited Norway in 990, where he was won over to Christianity by King Olaf Trygvesson, who sent some missionaries to accompany him to his country. In a remarkably short time these missionaries succeeded in converting the Norse colonists, at least outwardly, and in establishing an organized Church. Sixteen parishes were founded successively, together with churches and even a few monasteries. As the distance to Europe made communication very difficult, Greenland, in spite of the small number of souls which it contained, was formed into the Diocese of Gadar, suffragan first to the Archbishopric of Hamburg-Bremen, then to that of Lund, and ultimately to that of Trondhejm. The succession of its bishops is variously listed by Gams and by Eubel, and can hardly be ascertained with certainty at present. But this much seems certain that, before the colony perished, sixteen to eighteen bishops of various nationalities occupied the See of Gadar or at least were nominated to it. Their doings are unknown to history. Tradition has it that Bishop Erik Gnuþson joined an expedition in 1121 for the purpose of locating again the eastern coast of North America which had been discovered 100 years previously. During the reign of Bishop Arnes (1314-43) Greenland contributed its quota in natural products (walrus teeth) toward the Peter's-pence and the expense of the Crusades. It appears that no bishop visited Greenland after the beginning of the fifteenth century. The succession of titular bishops closes with Vincenz Kampe (1537). As mentioned above, the settlers received no reinforcements, and either perished or, by intermarriage, were assimilated by the pagan Eskimos. European manners and religion thus gave way to pagan barbarism. From the standpoint of the history of civilization it is remarkable that daring navigators had penetrated to the 73rd degree north latitude as early as 1135, and that the first Arctic expedition was undertaken in 1266 under the guidance of Catholic priests. Numerous stone monuments and ruins recall this early Norse Christian period. Of special importance are the ruins of a Romanesque church at Kakortok which, although comparatively small, warrant us in making inferences as to the style and size of other places of worship. Tombstones with runic inscriptions have also been discovered. A few documents have been preserved to which are attached the seals of the Bishops of Gadar (see Cronau, "Amerika", I, 114).

Christianity having disappeared from Greenland for the space of two hundred years, and when Denmark had ceased to give the island any thought, Hans Egede, a Lutheran pastor at Vaagen, conceived the idea of visiting his forlorn countrymen who had lapsed into paganism, and of preaching the Gospel to them. After overcoming all difficulties, he handed in his resignation as pastor and, together with his wife and children, went first to Bergen to establish a Greenland trading company and then, failing in this, to Copenhagen. When presented to the king he managed to interest him in his cause and succeeded in launching the trading company. In his capacity of supreme bishop, the king appointed Egede missionary. After many hardships he reached Greenland, but soon perceived that no descendants of the ancient colonists remained, and that his whole duty would consist in converting the savage Eskimos. By diligent application he acquired their language and, supplementing the spoken word with pictures, induced these people to embrace Christianity. He

remained fifteen years in Greenland and formed a small congregation. After Egede's departure, his son Paul continued his pastorate, completed his father's translation of the New Testament, and compiled a catechism in the Eskimo language. The elder Egede founded a Greenland seminary in Copenhagen and also wrote considerably. In 1740 he received the title of Superintendent of Greenland. He died, 5 November, 1758, at Stubbekjoping on the island of Falster. Since that time a number of preachers have endeavoured to Christianize the aborigines with more or less success. They were assisted in this work by German Moravian brethren, of whom Stack, David, Bohnish, and Beck had already (1733-34) laboured in the field. Their first followers were a certain Kajarnak, his wife and children, who were baptized in 1739. After fourteen years' work a small congregation was established, and a mission house built. The Lichtenfels mission was established in 1766; that of Lichtenau, in 1774; that of Frederiksdal, in 1824. After a century of existence there were four mission stations (twenty-seven male and female missionaries) with 1799 wards (of whom 1715 were baptized, and 736 communicants), to which number were added in 1861 the Umanak mission, and in 1864 the Idlorpait. The largest membership was attained in 1857 (1965 members; about 900 adults). Since then decay has set in, ascribed variously to differences of opinion among the brethren, millenarian tendencies among the neophytes, and friction with the Lutheran ministers of the established Church. Without doubt the action of the Government in dispersing the Greenlanders over their extensive hunting territories was an obstacle to their conversion, as their concentration during the winter season would naturally make them more amenable to spiritual influences. It is apparent that, under these circumstances, their conversion to Christianity was in most cases rather superficial -- a fact also confirmed by reliable witnesses. The history of the Moravian brethren admits that the entire education of the Eskimos (Lutheran) is limited to reading, writing, and the singing of songs; that thrift and benevolence are almost unknown among them, and that their morality in general is, to say the least, questionable. The first volume of the work describing the second German Arctic expedition of 1869-70 contains (pp. 160 and 195) an account of the church at Lichtenau and the cemetery at Fredrikshaab, which throws much light on the religious conditions of that time and also corroborates the opinion that even the descendants of Danes and aborigines most commonly revert to barbarism -- a poor result for the self-sacrifice of such men as Kleinschmidt and Cranz, the former a translator of the Bible and composer of various hymns, and the latter an historian of Greenland. In 1900 the Moravian mission resigned their parishes to the preachers and instructors of the Danish National Church, which had nominally about 8000 members, and left the scene of their thankless labours. Although Greenland, like the adjacent islands, is subject to the jurisdiction of the Vicar Apostolic of Copenhagen, all missionary activity has been suspended.

Quest. Hist.", I (Paris, 1902), 538-82.

PIUS WHITMAN

Gregorian Chant

Gregorian Chant

The name is often taken as synonymous with plain chant, comprising not only the Church music of the early Middle Ages, but also later compositions (elaborate melodies for the Ordinary of the Mass, sequences, etc.) written in a similar style down to the sixteenth century and even in modern times. In a stricter sense Gregorian chant means that Roman form of early plain chant as distinguished from the Ambrosian, Galliean, and Mozarabic chants, which were akin to it, but were gradually supplanted by it from the eighth to the eleventh century. Of the Gallican and Mozarabic chants only a few remains are extant, but they were probably closely related to the Ambrosian chant. Of the latter, which has maintained itself in Milan up to the present day, there are two complete manuscripts belonging to the thirteenth and fourteenth centuries respectively, and a considerable number belonging to the fifteenth and sixteenth centuries. An incomplete manuscript belongs to the twelfth century. It is at present in the British Museum and has been published in the fifth volume of the "Paléographie musicale". All these manuscripts contain the chants both for the Office and

for the Mass. The Office chants are antiphons and responses, as in the Roman books. The Mass chants are *Ingressa* (corresponding to the Introit, but without psalm), *Psalmellus* (Gradual), *Cantus* (Tract), Offertory, *Transitorium* (Communion), and, in addition, two antiphons having no counterpart in the Gregorian Mass, one *post Evangelium*, the other the *Confractorium*. There are, further, a few Alleluia verses and antiphons *ante Evangelium*. Musically it can easily be observed that the syllabic pieces are often simpler, the ornate pieces more extended in their *melismata* than in the Gregorian chant. The Gregorian melodies, however, have more individuality and characteristic expression. Though it is very doubtful whether these Ambrosian melodies date back to the time of St. Ambrose, it is not improbable that they represent fairly the character of the chant sung in Italy and Gaul at the time when the *cantilena romana* superseded the earlier forms. The frequent occurrence of cadences founded on the *cursus* at all events points to a time before the latter went out of use in literary composition, that is before the middle of the seventh century. (See Gatard in "Dict. d'arch. chrét.", s.v. "Ambrosien (chant)" and Mocquereau, "Notes sur l'Influence de l'Accent et du Cursus toniques Latins dans le Chant Ambrosien" in "Ambrosiana", Milan, 1897.)

The name *Gregorian chant* points to Gregory the Great (590-604), to whom a pretty constant tradition ascribes a certain final arrangement of the Roman chant. It is first met in the writings of William of Hirschau, though Leo IV (847-855) already speaks of the *cantus St. Gregorii*. The tradition mentioned was questioned first by Pierre Gussanville, in 1675, and again, in 1729, by George, Baron d'Eckhart, neither of whom attracted much attention. In modern times Gevaert, president of the Brussels music school, has tried to show, with a great amount of learning, that the compilation of the Mass music belongs to the end of the seventh or the beginning of the eighth century. His arguments led to a close investigation of the question, and at present practically all authorities, including, besides the Benedictines, such men as Wagner, Gastoué, and Frere, hold that the large majority of plain- chant melodies were composed before the year 600.

The principal proofs for a Gregorian tradition may be summarized thus:

- The testimony of John the Deacon, Gregory's biographer (c. 872), is quite trustworthy. Amongst other considerations the very modest claim he makes for the saint, "antiphonarium centonem. . . compilavit" (he compiled a patchwork antiphonary), shows that he was not carried away by a desire to eulogize his hero. There are several other testimonies in the ninth century. In the eighth century we have Egbert and Bede (see Gastoué, "Les Origines", etc., 87 sqq.). The latter, in particular, speaks of one Putta, who died as bishop in 688, "maxime modulandi in ecclesia more Romanorum peritus, quem a discipulis beati papae Gregorii didicerat". In the seventh century we have the epitaph of Honorius, who died in 638 (Gastoué, op. cit., 93):

. . . . divino in carmine pollens
 Ad vitam pastor ducere novit ovis

 Namque Gregorii tanti vestigia iusti
 Dum sequeris culpiens meritumque geris

-- that is: "Gifted with divine harmony the shepherd leads his sheep to life . . . for while following the footsteps of holy Gregory you have won your reward." According to this it was thought in Rome, less than forty years after the death of St. Gregory, that the greatest praise for a music-loving pope was to compare him to his predecessor Gregory.

- The feasts known to have been introduced after St. Gregory use in the main melodies borrowed from older feasts. See the detailed proof for this in Frere's "Introduction".
- The texts of the chants are taken from the "Itala" version, while as early as the first half of the seventh century St. Jerome's correction had been generally adopted.
- The frequent occurrence in the plain-chant melodies of cadences moulded on the literary *cursus* shows that they were composed before the middle of the seventh century, when the *cursus* went out of use.

H. BEWERUNG

St. Gregory the Great

Pope St. Gregory I ("the Great")

Doctor of the Church; born at Rome about 540; died 12 March 604. Gregory

is certainly one of the most notable figures in Ecclesiastical History. He has exercised in many respects a momentous influence on the doctrine, the organization, and the discipline of the Catholic Church. To him we must look for an explanation of the religious situation of the Middle Ages; indeed, if no account were taken of his work, the evolution of the form of medieval Christianity would be almost inexplicable. And further, in so far as the modern Catholic system is a legitimate development of medieval Catholicism, of this too Gregory may not unreasonably be termed the Father. Almost all the leading principles of the later Catholicism are found, at any rate in germ, in Gregory the Great. (F.H. Dudden, "Gregory the Great", 1, p. v).

This eulogy by a learned non-Catholic writer will justify the length and elaboration of the following article.

I. FROM BIRTH TO 574

Gregory's father was Gordianus, a wealthy patrician, probably of the famous *gens Amicia*, who owned large estates in Sicily and a mansion on the Caelian Hill in Rome, the ruins of which, apparently in a wonderful state of preservation, still await excavation beneath the Church of St. Andrew and St. Gregory. His mother Silvia appears also to have been of good family, but very little is known of her life. She is honoured as a saint, her feast being kept on 3 November. Portraits of Gordianus and Silvia were painted by Gregory's order, in the atrium of St. Andrew's monastery, and a pleasing description of these may be found in John the Deacon (*Vita*, IV, lxxxiii). Besides his mother, two of Gregory's aunts have been canonised, Gordianus's two sisters, Tarsilla and Æmilians, so that John the Deacon speaks of his education as being that of a saint among saints. Of his early years we know nothing beyond what the history of the period tells us. Between the years 546 and 552 Rome was first captured by the Goths under Totila, and then abandoned by them; next it was garrisoned by Belisarius, and besieged in vain by the Goths, who took it again, however, after the recall of Belisarius, only to lose it once more to Narses. Gregory's mind and memory were both exceptionally receptive, and it is to the effect produced on him by these disasters that we must attribute the tinge of sadness which pervades his writings and especially his clear expectation of a speedy end to the world. Of his education, we have no details. Gregory of Tours tells us that in grammar, rhetoric and dialectic he was so skilful as to be thought second to none in all Rome, and it seems certain also that he must have gone through a course of legal studies. Not least among the educating influences was the religious atmosphere of his home. He loved to meditate on the Scriptures and to listen attentively to the conversations of his elders, so that he was "devoted to God from his youth up". His rank and prospects pointed him out naturally for a public career, and he doubtless held some of the subordinate offices wherein a young patrician embarked on public life. That he acquitted himself well in these appears certain, since we find him about the year 573, when little more than thirty years old, filling the important office of prefect of the city of Rome. At that date the brilliant post was shorn of much of its old magnificence, and its responsibilities were reduced; still it remained the highest civil dignity in the city, and it was only after long prayer and inward struggle that Gregory decided to abandon everything and become a monk. This event took place most probably in 574. His decision once taken, he devoted himself to the work and austerities of his new life with all the natural energy of his character. His Sicilian estates were given up to found six monasteries there, and his home on the Caelian Hill was converted into another under the patronage of St. Andrew. Here he himself took the cowl, so that "he who had been wont to go about the city clad in the *trabea* and aglow with silk and jewels, now clad in a worthless garment served the altar of the Lord" (*Greg. Tur.*, X, i).

II. AS MONK AND ABBOT (C. 574-590)

There has been much discussion as to whether Gregory and his fellow-monks at St. Andrew's followed the Rule of St. Benedict. Baronius and others on his authority have denied this, while it has been asserted as strongly by Mabillon and the Bollandists, who, in the preface to the life of St. Augustine (26 May), retract the opinion expressed earlier in the preface to St. Gregory's life (12

March). The controversy is important only in view of the question as to the form of monasticism introduced by St. Augustine into England, and it may be said that Baronius's view is now practically abandoned. For about three years Gregory lived in retirement in the monastery of St. Andrew, a period to which he often refers as the happiest portion of his life. His great austerities during this time are recorded by the biographers, and probably caused the weak health from which he constantly suffered in later life. However, he was soon drawn out of his seclusion, when, in 578, the pope ordained him, much against his will, as one of the seven deacons (*regionarii*) of Rome. The period was one of acute crisis. The Lombards were advancing rapidly towards the city, and the only chance of safety seemed to be in obtaining help from the Emperor Tiberius at Byzantium. Pope Pelagius II accordingly dispatched a special embassy to Tiberius, and sent Gregory along with it as his *apocrisiarius*, or permanent ambassador to the Court of Byzantium. The date of this new appointment seems to have been the spring of 579, and it lasted apparently for about six years. Nothing could have been more uncongenial to Gregory than the worldly atmosphere of the brilliant Byzantine Court, and to counteract its dangerous influence he followed the monastic life so far as circumstances permitted. This was made easier by the fact that several of his brethren from St. Andrew's accompanied him to Constantinople. With them he prayed and studied the Scriptures, one result of which remains in his "Morals", or series of lectures on the Book of Job, composed during this period at the request of St. Leander of Seville, whose acquaintance Gregory made during his stay in Constantinople. Much attention was attracted to Gregory by his controversy with Eutychius, Patriarch of Constantinople, concerning the Resurrection. Eutychius had published a treatise on the subject maintaining that the risen bodies of the elect would be "impalpable, more light than air". To this view Gregory objected the palpability of Christ's risen body. The dispute became prolonged and bitter, till at length the emperor intervened, both combatants being summoned to a private audience, where they stated their views. The emperor decided that Gregory was in the right, and ordered Eutychius's book to be burned. The strain of the struggle had been so great that both fell ill. Gregory recovered, but the patriarch succumbed, recanting his error on his death bed. Mention should be made of the curious fact that, although Gregory's sojourn at Constantinople lasted for six years, he seems never to have mastered even the rudiments of Greek. Possibly he found that the use of an interpreter had its advantages, but he often complains of the incapacity of those employed for this purpose. It must be owned that, so far as obtaining help for Rome was concerned, Gregory's stay at Constantinople was a failure. However, his period as ambassador taught him very plainly a lesson which was to bear great fruit later on when he ruled in Rome as pope. This was the important fact that no help was any longer to be looked for from Byzantium, with the corollary that, if Rome and Italy were to be saved at all, it could only be by vigorous independent action of the powers on the spot. Humanly speaking, it is to the fact that Gregory had acquired this conviction that his later line of action with all its momentous consequences is due.

In the year 586, or possibly 585, he was recalled to Rome, and with the greatest joy returned to St. Andrew's, of which he became abbot soon afterwards. The monastery grew famous under his energetic rule, producing many monks who won renown later, and many vivid pictures of this

period may be found in the "Dialogues". Gregory gave much of his time to lecturing on the Holy Scriptures and is recorded to have expounded to his monks the Heptateuch, Books of Kings, the Prophets, the Book of Proverbs, and the Canticle of V+Canticles. Notes of these lectures were taken at the time by a young student named Claudius, but when transcribed were found by Gregory to contain so many errors that he insisted on their being given to him for correction and revision. Apparently this was never done, for the existing fragments of such works attributed to Gregory are almost certainly spurious. At this period, however, one important literary enterprise was certainly completed. This was the revision and publication of the "Magna Moralia", or lectures on the Book of Job, undertaken in Constantinople at the request of St. Leander. In one of his letters (Ep., V, liii) Gregory gives an interesting account of the origin of this work. To this period most probably should be assigned the famous incident of Gregory's meeting with the English youths in the Forum. The first mention of the event is in the *Whitby life* (c, ix), and the whole story seems to be an English tradition. It is worth notice, therefore, that in the *St. Gall manuscript* the Angles do not appear as slave boys exposed for sale, but as men visiting Rome of their own free will, whom Gregory expressed a desire to see. It is Venerable Bede (*Hist. Eccl.*, II, i) who first makes them slaves. In consequence of this meeting Gregory was so fixed with desire to convert the Angles that he obtained permission from Pelagius II to go in person to Britain with some of his fellow-monks as missionaries. The Romans, however, were greatly incensed at the pope's act. With angry words they demanded Gregory's recall, and messengers were at once dispatched to bring him back to Rome, if necessary by force. These men caught up with the little band of missionaries on the third day after their departure, and at once returned with them, Gregory offering no opposition, since he had received what appeared to him as a sign from heaven that his enterprise should be abandoned. The strong feeling of the Roman populace that Gregory must not be allowed to leave Rome is a sufficient proof of the position he now held there. He was in fact the chief adviser and assistant of Pelagius II, towards whom he seems to have acted very much in the capacity of secretary (see the letter of the Bishop of Ravenna to Gregory, *Epp.*, III, lxvi, "*Sedem apostolicam, quam antae moribus nunc etiam honore debito gubernatis*"). In this capacity, probably in 586, Gregory wrote his important letter to the schismatical bishops of Istria who had separated from communion with the Church on the question of the Three Chapters (*Epp.*, Appendix, III, iii). This document, which is almost a treatise in length, is an admirable example of Gregory's skill, but it failed to produce any more effort than Pelagius's two previous letters had, and the schism continued.

The year 589 was one of widespread disaster throughout all the empire. In Italy there was an unprecedented inundation. Farms and houses were carried away by the floods. The Tiber overflowed its banks, destroying numerous buildings, among them the granaries of the Church with all the store of corn. Pestilence followed on the floods, and Rome became a very city of the dead. Business was at a standstill, and the streets were deserted save for the wagons which bore forth countless corpses for burial in common pits beyond the city walls. Then, in February, 590, as if to fill the cup of misery to the brim, Pelagius II died. The choice of a successor lay with the clergy and people of Rome, and without any hesitation they elected Gregory, Abbot of St. Andrew's. In spite of their

unanimity Gregory shrank from the dignity thus offered him. He knew, no doubt, that its acceptance meant a final good-bye to the cloister life he loved, and so he not only refused to accede to the prayers of his fellow citizens but also wrote personally to the Emperor Maurice, begging him with all earnestness not to confirm the election. Germanus, prefect of the city, suppresses this letter, however, and sent instead of it the formal schedule of the election. In the interval while awaiting the emperor's reply the business of the vacant see was transacted by Gregory, in commission with two or three other high officials. As the plague still continued unabated, Gregory called upon the people to join in a vast sevenfold procession which was to start from each of the seven regions of the city and meet at the Basilica of the Blessed Virgin, all praying the while for pardon and the withdrawal of the pestilence. This was accordingly done, and the memory of the event is still preserved by the name "Sant' Angelo" given to the mausoleum of Hadrian from the legend that the Archangel St. Michael was seen upon its summit in the act of sheathing his sword as a sign that the plague was over. At length, after six months of waiting, came the emperor's confirmation of Gregory's election. The saint was terrified at the news and even meditated flight. He was seized, however, carried to the Basilica of St. Peter, and there consecrated pope on 3 September, 590. The story that Gregory actually fled the city and remained hidden in a forest for three days, when his whereabouts was revealed by a supernatural light, seems to be pure invention. It appears for the first time in the Whitby life (c. vii), and is directly contrary to the words of his contemporary, Gregory of Tours (*Hist. Franc.*, X, i). Still he never ceased to regret his elevation, and his later writings contain numberless expressions of strong feeling on this point.

III. AS POPE (590-604)

Fourteen years of life remained to Gregory, and into these he crowded work enough to have exhausted the energies of a lifetime. What makes his achievement more wonderful is his constant ill-health. He suffered almost continually from indigestion and, at intervals, from attacks of slow fever, while for the last half of his pontificate he was a martyr to gout. In spite of these infirmities, which increased steadily, his biographer, Paul the Deacon, tells us "he never rested" (*Vita*, XV). His work as pope is of so varied a nature that it will be best to take it in sections, although this destroys any exact chronological sequence. At the very outset of his pontificate Gregory published his "*Liber pastoralis curae*", or book on the office of a bishop, in which he lays down clearly the lines he considers it his duty to follow. The work, which regards the bishop pre-eminently as the physician of souls, is divided into four parts. He points out in the first that only one skilled already as a physician of the soul is fitted to undertake the "supreme rule" of the episcopate. In the second he describes how the bishop's life should be ordered from a spiritual point of view; in the third, how he ought to teach and admonish those under him, and in the fourth how, in spite of his good works, he ought to bear in mind his own weakness, since the better his work the greater the danger of falling through self-confidence. This little work is the key to Gregory's life as pope, for what he preached he practiced. Moreover, it remained for centuries the textbook of the Catholic episcopate,

so that by its influence the ideal of the great pope has moulded the character of the Church, and his spirit has spread into all lands.

(1) Life and Work in Rome

As pope Gregory still lived with monastic simplicity. One of his first acts was to banish all the lay attendants, pages, etc., from the Lateran palace, and substitute clerics in their place. There was now no *magister militum* living in Rome, so the control even of military matters fell to the pope. The inroads of the Lombards had filled the city with a multitude of indigent refugees, for whose support Gregory made provision, using for this purpose the existing machinery of the ecclesiastical districts, each of which had its deaconry or "office of alms". The corn thus distributed came chiefly from Sicily and was supplied by the estates of the Church. The temporal needs of his people being thus provided for, Gregory did not neglect their spiritual wants, and a large number of his sermons have come down to us. It was he who instituted the "stations" still observed and noted in the Roman Missal (see STATIONS). He met the clergy and people at some church previously agreed upon, and all together went in procession to the church of the station, where Mass was celebrated and the pope preached. These sermons, which drew immense crowds, are mostly simple, popular expositions of Scripture. Chiefly remarkable is the preacher's mastery of the Bible, which he quotes unceasingly, and his regular use of anecdote to illustrate the point in hand, in which respect he paves the way for the popular preachers of the Middle Ages. In July, 595, Gregory held his first synod in St. Peter's, which consisted almost wholly of the bishops of the suburbicarian sees and the priests of the Roman titular churches. Six decrees dealing with ecclesiastical discipline were passed, some of them merely confirming changes already made by the pope on his own authority.

Much controversy still exists as to the exact extent of Gregory's reforms of the Roman Liturgy. All admit that he did make the following modifications in the pre-existing practice:

- In the Canon of the Mass he inserted the words "diesque nostros in tua pace disponas, atque ab aeterna damnatione nos eripi, et in electorum tuorum iubarum grege numerari";
- he ordered the Pater Noster to be recited in the Canon *before* the breaking of the Host;
- he provided that the Alleluia should be chanted after the Gradual out of paschal time, to which period, apparently, the Roman use had previously confined it;
- he prohibited the use of the chasuble by subdeacons assisting at Mass;
- he forbade deacons to perform any of the musical portions of the Mass other than singing the Gospel.

Beyond these and some few minor points it seems impossible to conclude with certainty what changes Gregory did make. As to the much-disputed question of the Gregorian Sacramentary and the almost more difficult point of his relation to the plain song or chant of the Church, for Gregory's connection with which matters the earliest authority seems to be John the Deacon (Vita, II, vi, Xvii), see GREGORIAN CHANT; SACRAMENTARY. There is no lack of evidence, however, to illustrate Gregory's activity as manager of the patrimony of St. Peter. By his day the estates of the Church had reached vast dimensions. Varying estimates place their total area at from 1300 to 1800 square miles, and there seems no reason for supposing this to be an exaggeration, while the income arising therefrom was probably not less than \$1,500,000 a year. The land lay in many places

— Campania, Africa, Sicily, and elsewhere — and, as their landlord, Gregory displayed a skill in finance and estate management which excites our admiration no less than it did the surprise of his tenants and agents, who suddenly found that they had a new master who was not to be deceived or cheated. The management of each patrimony was carried out by a number of agents of varying grades and duties under an official called the *rector* or *defensor* of the patrimony. Previously the rectors had usually been laymen, but Gregory established the custom of appointing ecclesiastics to the post. In doing this he probably had in view the many extra duties of an ecclesiastical nature which he called upon them to undertake. Thus examples may be found of such rectors being commissioned to undertake the filling up of vacant sees, holding of local synods, taking action against heretics, providing for the maintenance of churches and monasteries, rectifying abuses in the churches of their district, with the enforcing of ecclesiastical discipline and even the reproof and correction of local bishops. Still Gregory never allowed the rectors to interfere in such matters on their own responsibility. In the minutiae of estate management nothing was too small for Gregory's personal notice, from the exact number of *sextarii* in a *modius* of corn, or how many *soluli* went to one golden pound, to the use of false weights by certain minor agents. He finds time to write instructions on every detail and leaves no complaint unattended to, even from the humblest of his multitude of tenants. Throughout the large number of letters which deal with the management of the patrimony, the pope's determination to secure a scrupulously righteous administration is evident. As bishop, he is the trustee of God and St. Peter, and his agents must show that they realize this by their conduct. Consequently, under his able management the estates of the Church increased steadily in value, the tenants were contented, and the revenues paid in with unprecedented regularity. The only fault ever laid at his door in this matter is that, by his boundless charities, he emptied his treasury. But this, if a fault at all, was a natural consequence of his view that he was the administrator of the property of the poor, for whom he could never do enough.

(2) Relations with the Suburbicarian Churches

As patriarchs of the West the popes exercise a special jurisdiction over and above their universal primacy as successors of St. Peter; and among Western churches, this jurisdiction extends in a most intimate manner over the churches of Italy and the isles adjacent. On the mainland much of this territory was in the hands of the Lombards, with whose Arian clergy Gregory was, of course, not in communion. Whenever opportunity offered, however, he was careful to provide for the needs of the faithful in these parts, frequently uniting them to some neighboring diocese, when they were too few to occupy the energies of a bishop. On the islands, of which Sicily was by far the most important, the pre-existing church system was maintained. Gregory appointed a vicar, usually the metropolitan of the province, who exercised a general supervision over the whole church. He also insisted strongly on the holding of local synods as ordered by the Council of Nicaea, and letters of his exist addressed to bishops in Sicily, Sardinia, and Gaul reminding them of their duties in this respect. The supreme instance of Gregory's intervention in the affairs of these dioceses occurs in the case of Sardinia, where the behaviour of Januarius the half-witted, aged Metropolitan of Cagliari, had reduced the church to a state of semi-chaos. A large number of letters relate to the reforms

instituted by the pope (Epp., II, xlvi; III, xxxvi; IV, ix,xxiii-xxvii, xxix; V, ii; IX, i, xi, ccii-cciv; XIV, ii). His care over the election of a new bishop whenever a vacancy occurs is shown in many cases, and if, after his examination of the elect, which is always a searching one, he finds him unfitted for the post, he has no hesitation in rejecting him and commanding another to be chosen (Epp., I, lv, lvi; VII, xxxviii; X, vii). With regard to discipline the pope was specially strict in enforcing the Church's laws as to the celibacy of the clergy (Epp., I, xlii, 1; IV, v, xxvi, xxxiv; VII, i; IX, cx, ccxviii; X, xix; XI, lvi a; XIII, xxxviii, xxxix); the exemption of clerics from lay tribunals (Epp., I, xxxix a; VI, xi, IX, liii, lxxvi, lxxix; X, iv; XI, xxxii; XIII, 1); and the deprivation of all ecclesiastics guilty of criminal or scandalous offences (Epp., I, xviii, xlii; III, xlix; IV, xxvi; V, v, xvii, xviii; VII, xxxix; VIII, xxiv; IX, xxv; XII, iii, x, xi; XIV, ii). He was also inflexible with regard to the proper application of church revenues, insisting that others should be as strict as he was in disposing of these funds for their proper ends (Epp., I, x, lxiv; II, xx-xxii; III, xxii; IV, xi; V, xii, xlvi; VIII, vii; XI, xxii, lvi a; XIII, xlvi; XIV, ii).

(3) Relations with Other Churches

With regard to the other Western Churches limits of space prevent any detailed account of Gregory's dealings, but the following quotation, all the more valuable as coming from a Protestant authority, indicates very clearly the line he followed herein: "In his dealings with the Churches of the West, Gregory acted invariably on the assumption that all were subject to the jurisdiction of the Roman See. Of the rights claimed or exercised by his predecessors he would not abate one tittle; on the contrary, he did everything in his power to maintain, strengthen, and extend what he regarded as the just prerogatives of the papacy. It is true that he respected the privileges of the Western metropolitans, and disapproved of unnecessary interference within the sphere of their jurisdiction canonically exercised. . . . But of his general principle there can be no doubt whatever" (Dudden, I, 475). In view of later developments Gregory's dealings with the Oriental Churches, and with Constantinople in particular, have a special importance. There cannot be the smallest doubt that Gregory claimed for the Apostolic See, and for himself as pope, a primacy not of honor, but of supreme authority over the Church Universal. In Epp., XIII, 1, he speaks of "the Apostolic See, which is the head of all Churches", and in Epp., V, cliv, he says: "I, albeit unworthy, have been set up in command of the Church." As successor of St. Peter, the pope had received from God a primacy over all Churches (Epp., II, xlvi; III, xxx; V, xxxvii; VII, xxxvii). His approval it was which gave force to the decrees of councils or synods (Epp., IX, clvi), and his authority could annul them (Epp., V, xxxix, xli, xliv). To him appeals might be made even against other patriarchs, and by him bishops were judged and corrected if need were (Epp., II, 1; III, lii, lxiii; IX, xxvi, xxvii). This position naturally made it impossible for him to permit the use of the title Ecumenical Bishop assumed by the Patriarch of Constantinople, John the Faster, at a synod held in 588. Gregory protested, and a long controversy followed, the question still at issue when the pope died. A discussion of this controversy is needless here, but it is important as showing how completely Gregory regarded the Eastern patriarchs as being subject to himself; "As regards the Church of Constantinople," he writes in Epp., IX, xxvi, "who can doubt that it is subject to the Apostolic See? Why, both our most

religious lord the emperor, and our brother the Bishop of Constantinople continually acknowledge it." At the same time the pope was most careful not to interfere with the canonical rights of the other patriarchs and bishops. With the other Oriental patriarchs his relations were most cordial, as appears from his letters to the patriarchs of Antioch and Alexandria.

(4) Relations with the Lombards and the Franks

Gregory's consecration as pope preceded by a few days only the death of Authari, King of the Lombards, whose queen, the famous Theodelinde, then married Agilulf, Duke of Turin, a warlike and energetic prince. With Agilulf and the Dukes Ariulf of Spoleto and Arichis of Benevento, Gregory soon had to deal, as, when difficulties arose, Romanus, the exarch, or representative, of the emperor, preferred to remain in sulky inactivity at Ravenna. It soon became clear that, if any successful resistance was to be made against the Lombards, it must be by the pope's own exertions. How keenly he felt the difficulty and danger of his position appears in some of the earliest letters (Epp., I, iii, viii, xxx); but no actual hostilities began till the summer of 592, when the pope received a threatening letter from Ariulf of Spoleto, which was followed almost immediately by the appearance of that chief before the walls of Rome. At the same time Arichis of Benevento advanced on Naples, which happened at the moment to have no bishop nor any officer of high rank in command of the garrison. Gregory at once took the surprising step of appointing a tribune on his own authority to take command of the city (Epp., II, xxxiv), and, when no notice of this strong action was taken by the imperial authorities, the pope conceived the idea of himself arranging a separate peace with the Lombards (Epp., II, xlv). No details of this peace have come down to us, but it seems certain that it was actually concluded (Epp., V, xxxvi). Dr. Hodgkin (*Italy and her Invaders*, v, 366) pronounces Gregory's action herein to have been wise and statesmanlike, but, at the same time, undoubtedly *ultra vires*, being quite beyond any legal competency then possessed by the pope, who thus "made a memorable stride towards complete independence". Gregory's independent action had the effect of rousing up Romanus the exarch. Wholly ignoring the papal peace, he gathered all his troops, attacked and regained Perugia, and then marched to Rome, where he was received with imperial honours. The next spring, however, he quitted the city and took away its garrison with him, so that both pope and citizens were now more exasperated against him than before. Moreover, the exarch's campaign had roused the Northern Lombards, and King Agilulf marched on Rome, arriving there probably some time in June, 593. The terror aroused by his advance is still mirrored for us in Gregory's homilies on the Prophet Ezechiel, which were delivered at this time. The siege of the city was soon abandoned, however, and Agilulf retired. The continuator of Prosper (*Mon. Germ. SS. Antiq.*, IX, 339) relates that Agilulf met the pope in person on the steps of the Basilica of St. Peter, which was then outside the city walls, and "being melted by Gregory's prayers and greatly moved by the wisdom and religious gravity of this great man, he broke up the siege of the city"; but, in view of the silence both of Gregory himself and of Paul the Deacon on the point, the story seems scarcely probable. In Epp., V, xxxix, Gregory refers to himself as "the paymaster of the Lombards", and most likely a large payment from the papal treasury was the chief inducement to raise the siege. The pope's great desire now was to secure a lasting peace with the Lombards,

which could only be achieved by a proper arrangement between the imperial authorities and the Lombard chiefs. On Queen Theodelinde, a Catholic and a personal friend, Gregory placed all his hopes. The exarch, however, looked at the whole affair in another light, and, when a whole year was passed in fruitless negotiations, Gregory began once again to mediate a private treaty. Accordingly, in May, 595, the pope wrote to a friend at Ravenna a letter (Epp., V, xxxiv) threatening to make peace with Agilulf even without the consent of the Exarch Romanus. This threat was speedily reported to Constantinople, where the exarch was in high favour, and the Emperor Maurice at once sent off to Gregory a violent letter, now lost, accusing him of being both a traitor and a fool. This letter Gregory received in June, 595. Luckily, the pope's answer has been preserved to us (Epp., V, xxxvi). It must be read in its entirety to be appreciated fully; probably very few emperors, if any, have ever received such a letter from a subject. Still, in spite of his scathing reply, Gregory seems to have realized that independent action could not secure what he wished, and we hear no more about a separate peace. Gregory's relations with the Exarch Romanus became continually more and more strained until the latter's death in the year 596 or early in 597. The new exarch, Callinicus, was a man of far greater ability and well disposed towards the pope, whose hopes now revived. The official peace negotiations were pushed on, and, in spite of delays, the articles were at length signed in 599, to Gregory's great joy. This peace lasted two years, but in 601 the war broke out again through an aggressive act on the part of Callinicus, who was recalled two years later, when his successor, Smaragdus, again made a peace with the Lombards which endured until after Gregory's death. Two points stand out for special notice in Gregory's dealings with the Lombards: first, his determination that, in spite of the apathy of the imperial authorities, Rome should not pass into the hands of some half-civilized Lombard duke and so sink into insignificance and decay; second, his independent action in appointing governors to cities, providing munitions of war, giving instructions to generals, sending ambassadors to the Lombard king, and even negotiating a peace without the exarch's aid. Whatever the theory may have been, there is no doubt about the fact that, besides his spiritual jurisdiction, Gregory actually exercised no small amount of temporal power.

Of Gregory's relations with the Franks there is no need to write at length, as the intercourse he established with the Frankish kings practically lapsed at his death, and was not renewed for about a hundred years. On the other hand he exercised a great influence on Frankish monasticism, which he did much to strengthen and reshape, so that the work done by the monasteries in civilizing the wild Franks may be attributed ultimately to the first monk-pope.

(5) Relations with the Imperial Government

The reign of Gregory the Great marks an epoch in papal history, and this is specially the case in respect to his attitude towards the imperial Government centered at Constantinople. Gregory seems to have looked upon Church and State as co-operating to form a united whole, which acted in two distinct spheres, ecclesiastical and secular. Over this commonwealth were the pope and the emperor, each supreme in his own department, care being taken to keep these as far as possible distinct and independent. The latter point was the difficulty. Gregory definitely held that it was a

duty of the secular ruler to protect the Church and preserve the "peace of the faith" (Mor., XXXI, viii), and so he is often found to call in the aid of the secular arm, not merely to suppress schism, heresy, or idolatry, but even to enforce discipline among monks and clergy (Epp., I, lxxii; II, xxix; III, lix; IV, vii, xxxii; V, xxxii; VIII, iv; XI, xii, xxxvii; XIII, xxxvi). If the emperor interfered in church matters the pope's policy was to acquiesce if possible, unless obedience was sinful, according to the principle laid down in Epp. XI, xxix; "Quod ipse [se imperator] fecerit, si canonicum est, sequimur; si vero canonicum non est, in quantum sine peccato nostro, portamus." In taking this line Gregory was undoubtedly influenced by his deep reverence for the emperor, whom he regarded as the representative of God in all things secular, and must still be treated with all possible respect, even when he encroached on the borders of the papal authority. On his side, although he certainly regarded himself as "superior in place and rank" to the exarch (Epp., II, xiv), Gregory objected strongly to the interference of ecclesiastical authorities in matters secular. As supreme guardian of Christian justice, the pope was always ready to intercede for, or protect anyone who suffered unjust treatment (Epp., I, xxxv, xxxvi, xlvi, lix; III, v; V, xxxviii; IX, iv, xlvi, lv, cxiii, clxxxii; XI, iv), but at the same time he used the utmost tact in approaching the imperial officials. In Epp., I, xxxix a, he explains for the benefit of his Sicilian agent the precise attitude to be adopted in such matters. Still, in conjunction with all this deference, Gregory retained a spirit of independence which enabled him, when he considered it necessary, to address even the emperor in terms of startling directness. Space makes it impossible to do more than refer to the famous letters to the Emperor Phocas on his usurpation and the allusions in them to the murdered Emperor Maurice (Epp., XIII, xxxiv, xli, xlii). Every kind of judgement has been passed upon Gregory for writing these letters, but the question remains a difficult one. Probably the pope's conduct herein was due to two things: first, his ignorance of the way in which Phocas had reached the throne; and second, his view that the emperor was God's representative on earth, and therefore deserving of all possible respect in his official capacity, his personal character not coming into the question at all. It should be noted, also, that he avoids any direct flattery towards the new emperor, merely using the exaggerated phrases of respect then customary, and expressing the high hopes he entertains of the new regime. Moreover, his allusions to Maurice refer to the sufferings of the people under his government, and do not reflect on the dead emperor himself. Had the empire been sound instead of in a hopelessly rotten state when Gregory became pope, it is hard to say how his views might have worked out in practice. As it was, his line of strong independence, his efficiency, and his courage carried all before them, and when he died there was no longer any question as to who was the first power in Italy.

(6) Missionary Work

Gregory's zeal for the conversion of the heathen, and in particular of the Angles, has been mentioned already, and there is no need to dwell at length on the latter subject, as it has been fully treated under AUGUSTINE OF CANTERBURY, SAINT. In justice to the great pope, however, it must be added that he lost no opportunity for the exercise of his missionary zeal, making every effort to root out paganism in Gaul, Donatism in Africa, and the Schism of the Three Chapters in North Italy and Istria. In his treatment of heretics, schismatics, and pagans his method was to try

every means — persuasions, exhortations, threats — before resorting to force; but, if gentler treatment failed, he had no hesitation in accordance with the ideas of his age, in resorting to compulsion, and invoking the aid of the secular arm therein. It is curious, therefore, to find him acting as a champion and protector of the Jews. In Epp., I, xiv, he expressly deprecates the compulsory baptism of Jews, and many instances appear in which he insists on their right to liberty of action, so far as the law permitted, both in civil affairs and in the worship of the synagogue (Epp., I, xxxiv; II, vi; VIII, xxv; IX, xxxviii, cxcv; XIII, xv). He was equally strong, however, in preventing the Jews from exceeding the rights granted to them by the imperial law, especially with regard to the ownership by them of Christian slaves (Epp., II, vi; III, xxxvii; IV, ix, xxi; VI, xxix; VII, xxi; VIII, xxi; IX, civ, ccxiii, ccxv). We shall probably be right, therefore, in attributing Gregory's protection of the Jews to his respect for law and justice, rather than to any ideas of toleration differing from those current at the time.

(7) Gregory and Monasticism

Although the first monk to become pope, Gregory was in no sense an original contributor to monastic ideals or practice. He took monasticism as he found it established by St. Benedict, and his efforts and influence were given to strengthening and enforcing the prescriptions of that greatest of monastic legislators. His position did indeed tend to modify St. Benedict's work by drawing it into a closer connection with the organization of the Church, and with the papacy in particular, but this was not deliberately aimed at by Gregory. Rather he was himself convinced that the monastic system had a very special value for the Church, and so he did everything in his power to diffuse and propagate it. His own property was consecrated to this end, he urged many wealthy people to establish or support monasteries, and he used the revenues of the patrimony for the same purpose. He was relentless in correcting abuses and enforcing discipline, the letters on such matters being far too numerous for mention here, and the points on which he insists most are precisely those, such as stability and poverty, on which St. Benedict's recent legislation had laid special stress. Twice only do we find anything like direct legislation by the pope. The first point is that of the age at which a nun might be made abbess, which he fixes at "not less than sixty years" (Epp., IV, xi). The second is his lengthening of the period of novitiate. St. Benedict had prescribed at least one year (Reg. Ben., lviii); Gregory (Epp., X, ix) orders two years, with special precautions in the case of slaves who wished to become monks. More important was his line of action in the difficult question of the relation between monks and their bishop. There is plenty of evidence to show that many bishops took advantage of their position to oppress and burden the monasteries in their diocese, with the result that the monks appealed to the pope for protection. Gregory, while always upholding the spiritual jurisdiction of the bishop, was firm in support of the monks against any illegal aggression. All attempts on the part of a bishop to assume new powers over the monks in his diocese were condemned, while at times the pope issued documents, called *Privilegia*, in which he definitely set forth certain points on which the monks were exempt from episcopal control (Epp., V, xlix; VII, xii; VIII, xvii; XII, xi, xii, xiii). This action on Gregory's part undoubtedly began the long progress by which the monastic bodies have come to be under the

direct control of the Holy See. It should be mentioned that in Gregory's day the current view was that ecclesiastical work, such as the cure of souls, preaching, administering the sacraments, etc., was not compatible with the monastic state, and in this view the pope concurred. On the other hand a passage in Epp., XII, iv, where he directs that a certain layman "should be tonsured either as a monk or a subdeacon", would suggest that the pope held the monastic state as in some way equivalent to the ecclesiastical; for his ultimate intention in this case was to promote the layman in question to the episcopate.

(8) Death, Canonization, Relics, Emblem

The last years of Gregory's life were filled with every kind of suffering. His mind, naturally serious, was filled with despondent forebodings, and his continued bodily pains were increased and intensified. His "sole consolation was the hope that death would come quickly" (Epp., XIII, xxvi). The end came on 12 March, 604, and on the same day his body was laid to rest in front of the sacristy in the portico of St. Peter's Basilica. Since then the relics have been moved several times, the most recent translation being that by Paul V in 1606, when they were placed in the chapel of Clement V near the entrance of the modern sacristy. There is some evidence that the body was taken to Soissons in France in the year 826, but probably only some large relic is meant. Venerable Bede (Hist. Eccl., II, i) gives the epitaph placed on his tomb which contains the famous phrase referring to Gregory as *consul Dei*. His canonization by popular acclamation followed at once on his death, and survived a reaction against his memory which seems to have occurred soon afterwards. In art the great pope is usually shown in full pontifical robes with the tiara and double cross. A dove is his special emblem, in allusion to the well-known story recorded by Peter the Deacon (Vita, xxviii), who tells that when the pope was dictating his homilies on Ezechiel a veil was drawn between his secretary and himself. As, however, the pope remained silent for long periods at a time, the servant made a hole in the curtain and, looking through, beheld a dove seated upon Gregory's head with its beak between his lips. When the dove withdrew its beak the holy pontiff spoke and the secretary took down his words; but when he became silent the servant again applied his eye to the hole and saw the dove had replaced its beak between his lips. The miracles attributed to Gregory are very many, but space forbids even the barest catalogue of them.

(9) Conclusion

It is beyond the scope of this notice to attempt any elaborate estimate of the work, influence, and character of Pope Gregory the Great, but some short focusing of the features given above is only just. First of all, perhaps, it will be best to clear the ground by admitting frankly what Gregory was not. He was not a man of profound learning, not a philosopher, not a conversationalist, hardly even a theologian in the constructive sense of the term. He was a trained Roman lawyer and administrator, a monk, a missionary, a preacher, above all a physician of souls and a leader of men. His great claim to remembrance lies in the fact that he is the real father of the medieval papacy (Milman). With regard to things spiritual, he impressed upon men's minds to a degree unprecedented the fact that the See of Peter was the one supreme, decisive authority in the Catholic Church. During his pontificate, he established close relations between the Church of Rome and those of Spain,

Gaul, Africa, and Illyricum, while his influence in Britain was such that he is justly called the Apostle of the English. In the Eastern Churches, too, the papal authority was exercised with a frequency unusual before his time, and we find no less an authority than the Patriarch of Alexandria submitting himself humbly to the pope's "commands". The system of appeals to Rome was firmly established, and the pope is found to veto or confirm the decrees of synods, to annul the decisions of patricarchs, and inflict punishment on ecclesiastical dignitaries precisely as he thinks right. Nor is his work less noteworthy in its effect on the temporal position of the papacy. Seizing the opportunity which circumstances offered, he made himself in Italy a power stronger than emperor or exarch, and established a political influence which dominated the peninsula for centuries. From this time forth the varied populations of Italy looked to the pope for guidance, and Rome as the papal capital continued to be the centre of the Christian world. Gregory's work as a theologian and Doctor of the Church is less notable. In the history of dogmatic development he is important as summing up the teaching of the earlier Fathers and consolidating it into a harmonious whole, rather than as introducing new developments, new methods, new solutions of difficult questions. It was precisely because of this that his writings became to a great extent the *compendium theologiae* or textbook of the Middle Ages, a position for which his work in popularizing his great predecessors fitted him well. Achievements so varied have won for Gregory the title of "the Great", but perhaps, among our English-speaking races, he is honoured most of all as the pope who loved the bright-faced Angles, and taught them first to sing the Angels' song.

HIS WRITINGS

Genuine, Doubtful, Spurious

Of the writings commonly attributed to Gregory the following are now admitted as genuine on all hands: "Moralium Libri XXXV"; "Regulae Pastoralis Liber"; "Dialogorum Libri IV"; "Homiliarum in Ezechielem Prophetam Libri II"; "Homiliarum in Evangelia Libri II"; "Epistolarum Libri XIV". The following are almost certainly spurious: "In Librum Primum Regum Variarum Expositionum Libri VI"; "expositio super Cantica Cantorum"; "Expositio in VII Psalmos Poenitentiales"; "Concordia Quorundam Testimoniorum S. Scripturae". Besides the above there are attributed to Gregory certain liturgical hymns, the Gregorian Sacramentary, and the Antiphonary. (See ANTIPHONARY; SACRAMENTARY.)

Works of Gregory; complete or partial editions; translations, recensions, etc.

"Opera S. Gregorii Magni: (Editio princeps, Paris, 1518); ed. P. Tossianensis (6 vols., Rome, 1588-03); ed. P. Goussainville (3 vols., Paris, 1675); ed. Cong. S. Mauri (Sainte-Marthe) (4 vols., Paris, 1705); the last-named re-edited with additions by J. B. Gallicioli (17 vols., Venice, 1768-76) and reprinted in Migne, P.L., LXXV-LXXIX. "Epistolae", ed. P. Ewald and L. M. Hartmann in "Mon. Germ. Hist.: Epist.", I, II (Berlin, 1891-99); this is the authoritative edition of the text of the Epistles (all references given above are to this edition); Jaffe, "Regesta Pontif," (2nd ed., Rome, 1885), I, 143-219; II, 738; Turchi, "S. Greg. M. Epp. Selectae" (Rome, 1907); P. Ewald, "Studien zur Ausgabe des Registers Gregors I." in "Neues Archiv", III, 433-625; L.M. Hartmann in "Neues

Archiv", XV, 411, 529; XVII, 493; Th. Mommsen in "Neues Archiv", XVII, 189; English translation: J. Barmby, "Selected Epistles" in "Nicene and Post-Nicene Fathers", 2nd Series, XII, XIII (Oxford and New York, 1895, 1898), "Regula Pastoralis Curae", ed. E. W. Westhoff (Munster, 1860); ed. H. Hurter, S.J., in "SS. Patr. Opuse. Select.", XX; ed. A. M. Micheletti (Tournai, 1904); ed. B. Sauter (Freiburg, 1904); English translations: "King Alfred's West Saxon Version of Gregory's Pastoral Care", ed. H. Sweet (London, 1871); "The Book of Pastoral Care" (tr. J. Barmby) in "Nicene and Post-Nicene Fathers", 2nd Series, XII (Oxford and New York, 1895). "Dialogorum Libri IV": very many editions of the whole work have appeared, and also of Bk. II, "Of the Life and Miracles of St. Benedict", separately; an old English translation has been reprinted by H. Coleridge, S. J. (London, 1874); L. Wiese, "Die Sprache der Dialoge" (Halle, 1900); H. Delehaye, "S. Gregoire Grand dans Phagiographie Grecque" in "Analecta Bolland." (1904), 449-54; B. Sauter, "Der heilige Vater Benediktus nach St. Gregor dem Grossen" (Freiburg, 1904). "Hom. XL in Evangelia", ed. H. Hurter in "SS. Patrum Opuse. Select.", series II, Tom. VI (Innsbruck, 1892). G. Pfeilschifter Gregors der Gr." (Munich, 1900). "Magna Moralia", Eng. tr. in "Library of the Fathers" (4 vols., Oxford, 1844); Prunner, "Gnade und Sunde nach Gregors expositio in Job" (Eichstätt, 1855).

CHIEF SOURCES.—First of all come the writings of Gregory himself, of which a full account is given above, the most important from a biographical point of view being the fourteen books of his Letters and the four books of Dialogues. The other early authorities are ST. GREGORY OF TOURS (d. 594 or 595), *Historia Francorum*, Bk. X, and the *Liber Pontificalis*, both practically contemporary. To the seventh century belong ST. ISIDORE OF SEVILLE. *De Viris Illustribus*, XL, and ST. ILDEPHONSUS OF TOLEDO, *De Viris Illustribus*, I. Next come the *Vita Antiquissima*, by an anonymous monk of Whitby, written probably about 713, and of special interest as representing an essentially English tradition in regard to the saint; THE VEN. BEDE, *Hist. Eccles.*, II, whose work was finished in 731; PAUL THE DEACON, who compiled a short *Vita Gregorii Magni* between 770 and 780, which may be supplemented from the same writers more famous work *Historia Longobardorum*; lastly JOHN THE DEACON, who, at the request of John VIII (872-882), produced his *Vita Gregorii* in answer to the complaint that no history of the saint had yet been produced in Rome. Besides these direct authorities considerable light on the period of St. Gregory's life may be gathered from the works of various contemporary chroniclers and historians.

WORKS ON GREGORY. — (1) General. — GREGORY OF TOURS, *Historia Francorum*, X, i, in P.L., LXXI; the best edition of this is by ARNDT AND KRUSCH in *Mon. Germ. Hist.: Script. Rerum Meroving.*, I; *Liber Pontificatis*, ed. DUCHESNE (Paris, 1884), I, 312; ISIDORE OF SEVILLE, *De Vir. Illustr.*, I, *ibid.*, XCVII; *Vita It. Papae Gregorii M.* (MS> Gallen, 567), written by a monk of Whitby, ed. GASQUET (Westminster, 1904): see also on same work EWALD, *Die alteste Biographie Gregors I in Historische Aufsätze dem Andenken an G. Waitz gewidmet* (Hanover, 1886), 17-54; VEN. BEDE, *Hist. Eccles.*, I, xxiii-xxxiii; II, i-iii; V, xxv; in P. L., XCV; PAUL THE DEACON, *Vita Gregorii M.* in P.L., LXXV; IDEM, *De Gestis Longobard.*, III, 24; IV, 5; In P.L., XCV; JOHN THE DEACON, *Vita Gregorii M.*, *ibid.*, LXXV; *Acta SS.*, 12 March;

G. ROGER HUDLESTON

Pope St. Gregory II

Pope St. Gregory II

(Reigned 715-731).

Perhaps the greatest of the great popes who occupied the chair of Peter during the eighth century, a Roman, son of Marcellus and Honesta. To his contemporaries in the West he was known as Gregory Junior or the Younger; to those in the East, who confounded him with Gregory I (author of "Dialogues") he was "Dialogus". The year of his birth is not known, but while very young he showed a desire for the Church and was placed by the pope in the "schola cantorum". He was made a subdeacon and *sacellarius* (paymaster and almoner) of the Roman Church by Sergius I. Then the care of the papal library was entrusted to him, and he has the honour of being the first papal almoner or librarian known to us by name. By the time he had become a deacon, he had given such signs of character and superior intelligence that he was chosen by Pope Constantine to accompany him when he had to go to Constantinople to discuss the canons of the Quinisext Council with the truculent tyrant, Justinian II. The pope's trust was not misplaced. The deacon Gregory "by his admirable answers", solved every difficulty raised by the emperor. One of the first things which Gregory took in hand when he became pope (19 May, 715) was to put in repair the walls of Rome. Not for the last time had the Lombards, those old enemies of the Romans, attacked their city and now a new foe had shown itself. The Mediterranean was fast becoming a Saracen lake, and there was fear that the Moslems might make a descent upon the Eternal City itself. Gregory had made good progress with his work of repair, when various causes combined with a devastating flood of the Tiber to prevent him from completing it. But throughout all his pontificate, Gregory failed not to scan with

anxiety the movements of the Saracens, and he is credited with having sent tokens of encouragement to the Frankish leaders who were stemming their advance in Gaul.

In the first year of his pontificate, he received a letter from John, Patriarch of Constantinople. Addressed "to the sacred head of the Church", it was really an apology for his having shown himself subservient to Philippius Bardanes in the matter of Monothelism. Gregory also received several distinguished pilgrims during his pontificate. Among the many Anglo-Saxon pilgrims who came to Rome during his reign, the most famous were Abbot Ceolfrid and King Ina, of whom the one took to the pope the famous Codex Amiatinus, and the other founded the "Schola Anglorum". Duke Theodo I of Bavaria also came to Rome to pray, and no doubt to obtain from the pope more preachers of the Gospel for his country. Among those whom Gregory dispatched for the conversion of Bavaria was St. Corbiban, who became one of its apostles. But the great apostle of Bavaria, as of Germany generally, was St. Winfrid, or Boniface, as he was afterwards called. Anxious to preach to the heathens, he went to Rome, and God "moved the pontiff of the glorious See" to grant his wishes. He sent Boniface "to the wild nations of Germany", bidding him, by the irrefragable authority of Blessed Peter, "go forth and preach the truths of both Testaments". Gregory watched and encouraged the work of Boniface unremittingly. In 722 he consecrated him bishop and interested the famous Charles Martel in his labours. Gregory was a great supporter of the monastic order. On the death of his mother, he converted his parental mansion into a monastery, and founded or restored many others. Among those he helped to restore was the famous Abbey of Monte Cassino. During the early portion of his pontificate, Gregory was on good terms with the Lombards. Their king drew up his laws under his influence; but their dukes, with or without the consent of their king, embroiled the peninsula by seizing portions of the possessions of the Greek empire. The Greek exarch at Ravenna was quite unable to stem the advance of the Lombards, so that Gregory appealed for help to Charles Martel and the Franks. Charles could not or would not come, but greater commotion in Italy than could have been caused by his advent was aroused by the publication there of the decrees of the Greek emperor, Leo III, known as the Isaurian or the Iconoclast (727). The Italians had been previously enraged by his attempt to levy an extraordinary tax on them. Despite the attempts of Greek officials to take his life, Gregory opposed both the emperor's illegal taxes and his unwarrantable interference in the domain of ecclesiastical authority. Now was the opportunity of the Lombards. When the exarch attempted to compel the pope to obey the imperial decrees, they became his defenders. Nearly all the Byzantine districts of Italy also turned against the emperor, and but for the pope would have elected another emperor to oppose him. When all seemed lost to the Byzantine cause in Italy, Eutychius, the last of the exarchs, contrived to wean the Lombards from the pope and to make them turn against him. The exarch was to help Liutprand, the Lombard king, to bring the almost independent Lombard Dukes of Benevento and Spoleto into complete subjection of his authority, and Liutprand was to assist him in bringing the pope to his knees. But the personal influence of Gregory over Liutprand was able to dissolve this unnatural alliance, and he repaid the exarch's treatment of him by furnishing him with troops to put down a rebellion against the imperial authority.

In connection with Gregory's struggle against the Iconoclast emperor and his Italian representatives, certain doubtful points have been hitherto passed over. For instance, it is certain that about the year 730 Ravenna fell for a brief space into the hands of the Lombards, and that by the exertions of the pope and the Venetians, it was recovered and continued to remain for a year or two longer a portion of the Byzantine empire. It is not, however, certain whether it was Gregory II or Gregory III who rendered this important service to Leo III. Probably, however, it was done by Gregory II about the year 727; though perhaps it is not quite equally probable that the two famous condemnatory letters which Gregory II is said to have sent to Leo III are genuine. If they are authentic, then it is certain not only that Ravenna was captured by the Lombards about 727, but that the independent temporal authority of the popes which in fact began with Gregory II was consciously felt by him. But when later Greek historians asserted that Gregory "separated Rome and Italy and the whole West from political and ecclesiastical subjection" to the Byzantine Empire, they are simply exaggerating his opposition to the emperor's illegal taxes, and Iconoclastic edicts. Despite all provocation, Gregory never for a moment swerved in his loyalty to the Iconoclast emperor; but, as in duty bound, he opposed his efforts to destroy an article of Catholic Faith. By his letters sent in all directions he warned the people against the teachings of the emperor, and in a council at Rome (727) proclaimed the true doctrine on the question of the worship of images. To the best of his power, also, he supported St. Germainus, the Patriarch of Constantinople, in the resistance he was making to the "gospel of Leo", and threatened to depose Anastasius, who had replaced the saint in the See of Constantinople, if he did not renounce his heresy. Gregory recognized both the Patriarch of Forum Julii (Cividale) and the Patriarch of Grado as joint heirs of the original metropolitan See of Aquileia, and for a time caused these rival prelates to live in peace.

Gregory died in February, and was buried in St. Peter's (11 Feb., 731). He is honoured as a saint in the Roman and other martyrologies.

HORACE K. MANN
Pope St. Gregory III

Pope St. Gregory III

(Reigned 731-741.)

Pope St. Gregory III was the son of a Syrian named John. The date of his birth is not known. His reputation for learning and virtue was so great that the Romans elected him pope by acclamation, when he was accompanying the funeral procession of his predecessor, 11 February, 731. As he was not consecrated for more than a month after his election, it is presumed that he waited for the confirmation of his election by the exarch at Ravenna. In the matter of Iconoclasm, he followed the policy of his predecessor. He sent legates and letters to remonstrate with the persecuting emperor, Leo III, and held two synods in Rome (731) in which the image-breaking heresy was condemned. By way of a practical protest against the emperor's action he made it a point of paying special honour to images and relics, giving particular attention to the subject of St. Peter's. Fragments of inscriptions, to be seen in the crypts of the Vatican basilica, bear witness to this day of an oratory he built therein, and of the special prayers he ordered to be there recited.

Leo, whose sole answer to the arguments and apologies for image worship which were addressed to him from both East and West, was force, seized the papal patrimonies in Calabria and Sicily, or wherever he had any power in Italy, and transferred to the patriarch of Constantinople the ecclesiastical jurisdiction which the popes had previously exercised both there, and throughout the ancient Prefecture of Illyricum. Gregory III confirmed the decision of his predecessors as to the respective rights of the Patriarchs of Aquileia and Grado, and sent the pallium to Antoninus of Grado. In granting it also to Egbert of York, he was only following out the arrangements of St. Gregory I who had laid it down that York was to have metropolitical rights in the North of England, as Canterbury had to have them in the South. Both Tatwine and Nothelm of Canterbury received the pallium in succession from Gregory III (731 and 736). At his request Gregory III extended to St. Boniface the same support and encouragement which had been afforded him by Gregory II. "Strengthened exceedingly by the help of the affection of the Apostolic See", the saint joyfully continued his glorious work for the conversion of Germany. About 737 Boniface came to Rome for the third time to give an account of his stewardship, and to enjoy the pope's "life-giving conversation", At Gregory's order the monk and great traveller, St. Willibald, went to assist his cousin St. Boniface in his labours.

The close of Gregory's reign was troubled by the Lombards. Realizing the ambition which animated Liutprand, Gregory completed the restoration of the walls of Rome which had been begun by his predecessors, and bought back Gallese, a stronghold on the Flaminian Way, from Transamund, Duke of Spoleto, which helped to keep open the communications between Rome and Ravenna. In 739, Liutprand was again in arms. His troops ravaged the exarchate, and he himself marched south to bring to subjection his vassals, the Dukes of Spoleto and Benevento, and the Duchy of Rome. Transamund fled to Rome, and Gregory implored the aid of the great Frankish chief, Charles Martel. At length ambassadors from the viceroy (*subregulus*) of the Franks appeared in Rome (739). Their arrival, or the summer heats, brought a momentary peace. But in the following year, Liutprand again took the field. This time the Romans left their walls, and helped Transamund to recover Spoleto. When, however, he had recovered his duchy, he would not or could not comply with Gregory's request, and endeavour to recover for the pope "the four cities of the Roman duchy which

had been lost for his sake." In the midst of all these wars and rumours of war, Gregory died, and was buried in the oratory of our Lady which he had himself built in St. Peter's. He died in 741, but whether in November or December is not certain. It is however, on 28 November that he is commemorated in the Roman martyrology.

Pope Gregory IV

Pope Gregory IV

Elected near the end of 827; died January, 844. When Gregory was born is not known, but he was a Roman and the son of John. Before his election to the papacy he was the Cardinal-Priest of the Basilica of St. Mark, which he adorned with mosaics yet visible. For his piety and learning he was ordained priest by Paschal I. This man, of distinguished appearance and high birth, was raised to the chair of Peter, despite his protestations of unfitness, mainly by the instrumentality of the secular nobility of Rome who were then securing a preponderating influence in papal elections. But the representatives in Rome of the Emperor Louis the Pious would not allow him to be consecrated until his election had been approved by their master. This interference caused such delay that it was not, seemingly, till about March, 828, that he began to govern the Church.

Throughout the greater part of his pontificate Gregory was involved in the quarrels between Louis and his sons which were to prove fatal to the domination of the Franks. Owing perhaps to a want of political insight or to an over-sympathetic or sanguine temperament, or, it may be, to a want of firmness of character, his efforts to promote domestic peace in the imperial family were not attended either with success or with glory. By a solemn deed, confirmed by Paschal I, Louis had made a division of the empire in favour of the three sons of his first wife, Lothair I, Pepin, and Louis the German (817). But on her death, he married the young and ambitious Judith, and was soon induced by her to devote himself wholly to furthering the interests of their son, afterwards known as Charles the Bald. Charles's half-brothers combined in arms against their father (830), seized and imprisoned him, and compelled him to confirm the Constitution of 817. The brothers, however, soon disagreed among themselves and Louis was restored to power by a diet at Nimwegen, and, by a decision of the pope, to his wife from whom he had been separated by force (Oct., 830). Untaught by experience, Louis continued his policy of favouring his youngest son. The brothers again flew to arms, and the eldest, Lothair (who was ruling Italy), by argument, by deception, and perhaps by gentle pressure, induced Gregory to accompany him across the Alps. The appearance of the pope in the camp of the rebels made it appear that he was in their favour. Hence the bishops who remained faithful to the emperor, suspicious of the pope's good faith, would not come to him when he summoned them to his presence. It was to no purpose that Gregory repelled their accusations. When at length he met Louis himself, he found that Louis also did not trust him. While

these negotiations were in progress, Lothair, who was false to everyone, was suborning the allegiance of his father's soldiers. Betrayed in consequence, Louis once again fell into the hands of his sons. Lothair seized the empire, allowed Gregory to return to Rome a sadder and a wiser man, and degraded his father (833). But next year witnessed a second fraternal quarrel, and a second restoration of Louis, who was weak enough to allow Lothair to retain the Kingdom of Italy. The result of his mistaken acts of clemency was not only that he had to protect the pope against Lothair's aggressions but that he had to face another rebellion of one of his sons. In marching to put it down, he died (June, 840).

His death put Lothair in possession of the imperial name. To be emperor in fact, he resolved to crush his brothers by force of arms. Detaining the legate whom Gregory dispatched to try and make peace, Lothair crossed the Alps. The terrible battle of Fontenay (now Fontenoy- en-Puisaye) near Auxerre (841), resulted not only in the defeat of Lothair, but in the practical annihilation of the Frankish people, and in the end of their empire. While the empire was collapsing, the Saracens were pushing forward their conquests. During Gregory's pontificate they possessed themselves of Sicily, and had been invited into Italy to take part in the wars of the petty princes of South Italy. To do what he could for the safety of Rome, the pope fortified the ancient Ostia by the erection of a stronghold called after himself Gregoriopolis. Equally for the benefit of Rome and the "Patrimony of St. Peter", Gregory repaired aqueducts and churches and founded "farm colonies" in the Campagna. He seconded the heroic efforts which St. Anaschar, the Apostle of the North, was making for the conversion of Sweden, authorizing his consecration as the first Archbishop of Hamburg, sending him the pallium, and "before the body and confession of Blessed Peter", giving him "full authority to preach the Gospel" and making him his legate "among the Swedes, Danes and Slavs."

Gregory gave the pallium to the Archbishops of Salzburg, Canterbury, and Grado, and favoured the latter against the encroachments of the Patriarch of Aquileia. He also supported Aldric, Bishop of Le Mans, who got into difficulties through his loyal support of Louis against his rebellious sons. To oblige Louis, Gregory caused some of his ecclesiastics to be trained in music in Rome, and he instructed him to proclaim the observance of the feast of All Saints throughout the empire. Gregory was buried in St. Peter's.

HORACE K. MANN

Pope Gregory V

Pope Gregory V

Born c. 970; died 4 February, 999. On the death of John XV the Romans sent a deputation to Otto III and asked him to name the one he would wish them to elect in the place of the deceased pontiff. He at once mentioned his chaplain and relation, Bruno, the son of Duke Otto of Carinthia and of Judith. He was already (996) distinguished for learning, especially for his knowledge of the dialects which were to develop into the languages of modern Europe. If possessed of a somewhat hasty disposition, he was nevertheless a worthy candidate for the papacy, and his election did honour to the Romans who elected him. This first German pope was consecrated 3 May, 996, and his accession was generally hailed with satisfaction. One of his first acts was to crown Otto emperor (21 May, 996). Throughout the whole of his pontificate he acted in full harmony with his imperial cousin. Together they held a synod a few days after Otto's coronation, in which Arnulf was ordered to be restored to the See of Reims, and Gerbert, the future Sylvester II, was condemned as an intruder. Unfortunately for himself and the peace of the Church, he prevailed upon the emperor not to banish from Rome the turbulent noble Crescentius Numentanus, "of the Marble Horse". No sooner did Otto leave Rome than Crescentius roused his adherents to arms and Gregory had to fly to the north. Crescentius did not stop here, but caused an antipope to be proclaimed in the person of the crafty Italo-Greek John Philagathus of Rossano, who had artfully made a position for himself at the court of the Ottos and now took the title of John XVI (997).

At a synod which Gregory had ordered to meet at Pavia, not only were Crescentius and his antipope anathematized, but King Robert of France was threatened with excommunication if he did not put away Bertha whom he had married though she was related to him not only by spiritual relationship but by blood. After some opposition, Robert finally yielded, and, repenting of his misdeeds, repudiated Bertha and espoused Constance. Gerbert, too, after having been condemned by this synod also, abandoned the See of Reims, and was rewarded with the See of Ravenna. Furious that his authority had been so flouted, Otto marched upon Rome. Philagathus fled from the city and Crescentius shut himself up in the Castle of Sant' Angelo. The emperor's troops pursued the antipope, captured him, deprived him of his nose, ears, eyes, and tongue, and brought him back to Rome. There he was brought before Otto and the pope, and publicly degraded (998). Then, after being driven ignominiously through the streets of Rome on an ass, he was transported to Germany, where he seems to have died in the monastery of Fulda (1013). The castle of Sant' Angelo was next besieged, and, when it was taken, Crescentius was hanged upon its walls (998). About the year 997, Archbishop Aelfric came to Rome in order to procure his pallium, and to consult the pope about replacing the secular canons, who then held the cathedral of Canterbury, by monks, in accordance with the commission he had received from King Ethelred and the Witan. As a mark of special honour, Gregory put his own pallium on Aelfric, and bade him put into his monastery at Canterbury "men of that order which the Blessed Gregory commanded Augustine therein to place". At the request of Otto, Gregory granted exceptional privileges to many German monasteries, and

in his company held various synods for the regulation of ecclesiastical affairs. He had to threaten with anathema Ardoin, Marquess of Ivrea, if he did not make amends for his treatment of the property of St. Mary's of Ivrea, its serfs, and its bishop. Gregory V was buried in St. Peter's "in front of the sacristy, i.e. on the Gospel side, near Pope Pelagius".

HORACE K. MANN

Pope Gregory VI

Pope Gregory VI

(JOHN GRATIAN).

Date of birth unknown; elected 1 May 1045; abdicated at Sutri, 20 December, 1046; died probably at Cologne, in the beginning of 1048. In 1045 the youthful libertine Benedict IX occupied the chair of Peter. Anxious, in order so it is said, that he might marry, to vacate a position into which, though wholly unfit, he had been thrust by his family, he consulted his godfather, John Gratian, the Archpriest of St. John "ad portam Latinam", a man of great reputation for uprightness of character, as to whether he could resign the supreme pontificate. When he was convinced that he might do so, he offered to give up the papacy into the hands of his godfather for a large sum of money. Desirous of ridding the See of Rome on such an unworthy pontiff, John Gratian in all good faith and simplicity paid him the money and was recognized as pope in his stead. Unfortunately the accession of Gratian, who took the name of Gregory VI, though it was hailed with joy even by such a strict upholder of the right as St. Peter Damian, did not bring peace to the Church. When Benedict left the city after selling the papacy, there was already another aspirant to the See of Peter in the field. John, Bishop of Sabina, had been saluted as Pope Sylvester III by that faction of the nobility which had driven Benedict IX from Rome in 1044, and had then installed him in his stead. Though the expelled pontiff (Benedict IX) soon returned, and forced John to retire to his See of Sabina, that pretender never gave up his claims, and through his party contrived apparently to keep some hold on a portion of Rome. Benedict, also unable, it seems, to obtain the bride on whom he had set his heart, soon repented of his resignation, again claimed the papacy, and in his turn is thought to have succeeded in acquiring dominion over a part of the city.

With an empty exchequer and a clergy that had largely lost the savour of righteousness, Gregory was confronted by an almost hopeless task. Nevertheless, with the aid of his "capellanus" or chaplain, Hildebrand, destined to be the great Pope Gregory VII, he essayed to bring about civil and religious order. He strove to effect the latter by letters and by councils, and the former by force of arms. But the factions of the antipopes were too strong to be put down by him, and the confusion only increased.

Convinced that nothing would meet the case but German intervention, a number of influential clergy and laity separated themselves from communion with Gregory or either of the two would-be popes and implored the warlike King Henry III to cross the Alps and restore order. Nothing loath, Henry descended into Italy in the autumn of 1046. Strong in the conviction of his innocence, Gregory went north to meet him. He was received by the king with all the honour due to a pope, and in accordance with the royal request, summoned a council to meet at Sutri. Of the antipopes, Sylvester alone presented himself at the synod, which was opened 20 Dec., 1046. Both his claim to the papacy and that of Benedict were soon disposed of. Deprived of all clerical rank and considered a usurper from the beginning, Sylvester was condemned to be confined in a monastery for the rest of his life. Benedict's case also presented no difficulty. He had now no claim to the papacy, as he had voluntarily resigned it. But it was different with Gregory. However, when the bishops of the synod had convinced him that the act by which he had become supreme pontiff was in itself simoniacal, and had called upon him to resign, Gregory, seeing that little choice was left him, of his own accord laid down his office. A German, Suidger, Bishop of Bainberg (Clement II), was then elected to replace him. Accompanied by Hildebrand, Gregory was taken by Henry to Germany (May, 1047), where he soon died.

Gregory VI (Antipope)

Gregory VI (Antipope)

On the death of Sergius IV in June, 1012, "a certain Gregory", opposed the election of Benedict VIII, and got himself made pope, seemingly by a small faction. Promptly expelled from Rome, he made his way to Germany, and craved the support of King Henry II (25 Dec., 1012). That monarch, however, after promising him that his case should be carefully examined in accordance with canon law and Roman custom, took away from him the papal insignia which he was wearing, and bade him cease to act as pope in the meanwhile. After this, history knows the "certain Gregory" no more.

Chronicle of Thietmar, IV, lxi, in P.L., CXXXIX.

HORACE K. MANN

Pope St. Gregory VII

Pope St. Gregory VII

(HILDEBRAND).

One of the greatest of the Roman pontiffs and one of the most remarkable men of all times; born between the years 1020 and 1025, at Soana, or Ravacum, in Tuscany; died 25 May, 1085, at Salerno.

The early years of his life are involved in considerable obscurity. His name, Hildebrand (Hellebrand)--signifying to those of his contemporaries that loved him "a bright flame", to those that hated him "a brand of hell"--would indicate some Lombard connection of his family, though at a later time, it probably also suggested the fabled descent from the noble family of the Aldobrandini. That he was of humble origin--vir de plebe, as he is styled in the letter of a contemporary abbot--can scarcely be doubted. His father Bonizo is said by some chroniclers to have been a carpenter, by others a peasant, the evidence in either case being very slender; the name of his mother is unrecorded. At a tender age he came to Rome to be educated in the monastery of Santa Maria on the Aventine Hill, over which his maternal uncle Laurentius presided as abbot. The austere spirit of Cluny pervaded this Roman cloister, and it is not unlikely that here the youthful Hildebrand first imbibed those lofty principles of Church reform of which he was afterwards to become the most fearless exponent. Early in life he made his religious profession as a Benedictine monk at Rome (not in Cluny); the house of his profession, however, and the year of his entrance into the order, both remain undetermined. As a cleric in minor orders he entered the service of John Gratian, Archpriest of San Giovanni by the Latin Gate, and on Gratian's elevation to the papacy as Gregory VI, became his chaplain. In 1046 he followed his papal patron across the Alps into exile, remaining with Gregory at Cologne until the death of the deposed pontiff in 1047, when he withdrew to Cluny. Here he resided for more than a year.

At Besançon, in January, 1049, he met Bruno, Bishop of Toul, the pontiff-elect recently chosen at Worms under the title of Leo IX, and returned with him to Rome, though not before Bruno, who had been nominated merely by the emperor, had expressed the intention of submitting to the formal choice of the Roman clergy and people. Created a cardinal-subdeacon, shortly after Leo's accession, and appointed administrator of the Patrimony of St. Peter's, Hildebrand at once gave evidence of that extraordinary faculty for administration which later characterized his government of the Church Universal. Under his energetic and capable direction the property of the Church, which latterly had been diverted into the hands of the Roman nobility and the Normans, was largely recovered, and the revenues of the Holy See, whose treasury had been depleted, speedily augmented. By Leo IX he was also appointed propositus or promisor (not abbot) of the monastery of St. Paul extra Muros. The unchecked violence of the lawless bands of the Champagne had brought great destitution upon this venerable establishment. Monastic discipline was so impaired that the monks were attended in their refectory by women; and the sacred edifices were so neglected that the sheep and cattle freely roamed in and out through the broken doors. By rigorous reforms and a wise administration Hildebrand succeeded in restoring the ancient rule of the abbey with the austere observance of earlier times; and he continued throughout life to manifest the deepest attachment for the famous house which his energy had reclaimed from ruin and decay. In 1054 he was sent to France as papal

legate to examine the cause of Berengarius. While still in Tours he learned of the death of Leo IX, and on hastening back to Rome he found that the clergy and people were eager to elect him, the most trusted friend and counsellor of Leo, as the successor. This proposal of the Romans was, however, resisted by Hildebrand, who set out for Germany at the head of an embassy to implore a nomination from the emperor. The negotiations, which lasted about eleven months, ultimately resulted in the selection of Hildebrand's candidate, Gebhard, Bishop of Eichstadt, who was consecrated at Rome, 13 April, 1055, under the name of Victor II. During the reign of this pontiff, the cardinal-subdeacon steadily maintained, and even increased the ascendancy which by his commanding genius he had acquired during the pontificate of Leo IX. Near the close of the year 1057 he went once more to Germany to reconcile the Empress-regent Agnes and her court to the (merely) canonical election of Pope Stephen X (1057-1058). His mission was not yet accomplished when Stephen died at Florence, and although the dying pope had forbidden the people to appoint a successor before Hildebrand returned, the Tusculan faction seized the opportunity to set up a member of the Crescentian family, John Mincius, Bishop of Velletri, under the title of Benedict X. With masterly skill Hildebrand succeeded in defeating the schemes of the hostile party, and secured the election of Gerard, Bishop of Florence, a Burgundian by birth, who assumed the name of Nicholas II (1059-1061).

The two most important transactions of this pontificate--the celebrated decree of election, by which the power of choosing the pope was vested in the college of cardinals, and the alliance with the Normans, secured by the Treaty of Meifi, 1059--were in large measure the achievement of Hildebrand, whose power and influence had now become supreme in Rome. It was perhaps inevitable that the issues raised by the new decree of election should not be decided without a conflict, and with the passing away of Nicholas II in 1061, that conflict came. But when it was ended, after a schism enduring for some years, the imperial party with its antipope Cadalous had been discomfited, and Anselm of Baggio, the candidate of Hildebrand and the reform party, successfully enthroned in the Lateran Palace as Alexander II. By Nicholas II, in 1059, Hildebrand had been raised to the dignity and office of Archdeacon of the Holy Roman Church, and Alexander II now made him Chancellor of the Apostolic See. On 21 April, 1073, Alexander II died. The time at length had come when Hildebrand, who for more than twenty years had been the most prominent figure in the Church, who had been chiefly instrumental in the selection of her rulers, who had inspired and given purpose to her policy, and who had been steadily developing and realizing, by successive acts, her sovereignty and purity, should assume in his own person the majesty and responsibility of that exalted power which his genius had so long directed.

On the day following the death of Alexander II, as the obsequies of the deceased pontiff were being performed in the Lateran basilica, there arose, of a sudden, a loud outcry from the whole multitude of clergy and people: "Let Hildebrand be pope!" "Blessed Peter has chosen Hildebrand the Archdeacon!" All remonstrances on the part of the archdeacon were vain, his protestations fruitless. Later, on the same day, Hildebrand was conducted to the church of San Pietro in Vincoli, and there elected in legal form by the assembled cardinals, with the due consent of the Roman

clergy and amid the repeated acclamations of the people. That this extraordinary outburst on the part of the clergy and people in favour of Hildebrand could have been the result of some preconcerted arrangements, as is sometimes alleged, does not appear likely. Hildebrand was clearly the man of the hour, his austere virtue commanded respect, his genius admiration; and the promptitude and unanimity with which he was chosen would indicate, rather, a general recognition of his fitness for the high office. In the decree of election those who had chosen him as pontiff proclaimed him "a devout man, a man mighty in human and divine knowledge, a distinguished lover of equity and justice, a man firm in adversity and temperate in prosperity, a man, according to the saying of the Apostle, of good behaviour, blameless, modest, sober, chaste, given to hospitality, and one that ruleth well his own house; a man from his childhood generously brought up in the bosom of this Mother Church, and for the merit of his life already raised to the archidiaconal dignity". "We choose then", they said to the people, "our Archdeacon Hildebrand to be pope and successor to the Apostle, and to bear henceforward and forever the name of Gregory" (22 April, 1073), Mansi, "Conciliorum Collectio", XX, 60.

The decree of Nicholas II having expressly, if vaguely acknowledged the right of the emperor to have some voice in papal elections, Hildebrand deferred the ceremony of his consecration until he had received the royal sanction. In sending the formal announcement of his elevation to Henry IV of Germany, he took occasion to indicate frankly the attitude, which, as sovereign pontiff, he was prepared to assume in dealing with the Christian princes, and, with a note of grave personal warning besought the king not to bestow his approval. The German bishops, apprehensive of the severity with which such a man as Hildebrand would carry out the decrees of reform, endeavoured to prevent the king from assenting to the election; but upon the favourable report of Count Eberhard of Nettenburg, who had been dispatched to Rome to assert the rights of the crown, Henry gave his approval (it proved to be the last instance in history of a papal election being ratified by an emperor), and the new pope, in the meanwhile ordained to the priesthood, was solemnly consecrated on the Feast of Sts. Peter and Paul, 29 June, 1073. In assuming the name of Gregory VII, Hildebrand not only honoured the memory and character of his earliest patron, Gregory VI, but also proclaimed to the world the legitimacy of that pontiff's title.

From the letters which Gregory addressed to his friends shortly after his election, imploring their intercession with heaven in his behalf, and begging their sympathy and support, it is abundantly evident that he assumed the burden of the pontificate, which had been thrust on him, only with the strongest reluctance, and not without a great struggle of mind. To Desiderius, Abbot of Monte Cassino, he speaks of his elevation in terms of terror, giving utterance to the words of the Psalmist: "I am come into deep waters, so that the floods run over me"; "Fearlessness and trembling are come upon me, and darkness hath covered me." And in view of the appalling nature of the task that lay before him (of its difficulties no one indeed had a clearer perception than he), it cannot appear strange that even his intrepid spirit was for the moment overwhelmed. For at the time of Gregory's elevation to the papacy the Christian world was in a deplorable condition. During the desolating era of transition--that terrible period of warfare and rapine, violence, and corruption in high places,

which followed immediately upon the dissolution of the Carolingian Empire, a period when society in Europe and all existing institutions seemed doomed to utter destruction and ruin--the Church had not been able to escape from the general debasement. The tenth century, the saddest, perhaps, in Christian annals, is characterized by the vivid remark of Baronius that Christ was as if asleep in the vessel of the Church. At the time of Leo IX's election in 1049, according to the testimony of St. Bruno, Bishop of Sengi, the whole world lay in wickedness, holiness had disappeared, justice had perished and truth had been buried; Simon Magus lording it over the Church, whose bishops and priests were given to luxury and fornication" (*Vita S. Leonis PP. IX* in Watterich, *Pont. Roman. Vitae*, I, 96). St. Peter Damian, the fiercest censor of his age, unrolls a frightful picture of the decay of clerical morality in the lurid pages of his "*Liber Gomorrhianus*" (*Book of Gomorrha*). Though allowance must no doubt be made for the writer's exaggerated and rhetorical style--a style common to all moral censors-- yet the evidence derived from other sources justifies us in believing that the corruption was widespread. In writing to his venerated friend, Abbot Hugh of Cluny (Jan., 1075), Gregory himself laments the unhappy state of the Church in the following terms: "The Eastern Church has fallen away from the Faith and is now assailed on every side by infidels. Wherever I turn my eyes--to the west, to the north, or to the south--I find everywhere bishops who have obtained their office in an irregular way, whose lives and conversation are strangely at variance with their sacred calling; who go through their duties not for the love of Christ but from motives of worldly gain. There are no longer princes who set God's honour before their own selfish ends, or who allow justice to stand in the way of their ambition. . . .And those among whom I live--Romans, Lombards, and Normans--are, as I have often told them, worse than Jews or Pagans" (*Greg. VII, Registr.*, 1.II, ep. xlix).

But whatever the personal feelings and anxieties of Gregory may have been in taking up the burden of the papacy at a time when scandals and abuses were everywhere pressing into view, the fearless pontiff felt not a moment's hesitation as to the performance of his duty in carrying out the work of reform already begun by his predecessors. Once securely established on the Apostolic throne, Gregory made every effort to stamp out of the Church the two consuming evils of the age, simony and clerical incontinency, and, with characteristic energy and vigor, laboured unceasingly for the assertion of those lofty principles with which he firmly believed the welfare of Christ's Church and the regeneration of society itself to be inseparably bound up. His first care, naturally, was to secure his own position in Rome. For this purpose he made a journey into Southern Italy, a few months after his election, and concluded treaties with Landolfo of Benevento, Richard of Capun, and Gisolfo of Salerno, by which these princes engaged themselves to defend the person of the pope and the property of the Holy See, and never to invest anyone with a church benefice without the papal sanction. The Norman leader, Robert Guiscard, however, maintained a suspicious attitude towards the pope, and at the Lenten Synod (1075) Gregory solemnly excommunicated him for his sacrilegious invasion of the territory of the Holy See (Capun and Benevento). During the year 1074 the pope's mind was also greatly occupied by the project of an expedition to the East for the deliverance of the Oriental Christians from the oppression of the Seljuk Turks. To promote the

cause of a crusade, and to effect, if possible, a reunion between the Eastern and the Western Church--hopes of which had been held out by the Emperor Michael VIII in his letter to Gregory in 1073--the pontiff sent the Patriarch of Venice to Constantinople as his envoy. He wrote to the Christian princes, urging them to rally the hosts of Western Christendom for the defense of the Christian East; and in March, 1074, addressed a circular letter to all the faithful, exhorting them to come to the rescue of their Eastern brethren. But the project met with much indifference and even opposition; and as Gregory himself soon became involved in complications elsewhere, which demanded all his energies, he was prevented from giving effect to his intentions, and the expedition came to naught. With the youthful monarch of Germany Gregory's relations in the beginning of his pontificate were of a pacific nature. Henry, who was at the time hard pressed by the Saxons, had written to the pope (Sept., 1073) in a tone of humble deference, acknowledging his past misconduct, and expressing regret for his numerous misdeeds--his invasion of the property of the Church, his simoniacal promotions of unworthy persons, his negligence in punishing offenders; he promised amendment for the future, professed submission to the Roman See in language more gentle and lowly than had ever been used by any of his predecessors to the pontiffs of Rome, and expressed the hope that the royal power and the sacerdotal, bound together by the necessity of mutual assistance, might henceforth remain indissolubly united. But the passionate and headstrong king did not long abide by these sentiments.

With admirable discernment, Gregory began his great work of purifying the Church by a reformation of the clergy. At his first Lenten Synod (March, 1074) he enacted the following decrees:

- That clerics who had obtained any grade or office of sacred orders by payment should cease to minister in the Church.
- That no one who had purchased any church should retain it, and that no one for the future should be permitted to buy or sell ecclesiastical rights.
- That all who were guilty of incontinence should cease to exercise their sacred ministry.
- That the people should reject the ministrations of clerics who failed to obey these injunctions.

Similar decrees had indeed been passed by previous popes and councils. Clement II, Leo IX, Nicholas II, and Alexander II had renewed the ancient laws of discipline, and made determined efforts to have them enforced. But they met with vigorous resistance, and were but partially successful. The promulgation of Gregory's measures now, however, called forth a most violent storm of opposition throughout Italy, Germany, and France. And the reason for this opposition on the part of the vast throng of immoral and simoniacal clerics is not far to seek. Much of the reform thus far accomplished had been brought about mainly through the efforts of Gregory; all countries had felt the force of his will, the power of his dominant personality. His character, therefore, was a sufficient guarantee that his legislation would not be suffered to remain a dead letter. In Germany, particularly, the enactments of Gregory aroused a feeling of intense indignation. The whole body of the married clergy offered the most resolute resistance, and declared that the canon enjoining celibacy was wholly unwarranted in Scripture. In support of their position they appealed to the words of the Apostle Paul, I Cor., vii,2, and 9: "It is better to marry than to be burnt"; and I Tim., iii, 2: "It behooveth therefore a bishop to be blameless, the husband of one wife." They cited the

words of Christ, Matt., xix, 11: "All men take not this word, but they to whom it is given"; and, recurred to the address of the Egyptian Bishop Paphnutius at the Council of Nice. At Nuremberg they informed the papal legate that they would rather renounce their priesthood than their wives, and that he for whom men were not good enough might go seek angels to preside over the Churches. Siegfried, Archbishop of Mainz and Primate of Germany, when forced to promulgate the decrees, attempted to temporize, and allowed his clergy six months of delay for consideration. The order, of course, remained ineffectual after the lapse of that period, and at a synod held at Erfurt in October, 1074, he could accomplish nothing. Altmann, the energetic Bishop of Passau, nearly lost his life in publishing the measures, but adhered firmly to the instructions of the pontiff. The greater number of bishops received their instructions with manifest indifference, and some openly defied the pope. Otto of Constance, who had before tolerated the marriage of his clergy, now formally sanctioned it. In France the excitement was scarcely less vehement than in Germany. A council at Paris, in 1074, condemned the Roman decrees, as implying that the validity of the sacraments depended on the sanctity of the minister, and declared them intolerable and irrational. John, Archbishop of Rouen, while endeavouring to enforce the canon of celibacy at a provincial synod, was stoned and had to flee for his life. Walter, Abbot of Pontoise, who attempted to defend the papal enactments, was imprisoned and threatened with death. At the Council of Burgos, in Spain, the papal legate was insulted and his dignity outraged. But the zeal of Gregory knew no abatement. He followed up his decrees by sending legates into all quarters, fully empowered to depose immoral and simoniacal ecclesiastics.

It was clear that the causes of the simony and of the incontinence amongst the clergy were closely allied, and that the spread of the latter could be effectually checked only by the eradication of the former. Henry IV had failed to translate into action the promises made in his penitent letter to the new pontiff. On the subjugation of the Saxons and Thuringians, he deposed the Saxon bishops, and replaced them by his own creatures. In 1075 a synod held at Rome excommunicated "any person, even if he were emperor or king, who should confer an investiture in connection with any ecclesiastical office", and Gregory recognizing the futility of milder measures, deposed the simoniacal prelates appointed by Henry, anathematized several of the imperial counsellors, and cited the emperor himself to appear at Rome in 1076 to answer for his conduct before a council. To this Henry retorted by convening a meeting of his supporters at Worms on 23 January 1076. This diet naturally defended Henry against all the papal charges, accused the pontiff of most heinous crimes, and declared him deposed. These decisions were approved a few weeks later by two synods of Lombard bishops at Piacenza and Pavia respectively, and a messenger, bearing a most offensive personal letter from Henry, was dispatched with this reply to the pope. Gregory hesitated no longer: recognizing that the Christian Faith must be preserved and the flood of immorality stemmed at all costs, and seeing that the conflict was forced upon him by the emperor's schism and the violation of his solemn promises, he excommunicated Henry and all his ecclesiastical supporters, and released his subjects from their oath of allegiance in accordance with the usual political procedures of the age.

Henry's position was now precarious. At first he was encouraged by his creatures to resist, but his friends, including his abettors among the episcopate, began to abandon him, and the Saxons revolted once more, demanding a new king. At a meeting of the German lords, spiritual and temporal, held at Tibur in October, 1076, the election of a new emperor was canvassed. On learning through the papal legate of Gregory's desire that the crown should be reserved for Henry if possible, the assembly contented itself with calling upon the emperor to abstain for the time being from all administration of public affairs and avoid the company of those who had been excommunicated, but declared his crown forfeited if he were not reconciled with the pope within a year. It was further agreed to invite Gregory to a council at Augsburg in the following February, at which Henry was summoned to present himself. Abandoned by his own partisans and fearing for his throne, Henry fled secretly with his wife and child and a single servant to Gregory to tender his submission. He crossed the Alps in the depth of one of the severest winters on record. On reaching Italy, the Italians flocked around him promising aid and assistance in his quarrel with the pope, but Henry spurned their offers. Gregory was already on his way to Augsburg, and, fearing treachery, retired to the castle of Canossa. Thither Henry followed him, but the pontiff, mindful of his former faithlessness, treated him with extreme severity. Stript of his royal robes, and clad as a penitent, Henry had to come barefooted mid ice and snow, and crave for admission to the presence of the pope. All day he remained at the door of the citadel, fasting and exposed to the inclemency of the wintry weather, but was refused admission. A second and a third day he thus humiliated and disciplined himself, and finally on 28 January, 1077, he was received by the pontiff and absolved from censure, but only on condition that he would appear at the proposed council and submit himself to its decision.

Henry then returned to Germany, but his severe lesson failed to effect any radical improvement in his conduct. Disgusted by his inconsistencies and dishonesty, the German princes on 15 March, 1077, elected Rudolph of Swabia to succeed him. Gregory wished to remain neutral, and even strove to effect a compromise between the opposing parties. Both, however, were dissatisfied, and prevented the proposed council from being held. Henry's conduct toward the pope was meanwhile characterized by the greatest duplicity, and, when he went so far as to threaten to set up an antipope, Gregory renewed in 1080 the sentence of excommunication against him. At Brixen in June, 1080, the king and his feudatory bishops, supported by the Lombards, carried their threat into effect, and selected Gilbert, the excommunicated simoniacal Archbishop of Ravenna, as pope under the title of Clement III. Rudolph of Swabia having fallen mortally wounded at the battle of Mersburg in 1080. Henry could concentrate all his forces against Gregory. In 1081 he marched on Rome, but failed to force his way into the city, which he finally accomplished only in 1084. Gregory thereupon retired into the exile of Sant' Angelo, and refused to entertain Henry's overtures, although the latter promised to hand over Guibert as a prisoner, if the sovereign pontiff would only consent to crown him emperor. Gregory, however, insisted as a necessary preliminary that Henry should appear before a council and do penance. The emperor, while pretending to submit to these terms, tried hard to prevent the meeting of the bishops. A small number however assembled, and, in accordance with their wishes, Gregory again excommunicated Henry. The latter on receipt of this news again

entered Rome on 21 March, 1084. Guibert was consecrated pope, and then crowned Henry emperor. However, Robert Guiscard, Duke of Normandy, with whom Gregory had formed an alliance, was already marching on the city, and Henry, learning of his advance, fled towards Citta Castellana. The pontiff was liberated, but, the people becoming incensed by the excesses of his Norman allies, he was compelled to leave Rome. Disappointed and sorrowing he withdrew to Monte Cassino, and later to the castle of Salerno by the sea, where he died in the following year. Three days before his death he withdrew all the censures of excommunication that he had pronounced, except those against the two chief offenders--Henry and Guibert. His last words were: "I have loved justice and hated iniquity, therefore I die in exile." His body was interred in the church of Saint Matthew at Salerno. He was beatified by Gregory XIII in 1584, and canonized in 1728 by Benedict XIII. His writings treat mainly of the principles and practice of Church government. They may be found under the title "Gregorii VII registri sive epistolarum libri" in Mansi, "Sacrorum Conciliorum nova et amplissima collectio" (Florence, 1759) and "S. Gregorii VII epistolae et diplomata" by Horoy (Paris, 1877).

THOMAS OESTREICH
Pope Gregory VIII

Pope Gregory VIII

(ALBERTO DI MORRA).

Born about the beginning of the twelfth century, at Benevento; elected at Ferrara, 21 Oct., 1187; died at Pisa, 17 Dec., 1187, after a pontificate of one month and twenty-seven days. The year 1187 witnessed the almost complete obliteration of Christianity in Palestine. On 4 July, Saladin won the decisive victory of Hittin, near Lake Tiberias; on 3 October, the terrible sultan was master of Jerusalem. The news of the fall of the Holy City struck Europe like a thunderbolt. Urban III is said to have died of a broken heart (20 Oct.). The following day the cardinals elected the chancellor, Cardinal Alberto. He was a Beneventan of noble family; had received a good education; at an early age became a monk, some say a Cistercian, some a Benedictine of Monte Cassino. He was created cardinal-deacon in 1155, by Adrian IV, and in 1158 cardinal-priest with the title of San Lorenzo in Lucina. Alexander III, in 1172, made him his chancellor. It is interesting to notice that he was the last cardinal who used that title until it was revived in our own day by Pius X, succeeding chancellors of the Holy See, for some reason not satisfactorily explained, calling themselves vice-chancellors. Cardinal Alberto was one of the two legates dispatched to England by Alexander III to investigate the murder of St. Thomas a Becket. He also, in the pope's name, placed the royal crown on Alfonso II of Portugal. He was universally beloved for the mildness and gentleness of his disposition; and was no sooner seated on the pontifical throne than he confirmed the popular estimate of his character by making overtures to Barbarossa for a reconciliation with the Church. Since the dominate policy of his pontificate must be a crusade for the recovery of the Holy Sepulchre, he issued circular letters to all the faithful, enjoining prayers and fasts; and as peace between the rival seaports of Pisa and Genoa was an essential condition to the transportation of troops and supplies, he repaired to the former city, where he was overtaken by death. He was buried in the cathedral of Pisa with all possible honours, and was succeeded by Clement III.

JAMES F. LOUGHLIN
Gregory VIII (Antipope)

Gregory VIII

Antipope. He was Mauritius Burdinus (Bordinho, Bourdin), who was placed upon the papal chair by Emperor Henry V, 8 March, 1118. Bourdin was a Frenchman, born probably at Limoges. He received a good education at Cluny, and followed his fellow-Benedictine, Bernard, Archbishop of Toledo and Primate of Spain, beyond the Pyrenees. At a time when Cluny stood for learning

and reform, his advancement was assured. In 1098, he was made Bishop of Coimbra (Gams); in 1111, he was raised to the Metropolitan See of Braga. Three years later, in consequence of a quarrel with the primate, he was suspended by Paschal II. Coming later to Rome, he so ingratiated himself with the pontiff, who was also a Cluiac, that he was retained at court and employed on weighty affairs. In 1117, when Henry came to Rome to force his terms upon the pope, Paschal, safe in Benevento, sent Bourdin with some cardinals to negotiate with the emperor. This mission proved to be the downfall of Bourdin. Seduced from his Gregorian principles, he openly espoused the cause of Henry, and, to emphasize his apostasy, placed the crown upon the emperor on Easter Day. He was promptly excommunicated; but was marked out for the supreme dignity by his new associates. A few months later, when Henry, learning of Paschal's death, hastened to Rome, surrounded by jurists, only to find that he had been outwitted by the vigilance of the cardinals, failing to capture Gelasius, he declared the latter's election null, and, after a discourse by the learned Irnerius of Bologna on imperial rights, induced a bribed assembly of Romans to proclaim Bourdin pope, who with unconscious irony took the name of Gregory. The honours of the papacy turned to ashes in his hands. Repeatedly excommunicated and finally delivered as a prisoner into the hands of Callistus II, he was detained in several monasteries until his death about 1137. Thus ended the career of a prelate "whom", says William of Malmesbury (*Gesta Regum Angl.*, V, 434), "everyone would have been obliged to venerate and all but adore on account of his prodigious industry, had he not preferred to seek glory by so notorious a crime". One of the canons of the Ninth General Council, 1123, declares all ordinations made by him after his condemnation, or by any bishop by him consecrated, to be irritoe.

JAFFE, *Regesta RR. PP.*, 2d ed., I, 821-22; II, 715.

JAMES F. LOUGHLIN

Pope Gregory IX

Pope Gregory IX

(UGOLINO, Count of Segni).

Born about 1145, at Anagni in the Campagna; died 22 August, 1241, at Rome. He received his education at the Universities of Paris and Bologna. After the accession of Innocent III to the papal throne, Ugolino, who was a nephew of Innocent III, was successively appointed papal chaplain, Archpriest of St. Peter's, and Cardinal-Deacon of Saint' Eustachio in 1198. In May, 1206, he succeeded Octavian as Cardinal-Bishop of Ostia and Velletri. A year later he and Cardinal Brancaleone were sent as papal legates to Germany to mediate between Philip of Swabia and Otto of Brunswick, both of whom laid claim to the German throne subsequent to the death of Henry VI. By order of the pope the legates freed Philip from the ban which he had incurred under Pope Celestine III on account of invading the Pontifical States. Though the legates were unable to induce Otto of Brunswick to give up his claims to the throne, they succeeded in effecting a truce between the two claimants and returned to Rome in 1208 to treat with the pope concerning their future

procedure. On their way back to Germany early in June, 1208, they were apprised at Verona that Philip had been murdered, and again returned to Rome. Early in January, 1209, they again proceeded to Germany with instructions to induce the princes to acknowledge Otto of Brunswick as king. They were successful in their mission and returned to Rome in June of the same year. After the death of Pope Innocent III, 16 July, 1216, Ugolino was instrumental in the election of Pope Honorius III on 18 July. In order to hasten the choice the College of Cardinals had agreed to an election by compromise and empowered Cardinals Ugolino and Guido of Preneste to appoint the new pope.

In January, 1217, Honorius III made Ugolino plenipotentiary legate for Lombardy and Tuscia, and entrusted him with preaching the crusade in those territories. In this capacity he became a successful mediator between Pisa and Genoa, in 1217, between Milan and Cremona in 1218, and between Bologna and Pistoia in 1219. At the coronation of Frederick II in Rome, 22 November, 1220, the emperor took the cross from Ugolino and made the vow to embark for the Holy Land in August, 1221. On 14 March, 1221, Pope Honorius commissioned Ugolino to preach the crusade also in Central and Upper Italy. After the death of Pope Honorius III (18 March, 1227), the cardinals again agreed upon an election by compromise and empowered three of their number, among whom were Ugolino and Conrad of Urach, to elect the new pope. At first Conrad of Urach was elected, but he refused the tiara lest it might appear that he had elected himself. Hereupon the cardinals unanimously elected Ugolino on 19 March, 1227, and he reluctantly accepted the high honour, taking the name of Gregory IX. Though he was already far advanced in age (being more than eighty years old), he was still full of energy.

The important diplomatic positions which Gregory IX had held before he became pope had acquainted him thoroughly with the political situation of Europe, and especially with the guileful and dishonest tactics of Emperor Frederick II. Three days after his installation he sternly ordered the emperor at last to fulfill his long delayed vow to embark for the Holy Land. Apparently obedient to the papal mandate, Frederick II set sail from Brindial on 8 September, 1227, but returned three days later under the plea that the Landgrave of Thuringia, who was accompanying him, was on the point of death, and that he himself was seriously ill. Gregory IX, knowing that Frederick II had on eight or nine previous occasions postponed his departure for the East, distrusted the emperor's sincerity, and on 20 September, 1227, placed him under the ban of the Church. He tried to justify his severe measures towards the emperor in a Brief to the Christian princes, while, on the other hand, the emperor addressed a manifesto to the princes in which he condemns the actions of the pope in very bitter terms. The imperial manifesto was read publicly on the steps of the Capitol in Rome, whereupon the imperial party in Rome, under the leadership of the Frangipam, stirred up an insurrection, so that when the pope published the emperor's excommunication in the basilica of St. Peter, 23 March, 1228, he was openly insulted and threatened by a Ghibelline mob, and fled first to Viterbo, and then to Perugia.

In order to prove to the Christian world that the pope was too hasty in placing him under the ban, the emperor resolved to proceed to the Holy Land and embarked from Brindial with a small army on 28 June, 1228, having previously asked the blessing of Gregory IX upon his enterprise.

The pope, however, denying that an excommunicated emperor had a right to undertake a holy war, not only refused his blessing, but put him under the ban a second time and released the crusaders from their oath of allegiance to him. While in the Holy Land the emperor, seeing that he could accomplish nothing as long as he was under the ban, changed his tactics toward the pope. He now acknowledged the justice of his excommunication and began to take steps towards a reconciliation. Gregory IX distrusted the advances of the emperor, especially since Rainald, the imperial Governor of Spoleto, had invaded the Pontifical States during the emperor's absence. But the papal anathema did not have the effect which Gregory IX had hoped for. In Germany only one bishop, Berthold of Strasburg, published the Bull of excommunication, and nearly all the princes and bishops remained faithful to the emperor. Cardinal Otto of San Nicolo, whom Gregory IX had sent to Germany to publish the emperor's excommunication, was entirely unsuccessful, because Frederick's son Henry, his representative in Germany, forbade the bishops and abbots to appear at the synods which the cardinal attempted to convene. Equally futile were Gregory's efforts to put Duke Otto of Brunswick on the German throne. In June, 1229, Frederick II returned from the Holy Land, routed the papal army which Gregory IX had sent to invade Sicily, and made new overtures of peace to the pope. Gregory IX, who had been a fugitive at Perugia since 1228, returned to Rome in February, 1230, upon the urgent request of the Romans, who connected an overwhelming flood of the Tiber with their harsh treatment of the pontiff. He now opened negotiations with Hermann of Salza (q. V.), the Grand Master of the Teutonic Order, whom the emperor had sent as his representative. On 20 July, 1230, a treaty was concluded at San Germano between the pope and the emperor, by force of which that part of the Pontifical States which was occupied by imperial troops and the papal possessions in Sicily were restored to the pope. After the ban was removed from the emperor by Cardinals John of Sabina and Thomas of Capua in the imperial camp near Ceperano on 28 August, 1230, pope and emperor met at Anagni and completed their reconciliation during the first three days of September.

The peace concluded between the pope and the emperor was, however, to be only temporary. The papacy as conceived by Gregory IX and the empire as conceived by Frederick II could not exist together in peace. The emperor aimed at supreme temporal power with which the pope should have no right to interfere. At least in Italy he tried to establish a rule of absolutism by suppressing all municipal liberty and holding the cities in subjection by a revived sort of feudalism. The pope, on the other hand, citing the example of Constantine, who exchanged Rome for Constantinople in deference to the pope, thought that the pope should be the supreme ruler in Italy and by force of his spiritual authority over the whole Christian world the papacy should in all things hold the supremacy over the empire. For a time the emperor assisted the pope in suppressing a few minor revolts in the Pontifical States, as was stipulated in the conditions of peace. Soon, however, he began again to disturb the peace by impeding the liberty of the Church in Sicily and by making war upon Lombardy. The freedom of the Lombard cities was a strong and necessary bulwark for the safety of the Pontifical States and it was only natural that the pope should use all his influence to protect these cities against the imperial designs. As arbiter between the emperor and the Lombard

cities the pope had a few times decided in favour of the latter. The emperor, therefore, no longer desired the services of the pope as mediator and began open hostilities against the Lombard League. He gained a signal victory at Cortenuova on 27 November, 1237. To save Lombardy from the despotic rule of the emperor and to protect the Pontifical States, the pope entered into an alliance with the Tuscans, Umbrians, and Lombards to impede the imperial progress. The continuous victories of the emperor spurred his pride to further action. He declared his intention to unite with the empire not only Lombardy and Tuscany, but also the Patrimony of St. Peter and practically the whole of Italy. On 12 March, 1239, the pope again excommunicated the emperor and another disastrous struggle between the papacy and the empire ensued. Henceforth the pope was convinced that as long as Frederick was emperor there was no possibility of peace between the papacy and the empire, and he left nothing undone to bring about his disposition. He ordered a crusade to be preached against him in Germany, instructed his German legate Albert of Behaim, the Archdeacon of Passau, to urge the election of a new king upon the princes, and to place under the ban all those that continued to side with the excommunicated emperor. Despite papal anathemas many bishops and princes remained loyal to the emperor who, encouraged by his large following, decided to humiliate the pope by making himself master of the Pontifical States. In this great distress the pope ordered all bishops to assemble in Rome for a general council at Easter (31 March), 1241. But the emperor prevented the meeting of the council by forbidding the bishops to travel to Rome and by capturing all those that undertook the journey despite his prohibition. He himself marched towards Rome with an army and lay encamped near the city, when Gregory IX suddenly died at the age of almost one hundred years.

The mendicant orders which began to shed great lustre over the Christian Church in the first half of the thirteenth century found a devoted friend and liberal patron in Gregory IX. In them he saw an excellent means for counteracting by voluntary poverty the love of luxury and splendour which was possessing many ecclesiastics; a powerful weapon for suppressing heresy within the Church; and an army of brave soldiers of Christ who were ready to preach His Gospel to the pagans even at the risk of their life. When still Cardinal-Bishop of Ostia, Gregory IX would often don the dress of St. Francis, walk about barefoot with the saint and his disciples, and talk of holy things. Saint Francis loved him as his father and in a prophetic spirit addressed him at times as "the bishop of the whole world and the father of all nations". Upon the special request of Saint Francis, Pope Honorius III appointed him protector of the order in 1220. He was also a devoted friend of St. Dominic and promoted the interests of his order in many ways. At the death of St. Dominic he held the funeral services and buried the saint at Bologna in 1221. St. Clare and her order stood likewise under the protection of Gregory IX, as is attested by the convents he founded for the order in Rome, Lombardy, and Tuscia. However, despite his great liberality towards the rising mendicant orders he did not neglect the older ones. On 28 June, 1227, he approved the old privileges of the Camaldolese, in the same year he introduced the Premonstratensians into Livonia and Courland, and on 6 April, 1229, he gave new statutes to the Carmelites. He financially and otherwise assisted the Cistercians and the Teutonic Order in the Christianization of Prussia and the neighboring

countries of the North. On 17 January, 1235, he approved the Order of Our Lady of Mercy for the redemption of captives. With the help of the religious orders he planned the conversion of Asia and Africa and sent missionaries out of their ranks to Tunis, Morocco, and other places, where not a few suffered martyrdom. He also did much to alleviate the hard lot of the Christians in the Holy Land, and would have done still more, if his plans to recover the Holy Land for the Christians had not been frustrated by the indifference of Frederick II. The calendar of saints was enriched with some of the most popular names by Gregory IX. On 16 July, 1228, he canonized St. Francis of Assisi, and on the next day he laid the cornerstone of the church and monastery which were erected in honour of the saint. He took part in the composition of the Office of St. Francis and also wrote some hymns in his honour. It was also at his command that Thomas of Celano wrote a biography of the saint (latest and best edition by d'Alencon, Rome, 1906). On 30 May, 1232, he canonized St. Anthony of Padua, at Spoleto; on 10 June, 1233, St. Virgil, Bishop of Salzburg and Apostle of Carinthia; on 8 July, 1234, St. Dominic, at Rieti; and on 27 May, 1235, St. Elizabeth of Thuringia, at Perugia.

Gregory IX was very severe towards heretics, who in those times were universally looked upon as traitors and punished accordingly. Upon the request of King Louis IX of France, he sent Cardinal Romanus as legate to assist the king in his crusade against the Albigenses. At the synod which the papal legate convened at Toulouse in November, 1229, it was decreed that all heretics and their abettors should be delivered to the nobles and magistrates for their due punishment, which, in case of obstinacy, was usually death. When in 1224 Frederick II ordered that heretics in Lombardy should be burnt at the stake, Gregory IX, who was then papal legate for Lombardy, approved and published the imperial law. During his enforced absence from Rome (1228-1231) the heretics remained unmolested and became very numerous in the city. In February, 1231, therefore, the pope enacted a law for Rome that heretics condemned by an ecclesiastical court should be delivered to the secular power to receive their "due punishment". This "due punishment" was death by fire for the obstinate and imprisonment for life for the penitent. In pursuance of this law a number of Patarini were arrested in Rome in 1231, the obstinate were burned at the stake, the others were imprisoned in the Benedictine monasteries of Monte Cassino and Cava (Ryccardus de S. Germano, ad annum 1231, in *Mon. Germ. SS.*, XIX, 363). It must not be thought, however, that Gregory IX dealt more severely with heretics than other rulers did. Death by fire was the common punishment for heretics and traitors in those times. Up to the time of Gregory IX, the duty of searching out heretics belonged to the bishops in their respective dioceses. The so-called Monastic Inquisition was established by Gregory IX, who in his Bulls of 13, 20, and 22 April, 1233, appointed the Dominicans as the official inquisitors for all dioceses of France (Ripoil and Bremond, "Bullarium Ordinis Fratrum Praedicatorum", Rome, 1729, I, 47).

For a time Gregory IX lived in hope that he might effect a reunion of the Latin and Greek Churches. Germanos, Patriarch of Constantinople, after a conversation on the religious differences between the Greeks and the Latins, which he had with some Franciscans at Nice, in 1232, addressed a letter to Gregory IX, in which he acknowledged the papal primacy, but complained of the

persecution of the Greeks by the Latins. Gregory IX sent him a cordial answer and commissioned four learned monks (two Franciscans and two Dominicans) to treat with the patriarch concerning the reunion. The papal messengers were kindly received both by the Emperor Vatatzes and by Germanos, but the patriarchs said that he could make no concessions on matters of faith without the consent of the Patriarchs of Jerusalem, Antioch, and Alexandria. A synod of the patriarchs was held at Nympha in Bithynia, to which the papal messengers were invited. But the Greeks stubbornly adhered to their doctrine concerning the procession of the Holy Ghost and asserted that the Latins could not validly consecrate unleavened bread. Thus Gregory IX failed, like many other popes before and after him, in his efforts to reunite the two Churches. In 1237 the Patriarch of the Syrian Monophysites and many of his bishops and monks renounced their heresy and submitted to the pope (Raynaldus ad annum 1237, n. 87 sq.), but their conversion was only temporary.

During the thirteen years and four months of his pontificate he created about fourteen cardinals, many of whom were members of religious orders. The best known among them are Sinibald of Fiesco, a learned canonist, who afterwards ascended the papal throne as Innocent IV; Raynald of Segni, a nephew of Gregory IX, who succeeded Innocent IV as Alexander IV; Otto of Montferrat, who spent over three years (1237-1240) as papal legate in England; Jacob of Vitry, an author, confessor of St. Mary of Oignies, whose life he wrote (*Acta SS.*, June, IV, 636-66); St. Francis Nonatus; and the learned and pious Englishman, Robert of Somercote, who, it is said, would have succeeded Gregory IX on the papal throne had he not died during the conclave (26 Sept., 1241). Gregory IX was also a man of learning, which he encouraged in various ways. He bestowed many privileges on the University of Paris, his Alma Mater, but also watched carefully over its professors, whom he warned repeatedly against the growing tendency of subjecting theology to philosophy by making the truth of the mysteries of faith dependent on philosophical proofs. He also possesses the great merit of having again made Aristotelianism the basis of scholastic philosophy, after the *Physics* of Aristotle had been prohibited in 1210; and his *Metaphysics* in 1215. The prohibition of Aristotle was meant only for the perverted Latin translation of his works and their Averroistic commentaries. Gregory IX commissioned William of Auvergne and other learned men to purge the works of Aristotle of their errors and thus made them again accessible to students. Among the greatest achievements of Gregory IX must be counted the collection of papal decretals, a work with which he entrusted Raymond of Pennaforte and which was completed in 1234 (see *DECRETALS*). The numerous letters of Gregory IX were first collected and published by Pamelius (Antwerp, 1572). Rodenburg edited 485 letters of Gregory IX, selected by Perts from the papal registers of the thirteenth century, and published them in "*Mon. Germ. Epist. Rom. Pontif.*" (Berlin, 1883), I, 261-728. Lucian Auvray began (Paris, 1890) to edit "*Les Registres de Gregoire IX, recueil des bulles de ce pape, publiées ou analysées d'après les manuscrits originaux du Vatican*", of which the eleventh fascicle appeared in 1908.

A *Life of Gregory IX, Vita Gregorii IX*, was written by a contemporary of Gregory IX, perhaps JOANNES DE FERENTINO. It was published by MURATORI in *Rerum Italicorum Scriptorum* (Milan, 1728), III, i, 577-588. Concerning it see MARX, *Die Vita Gregorii IX quellenkritisch*

untersucht (Berlin, 1889). The two best modern references are: BALAN, *Storia di Gregorio IX e dei suoi tempi*, 3 vol. (Modena, 1872-3); FELTEN, *Papsi Gregor IX*. (Freiburg, 1886); see also KOEHLER, *Verhältniss Friedrichs II zu den Papsien seiner Zeit* (Breslau, 1888); HUILLARD-BREHOLLER, *Historia diplomatia Frederici II*, 12 vols. (Innsbruck, 1880-85); PAGI, *Breviarium Gestorum Pont. Rom.* (Venice, 1730), III, 214-243.

MICHAEL OTT

Pope Gregory X

Pope Gregory X

Born 1210; died 10 January, 1276. The death of Pope Clement IV (929 November, 1268) left the Holy See vacant for almost three years. The cardinals assembled at Viterbo were divided into two camps, the one French and the other Italian. Neither of these parties could poll the two-thirds majority vote, nor was either willing to give way to the other for the election of a candidate to the papacy. In the summer of 1270 the head and burgesses of the town of Viterbo, hoping to force a vote, resorted to the expedient of confining the cardinals within the episcopal palace, where even their daily allowance of food was later on curtailed. A compromise was finally arrived at through the combined efforts of the French and Sicilian kings. The Sacred College, which then consisted of fifteen cardinals, designated six of their body to agree upon and cast a final vote in the matter. These six delegates met, and on 1 September, 1271, united their ballots in choice of Teobaldo Visconti, archdeacon of Liege, who, however, was not a cardinal himself nor even a priest. The new pontiff was a native of Piacenza and had been at one time in the service of Cardinal Jacopo of Palestrina, had become archdeacon of Liege, and accompanied Cardinal Ottoboni on his mission to England, and at the time of his election happened to be in Ptolemais (Acre), with Prince Edward of England, on a pilgrimage to the Holy Land. Receiving a summons from the cardinals to return immediately, he began his homeward journey on 19 November, 1271, and arrived at Viterbo on 12 February, 1272. He declared his acceptance of the dignity and took the name of Gregory X. On 13 March he made his entry into Rome, where on the nineteenth of the same month he was ordained to the priesthood. His consecration as pope took place on 27 March. He plunged at once with all his energies into the task of solving the weighty problems which then required his attention: the restoration of peace between Christian nations and princes, the settlement of affairs in the German empire, the amendment of the mode of life among clergy and people, the union of the Greek Church with Rome, the deliverance of Jerusalem and the Holy Land. As early as the fourth day after his coronation he summoned a general council, which was to open at Lyons on 1 May, 1274 (see LYONS, COUNCILS OF). In Italy the pope sought to make peace between the Guelphs and Ghibellines, whose factional war raged chiefly in Tuscany and Lombardy. Against the city of

Florence, the burgesses of which resisted these efforts to bring about a reconciliation, he issued a decree of excommunication.

After the death of Richard of Cornwall (1272) Gregory advised the German princes to select a new sovereign and refused the demand of Alfonso of Castile, rival of Richard, for recognition as emperor. Rudolf of Hapsburg having been elected on 29 September, 1273, Gregory X immediately recognized him and invited him to Rome to receive the imperial crown. The pope and the emperor met at Lausanne in October of 1273. Gregory was then returning from the Council of Lyons. Rudolf took here the customary oaths for the defence of the Roman Church, took the cross, and postponed until the following year his journey to Rome. The pope obtained from Alfonso of Castile the renunciation of his claims to the German crown.

From the very beginning of his pontificate Gregory sought to promote the interests of the Holy Land. Large sums were collected in France and England for this crusade. A resolutions adopted at the Council of Lyons, which opened on 7 May, 1274, provided that one-tenth of all benefices accruing to all churches in the course of six years should be set aside for the benefit of the Holy Land, the object being to secure the means of carrying on the holy war. This tithe was successfully raised, and preparations were at once made in France and England for the expedition, which unfortunately was not carried out. The ambassadors of the Grecian emperor, having arrived in Lyons on 24 June, swore, at the fourth sitting of the council (July 6) that the emperor had renounced the schism, and had returned to the allegiance due the Holy See. But this union, entered into by Michael Palaeologus for purely political reasons, was in no sense destined to endure. At the close of this council, over which Gregory had presided in person, he travelled by way of Lausanne, Milan, and Florence, as far as Arezzo, where he died on 10 January, 1276. Though his pontificate proved so short, the results which he achieved were of far-reaching consequence, and he succeeded in maintaining unimpaired peace and harmony. On account of his unusual virtues he is revered as a saint in Rome and in a number of dioceses (Arezzo, Placenza, Lausanne), his feast being 16 February.

J.P. KIRSCH
Pope Gregory XI

Pope Gregory XI

(PIERRE ROGER DE BEAUFORT).

Born in 1331, at the castle of Maumont in the Dioceses of Limoges; died 27 March, 1378, at Rome. He was a nephew of Pope Clement VI, who heaped numerous benefices upon him and finally created him cardinal deacon in 1348, when he was only eighteen years of age. As cardinal he attended the University of Perugia, became a skilled canonist and theologian, and gained the esteem of all by his humility and purity of heart. After the death of Urban V, the cardinals unanimously elected him pope at Avignon, on December, 1370. He chose the name of Gregory XI, had himself ordained priest on 4 January, 1371, and was crowned pope on the following day. Immediately on his accession he attempted to reconcile the Kings of France and England, but failed. He succeeded, however, in pacifying Castile, Aragon, Navarre, Sicily, and Naples. He also made efforts towards the reunion of the Greek and Latin Churches, the undertaking of a crusade, and the reform of the clergy. Soon, however, he had to give his entire attention to the turbulent affairs of Italy. Duke Bernabo Visconti of Milan, an inveterate enemy of the papacy, had in 1371 made himself master of Reggio and other places that were feudatory to the Holy See. When all other means to bring him to terms had failed, Gregory XI placed him under the ban. Bernabo compelled the legates that brought him the Bull of excommunication to eat the parchment on which his excommunication was written, and heaped many other insults upon them. Hereupon Gregory XI declared war upon him in 1372. Success was at first on the side of Bernabo, but when Gregory XI obtained the support of the emperor, the Queen of Naples, the King of Hungary, and bought into his service the English condottiere John Hawkwood, Bernabo sued for peace. By bribing some of the papal councillors he obtained a favourable truce on 6 June, 1374.

Like the preceding popes of Avignon, Gregory XI made the fatal mistake of appointing Frenchmen, who did not understand the Italians and whom the Italians hated, as legates and governors of the ecclesiastical provinces in Italy. The Florentines, however, feared that a strengthening of the papal power in Italy would impair their own prestige in Central Italy and allied themselves with Bernabo in July, 1375. Both Bernabo and the Florentines did their utmost to stir up an insurrection in the pontifical territory among all those that were dissatisfied with the papal legates in Italy. They were so successful that within a short time the entire Patrimony of St. Peter was up in arms against the pope. Highly incensed at the seditious proceedings of the Florentines, Gregory XI imposed an extremely severe punishment upon them. He put Florence under interdict, excommunicated its inhabitants, and outlawed them and their possessions. The financial loss which the Florentines sustained thereby was inestimable. They sent St. Catherine of Siena to intercede for them with Gregory XI, but frustrated her efforts by continuing their hostilities against the pope. In the midst of these disturbances Gregory XI, yielding to the urgent prayers of St. Catherine, decided to remove

the papal see to Rome, despite the protests of the French King and the majority of the cardinals. He left Avignon on 13 September, 1376, boarded the ship at Marsailles on 2 October, and came by way of Genoa to Corneto on 6 December. Here he remained until arrangements were made in Rome concerning its future government. On 13 January, 1377, he left Corneto, landed at Ostia on the following day, and sailed up the Tiber to the monastery of San Paolo, from where he solemnly made his entrance into Rome on 17 January. But his return to Rome did not put an end to the hostilities. The notorious massacre of Cesena, which was ordered by Cardinal Robert of Geneva (afterwards antipope Clement VII), embittered the Italians still more against the pope. The continuous riots in Rome induced Gregory XI to remove to Anagni towards the end of May, 1377. He gradually quelled the commotion and returned to Rome on 7 Nov., 1377, where he died while a congress of peace was in process at Sarzano. Gregory XI was the last pope of French nationality. He was learned and pious, though not free from nepotism. In 1374 he approved the Order of the Spanish Hermits of St. Jerome, and on 22 May, 1377, he issued five Bulls in which the errors of Wyclif were condemned. He was so disgusted with the conditions at Rome that only death prevented him from returning to Avignon. The Great Schism began after his death.
