Grossherzogtums Baden* (Freiburg, since 1887, 8 vols.); ZINGELER AND LAUR, *Die Bau- und Kunst-Denkmäler in den Hohenzollernschen Landen* (Stuttgart, 1896). Periodicals: *Freiburger Diözesanarchiv* (Freiburg, since 1865, annual; vol. XXIX has a complete ecclesiastico-historical bibliography of the archdiocese); *Zeitschrift für Gesch. des Oberrheins* (1850-1908); *Freiburger Katholisches Kirchenblatt* (1857-89); *Oberrheinisches Pastoralblatt* (Freiburg, since 1890).

THE UNIVERSITY.--A complete list of the literature dealing with the university is contained in ERMAN AND HORN, *Bibliographie der deutschen Universitäten II* (Leipzig, 1904), 195-213. The most important works are: RIEGGER, *Analecta academiae Friburgensis* (Freiburg, 1774 and 1779); IDEM, *Imagines, Sigilla atque nonnulla alia monumenta Academiae Friburgensis* (Freiburg, 1778); SCHRIBER, *Geschichte der Albert-Ludwigs-Universität* (3 vols., Freiburg, 1857-60); *Die Universität Freiburg seit dem Regierungsantritt Grossherzog Friedrichs* (Freiburg, 1881); PFISTER, *Die finanziellen Verhältnisse der Universität Freiburg* (Freiburg, 1881); MAYER, *Die Universität Freiburg im Br. in der ersten Hälfte des 19 Jahrhunderts* (3 parts, Bonn, 1892-94); KÖNIG in *Freiburger Diöcesan-Archiv.*, vols. XXI, XXII, XXIV, and XXVII; KAUFMANN, *Geschichte der deutschen Universitäten*, II (Stuttgart, 1895); MAYER, *Die Matrikel der Universität Freiburg im Br. vom 1460-1656*, I (Freiburg, 1907); BAUMGARTEN, *Freiburg im Breisgau in Die deutschen Hochschulen*, I (Berlin, 1907).

JOSEPH LINS

Frejus

Fréjus

DIOCESE OF FRÉJUS (FORUM JULII).

Suffragan of Aix; comprises the whole department of Var (France). It was suppressed by the Concordat of 1801, re-established by that of 1817, and definitively established in 1823. The *arrondissement* of Grasse, which until 1860 belonged to the department of Var, when it was annexed to that of the Alpes-Maritimes, was, in 1886, separated from the Diocese of Fréjus and attached to that of Nice. A Brief of 1852 authorized the bishop to assume the title of Bishop of Fréjus and Toulon. The present diocese comprises the territory of the ancient Diocese of Fréjus as well as that of the ancient Diocese of Toulon.

I. FRÉJUS

Christianity would seem to have been introduced into Fréjus in the time of Emperor Constantine. History relates that in 374 a certain Acceptus falsely declared himself guilty of some crimes in order to rid himself of the episcopal dignity, and that the Council of Valencia besought the Church to name another in his stead. The following are named among the bishops of this see: St. Leontius (419-433), brother of St. Castor and friend of John Cassian, who dedicated to him his first ten "Collationes", and of St. Honoratus, founder of the monastery of Lérins; Theodore (433-455), Abbot of the Iles d'Hyères, to whom Cassian dedicated the last seven "Collationes"; St. Auxilius (c. 475), formerly a monk of Lérins, and later a martyr under Euric, Arian King of the Visigoths; Riculfus (973-1000), who restored the ruins made by the Saracens, and built the cathedral and the episcopal palace; Bertrand (1044-91), who founded the collegiate church of Barjols; Raymond Berengarius (1235-1248), who arranged the marriage of Beatrice, daughter of the Count of Provence, with Charles of Anjou; Jacques d'Euse (1300-1310), preceptor of St. Louis of Toulouse, and later pope under the name of John XXII; Cardinal Nicolò Fieschi (1495-1524), who at the time of his death was dean of the Sacred College; André-Hercule de Fleury (1698-1715).

II. TOULON

The legend which states that a certain Cleon, who accompanied St. Lazarus to Gaul was the founder of the Church of Toulon, is based on an apocryphal document composed in the fourteenth century and ascribed to a sixth-century bishop named Didier. Honoratus and Gratianus, according to the "Gallia Christiana" were the first bishops of Toulon whose names are known to history, but Duchesne gives Augustalis as the first historical bishop. He assisted at councils in 441 and 442 and signed in 449 and 450 the letters addressed to Pope Leo I from the province of Arles. St. Cyprian, disciple and biographer of St. Cæsarius of Arles, is also mentioned as a Bishop of Toulon. His episcopate, begun in 524, had not come to an end in 541; he converted to Catholicism the Visigoth chiefs, Mandrier and Flavian, who became anchorites and martyrs on the peninsula of Mandrier.

The Island of Lérins, well known as the site of the celebrated monastery founded there in 410 (see LÉRINS) was sold in 1859 by the Bishop of Fréjus to an English purchaser. A number of the saints of Lérins are especially honoured in the diocese. Among them are Sts. Honoratus, Cæsarius, Hilary, and Virgilius, all of whom became archbishops of Arles; Quinidius, Bishop of Vaison; Valerius, Bishop of Nice; Maximus, Bishop of Riez; Veranus and Lambertus, Bishops of Vence;

Vincent of Lérins, author of the "Commonitorium", and his brother Lupus, Bishop of Troyes; Agricola, Bishop of Avignon; Aigulphus and Porcarius, martyrs. St. Tropesius, martyr during the persecution of Nero; St. Louis (1274-1297), a native of Brignoles, in the Diocese of Toulon, and later Archbishop of Toulouse; and the virgin St. Roseline, prioress of the monastery of La Celle-Roubaud, who died in 1329, and whose shrine, situated at Les Arcs near Draguignan, has been for six centuries a place of pilgrimage, are likewise especially honoured in the diocese. The sojourn in 1482 of St. Francis of Paula at Bormes and at Fréjus, where he caused the cessation of the plague, made a lasting impression. The chief places of pilgrimage in the Diocese of Fréjus and Toulon are those of Notre-Dame des Anges at Pignans, the chapel which King Thierry established in 508, for the veneration of a statue of the Blessed Virgin recovered by a shepherd and which, it was said, had been brought to Pignans by St. Nympha, niece of St. Maximinus and the companion of St. Mary Magdalen; Notre-Dame de Bénat, a shrine dating from the sixteenth century; Notre-Dame de Grâces at Cotignac, which dates from 1519, and later served by some priests who formed themselves into a religious community under the rule of St. Philip Neri, and were the first Oratorians in France. In 1637, as the result of an apparition of the Blessed Virgin to Frère Fiacre, Louis XIII and Anne of Austria sent him to Cotignac to offer up prayers. Anne of Austria became the mother of Louis XIV, and in 1660 he went in solemn state to Cotignac to return thanks to Notre-Dame de Grâces.

The church of St. Maximinus, begun towards the end of the thirteenth century by Charles II of Sicily and completed by the end of the fifteenth century, is the most beautiful example of pointed architecture in the south of France. The head of St. Mary Magdalen is honoured here, and the crypt contains tombs which date from the first centuries of the Christian Era. (For an account of the traditions on this subject, see LAZARUS and MARY MAGDALEN.) The celebrated preacher Massillon (1663-1742) was born at Hyères in this diocese. In 1905 (last year of the Concordat) the diocese numbered 326,384 inhabitants, 28 parishes, 142 succursal parishes, and 67 vicariates paid by the State. Before the enforcement of the law against the congregations in 1901 there were in the diocese communities of Trappists, Capuchins, Carthusians, Dominicans, Marists, Salesians, and Sulpicians. An important diocesan congregation founded in 1838, for teaching and hospital work, was that of Notre-Dame de la Miséricorde, the mother-house of which was at Draguignan. Before the law of 1901 the religious congregations possessed in the diocese 2 foundling asylums, 36 day nurseries, a seaside hospital for sick children, 2 orphanages for boys, situated in the country, 9 orphanages for girls, 6 workhouses, 2 houses of rescue, 3 houses of charity for the assistance of the poor, 30 hospitals or hospices, 2 houses of retreat, 7 religious houses for the care of the sick in their homes.

Gallia Christiana, Nova (1715), I, 418-447, 739-762; Instrumenta, 82-85, 129-131; ALBAN'S, Gallia Christiana novissima (Montbéliard, 1899); DUCHESNE, Fastes Episcopaux, I, 269-276; ESPITALIER, Les évêques de Fréjus (Draguignan, 1891-1898); LAMBERT, Histoire de Toulon (Toulon, 1892); DISDIER, Description historique du diocèse de Fréjus, d'après les manuscrits de Girardin et d'Antelmy (Draguignan, 1872); FOUGEIRET, Sanctuaires anciens et modernes de la

Très-Sainte Vierge dans les diocèses de Fréjus et de Toulon (Toulon, 1891); CHEVALIER, Topo-bibl., 1240, 3125.

GEORGES GOYAU

James Fremin

James Fremin

Jesuit missionary to the American Indians; b. at Reims, 12 March, 1628; d. at Quebec, 2 July, 1691. He entered the Society of Jesus in 1646 and in 1655 set out for the Onondaga mission in Canada to devote the rest of his life to the evangelization of the savages. At the invitation of a Cayuga chieftain he set out, in 1666, for Lake Tiohero, near the present Cayuga, but his stay there was of short duration. The next year he was sent to revive the mission founded by Father Jogues among the Mohawk and, on his way, instituted the first Catholic settlement in Vermont, on Isle La Motte. Arriving at Tinnontoguen, the Mohawk capital, he rapidly acquired the language and by his courage and kindness won the respect of his savage charges. Unfortunately, the Mohawk did not readily respond to his efforts, and his chief care seems to have been to attend to the Huron captives who were already Christianized.

In October, 1668, Father Fremin proceeded to the Seneca country, but the war then being waged with the Ottawa and the Susquehanna prevented many conversions. In August, 1669, he left for Onondaga to preside at a general meeting of the missionary priests, but shortly returned to Gannougare to resume his work among the captive Huron. The high repute he had gained among the various tribes was responsible for his recall, in 1670, to take charge of La Prairie, the Christian settlement near Montreal where the converted Indians had been gathered, and it was he who placed this refuge on a solid footing and eliminated the liquor traffic. From that time on, with the exception of several voyages to France in the interest of the mission, he devoted himself exclusively to the work of preserving in the Faith those Indians who had been baptized, and, despite the persistent efforts of the tribes from which the converts came, he was able to prevent any serious defection. He died worn out by his long apostolate, having been the means of bringing over ten thousand Indians into the Church.

CAMPBELL, *Pioneer Priests of North America* (New York, 1908); Jesuit Relations; HOLMES in *Handbook of American Indians*, s.v. Caughnawaga (Washington, 1907).

STANLEY J. QUINN

Nicholas French

Nicholas French

Bishop of Ferns, Ireland, b. at Ballytory, Co. Wexford, in 1604, his parents being John French and Christina Rosseter; d. at Ghent, 23 Aug., 1678. He studied at Louvain and appears to have been president of one of the colleges there, and on his return to Ireland in 1640 he was appointed parish

priest of Wexford. During the Confederation War in Ireland he joined the Confederate party and took an active part in the deliberations of the Kilkenny Assembly. He was appointed Bishop of Ferns and was consecrated in November, 1645. Though opposed to the party of Preston he favoured the peace of 1648 against the Nuncio Rinuccini, but in the synod at Jamestown in 1650, he bitterly opposed the Ormond faction. In 1651 he went on a deputation to the Duke of Lorraine to solicit his assistance against Cromwell, and to offer him the protectorship of Ireland, but this mission having proved a failure he remained on the Continent. It is not clear whether it was at this particular period or later that he officiated for a while as coadjutor Bishop of Paris. He retired to Santiago in Spain, where he assisted the Archbishop of Santiago, and where he wrote his book, "Lucubrations of the Bishop of Ferns in Spain." At the Restoration period he was about to return to Ireland, but being greatly disliked by Ormond on account of his attitude at the conference at Jamestown, the permission that had been given was withdrawn, and he remained in different parts of the Continent, notably at Paris and Ghent. During this portion of his life he published many pamphlets on Irish affairs, which are extremely valuable for the elucidation of the history from the outbreak of the war till 1675. In his last years he appears to have officiated as assistant to the Bishop of Ghent, and in that city he died, aged seventy-three years. There, too, a magnificent monument was raised to his memory.

He was a man of great literary activity as is evident from his numerous works. Besides a course of philosophy still in manuscript in March's Library, Dublin, he published "Queeres propound by the Protestant Party in Ireland concerning the peace now treated of in Ireland" (Paris, 1644); "A Narrative of Clarendon's Sale and Settlement of Ireland, etc." (Louvain, 1668); "The Bleeding Iphigenia" (1674), and "The Unkind Deserter of Loyal men and true friends," i.e. Ormond (Paris, 1676). An edition of his works was prepared by Samuel H. Bindon and was published at Dublin, in 1846.

BRADY, *Episcopal Succession* (Rome, 1867); WARE-HARRIS, *Antiquities of Ireland* (Dublin, 1739-45); Rinuccini's *Embassy in Ireland*, ed. HUTTON (Dublin, 1873); CLARENDON, *History of Irish Rebellion of 1641* (Dublin 1719); GILBERT, *History of Irish Confederation* (Dublin, 1882-1891).

JAMES MACCAFFREY

French Catholics in the United States

French Catholics in the United States

The first Bishop of Burlington, the Right Reverend Louis de Goesbriand, in a letter dated 11 May, 1869, and which appeared in "Le Protecteur Canadien", a French newspaper then published at St. Albans, Vermont, made the following statement: "I am convinced from positive information, that when we say that there are 500,000 French-Canadians in the United States, the figures are far below the truth." The sources from which the late prelate drew his information are unknown to the writers of this article, but it is a fact that to-day the Diocese of Burlington has a Catholic population

of 76,000 souls, of which 50,000 at least are of French Canadian birth or origin. It is also a fact that the French Canadian element has increased, both naturally and by immigration, to such an extent that it now numbers nearly 1,200,000 souls in the United States, that it has made its influence felt throughout the Eastern States, in all walks of life, and furthermore that, in point of numbers, it is the predominant element in several dioceses, and an important part of the population in many others. However, except in their own newspapers, or a few little-known books, scarcely anything had been said of the part taken by these immigrants in the civil and religious life of their new country, until, very recently, they took into their own hands the task of reviewing their history, of gathering statistics of their numbers, and of recording their achievements and the progress they have made in fifty years. The task is still far from complete, but enough has been done to demonstrate the progress of the French Canadians and their devotion to their Church and to their adopted country.

The immigration of French Canadians to the United States began before the War of American Independence (1775-83). French Canadians had then already immigrated to New England, and we find them in large numbers in the armies of Washington. After the war the American Congress, in recognition of their services and to prevent their being prosecuted in Canada on the charge of high treason, gave them land on the shores of Lake Champlain, where their descendants are still to be found. That concession of land, situated in the State of New York, has long been known as "the Refugees' Tract". In 1837, after the rebellion in the Province of Quebec, a new immigration to the Eastern States took place, to the State of Vermont, more particularly, where the "Patriots", vanquished in battle, sought refuge with their families. But the chief influx from French Canada to the United States took place after the Civil War. Notwithstanding the fact that they had at that time but few organized parishes, the French Canadians were here in sufficient numbers during the war to furnish 40,000 soldiers to the Union. The immigration at the close of the war has been ascribed to many causes, the most considerable of which are the unprecedented industrial prosperity that followed the Civil War and the inborn love of the French Canadian for travelling, together with the desire to earn the high wages and to share in the vast opportunities which the Republic offered to its citizens.

Some writers -- and many of these in earnest -- have given as the principal cause of this French Canadian immigration, three-fourths of which took place between 1865 and 1890, the necessity in which the farmers of the Province of Quebec found themselves of seeking a new home after leading a life of luxury and dissipation. Undoubtedly this was true of some, but the general moral character of the hundreds of thousands who crossed the border is the best proof that the true cause of this movement must be sought elsewhere. The Jesuit, Father Hamon, writing on this subject, does not hesitate to say: "The rapidity with which this immigration was accomplished, and the ease with which these Canadians transplanted into a foreign land, have immediately reconstructed the Catholic mould of the parish that made their strength in Canada; the energy shown by them in erecting churches and convents, in grouping themselves together, and in organizing flourishing congregations, supported within by all that nourishes Christian piety, protected without against pernicious influences by the strength of association, and a press generally well inspired; all these elements of Catholic

life, organized within a quarter of a century in the very citadel of old Puritanism, seem to indicate a Providential action as well as a Providential mission, the importance of which the future alone will reveal."

Those who do not look higher than material considerations in studying the causes of national movements will not give much credence to this opinion of Father Hamon. Nevertheless it is to-day a fact recognized by noted economists, that the French Canadians, now better known in the Republic under the name of French Americans, are, as labourers and artisans, the most solid and reliable pillar of industry in New England. And New England has received within its borders, more than two-thirds of their total immigration. As Catholics, it is obvious that they have played a role no less important, as may easily be seen by the perusal of Catholic Directories. Father Hamon classifies the French Canadian immigration as temporary, fluctuating, and permanent. Figures show the relative importance of each of these classes and demonstrate the spirit which animated the whole movement. The temporary immigration comprised a class of farmers who came to the United States with the avowed intention of going back to their old homes as soon as they had saved enough money to clear their farms from mortgages and all other financial incumbrances. This class became less numerous from day to day; so much so, that it was practically unnoticeable, as early as 1880. In many cases the intention of returning to the old home was never carried out, Frequently this class, by revealing to their neighbours the opportunities offered across the border, induced many of them to follow in their footsteps. As to the fluctuating immigration, only a mere mention is necessary. Always on the move, from one country to the other, from city to city, from mill to mill, those who formed this class led that kind of life which relies, as Father Hamon says, on the Providence of God for its support. This roving class is still less numerous than the temporary group, and it is to be found not only in all classes of newcomers, but in settled populations as well. The permanent immigration has been the most numerous, and, naturally, the most substantial. It is these permanent French Canadian immigrants who have organized parishes and parochial schools, erected churches and convents, and now constitute the labouring power *par excellence* in all the industrial centres of New England. Most of them, if not all, came from the rural districts of Canada, especially from the Eastern townships, from the Dioceses of Trois Rivières and Rimouski, and from the Counties of Beauce, Bellechasse, and others on the borders. Their farms had become insufficient to support large families; in the Eastern townships their titles to the land they occupied were disputed, and they were forced to give up the fruit of many years of labour; they were the victims of the indifference shown by their Governments, both Provincial and Federal, towards colonization and the opening up of new farming districts. The increasing population was thus compelled by circumstances, to look elsewhere, for more land and greater opportunities. At the same time, the reports sent home by those who had taken part in the earlier immigration had widely advertised throughout the whole Province of Quebec, the material advantages of the United States. This migration was called at the time "the desertion of the Fatherland". But those who spoke thus were forgetful of the historical fact, that the French of America have from the very beginning felt perfectly at home in the whole northern part of the continent, on the soil of which their missionaries, their

coureurs des bois, explorers, and warriors have left their footprints broadcast. In spite of all opposing efforts, hundreds of thousands of French Canadians, most of them farmers, between 1870 and 1890, left their rural occupation to adopt the more arduous life of the New England factories and the various industries of the Western States. This movement took place quietly, slowly, without creating any disturbance, and almost unnoticed. It was, in a certain sense, a repetition of that other movement which, advocated by Horace Greeley, sent toward the Golden Gate so many young men of the East.

Doubtless, this depopulation on a large scale was a great loss to Canada, where the emigrants might have founded families of colonists. But the nature of this emigration was such that it could not be checked by any special legislation. The movement had set in, and it was too late to forestall an event prepared by many years of economic conditions misunderstood or wilfully ignored. The stream had found its way across the borders, where new industries, phenomenal opportunities, and advantages unheard of before, were ready to absorb and utilize this new and valuable power of production.

In order to present a strictly accurate idea of the importance of the French American element, both numerically and from a Catholic standpoint, the following sources of information have been used for this article:--

- (1) The Twelfth Census of the United States (1900);
- (2) Local enumerations made in New England since 1900, and as late as the present year (1908); and
- (3) The Catholic Directory of the United States.

The accompanying table, compiled from the first of these three sources, shows, first, the number of French Americans born in Canada and, secondly, this first class combined with those of whom at least one parent was born in Canada.

DISTRIBUTION OF FRENCH AMERICANS		
State	Foreign-born	Of Foreign Parentage
Maine	30,908	57,682
New Hampshire	44,420	73,359
Vermont	14,924	40,097
Massachusetts	134,416	244,586

Nebraska	1,039	3,003
Kansas	1,485	5,547
Totals for North Central Division	77,019	198,451
Kentucky	136	397
Tennessee	119	312
Alabama	89	211
Mississippi	75	141
Texas	400	1,004
Louisiana	253	759
Indian Territory	48	173
Oklahoma	179	702
Arkansas	161	411
Totals for South Central Division	1,460	4,110

Montana	3,516	5,725
Wyoming	150	385
Colorado	960	2,300
New Mexico	84	270
Arizona	153	264
Utah	128	505
Nevada	222	486
Idaho	395	846
Washington	1,899	3,862
Oregon	874	2,169
California	2,410	5,392
Totals for Western Division	10,791	22,204

The figures given for Louisiana are, of course, exclusive of all other inhabitants of French extraction; those relating to California are exclusive of the large population of immigrants from France established in that State, more especially in the city of San Francisco. There were also, 115 persons of French Canadian parentage in Alaska, and 4 in Hawaii, besides 502 persons of the same parentage in the military and naval service of the United States, stationed abroad and not credited to any State or Territory. Combining with these small figures the totals for the five divisions given in the last column of the table, we get the grand total of 810,105 persons of French Canadian parentage living under the United States Flag. But these figures only represent the first and second generations, i. e. original immigrants still living, and their immediate descendants. In this connexion the director of the census says: "A small number of the persons reported as of foreign birth, are themselves of native parentage, so that, to a very small extent, the number of persons of foreign birth reported at each census is not included in its entirety in the number of persons reported as of foreign parentage. The figures are sufficiently comparable, however, to show the large body of population which must be added to the foreign born element itself in order to ascertain, even approximately, the number of persons of foreign extraction at any of the census periods considered. Moreover, this is the best figure that can be given as expressing the element of our population which is of foreign extraction, as the census inquiry does not go beyond the immediate parents of each person enumerated, and it is impracticable, at least under present conditions, to endeavor to determine the origin of the people beyond a single generation."

It is obvious, that an inquiry which does not go beyond the immediate ancestors of each person enumerated cannot convey an exact idea of the real number of those who may still be distinctly classified as French Americans, even though both of their parents may have been born in the United States. And when it is remembered that the French Canadians were early settlers in the northern part of the State of New York, that they were, practically, the first settlers of the State of Maine, and had found their way into Vermont as early as 1830; that French Canadians were the pioneers of the Western States, where they founded, or assisted in founding, great cities like Chicago, St. Louis, St. Paul, Dubuque, Milwaukee, and Detroit, it is not difficult to understand that in certain parts of the country at least three generations of French Americans have been recorded by the census

of 1900 as native whites of native parents. How far short of the actual number of French Americans are the figures of the National Census, may be estimated by considering the local enumerations taken in the New England States since 1900, with the following results:--

Maine	91,567
New Hampshire	84,011
Vermont	58,217
Massachusetts	366,879
Rhode Island	76,775
Connecticut	46,083
Total	723,532

These figures, compared with the total (508,362) of those given in the Census of 1900 for the same six States, show an excess of the local over the national enumeration of 215,170 persons, or more than 42.3 per cent, for New England alone. This excess, explained in part by the fact that the census inquiry of 1900 was limited to only two generations, is also attributable to the continuous flow of immigration and in greater measure to the large birth-rate which is still maintained among the French Americans, it having been scientifically established that the French Canadians -- at least in Canada -- double their numbers by natural increase every twenty-six years. Taking into consideration the increase (42.3 per cent) shown by the enumerations in New England over the figures given by the National Census, and also bearing in mind the fact that the figures quoted above do not include the French from France (reported as being 265,441 by the census of 1900) and the French-speaking Belgians, scattered throughout other States than those of New England, we may conclude that the French Americans in the United States to-day number more than 1,500,000, of whom nearly 1,200,000 can be classified as of French Canadian extraction. As this immigration of French Canadians was almost exclusively an immigration of Catholics, we are led to inquire what provisions were made for them in the different dioceses.

The French Canadians had left behind them in Canada a perfect Catholic organization, with parishes flourishing in all parts of the province, with episcopal sees in Quebec, Ontario, and the West -- an organization comprising to-day many ecclesiastical provinces with archbishops, bishops, a numerous clergy, both secular and regular, as well as educational and charitable institutions of the highest order. It was not to be expected that the immigrants should find in their new country the religious organization they had possessed in Canada. Nevertheless, they had to be provided for, and it became a serious problem for the hierarchy, of New England especially, to determine how these newcomers should be cared for spiritually. The question of language stood in the way from the very beginning. The French Canadians, though willing to become staunch Americans, did not know the English language, and even when they had learned it, they still preserved a strong attachment for their mother tongue. That this problem puzzled the bishops of New England, is shown by the time taken for its solution, and by the fact that in some instances they were reluctant, or often unable, to deal with the situation in the only proper way, which was, to give to these people priests of their own tongue and nationality. Even to-day this problem is not adequately solved. It

was feared at the beginning, as it is feared now in some quarters, that to grant to the French Canadian immigrants priests of their own tongue and nationality would encourage them to form a sort of state within the state, thereby causing great harm to the nation as a whole. Time has shown the fallacy of that argument. The patriotism of the French American element is undisputed. They possess the sterling civic qualities desirable and necessary to promote the best interests of the republic. As a matter of fact, the French Canadian immigration has created no new state in the state; and the French Americans have willingly learned the English language while remaining as closely attached as ever to their mother tongue, in which they see the best safeguard of their faith.

The progress accomplished for God and country through the organization of French American parishes all over New England is the conclusive proof of their excellency from every standpoint. It proves, at the same time, that further progress, religious and patriotic, can be accomplished by pursuing the same policy. At first, it was necessary to call priests from the Province of Quebec. That policy, inaugurated in the Diocese of Burlington in 1850, by the lamented Bishop de Goesbriand, has proved to be a blessing wherever it has been carried out. These early French Canadian missionaries, of whom many are still living, knew their people, understood their character and customs, had the same mentality as their flock, and easily succeeded in organizing flourishing parishes entirely devoted to the Church. As early as 1890 Father Hamon notes that these newcomers already possessed 120 churches and chapels, ministered to by Canadian priests, and 50 large schools, affording education to more than 30,000 children. Let us recall a few dates which mark the beginning of this new impulse given to the Catholic Church in the United States.

The first French American parish in the United States, after the foundation of Detroit, Michigan, was that of St. Joseph, at Burlington, Vermont, founded 28 April, 1850, with the Rev. Joseph Quévillon as first pastor. In the same state, the parish of the Nativité de la Sainte-Vierge, at Swanton, was organized in 1856, and that of St-François-Xavier at Winooski, in 1868. In the Diocese of Springfield, Massachusetts, the parish of Notre-Dame du Bon Conseil, at Pittsfield, was organized in 1867. In all, 22 parishes were organized by French Americans from that date to 1890, besides 15 parishes of mixed population, wherein the French Catholics were associated with their English-speaking brethren. In the Diocese of Providence, R. I., the parish of St-Jacques, at Manville, was organized in 1872, that of the Précieux Sang, at Woonsocket, in 1873, and that of St-Charles, at Providence, in 1878. In the Diocese of Hartford, Conn., the parish of St-Laurent, at Meriden, was organized in 1880, and five other parishes between 1880 and 1889. In the Diocese of Boston, the parish of St-Joseph, at Lowell, was organized in 1869, and that of Ste-Anne, at Lawrence, in 1873. In the Diocese of Portland, Maine, the parish of St-François de Sales, at Waterville, was organized in 1869, that of St-Pierre, at Lewiston, in 1871, that of St-Joseph, at Biddeford, in 1872, and that of St-Augustin, at Augusta, in 1888. In the Diocese of Manchester, New Hampshire, the parishes of St-Augustin, at Manchester, and St-Louis, at Nashua, were organized in 1872. Similar results were accomplished in the Dioceses of Ogdensburg, Albany, and Syracuse, and in the Western States. The accompanying table shows the actual religious organization of the French-American Catholics in New England -- their clergy, parishes, etc.

RELIGIOUS ORGANIZATION IN NEW ENGLAND				
Diocese	Parishes	Missions	Secular Priests	Regular Priests
Boston	20	2	33	31
Hartford	13	7	14	16
Springfield	38	5	59	14
Burlington	39	31	48	11
Portland	30	40	40	16
Manchester	25	15	38	17
Providence	21	--	42	8
Fall River	16	1	28	17
Totals	202	101	302	130

To complete these figures for the United States would necessitate a study of all the dioceses, as there are French Americans in every state and territory of the Union; a few statistics, however, of the priests of French extraction in the principal dioceses will help to give a more definite idea of the organization as a whole: Baltimore has 21; Chicago, 62; Albany, 19; St. Paul, 14; San Francisco, 3; New York, 25; Oregon, 5; Philadelphia, 3; Dubuque, 7; Milwaukee, 9; New Orleans, 96; Syracuse, 5; and Ogdensburg, 63.

Of the distinguished clergymen whose names are associated with the work already described, the following have already been called to their reward: Norbert Blanchette, first Bishop and first Archbishop of Oregon City; J. B. Lamy, Archbishop of Santa Fé, New Mexico; Monsignor Magloire Blanchette, Prothonotary Apostolic, of Walla Walla, Washington; the Rev. P. M. Mignault, of Chambly, Quebec, who in the fifties was vicar-general of the Diocese of Boston, with the special mission of caring for the spiritual needs of his compatriots in the United States; the Rev. Joseph Quévillon, of Burlington, Vermont; Monsignor Brochu, of Southbridge, the Rev. J. B. Primeau, of Worcester, the Rev. L. G. Gagnier, of Springfield, and the Rev. J. B. Bédard, of Fall River, Massachusetts; the Rev. J. Roch Magnan, of Muskegon, Michigan. Mention should also be made of the Right Rev. Bishop Michaud, lately deceased, whose father was a French Acadian, and who had been for many years at the head of the Diocese of Burlington, proving himself a worthy successor to Bishop de Goesbriand. Among the living there are scores of others who have been true pioneers of the Faith, and to whom is due great credit for having so well organized a new and loyal membership of the Church in the United States. Recently one of their number has been elevated to the See of Manchester. New Hampshire, in the person of the Right Rev. George Albert Guertin, consecrated 19 March, 1907.

The religious orders of men and women have been worthy co-labourers with the priests in the building-up of parishes. To them have been entrusted the education of children and the care of the sick and orphans. This mission has been especially well fulfilled in the French American parishes, where the convent of the sisters and the school of the brothers are the necessary complements of the church itself. One does not go without the other, and as a rule the school is built before the

church and is used for a church also. The number of members in the different religious communities of women is given in the accompanying table.

FEMALE RELIGIOUS IN NEW ENGLAND		
Diocese	Total in All Communities	In French Communities
Boston	1567	200
Burlington	268	115
Fall River	322	254
Hartford	1115	219
Manchester	435	300
Portland	482	355
Providence	551	222
Springfield	792	320
Totals	5532	1985

These 1985 women are distributed in 30 different orders, bearing the following names: Congregation de Notre-Dame de Montréal, Filles de Marie (France), Sœurs de Ste-Croix de Montréal, Sœurs de la Providence de Montréal, Sœurs de la Présentation de Marie de St-Hyacinthe, Sœurs de Ste-Anne de Lachine, Sœurs Grises de Montréal, Sœurs de la Merci, Sœurs Grises d'Ottawa, Sœurs de l'Assomption, Sœurs du Bon Pasteur de Québec, Sœurs Dominicaines, Sœurs Franciscaines Missionnaires de Marie, Sœurs Grises de St-Hyacinthe, Sœurs de Jésus-Marie de Sillery, Ursulines des Trois Rivières, Congrègation Notre-Dame (Villa Maria), Sœurs de la Sainte Union des Sacrés-Cœurs, Sœurs du Saint-Esprit, Sœurs du Saint-Rosaire, Filles de la Sagesse, Petites Sœurs des Pauvres, Sœurs de St-Joseph (Le Puy), Sœurs du Sacré-Cœur, Sœurs de St-Joseph (Chambéry), Sœurs Servantes du Cœur Immaculé de Marie, les Fidèles Compagnes de Jésus, Sœurs du Bon Pasteur (Angers), Petites Sœurs Franciscaines de Marie (Malbaie), Dames de Sion. The most important of these are: the Sœurs de Ste-Croix, with 18 convents and 149 members; Sœurs Grises, with 17 convents and 268 members; Sœurs de la Presentation de Marie, with 16 convents and 193 members; Sœurs de Jésus-Marie, with 19 convents and 171 members.

There are a few communities of brothers: Frères de la Charité de St-Vincent de Paul, 27 members; Frères Maristes d'Iberville, 47; Frères de St-Gabriel, 7; Frères des Ecoles Chrétiennes, 7; Frères du Sacré-Cœur, 31 -- making a total of 119 members. Besides these orders entirely devoted to education, the regular clergy has been given charge of a number of parishes which stand to-day among the most numerous and flourishing. For instance, the Dominican Order has two parishes, Ste-Anne, at Fall River, Massachusetts, and St-Pierre, at Lewiston, Maine. The Oblates are established at Lowell, Mass., and Plattsburg, N. Y.; the Pères de la Salette, in Connecticut and Massachusetts; the Pères du Sacré-Cœur, in Rhode Island and Massachusetts; the Pères Maristes in Massachusetts.

The French Americans have 133 parochial schools, in which 54,983 children receive Christian education.

CATHOLIC PAROCHIAL SCHOOLS IN NEW ENGLAND				
Diocese	Total Schools	French Schools	Total Pupils	Pupils in French Schools
Boston	76	15	48,192	7,263
Burlington	21	17	5,951	4,009
Fall River	21	14	9,300	6,171
Hartford	69	10	30,275	3,508
Manchester	36	19	12,800	8,833

Springfield	55	31	22,780	11,712
Totals	327	133	154,436	54,983

To these must be added the secondary (high-school and university academic courses) college established by the Pères de l'Assomption from France, at Worcester, Massachusetts, in 1904, and 14 small academies, commercial colleges, and boarding schools in which there are about 1000 pupils of both sexes. In connexion with the subject of higher education, it may be well to remark that about 3500 French American children attend annually the commercial and secondary colleges in different cities of Canada. French religious orders, both of women and men, also have charge of 2618 orphans in New England. French nuns have charge of 1865 sick and aged adults, wayward women, and working girls.

Besides their religious work, vast and praiseworthy as it is, the French Canadian immigrants have also displayed industry and activity in other walks of life, and in their closer relations with their fellow-citizens they have shown qualities and traits found only in the best of citizens. In other words they have stood well up to the standard in the body politic and in many ways have exercised over their surroundings an influence for the general good of the community such as to fully justify, at least so far as it refers to them, the statement made by Vice-President Fairbanks, that in the American Nation "flows the richest blood that courses in the veins of all the peoples in all quarters of the globe." In fifty years, they have built up a press that is not surpassed, from the Catholic point of view, by that of any other group of immigrants in the United States. That press is composed to-day of seven dailies -- "L'Indépendant", of Fall River, Mass.; "L'Opinion Publique", of Worcester, Mass.; "L'Etoile", of Lowell, Mass.; "La Tribune", of Woonsocket, R. I.; "L'Avenir National", and "Le Reveil", of Manchester, N. H.; "L'Echo de la Presse", of New Bedford, Mass.; two papers issued every other day -- "Le Messenger", of Lewiston, Maine; "L'Impartial", of Nashua, N. H.; one semi-weekly "Le Jean-Baptiste", of Pawtucket, R. I.; and the fifteen weeklies -- "L'Union", of Woonsocket, R. I., official organ of L'Union St-Jean-Baptiste d'Amérique; "Le Canado-Américain", of Manchester, N. H., official organ of L'Association Canado-Américaine; "La Justice", of Biddeford, Maine; "La Justice", of Central Falls, R. I.; "La Justice", of Holyoke, Mass.; "L'Estafette", of Marlboro, Mass.; "Le Progrès", of Lawrence, Mass.; "Le Courrier", of Lawrence, Mass.; "Le Courrier de Salem", of Salem, Mass.; "L'Echo de l'Ouest", of Minneapolis, Minn.; "Le Courrier

Franco-Américain", of Chicago, Ill.; "L'Indépendant" (weekly edition), of Fall River, Mass.; "L'Indépendant", of Fitchburg, Mass.; "Le Progrès", of Woonsocket, R. I., and "Le Citoyen", of Haverhill, Mass. These newspapers are thoroughly Catholic in spirit, as well as sincerely American. Their editors and publishers met in convention, at Woonsocket, R. I., on 25 September, 1906, and organized the Association des Journalistes Franco-Américains de la Nouvelle Angleterre. At that meeting they adopted resolutions asserting their loyalty to the republic, and advising the French Americans to show themselves true and sincere American citizens, to promote naturalization, to preserve their mother tongue, to learn the English language, to maintain parochial schools, wherein both languages should be taught on an equal footing, and to ask for priests of their own nationality to be their pastors. The resolutions also requested the Holy See to appoint, when feasible and proper, bishops of their nationality, familiar with both the English and French languages, in all dioceses in which the French Americans constitute the majority of the Catholic population. The first French newspaper to appear in the United States was "Le Courier de Boston", which was published weekly during a period of six months in 1789, the first number appearing on 23 April, and the last on 15 October. The editor and publisher was Paul Joseph Guérard de Nancrède, later a bookseller and stationer at Boston, and instructor in French at Harvard University from 1787 to 1800. The next French American newspaper was published in 1825, at Detroit, under the title of "La Gazette Française", which issued only four numbers. In 1817, the Detroit Gazette published a French column during four months and then abandoned the venture. The second French American newspaper in New England was "Le Patriote", published at St. Albans, Vermont, in 1839. Since that time nearly 200 newspapers published in the French language have appeared and disappeared, leaving only those mentioned above.

French American activity, while effectively applied to the enterprises of religion, education, and the press, has not neglected provident organizations. The first French institution of this kind was the Société de Jacques Cartier, founded in St. Albans, Vermont, in 1848, while the Société St-Jean-Baptiste of New York, organized in 1850, is still in existence. In 1868 they had 17 benevolent societies, and since then they have organized more than 400 others, of which about 142 are still in existence. Moreover they have established federations, which have more than four hundred and fifty councils or branches, with thousands of members. To these organizations are due, in a great measure, the existence and prosperity of the most of the parishes. Many of them have inserted in their by-laws articles recommending naturalization. To obtain membership in any one of them the applicant must, in all cases, be of French origin and a practising Catholic. The local societies which still survive are distributed among the different states as follows: Massachusetts, 62; Vermont, 18; New Hampshire, 25; Maine, 12; Rhode Island, 11; Connecticut 14 -- making a total of 142. It was in 1900 that, in response to the acknowledged need of a central organization embracing all the groups of the French race in the United States, the Union St-Jean-Baptiste d'Amérique was organized, with headquarters in Woonsocket, R. I., through the federation of a considerable number of the local societies. This move has proved to be a very wise one, as is shown by the rapid growth of the new society, which has enrolled over 19,500 members in eight years. The Association

Canado-Américaine of Manchester, New Hampshire, established in 1896, has a membership of over 11,000 and is working along the same religious and patriotic lines. In 1906, a new society, the *Ordre des Forestiers Franco-Américains*, was formed by the secession of a few thousand members from the *Foresters of America*, and it now comprises 40 courts. All the French American societies, with the exception of the *Forestiers*, give life insurance, and, without exception, they provide for sick benefits. Millions of dollars have been distributed by them to the widows and orphans of their members and to their sick fellow-members. The *Société des Artisans Canadiens-Français*, though a Canadian Society, and the *Société L'Assomption*, a society of French Acadians drawing the greater part of its membership from the maritime provinces, also have members in the United States and are therefore included in the accompanying table, which shows the number of councils or courts and the membership of the four national societies in New England.

Membership of National Societies		
Name	Councils or Courts	Members
L'Union St-Jean-Baptiste d'Amérique . . .	255 159	19,576 11,158
Association Canado- Américaine	4 40	897 8,500
Ordre des Chevaliers de Jacques Cartier	75 17	12,000 1,500
Ordre des Forestiers Franco-Américains Artisans Canadiens-Français		
L'Assomption		
.		

These societies are all Catholic, and in 1905 the *Union St-Jean-Baptiste d'Amérique* and *L'Association Canado-Américaine* were instrumental in organizing the *Société Franco-Américaine du Denier de St-Pierre*, whose sole object is to collect funds for the Holy See. The *Société Historique France-Américaine*, incorporated under the laws of the State of Massachusetts, was organized at Boston in 1899, "for the purpose of encouraging the careful and systematical study of the history of the United States, and especially to bring forth in its true light the exact part taken by the French race in the evolution and formation of the American people". With this end in view this society has met regularly twice a year since its organization. Noted American historians and writers, as well as several from France and Canada, have delivered before it addresses which have contributed in no slight measure to enrich the store of French American historical literature. Another organization which seems destined to play an important role, at least among the French Americans of tomorrow, is the *Association Catholique de la Jeunesse Franco-Américaine*, which was formed at Baltimore, Maryland, 4 January, 1908, by twenty-two young French Americans who were students in various

universities of that city. This organization aims first of all to form true sons of the Catholic Church and useful citizens of the American Republic. Piety, study, and action constitute its threefold motto. Its first congress, held at Worcester, Massachusetts, 23 and 24 August, 1908, was attended by delegates from circles formed in different New England localities.

Besides the admirable work they have accomplished by means of their parishes, press, and societies, and in order to render their efforts more effective, the French Americans have held at different times conventions called for various purposes. The first of these gatherings, destined to promote the interests of the mutual benefit societies then existing, and held under their auspices, took place at New York City, in 1865. Thereafter similar conventions were held annually, the year 1877 excepted, until 1881, as follows: 1865, New York; 1869, Detroit; 1873, Biddeford, Maine; 1866, New York; 1870, St. Albans, Vermont; 1874, New York; 1867, Troy; 1871, Worcester, Mass.; 1875, Glens Falls, N. Y.; 1868, Springfield, Mass.; 1872, Chicago, Ill.; 1876, Holyoke, Mass.; 1878, Troy, N. Y.; 1879, Boston, Mass.; 1880, Northampton, Mass.; 1881, Lawrence, Mass. Since 1880 there have been six general conventions of French Americans, to which all the groups of this element, as well as all their societies, were invited to send delegates. These national gatherings took place as follows: 1880, Springfield, Mass.; 1882, Cohoes, N. Y.; 1884, Troy; 1886, Rutland, Vermont; 1888, Nashua, N. H.; 1893, Chicago, Ill. In October, 1901, delegates (to the number of 742) of the various groups and societies of French Americans in New England and the State of New York met in a "Congress" at Springfield, Mass. The four great subjects of deliberation were naturalization, benevolent societies, education, and the religious situation, and the spirit of the numerous and forcible addresses made on these heads is fittingly and admirably reflected in the resolutions. This congress, undoubtedly the most successful gathering of French Americans held up to that time, appointed a permanent commission consisting of the president of the congress and two delegates from each state represented, authorizing it to take all necessary measures for putting the resolutions of the congress into effect, and giving it the power to call another congress, local or general, according to its discretion.

Besides these general conventions, others have been held at different times and places for the purpose of considering a particular question or the interests of the French Americans of a particular state or diocese. For instance, the French Americans of Connecticut have held eighteen conventions in the last twenty-three years. Political organizations have also flourished among citizens of French Canadian origin, and naturalization clubs can be found in every city, town, or village where they are sufficient in number to maintain such institutions. In June, 1906, there was organized in the State of Massachusetts the Club *Républicain Franco-Américain*, with headquarters at Boston, at the first banquet of which, in April, 1907, Hon. Charles J. Bonaparte, a member of the Roosevelt Cabinet, was the guest of honour. The French Americans, in 1890, had 13 representatives in the Legislatures of Vermont, Massachusetts, Rhode Island, Connecticut, and New Hampshire, besides numerous public servants in the city councils and the municipal administrations; in 1907 they elected senators in Maine, Massachusetts, and Rhode Island; their representatives in New England numbered, in 1907, as follows :--

State	Representatives	Senators
Maine	5	2
Massachusetts	6	1
New Hampshire	18	. . .
Connecticut	2	. . .
Rhode Island	4	2

-- a total of 5 Senators and 35 Representatives. In many instances their candidates for high political honours have been successful at the polls. Such has been the case with the Hon. Pierre Broussard, Congressman from Louisiana; the Hon. Aram J. Pothier, of Woonsocket, R. I., elected governor of his state in November, 1908, after having been its lieutenant-governor and mayor of his city; the Hon. Adélard Archambault, also of Woonsocket, and who has likewise filled the offices of lieutenant-governor and mayor; Judge Joseph A. Breaux, of Louisiana; Pierre Bonvouloir, of Holyoke, Mass., whose service as city treasurer covers a period of fifteen consecutive years; Hugo A. Dubuque, of Fall River, Mass., ex-member of the Massachusetts Legislature, and city solicitor; Alex. L. Granger, of Kankakee, Ill., district attorney; Aimé E. Boisvert, of Manchester, N. H., district attorney; and Arthur S. Hogue, of Plattsburg, N. Y., also district attorney. Studying an earlier period, we find the names of Pierre Ménard, first Lieutenant-Governor of Illinois; the Rev. Gabriel Richard, second Congressman from Michigan (the only Catholic priest who ever sat in Congress), and Louis Vital Bougy, United States Senator from Wisconsin. At the present time, prominent among those who serve the country abroad are the following French Americans: Arthur M. Beaupré (Illinois), Envoy Extraordinary and Minister Plenipotentiary to the Netherlands; Alphonse Gaulin (Rhode Island), Consul-general at Marseilles, France; Eugène L. Belisle (Massachusetts), Consul at Limoges, France; Pierre P. Demers (New Hampshire), Consul at Bahia, Brazil; Joseph M. Authier (Rhode Island), Consul at Guadeloupe, West Indies.

In civil life, belonging to the generation departed for a better world, though their names are still present to the memory of their fellow-citizens and compatriots, were Ferdinand Gagnon, of Worcester, Mass., the father of French American journalism; Dr. L. J. Martel, of Lewiston, Maine, his worthy associate in the advancement of the French American element in the New England States; Major Edmond Mallet, of Washington, D. C., recognized as an authority upon the history of the North-West, and whose library (preserved intact by L'Union St-Jean-Baptiste d'Amérique) is the largest and most complete collection of documents relating to the French Americans ever gathered; Frédéric Houde and Antoine Mousette, pioneer journalists; Judge Joseph LeBoeuf, of Cohoes, N. Y.; Pierre F. Peloquin, of Fall River, Mass., and a score of others who for years had been foremost among their compatriots as champions of their rights, both civil and religious.

To sum up, the record of the French Americans in their new country has been such that prominent men of native origin, writers and politicians of note, have sung their praise on more than one occasion. In this respect, one will readily remember the homage paid them upon different occasions by the late Senator Hoar, of Massachusetts, as well as the marks of high esteem shown them by

governors and members of Congress. As recently as 20 March, 1908, Senator Henry Cabot Lodge, of Massachusetts, speaking on "Immigration" before the Boston City Club, made the following statement: "Later than any of these (movements of immigration) was the immigration of French Canadians, but which has assumed large proportions, and has become a strong and most valuable element of our population. But the French of Canada scarcely come within the subject we are considering, because they are hardly to be classed as immigrants in the accepted sense. They represent one of the oldest settlements on this continent. They have been, in the broad sense, Americans for generations, and their coming to the United States, is merely a movement of Americans across an imaginary line, from one part of America to another." In truth, the sentiment of hostility and suspicion, which rebuked the French Americans at their arrival in the republic, has subsided before their splendid conduct and magnificent spirit, and is replaced to-day by that tribute of respect which mankind acknowledges as due, and never fails to grant, to men of talent, industry, generosity, and patriotism.

J.L.K. LAFLAMME

DAVID E. LAVIGNE J. ARTHUR FAVREAU

Charles-Emile Freppel

Charles-Emile Freppel

Born at Ober-Ehnheim, Alsace, 1 June, 1827; died at Paris, 22 Dec., 1891. He was Bishop of Angers, France; and deputy from Finistère. He began his studies at a school in the little town; and at seventeen he had received his baccalaureate degree, and entered the the seminary Strasburg, where he received the subdiaconate at the hands of Mgr. Roess in 1848, and was at once appointed to the chair of history. Subsequent to his ordination to the priesthood in 1849, he took a noteworthy part in the discussions of Bonnetty and Maret on the subject of traditionalism. He passed a brilliant examination which secured for him the degree of doctor at the Sorbonne, and after a competitive examination he was named chaplain of the church of Ste-Geneviève at Paris. Here he delivered a course of sermons on the "Divinity of Jesus Christ" which have since been published in book form. He conducted Advent and Lenten exercises at the Madeleine and St-Louis d' Antin, at Notre-Dame-de-Lorette, and St. Germain l' Auxerrois. His early discourses were published in 1869, in two volumes. Having been appointed to the chair of sacred eloquence at the Sorbonne, he conducted a series of scholarly studies on the Apostolic Fathers and the Christian apologists. They fill ten volumes (4th ed., Paris, 1885). In 1867 Napoleon III invited him to preach the Lenten sermons at the Tuileries, and these discourses have been published in a volume entitled "La Vie Chrétienne".

It was about this time that Renan's "Vie de Jésus" provoked such a storm of controversy. Mgr. Freppel published a reply to the work, his "Examen critique de la Vie de Jésus de M. Renan" (Paris, 1863), which was perhaps the best refutation of the theories expounded by the French free-thinker. Pius IX, who was then making preparations for the Council of the Vatican, summoned the Abbe

Freppel to Rome to assist in the work of drawing up the *schemata* (drafts of decrees). The pope thus showed his appreciation of Freppel's learning and accomplishments, and appointed him to the Bishopric of Angers, rendered vacant by the death of Mgr. Angebault. He received the episcopal consecration at Rome, 18 April, 1870. Later there was shown a disposition to elevate him to the metropolitan See of Chambery; but he declined with the same modesty which in 1885, caused him to implore those, who, with M. Jules Ferry, desired his elevation to the dignity of the cardinalate, to discontinue their efforts on his behalf. Upon his return from Rome he proved himself, by his defense of his country, as good a patriot as at the council he had shown himself as able theologian.

In 1871, he accepted the candidature for one of the electoral divisions of Paris. He was defeated because of the ill will which the liberals had borne him since the council, at which, according to them, he had shown himself too ultramontane. In 1880, the electors of Finistere asked him to act as the representative, he was elected by a large majority to this position of trust. His first speech in the French Chamber was a vigorous protest against the expulsion of the Jesuits. For eleven years the bishop-deputy (*evêque député*) was the most attentively-heard orator in the Chamber, treating with equal authority the most diverse subjects, and such as would seem farthest removed from his ordinary studies. While he did not bring about the triumph of justice to the extent he desired, he defended it nobly though running violently counter to the prejudices of that assembly. He won even the esteem of his enemies, and M. Floquet was one day was able to re-echo the plaudits not only of the Chamber but of the whole of France. His "OEuvres polémiques" and his "Oratoires" have been collected in seventeen volumes (Paris, 1869-88). Almost all the great religious, political, and social questions which engaged men's minds at that time are here treated. Amongst his numerous other writings should be mentioned his work on the French Revolution (Paris, 1889), and "Bossuet et l'éloquence sacrée au XVII siècle", (Paris, 1894).

LOUIS LALANDE

Frequent Communion

Frequent Communion

Without specifying how often the faithful should communicate. Christ simply bids us eat His Flesh and drink His Blood, and warns us, that if we do not do so, we shall not have life in us (John, vi, etc.). The fact, however, that His Body and Blood were to be received under the appearances of bread and wine, the ordinary daily food and drink of His hearers, would point, to the frequent and even daily reception of the Sacrament. The manna, too, with which He compared "the bread which He would give", was daily partaken of by the Israelites. Moreover, though the petition "give us this day our daily bread" does not primarily refer to the Eucharist, nevertheless it could not fail to lead men to believe that their souls, as well as their bodies, stood in need of daily nourishment. In this article we shall deal with (I) the history of the frequency of Holy Communion, (II) the present practice as enjoined by Pius X.

I. HISTORY

In the early Church at Jerusalem the faithful received every day (Acts, ii, 46). Later on, however, we read that St. Paul remained at Troas for seven days, and it was only "on the first day of the week" that the faithful "assembled to break bread" (Acts, xx, 6-11; cf. I Cor., xvi, 2). According to the "Didache" the breaking of bread took place on "the Lord's day" (*kata kyriaken*, c. xiv). Pliny says that the Christians assembled "on a fixed day" (Ep. x); and St. Justin, "on the day called Sunday" (*te tou heliou legomene hemera*, Apol., I, lxvii, 3, 7). It is in Tertullian that we first read of the Liturgy being celebrated on any other day besides Sunday (De Orat., c. xix; De Corona, c. iii). Daily reception is mentioned by St. Cyprian (De Orat. Domin., c. xviii in P.L., IV, 531); St. Jerome (Ep. ad Damasum); St. John Chrysostom (Hom., iii in Eph.); St. Ambrose (in Ps. cxviii, viii, 26, 28 in P.L., XV, 1461, 1462); and the author of the "De Sacramentis" (V, iv, 25; P.L., XVI, 452).

It should be noted that in the early Church and in the patristic ages, the faithful communicated, or at any rate were expected to communicate, as often as the Holy Eucharist was celebrated (St. John Chrysostom loc. cit.; Apostolic canons, X; St. Gregory the Great, Dial. II, 23). They received even oftener, since it was the custom to carry away the Sacred Elements and communicate at home (St. Justin, loc. cit.; Tertullian, "Ad Uxorem", II, v; Euseb., "Hist. Eccl.", VI, xliv). This was done especially by hermits, by dwellers in monasteries without priests, and by those who lived at a distance from any church. On the other hand, we find that practice fell far short of precept, and that the faithful were frequently rebuked for so seldom receiving the Holy Communion (see especially St. John Chrysostom, loc. cit., and St. Ambrose, loc. cit.). St. Augustine sums up the matter thus: "Some receive the Body and Blood of the Lord every day; others on certain days; in some places there is no day on which the Sacrifice is not offered; in others on Saturday and Sunday only; in others on Sunday alone (Ep. liv in P.L., XXXIII, 200 sqq.). Whether it was advisable for the faithful, especially those living in matrimony, to receive daily, was a question on which the Fathers were not agreed. St. Jerome is aware of this custom at Rome, but he says: "Of this I neither approve nor disapprove; let each abound in his own sense" (Ep. xlvi in P.L., XXII, 505 -- 6; Ep. lxxi in P.L., XXII, 672). St. Augustine discusses the question at length, and comes to the conclusion, that there is much to be said on both sides (Ep. liv in P.L., XXXIII, 200 sqq.). Good Christians still communicated once a week, down to the time of Charlemagne, but after the break-up of his empire this custom came to an end. St. Bede bears witness to the Roman practice of communicating on Sundays and on the feasts of the Apostles and Martyrs, and laments the rarity of reception in England (Ep. ad Egb. in P.L., XCIV, 665).

Strange to say, it was in the Middle Ages, "the Ages of Faith", that Communion was less frequent than at any other period of the Church's history. The Fourth Lateran Council compelled the faithful, under pain of excommunication, to receive at least once a year (c. Omnis utriusque sexus). The Poor Clares, by rule, communicated six times a year; the Dominicanesses, fifteen times; the Third Order of St. Dominic, four times. Even saints received rarely: St. Louis six times a year, St. Elizabeth

only three times. The teaching of the great theologians, however, was all on the side of frequent, and to some extent daily, Communion [Peter Lombard, IV Sent., dist. xii, n. 8; St. Thomas, Summa Theol., III, Q. lxxx, a. 10; St. Bonaventure, In IV Sent., dist. xii, punct. ii, a. 2, q. 2; see Dalgairns, "The Holy Communion" (Dublin) part III, chap. i]. Various reformers, Tauler, St. Catherine of Siena, St. Vincent Ferrer, and Savonarola, advocated, and in many instances brought about, a return to frequent reception. The Council of Trent expressed a wish "that at each Mass the faithful who are present, should communicate" (Sess. XXII, chap. vi). And the Catechism of the council says: "Let not the faithful deem it enough to receive the Body of the Lord once a year only; but let them judge that Communion ought to be more frequent; but whether it be more expedient that it should be monthly, weekly, or daily, can be decided by no fixed universal rule" (pt. II, c. iv, n. 58). As might be expected, the disciples of St. Ignatius and St. Philip carried on the work of advocating frequent Communion. With the revival of this practice came the renewal of the discussion as to the advisability of daily Communion. While all in theory admitted that daily reception was good, they differed as to the conditions required.

The Congregation of the Council (1587) forbade any general restriction, and ordered that no one should be repelled from the Sacred Banquet, even if he approached daily. In 1643, Arnauld's "Frequent Communion" appeared, in which he required, for worthy reception, severe penance for past sins and most pure love of God. The Congregation of the Council was once more appealed to, and decided (1679) that though universal daily Communion was not advisable, no one should be repelled, even if he approached daily; parish priests and confessors should decide how often, but they should take care that all scandal and irreverence should be avoided (see Denzinger, "Enchiridion", 10th ed., n. 1148). In 1690, Arnauld's conditions were condemned. In spite of these decisions, the reception of Holy Communion became less and less frequent, owing to the spread of rigid Jansenistic opinions, and this rigour lasted almost into our own day. The older and better tradition was, however, preserved by some writers and preachers, notably Fenelon and St. Alphonsus, and, with the spread of devotion to the Sacred Heart, it gradually became once more the rule. Difficulty, however, was raised regarding daily Communion. This practice, too, was warmly recommended by Pius IX and Leo XIII, and finally received official approval from Pius X.

II. PRACTICE

(a) The rules for frequent and daily Communion are laid down by the decree of the Congregation of the Council "Sacra Tridentina Synodus" (20 Dec., 1905). (1) "Frequent and daily Communion. . . should be open to all the faithful, of whatever rank and condition of life; so that no one who is in the state of grace, and who approaches the holy table with a right and devout intention, can be lawfully hindered therefrom." (2) "A right intention consists in this: that he who approaches the Holy Table should do so, not out of routine, or vainglory, or human respect, but for the purpose of pleasing God, or being more closely united with Him by charity, and of seeking this Divine remedy for his weaknesses and defects". Rule 3 declares that "it is sufficient that they (the daily communicants) be free from mortal sin, with the purpose of never sinning in future", and Rule 4

enjoins that "care is to be taken that Holy Communion be preceded by serious preparation and followed by a suitable thanksgiving, according to each one's strength, circumstances, and duties". "Parish priests, confessors, and preachers are frequently and with great zeal to exhort the faithful to this devout and salutary practice" (Rule 6); two rules (7 and 8) refer to the daily Communion in religious communities and Catholic institutions of all kinds; and the last rule (9) forbids any further controversy on the subject.

(b) *Acts and Decrees of Pius X* on frequent and daily Communion.-- For two years these decrees or pronouncements follow one another in the order indicated here.

30 May, 1905.-- On the eve of the Eucharistic Congress in Rome, Pius X indulgenced the "Prayer for the diffusion of the pious custom of daily Communion", which was published and distributed on the last day of the Congress.

4 June, 1905.-- The Holy Father, presiding at the closing of the Congress in Rome, said: "I beg and implore of you all to urge the faithful to approach that Divine Sacrament. And I speak especially to you, my dear sons in the priesthood, in order that Jesus, the treasure of all the treasures of Paradise, the greatest and most precious of all the possessions of our poor desolate humanity, may not be abandoned in a manner so insulting and so ungrateful."

The decree of 20 December, 1905, has already been summarized.

25 Feb., 1906.-- To gain the plenary indulgence, granted to those who communicate five times weekly, it is not necessary to go to confession every week, every fortnight, or every month; even less frequent recurrence will do. No definite interval is given.

11 August, 1906.-- The papal Brief "Romanorum Pontificum" grants indulgences and unusual privileges to the Sacramental League of the Eucharist, which has for its object the inducement of the faithful to adopt the practice of daily or frequent Communion. By a singular favour, all confessors inscribed in this League are urged to exhort their penitents to receive daily, or almost daily, to obtain a plenary indulgence once a week.

15 Sept., 1906.-- It was explained, on this date, that the decree of 20 Dec., 1905, applies not merely to adults and the youth of both sexes, but also to children so soon as they have received their first Communion in accordance with the rules of the Roman Catechism, that is to say, as soon as they manifest sufficient discretion.

7 Dec., 1906.-- Sick persons bed-ridden for one month, without some hope of prompt recovery, may receive Holy Eucharist, even though they may have broken their fast after midnight, by drinking something, as, for instance, chocolate, tapioca, semolina, or bread soup, which are *drink* in the sense of the decree. This may be repeated once or twice a week, if the Blessed Sacrament is kept in the house; otherwise, once or twice a month.

25 March, 1907.-- The hierarchy are urged to secure that, there be held each year, in the cathedral church, a special Triduum for the purpose of exhorting the people to practise frequent Communion. In parish churches one day will suffice. Indulgences are granted for these exercises.

8 May, 1907.-- A general permission is granted to give Communion in private oratories to all who attend Mass, except as to Easter Communion and Viaticum.

14 July, 1907.-- Brief again delegating Cardinal V. Vannutelli to the Eucharistic Congress at Metz, which was exclusively devoted to the consideration of the question of Holy Communion. The following is an extract from the Brief: "This [frequent Communion] in truth is the shortest way to secure the salvation of every individual man as well as that of society."

T.B. SCANNELL

Augustin-Jean Fresnel

Augustin-Jean Fresnel

Physicist; b. at Broglie near Bernay, Normandy, 10 May, 1788; d. at Ville d'Avray, near Paris, 14 July, 1827. His early progress in letters was slow though he showed while still young an aptitude for physical science. In his seventeenth year he entered the Ecole Polytechnique in Paris where he attracted the attention of Legendre. After spending some time at the Ecole des Ponts et Chaussées he was assigned to the engineering corps and served successively in the departments of Vendée, Drôme, and Ille-et-Vilaine. He lost his appointment through politics on the return of Napoleon from Elba. In 1819 he was made a member of the Lighthouse Commission, becoming its secretary in 1824, and was an examiner at the Ecole Polytechnique from 1821 to 1824. Shortly afterward his health, which had never been robust, became so weakened that he was obliged to give up nearly all active work. He was unanimously elected a member of the Académie des Sciences in 1823, and in 1825 was made an associate of the London Royal Society, receiving its Rumford Medal on his death-bed.

Fresnel occupies a prominent place among the French physicists of the nineteenth century. His chosen field of research was optics, and in a series of brilliant memoirs he did much to place the wave theory upon a firm basis. He introduced with conspicuous success the conjecture of Hooke (1672) that the light vibrations are transverse. His first paper was on aberration, but it was never published. In connexion with his study of the theory and phenomena of diffraction and interference he devised his double mirrors and biprism in order to obtain two sources of light independent of

apertures or the edges of opaque obstacles. His article on diffraction won the prize of the Académie des Sciences in 1819. He extended the work of Huyghens and others on double refraction and developed the well-known theory which bears his name. With Arago he investigated the phenomena and formulated the laws of the interference of polarized light. He showed how to obtain and detect circularly polarized light by means of his rhomb. An account of his more important contributions to optics may be found in Preston's "Theory of Light" (New York, 1891), or Wood's "Physical Optics" (New York, 1905). Fresnel gave a course of physics for some months at the Athenée in 1819, but otherwise had no academic connexions apart from his position as examiner at the Ecole Polytechnique. Most of his researches were carried on in the leisure he could obtain from his professional duties. In applied optics mention should be made of his system of lenses developed during his connexion with the lighthouse commission which has revolutionized lighthouse illumination throughout the world. Fresnel was a deeply religious man and remarkable for his keen sense of duty. A three-volume edition of his complete works was published in 1866.

ARAGO, *Oeuvres Complètes* (Paris, 1854), I, 107-185; VERDET, *Oeuvres Complètes d'Aug. Fresnel*, introduction in vol. I (Paris, 1866); HELLER, *Geschichte der Physik* (Stuttgart, 1884), II.

H. M. BROCK

Friar

Friar

[From Lat. *frater*, through O. Fr. *fredre*, *frere*, M. E. *frere*; It. *frate* (as prefix *fra*); Sp. *fraile* (as prefix *fray*); Port. *fret*; unlike the other Romance languages French has but the one word *frère* for friar and brother].

A friar is a member of one of the mendicant orders.

USE OF THE WORD

In the early Church it was usual for all Christians to address each other as *fratres* or brothers, all being children of the one Heavenly Father, through Christ. Later, with the rise and growth of the monastic orders, the appellation began gradually to have a more restricted meaning; for obviously the bonds of brotherhood were drawn more closely between those who lived under the rule and guidance of one spiritual father, their abbot. The word occurs at an early date in English literature with the signification of brother, and from the end of the thirteenth century it is in frequent use referring to the members of the mendicant orders, e.g. c. 1297, "frere prechors" (R. Glouc. 10105); c. 1325, "freres of the Carme and of Saint Austin" (Pol. Songs, 331), c. 1400, "frere meneours" (Maunder, xxxi, 139); c. 1400, "Sakked freres" (Rom. Rose). Shakespeare speaks of the "Friars of orders gray" (Tam. Shr., iv, i, 148). The word was also loosely applied to members of monastic and military orders, and at times to the convent of a particular order, and hence to the part of a town in which such a convent had been located.

The word *friar* is to be carefully distinguished in its application from the word *monk*. For the monk retirement and solitude are undisturbed by the public ministry, unless under exceptional circumstances. His vow of poverty binds him strictly as an individual but in no way affects the right of tenure of his order. In the life of the friar, on the contrary, the exercise of the sacred ministry is an essential feature, for which the life of the cloister is considered as but an immediate preparation. His vow of poverty, too, not only binds him as an individual to the exercise of that virtue, but, originally at least, precluded also the right of tenure in common with his brethren. Thus originally the various orders of friars could possess no fixed revenues and lived upon the voluntary offerings of the faithful. Hence their name of mendicants. This second feature, by which the friar's life differs so essentially from that of the monk, has become considerably modified since the Council of Trent. In Session XXV, ch. iii, "De Regular.", all the mendicant orders -- the Friars Minor and Capuchins alone excepted -- were granted the liberty of corporate possession. The Discalced Carmelites and the Jesuits have availed themselves of this privilege with restrictions (cf. Wernz, *Jus Decretal.*, III, pt. II, 262, note). It may, however, be pertinently remarked here that the Jesuits, though mendicants in the strict sense of the word, as is evident from the very explicit declaration of St. Pius V (Const. "Cum indefessæ", 1571), are classed not as mendicants or friars, but as clerics regular, being founded with a view to devoting themselves, even more especially than the friars, to the exercise of the sacred ministry (Vermeersch, *De Relig.*, I, xii, n. 8).

ORDERS OF FRIARS

The orders of friars are usually divided into two classes: the four great orders mentioned by the Second Council of Lyons (can. xxiii) and the lesser orders. The four great orders in their legal precedence are: (1) the Dominicans (St. Pius V, Const. "Divina", 1568); (2) the Franciscans; (3) the Carmelites, (4) the Augustinians.

- The Dominicans, or Friars Preachers, formerly known as the Black Friars, from the black cappa or mantle worn over their white habit, were founded by St. Dominic in 1215 and solemnly approved by Honorius III, in Dec., 1216. They became a mendicant order in 1221.
- The Franciscans, or Friars Minor (Grey Friars), were founded by St. Francis of Assisi, who is rightly regarded as the patriarch of the mendicant orders. His rule was orally approved by Innocent III in 1209 and solemnly confirmed by Honorius III in 1223 (Const. "Solet"). It is professed by the Friars Minor, the Conventuals, and the Capuchins.
- The Carmelites, or White Friars, from the white cloak which covers their brown habit, were founded as a purely contemplative order, but became mendicants in 1245. They received the approbation of Honorius III (Const. "Ut vivendi", 30 Jan., 1226) and later of Innocent IV (Const. "Quæ honorem", 1247). The order is divided into two sections, the Calced and Discalced Carmelites.
- The Augustinians, or Hermits of St. Augustine (Austin Friars), trace their origin to the illustrious Bishop of Hippo. The various branches which subsequently developed were united and constituted from various bodies of hermits a mendicant order by Alexander IV (Const. "Iis, quæ", 31 July, 1255, and Const. "Licet", 4 May, 1256).

These four orders are called by canonists the *quatuor ordines mendicantes de iure communi*. The Fourth Lateran Council ("De relic. dom.", III, tit. xxxvi, c. ix) had forbidden in 1215 the

foundation of any new religious orders. In face of this prohibition a sufficient number of new congregations, especially of mendicants, had sprung up to attract the attention of the Second Council of Lyons. In canon xxiii, the council, while specially exempting the four mendicant orders above mentioned, condemns all other mendicant orders then existing to immediate or to gradual extinction. All orders established since the Council of Lateran, and not approved by the Holy See, were to be dissolved at once. Those since established with such approval were forbidden to receive new members. The illustrious order of Service, founded in 1233 and approved by Alexander IV in 1256 (Const. "Deo grata"), happily survived this condemnation. Concerning the four greater orders, the council concludes: "Be it understood, however, that we do not conceive of the extension of this constitution to the Orders of Friars Preachers and of Friars Minor, whose evident service to the universal Church is sufficient approval. As for the Hermits of St. Augustine and the Order of Caramelites, whose foundation preceded the said Council (Fourth Lateran), we wish them to remain as solidly established as heretofore" (Lib. III, tit. xvii, c. un., in VI). The importance of the orders thus singled out and exempted was afterwards still further emphasized by the insertion of this canon into the "Corpus Juri" in the "Liber Sixtus" of Boniface VIII.

The so-styled lesser orders, of which the following are today the most flourishing, were founded and approved at various subsequent periods: the Minims (1474), the Third Order Regular of St. Francis (1521); the Capuchin -- as constituting a different branch of the Franciscan Order -- (1525); the Discalced Caramelizes -- as constituting a distinct branch of the Caramelizes -- (1568); the Discalced Trinitarians (1599); the Order of Penance, known in Italy as the Scalzetti (1781).

GREGORY CLEARY

Order of Friars Minor

Order of Friars Minor

(Also known as FRANCISCANS.) This subject may be conveniently considered under the following heads:

- I. General History of the Order;
 - A. First Period (1209-1517);

- B. Second Period (1517-1909);
- II. The Reform Parties;
 - A. First Period (1226-1517);
 - B. Second Period (1517-1897);
 - (1) The Discalced;
 - (2) The Reformanti;
 - (3) The Recollects, including a survey of the history of the Franciscans in the North, especially in Great Britain and Ireland (America is treated in a separate article);
- III. Statistics of the Order (1260-1909);
- IV. The Various Names of the Friars Minor;
- V. The Habit;
- VI. The Constitution of the Order;
- VII. General Sphere of the Order's Activity;
- VIII. The Preaching Activity of the Order;
- IX. Influence of the Order on the Liturgy and Religious Devotions;
- X. Franciscan Missions;
- XI. Cultivation of the Sciences;
- XII. Saints and Beati of the Order.

I. GENERAL HISTORY OF THE ORDER

A. First Period (1209-1517)

Having gathered about twelve disciples around him (1207-08), St. Francis of Assisi appeared before Innocent III, who, after some hesitation, gave verbal sanction to the Franciscan Rule. Thus was legally founded the Order of Friars Minor (*Ordo Fratrum Minorum*), the precise date being, according to an ancient tradition in the order, 16 April, 1209. His friars having rapidly increased in number and spread over various districts of Italy, St. Francis appointed, in 1217, provincial ministers (*ministri provinciales*), and sent his disciples farther afield. At the general chapter of 1219 these missions were renewed and other friars dispatched to the East, to Hungary, to France, and to Spain. Francis himself visited Egypt and the East, but the innovations introduced during his absence by some of the friars caused his speedy return in 1220. In the same year he resigned the office of general of the order, which he entrusted first to Peter of Cattaneo, on whose early death (10 March, 1221) he appointed Elias of Cortona. Francis, however, retained a certain supreme direction of the order until his death on 3 October, 1226.

Elias of Cortona, as the vicar of Francis, summoned the regular Pentecost chapter for the following year, and on 29 May, 1227, Giovanni Parenti, a jurist, was chosen as first successor of St. Francis and first minister-general. He has often been regarded as a native of Florence, but probably came from the neighbourhood of Rome. Gregory IX employed the new general on political missions at Florence and Rome, authorized the Minorites to lay out their own cemeteries (26 July, 1227), and charged them with the direction and maintenance of the Poor Clares (1 December, 1227).

In 1228 and the succeeding years, Elias of Cortona laboured zealously at the construction of a church to be dedicated to Francis of Assisi, who was canonized by Gregory IX on 16 July, 1228. On the day following the pope himself laid the foundation stone of this church at Assisi destined to receive the body of St. Francis, and he shortly afterwards entrusted to Thomas of Celano the task of writing the biography of the saint, which he confirmed on 25 February, 1229. The translation of the saint's body from the church of San Giorgio to the new basilica took place on 22 May, 1230, three days before the appointed time, and Elias of Cortona, possibly fearing some disturbance, took possession of the body, with the assistance of the civic authorities, and buried it in the church, where it was discovered in 1818. Elias was censured and punished for this action in the Bull of 16 June, 1230. The usual general chapter was held about the same date, and on 28 September, 1230, the Bull "Quo elongati" was issued, dealing with the Testament of St. Francis and certain points in the Rule of 1223. Elias meanwhile devoted all his energy to the completion of the magnificent church (or rather double church) of S. Francesco, which stands on the slope of a hill in the western portion of Assisi, and of the adjacent monastery with its massive pillars and arcades. His election as general in 1232 gave him freer scope, and enabled him to realize the successful issue of his plans. As a politician, Elias certainly possessed genius. His character, however, was too ostentatious and worldly, and, though under his rule the order developed externally and its missions and studies were promoted, still in consequence of his absolutism, exercised now with haughty bearing and again through reckless visitors, there arose in the order an antagonism to his government, in which the Parisian masters of theology and the German and English provinces played the most prominent part. Unable to stem this opposition, Elias was deposed, with Gregory IX's approval, by the Chapter of Rome (1239), and the hitherto undefined rights and almost absolute authority of the general in matters of income and legislation for the order were considerably restricted. Elias threw in his lot with Frederick II (Hohenstaufen), was excommunicated in consequence, and died on 22 April, 1253. Albert of Pisa, who had previously been provincial of Germany and Hungary, was chosen at the chapter of 1239 to succeed Elias, but died shortly afterwards (23 January, 1240). On All Saints' Day, 1240, the chapter again met and elected Haymo of Faversham, a learned and zealous English Franciscan, who had been sent by Gregory IX (1234) to Constantinople to promote the reunion of the Schismatic Greeks with the Apostolic See. Haymo, who, with Alexander of Hales had taken part in the movement against Elias, was zealous in his visitation of the various houses of the order. He held the Provincial Chapter of Saxonia at Aldenburg on 29 September, 1242, and, at the request of Gregory IX, revised the rubrics to the Roman Breviary and the Missal.

After Haymo's death in 1244 the General Chapter of Genoa elected Crescenzo Grizzi of Jesi (1245-47) to succeed him. Crescenzo instituted an investigation of the life and miracles of St. Francis and other Minorites, and authorized Thomas of Celano to write the "Legenda secunda S. Francisci", based on the information (Legenda trium Sociorum) supplied to the general by three companions of the saint (*Tres Socii*, i.e. Leo, Angelus, and Rufinus). From this period also dates the "Dialogus de vitiis Sanctorum Fratrum Minorum." This general also opposed vigorously the separationist and particularistic tendencies of some seventy-two of the brothers. The town of Assisi

asked for him as its bishop, but the request was not granted by Innocent IV, who, on 29 April, 1252, appointed him Bishop of jesi, in the March of Ancona, his native town. John of Parma, who succeeded to the generallship (1247-57), belonged to the more rigorous party in the order. He was most diligent in visiting in person the various houses of the order. it was during this period that Thomas of Celano wrote his "Tractatus de Miraculis". On 11 August, 1253, Clare of Assisi died, and was canonized by Alexander IV on 26 September, 1255. On 25 May, 1253, a month after the death of the excommunicated Elias, Innocent consecrated the upper church of S. Francesco, John of Parma unfortunately shared the apocalyptic views and fancies of the Joachimites, or followers of Jeachim of Floris, who had many votaries in the order, and was consequently not a little compromised when Alexander IV (4 November, 1255) solemnly condemned the "Liber introductorius", a collection of the writings of Joachim of Floris with an extravagant introduction, which had been published at Paris. This work has often been falsely ascribed to the general himself. its real author was Gerardo di Borgo S.-Donnino, who thus furnished a very dangerous weapon against the order to the professors of the secular clergy, jealous of the success of the Minorites at the University of Paris. The chapter convened in the Ara Coeli monastery at Rome forced John of Parma to abdicate his office (1257) and, on his recommendation, chose as his successor St. Bonaventure from Bagnorea. John was then summoned to answer for his Joachimism before a court presided over by the new general and the cardinal-protector, and would have been condemned but for the letter of Cardinal Ottoboni, afterwards Adrian V. He subsequently withdrew to the hermitage of Greccio, left it (1289) at the command of the pope to proceed to Greece, but died an aged broken man at Camerino on 20 March, 1289.

St. Bonaventure, learned and zealous religious, devoted all his energy to the government of the order. He strenuously advocated the manifold duties thrust upon the order during its historical development -- the labour in the care of souls, learned pursuits, employment of friars in the service of the popes and temporal rulers, the institution of large monasteries, and the preservation of the privileges of the order -- being convinced that such a direction of the activities of the members would prove most beneficial to the Church and the cause of Christianity. The Spirituals accused Bonaventure of laxity; yet he laboured earnestly to secure the exact observance of the rule, and energetically denounced the abuses which had crept into the order, condemning them repeatedly in his encyclical letters. In accordance with the rule, he held a general chapter every three years: at Narbonne in 1260, at Pisa in 1263, at Paris in 1266, at Assisi in 1269, and at Lyons in 1274, on the occasion of the general council. He made most of the visitations to the different convents in person, and was a zealous preacher. The Chapter of Narbonne (1260) promulgated the statutes of the order known as the "Constitutiones Narbonenses", the letter and spirit of which exercised a deep and enduring influence on the Fransican Order. Although the entire code did not remain long in force, many of the provisions were retained and served as a model for the later constitutions.

Even before the death of Bonaventure, during one of the sessions of the council (15 July, 1274), the Chapter of Lyons had chosen as his successor Jerome of Ascoli, who was expected by the council with the ambassadors of the Greek Church. He arrived, and the reunion of the churches

was effected. Jerome was sent back by Innocent V as nuncio to Constantinople in May, 1276, but had only reached Ancona when the pope died (21 July, 1276). John XXI (1276-77) employed Jerome (October, 1276) and John of Vercelli, General of the Dominicans, as mediators in the war between Philip III of France and Alfonso X of Castile. This embassy occupied both generals till March, 1279, although Jerome was preferred to the cardinalate on 12 March, 1278. When Jerome departed on the embassy to the Greeks, he had appointed Bonagratia of S. Giovanni in Persiceto to represent him at the General Chapter of Padua in 1276. On 20 May, 1279, he convened the General Chapter of Assisi, at which Bonagratia was elected general. Jerome later occupied the Chair of Peter as Nicholas IV (15 February, 1288-4 April, 1292). Bonagratia conducted a deputation from the chapter before Nicholas III, who was then staying at Soriano, and petitioned for a cardinal-protector. The pope, who had himself been protector, appointed his nephew Matteo Orsini. The general also asked for a definition of the rule, which the pope, after personal consultation with cardinals and the theologians of the order, issued in the "Exiit qui seminavit" of 14 August, 1279. In this the order's complete renunciation of property *in communi* was again confirmed, and all property given to the brothers was vested in the Holy See, unless the donor wished to retain his title. All moneys were to be held in trust by the *nuntii*, or spiritual friends, for the friars, who could however raise no claim to them. The purchase of goods could take place only through procurators appointed by the pope, or by the cardinal-protector in his name.

The Bull of Martin IV "Ad fructus uberes" (13 December, 1281) defined the relations of the mendicants to the secular clergy. The mendicant orders had long been exempt from the jurisdiction of the bishop, and enjoyed (as distinguished from the secular clergy) unrestricted freedom to preach and hear confessions in the churches connected with their monasteries. This had led to endless friction and open quarrels between the two divisions of the clergy, and, although Martin IV granted no new privileges to the mendicants, the strife now broke out with increased violence, chiefly in France and in a particular manner at Paris. Boniface VIII adjusted their relations in the Bull "Super cathedram" of 18 February, 1300, granting the mendicants freedom to preach in their own churches and in public places, but not at the time when the prelate of the district was preaching. For the hearing of confessions, the mendicants were to submit suitable candidates to the bishop in office, and obtain his sanction. The faithful were left free in regard to funerals, but, should they take place in the church of a cloister, the *quarta funerum* was to be given to the parish priest. Benedict XI abrogated this Bull, but Clement V reintroduced it (1312). Especially conspicuous among the later contentions over the privileges of the mendicants were those caused by John of Poliacco, a master of theology of Paris (1320) and by Richard Fitzralph, Archbishop of Armagh (1349). In 1516 the Fifth Council of the Lateran dealt with this question, which was definitively settled by the Council of Trent.

In the Bull "Exultantes" of 18 January, 1283, Martin IV instituted the *syndici Apostolici*. This was the name given to the men appointed by the ministers and custodians to receive in the name of the Holy See the alms given to the Franciscans, and to pay it out again at their request. The *syndici* consequently replaced the *nuntii* and procurators. All these regulations were necessary in

consequence of the rule of poverty, the literal and unconditional observance of which was rendered impossible by the great expansion of the order, by its pursuit of learning, and the accumulated property of the large cloisters in the towns. The appointment of these trustees, however, was neither subversive of nor an evasion of the rule, but rather the proper observance of its precepts under the altered conditions of the time. Under Bonagratia (1279-83) and his immediate successors Arlotto da Prato (1285-86), and Matthew of Acquasparta (1287-89), a learned theologian and philosopher who became cardinal in 1288 and rendered notable service to the Church, the Spiritual movement broke out in the Province of Ancona, under the leadership of Pietro Giovanni Olivi, who, after the General Chapter of Strasburg (1282), caused the order considerable trouble. The general, Raimondo Gaufredi (Geoffrey) of Provence (1289-95), favoured the Spirituals and denounced the lax interpretations of the Community, i.e. the majority of the order who opposed the minority, termed Spirituals or Zelanti. Raimondo even ventured to revise the general constitutions at the General Chapter of Paris in 1292, whereupon, having refused the Bishopric of Padua offered him by Boniface VIII, he was compelled by the pope to resign his office. Giovanni Minio of Muravalle, in the March of Ancona, a master of theology, was elected general by the Chapter of Anangi (1294), and although created Cardinal-Bishop of Porto (*Portuensis*) in 1302, continued to govern the order until Gonzálves of Valleboa (1304-13), Provincial of Santiago, Spain, was elected to succeed him by the Chapter of Assisi.

In his encyclical of 1302, Giovanni Minio had inculcated the rule of poverty, and forbidden both the accumulation of property and vested incomes. Gonzálves followed the same policy (12 February, 1310), and the Chapter of Padua (1310) made the precept still more rigorous by enjoining the "simple use" (*usus pauper*) and withdrawing the right of voting at the chapter from convents which did not adopt it. The *usus pauper* had indeed been a source of contention from 1290, especially in Provence, where some denied that it was binding on the order. These dissensions led to the *Magna Disputatio* at Avignon (1310-12), to which Clement V summoned the leaders of the Spirituals and of the Community or Relaxati. Clement laid the strife by his bull and Decretal "Exivi di Paradiso", issued at the third and last session of the Council of Vienne, 5 May, 1312. The prescriptions contained in the Franciscan Rule were divided into those which bound under pain of mortal, and those which bound under pain of venial sin. those enjoining the renunciation of property and the adoption of poverty were retained: the Franciscans were entitled only to the *usus* (use) of goods given to them, and wherever the rule prescribed it, only to the *usus pauper* or *arctus* (simple use). All matters concerning the Franciscan habit, and all the storehouses and cellars allowed in cases of necessity, were referred to the discretion of the superiors of the order.

The Spirituals of Provence and Tuscany, however, were not yet placated. At the General Chapter of Barcelona (1313), a Parisian master of theology, Alexander of Alessandria (Lombardy), was chosen to succeed Gonzálves, but died in October, 1314. The General Chapter of Naples (1316) elected Michael of Cesena, a moderate Conventual. The commission appointed by this chapter altered the general statutes of the rule of poverty. The Spirituals immediately afterwards rekindled the property strife, but John XXIII interdicted and suppressed their peculiar notions by the

Constitution "Quorumdam exigit" (7 October, 1317), thus completely restoring the official unity of the order. In 1321, however, the so-called theoretical discussion on poverty broke out, the inquisitor, John of Belna, a Dominican, having taken exception to the statement that Christ and the Apostles possessed property neither *in communi* nor *in speciali* (i.e. neither in common nor individually). The ensuing strife degenerated into a fierce scholastic disputation between the Franciscans and the Dominicans, and, as the pope favoured the views of the latter, a very dangerous crisis seemed to threaten the Minorites. By the Constitution "Ad conditorem canonum" (8 December, 1322) John XXII renounced the title of the Church to all the possessions of the friars Minor, and restored the ownership to their order. This action, contrary to the practice and expressed sentiments of his predecessors, placed the Minorites on exactly the same footing as the other orders, and was a harsh provision for an order which had laboured so untiringly in the interests of the Church. In many other ways, however, John fostered the order. It will thus be readily understood why the members inclined to laxity joined the disaffected party, leaving but few advocated of John's regulations. To the dissenting party belonged Gerardus Odonis (1329-42), the general, whose election at Paris in 1329 John had secured in the place of his powerful opponent Michael of Cesena. Odonis, however, was supported only by the minority of the order in his efforts to effect the abolition of the rule of poverty. The deposed general and his followers, the Michaelites (cf. FRATICELLI), were disavowed by the General Chapter of Paris, and the order remained faithful to the Holy See. The constitutions prescribed by Benedict XII, John's successor, in his Bull of 28 November, 1336, and the name "Constitutiones Catarcenses" or "Benedictinae"), contained not a single reference to the rule of poverty. Benedict died in 1342, and on the preferment of Gerardus Odonis to the Patriarchate of Antioch, Fortanerio Vassalli was chosen general (1343-47).

Under Guillaume Farinier (1348-57) the Chapter of Marseilles resolved to revive the old statutes, a purpose which was realized in the general constitutions promulgated by the General Chapter of Assisi in 1354 ("Constitutiones Farineriae or guilemi"). This code was based on the "Constitutiones Narboneses" (1260), and the Bulls "Exiit" and "Exivi", but the edicts of John XXII, being promulgated by the pope over and above the chapter, still continued in force. The great majority of the friars accommodated themselves to these regulations and undertook the care and proprietorship of their goods, which they entrusted to *fratres procuratores* elected from among themselves. The protracted strife of the deposed general (Michael of Cesena) with the pope, in which the general was supported with conspicuous learning by some of the leading members of the order and encouraged by the German emperor Louis IV (the Bavarian), for reasons of secular and ecclesiastical policy, gave great and irresistible impulse to laxity in the order, and prejudiced the founder's ideal. It was John XXII who had introduced Conventualism in the later sense of the word, that is, community of goods, income and property as in other religious orders, in contradiction to Observantism or the strict observance of the rule, a movement now strong within the order, according to which the members were to hold no property *in communi* and renounce all vested incomes and accumulation of goods. The Bull "Ad conditorem", so significant in the history of the order, was only withdrawn 1 November, 1428, by Martin V.

Meanwhile the development of Conventualism had been fostered in many ways. In 1348 the Black Death swept devastatingly over Europe, emptying town and cloister. The wealth of the order increased rapidly, and thousands of new brothers were admitted without sufficiently close examination into their eligibility. The liberality of the faithful was also, if not a source of danger for the Minorites, at least a constant incitement to depart to some extent from the rule of poverty. This liberality showed itself mainly in gifts of real property, for example in endowments for prayers for the dead, which were then usually founded with real estate. In the fourteenth century also began the land wars and feuds (e.g. the Hundred Years War in France), which relaxed every bond of discipline and good order. The current feelings of anarchic irresponsibility were also encouraged by the Great Western Schism, during which men quarreled not only concerning obedience to the papacy, to which there were three claimants since the Council of Pisa, but also concerning obedience to the generals of the order, whose number tallied with the number of the popes.

Guillaume Farinier was named cardinal in 1356, but continued to govern the order until the election of Jean Bouchier (de Buco) in 1357. John having died in 1358, Mark of Viterbo was chosen to succeed him (1359-66), it being deemed desirable to elect an Italian, the preceding four generals having been French, Mark was raised to the cardinalate in 1366, and was succeeded by Thomas of Farignano (1367-72), who became Patriarch of Grado in 1372, and cardinal in 1378. Leonardo Rossi of Giffone (1373-78) succeeded Thomas as general, and supported Clemens VII during the schism. This action gave umbrage to Urban VI, who deposed him and named Ludovico Donato his successor. Ludovico was also chosen in 1379 by the General Chapter of Gran in Hungary at which, however, only twelve provinces were represented, was named cardinal in 1381, but was executed in 1385 with some other cardinals for participating in a conspiracy against Urban VI. His third successor, Enrico Alfieri (1387-1405), could only bewail the privileges subversive of discipline, by means of which the claimants to the papacy sought to bind their supporters more closely to themselves. Alfieri's successor, Antonio de Pireto (1405-21), gave his allegiance to the Council of Pisa and Alexander V (1409-15), a man of no great importance. With the election of Martin V (1417-31) by the Council of Constance, unity was restored in the order, which was then in a state of the greatest confusion.

The Observance (*Regularis Observantia*) had meanwhile prepared the ground for a regeneration of the order. At first no uniform movements, but varying in different lands, it was given a definite character by St. Bernardine of Siena (q.v.) and St. John Capistran. In Italy as early as 1334 Giovanni de Valle had begun at San Bartolomeo de Brugliano, near Forligno, to live in exact accordance with the rule but without that exemption from the order, which was later forbidden by Clement VI in 1343. It is worthy of notice that Clement, in 1350, granted this exemption to the lay brother Gentile da Spoleto, a companion of Giovanni, but Gentile gathered together such a disorderly rabble, including some of the heretical Fraticelli, that the privilege was withdrawn (1354), he was expelled from the order (1355), and cast into prison. Amongst his faithful adherents was Paoluccio Vagnozzi of Trinci, who was allowed by the general to return to Brugliano in 1368. As a protection against the snakes so numerous in the district, wooden slippers (*calepodia*, *zoccoli*) were worn by

the brothers, and, as their use continued in the order the Observants were long known as the *Zoccolanti* or *lignipedes*. In 1373 Paoluccio's followers occupied ten small houses in Umbria, to which was soon added San Damiano at Assisi. They were supported by Gregory XI, and also, after some hesitation, by the superiors of the order. In 1388, Enrico Alfineri, the general appointed Paoluccio commissary general of his followers, whom he allowed to be sent into all the districts of Italy as an incentive to the rest of the order. Paoluccio died on 17 September, 1390, and was succeeded by John of Stroncone (d. 1418). In 1414, this reform possessed thirty-four houses, to which the Porziuncola was added in 1514.

In the fourteenth century there were three Spanish provinces: that of Portugal (also called Santiago), that of Castile, and that of Aragon. Although houses of the reformers in which the rule was rigidly observed existed in each of these provinces about 1400, there does not appear to have been any connection between the reforms of each province -- much less between these reforms and the Italian Observance -- and consequently the part played by Peter of Villacreces in Silos and Aguilera has been greatly exaggerated.

Independent also was the Reform or Observance in France, which had its inception in 1358 (or more accurately in 1388) in the cloister at Mirabeau in the province of Touraine, and thence spread through Burgundy, Touraine, and Franconia. In 1407 Benedict XIII exempted them from all jurisdiction of the provincials, and on 13 May, 1408, gave them a vicar-general in the person of Thomas de Curte. In 1414 about two hundred of their number addressed a petition to the Council of Constance, which thereupon granted to the friars of the *stricta observantia regularis* a special provincial vicar in every province, and a vicar-general over all, Nicholas Rodolphe being the first to fill the last-mentioned office. Angelo Salvetti, general of the order (1421-24), viewed these changes with marked disfavour, but Martin V's protection prevented him from taking any steps to defeat their aim. Far more opposed was Salvetti's successor, Antonio de Masso (1424-30). The ranks of the Observants increased rapidly in France and Spain in consequence of the exemption. The Italian branch, however, refused to avail themselves of any exemption from the usual superiors, the provincial and the general.

In Germany the Observance appeared about 1420 in the province of Cologne at the monastery of Gouda (1418), in the province of Saxony in the Mark of Brandenburg (1425); in the upper German province first at the Heidelberg monastery (1426). Cloisters of the Observants already existed in Bosnia, Russia, Hungary, and even in Tataria. In 1430 Martin V (1417-31) summoned the whole order, Observants and Conventuals, to the general Chapter of Assisi (1430), "in order that our desire for a general reform of the order may be fulfilled." William of Casale (1430-42) was elected general, but the intellectual leader of Assisi was St. John Capistran. The statutes promulgated by this chapter are called the "Constitutiones Martinianae" from the name of the pope. They cancelled the offices of general and provincial vicars of the Observants and introduced a scheme for the general reform of the order. All present at the chapter had bound themselves on oath to carry out its decisions, but six weeks later (27 July, 1430) the general was released from his oath and obtained from Martin V the Brief "Ad statum" (23 August, 1430), which allowed the

Conventuals to hold property like all other orders. This Brief constituted the Magna Charta of the Conventuals, and henceforth any reform of the order on the lines of the rule was out of the question.

The strife between the Observants and the Conventuals now broke out with such increased fury that even St. John Capistran laboured for a division of the order which was however still longer opposed by St. Bernardine of Siena. Additional bitterness was lent to the strife when in many instance princes and towns forcibly withdrew the ancient Franciscan monasteries from the Conventuals and turned them over to the Observants. In 1438 the general of the order named St. Bernardine of Siena, first Vicar-General of the Italian Observants, an office in which Bernardine was succeeded by St. John Capistran in 1441. At the General Chapter of Padua (1443), Albert Berdini of Sarteano, an Observant, would have been chosen general in accordance with the papa; wish had not his election been opposed by St. Bernardine. Antonio de Rusconibus (1443-50) was accordingly elected, and, until the separation in 1517, no Observant held the office of general. In 1443 Antonio appointed two vicars-general to direct the Observants -- for the cismontane family (i.e. for Italy, the East, Austria-Hungary, and Poland) St. John Capistran, and for the ultramontane (all other countries, including afterwards America) Jean Perioche of Maubert. By the so-called Separation bull of Eugene IV, "Ut sacra ordinis minorum" (11 January, 1446), outlined by St. John Capistran, the office of the vicar-general of the Observants was declared permanent, and made practically independent of the minister general of the order, but the Observants might not hold a general chapter separate from the rest of the order. After the canonization in 1450 of Bernardine of Siena (d. 1444), the first saint of the Observants, John Capistran with the assistance of the zealous cardinal Nicholas of Cusa (d. 1464), extended the Observance so greatly in Germany, that he could henceforth disregard the attacks of the lax and time-serving sections of the order. At the Chapter of Barcelona, in 1451, the so-called "Statuta Barchnionensia" were promulgated. Though somewhat modifies these continued in force for centuries in the ultramontane family.

The compromise essayed by St. James of the March in 1455 was inherently hopeless, although it granted to the vicars of the Observants *active* voting power at the general chapters. On this compromise was based the "Bulla concordiae" of Callistus III (2 February, 1456), which Pius II withdrew (11 October, 1458). The Chapter of Perugia (1464) elected as general Francesco della rovere (1464-69), who was elevated to the cardinalate in 1468, and later elected pope under the title of Sixtus IV (1471-84). Sixtus granted various privileges to the Franciscans in his Bull "Mare magnum" (1474) and his "Bulla aurea" (1479), but was rather more kindly disposed towards the Conventuals, to whom he had belonged. The general Francesco Nanni (1475-99), to whom Sixtus gave the sobriquet of Samson to signalize his victory in a disputation on the Immaculate Conception, and Egidio Delfini (1500-06) displayed a strong bias in favour of the reform of the Conventuals, Edigio using as his pleas the so-called "Constitutiones Alexandrinae" sanctioned by Alexander VI in 1501. His zeal was far surpassed in Spain by that of the powerful Minorite, Francisco Ximenes de los Cisneros, who expelled from the cloisters all Conventuals opposed to the reform. At Paris, Delfini won the large house of studies to the side of the reformers. The *Capitulum generalissimum* at Rome in 1506 was expected to bring about the union of the various branches, but the proposed

plan did not find acceptance, and the statutes, drawn up by the chapter and published in 1508 under the title "Statuta Iulii II", could not bridge the chasm separating the parties. After long deliberations had taken place under generals Rainaldo Graziani (1506-09), Philip of Bagnacavallo (1509-11), and Bernardino Prato da Chieri (1513-17), the last general of the united order, Leo X summoned on 11 July, 1516, a *capitulum generalissimum* to meet at Rome on the feast of Pentecost (31 May), 1517. This chapter first suppressed all the reformed congregations and annexed them to the Observants; declared the Observants an independent order, the true Order of St. Francis, and separated them completely from the Conventuals. The General of the Observants received the title of *Minister Generalis totius ordinis Fratrum Minorum*, with or without the addition *regularis Observantiae*, and was entrusted with the ancient seal of the order. His period of office was limited to six years, and he was to be chosen alternately from the *familia cismontana* and the *familia ultramontana* -- a regulation which has not been observed. For the other family a *Commissarius generalis* is always elected. In processions, etc., the Observants take precedence of the Conventuals.

B. Second period (1517-1909)

Christoforo Numai of Friuli was elected first General of the Reformed Order of Franciscans (*Ordo Fratrum Minorum*), but was raised a month later to the cardinalate. Francesco Lichetto (1518-20) was chosen as his successor by the Chapter of Lyons (1518), where the deliberations centered around the necessary rearrangement of the order in provinces and the promulgation of new general constitutions, which were based on the statutes of Barcelona (1451, cf. *supra*). Lichetto and his successors -- Paul of Soncino (1520-23), who died in 1523, and Francisco de Angelis Quiñones (1523-28), a Spaniard, diligently devoted themselves to establishing the Observance on a firm basis. Quiñones was named cardinal in 1528, and the new general, Paolo Pisotti (1529-33), unfortunately disregarding the ideal of his predecessors and failing entirely to grasp the significance of the reforms afoot at the time (for example that of the Capuchins), was deposed in 1533. In 1547 the Chapter of Assisi prescribed gray as the colour of the Franciscan habit, in accordance with the custom of the Observants and forbade the wearing of beards. At the General Chapter of Salamanca (1554), Clemente Dolera of Moneglia, the general in office promulgated new statutes for the cismontane family. On the preferment of Clemente to the cardinalate in 1557, Francesco Zamora, his successor (1559-65), defended at the Council of Trent the order's rule of poverty, which was then sanctioned by the council for the Observants and Capuchins. Under Luigi Pozzo (Puteus), the next general (1565-71), the Spanish Conventuals were united with the Observants by command of the pope, and a general reunion of the separated branches of the order seemed imminent. The two succeeding generals, Christophe de Cheffontaines, a Frenchman (1571-79), and Francisco Gonzaga (1579-87), laboured industriously for the rigorous observance and the rule of poverty, which was rather loosely interpreted, especially in France. Gonzaga reformed the great convent of studies at Paris and, in 1581, was appointed, in opposition to his wishes, Bishop of Cefalu (Sicily) and afterwards of Mantua, where he died in the odour of sanctity, in 1620. The process for his beatification is pending at Rome. Francis of Toulouse (1587-93) and Bonaventura Secusi of Caltagirone (Sicily, 1593-1600) were employed frequently on embassies by the popes, and revised

the constitutions of the order, in which however, the alterations were too frequent. Finally at the Chapter of Segovia in 1621, the minister general, Benignus of Genoa (1618-25), approved the "Statuta Segoviensia" for the ultramontane family, with suitable additions both for the French and for the German-Belgian nation. Thereafter the latter nation adhered most perseveringly to the principles of these statutes; that their consistency in this respect has proved a source of prosperity, vigour, and inner strength is universally known.

About this period the so-called Counter-Reformation was bursting into vigorous life in the North and the order entered on a new period of strenuous vitality. The Reformation had dealt a terrible blow to the Franciscans in these parts, annihilating in many instances entire provinces. Supported now by the emperor and the Catholic princes, they advance to regain their old position and to found new cloisters, from which they could minister to their flocks. To bring into subjection the four rather lax French provinces which were known as the *Provinciae confaederatae* and were thenceforward always too much inclined to shelter themselves behind the government, the general, Bernardine of Sena (Portugal, 1625-33), obtained from Urban VIII the Bull of 1 October, 1625. The French, indeed, justly complained that the general of the order was always chosen from Italy or from Spain. The privilege usurped by the Spanish kings, of exerting a certain influence in the election and indeed securing that the general should be alternately a Spaniard and an Italian (but one from the Crown lands of Spain), was in contradicition to all Fraciscan statutes and laws. The Spanish generals, furthermore resided usually at Madrid, instead of at Rome, and most of the higher offices were occupied by Spaniards -- an anomalous situation which aroused great resentment amongst the friars of other nations, especially France and in Italy, and continued until 1834. This introduction of national politics into the government of the oder proved as noxious to the interests of the Friars Minor as the established churches of the eighteenth century did to the cause of Christianity.

Generals Juan Merinero of Madrid (1639-45), Giovanni Mazzara of Naples (1645-48), and Pedro Mancro (1651-55) tried without success to give definite statutes to the cismontane family, while the "Constitutiones Sambucanae", drawn up by General Michele Buongiorno of Sambuca (1658-64) at the order of the general chapter, did not remain long in force. Ildefonso Salizanes (1664-70) and Francesco Maria Rhini (1670-74) were both raised to the episcopate. José Ximenes Samaniego (1676-82) zealously eradicated abuses which had crept into the order especially in Spain and France, and died as Bishop of Placencia in Spain (1692). Ildefonso Biezma (1702-16) and José García (1717-23) were appointed by papal Briefs. The next general was the famous Lorenzo Cozza (1723-27) who, as Custos of the Holy Land, had obviated a schism of the Maronites. He was created cardinal by Benedict XIII. At the Chapter of Milan (1729), Juan Soto was elected general (1729-36), and during his period of office had the statutes of the order collected, rearranged, and then published in 1734. Raffaello de Rossi (1744-50) gave the province (otherwise known as the custody) of the Holy Land its definitve constitution. From 1700 to 1723 no general chapter could be held in consequence of the continuous state of unrest caused by the wars and other dissensions. These disputes made their appearance even in the order itself, and were fanned to a flame by the rivalry

between the nations and between the different reform branches, the most heated contention being between the Observants and the Reformanti. The domestic discipline of the order thus became very slack in certain districts, although the personale of the friars Minor was at this time unusually high. Benedict XIII vainly endeavoured in 1727 to cement a union between the various branches (Observants, Reformanti, Recollects, and Discalced). The general chapter of 1750, at which Benedict XIV presided and warmly praised the order, elected Pedro Joannetio of Molina (1750-56) -- the only Discalced who has been general. Clemente Guignoni of Palemo followed (1756-62), and then Joannetio was elected general for the second time (1762-68), this occurrence being absolutely unique in the history of the order. Paschale Frosconi (1768-91) of Milan tried in vain on several occasions to hold a general chapter. During his long period of office, the Spaniards endeavoured to break away from the order (1774), and the evil effect of Gallicanism and Febronianism were being already universally felt, kings and princes suppressing many of the cloisters or forbidding intercourse with Rome. In 1766 Louis XV established in France the *Commission des Reguliers*, which, presided over by Cardinal de Brienne and conducted with the greatest perfidy, brought about in 1771 a union between the Conventuals and the French Observants. The former had but three provinces with forty-eight monasteries, while the latter had seven provinces and 287 monasteries. The French Observants, however, were always somewhat inclined towards laxity, particularly in regard to the rule of poverty, and had obtained in 1673 and 1745 a papal Brief, which allowed them to retain real estate and vested incomes. The French Revolution brought about the annihilation of the order in France.

In Bavaria (1769) and many other German principalities, spiritual and secular, the order was suppressed, but nowhere more thoroughly than in the Austrian and Belgian states of Joseph II and in the Kingdom of the two Sicilies (1788) then ruled by Ferdinand IV. On the death of Pasquale (1791) Pius VI appointed as general a Spaniard, Joachim Compañy (1792-1806). In 1804, the Spanish Franciscans effected, with the assistance of the King of Spain, their complete separation from the order, although the semblances of unity was still retained by the provision of Pius VII, that the general should be chosen alternately from the Spaniards and the other nation, and that, during his term of office, the other division of the order should be governed by an autonomous vicar-general. During 1793 and 1794 the order was extinct in France and Belgium; and from 1803 in most districts in Germany; from 1775 on, it was sadly reduced in Austria, and also in Italy, where it was suppressed in 1810. The devastation of the order and the confusion consequent on it were deplorable. The generals appointed by the pope, Ilario Cervelli (1806-14), Gaudenzio Patrignani (1814-17), Cirillo Almeda y Brea (1817-24), and Giovanni Tecca of Capistrano (1824-30), ruled over but a faction of the order, even though prospects were somewhat brighter about this period. In 1827, Tecca published the statutes which had been drawn up in 1768. Under the Spanish general, Luis Iglesias (1830-34), the formal separation of Spanish Franciscans from the main body of the order was completed (1832), but in 1833 most of their monasteries were destroyed during the Peasants' War and the revolution. The general Bartolomé Altemir (1834-38) was banished from Spain, and died at Bordeaux in 1843, Giuseppe Maria Maniscalco of Alessandria (1838-44) being

named his successor by Gregory XVI. The pope also appointed the two succeeding generals, Luigi di Loreta (1844-50) and two succeeding generals, Luigi di Loreta (1844-50) and Venanzio di Celano (1850-56). The former, in 1849, named Giuseppe Aréso Commissary of the Holy Land. In 1851, Aréso opened the first monastery at Saint-Palais.

About this period Benigno da Valbona introduced the Reformati into France, and in 1852 founded their first monastery at Avignon, while Venanzio as general laboured indefatigably for the resuscitation of the Observants in the same country, founding new missions and raising the standard of studies. In Russia and Poland, however, many monasteries were suppressed in 1831 and 1842, a general strangulation being afterwards effected by the ukase of 1864. In 1856, at the general chapter in the Ara Coceli at Rome, under the personal presidency of Pope Pius IX, Bernardino Trionfetti of Montefranco was elected general (1856-62). The monasteries of Italy were suppressed by the Piedmontese in 1866, during the generalship of Raffaello Lippi of Ponticulo (1862-69) and in 1873 their fate was shared by the houses of the previously immune Roman province. Bowed with grief and years, the general abdicated (1869), and, as a general chapter was impossible, Pius IX preferred one of the Reformanti Bernardino del Vago of Portogruaro (Portu Romatino) to the generalship (1869-89). This general did much to raise the status of the order, and founded, in 1880, an official organ for the whole order (the "Acta Ordinis Minorum"), which contains the official decrees, decision, and ppublications and also many works on canon law and ascetic theology for the discipline of the order. During his term of office the Prussian *Kulturkampf* expedded the majority of the German Franciscans (1875), most of whom settled in North America, and the the French monasteries were suppressed (1880), the scattered Franciscans reassembling in Italy. The Ara Coeli monastery, the ancient seat of the general's curia, having been sized by the Italian Government to make room for the national monument of Victor Emmanuel, the general was obliged to establish a new mother-house. The new Collegio di S. Antonio near the Lateran was made the seat of the minister general; it is also an international college for the training of missionaries and lectors (i.e. professors for the schools of the order). Bernardino also founded the Collegio di S. Bonaventura at Quaracchi, near Florence, which contains the printing press of the order, and is principally intended for the publication of the writings of the great Franciscan scholars, and other learned works. On the retirement of Bernardino in 1889, Luigi Canali of Parma was elected general (1889-97) and prepared the way for the union of the four reform branches of the order at the General Chapter of Assisi in 1895. The reunion is based on the constitutions which were drawn up under the presidency of Aloysius Lauer and approved on 15 May, 1897. Leo XIII completed the union by his Bull "Felicitate quâdam" of 4 October, which removed every distinction between the branches, even the difference of name, and consequently there exists today one single, undivided Order of Friars Minor (*Ordo Fratrum Minorum*, O.F.M.). On the resignation of Canali as general, Leo XIII, appointed Aloysius Lauer (4 Oct., 1897) of Katholisch-Willenroth (province of Kassel, Prussia), who introduced the principles of the union gradually but firmly, as it involved many changes, especially in Italy and Austria. On his death (21 August, 1901) Aloysius was succeeded as vicar-general by David Fleming, an Irish friar attached to the English province. At the general

chapter of 1903, Dionysius Schuler, of Schlatt, in Hobenzollern, who belonged, like Father Lauer, to the province of Fulda (Thuringia) and had laboured in the United States from 1875, was elected general. He also devoted himself to the complete establishment of the union, and prepared the way for the general reunion of the Spanish Franciscans with the order. At the General Chapter (or more correctly speaking the *Congregatio media*) of Assisi on 29 May, 1909, the order celebrated the seventh centenary of its glorious foundation.

At present (1909) the order of Friars Minor includes among its members:(1) two cardinals: José Sebastiao Neto, Patriarch of Lisbon; created in 1883 (resigned in 1907); Gregorio Aguirre y García, Archbishop of Burgos, created in 1907; (2) six archbishops, including Burgos, created in 1907; (2) six archbishops, including Monsignor Diomede Falconio, apostolic Delegate to the United States since 1907; (3) thirty-two bishops and one prelate *nullius* (of Santarem in Brazil); (4) three prefects Apostolic.

II. THE REFORM PARTIES

A. First Period (1226-1517)

All Franciscan reforms outside of the Observants were ordered to be suppressed by papal decree in 1506, and again in 1517, but not with complete success. The Clareni are dealt with under ANGELO CLARENO DA CINGULI; the Fraticelli and Spirituals under their respective headings. The so-called Caesarines, or followers of Caesar of Speyer (q.v.) (c. 1230-37), never existed as a separate congregation. The Amadeans were founded by Pedro Joao Mendez (also called Amadeus), a Portuguese nobleman, who laboured in Lombardy. When he died, in 1482, his congregation had twenty-eight houses but was afterwards suppressed by Pius V. The Caperolani, founded also in Lombardy by the renowned preacher Pietro Caperolo (q.v.) returned in 1480 to the ranks of the Observants. The Spiritual followers of Anthony of Casteljovanni and Matthias of Tivoli flourished during the period 1470-1490; some of their ideas resembled those of Kaspar Waler in the province of Strasburg, which were immediately repressed by the authorities. Among the reforms in Spain were that of Pedro de Villacreces (1420) and the sect called *della Capucciola* of Felipe Berbegal (1430), suppressed in 1434. More important was the reform of Juan de la Puebla (1480), whose pupil Juan de Guadalupe increased the severities of the reform. His adherents were known as *Guadalupenses*, *Discalced*, *Capuciati*, or *Fratres de S. Evangelio*, and to them belonged Juan Zumarraga, the first Bishop of Mexico (1530-48), and St. Peter of Alcántara (d. 1562 cf. below). The Neutrales were wavering Conventuals in Italy who accepted the Observance only in appearance. Founded in 1463, they were suppressed in 1467. This middle position between the Observants and Conventuals was also taken by the Martinianists, or Martinians, and the Reformati (Observants) *sub ministris* or *de Communiante*. These took as their basis the decrees of the Chapter of Assisi (1430), but wished to live under provincial ministers. They existed mostly in Germany and France, and in the latter country were called Coletani, for what reason it is not quite clear (cf. COLETTE, SAINT). To this party belonged Boniface of Ceva, a sturdy opponent of the separation of the Conventuals from the Observants.

B. Second Period (1517-1897)

Even within the pale of the Regular Observance, which constituted from 1517 the main body of the order, there existed plenty of room for various interpretations without prejudicing the rule itself, although the debatable area had been considerably restricted by the definition of its fundamental requirements and prescriptions. The Franciscan Order as such had never evaded the main principles of the rule, has never had them abrogated or been dispensed from them by the pope. The reforms since 1517, therefore, have neither been in any sense a return to the rule, since the Order of Friars Minor has never deviated from it, nor have they been a protest against a universal lax interpretation of the rule on the part of the order, as was that of the Observants against the Conventuals. The later reforms may be more truly described as repeated attempts to draw nearer to the exalted ideal of St. Francis. Frequently, it is true, these reforms dealt only with externals -- outward exercises of piety, austerities in the rule of life, etc., and these were in many cases gradually recast, mitigated, had even entirely disappeared, and by 1897 nothing was left but the name. The Capuchins are treated in a separate article; the other leading reforms within the Observance are the Discalced, the Reformati, and the Recollects. The Observants are designated by the simple addition of *regularis observantiae* while these reformed branches add to the general title *strictoris observantiae*, that is, "of the stricter Observance."

(1) The Discalced

Juan de la Puebla has been regarded as the founder of the Discalced friars Minor, since the province of the Holy Angels (de los Angeles), composed of his followers, has ever remained a province of the Observants. The Discalced owe their origin rather to Juan de Guadalupe (cf. above). He belonged indeed to the reform of Juan de la Puebla, but not for long, as he received permission from Alexander VI, in 1496, to found a hermitage with six brothers in the district of Granada, to wear the Franciscan habit in its original form, and to preach wherever he wished. These privileges were renewed in 1499, but the Spanish kings, influenced by the Observants of the province, obtained their withdrawal. They were again conferred, however, by a papal Brief in 1503, annulled in 1507, while in 1515 these friars were able to establish the custody of Estremadura. The union of 1517 again put an end to their separate existence, but in 1520 the province of St. Gabriel was formed from this custody, and as early as 1518 the houses of the Discalced friars in Portugal constituted the province de la Pietade. The dogged pertinacity of Juan Pasqual, who belonged now to the Observants and now to the Conventuals, according to the facilities afforded him to pursue the ideas of the old Egyptian hermits, withstood every attempt at repression. After much difficulty he obtained a papal Brief in 1541, authorizing him to collect companions, whereupon he founded the custody of Sts. Simon and Jude, or custody of the Paschalites (abolished in 1583), and a custody of St. Joseph. The Paschalites won a strong champion in St. Peter of Alcántara, the minister of the province of St. Gabriel, who in 1557 joined the Conventuals. As successor of Juan Pasqual and Commissary General of the Reformed Conventual Friars in Spain, Peter founded the poor and diminutive hermitage of Pedroso in Spain, and in 1559 raised the custody of St. Joseph to the dignity of a province. He forbade even sandals to be worn on the feet, prescribed complete abstinence from

meat, prohibited libraries, in all of which measures he far exceeded the intentions of St. Francis of Assisi. From him is derived the name Alcantarines, which is often given to the Discalced Friars Minor. Peter died in October, 562, at a house of the Observants, with whom all the Spanish reforms had entered into union in the preceding spring. The province of St. Joseph, old peculiarities. In 1572 the members were first called in papal documents *Discalceati* or *Excalceati*, and 1578 they were named *Fratres Capucini de Observantiâ*. Soon other provinces followed their example and in 1604 the Discalced friars petitioned for a vicar-general, a definitor general, although many were opposed to the appointment. On Gregory's death (8 July, 1623) his concessions to the Discalced friars were reversed by Urban VIII, who, however, in 1642 recognized their province as interdependent. They were not under the jurisdiction of the ultramontane commissary general, and received in 1703 their own procurator general, who was afterwards chosen (alternately) for them and the Recollects. They never had general statutes, and, when such were prepared in 1761, by Joannetio, a general from their own branch, the provinces refused to accept them. The Discalced gradually established houses in numerous provinces in Spain, America, the Philippines, the East Indies and the Kingdom of Naples, which was at this period under Spanish rule. The first houses established in Naples were handed over by Sixtus V to the Reformed Conventuals in 1589. In addition to the above, a house in Tuscany and another in London must be mentioned. This branch was suppressed in 1897.

(2) *The Reformati*

The proceeding of the general Pisotti against the houses of the Italian Recollects led some of the friars of the Stricter Observance under the leadership of Francis of Jesi and Bernardine of Asti to approach Clement VII, who by the Bull "In suprema" (1532) authorized them to go completely barefoot and granted them a separate custody under the provincial. Both these leaders joined the Capuchins in 1535. The Reformati ate cooked food only twice in the week, scourged themselves frequently, and recited daily, in addition to the universally prescribed choir-service, the Office of the Dead, the Office of the Blessed Virgin, the Seven Penitential Psalms, etc., which far exceeded the Rule of St. Francis, and could not be maintained for long. In 1579 Gregory XIII released them entirely from the jurisdiction of the provincials and almost completely from that of the general, while in Rome they were given the renowned monastery of S. Francesco a Ripa. In the same year (1579), however, the general, Gonzaga, obtained the suspension of the decree, and the new Constitutions promulgated by Bonaventure of Caltagirone, general in 1595, ensured their affiliation with the provinces of the order. Although Clement VIII approved these statutes in 1595, it did not deter him, in 1596, from reissuing Gregory XIII's Brief of 1579, and granting the Reformati their own procurator. At the suit of two lay brothers, in 1621, Gregory XV not only confirmed this concession, but gave the Reformati their own vicar-general, general chapter, and definitors general. Fortunately for the order, these concessions were revoked in 1624 by Urban VIII, who, however, by his Bull "Injuncti nobis" of 1639 raised all the custodies of the Reformati in Italy and Poland to the dignity of provinces. In 1642 the Reformati drew up their own statutes; these were naturally composed in Italian, since Italy was always the home of this branch of the Friars Minor. In 1620

Antonio Arrigoni a Galbatio was sent by the Reformati into Bavaria, and, despite the opposition of the local Observants, succeeded in 1625 in uniting into one province of the Reformati the monasteries of the Archduchy of Bavaria, which belonged to the Upper German (Strasburg) province. The new province thenceforth belonged to the cismontane family. Arrigoni also introduced in 1628 the reform into the province of St. Leopold in the Tyrol, into Austria in 1632, and into Bohemia in 1660, and succeeded in winning these countries entirely over to his branch, Carinthia following in 1688. After many disappointments, the two Polish custodies were raised to the status of provinces of the Reformati in 1639. In the course of time, the proximity of houses of the Reformati and the Observants gave rise to unedifying contentions and the rivalry, especially in Italy. Among the heroic figures of the Reformati, St. Pacificus of San Severino calls for special mention. St. Benedict of San Fidelfo cannot be reckoned among the Reformati, as he died in a retreat of the Recollects; nor should St. Leonard of Port Maurice, who belonged rather to the so-called *Riformella*, introduced into the Roman Province by Bl. Bonaventure of Barcelona in 1662. The principal house of the *Riformella* was that of S. Bonaventura on the Palatine. St. Leonard founded two similar monasteries in Tuscany, one of which was that of Incontro near Florence. These were to serve as places of religious recollection and spiritual refreshment for priests engaged in mission-work among the people. Like the Discalced, the Reformati ceased to have a separate existence in 1897.

(3) *The Recollects (Recollecti)*

(a) The foundation of "recollection-houses" in France, where they were badly needed even by the Observants, was perhaps due to Spanish influence. After the bloody religious wars, which exercised an enervating effect on the life of the cloister, one house of this description was founded at Cluys in 1570, but was soon discontinued. The general of the order, Gonzaga, undertook the establishment of such houses, but it was Franz Dozieck, a former Capuchin, who first set them on a firm basis. He was the first custos of these houses, among which that of Rabastein was the most conspicuous. Italian Reformanti had meanwhile been invited to nevers, but had to retire owing to the antipathy of the population. In 1595 Bonaventure of Caltagirone, as general of the order, published special statutes for these French houses, but with the assistance of the Government, which favoured the reforming party, the houses obtained in 1601 the appointment of a special commissary Apostolic. The members were called the *Récollets* -- since *Réformés* was the name given by the French to the Calvinists -- and also the *Cordeliers*, the ancient name for both the Observants and Conventuals. As regards the interpretation of the rule, there were rather important differences between the Cordelier-Observants and the Récollets, the interpretation of the latter being much stricter. From 1606 the Récollets had their own provinces, amongst them being that of St-Denis (Dionysinus) a very important province which undertook the missions in Canada and Mozambique. They were also the chaplains in the French army and won renown as preachers. The French kings, beginning with Henry IV, honoured and esteemed them, but kept them in too close dependence on the throne. Thus the notorious *Commission des Réguliers* (1771) allowed the Récollets to remain in France without amalgamating with the Conventuals. At this period the Récollets had 11 provinces with 2534 cloisters, but all were suppressed by the Revolution (1791).

(b) Recollection-houses are, strictly speaking, those monasteries to which friars desirous of devoting themselves to prayer and penance can withdraw to consecrate their lives to spiritual recollection. From the very inception of the order the so-called hermitages for which St. Francis made special provision served for this object. These always existed in the order and were naturally the first cloisters of which reformers sought to obtain possession. This policy was followed by the Spanish Discalced, for example in the province of S. Antonio in Portugal (1639). They had vainly endeavoured (1581) to make themselves masters of the recollection-houses of the province of Tarragona, where their purpose was defeated by Angelo do Paz Martial Bouchier had in 1502 prescribed the institution of these houses in every province of the Spanish Observants, they were found everywhere, and from them issued the Capuchins, the Reformati, and the Recollects. The specific nature of these convents was opposed to their inclusion in any province, since even the care of souls tended to defeat their main object of seclusion and sequestration from the world. The general chapter of 1676 ordained the foundation of three or four such convents in every province -- a precept which was repeated in 1758. The *ritiri* (*ritiro*, a house in which one lives in retirement), introduced into the Roman Province of the Observants towards the end of the seventeenth century, were also of this class, and even today such houses are to be found among Franciscan monasteries.

(c) The Recollects of the so-called German-Belgian nation have nothing in common with any of the above-mentioned reforms. The province of St. Joseph in Flanders was the only one constituted of several recollection-houses (1629). In 1517 the old Saxon province (Saxonia), embracing over 100 monasteries, was divided into the Saxon province of the Observants (Saxonia S. Curcis) and the Saxon province of the Conventuals (Saxonia S. Johannis Baptistae). The province of Cologne (Colonia) and the Upper German or Strasburg (Argentia) province were also similarly divided between the Observants and the Conventuals. The proposed erection of a Thuringian province (Thuringia) had to be relinquished in consequence of the outbreak of the Reformation. The Saxon province was subsequently reduced to the single monastery of Halberstadt, which contained in 1628 but one priest. The province of Cologne then took over the Saxon province, whereupon both took on a rapid and vigorous growth, and the foundation of the Thuringian Province (Fulda) became possible in 1633. In 1762 the last-named province was divided into the Upper and the Lower Thuringian provinces. In 1621 the Cologne province had adopted the statutes of the recollection-houses for all its monasteries, although it was not until 1646 that the friars adopted the name *Recollecti*. This example was followed by the other provinces of this nation and in 1682 this evolution in Germany, Belgium, Holland, England, and Ireland, all of which belonged to this nation, was completed without any essential changes in the Franciscan rule of life. The Recollects preserved in general very strict discipline. The charge is often unjustly brought against them that they have produced no saints, but this is true only of canonized saints. That there have been numerous saints amongst the friars of this branch of the Franciscan Order is certain, although they have never been distinguished by canonization -- a fact due partly to the sceptical and fervourless character of the population amongst which they lived and partly to the strict discipline of the order, which forbade and repressed all that singles out for attention the individual friar.

The German-Belgian nation had a special commissary general, and from 1703 a general procurator at Rome, who represented also the Discalced. They also frequently maintained a special agent at Rome. When Benedict XIII sanctioned their national statutes in 1729, he demanded the relinquishment of the name of Recollects and certain minor peculiarities in their habit, but in 1731 the Recollects obtained from Clement XII the withdrawal of these injunctions. In consequence of the effects of the French Revolution on Germany and the Imperial Delegates' Enactment (1803), the province of Cologne was completely suppressed and the Thuringian (Fulda) reduced to two monasteries. The Bavarian and Saxon provinces afterwards developed rapidly, and their cloisters, in spite of the *Kulturkampf*, which drove most of the Prussian Franciscans to America, where rich harvest awaited their labours, bore such fruit that the Saxon province (whose cloisters are, however mostly situated in Rheinland and Westphalia), although it has founded three new provinces in North America and Brazil, and the custody of Silesia was separated from it in 1902, is still numerically the strongest province of the order, with 615 members. In 1894 the custody of Fulda was elevated to the rank of a province. The Belgian province was re-erected in 1844, after the Dutch had been already some time in existence. The separate existence of the Recollects also ceased in 1897.

Great Britain and Ireland.--The Franciscans came to England for the first time in 1224 under Blessed Agnellus of Pisa, but numbers of Englishmen had already entered the order. By their strict and cheerful devotion to their rule, the first Franciscans became conspicuous figures in the religious life of the country, developed rapidly their order and enjoyed the highest prestige at court, among the nobility, and among the people. Without relaxing in any way the rule of poverty, they devoted themselves most zealously to study, especially at Oxford, where the renowned Robert Grosseteste displayed towards them a fatherly interest, and where they attained the highest reputation as teachers of philosophy and theology. Their establishments in London and Oxford date from 1224. As early as 1230 the Franciscan houses of Ireland were united into a separate province. In 1272, the English province had 7 custodies, the Irish 5. In 1282, the former (Provincia Angliae) had 58 convents, the later (Provincia Hiberniae) 57. In 1316 the 7 English custodies still contained 58 convents, while in Ireland the custodies were reduced to 4 and the convents to 30. In 1340, the number of custodies and houses in Ireland were 5 and 32 respectively; about 1385, 5 and 31. In 1340 and 1385, there were still 7 custodies in England; in 1340 the number of monasteries had fallen to 52, but rose to 60 by 1385. Under Elias of Cortona (1232-39) Scotland (Scotia) was separated from England and raised to the dignity of a province, but in 1239 it was again annexed to the English province. When again separated in 1329, Scotland received with its six cloisters only the title of *vicaria*. At the request of James I of Scotland, the first Observants from the province of Cologne came to the country about 1447, under the leadership of Cornelius von Ziriksee, and founded seven houses. About 1482 the Observants settled in England and founded their first convent at Greenwich. It was the Observants who opposed most courageously the Reformation in England, where they suffered the loss of all their provinces. The Irish province still continued officially but its houses were situated on the Continent at Louvain, Rome, Prague, etc. where fearless missionaries and eminent scholars were trained and the province was re-established in spite of the inhuman

oppression of the government of England. By the decision of the general chapter of 1625, the direction of the friars was carried on from Douai, where the English Franciscans had a convent, but in 1629 it was entrusted to the general of the order. The first chapter assembled at Brussels on 1 December, 1630. John Gennings was chosen first provincial, but the then bruited proposal to re-establish the Scottish convents could not be realized. The new province in England, which, like the Irish, belonged to the Recollects, gave many glorious and intrepid martyrs to the order and the Church. In 1838, the English province contained only 9 friars, and on its dissolution in 1840, the Belgian Recollects began the foundation of new houses in England and one at Killarney in Ireland. On 15 August, 1887, the English houses were declared an independent custody, and on 12 February, 1891, a province of the order. At the present day (1909) the English province comprises in England and Scotland 11 convents with 145 friars, their 11 parishes containing some 40,000 Catholics; the Irish Province comprises 15 convents with 139 brothers.

III. STATISTICS OF THE ORDER (1260-1909)

The Order of St. Francis spread with a rapidity unexpected as it was unprecedented. At the general chapter 1221, where for the last time all members without distinction could appear, 3000 friars were present. The order still continued its rapid developement, and Elias of Cortona (1232-39) divided it into 72 provinces. On the removal of Elias the number was fixed at 32; by 1274 it had risen to 34, and it remained stable during the fourteenth and fifteenth centuries. To this period belongs the institution of the *vicariae*, which, with the exception of that of Scotland, lay in the Balkans, Russia, and the Far East. It has been often stated that about 1300 the Franciscans numbered 200,000 but this is certainly an exaggeration. Although it is not possible to arrive at the exact figure, there can scarcely have been more than 60,000 to 90,000 friars at this period. In 1282 the cloisters were about 1583 in number. In 1316 the 34 provinces contained 197 custodies and 1408 convents; in 1340, 211 custodies and 1422 convents; in 1384, 254 custodies and 1639 convents. The Observants completely altered the conformation of the order. In 1455 they alone numbered over 20,000; in 1493, over 22,400 with more than 1200 convents. At the division of the order, in 1517, they formed the great majority of the friars, numbering 30,000 with some 1300 houses. In 1520 the Conventuals were reckoned at 20,000 to 25,000. The division brought about a complete alteration in the strength and the territories of the various provinces. In 1517 the Conventuals still retained the 34 provinces as before, but many of them were enfeebled and attenuated. The Observants, on the other hand, founded 26 new provinces in 1517, retaining in some cases the old names, in other cases dividing the old territory into several provinces.

The Reformation and the missionary activity of the Minorites in the Old, and especially in the New, World soon necessitated wide changes in the distribution, number, and extent, of the provinces. The confusion was soon increased by the inauguration of the three great reformed branches, the Discalced, the Reformati, and the Recollects, and, as these, while remaining under the one general, formed separate provinces, the number of provinces increased enormously. They were often situated in the same geographical or political districts, and were, except in the Northern lands, telescoped

into one another in a most bewildering manner -- a condition aggravated in the south (especially in Italy and Spain) by an insatiate desire to found as many provinces as possible. The French Revolution (1789-95), with its ensuing wars and other disturbances, made great changes in the conformation of the order by the suppression of a number of provinces, and further changes were due to the secularization and suppression of monasteries which went on during the nineteenth century. The union of 1897 still further reduced the number of provinces, by amalgamation all the convents of the same district into one province.

The whole order is now divided into twelve circumscriptions, each of which embraces several provinces, districts, or countries.

1. The first circumscription includes Rome, Umbria, the March of Ancona, and Bologna, and contains 4 provinces of the order, 112 convents, and 1443 friars.
2. The second embraces Tuscany and Northern Italy and contains 8 provinces, 138 convents, and 2038 religious.
3. The third comprises Southern Italy and Naples (except Calabria), with 4 provinces, 93 convents, and 1063 religious.
4. The fourth includes Sicily, Calabria, and Malta, and has 7 provinces, 85 convents, and 1045 religious.
5. The fifth embraces the Tyrol, Carinthia, Dalmatia, Bosnia, Albania, and the Holy Land, with 9 provinces, 282 convents and 1792 religious.
6. The sixth comprises Vienna, Hungary, Transylvania, Croatia, Galicia, and Bohemia, with 7 provinces, 160 convents, and 1458 friars.
7. The seventh, which in numerically the strongest, includes Germany, Holland, and Belgium, with 7 provinces, 129 convents and 2553 religious.
8. The eighth comprises France, Corsica, Great Britain, and Canada, with 7 provinces, 63 convents, and 975 religious.
9. The ninth comprises Portugal and Northern Spain with 5 provinces, 39 convents, and 1124 religious.
10. The tenth embraces Southern Spain and the Philippines, with 4 provinces, 48 houses, and 910 religious.
11. The eleventh includes Central and South America, with 12 provinces, 97 convents, and 1298 members.
12. The twelfth comprises Mexico and the United States, with 7 provinces (including the Polish commissariate at Pulaski, Wisconsin), 167 convents, and 1195 religious.

The total figures for the order are consequently (4 October, 1908), 81 provinces 1413 convents and 16,894 Franciscans. In 1905 the Franciscans numbered 16,842 and their convents 1373. For the second last decade of the nineteenth century the lowest figures are recorded, the figures announced at the general chapter of 1889 being: Observants 6228, Reformati 5733, Recollects 1621, Discalced 858 -- that is a total of 14,440 Franciscans. That only the Recollects had increased since 1862 may be seen from the figures for that year: Observants 10,200, Reformati, 9889, Recollects and Discalced together 1813 -- a total of 21,902 Minorites. The year 1768 gives the highest figures -- about 77,000 in 167 provinces. In 1762, the Observants had 87 provinces, 2330 convents, and 39,900 members; the Reformati 19,000 members with 37 provinces and 800 convents;

the Recollects 11,000 members, 490 convents; 22 provinces; the Disclaced 7000 members 430 convents, 20 provinces. Total, 76,900 Minorites, 4050 cloisters, 166 provinces. In 1700 the total was 63,400 Minorites, 3880 convents, and 154 provinces; about 1680, 60,000 Minorites, 3420 convents, and 151 provinces.

IV. THE VARIOUS NAMES OF THE FRIARS MINOR

The official name, *Fratres Minores* (*Ordo Fratrum Minorum* -- O.F.M.), or Friars Minor, was variously translated into the popular speech of the Middle Ages. In England the Friars Minor were commonly known as the Grey Friars from the colour of their habit. This name corresponds to the *Grabrodrene* of Denmark and Scandinavia. In Germany they were usually known as the *Baarfüßer* (*Baarfuozzen*, *Barvuzen*, *Barvoten*, *Barfüzzen*, etc.), that is, Barefooted (wearing only sandals). In France they were usually called the *Cordeliers* from their rope-girdle (*corde*, *cordelle*) but were also known as the *Frères Menous* (from *Fratres Minores*). After the fifteenth century the term was applied to both the Conventuals and the Observants, but more seldom to the Récollets (Recollects). Their popular name in Italy was the *Frati Minori* or simply the *Frati*. The Observants were long known in that country as the *Zoccolanti*, from their foot-wear.

V. THE HABIT

The habit has been gradually changed in colour and certain other details. Its colour, which was at first grey or a medium brown, is now a dark brown. The dress, which consists of a loose sleeved gown, is confined about the loins by a white cord, from which is hung, since the fifteenth century, the Seraphic rosary with its seven decades. A long or short under-habit of the same or a different colour and trousers are also worn. Shoes are forbidden by the rule, and may be worn only in case of necessity; for these sandals are substituted, and the feet are bare. Around the neck and over the shoulders hangs the cowl, quite separate from the habit, and under it is the shoulder-cape or mozetta, which is round in front and terminates in a point at the back. The Franciscans wear no head-dress, and have the great tonsure, so that only about three finger-breadths of hair remain, the rest of the scalp being shaved. In winter they wear about their necks between the cowl and the habit the round mantle which almost reaches the knees.

VI. THE CONSTITUTION OF THE ORDER

(See RULE OF ST. FRANCIS).

During the lifetime of St. Francis of Assisi, everything was directed and influenced by his transcendent personality. The duration of offices was not defined, and consequently the constitution was at first juridically speaking, absolute. From 1239, that is after the experiences of the order under Elias of Cortona, the order gradually developed a monarchical constitution. The chapter of definitors for the whole order (thirteenth century), the chapter of custodies in each province, the *discretus* sent by the subordinate convents to the provincial chapter, etc. are institutions which have long ceased to exist. To the past also belongs the custody in the sense of a union of several convents

whithin a province. Today a custody signifies a few cloisters constituting a province which has not yet been canonically erected.

The present constitution is as follows: The whole order is directed by the minister general, elected by the provincial ministers at the general chapter, whcih meets every twelve years. At first his term of office was indefinite, that is, it was for life; in 1517 it was fixed at six years; in 1571, at eight; in 1587, again at six; and finally the twelve-year period of office was settled on by Pius IX in 1862. The general resides at the Collegio S. Antonio, Via Merulana, Rome. The order is divided into provinces (that is, associations of the convents in one country or district), which prescribe and define the sphere of activity of the various friars within their sphere of jurisdiction. Several provinces together form a circumscription of which there are twelve in the order. Each circumscription sends one definator general, taken in turn from each province, to Rome as one of the counsellors to the minister general. These definitors are elected for six years at the general chapter and at the *congregatio intermedia* (also called frequently, by an abuse of the term, a general chapter), summoned by the general six years after his election. The general chapter and the *congregatio intermedia* may be convened by the general in any place. The provinces of the order are governed by the provincials (*ministri provinciales*), who are elected every three years at the Provincial chapter and constitute the general chapter. Their term of office, like that of the general, was first undefined; from 1517 to 1547 it was three years; from 1547 to 1571, six years; from 1571 to 1587, four years; since 1587, three years. While in office, the provincial holds every year (or every and a half) the intermediate chapter (*capitulum intermedium*), at which the heads of all the convents of the province are chosen for a year or a year and a half. The local superiors of houses (*conventus*) which contain at least six religious, are called guardians (earlier wardens); otherwise they receive the title *praeses* or superior. The provincial has to visit his own province and watch over the observance of the rule; the general has to visit the whole order, either personally or by means of visitors specially appointed by him (*visitatores generales*). The individual convents consist of the Fathers (*Patres*), i.e. the regular priests, the clerics studying for the priesthood (*fratres clerici*) and the lay brothers engaged in the regular service of the house (*fratres laici*). Newly received candidates must first make a year's novitiate in a convent specially intended for this end. Convents, which serve certain definite purposes are called colleges (*collegia*). These must not, however, be confounded with the Seraphic colleges, which are to be found in modern times in most of the provinces, and are devoted to the instruction of youthful candidates in the humanities, as a preparation for the novitiate, where the students first receive the habit of the order. No friar, convent, or even the order itself can possess any real property. (Cf. RULE OF ST. FRANCIS.)

The duties of the individual Fathers vary; according as they hold offices in the order, or are engaged as lectors (professors) of the different sciences, as preachers, in giving missions or in other occupations within or, with the permission of the superiors, without the order. The cardinal-protector, introduced in the order by St. Francis himself, exercises the office and rights of a protector at the Roman Curia, but has no power over the order itself.

VII. GENERAL SPHERE OF THE ORDER'S ACTIVITY

As a religious order in the service of the Catholic Church, and under her care and protection, the Franciscans were, according to the express wish of their founder, not only to devote themselves to their own personal sanctification, but also to make their apostolate fruitful of salvation to the people in the world. That the former of these objects has been fulfilled is clearly indicated by the number of Friars Minor who have been canonized and beatified by the Church. To these must be added the army of friars who have in the stillness of retirement led a life of virtue, known it its fullness to God alone, a mere fraction of whose names fill such volumes as the "Martyrologium Franciscanum" of Father Arthur do Monstier (Paris, 1638 and 1653) and the Menologium trium ordinum S.P. Francisci of Fortunatus Hüber (Munich, 1688), containing the names of the thousands of martyrs who have laid down their lives for the Faith in Europe and elsewhere under the heathen and heretic.

Like all human institutions, the order at times fell below its first perfection. Such a multitude of men, with their human infirmities and ever-changing duties, could never perfectly translate into action the exalted ideals of St. Francis, as the more supernatural and sublime the ideas, the ruder is their collision with reality and the more allowance must be made for the feebleness of man. That an aspiration after the fundamental glorious ideal of their founder has ever distinguished the order is patent from the reforms ever arising in its midst, and especially from the history of the Observance, inaugurated and established in the face of such seemingly overwhelming odds. The order was established to minister to all classes, and the Franciscans have in every age discharged the spiritual offices of confessor and preacher in the palaces of sovereigns and in the huts of the poor. Under popes, emperors, and kings they have served as ambassadors and mediators. One hundred have already been nominated to the Sacred College of Cardinals, and the number of Franciscans who have been appointed patriarchs, archbishops, and bishops, is at least 3,000. The popes elected from the Observants are: Nicholas IV (1288-92); Alexander V (1409-10). Sixtus IV (1471-84) was a Conventual of the period before the division of the order. Sixtus V (1585-90) and Clement XIV (1769-74) were chosen from the Conventuals after the division. The popes have often employed the Minorites as legates and nuncios, e.g. to pave the way for and carry through the reunion of the Greeks, Tatars, Armenians, Maronites, and other schismatics of the East. Many Minorites have also been appointed grand penitentiaries, that is, directors of the papal penitentiaries, and have served and still serve in Rome as Apostolic penitentiaries and as confessors to the pope himself or in the principal basilicas of the city. Thus the Observants are in charge of the Lateran Basilica in Rome. As inquisitors against heresy, the Franciscans were in the immediate service of the Apostolic See.

Observing a much stricter rule of poverty and renunciation of the world than all other orders, the Franciscans exercised during the Middle Ages a most salutary social influence over the enslaved and unprivileged classes of the population. The constant model of a practical poverty was at once consoling and elevating. The vast contributions of their monasteries towards the maintenance of the very poor cannot be indicated in rows of figures, nor can their similar contributions of today.

They also exerted a wide social influence through their third order (see THIRD ORDER). They tended the lepers, especially in Germany; the constantly recurring pests and epidemics found them ever at their post, and thousands of their number sacrificed their lives in the service of the plague-stricken populace. They erected infirmaries and founding hospitals. The Observants performed most meritorious social work especially in Italy by the institution of *montes pietatis* (*monti de Pieta*), in the fifteenth century, conspicuous in this work being Bl. Bernardine of Feltre (q.v.) with the renowned preacher. In England they fought with Simon de Montfort for the liberty of the people and the ideal of universal brotherhood, which St. Francis had inculcated in sermon and verse, and to their influence may be partly traced the birth of the idea of popular government in Italy and elsewhere in Europe.

VIII. THE PREACHING ACTIVITY OF THE ORDER

St. Francis exercised great influence through his preaching, and his example has been zealously followed by his order throughout the centuries with conspicuous success, evident not only in popular applause but in the profound effects produced on the lives of the people. At first all the friars were allowed to deliver simple exhortations and, with the permission of St. Francis, dogmatic and penitential sermons. This privilege was restricted in 1221, and still further in 1223, after which year only specially trained and tested friars were allowed to preach. The Franciscans have always been eminently popular preachers, e.g. Berthold of Ratisbon (q.v.), a German who died in 1272; St. Anthony of Padua (d.1231); Gilbert of Tournai (d. about 1280); Eudes Rigauld, Archbishop of Rouen (d. 1275); Leo Valvassori of Perego, afterwards Bishop of Milan (1263); Bonaventure of Jesi (d. about 1270); Conrad of Saxony (or of Brunswick) (d. 1279); Louis, the so-called Greculus (c.1300); Haymo of Faversham (d. 1244); Ralph of Rosa (c.1250). The acme of Franciscan preaching was reached by the Observants in the fifteenth century, especially in Italy and Germany. Of the many illustrious preachers, it will be sufficient to mention St. Bernadine of Siena (d. 1444); St. John Capistran (d. 1456); St. James of the March (d. 1476); Bl. Albert Berdini of Sarteano (d. 1450); Anthony of Rimini (d.1450); Michael of Carcano (Milan) (d.1485); Bl. Pacificus of Ceredano (d. 1482); Bl. Bernardine of Feltre (d.1494); Bernardine of Busti (d.1500); Bl. Angelo Carletti di Chivasso (d. 1495); Andrew of Faenza (d. 1507). In Germany we find: John of Minden (d.1413); Henry of Werl (d.1463); John of Werden (d.1437); author of the renowned collection of sermons "Dormi secure"; John Brugman (d.1473); Dietrich Coelde of Münster (d.1515); Johann Kannermann (d. about 1470); a preacher on the Passion; Johann Kannegieser, "the trumpet of Truth" (d. about 1500); Johann Gritasch (d. about 1410); Johann Mader; Johann Pauli (d. about 1530); whose work *Schimpf und Ernst* was a long favourite among the German people; Heinrich Kastner; Stephan Fridolin (d.1498). In Hungary: Pelbart of Temesvar (d. about 1490). In Poland: Bl. Simon of Lipnica (d. 1482); Bl. John of Dukla (d. 1484); Bl. Ladislaus of Gienlnow (d. 1505). In France: Oliver Maillard (d. 1502); Michel Minot (d. about 1522); Thomas surnamed Illyricus (d. 1529); Jean Tisserand (d. 1494); Etienne Brulefer (d. about 1507). The following illustrious Spanish theologians and preachers of the sixteenth century were Friars Minor: Alphonsus de Castro (d. 1558); Didacus

de Estella (d. 1575); Luis de Carvajal (d. about 1500); John of Carthage (d. 1617); St. Peter of Alcántara (d. 1562). Renowned Italian Franciscans were: Saluthio (d. about 1630); St. Leonard of Port Maurice (d. 1751); Bl. Leopold of Gaiches (d. 1815); Luigi Parmentieri of Casovia (d. 1855); Luigi Arrigoni (d. 1875), Archbishop of Lucca, etc. Other well-known French Franciscans were Michel Vivien (seventeenth century), Zacharie Laselve etc, and of the Germans mention may be made of Heinrich Sedulius (d. 1621), Fortunatus huever (d. 1706) and Franz Ampferle (d. 1646). Even today the Friars Minor have amongst their number many illustrious preachers, especially in Italy.

IX. INFLUENCE OF THE ORDER ON THE LITURGY AND RELIGIOUS DEVOTIONS

St. Francis prescribed for his order the abridged Breviary then reserved for the Roman Curia. As this and the Missal were revised by the general, Haymo of Faversham, at the command of Gregory IX, and these liturgical books have by degrees, since the time of Nicholas III (1277-80), been universally prescribed or adopted, the order in this alone has exercised a great influence. The Breviary of General Quiñonez (1523-28) enjoyed a much shorter vogue. To the Franciscan Order the Church is also indebted for the feast of St. Joseph (19 March) and that of the Blessed Trinity. The activity of the Franciscans in promoting devotion to the Immaculate Conception, since Scotus (d. 1308) defended this doctrine, is well known. St. Francis himself laboured earnestly to promote the adoration of Our Lord in the Blessed Eucharist, and Cherubino of Spoleto founded a sodality to accompany the Blessed Sacrament to the houses of the sick. In 1897 Leo XIII declared Paschal Baylon (d. 1592) patron of eucharistic leagues. The Christmas crib was introduced and popularized by the order to which -- especially to St. Leonard of Port Maurice (d. 1751) -- is also due the spreading of the devotion known as "the Stations of the Cross." The ringing of the Angelus morning, noon, and evening, was also inaugurated by the Franciscans, especially by St. Bonaventure and Bl. Benedict of Alrezzo (d. about 1520).

X. FRANCISCAN MISSIONS

St. Francis devoted himself to missionary labours from 1219 to 1221, and devoted in his rule a special chapter (xii) to missions. In every part of the world, the Franciscans have laboured with the greatest devotion, self-sacrifice, enthusiasm and success, even though, as the result of persecutions and wars, the result of their toil has not always been permanent. The four friars sent to Morocco in 1219 under Berard of Carbio (q.v.) were martyred in 1220. Electus soon shared their fate, and in 1227 Daniel with six companions was put to death at Ceuta. The bishops of Morocco were mostly Franciscans or Dominicans. In 1420 the Observants founded a convent at Ceuta, and here St. John of Prado died at the stake in 1632. This mission was entrusted to the province of S. Diego in 1641, and to the province of Santiago (Galicia, Spain) om 1860, after it had been constituted a prefecture Apostolic in 1859. In Oran, Libya, Tunis, Algiers, as well as throughout Egypt, Franciscans have laboured since the thirteenth century, and signaled their exertions by a glorious array of martyrs in 1288, 1345, 1358, 1370, 1373, etc. this mission was under the jurisdiction of

that in the Holy Land. In 1686 Upper Egypt was separated, and became in 1697 an independent prefecture Apostolic. Lower Egypt continued its connection with the Holy Land until 1839, when both (with Aden, which was again separated in 1889) were formed into a vicariate Apostolic, in which state they still remain. In Lower Egypt there are now sixteen monasteries, controlling parishes and schools. In Upper Egypt, from which the Copts were separated in 1892, are eight monasteries with parishes connected.

In 1630 the Congregation of Propaganda sent Fathers Mark of Scalvo and Edward of Bergamo to Tripoli, and in 1643 appointed Paschal Canto, a Frenchman, Prefect Apostolic of Barbary -- an office which still exists. The activity of this mission, like the others in these countries, is not so much directed to the conversion of Mohammedans as to the support and help of the Catholic settlers. Abyssinia (Ethiopia, Habesch) was first visited by John of Montecorvino (c. 1280). Later, Bl. Thomas of Florence was sent thither by Albert of Sarteano, and Sixtus IV, after the other missions had failed, sent Girolamo Tornielli. Many missionaries were put to death, and in 1687 a special prefecture was instituted for the conversion of the Copts. This was reinstated in 1815, and in 1895 a special hierarchy was erected for the same object. In 1700 Father Krump undertook the foundation of a new mission in Ethiopia, when in 1718 three missionaries were stoned to death.

The two Genoese ships which circumnavigated Africa in 1291 had two Minorites on board. Others accompanied Vasco da Gama. In 1446 the Franciscans visited Cape Verde where Roger, a Frenchman, zealously preached the Gospel. In 1459 they reached Guinea, of which Alphonsus of Bolano was named Prefect Apostolic in 1472. They thence proceeded to the Congo, where they baptized a king. In 1500 they went to Mozambique under Alvarez of Coimbra. The French Recollects laboured here during the seventeenth century, but since 1898 the Portuguese Franciscans have had charge of the mission. At the beginning of the sixteenth century Friars Minor settled in Melinda and on the Island of Socotra near Aden. In 1245 John of Plano Carpinis (Piano di Carpine) was sent by Innocent IV to the Great Khan in Tataria and penetrated thence into Mongolia. By order of Louis IX William of Rubruck (Rubruquis) proceeded thence through Armenia and Central Asia to Karakoram. The accounts of the travels of the last-mentioned historical and geographical renown. In 1279 Nicholas III sent five Franciscans to China, among them John of Montecorvino, who preached on the outward journey in Armenia, Persia, and Ethiopia and on his return journey in the same countries and in India. Having converted thousands and translated the New Testament and the Psalms into Chinese, he completed in 1299 a beautiful church in Peking. In 1307 Clement V appointed him Archbishop of Cambaluc and primate of the Far East and gave him six suffragan bishops, only three of whom reached Peking (1308). (See CHINA, Vol. III, 669-70.) From 1320 to 1325 Odoric of Pordenone laboured in Persia, India, Sumatra, Java, Borneo, Canton, Tibet, and China. In 1333 John XXII dispatched twenty-seven Franciscans to China, Giovanni Marignola of Florence following them in 1342. In 1370 William of Prato was sent as archbishop to Peking with twenty fellow-Minorites. The appearance of the Ming dynasty in 1368 brought about the ruin of all the missions. On 21 June, 1579, Franciscans from the Philippines penetrated to China once more, but the real founder of the new mission in China was Antonio de S. Maria (d. 1669), who

was sent to China in 1633, and later laboured in Cochin-China and Korea. China was also visited in 1661 by Bonaventura Ibañez (d. 1691) with eight friars. Henceforward Franciscan missions to China were constant. In 1684 came the Italian fathers under the renowned Bernardino della Chiesa (d.1739), including Basilio Rollo da Gemona (d. 1704) and Carlo Orazio da Castorano. At the beginning of the eighteenth century the Italian Franciscans began missions in the interior of China -- first in Shen-si, then in Shan-si, Shan-tung, etc.; numbers were martyred, particularly towards the close of the century. Despite the edict of persecution, Ludovico Besi began in 1839 a new mission to Shan-tung. The Franciscans continued to work persistently in most of the districts in China, where, in spite of persecution, they now hold nine of the thirty-eight vicariates. Every land, almost every province, of Europe and many divisions of America are represented in China by one or more missionaries. Of the 222 Franciscans at present (beginning of 1909) labouring there, 77 are Italians, 27 Dutch, 25 Germans, 25 Belgians, 16 French.

The first missionaries reached the Philippines in 1577 and founded the province of St. Gregory. Their leaders were Pedro de Alfaro (1576-79), Pablo a Jesu (1580-83), and St. Peter Baptist (1586-91), the first Franciscan martyr in Japan. From the Philippines they extended their field of labour to China, Siam, Formosa, Japan, Borneo. In the Philippines their activity was tireless; they founded convents, town, and hospitals; instructed the natives in manual labour -- the planting of coffee and cocoa, the breeding of silk-worms, weaving; and planned streets, bridges, canals, aqueducts, etc. Among the best known Franciscan architects may be included Lorenzo S. Maria (d. 1585), Macimo Rico (d. 1780), and a Joseph Balaguer (d. 1850). Here as elsewhere they studied the languages and dialects of the natives, and even to the present day continue to compile much sought after and highly prized grammars, dictionaries, etc. The occupation of the Philippines by the United States brought many alterations, but the missions are still under the province of S. Gregorio in Spain.

On 26 May, 1592, St. Peter Baptist set out from Manila for Japan with some associates, erected in 1594 a church and convent in Meaco, but on 5 February, 1597, suffered martyrdom on the cross with twenty five companions, of whom three were Jesuits. The missions of the Franciscans were thus interrupted for a time, but were repeatedly renewed from the Philippines, and as often the list of martyrs added to (e.g. in 1616, 1622, 1628, 1634, etc.). In 1907 some Franciscans again settled at Sappora on the Island of Yezo, thus forming a connecting link with the traditions of the past.

In 1680 Australia was visited by Italian Franciscans, who also preached in New Zealand, but in 1878 the missions were transferred to the Irish Franciscans. From 1859 to 1864, Patrick Bonaventure Geoghegan was Bishop of Adelaide, and was succeeded by another Franciscan, Luke Bonaventure Sheil (1864-72).

In Northern Europe, which in the thirteenth century was not yet completely converted to Christianity, the Franciscans established missions in Lithuania, where thirty-six were butchered in 1325. The first Bishop of Lithuania was Andreas Vazilo. During the fifteenth century John, surnamed "the Small", and Blessed Ladislaus of Gielniow laboured most successfully in this district. In Prussia (now the provinces of West and East Prussia), Livonia, and Courland (where the Minorite Albert

was Bishop of Marienwerder (1260-90) and founded the town of Reisenburg), as well as in Lapland, the inhabitants of which were still heathens, the Reformation put an end to the labours of the Friars Minor. Their numerous houses in Denmark, Sweden, and Norway, which formed the province of Denmark (Dania, Dacia), and the provinces of England, Scotland, and to some extent those of Holland and Germany, were also overthrown. After the year 1530, the Franciscans could work in these lands only as missionaries, in which capacity they laboured there from the fifteenth to the eighteenth century and still continue to a certain extent.

A few words may here be devoted to those Friars minor who stood forth as fearless defenders of the Faith in the Northern countries during the Reformation period. The Franciscans and Dominicans supplied the greatest number and the most illustrious champions of the Church, and comparatively few yielded to temptation or persecution and deserted their order and their Faith. As in the case of the scholars, artists, missionaries, and holy men of the order, only a few names can be mentioned here. Among the hundreds of names from Great Britain may be cited: John Forest of London, burned at the stake in 1538, Godfrey Jones (d. 1598), Thomas Bullaker (d. 1642), Henry Heath (d. 1643), Arthur Bell (d. 1643), Walter Colman (d. 1645) whose heroism culminated in every case in death. Similarly in Ireland we find Patrick O'Hely (d. 1578), Cornelius O'Devany (d. 1612), Boetius Egan (d. 1650), etc. Among the most distinguished Danish defenders of the Faith is Nikolaus Herborn (Ferber), mockingly called "Stagefyr" (d. 1535); in France, Christophe de Cheffontaines (d. 1595) and François Feuradent; in Germany Thomas Murner (d. 1537), Augustin von Alfeld (d. 1532), Johannes Ferus (Wild) (d. 1554), Konrad Kling, (d. 1556), Ludolf Manann (d. 1574), Michael Hillebrand (d. about 1540), Kaspar Schatzgeyer (d. 1527), Johann Nas (d. 1590), etc. Between 1520 and 1650 more than 500 Minorites laid down their lives for the Church.

On the Black and Caspian Seas the Franciscans instituted missions about 1270. The following Franciscans laboured in Greater Armenia: James of Russano in 1233; Andrew of Perugia in 1247; Thomas of Tolentino in 1290. King Haito (Ayto) II of Lesser Armenia, and Jean de Brienne, Emperor of Constantinople, both entered the Franciscan Order. Franciscans were in Persia about 1280, and again after 1460. About this time Louis of Bologna went through Asia and Russia to rouse popular sentiment against the Turks. The Franciscans were in Further India by 1500, and toiled among the natives, the St. Thomas Christians, and the Portuguese, who made over to them the mosque of Goa seized in 1510. The order had colleges and schools in India long before the arrival of the Jesuits, who first came under the Franciscan Archbishop of Goa, Joao Albuquerque (1537-53).

Since 1219 the Franciscans have maintained a mission in the Holy Land, where, after untold labours and turmoil and at the expense of hundreds of lives, they have, especially since the fourteenth century, recovered the holy places dear to Christians. Here they built houses for the reception of pilgrims, to whom they gave protection and shelter. Friars from every country compose the so-called custody of the Holy Land, whose work in the past, interrupted by unceasing persecutions and massacres, constitutes a bloody but glorious page in the history of the order. In the territory of the Patriarchate of Jerusalem, reinstated in 1847, the Franciscans have 24 convents, and 15 parishes;

in Syria (the Prefecture Apostolic of Aleppo), to which also belong Phoenicia and Armenia, they have 20 convents and 15 parishes, while in Lower Egypt they occupy 16 convents and 16 parishes. As all these (with numerous schools) are included in the custody of the Holy Land, the total for the mission is: 58 convents, 46 parishes, and 942 religious. the Catholics of Latin Rite in these districts number 74, 779; of Oriental Rites 893.

Under the greatest difficulties and frequently with small fruit, in consequence of the recurrent devastating wars and insurrections, the Franciscan missionaries have laboured in south-eastern Europe. Albania, Montenegro, bosnia, and Bulgaria received many Minorites in the thirteenth century, about which period many of the order occupied the archiepiscopal See of Antivari, and in 1340, Peregrinus of Saxony was nominated first Bishop of Bosnia. In these districts the Fraciscans worked earnestly to reconcile the schismatics with Rome. Nicholas IV, himself a Franciscan, sent missionaries of the order to Servia in 1288, and another mission followed (1354) under Friar Bartholomew, Bishop of Trau (Tragori). In 1389, Bajazet I destroyed almost all these missions, while those which were re-established in 1402 fell into the hands of the Turks, who definitely took possession of Servia in 1502. In 1464 the courageous Franciscan Angelus Zojedzodovic, obtained from Mohammed II a charter of toleration for Catholics, and progress was also made by the Franciscan missions in Bulgaria, Wallachia, Moldavia, and Podolia. In Black Russia Nikolaus Melsat of Crosna with twenty-five friars began a mission about 1370, Moldavia being visited about the same time by Anthony of Spalato (and lataer by Fabian of Bachia and James of the March), but their work was interrupted in 1460 by the Turks, who in 1476 cast 40,000 Christians from these districts into prison. Boniface IX transferred the episcopal see to Bakau, Benedict XIV to Sniatyn. At the beginning of the seventeenth century Bishop Bernardino Quirino was murdered by the Turks, and, on the death of the last bishop (Bonaventura Berardi) in 1818, the mission in Moldavia and Rumania was entrusted to the Conventuals, who still retain it.

The Franciscans were settled in Constantinople as early as the thirteenth century. In 1642 this and the subordinate missions were united into a prefecture Apostolic, from which the Prefecture of Rhodes was separated in 1897. The former now occupies seven convents, while the latter has seven churches and houses. In 1599, the convents of the Albanian mission were erected into a province, which, on 9 October, 1832, was divided into five prefectures Apostolic (Epirus, Macedonia, Servia, Pulati, and Kastrati), which are almost entirely worked by Franciscans, and were on 31 January, 1898, placed by the general, Aloysius Lauer, under a commissary general, with the authority of a provincial. In Bosnia and Herzegovina, which was separated from the Bosnian province in 1847 and elevated to the rank of a province in 1892, the Franciscans were the first missionaries and pastors, and these countries are still almost entirely under the spiritual guidance of the order, practically all the bishops having been Franciscans. When it was proposed in 1886 to erect a see at Antivari in Montenegro, Simon Milinovic of the Franciscan Order was designated Archbishop of Antivari and Primate of Servia. In Montenegro the Friars Minor administer ten of the eleven parishes.

According to the statistics of 4 October, 1907, the present condition of the Franciscan missions, which are distributed over the five continents, is as follows: Total number of Friars Minor, 4689, including 2535 priests, 620 clerics, 1396 lay brothers, and 138 novices. These are assisted in their work by 12,572 Franciscan sisters, chiefly members of the Third Order of St. Francis.

XI. CULTIVATION OF THE SCIENCES

The order has always devoted itself diligently to the cultivation of sciences, and, although St. Francis is to be numbered rather amongst the divinely enlightened than among the academically trained, he was neither a declared enemy nor a despiser of learning. To qualify themselves for the tasks assigned in ever-increasing numbers to their rapidly spreading order -- which was revered by rich and poor, was employed by popes and kings on missions of every description, and was to labour for the social betterment of every section of the community -- the Franciscans were early compelled to take advantage of every possible source of scientific culture, and, within thirty or forty years after their founder's death, they shared with the Dominicans the most prominent place in the revival of learning. This place has been retained for centuries with distinction and brilliancy, especially in the domain of theology and philosophy. A list of Franciscan scholars and their works would fill volumes, while many of their writings have exercised an abiding influence in the realms of science, on the religious life of the people, and on the whole human race. Mention may be made of only a few of the eminent dogmatic and moral theologians, philosophers, writers on ethics, historians, linguists, philologists, artists, poets, musicians, geographers, etc., whom the order has produced. Formerly Franciscans lectured in many universities, e.g. Paris, Oxford, Bologna, Cambridge, Cologne, Toulouse, Alcalá, Salamanca, Erfurt, Vienna, Heidelberg, Fulda. We may here mention; Alexander of Hales (d. 1245); John of Rupella (La Rochelle) (d. 1245); Adam of Marsh (Marisco) (d. 1258); John Peckman, Archbishop of Canterbury (d. 1292); Cardinal Matthew of Acquasparta (d. 1302); Johannes Guallensia (John of Wales) (d. about 1300); Richard of Middleton (de Mediavilla) (d. about 1305); John Duns Scotus (d. 1308), the most subtle of all Scholastics; William of Occam (d. 1349); William Vorrillon (Vorilongus) (d. 1464); Nicolas d'Orbellis (d. 1465); Monaldus (d. about 1290); John of Erfurt (d. about 1310); Nicholas of Lyra (d. about 1340); the most influential exegete of the Middle Ages; David of Augsburg, mystic (d. 1272); Artesanus of Asti (c. 1317), author of the famous "Summa Casuum", called the "Artesana"; Nicholas of Osimo (d. about 1450); Pacificus of Ceredano (d. 1482), author of the "Summa Pacifica"; Baptista Trovamala de Salis (c. 1485), author of the "Baptistiniana", also called the "Rosella"; Angelo Carletti di Chivasso (d. 1495), author of the "Summa Angelica"; Dietrich (Theodore) Coelde (d. 1515), author of the "Christenspiegel"; Francesco Lichetti (d. 1520); François Feuardent (d. 1612), controversialist and exegete; Luke Wadding (d. 1658); Florence Conry (d. 1629); Anthony Hickey (Hyquaeus) (d. 1641); Pierre Marchant (d. 1661); William Herinex (d. 1678); Friedrich Stummel (d. 1682); Patritius Sporer (d. 1683); Benjamin Eubel (d. 1756); Anacletus Reiffenstuel (d. 1703); DeGubernatis (d. about 1689); Alva y Astorga (d. 1667); Jean de la Haye (d. 1661); Lorenzo Cozza (d. 1729); Amadus Hermann (d. 1700); Claude Frassen (d. 1711); François Assermet (d. 1730);

Jerome of Montefortino (d. about 1740); Luca Ferraris (d. about 1750); Giovanni Antonio Bianchi (d. 1758); Sigmund Neudecker (d. 1736); Benedetto Bonelli (d. 1773); Kilian Kazenberger (d. about 1729); Vigilus Greiderer (d. 1780); Polychronius Gassmann (d. about 1830); Hereculanus Oberrauch (d. 1808); Ireneo Affò (d. 1797); Sancatntonio Cimarosto (d. 1847); Adalbert Waibel (d. 1852); Chiaro Vascotti (d. 1860); Gabriele Tonini (d. about 1870); Antonio Maria of Vicenza (d. 1884); Melchior Stanislaus of Cerreto (d. 1871); Petrus von Hötzl (d. 1902 as Bishop of Augsburg); Bernard van Loo (d. 1885); Fidelis a Fanna (d. 1881); Ignatius Jeiler (d. 1704); Marcellino da Civezza (d. 1906).

The Franciscans did not, like other orders, confine themselves to any particular Scholastic school (system). They were more attached to the teachings of Duns Scotus, perhaps, than to the School of St. Bonaventure, but there was no official compulsion in the matter.

Among the many naturalists, artists, and poets of the order may be mentioned: Thomas of Celano (d. about 1255), author of the "Dies Irae"; Giacomino of Verona (c. 1300), a precursor of Dante; St. Bonaventure (d. 1274); Jacopone of Todi (d. 1306), author of the "Stabat Mater"; John Brugman (d. 1473); Gregor Martic (d. 1905); the Croatian poet. Among the musicians: Julian of Speyer (d. about 1255); Bonaventure of Brescia (fifteenth century); Pietro Canuzzi; Luigi Grossi of Viadana (d. 1627); Domenico Catenacci (d. about 1791); David Moretti (d. 1842); Petrus Singer (d. 1882). Among the naturalists may be mentioned: Roger Bacon (d. 1294); the so-called Schwarzer (Black) Berthold (c. 1300), the reputed discoverer of gunpowder; Luca Pacioli (d. about 1510); Elektus Zwinger (d. 1690); Charles Plumier (d. 1704).

For writers on the history of the order, the reader may be referred to the bibliography, since the vast majority of the books cited have been written by Franciscans. In recent times -- to some extent since 1880, but manily since 1894 -- the investigation of the history of the Friars Minor, especially during the first centuries succeeding the foundation of the order, has aroused a keen and widespread interest in the leading civilized lands and among scholars of every religious denomination and belief.

XII. SAINTS AND BEATI OF THE ORDER

The number of Friars Minor who have been canonized or beatified, is -- even if we exclude here as throughout this article, the members of the other orders of St. Francis (Conventuals, Poor Clares, Tertiaries and Capuchins) -- extraordinarily high. In this enumeration we further confine ourselves to those who are officially venerated throughout the Church, or at least throughout the whole order, with canonical sanction. These exceed one hundred in number, the names, dates of decease, and feast of the best-known being as follows.

Saints

- Francis of Assisi, d. 3 October 1226 (4 October);
- Berard of Carbio and four companions, martyred 1220 (16 January);
- Peter Baptist and twenty-fve companions, martyred at Nagasaki, Japan, 1597 (5 February);
- John Joseph of the Cross, d. 1734 (5 March);
- Benedict of San Philadelphio, d. 1589 (3 April);

- Peter Regalda, d 1456 (13 May);
- Paschal Baylon, d. 1592 (17 May);
- Bernardine of Siena, d. 1444 (20 May);
- Anthony of Padua, d. 1231 (13 June);
- Nicholas Pick, hanged by *les Gueux* at Gorcum (Holland) in 1572 with eighteen companions, of whom eleven were Franciscans (9 July);
- Bonaventure of Bagnorea, d. 1274 (15 July);
- Francis Solanus, the Apostle of South America, d. 1610 (24 July);
- Louis of Anjou, Bishop of Toulouse, d. 1297 (19 August);
- Pacificus of San Severino, d. 1721 (25 September);
- Daniel, and seven companions, martyred at Ceuta 1227 (13 October);
- Peter of Alcántara, d. 1562 (19 October);
- John Capistran, d. 1456 (23 October);
- Didacus (Diego), d. 1463 (12 November);
- Leonard of Port Maurice, d. 1751 (26 November);
- James of the March (Monteprandone), d. 1476 (28 November).

Beati

- Matthew of Girgenti, d. 1455 (28 January).;
- Andreas de Conti di Signa, d. 1302 (1 February);
- Odoric of Pordenone, d. 1331 (3 February);
- Anthony of Stroncone, d. 1461 (7 Feb.);
- Aegidius Maria of St. Joseph, d. 1812 (9 Feb.);
- Sebastian of Apparizio, d. 1600 (25 Feb.);
- John of Triora, martyred in China, 1816 (27 Feb.);
- Thomas of Cora, d. 1720 (28 Feb.);
- Peter of Treia, d. 1304 (14 March);
- Salvator of Orta, d. 1567 (18 March);
- John of Parma, d. 1289 (20 March);
- Benventuo, Bishop of Osimo, d. 1282 (22 March);
- Rizzerius of Mucia, d. about 1240 (26 March);
- Peregrinus of Fallerone, d. about 1245 (27 March);
- Marco Fantuzzi of Bologna, d. 1479 (31 March);
- Thomas of Tolentino, martyred in Further India, 1321, (6 April);
- Benivoglio de Bonis, d. about 1235 (2 April);
- Julain of San Augustino, d. 1606 (8 April);
- Archangelo of Calatafimo, d. 1460 (9 April);
- Carlo of Sezze, d. 1670 (10 April);
- Angelo Carletti di Chivasso, d. 1495 (12 April);
- Andreas Hibernan, d. 1602 (18 April);
- Conrad of Ascoli, d. 1290, (19 April);
- Leopold of Gaiche, d. 1815 (20 April);
- Ægidius of Assisi, d. 1262, (23 April);
- James of Bitetto, called Illyricus, d. about 1490 (27 April);
- Agnellus of Pisa, d. 1236, (8 May);

- Francis of Fabriano, d. 1322 (14 May);
- Benventuo of Recanati, d. 1289 (15 May);
- John Forest, martyred at London, 1538 (22 May);
- John of Prado, martyred in Morocco, 1631, (29 May);
- Ercolane de Plagario (Piagale), d. 1451 (29 May);
- James Stepar, d. 1411 (1 June);
- Andrew of Spello, d. 1254 (3 June);
- Pacificus of Ceredano, d. 1482 (5 June);
- Stephen of Narbonne and Raymond of Carbonna, murdered by the Albigensians, 1242 (7 June);
- Bartolomeo Pucci, d. 1330 (8 June);
- Guido of Cortona, d. about 1250 (12 June);
- Benvenuto of Gobbio, d. about 1232 (27 June);
- Simon of Lipnica, d. 1482 (18 July);
- John of Dukla (like the preceding a Pole), d. 1484 (19 July);
- John of Laverna, d. about 1325 (9 Aug.);
- Peter of Molleano (Mogliano), d. 1490 (13 Aug.);
- Sanctes of Montefabri (Urbino), d. 1385 (14 Aug);
- John of Perugia and Peter of Sassoferrato, martyred at Valencia in Spain, 1231 (3 Sept.);
- Gentilis of Matelica, martyred in Persia (5 Sept.);
- Vincent of Aquilla, d. 1504 (6 Sept.);
- Apollinaris with thirty-nine companions of the First and Third Orders, martyred in Japan, 1617-32 (12 Sept);
- Bernardine of Feltre, d. 1494 (28 Sept.);
- John of Penna (Penne), d. 1271 (5 Oct.);
- Ladislaus of Gielniow, d. 1505 (22 Oct.);
- Francis of Calderola, d. 1407 (25 Oct);
- Theophilus of Corte, d. 1740 (30 Oct.);
- Liberato de Loro (Lauro), d. about 1306 (30 Oct.);
- Thomas of Florence, d. 1447;
- Rainerius of Arezzo, d. 1304 (5 Nov.);
- Bernardine of Aquila (Fossa), d. 1503 (7 Nov.);
- Gabriele Ferretti, d. 1456 (14 Nov.);
- Humilis of Bisignano, d. 1637 (5 Dec.);
- Conrad of Offida, d. 1306 (19 Dec.);
- Nicholas Factor, d. 1583 (23 Dec.).

To these might be added long lists of Blessed, who enjoy a cultus sanctioned by the Church, but whose cultus is only local, i.e. limited to their native or burial-places or to the dioceses with which they were connected. If these be included in the reckoning, the number of saints and beati in all the orders of St. Francis exceeds 300.

At the present time (1909), the *postulatura* of the order at Rome, whose office is to collect evidence concerning the candidates for beatification and canonization, is urging the cause of about ninety members of the First, Second, and Third orders of St. Francis. This list includes some names belonging to later and even recent times, and it will thus be seen that the Order of Friars Minor

never ceases to produce members whose holiness entitles them to the highest ecclesiastical honour -- that of the altar. That the spirit of Jesus Christ, which St. Francis laboured so untermittently to revive in the world and instilled into his institutions still lives in his order to the glorification of the Divine Name, the great efficiency of the Friars Minor in our day is sufficient proof.

(1) GENERAL HISTORY OF THE ORDER (SOURCES, ETC.). Note.-As elsewhere throughout this article, only relative completeness is here aimed at; all special monographs concerning a particular point, question, person, etc., are omitted, and none but general works, and, of these only a selection, are cited. *Chronica Fr. Jordani de Yano* in *Analecta Franciscana* (An. Fr.), I (Quaracchi, 1885), 1-19, written in 1262, new complete ed. by BOHMER (Paris, 1908) in *Collection d Etudes* by SARATIER; *Dialogus de Vitis Sanctorum Fratrum Minorum* (c. 1245), ed. LEMMENS (Rome, 1902); T. ECCLESTON (c. 1264), *De Adventu Fratrum Minorum in Angliam*, ed. BREWER, *Monumenta Franciscana*, I (R.S., London, 1858); supplement in *Monum Franc.*, II (R.S., London, 1882); complete id. in *An. Fr.* I. 217-57; abridgment in *Mon. Germ. Hist., Script. (M.G. SS.)*, XVIII, 560-9; BERNARD OF BESSE, *Liber de Laudibus S. Francisci* (c. 1280), ed. in *An. Fr.*, III (Quaracchi, 1807), 666-92; ed. FELDER (Rome, 1897); *Catalogus Generalium Ministorum O. F.M.* (begun in 1305), ed. in *An. Fr.*, III, 693-708; ed. HOLDER-EGGER in *M.G. SS.*, XXXII, 653-74; EHRLE in *eitschrift fur katholische Theologie*, VIII (Innsbruck, 1886), 322 sqq.; ADAM OF PARMA, ed. SALIMBENE, *Chronica*, written 1282-88 (Parma, 1857), ed. HOLDER-EGGER in *M. G. SS.*, XXXII (1905-09); ANGELO CLARENO, *Chronica septem Tribulationum ordinis Minorum* (c. 1314-23), portion ed. by DOLLINGER, *Beitrag zur Sektengesch.*, II (Munich, 1890); EHRLE in *Archiv fur Literatur-und Kirchengesch des M. A. (A.L.K.G.)*, I-III (Berlin, 1885-87); TOCCO (Rome, 1908); *Catalogus Sanctorum Fratrum Minorum* (c.1335), ed. LEMMENS (Rome, 1903); *Provinciale ordinis S. Francisci Antiquissimum* (c. 1343), ed. EUBEL (Quaracchi, 1892); *Chronica XXIV Generalium Ministrorum* (c. 1375), ed. in *An. Fr.*, III, 1 sqq; BARTHOLOMEW OF PISA, *De Conformitate Vitae B. Francisci ad Vitam Domini jesu* (c.1385), (Milan, 1510, 1513; Bologna, 1590, 1610), also in *An Fr.*, IV and V (Quaracchi, 1906, 1910); BERNARDINE OF FOSSA, *Chronica Fratrum Minorum Observantiae* (c. 1480), ed. LEMMENS (Rome, 1902); MARIANUS OF FLORENCE, *compendium Chronicarum O.F.M.* (c. 1515), ed. in *Archivum Franciscanum Historicum (A.F.H.)*, I-III (Quaracchi, 1908-10); *Speculum Vitae S. Francisci et Sorciourm eius* (Paris, s.d.; Venice, 1504; metz, 1509; Antwerp, 1620; Cologen, 1623; Raab, 1732); *Monumenta Ordinis Minorum* (Salamanca, 1506, 1510, 1511; Barcelona, 1523; Firmamentum Trium Ordinum S. Francisci (Paris, 1512; Venice, 1513); GLASSBERGER (c. 1508), *Chronica*

ordinis Min. (Obs.) in An. Fr., II (Quaracchi, 1887), 1 sqq.; JOHN OF KOMEROVO (1536), Tractatus Chronicae O.F.M. ed. ZEISSBERG in Archiv fur Oesterreichische Gesch., XLIX (Vienna 1872), 314-25; IDEM, Memoriale O.F.M. (an amplification of the last mentioned work) in Monumenta Poloniae Historica, V. (Lemberg, 1888), 64 sqq.; MARK OF LISBON, Chronica de la orden des los Fraklyles menored (Lisbon, 1556, etc. 1613; Salamanca, 1626, etc.). It tr. DIOLA (Brescia, 1581, etc.; Milan, 1609; Venice, 1585, etc.; Naples, 1680, etc.); Fr. tr. (Paris, 1600, etc.); Ger. Tr. (Constance, 1604); RIDOLFI (TOSSIGNANO), ZAGA. Historia originis seraphica religionis, etc. (Rome, 1587; 2nd. ed. Venice, 1603). The principal work on the history of the order is Annales Minorum, in 8 fol. vols. (Lyons and Rome, 1625-54), of WADDING (d. 1658). To this DE MELISSANO wrote a supplement (Turin, 1710); HAROLD wrote an abstract, Epitome Annatum Ord. Min., in 2 fol. vols. (Rome, 1662). A 2nd ed. of the Annales, with the supplement of DE MELISSANO, was issued in 16 fol. vols. (Rome 1731-36), vol. XVII (Rome, 1741) is an index only. Several continuations (Rome, Naples, Quaracchi, 1740-1886) bring the history up to 1622, in 25 vols. Other works are: DE GUBERNATIS, Orbis seraphicus seu historia de tribus ordinibus, etc., 5 vols. (Rome and Lons 1682-89), vol. VI (Quaracchi, 1887); DE ALVA ET ASTORGA, Monumenta antiqua seraphica (Louvain, 1664); SANNIG, Chronik der drey orden S. Francisci (3 vols., Prague, 1689, etc.); HUBER, Dreyfache Chronikh von dem dreyfachen Orden dess H. . . . Francisci (Munich, 1686); VAN DEN HAUTE, Brevis Historai Ord, Minorum (Rome, 1777); RANIER-MARCZIC (pseudonym of MARRACCINI), Apologia per l ordine de Fratri Minori (Lucca, 1748-50), 3rd vol., by DA DECIMO, who also edited the Secoli Serfici in 1757; KRESSLINGER, Ortus et progressus Ord. Min., Monachii (Munich, 1732); DA VICENZA, Storia cronologica dei tre ordini di s. Francesco (Venice 1760-61); DA LATERA, Manuale de Frati Minori (Rome, 1776); BENOFFI, Compendio di storia Minoritica (peasro, 1829); PAPINI, Storia di S. Francesco, 2 vols. (Foligno), 1825), PANFIELD DA MAGLIANO, Storia compendiosa di S. Francesco e de Francescani, extending only to 1414 (2 vols., Rome, 1874-76), vol. I., Ger. tr. (Munich 1883); JEILER, in Kirchenlex., s.v. Franciscanerorden; PATREM, Tableau synoptique de l Historie de l ordre de St. Francois de 1208 a 1878 (Paris, 1878), continued to 1909 (Paris, 1909); tr. into Latin under title Manuale Historiae O.F.M. . . . latine redditum a P. Gallo haselbeck (Freiburg, 1909); PALOMES, Storia di S. Francesco, 7th ed. (2 vols. Palermo, 1879); IDEM, Dei Frati Minori e delle loro denominazioni (Palermo, 1897). The collection Analecta Franciscana sive Chronica aliaque varia documenta ad Historiam Fratrum Minorum Spectantia (vol I. Quaracchi, 1885; II, 1887; III, 1897; IV, 1906; V. 1910) contains the important chronicles etc., of the order. A special journal Archivum Franciscanum, Historicum (A.F.H.), (vol. I. 1908; II, 1909 etc.) was started in 1908 for the investigation of the history of the order. The same purpose is served-though much less comprehensively-by the Miscellanea Francescana published by FALOCI-PULIGNANI (10 vols., Foligno, 1886-1908); Etudes Franciscaines (20 vols., Paris, 1889-1908), especially from vol. XII, see also C. EUBEL, Die avignonische obediens der Medikantenorden (Paderborn, 1900) Das Archiv fur Lit-und irchengesch, (A.L.K.G.) cf. supra; WIESHOFF, Die Stellung der Bettelorden in den deutschen frein, Reichstadten in M.A. (Leipzig, 1905); HOLZAPPEL, Die Anjange der Montes

Pietatis. 1462-1515 (Munich, 1903), tr. ROCCA (San Casciano, 1905); Focco, *Studii francescani* (2 vols., Naples, 1909); HEIMBUCHER, *Die Orden und Congregationen der kathol. Kirche*, II (2nd ed.,) Paderborn, 1907), 307-387, 424-475, where an excellent bibliography is given. The best, and the only complete, manual of the order's history is the *Handbuch der Gesch. des Franciscanerordens* (Freiburg and St. Louis).

(2) BULLS, GENERAL CONSTITUTIONS OF THE ORDER.- *Monumenta ord. Min. Firmament*, ed. WADDING in *Annales O. M.*, each volume of which contains a rich appendix of documents; SBAHRALEA (SBARAGLIS), *Bullarium Franciscanum* (1219-1302), (4 vols., Roem, 1759-68), continued by EUBEL, *Bull. Franc.* (1303-1431), V-VII (Rome, 1898, 1902, 1904); EUBEL, *Bullarii Franciscani Epitome. . . addito Supplemento* (Quaracchi, 1908), a digest of all the bulls of SEARALEA (*Bull. Fr.*, I-IV), with supplement; DA LATERA, *Supplementum ad Bullarium Franciscanum* (Rome, 1780), intended to remove the conventual interruption of SBARALEA. The different constitutions of the order since 1506 have usually been issued separately; the latest is *Regula et Constitutiones generales Fratrum Min.* (Rome, 1897). Concerning the earliest constitutions see EHIRLE in *A.L.K.G.*, VI. 1-138; *A.F. H.*, II (1909), 269 sqq; LITTLE. *Decrees of the General Chapters of the Friars Minor* (1260-82) in *English Historical Review*, XIII (London, 1898), 703 sqq. The largest collection is to be found in *Chronologia historico-legalis Ordinis Fratrum Min.* (4 vols., Naples. Venice and Rome, 1650-1795). The official decrees of the pope, the roman Congregations and General Curia since 1880 are collected in the *Acta ordinis Minorum* (28 vols. Quaracchi, 1882-1909).

University of Fribourg

University of Fribourg (Switzerland)

From the sixteenth century, the foundation of a Catholic university in Switzerland had often been canvassed among the Catholic cantons. The need of such an institution was with the passage of time ever more keenly felt, as the fact that higher educational institutions existed only in the Protestant cantons ensured for the Protestants a certain intellectual ascendancy. In spite of the pressing nature of the case, however, the want of the necessary means and the jealousy among the Catholic cantons combined to prevent any solution of the question being arrived at. From the very beginning, the inhabitants of Fribourg had laboured most zealously for the establishment of a university in their town. Out of their own resources, they founded in 1763 a school of law, which was continued till 1889 and then merged in the juristic faculty of the university. During the nineteenth century, the Catholic movement in Switzerland, making the Swiss "Pius-Verein" its rallying-centre, reinaugurated the agitation for a Catholic university. The Catholic Conservative Government of Fribourg finally took the matter in hand, and George Python, State Councillor for Fribourg and from 1886 Director of Public Education, who enjoyed the fullest confidence of the people, effected the foundation of the university. It was certainly a bold undertaking for a little state of only 119,000 (in 1909, 130,000) inhabitants, but the energy and political acumen of Python coupled with the unselfish liberality of the legislative council were a certain guarantee of success. The conversion of the public debt under favourable conditions in 1886 resulted in a saving of 2,500,000 francs (500,000 dollars), and on 24 December of the same year the supreme council resolved to set aside this sum as a foundation fund for the proposed university. On 4 October, 1889, a second resolution was passed, appropriating the interest on this capital to the foundation of the first faculties, which were opened in the following November, the juristic faculty (the extended school of law) with nine professors and the philosophical (for philosophy, literature, and history) with eighteen.

The town of Fribourg, seat of the university, contributed half a million francs towards the funded capital of the university, and in the autumn of 1890 the theological faculty was instituted with seven professors, In accordance with an agreement between the Government of Fribourg and Father Larocca, General of the Dominicans, this faculty was with the sanction of Leo XIII entrusted to the Dominican Order, and placed directly under the care of the Holy See. Many secular priests, however, have held chairs in the theological faculty, which has received from Rome the privilege of granting academical degrees (baccalaureate, licentiate, doctorate) in theology. The other faculties confer only the degrees of licentiate and doctorate. By the appropriation to the university of the profit on the public supply of water and electricity, and of a fixed annual sum from the newly-founded state bank, the further development of these three faculties and the establishment of the faculty of mathematical physics were made possible. The new faculty was opened in 1895 with eleven professors, and, as the institution of infirmaries has already been some years in progress, the establishment of the medical faculty-the only story now needed to crown the academical edifice-may be expected at an early date. Meanwhile, chairs of physiology and bacteriology have been instituted in connexion with the faculty of mathematical physics.

Despite many difficulties, including the crisis caused by the wanton dismissal of eight German professors in 1898, the development of the University of Fribourg has been steadily maintained.

As a cantonal public institution, it stands on the same legal footing as the other universities of Switzerland. The supreme authority is vested in the Cantonal Department of Public Education (i.e. the State Council), practically all the expenses being borne by the canton. The general constitution of the university is regulated by the Charter of 1 December, 1899. Leo XIII viewed its foundation with a great satisfaction to which he gave personal expression in many letters to the authorities of the Canton, to the university itself, and to the Swiss episcopate. The main sources of revenue, according to the cantonal budget for 1909, are as follows: Interest on foundation fund, 125,000 francs; yearly contributions from state bank, 80,000 frs.; profits arising from the electric and water works, 150,000 frs.; lease, 2,580 frs. To this sum of 357,580 frs. must be added 7700 frs. for the legal chairs and other endowments (especially the "Grivel" and the "Westermaier"). Many funds have been established for the assistance of students, and the institution of prizes.

In accordance with the wishes of its founder, the university has always maintained an international character, which consists not alone in the appointment of native professors to teach the history and literature of their native lands, but also in the various nationalities of the students attracted to the university. The lectures are delivered in Latin, French, and German. In the winter term of 1908-9, the teaching staff consisted of 70 lecturers from ten different lands, but especially from Switzerland, Germany, France, and Austria. Their distribution among the faculties was as follows: Theology, 13 ordinary and 2 extraordinary professors; Law, 14 ordinary and 4 extraordinary professors; Philosophy, 19 ordinary and 3 extraordinary professors; Mathematical Physics 10 ordinary and 3 extraordinary professors with 2 I4ivatdozen~en. The increase in the attendance at the university may be judged from this table of matriculated students:

Winter Term.	1890--1	1900--1	1908--9
Theology	64	127	202
Law	46	65	124
Philosophy	28	54	107
Mathematical Physics		80	135
Total	138	326	568

Of the 568 students in the winter term of 1908-9 181 were Swiss, 90 Germans, 86 Russians (Poles and Lithuanians), 32 Bulgarians, 31 Italians, 23 from the United States, 21 from Austria-Hungary, and the remainder from eleven other lands.

The university is governed by the rector, elected each year at the general meeting of the ordinary professors. He is assisted by the senate, which consists of the rector, pro-rector, and the deans and assistant deans of the separate faculties. At the head of each faculty stands the dean, who also holds office for a single year. The professors are appointed by the Council of State on the recommendation of the members of the faculty concerned, except that in the appointment of professors of theology due attention is always paid to the requirements of ecclesiastical law and the terms of the agreement with the Dominican Order. Candidates are recognized as matriculated students on the production

of a certificate which can be procured by following a certain course of academical studies in their native towns. Since 1905, women are allowed to matriculate, and, in addition to the regular students, permission may be given by the rector to other persons to attend particular lectures. As such persons numbered 119 in the winter term 1908-9, the total number of students who attended lectures during this period was 687. All the matriculated students are enrolled in a general association, called the "Akademia", and also contribute to an academic sick-fund. Many societies have been founded by the students of various lands for the promotion of social and intellectual intercourse. Thus, the "Columbia" has been instituted by the students from the United States, and publishes its own bulletin "The Columbia". There are three colleges for theological students: the Albertinum, Salesianum, and Canisianum, A special university society has been inaugurated to further the interests of the university. The university library is associated with that of the canton (which contains 140,000 volumes, 16,000 brochures, 534 manuscripts, and 350 incunabula), a new building for the accommodation of both libraries having been opened in 1908. The library expends an annual sum of 16,500 frs. in the purchase of books and journals. There are separate libraries for the different academical courses and institutes, 7650 frs. being spent annually on those in connection with the theological, legal, and philosophical faculties, and 30,000 frs. for those of the faculty of mathematical physics. The university has its own scientific publication, the "Collectanea Friburgensia", for which only contributions from professors are accepted, and in which twenty-five works have already appeared in three series. The list of the publications of the university lecturers, which is appended to the rector's annual report, gives one a good idea of the activity of the professors in other directions.

J.P. KIRSCH

Xavier Ehrenbert Fridelli

Xavier Ehrenbert Fridelli

(Properly FRIEDEL.)

Jesuit missionary and cartographer, b. at Linz, Austria, 11 March, 1673; d. at Peking, 4 June, 1743. He entered the Society of Jesus in 1688 and in 1705 arrived in China. Fridelli was an important contributor to the cartographical survey of the Chinese empire, begun in 1708 and completed in 1718 (according to others, 1715). Baron Richthofen says this is "the most comprehensive cartographic feat ever performed in so short a space of time (China, Berlin, 1877, I, 661, see 631 sq.). Together with Fathers Régis, Jartoux, and others, he designed the maps of Chi-li, the Amur district, Kahlkas (Mongolia), Sze-ch'wan, Yun-nan, Kwei-chou, and Hu-kwang (Hu-nan and Hu-pe), for which purpose he traversed the whole empire from south to north. At the time of his death Fridelli had

been rector for many years of the Southern or Portuguese church (Nan-t'ang), one of the four Jesuit churches at Peking.

Five letters in N. Welt-Bott (Augsburg, 1726, and Vienna, 1758), nos. 103, 106, 194, 589, 674; MSS report in the Vienna state library, no, 1117; Du Halde, Description de l'Empire de la Chine (the Hague, 1736), I, preface; Huonder, Deutsche Jesuitenmissionäre (Freiburg im Br., 1899), 87, 186.

A. HUONDER

St. Frideswide

St. Frideswide

(FRIDESWIDA, FREDESWIDA, Fr. FRÉVISSE, Old Eng. FRIS).

Virgin, patroness of Oxford, lived from about 650 to 735. According to her legend, in its latest form, she was the child of King Didan and Safrida, and was brought up to holiness by Algiva. She refused the proffered hand of King Algar, a Mercian, and fled from him to Oxford. It was in vain that he pursued her; a mysterious blindness fell on him, and he left her in her cell. From this eventually developed the monastery, in which she died on 19 October (her principal feast), and was buried. The earliest written life now extant was not composed until four hundred years after her death, but it is generally admitted that the substance of the tradition has every appearance of verisimilitude. From the time of her translation in 1180 (commemorated 12 Feb.) from her original tomb to the great shrine of her church, her fame spread far and wide; for the university was now visited by students from all parts, who went twice a year in solemn procession to her shrine and kept her feasts with great solemnity. Cardinal Wolsey transformed her monastery into Christ Church College, King Henry made her church into Oxford cathedral, but her shrine was dismantled, and her relics, which seem to have been preserved, were relegated to some out-of-the-way corner. In the reign of Edward VI, Catherine Cathie was buried near the site of her shrine. She was a runaway nun, who had been through the form of marriage with Peter Martyr, the ex-friar. The Catholics, as was but natural, ejected her bones in the reign of Queen Mary. But after Elizabeth had reinstated Protestantism, James Calphill, appointed Canon of Christ Church in 1561, dug up Cathie's bones once more, mixed them up (in derision of the Catholics) with the alleged remaining relics of the saint, and buried them both together amid the plaudits of his Zwinglian friends in England and Germany, where two relations of his exploit, one in Latin and one in German, were published in 1562. The Latin relation, which is conveniently reprinted in the Bollandists, is followed in the original by a number of epitaphs on the theme *Hic jacet religio cum superstitione*, but it does not seem that these words were incised on the tomb, though it is often said that they were. The episode strikingly illustrates the character of the continuity between the ancient faith and the reformed religion of England.

J.H. POLLEN

St. Fridolin

St. Fridolin

Missionary, founder of the Monastery of Säckingen, Baden (sixth century). In accordance with a later tradition, St. Fridolin is venerated as the first Irish missionary who laboured among the Alamanni on the Upper Rhine, in the time of the Merovingians. The earliest documentary information we possess concerning him is the biography written by Balther, a Säckingen monk, at the beginning of the eleventh century (*Mon. Germ. Hist.: Script. rer. Merov.*, III, 350-69). According to this life, Fridolin (or Fridold) belonged to a noble family in Ireland (Scottia inferior), and at first laboured as a missionary in his native land. Afterwards crossing to France, he came to Poitiers, where in answer to a vision, he sought out the relics of St. Hilarius, and built a church for their reception. St. Hilarius subsequently appeared to him in a dream, and commanded him to proceed to an island in the Rhine, in the territories of the Alamanni. In obedience to this summons, Fridolin repaired to the "Emperor" Clovis, who granted him possession of the still unknown island, and thence proceeded through Helion, Strasburg, and Coire, founding churches in every district in honour of St. Hilarius. Reaching at last the island of Säckingen in the Rhine, he recognized in it the island indicated in the dream, and prepared to build a church there. The inhabitants of the banks of the Rhine, however, who used the island as a pasturage for their cattle, mistook Fridolin for a cattle-robber and expelled him. On his production of Clovis's deed of gift, he was allowed to return, and to found a church and monastery on the island. He then resumed his missionary labours, founded the Scottish monastery in Constance, and extended his mission to Augsburg. He died on 6 March, and was buried at Säckingen. The writer of this legend professes to have derived his information from a biography, which he discovered in the cloister of Helera on the Moselle, also founded by Fridolin, and which, being unable to copy from want of parchment and ink, he had learned by heart.

This statement sounds very suspicious, and makes one conclude that Balther was compelled to rely on verbal tradition for the information recorded in his work. Not a single ancient author mentions Fridolin, the life has no proper historical chronological arrangement, and the enumeration of so many wonders and visions awakens distrust. Consequently, most modern historians justly reject the life as unauthentic, and as having no historical foundation for the facts recorded, while the older historians believed that it contained a germ of truth. In the early Middle Ages, there was certainly some connection between Säckingen and Poitiers, from which the former monastery received its relics, and this fact may have made the author connect Fridolin with the veneration of St. Hilarius of Poitiers, and the churches erected in his honour. The only portion of the life that can be regarded as historically tenable, is that Fridolin was an Irish missionary, who preached the Christian religion

in Gaul, and founded a monastery on the island of Säckingen in the Rhine. Concerning the date of these occurrences, we have no exact information. The monastery, however, was of great importance in the ninth century, since the earliest extant document concerning it states that on 10 February, 878, Charles the Fat presented to his wife Richardis the Monasteries of Säckingen, of St. Felix and of Regula in Zurich.

J.P. KIRSCH

Friedrich von Hausen

Friedrich von Hausen

(HUSEN)

Medieval German poet, one of the earliest of the minnesingers; date of birth unknown; d. 6 May, 1190. His name is mentioned frequently in legal documents, for the first time in one from Mainz dated 1171. He was born in middle Rhenish territory, as is shown by his dialect, especially by his rhymes, but several towns claim the honour of being his birthplace, and the question cannot be definitely decided. In 1175 he was in Italy, and again in 1186 in the suite of Henry VI. The next year he was present when Frederick I (Barbarossa) and Philip Augustus met between Mouzon and Yvois, and in 1188 he was at Worms in the company of Count Baldwin V of Hennegau. He accompanied the Emperor Frederick, by whom he was held in high esteem, on the crusade of 1189, and met his death at the battle of Philomelium, when he fell with his horse while pursuing the enemy. His popularity was great; the whole army, we are told, mourned his death.

Friedrich von Hausen is one of the earliest of the minnesingers who are known to have imitated French models, with which he became acquainted on his travels through Burgundy and Provence. Together with Veldeke he introduced the Romance element into the minnesong. The Provençal influence is especially evident in the dactylic rhythm of his verses, which resulted from the adoption into German of a Romance ten-syllable line with four or five stresses. His rhymes are still occasionally imperfect and his songs contain more than one strophe. Hausen's poetry is not at all

popular, but rather artificial in form and often abstruse in spirit. He is fond of dallying with a word. Like most of the troubadours or minnesingers he sings chiefly of love's pangs, but he never degenerates into effeminacy. Friedrich von Hausen's poems are printed in F. H. von der Hagen's "Minnesinger" (Leipzig, 1838, 4 vols.), I 212-217; a selection may also be found in K. Lachmann and M. Haupt, "Des Minnesangs Fruhling" (Leipzig, 1888), 42 sqq.; in Friedrich Pfaff, "Der Minnesang des 12 bis 14 Jahrhunderts" (Kürschners deutsche National-Litteratur, VIII, pt. I, 17-24); and in Karl Bartsch, "Deutsche Liederdichter des 12 bis 14 Jahrhunderts" (4th edition, by W. Golther, Berlin, 1901).

ARTHUR F.J. REMY
Society of Friends (Quakers)

Society of Friends (Quakers)

The official designation of an Anglo-American religious sect originally styling themselves "Children of Truth" and "Children of Light", but "in scorn by the world called Quakers".

The founder of the sect, George Fox, son of a well-to-do weaver, was born at Fenny Drayton in Leicestershire, England, July, 1624. His parents, upright people and strict adherents of the established religion, destined him for the Church; but since the boy, at an early period, felt a strong aversion to a "hireling ministry", he was, after receiving the bare rudiments of education, apprenticed to a shoemaker. He grew to manhood a pure and honest youth, free from the vices of his age, and "endued", says Sewel, "with a gravity and stayedness of mind seldom seen in children". In his nineteenth year, while at a fair with two friends, who were "professors" of religion, he was so shocked by a proposal they made him to join them in drinking healths, that he abandoned their company. Returning home, he spent a sleepless night, in the course of which he thought he heard a voice from heaven crying out to him: "Thou seest how young men go together into vanity, and old people into the earth; thou must forsake all, young and old, keep out of all, and be a stranger unto all." Interpreting the injunction literally, Fox left his father's house, penniless and with Bible in hand to wander about the country in search of light. His mental anguish at times bordered on despair. He sought counsel from renowned "professors"; but their advice that he should take a wife, or sing psalms, or smoke tobacco, was not calculated to solve the problems which perplexed his soul. Finding no food or consolation in the teachings of the Church of England or of the innumerable dissenting sects which flooded the land, he was thrown back upon himself and forced to accept his own imaginings as "revelations". "I fasted much", he tells us in his Journal, "walked abroad in solitary places many days, and often took my Bible and sat in hollow trees and lonesome places until night came on; and frequently in the night walked mournfully about by myself. For I was a man of sorrows in the first working of the Lord in me." This anguish of spirit continued, with intermissions, for some years; and it is not surprising that the lonely youth read into his Bible all his own idiosyncrasies and limitations.

Founding his opinions on isolated texts, he gradually evolved a system at variance with every existing form of Christianity. His central dogma was that of the "inner light", communicated directly to the individual soul by Christ "who enlightenth every man that cometh into the world". To walk in this light and obey the voice of Christ speaking within the soul was to Fox the supreme and sole duty of man. Creeds and churches, councils, rites, and sacraments were discarded as outward things. Even the Scriptures were to be interpreted by the inner light. This was surely carrying the Protestant doctrine of private judgment to its ultimate logical conclusion. Inconvenient passages of Holy Writ, such as those establishing Baptism and the Eucharist, were expounded by Fox in an allegorical sense; whilst other passages were insisted upon with a literalness before unknown. Thus, from the text "Swear not at all", he drew the illicitness of oaths, even when demanded by the magistrate. Titles of honour, salutations, and all similar things conducive to vanity, such as doffing the hat or "scraping with the leg", were to be avoided even in the presence of the king. War, even if defensive, was declared unlawful. Art, music, drama, field-sports, and dancing were rejected as unbecoming the gravity of a Christian. As for attire, he pleaded for that simplicity of dress and absence of ornament which later became the most striking peculiarity of his followers. There was no room in his system for the ordained and salaried clergy of other religions, Fox proclaiming that every man, woman or child, when moved by the Spirit, had an equal right to prophesy and give testimony for the edification of the brethren. Two conclusions, with disagreeable consequence to the early Friends, were drawn from this rejection of a "priesthood"; the first was, that they refused to pay tithes or church rates; the second, that they celebrated marriage among themselves, without calling in the services of the legally appointed minister.

Impelled by frequent "revelations", Fox began the public preaching of his novel tenets in 1647. It was not his intention to increase the religious confusion of the time by the addition of a new sect. He seems to have been persuaded that the doctrine by means of which he himself had "come up in spirit through the flaming sword into the paradise of God" would be greeted alike by Christian, Turk, and heathen. The enthusiasm and evident sincerity of the uncouth young preacher gained him numerous converts in all parts of Britain; whilst the accession of Margaret, wife of Judge Fell, afterwards of Fox himself, secured to the Friends a valuable rallying-point in the seclusion of Swarthmoor Hall, Lancashire. In an incredibly short time, a host of unordained apostles, male and female, were scouring the two hemispheres, carrying to the ends of the earth the gospel of Fox. One enthusiast hastened to Rome to enlighten the pope; a second went to the Orient to convert the sultan. The antagonistic religions dominant in England before and after the Restoration, Presbyterianism and the Established Church, made equally determined efforts, through the aid of the civil power, to crush the growing sect. From the detailed record which the Friends, in imitation of the primitive Christians, kept of the sufferings of their brethren, we gather that during the reign of Charles II, 13,562 "Quakers" were imprisoned in various parts of England, 198 were transported as slaves beyond seas, and 338 died in prison or of wounds received in violent assaults on their meetings. They fared still worse at the hands of the Puritans in Massachusetts, who spared no cruelty to rid the colony of this "cursed sect of heretics", and hanged four of them, three men and a woman,

on Boston Common. What marked them out for persecution was not so much their theory of the inward light or their rejection of rites and sacraments, as their refusal to pay tithes, or take the oaths prescribed by law, or to have anything to do with the army; these offences being aggravated in the estimation of the magistrates by their obstinacy in refusing to uncover their head in court and "thouing and theeing" the judges. The suffering Friends found at last a powerful protector in the person of their most illustrious convert, William, son of admiral Penn, who defended his coreligionists in tracts and public disputes, and, through his influence with the last two Stuart kings, was frequently successful in shielding them from the violence of the mob and the severity of the magistrates. Penn furthermore secured for them a safe refuge in his great colony of Pennsylvania, the proprietorship of which he acquired from Charles II in liquidation of a loan advanced to the Crown by his father. With the accession to the throne of James II the persecution of the Friends practically ceased; and by successive Acts of Parliament passed after the Revolution of 1688, their legal disabilities were removed; their scruples about paying tithes and supporting the army were respected; and their affirmation was accepted as equivalent to an oath.

Meanwhile, Fox, in the intervals between his frequent imprisonments, had laboured to impart the semblance of an organization to the society; whilst the excesses of some of his followers compelled him to enact a code of discipline. His efforts in both these directions encountered strong opposition from many who had been taught to regard the inward light as the all-sufficient guide. However, the majority, sacrificing consistency, acquiesced; and before the death of Fox, 13 Jan., 1691, Quakerism was established on the principles which it has since substantially preserved.

Although the Friends repudiate creeds as "external" and "human", yet they, at least the early Quakers and their orthodox modern followers, admit the fundamental dogmas of Christianity as expounded in the Apostles' Creed. Rejecting as non-Scriptural the term *Trinity*, they confess the Godhead of the Father, the Son, and the Holy Ghost; the doctrine of the Redemption and salvation through Christ; and the sanctification of souls through the Holy Spirit. Their ablest apologists, as Robert Barclay and William Penn, have not been able to explain satisfactorily in what respect the "inward light" differs from the light of the individual reason; neither have they reconciled the doctrine of the supreme authority of the "inner voice" with the "external" claims of Scripture and the historic Christ. These doctrinal weaknesses were fruitful germs of dissensions in later times.

Though one of the earliest of Fox's "testimonies" was in reprobation of "steeple-houses", that is, the stately edifices with which Catholic piety had covered the soil of England, nevertheless, as his adherents grew in numbers, he was forced to gather them into congregations for purposes of worship and business. These "particular meetings" assembled on the first day of the week. They worshipped without any form of liturgy and in silence until some man, woman, or child was moved by the Spirit to "give testimony", the value of which was gauged by the common sense of the assembly. By a process of development, a form of church government came into being, which has been described as follows:

"The whole community of Friends is modelled somewhat on the Presbyterian system. Three gradations of meanings or synods -- monthly, quarterly, and yearly -- administer the affairs of the Society, including in their supervision matters both of spiritual discipline and secular policy. The monthly meetings, composed of all the congregations within a definite circuit, judge of the fitness of new candidates for membership, supply certificates to such as move to other districts, choose fit persons to be elders, to watch over the ministry, attempt the reformation or pronounce the expulsion of all such as walk disorderly, and generally seek to stimulate the members to religious duty. They also make provision for the poor of the Society, and secure the education of their children. Overseers are also appointed to assist in the promotion of these objects. At monthly meetings also marriages are sanctioned previous to their solemnization at a meeting for worship. Several monthly meetings compose a quarterly meeting, to which they forward general reports of their condition, and at which appeals are heard from their decisions. The yearly meeting holds the same relative position to the quarterly meetings that the latter do to the monthly meetings, and has the general superintendence of the Society in a particular country." (See Rowntree, Quakerism, Past and Present, p. 60.)

All the yearly meetings are supreme and independent, the only bond of union between them being the circular letters which pass between them. The annual letter of London Yearly Meeting is particularly prized. With the passing away of its founders and the cessation of persecution, Quakerism lost its missionary spirit and hardened into a narrow and exclusive sect. Instead of attracting new converts, it developed a mania for enforcing "discipline", and "disowning", that is, expelled, multitudes of its members for trifling matters in which the ordinary conscience could discern no moral offence. In consequence, they dwindled away from year to year, being gradually absorbed by other more vigorous sects, and many drifting into Unitarianism.

In the United States, where, in the beginning of the last century, they had eight prosperous yearly meetings, their progress was arrested by two schisms, known as the Separation of 1828 and the Wilburite Controversy. The disturbance of 1828 was occasioned by the preaching of Elias Hicks (1748-1830), an eloquent and extremely popular speaker, who, in his later years, put forth unsound views concerning the Person and work of Christ. He was denounced as a Unitarian; and, although the charge seemed well founded, many adhered to him, not so much from partaking his theological heresies, as to protest against the excessive power and influence claimed by the elders and overseers. After several years of wrangling, the Friends were split into two parties, the Orthodox and the Hicksite, each disowning the other, and claiming to be the original society. Ten years later the Orthodox body was again divided by the opposition of John Wilbur to the evangelistic methods of an English missionary, Joseph John Gurney. As the main body of the Orthodox held with Gurney, the Wilburite faction set up a schismatic yearly meeting. These schisms endure to the present day. There is also a microscopical sect known as "Primitive" Friends, mainly offshoots from the Wilburites who claim to have eliminated all the later additions to the faith and practice of the early founders of the society.

In the fields of education, charity, and philanthropy the Friends have occupied a place far out of proportion to their numbers. There exist in the United States many important colleges of their foundation. They are exemplary in the care of their poor and sick. Long before the other denominations, they denounced slavery and would not permit any of their members to own slaves. They did not, however, advocate the abolition of slavery by violent measures. They have also been eminently solicitous for the welfare and fair treatment of the Indians.

According to Dr. H.K. Carroll, the acknowledged authority on the subject of religious statistics (*The Christian Advocate*, Jan., 1907), the standing of the various branches of Friends in the United States is as follows:

- Orthodox*: 1302 ministers, 830 churches, 94,507 communicants
- Hicksite*: 115 ministers, 183 churches, 19,545 communicants
- Wilburite*: 38 ministers, 53 churches, 4,468 communicants
- Primitive*: 11 ministers, 9 churches, 232 communicants

JAMES F. LOUGHLIN

Friends of God

Friends of God

(Ger. GOTTESFREUNDE).

An association of pious persons, both ecclesiastical and lay, having for its object the cultivation of holiness; its name alludes no doubt to John, xv, 14, 15. The circles of the "Friends of God" appears to have had its origin in Basle between the years 1339 and 1343, and to have thence extended down the Rhine even as far as the Netherlands, the cities most prominent in its history being Basle, Strasburg, and Cologne. Seeing the disturbed state of society in the large territory, the holy associates united in their efforts to counteract the many evil influences of the time, by applying themselves zealously to the practices of the interior life, and working diligently for the conversion of sinners. From this group of ascetics, whose sole bond of union was their common desire for holiness, the great school of German mystics took its rise. They aimed at becoming saints, and at giving edification at Catholic devotion, not heterodox enthusiasm; at affective contemplation, not arid speculation. Their great leaders were two Dominicans, the eloquent preacher John Tauler (c. 1300-1361) and the contemplative writer Blessed Henry Suso (c. 1300-1365); to these must be added Henry of Nördlingen, Conrad of Kaiserheim, and the Dominicans John of Tambach (a celebrated theologian),

John of Sternengassen, Dietrich of Colmar, and Nicholas of Strasburg. Among those whom they directed in the path of perfection were several communities of nuns, chiefly Dominican (e.g. in Unterlinden, Engelthal). Of these Dominicanesses, the most renowned for sanctity are the mystical writers Christina and Margaretha Ebner. Among their disciples living in the world, the following may be mentioned: Rulman Merswin, a wealthy merchant of Strasburg (1382), Henry of Rheinfelden, and the knight of Landsberg. The sermons, treatises, and letters of the "Friends of God" are remarkable for beauty of style, those of Suso constituting the best prose of the fourteenth century, the correspondence of Henry of Nördlingen and Margaretha Ebner being the earliest examples of epistolary literature in the German language, and the sermons of Tauler being masterpieces of eloquence.

As long as the association remained under the guidance of men like Suso and Tauler, masters in the spiritual life, it was preserved from blemish. Suso was the founder of the Children of Mary, and, in an age that witnessed the decadence of scholasticism or scientific theology, both friends based all their mysticism on Catholic doctrine, particularly on the solid system of St. Thomas. As Suso's "Book of the Eternal Wisdom" was composed for spiritual reading, so was his "Book of Truth" written to refute the errors and fanatic excesses of the Beghards and the Brethren of the Free Spirit. On his part, Tauler opposed the false mysticism of the Fraticelli and the schismatical tendencies of Louis of Bavaria. But the glory of the "Gottesfreunde" soon came to an end. A lay member of the association, Rulman Merswin, through either ignorance or fraud, brought the whole group of German mystics into disrepute. The doctrine of his alleged guide and master in the spiritual life — the mysterious layman of the Oberland (Der Gottesfreund vom Oberland), the "Friend of God" *par excellence*, to whom Merswin, in his posthumous work "Das Buch von den neun Felsen", ascribes revelations, prophecies of impending chastisements, and a divine mission to purify the Church — was diametrically opposed to that of Suso, Tauler, and the others. Denifle has proved conclusively that Merswin's great unknown is a myth, but, as the "Great Friend of God" had previously been regarded as the reformer of the hierarchy and a precursor of Luther, the recluse of the Oberland (Alsace) was much lauded and often quoted by those Protestant writers who asserted that true German mysticism was incompatible with Roman supremacy, scholastic theology, etc. After Rulman Merswin's death, Nicholas of Basle became the leader of the pseudo-Friends of God, but was eventually condemned as a Beghard and burned at Vienna in 1409. Another prominent member of this sect, his disciple Martin of Mainz, had suffered a like punishment sixteen years before in Cologne, for submitting unreservedly to a layman and maintaining several heretical propositions. From the beginning of the fifteenth century, the "Friends of God", whether orthodox or heterodox, disappear from the pages of history.

REGINALD WALSH

Abbey of Frigolet

Abbey of Frigolet

The monastery of St. Michael was founded, about 960, at Frigolet, by Conrad the Pacific, King of Arles, on one of the numerous hills which lie between Tarascon and Avignon, France. Successively occupied by the Benedictines of Montmajour, the Augustinians, the Hieronymites, and finally by the Reformed Augustinians, it was, together with all the monasteries in France, suppressed and sold by the French Republic. From that time it changed hands frequently, and was acquired, at length, by Rev. Edmund Boulbon, who purchased it from Rev. T. Delestrac. Edmund Boulbon, b. 14 January, 1817, entered the Abbey of Our Lady of La Trappe at Briquebec, in 1850. Of a robust faith, and burning with zeal for souls, he wished to lead a more active life. Acting on the advice of his superiors, he left the Trappists and undertook the restoration, in France, of the Order of St. Norbert, the constitution of which seemed to be better adapted to his active disposition. On 6 June, feast of St. Norbert, he received the white habit from the hands of Mgr de Gassignies, Bishop of Soissons, at Pr montr . Pius IX approved the project in an audience which he granted to Father Edmund, 4 December, 1856. With the consent of Mgr de Chalandon, Archbishop of Aix, Father Edmund took possession of Frigolet, and, having admitted several novices, he commenced the community life there. In honour of Our Lady Conceived without Sin he erected a magnificent church, which was solemnly consecrated on 6 Oct., 1866. The monastery was canonically erected as a priory on 28 August, 1868; and as an abbey in Sept., 1869, the Right Rev. Edmund Boulbon being its first abbot. On 8 Nov., 1880, the abbey of Frigolet was seized and the religious expelled. Eventually, however, they were permitted to return. Abbot Boulbon was spared the miseries of a second expulsion, for he died 2 March, 1883.

His successor, Paulinus Boniface, named abbot on 10 June, 1883, undid by his bad administration the good work so nobly begun by Abbot Boulbon; but after a canonical visitation by Mgr Gouthe-Soulard, Archbishop of Aix, he was deposed, and the direction of the abbey entrusted to the Rev. Denis Bonnefoy, a prudent and saintly religious. Up to this time, the Abbey of Frigolet, with the priories founded by it, had formed as it were a separate congregation with an organization of its own, having no connexion with the other abbeys or the general chapter of the order. This state of affairs was remedied by a decree of the Sacred Congregation of Bishops and Regulars,

dated 17 Sept., 1898; and the congregation of Frigolet was incorporated with the order. Unfortunately, the Right Rev. Denis Bonnefoy, who was made abbot on 21 March, 1899, died on 20 Sept. of the same year. The religious of Frigolet chose for their abbot Godfrey Madelaine, then prior of the Abbey of Mondaye, Calvados, France, the distinguished author of "L'histoire de S. Norbert" and other books. Meanwhile the French Republic had framed new laws against all religious institutions, and on 5 April, 1903, the religious, expelled from their abbey, took refuge in Belgium. There, having bought what was left of the former Norbertine Abbey of Leffe near Dinant, they restored it; and continued in the conventual life, in the hope that some day the fathers might be permitted to return to France. The Abbey of Frigolet had founded the priories of Conques and Etoile in France, and of Storrington and Bedworth in England. It has also sent missionaries to Madagascar.

F.M. GEUDENS

Fringes

Fringes (in Scripture)

This word is used to denote a special kind of trimming, consisting of loose threads of wool, silk, etc., or strips of other suitable material, along the edge of a piece of cloth. The English Bible uses it to designate a particular appendage of the Jewish costume. In the Mosaic legislation which is embodied in the Pentateuch, mention is made of a peculiar ordinance. "The Lord also said to Moses: Speak to the children of Israel, and thou shalt tell them to make to themselves *fringes* in the corners of their garments, putting in them ribands of blue: that when they shall see them, they may remember all the commandments of the Lord" (Num., xv, 37-39). "Thou shalt make *strings* [A.V. and R.V.: *fringes*] in the hem at the four corners of thy cloak" (Deut., xxii, 12). The description contained in these two passages is anything but clear, at least in the English Bibles; but it may be supplemented by a close reading of the original text, a knowledge of Eastern customs, and the details to be found in the rabbinical literature.

The word "fringes" is here an inaccurate rendering of the Hebrew; "strings" is slightly more exact. The Hebrew word *gedîlîm* means literally "twisted cords"; *çîçîth* would be best translated by "tassel". It is indeed an ornament of this description, fastened to the four corners of the upper garment, which is the object of the above regulations. This upper garment, the "cloak" of Deut., xxii, 12, seems to have been a large square piece of cloth, resembling the *'aba* of the modern bedouin, and worn like the *pallium* or *'imátion* of the Greeks, the four corners sometimes hanging in front (*'epiblema*), and sometimes one of the corners cast over the left shoulder (*periblema*). It was very likely the tassel of the corner thus thrown over Our Lord's shoulder that the woman with the issue of blood touched ("behind him"), in the circumstance recorded in Matt., ix, 20, and Luke, viii, 44. We should perhaps go back to a very ancient custom, the significance of which was lost sight of, to account for the wearing of these ornaments. At any rate, a new meaning was attached to them by the lawgiver of Israel.

Of these "fringes", or tassels, nothing more is said in the O. T., than that they should contain "ribands of blue"; more exactly, "a cord, or thread of purple". But the rabbinical literature contains most minute prescriptions with regard to these ornaments. Owing to the difficulty of procuring the purple dye, the custom prevailed of using only white threads of wool. They should be four in number, one being considerably longer than the others, spun expressly for the purpose, passed through an eyelet at the corner of the cloak, twisted a certain number of times, and tied by five knots. According to Deut., the *çîçîth* were intended to remind the people of the commandments of the Law. We may easily understand, therefore, why the Pharisees were wont to "enlarge their fringes" (Matt., xxiii, 5). This connexion led people to attach to the *çîçîth* and its various parts mystic significations, and to the statement that the wearing of it is the most important precept of the Law; nay more, is of equal merit with the observance of the whole Law.

The practice of wearing the *çîçîth* is still scrupulously followed by the Jews. The tassels are a part of the large *tâlîth*, or prayer-shawl, used universally during religious services: this garment is worn in such a way that the *çîçîth* are visible in front. Pious Jews, moreover, devised, since the Dispersion, an article of clothing, the small *tâlîth*, that would enable them to observe the Law at all times. This *tâlîth* is similar in shape to a large scapular, with the tassels fastened to the four corners, and is worn as an undergarment. Men only are to wear the *tâlîth* and the *çîçîth*.

Charles L. Souvay.

Samuel Fritz

Samuel Fritz

A Jesuit missionary of the eighteenth century noted for his exploration of the Amazon River and its basin; b. at Trautenau, Bohemia, in 1654; d. 20 March, 1728. He joined the Society of Jesus in 1673. In 1684 he was sent to Quito as a missionary. For forty-two years Fritz acted in this capacity among the Indians of the Upper Marañon. He succeeded in converting among others the powerful tribe of Omaguas (Omayas) and in concentrating into civilized settlements the savages of forty different localities, in the country between the Rivers Napo and Negro. An adept in technical arts and handicraft, he also was extraordinary linguistic abilities, supplemented by the rare gift of knowing intuitively how to treat the Indians. These qualifications enabled him to accomplish prodigious work among them, and merited for him the respect not only of the savages but also of the Spanish Government, to which he rendered valuable service in its boundary dispute with the Portuguese. At the instance of the Real Audiencia of Quito he began (1687) the cartographical delineation of the disputed missionary territory on the Upper Marañon between Peru and Quito. In

1689 he undertook, in a primitive *piroque*, a daring expedition down the Amazon to Pará, where he was captured and imprisoned for two years on the suspicion of being a Spanish spy. Although imperfectly equipped with the necessary instruments, he completed a comparatively accurate chart of the river's course. This was the first approximately correct chart of the Marañon territory. He was also the first to follow the Tunguragua instead of the Gran Pará (Ucayali) and prove it the real source of the Marañon.

A Protestant, Wappaeus, writes of him in his "Handbuch der Geographie und Statistik" (Leipzig, 1863-70, I, pt. III, 595) as follows: "The great respect justly shown at that time by European scientists for the geographical work of the Jesuits led to the admission into their ranks of Father Fritz by acclamation." In 1707 this map was printed at Quito and extensively copied, e.g. in the "Lettres Edifiantes" (Paris, 1781), VIII, 284, and the "N. Welt-Bott" (Augsburg, 1726, I), also in Condamine, "Relation abrégée d'un voyage fait dans l'intérieur de l'Amérique Mérid." (Paris, 1745), which contains the revised chart of Father Fritz for comparative study. The chart was reprinted in Madrid, in 1892, on the occasion of the fourth centenary of the discovery of America. There was another reprint in the "Recueil de voyage et de documents pour servir a l'hist. de la géogr.", ed. by Schéfer and Cordier (Paris, 1893). Three of his letters are incorporated in the "N. Welt-Bott" (Augsburg, 1726), III, nos. 24, 25; according to Condamine an original report of his travels is to be found in the archives of the Jesuit college at Quito.

A. HUONDER

Jean Froissart

Jean Froissart

French historian and poet, b. at Valenciennes, about 1337, d. at Chimay 1337 early in the fifteenth century. The exact dates of his birth and death are unknown, as well as the family from which he sprang. In 1361, after receiving ecclesiastical tonsure, he went to England to present to Queen Philippa of Hainault an account in verse of the battle of Poitiers. This marked the beginning of the wandering life which led him through the whole of Europe and made him the guest of the chief personages of the end of the fourteenth century. His sojourn in England lasted till 1367. Queen Philippa received him well and inspired him with the idea of writing his chronicles. He travelled through England and visited Scotland where he met David Bruce. In 1367 he accompanied the Black Prince to Bordeaux, returned to London, and in 1368 accompanied the Duke of Clarence to Milan where the duke was to wed the daughter of Galeazzo Visconti. From Italy Froissart returned

to Valenciennes where he learned of the death of Queen Philippa in 1369. He was then successively under the protection of Duke Wenceslaus of Brabant (1369-1381), and Comte Guy de Blois, seigneur of the parish of Lestines-au-Mont and a canonicate at Chimay (1384). Froissart accompanied Comte Guy into Flanders and to Blois. Then, to secure information concerning the Spanish wars, he visited the court of Gaston Phebus, Comte de Foix, and quitted it in 1389 in the company of Jeanne de Boulogne, the affianced bride of the Duc de Berry. In 1390 and 1391 he wrote his history at Valenciennes. He was at Paris in 1392, whence he went again to London, where he offered his poems to Richard II. Having quarrelled with Guy de Blois, he found a new protector in Philip the Bold, Duke of Burgundy. Little is known of his latter years, which were possibly passed at Chimay.

Froissart composed many poems of love and adventure, such as "l'ÉpINETTE AMOUREUSE", in which he relates the story of his own life, and "MÉLIADOR", a poem in imitation of the Round Table cycle, etc. His chief work is the "Chroniques de France, d'Angleterre, d'Ecosse, de Bretagne, de Gascogne, de Flandre et lieux circonvoisins", an account of European wars from 1328 till 1400. In the numerous manuscripts of the "Chronicles" three recensions of the first book are recognizable. The first, written between 1369 and 1379 brings the narrative to 1378 (the beginning is borrowed from the "Chronicle" of Jean le Bel, a canon of Liege). The tone of this recension is favourable to the English. The second recension, represented by the Amiens and Valenciennes MSS., was written under the inspiration of Guy de Blois and is favourable to the French. The third recension (Vatican MS.), written after 1400, is frankly hostile to England, but the MS. stops with the year 1340. The second, third, and fourth books of the "Chronicles" were written between 1387 and 1400.

The "Chronicles" contain many errors and are very partial, but despite these faults no work conveys so lively an impression of the men and things of the fourteenth century as this history of Froissart. His graceful and naive style and the picturesque turn which he gives to his recollections make him the king of chroniclers. The "Chronicles" were much copied; one of the most beautiful manuscripts of Froissart is at Breslau, copied in 1469 by Aubert de Hesdin, and admirably illustrated with miniatures (S. Reinach, *Gazette des Beaux Arts*, May, 1905). Among the modern editions are those of: Buchon, "Panthéon littéraire", 3 vols. (Paris, 1835 and 1846), defective in the first book; Kervyn de Lettenhove, 29 vols. (Brussels, 1867-1877), gives the various recensions of each chapter; Siméon Luce began to publish in 1869 the edition of the Société de l'Histoire de France, 8 vols. (Paris, 1869-1888); G. Raynaud, commissioned to continue this undertaking, published volumes IX to XI, which contain part of Book 11 (Paris, 1897-1899). The poem "Méliador" was edited by A. Longnon for the Société des Anciens Textes Français (Paris, 1895).

LOUIS BRÉHIER

Eugene Fromentin

Eugène Fromentin

French writer and artist; b. at La Rochelle, 24 October, 1820; d. at Saint-Maurice, near La Rochelle, 26 August, 1876. His father, a distinguished physician and art connoisseur, intended him for the bar. After a brilliant course of studies, the young man came to Paris, in November, 1839, to follow the lectures in law. In 1843 he became associated with Maître Dénormandie, an attorney-at-law. But his literary and artistic inclinations gradually rendered his profession insupportable. Marilhat's exhibition of 1844 definitely decided him to devote himself to painting. He became a pupil of Cabat, who was, with Flers, Huet, Corot, and Rousseau, one of the restorers of modern landscape painting. A short journey to Algeria, in 1846, showed him more clearly the line he was to follow. In 1848 and 1852 he again visited that country, to garner material for his work. He exhibited at the Salon in 1847. In 1850 he sent in eleven paintings, and was awarded a second-class medal. The only other notable events in his life were a voyage to Egypt, in the autumn of 1869, in the company of Napoleon III, at the time of the opening of the Suez Canal; and a short stay of some weeks in Holland, in July, 1875, where he obtained matter for his book, "Les Maîtres d'autrefois". He was made chevalier of the Legion of Honour in 1859, and officer in 1869. He married in 1851.

In his lifetime, it was as a painter rather than as writer that he became renowned. Orientalism was then in vogue. It suited the romantic tastes of the age, and satisfied the general curiosity for exotic customs. Great painters like Decamps, Delacroix, and Marilhat, had already made a specialty of it. Moreover, all thoughts were turned towards Algeria, a new, mysterious country, only half-conquered, which had just been the scene of a long colonial war. The public were never weary of hearing about it. Since the land has become so well known, this interest has ceased; and it must be admitted that Fromentin's reputation has suffered in consequence. Such is the penalty of a success partly based on the informative and teaching qualities of the painter's art. The actuality has ceased to interest us; and the glory of the artist who depended on it must necessarily fade. But Fromentin is far from deserving the obscurity into which he is now relegated. His work, as a painter, is that of a charming artist, the work of a landscapist and a painter of customs, who had the secret ambition of becoming an historical painter, and who, wisely enough, selected in the modern world subjects and plan best accommodated to his ambition and his ability. Fromentin's art, either by the nature of his paintings or the dimensions, rarely surpasses the "genre" properly so called; and yet there is something naturally impressive in the beauty of the Arab life and manners, in that nomadic, feudal, warlike existence, the majestic simplicity of the desert spaces, and the immutable tranquillity of the Orient. Finally, one cannot fail to recognize the distinctive mark of Fromentin's art. He is not a faultless painter, but he is one of exquisite delicacy. After 1860, especially, under the influence of Corot, he becomes one of the cleverest modern "harmonists". His blue slate-coloured Algerian pictures, with their remarkable greyish tints, have not been excelled. As a painter of the Arab horse, in the "Curée" of the Louvre, he has no rival. Sometimes he is eloquent, as in the "Simoun", the

"Soif", or the famous "Rue d'El Aghouat". But the works that show his art its best are those that depict both customs and scenery, as the "Passage du Gué" (New York), the "Chasse au Faucon" (Chantilly): in these he is a kind of modern Wouverman, more elegant and poetic than the former. And one may anticipate the day when, Africa in its turn having been subjected to civilization, industry, and uniformity, these pictures will be the sole witness of its ancient customs, and will then assume their historic signification.

It is, however, as a writer that Fromentin is rising more and more to fame. His work is very varied. As a result of his travels, he published, under the titles of: "Un été dans le Sahara" (Paris, 1856); and "Une année dans le Sahel" (Paris, 1858), the souvenirs of his two last sojourns in Algeria. In these he inaugurates a new method of description, much less literary than Chateaubriand's, less "technical" than Gautier's, a method which, in French tradition, marks the transition from Bernardin de Saint-Pierre to Loti. "Dominique" appeared a year later (Paris, 1862). This autobiography and transparent history of a pure youthful love is, together with "Adolphe" and the "Princesse de Clèves", one of the masterpieces of the French "roman d'analyse". But the work that will transmit Fromentin's name to posterity is his "Maîtres d'autrefois" (Paris, 1876). This book is composed from the notes made during a journey through Belgium and Holland to study the old painters; or rather, this journey was the occasion of the work. For the author, in connexion with the paintings he saw, discusses, in passing, the questions of æsthetic moment which he raises. It may be said that this book really originated artistic criticism. As a critic Diderot is purely literary, Hegel metaphysical, Ruskin religious, moral, or apocalyptic, Taine historical, or philosophical; but Fromentin made criticism strictly "artistic", that is to say, he seeks the secret of the significance, value, and beauty of a picture solely in an examination of the work, its style, and its methods of execution. It is through the painting thus understood and examined that he succeeds in determining the personality and the moral characteristics of the author. Here Fromentin is a great creator and a great writer, who really invents everything: methods, systems, and terminology. Some of his descriptions of paintings are the last word in the art of writing. Certain of his analyses, such as those of Rubens and Rembrandt, are definitive, and fix, forever, both the rules of the style or class, and the portraits of these great men. If to *understand* is to *equal*, it is by such pages that this distinguished writer, who has won a place among the first prose-writers of the last century, has really added something to the art of painting — that is to say — the manner of expressing it in writing.

LOUIS GILLET

Count Louis de Baude Frontenac

Count Louis de Baude Frontenac

A governor of New France, b. at Paris, 1662; d. at Quebec, 28 Nov., 1698. His father was captain of the royal castle of St-Germain-en-laye; his mother, *née* Phelypeaux, was the daughter of the king's secretary of state; Louis XIII was his godfather. By his valour and skill he won the rank of marshall of the king's camps and armies. He served in Holland, France, Italy and Germany, and also in Candia where Turenne had sent him to command a contingent against the Turks. A brilliant military reputation, therefore, preceded him to Canada. During his first administration (1672-1682) he built a fort at Cataracouy (now Kingston) to awe the Iroquois and facilitate communications with the West. To explore the course of the Mississippi, previously discovered by Joliet and Marquette, he sent Cavelier de La Salle, who named the country watered by that river Louisiana, in honour of Louis XIV. Although intelligent and magnanimous, brave and unflinching in peril, he was proud, imperious, and ready to sacrifice all to personal animosity. He quarrelled with most of the officials of the colony over petty questions: with his councillors, with the intendant (Duchesneau), with the Governor of Montreal (Perrot), and with Mgr de Laval, whose prohibition of the liquor-traffic with the Indians he judged harmful to commercial interests. The king, after vainly trying to curb his haughtiness, recalled him in 1682.

In 1689, when the uprising of the Iroquois and the Lachine massacre, in retaliation of Governor Denonville's treacherous dealing, threatened the existence of the colony, Frontenac was sent to the rescue and was hailed as a deliverer. He had to fight the allied Iroquois and English; but his bravery and ability were equal to the task. After d'Iberville's brilliant exploits in Hudson Bay, Frontenac divided his forces into three corps, which captured Corlar (Schenectady), Salmon Falls (N.H.) and Casco (Me.). When, to avenge these disasters, Boston sent a fleet against Quebec (1690), Frontenac's response to the summons of Phipps's envoy was: "Go tell your master that we shall answer him by the mouths of our guns" — a threat which was made good by the enemy's defeat. In 1696 Frontenac wisely disregarded the instructions of France to evacuate the upper country, which would have ruined the colony, and merely observed a defensive attitude. He dealt the Iroquois power a severe blow, burned the villages of the Onnontagués and Onneyouts, and devastated their country. By his orders d'Iberville razed Fort Pemquid in Acadia, captured St. John's, Newfoundland, and nearly the entire island, and took possession of all Hudson Bay Territory. Frontenac died sincerely regretted by the whole colony which he had saved from ruin. His character was a mixture of good and bad qualities. The latter were less evident during his second administration and his talents rendered eminent services. He found Canada weakened and attacked on all sides; he left it in peace, enlarged, and respected. He has been justly called "saver of the country". In spite of his Jansenistic education and prejudices against the bishop, the Jesuits, and even the Sulpicians, he possessed a rich fund of faith and piety. He was a faithful friend of the Recollects, and was buried in their church.

LIONEL LINDSAY

Bl. Frowin

Blessed Frowin

Benedictine abbot, d. 11 March, 1178. Of the early life of Frowin nothing is known, save that he is claimed as a monk of their community by the historians of the two great Benedictine abbeys of Einsiedeln in Switzerland and St. Blasius in Baden. The first authentic fact in his career is his election as abbot, the year 1142, to succeed St. Adelhelm in the newly established monastery of Engelberg (q.v.) in the Canton of Unterwalden, Switzerland. As abbot Frowin was conspicuous for sanctity, learning and administrative ability. Through his efforts the possessions and privileges, civil and ecclesiastical, of the abbey were greatly increased, while its renown as a home of learning, art, and piety spread far and wide. Himself a man of great intellectual endowments thoroughly versed in all the science, sacred and profane, of his time, he established a famous school in his abbey, in which besides the *trivium* and *quadrivium*, philosophy and theology were likewise taught. The library which he collected possessed, for those days, a vast number of manuscripts. According to a list that he himself has left us, it contained Homer, Cicero, Cato, Ovid and other authors of antiquity. This rich collection perished in 1729, when the abbey was destroyed by fire. Blessed Frowin not only copied books for his library, but composed several. Two of these, a commentary on the Lord's Prayer, and a treatise in seven books, "De Laude Liberi Arbitrii" ("In Praise of Free Will", but in reality a discussion of the chief theological questions of his day, directed, it is thought, against the errors of Abelard) are still extant, having been discovered by Mabillon in the archives of Einsiedeln. Frowin's other works, Commentaries on the Ten Commandments and various parts of Holy Scripture, are lost. Though never formally beatified, Frowin has commonly been styled "Blessed" by the chroniclers (see "Act. SS.", March, IX, 683). Pétin ("Dictionnaire Hagiographique" I, iiiii) gives 7 March as his feast day, and credits him with many miracles.

JOHN F.X. MURPHY

St. Fructuosus of Braga

St. Fructuosus of Braga

An Archbishop, d. 16 April, c. 665. He was the son of a Gothic general, and studied in Palencia. After the death of his parents he retired as a hermit to a desert in Galicia. Numerous pupils gathered around him, and thus originated the monastery of Complutum (Compludo) over which he himself at first presided, later, he appointed an abbot and again retired into the desert. In the course of time, he founded nine other monasteries, also one for 80 virgins under the saintly abbess Benedicta. In 654, Fructuosus was called to the Bishopric of Dumium, and on 1 December, 656, to the

Archbishopric of Braga. The life of this greatest of Spanish monastic bishops was written by Abbot Valerius, and based on the accounts of his pupils. In 1102, his relics were transferred to Compostela. The feast day is the 16 of April. Fructuosus is depicted with a stag, which was devoted to him, because he had been saved by Fructuosus from the hunters. There are still extant two monastic rules written by Fructuosus. The first (25 chapters) was destined for the monastery of Complutum, it has an appendix (called *pactum*), containing the formulae of consecration and the vows. The second, called the "common" rule, which consists of chapters and refers to a union of monasteries governed by an abbot-bishop, is addressed chiefly to superiors of monasteries.

GABRIEL MEIER

St. Fructuosus of Tarragona

St. Fructuosus of Tarragona

A bishop and martyr; d. 21 January, 259. During the night of 16 January, he, together with his deacons Augurius and Eulogius, was led into prison, and on 21 January tried by the judge Aemilianus. He confessed that he was a Christian and a bishop, whereupon all three were sentenced to be burnt alive. They underwent the ordeal courageously, and, praying and with outstretched hands, gave up the ghost. In this position they are depicted. St. Augustine mentions them in one of his sermons (273), and the Spanish poet Prudentius has celebrated them in a hymn (*Peristephanon*, hymn, 6).

GABRIEL MEIER

Johann Nepomuk Fuchs

Johann Nepomuk Fuchs

A chemist and mineralogist, b. at Mattenzell, near Bremberg, Lower Bavaria, 15 May, 1774; d. at Munich, 5 March, 1856. He originally studied medicine, but after the year 1801 devoted himself to chemistry and mineralogy. Following the custom of his country, he pursued his studies at various universities: Heidelberg, Berlin, Freiburg, and Paris. In 1805 he taught chemistry and mineralogy at the University of Landshut, and at Munich in 1826. In 1823 he was nominated a member of the Academy of Sciences and in 1854 conservator of the Museum of Mineralogy of Munich; two years before his death, the honour of nobility was conferred upon him by the King of Bavaria. He received many other honours. His memoirs, which are numerous, and play an important part in the development of the sciences of mineralogy and chemistry, are given in the collections of the Munich Academy, in Kastner's "Archives", Poggendorff's "Annalen", Dingler's "Journal", and other publications.

He wrote several books, among others one "On the Present Influence of Chemistry and Mineralogy" (Munich, 1824); one on the "Theories of the Earth" (Munich, 1824); "Natural History of the Mineral Kingdom" (Kempten, 1842); and a work on the preparation, properties, and uses of

soluble glass (Munich, 1857). His name is to this day associated with soluble glass, an alkaline silicate used in a special kind of fresco painting, called stereochromy, so much so that sometimes it is called Fuchs's soluble glass. Today soluble glass is also used in the application of bandages in surgery. His discovery of water glass was published in 1823. He pursued his researches in other departments of technical knowledge, his work on cement being particularly valuable. He retired from active life in 1852.

His collected works, produced by the committee of the central administration of the polytechnic union in the Kingdom of Bavaria, were edited, with his necrology, by Kaiser (Munich, 1856). His work included investigations on the replacement of one chemical group by another in minerals; the discovery of the amorphous state of several bodies, the artificial production of ultramarine and improvements in the dyeing industry, in the manufacture of beet-root sugar and in brewing. A variety of muscovite, containing nearly four per cent of chromium (chrome mica), is named "Fuchsite" after him. Fuchs, who owed his early education to Frauzzell and the suppressed Jesuits at Ratisbon, was throughout his life a practical and earnest Catholic.

T. O'CONNOR SLONE

Joseph Führich

Joseph Führich

(Born 1800; died 1876.) Joseph Führich was as Catholic in his art as in his life. He was fond of avowing his principles on art with great emphasis; he declares that religion, art, and nature are harmoniously combined in his mind, that he does not admit that ecclesiastical art is its own end, but that its end is to be serviceable in God's house, not as mere decoration, but as a means of instruction, in order to manifest to the heart as far as possible by means of the senses the life of faith. As a painter his works, like Overbeck's, were inspired by piety, while in his conceptions and their expression he resembles Cornelius. As the son of a poor painter in the Bohemian town of Kratzau, he learned the elements of the art in his father's workshop and practised drawing while keeping his flock, the Christ-Child and the adoration of the shepherds being his favourite subject. His father brought him at the age of sixteen to the painter Bergler in Prague.

This artist was so well pleased with two compositions assigned by him to the novice, that he advised him to exhibit some of his pictures. Two of them were actually bought, and several art patrons procured for him the funds necessary to attend the academy. The reading of Romantic poets soon made a Romanticist of him. Cornelius's illustrations of "Faust" and Overbeck's sketch of Tasso confirmed this tendency. On his journeys to Dresden and Vienna he became fond of Dürer's creations. He illustrated the Lord's Prayer in nine etchings and Tieck's "Genoveva" in fifteen. To the recommendation of some Romanticists he was indebted for the means for a journey to Rome, which he began towards the end of 1826. In Italy he studied the works of different periods of art, above all acquired the historical style, studied the representation of the great Christian mysteries, and modified his method by the study of the works of Raphael and Michelangelo. Of course he did not

fail to become acquainted with Fra Angelico, a spirit congenial to his own. In Rome he immediately joined the Nazarene School, learned monumental technic, and completed the Tasso cycle in the Villa Massimi by adding three frescoes: "Armida and Rinaldo", "Armida in the Enchanted Forest", and "The Crusaders at the Holy Sepulchre." The year 1829 saw him again in Prague, but in 1834 he went to Vienna, where he lived till his death.

It is noteworthy that two of his early pictures, painted shortly after his return, viz. "Jacob and Rachel" and "Mary's Journey over the Mountains", sold for five times the original price, even during his lifetime. In 1841 he became professor in the academy of Vienna and was raised to the order of knighthood in 1854, and was henceforth commonly called Ritter von Führich. Executed with faith the same care as the paintings just mentioned, are "Booz and Ruth", "St. Gudula", "Christ on His way to the Garden". He painted religious pictures almost exclusively; of Old-Testament subjects we may mention: "God writes the Commandments upon the Tables of Stone", "Josue and the destruction of Jericho", "The Sorrowing Jews"; of New -Testament pictures: "Joseph's Dream", "Joseph and Mary on their Way to Jerusalem", "The Birth of Christ", "The Storm on the Sea", "The Miraculous Draught of Fishes". These pictures prove the grandeur and loftiness of religious themes and testify to the moral and mystical conception of the artist. Purity in form an energy in expression, a simple beauty in movement and dress, without pretension and affectation, are their unmistakable excellencies. The artist's desire to apply the monumental fresco-technic in his native country fulfilled twice. In 1844-46 he painted the Stations of the Cross in the church of St. John Nepomucene in Vienna. The work was appreciated on all sides, and copies of it have reached America and the most distant missions.

In 1854-61 he painted, together with others, the church of Altlerchenfeld in Vienna. The artist himself has explained to us the plan of this Christian epos. Christ's activity as the Saviour before, during, and after his earthly careen is presented here to the eyes of the faithful as in a great picture Bible; in the vestibule, what precedes the creation of man; on the walls of the entrance and in the aisles, the prototypes of the Old Testament; in the nave, scenes from the New Testament; the pictures in the transept represent the proximate preparation for the redemption; over the main altar, the Crucifixion, and in the choir, Christ's life in His Church. The plan, as well as the composition, is magnificent, in the execution he was aided by less skilful hands, and the colouring is at times imperfect, as is the case in most of the works of the Nazarenes. But Führich acquired his greatest fame as a draughts-man. Though we may miss at times individuality, characters drawn from life, and dramatic movement, a fact which will not astonish us, considering the ideal character of his subjects, still he meets the essential requirements of his theme, often enraptures us by his *naïveté* and piety, by his noble lines and thoughtful invention. His cyclical pictures have become the joy of the Christian people. The master here achieves his ideal of the artist's work. The artist must be a man of meditation and a man of enthusiasm, who can translate the element of instruction from the purely intellectual sphere into that of the imagination, turn mere inspection into contemplation. The Christmas cycle or "The Way to Bethlehem" in its twelve numbers contains the most beautiful pictorial idylls. Full of charm and touching is the symbolical figure of the human soul, whose

attention is first called by the personification of Christian art to the mystery of the Incarnation and which then follows the events with the light of meditation and the inspiration of art. The fifteen pictures of the Easter cycle, "He is Risen", surprise us by the fertility of ideas, by the astonishing skill in the use of symbolical language, by their dignified earnestness and deep truth. Equally imperishable works of art are the eleven drawings and etchings entitled "Christ's Triumph". In "Thomas à Kempis" (to the text of Guido Görres) Führich found an opportunity to throw the principal tenets of our religion into poetical form, and at the same time to reveal the wealth of his Christian heart.

To these works must be added "The Life of Mary", "The Legend of St. Wendelin", "The Psalter", "Poor Henry", and "Memorials for Our Time". Most of these drawings were made for woodcuts, "The Prodigal Son" and "Ruth" for copperplate engravings. Führich's Catholic principles of æsthetics are laid down in his beautiful booklet "Von der Kunst" also in "Kunst und ihre Formen." Moreover, we have from his pen "Briefe aus Italien" and an autobiography; a new edition of the latter, prepared by friends and enriched with additions, appeared in 1875 in Vienna.

G. GIETMAN

Fulbert of Chartres

Fulbert of Chartres

Bishop, b. between 952 and 962; d. 10 April, 1028 or 1029. Mabillon and others think that he was born in Italy, probably at Rome; but Pfister, his latest biographer, designates as his birthplace the Diocese of Laudun in the present department of Gard in France. He was of humble parentage and received his education at the school of Reims, where he had as teacher the famous Gerbert who in 999 ascended the papal throne as Sylvester II. In 990 Fulbert opened a school at Chartres which soon became the most famous seat of learning in France and drew scholars not only from the remotest parts of France, but also from Italy, Germany, and England. Fulbert was also chancellor of the church of Chartres and treasurer of St. Hilary's at Poitiers. So highly was he esteemed as a teacher that his pupils were wont to style him "venerable Socrates". He was a strong opponent of the rationalistic tendencies which had infected some dialecticians of his times, and often warned his pupils against such as extol their dialectics above the teachings of the Church and the testimony of the Bible. Still it was one of Fulbert's pupils, Berengarius of Tours, who went farthest in subjecting faith to reason. In 1007 Fulbert succeeded the deceased Rudolph as Bishop of Chartres and was consecrated by his metropolitan, Archbishop Leutheric of Sens. He owed the episcopal dignity chiefly to the influence of King Robert of France, who had been his fellow student at Reims. As bishop he continued to teach in his school and also retained the treasurership of St. Hilary. When, about 1020, the cathedral of Chartres burned down, Fulbert at once began to rebuild it in greater splendour. In this undertaking he was financially assisted by King Canute of England, Duke William of Aquitaine, and other European sovereigns. Though Fulbert was neither abbot nor monk, as has been wrongly asserted by some historians, still he stood in friendly relation with Odilo of Cluny,

Richard of St. Vannes, Abbo of Fleury, and other monastic celebrities of his times. He advocated a reform of the clergy, severely rebuked those bishops who spent much of their time in warlike expeditions, and inveighed against the practice of granting ecclesiastical benefices to laymen.

Fulbert's literary productions include 140 epistles, 2 treatises, 27 hymns, and parts of the ecclesiastical Office. His epistles are of great historical value, especially on account of the light they throw on the liturgy and discipline of the Church in the eleventh century. His two treatises are in the form of homilies. The first has as its subject: *Misit Herodes rex manus, ut affligeret quosdam de ecclesia*, etc. (Acts xii 1); the second is entitled "*Tractatus contra Judaeos*" and proves that the prophecy of Jacob, "*Non auferetur sceptrum de Juda*", etc. (Gen., xlix, 10), had been fulfilled in Christ. Five of his nine extant sermons are on the blessed Virgin Mary towards whom he had a great devotion. The life of St. Aubert, bishop of Cambrai (d. 667), which is sometimes ascribed to Fulbert, was probably not written by him. Fulbert's epistles were first edited by Papire le Masson (Paris, 1585). His complete works were edited by Charles de Villiers (Paris, 1608), then inserted in "*Bibl. magna Patrum*" (Cologne, 1618) XI, in "*Bibl. maxima Patri.*" (Lyons, 1677), XVIII, and with additions, in Migne, P.L., CXLI, 189-368.

MICHAEL OTT

St. Fulcran

St. Fulcran

Bishop of Lodève; d. 13 February, 1006. According to the biography which Bernard Guidonis, Bishop of Lodève (d. 1331), has left us his saintly predecessor, Fulcran came of a distinguished family, consecrated himself at an early age to the service of the Church, became a priest, and from his youth led a pure and holy life. When in 949 Theoderich, Bishop of Lodève, died, Fulcran, notwithstanding his unwillingness, was chosen as his successor and was consecrated by the Archbishop of Narbonne on 4 February of the same year. He was untiring in his efforts to conserve the moral life within his diocese, especially among the clergy and the religious orders; he rebuilt many churches and convents, among them the cathedral dedicated to St. Genesius and the church of the Holy Redeemer with the Benedictine monastery attached to it. The poor and the sick were the objects of his special care; for their support he founded hospitals and endowed others already existing. The following anecdote from his life is worthy of mention. A bishop of Gaul had fallen away from the Faith and had accepted Jewish teachings. When the news reached Fulcran, he exclaimed in an excess of zeal: "This bishop should be burned!" Shortly afterwards the renegade prelate was actually seized by his incensed flock and delivered up to death by fire. Fulcran was then filled with remorse that by his utterance he should have been the cause of the apostate's death, and after doing severe penance, he made a pilgrimage to Rome, there to receive absolution for his supposed guilt. After his death he was buried in the cathedral of Lodève and honoured as a saint. His body, which had been preserved intact, was burned by the Huguenots in 1572, and only a few

particles of his remains were saved. He is the second patron of the Diocese of Lodève, and his feast falls on 13th February.

J.P. KIRSCH

Fulda

Fulda

DIOCESE OF FULDA (FULDENSIS).

This diocese of the German Empire takes its name from the ancient Benedictine abbey of Fulda. To systematize the work of evangelizing Germany, St. Boniface organized a hierarchy on the usual ecclesiastical basis; in Bavaria the Dioceses of Salzburg, Freising, Ratisbon, and Passau; in Franconia and Thuringia, Würzburg, Eichstätt, Buraburg near Fritzlar, and Erfurt. To facilitate missionary work farther north, especially among the Saxons, he sought a suitable spot for the location of a monastery. He chose for this mission St. Sturm, who, after journeying far and wide, found an appropriate place in the great forest of Buchonia, in the district of Grabfeld on the Fulda. Boniface sanctioned this choice of a location, and petitioned Carloman, to whom the country round about belonged, to grant him the site for a monastery. Carloman yielded to the saint's request, and also induced the Frankish nobles who had estates in the vicinity to bestow a part of them on the Church. On 12 March, 744, St. Sturm took solemn possession of the land, and raised the cross. The wilderness was soon cleared, and the erection of the monastery and church, the latter dedicated to the Most Holy Redeemer, begun under the personal direction of St. Boniface. He appointed St. Sturm first abbot of the new foundation, which he intended to surpass in greatness all existing monasteries of Germany, and to be a nursery for priests. The rule was modelled on that of the Abbey of Monte Cassino, as Sturm himself had gone to Italy (748) for the express purpose of becoming familiar with it. To secure absolute autonomy for the new abbey, Boniface obtained from Pope Zachary a privilege, dated 4 November, 751, placing it immediately under the Holy See, and removing it from all episcopal jurisdiction. The authenticity of this document has frequently been called into question, but on the whole it is considered as well established. (For further details see Tangl in "Mitteilungen des Instituts für österreichische Geschichtsforschung", 1899; and B. Sepp, "Die Fuldaer Privilegien Frage", Ratisbon, 1908.) In 753 Pepin gave the royal sanction to this exemption from episcopal jurisdiction. Boniface showed his love for Fulda when he charged that his remains should be laid to rest there.

Under the prudent administration of St. Sturm (d. 779), the monastery soon rose to greater splendour; from an early period the tomb of St. Boniface made it a national sanctuary for Christian Germany. Great success crowned the agricultural work of the monks, and small colonies which were established in different places gradually became the centres of villages and civil communities. Soon Fulda was the mother-house of a number of smaller monasteries, which were later administered by provosts under the superiorship of the abbot. The gifts of German princes, nobles, and private individuals increased the landed possessions of the abbey so rapidly that they soon extended over

distant parts of Germany; there were estates in Thuringia, Saxony, Hesse, Bavaria, Lorraine, Swabia: possessions along the Rhine, in East Frisia, and even at Rome (the church of Sant' Andrea). Even in artistic and literary lines Fulda rose to great importance. On the site of the first church, which had been artistically decorated by Sturmius, there rose under Abbots Baugulf (779-802), Ratgar (802-17), Eigil (818-22), and Rabanus Maurus (822-42) a magnificent edifice which roused the admiration of contemporaries, and even of posterity, and exerted a lasting influence on architectural and artistic activity in distant places. In addition to architecture, sculpture and painting were zealously cultivated. The monastic school established by Sturmius began to flourish during the time of Charlemagne and Alcuin, and, under Rabanus Maurus, particularly, was the chief nursery of civilization and learning in Germany, and became celebrated throughout Europe. It was open not only to theological students, but also to young men desiring to embrace secular careers. The curriculum embraced the subjects usually taught during the Middle Ages: the seven liberal arts (grammar, rhetoric, dialectics, arithmetic, geometry, physics, and astronomy), the different branches of theology, and the German language. Among the most renowned pupils of this school were: Rabanus Maurus, Walafried Strabo, Servatus Lupus, Otfried of Weissenburg, Rudolfus Fuldensis, Williram, Probus, and Meginhard; among the laity: Einhard, Bernhard, King of Italy, and Ulrich von Hutten. Rabanus also founded a library to familiarize the Germans with religious and classical literature, and the zeal of the monks soon produced rich treasures of valuable manuscripts. Unfortunately the greater part of this library disappeared during the looting of the abbey by the Hessians in 1631, and has not since been discovered.

Gradually the monastery rose to a commanding position in the German Empire. From 968 the abbot was primate of all the Benedictine monasteries of Germany and Gaul; from the time of Otto I, arch-chancellor of the empress, whom he crowned jointly with the Elector of Mainz; from the twelfth century he was a prince of the empire; from 1184 had the privilege of sitting at the left of the emperor; and from 1360 the imperial banner was borne before him by a knight. This glory, however, was not wholly without shadows. The monastic discipline was relaxed to such a degree that Abbot Marquard (1150-65) undertook to carry out a reform by introducing the regulations in force at Hirsau (*Consuetudines Hirsaugienses*). The importance of the school as a centre of learning also declined. The great wealth of the abbey in landed possessions, tithes, revenues, and regalia drew an increasing number of nobles to the monastery. By the twelfth century the monks of noble birth had monopolized the seats of the chapter and, in the course of time, practically all the important offices of the abbey itself, as well as the provostships of the dependent houses, were held by members of the German nobility. The difficulty of administering the vast landed possessions caused the abbots to grant certain sections in fief, which eventually resulted in great losses to the abbey; for the feudatories frequently turned their positions to their own personal interests, and sought to convert the fiefs into private property. One of the most notable illustrations of the greed of these monastic stewards is shown by the action of Count Johann von Ziegenhain in the fourteenth century, who, in an insurrection of the burgers of the city of Fulda against Abbot Heinrich VI von Hohenberg (1315-53), headed an attack on the monastery. Not infrequently, too, the obligations of the abbots

as princes of the empire, and the demands made upon them by the state proved most detrimental to the interests of the monastery and its inmates. In 1294, on application of the convent, the pope enjoined a separation of the abbatial and the conventual tables, which was put into effect in 1300 under Abbot Heinrich V von Weilnau (1288-1313) (cf. Rübsam, "Heinrich V. von Weilnau, Fürstabt von Fulda", Fulda, 1879). Imperial capitulations, of which there are records as early as the time of Heinrich VII von Kranlucken (1353-72), especially those of Johann I von Merlau (1395-1440), the "Old Statutes of 1395", restricted to a considerable degree the authority of the abbot over the convent, and raised correspondingly the independent status of that institution. In the mother-house the dean eventually replaced the abbot for all practical purposes. For centuries the chapter preserved this independence, which involved the almost complete exclusion of the abbot from the ecclesiastical organization of his monastery.

At a comparatively early date the teachings of the Reformers found access to the chapter of Fulda, with which, in 1513, the Abbey of Hersfeld had been united; and Abbot Johannes III von Henneberg (1521-41) was forced to consent to a decree of reform favouring the spread of the new doctrines. The zealous Abbot Balthasar von Dermbach (1570-1606) proved an earnest restorer of discipline in the chapter, vigorously inaugurating the work of the Counter-Reformation. Banished by the members of the chapter and their colleagues in 1576, he was unable to return to his abbey until 1602, great progress having been made meanwhile by the imperial administrators in restoring the Catholic Faith. The foundation of a Jesuit college in 1571 was the signal for the reflorescence of the school, which had sunk to comparative insignificance. In addition to the Jesuit gymnasium, Gregory XIII founded (1584) a papal seminary, which he placed under the direction of the Jesuits. Both of these institutions have contributed largely to the maintenance and spread of the Catholic Faith in Germany. A similar zeal for reform was displayed by Balthasar's second successor, Johann Bernhard Schenk von Schweinsberg (1623-32), whose exertions, together with the decrees of several papal visitors, particularly Pietro Luigi Caraffa (1627), restored to the abbot a certain measure of his proper authority, over against that of the chapter and the professors of noble birth. The decrees of reform issued by Caraffa, against which the provosts rebelled after the nuncio's departure, were repeatedly confirmed by the Holy See. The capitulars and provosts of noble birth still retained the privilege of admitting into the chapter only such as could show a certain number of noble ancestors, and this prerogative received papal confirmation in 1731. During the Thirty Years War the chapter was again menaced; in 1631, Landgrave Wilhelm V of Hesse, by virtue of a treaty with Gustavus Adolphus, received the abbey in fief to Sweden, and sought gradually to make Protestantism predominant. After the battle of Nördlingen, however, he no longer had power over Fulda. When the turmoil of the war had ceased, the abbey experienced a period of peace and prosperity. In 1732 the Jesuit and Benedictine schools were united, enlarged, and converted into a university. Benedict XIV raised the abbey to the rank of a bishopric (5 Oct., 1752), with the retention of its monastic organization. The first prince-bishop was Amand von Buseck (1737-56), the collegiate chapter of one dean and fourteen capitulars being now the cathedral chapter.

By the Imperial Delegates' Enactment (*Reichsdeputationshauptschluss*) of 1802 the abbey was secularized, and bestowed on the Prince of Orania as a secular principality; it embraced at this time forty sq. miles, with a population of 100,000. Under Napoleon, in 1809, it was ceded to the Grand Duchy of Frankfort; in 1815, to Hesse-Kassel, with which, in 1866, it passed to Prussia. The university was closed under the law of secularization, and the papal seminary was converted into an episcopal seminary. The last prince-bishop, Adalbert III von Harstall (1788-1802), died in 1814.

In accordance with the Bulls "Provida solersque" of 1821 and "Ad dominici gregis custodiam" of 1827, the Diocese of Fulda was re-established in 1829, and made suffragan to the ecclesiastical province of the Upper Rhine, the first bishop being Johann Adam Rieger (1829-31).

In 1857 and 1871 the boundaries of the new diocese were so altered as to define the territory now embraced within it. It was seriously affected by the Kulturkampf, the see being vacant from 1873 to 1881, and the seminary closed between 1873 and 1886; some of the religious communities suppressed at that time have never been re-established. The present bishop (1909) is Joseph Damian Schmitt, consecrated in 1907.

Statistics

The Diocese of Fulda embraces the Prussian administrative district of Kassel of the province of Hesse-Nassau, Bockenheim (a section of the civic circle of Frankfort-on-the-Main in the administrative district of Wiesbaden), the Grand Duchy of Saxe-Weimar, and one parish of the Grand Duchy of Hesse; Catholic population in 1900 was 167,306, in 1909 about 200,000. It comprises the exempt civic district of Fulda, with 3 parishes and 14 deaneries; for the care of souls, 150 parishes and curacies; 40 chaplaincies and posts as assistants; 53 administrative and teaching positions. The bishop is elected by the cathedral chapter, which consists of a dean, 4 capitulars and 4 prebends. The clergy employed in the care of souls in 1909 number 226 secular and 26 regular priests, giving a total of 252 active clergy, including pastors, curates, chaplains, and assistant priests, as well as priests engaged in the work of teaching and administrative offices. The following orders and congregations are represented in the diocese: Franciscans, at Fulda and Salmünster, with (1907) 35 fathers, and 40 brothers; Oblates of Mary Immaculate, at Hünfeld, with 28 fathers, and 29 brothers; Brothers of Mercy, at Fulda, with 6 brothers. Communities of women are: 1 abbey of Benedictine nuns at Fulda, with 35 sisters; 1 monastery of the English Ladies at Fulda, with 36 sisters; Ursulines at Fritzlär, 32 sisters; Sisters of Mercy of St. Vincent de Paul, 44 communities, with 363 sisters; Poor Servants of Christ, at Frankfort-Bockenheim, 18 sisters; Grey Nuns of St. Elizabeth, at Eisenach, 9 sisters; Vincentians at Kassel, 27 sisters; School Sisters of Divine Mercy at Kassel, 26 sisters.

The diocesan institutions are: the episcopal seminary at Fulda, with eight professors of theology; the episcopal gymnasium or preparatory seminary at Fulda; the episcopal Latin schools at Amöneburg, Geisa, Hünfeld, and Orb; the school for orphaned boys at Sannerz; a similar institution for girls at Maberzell, near Fulda; the reform school for young women at Horas near Fulda; St. Joseph's House for Orphans and First Communicants at Hünfeld; the Lioba Hospital for Incurables at Fulda; and the asylum for imbeciles at Fulda. The most important church of the diocese is the

cathedral at Fulda, in the style of the Renaissance, erected by Prince-Abbot Adalbert von Schleifras (1704-12) on the site of the church built by Abbot Baugulf and his successors. It contains precious altars, a rich treasury, and, as its most important shrine, the tomb of St. Boniface, at which the bishops of Prussia, Baden, and Württemberg gather once a year (cf. Pfaff, "Der Dom zu Fulda", 2nd ed., Fulda, 1855). Mention should also be made of the church of St. Michael at Fulda, dating from Carolingian times; the church on the Petersberg near Fulda; the church of St. Peter at Fritzlär, erected early in the thirteenth century; and the Protestant church of St. Elizabeth at Marburg, a noble specimen of the thirteenth century Gothic. The most popular place of pilgrimage in the diocese is the tomb of St. Boniface.

JOSEPH LINS

St. Fulgentius

St. Fulgentius

A Bishop of Ecija (Astigi), in Spain, at the beginning of the seventh century. Like his brothers Leander and Isidore, two holy Archbishops of Seville, of whom the first was older and the second younger than Fulgentius, he consecrated himself to the service of the Church. A sister of the three was St. Florentina (q.v.). Their father Severianus lived at first in Cartagena; he was a Roman, and, according to later though doubtful information, an imperial prefect. Exact data regarding the life of Fulgentius are wanting, as he is mentioned only occasionally in contemporary sources. Leander, in his "Libellus" on the religious life written for his sister Florentina states that he has sent Fulgentius back to his native town of cartagena, which he now regrets as he fears that harm may befall him, and he requests Florentina to pray for him. What the danger was to which Fulgentius was exposed we have no means of knowing. Probably through the influence of Leander, who was made Archbishop of Seville in the year 584 and who played an important part in the affairs of the Visigothic kingdom, Fulgentius became Bishop of Astigi (Ecija), in the ecclesistical province of

Seville. As Leander died in 600 and Pegasius is shown to have still been Bishop of Ecija in 590, we may safely assume that Fulgentius was chosen bishop between 600 and 610; at all events he already occupied the see in 610. Isidore, who succeeded to the Archbishopric of Seville upon the death of his brother Leander, dedicated to Fulgentius "his lord, the servant of God", his work on the offices of the Church, "De ecclesiasticis officiis". In fact it was at the solicitation of Fulgentius that he wrote this account of the origin and authors of the Church services i.e., of the Liturgy.

At the second synod of Seville (619), for which Isidore had assembled the bishops of the province of Baetica, a controversy between the Bishop of Astigi and the Bishop of Cordova regarding a church which was claimed by each as belonging to a parish in his diocese was brought up for settlement; a commission was appointed, and it was declared that thirty year's undisturbed possession should constitute a legal title. Fulgentius attended the synod in person, his name being found among the signatures to the Acts of the council. This is the last event in the life of Fulgentius for which we have positive proof. In any case, he died before the year 633, as one Marcianus is shown to have then been Bishop of Astigi. Fulgentius, like his sister and brothers, was revered as a saint. In Spain his feast was celebrated on different days; in the "Acta Sanctorum" of the Bollandists it is on 14 January. He is frequently confused in medieval writings with Fulgentius, Bishop of Ruspe; some works have also been attributed to him, of which, however, no traces remain. It is said that long after their deaths the bones of St. Fulgentius and those of his sister, St. Florentina, were carried for safety into the Sierra de Guadalupe, and that in the fourteenth century they were found in the village of Berzocana in those mountains.

J.F. KIRSCH

Saint Fulgentius

St. Fulgentius

(FABIUS CLAUDIUS GORDIANUS FULGENTIUS).

Born 468, died 533. Bishop of Ruspe in the province of Byzacene in Africa, eminent among the Fathers of the Church for saintly life, eloquence and theological learning. His grandfather, Gordianus, a senator of Carthage, was despoiled of his possessions by the invader Genseric, and banished to Italy, his two sons returned after his death, and, though their house in Carthage had been made over to Arian priests, they recovered some property in Byzacene. Fulgentius was born at Telepte in that province. His father, Claudius, soon died, and he was brought up by his mother, Mariana. He studied Greek letters before Latin "quo facilius posset, victurus inter Afros, locutionem Graecam, servatis aspirationibus, tamquam ibi nutritus exprimere". We learn from these words of his biographer that the Greek aspirates were hard for a Latin to pronounce. We are told that Fulgentius at an early age committed all Homer to memory, and throughout his life his pronunciation of Greek was excellent. He was also well trained in Latin literature. As he grew older, he governed his house wisely in subjection to his mother. He was favored by the provincial authorities, and made procurator of the fiscus. But a desire of religious life came over him: he practiced austerities

privately in the world for a time, until he was moved by the "Enarrationes" of St. Augustine on Psalm xxxvi to betake himself to a monastery which had been founded by a bishop named Faustus near his episcopal city, from which like other Catholic bishops he had been exiled by the Vandal king, Hunneric. The fervent appeal of the young man won his admission from Faustus, to whom he was already well known. His mother clamored with tears at the door of the monastery to see her son; but he gave no sign of his presence there. He became ill from excessive abstinence, but recovered without renouncing it. His worldly goods he made over to his mother, leaving his younger brother dependent on her.

But Faustus was obliged to fly from renewed persecution, and by his advice Fulgentius sought a small monastery not far off, whose abbot, Felix, had been his friend in the world. Felix insisted upon resigning his office to Fulgentius. A contest of humility ended in the agreement of all that Fulgentius should be co-abbot. Felix cared for the house, and Fulgentius instructed the brethren; Felix showed charity to the guests, Fulgentius edified them with discourse. A raid of Moors made it necessary to remove to a safer spot, and a new retreat was started at Idida in Mauretania, but Fulgentius soon left Felix, having conceived an ardent desire to visit the monasteries of Egypt, for he had been reading the "Institutiones" and "Collationes" of Cassian, and he also hoped to be no longer superior, and to be able to keep yet stricter abstinence. He took ship at Carthage for Alexandria with a companion named Redemptus. On his arrival at Syracuse, the holy bishop of that city, Eulalius, told him. "The lands to which you wish to travel are separated from the communion of Peter by an heretical quarrel". Fulgentius therefore stopped a few months with Eulalius, and then sought further advice from an exiled bishop of his own province, who was living as a monk on a tiny island off the coast of Sicily. He was recommended to return to his own monastery, but "not to forget the Apostles". In consequence, he made a pilgrimage to Rome, where he was present at a speech made by Theodoric before the senate, and had an opportunity of despising all the magnificence the court of the Gothic king could show. His return was hailed with joy in Africa, and a nobleman of Byzacene gave him fertile land on which he established a new monastery. But Fulgentius retired from his position as superior in order to live a more hidden life in a large and strict abbey which flourished on a rocky island. Here he worked, read, and contemplated. He was an accomplished scribe, and could make fans of palm leaves. Felix, however, refused to submit to the loss of his brother abbot, and he got Bishop Faustus to claim Fulgentius as his own monk and to order his return to Felix. The bishop ensured his continuance as abbot by ordaining him priest.

At this time the Arian King Thrasimund (496-523), though not so cruel a persecutor as his predecessors, allowed no Catholic bishops to be elected in Africa. It was decided in 508 by such bishops as could manage to meet together that it was necessary to brave this law, and it was decreed that elections should take place quietly and simultaneously in all the vacant sees, before the Government had time to take preventive measures. Fulgentius was nominated in several cities; but he had fled into hiding, and could not be found. When he thought all the appointments had been made, he reappeared, but the seaport of Ruspe, where the election had been delayed through the ambition of a deacon of the place, promptly elected him; and against his will he was consecrated

bishop of a town he had never seen. He insisted on retaining his monastic habits. He refused all ease and continued his fasts. He had but one poor tunic for winter and summer; he wore no *orarium*, but used a leathern girdle like a monk; nor would he wear clerical shoes, but went barefoot or with sandals. He had no precious chasuble (*casula*), and did not permit his monks to have any. Under his chasuble he wore a grey or buff (?) cloak. The same tunic served day and night, and even for the holy Sacrifice, at which, said he, the heart and not the garment should be changed. His first care at Ruspe was to get the citizens to build him a monastery, of which he made Felix abbot, and he never lived without monks around him. But very soon all the new bishops were exiled. Fulgentius was one of the juniors among the 60 African bishops collected in Sardinia, but in their meetings his opinion was eagerly sought, and the letters sent in the name of all were always drawn up by him. He also frequently composed pastoral letters for individual colleagues to send to their flocks. Fulgentius had brought a few monks with him to Sardinia, and he joined with two other bishops and their companions in a common life, so that their house became the oracle of the city of Calaris, and a centre of peace, consolation, and instruction.

It was perhaps about the year 515 that Thrasimund issued a series of ten questions as a challenge to the Catholic bishops, and the reputation of Fulgentius was now so great that the king sent for him to Carthage to speak in the name of the rest. The saint, during his stay in that city, gave constant instructions in the faith of the Holy Trinity, and reconciled many who had been rebaptized by the Arians. He discussed with many wise persons the replies to be made to the ten questions, and at length submitted to the king a small but able work which we still possess under the title of "*Contra Arianos liber unus, ad decem objectiones decem responsiones continens*". The king then proposed further objections, but was anxious to avoid a second reply as effective as the former one. He took the unfair and tyrannical course of having the new questions, which were expressed at great length, read aloud once to Fulgentius, who was not allowed to have a copy of them, but was expected to give direct answers; though the public would not know whether he had really replied to the point or not. When the bishop pointed out that he could not even recollect the questions after hearing them but once, the king declared that he showed a want of confidence in his own case. Fulgentius was therefore obliged to write a larger work, "*Ad Trasimundum regem Vandalorum libri tres*", which is a very fine specimen of careful and orthodox theological argument.

Thrasimund seems to have been pleased with this reply. An Arian bishop named Pinta produced an answer which, with Fulgentius's refutation of it, is lost to us. The work now entitled "*Adversus Pintam*" is spurious. The king wished to keep Fulgentius at Carthage, but the Arian bishops were afraid of his influence and his power of converting, and therefore obtained his exile. He was put on board ship at night, that the people of Carthage might not know of his departure. But contrary winds obliged the vessel to remain several days in port, and nearly all the city was able to take leave of the holy bishop, and to receive Holy Communion from his hand. To a religious man who was weeping he privately prophesied his speedy return and the liberty of the African Church.

Fulgentius was accompanied to Sardinia by many of his monastic brethren. Instead, therefore, of proceeding to his former abode, he obtained permission from the Bishop of Calaris to build an

abbey hard by the Basilica of St. Saturninus, and there he ruled over forty monks, who observed the strictest renunciation of private property, while the abbot saw to all their wants with great charity and discretion; but if any monk asked for anything, he refused him at once, saying that a monk should be content with what he is given, and that true religious have renounced their own will, "parati nihil velle et nolle". This severity in a particular point was no doubt tempered by the saint's sweetness of disposition and charm of manner, with which was associated a peculiarly winning and moving eloquence. He wrote much during his second exile. The Scythian monks, led by John Maxentius at Constantinople, had been trying to get their formula approved at Rome: "One of the Trinity was crucified". At the same time they were attacking the traces of Semipelagianism in the works of Faustus of Riez. On the latter point they had full sympathy from the exiles in Sardinia, whose support they had asked. Fulgentius wrote them a letter in the name of the other bishops (Ep. 15), and composed a work "Contra Faustum" in seven books, which is now lost. It was just completed when, in 523, Thrasimund died, and his successor, Hilderic, restored liberty to the Church of Africa.

The exiles returned, and new consecrations took place for all the vacant sees. When the bishops landed at Carthage, Fulgentius had an enthusiastic reception, and his journey to Ruspe was a triumphal progress. He returned to his beloved monastery, but insisted on Felix being sole superior; and he, who was consulted first among all the bishops of the province, asked leave in the monastery for the least things from the abbot Felix. He delivered in writing to the abbey a deed by which it was perpetually exempted from the jurisdiction of the bishops of Ruspe. This document was read in the Council of Carthage of 534. It was in fact the custom in Africa that monasteries should not of necessity be subject to the local bishop, but might choose any bishop at a distance as their ecclesiastical superior. Fulgentius now gave himself to the care of his diocese. He was careful that his clergy should not wear fine clothes, nor devote themselves to secular occupations. They were to have houses near the church, to cultivate their gardens with their own hands, and to be particular about correct pronunciation and sweetness in singing the psalms. He corrected some with words, others with scourging. He ordered fasting on Wednesdays and Fridays for all clergy and widows, and for those of the laity that were able. In this last period of St. Fulgentius's life he published some sermons, and ten books against the Arian Fabianus, of which only fragments remain. A year before his death he was moved to great compunction of heart; he suddenly quitted all his work, and even his monastery, and sailed with a few companions to the island of Circe, where he gave himself to reading, prayer, and fasting in a monastery which he had previously caused to be constructed on a small rock. There he mortified his members and wept in the presence of God alone, as though he anticipated a speedy death. But complaints were made of his absence, and he returned to his labors. He shortly fell into a grievous sickness. In his sufferings he said ceaselessly: "O Lord, give me patience here, and forgiveness hereafter." He refused, as too luxurious, the warm bath which the physicians recommended. He summoned his clergy and in the presence of the monks asked pardon for any want of sympathy or any undue severity he might have shown. He was sick for seventy days, continuing in prayer and retaining all his faculties to the last. His possessions he gave to the

poor, and to those of his clergy who were in need. He died on 1 January, 533, in the sixty-fifth year of his life and the twenty-fifth of his episcopate.

Besides the works already mentioned, we still possess of St. Fulgentius some fine treatises, sermons, and letters. The best known is the book "De Fide", a description of the true Faith, written for a certain Peter, who was going on a pilgrimage to the schismatic East. The three books "Ad Monimum", written in Sardinia, are addressed to a friend who understood St. Augustine to teach that God predestinates evil. St. Fulgentius is saturated with St. Augustine's writings and way of thinking, and he defends him from the charge of making God predestinate evil. He himself makes it a matter of faith that unbaptized infants are punished with eternal fire for original sin. No one can by any means be saved outside the Church; all pagans and heretics are infallibly damned. "It is to think unworthily of grace, to suppose that it is given to all men", since not only not all have faith, but there are still some nations which the preaching of the Faith has not yet reached. These harsh doctrines seem to have suited the African temperament. His last work against Semipelagianism was written at Ruspe and addressed to the leaders of the Scythian monks, John and Venerius: "De veritate praedestinationis et gratiae Dei", in three books. To these we may add the two books, "De remissione peccatorum". He wrote much on the Holy Trinity and the Incarnation: "Liber contra Arianos", "Liber ad Victorem", "Liber ad Scarilam de Incarnatione". To St. Augustine's doctrine of the Trinity, Fulgentius adds a thorough grasp of the doctrine of the Person of Christ as defined against Nestorianism and Eutychianism. His thought is always logical and his exposition clear, and he is the principal theologian of the sixth century, if we do not count St. Gregory. His letters have no biographical interest, but are theological treatises on chastity, virginity, penance, etc. His sermons are eloquent and full of fervour, but are few in number.

The chief authority for the life of St. Fulgentius is the biography by a disciple, almost certainly FERRANDUS, the canonist; it is prefixed to his works, and is also in *Acta SS.*, 1 Jan. See REYNOLDS in *Dict. of Christ. Biog.*, who refers also to SCHROECKH, *Kirchengeschichte*, xvii, xviii, and WIGGERS, *Augustinismus und Pelagianismus*, II; there is an excellent summary of his works in FESSLER-JUNGMANN, *Patrologia*, II; WORTER, *Zur Dogmengeschichte des Semipelagianismus*, III (Munster, 1900); FICKER, *Zur Würdigung des Vita Fulgentii* (*Zeitschr. f. Kirchengesch.*, 1900, 9); HELM identifies St. Fulgentius with the grammarian Fabius Furius Fulgentius Planciades (*Rhein. Mus. Philol.*, 1897, 177; *Philologus*, 1897, 253; see TEUFFEL-SCHWABE, *Gesch. der rom. Lit.*, 5th ed., pp. 1238 sqq.) On the collection of 80 spurious sermons appended to St. Fulgentius's works (first publ. by Raynaldus, Lyons, 1652) see G. MORIN, *Notes sur un MS. des homelies du Pseudo-Fulgence* (in *Revue Bened.*, April, 1909). The best edition of St. Fulgentius is that of DESPREZ (Paris, 1684), reprinted in Migne, P.L., LXV. Cf. BARDENHEWER, *Patrology* (tr., St. Louis, 1908).

JOHN CHAPMAN
Fulgentius Ferrandus

Fulgentius Ferrandus

A canonist and theologian of the African Church in the first half of the sixth century. He was a deacon of Carthage and probably accompanied his master and patron, Fulgentius of Ruspe, to exile in Sardinia, when the bishops of the African Church were banished from their sees by the Arian King of the Vandals, Thrasamund. After the death of Thrasamund and the accession of Hilderic, in. 523, the exiles were permitted to return, and Fulgentius, although only a deacon, soon gained a position of great importance in the African Church. He was frequently consulted in regard to the complex theological problems of the time and was known as one of the most redoubtable champions of orthodoxy in Western Christendom. His works are mostly of a doctrinal character. He defended the Trinitarian doctrines against the Arians and dealt besides with the question of the two natures in Christ, with baptism, and with the Eucharist. He drew up a "Breviatio Canonum Ecclesiasticorum" in which he summarized in two hundred and thirty-two canons the teaching of the earliest councils, Nicaea, Laodicea, Sardica, etc., concerning the manner of life of bishops, priests, deacons and other ecclesiastics, and of the conduct to be observed towards Jews, heathens and heretics. He also wrote at the request of the Comes Reginus (who was probably military governor of North Africa) a treatise on the Christian rule of life for soldiers, in which he laid down seven rules which he explained and inculcated, and in which he gave evidence of his piety and practical wisdom. Through no desire of his own, he was forced to take an active part in the controversy brought about through the condemnation of the "Three Chapters" by the Emperor Justinian. At the request of Pope Vigilius the Roman deacons Pelagius and Anatolius submitted the questions involved in the emperor's censure of the works of Theodore of Mopsuestia, Theodoret of Cyrus, and Ibas of Edessa, to their Carthaginian confrere, requesting him at the same time to lay the matter before the African bishops. Ferrandus at once declared himself in the most emphatic manner against yielding to the schemes of the emperor (Ep. vi, ad Pelagium et Anatolium diaconos). His decision met with the approval of Rusticus, Archbishop of Carthage, and was subsequently ratified by the council of African bishops over which Rusticus presided, and in which it was agreed to sever all relations with Pope Vigilius. Ferrandus died shortly after this event and before the Council of Constantinople was convened. (For his works see P.L., LXVII.)

AUDOLLENT, Carthage Romaine (Paris, 1901), 555 sqq., 743 sqq.; MAASSEN, *Gesch. d. Quellen und Litt. des kanon. Rechts* (Graz, 1870), I, 799-802; BARDENHEWER, *Patrology*, tr. SHAHAN (Freiburg im Br.; St. Louis, 1908), 618.

PATRICK J. HEALY

Lady Georgiana Charlotte Fullerton

Lady Georgiana Charlotte Fullerton

Novelist; born 23 September, 1812, in Staffordshire, died 19 January, 1885, at Bournemouth. She was the youngest daughter of Lord Granville Leveson Gower (afterwards first Earl Granville) and Lady Harriet Elizabeth Cavendish, second daughter of the fifth Duke of Devonshire. She was chiefly brought up in Paris, her father having been appointed English ambassador there when she was twelve years old. Her mother, a member of the Anglican Church, was a woman of deep religious feeling and Lady Georgiana was trained to devotion. In 1833 she married in Paris an attaché of the embassy Alexander George Fullerton, who was of good Irish birth and had previously been in the Guards. In 1841, when Lord Granville retired from the embassy, Lady Georgiana and her husband traveled for some time in France, Germany, and Italy. Two years later, Mr. Fullerton was received into the Church, after long and thoughtful study of the religious questions involved in this step. In 1844 his wife published her first book "Ellen Middleton", a tragic novel, of some power and showing markedly "High Anglican" religious views, so that Lord Brougham pronounced it "rank Popery". It was well received, and was criticized by Mr. Gladstone in "The English Review". Two years after, in 1846, the author placed herself under the instruction of Father Brownhill, S. J., and was received by him into the Church on Passion Sunday. In 1847 she published her second book, "Grantley Manor", which is largely a study of character, and is usually considered an advance, from a literary point of view, upon the first. There was then a pause in her published work, which was continued, in 1852, with the story of "Lady Bird". In 1855 her only son died, a loss she never quite recovered from, and henceforth she devoted herself to works of charity. In 1856 she joined the Third Order of St. Francis. She and her husband eventually settled in London and her literary work became a large part of her life. She not only wrote novels, but a good deal of biography, some poetry, and made translations from French and Italian. All her books have distinction and charm. Some of her chief works are: "Ellen Middleton" (London, 1884), "Grantley Manor" (London, 1854); "Lady Bird" (London, 1865); "La Comtesse de Bonneval", written in French (Paris, 1857); the same translated into English (London, 1858), "Laurentia", a tale of Japan (London, 1904); "Constance Sherwood" (Edinburgh and London, 1908), "Seven Stories" (London, 1896).

LEE in Dict. Nat. Biog., s. v.; CRAVEN, Lady G. Fullerton, sa vie et ses aevres (Paris, 1888), English version by COLERIDGE (London, 1888); YONGE, Women Novelists of Queen Victoria's Reign (London, 1897); The Inner Life of Lady G. Fullerton (London, 1899).

KATE M. WARREN

Bartolommeo Fumo

Bartolommeo Fumo

A theologian, b. at Villon near Piacenza; d. 1545. At an early age he entered the the Dominican Order and made great progress in all the ecclesiastical sciences, but especially in canon law. He was distinguished as an inquisitor at Piacenza, but is best known for his work, "Summa casuum conscientiae, aurea armilla dicta". This work, which was dedicated to Bishop Catelan of Piacenza, went through many editions, the two most important and best known being those of Antwerp (1591)

and Lyons (1594). It was held in high esteem by all the canonists of the time, especially because it contained, in brief and compendious form, a digest of all similar explanations since the thirteenth century. In one or two places, by a series of clean cut sentences, he refutes all the errors of probabilism. The authorship of the work has been disputed by one or two, but without reason. He is also the author of "Expositio compendiosa in epistolas in Pauli et canonicas", and book entitled, "Poemata quedam". His first work, "Philothea, opus immortalis animi dignitatem continens", was dedicated to Catalan before he became bishop.

H.J. SMITH

Funchal

Funchal

(FUNCHALENSIS.)

Diocese in the Madeira Islands. Both in neo-Latin and in Portuguese the name of the town signifies "fennel" (Latin *foenicularium*). Madeira, the Purpuraria of the Romans, situated in the extreme west of the ancient world, about 440 miles from the coast of Morocco, was discovered in 1344 by the famous Bristol lovers (*Amantes de Bristol*), Anna Dorset and Robert O'Machin; later it was abandoned. In 1419 Joan Gonçales and Tristan Vaz took possession of the island. In 1445 were first planted the vines (brought from Crete) that have since rendered Madeira so famous. The Christian inhabitants were subject at first to the bishop of Tangier, until Leo X (16 June, 1514) made Funchal an episcopal see. In the interest of the vast territories in Africa and Asia then subject to Portugal, Clement VII (8 July, 1539) raised Funchal to archiepiscopal rank, and gave it for suffragans Angra, Cabo Verde, Goa, and Santo Thomé. In 1551, however; it was reduced to simple episcopal rank, and 1570 was made a suffragan of Lisbon, which it is to be present.

Funchal is delightfully situated on the south side of the the Madeira Islands, and was therefore the first halting place for Portuguese and Spanish ships on their way to the New World. Owing to this natural advantage the island soon became a great centre of wealth and foreign trade, likewise an important centre for the spread of the gospel whose missionaries found the islands convenient as a resting-place going and coming. Funchal was once to the Portuguese what Gibraltar, St. Helena, and Malta now are to the English. Therefore they garrisoned the city, though naturally defended by its rugged cliffs, and built there four impregnable fortresses. Its churches and monasteries no longer exhibit their former architectural splendour, though, as late as the beginning of the nineteenth century, the lintels and jambs of the windows in many houses were of massive silver, and the church vessels of solid gold (chalices, pyres, monstrances) were thickly studded with pearls, diamonds, and other precious stones. Funchal has long been a favourite resort of invalids, especially those suffering from diseases of the lungs. Its white villas and editices, embowered in rich tropical vegetation, charm the traveller as he approaches from the sea. The roads and streets are quite steep and the usual means of transportation is by ox-sled. The population of the city is (1909) about 20,000. According to the "Annuaire Pontifical" for 1906, the diocese contains about 150,000

Catholics, with 50 parish churches, 80 public and two conventual chapels, all ministered to by 93 priests.

F. FITA

Fundamental Articles

Fundamental Articles

This term was employed by Protestant theologians to distinguish the essential parts of the Christian faith from those non-essential doctrines, which, as they believed, individual churches might accept or reject without forfeiting their claim to rank as parts of the Church universal. During the seventeenth century, the view that doctrines might be thus distinguished into two classes was widely current in the various reformed bodies; and several well-known divines endeavoured to determine the principle of the division. In some cases their aim was mainly practical. They hoped in this way to find a dogmatic basis for union between the separated churches. More often, however, the system was used controversially to defend the position of the Protestant bodies against the arguments of Catholics.

The first to advance the theory seems to have been George Cassander (1513-66), a Catholic by religion, but apparently little versed in theology. In his work "De officio pii ac publicae tranquillitatis vere amantis viri in hoc religionis dissidio" (1561), he maintained that in the articles of the Apostles' Creed we have the true foundations of the Faith; and that those who accept these doctrines, and have no desire to sever themselves from the rest of Christendom are part of the true Church. He believed that thus it might be possible to find a means of reuniting Catholics, Greeks, and Protestants. But the proposal met with no favour on either side. The Louvain professors, Hesselius and Ravesteyn, showed that the theory was irreconcilable with Catholic theology and Calvin no less vehemently repudiated a system so little hostile to Rome. Among Protestants, however, the view soon reappeared. It seemed to afford them some means of reply to two objections which they were constantly called on to meet. When Catholics told them that their total inability to agree amongst themselves was itself a proof that their system was a false one, they could answer that though differing as to non-essentials they were agreed on fundamentals. And when asked how it could be maintained that the whole Christian world had for centuries been sunk in error, they replied that since these errors had not destroyed the fundamentals of the faith, salvation was possible even before the gospel had been preached. It is asserted that the first to take up this standpoint was Antonio de Dominis, the apostate Archbishop of Spalatro, who, during the reign of James I, sojourned some years in England. Whether this was so or not, it is certain that from this period the distinction becomes a recognized feature in English Protestant polemics, while on the other hand Catholic writers are at pains to show its worthlessness. It fills an important place in the controversy between Father Edward Knott, S.J., and the Laudian divine, Christopher Potter. At this time, the term *fundamentals* was understood to signify those doctrines an explicit belief in which is necessary to salvation. Thus, Potter in his "Want of Charity justly charged on all such Romanists as dare affirm that Protestantism destroyeth

Salvation" (1633) says: "By Fundamental doctrines we mean such Catholique verities as are to be distinctly believed by every Christian that shall be saved" (p. 211). Knott had no difficulty in showing how hopelessly discrepant were the views of the more eminent Protestants as to what was fundamental. His attack forced his opponents to change their ground. Chillingworth, who replied to him in the notable book, "The Religion of Protestants a safe way to Salvation" (1637), while defining fundamental articles in a manner similar to Potter (op. cit., c. iii.20), nevertheless conceded that it was impossible to draw up any list of fundamental doctrines. He urged indeed that this mattered little, since the Bible constitutes the religion of Protestants, and he who accepts the Bible knows that he has accepted all the essentials of the Faith (op. cit., c. iii, n. 59). Yet it is plain that if we do not know which doctrines are fundamental, salvation cannot be conditional on the explicit acceptance of these particular truths.

The doctrine of fundamentals was destined to become notable not merely in England, but in Germany and France also. In Germany it assumed prominence in connection with the Syncretist dispute. The founder of the Syncretist school was the eminent Lutheran theologian, George Calixt (1586-1656). A man of wide culture and pacific disposition, he desired to effect a reconciliation between Catholics, Lutherans and Calvinists. In a treatise entitled "Desiderium et studium concordiae ecclesiasticae" (1650), he argued that the Apostles' Creed, which each of these three religions accepted, contained the fundamental doctrines of the Christian faith, and that the points on which they were at variance were no insuperable bar to union. These differences, he held, might be composed, if it were agreed to accept as revealed truth all that is contained in Scripture, and further all that is taught by the Fathers of the first five centuries. This eirenicon brought down upon him the most vehement attacks from the extreme party of his coreligionists, above all from Calovius, the representative of rigid Lutheranism. The keenest interest was aroused in the question, and on both sides it was warmly debated. The effort, though well meant, proved quite abortive.

The most famous by far of the controversies on this subject, however, was that between Bossuet and the Calvinist Jurieu. Jurieu's book, "Le Vray Système de l'Eglise" (1686), marks a distinct stage in the development of Protestant theology; while the work in which Bossuet replied to him was one of the most effective attacks ever levelled against Protestantism and its system. "Le Vray Systeme" was an attempt to demonstrate the right of the French Protestants to rank as members of the Church Universal. With this aim Jurieu propounded an entirely novel theory regarding the Church's essential constitution. According to him all sects without exception are members of Body of Christ. For this nothing is necessary but "to belong to a general confederation, to confess Jesus Christ as Son of God, as Saviour of the world, and as Messias; and to receive the Old and New Testaments as the rule and Law of Christians", (Système, p. 53).

Yet among the various portions of the Church we must, he tells us, distinguish four classes: (1) the sects which have retained all the truths taught in the Scriptures; (2) those which, while retaining the more important truths, have mingled with them superstitions and errors, (3) those which have retained the fundamental truths, but have added doctrines which are incompatible with them; and (4) those which have set the fundamental verities altogether aside. This last class are dead members

of the mystical body (*ibid.*, p. 52). Those who have retained the fundamental articles of the faith are, one and all, living parts of the Church. When he comes to define precisely which doctrines are, and which are not, fundamental, Jurieu bids us fall back on the rule of Vincent of Lérins: *Quod semper, quod ubique, quod ab omnibus*. Wherever all bodies of Christians still existing, and possessing some importance in the world, agree in accepting a dogma, we have, in that agreement, a criterion which may be considered infallible. Among truths so guaranteed are, e.g., the doctrine of the Trinity, of the Divinity of Jesus Christ, of the Redemption, the satisfaction, original sin, creation, grace, the immortality of the soul, the eternity of punishment (*ibid.*, 236-237). This work was followed, in 1688, by another entitled "Traité de l'unité de l'Eglise et des articles fondamentaux", written in reply to Nicole's criticisms. In the same year appeared Bossuet's famous "Histoire des Variations des Eglises protestantes". The Bishop of Meaux pointed out that this was the third different theory of the Church advanced by Protestant theologians to defend their position. The first reformers had accepted the Scriptural doctrine of an indefectible visible Church. When it was demonstrated that this doctrine was totally incompatible with their denunciation of pre-reformation Christianity, their successors took refuge in the theory of an invisible Church. It had been made patent that this was contrary to the express words of Scripture; and their controversialists had, in consequence, been compelled to look for a new position. This Jurieu had provided in his theory of a Church founded upon fundamental articles. Bossuet's polemic was the death-blow of the new theory. Jurieu, it is true, replied; but only involved himself in yet farther difficulties. He argued against the main thesis of the "variations" by contending that changes of dogma had been characteristic of the Christian Church from its earliest days.

Bossuet, in his "Avertissement aux Protestants sur les lettres de M. Jurieu", was not slow in pointing out that if this were true, then the principle, *Quod semper, quod ubique, quod ab omnibus*--according to Jurieu the criterion of a fundamental article--had ceased to possess the smallest value. (Avertissement, I, n. 22.)

In regard to the relation of the fundamental doctrines to salvation, Jurieu is in agreement with the English divines already quoted. "By fundamental points", he says, "we understand certain general principles of the Christian religion, a distinct faith and belief in which are necessary to salvation" (Traité, p. 495). Precisely the same view is expressed by Locke in his "Reasonableness of Christianity". After enumerating what he regards as the fundamental articles of faith, he says: "An explicit belief of these is absolutely required of all those to whom the Gospel of Jesus Christ is preached, and salvation through his name proposed" (Works, ed., 1740, I, 583). Waterland's "Discourse of Fundamentals" should perhaps be mentioned, since it is the only work by an Anglican divine explicitly devoted to this subject. Its professed aim is to determine a basis for intercommunion among various Christian bodies. But the whole treatment is quite academic. It had become patent how impossible was the task of determining which articles were fundamental. No one could decide what should be the principle of selection.

Waterland enumerates no less than ten different views on this point, which he rejects as inadequate. "We have", he says, "almost as many different rules for determining fundamentals

as there are different sects or parties." Needless to say, his own principle has as little authority as those which he rejects. The theory had, in fact, been weighed and found wanting. It afforded neither a basis for reunion nor a tenable doctrine as to the constitution of the Church. From this time it appears to have ceased to occupy the attention of Protestant writers. Doubtless the ideas which the theory embodies still have a wide range. There are numbers to-day who still think that while the differences between the various bodies of Christians are unessential, there is a residuum of fundamental truth common to all the principal groups of believers. From time to time, this view has taken effect in efforts after partial reunion among certain of the sects. These events, however, fall outside our scope: for they stand in no historic connection with that doctrine of fundamental articles, which in the seventeenth century filled so important a place in Protestant theology.

It remains briefly to notice the manner in which the theory conflicts with Catholic dogma. For a formal refutation the reader is referred to those articles in which the Catholic doctrines in question are expressly treated.

(1) In the first place the theory is repugnant to the nature of Christian faith as understood by the Church. According to her teaching, the essential note of this faith lies in the complete and unhesitating acceptance of the whole depositum on the ground that it is the revealed word of God. The conscious rejection of a single article of this depositum is sufficient to render a man guilty of heresy. The question is not as to the relative importance of the article in question but solely as to whether it has been revealed by God to man. This is clearly put by St. Thomas Aquinas in the *Summa Theologica* II-II:5:3: "In a heretic who rejects a single article of the faith, there remains the virtue of faith whether as united with charity [*formata*], or as severed from charity [*informis*]. . . The formal object of faith is the Supreme Truth in so far as revealed in the Holy Scriptures and in that doctrine of the Church which proceeds from the Supreme Truth. Hence if anyone does not hold to the doctrine of the Church as to an infallible and divine rule, . . . he does not possess the virtue of faith." The Church does not deny that certain truths are of more vital moment than others. There are some as to which it is important that all the faithful should possess explicit knowledge. In regard to others explicit knowledge is not necessary. But it denies emphatically that any Christian may reject or call in question any truth, small or great, revealed by God. On the other hand the system of Fundamental Articles, in each and all of its forms, involved that wholesome truths are of such importance that they must of necessity be held, there are others of less importance which an individual Christian or body of Christians may freely deny without forfeiture of grace.

(2) No less complete is the disagreement as to what is requisite in order that a body of Christians may be a part of the true Church of Christ. In the system under review it is maintained that all the sects which accept the Fundamental articles of the faith are partakers in this privilege. The Catholic Church knows of one and only one test to determine this question of membership in Christ's body. This test does not lie in the acceptance of this or that particular doctrine, but in communion with the Apostolic hierarchy. Such is the unanimous teaching of the Fathers from earliest times. By way of illustration the words of Saint Irenaeus may here be cited: "They who are in the Church", he writes, "must yield obedience to the presbyters, who have the succession from the Apostles, and

who with the succession of episcopate have received . . . the sure gift of truth. Let them hold in suspicion those who sever themselves from the succession. These have all of them fallen from the truth" (Adv. Haer., IV, xxvi, 2). The theory which finds the one requisite in the acceptance of a series of fundamental articles is a novelty without a vestige of support in Christian antiquity.

(3) It is manifest that the theory is destructive of that unity in faith and in corporate communion, which Christ Himself declared should for ever be the guarantee of the Divine origin of the Church (John, xvii, 21), and which the Catholic Church has ever exemplified and taught. Jurieu, it may be noted, frankly owned that on his theory the separate sects might be in a position of mutual excommunication, and yet remain members of the Church.

To sum up: the system of fundamental articles is repugnant to the religion of Christ. It is a stage in the disintegration of religion, consequent on the admission of the principle of private judgment in matters of faith; and it is a stage which is necessarily destined to lead on to the complete rejection of revealed truth.

G.H. JOYCE

Funeral Dues

Funeral Dues

The canonical perquisites of a parish priest receivable on the occasion of the funeral of any of his parishioners. This right of the parish priest is twofold: first, the right to an offering when a parishioner is buried within the limits of the parish to which he belonged, second, the right to a fourth (*quarta funeralis*) of the dues when a parishioner is buried outside the limits of the parish (The ancient episcopal *quarta funeralis* has fallen into desuetude.) The right to the *quarta funeralis* is founded on the obligations of a parish priest to his parishioners during life, and the correlative duties of those to whose care he ministers; since the labourer is worthy of his hire, it is but just that should the parishioner elect to be buried in a parish other than that to which he canonically belongs, the parish priest should not altogether be deprived of emolument for his past services. The Council of Trent (Sess. XXV, cap. xiii) gives the "fourth portion" the name of "quarta funeralium"; but other designations were common in earlier times, e.g. "portio canonica" (canonical portion), "quarta portio" (fourth share), "justitia" (justice) since it was considered a just reward for the work of a parish priest in his care of souls. That these funeral dues are not of recent origin is clear from ancient ecclesiastical enactments (Cap. Cum Quis, II, De sepulchretis, in VI). Leo III (Nos instituta) refers to this ancient discipline of the Church: "Do not break away from the rules which our forefathers have laid down for us". Still earlier, in 680, in the Anglo-Saxon Church could legally claim; and among them was the payment called "soul-shot". This payment was the mortuary charge ordered to be reserved for the dead, while the grave was yet open, or to be reserved for the church to which the deceased belonged if his body were buried in any place out of his "shriftshire" i.e. his proper parish (Lingard, "Antiquities of the Anglo-Saxon Church", I, iv).

As a price for burial, the parish priest can demand nothing without incurring the suspicion of simony. Burial is a spiritual right belonging to the faithful; and the parish priest, in virtue of his office, is bound to perform this duty for his parishioners. Nevertheless, if there is a legitimate custom which allows offerings to be made, or if the bishop should have established a fixed scale of offerings, the parish priest may demand such fees provided he in no way incurs suspicion of extortion. Also, in case of funerals with more than the ordinary burial service, a demand for payment for extra labour or to cover expenses is quite in accordance with canon law. The Roman Ritual (tit. vi, De exsequiis, n. 6) lays down that the amount to be charged for funeral services is to be fixed by the bishop; it also insists that in all cases of the poor who die with little or no property the parish priest is bound to bury them without charge (ibid., n. 7). This is in keeping with the immemorial affection of the Church for the poor (Tert., "Apol.", xxxix; Ambrose, "De off.", II, cxlii; Schultze "De Christ. veter. rebus sepulchr.", Gotha, 1879, 24). Emperor Constantine created at Constantinople a special association for the burial of the poor (Lex, "Begräbnissrecht", 208). The medieval Church granted indulgences for the burial of the poor, and her synods and bishops frequently inculcated the same as a work of mercy. While the parish priest is not bound to offer Mass on that occasion, he is warmly recommended to do so by Benedict XIV (Instr. 36) and other ecclesiastical authorities (Lex, op. cit., 209-11).

The Council of Trent (Sess. XXII, Decret. de obser. et evit. in celeb. Missae) in very clear words points out the duty of the bishops to determine specifically all offerings on the occasion of the Holy Sacrifice, so that there may be no opportunity for suspecting simony on the part of any ecclesiastic. The bishop is authorized to prescribe, in regard to funerals, what portion should belong to the parish priest and to others assisting at the altar; how much should be given to those who accompany the body to the grave; to those who toll the bells; likewise the number and weight of the candles used during the burial service, the remuneration for the use of funeral ornaments, etc. If the parishioner is buried outside his parish, the parish priest, as has been already said, is entitled to a fourth of the burial fees. This fourth has to be paid by the church of the parish in which the burial takes place, and it includes that proportion of the emoluments that come to the church by reason of the funeral up to the thirtieth day after the funeral. In the case of the funeral of a canon the "quarta funeralis" is due, not to the parish priest of the cathedral, but to the parish priest of the deceased canon's domicile. As a matter of practice at the present day there are many churches exempt from the payment of the quarta funeralis, such exemption being obtained either by pontifical privilege, custom, or prescription. Many monasteries, and indeed whole orders, have been exempted by pontifical privilege (St. Pius V, Decret Romanum, 20 May, 1567; Paul V, Decret Romanum, 20 Aug. 1605). Benedict XIII, in 1725, annulled all exemptions, so far as Italy and the adjacent islands were concerned. By custom or prescription the obligation of paying the quarta funeralis has been done away with in most places, although it still exists, for instance, in the Diocese of Paris (France). With regard to the fees for burial in our own time, there is no customary uniform fee, and the enactments of provincial synods contain nothing very definite on the matter. Generally speaking, if a church has a cemetery attached a scale of fees is drawn up and approved by the bishop for that

church the charges varying according to the degree of solemnity with which the funeral is carried out. In cemeteries not attached to a church, and which are whole Catholic, the administrators pay a fixed fee for each funeral, or more commonly a yearly stipend to the cemetery chaplain. Where the cemetery is controlled by secular authority, the funeral fees are arranged for and paid by the local authority but the amount of the fee varies according to the locality.

DAVID DUNFORD

Funeral Pall

Funeral Pall

A black cloth usually spread over the coffin while the obsequies are performed for a deceased person. It generally has a white cross worked through its entire length and width. The Roman Ritual does not prescribe its use in the burial of a priest or layman, but does so for the absolution given after a requiem when the body is not present. Still the Congregation of Sacred Rites supposes its existence, since it forbids ecclesiastics, especially in sacred vestments, to act as pall-bearers for a deceased priest (3110, 15). It also forbids the use of a white transparent pall fringed with gold in the funeral of canons (3248, 3). The "Ceremoniale Episcoporum" orders a black covering on the bed of state for a deceased bishop. It was once customary specially to invite persons to carry the pall, or, at least, to touch its borders during the procession. These pall-bearers frequently had the palls made of very costly materials and these were afterwards made into sacred vestments. Formerly dalmatics or even coverings taken from the altar were used as a pall for a deceased pope, but, on account of abuses that crept in, this practice was suppressed. In the Council of Auxerre (578, can. xii) and in the statutes of St. Boniface the pall hiding the body was forbidden.

In the English Church the funeral pall was regularly employed. Thus we read that, at the funeral of Richard Kellowe, Bishop of Durham (d. 1316), Thomas Count of Lancaster offered three red palls bearing the coat of arms of the deceased prelate. On the same occasion Edward II of England sent palls of gold cloth. At the burial of Arthur, son of Henry VII, Lord Powys laid a rich cloth of gold on the body. Similar rich palls were used in the obsequies of Henry VII and of Queen Mary.

FRANCIS MERSHMAN

Fuenfkirchen

Diocese of Fünfkirchen

(Hungarian PÉCS, QUINQUE ECCLESIENSIS)

Located in Hungary, in the ecclesiastical province of Gran. Christianity was introduced into this part of the ancient province of Pannonia (called *Valeria* since the time of Diocletian) before the fall of the Roman Empire. In Fünfkirchen itself, formerly the Roman colony of *Sopianæ*, there has been found an underground sepulchral chamber dating from early Christian times; it is still preserved, and contains religious paintings belonging to the second half of the fourth century

(Henszlmann, "Die altchristliche Grabkammer in Fünfkirchen" in "Mitteilungen der Zentralkommission", Vienna, 1873, 57 sq. de Rossi, "Bullettino di arch. crist.", 1874, 150-152). It is probable that even at this early day a house of Christian worship existed where the cathedral now stands. During the "migration of the nations", city and country were devastated; in the ninth century, this territory formed part of the kingdom of the Christian Slavic prince Privina, and Archbishop Liupramm of Salzburg (836-859) consecrated the church of St. Peter in the city even then called "Ad quinque Basilicas" because of its five churches. By King Stephen I of Hungary Fünfkirchen was made a bishopric in the year 1009. The first bishop was the Frank, Bonipert, a Benedictine monk. His successor, Maurus (1036-1070), erected a cathedral, the original foundations of which still stand, on the site of the old church of St. Peter (restored, 1877-1896). Maurus is the first ecclesiastical writer in the kingdom of Hungary, and is honoured as a saint in this diocese, as well as by the Benedictines.

Of the succeeding bishops, the following are worthy of mention: Calanus (1188-1218), who, on account of his services in defending the Church against the Patarini, was permitted by Clement III to wear the pallium and to have the cross borne before him, a custom which led to many difficulties with the Archbishops of Gran, but was nevertheless confirmed by Benedict XIV (1754); Wilhelm (1360-1374), during whose episcopate the cathedral school was raised to the rank of a university (1367), which flourished for a time, but which ceased to exist after the defeat in battle of Louis II by Solyman I in 1526; Anton Vrancies (1553-1557) and Georg Draskovich (1557-1563) who worked zealously for the reform of the religious life and were elevated to the cardinalate. After the conquest of the city by the Turks in 1543, the cathedral was transformed into a mosque, and it was only in 1687, after the expulsion of the Turks, that it was again opened for Christian worship. Under Bishops Franz Nesselrode (1703-1732) and Georg Girk (1853-1868), diocesan synods were held. Bishop Ignatius von Szepesy (1828-1838) founded a lyceum with a faculty of theology and law. A restoration of the cathedral in approved style was made by Ferdinand Dulánszky. The cathedral chapter numbers ten canons, six honorary canons and two prebendaries. The diocese is divided into two archdiaconates and twenty-two vice-diaconates; it embraces 178 parishes, with 258 dependent churches and stations, and six curacies. Of the parishes 33 are German, 54 Magyar and the rest composed of mixed nationalities. The number of Catholics in the diocese amounted in 1906 to 503,981. In the same year, there were 306 secular priests and 40 religious. The following orders of men exist in the diocese: Cistercians (1 monastery, with a college); Franciscans (7 monasteries); Brothers of Mercy (1 convent); Orders and congregations of women: Canonesses of Our Lady (1 convent); Sisters of Charity of St. Vincent de Paul (11 convents); Sisters of Providence, of the Holy Redeemer, of the Holy Cross (1 convent each). The territory of the diocese embraces the counties of Baranya and Tolna, and part of the counties of Somogy and Veröcze.

KOLLAR, *Historia episcopatus Quinqueecclesiensis*, 7 vols. (Budapest, 1782-1812); GERECZE, *Der Dom zu Fünfkirchen* (Fünfkirchen, 1894); *Die katholische Kirche unserer Zeit* (Munich, 1900), II, 590-593.

J. P. KIRSCH.

Franz Xaver von Funk

Franz Xaver von Funk

Church historian, b. in the small market town of Abtsgemünd in Württemberg, 12 October, 1840; d. at Tübingen, 24 February, 1907.

The son of an inn-keeper, Franz first attended the gymnasium at Ellwangen, and, on finishing his course of secondary studies, proceeded in 1859 to the University of Tübingen. Residing at the theological house of studies called Wilhelmsstift he studied philosophy and theology, and also found time to attend courses in classical philology and political economy with such profit that in 1862 he gained the prize offered by the faculty of political science for the best essay on the theme: "Was verstand man in 18. Jahrhundert unter Polizei?" (What signification had the word *police* in the 18th century?). Some of his earlier publications treated subjects connected with political economy. Having received his doctorate of philosophy in 1863, he devoted a year in the ecclesiastical seminary to moral theology and preparation for the priesthood. He was ordained at Rottenburg, 10 August, 1864, and his first work was in the care of souls; he felt, however, that the whole bent of his mind lay in the direction of intellectual labour. In October, 1865, he obtained permission to proceed to Paris to pursue further the study of political economy; the journey through France and his residence at Paris acted as a great mental stimulus. On his return in 1866, he was appointed tutor at the Wilhelmsstift, where his duty was to direct the personal studies and preparation for examinations of the theological students. When Hefele, then professor of church history at Tübingen, was called to Rome in 1868 as consultor during the preparation for the Vatican Council, Funk acted as substitute. Hefele did not return to his chair, being appointed Bishop of Rottenburg on 17 June, 1869, and Funk was appointed his successor. In 1870 Funk was named extraordinary, and in 1875 ordinary professor of church history, patrology, and Christian archæology, an office which he filled till his death.

His life was henceforth entirely devoted to his professorial duties and historical researches, especially to the various branches of the history of the early Church. His first important publications belong to the sphere of political science and the history of economics, and include the two treatises, "Zins und Wucher, eine moraltheologische Abhandlung" (Tübingen, 1878). Other articles on the same subject written by him either during this or a later period are: "Klemens von Alexandrien über Familie und Eigentum" ["Theologische Quartalschrift" (1871), 427-449; reprinted in "Kirchengeschichtliche Abhandlungen und Untersuchungen", II, 45 sqq.]; "Handel und Gewerbe im christlichen Altertum" [in "Theol. Quartalschrift" (1876); reprinted in "Kirchengesch. Abhand. u. Untersuch.", II, 60 sqq.]; "Ueber Reichtum und Handel in christlichen Altertum" [Ibid., III, 150 sqq., first published in "Histor.-politische Blätter" (1902), II]. Funk's professorial duties and his early study of classical philology soon led him into the province of early Christian literature and church history, and in these departments he accomplished his most important work as a scholar. In the former department his task consisted principally in the issuing of new editions of texts, prepared

in accordance with the rules of historical and textual criticism. His predecessor Hefele had issued a scholarly edition of the works of the Apostolic Fathers, "Opera patrum apostolicorum", but the last edition was that of 1855, and the discovery of important manuscripts rendered a new edition necessary. Funk undertook the task and the "Opera patrum apostolicorum" appeared in two volumes (Tübingen, 1878-1881), the first containing the authentic and the second the apocryphal writings. After the discovery of the Didache, a new edition of the first volume was issued in 1887; a fresh edition (the second) of the whole work appeared in 1901. The "Sammlung von Quellenschriften" (Tübingen, 1901; 2nd ed., 1906) contains a synopsis with the text of the authentic writings. Funk also published separately the Didache and certain of the early writings connected with this work ("Doctrina XII apostolorum", "Canones apostolorum ecclesiastici ac reliquæ doctrinæ de duabus viis expositiones veteres", Tübingen, 1887). His studies of the "Apostolic Constitutions" led Funk to the conviction that the existing editions of the "Constitutiones apostolicæ" and of the Syrian "Didascalia apostolorum" were unsatisfactory. He devoted many years to the preparation of a new edition, which was given to the public in 1905 ("Didascalia et Constitutiones Apostolorum", ed. F. X. von Funk, 2 vols., Paderborn, 1905), and was received with the greatest commendation by the learned world. He also published three works connected with early Christian literature. In the treatise "Die Echtheit der Ignatianischen Briefe" (Tübingen, 1883), he successfully refuted the attacks made on these important sub-apostolic writings, and demonstrated conclusively the authorship of St. Ignatius of Antioch.

For many years his attention was almost exclusively devoted to a group of writings, which constitute the principal source of information as to early Christian liturgy and discipline, namely the Didache, the Didascalia, the Apostolic Constitutions, the "Canones Hippolyti", the Egyptian Church Order, and the "Testamentum Domini nostri Jesu Christi" discovered by Rahmani. In opposition to the somewhat different views of other investigators, Funk sought to establish the connexion between these writings, and from this the date of their origin. The two works, which Funk devoted to this subject, are: "Die Apostolischen Konstitutionen" (Tübingen, 1891), and "Das Testament unseres Herrn und die verwandten Schriften" (Mainz, 1901). Similar investigations in the field of literary history and numerous questions touching on the liturgy, discipline and religious life of early Christian times form the subject of the numerous articles which Funk contributed to various periodicals during the many years of his academic activity. Most of these articles were published in the "Tübinger theologische Quartalschrift", the "Historisches Jahrbuch der Görresgesellschaft", the "Historisch-politische Blätter" or in the "Revue d'histoire ecclésiastique", and the majority are included, in more or less revised form, in the collection: "Kirchengeschichtliche Abhandlungen und Untersuchungen" (3 vols., Paderborn, 1897, 1899, 1907). Among the most important of these writings are those dealing with the above-mentioned pseudo-Apostolic works and their relations to one another ("Abhandlungen", II, 108 sqq., 136 sqq., 359 sqq., III, 64 sqq., 218 sqq., 275 sqq., 359 sqq., 362 sqq., 381 sqq.); the early Christian penitential discipline and the catechumenate (Ibid., I, 155 sqq., 182 sqq., 209 sqq.; III, 42 sqq., 57 sqq.); celibacy of the clerics in major orders (Ibid., I, 121 sqq.); the Agapæ and the Eucharistic Sacrifice (Ibid., I, 278, 293 sqq.,

III, 1 sqq., 85 sqq., 134 sqq.). One subject to which he often returned and which involved him in a long controversy with other scholars, especially with Father Kneller, S. J., was the convocation and papal ratification of the œcumenical synods of the early ages [Abhandlungen, I, 39 sqq., 87 sqq., 498 sqq., III, 143 sqq., 406 sqq.; Kneller returned to the subject again in the "Zeitschrift für katholische Theologie" (1908), 75-99]. Of the various contributions to later Church history, which flowed from Funk's industrious pen, may be mentioned the "Abhandlungen zur Geschichte der altbritischen Kirche" (Abhand., I, 421 sqq.), "Gerson und Gersen" (Ibid., II, 473 sqq.), "Der Verfasser der Nachfolge Christe" (Ibid., II, 408 sqq.), "Zur Galilei-Frage" (Ibid., II, 444 sqq.). Funk was an industrious contributor to the second edition of Herder's "Kirchenlexikon", in which are found no less than 136 articles, some of considerable length, from his pen. For Kraus's "Real-Encyclopädie der christlichen Altertümer" he also wrote several articles. The excellence of his "Lehrbuch der Kirchengeschichte", as a general church history, is universally recognized; the first edition appeared in 1886, the fifth in 1907, shortly before his death, the tireless worker being suddenly cut down in the midst of his labours by an apoplectic stroke. The Tübingen "Theologische Quartalschrift" for 1907 (p. 236 sqq.) contained a posthumous article of Funk's on the reputed writings of St. Hippolytus.

Among the Catholic historians whom Germany has produced in the last three decades Funk was undoubtedly the greatest authority and the chief historical writer on early Christian times. Clear and purely critical in method, his sole aim was the establishment of historical truth. His character was frank and conscientious; his life was blameless, as became a minister of God. As a controversialist he could be severe when an opponent allowed himself to be swayed by any other motive than the demonstration of exact truth. His method has created a school among the Catholic historians of Germany which has been a benefit to the advancement of earnest historical investigation and scholarly criticism.

BIHLMAYER, *François Xavier von Funck* in *Revue d'histoire ecclésiastique* (1907), 620-423 [sic].

J.P. Kirsch
Furness Abbey

Furness Abbey

Situated in the north of Lancashire about five miles from the town of Ulverston. Originally a Benedictine monastery of the Savigny Reform it afterwards became Cistercian. Vitalis, the founder of Savigny and the disciple of Robert d'Arbrissel, came to England in 1119, and Stephen, Count of Boulogne and afterwards King of England, offered him land at Tulketh on the Ribble, one mile below Preston. Accordingly, in 1124, Ewan d'Avranches, with a colony of monks, was sent from Savigny to establish the monastery at Tulketh. In 1127 Stephen gave to these monks his forest of Furness in Lancashire and thither they removed. This grant was most munificent, for it included large possessions in woods, pastures, fisheries, and mills, with a large share in the salt works and mines of the district. Development was so rapid that in 1134 a colony of monks was sent forth to

establish Calder near the Scotch border. Besides Calder, Swyneshead and Rushin were also colonized, and from Calder the famous Abbey of Byland was founded. By the year 1148 the Cistercian Reform, under the leadership of St. Bernard, was everywhere attracting attention and all the Savigny monks, those of Furness included, became Cistercians. In 1249 the Cistercian General Chapter placed four Irish monasteries under the control of Furness, viz. Fermoy, Wethirlagh, Inislounagh, and Corcumcrae. Through the foundation of Rushin there was frequent communication between Furness and the Isle of Man and more than one monk of Furness became Bishop of Man. This, no doubt, was due to the privilege held by the Abbey of Rushin of appointing the bishop, subject to the consent of the Manxmen. Nicholas de Meaux, a native of the Orkneys and once a canon of Wartre, was a monk at Meaux, a monk and Abbot of Furness, and finally Bishop of Man. Jocelin, a monk of Furness and afterwards of Iniscourcy, in Ireland, wrote the life of St. Patrick at the command of Thomas, Archbishop of Armagh; other works attributed to him are: "Book of British bishops"; "Life of St. Waldeve, Second abbot of Melrose"; "Life of St. Kentigern or Mungo". The names of thirty-two abbots of Furness are known, the last being Roger Pyle. In October, 1535, the royal commissioners visited the abbey; a little later the monks were accused of being implicated in the Pilgrimage of Grace and two of them were imprisoned at Lancaster. The final disruption came on 9 April, 1537, when the abbot, prior, and twenty-eight monks were forced to sign the deed of surrender. The site and lands were at first held by the Crown. Later they were assigned to the Earl of Salisbury and afterwards came into the possession of the Prestons of Preston Patrick. They were next acquired by Lord George Augustus Cavendish, and now belong to the Dukes of Devonshire. The buildings were renowned more for their grandeur than for their richness and beauty; portions of the ruins still remain to show this.

G.E. HIND

Furni

Furni

A titular see in Proconsular Africa, where two towns of this name are known to have existed. One discovered in the ruins of El-Msaadin, near Tebourba, had a bishop as early as the third century, Geminus Victor, who died shortly before St. Cyprian. Another bishop, Simeon, assisted at the Council of Carthage in 525. The second Furni was discovered at Henchir-Boudja about seven miles from Zama. A Donatist bishop of the see assisted at the synod held at Carthage in 411. The town was made famous by the courage of the martyr Mansuetus of Urusi, who was burned alive, according to Victor of Vita (*Histor. persec. Vandal.*, I, 3) at the gate of Urusi, also known as the gate of Furni. In 305, during the same persecution the basilicas of Furni and Zama had been burned. At Henchir-Boudja may be seen the ruins of a Byzantine fortress.

S. VAILHÉ

John Furniss

John Furniss

A well-known children's missionary, born near Sheffield, England, 19 June, 1809; at Clapham, London, 16 September, 1865.

His father was a wealthy master-cutler. He was educated at Sedgley Park, Oscott, and Ushaw College, where he became a priest in 1834. He was resident priest at Doncaster for five years, but his health having given way he travelled during eight years through Europe and the East, rather as a pilgrim than a tourist. After his return home, 1847, he spent some time at Islington, London, working for the welfare of the waifs and strays, for "Suffer little children to come to me" was his motto then as in after years. He became a professed member of the Congregation of the Most Holy Redeemer at St. Trond, Belgium, 1851, and afterwards gave missions in England and Ireland; but from 1851 until his death he devoted himself wholly to giving missions to children. He was the founder of children's missions and "the children's Mass", and by his writings systematized the philosophy of religious training. These missions lasted sometimes three weeks, and were given not only to school-children, but to working boys and girls. His maxim was that "nothing so disgusted children as monotony", and therefore he had the prayers at Mass and the Rosary sung to simple airs, and his sermons seldom lasted more than twenty minutes. He entered fully into the mode of thought of the child-mind, and, speaking quietly but with great dramatic power from a platform, he always riveted their attention. He was a wonderful story-teller, seldom moving to laughter but often to tears. He spent his spare time writing books for children which, though written with the utmost simplicity of language, are models of good English. His chief works are "The Sunday-School Teacher" and "God and His creatures", which has been published in French. He wrote a scathing answer to an attack on his works by the "Saturday Review" which was then the great organ of unbelief in England. His writings were assailed as "infamous publications" by the rationalist historian Lecky in his "History of European Morals", chiefly on account of the somewhat lurid eschatology of the children's books. More than four millions of his booklets have been sold throughout English-speaking countries.

ALBERT BARRY

St. Fursey

St. Fursey

An Abbot of Lagny, near Paris, d. 16 Jan., about 650. He was the son of Fintan, son of Finloga, prince of South Muster, and Gelgesia, daughter of Aedhfinn, prince of Hy-Briuin in Connaught. He was born probably amongst the Hy-Bruin, and was baptized by St. Brendan the Traveller, his father's uncle, who then ruled a monastery in the Island of Oirbsen, now called Inisquin in Lough Corrib. He was educated by St. Brendan's monks, and when of proper age he embraced the religious life in the same monastery under the Abbot St. Meldan, his "soul-friend" (*anam-chura*). His great

sanctity was early discerned, and there is a legend that here, through his prayers, twin children of a chieftain related to King Brendinus were raised from the dead. After some years he founded a monastery at Rathmat on the shore of Lough Corrib which Colgan identifies as Killursa, in the deanery of Annadown. Aspirants came in numbers to place themselves under his rule, but he wished to secure also some of his relatives for the new monastery. For this purpose he set out with some monks for Munster, but on coming near his father's home he was seized with an apparently mortal illness. He fell into a trance from the ninth hour of the day to cock-crow, and while in this state was favoured with the first of the ecstatic visions which have rendered him famous in medieval literature.

In this vision were revealed to him the state of man in sin, the beauty of virtue. He heard the angelic choirs singing "the saints shall go from virtue to virtue, the God of Gods will appear in Sion". An injunction was laid on him by the two angels who restored him to the body to become a more zealous labourer in the harvest of the Lord. Again on the third night following, the ecstasy was renewed. He was rapt aloft by three angels who contended six times with demons for his soul. He saw the fires of hell, the strife of demons, and then heard the angel hosts sing in four choirs "Holy, holy, holy Lord God of hosts". Among the spirits of the just made perfect he recognized Sts. Meldan and Beoan. They entertained him with much spiritual instruction concerning the duties of ecclesiastics and monks, the dreadful effects of pride and disobedience, the heinousness of spiritual and internal sins. They also predicted famine and pestilence. As he returned through the fire the demon hurled a tortured sinner at him, burning him, and the angel of the Lord said to him: "because thou didst receive the mantle of this man when dying in his sin the fire consuming him hath scarred thy body also." The body of Fursey bore the mark ever after. His brothers Foillan and Ultan then joined the community at Rathmat, but Fursey seems to have renounced the administration of that monastery and to have devoted himself to preaching throughout the land, frequently exorcising evil spirits. Exactly twelve months afterwards he was favoured with a third vision. The angel remained with him a whole day, instructed him for his preaching, and prescribed for him twelve years of apostolic labour. This he faithfully fulfilled in Ireland, and then stripping himself of all earthly goods he retired for a time to a small island in the ocean. Then he went with his brothers and other monks, bringing with him the relics of Sts. Meldan and Beoan, through Britain (Wales) to East Anglia where he was honourably received by King Sigebert in 633. The latter gave him a tract of land at Cnobheresburg on which he built a monastery within the enclosure of a Roman fort--Burghcastle in Suffolk--surrounded by woods and overlooking the sea. Here he laboured for some years converting the Picts and Saxons. He also received King Sigebert into the religious state. Three miracles are recorded of his life in this monastery. Again he retired for one year to live with Ultan the life of an anchorite.

When war threatened East Anglia, Fursey, disbanding his monks until quieter times should come, sailed with his brothers and six other monks to Gaul. He arrived in Normandy in 648. Passing through Ponthieu, in a village near Mézerolles he found grief and lamentation on all sides, for the only son of Duke Hayson, the Lord of that country, lay dead. At the prayer of Fursey the boy was

restored. Pursuing his journey to Neustria he cured many infirmities on the way, by miracles he converted a robber and his family, who attacked the monks in the wood near Corbie, and also the inhospitable worldling Ermelinda, who had refused to harbour the weary travellers. His fame preceded him to Péronne, where he was joyfully received by Erkinoald, and through his prayers obtained the reprieve of six criminals. He was offered any site in the king's dominions for a monastery. He selected Latiniacum (Lagny), close to Chelles and about six miles from Paris, a spot beside the Marne, covered with shady woods and abounding in fruitful vineyards. Here he built his monastery and three chapels, one dedicated to the Saviour, one to St. Peter, and the third, an unpretending structure, afterwards dedicated to St. Fursey himself. Many of his countrymen were attracted to his rule at Lagny, among them Emilian, Eloquius, Mombulus, Adalgisius, Etto, Bertuin, Fredegand, Lactan, Malguil. Having certain premonitions of his end, he set out to visit his brothers Foillan and Ultan who had by this time recruited the scattered monks of Cnobheresburg and re-established that monastery but his last illness struck him down in the very village in which his prayer had restored Duke Haymon's son to life. The village was thence-forward called Forsheim, that is, the house of Fursey. In accordance with his own wish his remains were brought to Péronne, many prodigies attending their transmission, and deposited in the portico of the church of St. Peter to which he had consigned the relics of Sts. Meldan and Beoan. His body lay unburied there for thirty days pending the dedication of the church, visited by pilgrims from all parts, incorrupt and exhaling a sweet odour. It was then deposited near the altar. Four years later, on 9 February, the remains were translated with great solemnity by St. Eligius, Bishop of Noyon, and Cuthbert, Bishop of Cambrai, to a chapel specially built for them to the east of the altar. In the "Annals of the Four Masters", Péronne is called *Cathair Fursa*.

In art St. Fursey is represented with two oxen at his feet in commemoration of the prodigy by which, according to legend, Erkinoald's claim to his body was made good; or he is represented striking water from the soil at Lagny with the point of his staff; or beholding a vision of angels, or gazing at the flames of purgatory and hell. It is disputed whether he was a bishop; he may have been a chorepiscopus. A litany attributed to him is among the manuscripts in Trinity College Dublin. An Irish prophecy is attributed to him by Harris.

C. MULCAHY

Franz Friedrich Wilhelm von Furstenberg

Franz Friedrich Wilhelm von Fürstenberg

A statesman and educator, b. 7 August, 1729, at Herdringen in Westphalia; d. 16 September, 1810, at Münster. After receiving his early education from private tutors, and from the Jesuits at Cologne, he attended the university there, and at Salzburg, for the study of jurisprudence, which he completed at the Sapienza in Rome in 1753. In 1748 he had become canon at the cathedral of Münster and, later, also at Paderborn, and received minor orders and subdeaconship, though he had no intention of entering the priesthood. During the Seven Years War (1756-1763) he rendered

signal services to his country as intermediary between the opposing camps, and through his influence warded off many a calamity from the city and principality of Münster.

After the death of Clemens August, Elector of Cologne and Prince-Bishop of Münster, on 6 February, 1761, it was chiefly through the influence of Fürstenberg that Maximilian Friedrich von Königseck-Rothenfels, who had succeeded Clemens August at Cologne (6 April, 1761), was also elected Prince-Bishop of Münster in September, 1762. In recognition for these services the new prince-bishop entrusted Fürstenberg with the temporal and spiritual administration of the Prince-Bishopric of Münster. In 1762 he appointed him privy councillor and minister and, in 1770, vicar-general and curator of educational institutions. No better man could have been found to manage the temporal and spiritual affairs of the Prince-Bishopric of Münster which had suffered severely during the Seven Years War. Everybody was deep in debt and all trade and commerce was at a standstill. To restore prosperity to the people he improved agricultural conditions by dividing the land into marks, draining marshes and reclaiming much soil which hitherto had lain idle or in pasturage. He ameliorated the condition of the serfs and gave an impulse to the entire abolition of serfdom. In order to liquidate the public debt he placed a duty on such imported goods as could be easily dispensed with, and for a space of six years levied a moderate capitation tax from which the privileged estates were not exempted. He improved the military and the sanitary system, the former by founding a military academy at Münster and by introducing the "Landwehr", the latter by founding a college of medicine (1773) and inducing its director, the learned Christopher Ludwig Hoffmann, to draw up a code of medicinal regulations which was justly admired through Germany as a model of its kind.

The greatest achievement of Fürstenberg was his reform of the educational system. During the latter half of the eighteenth century the higher educational institutions of Germany had become veritable hotbeds of rationalism and irreligion, and not infrequently pronounced freethinkers were engaged to instruct the candidates for the priesthood. These conditions were not only permitted but often directly favoured by a few unworthy but influential prelates, among whom must be numbered Fürstenberg's superior Max Friedrich, the elector of Cologne and Prince-Bishop of Münster. To counteract this state of affairs, Fürstenberg planned a reform of the educational institutions in the Diocese of Münster. Luckily he was not hampered in this by his superior, the prince-bishop. He began his reform with the gymnasium, as the basis of the education of the future Catholic priest, whom he considered the chief leader and teacher of the people. After consulting with acknowledged educators, especially the Jesuits who then directed the gymnasium of Münster, he drew up a tentative plan for the gymnasium in 1770, which, after a few changes, was enforced by his famous school ordinance of 1776. According to the new plan great stress was laid on a thorough training in theoretical and practical Christianity, and a course in Catholic philosophy was added to the curriculum. In the same year he turned the recently suppressed convent of Ueberwasser at Münster into a seminary where the hitherto neglected candidates for the priesthood could receive the requisite moral training. Fürstenberg then directed his attention towards the completion of the new University of Münster (approved in 1773) where, as an effectual safeguard against rationalistic tendencies, he

appointed to professorial duties only men who had been educated at the schools of his diocese and whom he knew to be firmly grounded in their Faith. To the most talented of these he offered every opportunity to prepare for professorial positions and even gave them the means to pursue special courses at foreign universities.

Fürstenberg's political activity came to a close in 1780, when Maximilian Franz, the brother of Emperor Joseph II of Austria, was elected coadjutor to Maximilian Friedrich as Archbishop of Cologne and Prince Bishop of Münster. Fürstenberg himself had aspired to this position and undoubtedly would have been elected if it had not been for the great influence of the Court of Vienna which favoured the election of Maximilian Franz. Fürstenberg was obliged to resign the ministry but was allowed to retain the office of vicar-general and curator of education. He now turned his entire attention towards the remodelling of elementary education. Through his ordinances for elementary schools in 1782, 1788, and 1801, he freed the system of elementary education of at least the most striking abuses. In order to obtain zealous and competent teachers he founded a normal school in 1783, which he put in charge of the famous educator, Bernard Overberg. After Prussia had taken possession of Münster in 1803, Fürstenberg's influence over the educational system began to decline, and when in 1805 he protested against the appointment of a professor of Protestant theology at the Catholic University of Münster, he was honourably dismissed as curator of education on the plea of old age. In 1807 he also resigned the position of vicar-general. Fürstenberg's renown as an educator had drawn some of the greatest minds of Europe to Münster, among them the Princess Amelia von Gallitzin, in whose return to the Catholic Faith from which she had become estranged in her youth, he was greatly instrumental.

MICHAEL OTT

Fussola

Fussola

A titular see in Numidia. It was a fortified town, inhabited for the most part by Donatists and situated forty miles from Hippo. St Augustine appointed as its first Catholic bishop, about 416, a young man named Antonius, who afterwards caused him much anxiety (Ceillier, "Histoire générale des auteurs sacrés et ecclésiastiques", Paris, 1861, VIII, 11 sqq.). A certain Melior is known to have been bishop in 484 (Gams, (465, col. 3), and the see still existed in the seventh century (Byzantische Zeitschrift, II, 26). The fortress of Fossala completed the defences of Hippo.

S. VAILHÉ

John Fust

John Fust

(Or FAUST.)

A partner of Gutenberg in promoting the art of printing, d. at Paris about 1466. He belonged to a wealthy family of Mainz, but very little is known of his early life. In 1450 he became a partner of Gutenberg in the establishment of a printing plant at Mainz, Fust furnishing the capital and taking a mortgage on the tools and materials as security. The partners carried on the business on several years, but the partnership was dissolved in 1455, when Fust brought suit against Gutenberg for the money that he had advanced and obtained possession of the printing apparatus. The business was then continued by Fust with his son-in-law, Peter Schöffer, of Gernsheim, as partner. In 1462, when Mainz was sacked Fust's workmen were scattered, and they carried with them to various countries the printing process which had been guarded as a secret in Mainz. Fust continued the business, however, until 1466, when he is thought to have gone to Paris and to have died there of the plague. Among the books that were issued from the press of Fust and Gutenberg the best known is the magnificent Latin "Bible of forty-two lines" (see Illustration s.v. EDITIONS OF THE BIBLE), so called because it was printed forty-two lines to the page. It is known also as the Mazarin Bible, because the first known copy of it was discovered in Cardinal Mazarin's library at Paris. It is a fine specimen of the early printer's art. They also printed an indulgence granted by Pope Nicholas V to the King of Cyprus (1454-5). In partnership with Schöffer Fust Published a Psalter (1457), the first printed book with a complete date; the "Rationale Divinorum Officiorum" of Durandus (1459); and Cicero's "De Officiis" (1465), the first printed edition of a classical author. Several other books that were printed by Fust and his partners are still extant, some of them very beautiful in their execution.

EDMUND BURKE

William Benedict Fytch

William Benedict Fytch

An English Franciscan friar of the Capuchin Reform, whose family name was Filch; b. at Canfield, Essex, in 1563; d. 1610. His parents were of the Puritan party, and he himself professed Calvinism until he was sent to study in London where he embraced the Catholic faith. He went over to Paris and entered the Capuchin order. In 1599 he was at his own request sent to England; he had hardly landed when he was seized and cast into prison. Here he remained for three years, and whilst there held conferences with the heretics concerning true Faith. He was at length released through the intercession of French Ambassador and sent back to France, where he was appointed master of novices. He was held in great reverence at the French Court; and amongst the people on account of his gift of miracles and spirit of prophecy. He wrote several ascetical works, the most famous being his treatise "The Will of God", which was written in English, but speedily translated into various languages. In 1625 this treatise was translated into Latin by order of the Minister General of the Order.

FATHER CUTHBERT

Gabala

Gabala

A titular see of Syria Prima. Ten bishops of this city are known between 325 and 553, the most famous being St. Hilary, writer and martyr (fourth century), and Severian, first the friend but later the enemy of St. John Chrysostom (see *Echos d'Orient*, IV, 15-17; IX, 220). Since the sixth century Gabala has been an exempt archdiocese directly dependent on the Patriarch of Antioch. The diocese is again noticed in the tenth century (*Echos d'Orient*, X, 97 and 140). When the Arabs took possession of the city in 639, they found there a Byzantine fortress, beside which the Caliph Moavia erected a second. According to the Arabian geographer Yaqout, the Greeks recovered the city from the Mussulmans in 969, who recaptured it in 1081. The crusaders entered Gabala in 1109, and it was henceforth the seat of a Latin diocese. For the Latin titulars see Le Quien, III, 1169; Ducange, "Les familles d'outre-mer", 795-796, and especially Eubel, I, 267; II, 173. Saladin took the city in 1187, and in 1517 it fell into the hands of the Sultan Selim. Gabala, at present called Djebeleh, is a caza of the vilayet of Beirut, and numbers 3000 inhabitants, all of whom are Mussulmans. There are to be seen here a small harbour, numerous ruins, sepulchral chambers, and ancient Christian chapels hewn in the rock, a Roman theatre, baths and mosques, one of which, formerly the cathedral, contains the tomb of the Sultan Ibrahim-Eddem, who died in 778.

S. VAILHÉ

Gabbatha

Gabbatha

The Aramaic appellation of a place in Jerusalem, designated also under the Greek name of Lithostrotos. It occurs only in John 19:13, where the Evangelist states that Pontius Pilate "brought Jesus forth, and sat down in the judgment seat, in the place that is called Lithostrotos, and in Hebrew Gabbatha." The name "Gabbatha" is certainly an Aramaic word, for by "Hebrew" St. John, like other New Testament writers, denotes the Aramaic language which was spoken commonly at the time in Judea. It is not a mere translation of "Lithostrotos", which properly means the tessellated or mosaic pavement whereon stood the judgment-seat, but which was extended to the place itself in front of Pilate's prætorium, where that pavement was laid. This was proved by the practice of St. John, who elsewhere gives Aramaic names as distinctly belonging to places, not as mere translations of the Greek. This is proved also by the fact that "Gabbatha" is derived from a root (meaning "back", or "elevation"), which refers, not to the kind of pavement, but to the "elevation" of the place in question. It thus appears that the two names "Lithostrotos" and "Gabbatha" were due to different characteristics of the spot where Pilate delivered Our Lord to death. The Aramaic name was derived from the configuration of that spot, the Greek name from the nature of its pavement. Efforts have been made by commentators to identify "Gabbatha" either with the outer

court of the Temple, which is known to have been paved, or with the meeting-place of the Great Sanhedrin, which was half within, half without that Temple's outer court, or again with the ridge at the back of the House of the Lord; but these efforts cannot be considered as successful. The only that can be gathered with certainty from St. John's statement (xix, 13) is that "Gabbatha" denotes the usual place in Jerusalem, where Pilate had his judicial seat, and whither he caused Jesus to be brought forth, that he might deliver in His hearing, and in that of the Jewish multitude, his formal and final sentence of condemnation.

FRANCIS E. GIGOT

Gaboon

Gaboon

VICARIATE APOSTOLIC OF GABUN

Formerly called the *Vicariate Apostolic of the Two Guineas*. The name Gaboon (Gabão) was originally given by the Portuguese to the estuary on which stands the town of Libreville, and to a narrow strip of territory on either bank of this arm of the sea. In the days of the slave trade it was merely a trading station on the Coast of Guinea which at that time extended from the Senegal to the mouth of the Congo River. At the present time the name of Guinea for this territory and the ecclesiastical title "The Two Guineas" have gone out of use both in the civil and the religious sense, and Gaboon designates the northern portion of French Congo, south of the Equator and lying between the Atlantic ocean and longitude 12 east of Paris. It is coextensive with the basin of the Ogowai River, to which should be added several small subsidiary streams as the Muni, the Komo, and the Rembo-Nkomi. Its surface though broken and uneven is at no point of great elevation, and is covered by a great dense, tropical forest interrupted only by some rocky plains in the south. The only roads are the tracks used by the natives, along which caravans travel on foot. The rivers are often blocked by rapids, so that navigation is both uncertain and hazardous. The climate is sultry, humid, and subject to storms, but the temperature remains almost stationary; the rainy season lasts from September to May. On the whole it is a healthy climate for men of temperate lives, and the mortality there is one of the lowest on the West-African coast. The population of Gaboon is very mixed, Gaboon being the geographical terminus of the migration drawn from the interior by trade. No doubt many of the races become broken up on the way, but those that reach the coast are slowly absorbed among the earlier settlers there. Indeed many of these tribes are semi-nomadic by habit, and change the sites of their villages as soon as the lands in their vicinity have become exhausted by crop-growing. It thus comes to that pass every four or five years a new ethnographical map of the country is necessary.

However it is possible to divide the peoples into several groups. Under the first group may be included the old slave-trading races that have been established a long time on the Coast. Of these the most important people are the Mpongwe, dwelling along the Gaboon estuary; they are mentioned in the eighteenth century by Dutch navigators. As a race they are intelligent and keen and enjoy an

undoubted ascendancy over the other black races. They are, moreover, gentle and hospitable, too hospitable perhaps. They easily fall victims to European vices, and immorality and alcohol have almost wiped them out. Not more than a few hundred of them remain, many of whom go as traders far into the interior. The point of the Gaboon peninsula is occupied by the Bengas; the creeks or inlets of the Manda and the Muni by the Baseki, usually known as the Boulous (Bulu); both tribes live by fishing and are dying out from alcoholism. Their languages differ from each other and equally from that of the Mpongwe. However the three tribes settled towards the South in the delta of the Ogowai, the Orongous (Orongu), the Galoas, and the Nkomis use a slightly modified form of Mpongwe, follow the same customs, have the same vices as the Mpongwe of the estuary, and engage in the rubber trade as well as in fishing. The second group is made up of one single tribe, the Fans or Pahouins (Pawin) who inhabit all the northern portion of Gaboon as far as the Ivindo, and in places are to be found along the left bank of the Ogowai. They are true barbarians and are an invading race, whose progress towards the coast goes on unceasingly.

They do not deserve all that former travellers have said as to their ferocity, but they are very fierce-looking, muscular, warlike, and above all vindictive. They are not, however, slave-dealers, nor do they, properly speaking, own slaves; their wives are really their slaves, and polygamy is more in vogue and more bestial among them than elsewhere. Nevertheless they are not victims to the grosser forms of immorality, in the same measure as other tribes are, but along the great rivers and at the coast alcoholism works terrible havoc among them. Those of them who dwell in the interior still practise cannibalism on their prisoners of war.

A third group of peoples is to be found in the southern part of the country; in this territory live tribes still given over to slavery. Thus, for instance, the Esteiras and the Balkalai, who act as middlemen in trading with the tribes dwelling in the mountains, the Bayakas, Bapunus, Ndjavis, Ishogos, Mbétés, Shakés, Adumas, who in exchange for articles of commerce sell their children as slaves. These slaves are brought secretly to the coast, but are no longer shipped to the Antilles or Brazil, instead they are bought by the Mpongwe and Nkomis who are thus enabled to lead lives of idleness. All these groups of tribes practise fetichism. They believe in a God who made the world, in an immortal soul and in retribution for evil; they worship spirits and ghosts, and are under the sway of sorcerers and secret societies, to which even the authority of their chiefs must yield.

The early evangelization of the country by Capuchins from Italy left no permanent traces. About 1840 an American prelate, Monsignor Barron, was the first to answer the appeal made for a priest of the Catholics among the freed negroes that the United States Government had shipped back to the coast of Africa. Monsignor Barren gave up an important post which he held under the Archbishop of Philadelphia and made two voyages to the Guinea Coast between 1840 and 1843. The Venerable Père Libermann had just at this date founded at Amiens his new congregation of the Sacred Heart of Mary, which later was united with that of the Holy Ghost; he furnished the first missionaries to Monsignor Barren. In the first year six out of seven of the missionaries died as much of starvation as of sickness; the seventh, after incredible adventures, succeeded in reaching Cape Palm on the Gaboon. This was Père Bessieux and the date, 29 September, 1884. The French navy had set up a

small fort there intended as a lookout for vessels engaged in the slave trade, and consequently Père Bessieux was able to erect the first station at this spot. The following year brought him many helpers, and among them Père Le Berre. In 1848 a slave dhow was captured by the French and forty-nine slaves were located near the mission station on a little plateau which was thereupon called Libreville (Freetown). Père Le Berre was given the official title of "Professor of Morals" and began instructing them. The next year the first nuns arrived, the French Sisters of the Immaculate Conception. In 1849 Père Bessieux was recalled to Europe, consecrated bishop, and sent back to Gaboon as Vicar Apostolic of the Two Guineas, with jurisdiction over a coast line 2000 leagues long, where to-day there are twenty-five ecclesiastical divisions.

About this time the Libreville mission made many attempts to set up stations elsewhere; only one was a success, that among the Bengas of Cape Esteiras, and it was called St. Joseph's Mission. To-day nearly all of this small tribe are Catholics. While the Libreville mission was in process of organization, building a suitable church, enlarging its schools, and clearing its grounds, the little government station about a mile away was gradually becoming a small town. In 1860 it became necessary to erect a parish there, and thus was founded the mission of Saint-Pierre, having for special object the conversion of the Mpongwe. The work of the sisters was transferred to this place as well as the school for girls and a native hospital; later the colony built a church and at present the parish contains about 3000 faithful. Monsignor Bessieux died in 1876 after having spent 33 years in Africa; he was succeeded by his early companion, Monsignor Le Berre. Under the new bishop new stations were rapidly founded, and the Congregation of the Holy Ghost continued to supply the necessary missionaries. In 1879 a mission to the Pahouins of the Como was attempted for the first time, and the Station of Saint Paul de Donghila was opened; after great hardships it is now a flourishing mission counting more than 1000 Catholics. Soon afterwards the missionaries began to move inwards from the coast and the estuary and in 1881 the mission of Saint-François-Xavier was founded at Lambarene on the Ogowai; in 1883 that of Saint-Pierre-Claver among the Adumas, which was afterwards moved to Franceville near the source of that river. In 1886 at Fernando Vaz in the Nkomi country the mission of Sainte-Anne was organized. These three places are now great mission centres and are thoroughly equipped. It would be only fitting to add to this list Monsignor Le Berre's new stations in the Kamerun sad in Spanish Guinea; but they now form part of new ecclesiastical divisions. In 1891, after 45 years of missionary life, the holy bishop died. His works had increased tenfold and his memory is blessed. He was succeeded by Monsignor Le Roy. During the three years which the new bishop spent at Gaboon three new stations were created. One arose on the banks of the Rio Muni, first at Kogo, then at Butika, at the present frontier of Spanish Guinea, among the Fans of the north. Another was established below the first rapids of the Ogowai, also in the Fan country. This station was Saint-Michel of Ndjole. The third station, Sainte-Croix, is surrounded by the Esteira peoples of the south-west. At the same time a fresh impulse was given to the evangelizing movement, for this was the period of the principal labour on the languages, of translations, of relations, of very useful journeys of exploration, of ordinances

favouring the work of the catechists, of agreements with the tribes concerning the reform of their family customs, etc.

The active direction of Monsignor Le Roy ceased in 1896 when he was elected Superior General of the Fathers of the Holy Ghost. He was replaced at Gaboon by Monsignor Adam, the present bishop, who has established three new stations: Notre-Dame-des-Trois-Epis, at Samba on the Ngume, a tributary of the left bank of the Ogowai, and Saint-Martin, a little further up the same river, both of them in the midst of the mixed populations of the south. The third post, of quite recent foundation, is Okano near Boue on the Ogowai in the Fan country. More than two hundred missionaries have died in the Gaboon territory and a hundred continue the work. They are divided into priests, brothers, both lay and teaching, and nuns. There are 47 priests; native priests and seminarians, native brothers and sisters, and upwards of a hundred catechists aid in the work of evangelization, and the number of Catholics is more than 12,000. The moral gain is slow but evident; progress is always being made. There have been great obstacles to the spread of the Gospel, obstacles not always due to the barbarism, fetichism, slavery, and cannibalism of the pagan tribes.

M. BRIAULT

St. Gabriel the Archangel

St. Gabriel the Archangel

"Fortitudo Dei", one of the three archangels mentioned in the Bible. Only four appearances of Gabriel are recorded:

- In Dan., viii, he explains the vision of the horned ram as portending the destruction of the Persian Empire by the Macedonian Alexander the Great, after whose death the kingdom will be divided up among his generals, from one of whom will spring Antiochus Epiphanes.
- In chapter ix, after Daniel had prayed for Israel, we read that "the man Gabriel . . . flying swiftly touched me" and he communicated to him the mysterious prophecy of the "seventy weeks" of years which should elapse before the coming of Christ. In chapter x, it is not clear whether the angel is Gabriel or not, but at any rate we may apply to him the marvellous description in verses 5 and 6.
- In N.T. he foretells to Zachary the birth of the Precursor, and
- to Mary that of the Saviour.

Thus he is throughout the angel of the Incarnation and of Consolation, and so in Christian tradition Gabriel is ever the angel of mercy while Michael is rather the angel of judgment. At the same time, even in the Bible, Gabriel is, in accordance with his name, the angel of the Power of God, and it is worth while noting the frequency with which such words as "great", "might", "power", and "strength" occur in the passages referred to above. The Jews indeed seem to have dwelt particularly upon this feature in Gabriel's character, and he is regarded by them as the angel of judgment, while Michael is called the angel of mercy. Thus they attribute to Gabriel the destruction of Sodom and of the host of Sennacherib, though they also regard him as the angel who buried Moses, and as the man deputed to mark the figure Tau on the foreheads of the elect (Ezech., 4). In

later Jewish literature the names of angels were considered to have a peculiar efficacy, and the British Museum possesses some magic bowls inscribed with Hebrew, Aramaic, and Syriac incantations in which the names of Michael, Raphael, and Gabriel occur. These bowls were found at Hillah, the site of Babylon, and constitute an interesting relic of the Jewish captivity. In apocryphal Christian literature the same names occur, cf. Enoch, ix, and the Apocalypse of the Blessed Virgin.

As remarked above, Gabriel is mentioned only twice in the New Testament, but it is not unreasonable to suppose with Christian tradition that it is he who appeared to St. Joseph and to the shepherds, and also that it was he who "strengthened" Our Lord in the garden (cf. the Hymn for Lauds on 24 March). Gabriel is generally termed only an archangel, but the expression used by St. Raphael, "I am the angel Raphael, one of the seven, who stand before the Lord" (Tob., xii, 15) and St. Gabriel's own words, "I am Gabriel, who stand before God" (Luke 1, 19), have led some to think that these angels must belong to the highest rank; but this is generally explained as referring to their rank as the highest of God's messengers, and not as placing them among the Seraphim and Cherubim (cf. St. Thomas, I, Q. cxii, a.3; III, Q. xxx, a.2, ad 4um).

In addition to the literature under ANGEL and in the biblical dictionaries, see PUSEY, *The Prophet Daniel* (London, 1868); EDERSHEIM, *Jesus the Messiah* (London and New York, 1890), Append. XIII; H. CROSBY, *Michael and Gabriel* in *Homiletic Review* (1890), XIX, 160-162; BARDENHEWER, *Mariä-Verkündigung* in *Bibl. Studien*, X, 496 sqq.

HUGH POPE

Brothers of St. Gabriel

Brothers of Saint Gabriel

The Congregation of the Brothers of Christian Instruction of St. Gabriel was originally founded by St. Louis Grignon de Montfort in 1705, but it did not spread much till it was amalgamated with one founded in 1835 by Monsignor Deshayes. Vicar-General of Rennes. It took the anomalous title of the Brothers of St. Gabriel; because the first chapel of the congregation was dedicated to St. Gabriel; this was at Boulogne. The object of the congregation is the Christian education of the young and also of the blind, the deaf, dumb, and the care and education of orphans. The members take no vows, but after making a novitiate of three years they promise to obey the superior and to devote themselves to the works of their institute; they are generally men of sufficient means to support themselves. They are governed by a superior elected by the votes of the whole community for three years: he is assisted by four counsellors elected in the same way. The congregation in 1851 had as many as ninety-one houses mostly in France and in the Diocese of Frankfort in Germany. Later it had 122 schools in France besides two for the blind and eight for the deaf-mutes. The French mother-house was at St. Laurent-sur-Sevre in Vendée: in 1880 it had 790 members. Recent statistics give the congregation 170 schools and colleges, eight asylums for the deaf and dumb, three for the blind, and several homes for orphans. The novitiate for Canada is a Sault-au-Recollet near Montreal.

The brothers have a college at Montreal and four schools in the archdiocese, besides three schools in the Diocese of Three Rivers and one at St. Ours in the Diocese of St. Hyacinth.

FRANCESCA M. STEELE

Bl. Gabriel Possenti

Bl. Gabriel Possenti

Pasionist student; renowned for sanctity and miracles; born at Assisi, 1 March, 1838; died 27 February, 1862, at Isola di Gran Sasso, Province of Abruzzo, Italy; son of Sante Possenti and Agnes Frisciotti; received baptism on the day of his birth and was called Francesco, the name by which he was known before entering religion, educated at the Christian Brothers' School, and at the Jesuit college at Spoleto. Immediately after the completion of his secular education, he embraced the religious state; on 21 September, 1856 he was clothed with the Passionist habit, and received the name of *Gabriele dell' Addolorata*. He made his religious profession on 22 September, 1857, and then began his ecclesiastical studies as a Passionist student. He was gifted with talent of a higher order and with a wonderful memory; and in his exact observance of rule, his spirit of prayer, and his fervent devotion to the Passion of our Lord, to the Holy Eucharist, and to the Dolours of the Blessed Virgin. In the sixth year of his religious life he died of consumption; his death was that of the just, holy and edifying, and he was buried in the church attached to the retreat at Isola di Gran Sasso where his remains are still entombed, and where numerous prodigies have been wrought, and numerous conversions effected, through his intercession.

Little was known of Gabriel's extraordinary spiritual gifts during his life. He was not singular, he conformed himself to the community life; he was only a fervent and exemplary Passionist novice and student hidden from the world in the cloister. After death, this young religious in a few years was declared venerable by the Church, thereby testifying that he had practised all the virtues in a heroic degree; and he was beatified and raised to the honours of the altar, by special privilege of the supreme pontiff before he was fifty years dead.

His solemn beatification took place on 31 May, 1908, in the Vatican basilica, in the presence of the cardinals then in Rome, of the Passionist fathers resident in Rome and of representatives from all the provinces of the congregation. Among those present were many who had known the beatified during his life, including one of his brothers, Father Norbert, C.P., his old spiritual director and confessor and Signor Dominico Tiberi, who had been miraculously cured through his intercession.

The Mass and Office in honour of Blessed Gabriel are allowed to the whole Passionist congregation, and his feast day is celebrated on 31 May. It is the express wish of Leo XIII and Pius X that he should be regarded as the chief patron of the youth of today, and especially as the patron of young religious, both novices and professed, in all that concerns their interior lives.

ARTHUR DEVINE

Gabriel Sionita

Gabriel Sionita

A learned Maronite, famous for his share in the publication of the Parisian polyglot of the Bible; b. 1577, at Edden on the Lebanon; d. 1648, at Paris. Though he came to Rome at the age of seven, he always looked upon Arabic as his mother tongue. At Rome he learnt Latin, Syriac, and acquired a slight knowledge of Hebrew; he studied theology, but did not receive the priesthood till much later, in Paris, at the advanced age of 45. Savary de Breves, once French ambassador to Turkey and interested in Oriental studies, when recalled from Rome, took two Maronites with him to Paris to assist in the publication of the polyglot under the auspices of de Thou, the royal librarian, and Cardinal Duperron. The two Maronites were Gabriel Sionita and John Hesronita. Gabriel, however, was by far the more prominent of the two. They received an annual stipend of 600 livres, and Gabriel was appointed to the chair of Semitic languages at the Sorbonne. Unfortunately both de Thou and Duperron died within four years, and serious financial difficulties arose. In 1619, it is true, the assembly of French clergy at Blois voted 8000 livres to support the undertaking; but through some malversation of funds, this money was never actually paid; at least such is the accusation brought by Gabriel in his preface to the Syriac Psalter which he published. The Maronites seem to have become involved in pecuniary embarrassments, which led to unseemly feuds with the leaders of the undertaking. In 1619, however, by royal diploma, Gabriel's stipend had been raised to 1200 livres; the following year he received the doctor's degree and two years later the priesthood. Evidently all had been done to honour and support these Eastern scholars; and the blame probably lies largely with Gabriel, who can hardly be excused from idleness and thriftlessness. In 1626, as Gabriel held no classes owing to lack of students, his stipend was curtailed. After some time, however, he was paid on the original basis; and, in 1629, his salary was increased to 2000 livres. In 1630, he recommenced work on the polyglot; but, as he did not apply himself industriously, and was even accused, apparently with some show of reason, of carelessness in the work, he again found himself in difficulties. In the quarrel which ensued, Richelieu supported the editor, Le Jay, against the Maronites; and as it was feared that Gabriel might leave the country, the cardinal had him imprisoned in Vincennes (1640); he was released, however, at the expiration of three months' time, when he had signed an undertaking and given sureties that he would prepare the texts for the polyglot. He had actually completed his great task some time before his death, which occurred at the age of 71. Gabriel's share in the polyglot is as follows: he revised and corrected almost all Syriac and Arabic texts; and he translated the Arabic and Syriac texts into Latin with the exceptions of the Book of Ruth. But he made only a revision and not a fresh translation of the Gospels into Latin, nor did he translate from Syriac into Latin the Sapiential books or the Apocalypse. Together with John Hesronita and Victor Sciala he published, in 1614, a Latin translation of the (Arabic) Psalter; in 1616, he published an Arabic grammar, of which, however, but one division (Liber I) appeared, containing rules for reading. In 1619, appeared his "Geographia Nubiensis", i.e. a translation of the Maronite editions of the same, or rather of Edrisi's geography, with a small treatise as appendix,

"De nonnullis Orient. urb. nec non indig. relig. ac. moribus". In 1634, was issued a "Poema enigmaticum" in praise of Divine wisdom by an ancient Syrian philosopher; in 1630, "Testamentum et pactiones inter Mohammedem et Christianae fidei cultores", in Arabic and Latin; and finally (1640-2) three small pamphlets, one in Latin and two in French, containing his defence in the actions of Le Jay and Vitre.

Gad

(, fortune, luck).

A proper name which designates in the Bible, (I), a patriarch; (II), a tribe of Israel; (III), a prophet; (IV), a pagan deity.

I. GAD (PATRIARCH)

A patriarch, to wit, the seventh son of Jacob, and the first by Zelpha, Lia's handmaid. He was born to Jacob in Mesopotamia of Syria (Aram), like his full brother, Aser (Gen., xxxv, 26). On his birth, Lia exclaimed: Happily! () and therefore called his name Gad (Gen., xxx, 11). The exclamation and the name given thereupon bespeak a real relation between the name of this son of Jacob, and that of the pagan deity which was also called "Gad"; although the exact nature of this relation is variously estimated at the present day. The patriarch Gad begot seven sons (Gen., xlv, 16). Nothing more is said in Holy Writ concerning him personally.

II. GAD (TRIBE)

Tribe of Israel on the east of Jordan, between eastern Manasses on the north, and Ruben on the south. The territorial possessions of the descendants of Gad cannot be given with perfect exactness. On the west, the portion of Gad abutted on the Jordan, and ran up the Arabah or Jordan valley, in a narrow strip, from the northern end of the Dead Sea to the southern extremity of the lake of Genesareth; but on the other three sides, its boundaries cannot be described with equal certainty. Thus, on the east, the Bible assigns to Gad no distinct limit. On the north, it gives, in one place (Deut., iii, 16), the river Jeboc as the extreme limit of that tribe, while, in two other places (Jos., xiii, 26, 30), it treats as such the locality of Manaim (Heb. Mahanaim) which was to the north of the Jeboc. In like manner, on the south, the sacred text represents in Jos., xiii, 15 sqq., as the boundary between Gad and Ruben, a straight line drawn eastwards from the Jordan and passing exactly northward of Hesebon, a town which it ascribes to Ruben; whereas, it assigns elsewhere (Num., xxxii, 34 sqq.; Jos., xxi, 37), to Ruben several towns north of Hesebon, and to Gad, the very town of Hesebon. From these apparently conflicting biblical data it is natural to infer that the extent of the tribe of Gad varied at different times in Hebrew history, and to consider as simply conventional

the definite limits ascribed to Gad on the ordinary maps of Palestine divided among the twelve tribes of Israel. The following are the principal towns mentioned in Jos., xiii, 25 sqq. and Num., xxxii, 34-36, as belonging to the descendants of Gad: Jaser, Ramoth, Masphe, Betonim, Manaim, Betharan, Bethnemra, Socoth, Saphon, Jegbaa, Etroth, Sophan. During the journey through the wilderness, the tribe of Gad counted upwards of 40,000 men and marched with Ruben and Simeon on the south side of Israel. Allowed by Moses to settle on the east side of the Jordan, on condition of aiding in the conquest of western Palestine, the Gadites complied with that condition, took possession of the territory which they had desired as favourable to pastoral pursuits, and formed for centuries the most important Israelite tribe beyond Jordan. They were a warlike race whose valour is highly praised in the parting blessing of Moses (Deut., xxxiii, 20, 21) and in the prophecy of Jacob (Gen., xlix, 19), and were able to hold their own in the raids made against them, chiefly by the children of Ammon. Upon the disruption of Solomon's empire, they formed a part of the northern kingdom, and shared with varying success in the subsequent wars against northern Israel. Their name appears on the Moabite stone (line 10). They were carried into captivity at the same time as the other tribes beyond Jordan by Teglatphalasar (734 B.C.), and in the time of the prophet Jeremias their cities were inhabited by the Ammonites. Their territory comprised the land of Galaad, the fertility and beauty of which are still praised by eastern travellers.

III. GAD (PROPHET)

A Hebrew prophet, contemporary with King David. He came to that prince when the latter was hiding in the cave of Odollam (I Kings [Samuel], xxii, 5), and was probably one of the Gadites who joined David there (I Par. [Chronicles], xii, 8). He then began under God's guidance his career of counsellor, which eventually won him the name of "the seer of David" (II Kings, xxiv, 11; I Par., xxi, 9). Gad announced to the king the divine punishment for numbering the people, and advised him to erect an altar to God on Ornan's threshing-floor (II Kings, xxiv, 11 sqq.; I Par., xxi, 9 sqq.). He is referred to as the author of a book narrating part of David's reign (I Par., xxix, 29) and as having assisted that king in arranging the musical services of the House of the Lord (II Par., xxix, 25).

IV. GAD (PAGAN GOD)

A pagan divinity explicitly mentioned in Is., lxv, 11, where the Hebrew name x, "Gad", is rightly rendered "Fortune" in the Vulgate. As far as is known in the present day, Gad is a word of Chanaanite origin, which, long before the passage of Isaias just referred to was written, had, from a mere appellative, become the proper name of a deity. Biblical testimony to the ancient worship of Gad in Chanaan is certainly found in the names of such places as Baalgad (Jos., xi, 17; xii, 7; xiii, 5) and Maglalgad "tower of Gad" (Jos., xv, 37). A trace of Gad's worship in Syria may perhaps be found in Lia's exclamation x "begad" on the birth of her first son when she also called "Gad"

(Gen., xxx, 11); this was admitted of old by St. Augustine (*Quæstiones in Heptateuchum*, in P. L., XXXIV, col. 571), and at a much more recent date by Dom Calmet, in his *Commentary on Genesis*.

Francis E. Gigot

Gadara

Gadara

A titular see of Palaestina Prima; there were two sees of this name, one in Palaestina Prima, the other in Palaestina Secunda; it is therefore difficult to ascertain to which of the two cities the known bishops belonged (*Le Quien*, III, 597). Gadara in Palaestina Secunda is to-day known as Oum-Keiss, beyond the Jordan, while Gadara in Palaestina Prima, the subject of this article, has not been identified. There was a Gader (*Jos.*, xii, 13) whose king was defeated by Josue, a place which is also mentioned in *I Par.*, ii, 51; *Jos.*, xv, 58. It is to-day called Djédur, half-way between Bethlehem and Hebron. A Geder (Greek *Gadera*) is mentioned as being in the plain of Sephelah (*Jos.*, xv, 36; *I Par.*, iv, 23) and is to-day called Khirbet-Djedireh, south-west of Amwas, or rather Qatrah, a village of the plain of Sephelah. Perhaps neither of these cities is our Gadara, and it can hardly be identified, as is often done, with Gazara or Gazer, a well-known Scriptural city, now Tell-Djezer, near Amwas.

S. VAILHÉ

Agnolo, Giovanni, and Taddeo Gaddi

Agnolo, Giovanni, and Taddeo Gaddi

Florentine artists, Taddeo being the father of Agnolo and Giovanni. The dates of their birth are very uncertain. Taddeo was probably born about 1300; Agnolo and Giovanni after 1333. The father died in 1366, Giovanni in 1383, Agnolo in 1396, and all three are buried in Santa Croce in Florence. Taddeo was the godson of Giotto, lived with him twenty-four years, and became the most eminent of his numerous scholars. Vasari says that he "surpassed his master in colour", and, in some of his works, "even in expression". Two paintings signed by him are in existence — one in Berlin, dated 1333, and another in the church of Mogognano, dated 1355. The best of his extant frescoes are those in the Giugni Chapel, formerly belonging to the Baroncelli family, in the church of Santa Croce, but his most extensive works, in the churches of San Spirito and the Serviti, have all disappeared. Many of his frescoes and several of his most celebrated altar-pieces have entirely disappeared. His principal work was in Florence, but he also executed several examples in Arezzo and in the Casentino. Perhaps he is best known for the fact that he was a distinguished architect, and designed the present Ponte Vecchio in Florence, and also lower down the river a still finer bridge (Ponte Trinita), which was destroyed in the sixteenth century. He was very successful, and amassed great wealth.

His son Agnolo entered the studios of Giovanni da Milano and Jacopo del Casentino; his best work is in the cathedral at Prato, where there are thirteen frescoes illustrating the story of the Holy Girdle, and in the church of Santa Croce at Florence, where there are eight panels by him, commemorating the legend of the Cross. His earliest work, according to Vasari, illustrated the story of Christ raising Lazarus, and was regarded as the most wonderful painting of a dead body that had ever been seen. He was the master of an even more celebrated man, Cennino Cennini, the author of an important treatise on painting in fresco, distemper, and other media, which is the chief source of our information respecting the technic of the early Florentine artists, and also of a book, the importance of which, especially with regard to tempera painting and the application of gold, can hardly be over-estimated. Giovanni Gaddi, the brother and pupil of Agnolo, was a man of much less importance, and hardly any works now remain which can be attributed to him with certainty, as in the rebuilding of San Spirito at Florence most of his work was destroyed.

GEORGE CHARLES WILLIAMSON

Gaeta

Gaeta

ARCHDIOCESE OF GAETA (CAIETANA).

Archdiocese in the province of Caserta in Campania (Southern Italy). It is the ancient Caieta, situated on the slopes of the Torre di Orlando, a promontory overlooking the Mediterranean. Gaeta was an ancient Ionian colony of the Samians according to Strabo; legend, however, derives its foundation from Caieta, the nurse of Æneas or Ascanius. Among the ancients it was famous for its lovely and temperate climate. Its port was of great importance in trade and in war, and was restored under Antoninus Pius. Among its antiquities is the mausoleum of Lucius Munatius Plancus. As Byzantine influence declined in Southern Italy the town began to grow. In the ninth century (840) the inhabitants of the neighbouring Formiæ fled to Gaeta through fear of the Saracens. Though under the suzerainty of Byzantium, Gaeta had then, like Naples and Amalfi, a republican form of government under a "dux" or lord. It was a strong bulwark against Saracen invasion, and in 847 aided Leo IV in the naval fight at Ostia. Later, however, looking rather to local safety, its dux, Docibilis, entered into treaties with the Saracens. From the end of the ninth century the principality of Capua claimed it, as a title for the younger son of the prince. In 1039 Gaeta, with Amalfi and Naples, acknowledged the rule of Guaimario, Duke of Salerno; about forty years later with the whole duchy of Salerno it became part of Robert Guiscard's new Norman territory.

In the many wars for possession of the Kingdom of the Two Sicilies, Gaeta, owing to its important strategic position, was attacked as often and as bravely as it was defended. In 1194 the Pisans, allies of Henry VI in the conquest of the kingdom, took possession of the town and held it as their own. In 1228 it rebelled against Frederick II and surrendered to the pope, but after the peace of San Germano (1230) it was given back to the Sicilian kingdom. In 1289 Don Jaime of Sicily tried to gain possession of it, but failed. In 1435 Alfonso V of Aragon (Alfonso I of Naples) besieged

it, and displayed great generosity, to his own disadvantage, by succouring those unable to bear arms who had been driven out from the besieged town. After a disastrous naval battle he captured it, and gained control of the kingdom. In 1501 Gaeta was retaken by the French, who, after the defeat of Garigliano (3 Jan., 1504), abandoned it to Gonsalvo de Cordova, Ferdinand the Catholic's general. In the War of the Spanish Succession it was captured (1707) by the Austrian general Daun, after a stubborn resistance made by the Spanish viceroy. In 1806 Masséna took it; finally it became the last refuge of Francis II of Naples. After an heroic defence, it capitulated 13 Feb., 1861, thus sealing the annexation of the Kingdom of Naples to the Kingdom of Italy. Cialdini, the Piedmontese general, received the title of Duke of Gaeta.

This city has often been the refuge of illustrious personages: among others, of Gelasius II, who was born there: of Margaret, Queen of Naples (1387): of Gregory XII (1410) after the capture of Rome by Alexander V; finally, of Pius IX (1848), during the Roman revolution. The cathedral contains the relics of St. Erasmus, transferred from Formiæ, and is a handsome building dating from the twelfth century; the campanile, in Norman style, dates from 1279. The church of St. Francis, built by Frederick II, is in very fine Gothic-Italian style, and contains paintings and sculpture by many of the most famous Neapolitan artists. The Chapel of the Crucifix is a curiosity. It is built on a huge mass of rock that hangs like a wedge between two adjoining walls of rock. Legend tells how the rock was thus split at the moment of our Saviour's death. The episcopal see dates from 846, when Constantine, Bishop of Formiæ, fled thither and established his residence. The See of Formiæ, abandoned since the end of the sixth century, was thereafter united to that of Minturno (Minturnæ). In 1818 Pius VII joined to Gaeta the very ancient See of Fondi. It was once a suffragan of Capua, then directly subject to the pope. Pius IX raised it to archiepiscopal rank, without suffragans. Among its bishops of note were: Francesco Patrizio (1460), friend of Pius II, author of a work in nine books, "De Regno et De Institutione Regis", dedicated to Alfonso, Duke of Calabria; and Tommaso de Vio, better known as the famous Cardinal Cajetan. The Archdiocese of Gaeta has now 42 parishes with 83,600 faithful, 3 monasteries for men, 9 convents for women, and 2 Catholic weekly papers.

CAPPELLETTI, *Le Chiese d'Italia* (1870), XXI, 334-453; FERRARO, *Memorie religiose e civili di Gaeta* (Naples, 1903); *Codex diplomaticus Cajetanus* (Monte Cassino, 1887-91); CASTELMOLA, *Memorie storiche della città di Gaeta* (Milan, 1879).

U. BENIGNI

Ivan Sergejewitch Gargarin

Ivan Sergejewitch Gagarin

Gagarin was of the princely Russian family which traces its origin to the ancient rulers of Starodub; born at Moscow, 1 August, 1814; died at Paris, 19 July, 1882.

Ivan (Johannes) was the son of the Russian state-councillor, Prince Sergius Gagarin, and Barbara Pushkin. He entered the service of the state at an early age, and was first named attaché to his uncle,

Prince Gregory Gagarin, at Munich, on whose death, in 1837, he acted as secretary to the legation at Vienna. He was afterwards transferred to the Russian embassy at Paris, where his services were requisitioned in a similar capacity. He frequented the salon of his near relation, Madame Sophie Swetchine, and was on terms of familiar intercourse with Ravignan, Lacordaire's successor in the pulpit of Notre-Dame. Probably this dual influence assisted in bringing about his conversion to Catholicism, in 1842. On 19 April of that year Gagarin made his profession of faith, and was received into the Church by Ravignan, thereby, according to Russian law, putting an end to his diplomatic career, and forfeiting all rights to his inheritance. In the latter half of 1843 he entered the Society of Jesus, and passed his novitiate at Saint-Acheul. He was afterwards employed in professorial work at Brugelettes, where he taught church history and philosophy, at the College of Vaugirard and the school of Ste-Geneviève, and at Laval. He spent some time in Versailles and, in 1855, was back at Paris, from which date onward his pen was ever actively employed in the interests of religion and learning. Gagarin's literary output was considerable; many of his articles which appeared in current reviews and periodicals were afterwards collected and published in book form.

As a polemist Gagarin was thorough, and his work as a religious propagandist was of great importance. His grand object was to extinguish dissension and schism amongst the Slavonic peoples and win over Russia to the Church Universal. In conjunction with Fr. Daniel, Gagarin founded (1856) the journal "Etudes de théologie, de philosophie et d'histoire" (merged into "Etudes religieuses, historiques et littéraires", 1862); he re-established the "Œuvre de Prop. des Sts. Cyrille et Méthode" (1858), to promote corporate union amongst the Churches; and contributed to the "Contemporain", "Univers", "Ami de la Religion", "Précis historiques", "Correspondant", "Revue des questions historiques", etc. The "Polybiblion" (Paris, 1882), another review in which articles appeared from the pen of Gagarin, exhibits (XXXV, 166-188) a long list of his writings. These include: "La question religieuse dans l'Orient" (1854); "La Russie sera-t-elle catholique?" (Paris, 1856), tr. German (Münster, 1857), and rendered into other languages; "De l'Enseignement de la théologie dans l'Eglise russe" (1856); "Un document inédit sur l'expulsion des Jésuites de Moscou" (1857); "Les Starovères, l'Eglise russe et le Pape" (1857); "De la Réunion de l'Eglise orientale avec l'Eglise romaine" (1860); "Réponse d'un Russe à un Russe" (1860); "Tendances catholiques dans la société russe" (1860); "L'avenir de l'Eglise grecque unie" (1862); "La primauté de Saint-Pierre et les livres liturgiques de l'Eglise russe" (1863). Gagarin also spent several years in Constantinople, where he founded the Society of St. Dionysius the Areopagite, which aims at reuniting the Greek and Latin Churches. With this object, too, he published "L'Eglise roumaine", etc. (1865); "Constitution et situation présente de toutes les Eglises de l'Orient" (Paris, 1865); "Les Eglises orientales unies" (1867), scholarly and comprehensive studies on the Oriental Churches. Amongst works of Gagarin's more mature years are: "Les hymnes de l'Eglise russe" (1868); and the very interesting and discursive "Le Clergé Russe" (new ed. Brussels, 1871; tr. London, 1872). The latter is a collection, in book form, of a series of articles published in the "Etudes religieuses" under the title "La réforme du clergé russe", an indictment of the encroachments of civil aggression on

ecclesiastical right. The "Mémoires d'Archetti" [Paris, Brussels, 1872 — "Les Jésuites de Russie" (1783-1785)]; and "Religion et Mœurs des Russes", edited by Gagarin (Paris, 1879), are further proofs of his great activity. Almost all the above were published at Paris. A portion of his works were re-issued by Brühl, in "Russische Studien zur Theologie und Geschichte" (Münster, 1857); and by Huttler, in "Katholike Studien" (Augsburg, 1865). When the religious orders were expelled from France, Gagarin went to Switzerland, but soon returned to Paris, where he died.

STREBER in *Kirchenlex.*, s. v.; VAPEREAU, *Dict. des Contemp.*, 6th ed. (Paris, 1893), s. v. *Gagarine*; ROSENTRAL, *Convertitenbilder*, III, ii, 194, sqq. See also, for indication as to sources, author's preface to various works.

P. J. MacAuley.
Achille Gagliardi

Achille Gagliardi

Ascetic writer and spiritual director; born at Padua, Italy, in 1537; died at Modena, 6 July, 1607. After a brilliant career at the University of Padua he entered the Society of Jesus in 1559 with two brothers younger than himself. He taught philosophy at the Roman college, theology at Padua and Milan, and successfully directed several houses of his order in Northern Italy. He displayed indefatigable zeal in preaching, giving retreats and directing congregations, and was held in great esteem as a theologian and spiritual guide by the Archbishop of Milan, St. Charles Borromeo, whom he accompanied on his pastoral visitations, and at whose request he published his popular handbook of religion, "Catechismo della fede cattolica" (Milan, 1584). He is the author of various works on asceticism and mysticism, some of them still unedited. Others were printed; shortly after his death, appeared the "Breve compendio intorno alla perfezione cristiana" (Brescia, 161), which has been translated into five languages, and more recently the valuable "Commentarii in Exercitia spiritualia S.P. Ignatii de Loyala" (Bruges, 1882), in which he explains very lucidly the author's suggestions for distinguishing between the good and evil external influences or internal motives which inspire or control human conduct.

PAUL DEBUCHY
William Gahan

William Gahan

A priest and author; born 5 June, 1732, in the parish of St. Nicholas, Dublin; died there, 6 December, 1804. He entered on his novitiate in the Augustinian Order, 12 Sept., 1748 and made his solemn profession 18 Sept., 1749. Shortly afterwards he was sent to Louvain, where he commenced his ecclesiastical studies, 1 June, 1750. He was ordained priest 25 May, 1755, but remained some years longer in the university to obtain his degree of Doctor of Divinity. In 1761 he returned to Dublin, and the supply of parochial clergy at the time being insufficient, he was

asked by Archbishop Lincoln, and was permitted by his superiors, to take up the work of a curate in St. Paul's Parish. After three years in this capacity he returned to his convent in St. John's Street, where, in the leisure intervals of an ever-active missionary life, he composed the well-known "Sermons and Moral Discourses", on which his literary reputation chiefly rests.

These "Sermons" have gone through several editions (7th ed., Dublin, 1873); they are characterized not so much by exceptional eloquence as by solid learning and genuine piety. Dr. Gahan held the office of prior from 1770 to 1778, and also from 1803 until his death in the following year. In 1783 he was made provincial of his order, an office which he continued to hold for some years. In 1786-7 he travelled through England, France, and Italy. About 1783 he made the acquaintance of Dr. John Butler, Bishop of Cork, who afterwards turned Protestant on his succession to the title and estates of Dunboyne. A frequent and friendly correspondence took place between these two, and the grief which Dr. Gahan felt for the fall of his friend (1787) was turned into joy when he attended Lord Dunboyne on his deathbed, and received him back into the Church (1800). For this, however, he was to suffer. In spite of Dr. Gahan's advice and that of Dr. Troy, Archbishop of Dublin, Lord Dunboyne insisted on willing his County Meath estate to the trustees of Maynooth College, recently founded (1795) by the Irish Parliament. But as the will was disputed, and the issue of its validity, according to the law then in force, depended on whether or not the testator had died "a relapsed Papist", Dr. Gahan was compelled to appear as a witness, and was asked to reveal the nature of his ministrations to the dying nobleman. He refused, of course, to do so, and after undergoing six painful examinations in the Chancery office in Dublin, he was committed to jail at the Trim assizes, 24 Aug., 1802, to which the case had been referred for final judgment, his persistent refusal to testify as to the religion in which Dunboyne had died being ruled by the presiding judge, Lord Kilwarden, to constitute contempt of court. This imprisonment, however, lasted only a couple of days, and the remainder of Dr. Gahan's useful life was passed in peace in his convent in Dublin, where he died holding the office of prior. As there were no Catholic cemeteries at the time, his remains were laid to rest in the graveyard attached to St. James's Protestant Church.

Besides the "Sermons" already spoken of, Dr. Gahan published the following works: "A History of the Christian Church"; "The Christian's Guide to Heaven, or complete Manual of Catholic Piety"; "A Short and Plain Exposition of the Catechism"; "Catholic Devotion"; "A Short and Easy Method to Discern the True Religion from all the Sects which undeservedly assume that name"; "Youth Instructed in the Grounds of the Christian Religion"; "The Devout Communicant" (a revision of Father Baker's original); "The Spiritual Retreat, translated from the French of Bourdaloue"; "An Abridgment of the History of the Old and New Testament", i. e. of Reeve's translation from the French of Royamont.

BRENAN, *Ecclesiastical History of Ireland* (2d ed., Dublin, s. d.), p. 642 sqq.; BATTERSBY, *A History of the Abbeys, Convents, Churches, etc., of the Order, particularly of the Hermits of St. Augustine in Ireland, with biographical sketches, etc.* (Dublin, 1858); in the sketch of Gahan, Brenan's account is supplemented and corrected; GILBERT in *Dict. Nat. Biog.*, s. v. (reproduces Brenan's inaccuracies).

P. J. TONER.

Claude Ferdinand Gaillard

Claude Ferdinand Gaillard

A French engraver and painter; b. at Paris, 7 Jan., 1834; d. there, 27 Jan., 1887. His early studies were probably with Hopwood and Lecouturier; but his chief master was Cogniet, with whom he began engraving in 1850. In this year, he entered the Ecole des Beaux-Arts. At first he had to engrave fashion-plates to make money enough to live, but his determined application to his art brought him the Prix de Rome for engraving, in 1856. At his first public showing in 1860, his prints were called laboured, soft, and flacid, more like dry-point etchings than burin work, and he was advised to adhere to the established rules of his art. Gaillard had already chosen a new method, and his work was a shock, because not done according to the formulæ that trammelled engravers of that day. He was such an innovator that in 1863 he was among the "refusés", but in their exhibition his portrait of Bellini was hailed by Burty as the work of a master, "who engraved with religious care and showed a high classical talent". Gaillard's manner — the new manner — was to engrave with soft, delicate lines, drawn closely together but not crossing, and to render with vaporous delicacy every fold, wrinkle, or mark on the skin with Van Eyck-like care. Henceforth Gaillard was represented by engravings and paintings at every Salon. He is best known by his "L'Homme à l'Oeillet", which brought him only \$100. This masterpiece was completed in eight days — the face in one.

His admirable portraits of Piux IX and Leo XIII, broad in general effect although worked with microscopic zeal and realism, raised "the insubordinate scholar" to the rank of the most celebrated engraver of his day. Another great plate is the St. Sebastian modelled with delicate touches, and showing studied outline, delicate chiaroscuro, and a marvellous relief. "My aim" he said "is not to charm, but to be true; my art is to say all." His marvellous work led many to suspect he had some secret process or mysterious "tour de main", but it was his penetrating mind and observant eye that seized the soul beneath the human face. Gaillard was decorated in 1876, became officer of the "Légion d'Honneur" in 1886, and President of the Société des Graveurs au Burin in 1886. Just before his death the Government ordered him to engrave Leonardo da Vinci's "Last Supper" and "Mona Lisa". As a painter Gaillard was accurate, minute and conscientious; yet his small canvases are effective, exhibit great power of characterization, and are large in their "ensemble". He painted the human face as he engraved it — with the precision and exactitude of the early Flemings. His catalogued engravings number 80; his "Virgin" after Bellini deserves special mention.

LEIGH HUNT

St. Gal

St. Gal

Of the ninety-eight bishops who have occupied the see of Clermont-Ferrand (Auvergne) the sixteenth and twenty-third bore the name of Gal, and both are numbered among the twenty-nine bishops of this church who are honoured as saints. The first and most illustrious was bishop from 527 to 551, the second, from 640 to 650. Born of a senatorial family of Auvergne, the first St. Gal early embraced the monastic life, and then became councillor to St. Quintianus, who he was to succeed in the See of Clermont. Thierry I, King of Austrasia, having invaded Auvergne, took Gal prisoner and attached him to the oratory of his palace. He regained his liberty some years later and returned to Clermont. Quintianus having died, Gal was chosen as his successor in 527. As bishop he was the intrepid defender of the rights of the Church against Sivigald, the governor appointed by Thierry, and after Sivigald's tragic death, the protector of his children from the prince's wrath. The chief event of his episcopate was the Council of Clermont in 535. Fifteen prelates of the kingdom of Austrasia assisted at it under the presidency of Honoratus, Bishop of Bourges. They drew up seventeen canons, of which the first sixteen are contained in the *Decretum* of Gratian, and have become laws of the universal Church. The following is a summary of the most remarkable: bishops are prohibited from submitting to the deliberations of councils any private or temporal affairs, before having dealt with matters regarding discipline; clerics are forbidden to appeal to seculars in their disputes with bishops excommunication is pronounced against bishops who solicit the protection of princes in order to obtain the episcopacy, or who cause forged decrees of election to be signed. The council also declares itself forcibly against the marriages of Christians with Jews, marriages between relatives, and the misconduct of the clergy. In 541 Gal took part in the fourth Council of Orléans, which promulgated energetic decrees for the abolition of slavery, and in 549 in the fifth, which condemned the errors of Eutyches and Nestorius. His feast is celebrated on 3 July.

The second St. Gal succeeded St. Cæsarius; he was a man of great sanctity, and was one of the most eminent bishops in Gaul. Little, however, is known of his life. His feast is kept 1 November.

A. FOURNET

Epistle to the Galatians

Epistle to the Galatians

GALATIA

In the course of centuries, gallic tribes, related to those that invaded Italy and sacked Rome, wandered east through Illyricum and Pannonia. At length they penetrated through Macedonia (279 B.C.), and assembled in great numbers under a prince entitled Brennus, for the purpose of invading Greece and plundering the rich temple of Delphi. The leaders disagreed and the host soon divided, one portion, under Brennus, marching south on Delphi: the other division, under Leonorius and Luterius, turned eastward and overran Thrace, the country round Byzantium. Shortly afterwards they were joined by the small remnants of the army of Brennus, who was repulsed by the Greeks,

and killed himself in despair. In 278 B.C., 20,000 Gauls, under Leonorius, Luterius, and fifteen other chieftains, crossed over to Asia Minor, in two divisions. On reuniting they assisted Nicomedes I, King of Bithynia, to defeat his younger brother; and as a reward for their services he gave them a large tract of country, in the heart of Asia Minor, henceforward to be known as Galatia.

The Galatians consisted of three tribes:

- the Tolistoboii, on the west, with Pessinus as their chief town;
- the Tectosages, in the centre, with their capital Ancyra; and
- the Trocmi, on the east, round their chief town Tavium.

Each tribal territory was divided into four cantons or tetrarchies. Each of the twelve tetrarchs had under him a judge and a general. A council of the nation consisting of the tetrarchs and three hundred senators was periodically held at a place called Drynemeton, twenty miles southwest of Ancyra.

That these people were Gauls (and not Germans as has sometimes been suggested) is proved by the testimony of Greek and Latin writers, by their retention of the Gallic language till the fifth century, and by their personal and place names. A tribe in the west of Gaul in the time of Caesar (Bell. Gall., VI, xxiv) was called Tectosages. In Tolistoboii we have the root of the word Toulouse, and in Boii the well known Gallic tribe. Brennus probably meant prince; and Strabo says he was called Prausus, which in Celtic means terrible. Luterius is the same as the Celtic Lucterius, and there was a British saint called Leonorius. Other names of chieftains are of undoubted Gallic origin, e.g. Belgius, Achichorius, Gaezatio-Diastus. Brogoris (same root as Brogitarus, Allobroges), Bitovitus, Eposognatus (compare Caesar's Boduognatus, etc.), Combolomarus (Caesar has Virdomarus, Indutionmarus), Adiorix, Albiorix, Ateporix (like Caesar's Dumnorix, ambiorix, Vercingetorix), Brogitarus, Deiotarus, etc. Place names are of a similar character, e.g. Drynemeton, the "temple of the oaks" or The Temple, from *nemed*, "temple" (compare Augustonemetum in Auvergne, and Vernemeton, "the great temple", near Bordeaux), Eccobriga, Rosologiacum, Teutobodiacum, etc. (For a detailed discussion of the question see Lightfoot's "Galatians", dissertation i, 4th ed., London, 1874, 235.)

As soon as these Gauls, or Galatians, had gained a firm footing in the country assigned to them, they began to send out marauding expeditions in all directions. They became the terror of their neighbours, and levied contributions on the whole of Asia Minor west of the Taurus. They fought with varying success against Antiochus, King of Syria, who was called Soter from his having saved his country from them. At length Attalus I, King of Pergamun, a friend of the Romans, drove them back and confined them to Galatia about 235-232 B.C. After this many of them became mercenary soldiers; and in the great battle of Magnesia, 180 B.C., a body of such Galatian troops fought against the Romans, on the side of Antiochus the Great, King of Syria. He was utterly defeated by the Romans, under Scipio Asiaticus, and lost 50,000 of his men. Next year the Consul Manlius entered Galatia, and defeated the Galatians in two battles graphically described by Livy, XXXVIII, xvi. These events are referred to in I Mach., viii. On account of ill-treatment received at the hands of Mithradates I King of Pontus, the Galatians took the side of Pompey in the Mithradatic wars (64 B.C.). As a reward for their services, Deiotarus, their chief tetrarch, received the title of king, and

his dominions were greatly extended. Henceforward the Galatians were under the protection of the Romans, and were involved in all the troubles of the civil wars that followed. They supported Pompey against Julius Caesar at the battle of Pharsalia (48 B.C.). Amyntas, their last king was set up by Mark Antony, 39 B.C. His kingdom finally included not only Galatia Proper but also the great plains to the south, together with parts of Lysonia, Pamphylia, Pisidia, and Phrygia, i.e. the country containing the towns Antioch, Iconium, Lystra and Derbe. Amyntas went to Actium, 31 B.C., to support Mark Antony; but like many others he went over, at the critical moment, to the side of Octavianus, afterwards called Augustus. Augustus confirmed him in his kingdom, which he retained until he was slain in ambush, 25 B.C. After the death of Amyntas, Augustus made this kingdom into the Roman province of Galatia, so that this province had been in existence more than 75 years when St. Paul wrote to the Galatians.

THE NORTH AND THE SOUTH GALATIAN THEORIES

St. Paul addresses his letter to the churches of Galatia (Gal., i, 2) and calls them Galatians (Gal, iii, 1); and in I Cor., vi, 1, he speaks of the collections which he ordered to be made in the churches of Galatia. But there are two theories as to the meaning of these terms. It is the opinion of Lipsius, Lightfoot, Davidson, Chase, Findlay, etc., that the Epistle was addressed to the people of Galatia Proper, situated in the centre of Asia Minor, towards the north (North Galatian Theory). Others, such as Renan, Perrot, Weizsacker, Hausrath, Zahn, Pfleiderer, Gifford, Rendell, Holtzmann, Clemen, Ramsay, Cornely, Page, Knowling, etc., hold that it was addressed to the southern portion of the Roman province of Galatia, containing Pisidian Antioch, Iconium, Lystra, and Derbe, which were visited by Saints Paul and Barnabas, during their first missionary journey (South Galatian Theory).

Lightfoot was the chief upholder of the North-Galatian theory; but a great deal has become known about the geography of Asia Minor since he wrote in the eighteenth century, and the South-Galatian Theory has proportionately gained ground. A German Catholic professor, Stinmann (*Der Liserkreis des Galaterbriefes*), has, however, recently (1908) given Lightfoot his strong support, though it must be admitted that he has done little more than emphasize and expand the arguments of Chase. The great coryphaeus of the South-Galatian theory is Prof. Sire W.M. Ramsay. The following is a brief summary of the principal arguments on both sides.

(1) The fact that the Galatians were being changed so soon to another gospel is taken by Lightfoot as evidence of the characteristic fickleness of the Gauls. Ramsay replies that tenacity in matters of religion has ever been characteristic of the Celts. Besides, it is precarious to argue from the political mobility of the Gauls, in the time of Caesar, to the religious inconsistency of Galatians, whose ancestors left the West four hundred years before. The Galatians received St. Paul as an angel from heaven (Gal., iv, 14). Lightfoot sees in this enthusiastic reception proof of Celtic fickleness of character. In the same way it may be proved that the 5000 converted by St. Peter at Jerusalem, and, in fact, that, nearly all the converts of St. Paul were Celts. Acts (xiii-xiv) gives sufficient indications

of fickleness in South Galatia. To take but one instance: at Lystra the multitude could scarcely be restrained from sacrificing to St. Paul; shortly afterwards they stoned him and left him for dead.

(2) St. Paul warns the Galatians not to abuse their liberty from the obligations of the Law of Moses, by following the works of the flesh. He then gives a long catalogue of vices. From this Lightfoot selects two (*methai, komoi*) as evidently pointing to Celtic failings. Against this it may be urged that St. Paul, writing to the Romans (xiii, 13), exhorts them to avoid these two very vices. St. Paul, in giving such an enumeratio here and elsewhere, evidently does not intend to paint the peculiar failings of any race, but simply to reprobate the works of the flesh, of the carnal or lower man; "they who do such things shall not obtain the kingdom of God" (Gal., v. 21).

(3) Witchcraft is also mentioned in this list. The extravagant devotion of Deiotarus, says Lightfoot, "fully bears out the character ascribed to the parent race." But the Emperor Tiberius and many officials in the empire were ardent devotees of augury. Sorcery is coupled by St. Paul with idolatry, and it was its habitual ally not only amongst the Gauls but throughout the pagan world.

(4) Lightfoot says that the Galatians were drawn to Jewish observances; and he takes this as evidence of the innate Celtic propensity to external ceremonial, "appealing rather to the senses and passions than the heart and mind." This so-called racial characteristic may be questioned, and it is a well-known fact that the whole of the aboriginal inhabitants of Asia Minor were given over heart and soul to gross pagan ceremonial. We do not gather from the Epistle that the Galatians were naturally attracted to Jewish ceremonies. They were only puzzled or rather dazed (iii, 1) by the specious arguments of the Judaizers, who endeavoured to persuade them that they were not as perfect Christians as if they adopted circumcision and the Law of Moses.

(5) On the South-Galatian theory it is supposed that the Epistle was written soon after St. Paul's second visit to Derbe, Lystra, Iconium, etc. (Acts, xvi). Lightfoot makes use of a strong argument against this early date. He shows, by a detailed examination, that the Epistle bears a close resemblance, both in argument and language, to parts of the Epistle to the Romans. This he thinks can be accounted for only on the supposition that both were written about the same time, and, therefore, several years later than the date required for the South-Galatian view. To this date required for the South-Galatian view. To this Rendell (Expositor's Greek Test., London, 1903.p. 144) replies that the coincidence is not due to any similarity in the circumstances of the two communities. "Still less can the identity of language be fairly urged to prove an approximation of the two epistles. For these fundamental truths formed without doubt the staple of the Apostle's teaching throughout the years of continuous transition from Jewish to Christian doctrine, and his language in regard to them could not fail to become in some measure stereotyped."

(6) The controversy has raged most fiercely round the two verses in Acts, xvi, 6 and xviii, 23, the only places where there is any reference to Galatia in Acts:

- "And they went through the Phrygian and Galatian region" (*ten phrygian kai Galatiken choran*);
- "he departed and went through the Galatian region and Phrygia" (or "Phrygia") (*ten Galatiken choran kai phrygian*).

Lightfoot held that Galatia Proper was meant in the second. Other supporters of the North-Galatian theory think that the countries of North Galatia and Phrygia are meant in both cases.

Their opponents, relying on the expression of contemporary writers, maintain that South Galatia was intended in both places. The former also interpret the second part of xvi, 6 (Greek text) as meaning that the travellers went through Phrygia and Galatia after they had passed through South Galatia, because they were forbidden to preach in Asia. Ramsey, on the other hand, maintains that after they had passed through the portion of Phrygia which had been added to the southern part of the province of Galatia (and which could be called indifferently Galatian or Phrygian) they passed to the north because they were forbidden to preach in Asia. He holds that the order of the verbs in the passage is in the order of time, and he gives examples of similar use of the aorist participle (St. Paul The Traveller, London, 1900, pp. ix, 211, 212).

The arguments on both sides are too technical to be given in a short article. The reader may be referred to the following: North-Galatian: Chase, "Expositor", Dec. 1893. p.401, May, 1894, p.331; Steinmann, "Der Leserkreis des Galaterbriefes" (Münster, 1908), p. 191. On the South-Galatian side: Ramsey, "Expositor", Jan., 1894, p. 42, Feb., p. 137, Apr., p. 288, "St. Paul The Traveller", etc; Knowling, "Acts of the Apostles", Additional note to ch. xviii (Expositor's Greek Test., London, 1900, p. 399); Gifford, "Expositor", July, 1894, p. I.

(7) The Galatian churches were evidently important ones. On the North-Galatian theory, St. Luke dismissed their conversion in a single sentence: "They went through the Phrygian and Galatian region" (Acts, xvi, 6). This is strange, as his plan throughout is to give an account of the establishment of Christianity by St. Paul in each new region. Lightfoot fully admits the force of this, but tries to evade it by asking the question: "Can it be that the historian gladly drew a veil over the infancy of a church which swerved so soon and so widely from the purity of the Gospel?" But the subsequent failings of the Corinthians did not prevent St. Luke from giving an account of their conversion. Besides, the Galatians had not swerved so widely from the purity of the Gospel. The arguments of the judaizers made some of them waver, but they had not accepted circumcision; and this Epistle confirmed them in the Faith, so that a few years later St. Paul writes of them to the Corinthians (I Cor., xvi, 1): "Now concerning the collections that are made for the saints, as I have given order to the churches of Galatia, so do ye also." It was long after the time that St. Paul could thus confidently command the Galatians that Acts was written.

(8) St. Paul makes no mention of this collection in our Epistle. According to the North-Galatian theory, the Epistle was written several years before the collection was made. In Acts, xx, 4, etc., a list is given of those who carried the collections to Jerusalem. There are representatives from South Galatia, Achaia, Macedonia, and Asia; but there is no deputy from North Galatia -- from the towns of Jerusalem on occasion, the majority probably meeting at Corinth, St. Paul, St. Luke, and Sopater of Berea (probably representing Philippi and Achaia; see II Cor., viii, 18-22); Aristarchus and Secundus of Macedonia; Gaius of Derbe, and Timothy of Lystra (S. Galatia); and Tychicus and Trophimus of Asia. There is not a word about anybody from North Galatia, the most probable reason being that St. Paul had never been there (see Rendall, Expositor, 1893, vol. II, p.321).

(9) St. Paul, the Roman citizen, invariably employs the names of the roman provinces, such as Achaia, Macedonia, Asia; and it is not probable that he departed from this practice in his use of

"Galatia". The people of South Galatia could with propriety be styled Galatians. Two of the towns, Antioch and Lystra, were Roman colonies; and the other two boasted of the Roman names, Claudio-Iconium, and Claudio-Derbe. "Galatians" was an honourable title when applied to them; but they would be insulted if they were called Phrygians or Lycaonians. All admit that St. Peter named the Roman provinces when he wrote "to the elect strangers dispersed throught Pontus, *Galatia*, Cappadocia, Asia, and Bithynia" (I Pet., i, 1).

(10) The manner in which St. Paul mentions St. Barnabas in the Epistle indicates that the latter was known to those for whom the Epistle was primarily intended. St. Barnabas had visited South Galatia with St. Paul (Acts, xiii, xiv), but he was unknown in North Galatia.

(11) St. Paul states (ii, 5) that the reason for his course of action at Jerusalem was that the truth of the gospel *might continue* with the Galatians. This seems to imply that they were already converted. He had visited the southern part of the Galatian province before the council, but not northern. The view favoured above receives confirmation from a consideration, as appended, of the persons addressed.

THE KIND OF PEOPLE ADDRESSED

The country of South Galatia answers the conditions of the Epistle admirably; but this cannot be said of North Galatia. From the Epistle we gather that the majority were Gentile converts, that many were probably Jewish proselytes from their acquaintance with the Old Testament, that Jews who persecuted them from the first were living amongst them; that St. Paul had visited them twice, and that the few Judaziers appeared amongst them only after his last visit. We know from Acts, iii, xiv (and early history), that Jews were settled in South Galatia. During the first missionary journey unbelieving Jews made their presence felt everywhere. As soon as Paul and Barnabas returned to Syrian Antioch, some Jewish converts came from Judea and taught that the circumcision was necessary for them, and went up to the council, where it was decreed that circumcision and the Law of Moses were not necessary for the Gentiles; but nothing was determined as to the attitude of Jewish converts regarding them, following the example of St. James, though it was implied in the decree that they were matters of indifference. This was shown, soon after, by St. Peter's eating with the Gentiles. On his withdrawing from them, and when many others followed his example, St. Paul publicly vindicated the equality of the Gentile Christians. The majority agreed; but there must have been "false brethren" amongst them (Gal., ii, 4) who were Christians only in name, and who hated St. Paul. Some of these, in all probability, followed him to South Galatia, soon after his second visit. But they could no longer teach the necessity of circumcision, as the Apostolic decrees had been already delivered there by St. Paul (Acts, xvi, 4). These decrees are not mentioned in the Epistle by the Judaizers, the advisability of the Galatians accepting circumcision and the Law of Moses, for their *greater perfection*. On the other hand, there is no evidence that there were any Jews settled at this time in North Galatia (see Ramsay, "St. Paul The Traveller"). It was not the kind of country to attract them. The Gauls were a dominant class, living in castles, and leading a half pastoral, half nomadic life, and speaking their own Gallic language. The country was very

sparsely populated by the subjugated agricultural inhabitants. During the long winter the ground was covered with snow; in summer the heat was intense and the ground parched; and one might travel many miles without meeting a human being. There was some fertile tracts; but the greater part was either poor pasture land, or barren undulating hilly ground. The bulk of the inhabitants in the few towns were not Gauls. Trade was small, and that mainly in wool. A decree of Augustus in favour of Jews was supposed to be framed for those at Ancyra, in Galatia. It is now known that it was addressed to quite a different region.

WHY WRITTEN

The Epistle was written to counteract the influence of a few Judaizers who had come amongst the Galatians, and were endeavouring to persuade them that in order to be *perfect* Christians it was necessary to be circumcised and observe the Law of Moses. Their arguments were sufficiently specious to puzzle the Galatians, and their object was likely to gain the approval of unbelieving Jews. They said what St. Paul taught was good as far as it went; but that he had not taught the full perfection of Christianity. And this was not surprising, as he was not one of the great Apostles who had been taught by Christ Himself, and received their commission from Him. Whatever St. Paul knew he learned from others, and he had received his commission to preach not from Christ, but from men at Antioch (Acts, xiii). Circumcision and the Law, it is true, were not necessary to salvation; but they were essential to the full perfection of Christianity. This was proved by the example of St. James, of the other Apostles, and of the first disciples, at Jerusalem. On this very point this Paul, the Apostle, placed himself in direct opposition to Cephas, the Prince of the Apostles, at Antioch. His own action in circumcising Timothy showed what he expected of a personal companion, and he was now probably teaching the good of circumcision in other places. These statements puzzles the Galatians, and made them waver. They felt aggrieved that he had left them, as they thought, in an inferior position; they began to observe Jewish festivals, but they had not yet accepted circumcision. The Apostle refutes these arguments so effectively that the question never again arose. Henceforth his enemies confined themselves to personal attacks (see II Corinthians).

CONTENTS OF THE EPISTLE

The six chapters naturally fall into three divisions, consisting of two chapters each.

- In the first two chapters, after the general introduction, he shows that he is an Apostle not from men, nor through the teaching of any man, but from Christ; and the gospel he taught is in harmony with the teaching of the great Apostles, who gave him the right hand of fellowship.
- He next (iii, iv) shows the inefficacy of circumcision and the Law, and that we owe our redemption to Christ alone. He appeals to the experience of the Galatian converts, and brings forward proofs from Scripture.
- He exhorts them (v, vi) not to abuse their freedom from the Law to indulge in crimes, "for they who do such things shall not obtain the kingdom of God." It is not for love of them he admonishes, that the Judaizers wish the Galatians to be circumcised. If there is virtue in the mere cutting of the flesh, the inference from the argument is that the Judaizers could become still more perfect by

making themselves eunuchs -- mutilating themselves like the priests of Cybele. He writes the epilogue in large letters with his own hand.

IMPORTANCE OF THE EPISTLE

As it is admitted on all hands that St. Paul wrote the Epistle, and as its authenticity has never been seriously called in question, it is important not only for its biographical data and direct teaching, but also for the teaching implies in it as being known at the time. He claims, at least indirectly, to have worked miracles amongst the Galatians, and that they received the Holy Ghost (iii, 5), almost in the words of St. Luke as to the events at Iconium (Acts, xiv, 3). It is the Catholic doctrine that faith is a gratuitous gift of God; but it is the teaching of the Church, as it is of St. Paul, that the faith that is of any avail is "faith that worketh by charity" (Gal., v. 6); and he states most emphatically that a good life is necessary for salvation; for, after enumeration the works of the flesh, he writes (v, 21), "Of the which I foretell you, as I have foretold to you, that they who do such things shall obtain the kingdom of God." In vi, 8, he writes: "For what things a man shall sow, those also shall he reap. For he that soweth in his flesh, of the flesh, also shall reap corruption. But he that soweth in the spirit, of the spirit shall reap life everlasting." The same teaching is found in others of his Epistles, and is in perfect agreement with St. James: "For even as the body without the spirit is dead; so also faith without works is dead" (James, ii, 26). The Epistle implies that the Galatians were well acquainted with the doctrines of the Trinity, the Divinity of Christ, Incarnation, Redemption, Baptism, Grace, etc. As he had never to defend his teaching to these points against Judaizers, and as the Epistle is so early, it is clear that his teaching was identical with that of the Twelve, and did not, even in appearance, lend itself to attack.

DATE OF THE EPISTLE

(1) Marcion asserted that it was the first of St. Paul's Epistles. Prof. Sir W. Ramsay (Expositor, Aug., 1895, etc.) and a Catholic professor, Dr. Valentin Weber (see below), maintain that it was written from Antioch, before the council (A.D. 49-50). Weber's arguments are very plausible, but not quite convincing. There is a good summary of them in a review by Gayford, "Journal of Theological Studies", July, 1902. The two visits to Galatia are the double journey to Derbe and back. This solution is offered to obviate apparent discrepancies between Gal., ii, and Acts, xv.

(2) Cornel and the majority of the upholders of the South-Galatian theory suppose, with much greater probability, that it was written about A.D. 53, 54.

(3) Those who defend the North-Galatian theory place it as late as A.D. 57 or 58.

DIFFICULTIES OF GALATIANS II AND I

(a) "I went up . . . and communicated to them the gospel . . . lest perhaps I should run, or had run in vain." This does not imply any doubt about the truth of his teaching, but he wanted to neutralize the opposition of the Judaizers by proving he was at one with the others.

(b) The following have the appearance of being ironical: "I communicated . . . to them who seemed to be some thing" (ii, 2); "But of them who seemed to be something . . . for to me they that seemed to be something added to nothing" (ii, 6): "But contrawise . . . James and Cephas and John, who seemed to be pillars." Here we have three expressions *tois dokousin* in verse 2; *ton dokounton einai ti*, and *oi dokountes* in verse 6; and *oi dokountes styloi einai* in verse 9. Non-Catholic scholars agree with St. John Chryostom that there is nothing ironical in the original context. As the verbs are in the present tense, the translations should be: "those who are in repute"; "who are (rightly) regarded as pillars". It is better to understand, with Rendall, that two classes of persons are meant: first, the leading men at Jerusalem; secondly, the three apostles. St. Paul's argument was to show that his teaching had the approval of the great men. St. James is mentioned first because the Judaizers made the greatest use of his name and example. "But of them who are in repute (what they were some time, it is nothing to me. God accepteth not the person of man)", verse 6. St. Augustine is almost alone in his interpretation that it made no matter to St. Paul that the Apostles were once poor ignorant men. Others hold that St. Paul was referring to the privilege of being personal disciples of our Lord. He said that did not alter the fact of his Apostolate, as God does not regard the person of men. Most probably this verse does not refer to the Apostles at all; and Cornerly supposes that St. Paul is speaking of the elevated position held by the presbyters at the council, and insists that it did not derogate from his Apostolate.

(c) "*I withstood Cephas.*" -- "But when Cephas was come to Antioch, I withstood him to the face, because he was *blamed* [*kategnosmenos*, perf. part. -- not, "to be blamed", as in the Vulgate]. For before that some came from James, he did eat with the Gentiles; but when they were done, he withdrew and separated himself, fearing them who were of circumcision. And to his dissimulation the rest of the Jews consented, so that Barnabas also was led by them into that dissimulation. But when I saw that they walked not uprightly unto the truth of the gospel, I said to Cephas before them all: if thou, being a Jew, livest after the manner of the Gentiles, and not as the Jews do, how dost thou compel the Gentiles to live as do the Jews?" (ii, 11-14).

Here St. Peter was found fault with probably by the Greek converts. He did not withdraw on account of bodily fear, says St. John Chryostom; but as his special mission was at this time to the Jews, he was afraid of shocking them who were still weak in the Faith. His usual manner of acting, to which he was led by his vision many years previously, shows that his exceptional withdrawal was not due to any error of doctrine. He had motives like those which induced St. Paul to circumcise Timothy, etc.; and there is no proof that in acting upon them he committed the slightest sin. Those who came from James probably came for no evil purpose; nor does it follow they were sent by him. The Apostles in their letter (Acts, xv,24) say: "Forasmuch as we have heard, that some going out from us have troubled you . . . to whom we gave no commandment." We need not suppose that St. Peter foresaw the effect of his example. The whole thing must have taken some time. St. Paul did not at first object. It was only when he saw the result that he spoke. The silence of St. Peter shows that he must have agreed with St. Paul; and, indeed, the argument to the Galatians required that this was the case. St. Peter's exalted position is indicated by the manner in which St. Paul says

(i, 18) that he went to behold Peter, as people go to view some remarkable sight; and by the fact that in spite of the preaching of St. Paul and Barnabas for a long time at Antioch, his mere withdrawal was sufficient to draw all after him, and in a manner compel the Gentiles to be circumcised. In the expression "when I saw that they walked not uprightly", they does not necessarily include St. Peter. The incident is not mentioned in the Acts, as it was only transitory. Eusebius (Hist. Eccl., I, xii) says that St. Clement of Alexandria, in the fifth book of the *Hypotyposes* (Outlines), asserts that this Cephas was not the Apostle, but one of the seventy disciples. Clement here has few followers.

A very spirited controversy was carried on between St. Jerome and St. Augustine about the interpretation of this passage. In his "Commentary on the Galatians", St. Jerome, following earlier writers such as Origen and St. Chrysostom, supposed that the matter was arranged beforehand between St. Peter and St. Paul. They agreed that St. Peter should withdraw and that St. Paul should publicly reprehend him, for the instruction of all. Hence St. Paul says that he withstood him in appearance (*kata prosopon*). Otherwise, says St. Jerome, with what face could St. Paul, who became all things to all men, who became a Jew that he might gain the Jews, who circumcised Timothy, who shaved his head, and was ready to offer sacrifice at Jerusalem, blame St. Peter for acting in a similar manner? St. Augustine, laying stress on the words "when I saw that they walked not uprightly", etc., maintained that such an interpretation would be subversive of the truth of Holy Scripture. But against this it may be said that it is not so very clear that St. Peter was included in this sentence. The whole controversy can be read in the first volume of the Venetian edition of St. Jerome's works, Epp., lvi, lxxvii, civ, cv, cxii, cxv, cxvi.

(d) *Apparent Discrepancies between the Epistle and Acts.* -- (1) St. Paul says that three years after his conversion (after having visited Arabia and returned to Damascus) he went up to Jerusalem (i, 17, 18) Acts states that after his baptism "he was with the disciples that were at Damascus, for some days" (ix, 19). "He immediately began to preach in the synagogues" (ix, 20). "He increased more in strength, and confounded the Jews" (ix, 22). "And when many days were passed, the Jews consulted together to kill him" (ix, 23); he then escaped and went to Jerusalem. These accounts here are not contradictory, as has been sometimes objected; but were written from different points of view and for different purposes. The time for the visit to Arabia may be placed between Acts, ix, 22 and 23; or between "some days" and "many days". St. Luke's "many days" (*hemeraikanai*) may mean as much as three years. (See III Kings, ii, 38; so Paley, Lightfoot, Knowling, Lewin.) The adjective *ikanos* is a favourite one with St. Luke, and is used by him with great elasticity, but generally in the sense of largeness, e.g. "a widow: and a *great* multitude of the city" (Luke, vii, 12); "there met him a certain man who had a devil now a very long time" (Luke, viii, 27); "a herd of many swine feeding" (Luke, viii, 32); "and he was abroad for a long time" (Luke, xx, 9); "for a long time, he had bewitched them" (Acts, viii, 11). See also Acts, xiv, 3, 21 (Greek text); xviii, 18, xix, 19, 26; xx, 37.

(2) We read in Acts, ix, 27, that St. Barnabas took St. Paul "to the apostles". St. Paul states (Gal., i, 19) that on this occasion, besides St. Peter, "other of the apostles I saw one, saving James the brother of the Lord". Those who find a contradiction here are hard to satisfy. St. Luke employs

the word *Apostles* sometimes in a broader, sometimes in a narrower sense. Here it meant the Apostles who happened to be at Jerusalem (Peter and James), or the assembly over which they presided. The objection can be pressed with any force only against those who deny that St. James was an Apostle in any of the senses used by St. Luke (see BRETHREN OF THE LORD).

One of the best critical commentaries on Galatians is CORNELLY, commentarius in S. Pauli Epistolam ad Galatas in the Cursus Scriptura Sacrae (Paris, 1892). Other useful Catholic commentaries are the well-known works of A LAPIDE, ESTIUS, BISPING, PALMIERI, MACEVILLY.

PATRISTIC LITERATURE; There are commentaries on the Epistle by AMBROSIASTER, ST. AUGUSTINE, ST. CHRYSOSTOM, ST. JEROME, (ECUMENIUS, PELAGIUS, PRIMASIUS, THEODORET, THEODORE OF MOPSUESTIA (a fragment), and THEOPHYLACT (all in Migne), and by ST. THOMA AQUINAS (many editions of St. Paul's Epistles).

CRITICAL EDITIONS IN ENGLISH: LIGHTFOOT, Galatians (4th ed., London, 1874); RAMSAY, Historical Commentary on Galatians (London, 1900); RENDALL, Galatians in Expositor's Greek Test., III (London, 1903).

FOR NORTH-GALATIAN THEORY: LIGHTFOOT (supra); CHASE in Expositor, Dec., 1893, May, 1894; FINDLAY in Expository Times, VII; CHEETHAM in Classical Review, vol. III (London, 1894); SCHMIEDEL, Galatia in Encyc. C. AHERNE

Pietro Colonna Galatino

Pietro Colonna Galatino

Friar Minor, philosopher, theologian, Orientalist; b. at Galatia (now Cajazzo) in Apulia; d. at Rome, soon after 1539; received the habit as early as 1480, studied Oriental languages in Rome and was appointed lector at the convent of Ara Coeli; he also held the office of provincial in the province of Bari, and that of penitentiary under Leo X. Galatino wrote his chief work "De Arcanis Catholicae Veritatis", at the request of the pope, the emperor, and other dignitaries, in 1516, at

which time, owing mainly to John Reuchlin's "Augenspiegel", the famous controversy on the authority of the Jewish writings was assuming a very menacing aspect. Galatino took up Reuchlin's defence. Resolved to combat the Jews on their own ground, he turned the Cabbala against them, and sought to convince them that their own books yielded ample proof of the truth of the Christian religion, hence their opposition to it should be branded as obstinacy. He gave his work the form of a dialogue. The two conflicting Christian parties were represented by Capnio (Reuchlin) and the Inquisitor Hochstraten, O.P. In conciliatory terms, Galatino responded to the queries and suggestions of the former, and refuted the objections of the latter. He had borrowed largely from the "Pugio Fidei" of the Dominican Raymond Martini, remodelling, however, the material and supplementing it with copious quotations from the "Zohar" and the "Gale Razayya".

In a long letter to Paul III (MS. Vat. Libr., cod. Ottob. Lat. 2366, fol. 300-308) he vehemently defended himself and his party against the charge of having forged the last-named book, which he firmly held to be the work of "Rabbenu ha-Kadosh". Galatino was aware, no less than his critics, that his "De Arcanis Cath. Ver." had many shortcomings, both in matter and form, and he begged his readers to consider that he was compelled to finish it within the space of a year and a half. The work became very popular and ran through several editions. For the rest, Galatino's extensive knowledge and his thorough acquaintance with Greek, Hebrew, and Jewish Aramaic is fully borne out by his numerous other unpublished writings. In bold language he inveighs against the corruption among the clergy and discusses the question of reform. While engaged on his remarkable work "De Vera Theologia" his strength threatened to fail him by reason of his great age and infirmity, but, having taken a vow to defend in the course of this work the doctrine of the Immaculate Conception of the Blessed Virgin, he instantly, so he tells us, recovered his strength and health (MSS. 52, 54, 60, St. Isidore's Coll.). In 1539, Paul III, in a special Bull, bequeathed Galatino's works, about thirty in number, to the convent of Ara Coeli and enjoined that special care be taken of them. The MSS. are now preserved in various Roman archives.

THOMAS PLASSMANN

Valerius Maximianus Galerius

Valerius Maximianus Galerius

Galerius, a native of Illyria, was made Caesar 1 March, 293, by Diocletian, whose daughter Valeria he married and who in turn adopted her husband. The latter began his career as an illiterate shepherd, was a man of violent character, fond of pleasure and politically insignificant; but he was an efficient soldier and a loyal and devoted henchman of Diocletian. When about this time the latter divided the empire between the two Augusti, Diocletian and Maximinian, and their two Caesars, Galerius received the countries on the Danube. His official residence was at Sirmium, but he was especially active in the East, Diocletian's share of the empire. From 293 to 295 he conducted campaigns against the Germans on the lower Danube and defeated them repeatedly. On the other hand, he was vanquished at Carrhae by the Persians, who under King Narses had invaded the Roman

territory. He retrieved himself, however, in a second battle to such good purpose that he forced a treaty which gave the Romans the greatest expansion of empire they ever secured in the East. To Galerius are ascribed the four edicts against the Christians published after 303 by Diocletian, who was himself a strong believer in the heathen superstitions. The Christians had been constantly increasing, both among the soldiers and the civil officials. Magnificent churches were being erected in the large cities, and the time seemed not far distant when the new religion would gain the ascendancy over the old. Christianity had, therefore, to be rooted out, the Holy Scriptures abolished, the churches destroyed, and the cemeteries confiscated. The Christians themselves were degraded to the condition of pariahs. The edicts, ever increasing in severity, were enforced much more strictly in the East where Galerius was in command than in the West. It was in the East that the decisive struggle between paganism and Christianity was fought out. When Diocletian voluntarily abandoned the imperial throne at Nicomedia in May, 305, he named Galerius his successor. The latter thenceforth passed most of his time in Illyricum.

Constantius Chlorus, the Caesar in Gaul, who was older than Galerius, was really his superior in mental gifts. At the death of Constantius in 306 the soldiers in Britain proclaimed his son Constantine, Emperor and Caesar; consequently Galerius was forced to recognize him. When Maxentius, son of the retired Emperor Maximian, and son-in-law of Galerius, had been chosen Caesar by the Senate and the Praetorians, dissatisfied with Galerius's extension to Rome of provincial taxation, the latter led an army against Rome to uphold the partition of the empire as ordained by Diocletian. But some of his troops deserted him, and Severus, whom he had appointed ruler of the Western Empire with the title of Augustus, was killed at the instigation of Maxentius. Meanwhile at Carnuntum Valerius Licinianus Licinius, a countryman and friend of Galerius, was proclaimed Caesar of the Western Empire. Nevertheless, Galerius was unable to master the situation either in Italy or the East, and never attained the supreme imperial dignity which Diocletian had held. One part of the empire after the other rebelled and became autonomous. He finally ceased his persecution of the Christians, for the sanguinary character of which he was personally responsible; it had lasted eight years and had disgusted even the pagan population. Menaced by the alliance between Constantine and Maxentius, he issued an edict 30 April, 311, in Nicomedia permitting the Christians to practice their religion without let or hindrance. A few days later Galerius died on the Danube. The Christian authors of his time, Lactantius in particular, condemned him violently as the author of the last great persecution of the Christians.

KARL HOEBER

Joseph Galien

Joseph Galien

Dominican, professor of philosophy and theology at the University of Avignon, meteorologist, physicist, and writer on aeronautics; b. 1699, at Saint-Paulien, near Le Puy, in Southern France; d. 1762 in the Dominican monastery at Le Puy—or, according to other accounts, in 1782 at Avignon. He entered the order at Le Puy. He studied philosophy and theology at the Dominican institution in Avignon with such success that he was sent to Bordeaux as professor of philosophy as early as 1726. From the year 1745 on he held the chair of theology at Avignon, and from 1747 the chair of philosophy. He seems to have resigned his professorship in 1751 to devote his energies entirely to the study of meteorology and physics. He published: "Lettres théologiques touchant l'état de pure nature, la distinction du naturel et du sur-naturel, et les autres matières qui en sont de conséquences" (Avignon, 1745); also the "Explication physique des effets de l'électricité" (Avignon, 1747). But Galien's most important contribution was a booklet that he issued anonymously in 1755 at Avignon under the title: "Mémoire touchant la nature et la formation de la grêle et des autres météores qui y ont rapport, avec une conséquence ultérieure de la possibilité de naviger [sic] dans l'air à la hauteur de la région de la grêle. Amusement physique et géométrique". The second edition of this booklet, this time with the name of its author, appeared as early as 1757. The change in its title renders it easy to discern what made the monograph so interesting. It was now called: "L'art de naviguer dans les airs, amusement physique et géométrique, précédé d'un mémoire sur la formation de la grêle." After propounding his theory regarding hail storms, Galien calculates how large an air-ship would have to be in order to transport an entire army with its equipment to Africa. His scheme was to construct a gigantic cube-shaped vessel of good, strong canvas of double thickness plastered with wax and tar, covered with leather and reinforced in places with ropes and rigging; its edge was to be 1000 *toises* (roughly 6,500 feet), and each surface 1,000,000 sq. *toises* (approx. 42,250,000 sq. feet) in area. In both length and breadth it would be larger than the city of Avignon, and would resemble a fair-sized mountain. This vessel would have to float in the atmospheric strata of the hail belt, as the atmosphere there is a thousand times lighter than water, while in the strata above this, into which the top of the cube would extend, the air is two thousand times lighter than water. For the scientific principles of his proposal Galien relied on Lana, S.J., perhaps also on Schott, S.J. His chief claim to importance lies in the fact that the Montgolfier brothers were acquainted with him, or at least his booklet. His birthplace was very near to theirs, and like Galien the Montgolfiers began with meteorological observations; moreover, the elder of the brothers made a first ascension at Avignon in 1782. In aeronautical works Galien is, for the most part, unfairly treated; as the writers assume that his scheme was meant seriously, contrary to his statement given on the title page.

B. WILHELM

Galilee

Galilee

(Sept. and N.T. *Galilaia*).

The native land of Jesus Christ, where He began His ministry and performed many of His works, and whence He drew His Apostles. Originally, the Hebrew word *Gâlîl*, derived from *gâlal*, "to roll", meant a circle or district, and in its feminine and plural forms was applied indifferently to several regions in Palestine. The simple term *Gâlîl* (Galilee) occurs first in Jos., xx, 7 (cf. Jos., xxi, 32; and I Par., vi, 76) where it denotes that portion of Nephtali lying to the northeast of Lake Merom, in which lay Cedes, one of the six cities of refuge. In III Kings, ix, 11, the expression "land of Galilee" is used to designate the northern part of Palestine, that embraced the twenty cities given by Solomon to Hiram, King of Tyre. Isaias (ix, 1) gives to "the land of Zabulon, and the land of Nephtali" the name "Galilee of the Nations" (D.V. "Galilee of the Gentiles"), undoubtedly on account of the large Gentile population in that region. As early as the Machabean period, the limits of Galilee had extended to Samaria (I Mach., x, 30), without however including the plain of Jezrael and the territory of Ptolemais (I Mach., xii, 47, 49). The New Testament frequently recognizes it as dividing, with the provinces of Samaria and Judea, all of Western Palestine. Josephus and, more accurately, the Talmudists (cf. Neubauer, "La Géographie du Talmud", Paris, 1868) give its boundaries at this period, as Phoenicia and Coele-Syria on the north; the Jordan valley on the east; Samaria, having En Gannim (modern Jennin) at its frontier, on the south; the Mediterranean and Phoenicia on the west. The territory thus described is naturally divided by a high ridge, at the eastern extremity of which was Caphar Hanan (*Kefr 'Anân*), into Upper Galilee, embracing ancient Nephtali and the northern part of Asher, and Lower Galilee, embracing ancient Zabulon and parts of Asher and Issachar. Although mountain ranges extend throughout the territory, rising to a height of 4000 feet in Upper, and to 1800 feet in Lower Galilee, the land is very productive, especially in the southern division where the valleys and plains are greater, and is capable of sustaining a very large population.

Josue (xix, 10-39) names 69 important Canaanite towns and cities, existing in the conquered territory allotted to the Hebrew tribes of Nephtali, Zabulon, Asher, and Issachar. Josephus (*Vita*, 45) counted 204 prosperous villages and 15 fortified cities in the Galilee of his time. Now its population is small, and for the most part scattered among miserable villages and mud hamlets. Safed, one of the four sacred cities of Palestine revered by Jews, which has a population of about 15,000, of whom 9000 are Jews, is the principal city in the north. Nazareth, a Christian city (about 10,000), is the chief city in the south. The deportation of Jews by Theglathphalasar (Tiglath-Pileser), 734 B. C., gave an overwhelming predominance to the Gentile elements noted in the population by Isaias. Although the Jews multiplied rapidly in Galilee after the Babylonian exile, they were oppressed by the heathen as late as the Machabean period (I Mach., v, 45-54), and did not prevail until the first century before Christ. As results of their long intercourse with the conquered Canaanites, and Phoenician, Syrian, and Greek immigrants, and their separation from their brethren in Judea by interlying Samaria, they spoke a dialect and had peculiarities in business, family and

religious customs, that brought upon them the contempt of the inhabitants of Jerusalem. Under the Roman Empire both Christianity and Judaism flourished there, as is evidenced by the ruins of numerous synagogues, churches, and monasteries belonging to that period that were destroyed by the Moslems. There are also notable ruins of churches and monasteries erected by the Crusaders, who restored Christianity in Palestine in the twelfth century, and were not finally overcome until 1291, when Acre in Galilee, their last stronghold, was taken by the Moslems. The territory is now a Turkish possession belonging to the vilayet of Beirut. The people are divided in their religious beliefs. Catholics of the Latin, Greek, and Maronite Rites, Orthodox Greeks, and Druses live side by side with Moslems. Near Safed there are several modern Jewish colonies.

A.L. MCMAHON

Allesandro Galilei

Alessandro Galilei

An eminent Florentine architect; born 1691; died 1737.

Having attained some distinction, he was invited by several noblemen to accompany them to England, where he resided seven years. Afterwards he returned to Tuscany and was appointed state architect by the Grand Dukes Cosmo III and Giovanni Gastone. He does not seem to have erected anything remarkable either in England or Tuscany. His abilities, however, were made manifest at Rome, to which place he had been invited by Clement XII. He designed the façade of S. Giovanni de' Fiorentini (1734), and the great façade of S. Giovanni in Laterano. The latter was the result of a competition set on foot by Clement XII. Of twenty-one designs sent in, that of Galilei was accepted and carried out. He also designed the Corsini chapel in the same edifice. Galilei has been much criticized on the ground that his arrangement of the orders was not correct, but his treatment of the ornamental parts is considered admirable. He was well versed in mathematics, and possessed many other valuable acquirements.

THOMAS H. POOLE

Galileo Galilei

Galileo Galilei

Generally called GALILEO. Born at Pisa, 18 February, 1564; died 8 January, 1642.

His father, Vincenzo Galilei, belonged to a noble family of straitened fortune, and had gained some distinction as a musician and mathematician. The boy at an early age manifested his aptitude for mathematical and mechanical pursuits, but his parents, wishing to turn him aside from studies which promised no substantial return, destined him for the medical profession. But all was in vain,

and at an early age the youth had to be left to follow the bent of his native genius, which speedily placed him in the very first rank of natural philosophers.

It is the great merit of Galileo that, happily combining experiment with calculation, he opposed the prevailing system according to which, instead of going directly to nature for investigation of her laws and processes, it was held that these were best learned by authority, especially by that of Aristotle, who was supposed to have spoken the last word upon all such matters, and upon whom many erroneous conclusions had been fathered in the course of time. Against such a superstition Galileo resolutely and vehemently set himself, with the result that he not only soon discredited many beliefs which had hitherto been accepted as indisputable, but aroused a storm of opposition and indignation amongst those whose opinions he discredited; the more so, as he was a fierce controversialist, who, not content with refuting adversaries, was bent upon confounding them. Moreover, he wielded an exceedingly able pen, and unsparingly ridiculed and exasperated his opponents. Undoubtedly he thus did much to bring upon himself the troubles for which he is now chiefly remembered. As Sir David Brewster (*Martyrs of Science*) says, "The boldness, may we not say the recklessness, with which Galileo insisted on making proselytes of his enemies, served but to alienate them from the truth."

Although in the popular mind Galileo is remembered chiefly as an astronomer, it was not in this character that he made really substantial contributions to human knowledge -- as is testified by such authorities as Lagrange, Arago, and Delambre -- but rather in the field of mechanics, and especially of dynamics, which science may be said to owe its existence to him. Before he was twenty, observation of the oscillations of a swinging lamp in the cathedral of Pisa led him to the discovery of the isochronism of the pendulum, which theory he utilized fifty years later in the construction of an astronomical clock. In 1588, a treatise on the centre of gravity in solids obtained for him the title of the Archimedes of his time, and secured him a lecture-ship in the University of Pisa. During the years immediately following, taking advantage of the celebrated leaning tower, he laid the foundation experimentally of the theory of falling bodies and demonstrated the falsity of the peripatetic maxim, hitherto accepted without question, that their rate of descent is proportional to their weight. This at once raised a storm on the part of the Aristoteleans, who would not accept even facts in contradiction of their master's dicta. Galileo, in consequence of this and other troubles, found it prudent to quit Pisa and betake himself to Florence, the original home of his family. By the influence of friends with the Venetian Senate he was nominated in 1592 to the chair of mathematics in the University of Padua, which he occupied for eighteen years, with ever-increasing renown. He afterwards betook himself to Florence, being appointed philosopher and mathematician extraordinary to the Grand Duke of Tuscany. During the whole of this period, and to the close of his life, his investigation of Nature, in all her fields, was unwearied. Following up his experiments at Pisa with others upon inclined planes, Galileo established the laws of falling bodies as they are still formulated. He likewise demonstrated the laws of projectiles, and largely anticipated the laws of motion as finally established by Newton. He studied the properties of the cycloid and attempted the problem of its quadrature; while in the "infinitesimals", which he was one of the first to introduce

into geometrical demonstrations, was contained the germ of the calculus. In statics, he gave the first direct and entirely satisfactory demonstration of the laws of equilibrium and the principle of virtual velocities. In hydrostatics, he set forth the true principle of flotation. He invented a thermometer (*termometro lento*), though a defective one, but he did not, as is sometimes claimed for him, invent the microscope.

Though, as has been said, it is by his astronomical discoveries that he is most widely remembered, it is not these that constitute his most substantial title to fame. In this connection, his greatest achievement was undoubtedly his virtual invention of the telescope. Hearing early in 1609 that a Dutch optician, named Lippershey, had produced an instrument by which the apparent size of remote objects was magnified, Galileo at once realized the principle by which such a result could alone be attained, and, after a single night devoted to consideration of the laws of refraction, he succeeded in constructing a telescope which magnified three times, its magnifying power being soon increased to thirty-two. This instrument being provided and turned towards the heavens, the discoveries, which have made Galileo famous, were bound at once to follow, though undoubtedly he was quick to grasp their full significance. The moon was shown not to be, as the old astronomy taught, a smooth and perfect sphere, of different nature to the earth, but to possess hills and valleys and other features resembling those of our own globe. The planet Jupiter was found to have satellites, thus displaying a solar system in miniature, and supporting the doctrine of Copernicus. It had been argued against the said system that, if it were true, the inferior planets, Venus and Mercury, between the earth and the sun, should in the course of their revolution exhibit phases like those of the moon, and, these being invisible to the naked eye, Copernicus had to advance the quite erroneous explanation that these planets were transparent and the sun's rays passed through them. But with his telescope Galileo found that Venus did actually exhibit the desired phases, and the objection was thus turned into an argument for Copernicanism. Finally, the spots on the sun, which Galileo soon perceived, served to prove the rotation of that luminary, and that it was not incorruptible as had been assumed.

Prior to these discoveries, Galileo had already abandoned the old Ptolemaic astronomy for the Copernican. But, as he confessed in a letter to Kepler in 1597, he had refrained from making himself its advocate, lest like Copernicus himself he should be overwhelmed with ridicule. His telescopic discoveries, the significance of which he immediately perceived, induced him at once to lay aside all reserve and come forward as the avowed and strenuous champion of Copernicanism, and, appealing as these discoveries did to the evidence of sensible phenomena, they not only did more than anything else to recommend the new system to general acceptance, but invested Galileo himself with the credit of being the greatest astronomer of his age, if not the greatest who ever lived. They were also the cause of his lamentable controversy with ecclesiastical authority, which raises questions of graver import than any others connected with his name. It is necessary, therefore, to understand clearly his exact position in this regard.

The direct services which Galileo rendered to astronomy are virtually summed up in his telescopic discoveries, which, brilliant and important as they were, contributed little or nothing to

the theoretical perfection of the science, and were sure to be made by any careful observer provided with a telescope. Again, he wholly neglected discoveries far more fundamental than his own, made by his great contemporary Kepler, the value of which he either did not perceive or entirely ignored. Since the first and second of his famous laws were already published by Kepler in 1609 and the third, ten years later, it is truly inconceivable, as Delambre says, that Galileo should not once have made any mention of these discoveries, far more difficult than his own, which finally led Newton to determine the general principle which forms the very soul of the celestial mechanism thus established. It is, moreover, undeniable, that the proofs which Galileo adduced in support of the heliocentric system of Copernicus, as against the geocentric of Ptolemy and the ancients, were far from conclusive, and failed to convince such men as Tycho Brahé (who, however, did not live to see the telescope) and Lord Bacon, who to the end remained an unbeliever. Milton also, who visited Galileo in his old age (1638), appears to have suspended his judgment, for there are passages in his great poem which seem to favour both systems. The proof from the phenomenon of the tides, to which Galileo appealed to establish the rotation of the earth on its axis, is now universally recognized as a grave error, and he treated with scorn Kepler's suggestion, foreshadowing Newton's establishment of the true doctrine, that a certain occult influence of the moon was in some way responsible. In regard to comets, again, he maintained no less erroneously that they were atmospheric phenomena, like meteors, though Tycho had demonstrated the falsity of such a view, which was recommended only as the solution of an anti-Copernican difficulty.

In spite of all deficiency in his arguments, Galileo, profoundly assured of the truth of his cause, set himself with his habitual vehemence to convince others, and so contributed in no small degree to create the troubles which greatly embittered the latter part of his life. In regard to their history, there are two main points to be considered. It is in the first place constantly assumed, especially at the present day, that the opposition which Copernicanism encountered at the hands of ecclesiastical authority was prompted by hatred of science and a desire to keep the minds of men in the darkness of ignorance. To suppose that any body of men could deliberately adopt such a course is ridiculous, especially a body which, with whatever defects of method, had for so long been the only one which concerned itself with science at all. It is likewise contradicted by the history of the very controversy with which we are now concerned. According to a popular notion the point, upon which beyond all others churchmen were determined to insist, was the geocentric system of astronomy. Nevertheless it was a churchman, Nicholas Copernicus, who first advanced the contrary doctrine that the sun and not the earth is the centre of our system, round which our planet revolves, rotating on its own axis. His great work, "*De Revolutionibus orbium coelestium*", was published at the earnest solicitation of two distinguished churchmen, Cardinal Schömburg and Tiedemann Giese, Bishop of Culm. It was dedicated by permission to Pope Paul III in order, as Copernicus explained, that it might be thus protected from the attacks which it was sure to encounter on the part of the "mathematicians" (i.e. philosophers) for its apparent contradiction of the evidence of our senses, and even of common sense. He added that he made no account of objections which might be brought by ignorant wiseacres on Scriptural grounds. Indeed, for nearly three quarters of a century no such

difficulties were raised on the Catholic side, although Luther and Melanchthon condemned the work of Copernicus in unmeasured terms. Neither Paul III, nor any of the nine popes who followed him, nor the Roman Congregations raised any alarm, and, as has been seen, Galileo himself in 1597, speaking of the risks he might run by an advocacy of Copernicanism, mentioned ridicule only and said nothing of persecution. Even when he had made his famous discoveries, no change occurred in this respect. On the contrary, coming to Rome in 1611, he was received in triumph; all the world, clerical and lay, flocked to see him, and, setting up his telescope in the Quirinal Garden belonging to Cardinal Bandini, he exhibited the sunspots and other objects to an admiring throng.

It was not until four years later that trouble arose, the ecclesiastical authorities taking alarm at the persistence with which Galileo proclaimed the truth of the Copernican doctrine. That their opposition was grounded, as is constantly assumed, upon a fear lest men should be enlightened by the diffusion of scientific truth, it is obviously absurd to maintain. On the contrary, they were firmly convinced, with Bacon and others, that the new teaching was radically false and unscientific, while it is now truly admitted that Galileo himself had no sufficient proof of what he so vehemently advocated, and Professor Huxley after examining the case avowed his opinion that the opponents of Galileo "had rather the best of it". But what, more than all, raised alarm was anxiety for the credit of Holy Scripture, the letter of which was then universally believed to be the supreme authority in matters of science, as in all others. When therefore it spoke of the sun staying his course at the prayer of Joshua, or the earth as being ever immovable, it was assumed that the doctrine of Copernicus and Galileo was anti-Scriptural; and therefore heretical. It is evident that, since the days of Copernicus himself, the Reformation controversy had done much to attach suspicion to novel interpretations of the Bible, which was not lessened by the endeavours of Galileo and his ally Foscarini to find positive arguments for Copernicanism in the inspired volume. Foscarini, a Carmelite friar of noble lineage, who had twice ruled Calabria as provincial, and had considerable reputation as a preacher and theologian, threw himself with more zeal than discretion into the controversy, as when he sought to find an argument for Copernicanism in the seven-branched candlestick of the Old Law. Above all, he excited alarm by publishing works on the subject in the vernacular, and thus spreading the new doctrine, which was startling even for the learned, amongst the masses who were incapable of forming any sound judgment concerning it. There was at the time an active sceptical party in Italy, which aimed at the overthrow of all religion, and, as Sir David Brewster acknowledges (*Martyrs of Science*), there is no doubt that this party lent Galileo all its support.

In these circumstances, Galileo, hearing that some had denounced his doctrine as anti-Scriptural, presented himself at Rome in December, 1615, and was courteously received. He was presently interrogated before the Inquisition, which after consultation declared the system he upheld to be scientifically false, and anti-Scriptural or heretical, and that he must renounce it. This he obediently did, promising to teach it no more. Then followed a decree of the Congregation of the Index dated 5 March 1616, prohibiting various heretical works to which were added any advocating the Copernican system. In this decree no mention is made of Galileo, or of any of his works. Neither is the name of the pope introduced, though there is no doubt that he fully approved the decision,

having presided at the session of the Inquisition, wherein the matter was discussed and decided. In thus acting, it is undeniable that the ecclesiastical authorities committed a grave and deplorable error, and sanctioned an altogether false principle as to the proper use of Scripture. Galileo and Foscarini rightly urged that the Bible is intended to teach men to go to heaven, not how the heavens go. At the same time, it must not be forgotten that, while there was as yet no sufficient proof of the Copernican system, no objection was made to its being taught as an hypothesis which explained all phenomena in a simpler manner than the Ptolemaic, and might for all practical purposes be adopted by astronomers. What was objected to was the assertion that Copernicanism was in fact true, "which appears to contradict Scripture". It is clear, moreover, that the authors of the judgment themselves did not consider it to be absolutely final and irreversible, for Cardinal Bellarmine, the most influential member of the Sacred College, writing to Foscarini, after urging that he and Galileo should be content to show that their system explains all celestial phenomena -- an unexceptional proposition, and one sufficient for all practical purposes -- but should not categorically assert what seemed to contradict the Bible, thus continued:

I say that if a real proof be found that the sun is fixed and does not revolve round the earth, but the earth round the sun, then it will be necessary, very carefully, to proceed to the explanation of the passages of Scripture which appear to be contrary, and we should rather say that we have misunderstood these than pronounce that to be false which is demonstrated.

By this decree the work of Copernicus was for the first time prohibited, as well as the "Epitome" of Kepler, but in each instance only *donec corrigatur*, the corrections prescribed being such as were necessary to exhibit the Copernican system as an hypothesis, not as an established fact. We learn further that with permission these works might be read in their entirety, by "the learned and skilful in the science" (Remus to Kepler). Galileo seems, says von Gebler, to have treated the decree of the Inquisition pretty coolly, speaking with satisfaction of the trifling changes prescribed in the work of Copernicus. He left Rome, however, with the evident intention of violating the promise extracted from him, and, while he pursued unmolested his searches in other branches of science, he lost no opportunity of manifesting his contempt for the astronomical system which he had promised to embrace. Nevertheless, when in 1624 he again visited Rome, he met with what is rightly described as "a noble and generous reception". The pope now reigning, Urban VIII, had, as Cardinal Barberini, been his friend and had opposed his condemnation in 1616. He conferred on his visitor a pension, to which as a foreigner in Rome Galileo had no claim, and which, says Brewster, must be regarded as an endowment of Science itself. But to Galileo's disappointment Urban would not annul the former judgment of the Inquisition.

After his return to Florence, Galileo set himself to compose the work which revived and aggravated all former animosities, namely a dialogue in which a Ptolemist is utterly routed and confounded by two Copernicans. This was published in 1632, and, being plainly inconsistent with his former promise, was taken by the Roman authorities as a direct challenge. He was therefore

again cited before the Inquisition, and again failed to display the courage of his opinions, declaring that since his former trial in 1616 he had never held the Copernican theory. Such a declaration, naturally was not taken very seriously, and in spite of it he was condemned as "vehemently suspected of heresy" to incarceration at the pleasure of the tribunal and to recite the Seven Penitential Psalms once a week for three years.

Under the sentence of imprisonment Galileo remained till his death in 1642. It is, however, untrue to speak of him as in any proper sense a "prisoner". As his Protestant biographer, von Gebler, tells us, "One glance at the truest historical source for the famous trial, would convince any one that Galileo spent altogether twenty-two days in the buildings of the Holy Office (i.e. the Inquisition), and even then not in a prison cell with barred windows, but in the handsome and commodious apartment of an official of the Inquisition." For the rest, he was allowed to use as his places of confinement the houses of friends, always comfortable and usually luxurious. It is wholly untrue that he was -- as is constantly stated -- either tortured or blinded by his persecutors -- though in 1637, five years before his death, he became totally blind -- or that he was refused burial in consecrated ground. On the contrary, although the pope (Urban VIII) did not allow a monument to be erected over his tomb, he sent his special blessing to the dying man, who was interred not only in consecrated ground, but within the church of Santa Croce at Florence.

Finally, the famous "E pur si muove", supposed to have been uttered by Galileo, as he rose from his knees after renouncing the motion of the earth, is an acknowledged fiction, of which no mention can be found till more than a century after his death, which took place 8 January 1642, the year in which Newton was born.

Such in brief is the history of this famous conflict between ecclesiastical authority and science, to which special theological importance has been attached in connection with the question of papal infallibility. Can it be said that either Paul V or Urban VIII so committed himself to the doctrine of geocentricism as to impose it upon the Church as an article of faith, and so to teach as pope what is now acknowledged to be untrue? That both these pontiffs were convinced anti-Copernicans cannot be doubted, nor that they believed the Copernican system to be unscriptural and desired its suppression. The question is, however, whether either of them condemned the doctrine *ex cathedra*. This, it is clear, they never did. As to the decree of 1616, we have seen that it was issued by the Congregation of the Index, which can raise no difficulty in regard of infallibility, this tribunal being absolutely incompetent to make a dogmatic decree. Nor is the case altered by the fact that the pope approved the Congregation's decision *in forma communi*, that is to say, to the extent needful for the purpose intended, namely to prohibit the circulation of writings which were judged harmful. The pope and his assessors may have been wrong in such a judgment, but this does not alter the character of the pronouncement, or convert it into a decree *ex cathedra*.

As to the second trial in 1633, this was concerned not so much with the doctrine as with the person of Galileo, and his manifest breach of contract in not abstaining from the active propaganda of Copernican doctrines. The sentence, passed upon him in consequence, clearly implied a condemnation of Copernicanism, but it made no formal decree on the subject, and did not receive

the pope's signature. Nor is this only an opinion of theologians; it is corroborated by writers whom none will accuse of any bias in favour of the papacy. Thus Professor Augustus De Morgan (*Budget of Paradoxes*) declares

It is clear that the absurdity was the act of the Italian Inquisition, for the private and personal pleasure of the pope -- who knew that the course he took could not convict him *as pope* -- and not of the body which calls itself *the Church*.

And von Gebler ("Galileo Galilei"):

The Church never condemned it (the Copernican system) at all, for the Qualifiers of the Holy Office never mean the Church.

It may be added that Riceloll and other contemporaries of Galileo were permitted, after 1616, to declare that no anti-Copernican definition had issued from the supreme pontiff.

More vital at the present day is the question with which we commenced: "Does not the condemnation of Galileo prove the implacable opposition of the Church to scientific progress and enlightenment?" It may be replied with Cardinal Newman that this instance serves to prove the opposite, namely that the Church has not interfered with physical science, for Galileo's case "is the one stock argument" (*Apologia* 5). So too Professor De Morgan acknowledges ("Motion of the Earth" in *English Cyclopaedia*):

The Papal power must upon the whole have been moderately used in matters of philosophy, if we may judge by the great stress laid on this one case of Galileo. It is the standing proof that an authority which has lasted a thousand years was all the time occupied in checking the progress of thought.

So Dr. Whewell speaking of this same case says (*History of the Inductive Sciences*):--

I would not be understood to assert the condemnation of new doctrines to be a general or characteristic practice of the Romish Church. Certainly the intelligent and cultivated minds of Italy, and many of the most eminent of her ecclesiastics among them, have been the foremost in promoting and welcoming the progress of science, and there were found among the Italian ecclesiastics of Galileo's time many of the earliest and most enlightened adherents of the Copernican system.

The literature concerning Galileo is abundant. In particular may be mentioned: DE MORGAN, Motion of the Earth in English Cyclopaedia; IDEM in Companion to the British Almanack, 1855; IDEM, Budget of Paradoxes (London, 1872); WHEWELL, History of the Inductive Sciences (3d ed., London, 1857); BREWSTER, Martyrs of Science (London, 1877); VON GEBLER, Galileo Galilei und die romische Curie (tr., London, 1879); GRISAR, Galilei-studien (Ratisbon, 1882); CHOUPIN, Valeur des Decisions Doctrinales et Disciplinaires (Paris, 1907); DE JAUGEY, Le proces de Galilee, etc. (Paris, 1888); LEPINOIS, La question de Galilee (Paris, 1878);

VACANDARD, *Le proces de Galilee* in *Revue du clerge francais*, 1 and 15 Oct., 1904; WARD in *Dublin Review*, April, July, 1871; *The History of Galileo in the Month*, Sept., Oct., 1867; GERARD, *Galileo* (Catholic Truth Society); MULLER, *Galileo-Galilei* (Rome, 1908); IDEM, *Galileo Galilei und das kopernikanische Weltsystem* in *Stimmen aus Maria-Laach*, suppl. 101. JOHN GERARD Elizabeth Galitzin

Elizabeth Galitzin

Princess, religious of the Sacred Heart; born at St. Petersburg, 22 February, 1797; died in Louisiana, 8 December, 1843. Her father was Prince Alexis Andrevitch, her mother Countess Protasof, the friend and "second conscience" of Madame Swetchine. When her mother abandoned the creed of the Russian Orthodox Church and embraced the Catholic Faith (a step to which the penalty of exile or death was still attached by Russian law), Princess Elizabeth was roused to bitter hatred of the Catholic Church, and bound herself by oath never to change her religion. But after four years, the influence of her mother's consistency of life and the conversion of other members of the family induced her to examine the question, and finally she too made her submission. Her vocation followed soon after her conversion, and she left it to Father Rozaven to find for her an austere order devoted to education". His choice was the Society of the Sacred Heart. Elizabeth Galitzin received the habit at Metz, in 1826, her first vows were taken in Rome at the Trinità dei Monti, 1828, and her profession took place in Paris, 1832. In 1834, she was named secretary general to the foundress, Blessed Madeleine Sophie Barat, and, in 1839, was elected assistant general and named visitor of the convents of the Sacred Heart in the United States.

Mother Galitzin carried out her duties of assistant general and visitor in a characteristic spirit. Though burning with ardour to attain the best in all religious perfection, her strict ideas of government, and the tendency to dissimulation, which autocratic natures sometimes reveal in the pursuit of their ends, prevented her from acquiring fully the spirit of the constitutions of her order. She made grave mistakes, but the Blessed foundress always willing to make allowances for others, excused them and ever recognized that Mother Galitzin's heart was true to the society. Conscious of the harm she had done in pressing the matter of some changes in the constitutions, Mother Galitzin begged to be sent back to the United States, to restore the original organization of the society. In the midst of an outbreak of yellow fever in Louisiana she nursed the sick with heroic devotedness, until she was herself struck down and died.

JANET STUART
Saint Gall

St. Gall

(GALLUS; in the most ancient manuscript he is called GALLO, GALLONUS, GALLUNUS, and sometimes also CALLO, CHELLEH, GILLIANUS, etc.).

An Irishman by birth, he was one of the twelve disciples who accompanied St. Columbanus to Gaul, and established themselves with him at Luxeuil. Gall again followed his magister, in 610, on his voyage on the Rhine to Bregenz; but he separated from him in 612, when Columbanus left for Italy; and he remained in Swabia, where, with several companions, he led the life of a hermit, in a desert to the west of Bregenz, near the source of the river Steinach. There, after his death, was erected an "ecelelesia Sancti Galluni" governed by a "presbyter et pastor". Before the middle of the eighth century this church became a real monastery, the first abbot of which was St. Otmar. The monastery was the property of the Diocese of Constance, and it was only in 818 that it obtained from the Emperor Louis the Pious the right to be numbered among the royal monasteries. and to enjoy the privilege of immunity. At last, in 854, it was freed from all obligation whatever towards the See of Constance, and henceforth was attached only by ties of canonical dependence. Called "Abbey of St. Gall", not from the name of its founder and first abbot, but of the saint who had lived in this place and whose relics were honoured there, the monastery played an illustrious part in history for more than a thousand years.

Apart from this authentic history, there exists another version or tradition furnished by the Lives of St. Gall, the most ancient of which does not antedate the end of the eighth century. A portion of the incidents related in these Lives is perhaps true; but another part is certainly legendary, and in formal contradiction to the most ancient charters of the abbey itself. According to these biographies, Gall was ordained a priest in Ireland before his departure for the Continent, therefore before 590. Having reached Bregenz with Columbanus, he laboured in the country as a missionary, and actively combated the pagan superstitions. Prevented by illness from following Columbanus to Italy, he was placed under interdict by the displeased Columbanus, and in consequence could not celebrate Mass until several years later, after the death of his old master. Gall delivered from the demon by which she was possessed Fridiburga, the daughter of Cunzo and the betrothed of Sigebert, King of the Franks; the latter, through gratitude, granted to the saint an estate near Arbon, which belonged to the royal treasury, that he might found a monastery there. Naturally the monastery was exempt from all dependence on the Bishop of Constance; moreover, Gall twice refused the episcopal see of that city, which was offered to him, and having been instrumental in securing the election of a secular cleric, the deacon John, the latter and his successors placed themselves in every way at the service of the abbey. Gall also declined the abbatial dignity of Luxeuil, which was offered him by the monks of the monastery after the death of St. Eustace. Shortly afterwards he died, at the age of ninety-five, at Arbon, during a visit; but his body was brought back to the monastery, and God revealed the sanctity of his servant by numerous miracles. His feast is celebrated on 16 October, the day ascribed to him in some very ancient martyrologies, while Adon, it is not known for what reason, makes it occur on 20 February. The saint is ordinarily represented with a bear; for a legend, recorded in the Lives, relates that one night, at the command of the saint, one of these animals brought wood to feed the fire which Gall and his companions had kindled in the desert.

The most ancient Life, of which only fragments have been discovered till the present date, but otherwise very important, has been remodelled and put in the better style of the ninth century by

two monks of Reichenau: in 816-24 by the celebrated Wettinus, and about 833-34 by Walafrid Strabo, who also revised a book of the miracles of the saint, written somewhat earlier by Gozbert the Younger, monk of St. Gall. In 850 an anonymous monk of the same abbey wrote, in verse, a Life which he published under the name of Walafrid; and others after him further celebrated the holy patron in prose and verse.

ALBERT PONCELOT
Abbey of St. Gall

Abbey of St. Gall

In Switzerland, Canton St. Gall, 30 miles southeast of Constance; for many centuries one of the chief Benedictine abbeys in Europe; founded about 613, and named after Gallus, an Irishman, the disciple and companion of St. Columbanus in his exile from Luxeuil. When his master went on to Italy, Gallus remained in Switzerland, where he died about 646. A chapel was erected on the spot occupied by his cell, and a priest named Othmar was placed there by Charles Martel as custodian of the saint's relics. Under his direction a monastery was built, many privileges and benefactions being upon it by Charles Martel and his son Pepin, who with Othmar as first abbot, are reckoned its principal founders. By Pepin's persuasion Othmar substituted the Benedictine rule for that of St. Columbanus. He also founded the famous schools of St. Gall, and under him and his successors the arts, letters, and sciences were assiduously cultivated. The work of copying manuscripts was undertaken at a very early date, and the nucleus of the famous library gathered together. The abbey gave hospitality to numerous Anglo-Saxon and Irish monks who came to copy manuscripts for their own monasteries. Two distinguished guests of the abbey were Peter and Romanus, chanters from Rome, sent by Pope Adrian I at Charlemagne's request to propagate the use of the Gregorian chant. Peter went on to Metz, where he established an important chant-school, but Romanus, having fallen sick at St. Gall, stayed there with Charlemagne's consent. To the copies of the Roman chant that he brought with him, he added the "Romanian signs", the interpretation of which has since become a matter of controversy, and the school he started at St. Gall, rivalling that of Metz, became one of the most frequented in Europe.

The chief manuscripts produced by it, still extant, are the "Antiphonale Missarum" (no. 339), the "Antiphonarium Sti. Gregorii" (no. 359), and Hartker's "Antiphonarium" (nos. 390-391), the first and third of which have been reproduced in facsimile by the Solesmes fathers in their "Paléographie Musicale". The other schools of the abbey — for the younger monks and for lay scholars attracted thither by the fame of the monastic professors — were founded as early as the ninth century, for the well-known, but unrealized plan of 820 provides separate accommodation for both schools. The domestic history of the community during these centuries of consolidation was not altogether free from troubles. Even during the lifetime of Othmar, the monks had to defend themselves against the bishops of Constance, who, having already secured jurisdiction over the neighbouring Abbey of Reichenau, refused to recognise the exemption and other privileges of St.

Gall. For many years the monks had to fight for their independence, but it was not until the time of Louis the Pious that their efforts were crowned with success and their rights confirmed. From that time up to the end of the tenth century was the golden age of the abbey, during which flourished many celebrated scholars — the three Notkers, Eckhard, Hartker and others. The decrees of the Council of Aachen (817) for the furtherance of discipline and the religious spirit were loyally carried into effect by Abbot Gotzbert (815-837), under whom the monks built a new and magnificent church and by whom also the library was greatly enlarged. He purchased many fresh manuscripts and set his monks to multiply copies of them. His successor Grimald (841-872) carried on the work, and a catalogue drawn up in his time, still extant, shows the wide range of subjects represented. Over four hundred of the manuscripts mentioned in that catalogue are still at St. Gall.

During the abbacy of Engelbert II (924-933) an incursion of the Huns threatened the abbey, and most of the valuable books and manuscripts were removed to Reichenau for safety, some never being returned. In 937 a disastrous fire almost entirely destroyed the monastery, but the library fortunately escaped. The abbey and town were rebuilt and fortified, and throughout the eleventh and twelfth centuries St. Gall maintained its place in the front rank of monastic establishments. With the thirteenth century, however, came a period of decline. Various causes contributed to this, one of them being the fact that the neighbouring feudal lords took to quartering themselves and their retinues upon the abbey more often than was good for monastic discipline. The abbots also were frequently called upon to settle their quarrels, and a spirit of worldliness thus crept into the cloister. About the same time the abbey and town became an independent principality, over which the abbots ruled as territorial sovereigns, taking rank as Princes of the Empire. Ulrich VI (1204-1220) was the first to hold that dignity. Records as to the library during this period are scanty. In the fourteenth century Humanists were allowed to take away some of the rarest of the classical manuscripts and in the sixteenth the abbey was raided by the Calvinists, who scattered many of the most valuable books. In 1530 Abbot Diethelm inaugurated a restoration with such success that he has been called the third founder of St. Gall. The library was one of his chief cares and his successors zealously followed his good example. Through their efforts the monastic spirit, the schools and the studies all revived and attained to something of their former greatness. In 1602, when the Swiss congregation of the Order of St. Benedict was formed, the Abbey of St. Gall took precedence as the first house of the congregation, and many of its abbots subsequently held the office of president.

A printing-press was started under Pius (1630-1674), which soon became one of the most important in Switzerland. In 1712 a great change came over the fortunes of the monastery. It was pillaged by the Swiss, who spared nothing. Most of the books and manuscripts were carried off to Zurich, Berne and other places, and only a portion of them were afterwards restored to St. Gall. The abbot of the time, Leodegar by name, was obliged for security to place his monastery under the protection of the townspeople whose ancestors had been serfs of the abbey, but who had, since the Reformation, thrown off the yoke of subjection. When these disturbances were over, a final attempt was made to revive the glories of the abbey. The monastery was rebuilt for the last time under Abbots Celestine II and Bede, but the resuscitation was short-lived. In 1798 the Swiss directory

suppressed the ecclesiastical principality and secularized the abbey, and in 1805 its revenues were sequestrated. The monks took refuge in other houses of the congregation, the last abbot, Pancras Forster, dying in 1829 at Muri. When the Diocese of Constance was suppressed in 1821, that portion of it in which St. Gall was situated was united to the Diocese of Coire, but in 1846 a rearrangement made St. Gall a separate see, with the abbey church as its cathedral and a portion of the monastic buildings being resigned for the bishop's residence. The church, rebuilt 1755-65 in the rococo style, contains some finely-carved choir stalls and a beautiful wrought iron screen. The conventual buildings, besides the bishop's palace, now accommodate also the cantonal offices and what remains of the library — about thirty thousand volumes and manuscripts. The town of St. Gall has a population of over 30,000 and is one of the principal manufacturing centres in Switzerland, muslin and cotton being its chief industries.

G. CYPRIAN ALSTON

Saint Galla

St. Galla

A Roman widow of the sixth century; feast, 5 October. According to St. Gregory the Great (Dial. IV, ch. xiii) she was the daughter of the younger Symmachus, a learned and virtuous patrician of Rome, whom Theodoric had unjustly condemned to death (525). Becoming a widow before the end of the first year of her married life, she, still very young, founded a convent and hospital near St. Peter's, there spent the remainder of her days in austerities and works of mercy, and ended her life with an edifying death. The letter of St. Fulgentius of Ruspe, "De statu viduarum", is supposed to have been addressed to her. Her church in Rome, near the Piazza Montanara, once held a picture of Our Lady, which according to tradition represents a vision vouchsafed to St. Galla. It is considered miraculous and was carried in recession in times of pestilence. It is now over the high altar of Santa Maria in Campitelli.

FRANCIS MERSHMAN

Galla

Galla

Vicariate Apostolic embracing the territory of the Galla or Oromo tribes in Abyssinia. In its widest extent the vicariate lies between 34d and 44d long. E. of Greenwich, and 4d and 10d N. lat. The Oromo or Galla, doubtless slightly European in descent, came originally from the region of Hehal, lying between the junction of the two Niles and the River Baro. Eventually, about the fifteenth century, they began to invade Abyssinia, where they soon became so powerful that they shared the power with the Negus of Ethiopia. The Galla are divided into two principal branches, the Borana or Western Galla, and the Barentouma or Eastern Galla, both of them subdivided into numerous tribes. There exist among the Galla other important tribes, also genuine negro tribes and

tribes of Mussulman origin. The vicariate dates from 4 May, 1846. The Capuchin, Right Rev. Guglielmo Massaia, was the first vicar Apostolic. He was born at Piova, province of Asti, Piedmont, 9 June, 1809, and had been a member of the aforesaid order twenty-one years when he was consecrated Bishop of Cassia, 24 May, 1846, and sent to the Galla tribes. It was then very difficult to gain access into the interior of Africa; only after five years of incessantly renewed attempts and at the cost of great hardships and many perils was he able to reach the region of Galla Assandabo, 20 November, 1852. Having evangelized the districts of Goudrou, Lagamara, Limmou, Nonna, and Guera, this valiant apostle entered, 4 Oct., 1859, the Kingdom of Kaffa, where conversions were abundant. With apostolic foresight he provided the converted tribes with priests, so that when persecution obliged him to flee, Christianity did not disappear.

In 1868 he was at Choa, where he laboured with success until 1879, and enjoyed the confidence of King Menelik, who made him his confidential counsellor and paid him great respect. In the interval the missions of Kaffa and Guera were administered by his coadjutor Bishop Felicissimo Coccino, who died 26 February, 1878. In 1879 Negus John of Abyssinia compelled his vassal Menelik to order Bishop Massaia to return to Europe. The venerable prelate, who had already been banished seven times, and was now more broken by labour and sufferings than by age, handed over the government of the vicariate to his coadjutor Bishop Taurin Cahagne, since 14 Feb., 1875, titular Bishop of Adramittium. Bishop Massaia was created cardinal by Leo XIII, 10 Nov., 1884; he died 6 Aug., 1889. He left valuable memoirs (see below), the publication of which was rewarded by the Italian government with the nomination to a high civil order, not accepted, however, by the venerable missionary. The mission of Harar was founded by Bishop Taurin, who from 1880 to 1899 sustained a glorious combat in this hot-bed of Islam and opened the way to the present quite prosperous mission. He has written a catechism and valuable works of Christian instruction in the Galla language. His name is held in veneration throughout these regions. The vicariate now includes the three great districts of Choa, Kaffa and Harar. There are 15 principal stations and an equal number of secondary ones. The Christians number more than 18,000. The mission possesses a seminary for priests and a preparatory seminary. It maintains 3 principal and 12 secondary schools, 3 dispensaries, 1 leper-hospital, 1 printing house, and important agricultural works. The vicar Apostolic has under his jurisdiction 125 European Capuchin missionaries from the province of Toulouse, France. There are also 8 native priests, 10 catechists, 35 seminarists, 17 Franciscan Sisters (Calais), and 12 Freres Gabrielistes (B. Louis-Marie Grignon de Montfort).

ANDREAS JAROSSEAU

Louis Gallait

Louis Gallait

Flemish painter; born at Tournai, 10 May, 1810; died in Brussels, 20 November, 1887. He produced melodramatic and sensational pictures, very much on the lines of those of Ary Scheffler, with a leaning towards the pathetic and emotional side. Gallait was, however, a more accomplished

painter than Scheffer, with whom his works have frequently been compared. His colouring was superior, and his drawing more accurate, but the two men were possessed of similar devotional fervour, and poetic emotion of a sentimental type. Gallait was a youthful prodigy, and produced his first picture when ten years old, obtaining an important local prize. One of his earliest performances was purchased by the municipal authorities of Tournai and presented to the Cathedral, and it was owing to the generosity of his own townspeople that he was enabled in 1835 to go to Paris and study under Hennequin. He became a member of the Institute of France, and honorary foreign Royal Academician. Several of his pictures were exhibited in London in 1862, and three at the Royal Academy in 1872, when he was residing at 51 Bedford Square. He painted in water-colours as well as in oil, and was made an honorary member of the Royal Institute.

GEORGE CHARLES WILLIAMSON

Antoine Galland

Antoine Galland

French Orientalist and numismatist, b. at Rollot, near Montdidier, in Picardy, 1646, d. at Paris, 1715. When he was four years old his father died leaving him in poverty, but through his diligence and industry he won protection which enabled him to pursue his studies at Noyon and later at Paris. He was already known as a scholar at the age of twenty-four, when de Nointel, the French ambassador at Constantinople, took him to the East to study the faith of the Greeks, several articles of which were the subject of a controversy between Arnault and the Protestant minister Claude. In 1675 Galland accompanied Nointel to Jerusalem, and in 1679 he was charged by Colbert, and, after his death by Louvois, with scientific researches in the Levant, with title of king's antiquary. He profited by these journeys to become familiar with modern Greek, and to learn Turkish, Persian, and Arabic. In 1701 he was admitted to the Academy of Inscriptions and Medals, and in 1709 he was appointed to the chair of Arabic at the Collège de France. We are indebted to him for numerous letters, notes, observations and remarks on the coins and inscriptions of Greek and Latin antiquity, many of which have been inserted in Banduri's "Bibliotheca nummaria". He collaborated in Herbelot's "Bibliothèque Orientale", which he brought to a conclusion after the death of its author. He is chiefly famous for his translation of the eastern tales, "The Arabian Nights" (Paris, 1704-08). This graceful though inaccurate translation, the first which had appeared in Europe until that time, brought great fame to its author. At his death he left many manuscripts, a number of which have been published, e.g., "Indian tales and fables of Pidpa and Lokman"; the "History of the princes of the line of Tamerlane", translated from the work of the Persian historian Abdel-rezzac; "Ottoman History", translated from the Turkish of Na'm Effendi; "History of Ghengis-Khan", from the Persian history of Nurkhoud; "Numismatic Dictionary", etc.

MICHAUD, Biographie universelle; DE BOZE, Histoire de l'Académie royale des Inscriptions et Belles-Lettres, depuis son établissement, avec les éloges des Académiciens morts depuis son

renouvellement (Paris, 1740); MAURY, *Les académies d'Autrefois*; L'ancienne académie des Inscriptions et Belles-Lettres (Paris, 1882).

A. FOURNET

Andrea Gallandi

Andrea Gallandi

Oratorian and patristic scholar, born at Venice, 7 December, 1709; died there 12 January, 1779, or 1780. Gallandi was descended from an ancient French family. He pursued his theological and historical studies under such excellent teachers as the two Dominicans, Danello Concina, a renowned moralist, and Bernardo de Rossi (de Rubeis), a noted historical scholar and theologian. With both of these instructors he kept up a warm friendship after he had joined the Oratory of St. Philip Neri. He established his reputation as a scholar by compiling the still valuable work of reference: "*Bibliotheca veterum patrum antiquorumque scriptorum ecclesiasticorum Græco-Latina*" (Venice, 1765-81, 14 vols.; 2nd ed., 1788). The work was dedicated to the Venetian Senate, but Gallandi did not live to see its completion. It is a collection of 380 ecclesiastical writers of the first seven centuries; its special merit is that instead of compiling important works already accessible in print, Gallandi gathered together the smaller and less known writings. Greek originals were printed in good type with Latin translations, and copious notes relative to the authors and their works were added. He also published a collection of the treatises of famous canonists (Coustant of Saint-Maur, the Ballerini, etc.) on the origin and development of canon law, which was entitled, "*De vetustis canonum collectionibus dissertationum sylloge*" (Venice, 1778, 1 vol. folio; Mainz, 1790, 2 vols.). At his death Gallandi left the following work which has never been published: "*Thesaurus antiquitatis ecclesiasticæ historico-apologetico-criticus complectens SS. patrum gesta et scripta doctissimorum virorum dissertationibus asserta et illustrata ac juxta seriem XII sec. digesta*".

PATRICIUS SCHLAGER

Galle

Galle

DIOCESE OF GALLE (GALLENSIS).

Diocese in Ceylon, created by Leo XIII 25 Aug., 1893, by detaching two civil provinces, the Southern (2146 sq. miles) and Sabaragamuwa (1901 sq. miles), from the Archdiocese of Colombo. The total population is about 900,000, of whom 10,160 are (1909) Catholics. Besides a few Europeans and burghers of mixed descent, the population includes Singalese, Moors, and Tamils. There is a still greater religious diversity: Sivites, Parsees, Mohammedans, Protestants of various denominations, mostly, however, Buddhists of the Southern type. For these reasons the conversion of the non-Catholic population is difficult; the racial and religious differences affect seriously the instruction of the faithful, sparsely scattered over a large area. Leo XIII entrusted the new diocese

to the Belgian Jesuits, and appointed as first bishop the Very Rev. Joseph Van Reeth, rector of the novitiate at Tronchiennes (Belgium). The bishop-elect (b. 6 Aug., 1843) was consecrated on 19 March, 1895, in Antwerp, his native town. Accompanied by three priests and one lay brother, he took possession of his see 9 Nov., 1895, since when progress has been slow but steady. The clergy comprises 22 Jesuits and 5 secular priests (4 natives and 1 European), residing in eleven centres, each having its church, mission-house, and school. The Catholic population has been doubled. The number of confessions has risen from 6381 (1897) to 27,956 (1908), and that of Communion from 7196 to 48,000. In 1897 only 335 boys and 376 girls attended the 14 Catholic schools, of which 9 had been opened that year; there are now (1909) some 2140 boys and 1009 girls in 39 schools. In 1901 was opened St. Aloysius's College, under the Jesuit Fathers, with 300 pupils. Belgian sisters of Charity of Jesus and Mary render praiseworthy help. They have a convent in Galle (1896) and one in Matara (1908), while a third is being built at Kegalla. To the Galle convent is attached a room for lace-making, work from which won a gold medal at the St. Louis Exhibition (U.S.A.) in 1904. A similar institution has been started at Matara.

J. COOREMAN

Juan Nicasio Gallego

Juan Nicasio Gallego

Priest and poet; born at Zamora, Spain, 14 December, 1777; died at Madrid, 9 January, 1853; received his training at Salamanca; entering into Holy orders, he soon went to Madrid, where he was given a post in the royal palace, being made director of the royal pages. His feelings as a patriot and his love for pseudo-classicism very naturally led him to associate himself with the coterie about the poet Quintana. Imitating the latter's metres, he surpassed him in perfection of form, but remains somewhat his inferior in respect of inspiration. It is by virtue of only seven odes and elegies that Gallego attained the high rank which he certainly occupies among Spanish poets. Of these the first was the ode, "A la defensa de Buenos Ayres" (1807), directed against the English, who, taking advantage of Spain's naval weakness, and the uneasiness in the colonies, had seized for the moment the capital of the Argentine region. With intensified liberal tendencies, Gallego presented himself for election and was returned a deputy to the Cortes. He had consistently opposed the French invaders of the Spanish soil, with both pen and voice, yet the despotic Ferdinand VII, after his return in 1814, imprisoned him because of his liberalism. During the second constitutional period, now free again, he was appointed Archdeacon of Valencia. The Royal Spanish Academy took him into its membership, and made him its perpetual secretary. The most famous of the few compositions left by Gallego is the elegy "El Dos de Mayo", which commemorates the events of 2 May, 1808 when the heroic and devoted opposition presented to the French troops by three Spanish artillerymen, Ruiz, Daoiz and Velarte, led to the rising of the whole land against the Napoleonic usurper. The effect of Gallego's stirring strains upon his countrymen, urging them to resist unto the death, can

hardly be exaggerated. Excellence of form characterizes this poem as it does his elegy on the death of the Duchess of Frias.

His poems are in the *Biblioteca de autores españoles*, LXVII. BLANCO-GARCÍA, *Historia de la literatura española en el siglo XIX*.

J.D.M. FORD

Pietro Luigi Galletti

Pietro Luigi Galletti

Benedictine, historian and archaeologist; b. at Rome in 1724; d. there, 13 December, 1790. He was educated in Rome where he entered the Order of St. Benedict. While a monk in the Abbey of St. Paul Without the Walls, he made a collection of the numerous ancient inscriptions used in the pavement of the floor of the famous basilica or scattered among the cloister buildings and in the surrounding vineyards. These became soon the nucleus of a classified museum of Christian and Pagan inscriptions. Later on he became keeper of the archives and librarian of the Benedictines in Florence. Pius VI bestowed various benefices on him and made him titular Bishop of Cyrene.

As a historian Galletti displayed great erudition and diligence. Some of his writings are still authoritative, notably his collection of inscriptions and his works on the higher papal officials of the old Lateran Palace. His literary activities were directed to widely divergent periods and spheres of historical and archaeological research. On Roman antiquity he wrote: "Capena, municipio dei Romani" (Rome, 1756), and "Gabbio, antica città di Sabina, scoperta ove era Torri" (Rome, 1757). His two works "Del Vestarario della santa Romana chiesa" (Rome, 1758), and "Del Primicerio della S. Sede Apostolica e di altri Uffiziali Maggiori del Sacro Palazzo Lateranense" (Rome, 1776) deal with the early history of the Roman Curia. The latter work is especially thorough and important. Among his contributions to the history of the religious orders the following are noteworthy: "Lettera intorno la vera e sicura origine del ven. ordine di S. Girolamo" (Rome, 1755), and "Ragionamento dell'origine e de'primi tempi dell'abbazia Fiorentina" (Rome, 1773). He was the author of a biography of the bishops of Viterbo: "Lettera a Giannantonio Bersetta sopra alcuni vescovi di Viterbo" (Rome, 1759), and of Cardinal Passionei: "Memorie per servire alla storia della vita del card. Domenico Passionei" (Rome, 1762). His work on the early churches of Rieti is of value for Christian archaeology: "Memoria di tre antiche chiese di Riete, S. Michele Arcangelo, S. Agata alla Rocca, S. Giacomo" (Rome, 1765). Finally, it is to Galletti that is due the first great collection of medieval inscriptions, treated as a source of historical information. His "Inscriptiones Venetae infimi aevi Romae exstantes" (Rome, 1757) was followed in the same series by the inscriptions found in Rome concerning Bologna, Rome itself (3 vols.), the March of Ancona, and Piedmont, in all seven volumes (1757-66).

J.P. KIRSCH

Gallia Christiana

Gallia Christiana

A documentary catalogue or list, with brief historical notices, of all the dioceses and abbeys of France from the earliest times, also of their occupants. In 1621 Jean Chenu, an *avocat* at the Parlement of Paris, published in a book entitled "Archiepiscoporum et episcoporum Galliae chronologica historia". Nearly a third of the bishops are missing, and the episcopal succession as given by Chenu was very incomplete. In 1626, Claude Robert, a priest of Langres, published with the approbation of Baronius, a "Gallia Christiana", in which he even entered a large number of churches outside of Gaul, and gave a short history of the metropolitan sees, cathedrals, and abbeys. Two brothers de Sainte-Marthe, Scévole (1571-1650) and Louis (1571-1656), appointed royal historiographers of France in 1620, had assisted Chenu and Robert. At the assembly of Clergy in 1626 a number of prelates commissioned these brothers to compile a more definitive work. They died before the completion of their work, and it was issued in 1656 by the sons of Scévole de Sainte-Marthe, Pierre (1618-90), himself historiographer of France, Abel (1620-71), theologian, and later general of the Oratory, and Nicolas-Charles (1623-62), prior of Clauway. On 13 September, 1656, the Sainte-Marthe brothers were presented to the assembly of the French Clergy, who accepted the dedication of the work on condition that a passage suspected of Jansenism be suppressed. The work formed four volumes in folio, the first for the archdioceses, the second and third for the dioceses, and the fourth for the abbeys, all in alphabetical order. The title was "Gallia Christiana, qua series omnia archiepiscoporum, episcoporum et abbatum Franciæ vicinarumque ditionum ab origine ecclesiarum ad nostra tempora per quattuor tomos deducitur, et probatur ex antiquæ fidei manuscriptis Vaticani, regnum, principum tabulariis omnium Galliae cathedralium et abbatium". Such as it was, the work possessed considerable value at the time, especially for the fullness of its lists and for the reproduction of a large number of valuable manuscripts. The defects and omissions, however, were obvious. The Sainte-Marthe brothers themselves announced in their preface the early appearance of a second edition corrected and enlarged. As early as 1660 the Jesuit Jean Colomb published at Lyons the "Noctes Blancalandanæ" which contains certain additions to the work of the Samaritani, as the brothers and their successors are often called.

The edition promised by the Sainte-Marthe brothers did not appear. In 1710 the Assembly of the French Clergy offered four thousand livres to Denys de Sainte-Marthe (1650-1725), a Benedictine of Saint-Maur, renown for his polemics against the Abbé de Rancé on the subject of monastic studies, on condition that he should bring the revision of the "Gallia Christiana" to a successful conclusion, that the first volume should appear at the end of four years, and that his congregation should continue the undertaking after his death. In 1715 through his efforts the first volume appeared, devoted to the ecclesiastical provinces of Albi, Aix, Arles, Avignon, and Auch. In 1720 he produced the second volume dealing with the provinces of Bourges and Bordeaux, and in 1725 the third, which treated of Cambrai, Cologne, and Embrun. After his death the Benedictines issued the fourth volume (1728) on Lyons, and the fifth volume (1731) on Mechlin and Mainz. Between 1731 and

1740, on account of the controversies over the Bull "Unigenitus", Dom Félix Hodin and Dom Ettiene Brice, who were preparing the latter volumes of the "Gallia Christiana", were expelled from the Abbey of Saint-Germain des Prés. They returned to Paris in 1739 and issued the sixth volume, dealing with Narbonne, also (1744) the seventh and eighth volumes on Paris and its suffragan sees. Père Duplessis united his efforts with theirs, and the ninth and tenth volumes, both on the province of Reims, appeared in 1751. The eleventh volume (1759) dealing with the province of Rouen was issued by Père Pierre Henri and Dom Jacques Taschereau. In 1770 the twelfth volume on the provinces of Sens and Tartenaise appeared, and in 1785 the thirteenth on the provinces of Toulouse and Trier. At the outbreak of the revolution, four volumes were lacking, Tours, Beaçon, Utrecht, and Vienne, respectively, and according to the Benedictine method, the fourteenth, fifteenth and sixteenth volumes of the "Gallia Christiana". The province of Utrecht alone has no place in this great collection, but this defect has been remedied in part by the "Bullarium Trajectense", edited by Gisbert Brom, and extending from the earliest times to 1378 (The Hague, 1891-96). The new "Gallia Christiana", of which volumes I to V and XI to XIII were reprinted by Dom Piolin between 1870 and 1877, and volumes VI to IX and XII by the publisher H. Welter, places after each metropolitan see its suffragan sees, and after each see the abbeys belonging to it. The documents, instead of encumbering the body of the articles, are inserted at the foot of each column under the title "Instrumenta". This colossal work does great honour to the Benedictines and to the Sainte-Marthe family. "The name of Sainte-Marthe", wrote Voltaire, "is one of those of which the country has most reason to be proud. "

In 1774 the Abbé Hugues du Temps, vicar-general of Bordeaux, undertook in seven volumes an abridgement of the "Gallia" under the title "Le clergé de France" of which only four volumes appeared. About 1867 the Abbé Fisquet undertook the publication of an episcopal history of France (La France Pontificate) in which for the early period he should utilize the "Gallia", at the same time bringing the history of each diocese down to modern times. Twenty-two volumes appeared and then the work ceased. Some years ago Canon Albanès projected a complete revision of the "Gallia Christiana", each ecclesiastical province to form a volume. Albanès, who was one of the first scholars to search the Lateran and Vatican libraries, in his efforts to determine the initial years of some episcopal reigns, found occasionally either the acts of election or the Bulls of provision. He hoped in this way to remove certain suppositious bishops who had been introduced to fill gaps in the catalogues, but died in 1897 before the first volume appeared. Through the use of his notes and the efforts of Canon Chevalier three addition volumes of this "Gallia Christiana (novissima)", treating Arles, Aix, and Marseilles, have appeared at Montbéliard since 1899.

Dreux du Radier, *Bibliothèque historique et critique du Poitou* (Paris, 1754); *Gallia Christiana*, Vol. IV, Preface; *Gallia Christiana (novissima)* (Montbéliard, 1899), Preface to the Aix volume; de Longuemare, *Un famille d'auteurs aux seizième, dix-septième et dix-huitième siècles; les Sainte-Marthe* (Paris, 1902).

GEORGES GOYAU

Gallicanism

Gallicanism

This term is used to designate a certain group of religious opinions for some time peculiar to the Church of France, or Gallican Church, and the theological schools of that country. These opinions, in opposition to the ideas which were called in France "Ultramontane", tended chiefly to a restraint of the pope's authority in the Church in favour of that of the bishops and the temporal ruler. It is important, however, to remark at the outset that the warmest and most accredited partisans of Gallican ideas by no means contested the pope's primacy in the Church, and never claimed for their ideas the force of articles of faith. They aimed only at making it clear that their way of regarding the authority of the pope seemed to them more in conformity with Holy Scripture and tradition. At the same time, their theory did not, as they regarded it, transgress the limits of free opinions, which it is allowable for any theological school to choose for itself provided that the Catholic Creed be duly accepted.

General Notions

Nothing can better serve the purpose of presenting an exposition at once exact and complete of the Gallican ideas than a summary of the famous Declaration of the Clergy of France of 1682. Here, for the first time, those ideas are organized into a system, and receive their official and definitive formula. Stripped of the arguments which accompany it, the doctrine of the Declaration reduces to the following four articles:

1. St. Peter and the popes, his successors, and the Church itself have received dominion [*puissance*] from God only over things spiritual and such as concern salvation and not over things temporal and civil. Hence kings and sovereigns are not by God's command subject to any ecclesiastical dominion in things temporal; they cannot be deposed, whether directly or indirectly, by the authority of the rulers of the Church, their subjects cannot be dispensed from that submission and obedience which they owe, or absolved from the oath of allegiance.
2. The plenitude of authority in things spiritual, which belongs to the Holy See and the successors of St. Peter, in no wise affects the permanence and immovable strength of the decrees of the Council of Constance contained in the fourth and fifth sessions of that council, approved by the Holy See, confirmed by the practice of the whole Church and the Roman pontiff, and observed in all ages by the Gallican Church. That Church does not countenance the opinion of those who cast a slur on those decrees, or who lessen their force by saying that their authority is not well established, that they are not approved or that they apply only to the period of the schism.
3. The exercise of this Apostolic authority [*puissance*] must also be regulated in accordance with the canons made by the Spirit of God and consecrated by the respect of the whole world. The rules, customs and constitutions received within the kingdom and the Gallican Church must have their force and their effect, and the usages of our fathers remain inviolable since the dignity of the Apostolic See itself demands that the laws and customs established by consent of that august see and of the Churches be constantly maintained.

4. Although the pope have the chief part in questions of faith, and his decrees apply to all the Churches, and to each Church in particular, yet his judgment is not irreformable, at least pending the consent of the Church.

According to the Gallican theory, then, the papal primacy was limited, first, by the temporal power of princes, which, by the Divine will, was inviolable; secondly by the authority of the general council and that of the bishops, who alone could, by their assent, give to his decrees that infallible authority which, of themselves, they lacked; lastly, by the canons and customs of particular Churches, which the pope was bound to take into account when he exercised his authority.

But Gallicanism was more than pure speculation. It reacted from the domain of theory into that of facts. The bishops and magistrates of France used it, the former as warrant for increased power in the government of dioceses, the latter to extend their jurisdiction so as to cover ecclesiastical affairs. Moreover, there was an episcopal and political Gallicanism, and a parliamentary or judicial Gallicanism. The former lessened the doctrinal authority of the pope in favour of that of the bishops, to the degree marked by the Declaration of 1682; the latter, affecting the relations of the temporal and spiritual powers, tended to augment the rights of the State more and more, to the prejudice of those of the Church, on the grounds of what they called "the Liberties of the Gallican Church" (*Libertes de l'Eglise Gallicane*).

These Liberties, which are enumerated in a collection, or corpus, drawn up by the juriconsults Guy Coquille and Pierre Pithou, were, according to the latter, eighty-three in number. Besides the four articles cited above, which were incorporated, the following may be noted as among the more important: The Kings of France had the right to assemble councils in their dominions, and to make laws and regulations touching ecclesiastical matters. The pope's legates could not be sent into France, or exercise their power within that kingdom, except at the king's request or with his consent. Bishops, even when commanded by the pope, could not go out of the kingdom without the king's consent. The royal officers could not be excommunicated for any act performed in the discharge of their official duties. The pope could not authorize the alienation of any landed estate of the Churches, or the diminishing of any foundations. His Bulls and Letters might not be executed without the *Pareatis* of the king or his officers. He could not issue dispensations to the prejudice of the laudable customs and statutes of the cathedral Churches. It was lawful to appeal from him to a future council, or to have recourse to the "appeal as from an abuse" (*appel comme d'abus*) against acts of the ecclesiastical power.

Parliamentary Gallicanism, therefore, was of much wider scope than episcopal; indeed, it was often disavowed by the bishops of France, and about twenty of them condemned Pierre Pithou's book when a new edition of it was published, in 1638, by the brothers Dupuy.

Origin and History

The Declaration of 1682 and the work of Pithou codified the principles of Gallicanism, but did not create them. We have to inquire, then, how there came to be formed in the bosom of the Church of France a body of doctrines and practices which tended to isolate it, and to impress upon it a physiognomy somewhat exceptional in the Catholic body. Gallicans have held that the reason of this phenomenon is to be found in the very origin and history of Gallicanism.

For the more moderate among them, Gallican ideas and liberties were simply privileges -- concessions made by the popes, who had been quite willing to divest themselves of a part of their authority in favour of the bishops or kings or France. It was thus that the latter could lawfully stretch their powers in ecclesiastical matters beyond the normal limits. This idea made its appearance as early as the reign of Philip the Fair, in some of the protests of that monarch against the policy of Boniface VIII. In the view of some partisans of the theory, the popes had always thought fit to show especial consideration for the ancient customs of the Gallican Church, which in every age had distinguished itself by its exactitude in the preservation of the Faith and the maintenance of ecclesiastical discipline. Others, again, assigned a more precise date to the granting of these concessions, referring their origin to the period of the earliest Carolingians and explaining them somewhat differently. They said that the popes had found it impossible to recall to their allegiance and to due respect for ecclesiastical discipline the Frankish lords who had possessed themselves of episcopal sees; that these lords, insensible to censures and anathemas, rude and untaught, recognized no authority but that of force; and that the popes had, therefore, granted to Carloman, Pepin, and Charles the Great a spiritual authority which they were to exercise only under papal control. It was this authority that the Kings of France, successors of these princes, had inherited. This theory comes into collision with difficulties so serious as to have caused its rejection as well by the majority of Gallicans as by their Ultramontane adversaries. The former by no means admitted that the Liberties were privileges since a privilege can be revoked by him who has granted it; and, as they regarded the matter, these Liberties could not be touched by any pope. Moreover, they added, the Kings of France have at times received from the popes certain clearly defined privileges; these privileges have never been confounded with the Gallican Liberties. As a matter of fact, historians could have told them, the privileges accorded by popes to the King of France in the course of centuries are known from the texts, of which an authentic collection could be compiled, and there is nothing in them resembling the Liberties in question. Again, why should not these Gallican Liberties have been transmitted to the German Emperors as well since they, too, were the heirs of Pepin and Charlemagne? Besides, the Ultramontanes pointed out there are some privileges which the pope himself could not grant. Is it conceivable that a pope should allow any group of bishops the privilege of calling his infallibility in question, putting his doctrinal decisions upon trial, to be accepted or rejected? -- or grant any kings the privilege of placing his primacy under tutelage by suppressing or curtailing his liberty of communication with the faithful in a certain territory?

Most of its partisans regarded Gallicanism rather as a revival of the most ancient traditions of Christianity, a persistence of the common law, which law, according to some (Pithou, Quesnel), was made up of the conciliar decrees of the earliest centuries or, according to others (Marca, Bossuet), of canons of the general and local councils, and the decretals, ancient and modern, which were received in France or conformable to their usage. "Of all Christian countries", says Fleury, "France has been the most careful to conserve the liberty of her Church and oppose the novelties introduced by Ultramontane canonists". The Liberties were so called, because the innovations

constituted conditions of servitude with which the popes had burdened the Church, and their legality resulted from the fact that the extension given by the popes to their own primacy was founded not upon Divine institution, but upon the false Decretals. If we are to credit these authors, what the Gallicans maintained in 1682 was not a collection of novelties, but a body of beliefs as old as the Church, the discipline of the first centuries. The Church of France had upheld and practised them at all times; the Church Universal had believed and practised them of old, until about the tenth century; St. Louis had supported, but not created, them by the Pragmatic Sanction; the Council of Constance had taught them with the pope's approbation. Gallican ideas, then, must have had no other origin than that of Christian dogma and ecclesiastical discipline. It is for history to tell us what these assertions of the Gallican theorists were worth.

To the similarity of the historical vicissitudes through which they passed, their common political allegiance, and the early appearance of a national sentiment, the Churches of France owed it that they very soon formed an individual, compact, and homogeneous body. From the end of the fourth century the popes themselves recognized this solidarity. It was to the "Gallican" bishops that Pope Damasus -- as M. Babut seems to have demonstrated recently -- addressed the most ancient decretal which has been preserved to our times. Two centuries later St. Gregory the Great pointed out the Gallican Church to his envoy Augustine, the Apostle of England, as one of those whose customs he might accept as of equal stability with those of the Roman Church or of any other whatsoever. But already -- if we are to believe the young historian just mentioned -- a Council of Turin, at which bishops of the Gauls assisted, had given the first manifestation of Gallican sentiment. Unfortunately for M. Babut's thesis, all the significance which he attaches to this council depends upon the date, 417, ascribed to it by him, on the mere strength of a personal conjecture, in opposition to the most competent historians. Besides, It is not at all plain how a council of the Province of Milan is to be taken as representing the ideas of the Gallican Church.

In truth, that Church, during the Merovingian period, testifies the same deference to the Holy See as do all the others. Ordinary questions of discipline are in the ordinary course settled in councils, often held with the assent of the kings, but on great occasions -- at the Councils of Epaone (517), of Vaison (529), of Valence (529), of Orleans (538), of Tours (567) -- the bishops do not fail to declare that they are acting under the impulse of the Holy See, or defer to its admonitions; they take pride in the approbation of the pope; they cause his name to be read aloud in the churches, just as is done in Italy and in Africa they cite his decretals as a source of ecclesiastical law; they show indignation at the mere idea that anyone should fail in consideration for them. Bishops condemned in councils -- like Salonius of Embrun Sagitarius of Gap, Contumeliosus of Riez -- have no difficulty in appealing to the pope, who, after examination, either confirms or rectifies the sentence pronounced against them.

The accession of the Carolingian dynasty is marked by a splendid act of homage paid in France to the power of the papacy: before assuming the title of king, Pepin makes a point of securing the assent of Pope Zachary. Without wishing to exaggerate the significance of this act, the bearing of which the Gallicans have done every thing to minimize, one may be permitted to see in it the

evidence that, even before Gregory VII, public opinion in France was not hostile to the intervention of the pope in political affairs. From that time on, the advances of the Roman primacy find no serious opponents in France before Hincmar, the famous Archbishop of Reims, in whom some have been willing to see the very founder of Gallicanism. It is true that with him there already appears the idea that the pope must limit his activity to ecclesiastical matters, and not intrude in those pertaining to the State, which concern kings only; that his supremacy is bound to respect the prescriptions of the ancient canons and the privileges of the Churches; that his decretals must not be placed upon the same footing as the canons of the councils. But it appears that we should see here the expression of passing feelings, inspired by the particular circumstances, much rather than a deliberate opinion maturely conceived and conscious of its own meaning. The proof of this is in the fact that Hincmar himself, when his claims to the metropolitan dignity are not in question, condemns very sharply, though at the risk of self-contradiction, the opinion of those who think that the king is subject only to God, and he makes it his boast to "follow the Roman Church whose teachings", he says quoting the famous words of Innocent I, "are imposed upon all men". His attitude, at any rate, stands out as an isolated accident; the Council of Troyes (867) proclaims that no bishop can be deposed without reference to the Holy See, and the Council of Douzy (871), although held under the influence of Hincmar condemns the Bishop of Laon only under reserve of the rights of the pope.

With the first Capets the secular relations between the pope and the Gallican Church appeared to be momentarily strained. At the Councils of Saint-Basle de Verzy (991) and of Chelles (c. 993), in the discourses of Arnoul, Bishop of Orleans, in the letters of Gerbert, afterwards Pope Sylvester II, sentiments of violent hostility to the Holy See are manifested, and an evident determination to elude the authority in matters of discipline which had until then been recognized as belonging to it. But the papacy at that period, given over to the tyranny of Crescentius and other local barons, was undergoing a melancholy obscurity. When it regained its independence, its old authority in France came back to it, the work of the Councils of Saint-Basle and of Chelles was undone; princes like Hugh Capet, bishops like Gerbert, held no attitude but that of submission. It has been said that during the early Capetian period the pope was more powerful in France than he had ever been. Under Gregory VII the pope's legates traversed France from north to south, they convoked and presided over numerous councils, and, in spite of sporadic and incoherent acts of resistance, they deposed bishops and excommunicated princes just as in Germany and Spain

In the following two centuries Gallicanism is even yet unborn; the pontifical power attains its apogee in France as elsewhere, St. Bernard, then the standard bearer of the University of Paris, and St. Thomas outline the theory of that power, and their opinion is that of the school in accepting the attitude of Gregory VII and his successors in regard to delinquent princes, St. Louis, of whom it has been sought to make a patron of the Gallican system, is still ignorant of it -- for the fact is now established that the Pragmatic Sanction, long attributed to him was a wholesale fabrication put together (about 1445) in the purlieu of the Royal Chancellery of Charles VII to lend countenance to the Pragmatic Sanction of Bourges.

At the opening of the fourteenth century, however, the conflict between Philip the Fair and Boniface VIII brings out the first glimmerings of the Gallican ideas. That king does not confine himself to maintaining that, as sovereign he is sole and independent master of his temporalities; he haughtily proclaims that, in virtue of the concession made by the pope, with the assent of a general council to Charlemagne and his successors, he has the right to dispose of vacant ecclesiastical benefices. With the consent of the nobility, the Third Estate, and a great part of the clergy, he appeals in the matter from Boniface VIII to a future general council -- the implication being that the council is superior to the pope. The same ideas and others still more hostile to the Holy See reappear in the struggle of Fratricelles and Louis of Bavaria against John XXII; they are expressed by the pens of William Occam, of John of Jandun, and of Marsilius of Padua, professors in the University of Paris. Among other things, they deny the Divine origin of the papal primacy, and subject the exercise of it to the good pleasure of the temporal ruler. Following the pope, the University of Paris condemned these views; but for all that they did not entirely disappear from the memory, or from the disputations, of the schools, for the principal work of Marsilius, "Defensor Pacis", was translated into French in 1375, probably by a professor of the University of Paris. The Great Schism reawakened them suddenly. The idea of a council naturally suggested itself as a means of terminating that melancholy rending asunder of Christendom. Upon that idea was soon grafted the "conciliary theory", which sets the council above the pope, making it the sole representative of the Church, the sole organ of infallibility. Timidly sketched by two professors of the University of Paris, Conrad of Gelnhausen and Henry of Langenstein, this theory was completed and noisily interpreted to the public by Pierre d'Ailly and Gerson. At the same time the clergy of France, disgusted with Benedict XIII, took upon itself to withdraw from his obedience. It was in the assembly which voted on this measure (1398) that for the first time there was any question of bringing back the Church of France to its ancient liberties and customs -- of giving its prelates once more the right of conferring and disposing of benefices. The same idea comes into the foreground in the claims put forward in 1406 by another assembly of the French clergy; to win the votes of the assembly, certain orators cited the example of what was happening in England. M. Haller has concluded from this that these so-called Ancient Liberties were of English origin, that the Gallican Church really borrowed them from its neighbour, only imagining them to be a revival of its own past. This opinion does not seem well founded. The precedents cited by M. Haller go back to the parliament held at Carlisle in 1307, at which date the tendencies of reaction against papa reservations had already manifested themselves in the assemblies convoked by Philip the Fair in 1302 and 1303. The most that we can admit is, that the same ideas received parallel development from both sides of the channel.

Together with the restoration of the "Ancient Liberties" the assembly of the clergy in 1406 intended to maintain the superiority of the council to the pope, and the fallibility of the latter. However widely they may have been accepted at the time, these were only individual opinions or opinions of a school, when the Council of Constance came to give them the sanction of its high authority. In its fourth and fifth sessions it declared that the council represented the Church that

every person, no matter of what dignity, even the pope, was bound to obey it in what concerned the extirpation of the schism and the reform of the Church; that even the pope, if he resisted obstinately, might be constrained by process of law to obey it in the above-mentioned points. This was the birth or, if we prefer to call it so, the legitimation of Gallicanism. So far we had encountered in the history of the Gallican Church recriminations of malcontent bishops, or a violent gesture of some prince discomfited in his avaricious designs; but these were only fits of resentment or ill humor, accidents with no attendant consequences; this time the provisions made against exercise of the pontifical authority took to themselves a body and found a fulcrum. Gallicanism has implanted itself in the minds of men as a national doctrine and it only remains to apply it in practice. This is to be the work of the Pragmatic Sanction of Bourges. In that instrument the clergy of France inserted the articles of Constance repeated at Basle, and upon that warrant assumed authority to regulate the collation of benefices and the temporal administration of the Churches on the sole basis of the common law, under the king's patronage, and independently of the pope's action. From Eugene IV to Leo X the popes did not cease to protest against the Pragmatic Sanction, until it was replaced by the Concordat of 1516. But, if its provisions disappeared from the laws of France, the principles it embodied for a time none the less continued to inspire the schools of theology and parliamentary jurisprudence. Those principles even appeared at the Council of Trent, where the ambassadors, theologians, and bishops of France repeatedly championed them, notably when the questions for decision were as to whether episcopal jurisdiction comes immediately from God or through the pope, whether or not the council ought to ask confirmation of its decrees from the sovereign pontiff, etc. Then again, it was in the name of the Liberties of the Gallican Church that a part of the clergy and the *Parlementaires* opposed the publication of that same council; and the crown decided to detach from it and publish what seemed good, in the form of ordinances emanating from the royal authority.

Nevertheless, towards the end of the sixteenth century, the reaction against the Protestant denial of all authority to the pope and, above all, the triumph of the League had enfeebled Gallican convictions in the minds of the clergy, if not of the parliament. But the assassination of Henry IV, which was exploited to move public opinion against Ultramontanism and the activity of Edmond Richer, syndic of the Sorbonne, brought about, at the beginning of the seventeenth century, a strong revival of Gallicanism, which was thenceforward to continue gaining in strength from day to day. In 1663 the Sorbonne solemnly declared that it admitted no authority of the pope over the king's temporal dominion, nor his superiority to a general council, nor infallibility apart from the Church's consent. In 1682 matters were much worse. Louis XIV having decided to extend to all the Churches of his kingdom the regale, or right of receiving the revenue of vacant sees, and of conferring the sees themselves at his pleasure, Pope Innocent XI strongly opposed the king's designs. Irritated by this resistance, the king assembled the clergy of France and, on 19 March, 1682, the thirty-six prelates and thirty-four deputies of the second order who constituted that assembly adopted the four articles recited above and transmitted them to all the other bishops and archbishops of France. Three days later the king commanded the registration of the articles in all the schools and faculties

of theology; no one could even be admitted to degrees in theology without having maintained this doctrine in one of his theses and it was forbidden to write anything against them. The Sorbonne, however, yielded to the ordinance of registration only after a spirited resistance. Pope Innocent XI testified his displeasure by the Rescript of 11 April, 1682, in which he voided and annulled all that the assembly had done in regard to the regale, as well as all the consequences of that action; he also refused Bulls to all members of the assembly who were proposed for vacant bishoprics. In like manner his successor Alexander VIII by a Constitution dated 4 August, 1690, quashed as detrimental to the Holy See the proceedings both in the matter of the regale and in that of the declaration on the ecclesiastical power and jurisdiction, which had been prejudicial to the clerical estate and order. The bishops designate to whom Bulls had been refused received them at length, in 1693, only after addressing to Pope Innocent XII a letter in which they disavowed everything that had been decreed in that assembly in regard to the ecclesiastical power and the pontifical authority. The king himself wrote to the pope (14 September, 1693) to announce that a royal order had been issued against the execution of the edict of 23 March, 1682. In spite of these disavowals, the Declaration of 1682 remained thenceforward the living symbol of Gallicanism, professed by the great majority of the French clergy, obligatorily defended in the faculties of theology, schools, and seminaries, guarded from the lukewarmness of French theologians and the attacks of foreigners by the inquisitorial vigilance of the French parliaments, which never failed to condemn to suppression every work that seemed hostile to the principles of the Declaration.

From France Gallicanism spread, about the middle of the eighteenth century, into the Low Countries, thanks to the works of the juriconsult Van-Espen. Under the pseudonym of Febronius, Hontheim introduced it into Germany where it took the forms of Febronianism and Josephism. The Council of Pistoia (1786) even tried to acclimatize it in Italy. But its diffusion was sharply arrested by the Revolution, which took away its chief support by overturning the thrones of kings. Against the Revolution that drove them out and wrecked their sees, nothing was left to the bishops of France but to link themselves closely with the Holy See. After the Concordat of 1801 -- itself the most dazzling manifestation of the pope's supreme power -- French Governments made some pretence of reviving, in the Organic Articles, the "Ancient Gallican Liberties" and the obligation of teaching the articles of 1682, but ecclesiastical Gallicanism was never again resuscitated except in the form of a vague mistrust of Rome. On the fall of Napoleon and the Bourbons, the work of Lamennais, of "L'Avenir" and other publications devoted to Roman ideas, the influence of Dom Guéranger, and the effects of religious teaching ever increasingly deprived it of its partisans. When the Vatican Council opened, in 1869, it had in France only timid defenders. When that council declared that the pope has in the Church the plenitude of jurisdiction in matters of faith, morals discipline, and administration that his decisions *ex cathedra* are of themselves, and without the assent of the Church, infallible and irreformable, it dealt Gallicanism a mortal blow. Three of the four articles were directly condemned. As to the remaining one, the first, the council made no specific declaration; but an important indication of the Catholic doctrine was given in the condemnation fulminated by Pius IX against the 24th proposition of the Syllabus, in which it was asserted that the Church cannot

have recourse to force and is without any temporal authority, direct or indirect. Leo XIII shed more direct light upon the question in his Encyclical "Immortale Dei" (12 November, 1885), where we read: "God has apportioned the government of the human race between two powers, the ecclesiastical and the civil, the former set over things divine, the latter over things human. Each is restricted within limits which are perfectly determined and defined in conformity with its own nature and special aim. There is therefore, as it were a circumscribed sphere in which each exercises its functions *jure proprio*". And in the Encyclical "Sapientiae Christianae" (10 January, 1890), the same pontiff adds: "The Church and the State have each its own power, and neither of the two powers is subject to the other."

Stricken to death, as a free opinion, by the Council of the Vatican, Gallicanism could survive only as a heresy; the Old Catholics have endeavoured to keep it alive under this form. Judging by the paucity of the adherents whom they have recruited -- daily becoming fewer -- in Germany and Switzerland, it seems very evident that the historical evolution of these ideas has reached its completion.

Critical Examination

The principal force of Gallicanism always was that which it drew from the external circumstances in which it arose and grew up: the difficulties of the Church, torn by schism; the encroachments of the civil authorities; political turmoil; the interested support of the kings of France. None the less does it seek to establish its own right to exist, and to legitimize its attitude towards the theories of the schools. There is no denying that it has had in its service a long succession of theologians and jurists who did much to assure its success. At the beginning, its first advocates were Pierre d'Ailly and Gerson, whose somewhat daring theories, reflecting the then prevalent disorder of ideas, were to triumph in the Council of Constance. In the sixteenth century Almain and Major make but a poor figure in contrast with Torquemada and Cajetan, the leading theorists of pontifical primacy. But in the seventeenth century the Gallican doctrine takes its revenge with Richer and Launoy, who throw as much passion as science into their efforts to shake the work of Bellarmine, the most solid edifice ever raised in defence of the Church's constitution and the papal supremacy. Pithou, Dupuy, and Marca edited texts or disinterred from archives the judicial monuments best calculated to support parliamentary Gallicanism. After 1682 the attack and defence of Gallicanism were concentrated almost entirely upon the four Articles. While Charlas in his anonymous treatise on the Liberties of the Catholic Church, d'Aguirre, in his "Auctoritas infallibilis et summa sancti Petri", Rocaberti, in his treatise "De Romani pontificis auctoritate", Sfondrato, in his "Gallia vindicata", dealt severe blows at the doctrine of the Declaration, Alexander Natalis and Ellies Dupin searched ecclesiastical history for titles on which to support it. Bossuet carried on the defence at once on the ground of theology and of history. In his "Defensio declarationis", which was not to see the light of day until 1730, he discharged his task with equal scientific power and moderation. Again Gallicanism was ably combatted in the works of Muzzarelli, Bianchi, and Ballerini, and upheld in those of Durand de Maillane, La Luzerne, Maret and Doellinger. But the strife is prolonged beyond its interest; except for the bearing of some few arguments on either side, nothing that is altogether new, after

all, is adduced for or against, and it may be said that with Bossuet's work Gallicanism had reached its full development, sustained its sharpest assaults, and exhibited its most efficient means of defence.

Those means are well known. For the absolute independence of the civil power, affirmed in the first Article, Gallicans drew their argument from the proposition that the theory of indirect power, accepted by Bellarmine, is easily reducible to that of direct power, which he did not accept. That theory was a novelty introduced into the Church by Gregory VII; until his time the Christian peoples and the popes had suffered injustice from princes without asserting for themselves the right to revolt or to excommunicate. As for the superiority of councils over popes, as based upon the decrees of the Council of Constance, the Gallicans essayed to defend it chiefly by appealing to the testimony of history which, according to them, shows that general councils have never been dependent on the popes, but had been considered the highest authority for the settlement of doctrinal disputes or the establishment of disciplinary regulations. The third Article was supported by the same arguments or upon the declarations of the popes. It is true that that Article made respect for the canons a matter rather of high propriety than of obligation for the Holy See. Besides, the canons alleged were among those that had been established with the consent of the pope and of the Churches, the plenitude of the pontifical jurisdiction was therefore safeguarded and Bossuet pointed out that this article had called forth hardly any protests from the adversaries of Gallicanism. It was not so with the fourth Article, which implied a negation of papal infallibility. Resting chiefly on history, the whole Gallican argument reduced to the position that the Doctors of the Church -- St. Cyprian, St. Augustine, St. Basil, St. Thomas, and the rest -- had not known pontifical infallibility; that pronouncements emanating from the Holy See had been submitted to examination by councils; that popes -- Liberius, Honorius, Zosimus, and others -- had promulgated erroneous dogmatic decisions. Only the line of popes, the Apostolic See, was infallible; but each pope, taken individually, was liable to error.

This is not the place to discuss the force of this line of argument, or set forth the replies which it elicited; such an enquiry will more appropriately form part of the article devoted to the primacy of the Roman See. Without involving ourselves in technical developments, however, we may call attention to the weakness, of the Scriptural scaffolding upon which Gallicanism supported its fabric. Not only was it opposed by the luminous clearness of Christ's words -- "Thou art Peter, and upon this rock will I build My Church"; "I have prayed for thee, Peter, that thy faith fail not . . . confirm thy brethren" -- but it finds nothing in Scripture which could warrant the doctrine of the supremacy of council or the distinction between the line of popes and the individuals -- the *Sedes* and the *Sedens*. Supposing there were any doubt of Christ's having promised infallibility to Peter, it is perfectly certain that He did not promise it to the council, or to the See of Rome, neither of which is named in the Gospel.

The pretension implied in Gallicanism -- that only the schools and the churches of France possessed the truth as to the pope's authority, that they had been better able than any others to defend themselves against the encroachments of Rome -- was insulting to the sovereign pontiff and

invidious to the other churches. It does not belong to one part of the Church to decide what council is oecumenical, and what is not. By what right was this honour refused in France to the Councils of Florence (1439) and the Lateran (1513), and accorded to that of Constance? Why, above all, should we attribute to the decision of this council, which was only a temporary expedient to escape from a deadlock, the force of a general principle, a dogmatic decree? And moreover, at the time when these decisions were taken, the council presented neither the character, nor the conditions, nor the authority of a general synod; it is not clear that among the majority of the members there was present any intention of formulating a dogmatic definition, nor is it proved that the approbation given by Martin V to some of the decrees extended to these. Another characteristic which is apt to diminish one's respect for Gallican ideas is their appearance of having been too much influenced, originally and evolutionally, by interested motives. Suggested by theologians who were under bonds to the emperors, accepted as an expedient to restore the unity of the Church, they had never been more loudly proclaimed than in the course of the conflicts which arose between popes and kings, and then always for the advantage of the latter. In truth they savoured too much of a courtly bias. "The Gallican Liberties", Joseph de Maistre has said, "are but a fatal compact signed by the Church of France, in virtue of which she submitted to the outrages of the Parliament on condition of being allowed to pass them on to the sovereign pontiff". The history of the assembly of 1682 is not such as to give the lie to this severe judgment. It was a Gallican -- no other than Baillet -- who wrote: "The bishops who served Philip the Fair were upright in heart and seemed to be actuated by a genuine, if somewhat too vehement, zeal for the rights of the Crown; whereas among those whose advice Louis XIV followed there were some who, under pretext of the public welfare, only sought to avenge themselves, by oblique and devious methods, on those whom they regarded as the censors of their conduct and their sentiments."

Even apart from every other consideration, the practical consequences to which Gallicanism led, and the way in which the State turned it to account should suffice to wean Catholics from it forever. It was Gallicanism which allowed the Jansenists condemned by popes to elude their sentences on the plea that these had not received the assent of the whole episcopate. It was in the name of Gallicanism that the kings of France impeded the publication of the pope's instructions, and forbade the bishops to hold provincial councils or to write against Jansenism -- or at any rate, to publish charges without endorsement of the chancellor. Bossuet himself, prevented from publishing a charge against Richard Simon, was forced to complain that they wished "to put all the bishops under the yoke in the essential matter of their ministry, which is the Faith". Alleging the Liberties of the Gallican Church, the French Parliaments admitted *appels comme d'abus* against bishops who were guilty of condemning Jansenism, or of admitting into their Breviaries the Office of St. Gregory, sanctioned by Rome; and on the same general principle they caused pastoral letters to be burned by the common executioner, or condemned to imprisonment or exile priests whose only crime was that of refusing the sacraments and Christian burial to Jansenists in revolt against the most solemn pronouncements of the Holy See. Thanks to these "Liberties", the jurisdiction and the discipline of the Church were almost entirely in the hands of the civil power, and Fenelon gave a fair idea of

them when he wrote in one of his letters: "In practice the king is more our head than the pope, in France -- Liberties against the pope, servitude in relation to the king -The king's authority over the Church devolves upon the lay judges -- The laity dominate the bishops". And Fenelon had not seen the Constituent Assembly of 1790 assume, from Gallican principles, authority to demolish completely the Constitution of the Church of France. For there is not one article of that melancholy Constitution that did not find its inspiration in the writings of Gallican jurists and theologians. We may be excused the task of here entering into any lengthy proof of this; indeed the responsibility which Gallicanism has to bear in the sight of history and of Catholic doctrine is already only too heavy.

A. DEGERT

The Gallican Rite

The Gallican Rite

This subject will be treated under the following six heads:

- I. History and Origin;
- II. MSS. and Other Sources;
- III. The Liturgical Year;
- IV. The Divine Office;
- V. The Mass;
- VI. The Occasional Services.

I. HISTORY AND ORIGIN

The name *Gallican Rite* is given to the rite which prevailed in Gaul from the earliest times of which we have any information until about the middle or end of the eighth century. there is no information before the fifth century and very little then; and throughout the whole period there was, to judge by existing documents and descriptions, so much diversity that, though the general outlines of the rite were of the same pattern, the name must not be taken to imply more than a very moderate amount of homogeneity. The Rite of Spain, fairly widely used from the fifth century to the end of the eleventh, and still lingering on as an archaeological survival in chapels at Toledo and Salamanca, was so nearly allied to the Gallican Rite that the term *Hispano Gallican* is often applied to the two. But the Spanish Mozarabic Rite has, like the allied Celtic, enough of an independent history to require separate treatment, so that though it will be necessary to allude to both by way of illustration, this article will be devoted primarily to the rite once used in what is now France. Of the origin of the Gallican Rite there are three principle theories, between two of which the controversy is not yet settled. These may be termed (1) the Ephesine, (2) the Ambrosian, and (3) the Roman theories.

(1) The first has been already mentioned under AMBROSIAN RITE and CELTIC RITE. This theory, which was first put forward by Sir W. Palmer in his "Origines Liturgicae", which was once very popular among Anglicans. According to it the Gallican Rite was referred to an original brought to Lyons from Ephesus by St. Pothinus and St. Irenaeus, who had received it through St. Polycarp

from St. John the Divine. The idea originated partly in a statement in the eighth century tract in Cott. MS. Nero A. II in the British Museum, which refers the Gallican Divine Office (*Cursus Gallorum*) to such an origin, and partly in a statement of Coleman at the Synod of Whitby (664) respecting the Johannine origin of the Celtic Easter. The Cottonian tract is of little or no historical value; Coleman's notion was disproved at the time by St. Wilfred; and the Ephesine theory has now been given up by all serious liturgiologists. Mgr Duchesne, and his "Origines de culte chrétien", has finally disposed of the possibility of so complicated a rite as the Gallican having so early an origin as the second century.

(2) The second theory is that which Duchesne puts forward in the place of the Ephesine. He holds that Milan, not Lyons, was the principal centre of Gallican development. He lays great stress on the incontestable importance of Milan and the Church of Milan in the late fourth century, and conjectures that a liturgy of Oriental origin, introduced perhaps by the Cappadocian Auxentius, Bishop of Milan from 355 to 374, spread from that centre to Gaul, Spain, and Britain. He points out that "the Gallican Liturgy in the features which distinguish it from the Roman, betrays all the characteristics of the Eastern liturgies," and that "some of its formularies are to be found word for word in the Greek texts which were in use in the Churches of the Syro-Byzantine Rite either in the fourth century or somewhat later", and infers from this that, "the Gallican Liturgy is an Oriental liturgy, introduced into the West towards the middle of the fourth century". not, he does not, however, note that in certain other important peculiarities the Gallican Liturgy agrees with the Roman where the latter differs from the Oriental. Controverting the third or Roman theory of origin, he lays some stress upon the fact that Pope St. Innocent I (416) in his letter to Decentius of Gubbio spoke of usages which Mgr Duchesne recognizes as Gallican (e.g. the position of the Diptychs and the Pax), as "foreign importations" and did not recognize in them the ancient usage of his own Church, and he thinks it hard to explain why the African Church should have accepted the Roman reforms, while St. Ambrose himself a Roman. refused them. He assumes that the Ambrosian Rite is not really Roman, but Gallican, much Romanized at a later period, and that the Giubbio variations of which St. Innocent complained were borrowed from Milan.

(3) The third theory is perhaps rather complicated to state without danger of misrepresentation, and has not been so definitely stated as the other two by any one writer. It is held in part by Probst, Father Lucas, the Milanese liturgiologists, and many others whose opinion is of weight. In order to state it clearly it will be necessary to point out first certain details in which all the Latin or Western rites agree with one another in differing from the Eastern, and in this we speak only of the Mass, which is of far more importance than either the Divine Office, or the occasional services in determining origins. The Eastern Eucharistic offices of whatever rite are marked by the invariability of the priest's part. There are, it is true, alternative anaphoras which are used either *ad libitum*, as in the Syro-Jacobite Rite, or on certain days, as in Byzantine and East Syrian, but they are complete in themselves and do not contain passages appropriate to the day. The lections of course vary with the day in all rites, and varying antiphons, troparia, etc., are sung by the choir; but the priest's part remains fixed. In the Western rites, whether Hispano-Gallican, Ambrosian, or Roman, a very large

proportion of the priest's part varies according to the day, and, as will be seen by the analysis of its Mass in this article, these variations are so numerous in the Gallican Rite that the fixed part even of the Prayer of the Consecration is strangely little. Certain of the varying prayers of the Hispano-Gallican Rite have a tendency to fall into couples, a Bidding Prayer, or invitation to pray, sometimes of considerable length and often partaking of the nature of a homily, addressed to the congregation, and a collect embodying the suggestions of the Bidding Prayer, addressed to God. These Bidding Prayers have survived in the Roman Rite of today in the Good Friday intercessory prayers, and they occur in a form borrowed later from the Gallican, in the ordination services, but in general the invitation to prayer is reduced to its lowest terms in the word *Oremus*. Another Western peculiarity is in the form of the recital of the Institution. The principal Eastern liturgies follow St. Paul's words in I Cor., xi, 23-25, and date the Institution by the betrayal, *en te nykti, he paredidoto* (in the night in which He was betrayed), and of the less important anaphoras, most either use the same expression or paraphrase it. The Western liturgies date from the Passion, *Qui pridie quam pateretur*, for which, though of course the fact is found there, there is no verbal Scriptural warrant. The Mozarabic of today uses the Pauline words, and no Gallican Recital of the Institution remains in full; but in both the prayer that follows is called (with alternative nomenclature in the Gallican) *Post Pridie* and the catchwords "Qui pridie" come at the end of the Post-Sanctus in the Gallican Masses, so that it is clear that this form existed in both. These variations from the Eastern usages are of an early date, and it is inferred from them, and from other considerations more historical than liturgical, that a liturgy with these peculiarities was the common property of Gaul, Spain, and Italy. Whether, as is most likely, it originated in Rome and spread thence to the countries under direct Roman influence, or whether it originated elsewhere and was adopted by Rome, there is no means of knowing. The adoption must have happened when liturgies were in rather a fluid state. The Gallicans may have carried to an extreme the changes begun at Rome, and may have retained some archaic features (now often mistaken for Orientalisms) which had been later dropped by Rome. At some period in the fourth century -- it has been conjectured that it was in the papacy of St. Damasus (366-84) -- reforms were made at Rome, the position of the Great Intercession and of the Pax were altered, the latter, perhaps because the form of the dismissal of the catechumens was disused, and the distinction between the *missa catechumenorum* and the *missa fidelium* was no longer needed, and therefore the want was felt of a position with some meaning to it for the sign of Christian unity, and the long and diffuse prayers were made into the short and crisp collects of the Roman type. It was then that the variable Post-Sanctus and Post-Pridie were altered into a fixed Canon of a type similar to the Roman Canon of today, though perhaps this Canon began with the clause which now reads, "Quam oblationem", but according to the pseudo-Ambrosian tract "De Sacramentis" once read "Fac nobis hanc oblationem". This may have been introduced by a short variable Post-Sanctus. This reform, possibly through the influence of St. Ambrose, was adopted at Milan, but not in Gaul and Spain. At a still later period changes were again made at Rome. They have been principally attributed to St. Leo (440-61), St. Gelasius (492-96), and St. Gregory (590-604), but the share these popes had in the reforms is not definitely

known, though three varying sacramentaries have been called by their respective names. These later reforms were not adopted at Milan, which retained the books of the first reform, which are now known as Ambrosian.

Hence it may be seen that, roughly speaking, the Western or Latin Liturgy went through three phases, which may be called for want of better names the Gallican, the Ambrosian, and the Roman stages. The holders of the theory no doubt recognize quite clearly that the line of demarcation between these stages is rather a vague one, and that the alterations were in many respects gradual. Of the three theories of origin of the Ephesine may be dismissed as practically disproved. To both of the other two the same objection may be urged, that they are largely founded on conjecture and on the critical examination of documents of a much later date than the periods to which the conjectures relate. But at present there is little else to go upon. It may be well to mention also a theory put forward by Mr. W.C. Bishop in the "Church Quarterly" for July, 1908, to the effect that the Gallican Liturgy was not introduced into Gaul from anywhere, but was the original liturgy of that country, apparently invented and developed there. He speaks of an original independence of Rome (of course liturgically only) followed by later borrowings. This does not seem to exclude the idea that Rome and the West may have had the germ of the Western Rite in common. Again the theory is conjectural and is only very slightly stated in the article. The later history of the Gallican Rite until the time of its abolition as a separate rite is obscure. In Spain there was a definite centre in Toledo, whose influence was felt over the whole peninsula, even after the coming of the Moors. Hence it was that the Spanish Rite was much more regulated than the Gallican, and Toledo at times, though not very successfully, tried to give liturgical laws even to Gaul, though probably only to the Visigothic part of it. In the greater part of France there was liturgical anarchy. There was no capital to give laws to the whole country, and the rite developed there variously in various places, so that among the scanty fragments of the service-books that remain there is a marked absence of verbal uniformity, though the main outlines of the services are of the same type. Several councils attempted to regulate matters a little, but only for certain provinces. Among these were the Councils of Vannes (465), Agde (506), Vaison (529), Tours (567), Auxerre (578), and the two Councils of Mâcon (581, 623). But all along there went on a certain process of Romanizing due to the constant applications to the Holy See for advice, and there is also another complication in the probable introduction during the seventh century, through the Columbanine missionaries of elements of Irish origin. The changes towards the Roman Rite happened rather gradually during the course of the late seventh and eighth century, and seem synchronous with the rise of the *Maires du Palais*, and their development into Kings of France. Nearly all the Gallican books of the later Merovingian period, which are all that are left, contain many Roman elements. In some cases there is reason to suppose that the Roman Canon was first introduced into an otherwise Gallican Mass, but the so-called Gelasian Sacramentary, the principle MS. of which is attributed to the Abbey of St. Dennis and the early eighth century, is an avowedly Roman book, though containing Gallican additions and adaptations. And the same may be said of what is left of the undoubtedly Frankish book known as the "Missale Francorum" of the same date. Mgr Duchesne attributes a good deal of this

eighth-century Romanizing tendency to St. Boniface, though he shows that it had begun before his day. The Roman Liturgy was adopted at Metz in the time of St. Chrodegang (742-66). the Roman chant was introduced about 760, and by a decree of Pepin, quoted in Charlemagne's "Admonitio Generalis" in 789, the Gallican chant was abolished in its favour. Pope Adrian I between 784 and 791 sent to Charlemagne at his own request a copy of what was considered to be the Sacramentary of St. Gregory, but which certainly represented the Roman use of the end of the eighth century. This book, which was far from complete, was edited and supplemented by the addition of a large amount of matter derived from the Gallican books and from the Roman book known as the Gelasian Sacramentary, which had been gradually supplanting the Gallican. It is probable that the editor was Charlemagne's principal liturgical advisor, the Englishman Alcuin. Copies were distributed throughout Charlemagne's empire, and this "composite liturgy", as Mgr Duchesne says, "from its source in the Imperial chapel spread throughout all the churches of the Frankish Empire and at length, finding its way to Rome gradually supplanted there the ancient use". More than half a century later, when Charles the Bald wished to see what the ancient Gallican Rite had been like, it was necessary to import Spanish priests to celebrate it in his presence.

It should be noted that the name *Gallican* has also been applied to two other uses: (1) a French use introduced by the Normans into Apulia and Sicily. This was only a variant of the Roman Rite. (2) the reformed Breviaries of the French dioceses in the seventeenth to mid-nineteenth centuries. These have nothing to do with the ancient Gallican Rite.

II. MSS. AND OTHER SOURCES

There are no MSS. of the Gallican Rite earlier than the later part of the seventh century, though the descriptions in the letters of St. Germanus of Paris (555-76) take one back another century. The MSS. are:--

(1) *The Reichenau Fragments* (Carlsruhe, 253), described (no. 8) in Delisle's "Memoire sur d'anciens Sacramentaires." -- These were discovered by Mone in 1850 in a palimpsest MS. from the Abbey of Reichenau in the library of Carlsruhe. The MS., which is late seventh century, had belonged to John II, Bishop of Constance (760-81). It contains eleven Masses of purely Gallican type, one of which is in honour of St. Germanus of Auxerre, but the others do not specify any festival. One Mass, except the post Post-Pridie, which is in prose is entirely in hexameter verse. Mone published them with a facsimile in his "Lateinische und Griechische Menssen aus dem zweiten bis sechsten Jahrhundert" (Frankfort 1850). They were reprinted in Migne's "Patrologia Latina" (Vol. CXXXVIII), and by Neale and Forbes in "The Ancient Liturgy of the Gallican Church" (Burntisland, 1855-67).

(2) *The Peyron, Mai, and Bunsen Fragments*. Of these disjointed palimpsest leaves, those of Mai and Peyron were found in the Ambrosian Library at Milan, and those of Bunsen at St. Gall. Peyron's were printed in his "M.T. Ciceronis Orationum Fragmenta inedita" (Stuttgart, 1824), MAI's in his "Scriptorum Veterum Vaticana Collectio", and Bunsen's in his "Analecta Ante-Niceana". All these were reprinted by C. E. Hammond: Peyron's and Bunsen's in his "Ancient Liturgy of

Antioch" (Oxford, 1879), and MAI's in his "Ancient Liturgies" (Oxford, 1878). The latest are also in Migne's "Patrologia Latina" with Mone's Riechenau fragments. the Peyron fragment contains part of what looks like a Lenten Contestatio (Preface) with other prayers of Gallican type. The Bunsen fragment contains part of a Mass for the Dead (Post-Sactus, Post Pridie) and several pairs of Bidding Prayers and Collects, the former having the title "Exhortatio" or "Exhortatio Matutina. The Mai fragments begin with part of a Bidding Prayer and contain a fragment of a *Contestatio*, with that title, and fragments of other prayers, two of which have the title "Post Nomina", and two others which seem to be prayers "Ad Pacem".

(3) *The Missale Gothicum* (Vatican, Queen Christina MSS. 317). -- Described by Delisle, No. 3 A MS. of the end of the seventh century, which once belonged to the Petau Library. The name is due to a fifteenth century note at the beginning of the book, and hence it has been attributed by Tommasi and Mabillon to Narbonne, which was in the Visigothic Kingdom. Mgr Duchesne, judging by the inclusion of Masses for the feasts of St. Symphorian and St. LÉger (d. 680), attributes it to Autun. The Masses are numbered, the MS. beginning with Christmas Eve, which is numbered "III". Probably there were once two Advent Masses, as in the "Missale Gallicanum". There are eighty-one numbered sections, of which the last is the first prayer of "Missa Romensif cottidiana", with which the MS. breaks off. The details of the Masses in this book are given in the section of the present article on the liturgical year. The Masses are all Gallican as to order, but many of the actual prayers are Roman. The "Missale Gothicum" has been printed by Tommasi (Codices Sacramentorum, Rome, 1680) Mabillon (De Liturgiâ Gallicanâ, Paris, 1685), Muratori (Liturgia Romana Vetus, Venice, 1748), Neale and Forbes (op. cit.), and Migne's "Patrologia Latina" (Vol. LXXII).

(4) *Missale Gallicanum Vetus* (Vatican. Palat. 493). -- Described by Delisle, No. 5 The MS., which is of the end of the seventh, or the early part of the eighth, century is only a fragment. It begins with a Mass for the feast of St. Germanus of Auxerre (9 Oct.), after which come prayers for the Blessing of Virgins and Widows, two Advent Masses, the Christmas Eve Mass, the *Expositio* and *Traditio Symboli*, and other ceremonies preparatory to Baptism; The Maundy Thursday, Good Friday and Easter Sunday ceremonies and the baptismal service, Masses for the Sundays after Easter up to the Rogation Mass, where the MS. breaks off. The Masses, as in the *Gothicum*, are Gallican in order with many Roman prayers. The Good Friday prayers are, with a few verbal variations, exactly those from the Roman Missal. The MS. has been printed by Tommasi, Mabillon, Muratori, and Neale and Forbes (op.cit.), and in Vol. LXXII of Migne's "Patrologia Latina".

(5) *The Lexeuil Lectinary* (Paris, Bibl. Nat., 9427). -- This MS., which is of the seventh century was discovered by Mabillon in the Abbey of Luxeuill, but from its containing among its very few saints' days the feast of St. Genevieve, Dom Morin (Revue BÈnÈdictine, 1893) attributes it to Paris. It contains the Prophetical Lessons, epistles and Gospels for the year from Christmas Eve onwards (for the details of which see the section of this article on the liturgical years). At the end are the lessons of a few special Masses, for the burial of a bishop, for the dedication of a church, when a bishop preaches, "et plebs decimas reddat", when a deacon is ordained, when a priest is blessed, "in profectone itineris", and "lectiones cotidianae". This lectionary is purely Gallican with no

apparent Roman influence. The MS. has not been printed in its entirety, but Mabillon in "De Liturgiâ Gallicanâ" gives the references to all the lessons and the beginnings and endings of the text.

(6) *The Letters of St. Germanus of Paris*. -- These were printed by Martène (De Antiquis Ecclesiae Ritibus Bassano, 1788) from an MS. at Autun, and are given also in Vol. LXXII of Migne's "Patrologia Latina". There appears to be no reason to doubt that they are genuine. They contain mystical interpretations of the ceremonies of the Mass and of other services. Mgr Duchesne says of the descriptions, on which the interpretations are based, that "We may reconstruct from the letters a kind of *Ordo Gallicanus*". (See section of this article on the Mass.)

Much side light is thrown on the Gallican Rite by the Celtic books (see CELTIC RITE), especially by the Stowe and Bobbio Missals. The latter has been called Gallican and attributed to the Province of Besançon, but it is now held to be Irish in a much Romanized form, though of Continental *provenance*, being quite probably from the originally Irish monastery of Bobbio, where Mabillon found it. A comparison with the Ambrosian books (SEE AMBROSIAN LITURGY AND RITE) may also be of service, while most lacunae in our knowledge of the Gallican Rite may reasonably be conjecturally filled up from the Mozarabic books, which even in their present form are those of substantially the same rite. There are also liturgical allusions in certain early writers: St. Hilary of Poitiers, St. Sulpicius Severus (d. about 400), St. Caesarius of Arles (d. about 542), and especially St. Gregory of Tours (d. 595), and some information may be gathered from the decrees of the Gallican councils mentioned above.

The above are all that exist as directly Gallican sources, but much information may also be gleaned from the books of the transition period, which, though substantially Roman, were much edited with Germanic tendencies and contained a large amount which was of a Gallican rather than a Roman type. The principal of these are:

(1) *The Gelasian Sacramentary*, of which three MSS. exist, one in the Vatican (Queen Christina MS. 316), and one at Zurich (Rheinau 30, and one at St. Gall (MS. 348). The MSS. are of the early eighth century. The groundwork is Roman, with Gallican additions and modifications. Evidence for the Gallican rites of ordination and some other matters is derived from this book. The Vatican MS. was published by Tommasi and Muratori, and a complete edition from all three MSS. was edited by H. A. Wilson (Oxford, 1894).

(2) *The Missale Francorum* (Vatican Q. Christina MS. 257, Delisle No. 4). -- A fragment of a Sacramentary of a similar type to the Gelasian, though not identical with it. Printed by Tommasi, Mabillon, and Muratori.

(3) *The Gregorian Sacramentary*. -- Of this there are many MSS. It represents the Sacramentary sent by Pope Adrian I to Charlemagne, after it had been rearranged and supplemented by Gelasian and Gallican editions in France. One MS. of it was published by Muratori. In this, as in many others, the editions form a supplement, but in some (e.g. the Angoulême Sacramentary, Bibl. Nat. Lat. 816) the Gelasian additions are interpolated throughout.

III. THE LITURGICAL YEAR

The Luxeuil Lectionary, the *Gothicum* and *Gallicum Missals*, and the Gallican adaptations of the Hieronymian Martyrology are the chief authorities on this point, and to these may be added some information to be gathered from the regulations of the Councils of Agde (506), Orleans (541), Tour (567), and Mâcon (581), and from the "Historia Francorum" of St. Gregory of Tours, as to the Gallican practice in the sixth century. It is probable that there were many variations in different times and places, and that the influence of the Hieronymian Martyrology brought about many gradual assimilations to Rome. The year, as is usual, began with Advent. The Council of Mâcon, which arranges for three days' fast a week, during that season, mentions St. Martin's Day as the key-day for Advent Sunday, so that, as a present in the Mozarabic and Ambrosian Rites, there were six Sundays of Advent (but only two Advent Masses survive in the Gallicanum.) The Gothicum and the Luxeuil Lectionary both begin with Christmas Eve. Then following Christmas Day; St. Stephen; St. John (according to Luxeuil); St. James and St. John (according to the Gothicum, which agrees with the Hieronymian Martyrology and with a Syriac Menology of 412, quoted by Duchesne. The Mozarabic has for 29 December "Sanctus Jacobus Frater Domini", but that is the other St. James); Holy Innocents; Circumcision; St. Genevieve (Luxeuil Lectionary only. Her day is 3 Jan.); Sunday after the Circumcision (Luxeuil); Vigil of Epiphany; Epiphany; two Sundays after Epiphany (Luxeuil); "Festum Sanctae Mariae" (Luxeuil, called "Assumptio" in the Gothicum, 18 Jan.); St. Agnes (Gothicum); after which follow in the Gothicum, out of their proper places, Sts. Cecily (22 Nov.); Clement (23 Nov.); Saturninus (29 Nov.); Andrew (30 Nov.); and Eulalia (10 Dec.); the Conversion of St. Paul (Gothicum); St. Peter's Chair (in both. This from its position after the Conversion of St. Paul in the Gothicum, ought to be St. Peter's Chair at Antioch, 22 Feb.; but it will not work out as such with the two Sundays between it and the Epiphany and three between it and Lent, as it appears in the Luxeuil Lectionary; so it must mean St. Peter's Chair at Rome, 18 Jan., which is known to have been the festival kept in Gaul; three Sundays after St. Peter's Chair (Luxeuil); *Initium Quadragesimae*; five Lenten Masses (Gothicum); Palm Sunday (Luxeuil); "Symboli Traditio" (Gothicum); Monday, Tuesday and Wednesday of Holy Week, called by the name still used in the Ambrosian Rite, *Authentica Hebdomada* (Luxeuil); Maundy Thursday; Good Friday; Easter Eve; Easter Day and the whole week; Low Sunday, called in both *Clausum Paschae*; four more Sundays after Easter (Luxeuil); Invention of the Cross (Gothicum, 3 May); St. John the Evangelist (Gothicum, 6 May); three Rogation Days; Ascension; Sunday after Ascension (Luxeuil); Pentecost; Sunday after Pentecost (Luxeuil); Sts. Ferreolus and Ferru (Gothicum, 16 June); Nativity of St. John the Baptist; Sts. Peter and Paul; Decollation of St. John the Baptist; Missa de Novo fructus (sic, Luxeuil); St. Sixtus (Gothicum, 6 Aug.); St. Lawrence (Gothicum, 10 Aug.); St. Hippolytus (Gothicum 13 Aug.); Sts. Cornelius and Cyprian (Gothicum, 16 Sept.); Sts. John and Paul (Gothicum, 26 June); St. Symphorian (Gothicum, 22 Aug.); St. Maurice and his companions (Gothicum, 22 Sept.); St. Leger (Gothicum, 2 Oct.); St. Martin (Gothicum, 22 Nov.). Both books also have Commons of Martyrs and Confessors, the Luxeuil has Commons of bishops and deacons for a number of other Masses, and the Gothicum has six Sunday Masses. The Gallicanum has a Mass in honour of St. Germanus of Auxerre before the two Advent Masses. In both the Gothicum

and Gallicanum a large space is given to the services of the two days before Easter, and in the latter the *Expositio* and *Traditio Symboli* are given at great length. The moveable feasts depended, of course, on Easter. When the Roman Church altered the Easter cycle from the old computation on a basis of 84 years to the new cycle of 532 of Victorius Aquitaine in 457, the Gallican Church, unlike the Celts, did the same; but when, in 525, the Roman Church adopted the 19 years cycle of Dionysius Exiguus, the Gallican Church continued to use the cycle of Victorius, until the end of the eighth or beginning of the ninth century. Lent began with the first Sunday, not with Ash Wednesday. There is a not very intelligible passage in the canons of the Council of Tours (567) to the effect that all through August there were "festivitates et missae sanctorum", but this is not borne out by the existing Sacramentaries of the Lectionary.

IV. THE DIVINE OFFICE

There is curiously little information on this point, and it is not possible to reconstruct the Gallican Divine Office from the scanty allusions that exist. It seems probable that there was considerable diversity in various times and places, through councils, both in France and Spain, tried to bring about some uniformity. The principle authorities are the Councils of Agde (506) and Tours (567), and allusions in the writings of St. Gregory of Tours and St. Caesarius of Arles. These and other details have been gathered together by Mabillon in his "De Liturgiâ Gallicanâ", and his essay on the Gallican *Cursus* is not yet superseded. The general arrangement and nomenclature were very similar to those of the Celtic Rite (q.v.). There were two principal services, Matins (*Ad Matutinam*, *Matutinum*) and Vespers (*ad Duodecimam*, *ad Vesperas Lucernarium*); and four Lesser Hours, Prime, or *Ad Secundum*, Terce, Sext, and None; and probably two night services, Complin, or *ad initium noctis*, and Nocturns. But the application of these names is sometimes obscure. It is not quite clear whether Nocturns and Lauds were not joined together as Matins; Caesarius speaks of *Prima*, while the Gallicanum speaks of *Ad secundum*; Caesarius distinguishes between *Lucernarium* and *Ad Duodeciman*, while Aurelian distinguishes between *Ad Duodeciman* and Complin; the Gothicum speaks of *Vespera Paschae* and *Initium Noctis Paschae*, and the Gallicanum has *Ad Duodeciman Paschae*. The distribution of the Psalter is not known. The Council of Tours orders six psalms at Sext and twelve *Ad Duodecimam*, with Alleluia (presumably as Antiphon) For Matins there is a curious arrangement which reminds one of that in the Rule of St. Columbanus (see CELTIC RITE, III). Normally in summer (apparently from Easter to July) "sex antiphonae binis psalmis" are ordered. This evidently means twelve psalms, two under each antiphon. In August there seem to have been no psalms, because there were festivals and Masses of saints. "Toto Augusto manicationes fiant, quia festivitates sunt et missae sanctorum". The meaning of *manicationes* and of the whole statement is obscure. In September there were fourteen psalms, two under each antiphon; in October twenty-four psalms, three to each antiphon; and from December to Easter thirty psalms, three to each antiphon. Caesarius orders six psalms at Prime with the hymn "Fulgentis auctor aetheris", two lessons, one from the old and one from the New Testament, and a *capitellum*"; six psalms at Terce, Sext, and None, with an antiphon, a hymn, a lesson, and a *capitellum*; at

Lucernarium a "Psalmus Directaneus", whatever that may be (cf. the "Psalmus Directus" of the Ambrosian Rite), two antiphons, a hymn, and a capitellum; and *ad Duodecimam*, eighteen psalms, an antiphon, hymn, lesson, and capitellum. From this it seems as though *Lucernarium* and *Ad Duodecimam* made up Vespers. combining the twelfth hour of the Divine Office (that is, of the recitation of the Psalter with its accompaniments) with a service for what, without any intention of levity, one may call "lighting-up time". The Ambrosian and Mozarabic Vespers are constructed on this principle, and so is the Byzantine *Hesperinos*.

Caesarius mentions a blessing given by the bishop at the end of *Lucernarium*, "cumque expleto Lucernario benedictionem populo dedisset"; and the following is an order of the Council of Agde (canon 30): "Et quia convenit ordinem ecclesiae ab omnibus aequaliter custodiri studendum est ut ubique fit et post antiphonas collectiones per ordinem ab episcopis vel presbyteris dicantur et hymni matutini vel vesperenti diebus omnibus decantentur et in conclusione matutinarum vel vesperinarum missarum post hymnos, capitella de psalmis dicantur et plebs collecta oratione ad vesperam ab Episcopo cum benedictione dimittatur". The rules of Caesarius and Aurelian both speak of two nocturns with lessons, which include on the feasts of martyrs lessons from their passions. They order also *Magnificat* to be sung at Lauds, and during the Paschal days; and on Sundays and greater festivals *Gloria in Excelsis*. There is a short passage which throws a little light upon the Lyons use of the end of the fifth century in an account of the Council of Lyons in 499, quoted by Mabillon. The council assembled by King Gundobad of Burgundy began on the feast of St. Just. The vigil was kept at his tomb. This began with a lesson from the Pentateuch ("a Moyse") in which occurred the words "Sed ego indurabo cor ejus", etc. (Ex., vii,3). Then psalms were sung and a lesson was read from the prophets, in which occurred the words "Vade, et dices populo huic: Audite audientes", etc. (Isaias, vi, 9), the more psalms and a lesson from the Gospels containing the words "Vae tibi, Corozain!" etc. (Matt. xi, 21; or Luke x, 13) and a lesson from the Epistles ("ex Apostolo") which contained the words "An divitias bonitatis ejus", etc. (Rom., ii, 4). St. Agobard in the ninth century mentions that at Lyons there were no canticles except from the Psalms, no hymns written by poets, and no lessons except from Scripture. Mabillon says that though in his day Lyons agreed with Rome in many things, especially in the distribution of the Psalter, and admitted lessons from the Acts of the Saints, there were still no hymns except at Complin, and he mentions a similar rule as to hymns at Vienne. But canon 23 of the Council of Tours (767) allowed the use of the Ambrosian hymns. Though the Psalter of the second recension of St. Jerome, now used in all the churches of the Roman Rite except the Vatican Basilica, is known as the "Gallican", while the older, a revision of the "Vetus Itala" used now in St. Peter's at Rome only, is known as the "Roman", it does not seem that the Gallican Psalter was used even in Gaul until a comparatively later date, though it spread thence over nearly all the West. At present the Mozarabic and Ambrosian Psalters are variants of the "Roman", with peculiarities of their own. Probably the decadence of the Gallican Divine Office was very gradual. In the eighth century tract in Cott. MS. Nero A. II. the "Cursus Gallorum" is distinguished from the "Cursus Romanorum", the "Cursus Scottorum" and the Ambrosian, all of which seem to have been going on then. The unknown writer, though his opinion is of no value on

the origin of the "Cursus", may well have known about some of these of his own knowledge; but through the seventh century there are indications of a tendency to adopt the Roman or the Monastic "cursus" instead of the Gallican, or to mix them up, a tendency which was resisted at times by provincial councils.

V. THE MASS

The chief authorities for the Gallican Mass are the letters of St. Germanus of Paris (555-576); and by a comparison of these with the extant Sacramentaries, not only of Gaul but of the Celtic Rite, with the Irish tracts on the Mass, with the books of the still existing Mozarabic Rite, and with the descriptions of the Spanish Mass given by St. Isidore, one may arrive at a fairly clear general idea of the service, though there exists no Gallican Ordinary of the Mass and no Antiphoner. Mgr. Duchesne, in his "Origines du Cult chrétien", has given a very full account constructed on this basis, though some will differ from him in his supplying certain details from Ambrosian books, and in his claiming the Bobbio Sacramentary as Ambrosian rather than Celtic.

The Order of this Mass is as follows:--

(1) The Entrance.-- Here an *Antiphona* (Introit) was sung. Nothing is said of any *Praeparatio Sacerdotis*, but there is one given in the Celtic Stowe Missal (see CELTIC RITE); and the Irish tracts describe a preliminary preparation of the Chalice, as does also the Mozarabic Missal. As no Antiphoner exists, we have no specimen of a Gallican *Officium* or Introit. Duchesne gives a Mozarabic one, which has something of the form of a Roman Responsary. The Antiphona was followed by a proclamation of silence by the deacon, and the salutation *Dominus sit semper vobiscum* by the priest. This is still the Mozarabic form of *Dominus vobiscum*.

(2) The Canticles.-- These, according to St. Germanus, were (i) The *Ajus* (*agios*) which may be the Greek Trisagion (*hagios Theos, k.t.l.*) or the Greek of the *Sanctus*, probably the latter which is still used elsewhere in the Mozarabic, and seems to be referred to in the *Ajus, ajus, ajus* of the life of St. Gery of Cambrai and the *Sanctus, sanctus, sanctus* of the Council of Vaison (529). In the Bobbio there is a prayer *Post Ajus*. (ii) The *Kyrie Eleison*, sung by three boys. This has disappeared from the Mozarabic. It is mentioned by the Council of Vaison (529). (iii) The Cantic of Zacharias (*Benedictus*). this is called *Prophetia* and there are collects *post Prophetiam* in the Riechenau fragments, the Gothicum and the Bobbio. The Mozarabic and Celtic books have *Gloria in Excelsis* here, but in the former the "Benedictus" is used instead on the Sunday before the Nativity of St. John the Baptist, called *Dominica pro adventu S. Johannis*. A different Cantic, *Sanctus Deus Angelorum* was used, according to St. Germanus, in Lent.

(3) The Lessons-- These were the *Lectio Prophetica* from the Old Testament, and the *Lectio Apostolica* or Epistle. In Paschal time the Apocalypse took the place of the *Lectio Prophetica*, and a lesson from the Acts of the Apostles that of the Epistle. In Lent the Histories of the Old Testament were read instead of the Prophetic Lesson, and on Saint's Days the Acts of the Saints. This agrees with the present Mozarabic, except in the Acts of the Saints, and with the Luxeuil Lectionary, and the Bobbio. The Acts of the Saints were used as Mass Lessons in the Ambrosian Rite as late as the

twelfth century. According to St. Germanus the second lesson followed immediately on the first, but in the Mozarabic the *Benedicite* and a *Psallendo* (Responsary) come between them. In the Gallican the *Benedicite* and the *Responsorium* followed the Epistle. The Bobbio has a fixed collect, *Post Benedictionem*, which is that which follows *Benedictus es* (Dan., iii) on Ember Saturdays in the Roman Missal.

(4) The Gospel-- This was preceded by a procession *in tribunal analogii*, i.e. to the ambo. The word *Analogion* is still the Byzantine term for the desk from which the Gospel is read. A clerk again sang the *Ajus*, and seven lighted candles were carried. The clerks cried out *Gloria tibi, Domine. Sanctus* was sung as they returned. Nothing is said about *Alleluia* preceding the Gospel, nor is there any in the Mozarabic. The Celtic Rite as shown in the Stowe Missal, included an *Alleluia* at that point, as do most other rites.

(5) Here, according to St. Germanus, followed the Homily.

(6) The Prex.-- The passage of St. Germanus is "Preces vero psallere levitas pro populo ab origine libri Moysaici ducit exordium, ut audita Apostoli praedicatione levitae pro populo deprecentur et sacerdotes prostrati ante Dominum pro peccatis populi intercedant". Duschene makes this refer to a Bidding Litany to follow the Homily, but judging from the analogy of the Stowe Mass, which places a litany between the Epistle and Gospel, and of the Mozarabic, which on Sundays in Lent has a very similar litany between the Prophetic Lesson and the Epistle, said by the priest who "prosternat se ad pedem altaris", it might be possible to understand "audita Apostoli praedicatione" to mean "after the Epistle". The Roman Good Friday prayers, however, which are similar in import to this litany, follow the Gospel; and so does the Great Synapte of Clementine, the Byzantine, and other Eastern rites which have petitions of the same type, and one of which is probably the original source of the Prex. The Council of Lyons (517) also mentions "orationem plebis quae *post evangelia* legeretur". No Gallican text of this litany exists, but it was probably much of the same type as that of the Stowe, which is called "Deprecatio Sancti Martini, and that which takes the place of the "Gloria in Excelsis" in Lent in the Ambrosian. The Prex is followed by a prayer called *Post Precem*.

(7) The Dismissal of the Catechumens.-- This is mentioned by St. Germanus as an ancient rite of which the form was still observed. He says in almost the same words which James of Edessa, speaking of the Syrian Rite, used a century later, that the deacon proclaims "juxta antiquum Ecclesiae ritum". No mention is made by St. Germanus of penitents, but the Council of Lyons just mentioned gave them permission to remain until after the Prex. In the Stowe Mass, as in the Roman, there is no allusion to catechumens or penitents.

(8) The Great Entrance and Offertory.-- It seems appropriate to give the Byzantine name to this ceremony, for, according to St. Germanus's description, it resembled the Great Entrance of that rite rather than anything which is now found in either the Roman or the Mozarabic of today, or in the Celtic Rite; and the Procession of the *Vecchioni* at Milan (see AMBROSIAN RITE) is altogether a different matter. First came the closing of the doors. This took place immediately after the Dismissal of the Catechumens in the Liturgy of St. James, and is put at the same point in the description of James of Edessa. In the Byzantine Rite of today it comes after the Great Entrance. In the Roman

Rite there is no sign of it. St. Germanus gives it a mystical meaning about the gates of the soul, but James of Edessa gives the real origin, the guarding of the mysteries against the heathen. Then the already prepared Elements were brought in, the bread in a vessel shaped like a tower, the mixed wine and water in a chalice. St. Germanus speaks of them as *Corpus Domini* and *Sanguis Christi* (cf. The wording of the Byzantine hymn known as the Cherubicon). While this was done the choir sang what St. Germanus called the *Sonus*. The Mozarabic Missal calls the Responsory that comes at this point the *Lauda*, and the name *Sonus* is given to very similar Responses sung at Vespers and Lauds. While the elements were being offered the choir sang the *Laudes*, which included *Alleluia*. This is the Mozarabic *Sacraficium*, the Roman *Offertorium*. St. Isidore gives the latter name to it. The tract in the Irish "Leabhar Breac" speaks of elevating the chalice "quando canitur *Imola Deo sacrificium laudis*", but the Stowe, being a priest's book, is silent about any antiphon here, though the prayers said by the priest are given. In the Stowe Missal the Offertory, which is a good deal Romanized, is preceded by the Creed. In the Ambrosian, as in the Byzantine, the Creed follows the Offertory. In the Gallican of St. Germanus there was as yet no Creed. By the time of James of Edessa it had got into the Syrian Liturgy, but the Roman did not adopt it until much later (see CREED, LITURGICAL USE OF). St. Germanus mentions three veils, the "palla linostima" [*linostema* is defined by St. Isidore (Orig., 19,22) as a material woven of flax and wool] "corporalis palla" of pure linen, "super quam oblatio ponitur", and a veil of silk adorned with gold and gems with which the oblation was covered. Probably the "linostima" covered the chalice, like the modern pall.

(9) The prayer that follows is not mentioned by St. Germanus, but is given in the Gallican books. It is preceded by a Bidding Prayer. The titles of the two are *Praefatio Missae* and *Collectio* (the usual expression being "Collectio sequitur"). They vary with the day and are found in the Gothicum, Gallicanum, Bobbio, and some of the Reichenau fragments. St. Isidore mentions them as the first two of the prayers of the Mass. In the Mozarabic the Bidding Prayer is called *Missa*, and is followed by "Agyos, agyos, agyos, Domine Deus Rex aeternae tibi laudes et gratias", sung by the choir, and an invariable invitation to prayer. The variable prayer which follows is called *Alia Oratio*. The "Missa" is almost always a Bidding Prayer addressed to the people, while the "Alia Oratio" is nearly always addressed to God, but sometimes both are Bidding Prayers and sometimes both are prayers to God.

(10) The Diptychs.-- St. Germanus says "Nomina defunctorum ideo hor illa recitantur qua pallium tollitur". The Gallican books and the Bobbio have variable prayers *Post Nomina*, and the Reichenau fragments have also prayers *Ante Nomina*, which are sometimes Bidding Prayers as are sometimes the prayers *Post Nomina* in the Gothicum. The form of the Intercession is given in the Stowe, but moved to its Roman positions in the Gelasian Canon. The Mozarabic retains the old position and has a prayer *Post Nomina*, which St. Isidore calls the third prayer. The position of the Great Intercession at this point exactly is peculiar to the Hispano-Gallican Rite, but it comes very near to the Alexandrian position, which is in the middle of the Preface, where a rather awkward break is made for it. The West Syrian and Byzantine Liturgies place the Great Intercession after

the Epiklesis, the East Syrian before the Epiklesis, and the Roman and Ambrosian divide it in two, placing the Intercession for the Living before, and that for the Dead after the Consecration, with Commemorations of Saints with each.

(11) The Pax.-- St. Germanus mentions that the Kiss of Peace came next, as it does now in the Mozarabic. St. Isidore associates it with the fourth prayer, which in the Gallican and Mozarabic books is called *Ad Pacem*. The Roman Rite, which has completely obliterated all distinction between the *Missa Catachumenorum* and the *Missa Fidelium*, associates this sign of unity, not with the beginning of the latter, but with the Communion, and this position is as old as the letter of St. Innocent I (416) to Decentius of Giubbio. The Ambrosian now follows the Roman, as did the Celtic Rite when the Stowe Missal was written, but the Bobbio retained the collect *Ad Pacem* in its original place, though it was probably not used with the Gelasian canon.

(12) The Anaphora-- St. Germanus merely mentions the *Sursum Corda*, and says nothing about what follows it. The dialogue was probably in the usual form, though the curious variation in the Mozarabic Rite makes that somewhat uncertain. Then follows the *Contestatio* or *Immolatio*, called by the Mozarabic Books *Illatio*, which is in the Roman Rite the Praefatio. St. Isidore calls it the fifth prayer and uses the word *Illatio* for it. The Gallican books, the Bobbio, and the Mozarabic Missal give a variable one for every Mass, and the Gallican books often give two. The general form is the same as the Roman, perhaps more diffuse in its expressions. Usually the words *Per quem* alone at the end of the proper section indicate the conclusion. The Mozarabic Illations end in varying ways, always of course leading up to the Sanctus.

(13) The Sanctus.-- The Gallican wording is not found, but there is no reason to suspect any variations unless the Mozarabic "gloria majestatis tuae" was also Gallican.

(14) The Post-Sanctus.-- This takes up the idea of the Sanctus and amplifies it, leading on to the Recital of the Institution. It generally, but not always, begins with "Vere Sanctus, vere Benedictus". There is a variable Post-Sanctus for every Mass. In the Gallican books this passage ends with some expression, generally simply "per Christum Dominum nostrum", which serves as the antecedent to "Qui pridie"; but, owing to the interpolated prayer "Adesto, adesto Jesu", etc., the Recital of the Institution begins with a fresh sentence with no relative. All Liturgies except the Roman have some form of Post-Sanctus. Even the Ambrosian has one for Easter Eve, and the Celtic Stowe Missal seems to use one with or without the Roman Canon. The Bobbio, completely Romanized from the Preface onwards, does not include one among its variables. In one Mass in the Gothicum (Easter Eve) the Post-Sanctus (so called by Neale and Forbes) contains a quite definite Epiklesis, but the prayer which follows is called *ad fractionem panis*, so it may be really a Post-Pridie.

(15) The Recital of the Institution.-- "Qui pridie quam pro nostra omnium salute pateretur" is all that exists of the Gallican form, as catchwords, so to speak. This, except that "et" comes there before "omnium", is the Ambrosian. The Stowe and the Bobbio have the Roman "Qui pridie quam pateretur", etc., but the corrector of the Stowe has added the Ambrosian ending "passionem meam praedicabitur", etc. The Mozarabic, though Post-Pridie is the name of the prayer which follows,

has (after an invocatory prayer to our Lord) "D.N.J. C. in qua nocte tradebatur", etc., following St. Paul's words in I Cor., xi, in which it agrees with the principal Eastern Liturgies. This is probably a late alteration.

(16) The Post-Pridie, called also *Post Mysterium* and *Post Secreta*, these two being the more usual Gallican names, while *Post-Pridie* is the universal Mozarabic name. This is a variable prayer, usually addressed to Christ or to the Father, but occasionally in the Mozarabic in the form of a Bidding Prayer. The petitions often include something of an oblation, like the *Unde et memores*, and often a more or less definite Epiklesis. Of the eleven Masses in the Reichenau fragment four contain a definite Epiklesis in this prayer, one has a Post-Pridie with no Epiklesis, one is unfinished, but has no Epiklesis as far as it goes, and in the rest this prayer is wanting. In the Gothicum there is generally no Epiklesis, but nine of the Masses there have one of some sort, in some cases vague. In the Mozarabic this prayer is usually only the oblation, though rarely there is an Epiklesis. It is followed there by a fixed prayer resembling the clause *Per quem haec omnia* in the Roman Canon.

(17) The Fraction.-- Of this St. Germanus says only that it takes place, and an antiphon is sung during it. The only rite which now retains this antiphon always is the Ambrosian, where it is called *Confractorium*. The Mozarabic has substituted for it the recitation of the Creed, "praeter in locis in quibus erit antiphona propria ad confractionem panis", which is chiefly during Lent, and in votive Masses. In the Stowe there is a long responsory, apparently not variable. No Gallican Confractorium remains. The fraction is not described, but in the Celtic Rite (q.v.) there was a very complicated fraction, and in the Mozarabic the Sacred Host is divided into nine particles, seven of which are arranged in the form of a cross. The Council of Tours (567) directs that the particles shall be arranged "non in imaginario ordine sed sub crucis titulo", so that it is probable that the Gallican fraction was similarly elaborate. The Stowe Gaelic tract speaks of two fractions, the first into two halves with a re-uniting and a commixture, the second into a number of particles varying with the rank of the day. The "Leabhar Breac" tract only mentions the first. Dom L. Gougaud (*Les rites de la Consecration et de la Fraction dans la Liturgie Celtique*", in "Report of the 19th Eucharistic Congress" (p. 359) conjectures that the first was the Host of the celebrant, the second that for the communicants.

(18) The Pater Noster.-- This was preceded by a variable introduction after the plan of *Praeceptis salutaribus moniti* and was followed by a variable Embolism. These are entitled in the Gallican books *Ante Orationem Dominicam* and *Post Orationem Dominicam*. In the Mozarabic the introduction *Ad orationem Dominicam* is variable, the Embolism is not.

(19) The Commixture.-- Of the manner of this in the Gallican Rite there is no information, nor is there any record of the words used. But see CELTIC RITE. In the Mozarabic the particle *Regnum* (see MOZARABIC RITE) is dipped in the chalice with the words "Vicit Leo de tribu Juda, radix David, Alleluia. Qui sedes super Cherubim, radix David, Alleluia", and the particle is dropped into the chalice, the priest saying "Sancta sanctis; et conjunctio corporis D.N.J.C. sit sumentibus et potantibus nobis ad veniam et defunctis fidelibus praestetur ad requiem."

(20) The Benediction.-- This when pronounced by a bishop was a variable formula, sometimes of considerable length. St. Germanus gives a form which was said by priests "Pax, fides et caritas

et communicatio corporis et sanguinis Domini sit semper vobiscum." There is a very similar form in the Stowe Missal and in the Ambrosian, but in both these it is connected with the Pax which comes at this point, as in the Roman Rite. In the Mozarabic, the deacon proclaims "Humilitate vos benedictioni". This is alluded to by St. Caesarius of Arles and is very like *tas kephalas hemon to kyrio klinomen* in the Byzantine Rite. Then follows a long variable Benediction of four clauses, pronounced by the priest, the people responding "Amen" to each clause. The Gallican Benedictions were of the same type. The practice of a Benediction before Communion continued in France long after the extinction of the Gallican Rite and survives to this day at Lyons. It was also the practice of the Anglo-Saxon Church. Dom Cabrol ("Benediction Episcopale" in "Report of the 19th Eucharistic Congress") considers that the Anglo-Saxon Benedictions were not survivals of Gallican (Celtic) usage, but were derived from the ancient practice of Rome itself, and that the rite was a general one of which traces are found nearly everywhere.

(21) The Communion.-- St. Germanus gives no details of this, but mentions the singing of the *Trecanum*. His description of this was not very clear. "Sic enim prima in secunda, secunda in tertia, et rursum tertia in secunda rotatur in prima." But he takes the threefold chant as an emblem of the Trinity. The Mozarabic on most days has a fixed anthem, Ps. xxxiii, 8 (9) (*Gustate, et videte*) 1 (2) (*Benedicam Dominum*) and 22 (23) (*Redimet Dominus*), and the Gloria with three Alleluias after each verse. This is called *Ad Accedentes*. In Lent and Easter-tide there are variants. The rather obvious *Gustate et videte* is given also in the Stowe Missal and Bangor Antiphoner, and is mentioned by St. Cyril of Jerusalem. It occurs in certain Eastern Liturgies. In the Mozarabic it is followed by the *Communio* "Refecti Christi corpore et sanguine, te laudamus, Domine, Alleluia" (thrice), with a variant in Lent. This is found also in the Celtic books. Probably it was used by the Gallican also. In the Mozarabic the priest's Communion, with his private devotions, goes on during these anthems. St. Caesarius of Arles and the Council of Auxerre (about 578), quoted by Duchesne, allude to the fact that men received the Host in the bare hand, but that women covered the hand with a linen cloth called *dominicalis*, which each brought with her.

(22) The Post-Communion.-- This, as given in the Gallican books, is a variable *Praefatio*, or Bidding Prayer, followed by a collect. The former is entitled *Post Communionem*, the latter *Collectio*. The Mozarabic has only a collect which is variable, but with a smaller selection than the other prayers.

(23) The Dismissal formula of the Gallican Mass is not extant. It may have been like the Stowe "Missa acta est in pace", or one form of Mozarabic "Missa acta est in nomine D.B.J.C., proficiamus cum pace."

It will be seen from the above analysis that the Gallican Mass contained a very small number of fixed elements, so that nearly the whole service was variable according to the day. The absence of an Ordinary is, therefore, of less importance than it would be in, for instance, the Roman or the Ambrosian. The full list of variables, as shown from the Reichenau fragments, the Gothicum, and St. Germanus's description, is:--

(1) The Introit. (2) (*Collectio*) *post Prophetiam*. (3) *Lectio Prophetica*. (4) *Lectio Apostolica*. (5) *Responsorium* before the Gospel. (6) Gospel. (7) *Post Precem*. (8) *Sonum*. (9) *Laudes*. (10) *Praefatio Missae*. (11) *Collectio*. (12) *Ante Nomina*. (13) *Post Nomina*. (14) *Ad Pacem*. (15) *Contestatio* or *Immolatio*. (16) *Post Sanctus*. (17) *Post Pridie*. (18) *Confractorium?* (19) *Ante Orationem Dominicam*. (20) *Post Orationem Dominicam*. (22) *Trecanum?* (23) *Communio?* (24) *Post Communem*. (25) *Collectio* or *Consummatio Missae*. Of these nos. 2, 8, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 24, 25 belong to the priest's part, and are therefore found in the Sacramentaries; 1, 5, 8, 9, as well as 18, 22, and 23, if these last were variable, belong to the part of the choir, and would be found in the Antiphoners, if any such existed; and 3, 4, 6, are found in the Lectionary. No. 12 is only found among the Reichenau fragments, but it is found there in every Mass of which the MS. is not imperfect at that part of the service. Thus the fixed parts of the service would only be: (a) The three Canticles. (b) The *Ajus* and *Sanctus*, etc., at the Gospel. (c) The *Prex*. (d) The Dismissal. (e) The priest's prayers at the Offertory. (f) The Great Intercession. (g) The *Pax* formula. (h) The *Sursum Corda* dialogue. (i) The *Sanctus*. (j) The Recital of the Institution. (k) The *Pater Noster*, and possibly the *Confractorium*, *Trecanum* and *Communio*, with probably the priest's devotions at Communion. Most of these are very short and the only really important passage wanting is the one fixed passage in the Prayer of Consecration, the Recital of the Institution.

VI. THE OCCASIONAL SERVICES

A. *The Baptismal Service*.-- The authorities for the Gallican Baptismal Service are the Gothicum and Gallicanum, both of which are incomplete, and a few details in the second Letter of St. Germanus of Paris. The forms given in the Stowe and the Bobbio are too much Romanized to illustrate the Gallican Rite very much. The form given in the Gothicum is the least complete. It consists of:--

(1) "*Ad Christianum faciendum*." A Bidding Prayer and collect, with the form of signing on eyes, ears, and nostrils.

(2) The Blessing of the Font. A Bidding Prayer, a collect, a *Contestio* (Preface), the infusion of chrism in the form of a cross with a triple insufflation, and an exorcism, which here is in an unusual place.

(3) The Baptismal formula "*Baptizo te in nomine ... in remissionem peccatorum, ut habeas vitam aeternam*".

(4) The Chrismation. The formula "*Perungo te chrisma sanctitatis*" seems to have been mixed up with a form for the bestowal of the white garment, for it goes on "*tunicam immortalitatis, quam D.N.J.C. traditam a Patre primus accepit ut eam integram et inlibatam preferas ante tribunal Christi et vivas insaecula saeculorum*". Probably the omission is "... in Nomine", etc., in the one formula; and "*Accipe vestem candidam*", or possibly "*Accipe*" alone, in the other. Mgr. Duchesne's suggestion of "a special symbolism, according to which the chrism would be considered as a garment" does not commend itself, for want of a verb to govern "*tunicam*". Still there is another formula for the white garment farther on.

(5) The Feet Washing. The form here is similar to that in the Gallicanum, the Bobbio, and the Stowe: "Ego te lavo pedes. Sicut D.N.J.C. fecit discipulis suis, tu facias hospitibus et peregrinis ut habeas vitam aeternam". This ceremony is only found in Gaul, Spain, and Ireland. At the Council of Elvira in 305 an order was made that it should be performed by clerks and not by priests. This limitation, of which the wording is quite clear, has been unaccountably interpreted to mean that it was then forbidden altogether.

(6) The Vesting with the white garment. This has a form similar to the Roman and Celtic, but not quite the same.

(7) Two final Bidding Prayers with no collect.

The Gallicanum has a much fuller form with the *Traditio* and *Expositio Symboli*, etc. It is:--

(1) "Ad faciendum Catechumenum." A long and curious exorcism beginning "Adgredior te, immundissime, damnate spiritus". This is only a fragment, and probably the unction and salt came here, as in the Spanish Rite.

(2) "Expositio vel Traditio Symboli." An address, the Creed, a long exposition of it, and a collect. The Creed varies verbally from the Roman form. There is a second "Expositio" later on.

(3) "Expositio Evangeliorum in aurium apertione ad electos." An address followed by a few words of each of the Gospels and an exposition of the emblems of the Evangelists. This is found in the Gelasian Sacramentary.

(4) "Praemissiones ad Scrutamen." A Bidding Prayer and a collect.

(5) "Praefatio Orationis Dominicae". The tradition and exposition of the Lord's Prayer.

(6) "Missa in symboli traditione." This is imperfect but agrees nearly, as far as they both go, with a Mass of the same title in the Gothicum.

(7) "Expositio Symboli." This, though as on the same lines as the earlier one, differs in wording. It is very incomplete and has probably got into this place by mistake.

(8) "Opus ad Baptizando (sic)." This is preceded by various services for Maundy Thursday, Good Friday, and Easter Eve, including the Blessing of the Candle. It begins with a "Praefatio antequam exorcidietur" and a collect. Then follow the exorcism and the blessing of the font, and the infusion of the chrism, this time in the form of three crosses.

(9) The Interrogation. This includes the renunciation of Satan and a confession of faith. The latter has a peculiar form, evidently directed against Arianism:--

"Credis Patrem et Filium et Spiritum Sanctum unius esse virtutis? R. Credo.
Credis Patrem et Filium et Spiritum Sanctum ejusdem esse potestatis? R. Credo.
Credis Patrem et Filium et Spiritum Sanctum trinae veritatis una manente substantia
Deum esse perfectum? R. Credo.

(10) The Baptismal formula: "Baptizo te credentem in Nomine, etc., ut habeas vitam in saecula saeculorum."

(11) The Chrismation. The formula is the same as the modern Roman.

(12) The Feet-washing. The words are slightly different from those in the Gothicum, Bobbio, and Stowe, but to the same effect.

(13) The "Post Baptismum". A single prayer (without a Bidding Prayer) beginning "Deus ad quem scubias veteris hominis in fonte depositas". It will be seen that there is no giving of the white robe in the Gallicum, and that the signing of the hand, found in the Celtic Rite (q.v.), is absent from both it and the Gothicum.

The Holy Week ceremonies which are mixed with the Baptismal service in the two books are not very characteristic. The couplets of invitatory and collect which occur in the Roman Good Friday service are given with verbal variations in the Gothicum; in both, however, there are other prayers of a similar type and prayers for some of the Hours of Good Friday and Easter Eve. The Blessing of the Paschal Candle consists of a Bidding Prayer and collect (in the Gothicum only), the "Exulter" and its Preface nearly exactly as in the Roman, a "Collectio post benedictionem cerei", and "Collectio post hymnum cerei." There is no ceremony of the New Fire in either.

B. The Ordination services of the Gallican Rite do not occur in any of the avowedly Gallican books, but they are found in the Gelasian Sacramentary and the Missale Francorum, that is to say, a mixed form which does not agree with the more or less contemporary Roman form in the Leonine and Gregorian Sacramentaries, though it contains some Roman prayers, is found in these two books, and it may be reasonably be inferred that the differences are of Gallican origin. Moreover, extracts relating to ceremonial are given with them from the *Statuta Ecclesia Antiqua*, formerly attributed the Fourth Council of Carthage, but now known to be a Gallican decree "promulgated in the province of Arles towards the end of the fifth century" (Duschene). The ceremonial therein contained agrees with that described in "De Officiis Ecclesiasticis" by St. Isidore of Seville. The forms of minor orders, including subdeacon, were very short, and consisted simply of the delivery of the instruments: keys to the porters, books of lectors, and exorcists, cruets to acolytes, chalice, paten, basin, ewer and towel to subdeacons, occur, Bidding Prayers and all, in the Roman Pontifical of today. In the ordination of deacons there is a form which is found in the Byzantine Rite, but has not been adopted in the Roman, the recognition by the people, after an address, with the cry of "Dignus est!". This is used for priests and bishops also (cf. *Axios*, in the Byzantine ordinations). The Bidding Prayer and collect which follow are both in the present Roman Pontifical, though separated by much additional matter. The ordination of priests was of the same type as that of deacons, with the addition of the anointing of the hands. The address, with a varied end, and the collect (but not the Bidding Prayer), and the anointing of the hands with its formula are in the modern Roman Pontifical, but with very large additions. The consecration of bishops began, after an election, with a presentation and recognition, neither of which is in the modern Pontifical. Then followed a long Bidding Prayer, also not adopted in the Roman Rite, and the Consecration Prayer *Deus omnium honorum*, part of which is embodied in the Preface in the Leonine and Gregorian Sacramentaries, and in the present Pontifical. During this prayer two bishops held the Book of the Gospels over the candidate, and all the bishops laid their hands on his head. Then followed the anointing of the hands, but apparently not of the head as in the modern rite, with a formula which is not in the Roman books.

C. The Consecration of a Church does not occur in the recognized Gallican books and from prayers in the Gelasian Sacramentary and Missale Francorum. It would seem, as Mgr. Duschene shows in his excellent analysis of both rites (*Origines du culte chrétien*), that at a time when the Roman Rite of Consecration was exclusively funerary and contained little else but the deposition of the relics, as shown in the *Ordines* in the St. Amand MS. (Bibl. Nat. Lat. 974), the Gallican Rite resembled more closely that of the modern Pontifical, which may be presumed to have borrowed from it. The commentary of Remigius of Auxerre (late ninth century), published by Martène, and the Sacramentary of Angoulême (Bibl. Nat. Lat. 12048) are the other authorities from which Duchesne derives his details. The order of the Celtic Consecration given in the *Leabhar Breac* is very similar (see CELTIC RITE). The order is:

(1) The Entrance of the bishop, with "Tollite portas, principes, vestras", etc., which exhibits the outline of the present rite. (2) The Alphabets, as at present. (3) The Exorcism, Blessing and mixing of water, salt, ashes, and wine. (4) The Lustration of the Altar and the inside of the Church. (5) The Consecration Prayers. These are the prayers "Deus, qui loca nomini tuo", and "Deus sanctificationum, omnipotens dominator", which occur at the same point at present. The latter prayer in the Gallican Rite is worked into a Preface (in the Roman sense of the word). (6) The Anointing of the Altar with chrism, with the five crosses as at present. the Celtic Rite had seven. (7) The anointing of the Church with chrism. Nothing is said about crosses on the walls. (8) The Consecration of the Altar with the burning of a cross of incense thereon, and a Bidding Prayer and collect. (9) The Blessing of linen, vessels, etc. (10) The Translation of the Relics which have been kept in a separate place and a night watch kept over them. This service, which is clearly the modern elaborate consecration in germ, has also many points in common with the *Akolouthia eis Egkainia Naou* in the Byzantine Euchologion, which is still simpler. The three are evidently three stages of the same service.

HENRY JENNER

Sts. Gallicanus

Sts. Gallicanus

The following saints of this name are commemorated on 25 June:

(1) St. Gallicanus

Roman Martyr in Egypt, 363-363, under Julian. According to his Acts (in "Acta SS.", June, VII, 31), which are not very reliable, he was a distinguished general in the war against the Persians, was consul with Symmachus, 333 (perhaps also once before with Bassus, 317). After his conversion to Christianity he retired to Ostia, founded a hospital and endowed a church built by Constantine. Under Julian he was banished to Egypt, and lived with the hermits in the desert. A small church was built in his honour in the Trastevere of Rome. His relics are at Rome in the church of Sant' Andrea della Valle. The legend of his conversion was dramatized by Roswitha.

(2) St. Gallicanus I

Seventh bishop of Embrun, was represented at the Fourth Council of Arles in 524, assisted in person at that of Carpentras in 527; perhaps also at the Second Council of Orange in 529, and at the Third Council of Vaison in the same year.

(3) St. Gallicanus II

Ninth bishop of Embrun, assisted at the Fourth Council of Orléans, 541 and was represented by Probus at the fifth of Orléans. He is said to have consecrated the church of the Spanish martyrs Vincent, Orontius, and Victor, built at Embrun by Palladius. It is probable, however, that Palladius never existed (he is not known except from some hagiographical documents of little value), and that Gallicanus governed the diocese from 518 to 549 and perhaps until 554.

FRANCIS MERSHMAN

Gallienus

Publius Licinius Egnatius Gallienus

Roman emperor; b. about 218; d. at Milan, 4 March, 268; appointed regent by his father Valerian when the Germans threatened the boundaries of the empire on the Rhine and the Danube. Gallienus took the western half of the empire and his father the eastern portion, in 255. Gallienus was by nature indolent and fond of pleasure. He was cruel to the vanquished, and was unable to repel the attacks of the Frankish invaders of Gaul, but bribed their chieftains to undertake the wardenship of the Rhenish borderline. When the Alemanni burst through the *limes Rhaeticus*, or Rhætian barrier, and invaded Upper Italy, the senate armed the Roman burgesses for the first time in thirty years and raised a force of troops on its own responsibility. Gallienus defeated the enemy at Milan, but made an alliance with one of the chiefs of the Marcomanni, and gave him Upper Pannonia. He forbade the senators to enter the military service, to have anything to do with the army, and excluded them from the administration of the provinces. In consequence of this decree, the former distinction between imperial and senatorial provinces disappeared. During the wars against the Germans many distinguished Roman officers were proclaimed emperors in the various provinces. The most successful of these was Aurelian, who later became sole emperor. In consequence of the withdrawal of the troops from the eastern boundaries, the countries near the Bosphorus and the Black Sea were laid open to pillage at the hands of the Goths. Simultaneously the Persians under Sapor I swooped down on Asia Minor. Valerian led an army against them, but was betrayed and captured. His servitude lasted until his death in 260.

Gallienus thereupon became sole ruler. A bloody persecution of the Christians broke out in 257- 258, instigated by imperial edicts; they were accused of failure to take up arms in defence of the empire from its invaders. Whoever refused to take part in the Roman pagan rites was first exiled, then slain. One of the first victims was St. Cyprian, Bishop of Carthage, who was executed 14 September, 258; at Rome Sixtus II and his deacon St. Lawrence suffered martyrdom. After the death of his father, Gallienus granted liberty of worship to the Christians. He recognized as his deputy in the East Odenanthus, ruler of the commercial city of Palmyra and energetic conqueror

of Sapor I, King of Persia. Afterwards he made him emperor. In the course of the wars against the enemies of the empire, the soldiers at various times proclaimed eighteen of their generals provincial emperors. These men were also called "The Thirty Tyrants". Among them were Postumus in Gaul, and Ingenuus in Pannonia, over whom Gallienus won a partial victory, with the help of Aureolus, the commander-in-chief of the imperial armies. When the troops in Italy acclaimed Aureolus "imperator", he tried to make himself master of Italy and Rome, but was defeated by Gallienus on the Adda and shut up in Milan. Gallienus was assassinated by his officers while this siege was going on.

Karl Hoeber
Joseph de Gallifet

Joseph de Gallifet

Priest; b. near Aix, France, 2 May 1663; d. at Lyons, 1 September, 1749. He entered the Society of Jesus at the age of fifteen, and upon taking up his studies came under the direction of Father de la Colombière, the confessor of Blessed Margaret Mary Aloccoque. It is not surprising that from such a director he should acquire that love of the Sacred Heart which he cultivated with so much fervour as to merit the title of the Apostle of the devotion to the Sacred Heart. While on a mission of charity during his third year of probation at Lyons, he caught a fever which brought him to death's door. So distressed were his brethren at the fear of losing him that a certain father made a vow in his name that if he were spared, Father de Gallifet would spend his life in the cause of the Sacred Heart. From that time on he began to recover. He ratified the vow, and never slackened in his efforts to fulfill it. His superiors realizing his fitness for government advanced him to three successive rectorships -- at Vesoul, at Lyons, and at Grenoble. The last-named appointment was followed by the provincialship of the Province of Lyons. In 1723 he was chosen assistant for France, an office which brought him to Rome. Here he found it in his power to work more effectively for the spread of the devotion that was dearest to his heart. Returning from Rome in 1732, he again became rector at Lyons where he passed his declining years, a model of meekness, humility, and charity. He wrote an admirable book on the Blessed Virgin, and one on the chief virtues of the Christian religion; his greatest work, "De Cultu Sacrosancti Cordis Dei ac Domini Nostri Jesu Christi", appeared in 1726. The main purpose of the book met with much opposition at first, and its well-supported plea for the establishment of a feast for the Sacred Heart was not crowned with victory until 1765. The zealous apostle had in the mean time gone to his reward. though he had lived to see the establishment of over 700 confraternities of the Sacred Heart.

JOSEPH H. SMITH

Gallipoli

Gallipoli

DIOCESE OF GALLIPOLI (GALLIPOLITANA).

Diocese in the province of Lecce (Southern Italy). The city is built on a high rock in the Gulf of Tarentum and joined to the mainland by a bridge of twelve arches. It is surrounded by a bastioned wall and dominated by a castle; has also an important trade in wine, oil and fish. Drinking-water is brought to the town from the mainland by means of an aqueduct. The harbour is a natural one, and not particularly safe. It is thought that the place owes its origin to the inhabitants of Gallipolis in Sicily. In 450, it was laid waste by the Vandals; in the days of St. Gregory the Great (590-604) Gallipolis belonged to the Roman Church. During the Norman invasion it resisted stubbornly. Roger I gave it to his brother Bohemund, who had been made Prince of Tarentum; thenceforth the city shared the lot of the Kingdom of the Two Sicilies.

Charles of Anjou besieged it in 1284 and destroyed it, driving the inhabitants from their homes; in 1327 Robert the Good gave them permission to return, within a short time the town again became prosperous. In 1429, the Turks disembarked there. In 1484, the Venetians, in order to force King Ferdinand to withdraw his troops from the pontifical states, blockaded the port with a fleet of 60 vessels. Despite the death of their leader, Giacomo Morello, they overcame the stubborn resistance of the citizens, and sacked the town ruthlessly. It was quickly restored; but in 1496, the Venetians, in revenge for the assistance given to Ferdinand II by the town, took possession of Gallipoli; even the French blockade in 1501 did not succeed in driving them out. In 1509 Gallipoli was given back to the Kingdom of Naples, at that time under Spanish rule. A very remarkable feat of arms occurred in 1528 when 600 Gallipolitans routed an army of 4000 French infantry and 300 cavalry. The last blockade occurred in 1809 when the English attacked the place and were repulsed.

Among its famous citizens are: the painters (Giovanni Andrea Coppola, Giovanni Domenica Catalano, Giuseppe Ribera (Spagnuololetto)); the sculptor Vespasiano Genuino; the poets Giovanni Coppola, Bishop of Muro, and Onofrio Orlandini; the jurisconsults Tommaso Briganti (1762) and Filippo Briganti (1804); the physician and naturalist Giovanni Presta (1797). The earliest bishop we know of is one Benedict who lived in the days of St. Gregory the Great. The Greek Rite, which was introduced probably in the tenth century, remained in use until the year 1513. Among other bishops are: Melchisedech, present at the Second Council of Nicaea (787); Alessio Calcedonio (1493), one of Bessarion's disciples; Alfonso Herrera (1576), a generous and charitable man; Vincenzo Capece (1595), a man of remarkable holiness; Antonio Perez de la Lastra (1679), philosopher and theologian; Oronzio Filomarino (1701), a renowned theologian. The cathedral,

built in 1629, has a famous facade; it is the work of Francesco Bischetini, and Scipione Lachibari. The frescoes of the cupola (martyrdom of St. Agatha) and on the walls are the work of Carlo Malinconico. The see is a suffragan of Otranto; it has 3 parishes and 20,100 souls, a convent of Carmelite nuns, and a foundling hospital.

U. BENIGNI

Adele Amalie Gallitzin

Adele Amalie Gallitzin

(Or GOLYZIN).

Princess; b. at Berlin, 28 Aug., 1748; d. at Angelmodde, near Münster, Westphalia, 17 April, 1806. She was the daughter of the Prussian General Count von Schmettau, and educated in the Catholic faith, though she soon became estranged from her religion. In 1768, she married the Russian Prince Dimitry Alexejewitsch Gallitzin, who was under Catherine II ambassador at Paris, Turin and The Hague. In each of these capitals, the princess, thanks to her beauty and her eminent qualities of mind and heart, played a brilliant role. At the age of twenty-four she forsook society suddenly and devoted herself to the education of her children. She applied herself assiduously to the study of mathematics, classical philology, and philosophy under the noted philosopher Franz Hemsterhuis, who kindled her enthusiasm for Socratic-Platonic idealism, and later under the name of "Diokles" dedicated to her the "Diotima", his famous "Lettres sur l'atheisme". The educational reform introduced by Franz v. Furstenberg, Vicar-General of Münster, induced her to take up her residence in the Westphalian capital. Here she soon became the centre of a set of intellectual men led by Furstenberg. This circle also included the gymnasial teachers, (whom she incited to the deeper study of Plato), Overberg, the reformer of popular school education, Clemens Augustus von Droste-Vischering, Count Leopold von Stolberg, the profound philosopher Hamann, who was interred in her garden. The poet Claudius of the "Wandsbecker Bote" was also a familiar visitor, and Goethe numbered the hours passed by him in this circle among his most pleasant recollections. The reading of Sacred Scripture, necessitated by the religious education of her children, and her constant intercourse with noble Catholic souls, led to her return to positive religious convictions. On 28 Aug., 1786, at the instance of Overberg, she approached the tribunal of penance for the first time in many years. Soon after she made this zealous priest her chaplain. Under his influence, she underwent a complete change which affected all her surroundings. Her religious life took on a larger growth, and produced the most admirable fruit. She became the centre of Catholic activity in Münster. In those revolutionary and godless times, she provided for the spread of religious writings, proved a support for the religious faith of many of her friends, and induced others, among them Count Stolberg, to make their peace with the Church. Her gentle charity assuaged the distress of many, and she readily and generously assisted poor and destitute priests. For extensive circles hers was a model of religious life, and her social activity was for many a providential blessing. Portions of her correspondence and diaries were published by Scheuter (Münster, 1874-76) in three

parts. This admirable lady was the mother of the well-known American missionary Prince Demetrius Gallitzin.

PATRICIUS SCHLAGER

Demetrius Augustine Gallitzin

Demetrius Augustine Gallitzin

Prince, priest, and missionary, born at The Hague, Holland, 22 December, 1770; died at Loretto, Pennsylvania, U.S.A., 6 May, 1840. He was a scion of one of the oldest, wealthiest, and most illustrious families of Russia. His father, Prince Demetrius Gallitzin (d. 16 March, 1803), Russian ambassador to Holland at the time of his son's birth, had been previously for fourteen years Russian ambassador to France, and was an intimate acquaintance of Diderot, Voltaire, d'Alembert, and other rationalists of the day. Though nominally an Orthodox Russian, he accepted and openly professed the principles of an infidel philosophy. On 28 August, 1768, he married in Aachen the Countess Amalie, only daughter of the then celebrated Prussian Field-Marshal von Schmettau. Her mother, Baroness von Ruffert, being a Catholic, Amalie was baptized in the Catholic Church, but her religious education was neglected, and it was not until 1786 that she became a fervent Catholic, which she remained until her death, 27 April, 1806.

Little attention was paid to the religious education of Demetrius, who was born and baptized in the Greek Orthodox Church. In youth his most constant companion was Frederick William, son of William V, then reigning Stadtholder of the Netherlands. This friendship continued even after Frederick William became King of the Netherlands and Duke of Luxemburg as William I. Almost from his infancy the young prince was subjected to rigid discipline, and his intellectual faculties, trained by the best masters of the age, reached their fullest development. When about seventeen he became a sincere Catholic, and to please his mother, whose birth (1748), marriage (1768), and First Holy Communion (1786) occurred on 28 August, the feast of St. Augustine, assumed at confirmation that name, and thereafter wrote his name Demetrius Augustine. After finishing his education he was appointed aide-de-camp to the Austrian General von Lillien, but as there was no opportunity for him to continue a military career his parents resolved that he should spend two years in traveling through America, the West Indies, and other foreign lands. Provided with letters of introduction to Bishop Carroll of Baltimore, and accompanied by his tutor, Father Brosius, afterwards a prominent missionary in the United States, he embarked at Rotterdam, Holland, 18 August, 1792, and landed in Baltimore, 28 October. To avoid the inconvenience and expense of travelling as a Russian prince, he assumed the name of Schmet, or Smith, and for many years was known in the United States as Augustine Smith. Soon after arriving at Baltimore, he was deeply impressed with the needs of the Church in America. He resolved to devote his fortune and life to the salvation of souls in the country of his adoption. Despite the objections of his relatives and friends in Europe, he, with the approval of Bishop Carroll, entered St. Mary's Seminary, Baltimore, as one of its first students, it having been founded the previous year (1791) by Sulpician priests, refugees from France. On 18 March,

1795, he was ordained priest, being the first to receive in the limits of the original thirteen of the United States all the orders from tonsure to priesthood.

In 1788 Captain Michael McGuire, an officer in the Revolutionary army, purchased about 1200 acres of land near the summit of the Alleghenies, in what is now Cambria County, Pennsylvania, and was the first white man to establish a residence within the limits of that county. He brought his family from Maryland and built his log-cabin in the valley below the site of the present town of Loretto, in the midst of a dense forest which covered all that portion of the State. His nearest neighbours were fully twenty miles distant. Soon relatives and friends followed from Maryland, established themselves in the vicinity, and formed what came to be known far and wide as McGuire's Settlement, later called Clearfield, the lands lying on the headwaters of Clearfield Creek. Some years after his arrival Father Gallitzin named it Loretto, after the city of Loreto in Italy; but it was not until 1816 that he laid out the town and caused the plan of lots to be recorded in the county archives. Captain McGuire died in 1793, bequeathing to Bishop Carroll four hundred acres of his land in trust for the benefit of the resident clergy who, he hoped, would be appointed to provide for the spiritual wants of his growing colony. He was the first to be buried in the portion of this land set aside for a cemetery, which Father Brosius consecrated on one of his early visits to the settlement.

Father Gallitzin first exercised his ministry at Baltimore and in the scattered missions of southern Pennsylvania and northern Maryland and Virginia. In 1796, while stationed at Conewago, Pennsylvania, he received a sick-call to attend a Mrs. John Burgoon, a Protestant, who lived at McGuire's Settlement, about one hundred and fifty miles distant, and who ardently desired to become a Catholic before her death. Father Gallitzin immediately started on the long journey, instructed Mrs. Burgoon, and received her into the Church. During this visit to the Alleghenies he conceived the idea of forming there a Catholic settlement. In preparation therefor, he invested his means (considerable at that time) in the purchase of land adjoining the four hundred acres donated to the Church, and at the urgent request of the little mountain colony obtained from Bishop Carroll permission to fix his permanent residence there with jurisdiction extending over a territory with a radius of over one hundred miles. In the summer of 1799 he commenced his career as pioneer priest of the Alleghenies. His first care was to erect a church and house of logs, hewn from the immense pine trees of the surrounding forest. In a letter to Bishop Carroll, dated 9 February, 1800, he writes: "Our church, which was only begun in harvest, got finished fit for service the night before Christmas. It is about 44 feet long by 25, built of white pine logs with a very good shingle roof. I kept service in it at Christmas for the first time. There is also a house built for me, 16 feet by 14, besides a little kitchen and a stable." While the church and house were being constructed, he said Mass for the few Catholics of the settlement in the log house, erected two years previously by Luke McGuire, the elder son of the captain. That house is still standing (1909) and serves as a residence for the descendants, in direct male line, of the founder of McGuire's Settlement. To accommodate the increasing influx of Catholic colonists, Father Gallitzin in 1808 enlarged the log church to almost double its former capacity, and as the population continued to increase, he took down the log

building in 1817, and on the same site erected a frame church, forty by thirty feet, which served as the parish church until 1853.

Father Heyden, one of Father Gallitzin's biographers, writes (1869): "What now constitutes the dioceses of Pittsburg, Erie, and a large part of the Harrisburg new episcopal see, was then the missionary field of a single priest, Rev. Prince Gallitzin. If we except the station at Youngstown, Westmoreland County, where the Rev. Mr. Browers had settled a few years before, there was not, from Conewago in Adams County to Lake Erie—from the Susquehanna to the Potomac—a solitary priest, church, or religious establishment of any kind, when he opened his missionary career. >From this statement we may conceive some idea of the incredible privations and toils which he had to encounter in visiting the various widely remote points where some few Catholics happened to reside." As early as 1800, and frequently thereafter, he wrote to Bishop Carroll, begging that one or more priests be sent to share his burdens. And so for more than twenty years he was obliged to perform, unassisted, a work which would have proved onerous for several.

He was not only the good shepherd of his multiplying flock; he was also in a particular manner their worldly benefactor. Following out his idea of establishing a Catholic colony at the place which he named Loretto, and which he made the cradle of Catholicity in Western Pennsylvania, he, by means of remittances from Germany and loans contracted on the strength of his expectations, purchased large portions of land adjoining the settlement, which he sold in small tracts to the incoming colonists at a very low rate and on easy terms. For much of this land he was never repaid. Moreover, he built, at his own expense, saw-mills, grist-mills, and tanneries, and established other industries for the material benefit of his flock. In accomplishing all this he necessarily burdened himself with a heavy personal debt; not imprudently, however, for he had received solemn assurances that he would obtain a portion of his father's large estate, as well as his share of his mother's bequest. The Russian Government, nevertheless, disinherited him for becoming a Catholic and a priest, and the German prince who had married his sister squandered both his and her inheritance. In these circumstances, he was compelled, in 1827, to appeal to the charitable public; the appeal was endorsed by Charles Carroll of Carrollton, who headed the list with a subscription of one hundred dollars; on the list stands the name of Cardinal Cappellari, afterwards Pope Gregory XVI, who subscribed two hundred dollars. Yet it was not until near the close of his life that the burden of debt was finally lifted. During the forty-one years of his pastorate in the Alleghenies, he never received a cent of salary; he maintained himself, his household, and the many orphans whom he sheltered, and abundantly supplied the wants of the needy among his flock out of the produce of his farm, which by his intelligent method of cultivation became very productive. It is estimated that he expended \$150,000 of his inheritance, a small portion of the amount that should rightly have come to him, but an immense sum for the times in which he lived, in the establishment of his Catholic colony on the Alleghenies. For some years (1804-1807) he was rewarded with ingratitude. His actions were misconstrued, his words and writings misinterpreted, his character vilified, his honour attacked, and even violent hands were laid on his person, and all this by members of his own flock. But, with the encouragement of his bishop and the aid of the civil courts, he brought

his defamers to acknowledge their guilt, for which they voluntarily and publicly made full reparation before their fellow Catholics in the Loretto church.

For fourteen years after his ordination Father Gallitzin was known to the general public as Augustine Smith. This was the name which he subscribed to all his legal papers and to his entries in the parish register of baptisms and marriages. But, fearing serious difficulties in the future, at his request, on 16 Dec., 1809, the Pennsylvania legislature validated the acts and purchases made under that assumed name, and legalized the resumption of his real name. Notwithstanding his varied labours, Father Gallitzin found time to publish several valuable tracts in favour of the Catholic cause. He was the first in the United States to enter the lists of controversy in defence of the Church; he was provoked thereto by a sermon delivered on Thanksgiving Day, 1814, in Huntingdon, Pennsylvania, by a certain minister who went out of his way to attack what he called "popery". Repelling this attack, Father Gallitzin first published his "Defense of Catholic Principles", which ran through several editions and was the means of many conversions. This was followed by "A Letter on the Holy Scriptures" and "An Appeal to the Protestant Public".

For twenty years Father Gallitzin had laboured alone in a vast mission whose Catholic population was constantly increasing; in 1834, when Father Lemke was sent to his assistance and was assigned the northern part of Cambria County as his sphere of action, the parish of Loretto was restricted within comparatively narrow limits. In the meantime Father Gallitzin's reputation for sanctity, the fame of his talents, and the account of his labours had spread far and wide; and it was his deep humility as well as his love for his community that prevented his advancement to the honours of the Church. He accepted the office of Vicar-General for Western Pennsylvania, conferred on him by Bishop Conwell of Philadelphia, in 1827, because he felt that in that office he could promote the interests of the Church; but he strongly resisted the proposals to nominate him for the position of first Bishop of Cincinnati and first Bishop of Detroit. For many years before his death he lived in the hope of seeing Loretto made an episcopal see, for Loretto was then a flourishing mission and the centre of a constantly increasing Catholic population, while Pittsburg was a small town containing but few Catholics. After forty-one years spent on the rugged heights of the Alleghenies, he died as he had lived, poor. On coming to McGuire's Settlement he found a dense wilderness; he left it dotted with fertile farms. As an evidence of his religious labours in Pennsylvania, it may be stated that within a radius of fifteen miles from the spot on which in 1799 he built his log church there are now no less than twenty-one flourishing parishes, thirty-three priests, and four religious and educational institutions. He was buried, according to his desire, midway between his residence and the church (they were about thirty feet apart); in 1847 his remains were transferred to a vault in a field nearer the town, over which a humble monument was erected out of squared blocks of rough mountain stone. In 1891 his remains were taken from the decayed coffin of cherry wood and placed in a metallic casket; in 1899, on the occasion of the centenary celebration of the foundation of the Loretto Mission, the rude monument was capped by a pedestal of granite, and this in turn by a bronze statue of the prince-priest, donated by Charles M. Schwab, who also built the large stone church, which was solemnly consecrated, 2 Oct., 1901.

Ferdinand Kittell
Diocese of Galloway

Diocese of Galloway

(Gallovidiana).

Situated in the southwest of Scotland. It comprises the Counties of Dumfries, Kirkcudbright, and Wigtown and about four-fifths of the County of Ayr, thus embracing a territory of 3347 square miles and a general population of 373,670, of which Catholics form only a small fraction. From an historical point of view, a singular interest attaches to this diocese since it is certainly the most ancient ecclesiastical foundation in Scotland, its founder and first bishop, St. Ninian, being "the first authentic personages that meets us in the succession of Scottish missionaries" (Belleshiem). This illustrious saint, a Briton, born on the Solway shore, educated at Rome and consecrated bishop by St. Siricius, founded his episcopal see at *Whithorn* and dedicated his cathedral to St. Martin of Tours, in 397; and, having evangelized the country as far north as the Grampian mountains, died about 432. The dates here given are on the authority of the majority of Scottish writers.

The original title of the see was "Whitherne" (Quhitherne), latinized "Witerha" and (more frequently) "Candida Casa", signifying the White House so called, St. Bede tells us, from the structure and appearance of the church erected by St. Ninian "in a style unusual among the Britons". At what precise date the territorial title of "Galloway" came into use is not quite clear. It is obviously improbable that the area of the diocese was at all defined in St. Ninian's time, but from the eighth till the end of the sixteenth century it was limited to the district of Galloway, i.e., the two Counties of Kirkeudbright and Wigtown. The succession of bishops in this see was three times interrupted in the course of its history for periods averaging three hundred years' duration each. The last Catholic bishop in the sixteenth century, Andrew Durie, died in 1558, and the see was vacant three hundred and twenty years.

It was restored, for the third time, by Leo XIII in 1878, and the Right Rev. John McLachlan, D.D., Vicar-General of the Western Vicariate of Scotland, was appointed the first bishop. From the extent of territory it would be perhaps more accurately described as a new diocese, for it was formed out of two outlying portions of the former eastern and western vicariates and has more than double the area it had at either previous restoration. The Catholic population, small in number and thinly dispersed over the whole territory, belonged chiefly to the poorer labouring class and, excepting the larger burghs, such as Ayr, Dumfries, and Kilmarnock, was very inadequately provided

for in respect of ordinary religious and educational needs. But the new bishop was a man of great energy and zeal, with a wide missionary and administrative experience, and in a comparatively short time he not only thoroughly organized the diocese but also furnished it abundantly with churches, schools, presbyteries, and an efficient clergy. While engaged in this great work he received generous encouragement and support from many of the wealthier members of his flock, e.g., the third Marquess of Bute; Rev. Sir David Oswald Hunter-Blair, Baronet; Captain R. D. Barre Cunninghame, and others. Bishop McLachlan died 16 Jan., 1893, and was succeeded by the Right Rev. William Turner, the present bishop; b. at Aberdeen, 12 Dec., 1844; cons. 25 July, 1893. The diocesan statistics for 1908 show a Catholic population of 17,625 souls, 21 missions, 41 churches or chapels, 30 priests in active work, 28 elementary schools, 10 religious communities (all since 1875), and various educational and charitable institutions. The diocese was a suffragan of York (England) previous to 1472; from that date until 1492 it was subject to St. Andrews; and from then until the extinction of the ancient hierarchy it was transferred to Glasgow. It is now a suffragan of the new Archbishopric of St. Andrews and Edinburgh.

Church in Scotland* (Edinburgh, 1890); Forbes, *Lives of St. Ninian and St. Kentigern* (Edinburgh, 1874); Keith, *Catalogue of Scottish Bishops* (Edinburgh, 1824); Walcott, *Ancient Church of Scotland* (Edinburgh, 1874); Skene, *Celtic Scotland* (Edinburgh, 1887); Maxwell, *Dumfries and Galloway* (Edinburgh, 1896); McKerlie, *Lands and Owners in Galloway* (Paisley, 1906); *The Catholic Directory of Scotland for 1878 and 1908*; *The Catholic Church of Scotland, Statistics* (Glasgow, 1878).

WILLIAM TURNER

Pasquale Galluppi

Pasquale Galluppi

Philosopher, b. at Tropea, in Calabria, 2 April, 1770; d. at Naples, 13 Dec., 1846, where from 1831 he was a professor in the university. His principal works are "Saggio filosofico sulla critica della conoscenza umana", 4 vols; "Lettere sulle vicende della filosofia da Cartesio a Kant"; "Elementi di Filosofia"; "Lezioni di Logica e Metafisica"; "Filosofia della volontà"; "Considerazioni filosofiche sull' idealismo trascendentale". Of his "Storia della Filosofia" he completed only the first volume. His philosophy is a mixture of assent to and dissent from Descartes, the French and English sensists, Kant, and the Scottish school of Reid. Cartesianism tempered by the modifications introduced into it by Leibniz, Wolf, and Genovesi, was the system in which Galluppi's mind was trained. The problem of human knowledge was his chief preoccupation. He maintained the objective reality of our knowledge, which he based on the testimony of consciousness, making us aware not only of our internal experience, but also of the external causes to which it is due. This theory was aimed at Kant, though Galluppi agreed with him that space and time are a priori forms in the mind. Against the sensists, he denied that the mind was merely passive or receptive, and held that like a builder it arranged and ordered the materials supplied it, deducing therefrom new truths which sensation

alone could never reach. He threw no light, however, on the difference between sensory and intellectual knowledge. This was the great weakness of his argument against the Scottish school, that the soul perceives not only its own affections or the qualities of bodies, but also its own substance and that of things outside itself. It was also natural that Galluppi should be foremost in attacking the theories of Rosemini concerning the idea of God as the first object of our knowledge: and it was this polemic (quiet enough in itself) which drew public attention to the Roveretan philosopher.

The morality of our actions, according to Galluppi, depends on the notion of duty which springs from the very nature of man. He never made use of the phrase "categoric imperative", but everything goes to show that on that point he did not completely escape Kant's influence: and although he asserted as the two great moral commandments "Be just" and "Be beneficent", he none the less approved of Kant's moral principle. Hence we do not find in him any hint as to the connection between the moral law and God, beyond the statement that God must reward virtue and punish vice. Against the Scottish school, on the other hand, he denied that morality depends on the feelings. His theodicy is well within the limits of that of Leibniz, and therefore admits not only the possibility of revelation, but also the divinity of Christianity. The care and clearness of his style made his works very popular; but when the Hegelianism of the Neapolitan school became the fashion in non-Catholic circles of thought, and Scholasticism regained its hold among Catholics, Galluppi's philosophy quickly lost ground. He always kept aloof from political questions; and his works were planned and written in his own home, amidst the noise and bustle of a large and happy family.

Werner, *Kant in Italien*, 1880 (Naples, 1897).

U. BENIGNI

Peter Gallwey

Peter Gallwey

Born at Killarney, 13 Nov., 1820; d. in London, 23 Sept., 1906; one of the best-known London priests of his time. He was educated at Stonyhurst, joined the Society of Jesus at Hodder, 7 Sept., 1836, was ordained priest in 1852, and professed of four vows in 1854. As prefect of studies at Stonyhurst, 1855-1857, he made important improvements in the method of study. In 1857 he was sent to the Jesuit church in London, where -- except for an interval of eight years during which he held the provincialate and other offices -- he spent the rest of his life. He was a man of deep spirituality, much venerated as a preacher, spiritual director, and giver of retreats; he was also noted for his love of the poor and his earnest advocacy of almsdeeds. So great were his energy and enterprise that he set his stamp on all he undertook. Several London convents and Catholic institutions owe largely to his zeal and encouragement both their first foundation and their successful subsequent development. His writings comprise among others: "Salvage from the Wreck", sermons preached at the funerals of some notable Catholics (1890); "Watchers of the Passion", (1894), a series of meditations on the Passion, embodying the substance of his retreats; a number of sermons, tracts and other small publications, mostly of a topical kind.

No life of Father Gallwey has so far been written, except a slight sketch by Percy Fitzgerald (London, 1906).

SYDNEY F. SMITH

Galtelli-Nuoro

Galtelli-Nuoro

(Galtellinensis-Norensis)

Diocese in the province of Sassari (Sardinia), on a hill of the same name, suffragan of Cagliari. In the neighbourhood there are quarries of red jasper. The ancient cathedral contains some good paintings. Nuoro, the Nora of the ancients, is a sub-prefecture of the same province, and stands about 2000 feet above sea-level. Near it are seen large quarries of granite and argentiferous lead, and a curious irregular ruin, apparently of early Roman origin. In the vicinity are twenty-four of the so-called *Nuraghi* (known locally as the Giants' Tombs, huge stone buildings in the shape of truncated cones. These belong to the neolithic age, and were a source of wonder even to the ancients. Here also are the *Virghenes* of Domos de Janas, a series of intercommunicating rooms excavated out of the granite rock. Galtelli was an episcopal see in 1138, when Innocent II made it a suffragan of Pisa; later, it was directly subject to the Holy See. In 1495, it was suppressed by Alexander VI, and its territory united to Cagliari. In 1787, at the request of King Victor Emmanuel III, it was re-established, but the bishop continued to live at Nuoro. Among its bishops of note was Fra Arnolfo de Bissalis (1366), renowned for his learning and eloquence. In the diocese are 25 parishes, 56,300 Catholics, 1 Franciscan monastery, 2 nunneries, 1 boys' boarding-school, and 3 girls' schools.

Cappelletti, *Le Chiese d' Italia* (1857), XIII, 95-99; Spano, *Memorie sopra l'antica cattedrale di Galtelli* (Cagliari, 1873); Martin, *Storia eccl. della Sardegna* (1841), III, 325-27, 85-88.

U. BENIGNI

Bernhard Galura

Bernhard Galura

Prince-Bishop of Brixen; b. 21 August, 1764, at Herbolzheim, Bresigau; d. 17 May, 1856. After he had completed his classical studies in his native town he entered the convent of the Friars Minor at Altbreisach, but because of its suppression by Emperor Joseph II, his stay here was of short duration. In 1783 he entered the seminary of Freiburg where, after a brilliant course in the ecclesiastical sciences, he was honoured with the doctorate of Theology. He was ordained priest in 1788 in the seminary of Vienna whither he had gone to follow a course of practical theology. In the same year he returned to the seminary of Freiburg, and after acting as prefect of studies for two years he took up parochial work, first at Altoberndorf and later in the cathedral of Freiburg. Recognizing in him a man of learning and sound judgment, Emperoro Francis appointed him in 1805 spiritual referee at Gunzburg, but owing to political changes he lost his position here, and ten

years later was assigned to the same duty at Innsbruck. In 1819 he became Vicar-General of Vorarlberg. On 30 January, 1820, he was consecrated auxiliary bishop of Brixen, and nine years later took formal possession of the chair of St. Cassian as Bishop of Brixen.

Like his distinguished predecessors, Galura directed all his efforts towards safeguarding the unity of the Faith in his diocese. By the establishment of missions and educational institutions and by the introduction of religious orders, especially the Jesuits (who had been banished from there) and the Sisters of Mercy (in 1838), he succeeded in restoring much of what the secular power had destroyed during the administration of his predecessor. He was highly respected by the civil authorities, and his deeply religious spirit, his charity towards the poor, and his administrative abilities have made him an ornament to his church and country. Besides numerous ascetical, homiletical, and catechetical works, he wrote also: (1) "Christkatholische Religion" (5 vols., Augsburg, 1796-1800); (3) "Lehrbuch der Christlichen Wohlgezogenheit" (Augsburg, 1841).

Hurter, Nomenel. (2nd ed.), III, 922; Trinkhauser, *Leben und Wirken des Fürstb. Galura* (Innsbruck, 1856); Felder, *Literaturzt.* (1801), I, 118-32.

JOSEPH SCHROEDER

Luigi Galvani

Luigi Galvani

Physician, b. at Bologna, Italy, 9 September, 1737; d. there, 4 December, 1798. It was his original intention to study theology and to enter a monastic order. His family, however, persuaded him to abandon that idea. He took up the study of the natural sciences from the point of view of the anatomist and physiologist. After maintaining his thesis on the nature and formation of the bones, he was appointed public lecturer at the University of Bologna and at the age of twenty-five taught anatomy at the Institute of Sciences. He became especially noted as a surgeon and accoucheur. In 1790, after thirty years of wedded life, he lost his wife Lucia, the daughter of Dr. Galeazzi, one of his teachers. He kept his chair at the university until 20 April, 1798, when he resigned because he would not take the civil oath demanded by the Cisalpine Republic, it being contrary to his political and religious convictions. As a result he had to take refuge with his brother Giacomo and broke down completely through poverty and discouragement. Soon after this his friends obtained his exemption from the oath and his appointment, on account of his scientific fame, as professor emeritus. He died before the decree went into effect.

Galvani's work in comparative anatomy and physiology includes a study of the kidneys of birds and of their sense of hearing. He is famous more especially on account of his experiments concerning "the electrical forces in muscular movements", leading up to his theory of animal electricity. This began with the accidental observation, in 1780, of the twitching of the legs of a dissected frog when the bared crural nerve was touched with the steel scalpel, while sparks were passing from an electric machine nearby. He worked diligently along these lines, but waited for eleven years before he published the results and his ingenious and simple theory. This theory of a nervous electric fluid,

secreted by the brain, conducted by the nerves, and stored in the muscles, has been abandoned by scientists on account of later discoveries, but Galvani was led to it in a very logical manner and defended it by clever experiments, which soon bore fruit. Thus he discovered that when nerve and muscle touch two dissimilar metals in contact with each other, a contraction of the muscle takes place; this led ultimately to his discussions with Volta and to the discovery of the Voltaic pile. The name Galvanism is given to the manifestations of current electricity.

Galvani was by nature courageous and religious. It is reported by Alibert that he never ended his lessons "without exhorting his hearers and leading them back to the idea of that eternal Providence, which develops, conserves, and circulates life among so many divers beings". His works (*Opere di Luigi Galvani*) were collected and published by the Academy of Sciences of the Institute of Bologna (1841-42). The following are some of the titles, with the original dates of publication in the "Antichi Commentari" of the Bologna Institute: "Thesis: De Ossibus" (1762); "De Renibus atque Ureteribus Volatilium" (1767); "De Volatilium Aure" (1768-70); "De Viribus Electricitatis in motu musculari commentarius" (1791), reprinted at Modena, 1792, with a note and dissertation by Gio. Aldini; translated by Mayer into German (Prague, 1793), and again published as a volume of Ostwald's "Klassiker" (Leipzig, 1894); "Dell' uso e dell' attività dell' arco conduttore nelle contrazioni de' muscoli" (1794); "Memorie sulla elettricità animale" (1797).

Popular Science Monthly, July, 1892; WALSH in *Catholic World* (June, 1904); ALIBERT, *Eloges Historiques* (Paris, 1806); VENTUROLI, *Elogio* (Bologna, 1802).

WILLIAM FOX

Galveston

Galveston

DIOCESE OF GALVESTON (GALVESTONIENSIS).

The Diocese of Galveston was established in 1847 and comprises that part of the State of Texas, U.S.A., between the Sabine River on the east, the Colorado River on the west, the Gulf of Mexico on the south, and the northern line of the counties of Lampasas, Coryell, McLennan, Limestone, Freestone, Anderson, Cherokee, Nacogdoches, and Shelby on the north, an area of 43,000 square miles.

French Recollects with La Salle attempted in 1685 to found the first missions among the Indians in Texas, and they were followed by Spanish Franciscans from Mexico sent in 1689 to build a barrier to French occupation. These efforts met with reverses, but early in the eighteenth century the missionary zeal of the Franciscans re-established many of the old missions and extended them in numerous new directions. They remained in a flourishing state until 1812 when they were suppressed by the Spanish Government. The colonization of Texas from the United States and the declaration of its independence as a republic in 1836 checked any further efforts to open the missions for several years, and then the Rev. John Timon, afterwards Bishop of Buffalo, and the Rev. John M. Odin, two Lazarists from the community in Missouri, visited the state and aroused the

long-neglected religious sentiments of the people. Measures were taken for the promotion of Catholic immigration and the public officials of the new republic gave every encouragement to their work. In 1841 Father Odin was named Coadjutor Bishop of Detroit, but refused the Bulls. Texas was then made a vicariate Apostolic and Father Odin was consecrated titular Bishop of Claudiopolis, 6 March, 1842. There were then only four priests in Texas. Bishop Odin set to work vigorously to build up his charge. The Texan Congress returned several of the ancient churches to their original uses, schools were opened, and the Ursuline nuns, the first religious community in Texas, were introduced to care for them. In 1847 the pope erected the state into a bishopric with Galveston as its episcopal see and Bishop Odin was transferred to its charge. In addition to the Ursulines he secured the services of communities of the Sisters of the Incarnate Word, the Brothers of Mary, and the Oblates, to the latter of whom he gave charge, in November, 1854, of the College of the Immaculate Conception. He visited Europe twice to secure priests and material help for his diocese. On the death of Archbishop Blanc of New Orleans, Bishop Odin was promoted, 15 Feb., 1861, to be his successor. During his incumbency of the See of Galveston he increased the number of priests to forty-two and the churches to fifty, and left the diocese with a college, four academies for girls and five schools for boys. He was born at Ambierle, France, 25 Feb., 1801, and died there, 25 May, 1870.

Claude Mary Dubuis, C.S.C., an indefatigable missionary, who had served long and unselfishly for the Church in Texas, was his successor. He was born 10 March, 1817, at Coutouvre, Loire, France, and ordained priest at Lyons., 1 June, 1844, where he was also consecrated bishop, 23 November, 1862. After years of hardships in Texas he resigned, 12 July, 1881, but kept the title Bishop of Galveston, and retired to France. Here he lived at Vernaison in the Diocese of Lyons, receiving in 1894 promotion to the titular Archbishopric of Arca. He assisted the ordinary of Lyons in episcopal work until his death, which took place, 22 May, 1895. Peter Dufal, C.S.C., had been named coadjutor to Bishop Dubuis with the right of succession on 14 May, 1878. He was then Vicar Apostolic of Eastern Bengal and titular Bishop of Delcus, having been consecrated at Le Mans, France, 25 November, 1860. He was born 8 Nov., 1822, at Lamure, Puy-de-Dome, France, and ordained priest in the Diocese of Blois, 8 Sept., 1852. On translation to Galveston he retained his titular see; he resigned the Texas diocese on account of ill health, 18 April, 1880, and retired to the house of his Congregation of the Holy Cross at Neuilly, near Paris, France, where he died in 1889. Nicholas Aloysius Gallagher, fourth bishop, was appointed administrator of Galveston in the absence of Bishop Dufal, having been consecrated at Galveston, 30 April, 1882, titular of Canopus. In 1894 he succeeded to the title of Galveston. He also acted as administrator of Columbus, Ohio, on the death of Bishop Rosecrans in 1878. Born 19 Feb., 1846, at Temperanceville, Belmont County, Ohio, he was ordained priest, 25 December, 1868, at Columbus, Ohio.

The religious communities of men represented in the diocese are: the Jesuits who have charge of St. Mary's University, Galveston; the Basilians (from Canada) managing St. Thomas's College, Houston, St. Mary's Seminary, La Porte, and St. Basil's College, Waco; the Fathers of the Congregation of the Holy Cross at Austin; the Paulist Fathers at Austin.

The religious communities of women are: Sisters of Charity of the Incarnate Word; Sisters of Charity (Emmitsburg); Sisters of St. Dominic; Sisters of the Holy Cross; Sisters of St. Mary; Sisters of Divine Providence; Ursuline Sisters; Sisters of the Holy Family. Statistics (1909): Priests 82 (53 seculars, 29 religious); churches 82 (missions with churches 35); stations 35; chapels 16; brothers 6; women religious 375; ecclesiastical students 12; colleges for boys 4; students 375; academies for girls 9; parochial schools 32; pupils in academies and parish schools 5000; hospitals 7; Catholic population 56,000.

THOMAS F. MEEHAN
Galway and Kilmacduagh

Galway and Kilmacduagh

DIOCESE OF GALWAY AND KILMACDUAGH (GALVIENSIS ET DUACENSIS).

Diocese in Ireland; an amalgamation of two distinct ancient sees; excepting the parish of Shrule (County Mayo) entirely in County Galway. Kilmacduagh, covering 137,520 acres, includes the whole Barony of Kiltartan, and part of Dunkellin and Loughrea. Galway diocese includes the barony of Galway and part of Moycullen and Clare. Its extent is less than Kilmacduagh, the united dioceses covering about 250,000 acres. Kilmacduagh coincides with the ancient territory of Hy Fiachrach Aidhne. On Ptolemy's map the district was called the country of the Gangani; later it was occupied by the Firbolg; and in the sixth century by the descendants of Fiachrach, brother of Niall of the Nine Hostages and uncle of Dathi. The time of its conversion to Christianity is uncertain. Probably it was Christian before the end of the sixth century, and it is certain that St. Colman was its first bishop. A near relative of King Guaire of Connaught, and a native of Kiltartan, he was born after the middle of the sixth century and educated at Arran, after which he lived for years a hermit's life in the Burren mountains. Drawn from his retreat by the persuasions of his friends, he founded a monastery at Kilmacduagh (610), becoming its abbot, and subsequently bishop of the whole Hy Fiachrach territory. He died in 632, and was buried at Kilmacduagh. In the five centuries following, the annalists make mention of only three bishops of Kilmacduagh. At the Synod of Kells, the diocese was made a suffragan of Tuam. Among its subsequent bishops we find men with the distinctively Irish names of O'Ruan, O'Shaughnessy, O'Murray, O'Felan, O'Brien, and O'Moloney. In the reign of Henry VIII the bishop was Christopher Bodkin, a time-server who earned the goodwill of Henry and of Elizabeth, and who through royal favour was promoted to the See of Tuam. Persecution had to be faced by his successors. One of these, Hugh De Burgo, was a prominent figure in the Confederation of Kilkenny (1642-50), and a prominent opponent of the Nuncio Rinuccini; when the war ended in the triumph of Cromwell, exile was his fate, imprisonment or death the fate of the

priests, and confiscation that of the Catholic landholders. After 1653 the See of Kilmacduagh was ruled by vicars, but after 1720 the episcopal succession was regularly maintained. In 1750 Kilmacduagh was united with the smaller Diocese of Kilfenora, the latter situated entirely in County Clare, and corresponding in extent with the Barony of Corcomroe. This union has continued. At first the Bishop of Kilmacduagh was Apostolic Administrator of Kilfenora, his successor Bishop of Kilfenora and Apostolic Administrator of Kilmacduagh, and so on alternately.

Contemporary with the monastery of Kilmacduagh was that of Annaghdown, on Lough Corrib, founded in the second half of the sixth century by St. Brendan. In process of time, Annaghdown became an episcopal see extending over the territory ruled by the O'Flahertys. In this district was the town of Galway. Placed where the waters of the Corrib mingle with the sea, it was at first but a fishing village. In the ninth century it was destroyed by the Danes; subsequently it was rebuilt and protected by a strong castle; in the twelfth century again destroyed by the King of Munster; and towards the end of that century wrested from the O'Flahertys by the powerful Anglo-Norman family of De Burgo. Other Anglo-Norman families also settled there, these in process of time being called the Tribes of Galway. Loyal to England and despising the old Irish, whom they drove out, the settlers made progress, and Galway in the first half of the seventeenth century, with its guilds of merchants, its mayor, sheriff, and free burgesses, was in trade, commerce, and wealth little inferior to Dublin itself. The Diocese of Annaghdown was joined to Tuam in 1324, and Galway town became in consequence part of the latter diocese. But the Galway men, regarding the surrounding people as little better than savages, were reluctant to be associated with them, and in 1484 obtained from the Archbishop of Tuam exemption from his jurisdiction. The arrangement, sanctioned by a Bull of Innocent VIII, was to have the church of St. Nicholas, at Galway, a collegiate church, governed by a warden and eight vicars; these having jurisdiction over the whole town, as well as over a few parishes in the neighbourhood. And warden and vicars "were to be presented and solely elected by the inhabitants of the town". It was a peculiar arrangement. The warden exercised episcopal jurisdiction, appointed to parishes, visited the religious institutions, but did not, of course, confer orders. The eight vicars resembled somewhat the canons of a cathedral church. In 1485 Galway obtained a new royal charter subjecting the town to a mayor, bailiffs, and corporation. In 1551 the warden and vicars were dispossessed of their church and lands, which were given to a lay warden and vicars, all Protestants. Just a century later the Catholics were driven from the town by the Cromwellians. Gradually they came back, and having been tolerated during the reign of Charles II and favoured under his successor, James II, had again to face persecution during the penal times. In 1731 the town contained about 5000 inhabitants. In 1747 the Protestant governor complained of the insolence of the Catholics, and of the number of priests coming there from abroad; in 1762 out of its 14,000 inhabitants all were Catholics except 350.

During the seventeenth and eighteenth centuries there were frequent disputes between the warden and the Archbishop of Tuam as to the latter's rights in Galway. There were troubles also attending the election of the warden and vicars. Driven from the corporation, the Catholics had no legally existing free burgesses, and had been compelled to meet by stealth, and constitute a mayor

and corporation, so as to have the necessary electoral body. But the Galway Tribes insisted on keeping the wardenship in their own hands. When the repeal of the penal laws allowed a Catholic corporation to come into existence, in 1793, the inhabitants insisted on exercising their right to vote, and conflicts with the Tribes arose. These disputes were finally ended in 1831 by the extinction of the wardenship and the erection of Galway into an episcopal see. In 1866 the Bishop of Kilmacduagh being unable to discharge his duties, the Bishop of Galway was appointed Apostolic Administrator of Kilmacduagh and Kilfenora, "durante beneplacito Sanctæ Sedis". In 1883 the union of the three dioceses was made permanent by papal Bull. Since that date the bishop is "Bishop of Galway and Kilmacduagh and Apostolic Administrator of Kilfenora". Among those connected with the diocese several have acquired fame. St. Ceallagh, who died about 550, is still venerated in Kilchrist, St. Sourney in Ballindereen, St. Foila in Clarenbridge, St. Colga in Kilcolgan. In the ninth century lived Flan MacLonan, chief poet of Ireland. In the seventeenth and eighteenth centuries lived John Lynch, author of "Cambrensis Eversus"; O'Flaherty, author of the "Ogygia"; Dr. Kirwan, Bishop of Killala; MacFirbis, the annalist; Dr. Fahy, whose history has become a standard work; Dr. O'Dea, Bishop of Clonfert, and others.

Statistics (1909): parish priests, 29; administrator, 1; curates, 29; regulars, 20; churches, 53; houses of regulars, 4; convents, 10; college, 1; monasteries, 3; Catholic population in 1901, 70,576; non-Catholic, 1931.

E.A. D'ALTON

Vasco da Gama

Vasco da Gama

The discover of the sea route to East Indies; born at Sines, Province of Alemtejo, Portugal, about 1469; died at Cochin, India, 24 December, 1524.

His father, Estevão da Gama, was Alcaide Mor of Sines, and Commendador of Cercal, and held an important office at court under Alfonso V. After the return of Bartolomeu Dias, Estevão was chosen by João II to command the next expedition of discovery, but, as both died before the project could be carried into execution, the commission was given by Emmanuel I to Vasco, who had already distinguished himself at the beginning of the year 1490 by defending the Portuguese colonies on the coast of Guinea against French encroachments. Bartolomeu Dias had proceeded as far as the Great Fish River (Rio do Infante), and had in addition established the fact the coast of Africa on the other side of the Cape extended to the northeast. Pedro de Corvilhão on his way from India had descended the east coast of Africa as far as the twentieth degree of south latitude, and had become cognizant of the old Arabic-Indian commercial association. The nautical problem, therefore, to be solved by Vasco da Gama was clearly outlined, and the course for the sea route to the East

Indies designated. In January, 1497, the command of the expedition was solemnly conferred upon Vasco da Gama, and on 8 July, 1497, the fleet sailed from Lisbon under the leadership of Vasco, his brother Paulo, and Nicoláo Coelho, with a crew of about one hundred and fifty men. At the beginning of November, they anchored in St. Helena Bay and, on the 25th of the same month, in Mossel Bay. On 16 December, the fleet arrived at the furthest landing point of Dias, gave its present name to the coast of Natal on Christmas Day, and reached by the end of January, 1498, the month of the Zambesi, which was in the territory controlled by the Arabian maritime commercial association. Menaced by the Arabs in Mozambique (2 March) and Mombasa (7 April), who feared for their commerce, and, on the contrary, received in a friendly manner at Melinda, East Africa (14 April), they reached under the guidance of a pilot on 20 May, their journey's end, the harbour of Calicut, India, which, from the fourteenth century, had been the principal market for trade in spices, precious stones, and pearls. Here also, as elsewhere, Gama skilfully surmounted the difficulties placed in his way by the Arabs, in league with the Indian rulers, and won for his country the respect needful for the founding a new colony.

On 5 October, 1498, the fleet began its homeward voyage. Coelho arrived in Portugal on 10 July, 1499; Paulo da Gama died at Angra; Vasco reached Lisbon in September, where a brilliant reception awaited him. He was appointed to the newly created post of Admiral of the Indian Ocean, which carried with it a high salary, and the feudal rights over Sines were assured to him. In 1502 Gama was again sent out, with his uncle Vicente Sodré and his nephew Estevão, and a new fleet of twenty ships, to safeguard the interests of the commercial enterprises established in the meantime in India by Cabral, and of the Portuguese who had settled there. On the outward voyage he visited Sofala (East Africa), exacted the payment of tribute from the Sheikh of Kilwa (East Africa), and proceeded with unscrupulous might, and even indeed with great cruelty, against the Arabian merchant ships and the Samudrian (or Zamorin) of Calicut. He laid seige to the city, annihilated a fleet of twenty-nine warships, and concluded favourable treaties and alliances with the native princes. His commercial success was especially brilliant, the value of the merchandise which he brought with him amounting to more than a million in gold. Again high honours fell to his share, and in the year 1519 he received instead of Sines, which was transferred to the Order of Santiago, the cities of Vidigueira and Villa dos Frades, resigned by the Duke Dom Jayme of Braganza, with the jurisdiction and the title of count. Once again, in 1524, he was sent to India by the Crown, under João III, to supersede the Viceroy Eduardo de Menezes, who was no longer master of the situation. He re-established order, but at the end of the year he was stricken by death at Cochin. In 1539, his remains, which up to that time had lain in the Franciscan church there, were brought to Portugal and interred at Vidigueira. To commemorate the first voyage to India, the celebrated convent of the Hieronymites in Belem was erected. A large part of the "Lusiad" of Camoens deals with the voyages and discoveries of Vasco da Gama.

OTTO HARTIG

Gamaliel

Gamaliel

(Greek form of the Hebrew name meaning "reward of God").

The name designates in the New Testament a Pharisee and celebrated doctor of the Law. Gamaliel is represented in Acts, v, 34 sqq., as advising his fellow-members of the Sanhedrin not to put to death St. Peter and the Apostles, who, notwithstanding the prohibition of the Jewish authorities, had continued to preach to the people. His advice, however unwelcome, was acted upon, so great was his authority with his contemporaries. We learn from Acts, xxii, 3, that he was the teacher of St. Paul; but we are not told either the nature or the extent of the influence which he exercised upon the future apostle of the Gentiles. Gamaliel is rightly identified with an illustrious Jewish doctor of the Law, who bore the same name and died eighteen years before the destruction of Jerusalem. In the Talmud, this Gamaliel bears, like his grandfather Hillel, the surname of "the Elder", and is the first to whom the title "Rabban", "our master", was given. He appears therein, as in the book of the Acts, as a prominent member of the highest tribunal of the Jews. He is also treated as the originator of many legal ordinances; as the father of a son, whom he called Simeon, after his father's name, and of a daughter who married the priest Simon ben Nathanael. The Jewish accounts make him die a Pharisee, and state that: "When he died, the honour of the Torah (the law) ceased, and purity and piety became extinct." At an early date, ecclesiastical tradition has supposed that Gamaliel embraced the Christian Faith, and remained a member of the Sanhedrin for the purpose of helping secretly his fellow-Christians (cf. Recognitions of Clement, I, lxxv, lxxvi). According to Photius, he was baptized by St. Peter and St. John, together with his son and with Nicodemus. His body, miraculously discovered in the fifth century, is said to be preserved at Pisa, in Italy.

Talmud of Jerusalem; Photius, *Bibliotheca*, Cod. 171; Taylor, *The Sayings of the Jewish Fathers* (Cambridge, 1877); Fouard, *St. Peter* (tr., New York, 1893); Le Camus, *L'oeuvre des Apôtres*, I (Paris, 1905).

FRANCIS E. GIGOT

Jean Gamans

Jean Gamans

Born 8 July, 1606, at Ahrweiler (according to other sources at Neuenahr, about two miles from Ahrweiler; there does not appear to exist any documentary evidence to show that he was born at the little town of Eupen, as stated in the "Bibliothèque des écrivains de la Compagnie de Jésus"); d. at the College of Aschaffenburg near Frankfort, 25 Nov., 1684. He entered the Society of Jesus at Trier on 24 April, 1623, having studied the humanities for five years and philosophy for two years at Cologne, where he had received the degree of Master of Arts. After making his novitiate, he devoted several months to a revision of his philosophical studies, and subsequently, from 1626, spent five years teaching in the college of Wurzburg, conducting his pupils through the five classes

which comprised the complete course in humanities. He then studied theology for a year at Mainz (1631), after which, the houses of his province of the Upper Rhine being suppressed during the war with Sweden, he continued his theological studies for three years at Douai, where he was ordained priest on 26 March, 1633. These studies having come to an end in 1634, and being followed doubtless by the third year of probation, he discharged for several years the duties of chaplain to the land and naval troops in Belgium and Germany. We find him mentioned under this title (*Castrensis*) in the catalogue of the Flandro-Belgian province for 1641 as being attached to the professed house at Antwerp, where he made his profession of the four vows on 26 December of the same year. He lived here with the first two Bollandists, Jean Bolland and Godefroid Henschen, became inflamed with zeal for their work and was henceforth their assiduous collaborator, whithersoever his duty called him, but especially at Baden-Baden, where he resided for some time in order to direct the studies of the young princes of the House of Baden. He was undoubtedly there in 1641 and 1649. At the end of this latter year he resided in a missionary capacity at Ettlingen near Karlsruhe. Here we lose all sight of him until 1681, when he was attached to the College of Aschaffenburg near Frankfort, where he died 25 November, 1684.

For more than thirty years, it is stated in the death notice inserted in the Annual letters of the College of Aschaffenburg for that year, he was so immersed in the hagiographical researches which he had undertaken in behalf of his associates at Antwerp that he devoted to them even the hours of the night, taking only a short rest on the floor or a strip of matting. Indeed, his name occurs very often in the "Acta SS." at the head of documents transcribed by his hand, and even of commentaries written entirely by him (cf. "Bibl. des écriv. de la C. de J", sv. "Gamans"). A large number of papers of this description is to be found in the vast manuscript collection of the early Bollandists preserved at the Royal Library of Brussels and in the modern Bollandist library, although the largest part of his papers, dispatched to the Bollandists after his death, were engulfed in the Main, the vessel bearing the precious freight having unfortunately sunk. Gamans had also collected a mass of material for a "Metropolis Moguntina", which he wished to compose on the model of the "Metropolis Salisburgensis" published by Hund in 1582, and also for a history of the grand ducal House of Baden. As many as eight manuscripts of the latter work are known to exist, but no portion of it or of the "Metropolis Moguntina" has been printed.

CH. DE SMEDT

Gambling

Gambling

Gambling, or *gaming*, is the staking of money or other thing of value on the issue of a game of chance. It thus belongs to the class of aleatory contracts which the gain or loss of the parties depends on an uncertain event. It is not gambling, in the strict sense, if a bet is laid on the issue of a game of skill like billiards or football. The issue must depend on chance, as in dice, or partly on chance,

partly on skill, as in whist. Moreover, in ordinary parlance, a person who plays for small stakes to give zest to the game is not said to gamble; gambling connotes playing for high stakes.

In its moral aspect, although gambling usually has a bad meaning, yet we may apply to it what was said about betting. On certain conditions, and apart from excess or scandal, it is not sinful to stake money on the issue of a game of chance any more than it is sinful to insure one's property against risk, or deal in futures on the produce market. As I may make a free gift of my own property to another if I choose, so I may agree with another to hand over to him a sum of money if the issue of a game of cards is other than I expect, while he agrees to do the same in my favour in the contrary event.

Theologians commonly require four conditions so that gaming may not be illicit.

- What is staked must belong to the gambler and must be at his free disposal. It is wrong, therefore, for the lawyer to stake the money of his client, or for anyone to gamble with what is necessary for the maintenance of his wife and children.
- The gambler must act freely, without unjust compulsion.
- There must be no fraud in the transaction, although the usual ruses of the game may be allowed. It is unlawful, accordingly, to mark the cards, but it is permissible to conceal carefully from an opponent the number of trump cards one holds.
- Finally, there must be some sort of equality between the parties to make the contract equitable; it would be unfair for a combination of two expert whist players to take the money of a couple of mere novices at the game.

If any of these conditions be wanting, gambling becomes more or less wrong; and, besides, there is generally an element of danger in it which is quite sufficient to account for the bad name which it has. In most people gambling arouses keen excitement, and quickly develops into a passion which is difficult to control. If indulged in to excess it leads to loss of time, and usually of money; to an idle and useless life spent in the midst of bad company and unwholesome surroundings; and to scandal which is a source of sin and ruin to others. It panders to the craving for excitement and in many countries it has become so prevalent that it rivals drunkenness in its destructive effects on the lives of the people. It is obvious that the moral aspect of the question is not essentially different if for a game of chance is substituted a horse-race, a football or cricket match, or the price of stock or produce at some future date. Although the issue in these cases seldom depends upon chance, still the moral aspect of betting upon it is the same in so far as the issue is unknown or uncertain to the parties who make the contract. Time bargains, difference transactions, options, and other speculative dealings on the exchanges, which are so common nowadays, add to the malice of gambling special evils of their own. They lead to the disturbance of the natural prices of commodities and securities, do grave injury to producers and consumers of those commodities, and are frequently attended by such unlawful methods of influencing prices as the dissemination of false reports, cornering, and the fierce contests of "bulls" and "bears", i.e. of the dealers who wish respectively to raise or lower prices.

Hitherto we have prescind from positive law in our treatment of the question of gambling. It is, however, a matter on which both the civil and the canon law have much to say. In the United

States the subject lies outside the province of the Federal Government, but many of the States make gambling a penal offence when the bet is upon an election, a horse-race, or a game of chance. Betting contracts and securities given upon a bet are often made void. In England the Gaming Act, 1845, voids contracts made by way of gaming and wagering; and the Gaming Act, 1892, renders null and void any promise, express or implied, to pay any person any sum of money under, or in respect of, any contract or agreement rendered null and void by the Gaming Act, 1845, or to pay any sum of money by way of commission, fee, reward, or otherwise, in respect of any such contract or agreement, or of any services in relation thereto or in connection therewith.

From very early times gambling was forbidden by canon law. Two of the oldest (41, 42) among the so-called canons of the Apostles forbade games of chance under pain of excommunication to clergy and laity alike. The 79th canon of the Council of Elvira (306) decreed that one of the faithful who had been guilty of gambling might be, on amendment, restored to communion after the lapse of a year. A homily (the famous "De Aleatoribus") long ascribed by St. Cyprian, but by modern scholars variously attributed to Popes Victor I, Callistus I, and Melchiades, and which undoubtedly is a very early and interesting monument of Christian antiquity, is a vigorous denunciation of gambling. The Fourth Lateran Council (1215), by a decree subsequently inserted in the "Corpus Juris", forbade clerics to play or to be present at games of chance. Some authorities, such as Aubespine, have attempted to explain the severity of the ancient canons against gambling by supposing that idolatry was often connected with it in practice. The pieces that were played with were small-sized idols, or images of the gods, which were invoked by the players for good luck. However, as Benedict XIV remarks, this can hardly be true, as in that case the penalties would have been still more severe.

Profane writers of antiquity are almost as severe in their condemnation of gambling as are the councils of the Christian Church. Tacitus and Ammianus Marcellinus tell us that by gambling men are led into fraud, cheating, lying, perjury, theft, and other enormities; while Peter of Blois says that dice is the mother of perjury, theft, and sacrilege. The old canonists and theologians remark that although the canons generally mention only dice by name, yet under this appellation must be understood all games of chance; and even those that require skill, if they are played for money.

The Council of Trent contented itself with ordering all the ancient canons on the subject to be observed, and in general prescribed that the clergy were to abstain from unlawful games. As Benedict XIV remarks, it was left to the judgment of the bishops to decide what games should be held to be unlawful according to the different circumstances of person, place, and time. St. Charles Borromeo, in the first Synod of Milan, put the Tridentine decree into execution, and drew up a list of games which were forbidden to the clergy, and another list of those that were allowed. Among those which he forbade were not only dicing in various forms, but also games something like our croquet and football. Other particular councils declared that playing at dice and cards was unbecoming and forbidden to clerics, and in general they forbade all games which were unbecoming to the clerical state. Thus, a council held at Bordeaux in 1583 decreed that the clergy were to abstain altogether from playing in public or in private at dice, cards, or any other forbidden and unbecoming game.

The council held at Aix in 1585 forbade them to play at cards, dice or any other game of the like kind, and even to look on at the playing of such games. Another, held at Narbonne in 1609, decreed that clerics were not to play at dice, cards, or other unlawful and unbecoming games, especially in public.

There was some doubt as to whether chess was to be considered an unbecoming, and therefore, an unlawful, game for clerics. In the opinion of St. Peter Damian it was certainly unlawful. On one occasion he caught the Bishop of Florence playing chess, to while away the time when on a journey. The bishop tried to defend himself by saying that chess was not dice. The saint, however, refused to admit the distinction, especially as the bishop was playing in public. Scripture, he said, does not make express mention of chess, but it is comprised under the term *dice*. And Baronius defends the saint's doctrine. Some sciolist, he remarks, may say that St. Peter Damian was under a delusion in classing chess under dice, since chess is not a game of chance but calls for the exercise of much skill and talent. Let that be as it may, he proceeds, priests must at any rate be guided in their conduct by the words of St. Paul, who declared that what is not expedient, what is not edifying, is not allowed.

Modern ecclesiastical law is less exacting in this matter. The provincial Councils of Westminster are content with prescribing that clerics must abstain from unlawful games. The Plenary Council of Maynooth, held in 1900, says that since not a little time is occasionally lost, and idleness is fostered by playing cards, the priest should be on his guard against such games, especially where money is staked, lest he incur the reproach of being a gambler. He is also exhorted to deter the laity by word and example from betting at horse-races, especially when the stakes are high. The Second Plenary Council of Baltimore made a distinction between games which may not suitably be indulged in by a cleric, even when played in private, and games like cards which may be played for the sake of innocent recreation. It repeated the prohibition of the First Plenary Council of Baltimore that clerics are not to indulge in unlawful games, and only in moderation are to use those that are lawful, so as not to cause scandal. Nowadays, it is commonly held that positive ecclesiastical law only forbids games of chance, even to the clergy, when in themselves or for some extrinsic reason, such as loss of time or scandal, they are forbidden by the natural law.

T. SLATER

Pius Bonifacius Gams

Pius Bonifacius Gams

An ecclesiastical historian, b. at Mittelbuch, Württemberg, 23 January, 1816; d. Munich, 11 May, 1892. His classical studies made at Biberach and Rottweil (1826-1834), he studied philosophy and theology at Tübingen (1834-38), entered the seminary of Rottenburg in 1838, and was ordained priest on 11 September, 1839. He filled various posts as tutor, vicar, parish priest, professor until 1 May, 1847, when he was appointed chairs of philosophy and general history by the theological faculty of Hildesheim. Finally he entered the Abbey of St. Boniface at Munich, which belonged to the Bavarian congregation of the Order of St. Benedict, and pronounced the monastic vows, 5 October, 1856, adding the name of Pius to that of Boniface. Gams filled several monastic offices, being successively master of novices, sub-prior, and prior. He is best known for his "Kirchengeschichte von Spanien", 3 vols. (Ratisbon, 1862-1879), and his "Series episcoporum Ecclesiae catholicae quotquot innotuerunt a beato Petro apostolo" etc. (Ratisbon, 1873-86, with two supplements). The "Kirchengeschichte von Spanien" is a conscientiously and methodically written work, critical, also, to a certain extent, in dealing with the earliest period of Spanish ecclesiastical history, though the author rarely abandons the aid which unreliable sources seem to furnish. The "Series episcoporum" has rendered useful service and is yet very helpful. It is a collection of the episcopal lists of all ancient and modern sees known to the author. Gaps are frequent in the lists of ancient sees, especially those of the Eastern Church. It was, of course, impossible to draw up a critical list (names and dates) for such remote times and larger information must be sought in extensive documentary works, e. g. "Italia Sacra" and the like; as a rule, however, the author has ignored a number of scattered dissertations which would have rectified, on a multitude of points, his uncertain chronology. In 1850 Gams founded with his colleagues Alzog, F. W. Koch, Mattes, and G.J. Müller a "Theologische Monatschrift" which lasted two years (1850-1851), and in which he published a number of essays.

Works

"Geschichte der Kirche Jesu Christi im neunzehnten Jahrhunderte mit besonderer Rücksicht auf Deutschland"; 3 vols. (Innsbruck, 1854-1858); "Johannes der Tauffer im Gefangnisse" (Tübingen, 1853); "Die elfte Saccularfeier des Martyrertodes des heiligen Bonifacius", etc. (Mainz, 1855); "Die Kirchengeschichte von Spanien", 3 vols, in five parts (Ratisbon 1862-79); "Spanische Briefe" in "Historisch-politische Blätter", LVI, 134 sq., 208 sq., 311 sq., 418 sq., "Wetterleuchten auf der pyrenaischen Halbinsel", *ibid*, LVI, 67 sq; "Series episcoporum Ecclesiae catholicae quotquot innotuerunt a beato Petro apostolo" (Ratisbon, 1873) supp I: "Hierarchia catholica Pio IX Pontifice Romano" (Munich, 1879), Supp. II: "Series episcoporum quae apparuit 1873 completur et continuatur ab anno circa 1870 ad 20 Febr. 1885" (Ratisbon, 1886); "Das Jahre des Martyrertodes der Apostel Petrus und Paulus" (Ratisbon, 1867).

H. LECLERCQ

Peter Gandolphy

Peter Gandolphy

(Or Gandolphi.)

Jesuit preacher; b. in London, 26 July, 1779; d. at East Sheen, Surrey, 9 July, 1821; son of John Vincent Gandolphi of East Sheen, and grandson of Count Pietro Gandolphi, of the ancient nobility of Genoa. Father Gandolphi's brother, John Vincent, married Teresa, eldest daughter of Thomas Hornyold, of Blackmore and Hanley. His only son succeeded to the Blackmore estates and assumed the name of Hornyold by Royal license in 1859. Hornyold was an ancient Catholic family in Worcestershire, and Blackmore Park (recent pulled down) was a fine example of an old English manor house, with numerous priests' hiding places. The present representative of the family, Alphonso Otto Gandolfi Hornyold, bears the title of Duke Gandolfi (a papal creation of 1899) as well as the old Genoese titles.

Father Gandolphi was educated in the Jesuit College at Liège, and also at Stonyhurst, where he was appointed as teacher of humanities in 1801. He was ordained priest about 1804, and his first charge was at Newport, Isle of Wight. He was then transferred to the Spanish chapel at Manchester Square, London (now known as St. James's, Spanish Place) where he soon attained great fame as a preacher; and as a worker among Protestants he made many converts. His methods, however, were somewhat infelicitous, and speedily incurred the censure of his ordinary, Bishop Poynter. It appears he wrote too speedily to be theologically exact, but there were certainly no heretical principles in his mind. Nevertheless it seems strange to read of a Catholic manual entitled the "Book of Common Prayer . . . for the use of all Christians in the United Kingdom" which he brought out in 1812. On account of this, and of his "Sermons in defense of the Ancient Faith", Bishop Poynter felt it his duty to suspend him, and to denounce the offending works. Gandolphi went to Rome in person to defend himself, and in 1816 he obtained official approbation for the two censured works from S. P. Damiani, master of theology and Apostolic penitentiary at St. Peter's, and F.J. O'Finan, prior of the Dominican convent of St. Sixtus and St. Clement. The Congregation of Propaganda, being anxious for a peaceable settlement of this unfortunate affair, required (1 March, 1817) that Gandolphi should be restored on his apologizing to Bishop Poynter for any unintentional disrespect which might have occurred in his address to the public, of which address also the bishop had complained. On 15 April Gandolphi accordingly wrote an apology, but the bishop in a pastoral letter on 24 April stated that the apology was inadequate, so at last on 8 July, Gandolphi made an unreserved apology; but this long drawn out public humiliation was too much for him. He resigned his post in 1818 and retired to his family home at East Sheen, where he died in a year or two. His principal works were: "A Defense of the Ancient Faith" (London, 1813-14); "Liturgy, or a Book of Common Prayer, and Administration of Sacraments, with other Rites and Ceremonies of the Church. For the use of all Christians in the United Kingdom" (London, 1812, Birmingham, 1815); "Lessons of Morality and Piety, extracted from the Sapiential Books" (London, 1822); and a number of controversial letters and sermons.

C.F. WEMYSS BROWN

Gangra

Gangra

A titular see in the province of Paphlagonia; in the native tongue the word signifies goat, and even now large numbers of goats are seen in this region. It belonged originally to Galatia, and was then the capital of King Dejotarus, the adversary of Mithridates, and the friend of the Romans. Later the city became the metropolis of Paphlagonia. It never had more than five suffragan sees. Le Quien (I, 549-554) mentions twenty-two of its archbishops from the fourth to the twelfth century, none of whom is especially noteworthy. The metropolitan see must have been suppressed in the fourteenth century after the conquest of the country by the Turks. Captured by the Tamerland, in 1402, it was recaptured, in 1423, by Sultan Murad II; since that time it has always been Turkish. The most memorable event of its Christian history is the council held there, probably in 343, to condemn Eustathius of Armenia and his exaggerated asceticism. More than twenty canons of this council defend the legitimacy of Christian marriage against the indiscretions of Eustathius and especially of his disciples (Hefele-Leclercq, *Histoire des conciles*, Paris, 1907, I (2), 1029-45). It is now known as Tchiangre, and is a sandjak of the vilayet of Castamouni. It is situated at the foot of Mt. Olgassus and numbers 16,000 inhabitants, 800 of whom are Greeks and 500 Armenians, all schismatics. The ancient cathedral of St. Demetrius has been converted into a mosque.

S. VAILHÉ

Diocese of Gap

Gap

(VAPINCENSIS).

Diocese; suffragan of Aix, includes the department of the Hautes-Alpes. Suppressed by the Concordat of 1801 and then united to Digne, this diocese was re-established in 1822 and comprises, besides the ancient Diocese of Gap, a large part of the ancient Diocese of Embrun. The name of this last metropolitan see, however, has been absorbed in the title of the Archbishop of Aix.

DIOCESE OF GAP

Ancient traditions in liturgical books, of which at least one dates from the fourteenth century, state that the first Bishop of Gap was St. Demetrius, disciple of the Apostles and martyrs. Father Victor de Buck in the *Acta Sanctorum* (October, XI) finds nothing inadmissible in these traditions, while Canon Albanès defends them against M. Roman. Albanès names as bishops of Gap the martyr St. Tigris (fourth century), then St. Remedius (394-419), whom the Abbé Duchesne makes a Bishop of Antibes and who was involved in the struggle between Pope Zosimus and Bishop Proculus of Marseilles, finally St. Constantinus, about 439. According to Duchesne the first historically known

bishop is Constantinus, present at the Council of Epaone in 517. The church of Gap had, among other bishops, St. Aregius (or Arey, 579-610?), who established at Gap a celebrated literary school and was held in great esteem by St. Gregory the Great; also St. Arnoude (1065-1078), a monk of Trinité de Vendôme, named bishop by Alexander II to replace the simoniac Ripert, and who became the patron of the episcopal city.

ARCHDIOCESE OF EMBRUN

The Archdiocese of Embrun had as suffragans, Digne, Antibes and Grasse, Vence, Glandèves, Senez, and Nice. Tradition ascribes the evangelization of Embrun to Sts. Nazarius and Celsus, martyrs under Nero. The first bishop was St. Marcellinus (354-74). Other bishops of Embrun were St. Albinus (400-37); St. Palladius (first half of the sixth century); St. Eutherius (middle of the seventh century); St. James (eighth century); St. Alphonsus (eighth century); St. Marcellus (end of the eighth century), whom Charlemagne sent to evangelize Saxony; St. Bernard (805-25), under whose episcopate Charlemagne enriched the Diocese of Embrun; St. Benedict (beginning of the tenth century), martyred by the Saracen invaders; St. Liberalis (920-40); St. Hismide (1027-45); St. Guillaume (1120-34), founder of the celebrated Abbey of Boscodon; St. Bernard Chabert (1213-35), Henry of Segusio (1250-71), known as Ostiensis, i.e. Cardinal-Bishop of Ostia, an orator and canonist of renown; the Dominican Raimond of Mévolhon (1289-94), who defended the doctrine of St. Thomas against the attacks of English theologians; Bertrand of Deaux (1323-38), who as the legate of Clement VI at Rome did much to bring about the downfall of Rienzi; Jacques Gelu (1427-32), one of the first prelates to recognize the supernatural vocation of Joan of Arc; Giulio de' Medici (1510-11), later pope under the name of Clement VII; Cardinal François de Tournon (1517-26), employed on diplomatic missions by Francis I, and founder of the College de Tournon; Cardinal de Tencin (1724-40), who in September, 1727, caused the condemnation by the Council of Embrun of the Jansenist Soanen, Bishop of his suffragan See of Senez. St. Vincent Ferrer preached several missions against the Vaudois in the Diocese of Embrun. Besides the bishops named the following are honored as saints in the present Diocese of Gap: Vincent, Orontius, and Victor, martyrs in Spain in the fourth century, the anchorite Veranus (sixth century), afterwards Bishop of Cavaillon, and the anchorite St. Donatus (sixth century).

The Diocese of Gap possesses two noted places of pilgrimage, Notre-Dame d'Embrun at Embrun, where Charlemagne erected a basilica, visited by Pope Leo III and Kings Henry II and Louis XVIII. Louis XI was wont to wear in his cap a leaden image of Notre-Dame d'Embrun. The other is that of Notre-Dame du Laus, where during fifty-four years (1664-1718) the blessed Virgin. appeared "an incalculable number of times" to a shepherdess, Venerable Benoite Rencurel. Three orders of women had their origin in the diocese. The Sisters of Providence, a teaching and nursing order, established in 1823 from the Sisters of Portieux (Vosges) and after 1837 an independent congregation; the Sisters of Saint Joseph, founded in 1837 for teaching and nursing; the Sisters of the Sacred Heart of Mary, founded in 1835 for teaching. The Diocese of Gap, numbering 109,510 inhabitants, had in 1906 at the cessation of the Concordat, 26 parishes, 218 missions, and 15 curacies,

paid by the state. During the Middle Ages there were in the mountainous region which forms the present diocese more than seventy hospitals, *maladreries*, lazarettoes, or houses of refuge, administered by two congregations of the vicinity, the Brothers of La Madeleine and the Brothers of Holy Penitence. About half of these asylums disappeared during the religious wars of the sixteenth century. The others with the exception of half a score were suppressed by royal command about 1690, and their goods given to the large hospitals of Gap, Embrun, and Briangon. In 1900, before the Law of Associations was enforced, there were in the Diocese of Gap five maternity hospitals, a school for deaf mutes, one orphanage for boys and two for girls, seven hospitals or asylums, two institutions for the care of the sick in their homes, all under the direction of religious orders.

GEORGES GOYAU

Anne Garcia

Anne García

Better known as Venerable Anne of St. Bartholomew, Discalced Carmelite nun, companion of St. Teresa; b. at Almendral, Old Castile, 1 Oct. 1550; d. at Antwerp, 7 June, 1626. She was of humble origin and spent her youth in solitude and prayer tending the flocks. When she first went to Avila to enter the Carmelite convent, she was refused, being too young; for several years after, she suffered much at the hands of her brothers. Finally, overcoming all obstacles, she entered the convent as lay sister and made her vows on 15 August, 1572. For the next ten years she filled the post of infirmarian; her spirit of prayer and humility endeared her to St. Teresa, whose almost inseparable companion and secretary she now became. St. Teresa died in her arms at Alba de Tormes in 1582. Anne afterwards returned to Avila, took part in the foundation of a convent at Ocana (1595), and was one of the seven nuns selected for the introduction of the order into France (October, 1604). The French superiors, desirous of sending her as prioress to Pontoise, obliged her to pass from the state of lay sister to that of choir sister. So unusual a step met with the disapproval of her companions, but as St. Teresa had foretold it many years previously Anne offered no resistance. She had also been forewarned that the same step would cause her great sufferings, and indeed her priorship at Pontoise (January to September, 1605), Paris (October, 1605, to April, 1608), Tours May, 1608, to 1611) brought her heavy trials, not the least of which were differences with her superiors. At the expiration of her last term of office she returned to Paris, but warned by a vision, she proceeded to Belgium (October, 1611), where she founded and became prioress of a convent at Antwerp (27 Oct., 1612), which she governed to the end of her life. Twice she was

instrumental in delivering the town from the hands of the enemy. In 1735, Anne of St. Bartholomew was declared Venerable; her process of beatification is not yet completed. Her writings include a number of letters still preserved, an autobiography now at Antwerp, edited by M. Bouix (Paris, 1869-72), and several treatises on spiritual matters, which appeared at Paris in 1646.

ENRIQUEZ, *Historia de la Vida etc.* (Brussels, 1632, Fr. tr. at Paris, 1633); *La Vie et les instructions de la Ven. Mere Anne de S. Barthelemy, par un solitaire de Montaigne* (Brussels, 1708; new ed., Paris, 1895).

B. ZIMMERMAN

St. Gonsalo Garcia

St. Gonsalo Garcia

Born of a Portuguese father and a Canarese mother in Bassein, East India, about the year 1556 or 1557; d. 5 Feb., 1597. His early training was entrusted to the Jesuits, who brought him up in their college in Bassein Fort. At the age of twenty-four or twenty-five he went to Japan in the company of some Jesuit Fathers who were ordered, in 1580, to leave Bassein, and join their mission in the former country. He quickly acquired a knowledge of the language; and as he was of an amiable disposition he won the hearts of the people and did great service as a catechist for eight years. He then left this kind of work and betook himself to Alacao for trading purposes. His business soon flourished and branches were opened in different places. During his frequent visits to Manila he made the acquaintance of the Franciscans, and being drawn more and more towards them he finally joined the Seraphic Order as a lay brother. He sailed from the Philippine Islands with other companions in religion under Petrus Baptista, 26 May, 1592, on an embassy from the Spanish Governor to the Emperor of Japan. After working zealously for the glory of God for more than four years, the Emperor Taiko-Sama, suspecting the missionaries were aiming at the overthrow of his throne, ordered St. Garcia and his companions to be guarded in their Convent at Miaco on 8 December, 1596. A few days afterwards, when they were singing vespers, they were apprehended and with their hands tied behind their backs were taken to prison. On 3 January, 1597, the extremities of the left ears of twenty-six confessors, St. Garcia amongst the number, were cut off; but were with great respect collected by the Christians. On 5 February of the same year, the day of the martyrdom, St. Garcia was the first to be extended on, and nailed to, the cross, which was then erected in the middle of those of his companions. Two lances piercing the body from one side to the other and passing through the heart, whilst the saint was singing the praises of God during the infliction of the torture, put an end to his sufferings and won for Garcia the martyr's crown. In 1627 these twenty-six servants of God were declared venerable by Urban VIII; their feast occurs on 5 February, the anniversary of their sufferings; and in 1629 their veneration was permitted throughout the Universal Church. The people of Bassein practiced devotion towards the saint; after the severe persecution to which Christianity was subjected in that region, from about 1739 he was gradually entirely forgotten until a well-known writer recently undertook to write the history of the place,

and drew the attention of the public to St. Garcia Gonsalo. Owing to the praiseworthy endeavors of a secular priest, and the great interest evinced by the present Bishop of Damaun in the promotion of the devotion towards the saint, the feast of St. Garcia is now annually celebrated with great solemnity; and pilgrims from all parts of Bassein, Salsette, and Bombay flock to the place on that occasion.

The Bull of Canonization; Bibliotheca Historica Filipina; Supplement to RIBADENEIRA, History of the Eastern Archipelago; GUERIN, Lives of the Saints; FERNANDES, Life of Saint Gonsalo Garcia; DE MONTE ALVERNE, Panegyric on St. Gonsalo Garcia; Bombay Catholic Examiner for 1903, 1904; O Anglo Lusitano for 1903, 1904.

MANOEL D'SÁ

Gabriel Garcia Moreno

Gabriel García Moreno

Ecuadorean patriot and statesman; b. at Guayaquil, 24 December, 1821; assassinated at Quito, 6 August, 1875. His father, Gabriel García Gomez, a native of Villaverde, in Old Castile, had been engaged in commerce at Callao before removing to Guayaquil, where he married Dona Mercedes Moreno, the mother of the future Ecuadorean martyr president. Gabriel García Gomez died while his son was still young, and the boy's education was left to the care of his mother, who appears to have been a woman of unusual ability for her task; she was, moreover, fortunate in securing as her son's tutor Fray Jose Betancourt, the famous Mercedarian, under whose tuition young García Moreno made rapid progress. A great part of his father's fortune having been lost, it was not without some considerable sacrifices that the youth was able to attend the university course at Quito. These material obstacles once overcome, he passed brilliantly through the schools, distancing all his contemporaries, and on 26 October, 1844, received his degree in the faculty of law (*Doctor en Jurisprudencia*) from the University of Quito.

In less than a year after his graduation young García Moreno had begun to take an active part in Ecuadorean politics, joining in the revolutionary movement which eventually replaced the Flores administration by that of Roca (1846). He soon distinguished himself as a political satirist by contributions to "El Zurriago", but what more truly presaged the achievements of his riper life was his good and useful work as a member of the municipal council of Quito. At the same time he was studying legal practice, and on 30 March, 1848, was admitted advocate. Immediately after this the deposed Flores, supported by the Spanish government, made an attempt to regain the presidency of Ecuador; García Moreno unhesitatingly came forward in support of the Roca administration, and when that administration fell, in 1849, he entered upon his first period of exile. After some months spent in Europe he returned to his native republic in the employ of a mercantile concern, and it was then that he took the first decisive step which marked him conspicuously for the enmity of the anti-Catholics, or, as they preferred to call themselves, the Liberals. At Panama he had fallen in with a party of Jesuits who had been expelled from the Republic of New Granada and wished

to find asylum in Ecuador. García Moreno constituted himself the protector of these religious, and they sailed with him for Guayaquil; but on the same vessel that carried the Jesuits and their champion, an envoy from New Granada also took passage for the express purpose of bringing diplomatic influence to bear with the dictator, Diego Noboa, to secure their exclusion from Ecuadorean territory. No sooner had the vessel entered the harbour of Guayaquil than García Moreno, slipping into a shore boat, succeeded in landing some time before the New Granadan envoy; the necessary permission was acquired from the Ecuadorean government, and the Jesuits obtained a foothold in that country. How soon the report of this exploit spread among the anti-Catholics of South America was evidenced by the fact that within a year Jacobo Sánchez, a New Granadan, had attacked García Moreno in the pamphlet "Don Felix Frias en Paris y los Jesuitas en el Ecuador", to which García Moreno's reply was an able "Defensa de los Jesuitas".

In 1853 he began to publish "La Nación", a periodical which, according to its prospectus, was intended to combat the then existing tendency of the government to exploit the masses for the material benefit of those who happened to be in power. At the same time García Moreno's programme aimed distinctly and professedly to defend the religion of the people. He was already known as a friend of the Jesuits; he now assumed the role of friend of the common people, to which he adhered sincerely and consistently to the day of his death. The Urbina faction, then in power, were quick to recognize the importance of "La Nación", which was suppressed before the appearance of its third number, and its proprietor was exiled, for the second time. Having been, meanwhile, elected senator by his native province of Guayaquil, he was prevented from taking his seat, on the ground that he had returned to Quito without a passport. After a sojourn at Paita, García Moreno once more visited Europe. He was now thirty-three years of age, and his experience of political life in Ecuador had deeply convinced him of his people's need of enlightenment. It was undoubtedly with this conviction as his guide and incentive that he spent a year or more in Paris, foregoing every form of pleasure, a severe, indefatigable student not only of political science, but also of the higher mathematics, of chemistry, and of the French public school system. On his return home, under a general amnesty in 1850, he became rector of the central University of Quito; a position of which he availed himself to commence lectures of his own in physical science. Next year he was active in the senate in opposition to the Masonic party, which had gained control of the government, while at the same time he persistently and forcibly, though unsuccessfully, struggled for the passage of a law establishing a system of public education modelled on that of France. In 1858 he once more established a paper, "La Union Nacional", which became obnoxious to the government by its fearless exposure of corruption and its opposition to the arbitrary employment of authority; and once more a political crisis ensued.

García Moreno was on principle an advocate of orderly processes of government, and that his professions in this regard were sincere his subsequent career fairly demonstrated, but at this juncture he was obliged to realize that his country was in the grip of a corrupt oligarchy, bent upon the suppression of the Church to which the whole mass of his fellow countrymen were devoted, and disposed to keep the masses in ignorance so as to sway them the more easily to its own ends. He

had, years before, attacked "the revolutionary industry", a phrase probably first used by him, in the prospectus of "La Nación"; it now became necessary for him to descend to revolutionary methods. Besides, the little Republic of Ecuador was at this time menaced by its more powerful neighbour on the south, Peru. García Moreno, if he was sure of opposition at the hands of the soi-disant Liberals, was also, by this time, recognized by the masses as a leader loyal to both their common Faith and their common country, and thus he was able to organize the revolution which made him head of a provisional government established at Quito. The republic was now divided, General Franco being at the head of a rival government established at Guayaquil. In vain did García Moreno offer to share his authority with his rival for the sake of national unity. As a defensive measure against the threat of Peruvian invasion, García Moreno entered into negotiations with the French envoy with a view to securing the protection of France, a political mistake of which his enemies knew how to avail themselves to the utmost. He was now obliged to assume the character of a military leader, for which he possessed at least the qualifications of personal courage and decisive quickness of resolution. While García Moreno inflicted one defeat after another upon the partisans of Franco, the latter, as representing Ecuador, had concluded with Peru the treaty of Mapasingue. The people of Ecuador rose in indignation at the concessions made in this treaty, and Franco, even his own followers being alienated, was defeated at Babahoya (7 August, 1860) and again at Salado River, where he was driven to take refuge on a Peruvian vessel. When his adversary had been forcibly driven from the country, García Moreno showed his magnanimity in the proclamation in which he sought to heal as quickly as possible the scars of this civil war: "The republic should regard itself as one family; the old demarcations of districts must be so obliterated as to render sectional ambitions impossible". In the reorganization of the Constituent Assembly, which was summoned to meet in January, 1861, he insisted that the suffrage should not be territorial, but "direct and universal, under the necessary guarantees of intelligence and morality, and the number of representatives should correspond (proportionally) to that of the electors represented". The Convention, which met on 10 January, elected García Moreno president; he delivered his inaugural address on the 2d of April following. Then began that series of reforms among which were the restitution of the rights of the Church and a radical reconstruction of the fiscal system. In the immediate present he had to deal with the machinations of his old adversary Urbina, who, from his retirement in Peru, kept up incessant intrigues with the opposition at home, and still more with the governments of neighbouring republics. García Moreno soon came to a sensible and honourable understanding with the Peruvian government.

A violation of Ecuadorean territory by New Granada, though it led to a hostile collision in which García Moreno himself took part, had no serious consequences until the Arboledo administration gave place to that of General Mosquera, whose ambition it was to make New Granada the nucleus of a great "Colombian Confederation", in which Ecuador was to be included. Urbina was not above writing encouraging letters to the New Granadan or Colombian dictator who was scheming against the independence of Ecuador. An invitation to García Moreno to confer with Mosquera elicited a very plain intimation that, so far as the national obliteration of Ecuador was

concerned, there was nothing to confer about. But in the meantime the Republic of Ecuador had ratified a concordat with Pope Pius IX (1862), and the discontent of the Regalista party at home with the provisions of that instrument gave Mosquera an excellent pretext for encroaching upon his neighbour's rights. The Regalistas were, without knowing it, a kind of Erastians, who claimed the appointment to ecclesiastical benefices as an inalienable right of the civil power. The President of Ecuador was charged with "casting Colombia, manacled, at the feet of Rome"; Urbina issued "manifestos" from Peru in the sense of "South America for the South Americans"; while the proclamation of President Mosquera recited, with others which seem to have been introduced merely for the sake of appearances, his three really significant grounds of complaint against García Moreno: that the latter had ratified the concordat; that he maintained a representative of the Holy See at Quito; that he had brought Jesuits into Ecuador. It may be remarked here, in passing, that if Mosquera had added to this catalogue of offences those of insisting upon free primary education for the masses, upon strict auditing of the public accounts, and a considerable bona fide outlay upon roads and other public utilities, his proclamation might have served adequately as the indictment upon which García Moreno was condemned and eventually put to death by those whom Pius IX ironically called "the valiant sectaries".

Mosquera was determined to have war, and all the efforts of the Ecuadorean government were of no avail to prevent it. At the battle of Cuaspud all but two battalions of the forces of Ecuador fled ignominiously. It is a matter for wonder, considering the grounds upon which he had declared war, that Mosquera, in the Peace of Pinsaquí, which followed this victory, should have left the Concordat of 1862, the delegate Apostolic, and the Jesuits just as they were. In March, 1863, García Moreno tendered his resignation to the National Assembly, who insisted upon his remaining in office until the expiration of his term. Nevertheless he had to face, during the next two years, repeated seditions and filibustering raids. After sparing the lives of the leaders in one of these movements, though they had by all law and custom incurred the penalty of death, he was severely criticized for ordering the execution of another such when it had become evident that an example was necessary for the peace of the republic. In a naval battle at Jambelí (27 June, 1865) at which García Moreno was personally present, the defeat of the Urbina forces was complete, and tranquillity reigned until the presidential term expired on the 27th of the following August.

In the following year began what may be considered as a connected series of attempts which terminated, nine years later, in the assassination of García Moreno. The dispute between Spain and Peru over the Chinchas Islands had led to a war in which, following García Moreno's advice, his successor Jeronimo Carrión had cast in the lot of Ecuador with that of the sister republic and its then ally, Chile. The ex-president was sent as minister plenipotentiary to Chile, with a commission to transact business with President Prado of Peru on his way. On his arrival at Lima an attempt was made to assassinate him, but it ended in the death of his assailant. His diplomatic mission resulted excellently for the friendly relations between Ecuador and its neighbours; the sojourn at Santiago also inspired García Moreno with a high admiration for Chile, and he even made up his mind to attempt a change of the Ecuadorean constitution so as to make it more like that of Chile, a project

which he carried into effect in the National Convention of 1869. On his return to Ecuador he found himself a second time in the uncongenial position of leader of a revolution. To anticipate a plot which the Liberals, led by one of Urbina's relations, were known to be forming, the conservatives of Ecuador had risen, declared Carrión deposed, and made García Moreno head of the provisional government. The justice of the grounds on which this extreme action was taken was established by the attempt of Veintemilla, at Guayaquil, only two months later, in March, 1869.

Having been duly confirmed as president *ad interim* by the National Convention of May, 1869, García Moreno resumed his work for the enlightenment, as well as the religious well-being, of his people. It was in these last years of his life that he did so much for the teaching of physical sciences in the university by introducing there the German Fathers of the Society of Jesus. The medical schools and hospitals of the capital benefited vastly by his intelligent and zealous efforts. In September, 1870, the troops of Victor Emmanuel occupied Rome; and on 18 January, 1871, García Moreno, alone of all the rulers of the world, addressed a protest to the King of Italy on the spoliation of the Holy See. The pope marked his appreciation of this outburst of loyalty by conferring on the President of Ecuador the decoration of the First Class of the Order of Pius IX, with a Brief of commendation dated, 27 March, 1871. It was, on the other hand, notorious that certain lodges had formally decreed the death of García Moreno, who, in a letter to the pope, used about this time the following almost prophetic words: "What riches for me, Most Holy Father, to be hated and calumniated for my love for our Divine Redeemer! What happiness if your benediction should obtain for me from Heaven the grace of shedding my blood for Him, who being God, was willing to shed His blood for us upon the Cross!" The object of numberless plots against his life, García Moreno pursued his way with unruffled confidence in the future -- his own and his country's. "The enemies of God and the Church can kill me", he once said, "but God does not die" (*Dios no muere*).

He had been re-elected president, and would soon have entered upon another term of office, when, towards the end of July, 1875, the police of Quito were apprised that a party of assassins had begun to dog García Moreno's footsteps. When, however, the chief of police warned the intended victim, the latter so discouraged all attempts to hedge him about with precautions, as to almost excuse the carelessness of his official guardians. It came out in evidence that within the fortnight preceding the finally successful attempt, the same assassins had at least twice been foiled by the president's failing to appear on occasions when he had been expected. Finally, on the evening of 6 August, the assassins found their prey unprotected, leaving the house of some very dear friends; they followed him until he had reached the Treasury, and there Faustino Rayo, the leader of the band, suddenly attacked him with a machete, inflicting six or seven wounds, while the other three assisted in the work with their revolvers. On hearing of the death of García Moreno, Pope Pius IX ordered a solemn Mass of Requiem to be celebrated in the Church of Santa Maria in Trastevere. The same sovereign pontiff erected to his memory, in the Collegio Pio-Latino, at Rome, a monument on which García Moreno is designated:

Religionis integerrimus custos
Auctor studiorum optimorum

Obsequentissimus in Petri sedem
Justitiae cultor; scelerum vindex.

The materials for this article have been derived from a biography, now extremely rare, written by a personal friend and political associate of García Moreno, HERRERA, *Apuntes sobre la Vida de García Moreno*. E. MACPHERSON

Garcilasso de la Vega (1503-1536)

Garcilasso de la Vega

Spanish lyric poet; b. at Toledo, 6 Feb., 1503; d. at Nice, 14 Oct., 1536. A noble and a soldier, he spent much time in Italy during the campaigns of Charles V, whose entire confidence he enjoyed. For a brief space (1531-2), he lost the imperial favour in consequence of his connivance at the marriage of his nephew with a royal ward contrary to the emperor's wishes, and was imprisoned on an island in the Danube. When liberated, he entered the service of the Spanish viceroy at Naples, shared in the expedition which, in 1535, Charles directed against Tunis, and in the following year met his death while leading an attack upon a castle in Southern France at the command of his master. In the history of Spanish literature Garcilasso occupies a prominent place because of the part which he played, along with Boscan, in naturalizing the Italian verse-forms in Spanish. To him is due no little credit for the skill with which he transplanted, even excelling his older comrade Boscan, the Italian sonnet with its hendecasyllable, the canzone, the terza rima, and other forms. The bulk of his poetry as preserved is not great. In the first edition, which was printed by Boscan's widow at the end of the volume containing the first edition of her husband's compositions, it embraces, besides some early villancicos in the older and native Spanish manner, three eglogas, two elegias, an epistola in blank verse, five canciones, which are rather complicated in their structure, and thirty-seven or thirty-eight sonnets. Although he passed his life in the camp, he hardly reflects at all in his poetry the martial spirit that actuated him; the pastoral note with its gentle melancholy is most persistent in his strains. As he was well acquainted with the Italian poets of the Renaissance, he does not fail to echo here and there some of their best passages, and reminiscences of Tansillo, Sannazzaro, and Bernardo Tasso are easily found in his work. Of the ancients, Horace had much to do with the development of his graceful poetic manner.

J.D.M. FORD

Garcilasso de la Vega (1503-1536)

Garcilasso de la Vega (the Inca)

Historian of Peru; b. at Cuzco, Peru, 12 April, 1539; d. at Córdoba, Spain, c. 1617. The name Garcilasso is a corruption of García Laso, his real name. The historian's father was the Spanish conqueror, Sebastian Garcilasso de la Vega y Vargas, who was born at Badajoz, Spain, and died

at Cuzco, 1559. The elder Garcilasso had served in Mexico under Hernán Cortez, in Guatemala under Deigo de Alvarado, and in Peru under Francisco Pizarro. In 1548, he had been named Governor of Cuzco, where, unlike others of the conquerors, he had done much to better the condition of the natives. Earlier in life, he had married an Inca princess, the historian's mother. He died in 1559, while still Governor of Cuzco, being one of the very few Spanish conquerors of Peru who did not die a violent death. The Inca mother taught her son the language of the ancient inhabitants of Peru, and suggested to him the idea of writing a history of these people. For this purpose, Garcilasso travelled over the entire empire of the Incas, got as much information suitable for his purpose as he could gather from both the natives and the new colonists, and consulted the few remaining monuments of that race. Being fearful of Garcilasso's growing influence with the natives of Peru, Philip II ordered him to proceed to Spain, whither he went in 1559, shortly after the death of his father. He served there for some time under John of Austria in the latter's campaign against the Moors of Granada. About 1584, he wrote his "Historia de la Florida", describing the exploits of Hernando de Soto in that country, and published it in London. In 1600, he began the first part of his "Comentarios Reales", which is a general history of Peru. This first part, dealing with the early history of the Incas, he finished in 1604, and published at Lisbon in 1609. In 1612, he finished the second part, dealing with the conquest of Peru by the Spaniards, and published it at Cordova in 1616. As a historian of Peru and its people, Garcilasso enjoyed singular advantages, for his mother, an Inca princess and her relations told him everything concerning their ancestors, omitting nothing, as they considered him one of their race. On the other hand, his father, who was the Governor of Cuzco, was on intimate terms with many of the conquerors, so that from them the historian heard the accounts of their deeds. Garcilasso, therefore, was in a position to get information at first hand from both the natives and their conquerors. His work is of great historic value, as it constitutes practically the only document we possess of the ancient civilization of Peru. The first part was translated into French by Pradelle-Beaudoin (Paris, 1633, and Amsterdam, 1737, 2 vols.), and again by Dalibard (Paris, 1744, 2 vols.), into German by Bottgeer (Nordhausen, 1786). The second part was translated into French by Pradelle-Beaudoin (Paris, 1646, 1658, and 1707), and into English by Rigault (London, 1688).

VENTURA FUENTES

Aloisio Gardellini

Aloisio Gardellini

Born at Rome, 4 Aug., 1759; died there, 8 Oct., 1829. He is famous chiefly for his collection of the decrees of the Congregation of Rites. Until 1587, the celebration of the Sacrifice of the Mass and the administration of the sacraments had been subject to regulations made by various popes. Necessarily, in the course of time, these regulations became somewhat confused by reason of

overlapping, amplification, and abolition. In the year mentioned above, Sixtus V, in the Constitution "Immensae aeterni Dei", called into being a body of cardinals, bishops, and clerics, whose work was to guard and guide the decorous celebration of the church offices. A collection of papal regulations and congregational decrees was published in 1730 by John Baptist Pithonius, a Venetian priest, the title of his book being "Constitutiones pontificae et Romanorum Congregationum decisiones ad sacros Ritus spectantes". This work was somewhat imperfect, and it was not until 1807 that Gardellini published the first two volumes of his well-known collection of the decrees of the Congregation of Rites, to which was prefixed "Sacrorum rituum studiosis monitum". Gardellini was a very profound student, especially of the liturgy and kindred subjects, and in diligence, piety, and learning was unexcelled. His collection of decrees gives evidence of most painstaking labour, and comprises all the decrees from 1602. Three further volumes were published in 1816, and a sixth volume was brought out in 1819. This volume contained more recent decrees down to the date of publication, and also the Commentary on the Clementine Instruction regarding the devotion of the Forty Hours. There were a few slight errors in the complete work, and the exacting love of perfection, so characteristic of Gardellini, would not allow him to leave these errors uncorrected. Accordingly, a new and corrected edition was published in 1827, and in this edition he included certain answers given between the years 1558 and 1599. In recognition of his great services, Gardellini was appointed assessor of the Congregation of Rites. Other editions of the decrees have been issued subsequently, but the collection of Gardellini is the foundation of them all; the latest is that of Muhlbauer with the decrees in alphabetical order (1863-65; with five supplementary volumes, 1876-87). The latest edition of the "Decreta Authentica" of the Congregation of Rites was published in 1898.

DAVID DUNFORD

Julius Peter Garesche

Julius Peter Garesché

Soldier; born 26 April, 1821, near Havana, Cuba; killed at the battle of Stone River, Tennessee, U.S.A., 31 December, 1862. He was sent to Georgetown College, Washington, in 1833, and remained there four years. There he was appointed to the U.S. Military Academy, at West Point, and graduated with the class of 1841, receiving his commission as a second-lieutenant in the Fourth Artillery. The five subsequent years were spent on the frontier and in garrison duty. During the Mexican War he served with distinction, and was appointed assistant adjutant-general, with the rank of captain in 1855. Wherever he was stationed, Garesché always took an active part in the affairs of the Church. In Washington he organized the first local conference of the St. Vincent de Paul Society, and during his residence at the capital acted as its president. He contributed frequently on Catholic, social and political questions, to the New York "Freeman's Journal" and "Brownson's Quarterly Review", and in September, 1851, in recognition of his services to the Church, received from Pius IX the decoration of a Knight of St. Sylvester. When the Civil War broke out, he declined a commission as

brigadier-general of volunteers, and was made chief of staff, with the rank of lieutenant-colonel in the regular army, to General William S. Rosecranz. In this capacity he participated in the operations of the Army of the Cumberland. At the battle of Stone River, he was killed by a cannon-ball, while leading a column in a gallant attempt to regain a lost day.

THOMAS F. MEEHAN

Jean Garet

Jean Garet

Benedictine of the Congregation of Saint-Maur, born at Havre about 1627; died at Jumieges, 24 September, 1694. He was professed in 1647 when he was twenty years old, and lived in the Abbey of Saint-Ouen at Rouen. While there he prepared an edition of Cassiodorus which was published at Rouen in 1679. Mommsen's criticism on his edition of the "Variae", which was included in the above work, is very severe: "A work without either skill or learning Garet took Fournier's text (Paris, 1579) as a basis, and inserted alterations of his own rather than corrections." (*Mon. Germ. Hist.: Auct. antiq.*, XII, cxv). As a preface to his edition Garet wrote a dissertation in which he tried to prove that Cassiodorus was a Benedictine. Migne followed the Garet edition in P.L., LXIX-LXX, and it remains the most complete modern edition. Needless to say it does not contain the "Complexiones" discovered later by Maffei.

PAUL LEJAY

Gargara

Gargara

A titular see in the province of Asia, suffragan of Ephesus. The city appears to have been situated on Mt. Gargaron, the highest peak (1690 feet) of Mt. Ida, celebrated in Grecian mythology and the Homeric epic. It was at first inhabited by a colony from Assos, who were followed by people from Miletopolis. The grammarian Diotimes conducted a school here which was poorly attended by the uncultured inhabitants of Gargara. Three of the ancient bishops of Gargara were John, 518; Theodore, 553; and Ephrem, 878. Mt. Gargara is now known as Dikeli-Dagh, forming part of Kaz-Dagh, the ancient Ida. It has been thought that the city itself was discovered in the ruins of Akrili in the caza of Aivadjik and the sanjak of Bigha. Gargara must not be confused with the Jacobite bishopric of Gargar or Birta of Gargar, today Gerger, situated in the mountains west of the Euphrates and south of Malatia.

S. VAILHE

Andre Garin

André Garin

An Oblate missionary and parish priest, born 7 May, 1822, at Côte-Saint-André, Isère, France; died at Lowell, Massachusetts, 16 February, 1895. He received his education at the lesser seminary of his native town, and entered the Order of the Oblates of Mary Immaculate, 1 November, 1842; as he was still too young to be admitted to the priesthood he was sent to Canada, where he was ordained 25 April, 1845, by Bishop Bourget of Montreal. During a period of twelve years he devoted himself to the Indian missions of Eastern Canada, after which he occupied the post of superior successively at Plattsburg and at Buffalo.

Though his services were peculiarly valuable in his early fields of labour as he had mastered both the Montagnais and the English languages, yet an able man being needed to organize parish and mission work among the French Canadians at Lowell, Father Garin was ordered thither and in a short time his remarkable good sense, courteous manner, and kindly disposition won for him a wonderful influence over his people. During a pastorate of some twenty-five years he built costly churches and commodious school edifices; he also established several religious confraternities among his parishioners. Grateful for all he had done for them, the members of his parish erected a statue to him two years after his death.

A.G. MORICE

Garland

Garland

A wreath of flowers or evergreens formerly used in connection with baptismal, nuptial, and funeral rites, as well as in solemn processions. The earliest certain reference to the baptismal garland, as worn by neophytes, occurs in a seventh-century description of the Alexandrine ritual, written by the patriarch Severus, who says that, after the baptism and unction (i. e. confirmation), the priest administered Holy Communion, and crowned the newly-baptized with garlands. This custom was still observed at Alexandria in eighteenth century. A similar rite has also been inferred from a passage in the Gallican liturgy (*baptizati et in Christo coronati*), but more probably this expression is merely metaphorical. The bridal crown or wreath is said to be of pre-Christian Greek origin, adopted later by the Romans. Tertullian refers to it as a sign of paganism, but this prejudice was afterwards set aside, and it was in common use among Christians by the time of St. John Chrysostom. the bride and bridegroom were crowned to symbolize their victory over the temptations of the flesh.

(For the continued use of garlands at the marriage ceremony during the early medieval period at Rome, see Duchesne, "Christian Worship", tr. London, 1903, 428-434.) The rite has been retained by the Greek Church, silver crowns taking the place of floral wreaths.

Funeral garlands were used in primitive times, in connection with the burial of virgins, and especially of virgin martyrs, to symbolize their victory, and by analogy they came also to be used for all martyrs. Hence they are constantly found represented in painting or sculpture, on the tombs of the early Christians. In later times a crown, consisting of a wooden hoop, with two half-circles crossing each other at right angles and covered with flowers and streaming ribbons, used to be carried before the bier of an unmarried woman, and afterwards suspended over or near to the grave. This custom was continued in England all through the middle ages and Reformation period, and it survives even now in certain remote places, especially in Devon and Cornwall. The iron hook upon which such wreaths were hung, in the seventeenth century, may still be seen in the south aisle of St. Alban's Abbey. In medieval times the clergy were wont to wear floral garlands or crowns on their heads, on the occasions of solemn processions. Stow mentions on at St. Paul's, London, when the dean and chapter "apparelled in copes and vestments, with garlands of roses on their heads, issued out at the west door" (Survey of London, ed. 1750); and in the inventories and church-wardens' accounts of many an English church, items of expenditure on similar ornaments occur. The same custom prevailed also in German, France and Italy. Martene (De Ant. Eccl. Rit., III, iv) mentions an illuminated missal belonging to a church at Melun, in which such floral garlands are pictured in a Corpus Christi procession, and the same is recorded at Angers, Laon, and elsewhere. According to Martene also, in certain places in France, a priest celebrating his first Mass was similarly decked, which custom still survives in certain parts of Germany and Bavaria. The term *garland* was also technically used to signify a crown of precious metal, often adorned with gems, made for the arrangement of natural or artificial flowers before the altar or sacred image at festival times.

Marriage; LECLERCQ, Manuel d'Archéologie Chrétienne (Paris, 1907).

G. CYPRIAN ALSTON

John Garland

John Garland

An English poet and grammarian, who lived in the middle of the thirteenth century. He tells us he was born in England and studied at Oxford with John of London, one of Roger Bacon's masters. He goes on to add that he was "fostered" in France and cherished that land above the land of his birth. The greater portion of his life was spent there. At one time he studied at the University of Paris, and then taught grammar and belles-lettres at Toulouse, and later at Paris. He went to Toulouse

at the time of the close of the Albigensian war. Hence it was about 1229 that he composed the "Epithalamium Beatae Virginis Mariae", dedicated to Cardinal Romano Bonaventura, Cardinal-Deacon of Sant' Angelo, who, as legate, was trying to win back the people of Languedoc to the orthodox Faith. His "De triumphis Ecclesiae" belongs to this period also. It is an epic poem in distichs, celebrating the victories of the crusades, the crushing of heresy, and the glories of the Faith. In 1234 he was back in Paris and wrote his "Accentuarium", a poem in 1426 hexameter verses on the laws of accent. A little later, at Paris also, he composed his "Carmen de Ecclesia", a poem on the liturgy, dedicated to Fulk, Bishop of London (1244-59)). In it the poet laments the recent death of his fellow-countryman, Alexander of Hales, who died on 21 August, 1245. After the manner of the schoolmasters of his day, he wrote a glossary of this poem. For his own use as a tutor he wrote a "Distigium" or "Cornutus" in forty-two hexameter verses, grouped in pairs, to assist in remembering unusual Latin words or latinized Greek words; a "Dictionarius cum commento", or glossary; a compendium of grammar, in verse; an "Æquivoca", or list of homonyms, also in verse; a treatise on rhetoric with the odd title "Moral Examples" (*Exempla honestae vitae*); a "Commentarius curiatium", intended to explain to the children of nobles the meaning of such Latin words as might interest them; a "Poetria", or collection of examples in every style of versification.

In the "Exempla" he tells us he got his name from the Rue Garlande (now the Rue Galande), a main thoroughfare in the neighbourhood of the university where he taught. It was for his pupils in Paris that he penned the "Miracula Beatae Mariae Virginis", wherein he tells us that he worked at it in the library of Ste-Genevieve, which goes to prove that it was open to the public. It is the earliest reference to this library. Other works are attributed to John Garland, some of them erroneously, as the various poems entitled "Facetus"; "De contemptu mundi"; "Floretus"; "Cornutus novus"; a treatise on chemistry; a treatise on interest. Many of the above have never been edited. John Garland's verses are very faulty, being merely bad prose versified. The style is designedly obscure and absurdly pedantic. The sarcasms of Erasmus with reference to the pedagogical methods of medieval teachers are often supported by quotations from Garland's writings. For men of the Renaissance, he was held up as a type of the scholastic turning to literature.

On his various works and editions thereof see HAUREAU, *Notices et extraits des manuscrits* (1879), XXVII, ii, 1-86; LE CLERC, *Histoire littéraire de la France* (1847-52), XXII, 11, 77.

PAUL LEJAY

Ven. Nicholas Garlick

Ven. Nicholas Garlick

Priest and martyr, born at Dinting, Derbyshire, c. 1555; died at Derby, 24 July, 1588. He studied at Gloucester Hall, now Worcester College, Oxford, matriculating in 1575, but did not take a degree, perhaps because of the Oath of Supremacy thereto annexed. He next became master of the high school at Tideswell in the Peak, where he exercised such a holy influence over his pupil that three

of them eventually went with him to Reims and one at least, Christopher Buxton (q.v.), became a martyr. He went to Reims in June, 1581, was ordained, and returned to England in January, 1583. After a year of labour, probably in the Midlands, he was arrested, and in 1585 sent into exile, with the knowledge that he would find no mercy if he returned. Nevertheless he was soon back at work in the same neighbourhood. He was arrested by the infamous Topecliffe at Padley, the home of John Fitzherbert, a member of a family still surviving and still Catholic, the arrest being made through the treacher of a son of the house. Topcliffe obtained the house and lived there till he died in 1604. With Garlick was arrested another priest, Robert Ludlam, or Ludham, who had, like Garlick, been at Oxford and had engaged in teaching before his ordination in May, 1581. In Derby Gaol, a small and pestiferous prison, they found a third priest, Robert Sympson, who was of Garlick's college at Oxford. There he had taken Protestant orders, but was soon after reconciled to the Church, for which he suffered long imprisonment in York Castle. In this trial his faith had grown stronger, but having been ordained and passed through many labours, including exile, he was again in durance and in danger of his life, and this time he was wavering. Garlick and Ludlam cheered, reconciled, and comforted their fellow-captive, and all three were tried and suffered together.

J.H. POLLEN

Francois-Xavier Garneau

François-Xavier Garneau

A French Canadian historian, b. at Quebec, 15 June, 1809, of François-Xavier Garneau and Gertrude Amiot; d. 2 February, 1866. After a short elementary course, he studied law, having succeeded by private effort in supplying the lack of classical instruction. He held the office of city clerk from 1844 till his death. In 1845 appeared the first volume of his "Histoire du Canada", an heroic venture, considering the restoration to France after the Conquest of nearly all the civil and military archives. When, through Dr. O'Callaghan, the United States Government had secured copies of the correspondence of the French colonial governors, Garneau went to Albany to study these documents and gather materials for his future volumes, which appeared successively in 1846 and 1848, the third volume recording events as late as the Constitution of 1792. The work was favourably received by both English and French. A second edition includes the period from 1792 to the Union (1840). A third edition, 1850, had an English translation, which, however, is not reliable.

Garneau's history must be judged according to the spirit of his time. Its first pages were written shortly after the troubles of 1837 and 1838, at the dawn of the Union of the Canadas, which was the outcome and penalty of the Rebellion. The prospect was gloomy for Lower Canada, and a patriot like Garneau, however impartial, could not easily repress his feelings. More reprehensible are his opinions on certain points of doctrine, and his unjust criticism of church authority and

influence. These may be explained by the nature of the books he had studied without proper guidance and the antidote of a sound philosophical training. These blemishes are not found in the last edition, revised at his request by a competent ecclesiastic. In fact, Garneau was ever a practical Catholic and died a most edifying death. The title of "national historian" rightly belongs to this pioneer in the field of Canadian history, who spent twenty-five years of patient research and patriotic devotedness on a work destined to draw the attention of Europe and the United States to the glories of his country.

LIONEL LINDSAY

Henry Garnet

Henry Garnet

(Garnett.)

English martyr, b. 1553-4; d. 1606, son of Brian Garnet, master of Nottingham School, then noted for its Catholic tendencies. He was, however, presumably a conformist until his twentieth year, when he courageously broke with all ties, retired abroad, and became a Jesuit in Rome, 11 Sept., 1575. Here he enjoyed the company of Persons, Weston, Southwell, and many others, with whom in future he was to be so closely allied, and made a brilliant university course under the celebrated professors of those days -- Bellarmine, Suarez, Clavius, etc. He subsequently taught for some time Hebrew and mathematics; a treatise on physics in his hand is still preserved at Stonyhurst, and he had the honor, whilst Clavius was sick, of fulfilling his chair. He was then summoned to England, where Father Weston was the only Jesuit out of prison, and he left Rome, 8 May, 1586, in company with Robert Southwell. Next year Weston himself was arrested, whereupon Garnet became superior and remained in office till his death.

As an indication of his prudent management it may be mentioned, that under his care the Jesuits in the English mission increased from one to forty, and that not a single letter of complaint, it is said, was sent to headquarters against him. Though he generally lived in London, the hotbed of persecution, neither he nor any of his subordinates, who often came to see him, were captured in his lodgings, though perilous adventures were numerous. He was a prolific correspondent, and his extant letters show him to have been in sympathetic touch with Catholics all over the country. He was also a generous distributor of alms, and sent to Rome relics and curiosities, among others the letters of Henry VIII to Anne Boleyn, now in the Vatican library. He wrote a "Treatise of Christian Renunciation", and he translated, or caused to be translated, Canisius's "Catechism", to which he added interesting appendixes on "Pilgrimages", "Indulgences", etc. These books, now extremely rare, were perhaps secretly printed under his care in London. "A Treatise of Equivocation", believed to have been composed by Garnet, was edited by D. Jardine in 1851.

In 1595 and 1598, Garnet became involved in unpleasant clerical troubles. Some thirty-three English Catholics, almost all of them priests, had been shut up in Wisbech Castle. Of this number, eighteen, besides two Jesuits, Father Weston and Brother Pounce, desired in the winter of 1594-5

to separate themselves from the rest and adopt a regular collegiate life. But it was impossible to do this without appearing at least to reflect unfavorably on those who did not care for the change. Furthermore, the number of the latter was considerable, and the prison was so small that any division of chambers and tables was out of the question. The minority certainly had a right to protest, but they did so in such a rough, unruly way, that they seemed to justify the separation, which was in fact carried out with Father Garnet's approval in February, 1595. An earnest attempt to settle the differences that ensued was made in October, and although it was not immediately successful, the division was given up in November, and a reconciliation effected so warm and hearty that, had it not been for a subsequent quarrel on a different matter, the "Wisbech Stirs" might have been chiefly remembered as a *felix culpa*. The letters to and from Garnet over the happy settlement do him the greatest credit (Dodd-Tierney, Church History of England, III, App. pp. civ-cxvii).

The subsequent trouble, with which Garnet was also concerned, was that of the "Appellant Priests" of 1598-1602. To understand it, one must remember that Elizabeth's government had rendered the presence of a bishop in England impossible. Cardinal Allen (See Allen, William, Cardinal) had governed the missionary priests, first from Douai, then from Rome, but after his death in 1594, a new form of government had to be essayed. As is usual in missionary countries, the first beginning was made with a sacerdotal hierarchy. Prefects for the mission were appointed from clergy in Belgium, in Spain, and in Europe, while those in England were put under an archpriest, and this arrangement lasted until the presence of a Catholic Queen, Henrietta Maria, allowed of a bishop to be sent to England without seriously endangering the flock (see Bishop, William). But George Blackwell, the man selected for the post of archpriest, proved a failure, and had eventually to be deposed. On paper his qualifications seemed excellent; in practice his successes were few, his mistakes many. Difficulties arose with his clergy, over whose missionary faculties he exercised a somewhat brusque control. Hence anger, sharp letters on both sides, and two appeals to Rome. In the end, his authority was maintained and even strengthened, but his manner of government was reprehended. Part of the censure for this should perhaps fall on Garnet, with whom Blackwell sometimes took counsel. As to this a serious misunderstanding needs correction. It has been alleged that the archpriest received "*secret orders to follow the advice of the superior of the Jesuits in the affairs of the clergy on all points of special importance.*" [The italicized words, which are erroneous or misleading, will be found in Dodd-Tierney, III, 51; Lingard (1883), VI, 640; or Tauton, "Black Monks", London (1901), I, 250.] One of the appellant clergy wrote in still stronger terms, which merit quotation as an example of the extremes to which controversy was sometimes carried. "All Catholics must hereafter depend upon Blackwell, and he upon Garnet, and Garnet upon Persons, and Persons upon the Devil, who is the author of all rebellions, treasons, murders, disobedience and all such designments as this wicked jesuit hath hitherto contrived" ("Sparing Discoverie" 70; Watson in Law's "Jesuits and Seculars" (London, 1869), p. lxxv). All that Cardinal Cajetan's "Instruction" really said was "The archpriest will take care to learn the opinion and advice of the Jesuit superiors in matters of greater importance."

Considering the difficulty of finding advisers of any sort in that time of paralyzing persecution, the obvious meaning of the words is surely perfectly honorable, and becoming both to the cardinal and to the archpriest. After they had been objected to, however, they were withdrawn by a papal brief, which added that "the Jesuits themselves thought this was necessary" under the changed circumstances.

The conclusion of Garnet's life is closely connected to the Gunpowder Plot, under which heading will be found an account of his having heard from Catesby in general terms that trouble was intended, and from Father Greenway, with Catesby's consent, the full details of the Plot, with the understanding that, if the plot were otherwise discovered, he would be at liberty to disclose the whole truth. After the plot had been discovered, and Garnet had been arrested, he thought it best in his peculiar circumstances to confess the whole truth about his knowledge, and for this he was tried and executed at the west end of Old St. Paul's, 3 May, 1606.

Garnet is thus described in the proclamation issued for his arrest --

Henry Garnet, *alias* Walley, *alias* Darcy, *alias* Farmer, of a middling stature, full faced, fat of body, of complexion fair, his forehead high on each side, with a little thin hair coming down upon the midst of the fore part of this head; his hair and beard griseled. Of age between fifty and three score. His beard on his cheeks close cut, and his chin very thin and somewhat short. His gait upright, and comely for a feeble man.

The execution was watched so closely that very few relics of the martyrdom were secured by Catholics, but a head of straw stained with his blood fell into the hands of a young Catholic, John Wilkerson. Some months later he showed it to a Catholic gentleman who noticed that the blood had congealed upon one of the husks in the form of a minute face, resembling, as they thought, Garnet's own portrait. The matter was much talked of, and the Protestant Archbishop of Canterbury personally conducted an examination of several witnesses, who had seen the strange phenomenon. Their evidence abundantly proves the reality of the lineaments which might be discerned in the husk. But to what extent the imagination of the onlookers (which were undoubtedly excited) contributed to the recognition of Garnet's features in particular, can hardly be decided now, for the straw, though carefully preserved by the English Jesuits at Liège, was lost during the troubles of the French revolution (L. Morris, "Life of Father John Gerard", London, 1881, 393-407).

As the Gunpowder Plot marked a new era of cruelty in the Protestant persecution of Catholics, so Protestant efforts to excuse their fault by blaming Garnet were at one time untiring, and even to the present day his case is discussed in an unfriendly spirit by non-Catholic writers (e.g. Jardine and Gardiner). On the other hand, the great Catholic theologians, who opposed King James in the matter of the Oath of Allegiance have spoken in Garnet's defense (especially Bellarmine "Apologia", XIII, xiii, 186, and Suarez, "Defensio Fidei Catholicæ". VI, ix, s. 6) -- a matter of good omen, considering the theological intricacies that beset his case. It is a matter of regret that we have as yet nothing like an authoritative pronouncement from Rome on the subject of Garnet's martyrdom.

His name was indeed proposed with that of the other English Martyrs and Confessors in 1874, and his cause was then based upon the testimonies of Bellarmine and the older Catholic writers, which was the correct plea for the proof of *Fama Martyrii*, then to be demonstrated (see *Beautification and Canonization*). But these ancient authorities are not acquainted with Garnet's actual confessions which were not known or published in their time. The consequence was that, as the discussion proceeded, their evidence was found to be inconclusive, and an open verdict was returned; thus his martyrdom was held to be neither proved nor disproved. This of course led to his cause being "put off" (*dilatus*) for further inquiry, which involves in Rome a delay of many years.

Gerard, *Contributions to a Life of Fr. H. Garnet* (London, 1898 -- reprinted from *The Month* of that same year; see also June and July, 1901); Foley, *Records* (London, 1878), IV, 1-192. The formal contemporary defense was by a Cretan Jesuit, Eudoeman-Joannis, *Apologia pro R. P. H. Garneto* (1610), and much will be found in the Jesuit historians, Bartoli, More, etc.; Morris, *Life of Father John Gerard* (London, 1881). See also Gillow, *Bibl. Dict. Eng. Cath.*, II, 392; Staton, *Menology* (London, 1892). See also literature under *Gunpowder Plot*.

J. H. POLLEN

St. Thomas Garnet

St. Thomas Garnet

Protomartyr of St. Omer and therefore of Stonyhurst College; b. at Southwark, c. 1575; executed at Tyburn, 23 June, 1608. Richard Garnet, Thomas's father, was at Balliol College, Oxford, at the time when greater severity began to be used against Catholics, in 1569, and by his constancy gave great edification to the generation of Oxford men which was to produce *Campion*, *Persons* and so many other champions of Catholicism. Thomas attended the Horsham grammar school and was afterwards a page to one of the half-brothers of Philip Howard, Earl of Arundel, who were, however, conformists. At the opening of St. Omer's College in 1592, Thomas was sent there. By 1595 he was considered fit for the new English theological seminary at Valladolid, and started in January, with five others, John Copley, William Worthington, John Ivreson, James Thomson, and Henry Mompesson, from Calais. They were lucky in finding, as a travelling companion, a Jesuit Father, William Baldwin, who was going to Spain in disguise under the alias *Ottavio Fuscinielli*, but misfortunes soon began. After severe weather in the Channel, they found themselves obliged to run for shelter to the Downs, where their vessel was searched by some of Queen Elizabeth's ships, and they were discovered hiding in the hold. They were immediately made prisoners and treated very roughly. They were sent round the Nore up to London, and were examined by Charles, second Lord Howard of Effingham, the lord admiral. After this Father Baldwin was sent to Bridewell prison, where he helped the confessor James Atkinson (q. v.) to obtain his crown. Meantime his young companions had been handed over to Whitgift, the Archbishop of Canterbury, who, having found that they encouraged one another, sent them one by one to different Protestant bishops or doctors. Only the youngest, Mompesson, conformed; the rest eventually escaped and returned to

their colleges beyond seas after many adventures. We are not told specifically what befell young Garnet, but it seems likely that he was the youth confined to the house of Dr. Richard Edes (Dict. Nat. Biog., XVI, 364). He fell ill and was sent home under bond to return to custody at Oxford by a certain day. But his jailer not appearing in time, the boy escaped, and to avoid trouble had then to keep away even from his own father. At last he reached St-Omer again, and thence went to Valladolid, 7 March, 1596, having started on that journey no less than ten times.

After ordination in 1599, "returning to England I wandered", he says, "from place to place, to reduce souls which went astray and were in error as to the knowledge of the true Catholic Church". During the excitement caused by the Gunpowder Plot in 1605 he was arrested near Warwick, going under the name Thomas Rokewood, which he had no doubt assumed from Ambrose Rokewood of Coldham Hall, whose chaplain he then was, and who had unfortunately been implicated in the plot. Father Garnet was now imprisoned first in the Gatehouse, then in the Tower, where he was very severely handled in order to make him give evidence against Henry Garnet, his uncle, superior of the English Jesuits, who had lately admitted him into the Society. Though no connection with the conspiracy could be proved, he was kept in the Tower for seven months, at the end of which time he was suddenly put on board ship with forty-six other priests, and a royal proclamation, dated 10 July, 1606, was read to them, threatening death if they returned. They were then carried across the Channel and set ashore in Flanders.

Father Garnet now went to his old school at St-Omer, thence to Brussels to see the superior of the Jesuits, Father Baldwin, his companion in the adventures of 1595, who sent him to the English Jesuit novitiate, St. John's, Louvain, in which he was the first novice received. In September, 1607, he was sent back to England, but was arrested six weeks later by an apostate priest called Rouse. This was the time of King James's controversy with Bellarmine about the Oath of Allegiance. Garnet was offered his life if he would take it, but steadfastly refused, and was executed at Tyburn, protesting that he was "the happiest man this day alive". His relics, which were preserved at St-Omer, were lost during the French Revolution.

[*Note:* In 1970, Thomas Garnet was canonized by Pope Paul VI among the Forty Martyrs of England and Wales, whose joint feast day is kept on 25 October.]

POLLEN, Protomartyr of Stonyhurst College in *Stonyhurst Magazine* (1889), 334-82; BLACKFAN, *Annales Coll. S. Albani, Vallesoleti*, ed. POLLEN (1899), 57, 84; CAMM in *The Month* (Aug., 1898), 164-77; YEPEZ, *Persecucion de Inglaterra* (Madrid, 1599), 820-30; FOLEY, *Records S.J.*, II, 475-505.

J.H. POLLEN
Charles Garnier

Charles Garnier

Jesuit Missionary, born at Paris, 1606, of Jean G. and Anne de Garault; died 7 December, 1649. He studied classics, philosophy, and theology at the Jesuit college of Clermont, joining the order

in 1624. He begged to be sent to the Canadian mission, and sailed in 1636 on the same fleet as Governor Montmagny. He was sent forthwith to the Huron country, where he was to spend the fourteen years of his heroic apostolate without once returning to Quebec. In six months he mastered the difficult language, and began a career of unceasing charity which was to be crowned by martyrdom. His zeal for the conversion of infidels brooked no hindrance nor delay. Neither distance nor weather, nor danger of death could prevent him from hastening to the stake to baptize and exhort captives of war. Filth, vermin, fetid and loathsome disease could not deter him from tending and redeeming dying sinners. His frail frame miraculously resisted the intense strain. His angelic patience amidst endless trials won him the title of "lamb" of the mission, whereof Brébeuf was styled the "lion". Several times -- first in 1637, then in 1639 with Jogues, and later with Pijart -- he strove to convert the Tobacco nation. His constancy finally overcame their obstinacy. They asked for the black robes (1646), and Garnier went to dwell with them until death. After the martyrdom of Fathers Daniel (1648), Brébeuf, and Lalemant (march 1649), he calmly awaited his turn. After decimating the Hurons, the Iroquois attacked the Tobacco nation. During the massacre of St. John's village, Garnier went about exhorting his neophytes to be faithful. Mortally wounded he dragged himself towards a dying Indian to absolve him, and received the final blow in the very act of charity (1649) on the eve of the Immaculate Conception, a dogma he had vowed to defend. His letters to his brother, a carmelite, reveal his sanctity. Ragueneau testifies to his heroic spirit of sacrifice. Parkman compares his life to that of St. Peter Claver among the blacks and styles it a voluntary martyrdom.

LIONEL LINDSAY

Jean Garnier

Jean Garnier

Church historian, patristic scholar, and moral theologian; b. at Paris, 11 Nov., 1612; d. at Bologna, 26 Nov., 1681. He entered the Society of Jesus at the age of sixteen, and, after a distinguished course of study, taught at first the humanities, then philosophy, at Clermont-Ferrand (1643-1653), and theology at Bourges (1653-1681). In 1681, he was sent to Rome on business of his order, fell ill on the way and died at Bologna. Garnier was considered one of the most learned Jesuits of his day, was well versed in Christian antiquity, and much consulted in difficult cases of conscience. In 1618, he published for the first time the "Libellus fidei", sent to the Holy See during the Pelagian controversy by Julian, Bishop of Eclanum in Apulia. Garnier added notes and an historical commentary. The Libellus also found a place in Garnier's later work on Mercator. In 1655, he wrote "Regulae fidei catholicae de gratia Dei per Jesum Christum", and published the work at Bourges. In 1673, he edited at Paris all the world of Marius Mercator (d. at Constantinople after 451). The edition contains two parts. The first gives the writings of Mercator against the Pelagians and to these Garnier adds seven dissertations: (1) "De primis auctoribus et praecipuis defensoribus haeresis quae a Pelagio nomen accepit"; (2) "De synodis habitis in causa Pelagianorum",

(3) "De constitutionibus imperatorum in eadem causa 418-430"; (4) "De subscriptione in causa Pelagianorum"; (5) "De libellis fidei scriptis ab auctoribus et praecipuis defensoribus haeresis Pelagianae"; (6) "De iis quae scripta sunt a defensoribus fidei catholicae adversus haeresim Pelagianorum ante obitum S. Augustini"; (7) "De ortu et incrementis haeresis Pelagianae seu potius Caelestianae". Cardinal Noris (op. 3, 1176) considered these dissertations of great value, and says that, if he had seen them in time, he would have put aside his own writings on the subject. In the second part, Garnier gives a good historical sketch of Nestorianism from 428 to 433, then of the writings of Mercator on this heresy, and adds two treatises on the heresy and writings of Nestorius, and on the synods held in the matter between 429 and 433. Much praise is bestowed on Garnier by later learned writers for the great amount of historical knowledge displayed in his dissertations, but he is also severely blamed for his arbitrary arrangement of the writings of Mercator and for his criticism of the original (Tillemont, "Mémoires ecclés.", XV, 142; Cotelier, "Monum. eccl. graec." III, 602).

Garnier edited in 1675 at Paris the "Breviarum causae Nestorianorum" (composed before 566 by Liberatus, an archdeacon of Carthage), correcting many mistakes and adding notes and a dissertation on the Fifth General Council. In 1678 he wrote "Systema bibliothecae collegii Parisiensis S.J.", a work considered very valuable for those arranging the books in a library. In 1680, he edited the "Liber diurnus Romanorum Pontificum" from an ancient manuscript, and added three essays: (1) "De indiculo scribendae epistolae"; (2) "De ordinatione summi pontificis" (3) De usu pallii (see LIBER DIURNUS). In the second essay he treats the case of Pope Honorius, whom he considers free of guilt. In 1642, Sirmond had published in four volumes the works of Theodoret, Bishop of Cyrus (d. 455); Garnier added an "Auctarium", which, however, was not published until 1684. It consists of five essays: (1) "De ejus vita"; (2) "De libris Theodreti"; (3) "De fide Theodreti"; (4) "De quinta synodo generali"; (6) "De Theodreti et orientalium causa." In these he is rather severe on Theodoret and condemns him undeservedly. Another posthumous work of Garnier's, "Tractatus de officiis confessarii erga singula poenitentium genera", was published at Paris in 1689.

FRANCIS MERSHMAN

Julien Garnier

Julien Garnier

Jesuit missionary, born at Connerai, France, 6 January, 1642; d. in Quebec, 1730. He entered the Society of Jesus in 1660, and, in October, 1662, sailed for Canada. He was the first Jesuit to be ordained there, and after his ordination in 1668, he prepared himself for missionary work among the Indians. He went first to the Oneida, but in a few months changed the field of his labours to the Onondaga mission. Garaconthié, the Onondaga chief, received him with every evidence of friendship, and, at his request, rebuilt the chapel of St. Mary. So successful was his ministry among the Onondagas that, on the arrival of other missionaries in 1671, Garnier set out with Father Frémin for the Seneca country, where he found a bare handful of Christian Indians at the Gandachioragou

mission. He immediately began to preach and baptize, and persevered in his work even after his chapel was destroyed by a fire which wiped out the entire village.

When trouble arose in 1683 between the French and the Senecas, Garnier went with de Lamberville to Governor de la Barre to urge compromise and moderation. He was unable, however, to dissuade the latter from his policy of repression, and de la Barre set out upon the ill-starred expedition which was to prevent priests from venturing among the northern tribes for over thirteen years. Every missionary was recalled at the outbreak of hostilities and Garnier was sent in turn to the settlements of Lorette and Caughnawaga. His adventurous spirit, naturally, chafed under the inactivity of these more tranquil labours, and when access to the Indians was made possible by the treaty of Montreal, in 1701, Father Garnier hastened back to his mission among the Senecas, where he remained until 1709, when Schuyler's expedition once more made it necessary for him to return to Canada. His departure marked the end of missionary work among the Senecas, and he passed his remaining years among the various settlements along the St. Lawrence, retiring from active life in 1728.

Both his extraordinary missionary zeal, and the length of time over which his labours extended have marked Father Garnier as the Apostle of the Senecas. His intimacy with this tribe was much more close than that of any other of the early Jesuits, and the notes and letters he has left still remain one of the principal and most accurate sources of information on this division of the Iroquois.

Campbell, *Pioneer Priests of North America* (New York, 1908); *Jesuit Relations*; *Handbook of American Ethnology* (Washington, 1907).

STANLEY J. QUINN

Raffaele Garrucci

Raffaele Garrucci

A historian of Christian art, b. at Naples, 22 January, 1812; d. at Rome, 5 May, 1885. He belonged to a wealthy family, entered the Society of Jesus at the age of fifteen and was professed on 19 March, 1853. He devoted himself to the study of the Christian Fathers, also to profane and Christian antiquities; both he and the celebrated De Rossi became the principal disciples of Father Marchi. On his many journeys through Italy, France, Germany, and Spain, he collected much valuable material for his archaeological publications. In 1854 he wrote for Father Cahier's "Mélanges d'Archéologie" a study on Phrygian syncretism. Soon after he edited the notes of Jean L'Heureux on the Roman catacombs (in manuscript since 1605); later an essay on the gilded glasses of the catacombs (1858), and another on the Jewish cemetery at the Villa Randanini. In 1872 he began the publication of a monumental history of early Christian antiquities, entitled "Storia dell' arte cristiana". It was destined to include all works of sculpture, painting, and the minor and industrial arts, during the first eight centuries of the Christian Era. It is, in fact, a general history of early Christian art, and contains five hundred finely engraved plates and explanatory text. Five of the six volumes contain respectively, the catacomb-frescoes--and paintings from other quarters--gilded

glasses, mosaics, sarcophagi, and non-sepulchral sculptures. The first volume is devoted to the theoretical part of the work, i.e. to a history of Christian art properly so called.

In this vast collection Garrucci re-edited to some extent materials taken from earlier works. For hitherto unedited materials he used photographs or reproductions of some other kind. His engravings are not always very accurate, and in point of finish are inferior to those obtained by more modern processes. His reproductions of catacomb-frescoes, in particular, have lost much of their value since the publication of the accurate work of Mgr. Wilpert (*Pitture delle catacombe romane*, Rome, 1903). on the whole, however, it must be said that the "*Storia dell' arte cristiana*" is yet far from being superseded by any similar work. Father Garrucci had more erudition than critical judgment; in this respect his fellow-student De Rossi was far superior to him. Hence the text of Garrucci's publications is now of doubtful authority. The list of his publications covers 118 numbers on Sommervogel, "*Bibliothèque de la compagnie de Jésus*" (Brussels 1902), III. Among them are the aforementioned "*Storia dell' arte cristiana nei primi otto secoli della chiesa*" (6 vols. Prato 1872--81); "*Dissertazioni archeologiche di vario argomento*" (2 vols., Rome 1864-65); "*Le monete dell' Italia antica, Raccolta generale*" (Rome, 1885).

R. MAERE

Garzon

Garzon

(GARZONENSIS.)

Suffragan diocese of Popayan in the Republic of Colombia. It comprises the Provinces of Neiva and Sur, and lies east of Popayan. It is about 140 miles in length, and its breadth varies from 40 to 100 miles. It extends from 1.5° to 4° north latitude, and lies between the 75° and 77° west longitude. The episcopal see is at Neiva, a town of 11,000 inhabitants, situated 150 miles s.w. of Bogota at a height of 1500 feet above sea-level, on the river Magdalena, which is navigable to this point. The diocese originally formed part of that of Tolima, which lay in the midst of the Cordilleras. As the territory was so extensive, the population very numerous and the difficulties of visitation too great, the bishop petitioned the Holy See to divide the diocese. This was done by a decree of Leo XIII, 20 June, 1900. The northern half was erected into a new diocese Ibagué, suffragan of Bogotá--and the southern half formed the Diocese of Carzon. Mgr. Estéban Rojas, born at Hato in the Diocese of Popayán, 15 January, 1859, had been raised to the See of Tulima, 18 March, 1895. He was transferred to Neiva as first Bishop of Garzon. the cathedral is dedicated to the Immaculate Conception of Our Lady. the population, of which a large part is of mixed origin, is almost entirely Catholic. Till recent years the public authorities neglected education and threw the whole burden on the clergy, but of late government schools are being established. (See COLOMBIA, REPUBLIC OF).

A.A. MACERLEAN

Bl. Gaspare Del Bufalo

Bl. Gaspare del Bufalo

Founder of the Missionaries of the most Precious Blood (C.P.P.S.); b. at Rome on the feast of the Epiphany, 1786; d. 28 December, 1837. His parents were Antonio del Bufalo, chief cook of the princely family of Altieri, and his wife Annunziata Quartironi. Because of his delicate health, his pious mother had him confirmed at the tender age of one and a half years (1787). As he was suffering from an incurable malady of the eyes, which threatened to leave him blind, prayers were offered to St. Francis Xavier for his recovery. In 1787, he was miraculously cured, wherefore he cherished in later life a special devotion to the great Apostle of India, and selected him as the special patron of the congregation which he founded. From his earliest years he had a great horror of even venial sins and showed deep piety, a spirit of mortification, remarkable control over his evil inclinations (especially his innate irascibility and strong self-will), and also heroic love for the poor and the miserable. Having entered the Collegium Romanum at the age of twelve he received in 1800 first tonsure, and one year later the four minor orders. As catechetical instructor at St. Mark's, his zeal won for him the name "The Little Apostle of Rome", and when but nineteen years old, he was appointed president of the newly instituted catechetical school of Santa Maria del Pianto.

After his ordination (31 July, 1808), he obtained a canonry at St. Mark's, and soon instituted with Gaetano Bonani a nocturnal oratory. He assisted Francesco Albertini in founding the Archconfraternity of the Most Precious Blood, and worked with great zeal in the poorer districts of Rome, preaching frequently in the market-places. In 1810 he was summoned before General Miollis to swear allegiance to Napoleon. But neither threats nor promises could induce him to do so, because Pius VII had forbidden it. The words with which he announced his final decision have become famous: "Non posso, non debbo, non voglio" (I cannot, I ought not; I will not). In consequence he suffered banishment, and later on imprisonment in the foul dungeons of Imola and Rocca (1810-1814). After Napoleon's fall he returned to Rome, intending to enter the re-established Jesuit Order. But obeying his spiritual adviser, Albertini, he founded a congregation of secular priests to give missions and spread devotion to the Most Precious Blood. Through Cardinal Cristaldi he obtained the pope's sanction and, as a mother-house, the former convent of San Felice in Giano. Of this he took solemn possession, 11 August, 1815. The Bull of beatification says, "Through Umbria, Aemilia, Picenum, Tuscany, Campania, Samnium, in short all the provinces of Middle Italy he wandered, giving missions". The very titles accorded to him by his contemporaries speak volumes: "Il Santo", "Apostle of Rome", "Il martello dei Carbonari" (Hammer of Italian Freemasonry).

How arduous some of his missions were may be gleaned from the fact that he frequently preached five times daily, sometimes even oftener. At Sanseverino fifty priests were not sufficient to hear confessions after his sermons. Though idolized by the people, he was not without enemies. His activity in converting the "briganti", who came in crowds and laid their guns at his feet after he had preached to them in their mountain hiding-places, excited the ire of the officials who profited

from brigandage through bribes and in other ways. These enemies almost induced Leo XII to suspend del Bufalo. But after a personal conference, the pope dismissed him, remarking to his courtiers, "Del Bufalo is an angel". His enemies next tried to remove him from his post by procuring his promotion as "internuncio to Brazil". In vain, however, for his humility triumphed. A last attempt under Pius VIII (1830) met with temporary success. Del Bufalo was deprived of faculties for a short time, and his congregation threatened with extinction. But his wonderful humility again manifested itself, and, though himself misjudged and his life-work menaced by the very authority that should have supported him, he showed no signs of resentment, forgave his enemies, and excused his unmerited condemnation. The storm soon passed, Gaspare was restored to honour, and resumed his work with renewed zeal. In 1836 his strength began to fail. Although fatally ill, he hastened to Rome, where the cholera was raging, to administer to the spiritual wants of the plague-stricken. It proved too much for him, and he succumbed in the midst of his labours on 28 Dec., 1837. He was beatified by Pius X on 29 Aug., 1904.

ULRICH F. MUELLER

Philippe-Aubert de Gaspé

Philippe-Aubert de Gaspé

A French Canadian writer, b. at Quebec, 30 Oct., 1786, of a family ennobled by Louis XIV in 1693, d. 29 Jan., 1871. His grandfather fought under Montcalm at Carillon (Ticonderoga). He studied at Quebec Seminary and after a brief practice of the law, was appointed sheriff. Forced by misfortune to retire to his ancestral home at Saint-Jean-Port-Joli, on the St. Lawrence, he there spent thirty years in study. At the ripe age of seventy-five, he produced a work, "Les Anciens Canadiens" (Quebec, 1861), which is a household word throughout Canada. This historical novel, almost entirely based on fact, illustrates Canadian national tradition, character, and manners. The author has interwoven the events of his own chequered life with the tragic tale of the struggles and fall of New France, and of the change of regime, the eyewitnesses of which he had personally known. In 1866, Gaspé published his "Mémoires", which continue and amplify the precious historical notes contained in his other works. Less brilliant and attractive than his novel, the "Mémoires" are an excellent specimen of anecdotal history. The author's standing and experience, the latter embracing directly or indirectly the space of a century dating from the Conquest, constitute him an authentic chronicler of an obscure yet eventful period of history.

LIONEL LINDSAY

Pierre Gassendi

Pierre Gassendi

(GASSENDY, GASSEND.)

A French philosopher and scientist; b. at Champtercier, a country place near Digne in Provence, 22 January, 1592 (tombstone says IX cal. Feb., i.e. 24 Jan.); d. at Paris, 24 October, 1655. He studied Latin and rhetoric at Digne, and philosophy at Aix, whence his father, Antoine called him back to take charge of domestic affairs. However he was appointed to succeed his former teacher of rhetoric at Digne at the age of 16, and his teacher of philosophy at Aix at the age of 19. His friends and patrons at Aix, Prior Gautier and Councillor Peiresc, recognized his character and talents from his first publication and helped him to enter the ecclesiastical state. He became doctor of theology at Aix and attained proficiency in Greek and Hebrew literature. To allow him leisure for his studies, he was appointed a canon (c. 1623) and provost (c. 1625) at the cathedral of Digne. Until 1645, his studies were interrupted only by a journey to the Netherlands in 1628 --his only trip outside of France. In 1645, on the recommendation of Cardinal Richelieu, he was appointed by the king to a professorship of mathematics at the College Royal of France, which he reluctantly accepted, being granted the rare privilege of returning to his native soil whenever his health required it. On 23 November, he delivered his inaugural address in presence of the cardinal. His lectures before a numerous and learned audience were astronomical rather than mathematical, and resulted, two years later, in the publication of "Institutio Astronomica". Meanwhile an inflammation of the lungs had obliged him to return to Provence. In 1653, he went back to Paris and was received in a friendly manner at the Chateau de Monmort, where a year later he fell seriously ill with intermittent fever. He was bled nine times, and, although he declared himself too weak for another bleeding, he submitted to the decision of the doctors in Paris. He underwent the same operation five times more, after which his speech became mere whispering, and he expired quietly at the age of 63.

Gassendi, "the Bacon of France", is specially note-worthy for his opposition to the Aristotelean philosophy, and for his revival of the Epicurean system. He wished the aprioristic methods then prevailing in the schools replaced by experimental proofs. His cosmology, psychology, and ethics are epicurean, except that he maintains the doctrine of the Creator and of Providence, and the spirituality and immortality of the soul. He thus attempts to build up a Christian philosophy upon Epicurus--an inconsistency which is attacked by non-Christian, as well as Christian philosophers. His views on the constitution of matter and his merits in regard to modern kinetic atomism are explained by Lasswitz. That Gassendi was neither "the father of materialism" nor a sceptic in the proper sense is shown by Kieff (see Baldwin, op. cit. below). He corresponded with Hobbes, Mersenne, Christina of Sweden, and engaged in controversy with Fludd, Herbert, and Descartes.

That as an amateur astronomer, Gassendi was a persevering, attentive, and intelligent observer, is evident from his notebook carefully kept from 1618 until 1652 and filling over 400 pages. With a Galilean telescope he observed the transit of Mercury in 1631, predicted by Kepler, by projecting the sun's image on a screen of paper. His instrument was not strong enough, however, to disclose the occultations and transits of Jupiter's satellites, or the true shape of Saturn's ring. The results of his astronomical work are analysed in Delambre's "Histoire de l'Astronomie Moderne" (Paris, 1821, II). Other works of minor importance refer to biographies, physics, and anatomy. Gassendi was in correspondence with Cassini, Galilei, Hevel, Kepler, Scheiner, Vallis, and other scientists. As to

the Copernican system, he maintained that it rested on probabilities, but was not demonstrated, although he ably refuted all objections against it. To those whose conscience forbade them to accept Copernicanism, he said that the Tychonian system recommended itself as the most probable of all (Op. V, De Rebus Caelestibus, V).

In character, Gassendi was retiring and unpretentious. With friends, he would give way to a humorous and ironical vein; in controversy, he observed the Socratic method. On Sundays and feast days he never omitted celebrating Mass; and when in Paris, he went to the church of his friend, Père Mersenne. In his last illness he asked for the Viaticum three times and for extreme unction, and his aspirations were words from the Psalms. Gassendi was esteemed by all, and loved by the poor for whom he provided in lifetime and in his last will. He founded two anniversary Masses for himself, one to be said in the cathedral of Digne, and one in the chapel of his friend, Monmort, at St-Nicolas-des-champs, Paris, where he was buried. The accompanying picture represents his marble bust in that mausoleum. The assertion that he was a Minorite is without foundation.

Gassendi's "Opera Omnia" were edited in 6 vols., Lyons, 1658, and Florence, 1727.

J.G. HAGEN

Joseph Gasser von Valhorn

Joseph Gasser von Valhorn

An Austrian sculptor, b. 22 Nov., 1816 at Prägraten, Tyrol; d. 28 Oct., 1900. He was first instructed by his father, a wood-carver, and later studied at the Academy, Vienna. In 1846 he went to Rome, where a government stipend enabled him to remain several years. On his return he settled in Vienna (1852), and executed five heroic figures for the portal of the cathedral at Speyer: Our Lady, the Archangel St. Michael, St. John the Baptist, St. Stephen and St. Bernard of Clairvaux, completed in 1856. Also in Speyer he carved seven reliefs for the Kaiserhalle. The marble statue of Rudolph IV on the Elizabeth bridge over the Danube Canal, Vienna, is by him. Other works are the statues of Maximilian I, Frederick the Warlike, and Leopold of Hapsburg for the Museum of the Arsenal; the marble statues of the Seven Liberal Arts in the staircase of the Opera House; twenty-four figures for the Cathedral of St. Stephen; the relief of Duke Rudolph the Founder for the New Townhall; the "Prometheus" and the "Genevieve" for the Court Theatre; a number of statues for the Altlerchenfelder Church; busts of Herodotus and Aristarchus for the university; and portraits of Maximilian of Mexico and of his wife the Empress Charlotte. He also made a bust of the Emperor Francis Joseph for the Hotel de Ville, Paris, and sculptures for the new cathedral, Linz. Most important among his works are the subjects for the Votive Church, Vienna, modelled around the year 1873: the Coronation of Mary, the group of the Trinity, a figure of Christ the Redeemer, statues for the high and side altars, nine angels, and the tympan reliefs for the three main portals. Glasser was professor at the Academy from 1865 to 1873, and was inscribed among the nobility in 1879. In spite of his long life, and much good work, he had but small influence on the development of modern sculpture in Austria.

M.L. HANDLEY
Johann Joseph Gassner

Johann Joseph Gassner

A celebrated exorcist; b. 22 Aug., 1727, at Braz, Vorarlberg, Austria; d. 4 April, 1779, at Pondorf, on the Danube (Diocese of Ratisbon); studied at Prague and Innsbruck; ordained priest, 1750, and after serving various missions, became parish priest and dean of Pondorf May, 1776. A few years after his appointment to Klosterle in the Diocese of Chur, Switzerland (1758), his health began to fall, so that he was scarcely able to fulfil the duties of his ministry; he consulted various physicians in vain; suddenly he conceived the idea that his infirmities might be due to the influence of the evil spirit and might be cured by spiritual means. His experiment was successful. He applied this method also to others and soon thousands came to him to be healed. The fame of these cures spread far and wide; he was invited to the Diocese of Constance, to Ellwangen, Ratisbon, and other places; everywhere he had the same success.

He was convinced that the evil spirit could harm the body as well as the soul; and hence that some infirmities were not the result of natural agencies, but were caused by the Devil. Only cases of the latter kind were taken up; he applied the exorcisms of the Church, and commanded the evil one to depart from the afflicted, in the name of the Lord Jesus. To find out whether the disease was caused naturally or not, he applied the "probative exorcism", i.e. he commanded the spirit to indicate by some sign his presence in the body. And only then he made use of the "expulsive exorcism". His proceedings were not secret; anyone of good standing, Catholic or Protestant, was admitted. People of all classes, nobles, ecclesiastics, physicians, and others often gathered around him to see the marvels they had heard of. Official records were made, competent witnesses testified to the extraordinary happenings. The character of the work made many enemies for him, but also many staunch friends and supporters. One of his bitterest opponents was the rationalistic professor Johannes Semler of Halle. Also the physician Mesmer pretended that the cures were performed by the animal magnetism of his invention, but he was afraid of confronting Gassner. Among his friends were the Calvinistic minister, Lavater of Zurich, and especially Count Fugger, the Prince-Bishop of Ratisbon.

Official investigations were made by the ecclesiastical authorities; and all were favourable to Gassner, except that they recommended more privacy and decorum. The University of Ingolstadt appointed a commission, and so did the Imperial Government; they ended with the approval of Gassner's procedure. In fact, he never departed from the Church's teaching or instructions concerning exorcism, and always disclaimed the name of wonder-worker. He was an exemplary priest, full of faith and zeal, and altogether unselfish in his works of mercy.

FRANCIS J. SCHAEFER
William Gaston

William Gaston

Jurist: b. at Newbern, North Carolina, U.S.A., 19 Sept., 1778: d. at Raleigh, North Carolina, 28 January 1844. His father, Dr. Alexander Gaston, a Presbyterian native of Ireland, formerly a surgeon in the British Navy, was killed at Newbern by British soldiers during the Revolution, and his education devolved on his mother Margaret Sharpe, a Catholic Englishwoman. She sent him to Georgetown College in 1791, his name being the name being inscribed on the roll of the students of that institution. After staying there four years he entered Princeton College, New Jersey, where he graduated with first honours in 1796. He then studied law, and was admitted to the bar in 1798. In August, 1800, Gaston was elected to the Senate of his native state, although its constitution at the time contained a clause excluding Catholics from office. Elected to Congress in 1813 and 1815, his career in Washington was active and brilliant, as one of the influential leaders of Federal party. Resuming the practice of law, he was elevated in 1833 to the bench of the supreme Court of North Carolina, an office which he held for the remainder of his life. In the convention of 1835 he was mainly instrumental in securing the repeal of the article of the North Carolina State Constitution that practically disfranchised Catholics. He was one of the most intimate friends of Bishop England, and his splendid gifts of intellect were always devoted to the promotion of the Faith and the welfare of his fellow Catholics.

THOMAS F. MEEHAN

St. Gatianus

St. Gatianus

Founder and bishop of Tours; b. probably at Rome; d. at Tours, 20 December, 301. He came to Gaul during the consulate of Decius and Gratus (250 or 251), devoted half a century to the evangelization of the third Lyonnaise province amid innumerable difficulties, which the pagans raise against him. But he overcame all obstacles, and at his death the Church of Tours was securely established. The "traditional school", relying on legends that have hitherto not been traced back beyond the twelfth century, have claimed that St. Gatianus was one of the seventy-two disciples of Christ, and was sent into Gaul during the first century by St. Peter himself. This assertion, which has been refuted by learned and devout writers, is untenable in the face of the testimony of Gregory of Tours. To this bishop, who lived in the sixth century, we are indebted for the only details we possess concerning his holy predecessor.

LÉON CLUGNET

Franz Christian Gau

Franz Christian Gau

Architect and archæologist, b. at Cologne, 15 June, 1790; d. at Paris, January, 1854. In 1809 he entered the Académie des Beaux-Arts, Paris, and in 1815 visited Italy and Sicily. In 1817 he went to Nubia, and while there he made drawings and measurements of all the more important monuments of that country, his ambition being to produce a work which should supplement the great work of the French expedition in Egypt. The result of his labours appeared in a folio volume (Stuttgart and Paris, 1822), entitled "Antiquités de la Nubie ou monuments inédits des bords du Nil, situés entre la première et la seconde cataracte, dessinés et mesurés in 1819". It consists of sixty-eight plates, of plans, sections, and views, and has been received as an authority. His next publication was the completion of Mazois's work on the ruins of Pompeii. In 1825 Gau was naturalized as a French citizen, and later became architect to the city of Paris. He directed the restoration of the churches of Sain-Julien-le-Pauvre, and Saint-Séverin, and built the great prison of La Roquette, etc. With his name also is associated the revival of Gothic architecture in Paris — he having designed and commenced, in 1846, the erection of the church of Sainte-Clotilde, the first modern church erected in the capital in that style. Illness compelled him to relinquish the care of supervising the work, and he died before its completion.

Imperial Dict. Univ. Biog., s.v.; Michaud, *Biog. Univ.*, s.v.

THOMAS H. POOLE

Antoine Gaubil

Antoine Gaubil

A French Jesuit and missionary to China, b. at Gaillac (Aveyron), 14 July, 1689; d. at Peking, 24 July, 1759. He entered the Society of Jesus, 13 Sept., 1704, was sent to China, where he arrived 26 June, 1722, and thenceforth resided continuously at Peking until his death. His Chinese name was Sun Kiun-yung. He had taken Parennin's place as head of the school in which Manchus were taught Latin, to act as interpreters in Russian affairs. Gaubil, the best astronomer and historian among the French Jesuits in China during the eighteenth century, carried on an extensive correspondence with the savants of his day, among them Féret and Delisle. His works are numerous, and are even yet highly praised. Among them is "Traité de l'Astronomie Chinoise" in the "Observations mathématiques", published by Pére Souciet (Paris, 1729-1732). From Chinese sources Gaubil translated the history of Jenghis Khan (*Historie de Gentchiscan* (Paris, 1739) and part of the annals of the T'ang Dynasty (in "Mémoires concernant les Chinois". vols. XV and XVI); he also wrote a treaty on Chinese chronology (*Traité de la Chronologie Chenoise*, Paris, 1814), and executed a good translation of the second of the Chinese classics, the "Book of History" (*Shoo-king*), edited by De Guignes (Paris, 1770).

Gaubil left a great number of manuscripts now kept in the Observatory and Naval Depot (Paris) and in the British Museum (London). From three manuscript volumes kept formerly at the Ecole Sainte-Geneviève (Paris) the present writer published "Situation de Holin en Tartarie" (T'oung Pao, March, 1893) and "Situation du Japon et de la Corée" (T'oung Pao, March, 1898). Abel Rémusat

in "Nouveaux Mélanges Asiatiques" (II, p. 289), wrote of Gaubil: "More productive than Parennin and Gerbillion, less systematical than Prémare and Foucquet, more conscientious than Amiot, less light-headed and enthusiastic than Cibot, he treated thoroughly, scientifically, and critically, every question he handled." His style is rather fatiguing as Gaubil, in studying the Chinese and Manchu languages, had forgotten much of his native tongue.

HENRI CORDIER

St. Gaudentius

St. Gaudentius

Bishop of Brescia from about 387 until about 410; he was the successor of the writer on heresies, St. Philastrius. At the time of that saint's death Gaudentius was making a pilgrimage to Jerusalem. The people of Brescia bound themselves by an oath that they would accept no other bishop than Gaudentius; and St. Ambrose and other neighbouring prelates, in consequence, obliged him to return, though against his will. The Eastern bishops also threatened to refuse him Communion if he did not obey. We possess the discourse which he made before St. Ambrose and other bishops on the occasion of his consecration, in which he excuses, on the plea of obedience, his youth and his presumption in speaking. He had brought back with him from the East many precious relics of St. John Baptist and of the Apostles, and especially of the Forty Martyrs of Sebaste, relics of whom he had received at Caesarea in Cappadocia from nieces of St. Basil. These and other relics from Milan and elsewhere he deposited in a basilica which he named *Concilium Sanctorum*. His sermon on its dedication is extant. From a letter of St. Chrysostom (Ep. clxxxiv) to Gaudentius it may be gathered that the two saints had met at Antioch. When St. Chrysostom had been condemned to exile and had appealed to Pope Innocent and the West in 405, Gaudentius warmly took his part. An embassy to the Eastern Emperor Arcadius from his brother Honorius and from the pope, bearing letters from both and from Italian bishops, consisted of Gaudentius and two other bishops. The envoys were seized at Athens and sent to Constantinople, being three days on a ship without food. They were not admitted into the city, but were shut up in a fortress called Athyra, on the coast of Thrace. Their credentials were seized by force, so that the thumb of one of the bishops was broken, and they were offered a large sum of money if they would communicate with Atticus, who had supplanted St. Chrysostom. They were consoled by God, and St. Paul appeared to a deacon amongst them. They were eventually put on board an unseaworthy vessel, and it was said that the captain had orders to wreck them. However, they arrived safe at Lampsacus, where they took ship for Italy, and arrived in twenty days at Otranto. Their own account of their four months' adventures has been preserved to us by Palladius (*Dialogus*, 4). St. Chrysostom wrote them several grateful letters.

We possess twenty-one genuine tractates by Gaudentius. The first ten are a series of Easter sermons, written down after delivery at the request of Benivolus, the chief of the Brescian nobility, who had been prevented by ill health from hearing them delivered. In the preface Gaudentius takes occasion to disown all unauthorized copies of his sermons published by shorthand writers. These

pirated editions seem to have been known to Rufinus, who, in the dedication to St. Gaudentius of his translation of the pseudo-Clementine "Recognitions", praises the intellectual gifts of thne Bishop of Brescia, saying that even his extempore speaking is worthy of publication and of preservation by posterity. The style of Gaudentius is simple, and his matter is good. His body lies at Brescia in the Church of St. John Baptist, on the site of the Concilium Sanctorum. His figure is frequently seen in the altar-pieces of the great Brescian painters, Moretto Savoldo, and Romanino. The best edition of his works is by Galeardi (Padua, 1720, and in P.L., XX).

JOHN CHAPMAN

Gaudentius of Brescia

Gaudentius of Brescia

(GAUDENTIUS BRIXIENSIS or BONTEMPS.)

A theologian of the Order of Friars Minor Capuchins; b. at Brescia in 1612; d. at Oriano, 25 March, 1672; descended from the noble Brescian family of Bontempi; having entered the Capuchin Order, was assigned to the duties of lector of theology. In this capacity he visited the several convents of his own province of Brescia, as well as other houses of study of the different Capuchin provinces of Italy. He was taken suddenly ill at Oriano, and died there while engaged in preaching a course of Lenten sermons. His remains were later removed to the Capuchin church at Verola, where they now rest. His fame as a theologian rests mainly on his "Palladium Theologicum seu tuta theologia scholastica ad intimam mentem d. Bonaventurae Seraph. Doc. cujus eximiae doctrinae raptae restituuntur, sententiae impugnatae propugnantur", a work in which elegance of style, depth of thought, and soundness of doctrine are admirably combined, and which ranks the author among the foremost exponents of the Franciscan school. Gaudentius's pupil and countryman, Gianfrancesco Durantio, undertook the publication of the work after the death of the author; and under the patronage of Louis XIV of France, who subjected the manuscript to the examination of a special commission of doctors of the Sorbonne, it was published at Lyons, in seven folio volumes, in 1676.

STEPHEN DONOVAN

Gaudete Sunday

Gaudete Sunday

The third Sunday of Advent, so called from the first word of the Introit at Mass (*Gaudete*, i.e. Rejoice). The season of Advent originated as a fast of forty days in preparation for Christmas, commencing on the day after the feast of St. Martin (12 November), whence it was often called "St. Martin's Lent"-- a name by which it was known as early as the fifth century. The introduction of the Advent fast cannot be placed much earlier, because there is no evidence of Christmas being kept on 25 December before the end of the fourth century (Duchesne, "Origines du culte chrétien", Paris, 1889), and the preparation for the feast could not have been of earlier date than the feast

itself. In the ninth century, the duration of Advent was reduced to four weeks, the first allusion to the shortened season being in a letter of St. Nicholas I (858-867) to the Bulgarians, and by the twelfth century the fast had been replaced by simple abstinence. St. Gregory the Great was the first to draw up an Office for the Advent season, and the Gregorian Sacramentary is the earliest to provide Masses for the Sundays of Advent. In both Office and Mass provision is made for five Sundays, but by the tenth century four was the usual number, though some churches of France observed five as late as the thirteenth century. Notwithstanding all these modifications, however, Advent still preserved most of the characteristics of a penitential seasons which made it a kind of counterpart to Lent, the middle (or third) Sunday corresponding with Laetare or Mid-Lent Sunday. On it, as on Laetare Sunday, the organ and flowers, forbidden during the rest of the season, were, permitted to be used; rose-coloured vestments were allowed instead of purple (or black, as formerly); the deacon and subdeacon reassumed the dalmatic and tunicle at the chief Mass, and cardinals wore rose- colour instead of purple. All these distinguishing marks have continued in use, and are the present discipline of the Latin Church. Gaudete Sunday, therefore, makes a breaker like Laetare Sunday, about midway through a season which is otherwise of a penitential character, and signifies the nearness of the Lord's coming. Of the "stations" kept in Rome the four Sundays of Advent, that at the Vatican basilica is assigned to Gaudete, as being the most important and imposing of the four. In both Office and Mass throughout Advent continual reference is made to our Lord's second coming, and this is emphasized on the third Sunday by the additional signs of gladness permitted on that day. Gaudete Sunday is further marked by a new Invitatory, the Church no longer inviting the faithful to adore merely "The Lord who is to come", but calling upon them to worship and hail with joy "The Lord who is now nigh and close at hand". The Nocturn lessons from the Prophecy of Isaias describe the Lord's coming and the blessings that will result from it, and the antiphons at Vespers re-echo the prophetic promises. The joy of expectation is emphasized by the constant Alleluias, which occur in both Office and Mass throughout the entire season. In the Mass, the Introit "Gaudete in Domino temper" strikes the same note, and gives its name to the day. The Epistle again incites us to rejoicing, and bids us prepare to meet the coming Saviour with prayers and supplication and thanksgiving, whilst the Gospel, the words of St. John Baptist, warns us that the Lamb of God is even now in our midst, though we appear to know Him not. The spirit of the Office and Liturgy all through Advent is one of expectation and preparation for the Christmas feast as well as for the second coming of Christ, and the penitential exercises suitable to that spirit are thus on Gaudete Sunday suspended, as were, for a while in order to symbolize that joy and gladness in the Promised Redemption which should never be absent from the heart of the faithful.

G. CYPRIAN ALSTON

Antoine de Gaudier

Antoine de Gaudier

A writer on asectic theology; b. at Château-Thierry, France, 7 January, 1572; d. at Paris, 14 April, 1622. About the age of twenty he entered the Society of Jesus at Tournay. Later on he was rector at Liège, professor of Holy Scripture at Pont-à-Mousson, and of moral theology at La Flèche. In these two last-named posts he was also charged with the spiritual direction of his brethren, and showed such an aptitude for this branch of the ministry that he was named master of novices and tertians. His appointment to these offices shows that Gaudier, since he died at the age of fifty must have evinced an early intellectual maturity and an exceptional talent for the guidance of souls. In the discharge of his various functions, he found an opportunity of developing before a domestic audience the principal matter of asceticism, which he elaborated little by little into a complete treatise. The eagerness shown to possess his spiritual writings led him at last to publish them. There then appeared successively in Latin; "De Sanctissimo Christi Jesu amore opusculum" (Pont-à-Mousson, 1619), translated into English by G. Tickell, S.J. ("The Love of Our Lord Jesus Christ", Derby, 1864); "De verâ Christi Jesu imitatione"; "De Dei praesentiâ"; "Praxis meditandi a B.P. Ignatio traditae explicatio" (Paris, 1620). There are French translations of these four works. After the death of Father Gaudier all his spiritual works, both printed and unedited, were collected in one folio volume under the title "De naturâ et statibus perfectionis" (Paris, 1643), a better edition in three octavo volumes being later supplied by Father J. Martinow, S.J. (Paris, 1856-8). While this great treatise is of special interest to Jesuits, since it is primarily intended for their institute, it is regarded by enlightened judges as one of the most beautiful and solid monuments of Catholic asceticism. The whole of the speculative part is of general interest, and the practical part, with the exception of rare passages, is equally so. It contains a thirty days' retreat according to the Spiritual Exercises of St. Ignatius, which has been separately edited several times since 1643. The great value of the work is heightened by the fact that Gaudier had personal intercourse with the immediate disciples of the saint.

PAUL DEBUCHY

Gaudiosus

Gaudiosus

Bishop of Tarazona (Turiasso), Spain; died about 540. Our information concerning the life of this holy bishop is scant, and rests on comparatively late sources. On the occasion of the translation of his remains in 1573, a sketch of his life was discovered in the grave, written on parchment; apart from the Breviary lessons of the Church of Tarazona, this document contains the only written details we possess concerning the life of Gaudiosus. His father, Guntha, was a military official (*spatharius*) at the court of the Visigothic King Theodoric (510-25). The education of the boy was entrusted to St. Victorianus, abbot of a monastery near Burgos (Oca), who trained him for the service of the Church. Later (c. 530) he was appointed Bishop of Tarazona. Nothing more is known of his activities. Even the year of his death has not been exactly determined. After his death he was venerated as a saint. According to the manuscript life found in his grave he died on 29 October, but the Church

of Tarazona celebrates his feast on 3 November. He was first entombed in the church of St. Martin (dedicated later to St. Victorianus), attached to the monastery where he had spent his youthful years. In 1573 his remains were disinterred and translated to the cathedral of Tarazona.

Acta SS., I, Nov., 664-65; DE LA FUENTE, *La Santa Iglesia de Tarazona en sus Estados Antiguos y Modernos* (Madrid, 1865).

J.P. KIRSCH
Christian Gaul

Christian Gaul

The Church of Gaul first appeared in history in connexion with the persecution at Lyons under Marcus Aurelius (177). The pagan inhabitants rose up against the Christians, and forty-eight martyrs suffered death under various tortures. Among them there were children like the slave Blandina and Ponticus, a youth of fifteen. Every rank of life had members among the first martyrs of the Church of Gaul: the aristocracy were represented by Vettius Epagathus; the professional class by Attalus of Pergamus, a physician; a neophyte Maturus, died beside Pothinus, Bishop of Lyons, and Sanctus, deacon of Vienne. The Christians of Lyons and Vienne in a letter to their brethren of Smyrna give an account of this persecution, and the letter preserved by Eusebius (*Hist. Eccl.*, V, i-iv), is one the gems of Christian literature. In this document the Church of Lyons seems to be the only church organized at the time in Gaul. That of Vienne appears to have been dependent on it and, to judge from similar cases, was probably administered by a deacon. How or where Christianity first gained a foothold in Gaul is purely a matter of conjecture. Most likely the first missionaries came by sea, touched at Marseilles, and progressed up the Rhone till they established the religion at Lyons, the metropolis and centre of communication for the whole country. The firm establishment of Christianity in Gaul was undoubtedly due to missionaries from Asia. Pothinus was a disciple of St. Polycarp, Bishop of Smyrna, as was also his successor, Irenaeus. In the time of Irenaeus, Lyons was still the centre of the Church in Gaul. Eusebius speaks of letters written by the Churches of Gaul of which Irenaeus is bishop (*Hist. Eccl.*, V, xxiii). These letters were written on the occasion of the second event which brought the Church of Gaul into prominence. Easter was not celebrated on the same day in all Christian communities; towards the end of the second century Pope Victor wished to universalize the Roman usage and excommunicated the Churches of Asia. Irenaeus intervened to restore peace. About the same time, in a mystical inscription found at Autun, a certain Pectorius celebrated in Greek verse the Ichthus or fish, symbol of the Eucharist. A third event in which the bishops of Gaul appear is the Novatian controversy. Faustinus, Bishop of Lyons, and other colleagues in Gaul are mentioned in 254 by St. Cyprian (*Ep.* lxxviii) as opposed to Novatian, whereas Marcianus of Axles was favourable to him.

No other positive information concerning the Church of Gaul is available until the fourth century. Two groups of narratives, however, aim to fill in the gaps. On the one hand a series of local legends trace back the foundation of the principal sees to the Apostles. Early in the sixth century we find

St. Caesarius Bishop of Arles, crediting these stories; regardless of the anachronism, he makes the first Bishop of Vaison, Daphnus, whose signature appears at the Council of Arles (314), a disciple of the Apostles (Lejay, *Le rôle théologique de Césaire d'Arles*, p. 5). One hundred years earlier one of his predecessors, Patrocles, based various claims of his Church on the fact that St. Trophimus, founder of the Church of Arles, was a disciple of the Apostles. Such claims were no doubt flattering to local vanity; during the Middle Ages and in more recent times many legends grew up in support of them. The evangelization of Gaul has often been attributed to missionaries sent from Rome by St. Clement--a theory, which has inspired a whole series of fallacious narratives and forgeries, with which history is encumbered. More faith can be placed in a statement of Gregory of Tours in his "Historia Francorum" (I, xxviii), on which was based the second group of narratives concerning the evangelisation of Gaul. According to him, in the year 250 Rome sent seven bishops, who founded as many churches in Gaul: Gatianus the Church of Tours, Trophimus that of Arles, Paul that of Narbonne, Saturninus that of Toulouse, Denis that of Paris, Stremonius (Austremonius) that of Auvergne (Clermont), and Martialis that of Limoges. Gregory's statement has been accepted with more or less reservation by serious historians. Nevertheless even though Gregory, a late successor of Gatianus, may have had access to information on the beginnings of his church, it must not be forgotten that an interval of three hundred years separates him from the events he chronicles; moreover, this statement of his involves some serious chronological difficulties, of which he was himself aware, e. g. in the case of the bishops of Paris. The most we can say for him is that he echoes a contemporary tradition, which represents the general point of view of the sixth century rather than the actual facts. It is impossible to say how much legend is mingled with the reality.

By the middle of the third century, as St. Cyprian bears witness, there were several churches organized in Gaul. They suffered little from the great persecution. Constantius Chlorus, the father of Constantine, was not hostile to Christianity, and soon after the cessation of persecution the bishops of the Latin world assembled at Arles (314). Their signatures, which are still extant, prove that the following sees were then in existence: Vienne, Marseilles, Arles, Orange, Vaison, Apt, Nice, Lyons, Autun, Cologne, Trier, Reims, Rouen, Bordeaux, Gabali, and Eauze. We must also admit the existence of the Sees of Toulouse, Narbonne, Clermont, Bourges, and Paris. This date marks the beginning of a new era in the history of the Church of Gaul. The towns had been early won over to the new Faith; the work of evangelization was now extended and continued during the fourth and fifth centuries. The cultured classes, however, long remained faithful to the old traditions. Ausonius was a Christian, but gives so little evidence of it that the fact has been questioned. Teacher and humanist, he lived in the memories of the past. His pupil Paulinus entered the religious life, at which, however, the world of letters was deeply scandalized; so much so, indeed, that Paulinus had to write to Ausonius to justify himself. At the same period there were pagan rhetoricians who celebrated in the schools, as at Autun, the virtues and deeds of the Christian emperors. By the close of the fifth century, however, the majority of scholars in Gaul were Christians. Generation by generation the change came about. Salvianus, the fiery apologist (died c. 492), was the son of pagan parents. Hilary of Poitiers, Sulpicius Severus (the Christian Sallust), Paulinus of Nola, and Sidonius

Apollinaris strove to reconcile the Church and the world of letters. Sidonius himself is not altogether free from suggestions of paganism handed down by tradition. In Gaul as elsewhere the question arose as to whether the Gospel could really adapt itself to literary culture. With the inroads of the barbarians the discussion came to an end.

It is none the less true that throughout the Empire the progress of Christianity had been made chiefly in the cities. The country-places were yet strongholds of idolatry, which in Gaul was upheld by a twofold tradition. The old Gallic religion, and Graeco-Roman paganism, still had ardent supporters. More than that, among the Gallo-Roman population the use of spells and charms for the cure of sickness, or on the occasion of a death, was much in vogue; the people worshipped springs and trees, believed in fairies, on certain days clothed themselves in skins of animals, and resorted to magic and the practice of divination. Some of these customs were survivals of very ancient traditions; they had come down through the Celtic and the Roman period, and had no doubt at times received the imprint of the Gallic and Graeco-Roman beliefs. Their real origin must of course, be sought further back in the same obscurity in which the beginnings of folk-lore are shrouded. This mass of popular beliefs, fancies, and superstitions still lives. It was the principal obstacle encountered by the missionaries in the rural places. St. Martin, a native of Pannonia, Bishop of Tours, and founder of monasteries, undertook especially in Central Gaul a crusade against this rural idolatry. On one occasion, when he was felling a sacred tree in the neighbourhood of Autun, a peasant attacked him, and he had an almost miraculous escape. Besides St. Martin other popular preachers traversed the rural districts, e.g. Victricius, Bishop of Rouen, another converted soldier, also Martin's disciples, especially St. Martin of Brives. But their scattered and intermittent efforts made no lasting effect on the minds of the peasants. About 395 a Gallic rhetorician depicts a scene in which peasants discuss the mortality among their flocks. One of them boasts the virtue of the sign of the cross, "the sign of that God Who alone is worshipped in the large cities" (Riese, *Anthologia Latina*, no. 893, v. 105). This expression, however, is too strong, for at that very period a single church sufficed for the Christian population of Trier. Nevertheless the rural parts continued the more refractory. At the beginning of the fifth century, there took place in the neighbourhood of Autun the procession of Cybele's chariot to bless the harvest. In the sixth century, in the city of Arles, one of the regions where Christianity had gained its earliest and strongest foothold, Bishop Caesarius was still struggling against popular superstitions, and some of his sermons are yet among our important sources of information on folk-lore.

The Christianization of the lower classes of the people was greatly aided by the newly established monasteries. In Gaul as elsewhere the first Christian ascetics lived in the world and kept their personal freedom. The practice of religious life in common was introduced by St. Martin (died c. 397) and Cassian (died c. 435). Martin established near Tours the "grand monastère", i.e. Marmoutier, where in the beginning the monks lived in separate grottoes or wooden huts. A little later Cassian founded two monasteries at Marseilles (415). He had previously visited the monks of the East, and especially Egypt, and had brought back their methods, which he adapted to the circumstances of Gallo-Roman life. Through two of his works "De institutis coenobiorum" and the "Collationes

XXIV", he became the doctor of Gallic asceticism. About the same time Honoratus founded a famous monastery on the little isle of Lérins (Lerinum) near Marseilles destined to become a centre of Christian life and ecclesiastical influence. Episcopal sees of Gaul were often objects of competition and greed, and were rapidly becoming the property of certain aristocratic families, all of whose representatives in the episcopate were not as wise and upright as Germanus of Auxerre or Sidonius Apollinaris. Lérins took up the work of reforming the episcopate, and placed many of its own sons at the head of dioceses: Honoratus, Hilary, and Caesarius at Arles; Eucherius at Lyons, and his sons Salonius and Veranius at Geneva and Vence respectively; Lupus at Troyes; Maximus and Faustus at Riez. Lérins too became a school of mysticism and theology and spread its religious ideas far and wide by useful works on dogma, polemics, and hagiography. Other monasteries were founded in Gaul, e.g. Grigny near Vienne, Ile Barbe at Lyons, Réomé (later known as Moutier-Saint-Jean), Morvan, Saint-Claude in the Jura, Chinon, Loches etc. It is possible, however, that some of these foundations belong to the succeeding period. The monks had not yet begun to live according to any fixed and codified rule. For such written constitutions we must await the time of Caesarius of Arles. Monasticism was not established without opposition. Rutilius Namatianus, a pagan, denounced the monks of Lérins as a brood of night-owls; even the effort to make chastity the central virtue of Christianity met with much resistance, and the adversaries of Priscillian in particular were imbued with this hostility to a certain degree. It was also one of the objections raised by Vigilantius of Calagurris, the Spanish priest whom St. Jerome denounced so vigorously. Vigilantius had spent much time in Gaul and seems to have died there. The law of ecclesiastical celibacy was less stringent, less generally enforced than in Italy, especially Rome. The series of Gallic councils before the Merovingian epoch bear witness at once to the undecided state of discipline at the time, and also to the continual striving after some fixed disciplinary code.

The Church of Gaul passed through three dogmatic crises. Its bishops seem to have been greatly preoccupied with Arianism; as a rule they clung to the teaching of Nicaea, in spite of a few temporary or partial defections. Athanasius, who had been exiled to Trier (336-38), exerted a powerful influence on the episcopate of Gaul; one of the great champions of orthodoxy in the West was Hilary of Poitiers, who also suffered exile for his constancy. Priscillianism had a greater hold on the masses of the faithful. It was above all a method, an ideal of Christian life, which appealed to all, even to women. It was condemned (380) at the Synod of Saragossa where the Bishops of Bordeaux and Agen were present; none the less it spread rapidly in Central Gaul, Eauze in particular being a stronghold. When in 385 the usurper Maximus put Priscillian and his friends to death, St. Martin was in doubt how to act, but repudiated with horror communion with the bishops who had condemned the unfortunates. Priscillianism, indeed, was more or less bound up with the cause of asceticism in general. Finally the bishops and monks of Gaul were long divided over Pelagianism. Proculus, Bishop of Marseilles, had obliged Leporius, a disciple of Pelagius, to leave Gaul, but it was not long until Marseilles and Lérins, led by Cassian, Vincent and Faustus, became hotbeds of a teaching opposed to St. Augustine's and known as Semipelagianism. Prosper of Aquitaine wrote against it, and was obliged to take refuge at Rome. It was not until the beginning of the sixth century that the

teaching of Augustine triumphed, when a monk of Lérins, Caesarius of Arles, an almost servile disciple of Augustine, caused it to be adopted by the Council of Orange (529).

In the final struggle Rome interfered. We do not know much concerning the earlier relations between the bishops of Gaul and the pope. The position of Irenaeus in the Easter Controversy shows a considerable degree of independence; yet Irenaeus proclaimed the primacy of the See of Rome. About the middle of the third century the pope was appealed to for the purpose of settling difficulties in the Church of Gaul and to remove an erring bishop (Cyprian, Epist. lxxviii). At the Council of Arles (314) the bishops of Gaul were present with those of Brittany, Spain, Africa, even Italy; Pope Sylvester sent delegates to represent him. It was in a way a Council of the West. During all that century, however, the episcopate of Gaul had no head, and the bishops grouped themselves according to the ties of friendship or locality. Metropolitans did not exist as yet, and when advice was needed Milan was consulted. "The traditional authority", says Duchesne, "in all matters of discipline remained always the ancient Church of Rome; in practice, however, the Council of Milan decided in case of conflict." The popes then took the situation in hand, and in 417 Pope Zosimus made Patrocles, Bishop of Aries, his vicar or delegate in Gaul, and provided that all disputes should be referred to him. Moreover, no Gallic ecclesiastic could have access to the pope without testimonial letters from the Bishop of Aries. This primacy of Aries waxed and waned under the succeeding popes. It enjoyed a final period of brilliancy, under Caesarius, but after his time it conferred on the occupant merely an honorary title. In consequence, however, of the extensive authority of Arles in the fifth and sixth centuries, canonical discipline was more rapidly developed there, and the "Libri canonum" that were soon in vogue in Southern Gaul were modelled on those of the Church of Aries. Towards the end of this period Caesarius assisted at a series of councils, thus obtaining a certain recognition as legislator for the Merovingian Church.

The barbarians, however, were on the march. The great invasion of 407 made the Goths masters of all the country to the south of the Loire, with the exception of Bourges and Clermont, which did not fall into their hands until 475; Arles succumbed in 480. Then the Visigoth kingdom was organized, Arian in religion, and at first hostile to Catholicism. Gradually the necessities of life imposed a policy of moderation. The Council of Agde, really a national council of Visigothic Gaul (506), and in which Caesarius was dominant, is an evidence of the new temper on both sides. The Acts of this council follow very closely the principles laid down in the "Breviarium Alarici" -- a summary of the Theodocian Code drawn up by Alaric II, the Visigothic king, for his Gallo-Roman subjects -- and met with the approval of the Catholic bishops of his kingdom. Between 410 and 413 the Burgundians had settled near Mains; in 475 they had come farther south along the Rhone, and about this time became Arians. The Franks, soon to be masters of all Gaul, left the neighbourhood of Tournai, defeated Syagrius in 486, and established their power as far as the Loire. In 507 they destroyed the Visigoth Kingdom, and in 534 that of the Burgundians; in 536 by the conquest of Arles they succeeded to the remnants of the great state created by the genius of King Theodoric; with them began a new era (*see* FRANKS).

The transition from one regime to another was made possible by the bishops of Gaul. The bishops had frequently played a beneficent rôle as intermediaries with the Roman authorities. Before the barbarian invasions they were the true champions of the people. Indeed it was long believed that they had been invested with special powers and the official title of *defensores civitatum* (defenders of the States). While this title was never officially borne by them, the popular error was only formal and superficial. Bishops like Sidonius Apollinaris, Avitus, Germanus of Auxerre, Caesarius of Arles, were truly the defenders of their fatherland. While the old civic institutions were tottering to their fall, they upheld the social fabric. Through their efforts the barbarians became amalgamated with the native population, introducing into it the germs of a new and vigorous life. Lastly the bishops were the guardians of the classical traditions of Latin literature and Roman culture, and long before the appearance of monasticism had been the mainstay of learning. Throughout the sixth and seventh centuries manuscripts of the Bible and the Fathers were copied to meet the needs of public worship, ecclesiastical teaching, and Catholic life. The only contemporary buildings that exhibit traces of classical or Byzantine styles are religious edifices. For all this, and for much more, the bishops of Gaul deserve the title of "Makers of France".

After the writings of EUSEBIUS OF CAESARIA, SULPICIUS SEVERUS, PAULINUS OF NOLA, SALVIANUS, GREGORY OF TOURS, etc., our principal source of information is the epigraphic material published by LE BLANT, *Inscriptions chrétiennes de la Gaule antérieures au VIIIe siècle* (Paris, 1858-85), with a supplement (1897); IDEM, *Les sarcophages chrétiens de la Gaule* (Paris, 1896). SIRMOND AND LALANDE, *Concilia antiqua Galliae* (4 vols., fol., 1629-66); also the catalogues or lists of bishops preserved in many dioceses and edited by DELISLE in *Histoire littéraire de la France*, XXIX.

General works devoted to the history and study of Christianity have chapters on the Church in Gaul. Special reference works: DUCHESNE, *Fastes épiscopaux de l'ancienne Gaule*, I (1894; 2nd ed., 1907), II (1900); HOUTIN, *La controverse de l'apostolicité des églises de France au XIXe siècle* (Paris, 1901); *Analecta Bollandiana*, XIX, 354; MORIN, *Saint Lazare et saint Maximin* in *Mémoires de la société des antiquaires de France*, LIX (Paris, 1898); AUBÉ in *Revue historique*, VII (1878) 152-64; HAVET, *Les origines de saint Denis* in *Bibliothèque de l'École des Chartes* (Paris, 1890), p. 25; DUFOURCQ, *La christianisation des foules dans l'Empire romain* in *Revue d'histoire et de littérature religieuses*, IV (Paris, 1899), 239; AMPÈRE, *Histoire littéraire de la France avant le XIIe siècle*, I and II (Paris, 1839); ROGER, *L'enseignement des lettres classiques en Gaule d'Ausone à Alcuin* (Paris, 1905); IMBART DE LA TOUR, *Les paroisses rurales du IVe au XIe siècle* (Paris, 1900); BABUT, *Priscillien et le priscillianisme* (Paris, 1909); DUFOURCQ, *Le mouvement légendaire lérinien* in *Etude sur les "Gesta Martirium" romains*, II (Paris, 1907); DUCHESNE, *Origines du culte chrétien* (Paris, 1889), 32, 84; IDEM, *La première collection romaine des décrétales* in *Atti del secondo congresso d'archeologia cristiana* (Rome, 1902), 159; ARNOLD, *Caesarius von Arelate und die gallische Kirche seiner Zeit* (Leipzig, 1894); MALNORY, *Césaire, évêque d'Arles* (Paris, 1894); CHÉNON, *Le "Defensor Civitatis"* in *Nouvelle revue historique du droit français* (1889), 551; CHATELAIN, *Uncialis scriptura* (Paris, 1902); ENLART

Manuel d'archéologie française, I (Paris, 1902). For a more extensive literature see MONOD, Bibliographie de L'histoire de France (Paris, 1888); MOLINIER, Les sources de l'histoire de France, Pt. I: Epoque primitive, Mérovingiens et Carolingiene (Paris, 1902).

PAUL LEJAY

Aloisius-Edouard-Camille Gaultier

Aloisius-Edouard-Camille Gaultier

Priest and schoolmaster; b. at Asti, Piedmont, about 1745, of French parents; d. at Paris, 18 Sept., 1818; began his studies in France, and completed them in Rome where he was ordained; upon his return to France (1780) he devoted himself to the work of education and in 1786 opened a school in Paris, wherein he applied his principle of instructing children while amusing them. The French Revolution obliged him to seek refuge in England, and, finding in London a number of his former pupils of the French nobility, he opened a course for the education of French refugees. His principles were greatly admired and his methods commended by the Universities of Oxford and Cambridge. He came back to France in 1801, and continued to teach and publish his educational works. Later another journey to London was undertaken for the purpose of studying the monitorial system of teaching, practised by Bell and Lancaster, a system which he wanted to introduce into the French schools. During the Hundred Days, Carnot appointed him a member of the commission for the reorganization of public instruction, and later Gaultier was one of the founders of the "Société pour l'enseignement élémentaire".

To give a complete list of Gaultier's works is impossible here. They include text-books for every branch of primary instruction, reading, writing, arithmetic, geometry, geography, history, logical and grammatical analysis, composition, politeness, etc., and they apply his method of instructive plays, that is, a system of questions and answers in which, according to the correctness or incorrectness of the answers, a scheme of loss and gain in credits constantly stimulates the interest of the pupils. While, from the point of view of modern pedagogy, this method has many obvious defects, especially that of being too mechanical and of insisting too much on mere memory, it was nevertheless an advance on methods previously used, and it acknowledged, though carrying it to excess, the great importance of the principle of interest in education. It must be supplemented by the application of the psychological principles of adaptation, reflection, and assimilation.

C.A. DUBRAY

Jean-Joseph Gaume

Jean-Joseph Gaume

French theologian and author, b. at Fuans (Franche-Comté) in 1802; d. in 1879. While attached to the Diocese of Nevers, he was successively professor of theology, director of the *petit séminaire*, canon, and vicar-general of the diocese, and had already published several works, when he left for

Rome in 1841. Gregory XVI made him a knight of the Reformed Order of St. Sylvester. A doctor of theology of the University of Prague, a member of several societies of scholars, honorary vicar-general of several dioceses, he received from Pius IX in 1854 the title of prothonotary apostolic.

Abbé Gaume is the author of numerous books treating of theology, history, education. Those of the first category are still esteemed, those of the second have fallen into oblivion, and those of the third gave rise to the famous question of the classics. These last writings are all inspired by one and the same thought; vividly struck by the religious and moral deterioration of his age, the author seeks its remote cause, and believes he finds it in the Renaissance, which was for society a resurrection of the paganism of antiquity, prepared the way for the Revolution, and was, in fine, the primal source of all the evil. Such is the dominating idea of the works "La Révolution" (8 vols., 1856) and "Histoire de la société domestique" (2 vols., 1854). It is again met with in "Les Trois Rome" (1857). But to cure the ills of society it was necessary to devise a new method of moulding childhood and youth; this was to consist in catechetical instruction and the exclusion of pagan authors from classical studies. In support of this method he composed his "Catéchisme de Persévérance, ou Exposé de la Religion depuis l'origine du monde jusqu'à nos jours" (8 vols., 1854); "La Religion et l'Eternité" (1859); "Traité de l'Esprit Saint" (1864). To this series of works belong his "Manuel du Confesseur" (1854) and "l'Horloge de la Passion" (1857), which he translated from St. Alphonsus Liguori.

The reform, or rather the revolution -- the word is his -- which he deemed necessary in classic instruction he had indicated as early as 1835 in his book "Le Catholicisme dans l'éducation", without arousing much comment. He returned to the subject in 1851 in a work entitled "Le Ver rongeur des sociétés modernes ou le Paganisme dans l'Education". The renown of the author, still more the patronage of two influential prelates -- Mgr. Gousset, Archbishop of Reims, and Mgr. Parisi, Bishop of Arras -- and above all the articles of Louis Veuillot in "L'Univers", which supported Abbé Gaume from the first, gained for his views a hearing which they had previously failed to secure, and provoked a lively controversy among Catholics. After having shown that the intellectual formation of youth during the first centuries of the Church and throughout the Middle Ages was accomplished through the study of Christian authors (ch. i-vi), Gaume proceeds to prove that the Renaissance of the sixteenth century perverted education throughout Europe by the substitution of pagan writers for Christian authors. In support of his thesis, he brings forward the testimony of men (viii-ix) and of facts (x-xxv), indicating the influence of classical paganism on literature, speech, the arts, philosophy, religion, the family, and society. Despite a proportion of truth, the exaggeration of his thesis was evident. It was the condemnation of the method held in honour in the Church for three centuries; Benedictines, Jesuits, Oratorians, the secular clergy themselves had, without opposition from the Holy See, made the pagan authors the basis of the curriculum in their colleges. Gaume did not go so far as to exclude the pagan texts; he allowed them some place in the three highest classes (the course comprised eight), but banished them from the first five years.

Consulted by the professors of his *petit séminaire* as to the course to pursue, the Bishop of Orléans, Mr. Dupanloup, addressed them a letter on classical teaching, in which he boldly declared

himself in favour of the existing regulations and methods, thus preserving for the ancient authors the rank they had hitherto held, but at the same time assigned an important place to Holy Scripture, the Fathers, and modern authors. Sharply attacked by Veillot in "L'Univers", the bishop retorted by issuing a pastoral on the classics and especially on the interference of lay journalism in episcopal administration, and concluded by enjoining on the professors of his *petits séminaires* to receive no longer "L'Univers". Then the question became even more burning; newspaper articles, brochures, pamphlets, even books succeeded one another on this question which created a general commotion among educationists. Gaume published in support of his thesis the "Lettre sur le paganisme dans l'éducation". For a time it seemed as though the diocese were on the point of division. At this juncture Mgr. Dupanloup drew up a declaration which was signed by forty-six prelates. It contained four articles, two of which dealt with journalism in its relations with episcopal authority, and two with the use of the classics. It was therein stated: (1) that the employment of the ancient classics in secondary schools, when properly chosen, carefully expurgated, and explained from a Christian point of view, was neither evil nor dangerous; (2) that, however, the use of these ancient classics should not be exclusive, but that it was useful to join to it in becoming measure, as is generally done in all houses directed by the clergy, the study and explanation of Christian authors. Abbé Gaume and his partisans lost no time in reducing their claims to the three following points: (1) the more comprehensive expurgation of pagan writers; (2) the more extensive introduction of Christian authors; (3) the Christian teaching of pagan authors. Nevertheless it required instructions from Rome to put an end to this controversy. The Abbé Gaume published further: "Bibliothèque des classiques chrétiens, latins et grecs" (30 vols., 1852-55); "Poètes et Prosateurs profanes complètement expurgés" (1857).

LAGRANGE. *Vie de Mgr. Dupanloup*, II, vi, vii; E. VEUILLOT, *Vie de Louis Veillot*, II, xviii L. VEUILLOT, *Mélanges*, Series I, vol. VI; Series II, vol. I; *Le Correspondant* (1852), various articles.

A. FOURNET

Bartolommeo Gavantus

Bartolommeo Gavantus

(GAVANTO)

Liturgist, a member of the Barnabite Order; b. at Monza, 1569; d. at Milan, 14 August, 1638. Gavantus devoted himself early to liturgical studies, and with such success that his fame soon spread to Rome, where he was recognized as having a most accurate knowledge of the sacred rites. His chief work is entitled "Thesaurus sacrorum rituum seu commentaria in rubricas Missalis et Breviarii Romani" (Milan, 1628; revised ed. by Merati, Rome, 1736-38). In this work the author traces the historical origin of the sacred rites themselves, treats of their mystical significance, gives rules as to the observance and obligation of the rubrics, and adds decrees and brief explanations bearing on the subject-matter of the work. The book was examined and approved by Cardinals

Millino, Muto, and Cajetan, and was dedicated to Pope Urban VIII. Gavantus was general of his order, and, in recognition of his great services, was named perpetual consultor to the Congregation of Rites by Pope Urban VIII 1623-1644.

DAVID DUNFORD

Gaza

Gaza

(Heb. *'Azzah*, "the strong")

A titular see of Palaestina Prima, in the Patriarchate of Jerusalem.

Gaza is one of the oldest cities in the world. Its first inhabitants were the Hevites (Deut., ii, 23). The Rephaim and the Enacim, expelled later by Josue, inhabited the surrounding mountains (Josue, xi, 22). The Hevites were driven forth by the Philistines who came from Caphtor (D.V., Cappadocia; Deut., ii, 23; Amos, ix, 7; Jer., xlvii, 4). Little else is known as to the origin of this warlike people, who occupied the whole Mediterranean coast between Phoenicia and Egypt, and whom the Hebrews could never wholly subdue. It is agreed, however, that they came from the southern coast of Asia Minor and the islands of the Aegean. Jeremias (xlvii, 4) speaks of the island of Caphtor, the isle of Cappadocia in D.V. According to Stephen of Byzantium ("De Urbibus," s.vv. Gaza, Minoa) the city of Gaza was a colony from Crete (cf. Soph., ii, 5). This statement is in accordance with the Biblical narrative which tells of reprisals made by the "Cerethi" (Cretans), a Philistine tribe. Philistines were established in the vicinity of Gaza as early as the time of Abraham; their leader, Abimelech, who bore the title of king, resided at Gerara (Gen., xxi, 33; xxvi, 1). Some critics, however, hold that the title of "King of the Philistines" was given to Abimelech, not because he was himself a Philistine, but because he dwelt in the country afterwards inhabited by that people. In any case the Philistines certainly possessed Gaza when Moses and the Hebrews arrived in the Holy Land. Though it was assigned to the tribe of Juda, the city could never be conquered by Josue on account of its high wall (Gen., xv, 18; Jos., xv, 47; Amos, i, 7). The tribe of Juda possessed the city by right but not in fact.

Gaza appears to have been the metropolis of the five satrapies which formed the territory of the Philistines; and like the four other cities, Ascalon, Accaron, Azotus, and Geth, it had a king whose power extended to all the cities and villages of the region. Samson, to escape from the hands of the Philistines, bore the gates of the city away on his shoulders during the night to the neighbouring mountain (Judges, xvi, 3); it was at Gaza that, blind and a prisoner of the Philistines, he pulled down the temple of Dagon on himself and his enemies (Judges xvi, 21-30). Dagon was not the special deity of Gaza. He is to be met with also at Ascalon, Azotus, and the other Philistine cities to which the term "Beth-dagon" is applied. To a certain extent the Philistines had transformed into a national deity this god of Assyrian origin, a monster in part the shape of a fish, in part also, the form of a man. The Israelites, who had captured Gaza before the time of Samson (Judges, i, 18),

were still in possession of it in the time of Solomon (III Kings, iv, 24). It is probable, however, that at this later date the city merely paid tribute, retaining its autonomy.

The people of Gaza continued to manifest their hatred for the Jews, and carried on a brisk commerce in Jewish slaves (Amos, i, 6), which drew upon them the terrible maledictions of the prophets of Israel (Amos, i, 6-7, Zach., ix, 5; Jer., xxv, 20; xlvii, 5). The evils foretold began when the rulers of Egypt and those of Assyria or Chaldea engaged in their long and eventful struggle for the domination of Asia and world-supremacy. Being on the great highway of the conquering armies, Gaza was destined to special suffering. About 734 B.C., Theglathphalasar III numbered among his vassals Hanon, the King of Gaza, who had joined Rasin and Phacee, Kings of Syria and Israel, in revolt against the Assyrian monarch. On the approach of the Assyrian army Hanon fled to Egypt and the city was taken and sacked. But the victors had scarcely departed when Hanon returned to Gaza; and in 720 B.C. we find him on the battlefield of Raphia, among the allies of Pharaoh Shabaka, where he was defeated and taken prisoner. Shortly after this the Philistines of Gaza were defeated by Ezechias, King of Juda (IV Kings, xviii, 8), and were forced to revolt with him against the Assyrians; the latter, however, returned and again compelled the Philistines to submit. Asarhaddon and Assurbanipal numbered among their tributaries Tsilbel, King of Gaza. When the Assyrian empire had been destroyed Egypt sought to enrich itself from the spoils, and Pharaoh Necho II captured Gaza (Jer., xlvii, 1; Herodotus II, clix) on his way towards Carchemish, where he was defeated by the Babylonians, who, under the leadership of Nabuchodonosor (Nebuchadnezzar), took the offensive and recaptured Gaza. The city was especially ill-treated, and had afterwards to pay tribute to King Nabonides for the building of the great temple of Sin at Haran. Later the Babylonians gave way to the Persians. Cambyses, on the occasion of his expedition to Egypt in 525 B.C., besieged Gaza, which alone dared to resist his march (Polybius, XVI, 40). It submitted, nevertheless, and under the Persian dominion, according to Herodotus (III, xv), who compares it to Sardis, one of the most beautiful cities of Asia, it enjoyed great prosperity. The people of Gaza, who seem to have been very courageous and very loyal to their masters, whoever they might be, refused to open the gates to the army of Alexander the Great (332 B.C.). He was forced to begin a regular siege, which lasted two months and cost him many men. After storming the city, Alexander laid waste to Gaza, put the men to the sword, and sold the women and children into slavery. He afterwards allowed the place to be re-colonized; but the new-comers were of a different stock from the old inhabitants. The Philistine stronghold made way for an Hellenic city (Diodorus Siculus, XVII, xlviii, 7; Arrian, II, xxxvi; Quintus Curtius, IV, xxxiii). Henceforth there is little peace for Gaza. For several centuries it was the battlefield for Egyptian, Syrian, and Jewish armies. It was taken three times by Ptolemy I, King of Egypt (320, 312, and 302 B.C.), and twice by Antigonos (315 and 306 B.C.). Finally it fell to the Lagidae, who retained it for almost a century. In 219 B.C. Antiochus of Syria took possession of it, and organized there the invasion of Egypt; but he was defeated at Raphia in 217 B.C., and compelled to abandon his conquest to the Egyptians. In 198 B.C. he again took Gaza, routed the Egyptians in the following year, and this time was able to retain his conquest. Jonathan Machabeus appeared with his army before Gaza, which refused to open its

gates, so the suburbs were burnt, and the inhabitants compelled to give hostages, 145-143 B.C. (I Mach., xi, 60-62).

Alexander Jannaeus besieged the city for a whole year (98 B.C.) and finally captured it, through treachery, sacked it and slew a large number of the inhabitants (Josephus, "Ant. Jud.," XIII, xiii, 3; "Bel. Jud.," I, iv, 2). It was rebuilt later by Pompey and by Gabinius (Josephus, "Ant. Jud.," XIV, iv, 4; Appian, "Syr.," 51). Anthony ceded to Cleopatra the whole of the Mediterranean coast between Egypt and Phoenicia, and Augustus gave Gaza to Herod the Great (30 B.C.). At Herod's death it became subject to the governor of Syria. In A.D. 66 the revolted Jews sacked the city, which was of course soon recaptured by the Romans (Josephus, "Bel. Jud.," II, xviii, 1). The era of Gaza, found on its coins and on numerous pagan and Christian inscriptions, dates from a journey of Pompey through Palestine, 28 October, 61 B.C. Gaza is mentioned only once in the New Testament (Acts, viii, 26), in connection with the route followed by the eunuch of Queen Candace. The Hellenistic city had transformed its Oriental deities into Graeco-Roman gods, and was long hostile to Christianity, which as late as the first quarter of the fourth century had scarcely secured a foothold there. It is true that Philemon, to whom St. Paul addressed an epistle, is spoken of as its first bishop; but this is merely an unreliable tradition. St. Sylvanus, its first bishop, martyred (310) at the mines of Phaeno, is called "bishop of the churches about Gaza" (Eusebius, "Hist. Eccl.," VIII, xiii; "De Mart. Palaest.," xiii, iv); Asclepas, his successor, is also called "bishop of the churches about Gaza." He assisted at the Council of Nicaea in 325, and was one of the Catholic bishops most feared by the Arians. He is always found among those who suffered the most severely in the Arian conflict, with men like St. Athanasius, Marcellus of Ancyra, and others of that type.

Constantine the Great forcibly introduced Christianity into Gaza, but such was the hostility of the pagan population that Bishop Asclepas deemed it prudent to build the church outside the city. Near the church, but likewise without the walls, arose later the oratory of the martyr St. Timothy; in the same place were relics of the martyrs St. Major and St. Thea. Christianity, however, spread rapidly in Majuma, the port of Gaza, between two and three miles from the city and owing dependence to it. The citizens of the port obtained from Constantine the privilege of municipal independence for their city, under the name of Constantia, with the right to have its own bishops. When, later, Julian the Apostate withdrew rights from Majuma, it still retained its bishops, the most famous of whom were Peter the Iberian, a Monophysite ascetic, and St. Cosmas, foster brother and friend of St. John Damascene. In the neighbouring cities, e.g. Anthedon, Bethelia, and Menois, Christianity was also introduced with difficulty. Under Julian the Apostate three brothers, Eusebius, Nestabos, and Zeno, were put to death at Gaza by the populace. St. Hilarion, born in the neighbouring Thabatha, a small village, was compelled to flee to Sicily to escape persecution by the pagans (Sozom., "Hist. Eccl.," V, ix; Greg. Naz., "Invect. I in Jul.," 66-67). The first church built in Gaza itself was the work of St. Irenion (d. 393) whose feast is 16 December. He was succeeded by Aeneas, and later by St. Porphyry (395-420), the true restorer of Christianity in Gaza. This holy bishop first sent Marcus, his deacon and historian, to Constantinople to obtain an order to close the pagan temples. The Christians then scarcely numbered 200 in Gaza; though the rest of the empire was

gradually abandoning its idols, Gaza was stubborn in its opposition to Christianity. The decree was granted by the emperor, and the temples closed, with the exception of the Marneion, the temple sacred to Zeus Marnas, which had replaced that of Dagon. There was no great change, however, in the sentiments of the people; so St. Porphyry decided to strike a decisive blow. He went himself to Constantinople during the winter of 401-402 and obtained from Arcadius a decree for the destruction of the pagan temples, which Cynegius, a special imperial envoy, executed in May, 402. Eight temples, those of Aphrodite, Hecate, the Sun, Apollo, Core, Fortune, the Heroeion, and even the Marneion, were either pulled down or burnt. Simultaneously soldiers visited every house, seizing and burning the idols and books of magic. On the ruins of the Marneion was erected, at the expense of the empress, a large church called the Eudoxiana in her honour, and dedicated 14 April, 407. Paganism had thus ceased to exist officially.

Gaza, now a Christian city, became rich and prosperous; and during the fifth and sixth centuries was the seat of a famous school of Christian rhetoricians. Monasticism also flourished there; and the Church recognizes as saints many religious of Gaza, e.g. Dorotheus, Dositheus, Barsanuphius, and John the Prophet; the Monophysite monks were also, for a time, actively engaged in its environs. At the Arab invasion, about 637, the city fell before General Amr. The Eudoxiana was converted into a mosque, and the Roman garrison, consisting of sixty soldiers under the command of Callinicus, having refused to apostatize, was slain at Eleutheropolis and Jerusalem ("Analecta Bollandiana," XXIII, 289-307; "Echos d'Orient," VIII, 1905, 40-43). The Arabs venerate the city as the burial-place of Hachem, the grandfather of Mahomet. When the Crusaders came, Gaza was almost in ruins; owing, however, to its situation on the way from Egypt to Syria, it soon regained prosperity. Baldwin III built a fortress there (1149) and confided it to the Templars. Saladin pillaged the city in 1170, but the fortress did not fall until 1187. Richard the Lionhearted held it for a brief time. In 1244 the combined forces of Christians and Saracens were defeated by the Kharezmians. The Turks finally took Gaza in 1516; and in 1799 Bonaparte held it for a few days. It is now known as Ghazze, and is a kaimakamat in the sandjak of Jerusalem. It numbers over 40,000 inhabitants, nearly all Mussulmans. There are only 1000 Greek schismatics, 150 Jews, 50 Protestants, and 150 Catholics. The latter have a Catholic pastor under the Patriarch of Jerusalem. The Greek Church contains the tomb of St. Porphyry. Mosques are very numerous, among the most remarkable being Djamia-el-Kebir, the ancient cathedral of the crusaders, dedicated to St. John the Baptist; also Nebi-Hachem, in which is the tomb of the grandfather of Mahomet. The city is unclean, and its streets narrow and crooked. But seen from a distance, amid its surrounding vegetation, it appears magnificent. The entire district is well irrigated and cultivated; the soil is extremely rich, and the trade of the city rather prosperous.

S. VAILHÉ

Pietro Maria Gazzaniga

Pietro Maria Gazzaniga

A theologian, b. at Bergamo, Italy, 3 March, 1722; d. at Vicenza, 11 Dec., 1799. At a very early age he entered the Order of St. Dominic, and after a brilliant course in the various branches of ecclesiastical sciences, especially philosophy and theology, he was, despite his youth, appointed to teach philosophy and church history, first in the various houses of his order and later at the University of Bologna. His genius, however, his untiring labours, and above all, his faculty for communicating knowledge did not long remain concealed within the walls of Bologna. Owing to the changes introduced into the theological faculty of the University of Vienna in 1760, the chair of dogmatic theology, which had been assigned exclusively to members of the Dominican Order, was vacant. It was but natural then that the empress, Maria Theresa, should appeal to his superiors to have him transferred to her cherished seat of learning. His fame accompanied him. Students from all quarters flocked to him. At his feet sat the empress herself, Cardinal Migazzi, the renowned Garampi, and even Pius VI, during his sojourn in Vienna, never failed to attend his lectures. After twenty years of active work he returned to Italy, where he continued to lecture in various places until his death.

In theology Gazzaniga is ranked as one of the foremost defenders and exponents of the Thomistic school during the latter part of the seventeenth, and the beginning of the eighteenth, century. By strict adherence to the traditional teaching of his school, he set himself against the spirit of his age, which sought to modernize and to conduct all theological schools of Austria on plans designed to render them more independent of ecclesiastical and royal authority. He succeeded in winning over to his cause Simon Rock, till then the faithful associate of Van Swieten, the inveterate promoter of the Jansenistic spirit in Austria, and with his assistance finally restored Thomism in the schools of that country. His fidelity to St. Thomas likewise rendered him very bitter against Molinism; so much so, in fact, that he succeeded in persuading the party of Father Gomar, as against that of Arminius, to subscribe to the Thomistic doctrine of predestination and reprobation (*ad sanam Thomistarum de predestinationis et reprobatione doctrinam descenderunt, Proelect.*, vol. II, diss. 6, n. 242). His principal work, the "*Praelectiones theologicae habitae in vindobonensi universitate, nunc vero alio methodo dispositae, emendatae et auctae*", has gone through many editions (9 vols., Bologna, 1788-1793; Bassani, 1831).

JOSEPH SCHROEDER

Gebhard (III) of Constance

Gebhard (III) of Constance

Bishop of that city and strenuous defender of papal rights against imperial encroachments during the Investitures conflict; b. about 1040; d. 12 November, 1110. He was a son of Duke Bertold I, and a brother of Bertold II, of Zahringen. For some time he was provost at Kanten, then entered the Benedictine monastery at Hirschau and on 22 December, 1084, as consecrated Bishop of Constance by the cardinal-legate, Otto of Ostia, the future Urban II. The see of Constance was then occupied by the imperial anti-Bishop Otto I, who, though excommunicated and deposed by Gregory VII in 1080, retained his see by force of arms. At an imperial synod held at Mainz, in April, 1085, Gebhard and fourteen other German bishops who remained faithful to Gregory VII were deposed, and Otto I was declared the lawful Bishop of Constance. Luckily, Otto I died in the beginning of 1086, and Gebhard was able to take possession of his see. One of his first acts as bishop was the reform of the Benedictine monastery of Petershausen near Constance, which he recruited with monks from Hirschau. In 1089 he consecrated the new cathedral of Constance, to replace the old one which had fallen into ruins in 1052.

On 18 April, 1089, Pope Urban II appointed him and Bishop Altmann of Passau, Apostolic-vicars for Germany. Arnold, a monk of St. Gall, whom Henry IV appointed anti-Bishop of Constance on 28 March, 1092, tried in vain to eject Gebhard from the See of Constance. The latter had powerful friends in his brother Bertold II, Duke Welf IV, the monks of Hirschau and Petershausen, and the citizens of Constance. In 1094 Gebhard held a synod of reform at Constance, and in 1095 he attended the Synod of Piacenza. Soon, however, the influence of Henry IV began to increase in Germany. In 1103 Gebhard was driven from his see, and the imperial anti-bishop, Arnold, usurped the bishopric. With the assistance of Henry V, Gebhard regained his see in 1105, freed the king from the ban by order of Paschal II, and accompanied him on his journey to Saxony. Gebhard attended the Synod of Nordhausen on 27 May, 1105, the diet at Mainz on Christmas, 1105, was sent as imperial legate to Rome in the spring of 1106, and was present at the Council of Guastalla in October of the same year. In the fresh dispute that arose between Paschal II and Henry V, Gebhard seemed to side with the emperor, but, after being severely reprimanded by the pope, withdrew from public life and devoted his whole attention to the welfare of his diocese.

MICHAEL OTT

Emile Gebhart

Emile Gebhart

A French professor and writer, b. 19 July, 1839, at Nancy; d. 22 April, 1908, in Paris. He was the grand-nephew of General Drouot, one of the most distinguished soldiers of the First Empire. Having finished his studies in the Lycee of Nancy, he was admitted to the Ecole Francaise of Athens, where he imbibed the Hellenic spirit and gathered a rich harvest of facts and anecdotes for his future works. When he returned to France he was sent to the Lycee of Nice and soon after appointed professor of foreign literatures in the University of Nancy. He was so successful that a chair of Southern European literatures was instituted specially for him at the Sorbonne, in 1880. For the

twenty-six years during which he retained that position, he was the most popular professor, the Sorbonne, his course of lectures being attended by enthusiastic audiences both of students and of men and women of the world. In 1895 he was elected to the Academy of Moral and Political Sciences, and in 1905 to the French Academy. He was fond of travelling, and every summer, for twenty-five years, he spent three months in Italy, visiting Rome, Milan, Florence, Venice, seeking rare and antique books in libraries, staying in monasteries and talking with the monks, and gathering information concerning popular legends from the common people on the streets and in the cottages of the poor. All the materials so collected were afterwards used in his books. His favourite subjects were Greek antiquity and the Italian Renaissance. He treated them in a masterly manner, showing a thorough but unpretentious knowledge. His style is clear, slightly sarcastic at times, but extremely agreeable. His principal works are: "Praxitele" (1864), "La Renaissance et la Réforme" (1877), "Les Origines de la Renaissance et l'Italie" (1879), "L'Italie mystique" (1890), "Le son des Cloches, contes et légendes" (1898), "Moines et Papes" (1896), "Autour d'une tiare" (1894), "Cloches de Noël et de Pâques" (1900), "Conteurs florentins au moyen-âge" [1901], "Jules II" (1904) "Florence" (1906). The last days of his life were dimmed by sadness. As he had always been fond of mysticism, which he had so well described in his lives of St. Francis of Assisi and St. Catherine of Siena, and as he disliked the rationalistic doctrines of the time the attacks of the Radicals on his religious and patriotic ideals wounded him deeply.

LOUIS N. DELAMARRE

Gideon

Gideon

Gideon or Gedeon (Hebrew "hewer"), also called JEROBAAL (Judges, vi, 32; vii, 1; etc.), and JERUBESHETH (II Kings, xi, 21, in the Hebrew text).

Gideon was one of the Greater Judges of Israel. He belonged to the tribe of Manasses, and to the family of Abiezer (Judges, vi, 34). Gideon's father was Joas, and lived in Ephra (Judges, vi, 11).

The following is in substance the account of Gideon's judgeship as related in Judges, vi-viii: Israel, having forsaken Yahweh's worship, had been for seven years exceedingly humbled by the incursions of the Midianites and of other Eastern tribes. At length, they turned to God who sent them a deliverer in the person of Gideon. In a first theophany, granted him by day while he was threshing wheat, Gideon received the difficult mission of freeing his people; whereupon he built an altar to the Lord (Judges, vi, 24). In a second theophany during the following night, he was directed to destroy the village-altar to Baal, and to erect one to Yahweh. This he did with the result that the people clamoured for his death to avenge his insult to their false god. Joas, however, saved his son's life by the witty taunt, which secured for the latter the name of Jerobaal: "Let Baal revenge himself!" (vi, 25-32). Thus divinely commissioned, Gideon naturally took the lead against Midian, and Amalec, and other Eastern tribes who had crossed the Jordan, and encamped in the valley of Jezrael. Comforted by the famous signs of the fleece (vi, 36-40), and accompanied by warriors

from Manasses, Aser, Zabulon, and Nephthali, he took up his position not far from the enemy. But it was God's intervention to show that it was His power which delivered Israel, and hence He reduced Gideon's army from 32,000 to 300 (vii, 1-8). According to a divine direction, the Hebrew commander paid a night visit to the enemy's camp and overheard the telling of a dream which prompted him to act at once, certain of victory (vii, 9-15). He then supplied his men with trumpets and with torches enclosed in jars, which, after his example, they broke, crying out: "The sword of Yahweh and Gideon." Panic-stricken at the sudden attack, Israel's enemies turned their arms against one another, and broke up in flight towards the fords of the Jordan (vii, 16-23). But, summoned by Gideon, the Ephraimites cut off the Madianites at the fords, and captured and slew two of their princes, Oreb and Zeb, whose heads they sent to the Hebrew leader, rebuking him at the same time for not having called earlier upon their assistance. Gideon appeased them by an Eastern proverb, and pursued the enemy beyond the Jordan river (vii, 24; viii, 3). Passing by Soccoth and Phaniel, he met with their refusal of provisions for his fainting soldiers, and threatened both places with vengeance on his return (viii, 4-9). At length, he overtook and defeated the enemies of Israel, captured their kings, Zebee and Salmana, returned in triumph, punishing the men of Soccoth and Phaniel on his way, and finally put to death Zebee and Salmana (viii, 10-21). Grateful for this glorious deliverance, Gideon's countrymen offered him the dignity of an hereditary king, which he declined with these noble words: "I will not rule over you, neither shall my son rule over you, but Yahweh shall rule over you" (viii, 22-23). He nevertheless asked and obtained from his soldiers the golden rings and other ornaments which they had taken from the enemy; and out of this spoil he made what seems to have soon become an object of idolatrous worship in Israel. Gideon's peaceful judgeship lasted forty years. He had seventy sons, and "died in a good old age, and was buried in the sepulchre of his father in Ephra" (viii, 24-32). His victory is alluded to in Isaias, x, 26, and in Ps. lxxxii, 12 (Heb., lxxxiii, 11), where the four kings mentioned in Judges, vii, viii, are distinctly named- a fact which shows that, at the time when this psalm was composed, the narrative of Gideon's exploits was commonly known in its present form. The various literary features exhibited by the text of Judges, vi-viii, have been minutely examined and differently appreciated by recent scholars. Several commentators look upon these features- such for instance as the two names, Gideon and Jerobaal; the two theophanies bearing on Gideon's call; the apparently twofold narrative of Gideon's pursuit of the routed enemies, etc.- as proving conclusively the composite origin of the sacred record of Gideon's judgeship. Others, on the contrary, see their way to reconcile all such features of the text with the literary unity of Judges, vi-viii. However this may be, one thing remains perfectly sure, to wit, that whatever may be the documents which have been utilized in framing the narrative of Gideon's exploits, they agree substantially in their description of the words and deeds of this Greater Judge of Israel.

Catholic commentaries on the book of Judges by CLAIR (Paris, 1880); VON HUMMELAUER (Paris, 1888); LAGRANGE (Paris, 1903); Non-Catholic by MOORE (New York, 1895); BUDDE (Freiburg im Breisgau, 1897); NOWACK (Göttingen, 1900).

FRANCIS E. GIGOT

Nicolas Gedoyn

Nicolas G doyn

A French translator and literary critic; b. at Orleans, 17 June, 1667; d. 10 August, 1744, at Port-Pertuis, near Beaugency. After studying in the College of the Jesuits, he entered their novitiate in 1684, becoming later professor of rhetoric at Blois. Ill-health, afterwards, obliged him to resign this position, and leave the Society of Jesus, for which, however, he always retained his affection. A canonicate at the Sainte-Chapelle (Paris) and two abbeys gave him the means of devoting himself to educational works. In 1711, he was elected to membership in the Acad mie de Inscriptions et Belles-Lettres, and in 1718 his free translation and adaptation of Quintilian, containing many allusions to contemporaries, was the occasion of his election to the French Academy. He also translated Pausanias (1731), and wrote "R flexions sur le go t", published by d'Olivet in "Recueil d'opuscules litt raires" (Amsterdam, 1767). Several other memoirs and essays were collected by d'Olivet and published under the title of "Oeuvres diverses de M. Pabb  G doyn". They contain a life of Epaminondas, an apology for translations, essays on the education of children, Roman urbanity, the ancients and the moderns, etc. In education, G doyn is an advocate of progress, and deplors the routine and the tradition which make parents and educators conform blindly to received methods and usages without realizing that circumstances change and that methods of education should be adapted and modified in consequence. Three things are necessary to a complete education: knowledge, virtue and good manners; the constant endeavour of the master should be to develop these in his pupils. Since money spent by parents for the education of their children is an invested capital of the greatest importance, great care should be taken in the selection of tutors.

Nouvelle Biographie G n rale (Paris, 1858), XIX, 802; d'Olivet, Vie de G doyn (1752); Maire in Buisson's Dictionnaire de p dagogie (Paris., 1887), I, i, 1149.

C.A. DUBRAY

Josef Anton Gegenbauer

Josef Anton Gegenbauer

An accomplished German historical and portrait painter, b. 6 March, 1800, at Wangen, W rtemberg; d. 31 January, 1876, at Rome. He studied first at the Royal Academy in Munich under Robert von Langer, remaining in that city from 1815 to 1823. Among his productions there were two idyllic works which were much admired, a "Saint Sebastian" and a "Modonna and Child", altar-piece for his native town. In 1823 the painter went to Rome, where he remained until 1826, studying especially the works of Raphael. He became notably successful as a fresco painter, and, on his return to W rtemberg, the king made him court painter and commissioned him to decorate the Royal Villa of Rosenstein. In 1829 Gegenbauer went again to Rome and worked on frescoes. During later residence at Stuttgart he was employed from 1836 to 1854 in decorating the royal

Palace with sixteen scenes in fresco from the history of Würtemberg. These include incidents in the life of Count Eberhard II of Würtemberg. In the same building are many of his oil paintings, among them being "Two Shepherds", "Adam and Eve after their expulsion from Eden", and "Moses Striking the Rock". In the Stuttgart Gallery is also his "Hercules and Omphale". His other paintings in oil, ranging in date from 1829 to 1860 include many on mythological subjects: "Sleeping Venus and Two Satyrs", "Leda and the Swan" "Apollo and the Muses", "Bacchus and Ariadne", "Venus and Cupid", "Ceres and Jason", "Aeolus Aeola", "Pluto and Proserpine", "Neptune and Thetis", several Genii and Amorettes, and some portraits. Among Gegenbauer's frescoes, in addition to those already mentioned, are "Jupiter giving Immortality to Psyche", "The Marriage of Cupid and Psyche", four scenes from the life of Psyche, "The Four Seasons", an "Aurora"--all at the Villa Rosenstein. In addition to these works, we may mention, as well as various Madonnas, "The Ascension of the Virgin", "The Crucifixion", "Hercules and Omphale", the last in the Thorwaldsen Museum at Copenhagen.

AUGUSTUS VAN CLEEF

Johann Geiler von Kaysersberg

Johann Geiler von Kaysersberg

A celebrated German pulpit orator, b. at Schaffhausen, Switzerland, 16 March, 1445; d. at Strasburg, 10 March, 1510. Until a scientific presentation of the history of the development of the Catholic sermon appears, an appreciation of even the most distinguished pulpit orator, although based on careful investigation, can only be a preliminary labour, for the picture, however elaborate, will lack the proper background. This is true in the case of the celebrated medieval preacher to the common people, Berthold of Ratisbon, and it applies no less to the great pulpit orator of the early sixteenth century, Geiler von Kaysersberg. More fortunate is the treatment of the subject in its relations to purely literary history, for the importance of Geiler in literature can be exactly determined. According to this history he was closely connected with those humanists of Strasburg of whom the leader was the well-known Jacob of Wimpheling (1450-1528), called "the educator of Germany". Like Wimpheling, Geiler was a secular priest; both fought the ecclesiastical abuses of the age, but not in the spirit of Luther and his adherents. They looked, instead, for salvation and preservation only in the restoration of Christian morals in Church and State through the faithful maintenance of the doctrines of the Church. The scene of Wimpheling's fruitful labours was the school, that of Geiler's the pulpit.

The surname "von Kaysersberg", given to Geiler by his contemporaries, was taken from the name of the place where his grandfather, who brought him up, lived. The father was killed by a hunting-accident when Geiler was three years old; and the excellent grandfather, who lived in Kaysersberg, took charge of the education of the child, sending him to the school at Ammersweiher, near Kaysersberg in Alsace, where his mother lived. When the talented boy was fifteen years old he went to the University of Freiburg in the Breisgau, which had just opened; two years later he

received the baccalaureate, and after two more years was made master of arts. He now gave lectures on various writings of Aristotle in the next semester, and in the following half-year filled the office of dean of the philosophical faculty for a brief period. In May, 1471, he went to the University of Basle, also found but a short time before, in order to study theology, and obtained the doctorate in 1475. At Basle he became acquainted with Sebastian Brant, with whom he formed a lasting friendship. While at Basle, Geiler preached his first sermons in the cathedral and greatly enjoyed his pulpit labours; the confessional, however, caused him many difficulties of conscience. Basle, nevertheless, was not to be the place where his powers were to find their permanent employment. At the entreaty of the students of Freiburg, the magistracy and citizens of that city obtained his appointment to the Freiburg University, of which he was elected rector the next year. But lecturing to students was not congenial to him; his inclination was always for preaching, and in this latter office his talents found a life-work suited to them. For a time he preached in the cathedral of Würzburg, in which city he thought of making his permanent home, but a fortunate accident changed his plans. Peter Schott, senator of Strasburg, an important and influential citizen who had charge of the property of the cathedral, urged strongly upon Geiler, now a well-known preacher, that his first duty was to the people of Alsace; accordingly Geiler resolved, notwithstanding the entreaties of the citizens of Würzburg, to settle in Strasburg, and pursuant to this decision he remained there the rest of his life.

Before this date the mendicant orders had supplied the pulpit of the cathedral of Strasburg. On account, however, of the frequent change of preachers and, above all, owing to some friction between the mendicants, and the parish priests, the cathedral chapter, together with the bishop and the city authorities, desired to have a secular priest appointed to fill the office permanently. Consequently a special position, as preacher was made for Geiler, and he filled this appointment with apostolic courage and intense zeal for souls for over thirty years. He not only preached, as required, every Sunday and feast day in the cathedral, and even daily during fasts, but also, on special occasions, in the monasteries of the city and often outside of the city. His daily life, passed in this simple round of duties, was only broken by occasional short journeys for which he apparently used his monthly holiday. Thus he frequently visited Frederick of Zollern, Bishop of Augsburg, who was very friendly to him; once he was called to Füssen on the River Lech by his patron the Emperor Maximilian, who desired his advice. He seems to have taken his short intervals of rest, when possible, for making pious pilgrimages, generally in the vicinity of his home, sometimes to distant spots. At Einsiedeln in Switzerland he met the Blessed Nikolaus of Flüe, who was even then well known; another time he journeyed to Sainte-Baume, near Marseilles, in order to pray in the grotto of St. Mary Magdalen. At home he lived very plainly, even austere. It was only natural that a life of such incessant labour, one in which the powers were constantly exerted to the utmost and none of the comforts of ease were enjoyed, should soon wear out the bodily frame. A kidney trouble developed, to relieve which he was obliged to visit annual the hot springs of Baden; dropsy finally appeared, and he passed away on Lætare Sunday of the year above mentioned. The next day, in the presence of an immense multitude of people, he was buried at the foot of the pulpit

which had been especially built for him, and of which he had been for so many years the greatest ornament.

The numerous volumes of Geiler's sermons and writings which have been published do not give a complete picture of the characteristic qualities of the preacher. God's grace had made Geiler an orator, and the aim Geiler sought, without regard to other considerations, was to produce the most powerful effect on his hearers. He prepared himself with great care for the pulpit, writing out his sermons beforehand, as his contemporary Beatus Rhenanus reports; those preparatory compositions, however, were drawn up, not in German, but in Latin. Only a very small part of the sermons that have been issued under his name are directly his. At a very early date his addresses were taken down by others and published. The best critic of Geiler's works, the well-known writer on literary history, Prof. E. Martin of Strasburg, has made the attempt, in the "Allgemeine deutsche Biographie", to give a summary of Geiler's genuine writings; according to him the authenticated writings number thirty-five. Notwithstanding this rich material, a proper appreciation of the extraordinary preacher is very difficult, because it is not certain that any of the extant works give exactly what Geiler said. One thing, however, is evident from them, that the Strasburg preacher was a widely read man not only in theology, but also in the secular literature of the day. This is shown by the sermons having Sebastian Brant's "Ship of Fools", which appeared in 1494, for their theme; these sermons attained the greatest popularity. Geiler displayed, also, exceptional facility in using public events to attract and hold the attention of his hearers. In originality of speech Geiler is in form, as in time, between Berthold of Ratisbon and Abraham a Sancta Clara, and perhaps the shortest and best characterization of the greatest preacher of the early Reformation period is indicated by this intermediate position; Berthold's homeliness of address showed only occasional lapses from the proprieties of speech, Geiler yielded oftener to the coarseness of his age, Abraham exceeded his contemporaries in unfortunate errors as to form and content.

According to the testimony of contemporaries, the effect of Geiler's forcible and unusual sermons was at times very marked; but the decay of morals was by now too great for them to have a permanent effect. Geiler himself complained bitterly that neither clergy nor laity were willing to join in a common reform. A man of austere morality; he never failed to show an apostolic courage towards both high and low, and exhibited an extraordinary daring in fighting vice and degeneracy of morals. Hence his works are an important source for the history of the civilization of these degenerate times. There are no distinct statements regarding what he effected by his personal influence among his intimate friends, especially by his influence on the pious family of the senator, Schott, upon Wimpfeling and Brant, who were, like Geiler, reformers in the best sense of the word, as well as, by his counsels, upon the Emperor Maximilian. Another striking merit of Geiler's oratory was that his thoughts were expressed in the language of ordinary life, which he used with unequalled skill. In his way posterity possesses, in Geiler's writings, an enduring source for the knowledge of the speech, customs, and beliefs of the common people at the beginning of the sixteenth century. It is no longer necessary to take up a question warmly discussed, even in modern times, as to how a

work of Geiler's came to be on the Index (cf. Reusch, "Der Index". I, 370) as in the last issue of the Index Geiler's name does not appear.

N. SCHEID

Johannes von Geissel

Johannes von Geissel

Cardinal, Archbishop of Cologne, b. 5 February, 1796, at Gimmeldingen, in the Palatinate; d. 8 September, 1864, at Cologne. After completing his classical studies at Neustadt-on-the-Hardt, and at Edesheim, he was received into the then imperial Lyceum of Mainz in 1813, and studied theology in the diocesan seminary of the same city, under Prof. Liebermann, from 1815 to 18. He was ordained priest, 22 August, 1818. For a short time he became assistant in the parish of Hambach. On 1 February, 1819, he was appointed professor at the Gymnasium of Speyer; on 24 June, 1822, canon of the cathedral chapter of Speyer; and on 25 May, 1836, dean of that body. Nominated Bishop of Speyer by the King of Bavaria, he was preconized by Gregory XVI, 20 May, 1837, and consecrated in Augsburg cathedral the following 13 August.

The new bishop displayed such zeal and efficiency that after four years he was called to a larger sphere of activity. After the accession to the throne of Prussia of Frederick William IV, the "conflict of Cologne" was to be settled amicably by an agreement between Church and State, to the effect that Archbishop Clemens August von Droste-Vischering would relinquish the personal direction of the archdiocese, which should pass over to a coadjutor with the right of succession. On 24 September, 1841, Gregory XVI appointed Geissel coadjutor to the Archbishop of Cologne; and on 4 March, 1842, he entered upon the administration of the archdiocese. When Clemens August died (19 October, 1845), Geissel succeeded him, and was enthroned as archbishop, 11 January, 1846. Finally, Pius IX created him cardinal, 30 September, 1850.

Geissel was a man of many gifts and great energy, one of the foremost German bishops of the nineteenth century. His services in behalf of the Catholic Church in Prussia and throughout Germany are of permanent value. Discretion and a sense of justice on the part of the government of Frederick William IV made it possible for the cardinal to regulate and ameliorate the conditions of the archdiocese in harmony with the policy of the State. He ended the heretical dissensions created by

the Hermesian School by suspending the refractory Hermesian professors Braun and Achterfeldt of Bonn; and he reorganized the theological faculty of that university by calling in as professors Dieringer and Martin, men of unsuspected orthodoxy. He was also solicitous for the education of the clergy, and established two seminaries for boys at Neuss and Münstereifel. To instill new zeal into the spiritual life of his people he encouraged popular missions, introduced religious orders and congregations into the archdiocese, instituted the Perpetual Adoration, and stimulated devotion to the Blessed Virgin by celebrating with unusual splendour the declaration of the dogma of the Immaculate Conception. Of still greater importance for the Church in Germany was his convocation of the German episcopate to a meeting at Würzburg, 1848. The result of this meeting of the hierarchy was a number of momentous deliberations for the future prosperity of the Church. In 1860 he held a provincial council at Cologne. Another matter which the cardinal had at heart during his life, was the completion of Cologne cathedral, the preparations for which had commenced in 1842. Geissel lived long enough to see the edifice completed and dedicate in October, 1863.

In the years preceding his elevation to the episcopal dignity, Geissel also displayed notable literary activity. During the first two decades of its existence (1821-37) he contributed numerous anonymous essays of either serious or humorously-satirical character on questions and occurrences of the day to the "Katholik", and became one of the foremost contributors to that periodical. His unusual poetical talent is shown by a number of poems, mostly of a religious character, and published partly in that periodical, partly issued singly, as the occasion offered. After his death there appeared a special edition of his "Festgedicht auf die Grundsteinlegung zum Fortbau des Kölner Doms" (Cologne, 1865). However, his most marked effort as a writer is his historical work, "Der Kaiser-Dom zu Speyer. Eine topographisch-historische Monographie" (3 vols., Mainz, 1828); 2nd ed. in one volume, as Vol. IV of his "Schriften und Reden" (Cologne, 1876).

Other historical writings of less significance are: "Der Kirchensprengel des alten Bisthums Speyer" (Speyer, 1832); "Die Schlacht am Hasenbühl und das Königskreuz zu Göllheim" (Speyer, 1835). Of other separate writings are to be mentioned "Sammlung aller Gesetze und Verordnungen über das Kirchen- und Schulwesen im bayerischen Rheinkreise vom Jahre 1796-1830" (Speyer, 1830); "Die religiöse Erziehung der Kinder aus gemischten Ehen. Eine geschichtlichen-rechtliche Erörterung" (Speyer, 1837); first published in the "Katholik", vols. LXIII, LXIV (1837). His pastoral letters, memoirs and addresses, composed by him during his episcopacy, show a great mind and heart. They have been collected with other dispersed and minor writings of earlier days, and various poems, in "Schriften und Reden von Johannes Cardinal von Geissel, Erzbischof von Köln, herausgegeben von Karl Theodor Dumont" (Vols. I-III, Cologne, 1869-70); later on vol. IV was added, "Der Kaiserdom zu Speyer", 2nd ed. (1876).

Conc. rec. Coll. Lacensis*, V, col. 231-382.

FRIEDRICH LAUCHERT

Pope St. Gelasius I

Pope St. Gelasius I

Died at Rome, 19 Nov., 496. Gelasius, as he himself states in his letter to the Emperor Anastasius (Ep. xii, n. 1), was *Romanus natus*. The assertion of the "Liber Pontificalis" that he was *natione Afer* is consequently taken by many to mean that he was of African origin, though Roman born. Others, however, interpreting *natione Afer* as "African by birth", explain *Romanus natus* as "born a Roman citizen". Before his election as pope, 1 March, 492, Gelasius had been much employed by his predecessor, Felix II (or III), especially in drawing up ecclesiastical documents, which has led some scholars to confuse the writings of the two pontiffs.

On his election to the papacy, Gelasius at once showed his strength of character and his lofty conception of his position by his firmness in dealing with the adherents of Acacius (see ACACIUS, PATRIARCH OF CONSTANTINOPLE). Despite all the efforts of the otherwise orthodox patriarch, Euphemius of Constantinople (q. v.), and the threats and wiles by which the Emperor Anastasius tried to obtain recognition from the Apostolic See, Gelasius, though hard-pressed by difficulties at home, would make no peace that compromised in the slightest degree the rights and honor of the Chair of Peter. The constancy with which he combated the pretensions, lay and ecclesiastical, of the New Rome; the resoluteness with which he refused to allow the civil or temporal pre-eminence of a city to determine its ecclesiastical rank; the unflinching courage with which he defended the rights of the "second" and the "third" sees, Alexandria and Antioch, are some of the most striking features of his pontificate. It has been well said that nowhere at this period can be found stronger arguments for the primacy of Peter's See than in the works and writings of Gelasius. He is never tired of repeating that Rome owes its ecclesiastical primacy not to an oecumenical synod nor to any temporal importance it may have possessed, but to the Divine institution of Christ Himself, Who conferred the primacy over the whole Church upon Peter and his successors. (Cf. especially his letters to Eastern bishops and the decretal on the canonical and apocryphal books.) In his dealing with the emperor he is at one with the great medieval pontiffs. "There are two powers by which chiefly this world is ruled: the sacred authority of the priesthood and the authority of kings. And of these the authority of the priests is so much the weightier, as they must render before the tribunal of God an account even for the kings of men." Gelasius's pontificate was too short to effect the complete submission and reconciliation of the ambitious Church of Byzantium. Not until Hormisdas (514-23) did the contest end in the return of the East to its old allegiance. Troubles abroad were

not the only occasions to draw out the energy and strength of Gelasius. The Lupercalia, a superstitious and somewhat licentious vestige of paganism at Rome, was finally abolished by the pope after a long contest. Gelasius's letter to Andromachus, the senator, covers the main lines of the controversy.

A staunch upholder of the old traditions, Gelasius nevertheless knew when to make exceptions or modifications, such as his decree obliging the reception of the Holy Eucharist under both kinds. This was done as the only effective way of detecting the Manichaeans, who, though present in Rome in large numbers, sought to divert attention from their hidden propaganda by feigning Catholicism. As they held wine to be impure and essentially sinful, they would refuse the chalice and thus be recognized. Later, with the change of conditions, the old normal method of receiving Holy Communion under the form of bread alone returned into vogue. To Gelasius we owe the ordinations on the ember days (Ep. xv), as well as the enforcement of the fourfold division of all ecclesiastical revenues, whether income from estates or voluntary donations of the faithful, one portion for the poor, another for the support of the churches and the splendour of Divine service, a third for the bishop, and the fourth for the minor clergy. Though some writers ascribe the origin of this division of church funds to Gelasius, still the pontiff speaks of it (Ep. xiv, n. 27) as *dudum rationabiliter decretum*, having been for some time in force. Indeed, Pope Simplicius (475, Ep. i, n. 2) imposed the obligation of restitution to the poor and the Church upon a certain bishop who had failed in this duty; consequently it must have been already regarded as at least a custom of the Church. Not content with one enunciation of this charitable obligation, Gelasius frequently inculcates it in his writings to bishops. For a long time the fixing of the Canon of the Scriptures was attributed to Gelasius, but it seems now more probably the work of Damasus (367-85). As Gelasius, however, in a Roman synod (494), published his celebrated catalogue of the authentic writings of the Fathers, together with a list of apocryphal and interpolated works, as well as the proscribed books of the heretics (Ep. xlii), it was but natural to prefix to this catalogue the Canon of the Scriptures as determined by the earlier Pontiff, and thus in the course of time the Canon itself came to be ascribed to Gelasius. In his zeal for the beauty and majesty of Divine service, Gelasius composed many hymns, prefaces, and collects, and arranged a standard Mass-book, though the Missal that has commonly gone by his name, the "Sacramentarium Gelasianum", belongs properly to the next century. How much of it is the work of Gelasius is still a moot question. Though pope but for four years and a half, he exerted a deep influence on the development of church polity, of the liturgy and ecclesiastical discipline. A large number of his decrees have been incorporated into the Canon Law.

In his private life Gelasius was above all conspicuous for his spirit of prayer, penance, and study. He took great delight in the company of monks, and was a true father to the poor, dying empty-handed as a result of his lavish charity. Dionysius Exiguus in a letter to his friend, the priest Julian (P.L., LXVII, 231), gives a glowing account of Gelasius as he appeared to his contemporaries.

As a writer Gelasius takes high rank for his period. His style is vigorous and elegant, though occasionally, obscure. Comparatively little of his literary work has come down to us, though he is said to have been the most prolific writer of all the pontiffs of the first five centuries. There are

extant forty-two letters and fragments of forty-nine others, besides six treatises, of which three are concerned with the Acacian schism, one with the heresy of the Pelagians, another with the errors of Nestorius and Eutyches, while the sixth is directed against the senator Andromachus and the advocates of the Lupercalia. The best edition is that of Thiel.

The feast of St. Gelasius is kept on 21 Nov., the anniversary of his interment, though many writers give this as the day of his death.

JOHN P.X. MURPHY

Pope Gelasius II

Pope Gelasius II

Born at Gaeta, year unknown; elected 24 Jan., 1118; died at Cluny, 29 Jan., 1119. No sooner had Paschal II ended his stormy pontificate, than the cardinals, knowing that the emperor, Henry V, had concerted measures with a faction of the Roman nobility to force the selection of a pliant imperial candidate, met secretly in a Benedictine monastery on the Palatine. Having dispatched a messenger to Monte Cassino, to summon the aged chancellor, Cardinal John of Gaeta, they turned a deaf ear to his entreaties and unanimously declared him pope.

John was of a noble family, probably the Gaetani. Early in his life he entered the monastery of Monte Cassino, where he made such progress in learning and became so proficient in Latin, that, under successive pontiffs, he held the office of chancellor of the Holy See. He was the trusted advisor of Paschal II; shared his captivity and shielded him against the zealots who charged the pope with heresy for having, under dire compulsion, signed the "Privilegium", which constituted the emperor lord and master of papal and episcopal elections (see PASCHAL II and INVESTITURES). When the news spread that the cardinals had elected a pope without consulting the emperor, the imperialist party broke down the doors of the monastery; and their leader, Cenzio Frangipani, seized the new pontiff by the throat, cast him to the ground, stamped on him with spurred feet, dragged him by the hair to his neighbouring castle, and threw him, loaded with chains, into a dungeon. Indignant at this brutal deed, the Romans rose in their might; and, surrounding the robber's den, demanded the instant liberation of the pontiff. Frangipani, intimidated, released the pope, threw

himself at his feet, and begged and obtained absolution. A procession was formed, and amidst shouts of joy Gelasius II (so he termed himself) was conducted into the Lateran and enthroned.

The triumph was of short duration; for, 2 March, the formidable figure of Henry V was seen in St. Peter's. As soon as he had heard of the proceedings at Rome, he left his army at Lombardy and hastened to the capital. Gelasius immediately determined upon flight. On a stormy night, the pope and his court proceeded in two galleys down the Tiber, pelted by the imperialists with stones and arrows. After several mishaps Gelasius at length reached Gaeta, where he was received by the Normans with open arms. Being only a deacon, he received successively priestly ordination and episcopal consecration. Meanwhile, the emperor, ignoring the action of the cardinals, placed on the throne of St. Peter a senile creature of royal power, Maurice Burdinus, Archbishop of Braga in Portugal, who had the audacity to take the venerated name of *Gregory*. Gelasius pronounced a solemn excommunication against both of them; and as soon as the emperor, frustrated of his prey, left Rome, he returned secretly; but soon took the resolution of taking refuge in France. He went by way of Pisa, where he consecrated its splendid marble cathedral, and Genoa. He was received by the French with the utmost reverence. The powerful minister of Louis VI, the Abbot Suger, conducted him to the monastery of Cluny. Gelasius was perfecting plans for the convocation of a great council at Reims, when he succumbed to pleurisy, leaving the consummation of the fifty years' war for freedom to his successor, Callistus II.

Baronius and Reumont agree in pronouncing that no historical personage ever compressed so many misfortunes into the short space of a year and five days. There seems to be no reason why the Benedictine Order should not take up his case for canonization. Benedict XIV tells us ("De Beat. et Canon.", I, xli, n. 30) that in his time the question was mooted; but for one reason or another it was overlooked. The life of Gelasius was written by his intimate friend, Pandulphus of Pisa, an eye-witness to what he narrates; it is in Muratori, "Rer. ital. Scr.", III, 1 sqq.

Liber Pontificalis, ed. DUCHESNE, II, 311-12, 376; WATTERICH, Pontificum Romanorum Vitæ (1862), II, 91-114; BARONIUS, Ann. Eccl. ad ann. 1118, 1119; GAETANI, Vita del pontefice Gelasio II (Rome, 1802, 1811); histories of medieval Rome by GREGOROVIVS; VON REUMONT.

JAMES F. LOUGHLIN

Gelasius of Cyzicus

Gelasius of Cyzicus

Ecclesiastical writer. He was the son of a priest of Cyzicus, and wrote in Bithynia, about 475, to prove against the Eutychians, that the Nicene Fathers did not teach Monophysitism. These details he gives us in his preface (Labbe, II, 117). Beyond that nothing is known about his personality. His "Syntagma" or collection of Acts of the Nicene Council has hitherto been looked upon as the work of a sorry compiler; recent investigations, however, point to its being of some importance. It is divided into three books (Labbe, II, 117-296): bk. I treats of the Life of Constantine down to 323; bk. II of History of the Council in thirty-six chapters; of bk. III only fragments have been published.

The whole of book III was discovered by Cardinal Mai in the Ambrosian Library, and its contents are fully described by Oehler. The serious study of the sources of Gelasius may be said to have begun with Turner's identification of the long passages taken from Rufinus (X, 1-5) in bk. II. A complete analysis of the sources [the Hist. Eccl. of Eusebius, Rufinus (in the Greek version of Gelasius of Caesarea d. 395), Socrates, Theodoret, "John", and Dalmatius], will be found in Löscheke, whose efforts it would appear, have restored to Gelasius a place among serious Church historians, of which he has been wrongly deprived and have also lent weight to the hitherto generally rejected idea that there was an official record of the Acts of the Council of Nicaea; and further that it was from this record that Dalmatius derived the opening discourse of Constantine, the confession of Hosius, the dialogue with Phaedo, and the nine dogmatic constitutions, which Hefele had pronounced "most certainly spurious". The "John" to whom Gelasius refers as a forerunner of Theodoret, is still unidentified; from him were derived the published portions of bk. III, the letters of Constantine to Arius, to the Church of Nicomedia, and to Theodotus, all of which Löscheke contends are authentic. He also proves that a comparison of Constantine's letter to the Synod of Tyre (335), as given by Gelasius and Athanasius (Apolg., n. 86), shows Gelasius to give the original, Athanasius an abbreviated version.

Text of Gelasius in Labbe-Coleti, conc., II, 117-296; Oehler in Zeitschr. f. wissenschaftliche Theol. (1861), IV, 439-442; Turner, On Gelasius of Cyzicus in Journal of Theological Studies (1899), I, 126-7; Löscheke, Das Syntagma des Gelasius Cyzicensis (Bonn, 1906); Lejay in Revue d'Hist. et de Litt. Relig. (1906), XI, 279; Hefele, Histoire des Conciles, new Fr. tr., Leclercq (Paris, 1907), I, 391 sqq.

EDWARD MYERS

Gemblours

Gemblours

(Gembloux, Gemblacum)

A suppressed Benedictine monastery about nine miles north-west of Namur on the river Orneau in Belgium, founded c. 945 by St. Guibert (Wibert) and dedicated to St. Peter the Apostle and the holy martyr Exuperius. St. Guibert was assisted in the erection of the monastery and the selection of its monks by Erluin, who had resigned a canonry to become a monk. Some of Guibert's relatives impugned the legality of the monastic foundation on the plea that the monastery was built on fiscal land which had been given in fief to Guibert's ancestors and could not be alienated without imperial authority. Emperor Otto I summoned Guibert and Erluin to his court, but was so favourably impressed with the manner in which they defended their pious undertaking that on 20 September, 946, he issued an imperial diploma approving the foundation of Gemblours and granting it various privileges. Guibert appointed his friend Erluin first Abbot of Gemblours, while he himself became a monk at the monastery of Gorze near Metz. Twice he returned to the Gemblours; once in 954, when the Hungarians threatened to pillage the monastery, on which occasion he not only preserved

it from injury, but also converted some Hungarians to the true Faith; and a second time in 957, when his brother-in-law Heribrand of Mawolt had seized the revenues of the monastery. He persuaded Heribrand to leave the possessions of the monastery unmolested in the future. On 23 May, 962, St. Guibert died at Gorze and his remains were brought to Gemblours. When monastic discipline was well established at Gemblours, Erluin attempted, at the suggestion of Count Regnier of Hainaut, to reform the monastery of Lobbes in 955. But on the night of 20 October, 958, three of the monks of Lobbes, who hated reform, assaulted Erluin in his cell, dragged him outside of the monastery, and inflicted on him serious bodily injuries. Erluin died at Gemblours on 10 August 986, after Pope Benedict VII had granted his monastery exemption and papal protection.

During the short reign of his successor Heriward (987-990), the monks voluntarily relinquished their right of exemption in favour of Bishop Notger of Liege, who was friendly disposed towards the monastery. Heriward was succeeded by Erluin II (990-1012), under whose weak administration monastic discipline greatly relaxed. His successor Olbert (1012-1048), a pious and learned abbot, restored discipline, built a new abbey church in 1022, organized a rich library, and by encouraging sacred and profane learning gave the first impulse to the subsequent flourishing condition of Gemblours. During the period of its greatest intellectual activity Gemblours was ruled over by Mysach (1048-1071); Thietmar (1071-1092); Liethard (1092-1115), and Anselm (1115-1136). Under Thietmar flourished the famous chronicler Sigebert (1030-1112), who in a neat Latin style wrote a chronicle of the world from 381-1111, a history of the Abbots of Gemblours, and other historical works of great value. His chronicle was continued by Abbot Anselm till 1136, and his history of the Abbots of Gemblours by the monk Gottschalk, a disciple of Sigebert. The learned prior Guerin, who was a famous teacher at the school of Gemblours, was a contemporary of Sigebert. In 1157 and again in 1185 the monastery was destroyed by fire, and though rebuilt, it began from this period to decline in importance. In 1505, under Abbot Arnold II of Solbrecg (1501-1511), it became affiliated with the Bursfeld Union (see Bursfeld, Abbey of). It was pillaged by the Calvinists in 1598, and was partly destroyed by fire in 1678 and again in 1712. It was just beginning to recover from these heavy misfortunes when in 1793 the Government suppressed it. The buildings are now used for a state agricultural college.

MICHAEL OTT B. Gerald Witzemann
Genealogy (In the Bible)

Genealogy (in the Bible)

The word *genealogy* occurs only twice in the New Testament: I Tim., i, 4, and Tit., iii, 9. In these passages commentators explain the word as referring to the Gentile theogonies, or to the Essene generation of angels, or to the emanation of spirits and aeons as conceived by the Gnostics, or to the genealogies of Jesus Christ, or finally to the genealogies of the Old Testament construed into a source of an occult doctrine. Some even appeal to Philo in order to refer St. Paul's expression to the various stories and fables told about Moses and the Patriarchs. In the Old Testament the term *genealogia* occurs only in a few manuscripts of the Septuagint, in I Par., iv, 33; v, 7, 17; ix, 22; I Esd., viii, 1, where the commonly received text reads *katalogismos* or *katalochismos*. In the present article, therefore, we shall not dwell upon the term *genealogy*, but consider the parts, usually genealogical lists, introduced by the phrase "these are the generations" or "this is the book of the generation"; we shall investigate the meaning of the introductory phrase, enumerate the principal genealogical lists, indicate their sources, draw attention to their importance, and point out their deficiencies. Special genealogical lists, for instance those of Christ, found in the Gospels of St. Matthew and St. Luke, must be studied separately.

I. INTRODUCTORY PHRASE

The introductory formula, "these are the generations" or "this is the book of the generation", is the heading to the ten parts of the Book of Genesis. It occurs also in Num., iii, 1; Ruth; iv, 18; I Par., i, 29. Similar expressions are found frequently, especially in the Books of Paralipomenon. What is their meaning? They do not denote any genealogy or genealogical table in our sense of these words. There can be no questions of posterity in Gen., ii, 4: "these are the generations of the heaven and the earth", as *toledhoth*, the Hebrew equivalent of "generations", seems to imply. In Gen., vi, 9, the introductory formula is followed by the history of the Flood; hence it cannot point forward to a genealogical table. If we keep in mind, on the other hand, that primitive history was only genealogy adorned with various anecdotes and stories of incidents, we begin to realize that the genealogical portions of the Book of Genesis are abbreviated and rudimentary biographies. The proper meaning of our introductory formula is, therefore, simply, "this is the history".

II. GENEALOGICAL LISTS

The peculiar character of primitive history accounts for the numerous genealogical lists found in the books of the Old Testament. We shall enumerate only the principal ones: Gen., v, 1-31, give the Patriarchs from Adam to Noe; Gen., x, 1-32, the ethnography of the sons of Noe; Gen., xi, 10-26, the Patriarchs from Sem to Abraham; Gen., xi, 27-32, the posterity of Thare; Gen., xxii, 20-24, the posterity of Nachor; Gen., xxv, 1-4, the descendants of Abraham by Centura; Gen., xxv, 12-18, the posterity of Ismael; Gen., xxv, 23-29, the sons of Jacob; Gen., xxxvi, 1-43, the posterity of Esau and the princes of Edom; Gen., xlvi, 8-27, the family of Jacob going into Egypt; Num., iii, 14-39, the list of the Levites; Num., xxvi, 1-51, the heads of the tribes; Ruth, iv, 18-22, the genealogy of David; I Esd., vii, 1-5, the genealogy of Esdras; II Esd., xi-xii, the genealogy of a number of persons. I Par., i-ix, is replete with genealogical lists which either repeat, or abbreviate, or again

develop the foregoing genealogies, adding at times other documents of an unknown origin. For instance, there is a brief genealogy of Benjamin in I par., vii, 6-12, a longer one in I Par., viii, 1-40; similarly a brief genealogy of Juda in I Par., iv, 1-23, a more complete one in I Par., ii, 3; iii, 24. The inspired historian makes no effort to harmonize these striking differences, but seems to be only careful to reproduce his sources.

In order to appreciate the foregoing lists properly, four of their peculiarities must be kept in mind:

- In the primitive languages each word had a certain meaning. Foreign names had to be translated or replaced by other names. As the Semitic language developed out of the primitive, the proper names too underwent a similar change, so as to assume a Semitic, and at times even a Hebrew, colouring. This does not destroy the historical character of the men known under these changed appellations; the martyr St. Adautus does not become a mere fiction simply because his real name is unknown. Lenormant has left us a comparison between the antediluvian Patriarchs of the Bible and the antediluvian heroes of Chaldee tradition (*Origines de l'histoire*, I, Paris, 1880, pp. 214-90), and the Vigouroux has given us a study on the mythological origin of the antediluvian Patriarchs (*Livres saints et critique ration.*, 1891, IV, liv. I, c. vii, p. 191-217). All this goes to show that the names actually found in the Biblical genealogies denote the same subject, but do not present the same form as the original names.
- The names found in the Biblical genealogies do not always denote persons, but may signify a family, a tribe or nation, or even the country in which the bearers of the respective names dwelt. For instance, Jos., vii, 1, speaks of "Achan the son of Charmi, the son of Zabdi, the son of Zare of the tribe of Juda", while the context (cf. 16 sqq.) shows that Zabdi stands for the "house of Zabdi" and Zare for the "family of Zare". Again, throughout Gen., x, the genealogy serves as ethnographic purpose, so that its names represent nations or countries. The name of the country can be identified with that of its inhabitants, because the country stands for its people by way of a metaphor which has almost ceased to be so on account of its frequent use. The same proper name denotes an individual, a family, a house, a tribe, or a nation, on account of the idea of solidarity of the whole community in the merits and demerits of the individual member. This width of meaning of the genealogical names does not detract from their historicity, since the obscurity of one's grandfather or great-grandfather does not prevent one from being a real offspring of his tribe or nation.
- When the names in the Biblical genealogies denote particular persons, their connection may be only a legal one. A woman whose husband died without issue was bound by law to be married to her husband's brother, and the first-born son of such a so-called levirate marriage was reckoned and registered as the son of the deceased brother (Deut., xxv, 5 sqq.). The question proposed to Christ by the Sadducees (Matt., xxii, 24; Mark, xii, 19; Luke, xx, 28) shows that this law was observed down to the time of Christ. Such a substitution of legal for physical parentage in the Biblical genealogies does not remove the offspring from his proper family or tribe.
- Finally, the strangers incorporated into a tribe or a family are reckoned among the descendants of the respective eponym. This custom explains the words of Jacob spoken on his death-bed (Gen., xlviii, 5-6); he ordains that the sons of Joseph, excepting Ephraim and Manasses, "shall be called by the name of their brethren in their possessions".

III. SOURCES OF THE GENEALOGIES

Generally speaking, the later genealogies were derived from written sources, either inspired or profane. For instance, the genealogy of Benjamin in I Par., vii, 6-12, is based on the data given in the Books of Genesis and Numbers; a more extensive genealogy of the same patriarch found in I Par., viii, 1-40, is based, no doubt, on written sources too, which are, however, unknown to us. As to the earlier genealogies, their veracity cannot be directly proved independently of inspiration. Written documents were used much earlier than the archaeologists of the first half of the eighteenth century believed. Moreover, very little writing was required to preserve the earliest genealogical lists, which are both rare and brief. We may grant freely that the art of writing was not known from Adam to the Flood, and for centuries after Noe. But keeping in mind the following facts, we find no difficulty in admitting oral tradition and memory as sufficient sources for these periods.

- It has been found that the power of memory is much greater among peoples who have not learnt the art of writing.
- Each of the genealogical lists belonging to the two periods in question contains only ten generations, so that only twenty names required to be transmitted by tradition.
- Before the introduction of writing, two devices were employed to aid the memory; either history was versified, or the facts were reduced to certain standard numbers. This second form was in use among the Scriptural nations. There were ten antediluvian Patriarchs, ten postdiluvian; seventy descendants of Jacob are named on the occasion of Israel's going into Egypt, though some of them were dead at that time, others had not yet been born; the ethnographical list of Genesis enumerates seventy nations, though it gives some names of little importance and omits others of great importance; I Par., ii, 3-55, gives seventy descendants of Juda; I Par., viii, 1-28, seventy descendants of Benjamin. This device guarded against arbitrary insertion or omission of any name, though it did not fully exclude the substitution of one name for another. A possible exception against such an arrangement will be considered in the last section.

IV. IMPORTANCE OF THE GENEALOGIES

The Hebrews shared the predilection for genealogies which prevailed among all the Semitic races. Among the Arabs, for instance, no biography is complete without a long list of the hero's ancestors. They register even the lineage of their horses, esteeming their nobility according to their extraction (Cf. "Revue des deux mondes", 15 May, 1855, pp. 1775-77; Caussin de Perceval, "Essai sur l'histoire des Arabes avant l'Islamisme", Paris, 1844-48). Among the Hebrews such genealogical lists were of still high importance for the following reasons:

- According to the Mosaic enactments, the Palestinian soil was given over to definite tribes and families. In order to recover, in the year of the jubilee, these family possessions, the claimant had to prove his legal descent.
- The nearest kinship conferred among the Hebrews the rights of the so-called Goel. Lev., xxv, 25, and Ruth, iv, 1-6, show some of the advantages implied in this right. The term Goel is rendered in the Latin Vulgate *propinquus* or *proximus*; in the English version it is translated by "kinsman".

- Again, the priests and Levites had to prove their legal descent in order to fulfil the honourable and remunerative functions of their respective offices. On returning from the Babylonian Captivity several were excluded from the priestly class because they could not prove their Levitical pedigree (I Esd., ii, 62; II Esd., vii, 64). Josephus (Vit., I) appeals to the priestly registers and is proud of the royal descent of his mother; he shows that even the priests residing in Egypt had their sons registered authentically in Jerusalem, so as to safeguard their priestly prerogatives (C. Apion., I, vii).
- Finally, the prophecy that the Messiah was to be born of the tribe of Juda and the house of David rendered the genealogy of this family most important. Eusebius (Hist. Eccl., III, xix, 20) relates on the authority of Hegesippus that Domitian (A. D. 81-96) put to death all the descendants of David, excepting the relatives of Christ on account of their lowly condition.

V. DEFICIENCIES OF THE GENEALOGIES

It cannot be denied that some of the genealogical links are omitted in the Biblical lists; even St. Matthew had to employ this device in order to arrange the ancestors of Christ in three series of fourteen each. At first sight such omissions may seem to be at variance with Biblical inerrancy, because the single members of the genealogical lists are connected by the noun son or the verb *beget*. But neither of these links creates a real difficulty:

- The wide meaning of the noun *son* in the genealogies is shown in Matt., i, 1: "Jesus Christ, the son of David, the son of Abraham". This phrase prepares the reader for the view that the noun son may connect a person with any one of his ancestors, however remote.
- As to the verb *beget*, some writers maintain that the Hiphil form of its Hebrew equivalent refers to the immediate offspring, while its Qal form may denote a more remote generation. But this contention does not rest on any solid foundation. It is true that the Hiphil form occurs in Gen., v and xi; it is also true that the successive links of the genealogies in these two chapters appear to exclude any intermediate generation. But this is only apparent. Unless it be certain from other sources that the Hebrew word in question signifies the begetting of an immediate offspring, Gen., v, 15, for instance, may just as well mean that Malaleel at the age of sixty-five begot the grandfather of Jared as that he begot Jared immediately. The same holds true of the other Patriarchs mentioned in the above two chapters. Nor can it be urged that such an interpretation would destroy the chronology of the Patriarchs; for the inspired writer did not intend to transmit a chronology.

A.J. MAAS

Genealogy of Christ

Genealogy of Christ

It is granted on all sides that the Biblical genealogy of Christ implies a number of exegetical difficulties; but rationalists have no solid reason for refusing to admit any of the attempted solutions, nor can we agree with those recent writers who have given up all hope of harmonizing the genealogies of Christ found in the First and Third Gospels. The true state of the question will become plain by studying the Biblical genealogies of Christ first separately, then in juxtaposition, and finally in their relation to certain exceptions to their harmony.

ST. MATTHEW'S GENEALOGY OF CHRIST

The genealogy of Christ according to the First Evangelist descends from Abraham through three series of fourteen members each; the first fourteen belong to the patriarchal order, the second to the royal and the third to that of private citizens. Matthew 1:17, shows that this arrangement was intended; for the writer expressly states: "So all the generations, from Abraham to David, are fourteen generations. And from David to the transmigration of Babylon, are fourteen generations: and from the transmigration of Babylon to Christ are fourteen generations."

<i>First Series</i>	<i>Second Series</i>	<i>Third Series</i>
1. Abraham	1. Solomon	1. Jechonias
2. Isaac	2. Roboam	2. Salathiel
3. Jacob	3. Abia	3. Zorobabel
4. Judas	4. Asa	4. Abiud
5. Phares	5. Josaphat	5. Eliacim
6. Eson	6. Joram	6. Azor
7. Aram	7. Ozias	7. Sadoe
8. Aminadab	8. Joatham	8. Achim
9. Naasson	9. Achaz	9. Eliud
10. Salmon	10. Ezechias	10. Eleazar
11. Booz	11. Manasses	11. Mathan
12. Obed	12. Amon	12. Jacob
13. Jesse	13. Josias	13. Joseph
14. David	14. Jechonias	14. Jesus

The list of the First Evangelist omits certain members in Christ's genealogy:

- The writer gives only three names for the time of the Egyptian exile (Eson, Aram, and Aminadab), though the period lasted 215 or 430 years; this agrees with Genesis 15:16, where God promises to lead Israel back in the fourth generation. But according to Genesis 15:13, the stranger shall afflict Israel for four hundred years.
- The three names Booz, Obed, and Jesse cover a period of 366 years. Omitting a number of other less probable explanations, the difficulty is solved most easily by the admission of a lacuna between Obed and Jesse.
- According to I Paralipomenon 3:11-12, Ochozias, Joas, and Amasias intervene between Joram and Azarias (the Ozias of St. Matthew); these three names cannot have been unknown to the Evangelist, nor can it be supposed that they were omitted by transcribers, for this conjecture would destroy the Evangelist's computation of fourteen kings.

- According to I Paralipomenon 3:15, Joakim intervenes between Josias and Jechonias. We may waive the question whether St. Matthew speaks of only one Jechonias or of two persons bearing that name; nor need we state here all the doubts and difficulties connected with either answer.
- St. Matthew places only nine links between Zorobabel and St. Joseph for a period covering some 530 years, so that each generation must have lasted more than 50 years. The genealogy as given in St. Luke enumerates eighteen generations for the same period, a number which harmonizes better with the ordinary course of events.

As to the omission of members in genealogical lists see GENEALOGY.

ST. LUKE'S GENEALOGY OF CHRIST

The genealogy in Luke 3:23-28 ascends from Joseph to Adam or rather to God; this is the first striking difference between the genealogies as presented in the First and Third Gospel. Another difference is found in their collocation: St. Matthew places his list at the beginning of his Gospel; St. Luke, at the beginning of the public life of Christ. The artificial character of St. Luke's genealogy may be seen in the following table:

<i>First Series</i>	<i>Second Series</i>	<i>Third Series</i>	<i>Fourth Series</i>
1. Jesus	22. Salathiel	43. David	57. Thare
2. Joseph	23. Neri	44. Jesse	58. Nachor
3. Heli	24. Melchi	45. Obed	59. Sarug
4. Mathat	25. Addi	46. Booz	60. Ragau
5. Levi	26. Cosan	47. Salmon	61. Phaleg
6. Melchi	27. Helmadan	48. Naasson	62. Heber
7. Janne	28. Her	49. Aminadab	63. Sale
8. Joseph	29. Jesus	50. Aram	64. Cainan
9. Mathathias	30. Eliezer	51. Esron	65. Arphaxad
10. Amos	31. Jorim	52. Phares	66. Sem
11. Nahum	32. Mathat	53. Judas	67. Noe
12. Hesli	33. Levi	54. Jacob	68. Lamech
13. Nagge	34. Simeon	55. Isaac	69. Mathusale
14. Mahath	35. Judas	56. Abraham	70. Henoch
15. Mathathias	36. Joseph		71. Jared
16. Semei	37. Jona		72. Malaleel
17. Joseph	38. Eliakim		73. Cainan
18. Juda	39. Melea		74. Henos
19. Joanna	40. Menna		75. Seth
20. Reza	41. Mathatha		76. Adam
21. Zorobabel	42. Nathan		77. God

The artificial structure of this list may be inferred from the following peculiarities: it contains eleven septenaries of names; three septenaries bring us from Jesus to the Captivity; three, from the captivity to the time of David; two, from David to Abraham; three again from the time of Abraham to the creation of man. St. Luke does not explicitly draw attention to the artificial construction of

his list, but this silence does not prove that its recurring number of names was not intended, at least in the Evangelist's source. In St. Luke's genealogy, too, the names Jesse, Obed, Booz, cover a period of 366 years; Aminadab, Aram, Esron fill a gap of 430 (or 215) years, so that here several names must have been omitted. In the fourth series, which gives the names of the antediluvian and postdiluvian patriarchs, Cainan has been inserted according to the Septuagint reading; the Hebrew text does not contain this name.

HARMONY BETWEEN ST. MATTHEW'S AND ST. LUKE'S GENEALOGY OF HARMONY BETWEEN ST. MATTHEW'S AND ST. LUKE'S GENEALOGY OF

The fourth series of St. Luke's list covers the period between Abraham and the creation of man; St. Matthew does not touch upon this time, so that there can be no question of any harmony. The third series of St. Luke agrees name for name with the first of St. Matthew; only the order of names is inverted. In this section the genealogies are rather identical than merely harmonious. In the first and second series, St. Luke gives David's descendants through his son Nathan, while St. Matthew enumerates in his second and third series David's descendants through Solomon. It is true that the First Gospel gives only twenty-eight names for this period, against the forty-two names of the Third Gospel; but it cannot be expected that two different lines of descendants should exhibit the same number of links for the period of a thousand years. Abstracting from the inspired character of the sources, one is disposed to regard the number given by the Third Evangelist as more in harmony with the length of time than the number of the First Gospel; but we have pointed out that St. Matthew consciously omitted a number of names in his genealogical list, in order to reduce them to the required multiple of seven.

EXCEPTIONS TO THE PRECEDING EXPLANATION

Three main difficulties are advanced against the foregoing harmony of the genealogies: *First*, how can they converge in St. Joseph, if they give different lineages from David downward? *Secondly*, how can we account for their convergence in Salathiel and Zorobabel? *Thirdly*, what do we know about the genealogy of the Blessed Virgin?

First Difficulty

The convergence of the two distinct genealogical lines in the person of St. Joseph, has been explained in two ways:

(a) St. Matthew's genealogy is that of St. Joseph; St. Luke's, that of the Blessed Virgin. This contention implies that St. Luke's genealogy only seemingly includes the name of Joseph. It is based on the received Greek text, *on (os enomizeto ouios Ioseph) tou Heli*, "being the son (as it was supposed, of Joseph, *but really*) of Heli". This parenthesis really eliminates the name of Joseph from St. Luke's genealogy, and makes Christ, by means of the Blessed Virgin, directly a son of Heli. This view is supported by a tradition which names the father of the Blessed Virgin "Joachim", a variant form of Eliacim or its abbreviation Eli, a variant of Heli, which latter is the form found in the Third Evangelist's genealogy. But these two considerations, viz. the received text and the

traditional name of the father of Mary, which favour the view that St. Luke gives the genealogy of the Blessed Virgin, are offset by two similar considerations, which make St. Luke's list terminate with the name of Joseph. First, the Greek text preferred by the textual critics reads, *on ouios, hos enomizeto, Ioseph tou Heli*, "being the son, as it was supposed, of Joseph, son of Heli", so that the above parenthesis is rendered less probable. Secondly, according to Patrizi, the view that St. Luke gives the genealogy of Mary began to be advocated only towards the end of the fifteenth century by Annius of Viterbo, and acquired adherents in the sixteenth. St. Hilary mentions the opinion as adopted by many, but he himself rejects it (Mai, "Nov. Bibl. Patr.", t. I, 477). It may be safely said that patristic tradition does not regard St. Luke's list as representing the genealogy of the Blessed Virgin.

(b) Both St. Matthew and St. Luke give the genealogy of St. Joseph, the one through the lineage of Solomon, the other through that of Nathan. But how can the lines converge in St. Joseph? St. Augustine suggested that Joseph, the son of Jacob and the descendant of David through Solomon, might have been adopted by Heli, thus becoming the adoptive descendant of David through Nathan. But Augustine was the first to abandon this theory after learning the explanation offered by Julius Africanus. According to the latter, Estha married Mathan, a descendant of David through Solomon, and became the mother of Jacob; after Mathan's death she took for her second husband Mathat, a descendent of David through Nathan, and by him became the mother of Heli. Jacob and Heli were, therefore, uterine brothers. Heli married, but died without offspring; his widow, therefore, became the levirate wife of Jacob, and gave birth to Joseph, who was the carnal son of Jacob, but the legal son of Heli, thus combining in his person two lineages of David's descendants.

Second Difficulty

The second difficulty urged against the harmony between the two genealogies is based on the occurrence of the two names Zorobabel and Salathiel in both lists; here again the two distinct lineages of David's descendants appear to converge. And again, two answers are possible:

(a) It is more commonly admitted that the two names in St. Matthew's list are identical with the two in St. Luke's series; for they must have lived about the same time, and the names are so rare, that it would be strange to find them occurring at the same time, in the same order, in two different genealogical series. But two levirate marriages will explain the difficulty. Melchi, David's descendant through Nathan, may have begotten Neri by a widow of the father of Jechonias; this made Neri and Jechonias uterine brothers. Jechonias may then have contracted a levirate marriage with the widow of the childless Neri, and begotten Salathiel, who was therefore the levirical son of Neri. Salathiel's son Zorobabel begat Abiud; but he also may have been obliged to contract a levirate marriage with the widow of a childless legal relative belonging to David's descendants through Nathan, thus begetting Reza, who legally continued Nathan's lineage.

(b) A more simple solution of the difficulty is obtained, if we do not admit that the Salathiel and Zorobabel occurring in St. Matthew's genealogy are identical with those in St. Luke's. The above proofs for their identity are not cogent. If Salathiel and Zorobabel distinguished themselves at all among the descendants of Solomon, it is not astonishing that about the same time two members

of Nathan's descendants should be called after them. The reader will observe that we suggest only possible answers to the difficulty; as long as such possibilities can be pointed out, our opponents have no right to deny that the genealogies which are found in the First and Third Gospel can be harmonized.

Third Difficulty

How can Jesus Christ be called "son of David", if the Blessed Virgin is not a daughter of David?

(a) If by virtue of Joseph's marriage with Mary, Jesus could be called the son of Joseph, he can for the same reason be called "son of David" (St. Augustine, *On the Harmony of the Gospels*, II, i, 2).

(b) Tradition tells us that Mary too was a descendant of David. According to Numbers 36:6-12, an only daughter had to marry within her own family so as to secure the right of inheritance. After St. Justin (*Adv. Tryph.* 100) and St. Ignatius (*Letter to the Ephesians* 18), the Fathers generally agree in maintaining Mary's Davidic descent, whether they knew this from an oral tradition or inferred it from Scripture, e.g. Romans 1:3; II Timothy 2:8. St. John Damascene (*De fid. Orth.*, IV, 14) states that Mary's great-grandfather, Panther, was a brother of Mathat; her grandfather, Barpanther, was Heli's cousin; and her father, Joachim, was a cousin of Joseph, Heli's levirate son. Here Mathat has been substituted for Melchi, since the text used by St. John Damascene, Julius Africanus, St. Irenaeus, St. Ambrose, and St. Gregory of Nazianzus omitted the two generations separating Heli from Melchi. At any rate, tradition presents the Blessed Virgin as descending from David through Nathan.

KNABENBAUER in HAGEN, *Lexicon Biblicum* (Paris, 1907), II, 389 sq.; PRAT in *Dictionnaire de la Bible* (Paris, 1903), III, 166 sqq. The question is also treated in the recent *Lives of Christ* by FOUARD, DIDON, GRIMM, etc. The reader will find the subject treated also in the commentaries on the Gospel of St. Matthew or St. Luke, e.g. KNABENBAUER, SCHANZ, FILION, MACEVILLY, etc. DANKO, *Historia revelationis divinae Novi Testamenti* (Vienna, 1867), 180-192, gives all the principal publications on the question up to 1865.

A.J. MAAS

Gilbert Genebrard

Gilbert G enebrard

A learned Benedictine exegete and Orientalist, b. 12 December, 1535, at Riom, in the department of Puy-de-D ome; d. 16 Feb., 1597, at Semur, department of C ote-d'Or. In his early youth he entered the Cluniac monastery of Mausac near Riom, later continued his studies at the monastery of Saint-Allyre in Clermont, and completed them at the College de Navarre in Paris, where he obtained the doctorate in theology in 1562. A year later he was appointed professor of Hebrew and exegesis at the Coll ege Royal and at the same time held the office of prior at Saint-Denis de La Chartre in Paris. He was one of the most learned professors at the university and through his numerous and erudite exegetical works became famous throughout Europe. Among his scholars at the Coll ege

Royal was St. Francis de Sales, who in his later life considered it an honour to have had G nebrard as professor (*Traite de l'Amour de Dieu*, XI, 11). About 1578 he went to Rome where he was honourably received by Sixtus V and stood in close relation to Allen, Baronius, Bosio, and other ecclesiastical celebrities. Upon his return, in 1588, he became one of the chief supporters of the Holy League in France. On 10 May, 1591 he was appointed Archbishop of Aix by Gregory XIII, but accepted this dignity only after the express command of the pope. He was consecrated by Archbishop Beaton of Glasgow on 10 April, 1592. As archbishop he remained a zealous leaguer, even after Henry IV became reconciled with the Church in July, 1593. The new king, however, became daily more popular and gained over to his side most of the Catholics. G nebrard saw that further opposition would be useless and, on 15 Nov., 1593, sent his submission to the king ("*Revue des questions historiques*", Paris, 1866, I 616, note). This, however, did not prevent the Provencal Parliament from banishing him on 26 Sept. 1596. For a short time he stayed at Avignon, but being allowed by the king to return, he retired to the priory of Semur, which he held *in commendam*. G nebrard translated many rabbinic writings into Latin, wrote one of the best commentaries on the Psalms: "*Psalmi Davidis vulgat  editione, calendario hebraeo, syro, graeco, latino, hymnis, argumentis, et commentariis, etc. instructi*" (Paris, 1577); is the author of "*De Sanct  Trinitate*" (Paris, 1569); "*Joel Propheta cum chald  paraphrasi et commentariis*", etc. (Paris, 1563); "*Chronographiae libri IV*" (Paris 1580), and numerous other works. He also edited the works of Origen (Paris, 1574).

MICHAEL OTT

General Chapter

General Chapter

(Lat. *capitulum*, a chapter).

The daily assembling of a community for purposes of discipline and administration of monastic affairs has always included the reading of a chapter of the rule, and thus the assembly itself came to be called the chapter and the place of meeting the chapter-house. The qualifying word *conventual*, *provincial*, or *general*, explains the nature of the meeting, and a general chapter, therefore, is one composed of representatives of a whole order or congregation or other group of monasteries. Historically, general chapters, or the germ from which they developed, can be traced back to St. Benedict of Aniane in the beginning of the ninth century. Although his scheme of confederation did not outlive its originator, the idea was revived a century later at Cluny. The example of Cluny produced imitators, and abbeys like Fleury, Dijon, Marmoutier, St-Denis, Cluse, Fulda, and Hirsau (or Hirschau), became centres of groups of monasteries in which a more or less embryonic system of general chapters was introduced. Later on, Citeaux, Camaldoli, Monte Vergine, Savigny, and other reforms, elaborated the idea, which resulted eventually in the congregational system inaugurated by the Fourth Lateran Council in 1215, and since that date it has been the almost invariable custom of every order or congregation. The constitution, times of meeting, and powers of a general chapter,

however, vary so much in the different religious orders that it is impossible to generalize on these points. At Cîteaux, for instance, the chapter met at the mother-house every year, and was, in theory, attended by all the abbots of the order. In other orders the meeting of chapters was held every three or four years, and this has remained the more general usage till the present day. In those that are divided into provinces, the provincial superiors, and sometimes some other officials as well, presided over by the general, if there be one, form the chapter; in others, the superiors of all the houses. Amongst Benedictines, each congregation has its own separate chapter, which is composed usually of the abbot and an elected delegate from each monastery, with the president of the congregation at their head. A general chapter usually elects the general or president of the order or congregation, sometimes appoints the various superiors and other officials, settles matters of business and discipline, hears appeals from its subjects, and in some cases also has the right to draw up or sanction changes in its constitutions. Subject of course to the Holy See, it represents the highest authority in its own particular order or federation. For more detailed descriptions as to the composition and powers of general chapters, the separate articles on the various religious orders must be consulted.

G. CYPRIAN ALSTON

Generation

Generation

(Lat. Vulgate, *generatio*).

This word, of very varied meaning, corresponds to the two Hebrew terms: *dôr*, *tôledôth*. As a rendering of the later, the Vulgate plural form, *generationes*, is treated in the article GENEALOGY. As a rendering of the former, the word *generation* is used in the following principal senses.

- It designates a definite period of time, with a special reference to the average length of man's life. It is in this sense, for example, that, during the long-lived patriarchal age, a "generation" is rated as a period of 100 years (Gen., xv, 16, compared with Gen., xv, 13, and Ex., xii, 40), and that, at a later date, it is represented as of only 30 to 40 years.
- The word *generation* is used to mean an indefinite period of time: of time *past*, as in Deut., xxxii, 7, where we read: "Remember the days of old, think upon every generation", and in Isaias, lviii, 12, etc.; of time *future*, as in Ps. xlv (Heb. xlv), 18, etc.
- In a concrete sense, *generation* designates the men who lived in the same period of time, who were contemporaries, as for instance in Gen., vi, 9: "Noe was a just and perfect man in his generations"; see also: Num., xxxii, 13; Deut., i, 35; Matt., xxiv, 34; etc.
- Independently of the idea of time, *generation* is employed to mean a race or class of men as characterized by the same recurring condition or quality. In this sense, the Bible speaks of a "just generation", literally "generation of the just" [Ps. xiii (Heb., xiv), 6; etc.], a "perverse generation", equivalent to: "generation of the wicked" [Deut., xxxii, 5; Mark, ix, 18 (Gr., verse 19); etc.].
- Lastly, in Is., xxxviii, 12, the word *generation* is used to designate a dwelling place or habitation, probably from the circular for of the nomad tent. Whence it can be readily seen that, in its various principal acceptations, the word *generation* (usually in the Septuagint and in the Greek New

Testament: *genea*) preserves something of the primitive meaning of "circuit", "period", conveyed by the Hebrew term *dôr*.

FRANCIS E. GIGOT

Genesareth

Genesareth

(*Gennesaret*.)

This is the name given to the Lake of Tiberias in Luke 5:1; called *Gennesar* in I Machabees 11:67. (See LAKE OF TIBERIAS.)

Genesisius

Genesisius

(1) Genesisius (of Rome)

A comedian at Rome, martyred under Diocletian in 286 or 303. Feast, 25 August. He is invoked against epilepsy, and is honoured as patron of theatrical performers and of musicians. The legend (*Acta SS.*, Aug., V, 119) relates: Genesisius, the leader of a theatrical troupe in Rome, performing one day before the Emperor Diocletian, and wishing to expose Christian rites to the ridicule of his audience, pretended to receive the Sacrament of Baptism. When the water had been poured upon him he proclaimed himself a Christian. Diocletian at first enjoyed the realistic play, but, finding Genesisius to be in earnest, ordered him to be tortured and then beheaded. He was buried on the Via Tiburtina. His relics are said to be partly in San Giovanni della Pigna, partly in S. Susanna di Termini and in the chapel of St. Lawrence. The legend was dramatized in the fifteenth century; embodied in later years in the oratorio "Polus Atella" of Löwe (d. 1869), and still more recently in a work by Weingartner (Berlinn 1892). The historic value of the Acts, dating from the seventh century, is very doubtful, though defended by Tillemont (*Mémoires*, IV s. v. Genesisius). The very existence of Genesisius is called into question, and he is held to be a Roman counterpart of St. Gelasius (or Gelasinus) of Hierapolis (d. 297). He was venerated, however, at Rome in the fourth century: a church was built in his honour very early, and was repaired and beautified by Gregory III in 741.

(2) Genesisius of Arles

A notary martyred under Maximianus in 303 or 308. Feast, 25 Aug. He is honoured as patron of notaries, and invoked against chilblains and scurf. The Acts (*Acta SS.*, Aug., V, 123, and Ruinart, 559), attributed to St. Paulinus of Nola, state: Genesisius, native of Arles, at first a soldier became known for his proficiency in writing, and was made secretary to the magistrate of Arles. While performing the duties of his office the decree of persecution against the Christians was read in his presence. Outraged in his ideas of justice, the young catechumen cast his tablets at the feet of the

magistrate and fled. He was captured and executed, and thus received baptism in his own blood. His veneration must be very old, as his name is found in the ancient martyrology ascribed to St. Jerome. A church and altar dedicated to him at Arles were known in the fourth century.

(3) Genesisius (Bishop of Clermont)

Twenty-first Bishop of Clermont, d. 662. Feast, 3 June. The legend, which is of a rather late date (*Acta SS.*, June, I, 315), says that he was descended from a senatorial family of Auvergne. Having received a liberal education he renounced his worldly prospects for the service of the Church, became archdeacon of Clermont under Bishop Proculus, and succeeded him in the episcopacy in 656. He laboured earnestly for the maintenance of Christian morality, and founded a hospital at Clermont and also the Abbey of Manlieu. After five years, fearing for his own soul, he left Clermont secretly and went to Rome in the garb of a pilgrim. The bereaved flock sent a deputation to the Holy See. Genesisius was found and induced to return. He then built a convent at Chantoin. He was buried in the church which he had built at Clermont in honour of St. Symphorian, and which later took his own name. In the life St. Prix (*Praejectus*), Genesisius is mentioned as one of the protectors of his childhood.

(4) Genesisius (Count of Clermont)

Died 725. Feast, 5 June. According to the lessons of the Breviary of the Chapter of Camaleria (*Acta SS.* June, I, 497), he was of noble birth; his father's name is given as Audastrius, and his mother's is Tranquilla. Even in his youth he is said to have wrought miracles--to have given sight to the blind and cured the lame. He built and richly endowed several churches and religious houses. He was a friend of St. Bonitus, Bishop of Clermont, and of St. Meneleus, Abbot of Menat. He was buried at Combronde by St. Savinian, successor of Meneleus.

(5) Genesisius (of Lyons)

(Or GENESTUS.) Thirty-seventh Archbishop of Lyons, d. 679. Feast, 1 November. He was a native of France, not of Arabia or Armenia as is sometimes stated and became a religious and abbot (not of Fontenelle, but) attached to the court and camp of Clovis II where he acted as chief almoner to the queen, St. Bathildis. He succeeded St. Chamond (*Annemundus*) in the See of Lyons, and was consecrated in 657 or 658. His name is found for the first time as bishop in a signature of 6 Sept., 664, attached to a charter drawn up by Bertefred, bishop of Amiens, for the Abbey of Corbie. On 26 June, 667, he subscribed another charter framed by Drauscus, Bishop of Soissons, for a convent of the Blessed Virgin founded by Ebroin, mayor of the palace, and his wife Leutrude. In the conflict between Ebroin and St. Leger (*Leodegarius*), Bishop of Autun, Genesisius (675-76) took the part of the bishop and was in consequence attacked by an armed band sent by Ebroin to expel him from Lyons; but Genesisius collected a force and successfully defended his city. In September, 677, he assisted at an assembly held at Maslay. He was succeeded at Lyons by Landebertus. His body remained in the church of St. Nicetius till the beginning of the fourteenth century, when it was transferred to Chelles.

FRANCIS MERSHMAN

St. Genevieve

St. Genevieve

Patroness of Paris, b. at Nanterre, c. 419 or 422; d. at Paris, 512. Her feast is kept on 3 January. She was the daughter of Severus and Gerontia; popular tradition represents her parents as poor peasants, though it seems more likely that they were wealthy and respectable townspeople. In 429 St. Germain of Auxerre and St. Lupus of Troyes were sent across from Gaul to Britain to combat Pelagianism. On their way they stopped at Nanterre, a small village about eight miles from Paris. The inhabitants flocked out to welcome them, and St. Germain preached to the assembled multitude. It chanced that the pious demeanour and thoughtfulness of a young girl among his hearers attracted his attention. After the sermon he caused the child to be brought to him, spoke to her with interest, and encouraged her to persevere in the path of virtue. Learning that she was anxious to devote herself to the service of God, he interviewed her parents, and foretold them that their child would lead a life of sanctity and by her example and instruction bring many virgins to consecrate themselves to God. Before parting next morning he saw her again, and on her renewing her consecration he blessed her and gave her a medal engraved with a cross, telling her to keep it in remembrance of her dedication to Christ. He exhorted her likewise to be content with the medal, and wear it instead of her pearls and golden ornaments. There seem to have been no convents near her village; and Genevieve, like so many others who wished to practise religious virtue, remained at home, leading an innocent, prayerful life. It is uncertain when she formally received the religious veil. Some writers assert that it was on the occasion of St. Gregory's return from his mission to Britain; others say she received it about her sixteenth year, along with two companions, from the hands of the Bishop of Paris. On the death of her parents she went to Paris, and lived with her godmother. She devoted herself to works of charity and practised severe corporal austerities, abstaining completely from flesh meat and breaking her fast only twice in the week. These mortifications she continued for over thirty years, till her ecclesiastical superiors thought it their duty to make her diminish her austerities.

Many of her neighbours, filled with jealousy and envy, accused Genevieve of being an impostor and a hypocrite. Like Blessed Joan of Arc, in later times, she had frequent communion with the other world, but her visions and prophecies were treated as frauds and deceits. Her enemies conspired to drown her; but, through the intervention of Germain of Auxerre, their animosity was finally overcome. The bishop of the city appointed her to look after the welfare of the virgins dedicated to God, and by her instruction and example she led them to a high degree of sanctity. In 451 Attila and his Huns were sweeping over Gaul; and the inhabitants of Paris prepared to flee. Genevieve

encouraged them to hope and trust in God; she urged them to do works of penance, and added that if they did so the town would be spared. Her exhortations prevailed; the citizens recovered their calm, and Attila's hordes turned off towards Orléans, leaving Paris untouched. Some years later Merowig (Mérovée) took Paris; during the siege Genevieve distinguished herself by her charity and self-sacrifice. Through her influence Merowig and his successors, Childeric and Clovis, displayed unwonted clemency towards the citizens. It was she, too, who first formed the plan of erecting a church in Paris in honour of Saints Peter and Paul. It was begun by Clovis at Mont-lès-Paris, shortly before his death in 511. Genevieve died the following year, and when the church was completed her body was interred within it. This fact, and the numerous miracles wrought at her tomb, caused the name of Sainte-Geneviève to be given to it. Kings, princes, and people enriched it with their gifts. In 847 it was plundered by the Normans and was partially rebuilt, but was completed only in 1177. This church having fallen into decay once more, Louis XV began the construction of a new church in 1764. The Revolution broke out before it was dedicated, and it was taken over in 1791, under the name of the Panthéon, by the Constituent Assembly, to be a burial place for distinguished Frenchmen. It was restored to Catholic purposes in 1821 and 1852, having been secularized as a national mausoleum in 1831 and, finally, in 1885. St. Genevieve's relics were preserved in her church, with great devotion, for centuries, and Paris received striking proof of the efficacy of her intercession. She saved the city from complete inundation in 834. In 1129 a violent plague, known as the *mal des ardents*, carried off over 14,000 victims, but it ceased suddenly during a procession in her honour. Innocent II, who had come to Paris to implore the king's help against the Antipope Anacletus in 1130, examined personally into the miracle and was so convinced of its authenticity that he ordered a feast to be kept annually in honour of the event on 26 November. A small church, called Sainte-Geneviève des Ardents, commemorated the miracle till 1747, when it was pulled down to make room for the Foundling Hospital. The saint's relics were carried in procession yearly to the cathedral, and Mme de Sévigné gives a description of the pageant in one of her letters.

The revolutionaries of 1793 destroyed most of the relics preserved in St. Genevieve's church, and the rest were cast to the winds by the mob in 1871. Fortunately, however, a large relic had been kept at Verneuil, Oise, in the eighteenth century, and is still extant. The church built by Clovis was entrusted to the Benedictines. In the ninth century they were replaced by secular canons. In 1148, under Eugene III and Louis VII, canons from St. Victor's Abbey at Senlis were introduced. About 1619 Louis XIII named Cardinal François de La Rochefoucauld Abbot of St. Genevieve's. The canons had been lax and the cardinal selected Charles Faure to reform them. This holy man was born in 1594, and entered the canons regular at Senlis. He was remarkable for his piety, and, when ordained, succeeded after a hard struggle in reforming the abbey. Many of the houses of the canons regular adopted his reform. He and a dozen companions took charge of Sainte-Geneviève-du-Mont, at Paris, in 1634. This became the mother-house of a new congregation, the Canons Regular of St. Genevieve, which spread widely over France. Another institute called after the saint was the Daughters of St. Genevieve, founded at Paris, in 1636, by Francesca de Blosset, with the object of

nursing the sick and teaching young girls. A somewhat similar institute, popularly known as the Miramiones, had been founded under the invocation of the Holy Trinity, in 1611, by Marie Bonneau de Rubella Beauharnais de Miramion. These two institutes were united in 1665, and the associates called the Canonesses of St. Genevieve. The members took no vows, but merely promised obedience to the rules as long as they remained in the institute. Suppressed during the Revolution, it was revived in 1806 by Jeanne-Claude Jacoulet under the name of the Sisters of the Holy Family. They now have charge of over 150 schools and orphanages.

A.A. MACERLEAN

Land of Genezareth

Land of Genezareth

By this name is designated in Mark, vi, 53, a district of Palestine bordering on the Sea of Galilee, and which in the parallel passage of Matthew (xiv, 34) is called "the country of Genesar". The two forms of the name are obviously cognate, but their origin and signification are disputed points among Biblical scholars, nor is there unanimity of opinion as to whether the name was given first to the land and afterwards to the lake or vice versa. The traditional signification: "Garden of the Princes" (as if derived from *Gan-sarim*) goes back to St. Jerome and the Talmud. Several modern scholars, however, prefer the derivation of the name from the Hebrew word *kinnereth*; or from the plural form *kinneroth*, cognate with *kinnor*, signifying a harp or zither. This name, according to them, would have been originally given to the lake on account of the supposed harp-like shape of its contour; but it seems more probable that the name was first used to designate the district, and was derived from the ancient fortified city within the borders of Nephtali; mentioned Book of Josue as *Ceneroth* in xi, 2, and as *Cenereth* in xix, 35. According to the Gospel narrative (cf. Matt., xiv, 13-36; Mark, vi, 31-56; Luke, ix, 10-17), which is confirmed by the description found in Josephus (Bel. Jud., III, x), the land of Genezareth lay to the west, and partly to the north, of the lake of the same name and bordered thereon. These sources do not determine the exact boundaries of the district, but it is probable from other incidental indications that it comprised the entire west coast of the lake, extending westward as far as the boundary separating Nephtali and Zabulon from Aser, and northward probably as far as the plain of Huleh and the mountains of Safed. Physically the district resembles somewhat a section of a tract amphitheatre, sloping, gently on the northern side

and more abruptly on the west, toward the low basin of the lake, and terminating in the plain now called Ghueir.

From the historical and religious standpoint the land of Genezareth is one of the most interesting localities in all Palestine, chiefly because of its connection with the public ministry of Our Lord. Within its boundaries were located Capharnaum, Corozain, Arbela, Magdala, and Tiberias, as well as the more ancient Cenereth. Of these once famous towns nothing remains at present except a few ruins, and the two wretched little villages occupying the site of Tiberias and of Magdala. According to the descriptions found in the Talmud, this region was a marvel of richness and fertility, a veritable paradise; and the same is firmer by Josephus (*loc. cit.*), who describes it as "wonderful in fertility as well as in beauty". He adds: "Its soil is so fruitful that all sorts of trees can grow upon it . . . for the air is so well tempered that it agrees with all sorts. Thus the palm-tree, which requires a warm atmosphere, flourishes equally well with the walnut, which thrives best in a cold climate . . . One may say that this place accomplishes a marvel of nature, forcing those plants which are naturally enemies of one another to agree together." It was noted for its delicious fruits of all varieties, and the climate was such that they flourished in nearly all the seasons of the year. Centuries of neglect have completely obliterated all this richness and luxuriance; and at present, except a few scattered psalms and wild fig-trees, the slopes of the land of Genezareth are barren and lifeless as are most of the other regions of Palestine.

JAMES F. DRISCOLL

Girolamo Genga

Girolamo Genga

A painter, born at Urbino in 1476; died at the same place, 1551. This talented craftsman was apprenticed in his fifteenth year to Luca Signorelli, whom he assisted in many of his works, especially at Orvieto. He then attached himself to Perugino, in whose school he was for three years, becoming the intimate friend of Raphael. After a residence in Florence and Siena he returned to Urbino to carry out some work for the duke, Guidobaldo II. Later on he resided at Rome, where he painted an altar-piece for the church of St. Catherine of Siena, but, in 1012, returned to Urbino at the request of the then duke, Francesco Maria, with whom eventually he went into banishment at Cesena, and for whom he painted his chief altar-piece, "God the Father, the Virgin, and Four Fathers of the Church", now in the Brera at Milan. He was not only a painter and sculptor, but a modeller in wax, clay, and terra-cotta, and some of the drinking-cups he executed in wax were used as models for finished works in silver. He designed vestments and musical instruments, and was an admirable musician himself. Vasari speaks of him as "an admirable inventor" and again as "a man of the most upright character, insomuch that a bad action committed by him was never heard of." In the Pitti Palace at Florence there is "Holy Family" which was painted by Genga.

GEORGE CHARLES WILLIAMSON

Edward Genicot

Edward Génicot

Moral theologian, b. at Antwerp, Belgium, 18 June, 1856; d. at Louvain, 21 February, 1900. After making a brilliant course of studies at the Jesuit college in his native city, he entered the Society of Jesus, 27 September, 1872. He was successively professor of humanities and of rhetoric at Ghent and at Antwerp, and after being ordained priest and sustaining a public defense in all theology, taught first canon law and then moral theology at the Jesuit college in Louvain from 1889 until his comparatively early and unexpected death. Father Génicot was a professor well liked by all his classes because of the solidity and clearness of his teaching. In 1896 he published his "Theologiæ Moralis Institutiones" in which the sixth edition, in harmony with recent decrees of the Holy See, appeared in 1909 (Brussels). Father Génicot drew his inspiration chiefly from the large work of Ballerini-Palmieri. His own work is characterized by a clearness of exposition, firm and straightforward judgment, avoidance and subtleties and rejection of defective arguments; also by marked intellectual honesty that dares to follow principles to their utmost conclusions and set down the conduct confessors may legitimately follow in the confessional. Confessors have no reason to fear the broadness of his conclusions, if they do not actually pass by the limits prescribed by the author. Another work, "Casus Conscientiæ", was published after the author's death. The third edition (1906) appeared with additions and corrections in 1909 (Louvain). These *Casus*, gathered in large part from actual experience, are remarkable for their presentation of real life and are something more than a mere repetition of theory.

J. SALSMANS

St. Gennadius I

St. Gennadius I

Patriarch of Constantinople (458-471), has left scarcely any writings. Facundus (*Defensio*, II, iv) states that he wrote against St. Cyril of Alexandria, probably in 431-2, and quotes a passage to show that his work was more violent even than the letter of Ibas. If St. Cyril's letter of 434 (*Ep.* lvi) is to the same Gennadius, they were friends in that year. Gennadius succeeded Anatolius as Bishop of Constantinople in 458. On 17 June, 460, St. Leo wrote to him (*Ep.* clxx) warning him against Timothy Aelurus, the Monophysite who had made himself Patriarch of Alexandria. Not later, it seems, than 459 St. Gennadius celebrated a great council of eighty-one bishops, many of whom were from the East and even from Egypt, including those who had been dispossessed of their sees by Aelurus. The letter of this council against simony is still preserved (*Mansi*, VII, 912). About the same time St. Daniel the Stylite began to live on a column near Constantinople, apparently without the Patriarch's leave, and certainly without the permission of Gelasius, the owner of the property where the pillar stood, who strongly objected to this strange invasion of his land. The Emperor Leo protected the ascetic, and some time later sent St. Gennadius to ordain him priest,

which he is said to have done standing at the foot of the column, since St. Daniel objected to being ordained, and refused to let the bishop mount the ladder. At the end of the rite, however, the patriarch ascended to give Holy Communion to the stylite and to receive it from him. Whether he then imposed his hands on him is not said. Possibly he considered it sufficient to extend them from below towards the saint. According to Theodorus Lector, Gennadius would allow no one to become a cleric unless he had learned the Psalter by heart. He made St. Marcian *oeconomus* of the Church of Constantinople.

St. Gennadius is said by Joannes Moschus to have been very mild and of great purity. We are told by Gennadius of Marseilles that he was *lingua nitidus et ingenio acer*, and so rich in knowledge of the ancients that he composed a commentary on the whole Book of Daniel. The continuation of St. Jerome's Chronicle by Marcellinus Comes tells us (according to some manuscripts) that Gennadius commented on all St. Paul's Epistles. Some fragments are collected in Migne, P.G., LXXXV, chiefly from the two catenae of Cramer on Romans; a few passages are found in the catena of Aecumenius, and a few in the Vienna MS. gr. 166 (46). Some fragments in the catenae of Niceohorus show that Gennadius also commented on Genesis. He is seen to have been a learned writer, who followed the Antiochene school of literal exegesis. He is celebrated in the Greek Menaea on 25 Aug. and 17 Nov., and on the former day in the Roman-Martyrology.

JOHN CHAPMAN

Gennadius II

Gennadius II

Patriarch of Constantinople (1454-1456).

His original name was George Scholarius (*Georgios Kourtesios Scholarios*). He was born about 1400, was first a teacher of philosophy and then judge in the civil courts under the Emperor John VIII (1425-1448). In this capacity he accompanied his master to the Council of Ferrara-Florence (1438-1439) and was at that time in favour of the union. He made four speeches at the council, all exceedingly conciliatory, and wrote a refutation of the first eighteen of Marcus Eugenius's syllogistic chapters against the Latins. But when he came back to Constantinople, like most of his countrymen, he changed his mind. Marcus Eugenius converted him completely to anti-Latin Orthodoxy, and from this time till his death he was known (with Marcus) as the most uncompromising enemy of the union. He then wrote many works to defend his new convictions, which differ so much from the earlier conciliatory ones that Allatius thought there must be two people of the same name ("Diatriba de Georgiis" in Fabricius-Harles "Bibliotheca Græca", X, 760-786); to whom Gibbon: "Renaudot has restored the identity of his person, and the duplicity of his character" ("Decline and Fall", lxviii, note 41. For Renaudot's work see bibliography below). Scholarius entered the monastery "of the Almighty" (*tou Pantokratoros*) under Constantine XI (1448-1453) and took, according to the invariable custom, a new name -- Gennadius. Before the fall of the city he was already well known as a bitter opponent of the union. He and Marcus Eugenius were the leaders of the anti-Latin

party. In 1447, Marcus on his death-bed praised Gennadius's irreconcilable attitude towards the Latins and the union (P. G., CLX, 529). It was to Gennadius that the angry people went after seeing the Uniat services in the great church of Santa Sophia. It is said that he hid himself, but left a notice on the door of his cell: "O unhappy Romans, why have you forsaken the truth? Why do you not trust in God, instead of in the Italians? In losing your faith you will lose your city", and so on (quoted by Gibbon, *ibid.*, ed. Bury, VII, 176).

As soon as the massacre of 29 May, 1453, was over, when Mohammed the conqueror thought of reorganizing the now subject Christians, he was naturally anxious to put an end to any sort of alliance between them and the Western princes. So he sent for this Gennadius because he was one of the chief enemies of the union, and told him to be patriarch. The see had been vacant three years, since the resignation of Athanasius II (1450). On 1 June, 1453, the new patriarch's procession passed through the streets that were still reeking with blood; Mohammed received Gennadius graciously and himself invested him with the signs of his office -- the crosier (*dikanikion*) and mantle. This degrading ceremony has continued ever since, except that now (since the Turks hanged Parthenius III in 1657) the sultan thinks it beneath his dignity, so that it is performed by the grand vizier (Pitzipios, "L'Eglise Orientale", Rome, 1855, III, 83). Mohammed also arranged with Gennadius the condition of Orthodox Christians (the so-called "Roman nation") in the Turkish Empire made the patriarch their acknowledged civil head before the Porte and gave him a diploma (called *berat*) exactly defining his rights and duties. This *berat* is still given to every patriarch before his consecration (or enthronement). Gennadius, who was not in Holy orders, was then ordained to each grade. Although he so disliked Latins, he seems to have kept good relations with the sultan. One of the symbolic books of the Orthodox Church is the Confession (*Homologia*) made by him to Mohammed, by which he is said to have secured a certain measure of tolerance for his people (see below). As the Santa Sophia had been made into a mosque, he used as his patriarchal church, first that of the Apostles (where the emperors were buried), then that of the All-Blessed (*tes pannakaristou* = the Blessed Virgin). But after two years, in 1456 (Gedeon in his *Patriarchikoi Pinakes*, Constantinople, 1890; others say it was in 1459), he resigned. It is difficult to give the full reason for this step. It is commonly attributed to his disappointment at the sultan's treatment of Christians. On the other hand, Mohammed seems to have kept the fairly tolerant conditions he had allowed to them; various writers hint darkly at other motives (see Michalcescu, *op. cit. infra*, 13). Gennadius then, like so many of his successors, ended his days as an ex-patriarch and a monk. He lived in the monastery of St. John Baptist at Seres in Macedonia (north-east of Saloniki), and wrote books till his death in 1468 (Papageorgiu in the "Byzantinische Zeitschrift", III,315). Gennadius Scholarius fills an important place in Byzantine history. He was the last of the old school of polemical writers and one of the greatest. Unlike most of his fellows he had an intimate acquaintance with Latin controversial literature, especially with St. Thomas Aquinas and the Schoolmen. He was as skilful an opponent of Catholic theology as Marcus Eugenicus, and a more learned one. His writings show him to be a student not only of Western philosophy but of controversy with Jews and Mohammedans, of the great Hesychast question (he attacked Barlaam and defended the monks;

naturally, the Barlaamites were *lateinophrones*, in short, of all the questions that were important in his time. He has another kind of importance as the first Patriarch of Constantinople under the Turk. From this point of view he stands at the head of a new period in the history of his Church; the principles that still regulate the condition of Orthodox Christians in the Turkish Empire are the result of Mohammed II's arrangement with him.

WORKS

Gennadius was a prolific writer during all the periods of his life. He is said to have left from 100 to 120 works (Michalcescu, op. cit. infra, 13). Of these a great number are still unedited. P. G., CLX, 320-773, contains the chief collection of what has been published. To this must be added the works in Simonides, *Orth Hellen. theologikai graphai* (London, 1859), 42-72; Jahn, "Anecdota græca theologica" (Leipzig, 1893), 1-68 and others mentioned below.

First Period (while he was in favour of the union, 1438-c. 1445).-- The chief works of this time are the "speeches" made at the Council of Florence (printed in Hardouin, IX, and P. G., CLX, 386 sqq.), also a number of letters addressed to various friends, bishops, and statesmen, mostly unedited. An "Apology for five chapters of the Council of Florence", edited first (in Latin) at Rome in 1577, and again in 1628, is doubtful (in P. G., CLIX, it is attributed to Joseph of Methone). A "History of the Council of Florence" under his name (in manuscript) is really identical with that of Syropulos (ed. Creighton, The Hague, 1660).

Second Period (as opponent of the union, to his resignation of the patriarchal see, c. 1445-1456 or 1459). A great number of polemical works against Latins were written in this time. Two books about the "Procession of the Holy Ghost" (one in Simonides, loc. cit., the other in P. G., CLX, 665); another one "against the insertion of the Filioque in the Creed" (ibid., 713); two books and a letter about "Purgatory"; various sermons and speeches; a "Panegyric of Marcus Eugenicus" (in 1447), etc. Some translations of works of St. Thomas Aquinas, and polemical treatises against his theology by Gennadius are still unedited, as is also his work against the Barlaamites. There are also various philosophical treatises of which the chief is a "Defence of Aristotle" (*antilepseis hyper Aristotelous*) against the Platonist, Gemistus Pletho (P.G., CLX, 743 sqq.).

His most important work is easily his "Confession" (*Ekthesis tes pisteos ton orthodoxon christianon*, generally known as *Ohomologia tou Gennadiou*) addressed to Mohammed II. It contains twenty articles, of which however only the first twelve are authentic. It was written in Greek; Achmed, Kadi of Berrhoea, translated it into Turkish. This is the first (in date) of the Orthodox Symbolic books. It was published first (in Greek and Latin) by Brassicanus (Vienna 1530), again by Chytræus (Frankfort, 1582). Crusius printed it in Greek, Latin, and Turkish (in Greek and Latin letters) in his "Turco-Græcia" (Basle, 1584 reprinted in P. G., CLX 333, sqq.). Rimmel has reprinted it (Greek and Latin) in his "Monumenta fidei Eccl. Orient." (Jena, 1850), I, 1-10; and Michalcescu in Greek only [Die Bekenntnisse und die wichtigsten Glaubenszeugnisse der griech.-orient. Kirche (Leipzig, 1904), 17-21]. There exists an arrangement of this Confession in the form of a dialogue in which Mohammed asks questions ("What is God?" -- "Why is he called *theos*?" -- "And how

many Gods are there?" and so on) and Gennadius gives suitable answers. This is called variously Gennadius's "Dialogue" (*didalexis*), or "Confessio prior", or "De Via salutis humanæ" (*Peri tes hodou tes soterias anthropon*). Rimmel prints it first, in Latin only (op. cit., 1-10), and thinks it was the source of the Confession (ibid., iii). It is more probably a later compilation made from the Confession by some one else (Otto, op. cit. infra). It should be noticed that Gennadius's (quasi-Platonic) philosophy is in evidence in his Confession (God cannot be interpreted, *theos* from *theein*, etc.; cf. Rimmel, op. cit., viii-xvi). Either for the same reason or to spare Moslem susceptibility he avoids the word *Prosopa* in explaining the Trinity, speaking of the three Persons as *idiomata* "which we call Hypostases" (Conf., 3).

During the *third period*, from his resignation to his death (1459-1468), he continued writing theological and polemical works. An Encyclical letter to all Christians "In defence of his resignation" is unedited, as are also a "Dialogue with two Turks about the divinity of Christ", and a work about the "Adoration of God". Jahn (*Anecdota græca*) has published a "Dialogue between a Christian and a Jew" and a collection of "Prophecies about Christ" gathered from the Old Testament. A treatise, "About our God, one in three, against Atheists and Polytheists" (P.G., CLX, 667 sqq.), is chiefly directed against the theory that the world may have been formed by chance. Five books, "About the Foreknowledge and Providence of God" and a "Treatise on the manhood of Christ", are also in P.G., CLX. Lastly, there are many homilies by Gennadius most of which exist only in manuscript at Athos ("Codd. Athous", Paris, 1289-1298). A critical edition of Gennadius's collected works is badly needed.

For the question of the supposed two persons, both named George Scholarius, see ALLATIUS, *De Georgiis eorumque scriptis in De Eccl. occid. atque orient. perp. consensione* (Cologne, 1648), III, 5, 6. His theory has been taken up again by KIMMEL, *op. cit.*, ii-vii, but was confuted long ago by RENAUDOT, *Dissertatio de Gennadii vita et scriptis* (Paris, 1709) in *P. G.*, CLX, 249 sqq. . OUDIN, *Comment. de Script. Eccles.* (Leipzig, 1722), III, 2481; FABRICIUS-HARLES, *Bibl. Græca* (Hamburg, 1790), XI, 349; and everyone since maintain the identity of Gennadius. TRYPHON EVANGELIDES, *Gennadios b' ho Scholarios* (Athens, 1896); Samos, *Georgios Scholarios* (1895); DRÄSEKE in the *Byzantinische Zeitschrift* IV (1895), 3 sqq.; GEDEON, *Patriarchikoi Pinakes* (Constantinople, s. d.), 471 sqq. CRUSIUS, *Turcogræcia* I, 2; Orro, *Des Patr. Gennadsus Confessio kritisch untersucht* (Vienna, 1864); KRUMBACHER, *Byzantinische Litteratur* (2nd ed., Munich, 1897), 119-121.

ADRIAN FORTESCUE

Gennadius of Marseilles

Gennadius of Marseilles

(GENNADIUS SCHOLASTICUS).

A priest whose chief title to fame is his continuation of St. Jerome's catalogue "De Viris illustribus".

Nothing is known of his life, save what he tells us himself in the last (xcvii) of the biographies in question: "I, Gennadius, presbyter of Massilia, wrote eight books against all heresies, five books against Nestorius, ten books against Eutyches, three books against Pelagius, a treatise on the thousand years of the Apocalypse of John, this work, and a letter about my faith sent to blessed Gelasius, bishop of the city of Rome" (ed. Bernoulli, 95). This fixes his period more or less; Gelasius reigned from 492-496, so Gennadius must have lived at the end of the fifth century.

Internal evidence shows that he was a Semipelagian, as indeed the name of his city would make one suspect. Of all the works to which he refers, only the "De Viris illustribus" -- "this work" -- is certainly extant. He tells us further that he translated and restored to their authentic form Evagrius Ponticus's works (xi, 65), and those of Timothy Ælurus (lxxii, 86). These translations are also lost. He twice mentions a "catalogue of heretics" that he means to write (xxv, 74, and liii, 79). Presumably this is the work "against all heresies" referred to above. There is a pseudo-Augustinian treatise, "De ecclesiasticis dogmatibus" (P. L., LVIII, 979-1054), that is now universally attributed to Gennadius. The only question is with which of the works he speaks of having written the last-mentioned should be identified. It has often been thought to be the letter to Gelasius. Caspari (op. cit. infra), Bardenhewer, Czaplá, and others have pointed out that the treatise has nothing of the nature of a letter or of a personal profession of faith. Only once, in chap. xxiii, does the author write in the first person (*laudo, vitupero*, etc.). They think therefore that it is more probably a fragment of Gennadius's eight books "against all heresies", apparently the last part, in which, having confuted the heretics, he builds up a positive system.

There are many indications that the author was a Semipelagian in Gennadius's chapters "De Viris illustribus". Semipelagians are warmly praised (Fastidiosus, lvi, p. 80; Cassian, lxi, 81; Faustus, lxxxv, 89); full Pelagians (Pelagius himself, xlii, 77; Julian of Eclanum, xlv, 77) are heretics; Catholics are treated shabbily (Augustine, xxxviii, 75; Prosper of Aquitania, lxxxiv, 89); even popes are called heretics (Julius I, in i, 61). The same tendency is confirmed by the treatise "De eccles. dogmatibus", which is full of Semipelagianism, either open or implied (original sin carefully evaded, great insistence on free will and denial of predestination, grace as an *adjutorium* in the mildest form, etc.; cf. Wiggers, op. cit. infra, 353 sqq.). Perhaps the most reprehensible effect of Gennadius's opinions on this point is his sneering remark about St. Augustine's prolific genius: "He wrote so much that it cannot all be found. For who shall boast of possessing all his works, or who shall read with as much care as he used in writing?" And at the end he tempers his faint praise by saying that Augustine "caused doubts about the question of unborn children to the simple" and that he "remained a Catholic" (xxxviii, 75). To say of Augustine merely that he remained a Catholic, shows prejudice, if anything can.

We have said that Gennadius's chief, if not his only, title to fame is his continuation of St. Jerome's "De Viris illustribus". In that work Jerome had for the first time drawn up a series of one hundred and thirty-five short biographies of famous Christians, with lists of their chief works. It was the first patrology and dictionary of Christian biography. So useful a book of reference naturally became popular, and while no one thought of controlling or correcting it, many people wrote

continuations after the same method. We hear of such a continuation by one Paterius, a disciple of Jerome, and of a Greek translation by Sophronius. But it was Gennadius's continuation that won most favour, that was accepted everywhere as a second part of the same work, and was always written (eventually printed) together with St. Jerome's work. Gennadius's part contains about one hundred lives (variously numbered: by Bernoulli, i to xcvi, with some marked as xciib, etc., originally cxxxvi-ccxxxii), modelled strictly on those of Jerome. In xc, 92, he says (in one version) that Theodore of Coelesyria (Theodulus) "died three years ago, in the reign of Zeno". From this Czaplá deduces that Gennadius wrote between 491 and 494. The series is arranged more or less in chronological order, but there are frequent exceptions. The text is in a bad state. Other people have modified it and added to it without noting the fact--as is usual among medieval writers. Richardson (op. cit. infra) and Czaplá consider, apparently with reason, that chapters xxx (John of Jerusalem), lxxxvii (Victorinus), xciii (Cærealis of Africa), and all the end portion (xcv-ci), are not authentic. There is doubt about parts of the others. Gennadius was on the whole an honourable and scrupulous writer. In one place (lxxxv, 90) he says: "There are other works by him (Faustus) which I will not name because I have not yet read them." He uses the name "Scholasticus" as an honourable epithet repeatedly (lxiii, 82, lxvii, 84, lxxix, 87, lxxxiv, 89). It is generally, and very justly, given to him by others.

De Viris illustribus, ed. ANDREAS (Jerome and Gennadius together, as nearly always; Rome, 1468). This is the editio princeps: the work had a long history in manuscript before (cf. Bernoulli, op. cit., xvi-lvi), and has been reprinted constantly since. FABRICIUS, *Bibliotheca ecclesiastica* (Hamburg, 1718), II, 1-43; this is the edition reproduced in *P. L.*, LVIII, 1059-1120; the most practical modern ed. is BERNOULLI, *Hieronymus und Gennadius De Viris illustribus* (Freiburg im Br., 1895, vol. II of KRÜGER, *Sammlung ausgewählter Kirchen und dogmengeschichtlichen Quellenschriften*), with apparatus and notes. All references above are to this edition. The work *De ecclesiasticis dogmatibus* was published by ELMENHORST (Hamburg, 1614), reprinted in *P. L.*, LVIII, 979-1054; CZAPLA, *Gennadius als Litterarhistoriker* (Münster, 1898). RICHARDSON edited GENNADIUS in the *Texte und Untersuchungen*-, XIV (1895); JUNGSMANN, *Quæstiones Gennadianæ* (Leipzig, 1881); CASPARI, *Kirchenhistorische Anekdota* (Christiania, 1883); DIEKAMP, *Wann hat Gennadius seinen Schriftstellerkatalog verfasst?* in *Römische Quartalschrift* (1898), 411-420; BARDENHEWER, *Patrologie*, tr. SHAHAN (Freiburg im Br., 1908), 608; WIGGERS, *Versuch einer pragm. Darstellung des Augustinismus und Pelagianismus* (Hamburg, 1833), 350-356.

ADRIAN FORTESCUE

Edmund and John Jennings

Edmund and John Gennings

The first, a martyr for the Catholic Faith, and the second, the restorer of the English province of Franciscan friars, were brothers and converts to the Church. Edmund Gennings was born at

Lichfield in 1567; died in London, 10 Dec., 1591. John was b. about 1570; d. at Douai, 12 Nov., 1660.

Edmund, even in his boyhood, exhibited an unusual gravity of manners and a mystical turn of mind; when about sixteen years of age, he was converted to the Catholic Faith, and immediately afterwards entered the English College at Reims. He was ordained priest in 1590, being then only twenty-three years of age, and at once returned to England under the assumed name of Ironmonger. But his missionary career was of short duration, for he was seized whilst saying Mass in London on 7 Nov., 1591, and executed at Gray's Inn Fields on 10 Dec. His martyrdom was the occasion of several remarkable incidents, chief of which was the conversion of his younger brother John. On his return to England, Edmund Gennings had at once gone to Lichfield to seek out his kindred in the hope of bringing them to the true faith but he found that all his relatives were dead except this one brother, who had, however, left his native city and gone to London. Thither Edmund proceeded and for a whole month searched the city, visiting every place where he thought his brother might be found. Eventually, when he was about to give up the search, he achieved his purpose, but the younger brother, far from being won over to Edmund's faith, only besought him to go away, lest he himself should become suspect; and when after awhile Edmund was seized and condemned John "rejoiced rather than bewailed the untimely and bloody end of his nearest kinsman, hoping thereby to be rid of all persuasions which he suspected he should receive from him touching the Catholic Religion". So wrote John Gennings in his life of his brother, published in 1614 at St-Omer.

Undoubtedly at this time John Gennings was bent on pleasure, but one must make allowances for the spirit of remorse with which he looked back on those days in after years, and not accept his own estimate of his youth too readily. However, about ten days after his brother's execution, a change came over him. He began one night to think of his brother's death and contempt of the world, and to compare his own life with that of the martyr. He was struck with remorse and wept bitterly, and next prayed for light. Instantly he felt an exceeding great reverence for the saints and, above all our Blessed Lady, and it seemed to him that he saw his brother in glory. He thereupon made a vow to forsake friends and country and seek a true knowledge of his brother's faith. Being received into the Church, he entered Douai College, was ordained priest in 1607, and the following year was sent upon the English mission. Here he conceived a desire for the restoration of the English province of Franciscans, and sought out Father William Staney, the Commissary of the English friars, and from him received the habit, either in 1610 or 1614 (the date is uncertain). After this, he went for a time to a convent of the order at Ypres, in Flanders, where he was joined by several English companions, amongst whom was Christopher Davenport, known in religion as Franciscus a Sancta Clara, afterwards a famous controversialist. Thus was the foundation of a new English province laid, and Father William Staney recognising the zeal of John Gennings, now gave into his hands the seal of the old province of the English Observants.

Gennings next proceeded to procure a house for the English friars at Gravelines, but in 1618 he obtained leave from the minister general to establish a settlement at Douai. As a matter of fact, most of the friars who had joined Gennings were *alumni* of Douai College, and in transferring their

residence to that town he hoped to obtain a continuous supply of recruits. The work of restoring the English province was definitely confided to him by the general chapter of 1618, and he was nominated "Vicar of England". To assist him in the work of restoration, the commissary general of the Belgian nation was empowered to gather together all the English and Scotch friars from any province in the order. A decree of the same general chapter placed the English Poor Clares of Gravcelines under the jurisdiction of English friars. In 1625, the number of the English friars having greatly increased, Gennings sent Father Franciscus a Sancta Clara to Rome to plead that the English province be canonically established. The request was granted with the simple restriction that the superior of the province should not assume the title of provincial, but that of custos; but in 1629, this restriction was taken away and Friar John Gennings was appointed minister provincial. The first chapter of the new province was held at Brussels in Advent of the same year, in the convent of the English sisters of the third order, which Gennings had himself founded in 1619. This community of tertiary sisters has continued to the present time, and is now established at Taunton, in England, with a branch house at Woodchester. Father John Gennings was re-elected provincial in 1634, and again in 1643.

FATHER CUTHBERT

Genoa

Genoa

ARCHDIOCESE OF GENOA (JANUENSIS)

Archdiocese in Liguria, Northern Italy. The city is situated on the gulf of the same name, extends along the lowest ridges of the Ligurian Apennines, which sweep around the gulf, between the mouths of the Polcevera and the Bisagno, and is protected from the inroads of these waters by the Punta della Lanterna and the Punta del Carignano. The bay forms a natural harbour secured against storms by the promontory of Portofino, which acts as a breakwater. Two piers (the smaller one begun in 1133) were necessary to break the force of the tide during storms. Its favourable position has made Genoa the largest trade centre on the Mediterranean. It is also a naval fortress with a chain of defences about ten miles in length.

In 205 B.C., Mago the Carthaginian landed there with a large army, and sacked the town for its sympathy with Rome, the rest of Liguria supporting the Carthaginians. From the end of the Second Punic War, Genoa belonged to Rome. After the Lombard invasion, it remained subject to Byzantium, like nearly all the maritime towns of Italy. In A.D. 641 King Rotari, in his expedition along the coast of Liguria, sacked Genoa, and carried off immense booty. It was later incorporated in the Lombard kingdom, probably under Charlemagne, becoming part of the March of Obertenga. In 935, it was surprised and sacked by the Saracens, but the Genoese fleet followed up the enemy and defeated them near the island of Asinara. In 1008, the Saracens came for the third time. Meanwhile the trade and enterprise of Genoa had steadily increased, and now rivalled that of Pisa, in those early times its friendly neighbour. In 1016, they drove the Arab chief Mogalied from

Sardinia. In 1052, the town organized itself into a commune, and was governed by consuls and a podestà (mayor); in 1258, however, the control was divided between the podestà and a "captain of the people", a condition which lasted till 1310. From 1339 to 1797, except when the rule was in the hands of foreigners, the city was governed by doges chosen from the principal families, at first for life, but after 1528 for periods of two years.

In 1087, the Genoese and Pisans captured Almadia and Subeila in Africa. In the First Crusade their fleet transported the crusading armies to the Holy Land, secured many ports in Syria and Palestine for the Christians, and, in return for their services, they were granted important commercial privileges among the Christian principalities of the East. Together with the Pisans they aided Innocent II to put down the schism of Anacletus, and, as a reward, the pope divided between the two municipalities the islands of Sardinia and Corsica, retaining, however, his own overlordship. In 1147, they took Almeria and Tortosa, in Spain, from the Moors. The threatening attitude of Genoa forced Frederick Barbarossa to recognize all its liberties and possessions; hence, until the reign of Frederick II, it remained friendly to the imperial cause, and even assisted in the attack on Sicily. In 1240, however, the Genoese refused to do homage to Frederick II, and, in 1241, they lent their fleet to transport the northern prelates to the council convened by Gregory IX, but were pursued and defeated between the islands of Il Giglio and Monte Cristo by the Pisans, the allies of the emperor. In 1244, Innocent IV took refuge in Genoa. The commercial favour shown by the Latin Empire of Constantinople (1204-60) towards the Venetians enabled the latter to defeat the Genoese at St-Jean d'Acre and on the high seas, in 1257 and 1258 respectively. In 1261, the Genoese took their revenge by assisting Michael Palæologus to reconquer Constantinople, and obtained from him Smyrna and Pera, and the monopoly of trade in the Black Sea. They developed markets rapidly on the shores of this sea, the principal one being Caffa, and carried on a brisk trade, exporting mainly wine, oil, woollens, and silks, and importing skins, furs, corn, Persian stuffs, etc. For the government of these colonies, a general consulate of the empire of Gazaria was established.

A bitter war now began between the rival cities of Genoa and Pisa. From 1262 to 1267, five naval battles (Settepozzi, Durazzo, Trapani, Tyre, and St-Jean d'Acre) were fought, in which Genoa was generally the loser. St. Louis IX of France sought to establish peace on a firm footing (Cremona, 1270); but a revolt in Corsica, stirred up by the Pisans, soon led to another war (1282-1284), which ended in the utter defeat of the Pisans near the island of Meloria. Soon the old rivalry with Venice was renewed, and the scene of the conflict shifted to the East. At Laiazzo, on the coast of Armenia, the Genoese were victorious (1294); the Venetians retaliated by destroying the Genoese quarter of Galato (1296), but in 1298 Lamba Doria (founder of the Doria family, famous in the annals of Genoa) totally destroyed the Venetian fleet at Curzola. Both rivals being now weakened, Henry VII (1311) easily obtained from the Genoese the right to govern them for twenty years, and a promise of help against Naples. A little later, Robert of Anjou (1318-1335) was called in by the Guelphs in opposition to the Visconti of Milan, favoured by the Ghibellines. When the Venetians, together with the Greeks and the Catalonians, wished, in 1342, to occupy the island of Scio as an outpost against the Turks, the Genoese, profiting by a quarrel among the allies, forestalled them.

This, amongst other causes, led to a fresh outbreak of war in 1350. In the Bosphorus (1352), a fierce but indecisive battle was fought; while at Alghero in Sardinia (1353) the Genoese were defeated by the Venetians and their allies. Genoa then chose Giovanni Visconti, Archbishop of Milan, as its ruler of "Signore". In 1354, Paganino Doria routed the Venetian forces in the Adriatic and at Porto Longone in the Morea (Greece). Driven out of the Black Sea, the Venetians took Beirut by way of compensation, and Genoa seized Cyprus (1373). When the Greek Emperor, John V, gave the Venetians the island of Tenedos, the Genoese, fearing lest the former should thereby have access to the Black Sea, espoused the cause of Andronicus; in this way broke out the conflict known as the War of Chioggia. The Genoese, defeated at Anzio (1378), were victorious at Pola (1379) and blockaded Venice, but were obliged to surrender when the blockade was broken by Vettor Pisani. The great rivals were now exhausted.

During the fifteenth century, Genoa constantly called on outsiders to rule her, but as constantly rebelled against their rule (1396-1409, France; 1409-1413, Teodoro II Paleologo di Monferrato; 1422-1435, Filippo Maria Visconti; 1458-1461, France; 1464-1478, 1487-1499, the Sforza of Milan; 1499-1512, 1515-1522, France). Meanwhile her colonies in the East were slipping away (Pera, 1453; Caffa, 1475). In 1431, at Portofino, the fleet in the service of Visconti was defeated by the Venetian and Florentine allies. Genoa was involved in the conflict between Francis I and Charles V, and in 1522 was sacked by the Spaniards. In 1527, the Spanish were expelled by the celebrated Andrea Doria with French aid, and in the year following Andrea succeeded in ridding himself of his French allies. The "Signoria" was offered him, but he prudently refused the title, though in reality he exercised its powers. This brought about the Fieschi Plot (1546), which proved abortive owing to the death of its leader. Noteworthy events in the subsequent history of Genoa are the attempts of Corsica to shake off Genoese authority (1553; 1737, King Theodore), its annexation by France in 1768, and the two conspiracies for the annexation of Genoa by Savoy (Vachero, 1628; Della Torre, 1672). In 1684, Louis XIV, without any just cause, had the town bombarded. A hundred years later (1797) the French set up there a democratic republic. In 1800, Masséna sustained a famous siege and blockade on the part of the Austrians and English. In 1805, the duchy was annexed to France, but in 1814 was provisionally, and in 1815 definitely, annexed to the Kingdom of Sardinia.

Genoa owes to the magnificence of its architecture its title of "La Superba" (the Proud). Among its best-known churches are: San Lorenzo, rebuilt in the twelfth century, the lower part of the façade dating from 1100, the remainder from 1523. The spandrils over the door are decorated with bas-reliefs of various periods. The cupola dates from 1567. There are paintings by Barrocci, Ferrari, Cambiaso, and sculptures by Montorsoli, Sansovino, Guglielmo della Porta and others. Near by is the little church of St. John the Baptist, formerly the baptistery of the city. The church of Saints Andrew and Ambrose (600) has paintings by Guido Reni and Rubens. Santissima Annunziata has beautiful Composite columns, and a famous Last Supper by Procaccino. In the church of St. Catherine of Genoa (with the saint's room adjoining) may be seen her body preserved in a silver urn. The church of Saints Cosmas and Damian antedates the year 1000; that of St. Donatus, consecrated in

1189, is built of old Roman materials. St. Philip Neri dates from 1694; the Gesù Maria from 1487. The latter has paintings by Paggi, Cambiaso, and Salimbeni. St. George's has two bronze doors, a part of the booty of Almeria (1148). The altar of St. John's was erected after the victory at Pola. On the façade of St. Mark's (1173) is a marble lion captured from the Venetians at Pola. Other churches are: Santa Maria in Castello (columns of oriental granite); Santa Maria del Carmine (rich tabernacle); San Siro (the cathedral till 985); San Stefano, which existed in 493, and has a painting by Giulio Romano. San Matteo, containing the war-trophies of the Dorias, was founded in 1125 by Martino Doria, and restored by Andrea Doria from plans by Fra Giovanni Angelo Mortorsoli; on the façade is the sarcophagus of Lamba Doria, the victor at Curzola; under the high altar is the tomb of Andrea Doria by Montorsoli, and several inscriptions recall the triumphs of this noble family of seamen and rulers. Santa Maria in Carignano (sixteenth century), one of the handsomest churches in the world, is in the form of a Greek cross; its cupola is the work of Galeazzo Alessi (q. v.) of Perugia. The Campo Santo, or public cemetery, is also greatly admired for its beautiful statuary. Among Genoa's public edifices are the Albergo dei Poveri, or home for the poor (1655), with a church attached; the Loggia dei Banchi, or exchange, built by Galeazzo Alessi. The Palazzo Ducale (1291) is crowned with a row of stucco statues of the various princes and kings defeated by the Genoese; its spacious halls were adorned by famous artists. The Palazzo S. Giorgio (1260), restored in 1368, has many statues of the doges of the fifteenth century. Worthy of notice also are the university, founded in 1471 by Bartolomeo Bianco, the Palazzo Reale, and the Municipio or Town Hall. Genoa has many famous private palaces, e.g. the Adorno, with paintings by Rubens, Guido Reni, Titian, and Giulio Romano; the Doria, with a representation of St. George and the Dragon over the doorway. Besides the university, there is a merchant-marine school, a Catholic high school, an academy of fine arts and other institutions of a similar nature.

The line of bishops is usually dated from St. Solomon or Salonius, said to have been martyred in 269. Other bishops are mentioned in the third and fourth centuries, the first known with any certainty being Diogenes, a member of the Council of Aquileia in 381. Blessed Jacobus a Voragine, author of the *Legenda Aurea* (Golden Legend) and Bishop of Genoa (1292-1298), tells us that till the tenth century he found no mention of a Bishop of Genoa, thus proving that in his time nothing was known of the legendary martyred bishops. The St. Syrus I assigned to the beginning of the fourth century may therefore be a double of St. Syrus II (1139-1163). When the Lombards captured Milan (568), its bishop, Laurentius, and many of his clergy took refuge in Genoa; five other Milanese bishops took up their residence there. It was this same Laurentius who dedicated the church of St. Ambrose built for the Milanese refugees. About 617, Bishop Appellinus became involved in the schism of Agrestius. In 634, Bishop Asterius ordained St. Byrsinus, who was to be one of the apostles of Northumbria.

Councils were held at Genoa in 773 (?), 1216, and 1292. Innocent IV and Adrian V were natives of the city. It was originally a suffragan of Milan, but, in 1133, Innocent II made it a metropolitan see. Its first archbishop was the St. Syrus mentioned above. Its suffragan sees are Albenga, Bobbio, Brugnate and Luni-Saranza, Chiavari, Savona and Noli, Tortona, Ventimiglia. In has 200 parishes

and 470,000 souls (161,000 in the city); there are 33 religious houses for men in the city, and 19 throughout the diocese; also 62 convents for women in the city, and 82 throughout the diocese. The archdiocese supports 2 Catholic daily newspapers, 3 weekly papers, and 13 other periodicals.

U. BENIGNI

Gentile Da Fabriano

Gentile da Fabriano

Italian painter; b. probably about 1378 in the District of the Marches; d. probably 1427. The history of this artist has for a long time been involved in mystery, and even Vasari's statements concerning him have to be accepted with caution. Of his early life we still know nothing, but thanks to the investigations of Milanese, Amico Ricci, and later on of Venturi and Corrado Ricci, we have a few definite facts concerning him. The earliest mention of him is concerned with the decoration of the large council hall in the doges' palace at Venice, which, it seems clear, must have been carried out between 1411 and 1414, probably in the former year, as the theory set up by Wickhoff, placing the work at a much later date, has now been proved to be untenable. In 1408, however, Gentile is known to have painted a large altar-piece in Venice for Francesco Amadi, and this date implies that he must have been resident in the city for some years previously, because it was not possible for an artist, who had not been born in Venice, to be accepted as a member of its school or guild, unless resident in the city for some considerable time before he made his application. Between April, 1414, and September, 1419, we know that he was painting in Brescia, decorating a chapel for Pandolfo Malatesta, and it was on the occasion of the visit which Pope Martin V made to Malatesta, when he was received at Chiari, that the pope invited Gentile to pay him a visit in Rome. We have evidence of the date on which he set out, because on the 18 September, 1419, he applied for a safe-conduct. There were serious difficulties, however, connected with the early days of the pontificate of Martin V, and Gentile only got as far as Florence, and could not proceed to Rome.

Of Gentile's residence in Florence we have evidence from the two applications he made, dated 23 March, and 6 April, 1420, that he might be relieved from the payment of tribute, inasmuch as he was only temporarily sojourning in Florence, and was on his way to his native city; but he could not have remained very long in Fabriano, because on 21 November, 1422, he figures in the deeds of matriculation connected with the doctors and painters of Florence, and in the following year he signs and dates his picture executed to the order of Palla Strozzi for the church of Santa Trinitè in that city. The evidence that he continued in Florence in 1423 is found in some deeds relating to a curious quarrel which took place between one of Gentile's pupils and a certain Bernardo, who threw

some stones into the courtyard of the house where Gentile was, breaking some small pieces of sculpture which happened to be of great value to the artist.

Gentile's work in Siena has usually been assigned to the year 1426, but closer investigation shows that it was carried out in 1425, and a lease of a house in Siena taken for a month by the artist in that year is still in existence, and proves the date of the residence of Gentile in Siena, and the time that he took to paint the picture. It is dated 22 July, and at the end of August of the same year Gentile was in Orvieto, painting in the Duomo, as the archives of the cathedral prove. That work completed, he was at length able to leave for Rome, and in 1427 was at work in the church of San Giovanni in Laterano, and the records of his engagement and stipend have been printed. By 22 November, 1428, he was dead, because on that day, according to the evidence of the commune of Fabriano, his niece Maddalena took possession of the property of her uncle, who was declared to have died in Rome intestate. Further evidence of this date is given by a deed dated October, 1427, in which the master is spoken of as deceased, and these documents prove the inaccuracy of the statements of Vasari both as regards the date of Gentile's decease and the place where Vasari says he died, Città di Castello. Amico Ricci and Milanese were inaccurate in stating that Gentile died after 1450, as they were misled by a phrase "autore requisito" which occurs in a document representing the visit of Roger van der Weyden to Rome, when he visited San Giovanni in Laterano, and saw the paintings of Gentile. He expressed the greatest admiration for the work, and according to Ricci and Milanese called the author of the paintings before him. Inasmuch as the visit took place in 1450, these two authors placed Gentile's decease after that date, but the phrase refers to the author having died, and this is proved by the two documents just cited.

These few facts practically embrace all that we definitely know respecting this artist. He is said to have learned his art under Allegretto Nuzzi. His family name is by some writers given as Maso or Massi, and his burial is said to have taken place in Santa Francesca Romana in the Campo Vaccino, but all these statements are for the present matters of conjecture. He was probably born at Fabriano in the March of Ancona, according to the evidence of his name, but Nuzzi is believed to have died when Gentile was fifteen years old, and therefore he could have derived very little instruction from Nuzzi. Two of his pictures are dated, the "Adoration of the Kings" in the Academy at Florence, 1423; and the group of saints in San Nicolò in the same city, 1425. His best work in Rome and Venice has perished, but he is well represented in the Brera Gallery in Milan, the galleries of Perugia, Paris, and Berlin; and important pictures in the Heugel collection in Paris and the Stroganoff collection in St. Petersburg are now accepted as being from his hand. Of his work in Rome there is a representation of the miracle of St. Nicholas to be seen in the Vatican Gallery, and part of his work in Orvieto still remains. A picture in the royal collection at Buckingham Palace is attributed to him, with considerable evidence in its favour; and his paintings are also to be seen at Settignano, in the municipal gallery at Pisa, and in the Jarves collection at Newhaven in the United States, but his most important work is the large picture in the Academy in Florence, a painting of remarkable excellence and extraordinary beauty. In his birthplace there is one picture representing St. Francis, which is probably a genuine work. His paintings are distinguished by great magnificence

of colour and marked by his peculiar method of high relief in *gesso* work, and by the remarkable use he made of small portions of the most brilliant colour, applied in conjunction with masses of gold. He may be accepted as one of the greatest masters of his period, and as a man exceedingly skilful in composition, and full of grand ideas as regards colouring and effect, for in the combination of rich colour with gold he has seldom if ever been equalled amongst decorative painters.

GEORGE CHARLES WILLIAMSON

Gentiles

Gentiles

(Heb. *Gôyîm*; Gr. *ethne, ethnikai, Hellenes*; Vulg. *Gentes, Gentiles, Graeci*).

A word of Latin origin and usually employed in the plural. In the English versions of both Testaments it collectively designates the nations distinct from the Jewish people. The basis of this distinction is that, as descendants of Abraham, the Jews considered themselves, and were in fact, before the coming of Christ, the chosen people of God. As the non-Jewish nations did not worship the true God and generally indulged in immoral practices, the term *Gôyîm* "Gentiles" has often times in the Sacred Writings, in the Talmud, etc., a disparaging meaning. Since the spread of Christianity, the word *Gentiles* designates, in theological parlance, those who are neither Jews nor Christians. In the United States, the Mormons use it of persons not belonging to their sect. *See* PROSELYTES.

I (New York, 1891); SELBIE in HAST., *Dict. of the Bible*, s. v.; LESÊTRE* in *Vig., Dict de la Bible*, s. v. *Gentils*; HIRSCH in *Jewish Encycl.*, s. v. (New York, 1903); BROWN, BRIGGS, AND DRIVER, *Hebrew and English Lexicon*, s. v. XXX (New York, 1906); DÖLLINGER*, *The Gentile and the Jew* (tr. London 1906).

FRANCIS E. GIGOT

Aloysius Gentili

Aloysius Gentili

Born 14 July, 1801, at Rome; died 26 September, 1848, at Dublin. He was proficient in poetry, displayed considerable musical aptitude, had a taste for mechanical and electrical science and was

devoted to the cultivation of modern languages, applying himself more particularly to the study of English. His early life was that of a brilliant young man of the world, full of ambition of a nobler kind, a pet of society, and an evident favourite of fortune. He sought admission into the Society of Jesus, and would have been accepted, but his health seemed broken, and the Society did not venture to receive him. He became more and more impressed with the conviction that God called him to the priesthood and to labour for the conversion of England. He made, the acquaintance of Father Rosmini who, at his earnest entreaty, accepted him as a postulant of the newly-founded Institute of Charity. He remained in Rome, attending theological lectures whilst residing at the Irish College, in order, at the same time, to improve his English, and after his ordination to the priesthood, in 1830, proceeded to Domo d'Ossola to make his novitiate.

Whilst Gentili was living at the Irish College, a young English gentleman, who had been converted whilst a student at Cambridge, arrived in Rome. This was Mr. Ambrose Phillips de Lisle (q. v.). This zealous convert applied to the rector of the Irish College, to obtain for him a priest to preach the Catholic Faith in the neighbourhood of his ancestral home. The rector suggested the Abate Gentili as in every way suited to the purpose. This led to a great friendship between the young priest and Mr. de Lisle, the submission of the whole project to Rosmini, and eventually to the coming of Gentili and other fathers to England in 1835. It was not merely the invitation of Mr. Phillips de Lisle that brought the Rosminians to England. In the meantime, one of the vicars Apostolic, Bishop Baines, who then ruled over the Western District, having his residence at Bath, had sought to obtain the services of the fathers for his college of Prior Park. Though Rosmini gave his consent as early as 1831, the period of preparation for the English Mission was a long one; for the little band did not sail from Civita Vecchia till 22 May, 1835. They set forth with a more personal blessing and mission from the Holy See than even St. Augustine and his companions received from St. Gregory the Great for Pope Gregory XVI actually came on board the vessel and blessed the three as "Italian missionaries", just before they sailed, probably a unique event in missionary history. Gentili and his companions arrived in London on 15 June, and no time was lost in getting to work. A few days later Gentili preached his first sermon in England, at Trelawney House, in Cornwall, whither they had been invited by Sir Henry Trelawney, Bart., a zealous convert. He took for his text, "Thou art Peter, and upon this rock I will build my church", and his discourse made a remarkable impression upon the many Protestants who came to hear it. Soon after, the missionaries were settled at Prior Park, where early in the following year (1836) Gentili gave a retreat to the whole college; and this was one of the first, if not the first public retreat according to the method of St. Ignatius given in a secular college in England. For this reason it excited among some no little criticism and opposition as a "novelty".

For two years Gentili was made president of Prior Park; but bishop Baines' plan of combining secular and regular professors on his staff was an ill-advised one, and eventually led to the only possible result, viz., the entire withdrawal of the fathers from Prior Park College. This step left them free to devote their energies and their increasing numbers to the real work for which they came--preaching the Faith to the English people. In 1840 was opened the missionary settlement at

Grace-Dieu, the seat of Mr. Philips de Lisle, from which as a centre they evangelized much of the surrounding country, the total population of which region was reckoned at 6000, of which only twenty - seven were catholics. Notwithstanding the unpromising surroundings, the bitter hostility of the neighbouring ministers and Gentili's being publicly burnt in effigy, his ceaseless labours were rewarded on a space of some two years, by the reception sixty-one adult converts, the baptism of sixty-six children under seven years of age and of twenty other children conditionally, and the conversion of an Anglican clergyman, Rev. Francis Wackerbarth. These consoling fruits were secured by incessant toil, daily instructions, visits, and religious services of every kind, sometimes in inns or hired rooms, sometimes in a poor cottage, or even in the open air. In the meantime the numbers of the Fathers had much grown. Among the Italians are now to be mentioned Fathers Pagalli, Rinolfi, and Signini; while some Englishmen and Irishmen had joined their ranks, notably the afterwards celebrated Fathers Furlong and Hutton. In 1842 Gentili visited Oxford, where it is probable, but not certain, that he met Newman. At any rate the visit had important consequences. For Gentili did meet one of Newman's chief and best-beloved followers, William Lockhart, a young Scotch graduate. The result was that during August of the following year, "Mr. Lockhart, feeling it impossible to resist his conviction that the Anglican Church had fallen into fatal Schism in separating from the Holy See, came to visit Father Gentili at Loughborough. After making a few days retreat under him in the chapel house at Loughborough, he was received into the Catholic Church, and a little later, entered as a postulant of the Order". This conversion was the very first fruit of the Oxford Movement, preceding the reception of Newman himself by no less than two years.

The first public mission was given at Loughborough by Fathers Gentili and Furlong, and had an extraordinary success. Sixty-three converts were instructed and received at it. From this time forward, the work of the fathers takes a new and far wider development. Great public missions all over the country alternate with innumerable spiritual retreats to colleges and communities for the next five years. It was a stirring-up of the minds and hearts of the Catholics of England, and a gathering into the net of converts from Protestantism, on a scale which astonishes us as we read of it at this distance of time. Some idea may be given of the labours and zeal of the fathers from what has been recorded of various great public missions. They usually gave four or five discourses daily, at fixed intervals, taking the sermons alternately, treating both dogmatic and moral Gospel doctrines, especially the great truths, the mystery of the Redemption, the Divine precepts, the Life of Christ. And the whole of the time intervening between the discourses was devoted to the arduous work of the confessional. So great usually was the concourse of penitents, that the fathers were kept occupied for eight or ten hours a day. Sometimes they even remained in church all night long, hearing confessions, and had absolutely no time either to say Mass, or recite the Divine Office much less take any sleep, or any nourishment, except in a hasty manner. Such wearisome labours were not interrupted, but only varied, for weeks and even months together. They had to prepare children for their First Communion, instruct converts restore peace in families, see to the restitution of ill-gotten

goods. They also introduced processions, evening Benedictions, and other solemn functions at the close of missions.

The years 1844 to 1848 were fully occupied with an incredible number of popular missions and retreats all over England. At Newcastle 250 adult Protestants were received into the Church; at Manchester missions in three of the principal churches produced to less than 378 converts. It was in 1848 that Gentili gave his great mission in Dublin, where, in spite of the political excitement of that year, the confessionals were so crowded, that the Fathers often sat there without a break from the last instruction at night till the Mass on the following morning. But a sad and altogether unexpected blow brought to a sudden end the labours of this great mission. Father Gentili, the pioneer missionary, was suddenly seized with a fatal fever, and died after only a few days illness. His mortal remains still repose in Glasnevin Cemetery.

L.C. CASARTELLI

Kneeling and Genuflection

Genuflection

To genuflect [Lat. *genu flectere*, *geniculare* (post-classic), to bend the knee; Gr. *gonu klinein* or *kamptein*] expresses:

- an attitude
- a gesture: involving, like prostration, a profession of dependence or helplessness, and therefore very naturally adopted for praying and for worship in general.

"The knee is made flexible by which the offence of the Lord is mitigated, wrath appeased, grace called forth" (St. Ambrose, *Hexaem.*, VI, ix). "By such posture of the body we show forth our humbleness of heart" (Alcuin, *De Parasceve*). "The bending of the knee is an expression of penitence and sorrow for sins committed" (Rabanus Maurus, *De Instit. Cler.*, II, xli).

I. AN ATTITUDE OR POSTURE AT PRAYER

To kneel while praying is now usual among Christians. Under the Old Law the practice was otherwise. In the Jewish Church it was the rule to pray standing, except in time of mourning (Scudamore, *Notit. Eucharist.*, 182). Of Anna, the mother of Samuel we read that she said to Heli: "I am that woman who stood before thee here praying to the Lord" (I Kings, i, 26; see also II Esd., ix, 3-5). Of both the Pharisee and the publican it is stated in the parable that they stood to pray, the attitude being emphasized in the case of the former (Luke, xviii, 11, 13). Christ assumes that standing would be the ordinary posture in prayer of those whom He addressed: "And when you shall stand to pray", etc. (Mark, xi, 25). "And when ye pray, you shall not be as the hypocrites, that love to stand and pray in the synagogues", etc. (Matt., vi, 5). But when the occasion was one of special solemnity, or the petition very urgent, or the prayer made with exceptional fervour, the Jewish suppliant knelt. Besides the many pictorial representations of kneeling prisoners, and the like, left us by ancient art, Gen., xli, 43 and Esth., iii, 2 may be quoted to show how universally in the East kneeling was accepted as the proper attitude of suppliants and dependents. Thus Solomon dedicating

his temple "kneeling down in the presence of all the multitude of Israel, and lifting up his hands towards Heaven", etc. (II Par., vi, 13; cf. III Kings, viii, 54). Esdras too: "I fell upon my knees, and spread out my hands to the Lord my God" (I Esd., ix, 5); and Daniel: "opening the windows in his upper chamber towards Jerusalem, he knelt down three times a day, and adored, and gave thanks before his God, as he had been accustomed to do before" (Dan., vi, 10), illustrate this practice. Of Christ's great prayer for His disciples and for His Church we are only told that "lifting up his eyes to heaven, he said", etc. (John, xvii, 1); but of His Agony in the Garden of Gethsemani: "kneeling down, he prayed" (Luke, xxii, 41). The lepers, beseeching the Saviour to have mercy on them, kneel (Mark, i, 40; cf. x, 17).

Coming to the first Christians, of St. Stephen we read: "And falling on his knees, he cried with a loud voice, saying", etc. (Acts, vii, 59); of the Prince of the Apostles: "Peter kneeling down prayed" (Acts, ix, 40); of St. Paul: "kneeling down, he prayed with them all" (Acts, xx, 36; cf. xxi, 5). It would seem that the kneeling posture for prayer speedily became habitual among the faithful. Of St. James, the brother of the Lord, tradition relates that from his continual kneeling his knees had become callous as those of a camel (Euseb., Hist. Eccl., II, xxiii; Brev. Rom., 1 May). For St. Paul the expressions "to pray" and "to bow the knee" to God are complementary (cf. Phil., ii, 10; Eph., iii, 14, etc.). Tertullian (Ad Scap., iv) treats kneeling and praying as practically synonymous. And when forgiveness of offences has to be besought, Origen (De Orat., 31) goes so far as to maintain that a kneeling posture is necessary.

It is remarkable that the "orantes" (praying figures) of early Christian art are in the catacomb frescoes invariably depicted as standing with arms extended. Some remarks of Leclercq (Manuel d'Archéologie chrétienne, I, 153 sqq.) suggest that a probable explanation may be found in the view that these "orantes" are merely conventional representations of prayer and of suppliants in the abstract. They are symbols, not pictures of the actual. Now, conventional representations are inspired as a rule in respect of detail, not so much by manners and customs prevalent at the date of their execution, as by an ideal conserved by tradition and at the place and time accepted as fitting. Ancient art has left us examples of pagan as well as of Christian "orantes". The attitude (standing with arms extended or upraised) is substantially the same in all. This, then, is the attitude symbolical, among the ancients, of prayer.

In reality, however, suppliants have, as a matter of course, very generally knelt. Hence such classical phrases as: "Genu ponere alicui" (Curtius); "Inflexo genu adorare" (Seneca); "Nixi genibus" (Livy); "Genibus minor" (Horace). On the other hand, examples are not wanting of Christians who pray standing. The "Stans in medio carceris, expansis manibus orabat", which the Church has adopted as her memory of the holy martyr, St. Agatha, is an illustration. And as late as the end of the sixth century, St. Gregory the Great describes St. Benedict as uttering his dying prayer "stans, erectis in coelum manibus" (Dial., II, c. xxxvii). Nor is it unlikely that since standing has always been a posture recognized, and even enjoined, in public and liturgical prayer, it may have survived well into the Middle Ages as one suitable, at least in some circumstances, for even private devotion. Yet, from the fourth century onwards, to kneel has certainly been the rule for private prayer. Eusebius

(*Vita Constant.*, IV, xxii) declares kneeling to have been the customary posture of the Emperor Constantine when at his devotions in his oratory. At the end of the century, St. Augustine tells us: "They who pray do with the members of their body that which befits suppliants; they fix their knees, stretch forth their hands, or even prostrate themselves on the ground" (*De curâ pro mortuis*, v). Even for the ante-Nicene period, the conclusion arrived at by Warren is probably substantially correct: —"The recognized attitude for prayer, liturgically speaking, was standing, but kneeling was early introduced for penitential and perhaps ordinary ferial seasons, and was frequently, though not necessarily, adopted in private prayer" (*Liturgy of the ante-Nicene Church*, 145)

It is noteworthy that, early in the sixth century, St. Benedict (*Reg.*, c. 1) enjoins upon his monks that when absent from choir, and therefore compelled to recite the Divine Office as a private prayer, they should not stand as when in choir, but kneel throughout. That, in our time, the Church accepts kneeling as the more fitting attitude for private prayer is evinced by such rules as the Missal rubric directing that, save for a momentary rising while the Gospel is being read, all present kneel from the beginning to the end of a low Mass; and by the recent decrees requiring that the celebrant recite kneeling the prayers (though they include collects which, liturgically, postulate a standing posture) prescribed by Leo XIII to be said after Mass it is well, however, to bear in mind that there is no real obligation to kneel during private prayer. Thus, unless conditioned on that particular posture being taken, the indulgence attached to a prayer is gained, whether, while reciting it, one kneel or not (*S. Cong. of the Index*, 18 Sept., 1862, n. 398). The "*Sacrosanctæ*", recited by the clergy after saying the Divine Office, is one of the exceptions. It must be said kneeling, except when illness makes the doing so physically impossible. Turning now to the liturgical prayer of the Christian Church, it is very evident that standing, not kneeling, is the correct posture for those taking part in it. A glance at the attitude of a priest officiating at Mass or Vespers, or using the Roman Ritual, will be sufficient proof. The clergy in attendance also, and even the laity assisting, are, by the rubrics, assumed to be standing. The Canon of the Mass designates them as "*circumstantes*". The practice of kneeling during the Consecration was introduced during the Middle Ages, and is in relation with the Elevation which originated in the same period. The rubric directing that while the celebrant and his ministers recite the Psalm "*Judica*", and make the Confession, those present who are not prelates should kneel, is a mere reminiscence of the fact that these introductory devotions were originally private prayers of preparation, and therefore outside the liturgy properly so called. It must not, in this connexion escape attention that, in proportion as the faithful have ceased to follow the liturgy, replacing its formulæ by private devotions, the standing attitude has fallen more and more into disuse among them. In our own time it is quite usual for the congregation at a high Mass to stand for the Gospel and Creed; and, at all other times either to remain seated (when this is permitted) or to kneel. There are, nevertheless, certain liturgical prayers to kneel during which is obligatory, the reason being that kneeling is the posture especially appropriate to the supplications of penitents, and is a characteristic attitude of humble entreaty in general. Hence, litanies are chanted, kneeling, unless (which in ancient times was deemed even more fitting) they can be gone through by a procession of mourners. So, too, public penitents knelt during such portions of the liturgy as

they were allowed to assist at. The modern practice of Solemn Exposition of the Blessed Sacrament for public adoration has naturally led to more frequent and more continuous kneeling in church than formerly. Thus, at a Benediction service it is obligatory to kneel from beginning to end of the function, except during the chant of the *Te Deum* and like hymns of Praise.

It has been remarked that penitents knelt during public prayer, the rest of the faithful standing. A corollary easily drawn from this was that in Lent and other penitential seasons, when all Christians without distinction professed themselves to be "penitents", the whole congregation should kneel during the celebration of the Divine Mysteries and during other liturgical prayers. This has given occasion to the Missal rubric, requiring the clergy and by implication the laity, to kneel in Lent, on vigils, ember-days, etc., while the celebrant recites the collects and post-communions of the Mass, and during the whole of the Canon, that is, from the *Sanctus* to the *Agnus Dei*. In early times an attempt was made to insist yet more emphatically on the character of penitents as that most befitting ordinary Christians. A practice crept in of posing in church as penitents, that is, of kneeling, on all days alike. It was a principle akin to that which deemed it a great virtue to fast even on Sundays and feast days. In both cases the exaggeration was condemned and severely repressed. In the twentieth canon of the Council of Nicæa (A.D. 325) the fathers lay down (the canon, though passed over by Rufinus, is undoubtedly genuine): —

Because there are some who kneel on the Lord's Day and in the days of Pentecost [the fifty days between Easter and Whit-Sunday]: that all things may be uniformly performed in every parish or diocese, it seems good to the Holy Synod that the prayers [*tas euchas*] be by all made to God, standing.

The canon thus forbids kneeling on Sundays; but (and this is carefully to be noted) does not enjoin kneeling on other days. The distinction indicated of days and seasons is very probably of Apostolic origin. Tertullian, long before Nicæa, had declared kneeling on the Lord's Day to be *nefas* (De Cor. Mil., c. iii). See also pseudo-Justin (Quæst. et Resp. ad Orthodox., Q. 115); Clement of Alexandria (Strom., VII); Peter of Alexandria (can. xv); with others. For post-Nicene times, see St. Hilary (Prolog. in Psalm.); St. Jerome (Dial. contra Lucif., c. iv); St. Epiphanius (Expos. Fidei, 22 and 24); St. Basil (De Spir. Sanct., c. xxvii); St. Maximus (Hom. iii, De Pentec.); etc. Note, however, with Hefele (Councils, II, ii, sect. 42) that St. Paul is expressly stated to have prayed kneeling, during paschal time (Acts, xx, 36; xxi, 5). Moreover St. Augustine, more than fifty years after the Council of Nicæa, writes: "Ut autem stantes in illis diebus et omnibus dominicis oremus utrum ubique servetur nescio" (i.e. but I do not know whether there is still observed everywhere the custom of standing, whilst praying, on those days and on all Sundays). Ep. cxix ad Januar. By canon law (II Decretal., bk., IX, ch. ii) the prohibition to kneel is extended to all principal festivals, but it is limited to public prayer, "nisi aliquis ex devotione illud facere velit in secreto", i.e. (unless anyone, from devotion, should wish to do that in private). In any case, to have the right to stand during public prayer was looked upon as a sort of privilege — an "immunitas" (Tertullian, loc. cit.).

On the other hand, to be degraded into the class of the "genuflectentes", or "prostrati", who (Fourth Council of Carthage, can. lxxxii) were obliged to kneel during public services even on Sundays and in paschal time, was deemed a severe punishment. St. Basil calls kneeling the lesser penance (*metanoia mikra*) as opposed to prostration, the greater penance (*metanoia megale*). Standing, on the contrary, was the attitude of praise and thanksgiving. St. Augustine (loc. cit.) considers it to signify joy, and therefore to be the fitting posture for the weekly commemoration by Christians of the Lord's Resurrection, on the first day of the week (See also Cassian, Cobb., XXI). Hence, on all days alike, the faithful stood during the chant of psalms, hymns, and canticles, and more particularly during the solemn Eucharistic or Thanksgiving prayer (our Preface) preliminary to the Consecration in the Divine Mysteries. The diaconal invitation (*Stomen kalos, k.t.l.; orthoi; Arab. Urthi; Armen. Orthi*) is frequent at this point of the liturgy. Nor have we any grounds for believing, against the tradition of the Roman Church, that during the Canon of the Mass the faithful knelt on weekdays, and stood only on Sundays and in paschal time. It is far more likely that the kneeling was limited to Lent and other seasons of penance. What precisely were the prayers which the Fathers of Nicæa had in view when insisting on the distinction of days is not at once evident. In our time the decree is observed to the letter in regard to the Salve Regina or other antiphon to Our Lady with which the Divine Office is concluded, and also in the recitation of the Angelus. But both these devotions are of comparatively recent origin. The term prayer (*euche*) used at Nicæa, has in this connection always been taken in its strict signification as meaning supplication (Probst, Drei ersten Jahrhundert., I, art. 2, ch. xlix). The diaconal litany, general in the East, in which all conditions of men are prayed for, preparatory to the offering of the Holy Sacrifice, comes under this head. And in fact in the Clementine Liturgy (Brightman, 9; Funk, Didascalia, 489) there is a rubric enjoining that the deacon, before beginning the litany, invite all to kneel down, and terminate by bidding all to rise up again. It remains however unexplained why the exception for Sundays and paschal time is not expressly recalled. In the Western or Roman Rite, traces of a distinction of days still exist. For instance at the end of the Complin of Holy Saturday there is the rubric: "Et non flectuntur genua toto tempore Paschali", which is the Nicene rule to the letter. The decree has likewise (though lightly varied in wording) been incorporated into the canon law of the Church (Dist. iii, De consecrat., c. x). It may be added that, both in the East and in the West, certain extensions of the exemption from the penitential practice of kneeling appear to have been gradually insisted upon. "The 29th Arabic Canon of Nicæa extends the rule of not kneeling, but only bending forward, to all great festivals of Our Lord" (Bright, Canons of Nicæa, 86). Consult Mansi, xiv, 89, for a similar modification made by the Third Council of Tours, A.D. 813. See also the c. Quoniam (II Decretal., bk. 9, c. 2) cited above.

To fix with some precision the import of the Nicene canon, as it was understood and reduced to practice by the ancients, the supplications, to which the name "bidding prayers" has sometimes been given, merit careful notice. They are the Western analogues of the Eastern diaconal litanies, and recur with great frequency in the old Gallican and Mozarabic uses. In their full form they seem peculiar to the Roman Rite. The officiating bishop or priest invites the faithful present, who are

supposed to be standing, to pray for some intention which he specifies. Thereupon, the deacon in attendance subjoins: "Flectamus genua" (Let us kneel down). He is obeyed. Anciently a pause more or less long, spent by each one in private and silent prayer, ensued. This ended at a sign given by the celebrant, or for him by some inferior minister, who, turning to the people with the word "levate", bade them stand up again. They having done so, the celebrant summed up, as it were, or collected their silent petitions in a short prayer, hence called a collect. "Cum is qui orationem collecturus est e terra surrexerit, omnes pariter surgunt" (Cassian, Instit., II, vii). The stress put in the early Church upon the due performance of this ceremonial explains why, before receiving baptism, a catechumen was required to rehearse it publicly. He is standing before the bishop who addresses him: "Ora, electe, flecte genua, et dic Pater noster". This is the "Oremus, flectamus genua" of the liturgy. The direction to say the Lord's Prayer in preference to any other, or at least previously to any other, is very natural. A glance at the Roman liturgical books will show what other *preces* were usually added — Kyrie eleison (repeated several times) and certain Psalm verses concluding, as a rule, with "Domine exaudi orationem meam. Et clamor meus ad te veniat" (Ps., ci, 1). Then the catechumen is told: "Leva, comple orationem tuam, et dic Amen". The words of the prayer in which the officiating priest will collect his supplications and those of the rest of the faithful are omitted, as it is only the catechumen's part in the common prayer which is being dealt with. The catechumen rises and says "Amen". This is gone through three times and the catechumen having shown that he has learned how to comport himself during the "oratio fidelium" of the liturgy in which he will henceforth take part, the baptismal ceremony is proceeded with (See Roman Ritual, De Baptismo Adulorum; and Van der Stappen, IV, Q. cxvii).

Of silent kneeling prayer the characteristic example is the group of prayers for all conditions of men in our Good Friday liturgy. They have retained the name "Orationes solemnes" (usual prayers) because, in primitive ages, gone through in every public Mass. They are the Latin "Oratio Fidelium", and their place in the daily liturgy is still marked by the "Oremus" invitation at the Offertory (Duchesne, Origines du culte chrétien, ch. vi, art. 5). The same form of prayer obtains at ordinations and in some few other rites. But it has long since been shorn of its most striking feature. The faithful are indeed bidden to kneel down; but straightway follows the order to stand up again, the impressive pause being suppressed. Again, nowadays, the object of the prayer is mostly no longer announced. The single word "Oremus" uttered by the celebrant is followed immediately by "Flectamus genua", with its momentary genuflexion, "Levate", and the collect (see, in the Roman Missal, the ember-day Masses, etc.). The learned Bishop Van der Stappen (Sacra Liturg., II, Q. lxxv) is of opinion that anciently on all days alike, there was a pause for silent prayer after every "Oremus" introducing a collect; and that on Sundays and other non-penitential days this same silent prayer was made by all standing and with hands raised to Heaven. The invitation *Flectamus genua* merely reminded the faithful that the day was one of those on which, by the custom of the Church, they had to pray kneeling. The rubrics for the Pentecost ember-days which occur in paschal time, and that prefixed to the last collect in the blessing of candles on the feast of the Purification, strengthen this view. Another instance of kneeling prayer (probably replaced by one said standing,

on Sundays and in paschal time) is that of the benedictions or short collects which, in early ages, it was usual to add after the recitation of each psalm, in public, and often in private, worship. The short prayers called "absolutions" in the Office of Matins are a survival of this discipline. (For a complete set of these prayers see Mozarabic Breviary in P.L., LXXXV. These collects were said kneeling, or at least were preceded by a brief prayer gone through in that attitude. They are probably the "genuflectiones", the multiplicity of which in the daily life of some of the earlier saints astonishes us (see for instance the Life of St. Patrick in the Roman Breviary, 17 March). The kneeling posture is that at present enjoined for the receiving of the sacraments, or at least confirmation, Holy Eucharist, penance and Holy orders. Certain exceptions, however, seem to show that this was not always the case. Thus, the supreme pontiff, when solemnly celebrating, receives Holy Communion in both kinds, seated; and, remaining seated, administers it to his deacons who are standing. In like manner, should a cardinal who is only a priest or deacon be elected pope; he is ordained priest (if he has not yet taken the step) and consecrated bishop, while sitting on his faldstool before the altar. It seems reasonable to suppose that at the Last Supper the Apostles were seated round the table when Christ gave them His sacred Body and Blood. That, in the early Church, the faithful stood when receiving into their hands the consecrated particle can hardly be questioned. Cardinal Bona indeed (*Rer. Liturg.*, H, xvii, 8) hesitates somewhat as to Roman usage; but declares that in regard to the East there can be no doubt whatever. He inclines moreover to the view that at the outset the same practice obtained in the West (cf. Bingham, XVI, v). St. Dionysius of Alexandria, writing to one of the popes of his time, speaks emphatically of "one who has stood by the table and has extended his hand to receive the Holy Food" (*Euseb.*, *Hist. Eccl.*, VII, ix). The custom of placing the Sacred Particle in the mouth, rather than in the hand of the communicant, dates in Rome from the sixth, and in Gaul from the ninth century (*Van der Stappen*, IV, 227; cf. *St. Greg.*, *Dial.*, I, III, c. iii). The change of attitude in the communicant may perhaps have come about nearly simultaneously with this. Greater reverence was being insisted upon; and if it be true that in some places each communicant mounted the altar-steps, and took for himself a portion of the consecrated Eucharist (*Clem. Alex.*, *Strom.*, I, i) some reform was sorely needed.

II. A GESTURE OF REVERENCE

This is peculiar to the Roman Rite, and consists in the momentary bending of one or both knees so as to touch the earth. Genuflecting, understood in this sense, has now almost everywhere in the Western Church been substituted for the profound bowing down of head and body that formerly obtained, and that is still maintained in the East as the supreme act of liturgical reverence. It is laid down by modern authorities that a genuflexion includes every sort of inclination, so that any bowing while kneeling is, as a rule, superfluous (*Martinucci*, *Man. Sacr. Cærem.*, I, i, nn. 5 and 6). There are certain exceptions, however, to this rule, in the liturgical *cultus* of the Blessed Sacrament. The practice of genuflecting has no claim to antiquity of origin. It appears to have been introduced and gradually to have spread in the West during the later Middle Ages, and scarcely to have been generally looked upon as obligatory before the end of the fifteenth century. The older Roman

Missals make no mention of it. Father Thurston gives A.D. 1502 as the date of the formal and semi-official recognition of these genuflexions. Even after it became usual to raise the consecrated Host and Chalice for the adoration of the Faithful after the Consecration, it was long before the priest's preceding and following genuflexions were insisted upon (see Thurston in "The Month", Oct., 1897). The genuflexions now indicated at such words as "Et incarnatus est", "Et Verbum caro factum est", and the like, are likewise of comparatively recent introduction, though in some cases they replace a prostration that was usual, in ancient times, when the same sacred words were solemnly uttered (see, for instance, in regard to the "Et incarnatus", the curious passage in the work of Radulphus Tongrensis (De can. observ.). The Carthusian custom of bending the knee, yet so as not to touch the ground, is curious; and has interest from the historical point of view as testifying to the reluctance formerly felt by many to the modern practice of genuflecting. See also the Decree of the S. Cong. of Rites (n. 3402) of 7 July, 1876, insisting that women as well as men must genuflect before the Blessed Sacrament. The simple bending of the knee, unlike prostration, cannot be traced to sources outside Christian worship. Thus, the pagan and classical gesture of adoration consisted in the standing before the being or thing to be worshipped, in putting the right hand to the mouth (*ad ora*), and in turning the body to the right. The act of falling down, or prostration, was introduced in Rome when the Cæsars brought from the East the Oriental custom of worshipping the emperors in this manner as gods. "Caium Cæsarem adorari ut deum constituit cum reversus ex Syria non aliter adire ausus esset quam capite velato circumvertensque se, deinde procumbens" (Suet., Vit., ii). The liturgical rules for genuflecting are now very definite.

1. All genuflect (bending both knees) when adoring the Blessed Sacrament unveiled, as at Expositions.
2. All genuflect (bending the right knee only) when doing reverence to the Blessed Sacrament, enclosed in the Tabernacle, or lying upon the corporal during the Mass. Mass-servers are not to genuflect, save when the Blessed Sacrament is at the altar where Mass is being said (cf. Wapelhorst, *infra*). The same honour is paid to a relic of the True Cross when exposed for public veneration.
3. The clergy in liturgical functions genuflect on one knee to the cross over the high altar, and likewise in passing before the bishop of the diocese when he presides at a ceremony. From these genuflexions, however, an officiating priest, as also all prelates, canons, etc., are dispensed, bowing of the head and shoulders being substituted for the genuflexion.
4. On Good Friday, after the ceremony of the Adoration of the Cross, and until Holy Saturday, all, clergy and laity alike, genuflect in passing before the unveiled cross upon the high altar.

F. THOMAS BERGH

Geoffrey of Clairvaux

Geoffrey of Clairvaux

A disciple of Bernard, was b. between the years 1115 and 1120, at Auxerre; d. some time after the year 1188, probably at the abbey of Haute Combe, Savoy. At an early age he entered the ranks of the clergy, and followed for some time the course of lectures given by Abelard. In 1140 St. Bernard of Clairvaux came to Paris, and before the assembled scholars preached a sermon "De conversione ad clericos" (P.L., CLXXXII, 832 sqq.), in which he dwelt on the vanities of a life in the world, on the necessity of a sincere conversion, and on the peace to be found in the monastic profession. Geoffrey was so struck by this forcible discourse that, with several others, he followed St. Bernard and joined the monastic community of Clairvaux. Soon he won the special confidence of the saintly abbot, became his *notarius*, or secretary, and his permanent companion. In 1145 he accompanied him to Toulouse and other cities of Southern France, where the saint preached against the Manichaeian or Albigensian heresy of a certain Henry and his partisans. During the years 1146-47 he travelled with St. Bernard through France and Germany, where the saint aroused people for a crusade to the Holy Land. At the council held at Reims in 1148 he took an active part in the discussion concerning the errors of Gilbert de la Porrée. In 1159 he was made abbot of the monastery of Igny in the Diocese of Reims, and in 1162 he became the fourth Abbot of Clairvaux. Owing to difficulties with the monks, he was forced to resign in 1165; but in 1170 he was appointed to the Abbey of Fossa Nuova in the diocese of Terracina, Italy, and in 1176 to that of Haute Combe, Savoy. In the political events of the time he had only a small share; thus, in 1167 and 1168, he took part in the negotiations tending towards the reconciliation of Alexander III (1159-81) with the Emperor Frederic Barbarossa (1152-90) and King Henry II of England (1154--89)

Most of the literary activity of Geoffrey has reference to the life and work of St. Bernard. Thus, while still *notarius* of the saint, he collected the letters of his abbot, variously estimated at 243 or 310 (P.L. CLXXII, 67 sqq.) He was the chief author of a life of St. Bernard in five books, furnishing materials for the first two books, revising them, and adding three of his own (P.L., CLXXXV, 225 sqq.) He also wrote fragments of a life of St. Bernard, probably used in the first books of the complete life (P.L., CLXXXV, 523 sqq.); an account of the saint's journey to Toulouse, in a letter to his teacher Archenfredus (P.L., CLXXXV, 410 sqq.); an account of the saint's journey through Germany, the third part of the sixth book of St. Bernard's life in P.L., CLXXXV, 395 sqq. (this description and the parts in the life of St. Bernard relating to Germany were edited also by waitz, in Mon. Germ. Hist.: Script., XXVI, 109-20, 133-37); a panegyric delivered in 1163 on the anniversary of Bernard's death (in P.L., CLXXXV, 573 sqq.); "Declamationes de colloquio Simonis cum Jesu" (in P.L., CLXXXIV, 437 sqq.), an ascetical work compiled from the sermons of St. Bernard; "Libellus contra capitula Gilberti Pictaviensis Episcopi (in P.L., CLXXXV, 595 sqq.), a refutation of the errors of Gilbert de la Porrée; a letter to Albinus, Cardinal Bishop of Albano, on

the same subject (P.L., CLXXXV, 587 sqq.); a life of St. Peter, Archbishop of Tarentaise (1175), published in *Acta Sanctorum Boll.*, May, II, 330 sqq.; a letter to the above-named Cardinal of Albano, as to whether the water added to the wine in the chalice is changed into blood of Our Lord (Baronius, *Ann. Eccl. ad. an. 1188*, n. 27); sermons and commentaries on books of Scripture, partly in print and partly manuscript.

FRANCIS J. SCHAEFER
Geoffrey of Dunstable

Geoffrey of Dunstable

Also known as GEOFFREY OF GORHAM.

Abbot of St. Alban's, d. at St. Alban's, 26 Feb., 1146. He was a scholar from the province of Maine, then annexed to the Dukedom of Normandy, who was invited by Richard, Abbot of St. Alban's, to become master of the Abbey school. On his arrival, he found that owing to his long delay another had been appointed, whereupon he opened a school at Dunstable. Having borrowed some copes from St. Alban's Abbey for a miracle play to be acted by his scholars, he had the misfortune to lose his house and all its contents by fire on the evening after the performance. To make up to God and the saint for the loss of the copes, he determined to become a monk of St. Alban's Abbey. Here he rose to be prior, and finally was elected abbot on the death of Richard, in 1119. He ruled firmly for twenty-six years, and the abbey prospered under his wise administration. He added to the building an infirmary with chapel attached, and spent large sums on a new shrine to which he translated the body of St. Alban, 2 Aug. 1129. Geoffrey endowed the nunnery at Sopwell, and founded another at Markyate, in Bedfordshire, for his friend and counsellor, Christina the recluse. He also opened a leper hospital near St. Alban's. Finally, he succeeded in saving the abbey, when it was threatened with destruction during the Civil War in the reign of Stephen.

EDWIN BURTON
Geoffrey of Monmouth

Geoffrey of Monmouth

(GAUFRIDUS ARTURUS, GALFRIDUS MONEMETENSIS, GALFFRAI or GRUFFYD AB ARTHUR).

Bishop of St. Asaph and chronicler; b. at Monmouth about 1100, d. at Llandaff, 1154. He was the son of Arthur, a priest, and was educated by his uncle Uchtryd, afterwards Bishop of Llandaff. It has been surmised that he became a Benedictine monk, but this is uncertain. At Oxford he met Walter the Archdeacon, who suggested to him the idea of his great work, "*Historia Regum Britanniae*". About 1140 he accompanied Uchtryd to Llandaff, where he became archdeacon of St. Teilo's, and opened schools in which many clerics and chieftains were educated. This "*Historia*" had appeared before 1139, but Geoffrey continued to work at it, and in 1147 he completed it in its

final form. In 1151-2 he was elected bishop of St. Asaph and was consecrated at Lambeth by Theobald Archbishop of Canterbury, on 24 Feb., having been ordained priest a week before, but he died without having entered his diocese. Geoffrey's "History" has been one of the great influences in English literature, making itself especially felt in the national romance from Layamon to Tennyson. Shakespeare, Milton, Dryden, Pope, and Wordsworth have all used his legends, while many of the earlier chroniclers followed him as an historian. But the twelve books of his "History", recounting how Brut, great-grandson of Aeneas, founded the kingdom, and narrating the adventures of subsequent kings, are in truth not history at all but the beginning of English story-telling. Among his legends is that of King Arthur, which became the most famous of the great cycles of romance so popular in the Middle Ages. Geoffrey's legend having received a new form from Sir Thomas Malory in the fifteenth century has again been given fresh life by Tennyson in the "Idylls of the Kings". Geoffrey claimed that his work was founded on a "most ancient book" -- probably a collection of British legends no longer extant. Geoffrey also wrote a Latin version of the Cymric "Prophecies of Merlin" and a life of Merlin is attributed to him. His stories exercised a wide influence in Germany, France, and Italy, while England they furthered the unification of the English people by spreading belief in a common origin of Briton, Saxon, and Norman. The "Historia Britonum" was first printed at Paris, 1508; the latest editions being those of Giles (London, 1844) and Schulz (Halle, 1854).

EDWIN BURTON

Geoffrey of Vendome

Geoffrey of Vendôme

(GOFFRIDUS ABBAS VINDOCINENSIS.)

A cardinal, b. in the second half of the eleventh century of a noble family, at Angers, France; d. there, 26 March, 1132. At an early age he entered the Benedictine community of the Blessed Trinity at Vendôme in the diocese of Chartres; and in 1093, while still very young and only a deacon, was chosen abbot of the community. During all his lifetime he showed a great attachment to the Holy See. Thus, in 1094, he went to Rome in order to help Pope Urban II (1088-99) to take possession of the Lateran still held by the faction of the antipope Clement III (1080-1100); the money which he offered to the custodian brought about the surrender. In compensation he was created a cardinal-priest by Urban II, with the titular church of St. Prica on the Aventine. No less than twelve times did he make the journey to Italy in the interest of the Church of Rome during the pontificates of Urban II, Paschal II (1099-1118), and Callistus II (1119-24); and on three different occasions he was made a captive. In 1096 and 1107 he extended the hospitality of his monastery to Popes Urban and Paschal. He took part in the councils held at Clermont in 1095, by Pope Urban; at Saintes, in 1096, by the Apostolic Legate Amatus of Bordeaux; and at Reims, in 1131, by Innocent II (1130-43). He also strenuously defended the ecclesiastical principles in the question of investitures, which he qualified in several small tracts as heresy and simony; he wrote in the same spirit to Pope

Paschal II when the latter made concessions (1111) to Emperor Henry V (1106-25). Finally, he always defended firmly the prerogatives, the rights, and the property of his abbey at Vendôme against the encroachments of either bishops or secular princes. Geoffrey was one of the distinguished men of his age, and was in correspondence with many eminent personalities of that time. His writings consist of a number of letters; of a series of tracts on the investitures of ecclesiastics by laymen, on the Sacraments of the Holy Eucharist, Baptism, Confirmation, and Extreme Unction, on ascetic and pastoral subjects; hymns to the Blessed Virgin and St. Mary Magdalene; sermons on the feasts of Our Lord, the Blessed Virgin, Mary Magdalene, and St. Benedict.

The best edition of his works is that of Sirmond (Paris, 1610), reprinted in P.L., CLVII. The tracts on the investitures are found also in "Mon. Germ. Hist.: Libelli de Lite", II, 680 sqq.

FRANCIS J. SCHAEFER

Biblical Geography

Biblical Geography

With the exception of the didactic literature, there is no book in the Bible which, to a greater or less extent, does not contain mention of, or allusions to, the geography and topography of the Holy Land. In early times, when the perusal of the Sacred Books was confined within the limits of the country in which they had come to light, there was little need of any special attention to geographical details. Palestine has a small area, and every one of its inhabitants was acquainted with almost every by-corner and nook in it. Not so, however, the outside reader -- the Jew of the Diaspora, for instance. But little did he care, in many cases, for such trifles as topographical niceties; God's message was all he was looking for in Holy Writ; as to those who longed for a fuller knowledge of the land of their forefathers, an occasional pilgrimage thither, at a time when local traditions were still alive, afforded ample opportunities. After A.D. 70, Jewish pilgrims ceased to flock to Palestine; on the other hand, zealous Christians, whilst at times casting a glance towards the land whence the light of the Gospel had come, would rather "stretch forth themselves to the things that are before", and direct their conquering steps to new shores. It thus happened that when the Church obtained her long-delayed freedom from the throes of persecution, and her scholars turned their minds to a searching study of the Bible, they realized that much of the book would remain sealed to them unless they were acquainted with the Holy Land. To this deeply-felt need Biblical geography, as a help to the study of the Scriptures, owes its birth (cf. St. Aug., *De Doctr. Chr.*, II, xvi, 24; Cassiod., *De institut. div. litt.*, xxv; St. Jer., *Ad Domn. et Rogat. in I Paralip.*, Præf.). Its necessity has never since been questioned, and its growth has kept abreast of the strivings after a better knowledge of the literal and historical sense of the Scriptures. The study of Biblical geography is pursued more than ever in our time, and it may not be amiss to mention here the principal sources and means at its disposal.

First of all, of course, stands the Bible, some parts of which, however, must be singled out, owing to their importance from the present point of view. The ethnographical list in Gen., x, is a

valuable contribution to the knowledge of the old general geography of the East, and its importance can scarcely be overestimated. The catalogues of stations of the Hebrew people in their journeyings from Egypt to the bank of the Jordan supply us with ample information concerning the topography of the Sinaitic Peninsula, the southern and eastern borders of the Dead Sea. In the Book of Josue is to be found a well-nigh complete survey of Palestine (especially of Southern Palestine) and the territory allotted to Juda in particular. Later books add little to the wealth of topographical details given there, but rather give a casual glimpse of an ever-growing acquaintance with places abroad -- in Egypt, Assyria, and Babylonia. The centuries following the Exile were for the adventurous Israelites a period of expansion. Colonies of thrifty merchants multiplied wonderfully East and West, above all throughout the Greek and Roman world, and Palestinian folks had to train their ears to many new, "barbarous" names of places where their kinsmen had settled. The Church at Jerusalem, therefore, was well prepared to listen with interest to the accounts of Barnabas's and Paul's missions abroad (Acts, xv, 12; xxi, 19).

While the authors of the English Authorized Version (A.V.) have made efforts to preserve proper names in their old Hebrew mould, our Douay Version (D.V.) adheres, as a rule, to the Latin transliteration. This imperfection is, however, by no means to be compared with that which arises from the astounding transcriptions of the Codex Vaticanus from which the Greek *textus receptus* was printed. To cite at random a few instances, Bahurim has become *Barakim*; Debbaseth, Heb. *Dabbaseth*, *Baitharaba*; Eglon, *Hodollam* or *Ailam*; Gethremmon, *Iebatha*, etc., not to speak of the frequent confusion of the sounds *d* and *r* or of the proper names wrongly translated, as *En Shemesh* by *he pege tou heliou*, etc. Thanks to a systematic correction of the whole text, such divergences are not to be found in the Codex Alexandrinus. Biblical information is in a good many instances paralleled, and not un-frequently supplemented, by the indications gathered from the documents unearthed in Egypt and Assyria. No fewer than 119 towns of Palestine are mentioned in the lists of Thothmes III (about 1600 B.C.); the names of some 70 Canaanite cities occur in the famous Tell-el Amarna letters (about 1450 B.C.); on the walls of Karnak the boastful records of the conquests of Sheshonk I (Sesac) exhibit a list of 156 names of places, all in Central and Southern Palestine (935 B.C.); the inscriptions of the Assyrian kings Tukalti Pal-Esarra III (Teglathphalasar, 745-27), Sarru-kinu (Sargon, 722-05), and Sin-akhi-erba (Sennacherib, 705-681) add a few new names. From the comparison of all these lists, it appears that some hundred of the Palestinian cities mentioned in the Bible are also recorded in documents ranging from the sixteenth to the eighth centuries B.C.

"The immovable East" still preserves under the present Arabic garb a goodly proportion (three-fourths, according to Col. C. R. Conder) of the old geographical vocables of the Bible; in most instances the name still cleaves either to the modern city which has supplanted the old one (e.g. *Beit-Lahm* for Bethlehem), or to the ruins of the latter (e.g. *Khirbet' Almîth*), or the site it occupied (e.g. *Tell Jezer* for Jazer; *Tell Ta 'annak* for Taanach); sometimes it has shifted to the neighbouring dale, spring, well, or hill (as *Wâdy Yabîs*). The history of the Palestinian cities and of the changes which some local names have undergone in the intervening centuries is traced, and

the identification helped, by the information supplied by geographers, historians, and travellers. In this regard, parts of the works of classical geographers, such as Strabo and Ptolemy, are consulted with profit; but they cannot compete with Eusebius's "Onomasticon", the worth of which was already recognized by St. Jerome, any more than the Peutinger Table, however useful, can rival the Madaba Mosaic Map (dating probably from Justinian's time) discovered in the autumn of 1897. The "Peregrinatio Silviae" (whatever the true name of the authoress), the descriptions of the Bordeaux pilgrim, the accounts of those whom the piety of the Middle Ages brought to the Holy Land, the histories of the Crusades and of the Latin Kingdom of Jerusalem, and, lastly, the Arab geographers afford valuable material to the student of Biblical geography.

The topography, as well as the history, of Palestine is a favourite study of the present day. Governments commission to the East diplomatic agents who are masters of archæology; schools have been founded at Jerusalem and elsewhere to enable Biblical students, as St. Jerome recommended (in lib. Paralip., Præf.), to acquire a personal acquaintance with the sites and the natural conditions of the country; and all -- diplomats, scholars, masters, and students -- scour the land, survey it, search its innermost recesses, copy inscriptions, make excavations, sift on the spot the evidences furnished by the Bible and all available authorities. The results of their labours are published in periodicals founded for that particular purpose (such as the "Palestine Exploration Fund Quarterly Statement", the "Zeitschrift", and the "Mittheilungen und Nachrichten des deutschen Palästina-Vereins", the "Palästinajahrbuch") or appear as important contributions in reviews of a wider scope (like the "Revue Biblique", the "Mélanges d'Archéologie orientale" or the "American Journal of Archæology"). In the bibliography given at the end of this article the reader will find a list of the works of scholars who, especially in the last fifty years, have earned fame in the field of Biblical geography, and a right to the gratitude of all students of Sacred Scripture.

The name *Palestine*, first used to designate the territory of the Philistines, was, after the Roman period, gradually extended to the whole southern portion of Syria. It applies to the country stretching from the Lebanon and Anti-Lebanon to the Sinaitic Desert, and from the Mediterranean to the Arabian Desert. Politically, the limits varied in the course of Biblical times. The old Land of Canaan was relatively small: it included the region west of the Jordan between a line running from the foot of the Hermon Range to Sidon, and another line from the southern end of the Dead Sea to Gaza. David's and Solomon's possessions were considerably larger; they probably extended north-eastward to the Syrian, and eastward to the Arabian Desert. Two classical expressions occur frequently in the Bible to designate the whole length of the land in historical times: "from the entrance of Emath [i. e., probably, the *Merj Ayûn*] to the river of Egypt [*Wâdy el-Arish*]", or "to the Sea of the Wilderness [Dead Sea]" and "from Dan to Bersabee". This represents, in the estimate of St. Jerome, about 160 Roman miles (141 Engl. m.). As to the breadth of the country, the same Father declared himself ashamed to state it, lest heathens might take occasion from his assertions to blaspheme (Ep. ad Dardan., 129). According to the measurements of the English surveyors, the area of the Holy Land is about 9700 square miles, a trifle over that of the State of Vermont. These figures are

humble indeed compared to those found in the Talmud, where (Talm. Babyl., "Sotah," 49^b) Palestine is given an area of 2,250,000 Roman square miles -- more than half the area of the United States.

The Land of Israel is a "land of hills and plains" (Deut., xi, 11). To the north, two great ranges of mountains, the Lebanon and the Anti-Lebanon, or Hermon, separated by the deep valley of Cœlesyria (El-Beqâ'a), raise their summits to a height of 9000 or 10,000 feet. The Lebanon was never within the borders of Israel; it remained the possession of the Phœnicians and of their Syrian successors; but the Hebrews liked to speak about its majestic grandeur, its slopes covered with oaks, firs, and cedars, its peaks capped with nearly perennial snow. Glistening closer on the northern frontier, Mt. Hermon -- *Sirion* of the Sidonians, *Sanir* of the Amorrhites, *Jebel esh-Sheikh* -- was perhaps more familiar. On both sides of the Jordan the mountains of Palestine prolong these two ranges. West of the upper course of the river, the mountains of Galilee gradually decrease towards the plain of Esdrelon which alone divides the highland. Only a few hills, among which Thabor (A. V. Tabor; *J. et-Tôr*), Moreh (*Nebî-Dahî*, "Little Hermon"), and the heights of Gelboe (A. V. Gilboa; *J. Fuqû'a*), bordering the plain to the east, connect the lesser ranges of Galilee with the mountains of Ephraim. The country then rises steadily, studded with rounded hills -- among them Ebal and Garizim (A. V. Gerizim) -- riven east and west by torrents, and is continued in the "Mountains of Juda" (3000 ft.), to decrease farther south (Bersabee, 700 ft.) and be connected through the "Mountains of Seir" (*Jebel Madera*, *J. Maqra*, *J. Arâif*) and the *J. et-Tih*, with the first approaches of Sinai. The mountains of Ephraim and those of Juda decline gradually towards the Mediterranean Sea, the last western hillocks bordering on the rich plain of Saron (A. V. Sharon), south of Mount Carmel, and on the Sephelah (A. V. Shephelah). As the Jordan Valley sinks while the plateau rises, the eastern ravines are the deeper (the Cedron falls 4000 ft. between Jerusalem and the Dead Sea), and west of the Dead Sea the wilderness of Juda becomes a labyrinth of rugged and precipitous gorges, the favourite haunt of outlaws at all times (cf. I Sam., D. V. I Kings, xxii, xxiii, xxiv), the last stronghold of Jewish independence (Masada, April, A.D. 78), and the time-honoured retreat of the Essenes and of the early Christian hermits.

East of the Jordan, the Hermon range is prolonged by the "mountains of Basan" [A. V. Bashan] (*Jôlan*), to the north of the Yarmûk (*Sheri' at el-Menadhireh*), the "mountains of Galaad" [A. V. Gilead] from the Yarmûk to the Arnon (*J. 'Ajlûn* and *J. Jil'ad*), north and south respectively to the Jaboc, or *Wâdy Zerkâ*, the Abarim Mountains, and the highlands of Moab, east of the Dead Sea; farther south this orographic system is continued by the ranges east of the 'Araba (*Jebâ*, *J. esh-Sherâ*), the *J. Tâuran* and the mountains of Western Arabia (*Hedjaz*, etc.). Tumbling down abruptly towards the Jordan and the Dead Sea, the mountains of Basan, of Galaad, and of Moab buttress the plateaux of the desert, where from time immemorial the nomad tribes of Bedouin have roamed. Only east of the watershed of the Yarmûk, some fifty miles from the Jordan, does the plateau rise to an altitude of 3500 feet in the volcanic region of the Hauran, where some peaks tower to a height of over 5000 feet, and north-east of which stretches, 25 miles long and 20 miles wide, and with the average depth of 500 feet, the broken sea of lava of the Trachon (*Lejâh*). With the exception of the Trachon, and the mountains of Hauran -- which lie beyond the limits of classical Palestine -- and of a small

volcanic section in the north-east, which lies between Mount Hermon and the river Yarmûk, and extends westwards to Mount Thabor, the surface rock of Palestine is a soft limestone containing many fossils; it is hollowed by numberless caverns, some of which are mentioned in Scripture, once, probably, the dwelling-places of the early inhabitants of the country; in later times the favourite cells of anchorites.

The most wonderful geographical and geological feature of Palestine is the gigantic depression which divides the country into two halves. It is the natural continuation of the ravine through which the Orontes (*Nahr el-'Asî*) and the Leontes (*N. el-Litâni*) have furrowed their beds. From "the entrance of Emath", the *Ghôr*, as this depression is called by the Arabs, runs directly south, falling persistently with an average gradient of 15 feet per mile, and passes at an altitude of 1285 feet below the sea level, under the blue waters of the Bahr Lût, the bed of which reaches a depth of more than 1300 feet below the water level, this being the lowest point of this unparalleled depression. Towards the south the bed of the Salt Sea rises, but the furrow is continued through the 'Araba, which, although in some places it goes to a height of 781 feet above the Red Sea, remains much lower than the bordering regions, and finally plunges into the Gulf of 'Aqaba. From the "waters of Merom" (*Bahrat el Hûleh*) to the Lake of Tiberias (*Bahr Tabarîyeh*) the Ghôr is scarcely more than a narrow gap; it broadens to about four miles south of the lake, then narrows to a mile and a half before reaching the plain of Beisan, where it spreads to a breadth of eight miles. South of *'Ain es-Saqût*, down to the confluence of the Jaboc, the valley is only two miles wide; but it soon expands again and north of the Dead Sea measures twelve to fourteen miles.

Inside the Ghôr the Jordan has ploughed its double bed. The larger bed, the Zôr, is an alluvial plain, the width of which varies from 1200 feet to a mile and a half; it is sunken eighteen to twenty feet in the upper course of the river, forty to ninety feet in the middle course, and about one hundred and eighty feet at some distance north of the Dead Sea. The Zôr is very fertile except in its few last miles (the *'Arabah* or "desert" of Scripture), where the salt-saturated soil is barren and desolate. Sunken within the Zôr, and hidden behind a dense screen of oleanders, acacias, thorns, and similar shrubbery, the Jordan (*esh-Sheri-'at el-Kebîr*, 'the Great Trough") follows its serpentine course, swiftly rolling its cream-coloured waters through a succession of rapids which render it practically unnavigable. "The Great Trough" of Palestine is much narrower than its celebrity might lead one to suppose. A few miles below Lake Hûleh, its width is only 75 feet; about twenty miles, as the crow flies, north of the Dead Sea, it measures some 115 feet; but as it goes down towards the Sea, the river broadens to 225 feet. Before the Roman period no bridges existed over the Jordan; communications were active, nevertheless, between both banks, thanks to the shallowness of the water, which is fordable in five or six places (Jos., ii, 7; Judges, iii, 28; vii, 24; xii, 5, 6, etc.). Early in the spring, however, this is utterly impossible, for the river, swollen by the melting snow of Mount Hermon, overflows its banks and spreads over the whole area of the Zôr (Jos., iii, 15; I Par., xii, 15; Ecclus., xxiv, 36). The Jordan is formed by the union of three springs, respectively known as Nahr el-Hasbâni, N. el-Leddân, and N. Banîyas, which meet nine miles north of Lake Hûleh. On both sides it receives many tributaries, very few of which are explicitly mentioned in Scripture.

We may mention, on the west side, the N. el-Bîreh, which comes down from Mount Thabor, the N. el-Jahûd, bringing down from Nebî Dahî the waters of 'Ain-Jalûd, possibly the site of the trial of Gideon's companions (Judges, vii, 4, 6), the Wâdy Far'ah, which originates near Mount Hebal and Mount Garizim, the W. Nawaimah, the pass to the heights of Bethel (*Beitîn*; cf. Jos., xvi, 1), and, below Jericho, the W. el-Kelt, the "torrent of Carith (A. V. Cherith)" mentioned in III (A. V. I) Kings, xvii, 3, according to many Biblical geographers. On the east, besides many brooks draining the hill country of Galaad, the Jordan receives, south of the Lake of Tiberias, the Sherî 'at el-Menadhîreh, not spoken of in the Bible (Yarmûk of the Talmud, Hieromax of the Greek writers), the W. Yabîs, the name of which recalls that of the city of Jabes-Galaad W. (I Kings, xi; xxxi, 11-13), the Jaboc (*N. ez-Zerqa*), the Nimrîn (cf. Bethemra, Num., xxxii, 36; Jos., xiii, 27), and, a few miles from the Dead Sea, the united waters of the W. Kefrein and W. Hesbân (cf. Hesebon, A. V. Heshbon, Num., xxi, 26; Jos., xxi, 39, etc.).

Among the rivers and torrents debouching into the Dead Sea from the mountains of Juda, only one deserves notice, viz., the Wâdy en-Nâr, made up of the often dry Cedron (Wâdy Sitti Maryam), east of Jerusalem, and the "Valley of Ennon" (W. er-Rabâbi) to the south of the Holy City. Many torrents stream from the highlands of Moab; among these may be mentioned the Wâdy 'Ayûn Mûsâ, the name of which preserves the memory of the great leader of Israel, the Arnon (W. el-Mojîb), the Wâdy of Kerak, probably the Biblical Zared, the "waters of Nemrim [A. V. Nimrim]" (Is., xv, 6; Jer., xlvi, 34. -- W. Nemeira), and finally the W. el-Qurâhi, very likely the "torrent of the willows" of Is., xv, 7.

In the Mediterranean watershed, from the extreme north of Phœnicia, the most famous rivers are the Eleutherus (I Mach., xi, 7; xii, 30. -- Nahr el-Kebîr), the N. el Qasimîyeh (Leontes of the Greeks), the N. el-Muqattâ (Cison; A. V. Kishon), the N. ez-Zerqâ, very likely the "flumen Crocodilon" of Pliny (Hist. Nat., V, xvii) and the Sichor Labanah of the Bible (Jos., xix, 26. -- A. V. Shihôr-libnath), the N. el-Falêq, possibly the Nahal Qanah (D. V. "valley of reeds"; A. V. Kanah) of Jos., xvi, 8 and xvii, 9, the N. Rabin, one of the confluent of which, the W. es-Sarâr, runs through the famous "valley of Sorek" (A. V. Sorek. -- Judges, xvi, 4, etc.), the N. Sukreir, into which opens the "valley of the terebinth" (A. V. "valley of Elah". -- I Kings, xvii, 2, 19; xxi, 9 -- probably the W. es-Sunt), the W. el-Hasy, the main branch of which passes at the foot of Lachis (Tell el-Hasy), while another originates near Khirbet Zuheilîqa, not unlikely the site of Siceleg (A. V. Ziklag. -- Jos., xv, 31, etc.); the W. Ghazzeh, into which flows the W. esh-Sherî'a, perhaps the "torrent Besor" (I Kings, xxx, 9, etc.), and the W. es-Seba', which recalls to the mind the city of Bersabee (Beer-Sheba), both being the natural outlets of all the hydrographic system of the Negeb; finally, the W. el-'Arîsh, or "torrent of Egypt", Shihôr of the Hebrews and Rhinocolurus of the Greeks, which drains all the northern and north-eastern portions of the Sinaitic Peninsula. The Scriptures mention likewise a few inland rivers, particularly two in the territory of Damascus: the Abana (N. Barâda), which, after watering the city of Damascus, loses itself some twenty miles east in the Bahrat el-'Ateibeh, and the Pharphar, which feeds the Bahrat el-Hijâneh.

Besides the two lakes just mentioned, which are outside of Palestine proper, and the Lakes Hûleh and Tiberias, in the course of the Jordan, the Holy Land possesses no other lakes of any extent except the Birket er-Ram (the Lake Phiala of Josephus -- Bell. Jud., III, x, 7) to the south of Banîyas; but ponds and marshes are numerous in certain parts of the land. Marshes near the lower Jordan, at a short distance from the Dead Sea, are mentioned in I Mach., ix, 46.

Deut., viii, 7, describes Palestine as "a land of brooks and of waters and of fountains". Many springs are mentioned in Scripture, and nearly all belong to Western Palestine. Going from north to south, and leaving aside those in the neighbourhood of cities to which they gave their names (Engannim, Enhasor, etc.) we may mention here: the "fountain of Daphnis" (Num., xxxiv, 11, in the Vulgate only: other texts have merely: "the fountain") identified by Robinson with 'Ain el-'Asy, the main spring of the Orontes in Cœlesyria; the "fountain which is in Jezrahel" (I Kings, xxix, 1) generally recognized in the 'Ain Jalûd, near the Little Hermon; the "fountain that is called Harad" (Judges, vii, 1), possibly the same, or 'Ain el-Meiyteh, 180 feet below 'Ain Jalûd; the "fountain of Taphua" (Jos., xvii, 7), near the city of that name; the "fountain of Jericho" or "of Eliseus" (D. V. Elisha. -- IV Kings, ii, 19, 22), 'Ain es-Sultân, to the north of Jericho; the "fountain of the Sun" (Jos., xv, 7), 'Ain el-Haûd, or Apostles' Fountain, on the road from Jerusalem to Jericho; the "fountain of the water of Nephtoa" (Jos., xv, 9), near Lifta, north-west of Jerusalem; the "source of the waters of Gihon" (II Par., xxxii, 30), 'Ain Umm ed-Derej, or, as the Christians call it, 'Ain Sitti Maryam, on the south-east slope of the Temple hill at Jerusalem; the "fountain Rogel" (Jos., xv, 7), Bîr Eiyûb in the W. en-Nâr, south of Jerusalem; the "dragon-fountain" (Neh., D. V. II Esdras, ii, 13), somewhere in the neighbourhood of the Holy City, unidentified; "The Spring of him that invoked from the jawbone" (so D. V.; A. V. Enhakkore -- Judges, xv, 19 -- rather, "the Spring of the partridge, which is in Lehy"), identified by Conder with some 'Avûn Qâre, north-west of Sor'a; the "water" where Philip baptized the eunuch of Candace (Acts, viii, 36) 'Ain ed-Dirweh, near the highroad from Jerusalem to Hebron; "the fountain of Mispbat that is Cades" (A. V. "Enmishpat, which is Kadesh" -- Gen., xiv, 7) 'Ain Kedeis in the desert.

In places where the supply of water was scanty the ancient inhabitants constructed pools, either by damming up the neighbouring valley or by excavation. Of the former description were very likely the pools of Gabaon [A. V. Gibeon. -- II Kings (A. V. II Samuel), ii, 13], Hebron (II Kings, iv, 12), Samaria (III Kings, xxii, 38), Hesebon (Cant., vii, 4), and certainly the lower pool of Siloe near Jerusalem (Is., xxii, 9, 11); of the latter description are the "upper pool" of Siloe (IV Kings, xx, 20) and the famous "pools of Solomon", probably alluded to in Eccl., ii, 6, near Bethlehem. These pools, frequent in the East, are supplied either by natural drainage, or by springs, or by aqueducts bringing water from a distance.

In its *climate*, as well as in everything else, Palestine is a land of contrasts. At Jerusalem, which is 2500 feet above the sea level, the mean temperature of the whole year is about 63° F.; during the winter months, although the mean temperature is about 50°, the mercury occasionally plays around the freezing-point; whereas in June, July, August, and September, the average being between 70° and 75°, the thermometer sometimes rises to 100° or higher. For six or seven months there is no

rain; the dry wind from the desert and the scorching sun parch the land, especially on the plateaux. The first rains generally fall about the beginning of November; the "latter rain", in the month of April. Plenty or famine depend particularly on the April rains. On clear nights, all the year round, there falls a copious dew; but in summer time there will be no dew if no westerly breeze, bringing moisture from the sea, springs up towards the evening. Snowfalls are only occasional during the winter, and usually they are light, and the snow soon melts; not seldom does the whole winter pass without snow (as an average, one winter in three). Owing to the neighbourhood of Lebanon and Hermon, the Upper Galilee enjoys a more temperate climate; but in the lowlands the mean temperature is much higher. Along the coast, however, it is relieved almost every evening by the breeze from the sea. In the Ghôr, the climate is tropical; harvesting, indeed, begins there in the first days of April. During the winter months, the temperature is warm in the daytime, and may fall at night to 40°; in summer the thermometer may rise in the day to 120° or 140°, and little relief may be expected from the night. "The valley concentrates the full radiance of an eastern sun rarely mitigated by any cloud, though chilled at times by the icy north winds off the snows of Lebanon and Hermon; it is parched by the south wind from the deserts of the South, yet sheltered from the moist sea breezes from the West that elsewhere so greatly temper the climate of the Holy Land" (Aids to the Bible Student). The flora and fauna of the lowest portions are accordingly similar to those of India and Ethiopia. The coast of the Dead Sea, sunken deeper than the Ghôr, has a deadly equatorial climate, perhaps the hottest in the world.

These orographic, hydrographic and climatic conditions of the Holy Land explain the variety -- wonderful, if we consider the size of the country -- of its fauna and flora. It is "a good land. . . . A land of wheat, and barley, and vineyards, wherein fig trees, and pomegranates, and olive yards grow: a land of oil and honey. Where without any want thou shalt eat thy bread, and enjoy abundance of all things" (Deut., viii, 7-9). Palestine, indeed, even now, but much more so in Biblical times, may be said fairly to repay the labour of its inhabitants. The north, on both sides of the Jordan, is a most fertile region; the plains of Esdrelon and of Saron (A. V. Sharon, except in Acts, ix, 35), the Sephelah and the Ghôr were at all times considered the granaries of the country. Even the land of Juda contains rich and pleasant dales, an ideal home for gardens, olive-groves, vineyards, and fig trees; and the high country, with the exception of the sun-baked and wind-parched desert, affords goodly pastures. (See ANIMALS IN THE BIBLE; PLANTS IN THE BIBLE.)

Palestine seems to have been inhabited about the fourth millennium B.C. by a population which may be called, without insisting upon the meaning of the word, aboriginal. This population is designated in the Bible by the general name of *Nephilim*, a word which, for the Hebrews, conveyed the idea of dreadful, monstrous giants (Num., xiii, 33, 34). We hear occasionally of them also as *Rephaim*, *Enacim*, *Emim*, *Zuzim*, *Zamzommim*, and *Horites*, these last, whose name means "cave-dwellers", being confined to the deserts of Idumæa. But what were the ethnological relations of these various peoples, we are not able to state. At any rate, the land must have been thinly inhabited in those early times, for about 3000 B.C. it was styled by the Egyptians "an empty land". Towards the third millennium B.C., a first Semitic Canaanite element invaded Palestine, followed,

about the twenty-fifth century, by a great Semitic migration of peoples coming from the marshes of the Persian Gulf, and which were to constitute the bulk of the population of Canaan before the occupation of the land by the Hebrews. From the twentieth century B.C. onwards, Aram continued to pour on the land some of its peoples. Palestine had thus, at the time of Abraham, become thickly inhabited; its many cities, united by no bond of political cohesion, were then moving in the wake of the rulers of Babylon or Susa, although the influence of Egypt, fostered by active commercial communications, is manifest in the Canaanite civilization of that period. As a result of the battle of Megiddo, the Land of Canaan was lost to Babylon and added to the possessions of Egypt; but this change had little effect on the internal conditions of the country; administrative reports continued to be written, and business transacted, in the Cananæo-Assyrian dialect, as is shown from the Tell el-Amarna and the Ta'annak discoveries. About the same epoch the Hethites came in from the North and some of their settlements were established as far south as the valley of Juda, while the Amorrhites were taking hold of the trans-Jordanic highland. Speaking generally, when the Hebrews appeared on the banks of the Jordan and the Philistines on the Mediterranean shore (c. 1200 B.C.), the Amalecites held the Negeb, the Amorrhites the highlands east of the river, the Canaanites dwelt in the valleys and plains of the west, and some places here and there were still in possession of the aborigines. The Philistines drove the Canaanites from the coast and occupied the Sephela, whereas the Zakkala settled on the coast near Mount Carmel. We know in detail from the Bible the progress of the Hebrew conquest of the rest of the land: the remnant of the former settlers were absorbed little by little into the new race.

Needless to tell here how the different tribes, at first without any other bond of unity than that of a common origin and faith, gradually were led by circumstances to join under a common head. This political unity, however, was ephemeral and split into two rival kingdoms -- that of Israel in the north, and that of Juda in the south. The vicissitudes of these two tiny kingdoms fill several books of the Old Testament. But they were doomed to be merged into the mighty empires of the Euphrates and to share their fate. A Babylonian province in 588, a Persian satrapy after Cyrus's victories, Palestine became for a few years part of Alexander's vast dominion. At the division of his empire the Land of Israel was allotted to Seleucus, but for fifteen years was a bone of contention between Syria and Egypt, the latter finally annexing it, until, in 198 B.C., it passed by right of conquest to King Antiochus III of Syria. A short period of independence followed the rebellion of the Machabees, but finally Rome assumed over Palestine a protectorate which in time became more and more effectual and intrusive. Josephus narrates how Palestine was divided at the death of Herod; St. Luke (iii, 1) likewise describes the political conditions of the country at the beginning of Christ's public life. West of the Jordan and the Dead Sea, Palestine included Galilee, Samaria, Judea, and Idumæa (Edom); east of that river, Gaulanitis corresponded to the modern Jolan; Auranitis was the administrative name of the plateau of *Jebel-Hauran*; north-west of it, the Lejah formed the main part of Trachonitis; Iturea must have been the country south-east of Hermon; north of Iturea, on the banks of the upper Barâda, at the foot of the Anti-Lebanon, was situated the small, but rich, tetrarchy of Abilene; south of Iturea, between Gaulanitis and Auranitis extended Batanea; finally,

under the name of Perea was designated the land across the Jordan from Pella to Moab, and westwards to the limits of Arabia, determined by the cities of Gerasa (Jerash), Philadelphia (Ammân), and Hesebon.

It is very difficult to form an estimate of the population of Palestine, so conflicting are the indications supplied by the Bible. We are told in II Kings, xxiv, 9, that in the census undertaken at David's command, there were found 1,300,000 fighting men. These figures, which may represent a total population of from 4,000,000 to 5,000,000, undoubtedly overshoot the mark. From what may be gathered in various places of Holy Writ, the figures given in II Kings might fairly represent the whole population at the beat epochs.

In the foregoing portions of this article Palestine alone has been spoken of and described. However, as has been intimated above, Genesis, Exodus, Daniel, Esther, in the Old Testament, the Acts, the Epistles, and the first chapters of the Apocalypse, in the New, contain geographical indications of a much wider range. To attempt a description of all the countries mentioned would be to engage in the whole geography of the Assyrian, Babylonian, Egyptian, and Roman empires, a task which the allusions made -- with the exception of the detailed description of the Israelites' journey from Egypt to the Jordan -- would hardly justify. On the other hand, it is certain that Palestine is the theatre where most, and those the most vital, of the events of sacred history took place. The following list, which gives the names of most places, within and without Palestine, mentioned in Holy Writ, briefly supplies the indications needed. From the variety of countries to which these places belonged the reader may form an idea of the range of geographical knowledge possessed by the Biblical writers, and acquired by them, either from personal experience or by hearsay.

GEOGRAPHICAL NAMES IN HOLY SCRIPTURE

Many of the more important places mentioned below are subjects of special articles in THE CATHOLIC ENCYCLOPEDIA; where the title of such an article is identical with the local name given in the list, the reader will be referred to that article simply by the letters "q. v." (*quod vide*); where the special article is headed with a different name or a modified form of the same name, the cross-reference gives that name in CAPITALS AND SMALL CAPITALS. Cross-references to other titles in the list itself are given in the ordinary type.

Abana: river of Damascus. See LEBANON.

Abarim (q.v.): mountains in N. Moab.

Abdon (Jos., xxi, 30, etc.): Khirbet Abdeh, N. of the Wâdy el-Karn.

Abel (the great: I Kings, vi, 18) is a common name, "stone", as the D.V. suggests in the parenthesis. -- *Abel* (Judges, xi, 33; Heb. 'Abél Kerāmîm), -- *Abela* (IV Kings, xx, 14) -- *Abeldomum Maacha* (III Kings, xv, 20; IV Kings, xv, 29); -- *Abelmaim* (II Par., xvi, 4); -- *Abelmehula* (Judges, vii, 23, etc.); *Abelsatim* (Num., xxxiii, 49), the place where the Israelites were enticed into the impure worship of Beelphegor; in the Ghôr E. of the Jordan, at a short distance from the Dead Sea.

Aben-Boen (Jos., xviii, 18), also "the stone of Boen" (Jos., xv, 6): a conspicuous rock marking the limit of Juda and Benjamin between *Beth Hagla* and the Ascent of Adommim.

Abes (Jos., xix, 20; Issachar): prob. Kh. eb-Beidâ, in the plain of Esdrelon, between Nazareth and Mt. Carmel.

Abila (not mentioned in the Bible), after which Abiline was named: Sûk Wâdy Barâda, S. of Anti-Lebanon.

Abran (Jos., xix, 28; Aser): perhaps a mistake for Abdon. Unknown.

Accad (Achad; Akkad). See BABYLONIA.

Accain (Jos., xv, 57): mtn. of Juda, Kh. Yâqîn.

Accaron (q.v.).

Accho. See ACRE.

Achazib, 1 (Jos., xix, 21; Aser): Ez-Zib, betw. Accho and Tyre. -- 2 (Jos., xv, 44; Mich., i, 14; W. Juda): 'Ain el-Kezbeh.

Achor: a valley near Jericho, possibly Wâdy el Qelt.

Achsaph (Jos., xi, 1, etc.; Aser): prob. Kefr Yâsîf, N.E. of Acre.

Achzib. See Achazib 2.

Acrabatane: 1. Toparchy of Judea, including region betw. Neapolis (Naplûs) and Jericho. -- 2 (I Mach., v, 3), region of the Ascent of Acrabim.

Acrabim (Ascent of; D.V.: "Ascent of the Scorpion"; Jos., xv, 3; S. limit of Juda): most prob. Naqb es-Sâfâ, S.W. of the Dead Sea, on the road from Hebron to Petra.

Acron (Jos., xix, 43). See ACCARON.

Adada (Jos., xv, 22; S. limit of Juda): 'Ad'ada, E. of Bersabee.

Adadremmon (Zach., xii, 11): in the plain of Esdrelon; in later times, Maximianopolis (St. Jerome): Rûmmâneh, S. of Lejûn.

Adama (Deut., xxix, 23): city of the Pentapolis.

Adami (Jos., xix, 33): also *Adam*: Damîeh, S.W. of the L. of Tiberias. The Jordan may be forded there.

Adar (Num., xxxiv, 4; Jos., xv, 3), also *Addar* and *Adder*: S. limit of Juda, N.W. of Cades. There is in that region a Jebel Hadhîreh.

Adarsa (I Mach., vii, 40), also *Adazer* (I Mach., vii, 45): Kh. 'Adaseh, N. of Jerusalem and E. of El-Jib.

Adiada (I Mach., xii, 38), also *Addus*, in the Sephela: Haditeh, E. of Lydda.

Adithaim (Jos., xv, 36)-- text perhaps corrupt; as it stands, designates a place, hitherto unidentified, in the neighbourhood of Gaza.

Adom (Jos., iii, 16): Tell-Damîeh, a little S. of the confluence of the Jaboc and the Jordan.

Adommim: (Ascent of; Jos., xv, 7; xviii, 18), limit of Benjamin and Juda; seems to correspond to Tal'at ed-Dûmm, on the road from Jerusalem to Jericho, a place notorious for the thieves who lurked round about (Luke, x, 30-35).

Adon (I Esd., ii, 59), also *Addon* (II Esd., vii, 61): a city of Chaldea, the same as *Eden* in Is., xxxvii, 12; Ezech., xxvii, 23.

Adrumetum (Acts, xxvii, 2): city and seaport in Mysia, over against the island of Lesbos; mod. Adramiti or Edremid, also Ydremid.

Adullam (q.v.).

Aduram (II Par., xi, 9, S. Juda), also *Ador* (I Mach., xiii, 20): Dora, W. of Hebron.

Ænon (q.v.).

Agar's Well (Gen., xvi, 14), "between Cades and Barad": Bîr Mâyîn.

Ahalab (Judges, i, 31; Aser): poss. the same as *Mehebel* (Jos., xix, 29; D.V. "from the portions"), the Makhalliba of the third campaign of Sennacherib. Unknown.

Ahava: stream, or perhaps canal, in Babylonia, possibly not far W. of Babylon.

Ahion (III Kings, xv, 20, etc.), also *Aion* (IV Kings, xv, 29): the name seems to be preserved in Merj 'Ayûn, between the valley of the Leontes and that of the upper Jordan. The site was possibly Tell-Dibbîn, or Khiam, a near-by place.

Aialon, 1 (Jos., x, 12 etc.) town and valley: *Yâlô*, W. N.W. of Jerusalem, E. of Amwâs. — 2 (Judges, xii, 12; Zabulon): Kh. Jalîm, E. of Acre.

Ai: D.V. for Hai.

Aiath (Is., x, 28): the same as Hai.

Aila, *Ailath*: the same as Elath.

Ain (Jos., xix, 7; Juda), also called *En-Rimmon*: Kh. Umm er-Rummânîm, N. of Bersabee, on the road to Beit-Jibrîn.

Alexandria (q.v.).

Alima (I Mach., v, 26): poss. Kh. 'Ilma.

Almath (I Par., vi, 60; Heb. 45) also *Almon* (Jos., xxi, 18), in Benjamin: Kh. 'Almith, N.E. of Jerusalem, between Jebâ and Anâtâ.

Alus (Num., xxxiii, 13), encampment of the Israelites on their way to Sinai: poss. Wâdy el-'Ech, N.W. of Jebel Mûsa.

Amaad (Jos., xix, 26; Aser): Kh. el-'Amud, N. of Acre, or Umm el-'Amed, W. of Bethlehem of Zabulon.

Amam (Jos., xv, 26; S. Juda). Unidentified.

Amana (Cant., iv, 8): poss. the same as Mt. Hor of the N.

Amma (Jos., xix, 30; Aser): perhaps 'Alma esh-Shâ'ûb, W. of the Scala Tyriorum (Râs en-Nâqûra).

Amona (Ezech., xxxix, 6): if we should see in it the name of a town, might stand for Legio-Mageddo, mod. El-Lejûn.

Amosa (Jos., xviii, 26; Benjamin): either Qolonieh (so Talmud), or Beit-Mizzeh, N. of Qolonieh.

Amphipolis (Acts, xviii, 1): in Macedonia, 30 m. from Philippi; mod. Jenikoei.

Amthar (Jos., xix, 13; Zabulon): prob. not a proper name, seems to mean "turns towards".

Ana: a town in Babylonia, on the Euphrates, possibly 'Anah.

Anab (Jos., xi, 21): mount. of Juda, once belonging to the Enacim; Kh. 'Anab, S. of Beit-Jibrîn.

Anaharath (Jos., xix, 19); Issachar); Egypt.: Anuhertu: En-Na'ûra, N.E. of Zerâ'in.

Anania (II Esd., ii, 32; Benjamin): Beit-Hanîna, N. of Jerusalem.

Anathoth (q.v.).

Anem (I Par., vi, 73, Heb., 58; Issachar), perhaps a contraction for Engannim, which stands in the same place, Jos., xix, 21. However, poss. 'Anîm, S. of Lejûn.

Aner (I Par., vi, 70; Heb. 55; W. Manasses), perhaps a corruption for Thanach of Jos., xxi, 25; poss. also 'Ellar, N.W. of Sebastiyeh.

Ange (Judith, ii, 12), a mount, in Cappadocia: Erjias.

Anim (Jos., xv, 50; mount. of Juda): Kh. Ghuwein.

Antioch: 1. Of Pisidia. -- 2. Of Syria (q.v.).

Antipatris (q.v.).

Apadno (Dan., xi, 45); doubtful as a proper name.

Apamea (Judith, iii, 14), country and city of Syria: Qal 'at el-Mudhiq.

Aphaerema (I Mach., xi, 34; not in the Vulg.), one of the toparchies of Juda: see Ephraim.

Aphara (Jos., xviii, 23; Benjamin), commonly identified with Tell el-Fârah, S.E. of Beîtn.

Aphec 1 (Jos., xii, 18; N.W. Juda): poss. Merj-Fikieh (Conder). -- 2 (Jos., xix, 30, etc.; Aser).

Unknown. -- 3 (I Kings, iv, 1; Benjamin): perhaps Qastûl. -- 4 (I Kings, xxix, 1; Issachar): El-'Afûleh, N.W. of Zerâ'in. -- 5 (III Kings, xx, 26, etc.) Assy.: *Apqu*: prob. Fîq, E. of the L. of Tiberias.

Apheca, 1 (Jos., xiii, 4): Afkâ, N.E. of Beirût. -- 2 (Jos., xv, 53; mount. of Juda), Egypt.: Apuken: prob. Fuqîn, W. of Bethlehem.

Apollonia (Acts, xvii, 1), in Mygdonia, a prov. of Macedonia: mod. Pollina.

Appiiforum (Acts, xxviii, 15), 43 m. S.E. of Rome, on the Appian Way, on the edge of the Pontine Marshes.

Ar, *Ar Moab* (Num., xxi, 15, etc.) N. of Moab, and S. of the river Arnon; some suggest Rabba; others Umm er-Resâs; others Mûhâtet el-Haj.

Arab (Jos., xv, 52; mount. of Juda), also *Arbi* (II Kings, xxiii, 25): Kh. er-Râbîyeh, W. of Ziph.

Arach, 1 (Gen., x, 10), cuneif. *Arku*, a town in Babylonia. Warka, on the left bank of the Euphrates, 125 m. S.E. of Babylon. -- 2. See *Archi*.

Arad (q.v.).

Arada, a station of the Israelites in their journey between Sinai and Cades. Unknown.

Arama, 1 (Jos., xix, 36; Nephtali): Rameh, N.W. of the L. of Tiberias. -- 2 (I Kings, xxx, 30). See *Horma*.

Ararat. See *ARK*.

Arbatis (I Mach., v, 23); doubtful whether it is a district or a city. Unknown.

Arbee. See *HEBRON*.

Arbella (I Mach., ix, 2), according to Josephus, in Galilee, in the neighbourhood of Sepphoris; prob. Kh. 'Irbid, W. of the L. of Tiberias.

Archi seems rather a gentile name, derived from *Arach*, *Erek*, or *Erech*, 'Ain 'Arîk, between Beîtn and Beit Ur.

- Arebba* (Jos., xv, 60; mount. of Juda): Kh. Rebba S.W. of Jerusalem, near Beit Nettîf(?).
- Arecon* (Jos., xix, 46; Dan): Tell er-Raqqeit, N. of Jaffa.
- Areopolis*, Greek name of Ar Moab.
- Ariel* (Is., xxix, 1, 2), symbolical name of Jerusalem: "city of God".
- Arimathea*. See Rama.
- Arnon*, river of Moab: Wâdy el-Môjib.
- Aroer*, 1 (Deut., ii, 36, etc.; Moab. S., 1. 26): 'Arâ'ir, N. of the Arnon river. -- 2 (Judges, xi, 33), "over against Rabba", i. e. E. of Ammân. Unknown. -- 3 (I Kings, xxx, 28; S. Juda), Egypt.:
- Har-horar*: 'Ar'ârah, E.S.E. of Bersabee.
- Arpad* A. V. for Arphad.
- Arphad* (IV Kings, xviii, 34, etc.), Assy.: *Arpaddu*: Tell 'Erfâd, 12 m. N. of Aleppo.
- Aruboth* (III Kings, iv, 10), poss. Wâdy Arrûb, near Bersabee.
- 'Arûmah* (Judges, ix, 31; D.V.: "privately"), a proper name: perhaps El-'Orme, S. of Naplûs.
- 'Asal* (Zach., xiv, 5; D.V.: "the next"). A proper name is demanded by the context: perhaps the Wady 'Asûl, S. of Jerusalem.
- Asan*. (Jos., xv, 42, etc.; Juda): poss. 'Aseileh (?) between Bersabee and Hebron.
- Asaramel* (I Mach., xiv, 27); wrongly given as a proper name; either some court, or a title of Simon: "prince of the people of God".
- Asasonthamar*. See ENGADDI.
- Ascalon*. See PHILISTINES.
- Asem* (Jos., xv, 29, etc.; S. Juda), also *Asom* (I Par., iv, 29). Unknown.
- Asemona* (Num., xxxiv, 4; Jos., xv, 14; S. Juda): poss. 'Ain Qaseimeh, W. of Cades.
- Asena* (Jos., xv, 33, plain of Juda): perhaps 'Aslîn; perh. Kefr Hâsan.
- Aser* (q.v.) 1 (Jos., xvii, 7; W. Manasses). -- 2 (Tob., i, 2; Nephtali) poss. the same as Asor 1.
- Asergadda* (Jos., xv, 27; S. Juda). Unidentified.
- Ashdod*, A.V. for Azotus.
- Asiongaber* (q.v.).
- Asor*, 1 (Jos., xi, 1, etc.; Nephtali), also *Hasor*, *Heser*. Egypt.: *Huzar*: the site seems to have been in the neighbourhood of L. Hûleh, but its exact location is the object of great discussions. -- 2 (Jos., xv, 23; S. Juda). Unknown; perhaps connected with Jebel Hâdhîreh, N.E. of Cades.-- 3 (Jos., xv, 25; S. Juda). Unknown. -- 4 (II Esd., xi, 33, Benjamin), poss. Kh. Hazzûr, N. of Jerusalem.
- Asphar* (I Macb., ix, 33), a pool in the desert of Thecue, perh. Bîr ez-Zâ'ferâneh.
- Assedim* (Jos., xix, 35; Nephtali). Some: Hattin el-Kedim; others: Es-Sattîyeh; perhaps not a proper name.
- Asson*, 1 (Acts, xx, 13, 14), seaport in Mysia: Behram Kalessi. -- 2 (Acts, xxvii, 13); not a proper name, but compar. of *agchi*, "near".
- Astaroth* (Deut., i, 4, etc.), capital of Og, king of Basan: Tell Astâra, in Hauran.
- Astarothcarnaim* (Gen., xiv, 5), prob. Tell As'âri, in Hauran.

Ataroth, 1 (Num., xxxii, 1, etc.; Moab. S., l. 10; Moab): Khirbet 'Attarus, S. of the Wâdy Zerqâ. Ma'în. -- 2 (Jos., xvi, 2; S. Ephraim), also *Ataroth Addar* (Jos., xvi, 5; xviii, 13); some: Atâra, S. of El-Bireh; others: Kh. ed-Darieh, near Lower Bethoron. -- 3 (Jos., xvi, 7; E. Ephraim), poss. Tell et-Trûny (Conder).

Athach (I Kings xxx, 30), possibly the same as Ether.

Athar. See Ether.

Athens (q.v.).

Athmatha (Jos., xv, 54; mount. of Juda). Unidentified.

Athrôth bêth Yô'âb (I Par., ii, 54; D.V.: "the crowns of the house of Joab"), name of a place. Site unknown.

Attalia (q.v.).

Ava (IV Kings, xvii, 24, etc.), also *Avah*, a Babylonian city conquered by the Assyrians. Possibly Hit, on the right bank of the Euphrates.

Avim (Jos., xviii, 23, Benjamin). Some identify it with Hai. Otherwise unknown.

Avith (Gen xxxvi, 35; Edom), perhaps in the neighbourhood of the Jebel el-Ghuweiteh, E. of the Dead Sea.

Avoth Jair (III Kings, iv, 13). See Havoth Jair.

Axaph. See Achsaph.

'Ayephûm (II Kings, xvi, 14; D.V.: "weary"), possibly, rather, a place E. of Bahurim.

Aza (I Par., vii, 28; N.W. of Ephraim). Unknown.

Azanotthabor (Jos., xix, 34; Neplitali), in the neighbourhood of Mt. Thabor. Unknown.

Azeca (Jos., x, 10, etc.; plain of Juda), in the environs of Tell Zakarîyah. No agreement as to the exact identification.

Azmaveth (I Esd., ii, 24): Hizmeh, N. of Anita.

Azotus (q.v.).

Baal (I Par., iv, 33), probably identical with *Baalath Beer Ramath* (Jos., xix, 8; Simeon), poss. Biâr Mâyîn, or Tell el-Lekiyeh, N. of Bersabee.

Baala, 1 (Jos., xv, 9, etc.; Juda) old name of Cariathiarim. -- 2 (Jos., xv, 29, etc.; S. Juda), also *Bala*; perhaps Kh. Umm-Baghle, N.E. of Bersabee.

Baalam (I Par., vi, 70; Heb. 55; W. Manasses), also *Balaam*; possibly *Jebblaam* (Jos., xvii, 11): Bir Bel'ameh, S. of Jenîn.

Baalath (Jos., xix, 44; N. Dan), also *Balaath* (II Par., viii, 6), prob. Bel'ain, N.W. of Beit Ur.

Baalath Beer Ramath. See Baal.

Baalbek (q.v.).

Baalgad (Jos., xi, 17, etc.), at the foot of Mt. Hermon: Baniyas.

Baal Hamon (Cant., viii, 11; D.V. "that which hath people"), poss. identical with Balamon (Judith, viii, 3); perh. Kh. Bel'ameh S. of Jenîn.

Baalhasor (II Kings, xiii, 23), poss. Tell 'Asûr, N.E. of Beitîn.

Baal Hermom (Judges, iii, 3, etc.). Whether it is a city or a mountain is doubtful; supposed to be the same as Baalgad.

Baalmeon (Jos., xvii, 17, etc.), also *Baalmaon*, *Beelmeon*, *Bethmaon*: Tell Mâ'in, S.W. of Madâba. *Baal Peor*, A.V. for Beelphegor.

Baal Pharasim (II Kings, v, 20), in the neighbourhood of the Valley of Raphaim, S. of Jerusalem.

Baal Salisa (IV Kings, iv, 42): prob. Kh. Sarîsia, 15 m. N.E. of Lydda.

Baalthamar (Judges, xx, 33; Benjamin), N.W. of Gabaa, about Kh. Adase.

Babylon. See BABYLONIA.

Bahurim (II Kings, iii, 16, etc.), on the slope of Mt. Olivet, poss. Kh. ez-Zambi, or Kh. Buqei'dan.

Bala, 1 (Gen., xiv, 2). See Segor. -- 2. See Baala 2.

Balaam. See Baalam.

Balaath. See Baalath.

Baloth (Jos., xv, 24; S. Juda), poss. identical with Baalath Beer Ramath. Otherwise unknown.

Bamoth (Num., xxi, 19; Moab). Site unknown, between Dîbân and Mâ'in.

Bamothbaal (Jos., xiii, 17), prob. the same.

Bane (Jos., xix, 45; Dan), also *Bane Barach*; Assy.: *Banaaibarqa*; prob. 'Ibn-'Ibrâk, E. of Jaffa.

Banias. See CÆSAREA PHILIPPI.

Barach. See Bane.

Barad (Gen., xvi): Umm e1-Bâred, S.E. of Cades.

Barasa (I Mach., v, 26): Bosra, in the Hauran.

Basan (Deut., iii, 4), a region S. of the Plain of Damascus; at first the Kingdom of Og, then given to the tribe of Manasses.

Bascama (I Mach., xiii, 23), perh. Tell-Bâzûk, in Jolan.

Bascath (Jos., xv, 39; plain of Juda), somewhere around Lachis. Unknown.

Bashan, A.V. for Basan.

Bathuel (I Par., iv, 30; Simeon). See Bethul.

Baziothia (Jos., xv, 28; S. Juda), an unidentified city in the neighbourhood of Bersabee unless the text is Corrupt.

Beelmeon. See Baalmeon.

Beelphegor (q.v.).

Beelsephon (Ex., xiv, 2); Egypt.: Bali Sapûna. If a mountain, poss. Jebel 'Attâka, S.W. of Suez.

Beer (Num., xxi, 16; D.V.: "the well"), prob. in the Wâdy Themed, S.S.E. of Madâba.

Beer Elim (Is., xv, 8; D.V.: "the well of Elim"); the same as Beer.

Belamon. See Baal Hamon.

Belma. See Baal Hamon.

Belmen (Judith, iv, 4 omitt. in Vulg.), between Bethoron and Jericho.

Benejaacan (Num., xxxiii, 31), Bîrein, north of Cades.

Benennom (II Par., xxviii, 3), valley S. of Jerusalem. See JERUSALEM.

Beon (Num., xxxii, 3). See Baalmeon.

- Bera* (Judges, ix, 21), prob. El-Bîreh, N. of Jerusalem.
- Berdan* (Gen., xxi, 32; D.V.: "well of oath"), Tell el-Qady, W.S.W. of Bersabee.
- Berea* (I Mach., ix, 4), commonly identified with El-Bîreh.
- Beræa* (q.v.).
- Beromi* (II Kings, xxiii, 31), the same as Bahurim.
- Beroth* (q.v.)
- Berotha* (II Kings, viii, 8), Bereitân, S. of Baalbek.
- Bersabee* (q.v.).
- Besecath* (IV Kings, xxii, 1). See Bascath.
- Besor*, a river S.W. of Gaza, prob. Wâdy esh-Sherî'a.
- Bessur* (Jos., xv, 58). See Bethsur.
- Betane* (Judith, i, 9; omitt. in Vulg.), a name poss. misspelled, points to a place S. of Jerusalem.
- Bete* (II Kings, viii, 8; I Par., xviii, 8, has Thebath), possibly Tâyibeh, on the road from Hamath to Aleppo; or more prob. Tâyibeh, S. of Baalbek.
- Beten* (Jos., xix, 25; Aser): El-Bâneh, E. of Acre.
- Bethabara*. See BETHANY BEYOND THE JORDAN.
- Bethacad* (IV Kings, x, 12; D.V.: "shepherd's cabin"), more prob. a proper name: Beit Qād, betw. Mt. Gelboe and Jenîn.
- Bethacarem* (Jer., vi, 1; II Esd., iii, 14; Juda), also *Bethacharam*. Unknown; supposed to be some place on the Jebel el-Fureidis, S.E. of Bethlehem.
- Bethanan* (III Kings, iv, 9; Benjamin), perhaps Beit 'Ănân, W. of Nebi Samwîl.
- Bethanath* (Jos., xix, 38; Nephtali), prob. 'Ainîta, near Cades of Nephtali.
- Bethany* (q.v.).
- Bethanoth* (Jos., xv, 59; mount. of Juda), Kh. Beit'Anun, N.E. of Hebron.
- Betharaba* (Jos., xv, 6, etc.; E. of Juda), unknown; must have been in the neighbourhood of Jericho.
- Betharam* (Jos., xiii, 27). See BETHARAN.
- Betharan* (q.v.).
- Beth Arbel* (Osee, x, 14; D.V. "the house of him that judgeth Baal"), prob. the same place as Arbella.
- Bethaven* (Gen., xii, 8): poss. Kh, Haiyân, also called El-Jîr, E. of Beitîn. -- I Kings, xiii, 5, *Bethoron* should probably be read instead of *Bethaven*.
- Bethazmoth* (I Esd., ii, 24). See Azmaveth.
- Beth Baal Meon* (Moabite Stone, line 30). See Baalmeon.
- Bethbera* (Judges, vii, 24), a ford of the Jordan, either N. of the confluence of the W. Jalûd, or in the neighbourhood of Jericho.
- Bethberai* (I Par., iv, 31; Simeon), poss. Bîrein, betw. Cades and Khalasa.
- Bethbessen* (I Mach., ix, 62), prob. the same place as Beth Hagla.
- Bethchar* (I Kings, xvii, 11), an unknown place in the neighbourhood of Maspha of Benjamin.
- Bethdagon* (q.v.).

Beth Deblathaim (Jer., xlvi, 22; D.V.: "the house of Deblathaim"; Moabite Stone, line 30). See Deblathaim.

Beth Eden (Amos, i, 5; Lebanon). Some: Jusieh el-Kadimeh; others: Beit el-Jaune, between Banîyas and Damascus.

Bethel, 1 see s.v. -- 2 (Jos., xii, 16; Simeon) another name for Bethul.

Bethemec (Jos., xix, 27; Aser), prob. 'Amqâ, N.E. of Acre.

Bether (Cant., ii, 17; mount. of Juda), Kb. Bettîr, S.W. of Jerusalem, the last stronghold of the Jewish rebels in the second century.

Beth Esel (Mich i, 11: D.V. "the house adjoining"), perhaps the same place as Asal (Zach., xiv, 5); some place it E. of Mt. Olivet; some others S. of Jerusalem; some, finally, in the Sephela.

Bethgader (I Par., ii, 51). See Gader.

Bethgamul (Jer., xlvi, 23; Moab), Kh. Jemâil, N.E. of Dibân.

Beth-Haggan (IV Kings, ix, 27; D.V.: "gardenhouse"), prob. the same as Engannim, i.e. Jenîn.

Beth Hagla (Jos., xv, 6, etc.; Benjamin): Qasr Hajlâ, S.E. of Jericho.

Beth Hammerhaq (II Kings, xv, 17; D.V. "afar off from the house") likely the name of some place in the Cedron Valley.

Bethjesimoth (Jos., xiii, 30), Bethsimoth (Num., xxxiii, 49), Kh. Suweimeh, in the Ghôr, 1¼ m. N. of the Dead Sea, 2 m. E. of the Jordan.

Beth Le 'āphrah (Mich. i, 10; D.V.: "the house of Dust"), el-Thaiyeb, N.E. of Beitin.

Beth Lebā'ôth (Jos., xv, 32), perhaps the same as Bethberai.

Bethlehem (q.v.).

Bethmaacha. See Abel.

Bethmaon. See Baalmeon.

Bethmarchaboth (Jos., xix, 5; S. Simeon; Jos., xv, 31, has Medemena). If we should distinguish, Bethmarchaboth might poss. be El-Merqeb, S.W. of the S. end of the Dead Sea.

Beth Millo (Judges, ix, 6), probably some stronghold in the neighbourhood of Sichem, perhaps Kh. ed-Duārah, S. of Nāplûs.

Bethnemra (Num., xxxii, 36, etc.), Tell-Nimrîn, on the Wâdy Nimrîn.

Bethoron, two cities of Ephraim, about 12 m. N.W. of Jerusalem: Upper Bethoron, Beit 'Ur el-Fôqâ, to the E.; and Lower Bethoron, Beit Ur el-Tahtâ, to the W. -- In I Mach., iv, 29, Bethsur should be read instead of Bethoron.

Bethphage (Matt., xxi, 1; Luke, xix, 29), on Mt. Olivet, near the road from Jerusalem to Jericho; poss. Habalat el-'Amîrâ, or Kehf Abu Laiân.

Bethphalet (Jos., xv, 27; II Esd., xi, 26; S. Juda). Also *Bethphelet*. Unknown.

Bethpheses (Jos., xix, 21; Issachar), in the neighbourhood of Jenîn. Unknown.

Bethphogor (Deut., iii, 29, D.V. "temple of Phogor"; A.V. Bethpeor), prob. an abbreviation for Beth Beelphegor. See BEELEHEGOR.

Bethsaida (q.v.).

Bethsames, 1 (Jos., xv, 10, etc.; Dan); also *Bethsemes* (I Par., vi, 59): 'Ain-Shems, 15 m. W. of Jerusalem. -- 2 (Jos., xix, 22; Issachar), possibly 'Ain esh-Shemsiyeh, S. of Beisân; or Kh. Shemsin, S. of the L. of Tiberias. -- 3 (Jos., xix, 38; Nephtali), perhaps Kh. Shem'â (?), W. of Sâfed.

Bethsan (q.v.).

Bethsetta (Judges, vii, 23), possibly Shuttah, N. W. of Beisân.

Bethsimoth. See Bethjesimoth.

Bethsur, *Bethsura* (Jos., xv, 58, etc.; mount. of Juda), Beit-Sûr, N. of Hebron.

Beththaphua (Jos., xv, 53; mount, of Juda), Taffuh, W. of Hebron.

Bethul (Jos., xix, 4, etc.; Simeon), perhaps Beit-Ulâ, N.W. of Hebron (doubtful).

Bethulia (q.v.).

Bethzachara (I Mach., vi, 32, 33): Beit-Skâria, S.W. of Bethlehem.

Bethzecha (I Mach., vii, 19), a much controverted site. Some think that it is the hill of Bezetha, which was enclosed within the walls of Jerusalem by Herod Agrippa.

Betomesthaim (Judith, iv, 6; omitt. in Vulg.): Kh. Umm el-Bothmeh, S. of Jenîn.

Betonim (Jos., xiii, 26; Gad): Batneh, 4 m. S. of Es-Salt.

Bezec, 1 (Judges, i, 4), possibly Bezqâh, S.E. of Lydda; some, however, think the text corrupt, and would read Azeca. -- 2 (I Kings, xi, 18; Issachar): Kh. 'Ibzîq, on the road from Naplûs to Beisân.

Bokim (Judges, ii, 1, 5), unknown place near or at Bethel.

Bosor, 1 (Deut., iv, 43, etc.; Moab. S., l. 27), prob. Qesûr el-Besheir, S.W. of Dibân. -- 2 (I Mach., v, 26, 36), very likely Busr el-Harîrî, in the Ledjah. -- 3 (I Mach., v, 28): Bosra in Hauran. See BOSTRA.

Bosphorus (Abd., 20). So Vulg. and the versions thereof, for Sepharad.

Bosra, 1 (Is., lxiii, 1; Edom): Buseireh, S. of the Dead Sea. -- 2 (Jos., xxi, 27), mistranslation for Astaroth. -- 3 (Jer., xlviii, 24): Bosor, 1.

Bubastus (Ezech., xxx, 17), Egypt.: *Pi-Beset*; Tell el-Basta, N.E. of Cairo.

Cabseel (Jos., xv, 21; S. Juda). Unknown.

Cabul (Jos., xix, 27; Aser): Kabûl, S.E. of Acre.

Cademoth (Deut., ii, 26, etc.), also *Cedimoth*. Seems to have been N. of the Arnon; poss. Umm Ressâs.

Cades (q.v.).

Cadumim (Judges, v, 21), perhaps not a proper name; possibly also a corrupt. of the text for Cades: "torrent of Cades" (of Nephtali), another name for the Cison.

Cæsarea. See CÆSAREA PALÆSTINÆ; C. PHILIPPI.

Calano (Gen., x, 10; Is., x, 9; Amos, vi, 2), in S. Babylonia, perhaps mod. Zerghûl.

Caleb Ephrata (II Par., ii, 24). So Heb.; most probably Sept. and Vulg. are right in translating: "Caleb went to Ephrata".

Camon (Judges, x, 5), a town E. of the Jordan, in the neighbourhood of Pella: Qimeim or Tabekat-Fakîl.

Cana (q.v.).

Canath (Num., xxxii, 42). See CANATHA.

Caphara (Jos., ix, 17, etc.; Benjamin), also *Caphira*, *Cephira*: Kh. Kefîreh, W. of Nebi Samwîl.

Capharnaum (Matt., iv, 13, etc.), on the L. of Tiberias; identified by some with Tell Hûm, on the W. shore; by others with Minieh, S.W. of Tell Hûm.

Capharsalama (I Mach., vii, 31) was likely near Jerusalem. Unknown.

Carcaa (Jos., xv, 3; S. Juda); W. of Cades. Unknown.

Carehim (I Par., xii, 6) is not, as would seem at first sight, a place-name, but a gentile name.

Carem (q.v.).

Cariath (Jos., xviii, 28; Benjamin), prob. for Cariathiarim.

Cariathaim, 1 (Gen., xiv, 5, etc.): Qreiyat, 10 m. S.W. of Madaba. -- 2 (I Par., vi, 76; Nephtali).

Unknown. jos., xxi, 32, has Carthan, instead of Cariathaim.

Cariatharbe. See HEBRON.

Cariathbaal. See Cariathiarim.

Cariath Chuzoth (Num., xxii, 39), a place between the Arnon and Bamothbaal. Unidentified.

Cariathiarim (N.W. Juda), also called *Cariathbaal*, *Cariath*: Qaryet el-'Enâb, or Abu-Gosh, W. of Jerusalem.

Cariathsenna. (Jos., xv, 49). See Dabir 1.

Cariathsepher (Jos., xv, 15; Judges, i, 12). See Dabir 1.

Carioth, 1 (Jos., xv, 25; S. Juda), rather *Carioth Hesron*, the birthplace of Judas, "the man of Carioth": Kh. el-Qureitein, S. of Hebron. -- 2 (Amos, ii, 2; Jer. xlvi, 24, 41; Moabite Stone, 1. 13; Moab): prob. Er-Rabbâh.

Carmel (Jos., xv, 55; I Kings, xv, 12, etc.; S. Juda): El-Kermel, S. of Hebron.

Carnaim (I Mach., v, 26, etc.; Transjord.), the same, according to some, as Astarothcarnaim; others identify it with Sheikh-Sââd, near Astarothcarnaim.

Carnion (II Mach., xii, 21, 26). Many identify it with Carnaim; some with Qrein, in the Ledjah.

Cartha (Jos., xxi, 34; Zabulon), poss. Kh. Qîreh.

Carthan (Jos., xxi, 32), perhaps another name for Cariathaim 2.

Casaloth (Jos., xix, 8; Issachar), most probably the same as Ceseleth-Thabor.

Casbon (I Mach., v, 36), very likely identical with *Casphin* (II Mach., xii, 13): Khisfîn, N. of the Yarmûk, and E. of the L. of Tiberias.

Casphin. See Casbon.

Casphor (I Mach., v, 26), the same as Casbon.

Cateth (Jos., xix, 15; Zabulon), also *Cathed*, probably to be identified with Cartha.

Cauda (Acts, xxvii, 16; A.V. Clauda), a small island where St. Paul landed after leaving Crete; most probably the island of Gauda, S. of Crete, although some, though with little reason, would have it to be the island of Gozo, near Malta.

Cedes (q.v.).

Cedimoth (Jos., xiii, 18). See Cademoth.

Cedron, 1 (1 Mach., xv, 39; xvi, 9), prob. Qatra, S.E. of Yebnâ and S.W. of 'Aqîr -- 2 A torrent E. of Jerusalem: Wâdy Sitti Maryam. See JERUSALEM.

Ceelatha (Num., xxxiii, 22), station of the Israelites on their journey from Sinai to Cades; prob. Contellet Qureyeh.

Ceila (Jos., xv, 44, etc.; middle of Juda): Kh. Qîlâ, N.W. of Hebron.

Celesyria (or Cœle-Syria. -- I Mach., x, 69, etc.), the valley between Lebanon and Anti-Lebanon: El-Beqâ'a.

Cellon (Judges, ii, 13), perhaps the country watered by the Chalos river (Nahr Kuâik), which flows through Aleppo.

Cenchræ (Acts, xviii, 18; A.V. Cenchrea), seaport of Corinth.

Cenereth, *Ceneroth*. See GENESARETH.

Cenezites, a clan named among the inhabitants of Palestine in patriarchal times (Gen., xv, 19); their original settlements were probably in Mt. Seir (Edom).

Cenneroth. See GENESARETH.

Cephira (I Esd., ii, 25; II Esd., vii, 29). See Caphara.

Cerethi (I Kings, xxx, 14, etc.); a tribe settled on the S. border of Canaan, and closely associated with the Philistines. Some think it originated in Crete.

Ceseleth-thabor (Jos., xix, 12): 'Tksâl, W. of Mt. Thabor.

Cesil (Joe., xv, 30), a mistaken form for Bethul.

Cesion (Jos., xix, 20; xxi, 28), See CEDES.

Cethlis (Jos., xv, 40; plain of Juda). Unknown.

Chabul (III Kings, ix, 13), name which seems to be ironical: "thorn land", given by Hiram, King of Tyre, to the twenty cities of Galilee handed over to him by Solomon; these cities very likely belonged to N. Aser and Nephtali.

Chalane (Gen., x, 10, etc.). See Calano.

Chaldee. See BABYLONIA.

Chale (Gen., x, 11, 12), city in the neighbourhood of Ninive; Assyr.: Kalhu or Kalah: Nimrûd, at the confluence of the Tigris and the Upper Zab.

Chali (Jos., xix, 25; Aser): prob. Kh. 'A1ya, N.E. of Acre.

Chamaam (Jer., xli, 17), name of a caravanserai in the neighbourhood of Bethlehem. Site unidentified.

Chanath (Num., xxxii, 42). See CANATHA.

Characa (II Mach., xii, 17; Transjord.). Some: El-Harâk, N.W. of Bosra; others: Arâq el-'Emîr, also El-Kerak. Perhaps not a proper name.

Charan, 1 (Judges, v, 9; Acts, vii, 2, 4). See Haran. -- 2 (Tob., xi, 1). The Greek *Textus Receptus* gives here no place-name. Impossible to determine the true reading.

Charcamis. See HETHITES.

Chasphia (I Esd., viii, 17), town or region inhabited by an important colony of exiled Jews. Unknown.

Chebbon (Jos., xv, 40; Juda): El-Qubeibeh, S.W. of Eleutheropolis.

Chebron (I Mach., v, 65), for HEBRON.

Chellus (Judith, i, 9; omitt. in Vulg.), prob. Khalasah, S.W. of Bersabee and N. of Cades.

Chelmad (Ezech., xxvii, 23); poss. a town; in that case might be Chelmadeh, near Bagdad; or a region -- Carmania; possibly also might be translated "as a disciple."

Chelmon (Judith, vii, 3, in Greek only), a town near Bethulia, likely Tell-Qaimûn, E. of Mt. Carmel; or Kumieh, between the Little Hermon and Mount Gelboe.

Chene (Ezech., xxvii, 23). The Heb. has *Kalneh*. See Calano.

Cherub (I Esd., ii, 59; II Esd., vii, 61); the complete name was *Cherub Addon-Immer*. Unknown.

Cheslon (Joe., xv, 10; N.W. Juda). Keslâ.

Chobar, a river in "the land of the Chaldeans", commonly identified with the mod. Chabûr; but the names have roots absolutely different, and the position seems unsatisfactory. Perhaps we should see here one of the canals with which Babylonia was seamed, poss. the Nahr Malcha, or King's Canal, of Nabuchodonosor.

Chorazin, A.V. for Corozain.

Chub (Ezech., xxx, 5). Great divergences exist as to its identification. Some suggest Cobe, near the Indian Ocean; others Chobat, in Mauretania, or Cobion, in Mareotica; both these opinions are most unlikely. It has also been proposed to correct the text and read Lûb (Libya); not probable.

One Heb. MS. has *Kenûb* (Egypt. *Keneb*, i.e. S. Egypt). Nothing can be said with certainty.

Chun (I Par., xviii, 8). In the parallel text of II Kings, viii, 8, instead of Chun, we find Berothai. If Chun was a distinct city, it might be recognized in Kûnâ, S.W. of Baalbek.

Chus (Judith, vii, 8; omitt. in Vulg.): poss. Qûzâ, 5 m. S. of Naplûs.

Cibsaim (Jos., xxi, 22; Ephraim), perhaps the same as Jecmaam (I Par., vi, 68). Tell el-Qabans, near Bethel, has also been suggested, but the identification is very doubtful.

Cina (Jos., xv, 22; S. Juda). Unknown.

Cineans (Gen., xv, 19, etc.), a clan closely allied to Israel, perhaps also to the Madianites. Its home seems to have been in the S. of Juda; however, we see in Judges, iv, 11, that Heber the Cinean dwelt in the plain of Esdrelon.

Clauda A.V. for Cauda.

Coa (Ezech., xxiii, 23); Assy.: *Ku (tu)* or *Gu (tu)* perhaps the same word as rendered in Hebrew *Gôyîm*, Gen. xiv, 1. A country in the neighbourhood of Babylonia and Elam. Unidentified.

Colossae (q.v.).

Corinth (q.v.).

Corozain (Matt. xi, 21; Luke, x, 13), prob. Kh. Kerâzeh, N. of the L. of Tiberias.

Cos (I Mach., xv, 23; Acts, xxi, 1), an island in the Ægean Sea: mod. Stanko.

Culon (Jos., xv, 59, in Greek; omitt. in Heb. and Vulg.; Juda) prob. Qoloniyyeh.

Cutha (IV Kings, xvii, 24); cuneif. *Gudua*, *Gudu*, *Kutu*; identif. with Tell Ibrahim, N.E. of Babylon.

Cyprus (q.v.).

Cyrene (q.v.).

- Dabereth* (Jos., xix, 21, etc.; Zabulon), Deburîyeh, W., and at the foot of Mt. Thabor.
- Dabir*, 1 (Jos., xi, 22, etc.; S. Juda) the same as *Cariathsenna* and *Cariathsepher*: most prob.
- Darherîyeh, S.S.W. of Hebron. -- 2 (Jos., xv, 7; N. Juda): poss. Toghret ed-Debr.
- Dalmanutha* (Mark, viii, 10): perhaps El-DeIhamîyeh, S. of the L. of Tiberias, on the left bank of the Jordan.
- Damascus* (q.v.).
- Damna* (Jos., xxi, 35; Zabulon; in the parallel passage, I Par., vi, 77, Heb. 62, Remmono). The true name is doubtful; poss. Rummâneh, N. of Nazareth.
- Dan* (q.v.).
- Danna* (Jos., xv, 49: mount. of Juda). Unknown.
- Daphca* (Num., xxxiii, 12, 13,) station of the Israelites on their journey from the Red Sea to Sinai: poss. Tabacca, near the Wâdy Lebweh.
- Daphne* (II Mach., iv, 33), a sacred grove and shrine near Antioch of Syria.
- Dathema* (I Mach., v, 9; Transjord.), either Er-Remtheh, or El-Hosn, S.W. of the Yarmûk.
- Debbaseth* (Jos., xix, 11; Zabulon). Some: Jebâta, S.W. of Nazareth; others: Kh. ed-Dabsheh, or Zebdâh.
- Debera* (Jos., xv, 7). See *Dabir* 2.
- Deblatha* (Ezech., vi, 14), in the land of Emath; prob. the same as Reblatha (Jer., xxxix, 5, 6).
- Deblathaim* (Jer., xlvi, 22; D.V.: "house of Deblathaim"; Moabite Stone, l. 30: *Diblathan*): Ed-Dleilet el-Gharbiyeh (Musil), doubtful.
- Decapolis* (q.v.).
- Delean* (Jos., xv, 38; Plain of Juda). Unknown.
- Delos* (I Mach., xv, 23), an island in the Ægean Sea.
- Denaba* (Gen., xxxvi, 32; I Par., i, 43; Edom). Unidentified.
- Derbe* (Acts, xiv, 6, etc.), a town in Lycaonia; not identified.
- Dessau* (II Mach., xiv, 16; Judea). Unknown.
- Dibon* (q.v.).
- Dimona* (Jos., xv, 22; S. Juda; the same is called, prob. by a copyist's mistake, Dibon, in II Esd., xi, 25): Kh. et-Teibeh.
- Diospolis*. Greek name of Lod. See SEBASTE, DIOCESE OF.
- Dizahab* (Deut., i, 1; D.V. "where there is very much gold"). The name of a station of the Israelites; poss. Ed-Dhejbeh.
- Doch* (I Mach., xvi, 15): Ain-Dûk, N.W. of Jericho.
- Dommim*. See Phesdommim.
- Dor* (Jos., xi, 2, etc.; Aser), Assyr. *Duru*: Tantûra, on the Mediterranean shore, S. of Mt. Carmel.
- Dora* (I Mach., xv, 11). See *Dor*.
- Dothain*, *Dothan* (Gen., xxxvii, 17, etc.), Tell Do-thân, betw. Sebastîyeh and Jenin.
- Duma* (Jos., xv, 52; S. Juda): Kh. Dômeh, S.W. of Hebron.

Dura (Dan., iii, 1), plain S.E. of Babylon; the name is preserved in the Teful (hills) Dûra, and Nahr Dûra.

Ecbatana, 1 (I Esd., vi, 2), capital of Major Media: Takti Soleiman. -- 2. Capital of the kingdom of Cyrus: Hamadan.

Edema (Deut., ix, 23; Nephtali), prob. Kh. 'Admâh, on the right bank of the Jordan, below the confluence of the Yarmûk. Some, however, identify it with Damîyeh, W. of the L. of Tiberias.

Eder (Jos., xv, 21; S. Juda), either Eh. el-'Adar, or Kh. Umm Adreh.

Edom. See IDUMEA.

Edrai, 1 (Num., xxi, 33; E. Manasses): Der'at. -- 2 (Jos., xix, 37; Nephtali): Yã'ter, half way between Tyre and L. Hûleh.

Eglon (Jos., x, 3, etc.; plain of Juda): Kh. Ajlan, W. of Beit-Jibrîn.

Ekron, A.V. for Accaron.

Elam (q.v.).

Elath (Deut., ii, 8, etc.), seaport on the 'Aqâba Gulf: mod. 'Aqâba.

Elcesi, or rather *Elqosh*, birthplace of the prophet Nahum. Some deem it to be El-Kauze, in Nephtali; others, Qessîyeh, S.E. of Beit-Jibrîn, in the Sephela.

Eleale (Is., xv, 4, etc.; Moab): El-'Al, N. of Hesbân.

Eleph (Jos., xviii, 18; Benjamin). Unknown.

Eleutheropolis (q.v.), Greek name of Beit-Jibrîn.

Eleutherus, river dividing Syria from Phœnicia: Nahr el-Kebir.

Elim (Ex., xvi, 1, etc.), station of the Israelites on their journey from the Red Sea to Sinai: somewhere about the Wâdy Gharandel.

Ellasar (Gen., xiv, 19): prob. Larsa, Larissa of the Greeks, on the left bank of the Euphrates, in Lower Babylonia.

Elmelech (Jos., xix, 26; Aser); Egypt. *Retemaraka* probably in the neighbourhood of Wâdy el-Mâlek, a tributary of the Cison (A.V. Kishon).

Elon (Jos., xix, 43; Dan): either Beit-'Ello, or more prob. Ellîn.

Eltecon (Jos., xv, 59; mount. of Juda), Thecue, birthplace of Amos, according to St. Jerome (little prob.). Unidentified.

Elthece (Jos., xix, 44, etc.; Dan); also *Eltheco*: Assy.: Altaquu, in the neighbourhood of Accaron. Not identified.

Eltholad (Jos., xv, 30; S.W. Juda). Unknown.

Elymais (II Mach., ix, 2), not a town, but the prov. Elymais is meant; although a city, poss. Susa, is alluded to in the context.

Emath, 1. Egypt.: Hamt(u); Assy.: Amaatti; Epiphania of the Greeks: Hamah, on the Orontes. -- 2 (Jos., xix, 35; Nephtali): prob. El-Hammân, S. of Tiberias.

Emath Suba (II Par., viii, 3), possibly the country of Emath 1.

Emer. See Cherub.

Emmaus (q.v.).

- Emmer* (I Esd., ii, 59; Esd., vii, 61). See Cherub.
- Emona* (Jos., xviii, 24; Benjamin), poss. Kh. Kefr 'Anâ, N. of Beitin.
- Enaim* (Gen., xxxviii, 14, etc.; plain of Juda), near Odollam; but unknown.
- Enan*, rather *Hasar Enan*, "the village of Enan" (D.V., Num., xxxiv, 9, etc.). Some: Qiryatein, on the road from Damascus to Palmyra; others, and more prob.: Hazûreh, near Banîas.
- Endor* (I Kings, xxviii, 7; Issachar): 'Endor, S. of Mt. Thabor.
- Engaddi* (q.v.), W. shore of the Dead Sea, towards the middle: 'Ain Jîdî.
- Engallim* (Ezech., xlvi, 10): poss. 'Ain el-Feshkhâh, N.W. shore of the Dead Sea; or 'Ain Hajlâh.
- Engannim*, 1 (Jos., xv, 34; plain of Juda): perh. Beit el-Jemal. -- 2 (Jos., xix, 31; xxi, 29; Issachar): Jenîn, S. of Zerâ'în.
- Enhadda* (Jos., xix, 21; Issachar): prob. Kefr 'Adan, N.W. of Jenîn.
- Enhasor* (Jos., xix, 37; Nephtali): Kh. Hazîreh, W. of L. Huleh.
- Ennom* (Valley of). See JERUSALEM.
- Ennon*. See ÆNON.
- Enon*. See Enan.
- Ensemes* (Jos., xv, 7; xviii, 7), generally recognized in Ain el-Hâûd, or "Apostles' Spring" of the Christians on the road from Jericho to Jerusalem.
- Epha* (Is., lx, 6), a branch of the Madianites, prob. settled in N. Arabia.
- Ephes Dammim* (I Kings, xvii, 1). See Phesdommim.
- Ephesus* (q.v.).
- Ephra*, 1 (Judges, vi, 11, etc.; W. Manasses), birthplace of Gedeon: perhaps Et-Tayebeh, between Mt. Thabor and Beisân. -- 2 (Jos., xviii, 23; I Kings, xiii, 17, etc.; Benjamin): Et-Tayebeh, N.E. of Beitîn.
- Ephrata* (Gen., xxxv, 16, etc.), surname of Bethlehem, poss. the name of the surrounding region.
- Ephrem*. See Ephra 2.
- Ephron*, 1 (Jos., xv, 9). A mountain district on the N. border of Juda, between the spring of Nephtoa and Cariathiarim. -- 2 (II Par., xiii, 19). See Ephra 2 -- 3. (I Mach., v, 46; II Mach., xii, 27; Transjord.), a city perhaps identical with Gephirus of Polyb. (V. lxx, 12). The site is unknown, but was likely in the Wâdy el-'Arab, or the straits of the Sheri 'at el-Mand-hûr.
- Erek*. See Archi.
- Esaan* (Jos., xv, 22; mount. of Juda). The text is perhaps corrupt and should be read Samma, as I Par., ii, 43: Es-Samîyâh seems to be intended.
- Escol*. A valley with vineyards and pomegranates near Hebron, prob. the Wâdy Beit Iskahîl N.W. of the city.
- Esdrelon*: large plain in the watershed of the Cison (A.V. Kishon).
- Esem*. See Asem.
- Esna* (Jos., xv, 43; plain of Juda): 'Idhnâh, between Beit-Jibrîn and Hebron.
- Esora* (Judith, iv, 4; omitt. in Vulg.) seems to be identical with Hasar of Nephtali.
- Estaol*. See Esthaol.

Esthamo (I Kings, xxx, 28 etc.; mount, of Juda), also *Esthemo*, *Istemo*: Es-Semû'a, S. of Hebron.
Esthaol (Judges, xiii, 25, etc.; plain of Juda): 'Eshû'a, W. of Jerusalem, and S. of Amwas.
Etam, 1 (Jos., xv, 60, etc.; mount. of Juda): prob. near 'Ain Etân, S.W. of Bethlehem, perhaps Kh. el-Khûkh. -- 2 Cave of Etam (Judges, xv, 8), very likely in the neighbourhood of Jerrah, poss. the cave of Marmita, near Deir Aban. 3 (I Par., iv, 32; Simeon), Kh. 'Aitûn, S. of Beit-Jibrîn.
Etham (Ex., xiii, 20; Num., xxxiii, 6), station of the Israelites on their journey from Egypt to Sinai: somewhere E. of El-Gisr.
Ethan ("rivers of", Ps. lxxiii [Hebr. lxxiv], 15), probably not a proper name, but the equivalent for "perennial".
Ether (Jos., xv, 42, etc.; plain of Juda), also *Athar*. In I Par., iv, 32, instead of Ether we read *Thoken*. Possibly Kh. el-'Atr, N.W. of Beit-Jibrîn.
Ethroth (Num., xxxii, 35; Transjord.), prob. in the neighbourhood of Jebel Attarûs, S. of the W. Zerqâ Mâ'in, in Moab.
Euphrates. See PERATÆ.
Ezel (I Kings, xx, 19). An unknown conspicuous rock; perhaps the text is corrupt.
Fair Havens, A.V. for Good-havens.
Gaas (Jos., ii, 9; Ephraim), a mountain N. of which was Josue's tomb: Jebel el-Ghassâneh.
Gabaa, also *Gaba*, *Gabae*, *Gabee*, *Geba*, 1 (Jos., xviii, 24, etc.; Benjamin): Jeba', N.E. of Jerusalem. -- 2 (Jos., xv, 57, etc.; mount. of Juda): poss. Jeba'a, S.W. of Bethlehem. -- 3 (Judges, xix, 20, etc.; Benjamin): poss. Tell el-Fûl, or Kh. es-Sikkeh. -- 4 (Judith, iii, 14; Samaria): perh. Jeba', S. of Tell Dothan.
Gabaa of Benjamin. Gabaa 3.
Gabaa of Saul. Gabaa 3.
Gabaa of Phinees (Jos., xxiv, 33; Ephraim), burial place of Eleazar, Aaron's son: perh. Jibî'a, N.W. of Jifneh.
Gabae (Jos., xxi, 17). See Gabaa 3.
Gabaon (Jos., ix, 3, etc.; Benjamin): El-Jib, N.N.W. of Jerusalem.
Gabathon (Jos., xxi, 23, etc.; Dan), also *Gebbethon*: poss. Qibbîyeh, E. of Lydda.
Gabee (Jos., xviii, 24; I Par., vi, 60). See Gabaa 3.
Gabim (Is., x, 31), wrongly interpreted as a proper name: seems to mean houses scattered in the country, outside of villages.
Gad (q.v.).
Gadara. A city of the Decapolis: Umm Keis, S. of the Yarmûk.
Gader (Jos., xii, 13; S. Palestine), identical with *Bethgader*, I Par., ii, 51; also identified by some with *Gedor*; by others with *Gedera*. Otherwise unknown.
Gaderoth (Jos., xv, 41; II Par., xxviii, 18; plain of Juda), poss. Qatrah, S.E. of Yebna (doubtful).
Gadgad (Num., xxxiii, 32; D.V.: Mount Gadgad), is not a mountain; the Wâdy Ghâdhâghydh, S. of Qureîyeh, on the road from 'Ain Kedeis to the 'Aqâba Gulf, has been proposed, and the identification does not lack probability.

Gador (Jos., xv, 58; mount. of Juda): Jedûr.

Galaad, 1. Country on the E. of the Jordan. -- 2 (Judges, xii, 7) should probably be completed, according to several Gr. Manuscripts: Maspha of Galaad.

Galgal, *Galgala*, 1. Place of the encampment of the Israelites in the Ghôr, commonly recognized in Tell Jeljûl, E. of Jericho. -- 2 (Jos., xii, 23; I Mach., ix, 2), a Canaanite royal city: Jiljulîyeh, N.E. of Jaffa, or Qalqilîyeh, a little to the N. -- 3 (IV Kings, ii, 1, etc.) Jiljilîya, between Beitîn and Naplûs.

Galilee (q.v.).

Gallim, 1 (Jos., xv, 59; omitt. in Heb. and Vulg.) Beit Jâlâ, between Bettîr and Bethlehem. -- 2 (I K., xxv, 44; Is., x, 30; Benjamin) Kh. el-'Adâse, or Beit Lejâ, N. of Jerusalem. -- 3 (Is., xv, 8; Moab) Unknown; located by the Onomasticon 8 m. S. of Areopolis.

Gamzo (II Par., xxviii, 18): Jimzu, S.E. of Lydda.

Gareb (Jer., xxxi, 39), a hill in or near Jerusalem. From the text it would seem the Jebel Neby Daûd is intended; many, however, identify it with J. Abû Tôr.

Garizim, mountain in the neighborhood of Sichem: J. et-Tôr, S. of Naplûs.

Gaulon (Jos., xx, 8, etc.; E. Manasses), also *Golan*: probably Sâhem el-Jôlân, N. of the Wâdy el-Ehreir.

Gaza (q.v.).

Gazara (I Mach., vii, 45 etc.), later name for Gazer 1.

Gazer, 1. Tell Jezer, S. of Lydda. -- 2. See Jazer.

Gazera (I Par., xiv, 16). See Gazer 1.

Geba. See Gabaa 1.

Gebal. See BYBLOS.

Gebbar (I Esd., ii, 20), for Gabaon.

Gebbethon. See Gabathon.

Gedera (Jos., xv, 36; Sephela): poss. Kh. Jedîreh, S.E. of Lydda; or Qatrâ, S.E. of Jabneh.

Gederothaim (Jos., xv, 36), poss. another reading for Gedera.

Gedor, 1 (Jos., xv, 58; mount. of Juda) Kh. Jedûr, between Bethlehem and Hebron. -- 2 (I Par., xii, 7) Perhaps Gedor 1. -- 3 (I Par., iv, 39) Unknown. Some think Gerara is intended. -- 4 (I Mach., xv, 39). See Cedron 1.

Genesar. See GENESARETH.

Genesareth (q.v.).

Gerara (Gen., x, 19, etc.). A city on the S.W. border of Palestine, commonly identified with Kh. Umm Jerâr, S. of Gaza.

Gerasa, 1 (Transjord.), Jerash. See GERASA. -- 2 A city supposed by Matt., viii, 28, etc. (original text somewhat doubtful): poss. Kuren Jerâdeh, N. of the Wâdy Fîk, E. of the L. of Tiberias.

Gerisim, A.V. for Garizim.

Gessen. Region in Lower Egypt, between the Pelusian arm of the Nile and the wilderness.

Gessur (I Kings, xxvii, 8, etc.), a region the location of which is much disputed. Some think it to have been in the S. of Palestine (Cheyne); others locate it in the N. Jôlân, even in the Ledjâh.

Gethaim (II Kings iv, 3; II Esd., xi, 33; in or near Benjamin), identified by some with Ramleh.

Gethhepher (Jos., xix, 13, etc.; Zabulon): El-Meshhad, N.E. of Nazareth.

Gethremmon, 1 (Jos., xix, 45, etc.; Dan) possibly identical with Gethaim. -- 2 (Jos., xxi, 25; W. Manasses; -- I Par., vi, 70, Heb. 55, *Balaam*). If the text of Jos. be preferred, Gethremmon might possibly be *Kefr Rummân*, N.W. of *Sebastîyeh*.

Gethsemani (q.v.).

Gezer, *Gezeron*. See *Gazer*.

Gibeon, A.V. for *Gabaon*.

Gideroth. See *Gaderoth*.

Gihon. See *JERUSALEM*.

Gilo (Jos., xv, 51; mount. of Juda), birthplace of Achitophel; unlikely supposed by some to be Kh. Jâlâ, or Beit Jâlâ, near Bethlehem; really unknown.

Gnidus (I Mach., xv, 23; Acts, xxvii, 7), a city in Caria.

Gob (II Kings, xxi, 18, 19). Unknown. Perhaps the text is corrupt.

Golan. See *Gaulon*.

Golgotha. See *JERUSALEM*.

Gomorrha (Gen., xiv, 2, etc.), a city of the Pentapolis. Site unknown.

Good-havens (Acts, xxvii, 8), Kalo Limniones, E. of C. Matala, on the S. coast of Crete.

Gortyne (I Mach., xv, 23), a city in Crete.

Goaen (Jos., xv, 51; mount. of Juda). Unknown.

Gullath (Judges, i, 15; D.V. "the Upper and the Nether watery ground"); proper names, poss. referring to *Seil ed-Dilbeh*.

Gurbaal (II Par., xxvi, 7): Tell el-Ghûr, N. of Bersabee.

Habor (q.v.).

Haceldama. See *JERUSALEM*.

Hachila (I Kings, xxiii, 19, etc.), a hill on the S. of the wilderness of Ziph (Juda): might be *Dahr el-Kôlâ*, although the identification is by no means certain.

Hadassa (Jos., xv, 37; plain of Juda), perh. 'Ebdîs, or 'Eddîs, E. of Ascalon.

Hadid (I Esd., ii, 33), identical with *Adiada*.

Hadrach (Zach., xi, 1); Assyr.: *Hatarika*, *Hataraka*, a town in Syria; unknown.

Hai, 1 (A.V. Gen., xii, 8, etc.), prob. Kh. Haiyân, E. of Beifîn. -- 2 (Jer., xlix, 3), prob. an Ammonite city. Unknown.

Hala (IV Kings, xvii, 6; xviii, 11), a place of exile of the Israelites in Assyria; Assyr.: *Halahhu* perh. Gla or Kalah, near the source of the Khabur.

Halcath (Jos., xix, 25; xxi, 31): Yerkâ, N.E. of Acre.

Halhul (Jos., xv, 58; mount. of Juda): Halhûl, N. of Hebron, near Beit Sûr.

Halicarnassus (q.v.).

Hammoth Dor (Jos., xxi, 32). See Hamon 1.

Hamon, 1 (I Par., vi, 76, Heb. 61; Nephtali): El-Hammâm, on the W. shore of the L. of Tiberias. -- 2 (Jos., xix, 28; Aser), poss. Kh. el-'Awâmîd, S. of Tyre.

Hanathon (Jos., xix, 14; N. Zabulon): perh. Kefr' Anân.

Hanes (Is., xxx, 4), Egypt. *Hininsu*; Assy.: *Hiniinshi*: a city in the Delta of the Nile, prob. Heracleopolis Parva of the classics: Ahnâs el-Medîneh.

Hapharaim (Jos., xix, 19; Issachar), Egypt. *Hapurama*; Kh. el-Farrîyeh, between Mt. Carmel and Lejûn.

Haran. A town in Mesopotamia: Assy.: *Harranu*, on the river Belikh, a confluent of the Euphrates.

Hares (Judges, i, 35). The exact name is doubtful; moreover Hares is equivalent to Shemesh (Sun); hence Har Heres, 'Ir Shamesh, and Beth Shamesh might be three forms of one name. After all, the name might not indicate a hill, but a village: 'Ain Shems.

Harma. See Horma 1.

Haroseth (Judges, iv, 2): El-Harîfîyeh, on the right bank of the Cison, between Haifa and Nazareth.

Hasarsuhal (Jos., xv, 28 etc.; S. Juda). Unknown.

Hasarsusim (Jos., xix, 5; S. Simeon); might be Sûsîn or Beit Sûsîn, on the road from Gaza to Egypt.

Haserim (Deut., ii, 23), a common name meaning "the villages": Arab. Dwar.

Haseroth (Num., xi, 35), a station of the Israelites in their journey from Mt. Sinai to Cades: 'Ain Hadrâ, about eighteen hours N.E. of Mt. Sinai.

Hasersual. See Hasarsuhal.

Hasersusa. See Hasarsusim.

Hassemon (Jos., xv, 27; S. Juda). Unknown.

Havoth Jair. A group of cities E. of the Jordan in Galaad, Argob, and Basan.

Hebal, a mountain in the Ephraim range, N. of Naplûs, over against Mt. Garizim: Jebel Slîmâh.

Hebron (q .v.).

Hebrona (Num., xxxiii, 34), a station of the Israelites on their journey from Egypt to the Holy Land: near Asiongaber.

Helam (II Kings, x, 16, 17), an unknown Ammonite city.

Helba (Judges, i, 31). See Ahalab.

Helbon (Ezech., xxvii, 18), a town in Syria renowned for its wine: Helbûn, on the E. slope of Anti-Lebanon, 12 m. N.W. of Damascus.

Helcath. See Halcath.

Heleph (Jos., xix, 33; Nephtali), poss. Beit Lîf, halfway between L. Hûleh and the sea.

Heliopolis. See BAALBEK.

Helmondeblathaim. See Deblathaim.

Helon, 1 (I Par., vi, 58, Heb. 43, Gr. 57). See Holon. -- 2 (I Par., vi, 69, Heb. 54), for Aialon. -- 3 (Jer., xlviii, 21; Ruben). Unknown.

Hemath (I Par., xviii, 3, 9). See Emath.

Henoch (Gen., iv, 17), the first city built by Cain and called after his first-born son; of course, entirely unknown.

Herma. See *Horma* 1.

Hermon. Mountain range on the N. border of Israel: Jebel el-Sheikh, or J. et-Telj.

Hesebon (Num., xxi, 26, etc.; Moab). Hesbân.

Heser (III Kings, ix, 15), the same as *Asor* 1.

Heshbon, A.V. for *Hesebon*.

Hesmona (Num., xxxiii, 29; xxxiv, 4), station of the Israelites on their way from Cades to Asiongaber: in the neighbourhood of 'Ain Kômeh.

Hesron, 1 (Jos., xv, 3; S. Juda), prob. some *Hasar*. Unidentified. -- 2 (Jos., xv, 25). See *Asor* 3.

Hethalon (Ezech., xlvii, 15; xlvi, 1): either Heitela, N. of Tripoli of Syria; or more prob. Adlûn, N. of the Leontes, on the road from Tyre to Sidon.

Hethites (q.v.).

Hevites. One of the petty clans of Canaanites dispossessed by Israel and the Philistines. The Gabaonites were Hevites.

Hevilah, *Hevilath*. Country watered by the Phison. Unknown.

Hierapolis (q.v.).

Hieromax, Greek name of the Sherî'at el-Menadhîreh, or Yarmûk.

Hirsemes. See *Bethsames*.

Hoba (Gen., xiv, 15), N. of Damascus; the identifications proposed are very unsatisfactory.

Hodsi (II Kings, xxiv, 6), probably a copyist's mistake for *Cedes*.

Holon (Jos., xv, 51; xxi, 15; mount. of Juda). Unknown.

Hor, 1. A mountain by which Israel had their encampment in the desert, and the place of Aaron's death; commonly identified with Jebel Nebî Harûn, S.W. of Petra, a most unlikely location; must be looked for in the neighbourhood of Cades, possibly Jebel Mueileh, N.W. of Cades. -- 2. According to common interpretation, another mountain at the N. limit of the Promised Land, and variously identified, although the Jebel esh-Shûqîf seems to be the most suitable location; -- perhaps not a proper name, but an expression to be translated: "the rising up of the mountain", i.e. S. Lebanon.

Horeb (q.v.).

Horem (Jos., xix, 38; Nephtali), Kh. el-Hûrâh, W. of L. Hûleh.

Horma, 1 (Num., xiv, 45 etc.), formerly called *Sephath*: prob. Sbaite, N.N.E. of Cades. -- 2 (Jos., xix, 29; Aser) Râmeh, S.E. of Tyre.

Hosa (Jos., xix, 29; Aser. text doubtful), poss. Ezzîyat, S. of Tyre.

Hucac. See *Halcath*.

Hucuca (Jos., xix, 34; Nephtali): Yaquq, W. of Capharnaum, S.S.W. of Sâfed.

Hus (Job. i. 1; Jer., xxv, 20; Lam., iv, 21; perhaps different regions are intended). From what may be gathered concerning the "land of Hus" in Job, it was in Arabia, N. of Saba, W. of Chaldea, N. of Edom. See *JOB*.

Iconium (q.v.), in Lycaonia: Konieh.

Idumea (q.v.).

Ijeabarim (Num., xxi, 11; xxxiii, 44), station of the Israelites in Moab: Kh. 'Ai, S.E. of Kerak.

India, I. (Esth., i, 1) the region on the right bank of the Indus. -- 2. The text (I Mach., viii, 8) seems to be at fault, and should perhaps be read Ionia.

Islands, refers to the islands and coasts of the Mediterranean Sea.

Iturea (Luke, iii, 1), originally the country of Jetur (I Par., i, 51; v, 19), on the E. slope of Anti-Lebanon, N. of Damascus.

Jabes (I Par., ii, 55; Juda). Unknown.

Jabes Galaad (I Kings, xi, 1 etc.), poss. Ed-Deir near which there is a Wâdy Yâbîs.

Jabnia (II Par., xxvi, 6). See Jamnia.

Jaboc: Nahr es-Zerqâ, between the regions called Belqâ. and 'Ajlûn, E. of the Jordan.

Jacan. See Benejaacan.

Jachanan (Jos., xii, 22), an unknown place about Mt. Carmel.

Jagur (Jos., xv, 21; S. Juda). Unknown.

Jamnia (I Mach., xiv, 15, etc.), a town of the Sephela: Yebnâ.

Janoe, 1 (Jos., xv, 6; xvi, 7; Ephraim): Yânûn, S.E. of Naplûs. -- 2 (IV Kings, xv, 29; Nephtali): Yânûh, E. of Tyre, according to some; more prob. Hûnûn, S. of the Merj 'Aiyûn.

Janum (Jos., xv, 53; mount, of Juda), poss. Beni Naim, E. of Hebron.

Japhie (Jos., xix, 12; Zabulon): Yâfâ, S.W. of Nazareth.

Jaramoth (Jos., xxi, 29; Issachar), called *Ramoth* in I Par., vi, 73, Heb. 58). Unidentified.

Jarephel (Jos., xviii, 27; Benjamin): Râphât, N. of El-Jib.

Jasa (Num., xxi, 23; Jer., xlvi, 21; Moab. S., l. 19); Onomasticon: "between Madaba and Dibon": Umm el-Wâlîd (? Musil).

Jaser (Jos., xxi, 36). See Jasa. -- 2. See Jazer.

Jassa. See Jasa.

Jazer (Num., xxxii, 1, etc.; Transjord.), prob. Kh. Sâr, W. of Ammân.

Jeabarim (Num., xxi, 11, etc.). See Ijeabarim.

Jeblaam (Jos., xvii, 11; Issachar); Egypt.: *Ibra'amû*: Kh. Bel'ameh, S. of Jenîn.

Jebnael (Jos., xix, 33; Nephtali): Yemmâ, between Thabor and the S. end of the L. of Tiberias.

Jebneel. See Jamnia.

Jeboc: the same as Jaboc.

Jebus. See JERUSALEM.

Jecmaam (I Par., vi, 68, Heb. 53), also *Jecmaan* (III Kings, iv, 12). In the parallel list of Jos., xxi, 22, *Cibsaim* is to be found. Text doubtful.

Jecnam (Jos., xxi, 34; Zabulon): prob. Tell Qaimûn, E. of Mt. Carmel.

Jeconam (Jos., xix, 11). See Jecnam.

Jecthel (IV Kings, xiv, 7), name given to Petra by Amasias, King of Juda. See PETRA.

Jecthel (Jos., xv, 38; Sephela). Unknown.

Jedala (Jos., xix, 15; Zabulon): Jeidâ, S. of Bethlehem of Zabulon.

- Jegbaa* (Judges, viii, 11; Transjord.): Ajobîhât, E. of Es-Salt.
- Jehoshaphat*, A.V. for Josaphat.
- Jemnaa*. See Jamnia.
- Jephtha* (Jos., xv, 43; plain of Juda). An unidentified place, S.E. of Beit Jibrîn.
- Jerico* (q.v.).
- Jerimoth*. Jos x 23, 35; Sephela): Kh. Yarmûk, 6 m. N.N.E. of Beit Jibrîn.
- Jerimuth* (II Esd., xi, 29). See Jerimoth.
- Jeron* (Jos., xix, 38; Nephtali): Yârûn, W. of L. Huleh.
- Jerusalem* (q.v.).
- Jesania* (III Kings, xv, 17): 'Ain Sinîya, N. of Beitûn. Perhaps should be read also instead of Sen, I Kings, vii, 12.
- Jesimon*, 1 (Num., xxi, 20; xxiii, 28; Moab) desert N. of the Dead Sea, and E. of the lower Jordan. -- 2 (I Kings, xxiii, 15 etc.) country between the deserts of Ziph and of Maon, and Engaddi.
- Jesse* (Judith, i, 9), for Gessen.
- Jesue* (II Esd., xi, 26; S. Juda): Kh. Sâ'weh, E. of Bersabee.
- Jeta* (Jos., xxi, 16; Juda-Simeon): Yuttâ, S. of Hebron.
- Jeteba* (IV Kings, xxi, 19), birthplace of Messalemeth, Manasses' wife, prob. in Juda, but unknown.
- Jetebatha* (Deut., x, 7), station of the Israelites between Cades and Asiongaber. Unknown.
- Jethela* (Jos., xix, 42; Dan): Beit Tûl, S.E. of Yalô.
- Jether* (Jos., xv, 48; mount. of Juda): 'Attîr, between Hebron and Bersabee.
- Jethnam* (Jos., xv, 23; S. Juda). Unknown.
- Jethson* (Jos., xxi, 36). So Vulg., prob. by mistake; in other texts, *Cademoth*.
- Jezer*. See Jazer.
- Jezael*, 1 (Jos., xvii, 16, etc.; Issachar): Zerâ'în, S.W. of Jebel Nebî Dahî (Little Hermon). -- 2 (Jos., xv, 56; I Kings, xxvii, 3; Juda), in the neighbourhood of Carmel and Ziph. Unknown.
- Jim* (Jer., xxvi, 18; S. Juda): perh. Beit 'Awwâ, not far from Bersabee.
- Joppe*. See JAFFA.
- Jordan* (q.v.).
- Josaphat* (Joel, iii, 2, 12), prob. an allegorical name: "the valley wherein Yahweh shall judge".
- Jota* (Jos., xv, 55). See Jeta.
- Jucadam* (Jos., xv, 56; mount. of Juda): apparently S.E. of Hebron. Unidentified.
- Jud* (Jos., xix, 45; Dan): El-Yehûdîyeh. N. of Lydda.
- Juda* (q.v.).
- Judea* (q.v.).
- Laban* (Deut., i, 1), station of the Israelites in their journey from Sinai to Cades. Unknown.
- Labanath* (Jos., xix, 26), is separated in Vulg. from preceding word, to which it should be joined: Sihor Labanath. See Sihor.
- Lacedemon* (II Mach., v, 9). See SPARTA.
- Lahela* (I Par., v, 26), a mistake for "to Hala", a region of Assyria.

Lahem (I Par., iv, 22; the text is not clear). Unknown.

Lais. See DAN.

Laisa (Is., x, 30; I Mach., ix, 5): Kh. Q'âqûl, W. of 'Anâta

Lampsacus (I Mach., xv, 23), a city of Mysia, on the Hellespont, possibly a mistake for *Sampsame*: Samsûn, a little seaport between Sinope and Trebizond, on the Black Sea.

Laodicea. (Col., ii, 1, etc.; q.v.).

Lebaoth (Jos., xv, 32). See Beth Leba'ôth.

Lebna, 1 (Num., xxxiii, 20) a station of the Israelites in the journey from Sinai to Cades. Unknown. -- 2 (Jos., x, 31; Sephela): poss. Kh. el-Benâwy, 10 m. S.E. of Lachis.

Lebona (Judges, xxi, 19): El-Lûbbân, S. of Naplûs.

Lehi (Judges, xv, 17; D.V. "jawbone"): Kh. 'Ain el-Lehî has been proposed, but is very doubtful; the above Arab. name seems to be rather 'Ain 'Allek.

Lecum (Jos., xix, 33; Nephtali) site unknown, probably in the neighbourhood of L. Huleh.

Leheman (Jos., xv, 40; plain of Juda), Kh. el-Lahm, S. of Beit Jibrîn.

Lesâ (Gen., x, 19), poss. Callirrhoe (St. Jerome): Hammâm ez-Zerqâ, E. of the Dead Sea.

Lesem (Jos., xix, 47). See DAN.

Lobna (Jos., xxi, 13), the same as Lebna 2.

Lod (I Par., viii, 12, etc.): El-Lûdd. See SEBASTE.

Lodabar (II Kings, ix, 4, etc.; Transjord.) Greek has *Daibon*: text unsettled.

Luith (Is., xv, 5; Jer., xlviii, 5; Moab): Kh. Fâs (Musil); Nûchîn (de Saulcy); hardly identified.

Luza, 1 (Gen., xxviii, 19, etc.), an old name for Bethel. -- 2 (Judges, i, 26) A city of the Hethites, perh. Lûweizîyeh, N.W. of Tell el-Qâdî.

Lyda (I Mach., xi, 34), *Lydda* (Acts, ix, 32, etc.). Lod.

Lystra. 1 (Acts, xiv, 8, etc.), a city of Lycaonia: *Khatyn Seraî*. -- 2 (Acts, xxvii, 5), in some Manuscripts, a mistake for *Myra* in Lycia.

Maara of the Sidonians (Jos., xiii, 4): possibly "the cave" of Jezzîn, about 9 m. E. of Sidon; but the text seems corrupt and should perhaps be read: "from Gaza to Sidon".

Maces (III Kings, iv, 9; Dan). Unknown.

Maceda (Jos., x, 10, etc.), poss. El-Mûghâr, in the neighbourhood of Accaron.

Maceloth (Num., xxxiii, 25), station of the Israelites on the journey from Sinai to Cades: prob. Maqehelat.

Machbena (II Par., ii, 49), prob. the same as Chebbon.

Machmas (I Kings, xiii, 2, etc. Benjamin): Mikhmâs N. of Jerusalem.

Machmethath (Jos., xvi, 7, etc., limit of Ephraim and W. Manasses), perhaps not a city, but a region, poss. the Plain of El-Makhnâh (Guthe).

Machtesh (Soph., i, 11; D.V.: "the Mortar"), a place near Jerusalem, "the Valley of Siloe" (St. Jerome).

Madmena (I Par., ii, 49). See Medemena.

Madon (Jos., xi, 1, etc.) perh. should be read *Maron*; poss. Kh. Madîn, W. of Tiberias, or Meiron, N.W. of Sâfed.

Magala (I Kings, xvii, 20; xxvi, 57), wrongly interpreted by Vulg. as a proper name; means a fenced encampment.

Magdal, 1 (Ex., xiv, 2, etc.): perh. Serapeum. -- 2 (Jer., xliv, 1, etc.) perh. the same; poss. Tell es-Semût, near Pelusium.

Magdala (Matt., xv, 39; Mark, viii, 10; text not certain): El-Mejdel; on the W. shore of the L. of Tiberias.

Magdalel (Jos., xix, 38; Nephtali): poss. El-Mejdel; according to the Onomasticon, Athlit.

Magdalgai (Jos., xv, 37; Sephela), Assyr.: *Magdilu*; either El-Mejdel, near Ascalon, or El-Mejeleh, S. of Beit Jibrîn.

Magedan (Matt., xv, 39). See Magdala, Dalmanutha.

Mageddo, *Mageddon*. See MAGEDDO.

Mageth (I Mach., v, 26, 36; Transjord.): prob. Kh. el-Mukatîyeh, W. of the confluence of the Rûqqâd and the Yarmûk.

Magron, 1 (I Kings, xiv, 2), prob. a common name indicating the top of the hill on the slope of which Jeba' is built. -- 2 (Is., x, 28): poss. Makrûn, N.W. of Mikhmâs.

Mahanaim: Kh. Malneb, S.W. of Hauran, in the Jebel 'Ajlûn, N. of the Jaboc.

Mahane Dan (Judges, xiii, 25; xviii, 12), a place W. of Cariathiarim.

Mallos (II Mach., iv, 30), a city of Cilicia.

Malta (q.v.).

Mambre. See Hebron.

Manaim (Jos., xiii, 26, etc.). See Mahanaim.

Manasses (q.v.).

Maon, 1 (Jos., xv, 55; S. Juda): Kh. Ma'în. -- 2 (Judges, x, 12), perhaps Ma'ân, E. of Petra; text poss. corrupt.

Mara (Ex., xv, 23), station of the Israelites between Egypt and Mt. Sinai, perh. 'Ain Hawâra, or Wâdy Mereira.

Maresa, a city in the Sephela; the name is preserved in Kh. Maresh, near Beit Jibrîn; the site was prob. in Tell Sandahanna, a little S.E. of Kh. Maresh.

Mareth (Jos., xv, 59: mount. of Juda), poss. Beit Ummâr, S.S.W. of Bethlehem.

Maroth (Mich., i, 12). Unknown, although some deem it to be identical with Mareth.

Masal (Jos., xix, 26 etc.; Aser): perh. Khan Mithilîya, S.W. of Mt. Carmel.

Masaloth (I Mach., ix, 2), prob. a common name meaning "the steps" -- i.e. the steps of the caves of Arbella.

Masepha (Jos., xv, 38; Sephela): Tell es-Safîyeh, 7 m. N.W. of Beit Jibrîn.

Maserephoth (Jos., xi, 8; xiii, 6). Unknown. Perhaps 'Ain Musherfi, on the Mediterranean shore, S. of Râs en-Nâqûra.

Maspha, Masphath, 1. Of Benjamin: site much disputed: Shâ'fat, Nebî Samwîl, El-Bîreh, and Tell Nasbeh, all N. of Jerusalem, have been proposed with more or less probability. -- 2. Of Galaad: see Ramoth Galaad. -- 3. Of Juda: prob. Tell es-Safîyeh. -- 4. Of Moab (I Kings, xxxii, 3, 4). Unknown.

Masphe. See Maspha of Galaad.

Masreca (Gen., xxxvi, 36; I Par., i, 47), N. of Idumea.

Matthana. Station of the Israelites in their journey through Moab; possibly Mechatta.

Meddin (Jos., xv, 61; wilderness of Juda). Unknown.

Medemena, 1 (Jos., xv, 31; S. Juda). Unknown. -- 2 (Is., x, 31; Benjamin): Kh. el-Qarâmi, N. of Jerusalem.

Megiddo. See MAGEDDO.

Mejarcon (Jos., xix, 46; Dan), poss. the Nahr el-'Aujeh, betw. Joppe and Arecon.

Melita, A.V. for Malta (q.v.).

Melothi (Judith, ii, 3, Vulg. only), perhaps Melitine of Cappadocia.

Memphis (q.v.).

Mennith (Judges, xi, 33). Onomasticon: at a short distance from Hesebon; poss. Umm el-Qenâfid.

Mephaath (Jos., xiii, 18): Nef'â, S.S.E. of Ammân.

Merala (Jos., xi, 19, Zabuton): prob. Ma'lûl, S.W. of Nazareth.

Merom (Waters of). Lake Hûleh.

Meroz (Judges, v, 23): poss. El-Mahrûneh, between Dothân and Kûbatîyeh; or El-Mûrassas, near Beisân.

Merrha (Bar., iii, 23). Unknown. Perhaps we should read Madian.

Mesopotamia (q.v.).

Mesphe (Jos., xviii, 26), for Maspha of Benjamin.

Messa (Gen., x, 30), in Arabia. Unknown.

Messal (Jos., xix, 26). See Masal.

Methca (Num., xxxiii, 28), station of the Israelites in the journey from Sinai to Cades. Unknown.

Miletus (q.v.).

Misor (Jos., xxi, 36), not found in the Hebr.; poss. a mistake.

Mitylene (Acts, xx, 14), in the island of Lesbos: Metelin.

Mochona (II Esd., xi, 28; Juda): Kh. el-Moqenna.

Modin, the birthplace of the Machabees; generally admitted to be El-Medieh, E. of Lydda.

Molada (Jos., xv, 26; S. Juda), perh. Tell el-Milh, between Bersabee and the Dead Sea.

Moresheth Gath (Mich., i, 1, etc.), birthplace of Micheas, E. of Eleutheropolis. Unidentified.

Mortar (Soph., i, 11). See Machtesh.

Mosel (Ezech., xvii, 19). As such, not a proper name; should be understood: "from Uzal".

Mosera (Deut., x, 6). See Moseroth.

Moseroth (Num., xxxiii, 30), station of the Israelites in the journey from Cades to Asiongaber. Unidentified.

Myndus (I Mach., xv, 23), a city in Caria, between Miletus and Halicarnassus.

Myra (Acts, xxvii, 5), not in the Vulg., but should be read instead of Lystra.

Naalol (Jos., xix, 15, etc.; Zabulon), prob. Ma'lûl, E. of Nazareth.

Naama, 1 (Jos., xv, 41; Sephela): perh. Na'ameh, S. of Lydda and E. of Jabneh. -- 2 (Job, ii, 11); there was prob. a city of that name in Nabathea. Unknown.

Naaratha (Jos., xvi, 7; E. Ephraim), poss. Tell Tahtâni, N. of Jericho.

Naas (I Par., iv, 12; Juda), perh. Deir Nâbâs, N.E. of Beit Jibrîn.

Naasson (Tob., i, 1), prob. Aser 2.

Nahaliel (Num., xxi, 19), station of the Israelites E. of the Dead Sea, near the Arnon. Wâdy Enkeile (? Robinson).

Naim (Luke, vii, 11): Naîn, on the N.W. slope of the Jebel Dahy.

Naiioth (I Kings, xix, 18, etc.), "in Ramatha". Otherwise unknown.

Nazareth (q.v.).

Neapolis (Acts, xvi, 11; xx, 6), a city in Macedonia: Kavalla.

Neballat (II Esd., xi, 34): Beit Nebâla, N. of Lydda.

Nebo, 1 Mountain N. of Moab: Jebel Nebâ. -- 2 (Num., xxxii, 3; Moabite Stone, l. 14), a town about the Jebel Nebâ.

Nebzan (Jos., xv, 62; desert of Juda, near the Dead Sea). Unknown.

Neceb (Jos., xix, 33, in the Vulg.; Nephtali). See Adami.

Nehelescol. See Escol.

Nehiel (Jos., xix, 27; Aser). Some: Kh. Yânîn, E. of Acre; others: Mi'âr.

Nemra (Num., xxxii, 3). See Bethnemra.

Nemrim (Is., xv, 6; Jer., xlviii, 34): Wâdy Nemeira, S.E. of the Dead Sea; there is a Kh. Nemeira.

Nephath Dor. See Dor.

Nephtali (q.v.).

Nephtoa (Jos., xv, 9; Juda-Benjamin): Liftâ, N.W. of Jerusalem.

Nesib (Jos., xv, 43; Sephela): Beit Nâsîb, E. of Eleutheropolis.

Nethuphati (II Esd., xii, 28). See Netupha.

Netupha (I Par., ii, 54, etc.; Juda): prob. Beit Nettîf, N .E. of Eleutheropolis.

Nicopolis (Titus, iii, 12), a city in Epirus: Paleoprevyza.

Nineveh, A.V. for Ninive.

Ninive (q.v.).

No, *No Amon* (Nahum, iii, 8; Ezech., xxx, 14); not Thebes of Upper Egypt, but Thebes in the Delta (Diospolis): Tell Balamûn.

Noa (Jos., xix, 23; Zabulon). Unknown.

Nob (II Esd., xi, 32; Benjamin): Beit Nûbâ, between 'Anâta and Jerusalem.

Nobe, 1 (Judges, viii, 11; Transjord.). Unknown. -- 2 (I Kings, xxi, 1, etc.). See Nob. -- 3 (Num., xxxii, 42). See Canath.

Nophe (Num., xxi, 30; Moab): text doubtful.

Nopheth (Jos., xvii, 11), a town, according to Vulg.; the clause should be rendered: "three villages".

Noran. See Naaratha.

Oboth (Num., xxxiii, 43). Station of the Israelites in the journey from Asiongaber to the frontiers of Moab; prob. Wâdy Weibeh, N. of Fenân.

Odollam: prob. Kh. 'Aid el-Mîeh; the cave is near the summit of the S. hill. See ADULLAM.

Odullam. See ADULLAM.

Olon (Jos., xv, 51). See Holon.

On. See BAALBEK.

Ono (I Par., viii, 12; Dan); Egypt.: *Aunau*; Kefr Anâ, between Lydda and Jaffa.

Ophel (II Par., xxvii, 3), a part of Jerusalem.

Opher (IV Kings, xiv, 25). See Gethhepher.

Ophera (Jos., xviii, 23). See Ephra 2.

Ophni (Jos., xviii, 24); Benjamin: perhaps Jifneh, N.W. of Beifîn.

Oreb (Judges, vii, 25, etc.): poss. 'Osh el-Ghûrâb, between the Jebel Qarantâl and the Jordan.

Oronaim (Is., xv, 5; Jer., xlvi, 3, etc.; Moabite Stone, l. 32): Wâdy Ghûweir (Conder): would seem rather S. of the Arnon.

Orontes, great river of Syria: Nahr el-'Asî.

Orthosias (q.v. -- I Mach., xv, 37).

Ozensara (I Par., vii, 24): perhaps Beit Sîrâ, W.S.W. of Lower Bethoron.

Palmyra (q.v.).

Paphos (q.v. -- Acts, xiii, 6, etc.), in Cyprus: Baffo.

Paros. I Par., xxix, 2; Esth., i, 6, speak of "marble of Paros"; but this is not to be found in the original; only "white stone".

Patara (Acts, xxi, 1-3), a city in Lycia: Jelemish.

Patmos. One of the Sporades, S. of Samos, W. of Miletus: Patino.

Pelusium (Ezech., xxx, 15, 16); Copt.: *Peremun*, *Pelusiu*, a city N.E. of the Delta of the Nile, on the branch called, after the name of the city, Pelusiac: Sâ el-Haggâr.

Pentapolis. Region of the five cities: Sodom, Gomorrha, Adama, Seboim, in the Valley of Siddim.

Pergamus (Apoc., i, 11; ii, 12), metropolis of the prov. of Asia: Bergamo, or Bergama.

Perge (Acts, xiii, 13), second city of the prov. of Pamphilia: Murtana.

Persia (q.v.).

Persepolis. Whether it is spoken of in II Mach., xix, 2, is doubtful.

Petra (q.v.).

Phalti. See Bethphalet.

Phanuel (Gen., xxxii, 30, etc.; Transjord.), Egypt.: *Penualu*; on the banks of the Jaboc. Site uncertain.

Phara (I Mach., ix, 50): the text seems uncertain; perhaps the same as Pharaton.

Pharan. General term to designate the wilderness between Sinai and Palestine.

Pharaton (Judges, xii, 13, etc.): birthplace of Abdon, one of the Judges of Israel. Prob. Fer'ata, 7 m. S.W. of Naplûs.

Pharphar, river of Damascus: Nahr el-'Awaj.

Phaselis (I Mach., xv, 23): a city of Asia Minor on the borders of Lycia and Pamphilia.

Phasga. Whether this is a common or a proper name is doubtful. At any rate, it indicates a place connected with Mt. Nebo, prob. Ras Siâghâh, W. and at a very short distance of the Jebel Nebâ.

Phatures (Is., xi, 11; Jer., xliv, 1, etc.): Egypt.: *Patarisi*. Upper Egypt.

Phau (Gen. xxxvi, 39; I Par., i, 50): Phau'ârâ has been proposed.

Phesdommim (I Kings, xvii, 11; I Par., xi, 13): poss. Dâmîm, on the road from Jerusalem to Beit Jibrîn, N. of Shûweikeh.

Phihahiroth (Ex., xiv, 29; Num., xxxiii, 7); Egypt.: *Pikeheret*. A station of the Israelites in their flight from Egypt. Unidentified.

Philadelphia (q.v.).

Philippi (q.v.).

Phinon. See Phunon.

Phithom, a town in Lower Egypt: Tell el-Maskhûtâ, W. of Lake Timsab.

Phœnicia (q.v.).

Phogor, 1 Mountain N. of the Abarim range, variously identified: El-Mareighât, Tell-Matâba, El-Benât. -- 2 See Bethphogor. -- 3 (Jos., xv, 60, Greek): one of the 11 cities added in the Greek to the list of the Hebrew: Kh. Beit Foghûr, S.W. of Bethlehem.

Phrygia. See ASIA MINOR.

Phunon (Num., xxxiii, 42), a station of the Israelites on the journey from Asiongaber to Moab: Kh. Fenân, on the edge of the 'Araba.

Pisidia (q.v.).

Pontus, territory N.E. of Asia Minor, on the shore of the Black Sea.

Ptolemais (I Mach., xii, 48, etc.): Greek name of Acre.

Puteoli (Acts, xxviii, 13), a seaport near Naples: Pozzuoli.

Qibroth Hathhawah (Num., xi, 3; D.V.: "graves of lust"), station of the Israelites on their journey from Sinai to Cades: possibly in Wâdy Khbebeh.

Qir Moab (Is., xv, 1; D.V.: "the wall of Moab"), a proper name: Kerak.

Qir Heres (Is., xvi, 7, etc.; D.V.: "brick walls"; Moabite Stone, 1, 3). See Qir Moab.

Rabba, *Rabbath Ammon*, principal city of the Ammonites: Ammân. See PHILADELPHIA.

Rabboth Moab. See Ar.

Rabboth (Jos., xix, 20; Issachar): Râbâ, 7 m. S.E. of Jenîn.

Rachal (I Kings, xxx, 29; Septuag.: "in Carmel"). A city in S. Juda; the text, however, is doubtful, and several commentat. prefer the Greek reading.

Ragau (Judith, i, 5, 15): a prov. in Media.

Rages (Tob., i, 14, etc.): principal city in Ragau: Rai, S.E. of Teheran.

Rama, 1 Of Aser: prob. Râmîâ, E. of Tyre. -- 2 Of Benjamin Er-Ram, 5 m. N. of Jerusalem. -- 3 Of Galaad. See Ramoth Galaad. -- 4 Of Nephtali: Rameh, 6 m. S.W. of Sâfed. See Arama. -- 5 Of Samuel. Some: Ram-Allâh 3 m. S.W. of Beitîn; others: Beit Rîmâ, 13 m. E.N.E. of Lydda; others:

Ramleh; more probably Rentis, W. of Beit Rîmâ. -- 6 Of Simeon: possibly Kubbet el-Baul, S. of Hebron.

Ramatha, birthplace of Samuel. See Rama 5.

Ramathaim Sophim. See Rama 5.

Ramesses (Gen., xlvii, 11; Lower Egypt). The site has not yet been identified; some see it in San, the Tanis of the ancients; others in Es-Salihêh.

Rameth. See Jaramoth.

Ramoth, 1 Of Galaad, usually called in the Bible Ramoth Galaad: perhaps Reimûn (Conder); more probably Es-Salt. -- 2 See Jaramoth.

Ramoth Masphe. See Ramoth of Galaad.

Raphaim, 1 Generic term designating the early population of Palestine: the Emim, Enacim, Horim, Zuzim, were Raphaim. -- 2 (Valley of). A valley which seems to have been S. of Jerusalem, perh. the plain El-Bûqei'a.

Raphidim (Ex., xvii, 8, etc.). A station of the Israelites in their journey from the Red Sea to Sinai; may correspond to Wâdy 'Erphâid.

Raphon (I Mach., v, 37; Transjord.): poss. Er-Râfe, E. of the Jerb el-Hajj.

Rebla, 1 (Num., xxxiv, 11): N. boundary of Israel; its site is much disputed: 'Arbîn, N.E. of Damascus; Rebleh, between Baalbek and Homs; Halibna or Zôr Ramlêh being proposed, the latter with perhaps more probability. -- 2 Also called

Reblatha (IV Kings, xxv, 6, etc.): Rebleh, in the Beqâ'a

Reccath (Jos., xix, 35; Nephtali): an old name of Tiberias, according to the Talmud.

Recem (Jos., xviii, 27; Benjamin). Unidentified.

Recha (I Par., iv, 12). Unknown.

Rechoboth (Gen., xxxvi, 37), a well near Bersabee: Naqb er-Rûbâ'i (?).

Remmon, 1 (Jos., xv, 32, etc.; S. Juda): prob. Kh. Umm er-Rummâmîn, N. of Bersabee. -- 2 (Jos., xix, 13; Zabulon): Rummâneh, N. of Nazareth.

Remmono (I Par., vi, 77, Heb. 62): see Remmon 2.

Remmonphares (Num., xxxiii, 19), station of the Israelites on their journey from Sinai to Cades. Unknown.

Rephidim, A.V. for Raphidim.

Resen (Gen., x, 12), one of the four cities which made up Greater Ninive: poss. Selamîyeh.

Reseph (IV Kings, xix, 12; Assyria); Assyr.: *Rasapa*: identified with Rusâfâ, between Palmyra and the Euphrates.

Ressa (Num., xxxiii, 21), station of the Israelites, between Sinai and Cades: Wâdy Suweiqâ (?).

Rethma (Num., xxxiii, 18), another station in the same neighbourhood. Unknown.

Rhegium (Acts, xxvii, 40): Reggio di Calabria.

Rhodes (q.v. -- I Mach., xv, 23; Acts, xxi, 1).

Rogelim (II Kings, xvii, 27, etc.; Galaad). Unknown.

Rohob, 1 (Num., xiii, 22, etc.), in the neighbourhood of Cæsarea Philippi: poss. Hibbarîyeh. -- 2 (Jos., xix, 23; Aser): prob. Tell er-Râhîb, at a short distance from Sidon. -- 3 (Jos., xix, 30; Judges, i, 31), near the Sea and the Cison. Unknown.

Rohoboth. See Rechoboth.

Rome (q.v.).

Ruben (q.v.).

Ruma, 1 (Jos., xv, 52: should be Duma; S. Juda): Ed-Dôme, S.E. of Eleutheropolis. -- 2 (IV Kings, xxiii, 36). Unknown.

Saananim (Jos., xix, 33; Nephtali): poss. Sin en-Nâbrâ, S. of the L. of Tiberias.

Saarim (Jos., xv, 36; 5. Simeon): prob. identical with Sarohen.

Sabama (Jos., xiii, 19; Ruben): poss. Shânâb, N.W. of Hesbân.

Saban. See Sabama.

Sabarim, 1 (Jos., vii, 5; D.V.: "quarries"), on the descent from Hai towards the Ghôr. Unknown. -- 2 (Ezech., xlvi, 16), a town in Syria "between the border of Damascus and the border of Emath."

Sabee (Jos., xix, 2; Simeon); text not certain.

Sachacha (Jos., xv, 61; desert of Juda): prob. Kh. es-Sikkheh.

Salebim (Jos., xix, 42, etc.; Dan): Kh. Selbît, N.W. of Yâlô.

Salecha (Deut., iii, 10, etc.; E. limit of Basan): Salkhâd, S. of Jebel Hauran.

Salem, 1 (Gen., xiv, 18), commonly identified with Jerusalem; this identification, however, is far from certain. -- 2 (Gen., xxxiii, 18), perhaps not a proper name; if one, Salim, E. of Naplûs.

Salim (John, iii, 23). See Æ NON.

Salmona (Num., xxxiii, 41), station of the Israelites in the journey from Asiongaber to Moab; must be between the Gulf of 'Aqâba and Kh. Fenân. Unidentified.

Salmone (Acts, xxvii, 7), a promontory at the N.E. end of Crete: C. Sidero.

Sama (Jos., xix, 2; S. Juda): perhaps *Saba* should be read; might be Tell es-Seba', E. of Bersabee.

Samaraim (Jos., xviii, 22; Benjamin): prob. Kh. es-Sumrâ, 5 m. N. of Jericho.

Samaria (q.v.).

Samir, 1 (Jos., xv, 48; mount. of Juda): poss. Kh. Sômerâh, S.W. of Hebron. -- 2 (Judges, x, 1, 2), the home and burial place of Tola: Sanûr (?), between Samaria and Engannim.

Samos (q.v.).

Samotheicia, an island in the Ægean Sea, S. of the Coast of Thracia, N.W. of Troas.

Sanan (Jos., xv, 37; Sephela): perhaps the same city as indicated in Mich., i, 11 (D.V.: "pass away"): *Senân*.

Sanir. Name given to Mt. Hermon by the Amorrheans.

Saphon (Jos., xiii, 27; Gad). Some: El-Hammeh; others: Tell Amâteh, N. of the Jaboc.

Saraa (Jos., xv, 33, etc.; Dan): Sûr'ah, W. of Jerusalem.

Saraim (Jos., xv, 36; plain of Juda): Kh. Sa'îreh, N.E. of Zanû'a.

Sarathasar (Jos., xiii, 19; Ruben): Sârâ, a little S. of the Zerqâ.

Sardis (Apoc., iii, 1), principal city of Lycia.

Sarea. See Saraa.

Sared. See Sarid.

Sareda. Prob. Sarthan.

Saredatha. See Sarthan.

Sarephta, *Sarepta* (III Kings, xvii, 9, etc.): Sarafend, about 8 m. S. of Sidon.

Sarid (Jos., xix, 10; Zabulon): poss. Tell Shâdûd, S.W. of Nazareth.

Sarion. Name given by the Sidonians to Mt. Hermon.

Sarohen (Jos., xix, 6; S. Simeon): prob. Tell esh-Sherî'ah. N.W. of Bersabee.

Saron, 1 Maritime plain between Jaffa and Mt. Carmel. -- 2 Country between Mt. Thabor and the L. of Tiberias. -- 3 (I Par., v, 16): either some region E. of the Jordan, or 1.

Sarona (Acts, ix, 35). See Saron 1.

Sarthan, *Sarthana* (Jos., iii, 16, etc.): poss. Qarn Sartabeh, W. of the Jordan, S. of the Wâdy Fâr'a.

Scorpion (Ascent of the). See Acrahim.

Scythopolis (II Mach., xii, 30): Beisân. See BETHSAN.

Seboim, I (Gen., x, 19, etc.). A city of the Pentapolis. -- 2 (I Kings, xiii, 18). A valley leading from the Ghôr to the heights of Machmas (Benjamin): Wâdy Abû Dâba', which debouches into the Wâdy el-Kelt.

Sechrona (Jos., xv, 11; N. Juda): Kh. Sukereir (?).

Sedada (Num., xxxiv, 8): prob. Kh. Serâdâ, E. of the Merj 'Aiyûn.

Segor (Gen., xiii, 10), generally identified with Es-Safiyeh, in the Ghôr of the same name, S. of the Dead Sea.

Sehesima (Jos., xix, 22; Issachar), prob. E. of Mt. Thabor. Unknown.

Seir, 1 (Gen., xxxvi, 8, etc.) practically synonymous with Edom: the mountainous region between the S. end of the Dead Sea, the Wâdy el-Emâz and the Wâdy Ar'ârah. -- 2 (Jos., xv, 10), a point defining the limit of Juda, S.W. of Cariathiarim.

Seira (IV Kings, viii, 21; Edom), poss. Ez-Zûweireh, W. of the S. end of the Dead Sea.

Seirath (Judges, iii, 26), likely in the hill-country of Ephraim, and not far from Galgala. Site unknown.

Sela, 1. See PETRA. -- 2 (Judges, i, 36): prob. Cades. -- 3 (Jos., xviii, 23; Benjamin): poss. Kh. Tabaqât, at a short distance S.E. of Tell el-Fûl.

Selcha. See Salecha.

Selebin. See Salebim.

Seleucia (q.v. -- I Mach., xi, 8; Acts, xiii, 4).

Selim (Jos., xv, 32; 5. Juda), prob. the same as Sarohen.

Selmon, 1 (Judges, ix, 48): prob. Sheikh Selmân, S.W. of Mt. Garizim. -- 2 (Ps. lxxviii, 14): the text is not altogether certain; perhaps the Asalmanus of Ptolemy: Jebel Hauran.

Semeran, 1 (Jos., xix, 15, etc.; Zabulon): perh. Semûnîyeh, 5 m. W. of Nazareth; or Es-Semeirîyeh, 3 m. N. of Acre. -- 2 (II Par., xiii, 4): a hill S. of Beitîn.

Senaa. Unknown.

Sene (I Kings, xiv, 4), one of two conspicuous rocks on the way from the Wâdy Sûweinât, which seems to have retained the name, to Machmas.

Senna. See *Sin* 2.

Sennaar: prob. Upper and Lower Babylonia.

Sennim. See *Saananim*.

Sensenna (I Par., iv, 31); Jos., xix, 5, has *Hasersusa*, prob. identical.

Seon (Jos., xix, 19; Issachar): 'Ayûn esh-Shâ'in (?), N.W. of Mt. Tabor.

Sephaath (Judges, i, 17; S. Juda): prob. Sbaite.

Sephama (Num., xxxiv, 10, 11), N. limit of the Holy Land; prob. Ofânî, S.E. of Banîyas.

Sephemoth (I Kings, xxx, 28; S. Juda), near Aroer. Unknown.

Sephar (Gen., x, 30), limit of the country of the sons of Jectan, commonly identified with Zaphar, in S. Arabia.

Sepharad (Abd., 20; D.V.: "Bosphorus"): some prov. in the Persian empire.

Sepharvaim (IV Kings, xvii, 24, etc.): poss. Sippar, in Babylonia: mod. Abû Habbâ; more prob. a city in Syria, poss. Sabarim 2.

Sephata (II Par., xiv, 9-10): text unsettled. Some: Tell es-Safiyeh; others: a valley near Maresa; others, with Sept. "northwards".

Sephela: maritime plain from Jaffa to the "torrent of Egypt".

Sepher (Num., xxxiii, 23), a station of the Israelites in their journey between Sinai and Cades: prob. the defiles of the Jebel 'Arâif.

Sephet (Tob., i, 1; Aser): poss. Sâfed, in Upper Galilee.

Ser (Jos., xix, 35; Nephtali). Unknown.

Sesach (Jer., xxv, 26; li, 41), cryptographic name of Babylon, according to the system called the Athbash (i.e.: *Aleph=Thau; Beth=Shin; etc.*).

Setim, Settim. See *Abel*.

Siceleg (Jos., xv, 31, etc.; S. Simeon): prob. Kh. Zûheilîqâ, N. of the Wâdy esh-Sherî'a.

Sichar (John, iv, 5), very prob. Sahel 'Askar, E. of Naplûs.

Sichem (q.v.).

Sicyon (I Mach., xv, 23), a town N.W. of Corinth, on the Gulf of Corinth.

Siddim (Gen xvi, 3, etc.; D.V.: "Woodland Vale"): plain of the Pentapolis, believed to be about the Dead Sea, perhaps towards the S. end.

Side (I Mach., xv, 23), a city on the coast of Pamphilia: Eski Adalia.

Sidon (q.v.).

Silo (Jos. xviii, 1, etc. Ephraim). A famous place of worship of the Israelites in early times; the Ark of the Covenant was kept there until the last days of Heli. Silo was situated "on the N. of the city of Bethel, and on the E. side of the way that goeth from Bethel to Sichem, and on the S. of the city of Lebona" (Judges, xxi, 19): Seilûn. See *ARK*.

Siloe. See *SILOE; JERUSALEM*.

Sin, 1. Desert in the Sinaitic Peninsula, through which the Israelites went on leaving Egypt: Debbet er-Ramleh. -- 2. Egypt: *Sun*: Pelusium.

Sinai (q.v.).

Sion, 1. See JERUSALEM. -- 2. Another name for Mt. Hermon.

Sior (Jos., xv, 44; mount. of Juda): Sâ'îr, N.N.E. of Hebron.

Sis (II Par., xx, 16), a steepy passage from Engaddi up to the desert above: prob. Wâdy Hâsâsâ.

Smyrna (q.v.).

Soba, Assyri.: *Subiti*; a region in Syria, possibly S. of Damascus, in the neighbourhood of the Jebel Hauran.

Sobal (Judith, iii, 1, 14; Ps. lix, 2), for Soba.

Soccoth, 1. (Ex., xii, 37) first station of the Israelites on leaving Ramesses, poss. about Ismailiya or El-Gisr. -- 2 (Gen., xxxiii, 17, etc.; Gad); prob. Tell Dar'âla, N. of the Nahr ez-Zerqâ.

Socho, 1 (I Kings, xvii, 1), where David overcame Goliath: Kh. esh-Shuweikeh, N .E. of Eleutheropolis. -- 2 (Jos., xv, 48; mount. of Juda): prob. Kh. esh-Shuweikeh, S.W. of Hebron. -- 3. See Soccoth 2.

Sochot, *Sochoth*. See Soccoth 2.

Sodom (q.v.).

Sorec (Judges, xvi, 4, etc.), a valley famous in the story of Samson; prob. the Wâdy es-Sarâr; the name has been preserved in the neighbouring Kh. Sûriq.

Sparta (q.v.).

Sual (I Kings, xiii, 17), a place which seems to have been in the N. of Benjamin.

Suba. See Soba.

Sunam, *Sunem* (Jos., xix, 18, etc.; Issachar): Sûlem, at the foot of Jebel Dâhy, 4 m. N. of Zerâ'în.

Sur, 1. Desert E. of Egypt, also called Desert of Etham, perhaps around Tharu, which the Egyptians considered their E. frontier. -- 2 (Judges, ii, 28), perhaps another form of the name Tyre (Hebr. Çâr).

Susa, *Susan*. See SUSA.

Syene (q.v.).

Syracuse (q.v.).

Syria (q.v.).

Taberah (A.V.). See Qibroth Hatthawah.

Tanis, a city in the Delta of the Nile: Zoan.

Taphna, a town in Lower Egypt, in the neighbourhood of Tanis and Pelusium: Tell Defenne.

Taphua, 1 (Jos., xv, 34; Sephela). Unknown. -- 2 (Jos., xii, 17): "between Bethel and Epher".

Unidentified. -- 3 (Jos., xvi, 8, etc.), on the borders of Ephraim and Manasse, perh. the same as Taphua 2.

Tarsus (q.v.).

Tebbath (Judges, vii, 22), a city in the Ghôr, near Abelmehula. Unidentified.

Telaim (I Kings, xv, 4; D.V.: "as lambs"): prob. Telem.

Telem (Jos., xv, 24; S. Juda), S. of Tell el-Milh, there is a tribe of Arabs whose name, Dhâllâm, bears analogy with the present Biblical name; moreover, all the district of Molada is called Tûlam (Schwartz), possibly also a relic of the old name.

Temptation (Ex., xvii, 7, etc.). See Raphidim.

Terebinth (Valley of; I Kings, xvii, 2, etc.): between Socho and Azeca, most prob. Wâdy es-Sant. *Thabor*, 1. Mountain (q.v.). -- 2 (Jos., xix, 22; Judges, viii, 18; Issachar). Unknown. -- 3 (I Par., vi, 77; Zabulon); in Jos., xxi, 28, instead of Thabor, we read Daberath: Debûrîyeh.

Thacasin (Jos., xix, 13; Zabulon): possibly Corozain.

Thadmor. See PALMIRA.

Thahath (Num., xxxiii, 26), given as a station of the Israelites in their journey from Sinai to Cades; poss. a gloss added to the text.

Thalassa (Acts, xxvii, 8), a city in Crete, near Good-havens.

Thalassar (Is., xxxvii, 12), a region in W. Mesopotamia, prob. along the Euphrates, between Balis and Birejik.

Thaleha (Jos., xix, 7, Septuag.), for Ether.

Thamar (Ezech., xlvi, 19; xlviii, 28): poss. Tamara of the classics, and Thamaro of the Peutinger Table, on the road from Hebron to Elath.

Thamna, 1 (Judges, xiv, 1, 25; Benjamin) Kh. Tibneh, W. of 'Ain Shems. -- 2 (Gen., xxxviii, 12-14; Jos., xv, 57; N. Juda); Assyri.: *Tamna*; perh. Tibneh, N.W. of Jebâ'a; more prob. Tibnâh, S.E. of Deir Abân.

Thamnata (I Mach., ix, 50), between Bethel and Pharathon: poss. El-Taiyebah, or Tammûn, in the Wâdy Fâr'a.

Thamnathsaraa, *Thamnathsare*, burialplace of Josue: prob. Kh. el-Fakhakhir, in Ephraim.

Thanac, *Thanach* (Jos., xxi, 25, etc.): Tell Ta'annak, S.W. of Lejûn.

Thanathselo (Jos., xvi, 6; N. Ephraim): Ta'anâ, S.E. of Naplûs.

Thapsa, 1 (III Kings, iv, 24), N. limit of Solomon's kingdom: Thapsacus, on the Euphrates, above the confluence of the Belik. Kala'at Dibseh. -- 2 (IV Kings, xv, 6), city taken by Manahem, after he had overthrown Sellum: prob. a mistake for Thersa.

Thare (Num., xxxiii, 27), supposed to be a station of the Israelites on the journey from Sinai to Cades; poss. a gloss.

Tharela (Jos., xviii, 7; Benjamin). Unknown.

Tharsis, 1. A maritime country far to the W. of Palestine, and on the location of which there is much variance of opinions, some deeming it to be Spain (Tartessos); others Carthage, in Spain (Tarseion), others, the Tyrrhenians (Tiras of Gen., x, 12), or Etruscans. -- 2 (Judges, ii, 13), pose. Tarsus of Cilicia.

Thebath (I Par., xviii, 8), identical with Bete.

Thebes (Judges, ix, 50; II Kings, xi, 21; Samaria): Tûbâs, N.E. of Naplûs.

Thecua, *Thecua* (Amos, i, 1), birthplace of Amos: Kh. Teqû'a, S. of Bethlehem.

Thelassar. See Thalassar.

Thelharsa (I Esd., ii, 59; II Esd., vii, 61), an unknown Babylonian city.

Thelmala (I Esd., ii, 59; II Esd., vii, 61), another unknown Babylonian city.

Theman (Jer., xlix, 7, etc.): poss. Chobak, in the Wâdy Gharandel, S. of the Dead Sea.

Thelmela. See *Thelmala*.

Themna. See *Thamna*.

Thenac. See *Thanac*.

Thersa (Jos., xii, 24, etc.; Samaria), the capital of Jeroboam's kingdom: poss. Tullûzâh, N. of Mt. Hebal, or Et-Tîreh, near Mt. Garizim.

Thesbe, birthplace of Elias; whether Thisbe of Galilee (see below), or Thesbon of Galaad (Kh. el-Istib, near the Wâdy 'Ajlûn, 10 m. N. of the Jaboc), is not absolutely certain, although the Greek favours the latter opinion.

Thessalonica (q.v.).

Thisbe (Tob., i, 2), birthplace of Tobias, S. of Cedus of Nephtali.

Thochen. See *Ether*.

Thogorma (Gen., x, 3, etc.): Phrygia, according to Josephus and Targum; others generally identify it with Armenia, and especially W. Armenia. Cf. Assyrian: *Til-Garimmu*.

Tholad. See *Eltholad*.

Thophel (Deut., i, 1): poss. Tefîleh, S.E. of the Dead Sea.

Thopo (I Mach., ix, 50; Judea), perh. identical with Taphua 1.

Three Taverns (Acts, xxviii, 15), a place likely near the mod. Cisterna on the Appian Way.

Thyatira (Apoc., ii, 20), a city in Lydia: Ak-Hissar.

Tiberias. See *GALILEE*.

Tichon (Ezech., xlvi, 16; D.V.; "the house of Tichon"): possibly El-Hadr, E.N.E. of Banîyas, on the Nahr Mughannîyeh.

Tob. A country E. of the Jordan; Geographers are at variance as to its location: some place it S.W. of Soba; others, S. of Gadara; others E. of the bridge called Jisr Benât Yâkûb.

Topheth. See *JERUSALEM*.

Tripoli (q.v.).

Troas (Acts, xvi, 6-8), a seaport in Mysia: Eski Stambûl.

Trogyllium (Acts, xx, 15, accord. to MS.D; omitt. in the principal other Manuscripts), a promontory in Asia Minor, over against the E. end of Samos: C. Mycale.

Tubin (I Mach., v, 13). See *Tob*.

Tyre (q.v.).

Ur (Gen., xi, 28, etc.); Assyrian: *Uru*: el-Mughâir, on the right bank of the Lower Euphrates.

Vale Casis (Jos., xviii, 21), a place in the Ghôr, in the neighbourhood of Jericho.

Vedan (Ezech., xxvii, 19), poss. Egyptian: *Uethen*, a city E. of Egypt; the text is not clear.

Zabulon (q.v.).

Zanoa, *Zanoë*, 1 (Jos., xv, 34, etc.; Sephela): Zanû'a. -- 2 (Jos., xv, 56, etc.; mount. of Juda): Kh. Zanûtâ.

Zephrona (Num., xxxiv, 9; N. limit of the Holy Land): perh. Kh. Senbarîyeh.

Ziklag, A.V. for Siceleg.

Ziph (Jos., xv, 24, etc.; desert of Juda): Tell ez-Ziph, betw. Hebron and Carmel.

Zohemoth (III Kings, i, 9), a rocky place near Jerusalem; the name seems preserved in the mod. Ez-Zehweileh.

The bibliography of Biblical Geography is very extensive. In his *Bibliotheca Geographica Palestinæ* (Berlin, 1890), RÖRICHT attempted a classification of the whole literature of the subject, from 333 to 1878. TOBLER had already paved the way by a similar work, some twenty-five years before. A systematic enumeration has been undertaken by Prof. THOMSEN, of the German Palestinian Institute. We must limit ourselves here to a selection of: I. Serials and periodicals; II. Studies on old sources; III. General works; IV. Special subjects.

I. First and foremost, the publications of the Palestine Exploration Fund, since 1865. Besides the maps of E. and W. Palestine (1 inch to the mile), seven volumes of Memoirs on W. Palestine, Moab, Jerusalem, special papers, name-lists, three volumes of studies on natural history, botany, geology, have been issued, and others are forthcoming. The *Palestine Exploration Fund Quarterly Statement* announces the progress of the work accomplished by the society. Germany has likewise her Palestine Association, issuing the *Zeitschrift des Deutschen Palästina-Vereins* (abbreviated *ZdDPV*), the *Mittheilungen und Nachrichten des DPV*. The Imperial Palestinian Institute began in 1905 the publication of a *Palästina-jahrbuch*. The Ecole pratique d'Etudes Bibliques of the French Dominicans at Jerusalem started in 1892 the excellent *Revue Biblique*; the Faculté Orientale of the St. Joseph University at Beirut has been issuing yearly since 1906 a stout volume of *Mélanges*; while the members of the American School of Oriental Study and Research in Palestine publish their contributions mostly in the *Biblical World* and *The American Journal of Archaeology*. Valuable articles on Biblical geography are likewise to be found in CLERMONT-GANNEAU: *Mélanges d'Archéologie Orientale*, also in the *Oriens Christianus*, and the *Revue de l'Orient Latin*.

II. 1. PETRIE, *Syria and Egypt from the Tell el Amarna letters* (London, 1898); ZIMMERN, *Palästina um das Jahr 1400 v. Chr.* (s. d.); CLAUSS, *Die Städte der El Amarna Briefe und die Bibel in ZdDPV*, t. XXV (1907), parts 1 and 2; DHORME, *Les pays bibliques au temps d'El Amarna* in *Revue Biblique* (1908, Octob.). 2. MAX MÜLLER, *Asien und Europa nach Altägyptischen Denkmälern* (Leipzig, 1893); ID., *Die Palästinaliste Thutmosis III*, in *Mittheilungen der Vorderas. Gesellschaft* (1907), I, 3. SCHRADER-WINCKLER, *Die Keilinschriften und das Alte Testament* (3rd ed.; a new edition, entitled *Keilinschriften und Bibel*, is forthcoming, vol. II, to be published by H. WINCKLER, will be devoted to history and geography). 4. *Notitia dignitatum et administrayionum omnium tam civilium quam militarium in partibus Orientis et Occidentis* (BÖCKING edit., 1839-1853); *Peutinger Table* (ed. prine., 1591; ed. DESJARDINS, Paris, 1875). 5. DE LAGARDE, *Onomastica Sacra* (Göttingen, 1870); KLOSTERMANN, *Eusebius Onomasticon der Bibl. Ortsnamen* (Leipzig, 1904); THOMSEN, *Palästina nach dem Onomasticon des Eusebius* in *ZdDPV*, XXVIII, 97-141; ID., *Loca sacra; Verzeichnis der 1. bis 6. Jahrh. n. Chr. erwähnten Ortschaften Palästinas* (Halle, 1907). 6. NEUBAUER, *La Géographie du Talmud* (Paris, 1868).

7. Descriptions of the Holy Land by early Christian pilgrims may be found in *P. L.*, VIII (PILGRIM or BORDEAUX); CLV, and *P. G.*, CXXXIII. The Palestine Pilgrims Texts Society have printed these and other texts, even of Moslem writers; some likewise (BURKARD, *Descriptio Terræ Sanctæ*, in particular), may be found in LAURENT, *Peregrinatores Medii ævi quattuor* (Leipzig, 1873); others in GOLUBOVICH, *Biblioteca bio-Bibliografica della Terra Santa e dell' Oriente Francese* (Quaracchi, 1906). A good criticism of some of these Pilgrims' texts is given in BAUMSTARK, *Abendländische Palästina-pilger des ersten Jahrtausends und ihre Berichte* (Cologne, 1906). 8. PARIS, *Guillaume de Tir et ses continuateurs* (Paris, 1879-80); *Recueil des historiens des Croisades, publié per les soins de l'Académie des inscriptions et Belles-Lettres-Historiens Orientaux* (Paris, 1884-); REY, *Recherches géographiques et historiques sur la domination des Latins en Orient* (Paris, 1877); *Colonies Franques de la Syrie au XII^e et au XIII^e s.* (Paris, 1883).

III. BAEDEKER (BENZIGER), *Palestine and Syria* (4th ed., Leipzig, 1906); CONDER, *Handbook to the Bible* (London, 1887); ID., *Palestine* and numerous articles on Bibl. geography in HAST., *Dict. of the Bible*; HURLBUT, *Manual of Biblical Geography* (Chicago, 1894); RITTER, *The Comparative Geography of Palestine and the Sinaitic Peninsula* (Edinburgh, 1866); SMITH, *Historical Geography of the Holy Land* (New York, 1908, 13th ed.); STANLEY, *Sinai and Palestine* (London, 1886); THOMSON, *The Land and the Book* (3 vols., London, 1881-86); WILSON, *The Lands of the Bible* (Edinburgh, 1847); BENZIGER, *Hebräische Archäologie* (Tübingen, 1907); BUHL, *Geographie des Alten Palästina* (Freiburg and Leipzig, 1896); RIESS, *Biblische Geographie* (Freiburg, 1872); ID., *Atlas Scripturæ Sacræ*, re-edited by RÜCKERT; Freiburg, 1906); FILLION AND NICOLLE, *Atlas Géographique de la Bible* (Lyons and Paris, 1890); GRATZ, *Théâtre des événements racontés dans les divines écritures*, Fr. tr., by GIMAREY, revised by BUGNIOT (Paris, 1869); GUÉRIN, *Description géographique, historique et archéologique de la Palestine* (3 vols., Paris, 1868-1880); LEGENDRE, *Carte de La Palestine ancienne et moderne* (Paris, s. d.); ID., *Palestine*, and numerous geographical and topographical articles in VIGOUROUX, *Dict. de la Bible*; LIÉVIN DE HAMME, *Guide indicateur de la Terre Sainte* (Jerusalem, 4th ed., 1897); HAGEN, *Atlas biblicus* (Paris, 1897); RELAND, *Palæstina ex monumentis veteribus illustrata* (Utrecht, 1714).

IV. 1. ROBINSON, *Physical Geography of the Holy Land* (London, 1865); HULL, *Memoir on the Geology and Geography of Arabia Petæa, Palestine and adjoining districts* (London, 1889); LARTET, *Essai sur la géologie de la Palestine et des contrées avoisinantes*, in *Annales des sciences géologiques*, I (1869); BLANCKENHORN, *Entstehung und Geschichte des Todten Meeres*, in *ZdDPV*, XIX (1896). 2. VAN KASTEREN, *La frontière septentrionale de la Terre Promise*, in *Revue Biblique*, IV (1895), 23 sqq. 3. FURRER, *Die antiken Städte und Ortschaften im Libanongebiete*, in *ZdDPV*, VIII (1885). 4. FURRER, *Zur Ostjordanischen Topographie*, in *ZdDPV*, XIII (1890); SCHUMACHER, *Der Dscholan*, in *ZdDPV*, IX (1886), tr. *The Jaulan* (London, 1888). 5. DE LUYNES, *Voyage d'Exptoration à la Mer Morte* (Paris, s. d.); DE SAULCY, *Voyage autour de la Mer Morte* (Paris, 1853); GAUTIER, *Autour de la Mer Morte* (Paris, 1898). 6. CONDER,

Heth and Moab (London, 1889); TRISTRAM, *The Land of Moab* (London, 1874); BRÜNNOW AND VON DOMASZESWKI, *Die Provincia Arabia* (Strasburg, 1904); MUSIL, *Karte von Arabia Petraea* (Vienna, 1906); ID., *Arabia Petraea: Topographischer Reisebericht*; I, *Moab*; II, *Edom* (Vienna, 1907). 7. PALMER, *The Desert of the Exodus* (Cambridge, 1871); DE LABORDE, *Commentaire géographique sur l'Exode et les Nombres* (Paris, 1841); LAGRANGE, *Le Sinai biblique*, in *Revue Biblique* (1889), 369-92; ID., *L'Itinéraire des Israélites du pays de Gessen aux bords du Jourdain* in *Revue Biblique* (1900), 63-86; 273-87; 443-49; SZCZEPANSKI, *Nach Petra und zum Sinai* (Innsbruck, 1908).

Charles L. Souvay.

Geography and the Church

Geography and the Church

The classic historians of geography, Alexander von Humboldt, Carl Ritter, and Oscar Peschel, never forgot to acknowledge how greatly their science was indebted to the Church. Of course the beginnings of all profane knowledge can be traced back to the time when "priest" and "scholar" meant one and the same thing. But with geography especially the Church had very close relations -- relations which are readily explained by the nature of this science and the course of its evolution.

The object of geography is to extend our knowledge of the earth's surface and to determine the position of our planet in relation to cosmic and physical phenomena. For the fulfilment of its first and more important task, the accumulation of geographic information, the prerequisites were at hand even in the earlier days. It needed only intrepid men to penetrate from known to unknown countries. But the powerful incentive of a purely scientific interest was still lacking. The motives that led to geographical progress at that time were greed and lust of conquest, as well as a far nobler motive than these -- the spread of Christianity. To this mission the most intelligent, the most upright, and the most persevering of all explorers devoted themselves. Consequently, it was they who achieved the greatest success in the field of discovery during the Middle Ages and far into later days, right up to the time when modern scientific research became its successor. The second purpose, geographical theory, commonly called universal geography, could only be profitably attempted after adequate progress had been made in the auxiliary sciences of astronomy, mathematics, and physics. But herein, too, medieval clerical scholars were the first to show their clear-sightedness. For them there was no more attractive pursuit than to trace the vestiges of the Creator in all the marvellous harmony of the universe. How, then, was it possible that the laws governing this globe of ours could escape their search for truth? Of course, they could only have a presentiment of these laws, but frequently enough their ideas came very close to the precise results of the great modern scientists, equipped with the best of modern instruments. Again, one of the greatest of them all was a theologian -- Copernicus.

Under these circumstances it was inevitable that the part contributed by the Church to this branch of human knowledge should be of great importance, as the most distinguished geographers

bear witness. We may therefore rightfully present a coherent picture thereof. To this end we have divided the subject according to the following aspects:

- I. The Influence of the Activity of the Church on the Discoveries of New Lands and Races during the Middle Ages;
- II. The Views and Statements of Medieval Theologians;
- III. The Opening up of Foreign Lands by Missionaries from the Age of Discovery down to the Present Day, and the Part Borne by Catholic Scholars in Modern Geographical Research.

I.

The confines of the world as known to geographers at the beginning of the Christian Era are shown in the famous geography of the Alexandrian, Claudius Ptolemæus (150 A.D.). Southwards they extended to the White Nile and the northern boundary of the Sudan; in the west they included the Canary Isles and the British Isles; to the north they reached as far as the German Seas and thence over the Low Countries of Russia and the Aral Sea to the sources of the Indus and the Ganges. In the Orient they took in Arabia and the coasts of India and Indo-China as far as the Archipelago. Their certain knowledge, however, did not extend beyond the boundaries of the Roman Empire when it was at its zenith. At the very time when this empire was falling to pieces, it was overrun by the peaceful missionaries of the new spiritual power, Christianity. Even in the first few hundred years they found their way to the Far East. According to tradition, the Apostle Thomas himself reached Meliapur. In any case Christianity had been spread in Malabar, on the coast of Coromandel, in Socotra and Ceylon as early as the fourth century, as Cosmas Indicopleustes informs us in his "Christian Topography", a very important work from a geographic standpoint. Even in Abyssinia and in Southern Arabia the Faith found a footing. Simultaneously the frontier lands on the Rhine and the Danube were opened up. The subsequent centuries were spent in exploring the North. To this end a centre of operations was established which, for the purpose of the scientific discoverer could not have been more wisely selected in the conditions then prevalent. Then followed the foundation of monasteries in the British Isles which sent out in all directions their monks, well equipped with learning and well fitted to become the pioneers of culture. To these missionaries we owe the earliest geographical accounts of the northern countries and of the customs, religions, and languages of their inhabitants. They had to define the boundaries of the newly established dioceses of the Church. Their notes, therefore, contained the most valuable information, though the form was somewhat crude, and Ritter very justly traces the source and beginning of modern geography in these regions back to the "Acta Sanctorum". The world is indebted to the diaries of St. Ansgar (died 865) for the first description of Scandinavia. The material in them was employed later on by Adam of Bremen in his celebrated work "De situ Daniæ". The accounts of these countries that Archbishop Axel of Lund (died 1201), the founder of Copenhagen, furnished to the historian Saxo Grammaticus were also of great value. Reports brought in by monks enabled Alfred the Great (901) to compile the first description of Slavonic lands. Then followed the Chronicle of Regino of Prum (907-968) -- a work equally important for the historian and the geographer, as it contains the reports of St. Adalbert, who made his way into Russia in 961. Of similar merit are the historical works of

the monk Nestor of Kiev (died 1100) and the country pastor Helmold (died 1170). Bishops Thietmar of Merseburg (died 1019) and Vincent Kadlubek of Cracow (1206-18) bring us the earliest information regarding the geography of Poland, while the letters of Bishop Otto of Bamberg contain the earliest description of Pomerania. In like manner the geography of Prussia, Finland, Lapland, and Lithuania begins with the evangelization of these countries. And even if it be difficult to-day to estimate at their proper value the discovery of these regions now so familiar to us, the first voyages of civilized Europeans on the high seas, which started from Ireland, will always challenge our admiration. Groping from island to island, the Irish monks reached the Faroe Isles in the seventh century and Iceland in the eighth. They thus showed the Northmen the route which was to bring about the first communication between Europe and America, and finally set foot on Greenland (1112). The earliest accounts of these settlements, with which, owing to unpropitious political and physical conditions, permanent intercourse could not be maintained, we owe to Canon Adam of Bremen, to the reports sent by the bishops to their metropolis at Drontheim (Trondhjem), and to the Vatican archives.

Meanwhile, communication with the East had never ceased. Palestine was an object of interest to all Christendom, to which the eyes of the West had been turned ever since the days of the Apostles. Thousands and thousands of pilgrims flocked thither in bands. Not a few of them possessed sufficient ability to describe intelligently their experiences and impressions. Thus the so-called "Itineraries", or guide-books, by no means confined themselves to a description of the Sacred Places. Besides giving exact directions for the route, they embraced a great deal of information about the neighbouring countries and peoples, about Asia Minor, Egypt, Arabia, Persia, and even India. These works were very popular reading and undoubtedly infused an entirely new element into the study of geography in those days. A still greater stimulus was given to it by the Crusades -- those magnificent expeditions which, inspired and supported by the Church, brought huge masses of people into contact with the Orient. They made a knowledge of the lands they sought to conquer, a commonplace in Europe. They were the means of spreading the geographic theories and methods of Arabian scholarship, at that time quite advanced, thereby placing the research of Western scholars on entirely new bases, and putting before them new aims and objects. Finally, in the effort to secure new allies for the liberation of the Holy Land, they brought about intercourse with the rulers of Central Asia. This intercourse was of the utmost importance in the history of medieval discoveries.

Stray communities of Christians were scattered throughout the interior of Asia, even in the early centuries, thanks to the zeal of the Nestorians. It is true that they were separated from Rome and were suppressed by rigorous persecutions in China as early as the eighth century. But even during the Crusades some Mongolian tribes showed such familiarity with the new faith that the popes had great hopes of an alliance with these nations. The general council held at Lyons in 1245 under Innocent IV decided to send out legates. Men duly qualified for these missions were found among the newly established Orders of St. Francis and St. Dominic. The Dominican Ascalinus in 1245 reached the court of the Khan of Persia on the eastern shore of the Black Sea after a voyage of fifty-nine days, but his errand was fruitless. His companion, Simon of St-Quentin, wrote an

account of the voyage, as did also his great contemporary, Vincent of Beauvais. The enterprises of the Franciscans were politically more successful, and far more productive of scientific results. Under the leadership of John de Piano Carpini of Perugia, they travelled through Germany, Bohemia, Poland, and Southern Russia as far as the Volga, and thence to the Court of the Grand Khan at Karakorum (1246). Their reports embrace the political conditions, ethnography, history, and geography of the Tatar lands. They were excellently supplemented by Friar Benedict of Poland of the same order in regard to the Slav countries. Both these works, however, are surpassed by the Franciscan William Rubruck (Rubruquis) of Brabant, whose report Peschel pronounces to be "the greatest geographical masterpiece of the Middle Ages". He was the first to settle the controversy between medieval geographers as to the Caspian Sea. He ascertained that it was an inland lake and had not, as was supposed for a long while, an outlet into the Arctic Ocean. He was the first Christian geographer to bring back reliable information concerning the position of China and its inhabitants. He knew the ethnographic relations of the Hungarians, Bashkirs, and Huns. He knew of the remains of the Gothic tongue on the Tauric Chersonese, and recognized the differences between the characters of the different Mongolian alphabets. The glowing pictures he drew of the wealth of Asia first attracted the attention of the seafaring Venetians and Genoese to the East. Merchants followed in the path he had pointed out, among them Marco Polo, the most renowned traveller of all times. His book describing his journeys was for centuries the sole source of knowledge for the geographical and cartographical representations of Asia. Side by side with Marco Polo, friars and monks pursued untiringly the work of discovery. Among them was Hayton, Prince of Annania (Armenia), afterwards Abbot of Poitiers, who in 1307 made the first attempt at a systematic geography of Asia in his "Historia orientalis". Also the Franciscans stationed in India who followed the more convenient sea route to China at the end of the thirteenth century. Special credit is due to John of Monte Corvino (1291-1328), Odoric of Pordenone (1317-31), whose work was widely circulated in the writings of John Mandeville, and John of Marignolla. Of India, also, the missionaries gave fuller information. Menentillus was the first to prove the peninsular shape of the country and, in contradiction to Ptolemy, described the Indian Ocean as a body of water open to the South. The Dominican Jordanus Catalani (1328) records his observations on the physical peculiarities and natural history of India. At the same time more frequent visits were made to Northern Africa and Abyssinia; and towards the middle of the fourteenth century settlements were made in the Canary Isles.

However, the immense tracts of land in the interior of Asia were soon closed again to scientific investigation. With the fall of the Mongol dynasty, which had been favourably disposed to Christians, China became forbidden ground to Europeans. But the East remained the goal of Western trade, to which the missions had shown the way. The rich lands on the Indian Ocean remained open, and henceforth they were the objective point of all the great exploring expeditions, undertaken by the sea-loving Portuguese, which culminated in the discovery of America by Columbus. It is well known how much these undertakings were furthered by the all-pervading idea of spreading Christianity. The main object of Henry the Navigator in equipping his fleet with the revenues of the Order of Christ was the conversion of the heathen. He was working to the same purpose on the

continent of Africa, where he sought to establish communications with the Christian ruler of Abyssinia. His efforts led to the circumnavigation of Africa by his successors, and to the systematic exploration of the highland states of East Africa begun by Portuguese missionaries in the sixteenth century. Columbus, too, was regarded in his time as pre-eminently the envoy of the Church. Furthermore, the strange results expected from his expedition and his own projects were the last echo of all the aspirations of medieval Christendom, which contemplated a way to the Kings of Cathay (China) whose disposition to embrace Christianity had been repeatedly emphasized by Toscanelli, as well as the discovery of the Earthly Paradise, which Columbus placed somewhere near the gulf of Paria, the recovery of the Holy Sepulchre by means of the treasures he expected to find, and, finally, the extension of the Kingdom of God over the entire earth before the approaching end of the world.

II.

Philosophical speculation also had a share in the magnificent success that crowned the practical work of the Middle Ages. Although geography as a science for its own sake was no more the chief purpose of this speculation than exploration for its own sake was that of the missionaries, it had arrived at truths that are admitted to-day, even when tested by the light of modern research -- truths that must be recognized as real progress. As might be expected, in the early centuries of the Church men strove above all things to reconcile deductions from the observation of the facts of nature with the beliefs that were then supposed to be taught in Holy Scripture. The earliest Christian literature was so predominantly exegetical that the teachings of the ancients were always tested in order to see whether they were in harmony with Holy Writ. Hence it was that several of the Fathers pronounced in favour of the theory of the flatness of the earth's surface which had been put forward in later Roman cosmographies. Among the advocates of this error were Theodore of Mopsuestia, St. John Chrysostom, Severian of Gabala, Procopius of Gaza, and others. Cosmas Indicopleustes advanced an especially grotesque elaboration of this doctrine. In his exaggeratedly narrow interpretation of the phraseology of Holy Writ he claimed that the world was constructed in the shape of the Tabernacle of the Covenant in the Old Testament. But long before his day there were men who believed in the sphericity of the earth. It was recognized by Clement and Origen; Ambrose and Basil also upheld it. Gregory of Nyssa even sought to explain the origin of the earth by means of a physical experiment, and advanced hypotheses that come very close to the modern theories of rotation. Augustine declared that the doctrine of the sphericity of the earth in no way conflicted with Holy Writ, and later authors, especially the Venerable Bede, also attempted to prove it on scientific grounds. For a considerable period the question of the Antipodes was beset with controversy. It was absolutely denied by Lactantius and several others, principally on religious grounds, as the people of the Antipodes could not have been saved. The learned Irishman, Bishop Virgilius, patron saint of Salzburg (died 784) was the first to openly express the opinion that there were men living beyond the ocean. Individual physiographical phenomena also began to come under the observation of the learned, such as the influence of the moon on the tides, the erosive

action of the sea, the circulation of water, the origin of hot springs and volcanoes, the division of land and water, the position of the sun at different latitudes. The learning and opinions of the first few hundred years were comprehensively set forth in the tremendous work of Isidore of Seville (died 636), the "Etymologiæ" or "Origines", which for a long time enjoyed unlimited authority. During the next few centuries, which were comparatively barren of literary achievements, the only men to attain any celebrity, besides Bede and Virgilius of Salzburg, were the anonymous geographer of Ravenna (c. 670), the Irish monk Dicuil, author of the well-known "Liber de mensurâ Orbis terræ" (c. 825), and the learned Pope Sylvester (999-1003), otherwise known as Gerbert of Aurillac, the most illustrious astronomer of his century. The oldest cartographic documents we have also date from the same period. They rely for their information on the earth's surface substantially on the Roman methods of delineation. The lost map of the world as known to the Romans can now be reconstructed only by means of the medieval *Mappæ mundi*; consequently, they exhibit all the deficiencies of the model they followed; they are circular in plan and were drawn neither on projection nor according to scale, the boundaries of the provinces being indicated by straight lines. The central point was in the Ægean Sea; at the time of the Crusades it was transferred to Jerusalem, the East being at the top of the maps. In addition to adhering to the Roman form, these maps have preserved for us also the contents of the Roman maps; and therein lies the principal value of these interesting documents. They were often draughted with the greatest and most artistic care. Especial importance attaches to the map of the world made by the Spanish monk Beatus. Numerous copies of this show the entire area of the globe as known in 776 after Christ. Of the big wall maps only those in the cathedral at Hereford and the nunnery at Ebsdorf have survived. Both of them are of the latter half of the thirteenth century and are representative of the ancient type of map. Small atlases were largely circulated in cosmographical codices. These are known as Macrobius atlases, Zone atlases, Ranulf atlases, and so forth. Special maps have also come down to us; two of them, showing south-eastern Europe with Western Asia and Palestine are even attributed to St. Jerome. There is a representation of Palestine in mosaic in the church at Madaba; this dates from the middle of the sixth century. The English monk, Matthew Paris, draughted some modern maps in the thirteenth century which were quite free from the influence of Ptolemy and the Arabians.

But geographical problems made great and unexpected progress when they received a more scientific basis. This basis was provided by the scholastics when they made the Aristotelean system the starting-point of all their philosophical researches. Their thorough logical training and their strict critical method gave to the work of these commentators on Aristotle the value of original research, which strove to comprehend the entire contemporary science of nature. As at the same time the *Almagest* of Ptolemy was brought to light again by the presbyter, Gerard of Cremona (1114-87), there was not a single problem of modern physical and mathematical geography the solution of which was not thus attempted. The fact that the writings of Aristotle and Ptolemy, on which they founded their investigations, had already passed through the hands of Arabian scholars, who, however, probably received them at some time from Syrian priests, proved of advantage to the consequent geographical discussions. The most eminent representative of physical studies was

Albertus Magnus; of mathematics, Roger Bacon. Their precursor, William of Conches, had already given evidence of independent conception of the facts of nature in his "Philosophia Mundi". Also Alexander Neckham (1150 to about 1227), Abbot of Cirencester, whose "Liber de naturâ rerum" contains the earliest record of the use of the mariner's compass in navigation and a list of remarkable springs, rivers, and lakes. Blessed Albertus Magnus (1193-1280), a master with whom in the universality of his knowledge only Alexander von Humboldt is comparable, opened up to his contemporaries the entire field of physiography, by means of his admirable exposition of Aristotle, laid the foundations of climatology, botanical geography, and, in a certain sense, even of comparative geography. His work "De cœlo et mundo" treats of the earth as a whole; his "libri meteororum" and "De passionibus aeris" include meteorology, hydrography, and seismology. In the "De naturâ locorum" he enlarges upon the system of the zones and the relations between man and the earth. He furnished proofs of the sphericity of our planet that are still popularly repeated to-day; he calculated accurately the duration of the day and the seasons in the different quarters of the globe. Ebb and flow, volcanology, the formation of mountain-ranges and continents -- all these subjects furnish him material for clever deductions. He carefully recorded the shifting of coastlines, which men at that time already associated with the secular upheaving and subsidence of continents. He also ascertained the frequency of earthquakes in the neighbourhood of the ocean, He closely observed fossilized animals. He knew that the direction of the axes of mountain-ranges influenced the climate of Europe, and, on the authority of Arabian writers, he was the first to refute the old error that the intertropical surface of the earth must necessarily be quite parched. His fellow-friar, Vincent of Beauvais (died 1264), also proved himself to be a very keen observer of nature. A great mass of geographical material is stored up in his "Speculum naturale". Among other things he recognized that mountain-ranges constantly lose in height, owing to the influence of climate and of rain, and that in high altitudes the temperature falls because of the decrease of atmospheric density. Finally, we must mention the original views of St. Thomas Aquinas on geography, as well as those of the laymen Ristoro of Arezzo, Brunetto Latini (1210-94), his great disciple, Dante (1266-1321), and, lastly the "Book of Nature" by Conrad of Megenberg, canon of Ratisbon (1309-1378). For all of these Albertus Magnus had opened the door to the rich treasure-house of Greek and Arabian learning. Still more far-reaching in their results were the labours of the scholars who applied themselves principally to mathematical geography. At the head of them all stands Roger Bacon, the "Doctor Mirabilis" of the Order of St. Francis (1214-94). Columbus was emboldened to carry out his great project on the strength of Bacon's assertion that India could be reached by a westerly voyage -- a claim based on mathematical computation. Even before Ptolemy's "Geography" had been rediscovered, Bacon attempted to sketch a map, determining mathematically the positions of places, and using Ptolemy's Almagest, the descriptions of Alfraganus, and the Alphonsine Tables. Peschel pronounces this to be "the greatest achievement of the scholastics". Cardinal Pierre d'Ailly (1350-1425), whose "Imago Mundi" was also a favourite book of Columbus's, founded it on Bacon's works. It is to him and Cardinal Filiaster that Western civilization owes the first Latin translation of Ptolemy's "Geography", which Jacopus Angelus finished and dedicated to Pope Alexander V

(1409-10). The circulation of this book created a tremendous revolution, which was particularly beneficial to the development of cartography for centuries thereafter. As early as 1427 the Dane Claudius Clavus added to Filiaster's priceless manuscript of Ptolemy's work his map of Northern Europe, the oldest map of the North which we possess. Domnus Nicolaus Germanus, a Benedictine (of Reichenbach?) (1466), was the first scholar who modernized Ptolemy by means of new maps and made him generally accessible. The Benedictine Andreas Walsperger (1448) made a map of the world in the medieval style. That of the Camaldolese Fra Mauro (1457) is the most celebrated of all monuments of medieval cartography. It was already enriched by data furnished in Ptolemy's work. The map of Germany designed by Cardinal Nicholas of Cusa (1401-64), a pupil of Toscanelli (1387-1492), was printed in 1491. This prelate was the teacher of Peurbach (1432-61), who in turn was the master of Regiomontanus (1436-67), the most illustrious astronomer since Ptolemy. Cardinal Bessarion enabled Regiomontanus to study Greek, and Pope Sixtus IV (1474) entrusted the reformation of the Calendar to him. We must also mention Æneas Sylvius (afterwards Pope Pius II) and the papal secretaries Poggio and Flavio Biondo, who made several valuable contributions to the science of geography, also Cardinal Bembo and the Carthusian Reisch (1467-1525).

III.

In order to set forth properly the achievements in discovery and research in modern times by Catholic scholars, we adopt Peschel's arrangement. He divides this period of the development of geography into two main epochs:

- (1) That of discovery, up to the middle of the seventeenth century;
- (2) That, of geographical measurement, from 1650 down to the present day.

We cannot set down all the names of priests and missionaries which we find in both these periods. Their chief usefulness lay in their contributions to the general knowledge of various countries and races. But they also made contributions of the greatest value to the theoretical development of our science. They were the first and foremost promoters of many studies auxiliary to geography that sprang up in the course of time, such as ethnology, meteorology, volcanology, and so forth.

(1) Even on their earliest voyages the great discoverers took with them learned priests. These men wrote glowing accounts of the wonders they saw in the newly discovered lands to their brethren at home, so that they might spread the information broadcast. In a short time monastic settlements sprang up in the great colonial possessions of Spain and Portugal. The Dominicans were the first missionaries to America, and Franciscans are heard of in India as early as 1500, while the Augustinians accompanied Magellan to the Philippines in 1521. They were equipped with the best available aids and assistants. Among the Jesuits especially these received a thorough and systematic training. The Jesuits established missions on the Congo, in 1547, in Brazil, in 1549, in Abyssinia, 1555, in South Africa, 1559, in Peru, 1568, in Mexico, 1572, in Paraguay, 1586, and in Chile, 1591. They even penetrated into the old heathen civilizations of Japan (1549) and China (1563).

Soon after the discovery of the West Indies, the Hieronymite Fray Roman wrote a valuable study of the mythology of their inhabitants, which Ferdinand Columbus incorporated in his "Vida

del Almirante". It became the corner-stone of American ethnology. The Dominican Bias de Castillo explored the crater of Masaya in Nicaragua, in 1538, which Oviedo also visited and described later. The much-admired work "De rebus oceanicis et novo orbe" was written by Peter Martyr d'Anghiera (1475-1526), prior of Granada, and a friend of Columbus. It is especially noteworthy for its intelligent observations on ocean currents and volcanoes, which its author doubtless derived from missionaries. A most signal contribution was the "Historia natural y moral de las Indias" (1588), by the Jesuit José d'Acosta (1539-1600), who lived in Peru from 1571 to 1588, and proved himself one of the most brilliant writers on the natural history of the New World and the customs of the Indians. The first thorough exploration of Brazil was made by Jesuit missionaries, under Father Ferre (1599-1632) and others. Starting from Quito, Franciscans visited the region around the source of the Amazon in 1633. Father Laureano de la Cruz penetrated as far as the River Napo in 1647, and in 1650 made a journey by boat as far as the Pará River.

To missionaries, also, we owe important information concerning the interior of Africa during the sixteenth, and at the beginning of the seventeenth, century. The Portuguese priests Alvarez and Bermúdez accompanied the embassy of King Emanuel to King David III of Abyssinia. They sent home valuable reports regarding the country. They were followed by the Jesuits. A. Ternández crossed Southern Abyssinia, as far as Melinde, in 1613, and set foot in regions which until recently were closed to the Europeans. Father Paez (1603) and Father Lobo (1623) were the first to reach the source of the Blue Nile. As early as the middle of the seventeenth century the Jesuits drew a map of Abyssinia on the information supplied by these two men and by Fathers Almeida, Méndez, and Téllez. It was the best map of Abyssinia until the time of Abbadie (1810-97). At the request of Bishop Migliore of S. Marco, the Portuguese Duarte López (1591) wrote an important description of the Congo territory. The "Etiopia Oriental" (1609) by the Dominican Juan dos Santos was an authority on the lake country and eastern Central Africa until Livingstone's transcontinental expedition. The Jesuit missionaries Machado, Affonso, and Paiva in 1630 even thought of establishing communication between Abyssinia and the Congo territory. The Arabian Leo Africanus, whom Pope Leo X had educated, and who was named after him, wrote a book describing the Sudan. It was published by Ramusio in 1552 and was considered the only reliable authority on this country till the nineteenth century. More careful research led to the sending of missionaries to Central Asia. The Augustinian González de Mendoza made the first really intelligible map of China in 1585, and Father Benedict Goes opened the land route thither, after a perilous journey from India, in 1602. Thereupon the Jesuits Ricci and Schall, both learned mathematicians and astronomers, prepared the cartographic survey of the country. Ricci (1553-1610), as the "geographer of China", is justly compared to Marco Polo, the "discoverer of China". Using his notes, Father Trigault issued an historical and geographical treatise on China in 1615. Father Andrada visited Tibet in 1624, and published, in 1626, a book describing it which was afterwards translated into five languages. Borrus and Rhodes published reports on Farther India.

The science of cartography now made a quite Unexpected advance, due to the frequent and repeatedly enlarged editions of Ptolemy's work that were issued by the Benedictine Ruysch (1508),

by Bernardus Sylvanus (1511), Waldseemüller (1513), and others. Canon Martin Waldseemüller's map of the world (St-Dié, 1507) was his most distinguished achievement. It was the first to give to the New World the name of America. Bishop Olaus Magnus, one of the most illustrious geographers of the Renaissance, made a map of Northern Europe in 1539. He also undertook a long journey in the North in 1518-19 and was the first man to propound the idea of a north-east passage. The great map-makers Mercator and Ortelius also received devoted help and encouragement from ecclesiastics.

The most important result of the astronomical and physiographical observations made during this period was the discovery and establishment of the heliocentric system by Copernicus, canon of Königsberg (1473-1543). Celio Calcagnini (1479-1541) had prepared the way for this theory. In spite of the fact that his hypothesis was in direct contradiction to hitherto accepted interpretations of Holy Writ, such high dignitaries of the Church as Schomberg, Giese, Dantiscus, and others encouraged Copernicus to make public his discovery. Moreover Pope Paul III graciously accepted the dedication of the work "*De revolutionibus orbium cœlestium*" which appeared in 1543. Among the foremost astronomers was the Jesuit Scheiner (1575-1650). He and his assistant Cysatus were the first to notice the spots on the sun (1612), and founded the science of heliographic physics, of which Galileo had not even thought. The Capuchin monk Schyrl (Schyrlæus) de Rheita built a terrestrial telescope in 1645 and drew a chart of the moon. Nor did isolated physical phenomena pass unnoticed; attempts had already been made to classify them systematically. Giovanni Botero (1560-1617), secretary to St. Charles Borromeo, ranked with Peter Martyr among the first writers on deep-sea research -- or thalassography, and is considered to be the founder of statistical science. His "*Relatione del mare*" (1599) is the earliest known monograph on the subject of the ocean. He was followed by the Jesuit Fournier, whose significant "*Hydrographie*" (1641) treats encyclopedically of oceanic science. At Ingolstadt (Eck and Scheiner) and Vienna (Celts, Stabius, Tannstätter) geography was treated with especial care. The first professor of geography at Wittenberg was Barthel Stein, who entered a monastery at Breslau in 1511 and completed a description of Silesia in 1512-13. Cochläus (1479-1552), humanist and theologian, sought to make the scientific study of ancient authors (*Meteorology of Aristotle, Geography of Mela*) a part of higher education. He instilled a knowledge of geography into his pupils which at that time was without equal. Johann Eck, Luther's opponent, wrote a much-praised work on the physical geography of mountains and rivers for his lectures at Freiburg. The Jesuit Borrus was the forerunner of Halley the astronomer. He drew up a chart showing the magnetic variations of the compass in 1620.

(2) About the middle of the seventeenth century it was left almost exclusively for missionaries, going about their unselfish, silent, and consequently much under-estimated labours, to continue geographical research until, towards the end of the eighteenth century, great expeditions were sent out, supported by states and corporations and equipped with every possible scientific and technical aid and appliance. The missionaries achieved results from their work that entitle them to the credit of having been the pioneers of scientific geography and its strenuous co-operators. Bold expeditions exploring the interior of continents became more frequent. Numerous reports on Canada from the

hands of Jesuit missionaries, dated between the years 1632 and 1672, have been preserved. The Franciscan Friar Gabriel Sagard, commonly called Theodat, sojourned among the Hurons from 1624 to 1626. The Jesuits Bouton (1658) and de Tertre (1687) devoted a few pamphlets to the Antilles and the Carib tribes. It was at that time that the great rivers of America for the first time became adequately known. Under the leadership of La Salle, the Franciscans Hennepin, de la Ribourde, and Membré penetrated to the Great Lakes and Niagara Falls in 1680 and the following years. The same men navigated the Mississippi, of which even the Delta had been scarcely known until then. Mexico and California as far as the Rio Colorado were traversed by the Jesuits Kino (1644-1711), Sedlmayer (1703-1779), and Baegert (1717-1777). We find that between 1752 and 1766 -- eighty years before Meyer, the celebrated circumnavigator of the globe -- the Jesuit Wolfgang Beyer reached Lake Titicaca. Father Manuel Ramon sailed up the Cassiquiare from the Rio Negro to the Orinoco in 1744 and anticipated La Condamine, Humboldt, and Bonpland in proving that this branch connected these streams. Father Samuel Fritz, from 1684 on, recognized the importance of the Marañon as the main river and source of the Amazon. He drew the first reliable map of the entire course of the stream. The Jesuits Techo (1673), Harques (1687), and Duran (1638) wrote about Paraguay, and d'Ovaglia (1646) about Chile. Abyssinia, the most interesting country in Africa, was suddenly closed to missionaries about 1630. It was not until 1699 that the Jesuit Father Brévedent, with the physician Poncet, once more ventured up the Nile and into the interior of the country; but in so doing he lost his life. The Capuchins Cavazzi (1654), Carli (1666), Merolla (1682), and Zucchelli (1698) accomplished remarkable results in the Congo region. Even as late as the year 1862 the geographer Petermann made use of their writings to construct a map of that region.

But the greatest scientific triumphs attended the work of the missionaries in Asia. Especially remarkable were the successful attempts to penetrate into Tibet, a feat which Europeans did not repeat until our times. After Andrada, whom we have already mentioned, followed Fathers Grueber and d'Orville, who reached Lhasa from Peking in 1661 and went down into India through the Himalaya passes. The Jesuit Desideri (1716-29) and the Capuchins Della Penna (1719-1746) and Beligatti (1738) spent considerable time in this country.

To these travels must be added the splendid achievements in cartography and astronomy of the Jesuits, which, about 1700, caused a complete revolution in the development of geography. It was due chiefly to them that one of the most powerful States of that time, France, lent its support to this science, thus offering an example that resulted in a series of governmental subventions giving the development of geography its most powerful impetus. In 1643 the Jesuit Martin Martini (1614-61) landed in China. During his sojourn he acquired a personal knowledge of most of the provinces of that immense empire and collected his observations in a complete work, that appeared in 1651, entitled "Atlas Sinensis". In Richthofen's opinion it is "the fullest geographical description of China that we have". Moreover, it contains the first collection of local maps of that country. Athanasius Kircher further drew the attention of scholars the world over to the Celestial Empire in his "China monumentis illustrata" (1667). He, too, had at his disposal information gathered by missionaries.

And finally the Belgian Jesuit Verbiest succeeded in arousing the interest of Louis XIV by the advice he sent home to Europe. At his request, six of the most learned Jesuits went to China in 1687; they were Fathers Bouffe, Fontaine, Gerbils, Le Comte, and Viscous. They bore the title of "royal mathematicians" and at the expense of the French Crown were equipped with the finest instruments. From 1691 to 1698 Gerbils, court astronomer to the emperor, made several excursions to the hitherto unknown region on the northern boundary of China. He presented a map of the environs of Peking to the emperor who then ordered the survey of the Great Wall, which was completed by Fathers Bouffe, Régis, and Jared. This achievement was followed in the succeeding years by the mapping of the entire empire. Fathers Jartoux, Fridelli, Cardoso, Bonjour (Augustinian), de Tartre, de Mailla, Hinderer, and Régis undertook the work. By 1718 the map was finished. In addition to China proper it embraced Manchuria and Mongolia, as far as the Russian frontier. Simultaneously, a delineation of Tibet as far as the sources of the Ganges was begun. The map ranks as a masterpiece even to-day. It appeared in China itself in 120 sheets and since that time has formed the basis of all the native maps of the country. Fathers Espinha and Hallerstein extended the survey to Ili. The Jesuit Du Halde edited all the reports and letters sent to him by his brethren and published them in 1735 in his "Description géographique, historique, chronologique, politique et physique de l'empire de la Chine et de la Tartarie chinoise" (4 vols.). The material for the maps in this work was prepared by d'Anville, the greatest geographer of his time. All modern maps can be traced back to his "Atlas de la Chine". Still later, there were published in fifteen volumes the "Mémoires concernant l'histoire . . . des Chinois, par les missionnaires de Pekin" (Paris, 1776-91).

Many of the missionaries belonged to the learned societies of Paris, London, and St. Petersburg. They exchanged letters on scientific topics with such renowned scholars as Leibniz, Linnæus, John Ray, Duperron, Delisle, Marinoni, Simonelli, and others. The influence of widely read periodical publications is also noteworthy. Among them were the "Lettres édifiantes et curieuses écrites des missions étrangères", numerous volumes and repeated editions of which were published in the eighteenth century. They contained a mass of geographical material. The science of geography profited by this intercourse between the Jesuits and the European scientists. The greatest need at that time was the definite determination of astronomical positions in order to construct a really faultless map of the world. Thanks to the sound training in astronomy of the Jesuit missionaries before they went abroad, their missionary stations soon gathered many excellent determinations of latitude and longitude. As early as the middle of the seventeenth century they produced a great mass of reliable data from China. Between 1684 and 1686 they determined the exact position of the Cape of Good Hope, of Goa and Louveau (Siam). This enabled them to make a correct map of Asia which had until then shown an error of nearly 25 degrees of longitude towards the east. By order of the French Academy, Father Louis Feuillée, the learned Franciscan, and pupil of Cassini, revised uncertain positions in Europe and America. He made surveys in Crete, Salonica, Asia Minor, and Tripoli, in 1701-02, in the Antilles and Panama, 1703-05, in South America, 1707-12, and in the Canary Isles, 1724. Thus Delisle and d'Anville, the reformers of map-making, built up their work on the scaffolding furnished them by the Jesuits. In the attempts to determine the length

of a degree of longitude made in the seventeenth century, the Jesuits took a very prominent part. As early as 1645 Fathers Riccioli and Grimaldi tried to determine the length of a degree on the meridian. Similar work was done in 1702 by Father Thoma in China; in 1755, by Fathers Boscovich and Maire in the Papal States; in 1762, by Father Liesganig in Austria, and in the same year by Father Christian Mayer, in the Palatinate, also by Fathers Beccaria and Canonica in northwestern Italy (1774).

Besides the Jesuits engaged in geodetic work in Abyssinia, South America, and China, we meet with Father Velarde (1696-1753), who published the first approximately accurate map of the Philippines about 1734. G. Matthias Vischer, parish priest of Leonstein in Tyrol (1628-95), drew a map of Upper Austria in 1669 that was republished as recently as 1808. Father Liesganig, in conjunction with Fathers von Mezburg and Guessmann, designed maps of Galicia and Poland. Father Christian Mayer drew a map of the Rhine from Basle to Mainz, and Father Andrian, a chart of Carinthia. Fathers Grammatici (1684-1736), Dechalles, and Weinhart must also be mentioned.

In view of the lively intercourse between the missionaries and the members of their orders in Europe it is not surprising that the latter also compiled voluminous geographical summaries. Such are the works of the Jesuit Riccioli (1598-1671), the "Almagestum Novum" and "Geographia et Hydrographia reformata" (1661). Riccioli was a worthy contemporary of the great Varenus, and was really entitled to rank as a reformer, especially in cartography. Father Athanasius Kircher (1602-80) among other things devoted himself to physics. His most original observations are set down in his "Magnes, sive de arte magneticâ" (1641) and his "Mundus subterraneus" (1664). He made the ascent of Vesuvius, Etna, and Stromboli, at the risk of his life in order to measure their craters. On the basis of his observations he advanced a theory concerning the interior of the earth which was accepted by Leibniz and, after him, by an entire school of geologists, the Neptunists. He also was the author of the first attempt at a physical map, to wit, the chart of ocean currents (1665).

The Jesuit Father Heinrich Scherer (1628-1704), professor at Dillingen, devoted his entire life to geographical study. He incorporated in his works all that was then known of the earth. His "Geographica hierarchica" contains the earliest mission atlas. The science of map-making owes much to him. His "Geographia naturalis" contains the first orographical and hydrographical synoptic charts. His "Geographia artificialis" recommends a system of cartographic projection which the geographer Bonne, in 1752, accepted and carried out as one of the best. Alongside of these mighty works, which, in imitation of the great encyclopedic works of the Middle Ages, attempt to give a survey of the whole geographical knowledge of a period, we now meet in increasing numbers the equally important treatises on special subjects which resemble the works of our modern scientists. The name of the Dane Nicholas Steno is one of the foremost in the history of geology. He was tutor to the sons of Grand Duke Cosimo III and later vicar-general of the Northern Missions (1688-87). In the opinion of Zittel he was far in advance of his time. He was the first scientist to attempt the solution of geological problems by induction. He was also the first scholar who clearly conceived the idea that the history of the earth could be inferred from its structure and its component parts.

His little monograph "De solido intra solidum naturaliter contento" (1669) was the foundation of crystallography and stratigraphy, or the science of the earth's strata. One of the most painstaking geologists of the eighteenth century was the Abbate Lazzaro Spallanzani (1729-99). With him rank Fathers de la Torre (*Storia e fenomeni del Vesuvio*, 1755), Fortis (1741-1803), Palassou (*La minéralogie des Monts Pyrenées*, 1782), Torrubia (1754, in America and the Philippines), Canon Recupero, at Catania (died 1787), and many others.

The history of meteorology tells the same story as that of mathematical geography. This science also depended on widely scattered observations which could only be obtained from the monasteries scattered over Europe. Raineri, a pupil of Galileo, made the first records of the fluctuations of the thermometer. The first meteorological society, the "Societas Meteorologica Palatina" (1780-95), accomplished splendid results. Its founder was the former Jesuit and court chaplain Johann Jacob Hemmer. Almost all of its correspondents belonged to the various religious orders of Germany, Austria-Hungary, France, and Italy. The rapid growth of ethnography and linguistics was rendered possible solely by the vast accumulation of materials made by the missionaries in the course of the centuries. There was hardly a writer of travels who did not to some extent contribute to them. While many of them occupied themselves with this science exclusively, we mention here only the "pioneers of comparative ethnography", Fathers Dobrizhoffer (1718-91), in Paraguay, and Lafiteux in Canada; the noted Sanskrit scholars Fathers Hanxleden (1681-1782), Cœurdeux (1767), and Paulinus a Santo Bartholomeo (1776-89, in India), and, finally, the able Father Hervas (1733-1809). The latter's chief work, the "Catalogo de las lenguas" (1800-03), was published in Rome, whither all the members of the suppressed Jesuit Order had flocked.

Since the beginning of the nineteenth century the progress of geographical science, as was to be expected, is due chiefly to laymen, who, without religious aims, have continued the work on the foundations already provided. The co-operation of the clergy was of secondary importance, but it never entirely ceased, and, true to its great traditions, it has won a place of honour even amid the stupendous achievements of modern research. By way of proof, we close with the names of the theologian Moigno (1804-84), the founder and publisher of the natural science periodicals "Le Cosmos" (1852-) and "Les Mondes" (1863-); of the astronomer Secchi (1818-78), who, among other things, invented the meteorograph in 1858; also of the Lazarist Fathers Huc (1839-60), Gabet, and Armand David (died 1900). The last-named made themselves famous by their explorations in China, Manchuria, and Tibet. Finally, we should remember the astronomical, meteorological, seismological, and magnetic observatories established by the Society of Jesus all over the world (Rome, Stonyhurst, Kalocsa, Granada, Tortosa, Georgetown near Washington, Manila, Belen in Cuba, Ambohidempona in Madagascar, Calcutta, Zi-ka-wei, Boroma, and Bulawayo on the Zambesi, etc.) and their periodical reports.

O. HARTIG.

St. George

St. George

Martyr, patron of England, suffered at or near Lydda, also known as Diospolis, in Palestine, probably before the time of Constantine. According to the very careful investigation of the whole question recently instituted by Father Delehaye, the Bollandist, in the light of modern sources of information, the above statement sums up all that can safely be affirmed about St. George, despite his early cultus and pre-eminent renown both in East and West (see Delehaye, "Saints Militaires", 1909, pp.45-76).

Earlier studies of the subject have generally been based upon an attempt to determine which of the various sets of legendary "Acts" was most likely to preserve traces of a primitive and authentic record. Delehaye rightly points out that the earliest narrative known to us, even though fragments of it may be read in a palimpsest of the fifth century, is full beyond belief of extravagances and of quite incredible marvels. Three times is George put to death-chopped into small pieces, buried deep

in the earth and consumed by fire-but each time he is resuscitated by the power of God. Besides this we have dead men brought to life to be baptized, wholesale conversions, including that of "the Empress Alexandra", armies and idols destroyed instantaneously, beams of timber suddenly bursting into leaf, and finally milk flowing instead of blood from the martyr's severed head. There is, it is true, a mitigated form of the story, which the older Bollandists have in a measure taken under their protection (see Act. SS., 23 Ap., no. 159). But even this abounds both in marvels and in historical contradictions, while modern critics, like Amelineau and Delehaye, though approaching the question from very different standpoints, are agreed in thinking that this mitigated version has been derived from the more extravagant by a process of elimination and rationalization, not vice versa.

Remembering the unscrupulous freedom with which any wild story, even when pagan in origin, was appropriated by the early hagiographers to the honour of a popular saint (see, for example, the case of St. Procopius as detailed in Delehaye, "Legends", ch. v) we are fairly safe in assuming that the Acts of St. George, though ancient in date and preserved to us (with endless variations) in many different languages, afford absolutely no indication at all for arriving at the saint's authentic history. This, however, by no means implies that the martyr St. George never existed. An ancient cultus, going back to a very early epoch and connected with a definite locality, in itself constitutes a strong historical argument. Such we have in the case of St. George. The narratives of the early pilgrims, Theodosius, Antoninus, and Arculphus, from the sixth to the eighth century, all speak of Lydda or Diospolis as the seat of the veneration of St. George, and as the resting-place of his remains (Geyer, "Itinera Hierosol.", 139, 176, 288). The early date of the dedications to the saint is attested by existing inscriptions of ruined churches in Syria, Mesopotamia, and Egypt, and the church of St. George at Thessalonica is also considered by some authorities to belong to the fourth century. Further the famous decree "De Libris recipiendis", attributed to Pope Gelasius in 495, attests that certain apocryphal Acts of St. George were already in existence, but includes him among those saints "whose names are justly revered among men, but whose actions are only known to God".

There seems, therefore, no ground for doubting the historical existence of St. George, even though he is not commemorated in the Syrian, or in the primitive Hieronymian Martyrologium, but no faith can be placed in the attempts that have been made to fill up any of the details of his history. For example, it is now generally admitted that St. George cannot safely be identified by the nameless martyr spoken of by Eusebius (Hist. Eccles., VIII, v), who tore down Diocletian's edict of persecution at Nicomedia. The version of the legend in which Diocletian appears as persecutor is not primitive. Diocletian is only a rationalized form of the name Dadianus. Moreover, the connection of the saint's name with Nicomedia is inconsistent with the early cultus at Diospolis.

Still less is St. George to be considered, as suggested by Gibbon, Vetter, and others, a legendary double of the disreputable bishop, George of Cappadocia, the Arian opponent of St. Athanasius. "This odious stranger", says Gibbon, in a famous passage, "disguising every circumstance of time and place, assumed the mask of a martyr, a saint, and a Christian hero, and the infamous George of Cappadocia has been transformed into the renowned St. George of England, the patron of arms, of chivalry, and of the Garter." "But this theory, says Professor Bury, Gibbon's latest editor, "has

nothing to be said for it." The cultus of St. George is too ancient to allow of such an identification, though it is not improbable that the apocryphal Acts have borrowed some incidents from the story of the Arian bishop. Again, as Bury points out, "the connection of St. George with a dragon-slaying legend does not relegate him to the region of the myth, for over against the fabulous Christian dragon-slayer Theodore of the Bithynian Heraclaea, we can set Agapetus of Synnada and Arsacius, who though celebrated as dragon-slayers, were historical persons". This episode of the dragon is in fact a very late development, which cannot be traced further back than the twelfth or thirteenth century. It is found in the Golden Legend (*Historia Lombardic* of James de Voragine and to this circumstance it probably owes its wide diffusion. It may have been derived from an allegorization of the tyrant Diocletian or Dadianus, who is sometimes called a dragon (*ho bythios drakon*) in the older text, but despite the researches of Vetter (*Reinbot von Durne*, pp.lxxv-cix) the origin of the dragon story remains very obscure. In any case the late occurrence of this development refutes the attempts made to derive it from pagan sources. Hence it is certainly not true, as stated by Hartland, that in George's person "the Church has converted and baptized the pagan hero Perseus" (*The Legend of Perseus*, iii, 38). In the East, St. George (*ho megalomartyr*), has from the beginning been classed among the greatest of the martyrs. In the West also his cultus is very early. Apart from the ancient origin of St. George in Velabro at Rome, Clovis (c. 512) built a monastery at Baralle in his honour (Kurth, *Clovis*, II, 177). Arculphus and Adamnan probably made him well known in Britain early in the eighth century. His Acts were translated into Anglo-Saxon, and English churches were dedicated to him before the Norman Conquest, for example one at Doncaster, in 1061. The crusades no doubt added to his popularity. William of Malmesbury tells us that Saints George and Demetrius, "the martyr knights", were seen assisting the Franks at the battle of Antioch, 1098 (*Gesta Regum*, II, 420). It is conjectured, but not proved, that the "arms of St. George" (argent, a cross, gules) were introduced about the time of Richard Coeur de Lion. What is certain is that in 1284 in the official seal of Lyme Regis a ship is represented with a plain flag bearing a cross. The large red St. George's cross on a white ground remains still the "white ensign" of the British Navy and it is also one of the elements which go to make up the Union Jack. Anyway, in the fourteenth century, "St. George's arms" became a sort of uniform for English soldiers and sailors. We find, for example, in the wardrobe accounts of 1345-49, at the time of the battle of Crecy, that a charge is made for 86 penoncells of the arms of St. George intended for the king's ship, and for 800 others for the men-at-arms (*Archaeologia*, XXXI, 119). A little later, in the Ordinances of Richard II to the English army invading Scotland, every man is ordered to wear "a signe of the arms of St. George" both before and behind, while the pain of death is threatened against any of the enemy's soldiers "who do bear the same crosse or token of Saint George, even if they be prisoners". Somewhat earlier than this Edward III had founded (c. 1347) the Order of the Garter, an order of knighthood of which St. George was the principal patron. The chapel dedicated to St. George in Windsor Caste was built to be the official sanctuary of the order, and a badge or jewel of St. George slaying the dragon was adopted as part of the insignia. In this way the cross of St. George has in a manner become identified

with the idea of knighthood, and even in Elizabeth's days, Spenser, at the beginning of his *Faerie Queene*, tells us of his hero, the Red Cross Knight:

But on his breast a bloody Cross he bore,
The dear remembrance of his dying Lord,
For whose sweet sake that glorious badge we wore
And dead (as living) ever he adored.

We are told also that the hero thought continually of wreaking vengeance:

Upon his foe, a dragon horrible and stern.

Ecclesiastically speaking, St. George's day, 23 April, was ordered to be kept as a lesser holiday as early as 1222, in the national synod of Oxford. In 1415, the Constitution of Archbishop Chichele raised St. George's day to the rank of one of the greatest feasts and ordered it to be observed like Christmas day. During the seventeenth and eighteenth centuries St. George's day remained a holiday of obligation for English Catholics. Since 1778, it has been kept, like many of these older holidays, as a simple feast of devotion, though it ranks liturgically as a double of the first class with an octave.

SAINT GEORGE AND THE DRAGON

The best known form of the legend of St. George and the Dragon is that made popular by the "*Legenda Aurea*", and translated into English by Caxton. According to this, a terrible dragon had ravaged all the country round a city of Libya, called Selena, making its lair in a marshy swamp. Its breath caused pestilence whenever it approached the town, so the people gave the monster two sheep every day to satisfy its hunger, but, when the sheep failed, a human victim was necessary and lots were drawn to determine the victim. On one occasion the lot fell to the king's little daughter. The king offered all his wealth to purchase a substitute, but the people had pledged themselves that no substitutes should be allowed, and so the maiden, dressed as a bride, was led to the marsh. There St. George chanced to ride by, and asked the maiden what she did, but she bade him leave her lest he also might perish. The good knight stayed, however, and, when the dragon appeared, St. George, making the sign of the cross, bravely attacked it and transfixed it with his lance. Then asking the maiden for her girdle (an incident in the story which may possibly have something to do with St. George's selection as patron of the Order of the Garter), he bound it round the neck of the monster, and thereupon the princess was able to lead it like a lamb. They then returned to the city, where St. George bade the people have no fear but only be baptized, after which he cut off the dragon's head and the townsfolk were all converted. The king would have given George half his kingdom, but the saint replied that he must ride on, bidding the king meanwhile take good care of God's churches, honour the clergy, and have pity on the poor. The earliest reference to any such episode in art is probably to be found in an old Roman tombstone at Conisborough in Yorkshire, considered to belong to the first half of the twelfth century. Here the princess is depicted as already in the dragon's clutches, while an abbot stands by and blesses the rescuer.

HERBERT THURSTON

George Hamartolus

George Hamartolus

A monk at Constantinople under Michael III (842-867) and the author of a chronicle of some importance. Hamartolus is not his name but the epithet he gives to himself in the title of his work: "A compendious chronicle from various chroniclers and interpreters, gathered together and arranged by George, a sinner [*hypo Georgiou hamartolou*]" . It is a common form among Byzantine monks. Krumbacher (*Byz. Litt.*, 358) protests against the use of this epithet as a name and proposes (and uses) the form *Georgios Monachos*. Nothing is known about him except from the internal evidences of his work, which establishes his period (in the preface he speaks of Michael III as the reigning emperor) and his calling (he refers to himself several times as a monk). The chronicle consists of four books. The first treats of profane history from Adam to Alexander the Great; the second, of

the history of the Old Testament; the third, of Roman history from Julius Cæsar to Constantine; and the fourth down to the author's own time. As usually in the case of such medieval chronicles, the only part to be taken seriously is the account of more or less contemporary events. The rest is interesting as an example of Byzantine ideas on the subjects, and of the questions that most interested Byzantine monks. George describes his ideal and principles in the preface. He has used ancient and modern sources (all Greek, of course), has especially consulted edifying works, and has striven to tell the truth rather than to please the reader by artistic writing. But of so great a mass of material he has chosen only what is most useful and necessary. In effect, the questions that seemed most useful and necessary to ecclesiastical persons at Constantinople in the ninth century are those that are discussed. There are copious pious reflections and theological excursuses. He writes of how idols were invented, the origin of monks, the religion of the Saracens, and especially of the Iconoclast controversy that was just over. Like all monks he hates Iconoclasts. The violence with which he speaks of them shows how recent the storm had been and how the memory of Iconoclast persecutions was still fresh when he wrote. He writes out long extracts from Greek Fathers. The first book treats of an astonishingly miscellaneous collection of persons — Adam, Nimrod, the Persians, Chaldees, Brahmins, Amazons, etc. In the second book, too, although it professes to deal with Bible history only, he has much to say about Plato and philosophers in general. George Hamartolus ended his chronicle with the year 842, as a colophon in most manuscripts attests. Various people, among them notably "Symeon Logothetes", who is probably Symeon Metaphrastes, the famous writer of saints' lives (tenth century, see Krumbacher, 358), continued his history to later dates — the longest continuation reaches to 948. In spite of his crude ideas and the violent hatred of Iconoclasts that makes him always unjust towards them, his work has considerable value for the history of the last years before the schism of Photius. It was soon translated into Slav languages (Bulgarian and Servian) and into Georgian. In these versions it became a sort of fountain-head for all early Slav (even Russian) historians. As a very popular and widely consulted book it has been constantly re-edited, corrected, and rearranged by anonymous scribes, so that the reconstruction of the original work is "one of the most difficult problems of Byzantine philology" (Krumbacher, 355).

Combefis first published the last part of Book IV of the chronicle and the continuation (813-948) under the title, *Bioi ton neon Basileon*, in the "Maxima bibliotheca (Scriptores post Theophanem)" (Paris, 1685; reprinted, Venice, 1729). The first edition of the whole work was edited by E. de Muralt: "Georgii monachi, dicti Hamartoli, Chronicon ab orbe condito ad annum p. chr. 842 et a diversis scriptoribus usq. ad ann. 1143 continuatum" (St. Petersburg, 1859). This is the edition reprinted in Migne, P. G., CX, with a Latin translation. It does not represent the original text, but one of the many modified versions (from a Moscow twelfth-century Manuscript), and is in many ways deficient and misleading (see Krumbacher's criticism in "Byz. Litt.", p. 357). A critical edition is still wanted.

ADRIAN FORTESCUE.

George of Trebizond

George of Trebizond

A Greek scholar of the early Italian Renaissance; b. in Crete (a Venetian possession from 1206-1669), 1395; d. in Rome, 1486. He assumed the name "of Trebizond" because his family came from there. He was one of the foremost of the Greeks to arrive in Italy (c.1420) before the fall of Constantinople. Vittorino da Feltre (1378-1446) taught him Latin, and in return he taught Greek in the famous school at Mantua. After teaching for a time at Venice and Florence he came to Rome, and when Eugenius IV (1431-47) restored the University of Rome (1431), one of its most important professorships was assigned to George of Trebizond, who had acquired the highest repute as a master of Latin style. By Nicholas V (1447-1455) he was much sought after as a translator of Greek works -- such as the "Syntaxis" of Ptolemy and the "Praeparatio Evangelica" of Eusebius. His incompetence, arrogance, and quarrelsomeness led to difficulties with Bessarion, Theodore Gaza, Perrotti and Poggio, and he was obliged to leave Rome, and take refuge with Alfonso, King of Naples. Under the pontificate of his former pupil Paul II (1464-1471), he returned to Rome and was appointed a papal abbreviator, but became involved in fresh quarrels in 1465 he visited Crete and Byzantium, and then returned to Rome, where he wrote the account of the martyrdom of Bl. Andrew of Chios (*Acta SS.*, 29 May). He died resenting the obscurity into which he had fallen, and was buried in the Minerva. "George of Trebizond is the most unpleasing of the Greeks of that day. Conceited, boastful and spiteful, he was universally hated" (*Pastor*, II, 202, note). He sided with the partisans of Aristotle in the controversy raised by Georgios Gemisthos Pleithon (1356-1450). His onslaught on Plato lost him the friendship of Bessarion and led to the latter writing (1464) his great works "In calumniatorem Platonis", in the fifth book of which he points out 259 mistakes in Trebizond's translation of the "Laws" of Plato. His numerous translations included the "Rhetoric" and "Problems" of Aristotle, and St.Cyril's "Commentary on St. John", but, as *Pastor* notes, they are almost worthless (II, 198, note). A list of some forty-six works will be found in *Migne*, P.G., CLXI, 745-908.

EDWARD MYERS

George Pisides

George Pisides

(Or THE PISIDIAN).

A Byzantine poet lived in the first half of the seventh century. From his poems we learn he was a Pisidian by birth, and a friend of the Patriarch Sergius and the Emperor Heraclius, who reigned from 610 to 641. He is said to have been a deacon at St. Sophia's, Constantinople where he filled the posts of archivist, guardian of the sacred vessels, and referendary. He evidently accompanied Heraclius in the war against the Persians (622), in which campaign the true Cross, which the enemy had captured some years before at Jerusalem, was recovered. His works have been published in the original Greek with a Latin version and are to be found in P.G., XCII, 1160-1754.

About five thousand verses of his poetry, most in trimetric iambics, have come down to us. Some of the poems treat of theology and morals, the others being a chronicle of the wars of his day. They are: (1) "De expeditione Heraclii imperatoris contra Persas, libri tres",--an account of the Persian war, which shows him to have been an eyewitness of it; (2) "Bellum Avaricum", descriptive of the defeat of the Avars --Turkish horde, that attacked Constantinople in 626, and were defeated, during the absence of the emperor and his army; (3) "Heraclias" or "De extremo Chosroae Persarum regis excidio"--written after the death of Chosroes, who was assassinated by his mutinous soldiery at Ctesiphon, in 628; this poem treats mostly of the deeds of the emperor and contains but little concerning Chosroes, it is valued not so much for any literary merit, as for being the principal source for the history of the reign of Heraclius; (4) "In sanctam Jesu Christi, Dei nostri resurrectionem", in which the poet exhorts Flavius Constantinus to follow in the footsteps of his father, Heraclius; (5) "Hexaameron", or "Opus sex dierum seu Mundi opificium", this is his longest and most elaborate poem and is dedicated to Sergius; (6) "De vanitate vitae"; (7) "Contra impium Severum Antiochiae", written against the Monophysite heresy; (8) "In templum Deiparae Constantinopoli, in Blachernissitum"; and finally (9) one piece in prose, "Encomium in S. Anastasium martyrem". From references in Theophanus, Suidas, and Isaac Tzetzes, we know he wrote other works which have not reached us.. George's verse is considered correct and elegant, but he is sometimes dull and frigid. He was greatly admired by his countrymen in succeeding ages and preferred even to Euripides. But later critics are not so laudatory. Finlay in his History of Greece, I (Oxford, 1877) says, "It would be difficult in the whole range of literature to point to poetry which conveys less information on the subject which he pretends to treat than that of George the Pisidian. In taste and poetical inspiration he is as deficient as in judgment and he displays no trace of any national characteristics." But to be just we must remember that he was a courtier and wrote with the intention of winning the favour of the emperor and the patriarch. Literature, if we except the production of religious controversy was practically extinct in Europe and George stands forth as its sole exponent, the only poet of his century.

A.A. MACERLEAN

George the Bearded

George the Bearded

(Also called THE RICH.)

Duke of Saxony, b. at Dresden, 27 August, 1471; d. in the same city, 17 April, 1539. His father was Albert the Brave of Saxony, founder of the Albertine line of the Wettin family, still the ruling line of Saxony, his mother was Sidonia, daughter of George of Podiebrad, King of Bohemia. Elector Frederick the Wise, a member of the Ernestine branch of the same family, known for his protection of Luther, was a cousin of Duke George. Albert the Brave had a large family and George, a younger son, was originally intended for the Church; consequently he received an excellent training in theology and other branches of learning, and was thus much better educated than most of the princes of his day. The death of his elder brother opened to George the way to the ducal power. As early as 1488, when his father was in Friesland fighting on behalf of the emperor, George was regent of the ducal possessions, which included the Margravate of Meissen with the cities of Dresden and Leipzig. George was married at Dresden, 21 November, 1496, to Barbara of Poland, daughter of King Casimir IV of that country. George and his wife had a large family of children, all of whom, with the exception of a daughter, died before their father. In 1498, the emperor granted Albert the Brave the hereditary governorship of Friesland. At Maastricht, 14 February, 1499, Albert settled the succession to his possessions, and endeavoured by this arrangement to prevent further partition of his domain. He died 12 September 1500, and was succeeded in his German territories by George as the head of the Albertine line, while George's brother Heinrich became hereditary governor of Friesland. The Saxon occupation of Friesland, however, was by no means secure and was the source of constant revolts in that province. Consequently Heinrich, who was of a rather inert disposition, relinquished his claims to the governorship, and in 1505 an agreement was made between the brothers by which Friesland was transferred to George, while Heinrich received an annuity and the districts of Freiberg and Wolkenstein. But this arrangement did not restore peace in Friesland, which continued to be an unceasing source of trouble to Saxony, until finally the duke was obliged, in 1515, to sell it to Burgundy for the very moderate price of 100,000 florins. These troubles outside of his Saxon possessions did not prevent George from bestowing much care on the government of the ducal territory proper. When regent, during the lifetime of his father, the difficulties arising from conflicting interests and the large demands on his powers had often brought the young prince to the verge of despair. In a short time, however, he developed decided ability as a ruler; on entering upon his inheritance he divided the duchy into governmental districts, took measures to suppress the robber-knights, and regulated the judicial system by defining and readjusting the jurisdiction of the various law courts. In his desire to achieve good order, severity, and the amelioration of the condition of the people, he sometimes ventured to infringe even on the rights of the cities. His court was better regulated than that of any other German prince, and he bestowed a paternal care on the University of Leipzig, where a number of reforms were introduced, and Humanism, as opposed to Scholasticism, was encouraged.

From the beginning of the Reformation in 1517, Duke George directed his energies chiefly to ecclesiastical affairs. Hardly one of the secular German princes held as firmly as he to the Church, he defended its rights and vigorously condemned every innovation except those which were countenanced by the highest ecclesiastical authorities. At first he was not opposed to Luther, but

as time went on and Luther's aim became clear to him, he turned more and more from the Reformer, and was finally, in consequence of this change of attitude, drawn into an acrimonious correspondence in which Luther, without any justification, shamefully reviled the duke. The duke was not blind to the undeniable abuses existing at that time in the Church. In 1519, despite the opposition of the theological faculty of the university, he originated the Disputation of Leipzig, with the idea of helping forward the cause of truth, and was present at all the discussions. In 1521, at the Diet of Worms, when the German princes handed in a paper containing a list of "grievances" concerning the condition of the Church, George added for himself twelve specific complaints referring mainly to the abuse of Indulgences and the annates. In 1525 he combined with his Lutheran son-in-law, Landgrave Philip of Hesse, and his cousin, the Elector Frederick the Wise, to suppress the revolt of the peasants, who were defeated near Frankenhausen in Thuringia. Some years later, he wrote a forcible preface to a translation of the New Testament issued at his command by his private secretary, Hieronymus Emser, as an offset to Luther's version. Lutheran books were confiscated by his order, wherever found, though he refunded the cost of the books. He proved himself in every way a vigorous opponent of the Lutherans, decreeing that Christian burial was to be refused to apostates, and recreant ecclesiastics were to be delivered to the bishop of Merseburg. For those, however, who merely held anti-catholic opinions, the punishment was only expulsion from the duchy. The duke deeply regretted the constant postponement of the ardently desired council, from the action of which so much was expected. While awaiting its convocation, he thought to remove the more serious defects by a reform of the monasteries, which had become exceedingly worldly in spirit and from which many of the inmates were departing. He vainly sought to obtain from the Curia the right, which was sometimes granted by Rome, to make official visitations to the conventual institutions of his realm. His reforms were confined mainly to uniting the almost vacant monasteries and to matters of economic management, the control of the property being entrusted in most cases to the secular authorities. In 1525, Duke George formed, with some other German rulers, the League of Dessau, for the protection of Catholic interests. In the same way he was the animating spirit of the League of Halle, formed in 1533, from which sprang in 1538 the Holy League of Nuremberg for the maintenance of the religious Peace of Nuremberg.

The vigorous activity displayed by the duke in so many directions was not attended with much success. Most of his political measures, indeed, stood the test of experience, but in ecclesiastico-political matters he witnessed with sorrow the gradual decline of Catholicism and the spread of Lutheranism within his dominions, in spite of his earnest efforts and forcible prohibition of the new doctrine. Furthermore, during George's lifetime his nearest relations his son-in-law Philip of Hesse, and his brother Heinrich, joined the Reformers. He spent the last years of his reign in endeavours to secure a Catholic successor, thinking by this step to check the dissemination of Lutheran opinions. The only one of George's sons then living was the weak-minded and unmarried Frederick. The intention of his father was that Frederick should rule with the aid of a council. Early in 1539, Frederick was married to Elizabeth of Mansfeld, but he died shortly afterwards, leaving no prospect of an heir. According to the act of settlement of 1499, George's Protestant brother

Heinrich was now heir prospective; but George, disregarding his father's will, sought to disinherit his brother and to bequeath the duchy to Ferdinand, brother of Charles V. His sudden death prevented the carrying out of this intention.

George was an excellent and industrious ruler, self-sacrificing, high-minded, and unwearied in the furtherance of the highest interests of his land and people. As a man he was upright, vigorous and energetic, if somewhat irascible. A far-seeing and faithful adherent of the emperor and empire, he accomplished much for his domain by economy, love of order and wise direction of activities of his state officials. The grief of his life was Luther's Reformation and the apostasy from the Old Faith. Of a strictly religious, although not narrow, disposition, he sought at any cost to keep his subjects from falling away from the Church, but his methods of attaining his object were not always free from reproach.

H. A. CREUTZBERG
Georgetown University

Georgetown University

Georgetown University, Washington, District of Columbia, "is the oldest Catholic literary establishment in the United States. It was founded immediately after the Revolutionary War, by the incorporated Catholic Clergy of Maryland, who selected from their Body Trustees, and invested them with full power to choose a President and appoint Professors. Since the year 1805, it has been under the direction of Society of Jesus" (The Laity's Directory, 1822).

Origin and Founder

In treating of the origin of Georgetown University, its chronicles and historians are wont to refer to earlier schools in Maryland, projected or carried on by the Jesuits. It is true that Father Ferdinand Poulton, a few years after the settlement of St. Mary's, wrote to the general of the society about the prospects of founding a college in the infant colony; and the general answered, in 1640: "The hope held out of a college I am happy to entertain; and, when it shall have matured, I will not be backward in extending my approval". But the times were not favourable. The laws against Catholic education and educators were so stringent during the greater part of the Maryland colonial period that it was only at intervals, for brief spaces of time, and by stealth, that the Jesuits, always solicitous for the education of youth, were able to conduct a school. Such a school was at Bohemia, in Cecil County; it numbered among its scholars John Carroll, the founder of Georgetown College. He is the link, moral and personal, between Georgetown and earlier schools; and with his name the history of Georgetown College is indissolubly connected. He had a large share in its foundation and upbringing, and the sons of Georgetown, to honour his memory, have formally instituted the observance of "Founder's Day", in January of each year. Even before he became the first bishop of the United States, he saw and impressed upon his former brethren of the Society of Jesus the urgent need of a Catholic College. Having secured their cooperation, he drew up the plan of the institution and issued a prospectus appealing to his friends in England for financial assistance. It was he who

selected the site; and--although unable to give personal supervision to the undertaking, burdened as he was with the solicitude of all the churches--he watched with paternal interest over the early growth of the college. Georgetown still possesses his portrait, by Gilbert Stuart, relics from his birthplace at Upper Marlborough, the manuscript of his course in theology, the Missal which he used when a rural missionary at Rock Creek, the attestation of his consecration as bishop at Lulworth Castle, the circular which he issued detailing the plan and scope of the college, and many letters, original or copied, relating to its standing and prospects.

In 1889 the college celebrated with befitting pomp the hundredth anniversary of its foundation. Georgetown, in 1789, was the chief borough of Montgomery County, Maryland. Father Carroll selected it for the site of the academy, influenced, no doubt, by a knowledge of the locality acquired during his missionary excursions. In speaking of the present site, he describes it as "one of the most lovely situations that imaginations can frame". The first prospectus says: "in the choice of Situation, Salubrity of Air, Convenience of Communication, and Cheapness of Living have been principally consulted, and Gerogetown offers these united advantages". In regard to the "Salubrity of Air", it is significant that the college records show the first death among the students to have occurred in 1843. In 1784, Father carroll was appointed prefect-Apostolic or superior, of the Church in the United States. In 1785 he wrote to his friend, Father Charles Plowden, in England: "The object nearest my heart now, and the only one that can give consistency to our religious views in this country, is the establishment of a school, and afterwards a Seminary for young clerymen." At a meeting of the clergy, held at White Marsh, in 1786, he presented a detailed plan of a school, and recommended the site which had impressed him so favourably. The clergy sanctioned the project, adopted a series of "Resolves concerning the Institution of a School", and directed the sale of a piece of land belonging to the corporation, in order that the proceeds might be applied to the erection of the first building. The Reverends John Carroll, James Pellentz, Robert Molyneux, John Ashton, and Leonard Neale were appointed directors. In 1788, the first building was undertaken. The work proceeded slowly, from want of funds, and 1789 is considered to be the year of the foundation of the college, as the deed of the original piece of ground was dated 23 January of that year. The land--one and a half acres--was acquired by purchase, for the sum of 75 pounds, current money. The "Old Building", as it was called, was not ready for occupancy until 1791; it was removed in 1904, to make way for Ryan Hall.

In its material growth the college has expanded from the solitary academic structure of early days into the clustering pile that crowns the ancient site. Among its oldest constructions are:

- the North Building (begun 1791, completed 1808),
- the Infirmary (1831-1848),
- the Mulledy Building (1831),
- the Observatory (1843),
- the Maguire Building (1854),
- the Healy, or Main, Building (1879),
- the Dahlgren Chapel (1893),
- the Ida M. Ryan Hall (1905), and

- the Ryan Gymnasium (1908).

To the original classical academy have been added, as opportunity arose or expediency prompted, the astronomical observatory, in 1843; the medical school, in 1851; the law school, in 1870; the university hospital, in 1898; the dental school, in 1901; the training school for nurses, in 1903.

Since 1805, when the Society of Jesus was restored in Maryland, Georgetown has been a Jesuit College, with the traditions, the associations, courses of study, and methods of instruction which the name implies. Until 1860 the Superior of the Mission and Provincial of Maryland generally resided at the college; the novitiate was there for some years; and it was the provincial house of higher studies for philosophy and theology, during the greater part of the period preceding the opening of Woodstock Scholasticate, in 1869. Naturally, under such conditions, the college exercised considerable influence upon the religious development of the country and Catholic progress in the early days. The first three Archbishops of Baltimore had intimate relations with it: Carroll, as founder; Neale, as president; and Marechal, as professor. Bishop Dubourg of New Orleans was president; the saintly Bishop Flaget, of Bardstown, was professor; as also Bishop Vandeveld of Chicago. Bishops Carrell of Covington and O'Hara of Scranton were students. Bishop Benedict J. Fenwick, of Boston, one of the first students at Georgetown, and afterwards professor and president, founded the college of the Holy Cross, at Worcester, Mass., a direct offshoot of Georgetown. The Rev. Enoch Fenwick, S.J., president, had a large share in building the cathedral of Baltimore. Bishop Neale founded the Visitation Order in America. Fathers James Ryder and Bernard A. Maguire, presidents, were distinguished pulpit orators. Father Anthony Kohlmann, president, was a profound theologian, and his work, "Unitarianism Refuted", is a learned contribution to controversial literature. Father Camillus Mazzella, afterwards Cardinal, is famous as a dogmatic theologian. Father James Curley, in a modest way, promoted astronomical science; the renowned Father Secchi was for a time connected with the observatory, as was also Father John Hagen, now Director of the Vatican Observatory. Georgetown has exerted its influence on education and morals indirectly through various other colleges that have sprung from it, and directly by the host of its own alumni, nearly five thousand in number, many of them distinguished in every walk of life.

Upon the opening of the college, in 1791, the first name upon the Register is that of William Gaston of North Carolina, who, despite the constitutional disqualifications of Catholics in his native State, represented it in Congress, and rose to its Supreme Bench. The number of students enrolled in 1792 was 66; on the opening day of 1793, 47 new students entered. This was a promising beginning, but growth was slow, and for several years following there was even a falling off. In 1813 the boarders numbered 42; the average for the preceding ten years had been 25. The century mark (101) was reached for the first time in 1818; the highest number (317) in 1859. The majority of the students at that period were from the Southern States, and the breaking out of the Civil War caused a rapid exodus of young men from classroom to camp. There were only 120 registered in 1862.

The printed prospectus of 1798, issued by by Rev. Wm. Dubourg (president, 1796-99), furnishes the details of the studies pursued at that date, and holds forth promise of an enlarged course. This

promise was fulfilled under his immediate successor, Bishop Leonard Neale (president, 1799-1806). In 1801, there were seven members of a senior class, studying logic, metaphysics, and ethics. Father John Grassi (president, 1812-17) infused new life into the administration of the college: he promoted the study of mathematics and secured the necessary apparatus for teaching the natural sciences. During his term of office, the power to grant degrees was conferred by Act of Congress, March 1, 1815, the bill being introduced by Georgetown's proto-alumnus, a member from North Carolina. This power was first exercised in 1817. The formal incorporation of the institution was effected by Act of Congress in 1844, under the name and title of "The President and Directors of Georgetown College". By this Act the powers granted in 1815 were increased. The Holy See empowered the college, in 1833, to confer in its name degrees in philosophy and theology.

The Rev. Robert Plunket was chosen to be the first president. The corporation defrayed the expenses of his passage from England to America. He entered upon his duties in 1791, served for two years, and was succeeded by Father Robert Molyneux, who became the first superior of the restored Society in Maryland, and held the presidency of the college for a second term at the time of his death, in 1808. The school began with very elementary classes, but the original plan contemplated a rounded academic course, and gradually the standard of classes was raised, and their number increased. Some of the assistant teachers were aspirants to Holy orders, and a class in theology was formed. In 1808, four of this class were elevated to the priesthood, Benedict Fenwick, Enoch Fenwick, Leonard Edelen, and John Spink, the first members of the Society of Jesus to be ordained in the United States.

Present Status

Georgetown University consists of the college, the school of medicine, the school of dental surgery, and the school of law. Clinical instruction is given in the University Hospital, which is in charge of the Sisters of St. Francis, and has a training school for nurses attached. Post-graduate courses of study are carried on in the law and medical schools, and are offered in the college. The college grounds comprise 78 acres, a large part of which is occupied by "The Walks", famous for their woodland scenery. The hospital is in close proximity to the college; the law and medical schools are in the heart of the city. The Riggs Memorial Library contains many rare and curious works, early imprints, and ancient manuscripts. Among the special libraries incorporated in the Riggs is that of the historian, Dr. J. Gilmary Shea, valuable for American and Indian languages. The smaller Hirst Library is for the use of the students of the undergraduate school. There are also special libraries for the post-graduate course, for the junior students, and for Maryland colonial research. The Coleman Museum is a large hall in which are displayed various collections; here three thousand specimens illustrate the whole field of mineralogy, while in geology and palaeontology there are excellent collections. Mosaics, curious in great variety make the museum one of the most interesting institutions of this kind. The College Archives are deposited in a spacious fire-proof vault, well lighted and ventilated. Connected with the archives, there is a hall for the exhibition of Missals, chalices, vestments, bells, and other memorials of the early Jesuit missions of Maryland. Gaston Hall, where commencement and other exercises are held, owes its artistic

ornamentation and finish to the liberality of the Alumni Association. The Philodemic Debating Society Room is decorated with the portraits of distinguished graduates and college worthies. The College Journal and literary and scientific societies furnish opportunity for mental improvement; the Sodality of the Blessed Virgin, which is the oldest in the United States, helps to piety. The Athletic Association encourages sport and promotes physical training by means of the gymnasium, ball clubs, boat clubs, etc. The spirit of loyalty towards Alma Mater is fostered by the national Society of Alumni and by the local societies of New York, Philadelphia, Northeastern Pennsylvania, the Pacific Coast, Wisconsin, and the Georgetown University Club of New England.

Georgia

Georgia

STATISTICS

The area of Georgia is 59,475 sq. m., and it is the largest of the original thirteen United States; bounded on the north by Tennessee and North Carolina, on the east by the Savannah River and the Atlantic Ocean, on the south by Florida, and on the west by Florida and Alabama. Population in 1790, 82,548; in 1830, 516,823; in 1870, 1,184,109; and in 1900, 2,216,331, including 1,034,813 negroes, 204 Chinese, 1 Japanese, and 19 Indians. The population of Savannah, the largest city, was, in 1900, 54,244. The present Constitution was adopted in 1877. The State is divided into 10 congressional districts, 44 senatorial districts, and 137 counties. No State in the American Union has such a variety of agricultural products. Cotton is the chief. Before the Civil War one-sixth of the total cotton crop of the United States was raised in Georgia. In 1883, 824,250 bales were produced; in 1907, 1,920,000. Georgia now ranks as the second cotton-producing State. Among other agricultural products, Georgia produced in 1907 5,010,000 bushels of oats, 57,538,000 bushels of corn, and 2,673,000 bushels of wheat. Georgia is likewise remarkable for the extent and variety of its woodland, its pine being world-famous. It possesses coal, iron, and gold mines, as well as silver, copper, and lead. In 1905 the value of its products of manufacture was \$151,040,455, the capital employed being \$135,211,551. Its favourable location, extensive railroads, and numerous navigable streams give Georgia excellent commercial advantages. Situated between the North and the South-West, the West and the Atlantic, trade between these sections passes through the State. Atlanta and Savannah are its principal commercial centres. The value of foreign commerce is estimated at \$30,000,000. There is no Southern State equal to Georgia in the number of its railroad enterprises. Atlanta, Columbus, Macon, Savannah, and Augusta are the principal railroad centres. The mileage of railroads in 1907 was 6786.33.

EDUCATION

The Constitution provides for a "thorough system of common schools", maintained by taxation "or otherwise", and free for "white and coloured races". The State school commissioner is appointed by the governor for a term of two years. Every county has a board of education and a superintendent, and is provided with free schools. Atlanta, Savannah, Augusta, Macon, and Columbus are separately organized under local laws. The State university, at Athens, founded in 1785, is non-sectarian and in 1908 had 199 instructors and 3375 students. Connected with it are agricultural colleges, a law school, and a medical school in various parts of the State.

The other prominent institutions of learning are Atlanta University at Atlanta, founded in 1869, non-sectarian, with 20 instructors and 340 students; Clark University at Atlanta, founded in 1870, Methodist Episcopal, with 25 instructors and 532 students; Emory College at Oxford, founded in 1836, Methodist Episcopal, with 14 instructors and 265 students; Morris Brown College at Atlanta, founded in 1881, Methodist, with 28 instructors and 940 students; Shorter College at Rome, founded in 1877, Baptist, with 30 instructors and 250 students; and Wesleyan Female College at Macon, the first institution of learning for women in America, founded in 1836, Methodist Episcopal, with 33 instructors and 474 students. In the common schools of Georgia there were enrolled in 1907 499,103 pupils and 10,360 teachers.

CIVIL HISTORY

The swamps and pine lands of Georgia, the last colonized of the original thirteen American settlements, were all but untrod by the feet of white men before the eighteenth century. Tradition has it that De Soto, in his ill-starred march to his grave in the Mississippi, camped for a while in 1540 near the present city of Augusta; a more unreliable tradition asserts that Sir Walter Raleigh, on his initial voyage, "landed at the mouth of Savannah River, and visited the bluff on which the city was afterwards built". For a century and a half the Uchees, Creeks, and Cherokees were left undisputed masters of their hunting-grounds -- Lords of the Marches -- between the English frontier to the north and the Spanish to the south. In the nature of things this could not long endure. By the voyage of John Cabot, in 1497, England laid claim to the Atlantic seaboard; by the settlement of St. Augustine, in 1565, Spain established its authority over the southern coast. The vastness of the new world deferred the inevitable clash of these overlapping claims until the settlement of South Carolina in 1670, when Spain, alarmed at this territorial expansion of the Protestant English colonies, began, by intrigues with Indians and negro slaves, to harass the safety of the latter colony. At the beginning of the eighteenth century Parliament began to feel that a military colony on the southern frontier was imperative, and this conclusion was felicitously complemented by the belief that the mulberry and the vine could be successfully cultivated on the southern hills and savannas; while a third great philanthropic consideration contributed to the final adoption of the scheme. James Oglethorpe, who had followed up a brilliant military career as aide-de-camp to the Prince Eugene by a still more brilliant parliamentary career, had conceived the plan of settling a colony in the New World with worthy, though unfortunate and economically unproductive, inmates of the wretched English prisons. With this threefold purpose in view, a petition was presented and accepted by the

Privy Council and the Board of Trade, and the charter of the Colony of Georgia, named after the king and embracing the territory lying between the Savannah and the Altamaha Rivers, received the great seal of England on 9 June, 1732. This charter created a board of trustees for twenty-one years, who were to possess entire rights in the governing and the financing of the project, but who were not to profit, either directly or indirectly, by the venture. The board thus created, composed of many leading noblemen, clergymen, and members of Parliament of the day, met forthwith and drew up one of the most remarkable governmental documents in English colonial history. A military governor was appointed. Transportation, food, and land were given settlers for the feudal returns of labour and military service; but tenure of land was to descend only along the line of direct male issue. Other salient limitations in these by-laws were the prohibition of liquor, as well as that of negro slaves, and freedom of worship was to be granted to all prospective colonists "except papists". With this document and 126 passengers, carefully selected for the most part from the more worthy inmates of English prisons, Oglethorpe himself, who had been appointed "general" of the new colony, embarked on the "Anne," on 12 November, 1732, arrived at Charleston the following January, and in the spring of that year founded Savannah, which took its name from that of the river above which the little cabins of the settlers were first reared.

During the twenty-one years of its proprietary government Georgia struggled along, rather in spite of the remote designs and unpractical restrictions of its trustees than because of their indefatigable labour, sterling integrity, and single-minded philanthropy. As a frontier settlement against the Catholic colonies of Spain, Georgia speedily justified its existence. War between the rival countries was declared in 1739. Oglethorpe invaded Florida in 1740, and with an insufficient force unsuccessfully besieged St. Augustine. Two years later Spain retaliated, attempting by land and sea the complete annihilation of the English colony. By a splendid bit of strategy on Oglethorpe's part the invasion was repulsed, and the last blow had been struck by Spain against the English colonies in the New World. Less successful was the attempt of the board of trustees to plant the mulberry and the vine in the new colony. The warfare with Spain, the lack of adequate skilled labour, and the general thriftlessness of the colonists made the cultivation of such products practically impossible. The vine, which was to have supplied all the plantations, and to cultivate which they had imported a Portuguese vignerone, resulted in only a few gallons and was then abandoned. The hemp and flax, which were to have sustained the linen manufactures of Great Britain and to have thrown the balance of trade with Russia into England's favour, never came to a single ship-load; and the cultivation of the mulberry seems to have expired with its crowning achievement when, on the occasion of His Majesty's birthday in 1735, Queen Caroline appeared at the levee in a complete court dress of Georgia silk. Least successful of all was the philanthropic attempt to colonize Georgia with non-productive inmates from English prisons. It was this class that early began to cry for rum and slavery; and had it not been for the settlement of Ebenezer, in 1734, with industrious Salzburgers, expelled from Germany by reason of their religious beliefs; that of Fort Argyle, in 1735, with a colony of Swiss and Moravian immigrants; and that of New Inverness, in 1736, with a hardy band of thrifty Scotch mountaineers, the philanthropic plans of Oglethorpe would have been speedily

wrecked. As it was, the energies of the general were mainly directed towards placing Savannah upon an economically self-sufficient basis.

One of the restrictions that acted most forcibly against labour and thrift, the tenure of land along the line of male descent, was repealed in 1739. Another, the prohibition of slavery, a restriction which served to make restless and impermanent an unskilled and thriftless population settled so close to the slave-holding settlements of South Carolina, was removed in 1747. Even the attempt to rouse up spiritual energy in Savannah proved too great a task for the Wesleys, although in 1738 the eloquent Whitefield seems to have won at least a hearing for his strenuous moral code. But neither an energetic general governor, a concessive board of trustees, nor the zealous bearers of a fresh and fiery spiritual code could establish the philanthropic or commercial success of the proprietary colony of Georgia. Mutiny was widespread. Oglethorpe's life was threatened and actually attempted. The trustees were disheartened. Letters of dissent and charges against Oglethorpe, written under the pseudonym of "The Plain Dealer", reached Parliament. In 1743 Oglethorpe returned to England to face a general court martial on nineteen charges. He was entirely exonerated from charges, which were pronounced "false, malicious and without foundation". But he had done with the colony and never returned to Savannah while the board of trustees, in 1751, at the expiration of their charter, formally and wearily surrendered their right of government to the Lords of the Council, and Georgia became a royal province.

In the generation before the Revolution Georgia steadily increased in population under royal governors. The cultivation of rice by slaves made the colony economically self-supporting. A better class of colonists were induced to immigrate to its woodlands and rice fields from England and the Carolinas. On 11 January, 1758, the Assembly passed an Act "for constituting the several Divisions and Districts of this Province into Parishes, and for establishing Religious Worship therein, according to the Rites and Ceremonies of the Church of England". This was designed not to interfere with other classes of worshippers, but to provide by law for supplying the settlements with the ministrations of religion, by which Act a salary of £25 per annum was allowed every clergyman of the Established Church. The law excluding Roman Catholic colonists was not, however, repealed; a restriction which put to the test the loyalty of a Georgian Tory governor when four hundred Acadian refugees sought shelter at Savannah, bringing letters from the governor of Nova Scotia to the effect that, for the better security of that province and in consequence of a resolution of his Council, he had sent these people to Georgia". Governor Reynolds distributed them about the colony for the succeeding winter and maintained them at the public expense. But in the spring, "by leave of the Governor, they built themselves a number of rude boats, and in March most of them left for South Carolina; two hundred of them in ten boats going off at one time, indulging the hope that they might thus work their way along to their native and beloved Acadie". No other form of civic or religious exclusiveness, however, hampered the steady growth of the colony. Aside from spasmodic Indian incursions, incited by the French, Georgia developed the arts of peace, immigrants continued to flock in, and between 1763 and 1773 the exports of the colony increased from £27,000 to £121,600.

The preponderating Tory element in the colony at the outbreak of the Revolution, made up for the most part of a new generation of wealthy landowners and their 14,000 slaves, who spelt commercial ruin in revolution and who persuaded a second generation of parasitic idlers to share their views, allowed the British Parliament to boast throughout the Revolution that Georgia was a royalist province. The distance of the colony from the centre of operations, the blundering inaptitude of such provincial generals as Howe, the early capture and long retention by the British of both Savannah and Atlanta, and the hostility of the Indians to the colonial cause gave some historical warrant to such a point of view. But if the fervour of the revolutionary spirit was restricted to but a few, it gained, in consequence, in expressive momentum. In spite of British military successes along the coast; in spite of the disheartening and devastating guerilla incursions of Indians and Florida Rangers to the south and west; in spite of Washington's enforced neglect of the frontier colony's safety, the spirit of the Georgian Americans slumbered fiercely under an intense repression, bursting forth in sporadic flames of personal heroism and stoical fortitude. Nancy Hart is as heroic a heroine, if a coarser one, as Molly Pitcher, and Savannah is hallowed by the life-blood of Pulaski. Georgia served by waiting, and when at last Washington could assign Greene and Lee to the army of the South, the recapture of Savannah followed closely upon that of Atlanta, and the last British post had been abandoned in the colony before the surrender at Yorktown.

In the meantime, in 1777, Georgia had passed its first State Constitution. A second was adopted in 1789 and a third in 1798, which, several times amended, endured up to the time of the passage of the present Constitution. The fifty-sixth article of the first Constitution established religious toleration. The second Constitution closed the membership of both houses against clergymen, but the test of Protestantism, in respect to office-holding, required by the first Constitution, was dispensed with; and the elective franchise was extended to all male tax-paying free-men. On 2 June, 1788, the National Constitution was ratified, and Georgia was the fourth State to enter the Union. In the first thirty years of its statehood Georgia was embroiled in difficulties with the Indians, following the Yazoo land scandals and the treaty of 1802, by which Georgia ceded all its claims to lands westward of its present limits, and the Creeks ceded to the United States a tract afterwards assigned to Georgia and now forming the south-western counties of the State. Triangular difficulties between a State jealous of its rights, a government jealous of its federal power, and Indians jealous of their tribal property rights resulted in much ill-feeling and bloodshed, with all but the extermination of the Creeks by General Floyd's Georgian troops in the War of 1812. Indeed these difficulties were not finally settled until the removal of the Cherokees by the Union to a Western reservation in 1838, by which Georgia came into possession of the full quota of land she now holds.

The relation between State and Government in these Indian affairs during the first three decades of the century induced in Georgia, in particular, that spirited endeavour to safeguard the rights of local governments which later characterized the State's Right doctrine of the entire South before the outbreak of the Civil War; and upon the election of Lincoln to the presidency of the nation, the politicians of Georgia took active measures towards accomplishing the secession of their State from the Union. The delegates to the Confederate convention at Montgomery, Alabama, were

conspicuously energetic, and a Georgian, Alexander H. Stephens, was made Vice-President of the Confederacy. In the war that followed the State reaped a rich harvest of havoc and devastation, the culmination of its suffering being Sherman's March to the Sea, through its territory, in 1864. After the termination of hostilities Georgia violated the Reconstruction Act by refusing to allow negroes, upon election, a seat in the Legislature; but the Supreme Court of the State decided that negroes were entitled to hold office; a new election was held; both houses were duly reorganized; the requirements of Congress were acceded to, and by Act of 15 July, 1869, Georgia was readmitted to the Union. Since the close of the war the material development of Georgia has been remarkable, principally along the lines of manufactured industries. At present its cotton mills are among the largest in the world. The Cotton Exposition in 1881 and The Cotton States and International Exposition in 1895, both held in Atlanta, were eloquent of the fact that Georgia has been the first of the seceding States to recognize the spirit of the new commercial life of the South.

RELIGION

Church History

The Diocese of Savannah, which comprises the State of Georgia, was established in 1850. As late as the period of the American Revolution there was scarcely a Catholic to be found in the colony or State of Georgia, nor was there a priest in the State for many years thereafter. Bishop England states that there were not twenty-five priests in all the colonies at that time. About 1793 a few Catholics from Maryland moved into Georgia and settled in the vicinity where the church of Locust Grove was subsequently built. Previous to their removal these earliest Georgian Catholics had applied for a clergyman to accompany them, but were unable to obtain their request. Shortly after the French Revolution, Catholic *émigrés* from the French colony of Santo Domingo, then enduring the horrors of a negro revolution, settled at Augusta and Savannah. One of their priests began to discharge the duties of his ministry at Maryland, a little colony fifty miles above Augusta, a fact which is recorded as "the commencement of the Church in Georgia". In a few years this settlement was abandoned; Savannah became the fixed residence of a priest; the congregation was incorporated by the Legislature of the State; the city council gave a grant of land, and a wooden edifice with a small steeple was erected. In the year 1810 the Legislature incorporated the Catholics of Augusta, an Augustinian friar, Rev. Robert Browne, became pastor, and the brick church of the Holy Trinity, fifty feet in length and twenty-five wide, was erected from funds raised by subscription. In 1820 Georgia and the Carolinas were separated from the See of Baltimore, the Rev. Doctor England being appointed to the newly formed see. At that time there were about five hundred Catholics in Savannah, with fewer still in Augusta. In 1839 Bishop England announced that there were but eleven priests in the State.

The most salient feature of the work of the Church in Georgia at the present time is the evangelical energy directed towards the conversion of the negroes, a task which is being undertaken by the Society of the African Missions. The population of the State is about equally divided between white and coloured, and of the million negroes not above five hundred are Catholics. There is a

mission with church and school and two resident priests in Savannah, with about four hundred Catholic people. In the school 110 children are taught by Franciscan Sisters. In Augusta a new mission has been established with a church and a school with twenty pupils. Among the 30,000 coloured in the city of Augusta there are not above twenty Catholics.

Church Statistics

In the Diocese of Savannah there are, according to the census of 1908, 23,000 Catholics, 18 secular priests, 41 priests of religious orders, 13 churches with resident priests, 18 missions with churches, 81 stations, and 14 chapels.

Church Educational Facilities

There are three Catholic colleges in Georgia with 342 students: the College of Marist Fathers at Atlanta, the College of the Sacred Heart at Augusta, and St. Stanislaus Novitiate of the Society of Jesus at Macon. There are ten academies, one seminary for small boys, while twelve parishes in the diocese possess parochial schools in charge of Sisters and Brothers. The State furnishes these schools no financial support.

Church Charitable Institutions

There are in Georgia 2 Catholic hospitals owned by and in charge of the Sisters of Mercy, one of which secures aid from the county for the care of the poor -- a *per capita* assignment. There are 170 orphans cared for at St. Joseph's Orphanage, Washington, in charge of 6 Sisters of St. Joseph; St. Mary's Home for Female Orphans, Savannah, in charge of 7 Sisters of Mercy; and 2 coloured orphanages. In addition to these there is a Home for the Aged, at Savannah, in charge of 10 Little Sisters of the Poor, with 94 inmates.

Religious Polity

Under the Constitution of the United States, as well as under the State Constitution, full liberty of conscience in matters of religions opinion and worship is granted in Georgia; but it has been held that this does not legalize wilful or profane scoffing, or stand in the way of legislative enactment for the punishment of such acts. It is unlawful to conduct any secular business, not of an imperative nature, on Sunday. There are no specific requirements for the administration of oaths; such may be administered by using the Bible to swear upon, by the uplifted hand, or by affirmation, the form being: "You do solemnly swear in the presence of the ever living God" or "You do sincerely and truly affirm, etc." The sessions of the legislature are opened with prayer, those of the courts are not. Georgia recognizes as State holidays 1 January and 25 December, but no church Holy Days, as such, are recognized as holidays. The law allows the same privileges to communications made to a priest under the seal of confession as it does to confidential communications made by a client to his counsel, or by a patient to his physician. The statutes contain no provisions making any exception between the rights and privileges of civil or ecclesiastical corporations. The property of the Church in the diocese is held by the bishop and his successors in office.

EXCISE AND WILLS

Georgia from the very beginning seems to have steadily pursued a restrictive policy in the granting of excise privileges. The initial steps in legislation looking towards the prohibition of the sale of liquors were taken in 1808, when the Legislature passed an Act making it unlawful to sell intoxicating drink within one mile of any "meeting-house" or other "places of public worship" during the time "appropriated to such worship", under the penalty of thirty dollars, a fact which has been regarded as "the first attempt at the restriction of the traffic". By 1904 there were 104 prohibition counties out of 134, and Georgia has been a prohibition State since 1 January, 1908.

Every person is entitled to make a will unless labouring under some disability of law arising from want of capacity or want of perfect liberty of action. Children under fourteen years of age cannot make a will. Nor can insane persons. A married woman may make a will of her separate property without her husband's consent. All wills, except such as are nuncupative, disposing of real or personal property, must be in writing, signed by party making same, or by some other person in his presence and by his direction, and shall be attested and subscribed in presence of testator and three or more competent witnesses. If a subscribing witness is a legatee or devisee under will, witness is competent, but legacy or devise is void. A husband may be a witness to a will by which legacy creating a separate estate is given to his wife, the fact only going to his credit. No person having a wife or child shall by will devise more than two-thirds of his estate to any charitable, religious, educational, or civil institution to the exclusion of his wife or child; and in all cases a will containing such a devise shall be executed at least ninety days before death of testator or such devise shall be void. A year's support of family takes precedence in wills as a preferred obligation. There is no inheritance tax.

MARRIAGE AND DIVORCE

The marriage laws of Georgia require parental consent when the contracting male is under twenty-one years and the female under eighteen years, while all marriages are prohibited within the Levitical degrees. Marriages by force, menace, or duress, of white with a negro, or when either party is mentally or physically incapable, or insane, or when there has been fraud in the inception, as well as bigamous marriages, are considered by statute void or voidable. The grounds for divorce are mental and physical incapacity, desertion for three years, felony cruelty, habitual drunkenness, force, duress, or fraud in obtaining marriage, pregnancy of wife by other than husband at marriage, relationship within the prohibited degrees, and adultery. One year's residence in the State is required before the issuance of a decree of divorce. From 1867 to 1886 the State granted 3959 decrees of divorce; from 1887 to 1906 10,401 were decreed. In 1880 the divorce rate per 100,000 population was 14; in 1900, 26.

JARVIS KEILEY

Georgius Syncellus

Georgius Syncellus

(Gr. *Georgios ho Sygkellos*).

Died after 810; the author of one of the more important medieval Byzantine chronicles. Not much is known of his life. He had lived many years in Palestine as a monk; under the Patriarch Tarasius (784-806) he came to Constantinople to fill the important post of *syncellus*. The syncellus is the patriarch's private secretary, generally a bishop, always the most important ecclesiastical person in the capital after the patriarch himself, often the patriarch's successor. But George did not succeed Tarasius. Instead, when his patron died he retired to a monastery and there wrote his chronicle. The only date we know at the end of his life is 810 (6302 an. mundi), which he mentions (Dindorf's edition, 389, 20, see below) as the current year. The chronicle, called by its author, "Extract of Chronography" (*Ekloge chronographias*), contains the history of the world from the Creation to the death of Diocletian (316). It is arranged strictly in order of time, all the events being named in the year in which they happened. The text is continually interrupted by long tables of dates, so that Krumbacher describes it as being "rather a great historical list [Geschichtstabelle] with added explanations, than a universal history" (Byzantinische Litteratur, 2nd ed., Munich, 1897, 340). The author has taken most trouble over the Bible history, the chronology of the life of Christ and the New Testament. For later times he is content with a compilation from Eusebius (Church History and Canon) and one or two other historians (the Alexandrines Panodorus and Annianus especially; see Gelzer, *op. cit. infra*). He took trouble to secure good manuscripts of the Septuagint and did some respectable work as a critic in collating them. He also quotes Greek Fathers — Gregory Nazianzen and Chrysostom especially. His interest is always directed in the first place to questions of chronology. The "Extract of Chronology" has merit. Krumbacher counts it as the best work of its kind in Byzantine literature (*op. cit.*, 341). That the author thinks the Septuagint more authentic than the Hebrew text — of which he could read nothing at all — is a harmless and inevitable weakness in a Greek monk. Georgius Syncellus's chronicle was continued by his friend Theophanes Confessor (*Theophanes homologetes*). Anastasius Bibliothecarius composed a "Historia tripartita" in Latin, from the chronicle of Syncellus, Theophanes, and Nicephorus the Patriarch (806-815). This work, written between 873 and 875 (Anastasius was papal librarian), spread Syncellus's chronological ideas in the West also. In the East his fame was gradually overshadowed by that of Theophanes.

ADRIAN FORTESCUE

Gerace

Gerace

DIOCESE OF GERACE (HIERACENSIS).

Diocese in the province of Reggio in Calabria (Southern Italy), on a lofty site overlooking the Ionian Sea, not far from Cape Spartivento. The city probably owes its origin, or at least its importance, to the ruin of the town of Locri Epizephyrii, one of the earliest Greek colonies in Lower Italy, founded by the Ozolian Locrians (684-680 B.C.) and endowed with a code of laws by Zaleucus. Through its advanced civilization and its trade Locri Epizephrii was brought into prominence. It suffered much during the wars of Dionysius the Younger and of Pyrrhus, and in the Second Punic War, when it passed into the hands of the Romans, retaining, however, the ancient constitution of Zaleucus. Its decay dates from this period. Before its total ruin, Locri Epizephrii had a bishop of its own; but in 709, under Bishop Gregory, the see was transferred to Gerace.

The name *Gerace* is probably derived from Saint Cyriaca, whose church was destroyed by the Saracens in 915. They captured the town in 986, but in 1059 it fell into the hands of the Normans. Until 1467 the Greek Rite was in use at Gerace, and such had probably been the custom from the beginning. As early as the thirteenth century efforts were made to introduce the Latin Rite, which accounts for the schism between Latins and Greeks about 1250-1253. The latter demanded as bishop the monk Bartenulfo, a Greek whereas Innocent IV, in 1253, appointed Marco Leone. In 1467, bishop Atanasio Calceofilo introduced the Latin Rite. Among bishops of note are: Barlaam II (1342), Abbot of San Salvatore at Constantinople, and ambassador from the Emperor Andronicus to Benedict XII, apropos of the union of the two Churches. Barlaam at one time had opposed the idea, but later recognized his error, and Clement VI bestowed on him the See of Gerace. He taught Greek to Petrarch, Boccaccio, and others, and was thus one of the first of the Italian humanists. Bishop Ottaviano Pasqua (1574) wrote a history of the diocese. Another bishop, Giovanni Maria Belletti (1625), wrote "Disquisitiones Clericales"; Giuseppe Maria Pellicano (1818) rebuilt the cathedral, destroyed by an earthquake in 1783. Gerace is a suffragan of Reggio; it has 69 parishes, and 132,300 souls; 1 religious house for men, and 3 for women.

U. BENIGNI

St. Gerald

St. Gerald

Bishop of Mayo, an English monk, date of birth unknown; died 13 March, 731; followed St. Colman, after the Synod of Whitby (664), to Ireland, and settled in Innisboffin, in 668. Dissensions arose, after a time, between the Irish and the English monks, and St. Colman decided to found a separate monastery for the thirty English brethren. Thus arose the Abbey of Mayo (*Magh Eo*, the yew plain), known as "Mayo of the Saxons", with St. Gerald as the first abbot, in 670. St. Bede writes: "This monastery is to this day (731) occupied by English monks ... and contains an exemplary body who gathered there from England, and live by the labour of their own hands (after the manner of the early Fathers), under a rule and canonical abbot, leading chaste and single lives." Although St. Gerald was a comparatively young man, he proved a wise ruler, and governed Mayo until 697, when, it is said, he resigned in favour of St. Adamnan. Some authors hold that St. Adamnan

celebrated the Roman Easter at Mayo, in 703, and then went to Skreen, in Hy Fiachrach, and that after his departure the monks prevailed on St. Gerald to resume the abbacy. The Saxon saint continued to govern the Abbey and Diocese of Mayo till his death. His feast is celebrated on 13 March. Mayo, though merged in Tuam for a time, remained a separate see until 1579.

W.H. GRATTAN-FLOOD

Geraldton

Geraldton

DIOCESE OF GERALDTON (GERALDTONENSIS).

Diocese in Australia, established in 1898, comprises the territory lying between the southern boundary of the Kimberley district and a line running eastward from the Indian Ocean along the 30th parallel of south latitude until it reaches the 120th degree of longitude, whence it follows the 29th degree of latitude to the south Australian border. It is a suffragan of Adelaide. There are 28 churches in the diocese, attended by 10 secular and 4 regular priests; 5 boarding and 12 primary schools with 747 pupils in charge of 51 sisters. The Presentation nuns, who made a foundation from Ireland in 1890, have 28 sisters in 6 communities; Dominican nuns from Dunedin, New Zealand, arrived in 1899, and have 4 communities with 24 sisters. The first bishop of the see, Right Rev. William Bernard Kelly, was consecrated 14 August, 1898. The Bishop of Geraldton also has jurisdiction over the Vicariate of Kimberley.

THOMAS F. MEEHAN

Baron Ferdinand de Geramb

Baron Ferdinand de Géramb

In religion, Brother Mary Joseph; Abbot and procurator-general of La Trappe, came of a noble and ancient family in Hungary; b. in Lyons, 14 Jan., 1772; d. at Rome, 15 March, 1848.

Some historians wrongfully call in question both the place and date of his birth, as also his noble descent. Being of a fiery and chivalrous disposition, he took an active part in the struggles of the monarchies in Europe against the French Revolution, and rose to the rank of lieutenant-general. In 1808 he fell into the hands of Napoleon, who imprisoned him in the fortress of Vincennes until 1814, the time when the allied powers entered Paris. After bidding farewell to the Tsar and Emperor of Austria, he resolved to leave the world. It was at this time that he providentially met the Rev. Father Eugene, Abbot of Notre Dame du Port du Salut, near Laval (France), of whom he begged to be admitted as a novice in the community. He pronounced his vows in 1817. After having rendered great services to that monastery, he was sent, in 1827, to the monastery of Mt. Olivet (Alsace). During the Revolution of 1830 de Géramb displayed great courage in the face of a troop of insurgents that had come to pillage the monastery; though the religious had been dispersed, the abbey was at least, by his heroic action, spared the horrors of pillage. It was at this time that Brother Mary Joseph

made his pilgrimage to Jerusalem. On his return in 1833, he went to Rome, where he held the office of procurator-general of La Trappe. He soon gained the esteem and affection of Gregory XVI, who, though he was not a priest, named him titular abbot with the insignia of the ring and pectoral cross, a privilege without any precedent. Abbot de Géramb is the author of many works, the principal of which are: "Letters to Eugene on the Eucharist"; "Eternity is approaching"; "Pilgrimage to Jerusalem"; "A Journey from La Trappe to Rome", besides many others of less importance and of an exclusively ascetical character. They were often reprinted and translated. His style is easy and without affectation. The customs, manners, and incidents of the journey which he describes, all are vividly and attractively given, and the topographical descriptions are of an irreproachable accuracy. Even under the monk's cowl the great nobleman could occasionally be seen distributing in alms considerable sums of money which he had received from his family to defray his expenses.

In 1796, Baron de Géramb married his cousin Theresa de Adda, who died, in 1808, at Palermo. Six children had been born to him, of which number two died in their youth. On his entrance into La Trappe he confided the surviving children to the care of his brother, Léopold de Géramb, after having placed them under the protection of the Tsar and the Emperor of Austria.

EDMOND M. OBRECHT

Joseph-Marie de Gerando

Joseph-Marie de Gérando

A French statesman and writer, born at Lyons, 29 February, 1772; died at Paris, 10 November, 1842. After completing his studies with the Oratorians at Lyons, he took part in the defence of the city against the besieging armies of the French Convention. Wounded and taken prisoner, he barely escaped being put to death, and later took refuge in Switzerland and at Naples. He enlisted again in the army and was at Colmar when the French Institute announced the offer of a prize for the best essay on "The influence of signs on the formation of ideas". Gérando sent a paper, which was awarded first honours. This was a turning-point in his life; for, having come to Paris, he was appointed to many important functions, political, administrative, and educational. In 1815, he was one of the founders of the Société pour l'instruction élémentaire, which introduced into France the monitorial system, established in England by Lancaster, and thus made education possible for the poor classes. He was a member of the state-council under Napoleon and under Louis XVIII, member of the Académie des Inscriptions et Belles-Lettres, and of the Académie des Sciences morales et politiques, and officer of the Legion of Honour. In 1819, he opened a course in the faculty of law in Paris; and, in 1837, became a member of the Chambre des Pairs. He consecrated his talent to the causes of education and charity, taking part in the foundation and administration of schools, hospitals, and charitable institutions of all kinds. His works are very numerous; among the most important must be mentioned the following.

- Philosophical:

- "Des signes et de l'art de penser considérés dans leurs rapports naturels" (Paris, 1800), a development of his prize-essay in which the author follows Condillac, but differs from him on many points;
- "De la génération des connaissances humaines" (Berlin, 1802), awarded a prize by the Academy of Sciences of Berlin;
- "Histoire comparée des systèmes de philosophie considérés relativement aux principes des connaissances humaines" (Paris, 1803).
- Educational:
 - "Du perfectionnement moral, ou de l'éducation de soi-même" (Paris, 1824);
 - "Cours normal des instituteurs primaires" (Paris, 1832);
 - "De l'éducation des sourds-muets de naissance" (Paris, 1832);
 - "Institutes du droit administratif français" (Paris, 1830).
- Charitable:
 - "Le visiteur du pauvre" (Paris, 1820);
 - "De la bienfaisance publique" (Paris, 1839).

C. A. DUBRAY

St. Gerard

St. Gérard, Abbot of Brogne

Born at Staves in the county of Namur, towards the end of the ninth century; died at Brogne or St-Gérard, 3 Oct. 959. The son of Stance, of the family of dukes of Lower Austrasia, and of Plectrude, sister of Stephen, Bishop of Liège, the young Gérard, like most men of his rank, followed at first the career of arms. His piety, however, was admirable amid the distractions of camp. He transformed into a large church a modest chapel situated on the estate of Brogne which belonged to his family. About 917, the Count of Namur charged him with a mission to Robert, younger brother of Eudes, King of France. He permitted his followers to reside at Paris, but himself went to live at the Abbey of St-Denis, where he was so struck by the deifying lives of the monks that, at the conclusion of his embassy, with the consent of the Count of Namur and Bishop Stephen, his maternal uncle, he returned to St-Denis, took the religious habit, and after eleven years was ordained priest. He then requested to be allowed to return to Brogne, where he replaced the lax clerics with monks animated by a true religious spirit. Thereupon he himself retired to a cell near the monastery for more austere mortification. From this retreat he was summoned by the Archbishop of Cambrai who confided to him the direction of the community of St-Ghislain in Hainault. Here also he established monks instead of the canons, whose conduct had ceased to be exemplary, and he enforced the strictest monastic discipline. Gradually he became superior of eighteen other abbeys situated in the region between the Meuse, the Somme, and the sea, and through his efforts the Order of St. Benedict was soon completely restored throughout this region. Weighed down by age and infirmities, he placed vicars or abbots in his stead, in the various abbeys with which he was charged, and retired to that of Brogne. He still had courage to take a journey to Rome in order to obtain a Bull confirming the privileges of that abbey. On his return he paid a final visit to all the communities which he had

reorganized, and then awaited death at Brogne. His body is still preserved at Brogne, now commonly called St-Gérard.

LÉON CLUGNET

St. Gerard, Bishop of Toul

St. Gerard, Bishop of Toul

Born at Cologne, 935; died at Toul, 23 April, 994. Belonging to a wealthy and noble family, he received an excellent education in the school for clerics at Cologne, and throughout his youth was a model of obedience and piety. He was eventually ordained to the priesthood, in which office his virtues were a source of edification to the city of Cologne. At the death of Gauzelin, Bishop of Toul (963), he was appointed to succeed him by the Archbishop of Cologne, was well received by the clergy and people of Toul, and bore the burdens of his episcopal office without any of its comforts. Although he avoided paying long visits to the court of the Emperor Otto II, who was desirous of keeping Gerard near him, he nevertheless obtained from the emperor the confirmation of the privilege in virtue of which Toul, although united to the empire about 925, formed an independent state of which the Emperor Henry the Fowler reserved to himself only the protectorate, abandoning to Gerard's predecessor, Gauzelin, the therefore rightly considered as the true founder of the temporal power of the bishops of Toul. He was energetic in his opposition to powerful personages who were inimical to his authority, and governed his county wisely, promulgating administrative measures, traces of which subsisted to the time of the French Revolution. He died at the age of fifty-nine, and was buried with pomp in the choir of his cathedral. Leo IX, one of his successors in the See of Toul, canonized him in 1050.

LÉON CLUGNET

Gerard, Archbishop of York

Gerard, Archbishop of York

Date of birth unknown; died at Southwell, 21 May, 1108. He was a nephew of Walkelin, Bishop of Winchester, of Simon, Abbot of Ely, and connected with the royal family. Originally a precentor in Rouen cathedral, he became clerk in the chapel of William Rufus, who employed him in 1095 on a diplomatic mission to the pope. His success was rewarded with the Bishopric of Hereford, and he was consecrated by St. Anselm 8 June, 1096, having been ordained deacon and priest on the previous day. On the accession of Henry I, in 1100, he was made Archbishop of York and began a long contest with St. Anselm, in which he claimed equal primacy with Canterbury and refused to make his profession of canonical obedience before him. When he journeyed to Rome for the pallium, he was entrusted with the mission of representing the king against Anselm in the controversy about investitures. The pope's decision was against the king, but Gerard professed to have received private assurances that the decrees would not be enforced. This was denied by the monks who represented

St. Anselm; and the pope, when appealed to, repudiated the statement and excommunicated Gerard till he confessed his error and made satisfaction.

Eventually he professed obedience to St. Anselm, but continued to assert the independence of York. When Anselm refused to consecrate three bishops, two of whom had received investiture from the king, Gerard attempted to do so, but two refused to accept consecration at his hands. The pope reprimanded him for his opposition to the primate, and finally the two prelates were reconciled. Gerard carried out many reforms in York, though by his action against St. Anselm he incurred great unpopularity, and the writers of the time charge him with immorality, avarice, and the practice of magic. He died suddenly on the way to London to attend a council, and his death without sacraments was regarded as a Divine judgment. The canons refused to bury him within the cathedral, and the people pelted the hearse with stones. Some Latin verses by him are preserved in the British Museum (Titus. D. XXIV. 3).

EDWIN BURTON

John Gerard

John Gerard

Jesuit; born 4 October, 1564; died 27 July, 1637. He is well known through his autobiography, a fascinating record of dangers and adventures, of captures and escapes, of trials and consolations. The narrative is all the more valuable because it sets before us the kind of life led by priests, wherever the peculiar features of the English persecution occurred. John was the second son of Sir Thomas Gerard of Bryn, for a time a valiant confessor of the Faith, who, however, in 1589, tarnished his honour by giving evidence against the Ven. Philip Howard, Earl of Arundel (q.v.). Different opinions are held (by Morris and Gillow) as to the permanence of his inconsistency. John left his father's house at New Bryn at the age of thirteen, and went first to Douai seminary; matriculated at Oxford (1579), and thence proceeded to the Jesuits' College at Paris (1581). Having come to England for his health's sake, he was arrested on 5 March, 1584, and suffered two years' imprisonment in the Marshal-sea. He was bailed out in 1586, and, with the consent of his sureties, once more made his way to the Continent, and was received at the English College, Rome, 5 August, 1586. At first he paid for himself, but in April, 1587, he became a scholar to the pope. Next year, 15 August, 1588, he entered the Jesuit novitiate; but so great was the dearth of missionaries in England that he was dispatched thither in the ensuing September.

His romantic adventures began on landing, for he was set ashore alone on the Norfolk coast at a moment when the country was in a turmoil of excitement after the defeat of the Armada, and when feeling against Catholics ran so high that fifteen priests had been butchered in two days in London, and twelve others sent to the provinces for the same purpose, though half of these eventually escaped death. Gerard, being an accomplished sportsman and rider, succeeded in making his way about the country, now as a horseman who had lost his way in the chase, now as a huntsman whose hawk had strayed. Before long he had won the steadfast friendship of many Catholic families, with

whose aid he was able to make frequent conversions, to give retreats and preach, and to send over many nuns and youths to the convents, seminaries, and religious houses on the Continent. Dr. Jessopp, a Protestant writes:

The extent of Gerard's influence was nothing less than marvellous. Country gentlemen meet him in the street and forthwith invite him to their houses; highborn ladies put themselves under his direction almost as unreservedly in temporal as in spiritual things. Scholars and courtiers run serious risks to hold interviews with him, the number of his converts of all ranks is legion; the very gaolers and turnkeys obey him; and in a state of society when treachery and venality were pervading all classes, he finds servants and agents who are ready to live and die for him. A man of gentle blood and gentle breeding - of commanding stature, great vigour of constitution, a master of three or four languages, with a rare gift of speech and an innate grace and courtliness of manner - he was fitted to shine in any society and to lead it. From boyhood he had been a keen sportsman, at home in the saddle, and a great proficient in all country sport. His powers of endurance of fatigue and pain were almost superhuman; he could remain in hiding days and nights in a hole in which he could not stand upright, and never sleep, and hardly change his position: he could joke on the gyves that were ulcerating his legs. He seems never to have forgotten a face or a name or an incident. Writing his autobiography twenty years after the circumstances he records, there is scarcely an event or a name which recent research has not proved to be absolutely correct. As a literary effort merely, the *Life* is marvellous. ("Academy", 9 July, 1881.)

In those times of danger, no prudence could always effectually ensure a priest against capture. Gerard was taken prisoner, July, 1594, through a servant, whose secret treachery was not suspected. He passed two years in smaller prisons, and was then sent to the Tower, where he was cruelly tortured, being hung up by his hands, of which torment he has left a very vivid description. His courage and firmness, however, were such, that his examiners lost hope of extracting secrets from him, and he was relegated to the Salt Tower, where he cleverly contrived to say Mass. In 1597, he managed to escape by means of a string thrown one night by a friend from Tower Wharf into the Cradle Tower. By this string a rope was drawn across the moat, and with its assistance he managed eventually to get across, but with great difficulty, as his hands were still helpless from the torture.

Until the discovery of the Gunpowder Plot (q.v.), at the end of 1605, he continued his adventurous life as a missionary in England, but he was then obliged to slip away disguised as a footman in the train of the Spanish Ambassador. The rest of his life was spent in the English colleges on the Continent. He wrote, in 1607, "A Narrative of the Gunpowder Plot", and afterwards his autobiography, "Narratio P. Joannis Gerardi de Rebus a se in Anglia gestis". He strongly befriended Mary Ward (q.v.) in her attempt to found an active religious order for women, and passed the last ten years of his life as spiritual director of the English College at Rome.

J. H. POLLEN
Ven. Miles Gerard

Ven. Miles Gerard

Martyr; born about 1550 at Wigan; executed at Rochester 13 (30?) April, 1590. Sprung perhaps from the Gerards of Ince, he was, about 1576, tutor to the children of Squire Edward Tyldesley, at Morleys, Lancashire. Thence in 1579 he went to the seminaries of Douai and Reims, where he was ordained 7 April, 1583, and then stayed on as professor until 31 August, 1589 (O.S.), when he started for England with five companions. At Dunkirk the sailors refused to take more than two passengers; so the missionaries tossed for precedence, and Gerard and Francis Dicconson, the eldest (it seems) and youngest of the party, won. Though bound for London, they were driven out of their course into Dover harbour, where they were examined and arrested on suspicion (24 November, N.S.). A contemporary newsletter says that they were wrecked, and escaped the sea only to fall into the hands of persecutors on shore, but this is not consistent with the official records. These show that the prisoners at first gave feigned names and ambiguous answers, but soon thought it better to confess all. After many tortures in the worst London prisons under the infamous Topcliffe, they were condemned as traitors, and "taken to Rochester, where they were hanged and quartered", says Father John Curry, S. J., writing shortly afterwards, "and gave a splendid testimony to the Catholic Faith".

J. H. POLLEN

Richard Gerard

Richard Gerard

Confessor; born about 1635; died 11 March, 1680 (O.S.). The Bromley branch of the Gerard family, which divided off from the original stock of Bryn in the fourteenth century, grew to power and affluence through Gilbert, solicitor-general to Queen Elizabeth, and as such an active persecutor of Catholics. Indeed he is said to have obtained the estate of Gerard's Bromley, through a court intrigue, from the Catholic Sir Thomas Gerard of Bryn (father of John Gerard, S.J.), as the price for which the knight bought off the prosecution against him for adhering to Mary Queen of Scots. In 1603 Gilbert's son Thomas was made Baron Gerard of Gerard's Bromley, County Stafford, but his grandson (the subject of this article), Richard of Hilderstone, County Stafford (by John, a younger son, d. 1673), was a Catholic, though how he became one is not known. Richard was a friend of the Jesuit missionaries, had three sons at their college of St-Omer, and was trustee for them for some small properties. It would seem that he had been invited to a little function on the feast of the Assumption, 1678, when Father John Gavan (the future martyr) made his profession, at the house of the Penderels at Boscobel, who had sheltered Charles II after the battle of Worcester; and that after dinner the party visited the celebrated "Royal Oak", in which Charles had hidden. This came to the knowledge of Stephen Dugdale, afterwards an infamous informer, and became the occasion of Richard's imprisonment and death. For, during the fury of Oates's Plot, when witnesses

were being sought to attest the innocence of the Catholic lords who were impeached, Richard Gerard manfully came forward, and his evidence was likely to have proved of capital importance. To obviate this, Dugdale accused him of having contributed to the funds of the alleged plotters (perhaps with some reference to the pensions paid for his boys at St-Omer) and of having conspired to murder the king. Examined by the Lords' committee (19 May, 1679) he confessed to the innocent meeting at Boscobel, and was thrown into Newgate, where he languished ten months without trial before he was freed by death. He was fortunate in being attended during his last hours by Father Edward Petre, who, in a letter written 29 March, 1680, speaks of his constancy and of his dying wish to be buried by the side of his friend, Father Whitbread, then recently martyred.

Several years later his third son, Philip (born 1 December, 1665), having entered the Society of Jesus 7 September, 1684, unexpectedly became seventh and last Lord Gerard of Gerard's Bromley (12 April, 1707, O.S.), through the deaths of various cousins and older brothers. Philip never claimed the title, and gave up all rights to the estates for a small yearly pension of 60 pounds, being obliged to leave the country by the action of a near connection, the Duke of Hamilton, who advertised the reward of 1,000 pounds for his arrest as a priest. It is curious that the four lords who have been among the English Jesuits all lived at the same time. Philip Gerard (d. 1733) was the contemporary of Father Gilbert Talbot (d. 1743), who became Earl of Shrewsbury in 1717; also of Father William Molyneux (d. 1754), who was Viscount Sefton in 1745; also of Father Charles Dormer (d. 1761), who was Baron Dormer in 1728.

J. H. POLLEN
St. Gerard Majella

St. Gerard Majella

Born in Muro, about fifty miles south of Naples, in April, 1726; died 16 October, 1755; beatified by Leo XIII, 29 January, 1893, and canonized by Pius X, 11 December, 1904. His only ambition was to be like Jesus Christ in his sufferings and humiliations. His father, Dominic Majella, died while Gerard was a child. His pious mother, owing to poverty, was obliged to apprentice him to a tailor. His master loved him, but the foreman treated him cruelly. His reverence for the priesthood and his love of suffering led him to take service in the house of a prelate, who was very hard to please. On the latter's death Gerard returned to his trade, working first as a journeyman and then on his own account. His earnings he divided between his mother and the poor, and in offerings for the souls in purgatory. After futile attempts first to become a Franciscan and then a hermit, he entered the Congregation of the Most Holy Redeemer in 1749. Two years later he made his profession, and to the usual vows he added one by which he bound himself to do always that which seemed to him more perfect. St. Alphonsus considered him a miracle of obedience. He not only obeyed the orders of superiors when present, but also when absent knew and obeyed their desires. Although weak in body, he did the work of three, and his great charity earned for him the title of Father of the Poor. He was a model of every virtue, and so drawn to Our Lord in the tabernacle

that he had to do violence to himself to keep away. An angel in purity, he was accused of a shameful crime; but he bore the calumny with such patience that St. Alphonsus said: "Brother Gerard is a saint". He was favoured with infused knowledge of the highest order, ecstasies, prophecy, discernment of spirits, and penetration of hearts, bilocation, and with what seemed an unlimited power over nature, sickness, and the devils. When he accompanied the Fathers on missions, or was sent out on business, he converted more souls than many missionaries. He predicted the day and hour of his death. A wonderworker during his life, he has continued to be the same since his death.

J. MAGNIER

Gerard of Cremona

Gerard of Cremona

A twelfth-century student of Arabic science and translator from Arabic into Latin; born at Cremona, in 1114; died in 1187. The place and date of Gerard's birth are not given in any document prior to the fourteenth century. Tiraboschi, in his "Storia della letteratura italiana", is at pains to refute the contention of some Spanish writers that Gerard was born, not at Cremona in Italy, but at Carmona in Spain. While conceding that Gerard spent a good many years at Toledo, Tiraboschi shows that Cremona and not Carmona is his birthplace. In fact, the manuscripts of his writings style him *Cremonensis*, or *Chremonensis* (which seems to be a corrupt form of *Cremonensis*). From the "Chronicle" of the Dominican Francisco Pipino, who flourished about the year 1300, we learn, besides the place and date of his birth and death, that impelled by his interest in the works of the astronomer Ptolemy, he went to Toledo, and, applying himself to the study of Arabic, soon acquired so great a proficiency in that language that he was able to translate not only the "Almagest", but also the entire works of Avicenna, into Latin. He died in the year 1187 and was buried in the church of St. Lucy at Cremona, to which he bequeathed his valuable library. The number of books which he translated from Arabic into Latin is said by Pipino to be seventy-six. Whether he is the author of original treatises is uncertain. The works sometimes attributed to him are almost certainly to be ascribed to Gerard of Sabionetta, who lived in the thirteenth century. He must have been a man of extraordinarily wide taste in scientific matters, for he translated, according to the "Chronicle" of Pipino, works on dialectic, geometry, philosophy, physics, and several other sciences. His activity as a translator, combined with the efforts in the same line of Michael Scott, and of the group of men who formed a regular college of translators at Toledo under the direction of Bishop Raymond, brought the world of Arabian learning within the reach of the scholars of Latin Christendom and prepared the way for that conflict of ideas out of which sprang the Scholasticism of the thirteenth century. In this work Gerard was a pioneer. If the description of his moral qualities given by Pipino is not overdrawn, he was a man whose single-minded devotion to the cause of science enabled him to overcome the difficulties which in those days were inevitable in a task such as he undertook.

WILLIAM TURNER

Gerardus Odonis

Gerardus Odonis

Also *Geraldus Othonis*, or *Otonis*, a medieval theologian and Minister General of the Franciscan Order; born probably at Châteauroux, in the present department of Indre, France, date unknown; died at Catania, Sicily, 1348. Whether he was the son of Count André de Chauvigny is very doubtful. After he had entered the Order of St. Francis, most probably at Châteauroux, and consequently had belonged to the Touraine province of the order, he became a member of the Aquitanian province and still belonged to this latter (without, however, being provincial minister) when he was elected minister general of the order, 10 June, 1329, at the general chapter. The presiding officer of this chapter was Cardinal de la Tour, a Franciscan, whom John XXII (1316-34) had appointed vicar-general of the order. The previous minister general, Michael of Cesena, had been deposed by John XXII on 6 June, 1328, on account of his rebellious attitude towards the Holy See in the discussion regarding the rule of poverty (see Fraticelli and Michael of Cesena). Gerardus Odonis was inclined to give up poverty, the principle of the order, on account of which Michael of Cesena had come into conflict with the pope. The general chapter held at Paris (1329) took a position, in the name of the entire order, on the side of the pope and formally expelled the small party made up of Michael of Cesena's adherents which opposed the Holy See.

Gerardus Odonis openly showed his readiness to abandon the rule of poverty at the general chapter of Perpignan (1331), where he won over to his side fourteen provincial ministers. In reference to this question they presented a petition to John XXII which the pope rejected in the consistory of 1 August, 1331. Owing to his lax views concerning poverty Gerardus also became entangled in a dispute with King Robert and Queen Sanzia of Naples and Sicily. These rulers were unwavering protectors of the rigid adherents to the rule of poverty as well as of the followers of Michael of Cesena and of the Fraticelli. Notwithstanding the papal letters of admonition and the fact that John XXII sent Gerardus Odonis as his representative to the Court of Naples in 1331 and the following year, Gerardus had new statutes drawn up with the view of changing the form of the Franciscan Order to that of the old orders of monks. These regulations were confirmed, 28 November, 1336, by Benedict XII (1334-42); consequently Gerardus was able at the chapter held at Cahors, 7 June, 1337, to obtain, in spite of strong opposition, the enactment of the so-called "Constitutiones Benedictinae". Nevertheless, he was in danger of being removed from his position, nor did the statutes remain in force longer than the lifetime of Benedict XII and the period during which Gerardus was general. The general chapter of Assisi abrogated, 1 June, 1343, the "Constitutiones Benedictinae" and re-enacted, with some additions, the constitutions of Narbonne (1260).

There is some truth in the assertion made as to Gerardus Odonis that he both resembled and imitated Brother Elias, the lax minister general second in succession from St. Francis of Assisi; indeed, he even exceeded Elias. However, it must be said to his credit that, in union with the pope, he zealously promoted Franciscan missions, constantly sending fresh missionaries to Persia, Georgia, Armenia (1329); Malabar (1330), China and Tataria (1331); Bosnia (1340). In 1329 John XXII sent

him to King Charles Robert of Hungary and to Ban Stephen of Bosnia for the purpose of bringing about the extermination of the heretics, largely Patarenes, in these countries. On 5 Sept., 1333, Gerardus and the Dominican Arnould de Saint-Michel (Arnouldus de S. Michaele) were appointed papal legates to make peace between the Kings of England and Scotland. The procurator of the Scotch king in Paris having reported, however, that his master was not to be found in Scotland, John recalled the commission of the legates, 31 Oct., 1333. Gerardus remained in Paris and defended before a large number of professors of the university, on 18 Dec., 1333, the opinion of John XXII concerning the *Visio beatifica*, namely, that the saints do not enjoy the complete Beatific Vision until after the Last Judgment. The University of Paris was greatly agitated by the controversy, and the next day, 19 Dec., Philip VI called together twenty-nine professors at Vincennes to discuss the question. This assembly dissented from the opinion of the pope, as did also a second assembly which met 2 Jan., 1334. As is known, John XXII withdrew his opinion, 3 Dec., 1334. Gerardus Odonis was also one of the commission of sixteen masters of theology which met by command of Benedict XII from 4 July to 4 Sept., 1334, at Pont-Sorgues near Avignon, to discuss, under the pope's presidency, the question of the *Visio beatifica*. On 27 Nov., 1342, Benedict XII appointed him Patriarch of Antioch and at the same time administrator of the Diocese of Catania, Sicily.

Apart from the "Constitutiones Benedictinae" and the "Officium de stigmatibus S. Francisci", still recited in the Franciscan Order and commonly attributed to Gerardus, the best known of his writings is his "Commentarius [Expositio] in Aristotelis Ethicam" (Brescia, 1482, Venice, 1500). This work brought him the honour later of being called *Doctor Moralis*. He also wrote on logic and a treatise entitled "Philosophia Naturalis", in which he is said to have apparently taught Atomism; another work was a "Commentarius in IV libros Sententiarum". Among his exegetical works are: "De figuris Bibliorum", and treatises on the Psalter, the First Epistle to the Corinthians, and the Epistle to the Galatians, besides "Sermones". In addition to taking severe measures against the adherents of the deposed Michael of Cesena, Gerardus addressed to the latter the writing "Quid niteris", to which, however, Cesena soon made a rejoinder beginning "Teste Salomone".

MICHAEL BIHL

Gerasa

Gerasa

A titular see in the province of Arabia and the Patriarchate of Antioch. According to Josephus, it was a city of Decapolis in which a number of Jews resided. Alexander Jannaeus took possession of it, although it was surrounded by a triple wall (Bell. Jud., I, 4, 8). In 68 A.D. Vespasian ravaged the country and sacked the city because the Jews were all-powerful there (op. cit., IV, 9, 1). Simon, the son of Gioras, one of the principal leaders of the rebellious Jews, was born at Gerasa. The city is mentioned as forming a part, sometimes of Arabia, sometimes of Syria, by Ptolemy, Pliny, and Stephen of Byzantium, who also speak of several notable persons of the place. Coins and a number of inscriptions prove that it was sometimes called Antioch on the Chrysorrhoeas, the little river by

which it is watered. In the Gospel (Matt., viii, 28; Mark, v, i; Luke, viii, 26, 37) there is question of the country of the Gerasans, but if this name is to be read instead of Gadarenians or Gergesians, the reference is to another locality, near the lake of Tiberias. The prosperity of Gerasa, once considerable, dates from the first centuries of our era, its buildings date from the emperors of the second and third centuries. Its destruction was brought about by earthquakes and the Arab invasions. We know three Greek Bishops of Gerasa: Exairesius, fourth century; Plancus, 451; Aeneas, who built the church of St. Theodore in the sixth century. In 1121 Baldwin II attempted in vain to conquer it, and at the beginning of the thirteenth century the geographer Yakut informs us that it was no longer inhabited. In modern times, several thousand Tcherkesses have established themselves amid its ruins and have unfortunately destroyed most of the Graeco-Roman monuments which time had spared. Until recently Djerash was the best preserved city of Roman antiquity and the one which afforded us the most exact idea of Roman civilization. Its ramparts, in a state of partial preservation, are still to be seen; also a magnificent triumphal arch, with three openings about 82 feet wide by 29 high; a "naumachia", or circus for naval combats; two theatres; the forum with fifty-five columns still standing; the great colonnade which crosses the city from north to south, and which still retains from 100 to 150 of its columns; several aqueducts; some propylaea; a temple of the Sun, the columns of which are about 40 feet high, and several other temples, baths, etc. Greek and Latin inscriptions are very numerous among the ruins. The ramparts of the city cover a distance of about three miles.

S. VAILHÉ

Gabriel Gerberon

Gabriel Gerberon

A Benedictine of the Maurist Congregation; b. at St-Calais, Department of Sarthe, France, 12 Aug., 1628; d. in the monastery of St-Denis, near Paris, 29 March, 1711; educated by the Oratorians at Vendôme; became a Benedictine in the monastery of St-Mélaine, at Rennes, 11 Dec., 1649; studied theology in the monastery of Mont St-Michel; ordained priest in 1655; and taught philosophy and theology in the monasteries of Bourgeuil, St-Denis, and St-Benoît-sur-Loire until 1663. His departure from the Scholastic method of teaching theology, and his leaning towards Jansenism, influenced his superiors to relieve him of his professional duties. In 1663 he was sent to the monastery of La Couture, near Le Mans, and three years later, to St-Germain-des-Prés, where he devoted six years (1666-1672) to the care of souls and to literary pursuits. In 1672 he was sent to the monastery of Argenteuil, and in 1675 he was appointed subprior of the monastery of Corbie. Here he openly opposed the encroachments of Louis XIV in ecclesiastical and monastic affairs, and when it became known that he was the author of the second volume of "L'Abbé commendataire" (Cologne, 1674), a work which severely condemned the abuse of setting commendatory abbots over monasteries, the king ordered his arrest (1682). Gerberon escaped the hands of the law by fleeing to Brussels, thence to Holland, where he lived a few years under the assumed name of Augustin Kergré. In 1690 he returned to Brussels, and, in union with Quesnel and other Jansenists,

wrote numerous pamphlets in favour of Jansenism. On 30 May, 1703, he was arrested at the command of the Archbishop of Mechlin, who intended to give him over to his monastic superiors. Louis XIV, however, imprisoned him at Amiens (1703-1707) and at Vincennes (1707-1710). After retracting all his Jansenistic errors, Gerberon was set free, and returned to the monastery of St-Germain-des-Prés, 25 April, 1710. He deeply regretted his errors, and died a repentant son of the Catholic Church.

Gerberon was one of the most prolific writers of the Maurist Congregation. Tassin (loc. cit. below) ascribes one hundred and eleven works to him, many of which, however, are spurious. Of the sixty-one works ascribed to him by de Lama (loc. cit. below), the following are the most important: "Apologia pro Ruperto Abbate Tuitiensi" (Paris, 1669), in which he proves against Salmasius and other Protestants that Abbot Rupert of Deutz held the Catholic doctrine of the Real Presence; "Histoire générale du Jansénisme" (Amsterdam, 1700), 3 vols.; "Acta Marii Mercatoris" (Brussels, 1673); "Histoire de la Robe sans couture de N. S. Jésus-Christ, qui est révéree dans l'église des Bénédictins d' Argenteuil" (Paris, 1676). His chief Jansenistic work is entitled "Le Miroir de la Piété chrétienne" (Brussels, 1676). He also edited the works of St. Anselm: "S. Anselmi opera omnia, necnon Eadmeri monachi Cantuar. Historia Novorum et alia opuscula" (Paris, 1675).

MICHAEL OTT

Olympe-Philippe Gerbet

Olympe-Philippe Gerbet

A French bishop and writer; b. at Poligny (Jura), 1798; d. at Perpignan (Pyrénées Orientales), 1864. He studied at the Académie and the Grand-Séminaire of Besançon, also at St-Sulpice and the Sorbonne. Ordained priest in 1822, he joined Lamennais at "La Chesnaie" (1825) after a few years spent with Salinis at the Lycée Henri IV. Although an enthusiastic admirer of Lamennais he nevertheless accepted the papal Encyclical "Mirari vos" of 15 Aug., 1832, and the "Singulari nos" of 13 July, 1834, which condemned the traditionalism of Lamennais; and, after fruitless efforts to convert the master, he withdrew to the "Collège de Juilly" (1836). The years 1839-49 he spent in Rome, gathering data for his "Esquisse de Rome Chrétienne". Recalled by Monseigneur Sibour, he became successively professor of sacred eloquence at the Sorbonne, Vicar-General of Amiens, and Bishop of Perpignan (1854). His episcopate was marked by the holding of a synod (1865), the reorganization of clerical studies, various religious foundations, and, above all, by the famous pastoral instruction of 1860 *sur diverses erreurs du temps présent*, which served as a model for the Syllabus of Pius IX. Gerbet has been called the Fénelon of the nineteenth century. Besides many articles in "Le Mémorial catholique", "L'Avenir", "L'Université catholique", and some philosophical writings ("Des doctrines philosophiques sur la certitude", Paris, 1826; "Sommaire des connaissances humaines", Paris, 1829; "Coup d'oeil sur la controverse chrétienne", Paris, 1831; "Précis d'histoire de la philosophie", Paris, 1834; under the names of Salinis and Scorbiac), all more or less tinged with Lamennais's errors, he wrote the following: "Considérations sur le dogme générateur de la

piété chrétienne" (Paris, 1829); "Vues sur la Pénitence" (Paris, 1836) — these two works are often published together; "Esquisse de Rome Chrétienne" (Paris, 1843), previously mentioned. In the two former books Gerbet views the dogmas of the Eucharist and Penance as admirably fitted to develop the affections — *nourrir le coeur de sentiments* — just as he uses the *réalités visibles* of Rome as symbols of her *essence spirituelle*. Sainte-Beuve (Causeries de lundi, VI, 316) says that certain passages of Gerbet's writings "are among the most beautiful and suave pages that ever honoured religious literature". Gerbet's "Mandements et instructions pastorales" were published at Paris in 1876.

J.F. SOLLIER

Jean-Francois Gerbillon

Jean-François Gerbillon

French missionary; born at Verdun, 4 June, 1654; died at Peking, China, 27 March, 1707. He entered the Society of Jesus, 5 Oct, 1670, and after completing the usual course of study taught grammar and humanities for seven years. His long-cherished desire to labour in the missions of the East was gratified in 1685, when he joined the band of Jesuits who had been chosen to found the French mission in China. Upon their arrival in Peking they were received by the emperor Kang-Hi who was favourable impressed by them and retained Gerbillon and Bouvet at the court. This famous monarch realized the value of the services which the fathers could render to him owing to their scientific attainments, and they on their part were glad in this way to win his favour and gain prestige in order to further the interests of the infant mission. As soon as they had learned the language of the country, Gerbillon with Pereyra, one of his companions, was sent as interpreter to Niptchou with the ambassadors commissioned to treat with the Russians regarding the boundaries of the two empires. This was but the beginning of his travels, during which he was often attached to the suite of the emperor. He made eight different journeys into Tatar. On one of these he was an eyewitness to the campaign in which Kang-Hi defeated the Eleuths. On his last journey he accompanied the three commissioners who regulated public affairs and established new laws among the Tatar-kalkas, who had yielded allegiance to the emperor. He availed himself of this opportunity to determine the latitude and longitude of a number of places in Tatar. Gerbillon was for a time in charge of the French college in Peking, and afterwards became superior-general of the mission. He enjoyed the special friendship and esteem of the emperor, who had a high opinion of his ability and frequently availed himself of his scientific and diplomatic services. He was withal a zealous missionary, and in 1692 obtained an edict granting the free exercise of the Christian religion. After the emperor's recovery from a fever, during which he was attended by Gerbillon and Bouvet, he showed his gratitude by bestowing on them a site for a chapel and residence. Gerbillon was a skilled linguist. He was the author of several works on mathematics, and wrote an account of his travels in Tatar. These relations are valuable for their accurate account of the typography of the country, the customs of the people, and also for the details of life of the missionaries at the court. Among his works are

"Eléments de Géométrie" (1689), "Géométrie pratique et théoretique" (1690), "Eléments de philosophie". "Relations du huit Voyages dans la Grande Tartarie". A work entitled "Elementa Linguæ Tartaricæ" is also attributed to him.

Sommervogel, Biblioth. de la C. de J., III; Eyries in Biographie Universalis, s.v.

HENRY M. BROCK

Hyacinthe Sigismond Gerdil

Hyacinthe Sigismond Gerdil

Cardinal and theologian; b. at Samoëns in Savoy, 20 June, 1718; d. at Rome, 12 August 1802. When fifteen years old, he joined the Barnabites at Annecy, and was sent to Bologna to pursue his theological studies; there he devoted his mind to the various branches of knowledge with great success, and attracted the attention of Archbishop Lambertini of that city, later Pope Benedict XIV. After his studies, he taught philosophy at Macerata, philosophy and moral theology at Turin, and became provincial of his order. At the suggestion of Benedict XIV, he was chosen preceptor of the Prince of Piedmont, afterwards Charles Emmanuel IV. Designated cardinal *in petto*, in 1773, by Clement XIV, he was promoted to that dignity by Pius VI, in 1777, who called him to Rome and named him Bishop of Dibbon, consultor of the Holy Office, corrector of the oriental books, and prefect of the Propaganda. After the invasion of Rome in 1798, he left the city and returned to his Abbey Della Chiusa. On the death of Pius VI he would probably have been elected pope at the consistory of Venice, in 1800, had not his election been vetoed by Cardinal Herzan in the name of the Emperor of Germany. He accompanied the new pope (Pius VII) to Rome, where he died in 1802.

His numerous works written in Latin, Italian, and French on divers subjects — dogmatic and moral theology, canon law, philosophy, pedagogy, history, physical and natural sciences, etc. — form twenty volumes in quarto (ed. Rome, 1806-1821). Among the most important may be mentioned: "L'Immortalité de l'âme démontrée contre Locke et défense du P. Malebranche contre ce philosophe" (Turin, 1747-48), 2 vols.; "Réflexions sur la théorie et la pratique de l'éducation contre les principes de J.-J. Rousseau" (Turin, 1765), reprinted in a new edition under the title "Anti-Emile"; "Exposition des caractères de la vraie religion", written in Italian (translated into French, Paris, 1770), etc. His works were written especially for the defence of spiritual philosophy against materialism, of supernatural religion against Deism, of the supreme authority of the pope against Febronianism and the Synod of Pistoia. A scholar of very extensive knowledge, a deep thinker, though some of his philosophical opinions, especially those concerning our knowledge of God, are not those generally accepted, a theologian of firm principles, he was also known as a man of great moderation in his counsels and of great charity in controversy.

G.M. SAUVAGE

Gerhard of Zutphen

Gerhard of Zütphen

(ZERBOLT OF ZUTPHEN)

Born at Zütphen, 1367; died at Windesheim, 1398; a mystical writer and one of the first of the Brothers of the Common Life, founded by Gerhard Groote and Florentius Radewyn at Deventer, in the Netherlands. Even in that community of "plain living and high thinking" Gerhard was remarkable for his absorption in the sacred sciences and his utter oblivion of all matters of merely earthly interest. He held the office of librarian, and his deep learning in moral theology and canon law did the brothers good service, in helping them to meet the prejudice and opposition which their manner of life at first aroused. His best known works are entitled "Homo quidam" and "Beatus vir"; the two are almost identical (de la Bigne, Bibliotheca Patrum, XXVI). Two other treatises on prayer in the mother-tongue and on reading the Scripture in the mother-tongue are attributed to him (Ullmann, Reformatoren vor der Reformation; and Hirsche in Herzog's Realencyklopädie, 2nd ed.). Ullmann and other controversialists have used Gerhard of Zütphen's zeal for propagating the vernacular Scriptures as proof to connect the Brothers of the Common Life with the German Reformers; but an examination of Gerhard's arguments, as quoted by them, reveals with how little foundation.

VINCENT SCULLY

Gerhoh of Reichersberg

Gerhoh of Reichersberg

Provost of that place and Austin canon, one of the most distinguished theologians of Germany in the twelfth century, b. at Polling, Bavaria, 1093; d. at Reichersberg, 27 June, 1169. He studied at Freising, Mosburg, and Hildesheim. In 1119, Bishop Hermann of Augsburg called him as "scholasticus" to the cathedral school of that city; shortly afterwards, though still a deacon, he made him a canon of the cathedral. Gradually Gerhoh adopted a stricter ecclesiastical attitude, and eventually withdrew (1121) from the simoniacal Bishop Hermann, and took refuge in the monastery of Raitenbuch in the Diocese of Freising. After the Concordat of Worms (1122) Bishop Hermann was reconciled with the legitimate pope, Callistus II, whereupon Gerhoh accompanied the bishop to the Lateran Council of 1123. On his return from Rome Gerhoh resigned his canonicate, and with his father and two half-brothers joined the Austin canons at Raitenbuch (1124).

Bishop Kuno of Ratisbon ordained him a priest in 1126, and gave him the parish of Cham, which he later resigned under threats from Hohenstaufen followers whom he had offended at the Synod of Würzburg in 1127. He returned to Ratisbon, and in 1132 Archbishop Conrad I of Salzburg appointed him provost of Reichersberg, to the spiritual and material advantage of that monastery. Archbishop Conrad sent him several times on special missions to Rome; in 1143 he also accompanied, together with Arnold of Brescia, Cardinal Guido of Santa Maria in Porticu on his

embassy to Bohemia and Moravia. Eugene III (1145-53) held Gerhoh in high esteem; his relations with the successors of that pope were less pleasant. On the occasion of the disputed papal election in 1159 (Alexander III and Victor IV) Gerhoh sided with Alexander III, but only after long hesitation; for this action the imperial party looked on him with hatred. For refusing to support the antipope, Archbishop Conrad was condemned to banishment in 1166, and the monastery of Reichersberg repeatedly attacked; Gerhoh himself was forced to take refuge in flight, and died soon after his return to Reichersberg. Gerhoh was a reformer in the spirit of the Gregorian ideas. He aimed particularly, perhaps with excessive zeal, at the reform of the clergy; it seemed to him that this object could not be attained unless the community life were generally adopted.

His reformatory views, and his ecclesiastical policy are set forth in the following works : "De ædificio Dei seu de studio et cura disciplinæ ecclesiasticæ" (P. L., CXCIV, 1187-1336; Sackur, 136-202); "Tractatus adversus Simoniacos" (P. L., 1335-1372; Sackur, 239-272; see also Jaksch in Mittheilungen des Instituts für österreichische Geschichtsforschung, VI [1885], 254-69); "Liber epistolaris ad Innocentium II. Pont. Max. de eo quis distet inter clericos sæculares et regulares" (P. L., CXCIV, 1375-1420; Sackur, 202-239); "De novitatibus hujus sæculi ad Adrianum IV Papam" (selections in Grisar and in Sackur, 288-304); furthermore, the important work written in 1162, "De investigatione Anti-Christi" libri III [selections in P. L., CXCIV, 1443-1480; see also Stülz in "Archiv für österreichische Geschichte, XXII (1858), 127-188; selections in Scheibelberger, see below; book I complete in Sackur, 304-395]; "De schismate ad cardinales" [Mühlbacher in Archiv für österreichische Geschichte, XLVII (1871), 355-382; Sackur, 399-411]; his last work is the "De quarta vigilia noctis" [Oesterreichische Vierteljahresschrift für kath. Theologie X (1871), 565-606; Sackur, 503-525]. His principal work he left unfinished, "Commentarius in Psalmos" (P. L., CXCIII, 619-1814; CXCIV, 1-1066); it offers much interesting material for contemporaneous history. This is particularly true of his commentary on Ps. lxxiv, that appeared separately as "Liber de corrupto Ecclesiæ statu ad Eugenium III Papam" (P. L., CXCIV, 9-120); Sackur, 439-92). We are indebted to him also for a number of polemical works and letters against the Christological errors of Abelard, Gilbert de la Porrée, and Bishop Eberhard of Bamberg; others deal with the errors of Folmar, Provost of Triefenstein, on the subject of the Holy Eucharist.

The genuineness of the "Vitæ beatorum abbatum Formbacensium Berengeri et Wirntonis, O.S.B.", generally ascribed to Gerhoh, is denied by Wattenbach. The Migne edition of Gerhoh's works is faulty and incomplete. Those of his writings which are of importance for the study of the history of that period were edited by Sackur in the "Monumenta Germaniæ Historica: Libelli de lite imperatorum et pontificum", III (Hanover, 1897), 131-525; also by Scheibelberger, "Gerhohi Opera adhuc inedita" (Linz, 1875).

FRIEDRICH LAUCHERT

Saint Germain, Bishop of Auxerre

St. Germain

Bishop of Auxerre, born at Auxerre c. 380; died at Ravenna, 31 July, 448. He was the son of Rusticus and Germanilla, and his family was one of the noblest in Gaul in the latter portion of the fourth century. He received the very best education provided by the distinguished schools of Arles and Lyons, and then went to Rome, where he studied eloquence and civil law. He practised there before the tribunal of the prefect for some years with great success. His high birth and brilliant talents brought him into contact with the court, and he married Eustachia, a lady highly esteemed in imperial circles. The emperor sent him back to Gaul, appointing him one of the six dukes, entrusted with the government of the Gallic provinces. He resided at Auxerre and gave himself up to all the enjoyments that naturally fell to his lot. At length he incurred the displeasure of the bishop, St. Amator. It appears that Germain was accustomed to hang the trophies of the chase on a certain tree, which in earlier times had been the scene of pagan worship. Amator remonstrated with him in vain. One day when the duke was absent, the bishop had the tree cut down and the trophies burnt. Fearing the anger of the duke, who wished to kill him, he fled and appealed to the prefect Julius for permission to confer the tonsure on Germain. This being granted, Amator, who felt that his own life was drawing to a close, returned. When the duke came to the church, Amator caused the doors to be barred and gave him the tonsure against his will, telling him to live as one destined to be his successor, and forthwith made him a deacon.

A wonderful change was instantly wrought in Germain, and he accepted everything that had happened as the Divine will. He gave himself up to prayer, study, and works of charity, and, when in a short time Amator died, Germain was unanimously chosen to fill the vacant see, being consecrated 7 July, 418. His splendid education now served him in good stead in the government of the diocese, which he administered with great sagacity. He distributed his goods among the poor, and practised great austerities. He built a large monastery dedicated to Sts. Cosmas and Damian on the banks of the Yonne, whither he was wont to retire in his spare moments. In 429 the bishops of Britain sent an appeal to the continent for help against the Pelagian heretics who were corrupting the faith of the island. St. Prosper, who was in Rome in 431, tells us in his Chronicle that Pope Celestine commissioned the Church in Gaul to send help, and Germain and Lupus of Troyes were deputed to cross over to Britain. On his way Germain stopped at Nanterre, where he met a young child, Genevieve, destined to become the patroness of Paris. One of the early lives of St. Patrick, Apostle of Ireland, tells us that he formed one of St. Germain's suite on this occasion. Tradition tells us that the main discussion with the representatives of Pelagianism took place at St. Alban's, and resulted in the complete discomfiture of the heretics. Germain remained in Britain for some time preaching, and established several schools for the training of the clergy. On his return he went to Arles to visit the prefect, and obtained the remission of certain taxes that were oppressing the people of Auxerre. He constructed a church in honour of St. Alban about this time in his episcopal city.

In 447 he was invited to revisit Britain, and went with Severus, bishop of Trèves. It would seem that he did much for the Church there, if one can judge from the traditions handed down in Wales. On one occasion he is said to have aided the Britons to gain a great victory (called from the battle-cry,

Alleluia! the Alleluia victory) over a marauding body of Saxons and Picts. On his return to Gaul, he proceeded to Armorica (Brittany) to intercede for the Armoricans who had been in rebellion. Their punishment was deferred at his entreaty, till he should have laid their case before the emperor. He set out for Italy, and reached Milan on 17 June, 448. Then he journeyed to Ravenna, where he interviewed the empress-mother, Galla Placidia, on their behalf. The empress and the bishop of the city, St. Peter Chrysologus, gave him a royal welcome, and the pardon he sought was granted. While there he died on 31 July, 450. His body, as he requested when dying, was brought back to Auxerre and interred in the Oratory of St. Maurice, which he had built. Later the oratory was replaced by a large church, which became a celebrated Benedictine abbey known as St. Germain's. This tribute to the memory of the saint was the gift of Queen Clotilda, wife of Clovis. Some centuries later, Charles the Bald had the shrine opened, and the body was found intact. It was embalmed and wrapped in precious cloths, and placed in a more prominent position in the church. There it was preserved till 1567, when Auxerre was taken by the Huguenots, who desecrated the shrine and cast out the relics. It has been said that the relics were afterwards picked up and placed in the Abbey of St. Marion on the banks of the Yonne, but the authenticity of the relics in this church has never been canonically recognized. St. Germain was honoured in Cornwall and at St. Alban's in England's pre-reformation days, and has always been the patron of Auxerre.

Saint Germain, Bishop of Paris

St. Germain

Bishop of Paris; born near Autun, Saône-et-Loire, c. 496; died at Paris, 28 May, 576. He studied at Avalon and also at Luzy under the guidance of his cousin Scapilion, a priest. At the age of thirty-four he was ordained by St. Agrippinus of Autun and became Abbot of Saint-Symphorien near that town. His characteristic virtue, love for the poor, manifested itself so strongly in his alms-giving, that his monks, fearing he would give away everything, rebelled. As he happened to be in Paris, in 555, when Bishop Eusebius died, Childebert kept him, and with the unanimous consent of the clergy and people he was consecrated to the vacant see. Under his influence the king, who had been very worldly was reformed and led a Christian life. In his new state the bishop continued to practise the virtues and austerities of his monastic life and laboured hard to diminish the evils caused by the incessant wars and the licence of the nobles. He attended the Third and

Fourth Councils of Paris (557, 573) and also the Second Council of Tours (566). He persuaded the king to stamp out the pagan practices still existing in Gaul and to forbid the excess that accompanied the celebration of most Christian festivals. Shortly after 540 Childebert making war in Spain, besieged Saragossa. The inhabitants had placed themselves under the protection of St. Vincent, martyr. Childebert learning this, spared the city and in return the bishop presented him with the saint's stole. When he came back to Paris, the king caused a church to be erected in the suburbs in honour of the martyr to receive the relic. Childebert fell dangerously ill about this time, at his palace of Celles, but was miraculously healed by Germain, as is attested in the king's letters-patent bestowing the lands of Celles on the church of Paris, in return for the favour he had received. In 588 St. Vincent's church was completed and dedicated by Germain, 23 December, the very day Childebert died. Close by the church a monastery was erected. Its abbots had both spiritual and temporal jurisdiction over the suburbs of St. Germain till about the year 1670. The church was frequently plundered and set on fire by the Normans in the ninth century. It was rebuilt in 1014 and dedicated in 1163 by Pope Alexander III. Childebert was succeeded by Clotaire, whose reign was short. At his death (561) the monarchy was divided among his four sons, Charibert becoming King of Paris. He was a vicious, worthless creature, and Germain was forced to excommunicate him in 568 for his immorality. Charibert died in 570. As his brothers quarrelled over his possessions the bishop encountered great difficulties. He laboured to establish peace, but with little success. Sigebert and Chilperic, instigated by their wives, Brunehaut and the infamous murderess Fredegunde, went to war, and Chilperic being defeated, Paris fell into Sigebert's hands. Germain wrote to Brunehaut (his letter is preserved) asking her to use her influence to prevent further war. Sigebert was obdurate. Despite Germain's warning he set out to attack Chilperic at Tournai, whither he had fled, but Fredegunde caused him to be assassinated on the way at Vitri in 575. Germain himself died the following year before peace was restored. His remains were interred in St. Symphorien's chapel in the vestibule of St. Vincent's church, but in 754 his relics were solemnly removed into the body of the church, in the presence of Pepin and his son, Charlemagne, then a child of seven. From that time the church became known as that of St. Germain-des-Prés. In addition to the letter mentioned above we have a treatise on the ancient Gallican liturgy, attributed to Germain, which has been published by Martene in his "Thesauris Novus Anecdotorum". St. Germain's feast is kept on 28 May.

St. Germaine Cousin

St. Germaine Cousin

Born in 1579 of humble parents at Pibrac, a village about ten miles from Toulouse; died in her native place in 1601. From her birth she seemed marked out for suffering; she came into the world with a deformed hand and the disease of scrofula, and, while yet an infant, lost her mother. Her father soon married again, but his second wife treated Germaine with much cruelty. Under pretence of saving the other children from the contagion of scrofula she persuaded the father to keep Germaine away from the homestead, and thus the child was employed almost from infancy as a shepherdess. When she returned at night, her bed was in the stable or on a litter of vine branches in a garret. In this hard school Germaine learned early to practise humility and patience. She was gifted with a marvellous sense of the presence of God and of spiritual things, so that her lonely life became to her a source of light and blessing. To poverty, bodily infirmity, the rigours of the seasons, the lack of affection from those in her own home, she added voluntary mortifications and austerities, making bread and water her daily food. Her love for Jesus in the Blessed Sacrament and for His Virgin Mother presaged the saint. She assisted daily at the Holy Sacrifice; when the bell rang, she fixed her sheep-hook or distaff in the ground, and left her flocks to the care of Providence while she heard Mass. Although the pasture was on the border of a forest infested with wolves, no harm ever came to her flocks.

She is said to have practised many austerities as a reparation for the sacrileges perpetrated by heretics in the neighbouring churches. She frequented the Sacraments of Penance and the Holy Eucharist, and it was observed that her piety increased on the approach of every feast of Our Lady. The Rosary was her only book, and her devotion to the Angelus was so great that she used to fall on her knees at the first sound of the bell, even though she heard it when crossing a stream. Whenever she could do so, she assembled the children of the village around her and sought to instil into their minds the love of Jesus and Mary. The villagers were inclined at first to treat her piety with mild derision, until certain signs of God's signal favour made her an object of reverence and awe. In repairing to the village church she had to cross a stream. The ford in winter, after heavy rains or the melting of snow, was at times impassable. On several occasions the swollen waters were seen to open and afford her a passage without wetting her garments. Notwithstanding her poverty she found means to help the poor by sharing with them her allowance of bread. Her father at last came to a sense of his duty, forbade her stepmother henceforth to treat her harshly, and wished to give her a place in the home with the other children, but she begged to be allowed to remain in the humbler position. At this point, when men were beginning to realize the beauty of her life, God called her to Himself. One morning in the early summer of 1601, her father finding that she had not risen at the usual hour went to call her; he found her dead on her pallet of vine-twigs. She was then twenty-two years of age.

Her remains were buried in the parish church of Pibrac in front of the pulpit. In 1644, when the grave was opened to receive one of her relatives, the body of Germaine was discovered fresh and

perfectly preserved, and miraculously raised almost to the level of the floor of the church. It was exposed for public view near the pulpit, until a noble lady, the wife of François de Beauregard, presented as a thanks-offering a casket of lead to hold the remains. She had been cured of a malignant and incurable ulcer in the breast, and her infant son whose life was despaired of was restored to health on her seeking the intercession of Germaine. This was the first of a long series of wonderful cures wrought at her relics. The leaden casket was placed in the sacristy, and in 1661 and 1700 the remains were viewed and found fresh and intact by the vicars-general of Toulouse, who have left testamentary depositions of the fact. Expert medical evidence deposed that the body had not been embalmed, and experimental tests showed that the preservation was not due to any property inherent in the soil. In 1700 a movement was begun to procure the beatification of Germaine, but it fell through owing to accidental causes. In 1793 the casket was desecrated by a revolutionary tinsmith, named Toulza, who with three accomplices took out the remains and buried them in the sacristy, throwing quick-lime and water on them. After the Revolution, her body was found to be still intact save where the quick-lime had done its work.

The private veneration of Germaine had continued from the original finding of the body in 1644, supported and encouraged by numerous cures and miracles. The cause of beatification was resumed in 1850. The documents attested more than 400 miracles or extraordinary graces, and thirty postulatory letters from archbishops and bishops in France besought the beatification from the Holy See. The miracles attested were cures of every kind (of blindness, congenital and resulting from disease, of hip and spinal disease), besides the multiplication of food for the distressed community of the Good Shepherd at Bourges in 1845. On 7 May, 1854, Pius IX proclaimed her beatification, and on 29 June, 1867, placed her on the canon of virgin saints. Her feast is kept in the Diocese of Toulouse on 15 June. She is represented in art with a shepherd's crook or with a distaff; with a watchdog, or a sheep; or with flowers in her apron.

C. MULCAHY

Bl. German Gardiner

Bl. German Gardiner

Last martyr under Henry VIII; date of birth unknown; died at Tyburn, 7 March, 1544; secretary to, and probably a kinsman of, Stephen Gardiner, and an able defender of the old Faith, as his tract against John Frith (dated 1 August, 1534) shows. During the years of fiery trial, which followed, we hear no more of him than that "he was stirred up to courage" by the examples of the martyrs, and especially by More, a layman like himself. His witness was given eight years later, under remarkable circumstances. Henry VIII was becoming more severe upon the fast-multiplying heretics. Canmer fell under suspicion, and Gardiner was (or was thought to have been) employed in drawing up a list of that heresiarch's errors in the Faith. Then the whim of the religious despot changed

again, and the Catholic was sacrificed in the heretic's place. Still he was the last victim, and Henry afterwards became even more hostile to Protestantism. Gardiner's indictment states plainly that he was executed for endeavouring "to deprive the King of his dignity, title, and name of Supreme Head of the English and Irish Church", and his constancy is further proved by this circumstance, that Thomas Haywood, who had been condemned with him, was afterward pardoned on recanting his opinions. His other companions at the bar were Blessed John Larke, priest, whom Blessed Thomas More had presented to the rectory of Chelsea (when he himself lived in that parish), and also the Ven. John Ireland, who had once been More's chaplain. They suffered the death of traitors at Tyburn.

Camm, *Lives of English Martyrs* (London, 1904), i, 543-7; Strype, *Canmer* (1694), 163-8; More, *Life of More* (1726), 278.

J.H. POLLEN

Germanicia

Germanicia

A titular see in the province of Euphratensis and the patriarchate of Antioch; incorrectly called Germanicana and located in Byzacene, Africa. An official document of the Propaganda, the "Catalogo dei vescovati titolari" for 1884 (no. 228, 10) expressly states that the see is *Germanicia in Euphratensis*. Le Quien (*Oriens christ.*, Paris, 1740, II, 939) names five Greek bishops of this city, among them the Arian Eudoxius, future Bishop of Antioch and Constantinople. He also names (II, 1495) four Jacobite bishops, and at least eighteen others are known from the eighth to the thirteenth century (*Revue de l'Orient Chrétien*, 1901, 200), if Germanicia be considered identical with Marash, which has not been ascertained. It is customary to consider these two cities as identical, but the texts collected by Müller, in his edition of Ptolemy's "Geographia" (965-967), are so contradictory that it is difficult to arrive at any conclusion. Müller prefers to locate Germanicia in the neighbouring ruins of Altun-Tash-Kale. If Germanicia and Marash are one, this industrial city, whose climate is very healthy, is situated in a sanjak of the vilayet of Aleppo. It numbers 52,000 inhabitants, about 15,000 of whom are Catholics, comprising Melchites, Armenians, Chaldeans and Latins; 22,000 are Mussulmans. The remainder are either schismatic Christians or Jews.

CUINET, *La Turquie d'Asie* (Paris, 1892), II, 226-239.

S. VAILHÉ

Germanicopolis

Germanicopolis

A titular see in the province of Isauria, suffragan of Seleucia. The city took its name from Germanicus, grandson of Augustus. Four of its bishops are known during the Byzantine government: Tyrannus, 451; Eustathius, 797; Basil, 878 (*Le Quien, Or. christ.*, II, 1027); and Bisulas in the sixth

century (Brooks, Sixth Book of the Letters of Severus, 13, 26, 80). The crusaders sustained a great defeat near the city in 1098. It then passed into the power of the Armenian dynasty of the Rupenians, who called it Germanig, whence is derived the present name of Ermenek. The Turks took possession of it in 1228. It is situated at a height of 1362 feet, in a *caza* of the vilayet of Adana, and numbers 6500 inhabitants. The ruins of many Roman monuments and a stronghold are still to be seen on the mountain.

CUINET, *La Turquie d'Asie*, II, 77; ALISHAN, *Sissouan*, 338-340.

Germans in the United States

Germans in the United States

Germans, either by birth or descent, form a very important element in the population of the United States. Their number is estimated at not less than twelve millions. Under the name *Germans* we here understand to be included all German-speaking people, whether originally from Germany proper, Austria, Switzerland, or Luxemburg.

I. GERMANS IN GENERAL

The landing, in the autumn of 1683, of Franz Daniel Pastorius and his little band of Mennonite weavers, from Crefeld, marks the beginning of German-American history. These early immigrants founded Germantown, Pennsylvania, where they soon built themselves a church and established a school, taught by Pastorius, who wrote for it, and published, a primer, the first original school-book printed in Pennsylvania. To this place came the German settlers who gradually spread over Montgomery, Lancaster, and Berks Counties, among them, the so-called Rosicrucians (settled near Germantown), a colony of German Friends, Quaker converts made by William Ames and visited by Penn (founded Cresheim, from Kreisheim near Worms), and the Dunkers (Conestoga, Aphrata). From these early Pennsylvania settlers and their descendants many Americans of note have sprung, as Bayard Taylor, James Lick, Charles Yerkes, John Fritz, John Wanamaker, Charles M. Schwab, and Henry C. Frick.

In 1707, a small band of Lutherans, from the Palatinate, embarked for America. They landed at Philadelphia and settled in what is now known as Morris County. In the spring of the following year, another company of fifty-two Palatines, joined by three Holsteiners, went to England and appealed to Queen Anne, praying for transportation to America. The majority of these men were farmers and one was a Lutheran clergyman, Kockerthal; on arriving in the Colonies in the winter of 1709, they were settled in the district then known as Quassaick Creek and Thankskamir (part of the territory of the present Newburgh). Another, and far more extensive, migration took place in the same year and the following; about three thousand Palatines landed in America, by way of England. The severities of the winter of 1708-09 seem to have been the chief cause of this exodus. One company, under Christopher de Graffenried and Lewis Mitchell, settled at the junction of the

Neuse River and the Trent (North Carolina) and in the neighbouring country. This colony included a considerable number of Swiss, and to their first settlement they gave the name, New Berne, in memory of the native city of the two Swiss partners, de Graffenried and Mitchell. Another company of Germans was settled about the same time, by Governor Spotswood, at Germanna in Virginia, whither, a little later, many of those who had established themselves in North Carolina are said to have removed. Some ten or fifteen years after Spotswood's retirement to Germanna, a company of Germans came into Virginia from Pennsylvania, doubtless Palatines from Berks County. They settled in the lower Shenandoah Valley and founded the town of Strasburgh, just over the mountain from Germanna.

By far the largest expedition of Palatines left the shores of England towards the end of January, 1710. They were settled on the Hudson (Rhinebeck, Germantown, Newburgh, West Camp, Saugerties, etc.), whence many afterwards removed to the Schoharie Valley (Blenheim, Oberweiser, Dorp, Brunnen Dorp, etc.); the Government, however, refused to recognize their title to the Schoharie lands, and some of them at last migrated in disgust to the Mohawk Valley, where their increase and the stream of German immigration that followed made the Mohawk "for thirty miles, a German river" (Mannheim, Oppenheim, Newkirk, German Flats, Herkimer, etc.). But the greater portion removed from Schoharie in 1723 to Pennsylvania, where Governor Keith, on hearing of their afflictions and unrest, offered them an asylum from all persecution. Previously to this migration from New York to Pennsylvania, thousands of Germans had sailed directly to the latter territory, and so large was the Palatine element in these and the following immigrations that the natives of all other German States, coming with them, were called by the same name. Between 1720 and 1730 the German immigration to Pennsylvania became so large as to be looked upon by the other settlers with serious misgivings; Logan, Penn's secretary, suggested the danger of the province becoming a German colony, as the Germans "settled together, and formed a distinct people from His Majesty's subjects". As early as 1739, a German newspaper was published at Germantown, and another appeared at Philadelphia in 1743. The Germans became an important factor in the political life of Pennsylvania, usually uniting with the Quakers, and forming with them a conservative peace party. In 1734, the Schwenkfelders, followers of Casper Schofield, came to Pennsylvania and settled along the Perkiomen, in Montgomery County. About the same time a number of Germans established themselves near Frederick, Maryland, and between South Mountain and the Conococheague.

The first German settlement in South Carolina was in 1731, at Purysburg on the Savannah. In 1734 Lutherans from Salzburg founded Ebenezer, the first settlement in Georgia. Seven years later, there were about 1200 Germans in Georgia. By the middle of the eighteenth century the mountain counties of North Carolina had numerous German settlements. Meantime, the Moravians, who in 1736 had settled in Georgia, had left that colony and secured a tract of land in Pennsylvania, to which they gave the name of Bethlehem. Zinzendorf came thither in 1741. More than twenty years earlier, German settlers had established themselves on the lower Mississippi. The "German Creoles" of Louisiana are descendants of these early colonists.

During the war of the Revolution, thirty thousand German soldiers fought under the British flag. They had been sold to England by the petty princes of Germany, those "brokers of men and sellers of souls", as one of these soldiers rightly styled them. As Hesse furnished more than any other German State (twelve thousand) all these soldiers were called Hessians. Over one third of the thirty thousand never returned to Europe; some had died; many had deserted to Washington's army, "coming over in shoals", as Gates wrote in 1777; many thousands settled in the newly created States.

On the eve of the Revolution there were fully a hundred thousand Germans in Pennsylvania. Their number was little increased during the next sixty years, since the great immigration period did not begin until about the year 1840. Among those who came to the United States before 1830 was Franz Lieber, accompanied by his two friends, Professors Carl Beck and Carl Follen. For nearly half a century Lieber stood in the front rank as an authority on public questions. The year 1848 brought to our shores those thousands of political refugees who belonged to the most educated of the German nation. To mention several, merely as typical of the rest, among these "Forty-Eighters" were Carl Schurz, Friedrich Hecker, Franz Sigel, Oswald Ottendorfer, Friedrich Kapp, Wilhelm Rapp, Gustav von Struve, and Lorenzo Brentano. Soon the number of German immigrants grew enormously, averaging over 800,000 for each of the six succeeding decades. They did not, however, settle in the Eastern States only, but the majority proceeded to the Middle West, whither many of the Germans, who had already been very numerous on the frontiers, had removed as soon as the new country was opened for colonizing. Owing to prosperity in the Fatherland, German immigration began to decline in the early nineties. During the period subsequent to 1848 the Germans settled chiefly in the following states: New York, New Jersey, Pennsylvania (especially the western parts), Maryland, Ohio, Indiana, Illinois, Michigan, Wisconsin, Iowa, Nebraska, Missouri, Minnesota, California, Louisiana, Texas, North Dakota. They were never attracted to the New England States until about the middle of the nineteenth century. Even now New Hampshire, Vermont, and Maine have practically no German population; in Massachusetts there are very few except around Boston. According to the twelfth census, taken in 1900, there was in that year, a German-born population of 2,663,418 in the United States (about three millions from Germany and German Austria). Since 1900 about 250,000 more have come over. Add to these the descendants of the immigrants from the earliest periods down to our time, and the large number of people of German descent who can now hardly be recognized as Germans, owing to the fact that they have assumed English names, it is safe to say that there are at present (1909) fully twelve million persons of German birth or descent in the United States.

The early Germans were mostly farmers in their old country, and it was but natural that, after their arrival in the United States, they should have chosen the same occupation. There is no need of pointing out the merits of the German farmers, since those merits have been generally admitted in Pennsylvania, the Mohawk Valley, and, later, the Middle West. In trade, industry, and commerce the Germans in the United States are second to none. Men like Spreckels, Havemeyer, A. Busch, Fred Pabst, Henry Miller, and Henry C. Frick, stand among the pillars of American Industry.

Rockefeller is proud of his German descent. The Belmonts came from Alzey, the Astors from Walldorf near Heidelberg, the Iselins from Switzerland. The largest lumber-yard in the world, is owned by Fritz Weyerhäuser, a native of Hesse. The Roebblings are still prominent in their line of industry. Prominent as bankers are those bearing German names.

But more important, though less known, is the army of skilled mechanics in all different branches, designers, lithographers, etc., who, in their spheres, have made the German name honoured and respected. The Germans are known to be a hardworking, thrifty people, and, as a result, they are generally prosperous, and pauperism is hardly known among them. Americans have learned that wherever the Germans settle, prosperity and culture are pretty sure to follow. -- "What the Germans do, they do well", has become a common saying among their neighbours. Puritanism never gained a foothold among the Germans. Though they cannot be charged with extravagance, they are fond of the quiet joys and amusements of social life, witness their many societies, which combine beneficial objects with recreation and amusement. Their fondness for children and family life is well known; as a rule they have large families. The industry and carefulness of the German housewife are proverbial.

While there have not been any great political leaders among the Germans, with the exception, perhaps, of Carl Schurz, it cannot be denied that their influence on the political development of the country has been on the whole a very wholesome one. As adherents of a healthy and vigorous conservatism in politics, they are universally respected. Though anxious to preserve their language and customs, they have given ample proof of their loyalty to the land of their choice. The share taken by the Germans in the wars of the United States, was by no means limited to the War of the Revolution and the Civil War of 1861-65. From the very beginning of their settlement in this country, they always stood ready to take up arms in its defence. The early Germans of Pennsylvania and New York, responded freely to the summons to defend their new country against the French and their allies, the Indians. They gave freely of their men and means to the cause of liberty, in the War of the Revolution. The names of Generals de Kalb, F. W. A. Steuben, F. W. de Woedke, J. P. G. Muehlenberg, and George Weedon will always be mentioned with honour, among those who established the liberties of the country. Undoubtedly the ablest of them was General Steuben, the impetuous warrior who "took a mob and hammered it into an army". Nor should we forget to cite the name of Herkimer, than whom no braver man fought in the War for Independence. He was the son of a Palatine immigrant, and in the battle of Oriskany -- "of all the battles of the Revolution, the most obstinate and murderous" -- those whom Herkimer led were largely Palatines. To them and their brave leader belongs largely the credit of making possible the victory of Saratoga, by which the struggle for the Hudson was ended, and the vital union of the northern Colonies secured.

The Germans also did their duty in full in the War of 1812 and in the Mexican War. What they did to keep the United States together, can be learned from an article by General Franz Sigel, which was published at St. Louis after his death. The General calls attention to the historical fact, that, three days after the surrender of Fort Sumter, when the City of Washington was in imminent peril of falling into the hands of the Confederates, this catastrophe was prevented by the arrival of a

detachment of infantry and cavalry from Pennsylvania, the five companies of which were chiefly composed of Germans, both from the older and from the more recent immigrant stock. Again, when St. Louis was in extreme danger of falling into the hands of the Confederacy it was four regiments of volunteers, mainly German, and one regiment commanded by Sigel that surrounded the camp of the Confederates and made them prisoners. There were, during that war, not fewer than 176,767 Germans in the United States Army. Of the more than 5,000 officers of the German contingent, the following may here be mentioned: the exiled popular leader Friedrich Hecker, who was one of the first to form a volunteer regiment, Gustav von Struve, General Blanker, General Osterhaus, Jos. Fickler, Nepomuk Katzenmayer, General Alexander von Schimmelpfennig, General Max Weber, General Sigel, and Captain Albert Sigel, a brother of the General, August Willich, the commander of a regiment from Indiana, and especially General Carl Schurz, who commanded the eleventh corps at the battle of Gettysburg. It is deserving of mention that among the Germans, the advocates of the abolition of slavery were always prominent. The first German settlers in this country, were also signers of the first anti-slavery petition in America (1688).

Although the first German colonists themselves, for the most part, had no higher education than what was to be acquired in the German village schools of that time, they considered it their duty to establish schools for their children, and therefore, as a rule, brought teachers over with them. School attendance was always looked upon as a serious matter, almost as serious as the teaching of religion, which was combined with elementary instruction, so that German colonies thus paved the way for compulsory education. Men like Muehlenberg and Schlatter did much in the way of improving the schools. The development of German literature in America, including thousands of publications, went hand in hand with this progress. The first German Bible published in the New World appeared in 1743, forty years before an English Bible was printed in America. The "Public Academy of the City of Philadelphia", not the University of Pennsylvania, is the first American school into which German was introduced. Gradually the language was introduced into the public schools of cities with a large German population, and numerous German private schools were established in the different parts of the country. And after educated Americans had become acquainted with German educational methods, German literature, and German science, either directly by attending German schools of learning, or indirectly from France through England, they enthusiastically advocated educational reform based upon the German models. It is no exaggeration to speak of a gradual "Germanization" of most of the greater American colleges. "Although Great Britain is generally regarded as the mother of the United States, Germany has, from an intellectual standpoint, become more and more the second mother of the American Republic. More than any other country, Germany has made the universities and colleges of America what they are today -- a powerful force in the development of American Civilization" (Andrew D. White).

II. THE GERMAN CATHOLICS IN AMERICA

A certain proportion of the Palatines who went to England were of the Catholic Faith, but they were not allowed to proceed to the American colonies, neither was the English government willing

to permit their prolonged residence in England. They were therefore returned under government passports to the Palatinate. But of those who came later and directly to America, undoubtedly, a considerable number were Catholics. In 1741 the German Province of the Society of Jesus, sent out two priests to minister to the German Catholics in Pennsylvania. These were Father William Wappelet (born 22 January, 1711, in the Diocese of Mainz), co-founder of the mission of Conewago, and Father Theodore Schneider, a Palatine (born at Geinsheim, Diocese of Speyer, 7 April, 1703), who took up his residence at Goshenhoppen, in Berks County. Other German Jesuits came later on, among them Fathers James Frambach (died 1795 at Conewago), Luke Geissler (died at Lancaster, in 1786), Lawrence Graessel, who was appointed coadjutor to Bishop Carroll, but died in Philadelphia, of yellow fever, before consecration, James Pellentz, one of Bishop Carroll's vicars-general (died at Conewago in 1800), Matthias Sittensperger (changed his name to Manners), Ferdinand Steinmayr (Farmer), who, according to Bishop Carroll, founded the first Catholic congregation in New York (died in Philadelphia, 17 August, 1787, in the odour of sanctity). Father Farmer was a member of the famous Philosophical Society of Philadelphia, and was made a member of the Board of Trustees of the University of Philadelphia, when that institution was chartered in 1779. To these early missionaries may be added Father John Baptist de Ritter, who was a German, though a member of the Belgian Province. He died at Goshenhoppen, 3 February, 1787. Father Schneider was the pastor of the parish at Goshenhoppen for twenty-three years, ministering to the Catholics there and in the region for fifty miles around. Before he died, in 1764, he had the satisfaction of seeing the Church firmly established in Pennsylvania. His companion, Father Wappeler, founded the mission of the Sacred Heart at Conewago. Of him, Bishop Carroll wrote that "he was a man of much learning and unbounded zeal". Having remained about eight years in America, and converted or reclaimed many to the Faith of Christ, he was forced by bad health to return to Europe. His successor, Father Pellentz, built the church of the Sacred Heart of Jesus, the first in the country under that title. It is not probable that there was any large, or indeed appreciable, number of German Catholics in any other colony at that time, with the exception of Louisiana, whose French inhabitants shared and honoured their religion, whereas most of the English colonies had severe laws against the "Papists". But gradually all were opened to Catholics.

From a letter by the Rev. Dr. Carroll to the Rev. C. Plowden, in 1785, we learn that in that year he visited Philadelphia, New York, and the upper countries of the Jerseys and Pennsylvania, "where our worthy German brethren have formed congregations". Although we do not know of any German settlement in the Far West during the seventeenth or eighteenth centuries, we find during that period German priests labouring among the Indian tribes on the coast of the Pacific, and in the south-western States. The first German priest on the Pacific coast was the Jesuit Father Eusebio Francisco Kino. His real name was Eusebius Franz Kuehn. He was a native of Trent, and entered the Society of Jesus at Ingolstadt. He came from Germany in 1680 or 1681, and to Lower California in 1683. In the following year he was called to Sonora, where he laboured until his death, in 1710, meanwhile making missionary and exploring trips to the Rio Gila in Sonora. Other German Jesuits in Lower California from 1719 to 1767, were Joseph Baegert, the author of the "Nachrichten von der

Kalifornischen Halbinsel" (Mannheim, 1772), Joh. Bischoff, Franz Benno Ducure, Joseph Gasteiger, Eberhard Helen, Lambert Hostell, Wenzeslaus Link, Karl Neumayr, Georg Retz, Ignatz Tuersch, Franz X. Wagner. Arizona saw the indefatigable Father Eusebius Kuehn, towards the latter part of the seventeenth century, as far up as the Gila River at its junction with the Colorado. In 1731, Philip V, at the suggestion of Benedict Crespo, Bishop of Durango, ordered three central missions to be established in Arizona, at the royal expense. To the joy of the bishop, three German Jesuit Fathers were sent, Father Ignatius Xavier Keller, Father John Baptist Grashoffer, and Father Philip Segesser. Of the last two, one soon died, and the other was prostrated by sickness, but Father Ignatius Keller became the leader of the new missions in that district, taking possession of Santa Maria Soamea, 20 April, 1732. About the year 1750, we find Father Ignatius Pfefferkorn, a native of Mannheim, Germany, at Guevavi; and at the same time, Father Sedelmayr, at the instance of the Spanish Government, was evangelizing the tribes of the Gila, erecting seven or eight churches in the villages of the Papagos, among whom Father Bernard Middendorf also laboured, and Father Keller was endeavouring to reach the Moquis, who were willing to receive missionaries of any kind but Franciscans. Other prominent Jesuits from the Fatherland were Fathers Caspar Steiger, Heinrich Kürtzel, and Michael Gerstner. By the summary act of the King of Spain, in 1763, every church in Arizona was closed and the Christian Indians were deprived of their zealous German priests.

In 1808, the Diocese of Baltimore, which had, up to this time, embraced the entire United States, was divided, and the four new sees of Philadelphia, New York, Boston, and Bardstown erected. There were, at that time, under the jurisdiction of the first Bishop of Philadelphia, Holy Trinity, attended by the Rev. William Elling and Father Adam Britt, the latter of whom issued a new edition of the German catechism; St. Joseph's Orphan Asylum, erected in 1806, was the first institution of its kind established by Catholics in the United States. The Rev. Louis de Barth attended at Lancaster and Conewago. He was the son of Joseph de Barth, Count de Welbach, and his wife, Maria Louisa de Rohme, and was born at Münster, 1 November, 1764. When the See of Philadelphia became vacant by the death of Bishop Egan, Father de Barth became administrator of the diocese. He died 13 October, 1838. The Rev. Paul Erntzen had begun, in 1793, his quarter-century pastorship at Goshenhoppen. Father Peter Helbron, O. Min. Cap., had reared a log chapel in Westmoreland County. After years of devoted service, he went to Philadelphia, but died at Carlisle on his homeward journey. The Rev. Demetrius A. Gallitzin was labouring in the district of which Loretto was the centre, and had come to America in 1792, with a learned and pious priest, the Rev. F. K. Brosius, who had offered his services to Dr. Carroll. He travelled under the name of Schmet, a contraction of his mother's name, but this in America soon became Smith, by which he was known for many years. He bore letters to Bishop Carroll, and when he was introduced to the priests of Saint-Sulpice, was delighted with their life and work. His father had marked out a brilliant career for him in the military or diplomatic service in Europe, but the peace and simplicity which reigned in America contrasted to forcibly with the seething maelstrom of European revolution that, penetrated with the vanity of worldly grandeur, young Gallitzin resolved to renounce all schemes of pride and ambition, and to embrace the clerical profession for the benefit of the American mission.

In 1808 the diocese of New York was created, and its chief organizer was the learned and able Jesuit Father, Anthony Kohlmann, as vicar-general and administrator *sede vacante*. He had come over from the old country in 1806, together with two other priests of his order. The German Catholics in New York had gradually increased, so that they organized a little congregation by themselves. Their first pastor seems to have been the Rev. John Raffener, of whom Archbishop Hughes said: "Bishops, priests, and people have reason to remember Father Raffener for many years to come". He visited his countrymen far and near, always ready to hasten to any point to give them the consolations of religion. For a time the Germans in New York assembled under his care in a disused Baptist place of worship at the corner of Delancey and Pitt Streets, and afterwards, when the lease expired, in St. Mary's church; but on 20 April, 1833, the corner-stone of a church to be dedicated to St. Nicholas, on Second Street, was laid. By the sacrifices and exertions of Father Raffener the church was completed and dedicated on Easter Sunday, 1836. Father Raffener directed the church for several years and became vicar-general for the Germans in the diocese. By the year 1836, the German Catholic element in the Boston diocese required Bishop Fenwick's care, the largest body of them being in and near Roxbury. Having no priest in his diocese who could speak German fluently, Bishop Fenwick applied to his fellow-bishop in New York, and at the close of May, 1835, the Very Rev. John Raffener, apostle of his countrymen in the East, arrived. On the last day of May, that zealous priest gathered three hundred in the chapel of St. Aloysius and addressed them with so much power and unction, that he spent the whole evening in the confessional. Quickened by his zeal, they resolved to collect means to support a priest, and in August, 1836, they obtained the Rev. Father Hoffmann as their pastor, with Father Freygang as assistant; but, led by designing men, they would not co-operate with those sent to minister to them. Fathers Hoffmann and Freygang were both forced to retire, and an ex-Benedictine, named Smolnikar, became their choice. In a short time, however, the bishop discovered in this priest unmistakable signs of insanity and, unable to obtain another clergyman, became himself the chaplain of the German congregation. In 1841, stimulated by their bishop, they purchased a lot on Suffolk Street, and prepared to erect a church, laying the corner-stone on 28 June; he had already secured a zealous priest, Rev. F. Roloff, for his congregation. The German Catholic body in New York City, was now increasing so rapidly that soon another church was needed, and in June the corner-stone of St. John Baptist's was laid by the Very Rev. Dr. Power, to be dedicated on 13 September, by the Rt. Rev. Dr. Hughes.

About 1820 Ohio was already the home of many Catholic families of German speech. it was for this reason that Bishop Flaget, of Bardstown and Louisville, urged that a see should be erected at Cincinnati, and for its first bishop recommended the Rev. Demetrius A. Gallitzin, educated in Germany, and familiar with the language and ideas of the people; but the good priest, learning of the project, peremptorily refused. In 1829, two zealous German priests began to make a list of their Catholic countrymen in the State of Ohio. They found them everywhere -- at Cincinnati, Somerset, Lancaster -- and by their untiring zeal awoke in the hearts of many who had for years neglected to practise it. One of these itinerant priests was the Rev. John Martin Henni, a name to be known in time as that of the founder of the first German Catholic paper, first Bishop of Wisconsin, and first

Archbishop of Milwaukee. In 1832, on the death of Bishop Fenwick of Cincinnati, the administration of the diocese devolved on the zealous missionary priest, Father Edward Reese, who had laboured so earnestly among his countrymen in the diocese and been instrumental in the establishment of the "Leopoldinen-Stiftung", an association for aiding missions, at Vienna, whose alms have fostered so many missions and helped substantially towards developing the Catholic school system, particularly in the Diocese of Cincinnati, and the dioceses formed from it. Dr. Reese was born at Vianenburg, near Hildesheim, in 1791 and, like Pio Nono, had been a cavalry officer before he embraced the priesthood. he was the founder of the Athenæum in Cincinnati, which later was transferred to the Jesuits, and changed into the present St. Xavier College. Holy Trinity, erected in 1834, was the first German church west of the Alleghanies. Its second pastor, the Rev. John M. Henni, whom we have already mentioned, displaying untiring energy in founding and organizing schools in Cincinnati and was actively interested in the development of Catholic educational work throughout the States; he also formed the German Catholic Orphan Society of St. Aloysius, and an asylum was soon erected. About this time, log churches arose at Glandorf, Bethlehem, and New Riegel in northern Ohio, sufficient to gather the faithful together, and afforded a place for the instruction of the young. Meanwhile, the Catholic population of the State increased steadily, and the churches and institutions were very inadequate. St. Mary's church for the Germans, in Cincinnati, was dedicated in July, 1842; another German church was erected about the same time, as Zanesville, by Rev. H. D. Juncker. As early as 1836, a German congregation was organized at Louisville, Kentucky, by the Rev. Jos. Stahlschmidt; they soon erected St. Boniface's church, which was dedicated on the feast of All Saints, 1838. This church was attended for a time from Indiana and Ohio by the Rev. Jos. Ferneding and Rev. John M. Henni. In 1842, on 30 October, Bishop Chabrat dedicated St. Mary's church, Covington, Kentucky, a fine brick structure, erected by the German Catholics of that city. When, in 1833, the Rt. Rev. Frederick Reese became Bishop of Detroit, there were labouring in his diocese, among other German priests, the Redemptorist Fathers Saenderl and Hatscher. in the following year the German church of the Holy Trinity was established. At that time Vincennes was erected into a diocese. Three years later, we find a German congregation in Jasper County, Illinois. The German Catholics around Quincy, Illinois, had erected a house for a priest, and as a temporary chapel till their church was built. Father Charles Meyer's ministrations in the little log church of St. Andrew, at Belleville, Ill., was his first step to a future bishopric. In 1841, a German Catholic church was erected at West Point, Iowa, in the present Diocese of Dubuque. At Pittsburg the German Catholics attended St. Patrick's until their increasing numbers made it expedient for them to form a separate congregation. They then worshipped in a building previously used as a factory. in 1839, at Bishop Kenrick's suggestion, a community of Redemptorists then in Ohio, came and took charge of this mission, and the factory was soon transformed into the church of St. Philomena, with a Redemptorist convent attached -- the first house of that congregation in the United States. Here, before long, the Rev. John N. Neumann received the habit and began his novitiate, to become in time Bishop of Philadelphia, and die in the odour of sanctity. When, on 3

December, 1843, the first Bishop of Pittsburg reached that city, he founded in his district a Catholic population estimated at forty-five thousand, 12,000 being of German origin.

An attempt at Catholic colonization was made about this time at St. Mary's, Elk County, where Messrs. Mathias Benziger and J. Eschbach, of Baltimore, purchased a large tract. Settlers soon gathered from Germany, who, from the first, were attended by the Redemptorist Fathers, but, though well managed, and encouraged by the hearty approval of the bishop, the town never attained any considerable size. Important and wide-reaching in its results, not only for the Diocese of Pittsburg, but for the Catholic Church in the United States, was the arrival at Pittsburg, 30 September, 1845, of the Benedictine monk, Dom Boniface Wimmer. The Rev. Peter Lemcke, a German priest, had been labouring for several years in the mission of Pennsylvania. His life had been a strange and varied one. Born in Mecklenburg, of Lutheran parents, he grew up attached to their sect, trained piously by those who clung to the great doctrines of Christianity. Drafted into the army, he fought under Blücher at Waterloo, and afterwards returning to his home, resolved to become a Lutheran minister. To his astonishment and dismay, he found the professors to be men who, in their classes, ridiculed every religious belief which he had been taught to prize. He was led to study, and a thorough mastery of the works of Luther convinced him that Almighty God never could have chosen such a man to work any good in his Church. he went to Bavaria, where he began to study Catholic doctrines, and was received into the Church by Bishop Sailer. Having resolved to become a priest, he went through a course of study and was ordained. Coming to America in 1834, he was sent, in time, as assistant to Father Gallitzin, and laboured in the missions of Western Pennsylvania. As early as 1835, he appealed, in the Catholic papers of Germany, to the Benedictines to come to the United States. He returned to Europe in 1844, mainly to obtain German priests for the missions of the Diocese of Pittsburg. At Munich he met Dom Boniface Wimmer, a Benedictine monk of the ancient Abbey of Metten, in Bavaria, a religious whose thoughts have already turned to the American mission. Father Lemcke offered him a farm of 400 acres which he owned at Carrolltown, Maryland. Correspondence with Bishop O'Connor followed. Dom Boniface could not secure any priests of his order, but he obtained four students and fourteen lay brothers. Their project was liberally aided by the Ludwig-Verein, the Prince-Bishop of Munich, the Bishop of Linz, and others. After conducting his colony to Carrolltown, Father Wimmer paid his respects to Bishop O'Connor. That prelate urged him to accept the estate at St. Vincent's which Father Brouwers had left to the Church in the preceding century, rather than establish his monastery at Carrolltown. Visiting St. Vincent's with the bishop, Dom Boniface found there a brick church with a two-story brick house which, though built for a pastoral residence, had been an academy of Sisters of Mercy. He decided in favour of the bishop's suggestion, and, 19 October, 1846, the first community of Benedictine monks was organized in the schoolhouse at St. Vincent's. Father Wimmer took charge of the neighboring congregation, and was soon attending several stations. His students were gradually ordained, and in a few years St. Vincent's was declared by the Holy See an independent priory, and was duly incorporated 10 May, 1853. Prior Wimmer showed great ability and zeal, and from the outset confined his labours as much as possible to German congregations.

Already, before 1850, the Rev. John E. Paulhuber and other Jesuit Fathers from Georgetown had been in charge of St. Mary's church at Richmond, Virginia, erected for Germans, of whom there were seven or eight hundred in the city. In the Diocese of Wheeling, erected in 1850, there was a log chapel near the German settlement of Kingwood. About that time, German settlers were gathering in Preston, Doddridge, and Marshall Counties. Soon after, the Rev. F. Mosblech began to plan the erection of a church for the Germans in Wheeling. When Bishop Hughes, in 1843, returned from Europe, one of his first episcopal acts was the dedication of the church of the Most Holy Redeemer, on Third Street, New York, which the Redemptorists had erected for the German Catholics. The Rev. John Raffener, the Apostle of the Germans, reported the labours among his countrymen, in New York State, of Fathers Schneider at Albany, Schwenninger at Utica, Inama at Salina, the Redemptorists and Franciscans of St. Peter's church at Rochester, and announced that peace prevailed in the long distracted congregation of St. Louis, Buffalo. In New York City, St. Alphonsus, the second church of the Redemptorists for the Germans, was erected in 1848. The German Catholics of Albany, though struggling with difficulties, were soon rearing a near Gothic church on Hamilton and Philip Streets. Addressing the Leopold Society, in January, 1850, to acknowledge their generous aid, Bishop McCloskey estimated the Catholic population of his diocese at 70,000, including 10,000 Germans. He had sixty-two churches, eleven of them for Germans. At about the same time, Bishop Timon, of Buffalo, estimated his flock at 40,000 souls, half of whom were Germans, attended by five secular priests and five Redemptorists. The Diocese of Cincinnati received, in 1843, a valuable accession, a colony of seven priests of the Congregation of the Most Precious Blood (Sanguinists), led by the Rev. Francis de Sales Brunner. The difficult mission of Peru was assigned to them by the bishop, with the charge of Norwalk and scattered stations in the neighbouring counties. The labours of the Sanguinist priests were singularly blessed, and the healthy growth of the Church in that part of Ohio must be ascribed mainly to these excellent missionaries. In December, 1844, Father Brunner established a convent of his congregation at New Riegel, another, next year, at Thompson, and, in 1848, one at Glandorf. Each of these became the centre of religious influence for a large district. Father Brunner was born at Mumliswil, Switzerland, 10 January, 1795, entered the Congregation of the Precious Blood in 1838, and, after taking part in the establishment of a community in Switzerland, formed a project of a mission in America.

In April, 1845, Bishop Purcell, with a large gathering of the clergy, societies, ecclesiastics, and pupils of the schools, laid the corner-stone of the German church of St. John the Baptist, Green Street, Cincinnati, Ohio, to be dedicated on 1 November of the same year, by Bishop Henni of Milwaukee, who had done so much for the German Catholics of Cincinnati. St. Mary's church, at Detroit, Michigan, was dedicated for the Germans, 29 June, 1843. In 1844 Bishop Kenrick of St. Louis estimated the Catholic population of Missouri at 50,000, one third being of German origin. At this time, St. Louis possessed the German church of St. Aloysius. The corner-stone of St. Joseph's, another church for the Germans, under the care of the Fathers of the Society of Jesus, was laid in April, 1844. A letter sent, in 1850, by Archbishop Kenrick to the Leopold Association, gives the condition of the German Catholics of the diocese at this time. -- Four of the ten churches in St.

Louis were exclusively German. The Germans had their own orphan asylum and an Ursuline convent, with sisters from Hungary and Bavaria. Three German congregations in Scott County were attended by a priest at Benton. Two congregations in St. Charles County had each a German priest. Those in Washington County were attended by two German Fathers of the Society of Jesus; and three other fathers attended four congregations in Osage and Cole Counties. Jefferson City had a German congregation and priest. In Gasconade County, the German Catholics were erecting a church. The archbishop was about to send a German priest to Montgomery County. Those at Boonville were visited by priests, but had no church, while those in Pettis, with five or six small congregations, were regularly visited.

By the close of the year 1844 the Rt. Rev. William Quarter, first Bishop of Chicago, had twenty-three priests in his diocese, one at the cathedral (the Rev. C. H. Ostlangenberg) to care for the Germans, while Quincy had its German congregation and priest. With a steadily increasing German flock, he appealed, and not in vain, to the Leopold Association and made plans to give them a church of their own in Chicago, as they were estimated at one thousand. Chapels were being erected at St. Peter's and at Teutopolis. After Easter, 1850, the Rt. Rev. James Oliver van de Velde, the second Bishop of Chicago, dedicated St. Joseph's church, at Grosse Pointe, or New Trier, erected by the Rev. Henry Fortmann, and exhorted the German Catholics at Ridgeville to commence building. In 1844, the Rev. Ivo Schacht, who had a large district, embracing several counties of the State of Tennessee, laid the corner-stone of a church at Clarksville. The German Catholics in Nashville desired a church of their own, and Bishop Miles appealed in their behalf to the Leopold Association.

When, in 1846, Bishop Loras of Dubuque, visited New Vienna, he found there 250 Germans, all Catholics. There were at that time more or less Germans everywhere in that diocese, and almost all farmers. On 19 April, 1846, Bishop Henni, of Milwaukee, laid the corner-stone of St. Mary's German Church in that city. Before the Mexican War had begun, German settlements were established at Couhi, New Braunsfels, and Fredericksburg, Texas. About the year 1849 the Rev. Gregory Menzel was labouring among his countrymen at the two last-named places, as well as at Bastrop and Austin, urging Catholics, for the sake of the future of their families, to gather near each other so as to enjoy the benefits of church and school. Bishop Odin of Galveston, in 1851, visited Europe and, before the end of the following year, had the consolation of bringing with him four Franciscans from Bavaria to take care of his increasing German flock.

In the Diocese of Pittsburg the community of Benedictines had grown and prospered. New lands were acquired, and suitable buildings for various purposes were erected. In 1855, Prior Wimmer visited Rome, and Pope Pius IX, on 24 August, made St. Vincent's an exempt abbey, and on 17 September appointed the Rt. Rev. Boniface Wimmer mitred abbot for a term of three years. St. Vincent's College, opened in 1849, had thriven with the growth of the community and soon had a large number of students. The course was thorough, and pupils had special advantages for acquiring a practical knowledge of German. The Redemptorists were labouring earnestly in Pittsburg, under Father Seelos and others. In 1851 they laid the foundation of St. Joseph's German Orphan Asylum.

When, in 1853, the See of Erie was erected, the German Catholics had a little church in that city. Williamsburg, New York, had a German church of the Holy Trinity many years before the Diocese of Brooklyn, to which it now belongs, was erected. In Brooklyn, St. Boniface's, purchased from the Episcopalians, was dedicated for the use of the Germans in 1854, as were Holy Trinity and St. Malachy's in East New York. From the year 1849, the German Catholics at Elizabeth, Diocese of Newark, were visited by the Redemptorist Fathers till the Rev. Augustine Dantner, O.S.F., became their resident priest in 1852. Bishop Bayley endeavoured to secure the Benedictine Fathers for St. Mary's German Church, Newark, and in 1856 the Rt. Rev. Abbot Wimmer sent Father Valentine Felder, O.S.B., to that city. Two years later, St. Michael's German church was dedicated. In 1853 the Abbot of Einsiedeln, at the request of the Bishop of Vincennes, sent a colony of Benedictine monks to Indiana. They settled in Spencer County, where they founded the Abbey of St. Meinrad. At that time, the Very Rev. Jos. Kundeck had been for twenty years vicar-general of the diocese, in which he laboured most zealously. In 1857 the sovereign pontiff established the Diocese of Fort Wayne, selecting for its first bishop, the Rev. Henry Luers, born near Münster, Westphalia, 29 September, 1819. He soon dedicated St. Mary's German church, the pastor of which was the Rev. Joseph Wentz. In the summer of 1858 the Franciscan Fathers of the Province of the Holy Cross founded a residence at Teutopolis, Effingham County, Illinois, under the Very Rev. Damian Hennewig. The corner-stone of the college was laid in 1861, and the institution arose at Quincy. The German Catholic church at Alton was, in June, 1860, destroyed by a tornado, but the congregation courageously set to work to replace it by a more substantial edifice. In 1856, the Salesianum, the famous seminary of Milwaukee, was opened, with the Very Rev. Michael Heiss as rector and the Rev. Dr. Joseph Salzmann as leading professor. The church of the seminary was consecrated in 1861. The fine church of St. Joseph was erected at Milwaukee, Wisconsin, in 1856, by Rev. C. Holzhauer. A community of the Capuchin Order, destined to spread to many parts of the United States and to distinguish itself by successful mission work, arose in the diocese. Two secular priests, Fathers Haas and Frey, conceived the idea of establishing a Capuchin house. After some correspondence, a father of the order came from Europe and opened a novitiate, receiving the two priests as novices in 1857. After their profession postulants came, the community grew, and God blessed their labours wonderfully. The first German priest on record in Upper California, was the Rev. Florian Schweninger, who first appears at Shasta, in 1854. He must have arrived in 1853. In 1856 the Rev. Sebastian Wolf had charge of a station in Placerville, California. He was later (1858-59) stationed at St. Patrick's church as assistant, but preached the German sermon at St. Mary's cathedral, at the nine-o'clock Mass on Sundays. He began to erect a church for the Germans early in 1860, and since then St. Boniface's congregation has formed an independent parish. He remained pastor until the archbishop called from St. Louis some Franciscans, who took charge and, in 1893, founded another German parish, St. Anthony's, in the southern part of the city. In the lower part of the State, the Diocese of Monterey, the first German name found in ght parish records of San Diego is that of the Rev. J. Christ. Holbein, missionary Apostolic, who was in charge of both the former Indian mission and the city of San Diego, from July, 1849, to February, 1850.

A German settlement for the first time appears in the Catholic Directory as an out-mission of Santa Anna in 1867, but it had no German priests until years after. It is St. Boniface's. The first German parish of Los Angeles, St. Joseph's, was organized in 1888; the first German church in Sacramento in 1894. German Jesuits went to work in what is now Oregon and Washington, with others of their order, in the early forties, and since then German parishes have arisen. No German priests or settlers of account reached New Mexico until within the last fifteen or twenty years.

Gradually German Catholics were to be found in nearly every part of the United States, especially in New York, Ohio, Illinois, Iowa, Indiana, Michigan, Minnesota, Missouri, Pennsylvania, and New Jersey, everywhere establishing flourishing congregations with schools and churches. The number of German Catholics in the United States can only be given approximately. Over one-third of the Germans from the German Empire, as well as the majority of the Germans from Austria, are Catholics; accordingly, almost one-half of the Germans in this country should be Catholics. making liberal allowance for the leakage, we may safely say that at least one-fourth, i.e. over three millions, are Catholics. This is a conservative estimate. The leakage is considerable among Catholics of all nationalities. For the defection of Germans in particular, the following reasons must be assigned. Where Germans settled in small numbers, frequently there were no priests of their own tongue. Left to themselves, they were in a condition of religious isolation; they gradually neglected religious practices and finally lost their faith. Although this applies to all immigrants who do not speak English, it proved specially disastrous in the case of the Germans. As over one-half of the German settlers were Protestant, and frequently had churches and various church organizations, there was a non-Catholic atmosphere around them; mixed marriages, particularly in such places, frequently resulted in losses to the Catholic Church. Great as the contributions of the immigrants of '48 were to the intellectual advancement of the United States, it cannot be denied that, on the whole, their influence was not favourable from a religious viewpoint. The same must be said of certain German organizations, as the turnvereins, which frequently manifested an anti-Catholic, and even anti-religious, spirit. Nor can it be denied that Socialistic principles were largely spread by German immigrants and German publications. Small wonder that hundreds of thousands of Germans have been lost to the Catholic Church.

German Churches and Religious Communities

No attempt is made to give exact statistics of German Catholic churches and parishes, because such are not available at the present time. A general idea, however, can be formed from the fact, that among the 15,655 priests in the Catholic Directory for the United States, about one third bear German names. Among the more distinguished German prelates, mention should be made of John Martin Henni, first Bishop, and later Archbishop, of Milwaukee; Michael Heiss, Archbishop of Milwaukee; Seb. Gebhard Messmer, Bishop of Green Bay, now Archbishop of Milwaukee; Winand S. Wigger, third Bishop of Newark, a wise ruler, a devout priest, and notable for his practical work as head of the St. Raphael Society for the protection of immigrants; and most particularly of the saintly Bishop Neumann of Philadelphia, whose beatification is the earnest hope of all American Catholics.

Of the great number of European orders and congregations of men and women labouring in the United States for man's spiritual or physical welfare, the following are of German origin and even now (1909) are recruited chiefly from Germans or their descendants:-

Religious Orders of Men

(1) Benedictines, -- (a) American Cassinese Congregation, founded in 1846, by the Rev. Boniface Wimmer, O.S.B. -- At the present time there belong to this congregation the following independent abbeys: St. Vincent's Arch-Abbey, Beatty, Pennsylvania, with 126 fathers, 5 deacons, 23 clerics, 64 lay brothers, and 4 novices; St. John's Abbey, Collegeville, Minnesota, with 94 fathers, 11 clerics, 26 lay brothers, 9 novices; St. Benedict's Abbey, Atchison, Kansas, with 51 fathers, 6 clerics, 18 brothers; St. Mary's Abbey, Newark, New Jersey, with 40 fathers, 7 clerics, 14 lay brothers; Maryhelp Abbey, Belmont, North Carolina, the Rt. Rev. Leo Haid, D.D., O.S.B. abbot-bishop, 31 fathers, 1 deacon, 4 clerics, 36 lay brothers, 4 novices; St. Bernard's Abbey, Cullman Co., Alabama, with 38 fathers, 1 deacon, 3 subdeacons, 12 clerics, 16 lay brothers, 6 postulants; St. Procopius's Abbey, Chicago, Illinois, with 14 fathers, 6 clerics, 20 lay brothers, 6 novices; St. Leo's Abbey, St. Leo, Florida, with 12 fathers, 16 lay brothers, 3 novices. (b) Swiss American Congregation, founded by Pope Pius IX, 1871, and Pope Leo XIII, 1881. -- To this congregation belong the following abbeys: St. Meinrad's Abbey, St. Meinrad, Indiana, founded in 1854 by two Benedictine Fathers from Einsiedeln, Switzerland; an abbey since 1871, 50 fathers, 6 clerics, 42 lay brothers, 7 novices; Conception Abbey, Conception, Missouri, founded in 1873 by Fathers Frown Conrad and Adelhelm Odermatt from the Benedictine Abbey, Engelberg, Switzerland; an abbey since 1881, 42 fathers, 7 clerics, 26 lay brothers, 4 novices; New Subiaco Abbey, Spielerville, Arkansas, with 30 fathers, 5 clerics, 23 lay brothers, 5 novices; St. Joseph's Abbey, Gessen, Louisiana, with 19 fathers, 4 clerics, 8 lay brothers, 3 novices; St. Mary's Abbey, Richardton, North Dakota, with 21 fathers, 8 clerics, 12 lay brothers, 11 novices; St. Benedict's Abbey, Mt. Angel, Oregon, with 18 fathers, 7 clerics, 28 lay brothers, 2 novices. -- With these abbeys are connected 17 colleges and numerous parishes, stations, and missions. (2) Capuchins. -- There are two provinces: (a) St. Joseph's, extending over the States of New York, New Jersey, Michigan, Iowa, Wisconsin, Minnesota, Dakota, and the Dioceses of Chicago and Fort Wayne; (b) St. Augustine's, comprising the States of Pennsylvania, West Virginia, Maryland, Ohio, Kentucky, Indiana, and Illinois (the dioceses of Chicago and Fort Wayne excepted). -- (a) St. Joseph's Province, founded in 1857 by two secular priests, Fathers Gregory Haas and John Anthony Frey, numbers 67 fathers, 19 professed clerics, 43 professed brothers, 2 novices, and 10 Brothers of the Third Order; (b) St. Augustine's Province, founded in 1874, by the Capuchin Fathers Hyacinth Epp and Matthias Hay, with 64 fathers, 18 professed clerics, 37 professed lay brothers, 5 novices, 2 Brothers of the Third Order. (3) Franciscans. -- The three provinces, of the Sacred Heart of Jesus, of St. John the Baptist, of the Most Holy Name, number 431 fathers, 148 clerics, 233 lay brothers, 36 Tertiary Brothers, and 10 novices. (4) Jesuits. -- About 200 Jesuits from the Fatherland are labouring in the United States. Besides, there are several hundred Jesuits of German descent who were born in this country. For nearly forty years there was a distinct German division called the Buffalo mission of the German Province, with

colleges at Buffalo, New York; Cleveland and Toledo, Ohio; Prairie du Chien, Wisconsin; two Indian missions in South Dakota, and other houses. In 1907, the mission numbered about 300 members; in that year the mission was separated from the mother-province, and the houses and members joined to different American provinces. (5) Redemptorists. -- Although now many other nationalities are represented in the Congregation of the Most Holy Redeemer, it still numbers a great many Germans among its members. The two provinces of Baltimore and St. Louis are composed of 325 fathers, 95 professed lay brothers, 48 novice lay brothers and postulants. (6) Fathers of the Precious Blood. -- This congregation, founded at Rome in 1814 is divided into four provinces, three European and one American. The American province was organized in 1844 by the Rev. Francis S. Brunner, and most of its members are Germans, either by birth or by descent. The congregation is represented in the Dioceses of Cincinnati, Fort Wayne, Cleveland, Kansas City, St. Joseph, St. Paul, Chicago, and San Antonio. -- 100 fathers, 6 clerics, 82 lay brothers, and 32 novices. (7) Alexian Brothers. -- They conduct hospitals and asylums, in the Archdioceses of Chicago and St. Louis, the Dioceses of Green Bay and Newark. -- 99 professed brothers, 5 novices, 6 postulants. (There are also numerous Germans among the Passionists, Dominicans, Lazarists and the Fathers of the Holy Cross.)

Religious Orders of Women

(1) Sisters of St. Benedict. -- In 1852 the first colony of Benedictine Sisters came to the United States from Eichstätt, Bavaria, and settled in St. Mary's, Elk County, in the Diocese of Erie, Pennsylvania. At present they have also houses in many other dioceses. They number about 2000 sisters, 135 novices, and 115 postulants. (2) Sisters of Christian Charity. -- They were established in 1874 by sisters from Paderborn, Germany. The sisters conduct establishments in 17 dioceses; they number about 731, including novices and postulants. The mother-house for the United States is at Wilkes-barre, Pennsylvania. (3) Sisters of the Third Order of St. Francis. -- (a) Mother-house at Peoria, Illinois, founded in 1876, by sisters from the house of Bethlehem, Herford, Westphalia, Germany. 151 sisters, 32 novices, 28 postulants. (b) Mother-house at Glen Riddle, Pennsylvania. 804 professed sisters, 54 novices, 8 postulants. (c) Mother-house at 337 Pine Street, Buffalo, New York. 256 sisters, 30 novices, 14 postulants. (d) Mother-house at Syracuse, New York; Millvale, Pennsylvania, and at Mt. Loretto, Staten Island, New York. All these houses are German foundations, though now many sisters of other nationalities belong to them. (4) Sisters of the Third Order Regular of St. Francis. -- There are about 500 sisters, 48 novices, and 7 postulants, with mother-house at Oldenburg, Indiana. They were founded in the year 1851, by Mother M. Theresa of Vienna, Austria. (5) Sisters of St. Francis. -- Their mother-house at 749 Washington Street, Buffalo, New York, was founded in 1874, by sisters from Nonnenwerth near Rolandseck, Rhenish Prussia. There are 268 sisters. (6) Franciscan Sisters. -- Founded in 1872, by sisters from Salzkotten, Germany. Mother-house for the United States, at St. Louis, Missouri. There are 192 sisters. (7) School Sisters of St. Francis. -- Their mother-house and novitiate are at Milwaukee, Wisconsin. There are 668 professed sisters, 110 novices, 54 postulants. (8) Franciscan Sisters of the Perpetual duration. -- Founded in 1853, by Most Rev. M. Heiss, D.D. There are 364 professed sisters, 45 novices, and

42 postulants. Mother-house at St. Rose Convent, la Crosse, Wisconsin. (9) Hospital Sisters of St. Francis. -- Founded in 1875, by sisters from Münster, Westphalia, Germany. Sisters 299, novices 24, postulants 6. Provincial House at St. John's Hospital, Springfield, Illinois. (10) Poor Sisters of St. Francis of the Perpetual Adoration. -- Provincial house at St. Francis Convent, Lafayette, Indiana. Founded by Sisters from Olpe, Westphalia, Germany. Professed sisters 573, novices 65, postulants 24. (11) Sisters of the Poor of St. Francis. -- Founded by sisters from Aachen, Germany. They conduct hospitals in eight dioceses, and number about 530. (12) The Poor Handmaids of Jesus Christ. -- The American Province of this sisterhood was established in August, 1868, at Fort Wayne, Indiana. The mother-house and novitiate are still united with the general mother-house at Dernbach, Germany. They number 423 professed sisters, 32 novices, 19 postulants. (13) School Sisters of Notre Dame. General mother-house, Munich, Bavaria. Principal mother-house in America, Milwaukee, Wisconsin. First convent established at Baltimore, 1847. The sisters form the largest teaching Congregation in the United States and conduct schools in nearly all the dioceses. Number of sisters and novices 3368, besides 238 candidates, with 99,009 pupils. (14) Sisters of the Most Precious Blood. -- (a) Mother-house at Maria Stein, Ohio, established in 1834, by sisters from Switzerland. (b) Mother-house at Ruma, Illinois; established in 1868, at Piopolis, Illinois, by sisters from Gurtweil, Baden, Germany; transferred to Ruma, in 1876. (c) Mother-house at O'Fallon, Missouri. About 1000 sisters belong to this congregation. (15) Sisters of Divine Providence. Mother-house at Pittsburg, Pennsylvania, and Brightside, Holyoke, Massachusetts. The Pittsburg mother-house was established in 1876, by sisters from Mainz, Germany. There are now about 400 sisters in all.

Beside all these, there are several smaller German religious congregations in the United States. In other congregations also, not of German foundation, there are now many German sisters. There must be, therefore, upwards of twelve thousand sisters of German origin in this country.

Parochial Schools

From the very beginning, of their settling in this country the German Catholics had at heart the establishing of parochial schools. Interesting details are given concerning the schools at Goshenhoppen and Conewago. The school at Goshenhoppen was begun by Father Schneider, S.J. (who had previously served as Rector Magnificus, or elective head, of Heidelberg University), soon after his arrival, in 1741. It was under his charge for twenty years, and under Father Ritter's during the twenty-three succeeding years. It was attended by the children of the whole neighbourhood, Protestant as well as Catholic, it being the only one in the place. About the time of the close of the French and Indian War, the school, for the first time, engaged the services of a lay teacher. Contrary to the custom which prevailed in the Colonies generally, the schoolmaster was looked upon as a person of distinction in the little world of Goshenhoppen. Three schoolmasters are mentioned in the parish registers between 1763 and 1796; Henry Fredder, Breitenbach, and John Lawrence Gubernator. The last-named was no doubt the most distinguished of the three. Born at Oppenheim, Germany, in 1735, he served as an officer in the army of the Allies in the Seven Years' War, and came to America during the Revolutionary War. highly educated, and a devoted teacher, he rendered

eminent services to the cause of Catholic education in Pennsylvania, during a period of twenty-five years. When, about 1787, the school near Conewago was so far developed as to be able to support a lay teacher, the services of this famous schoolmaster were obtained.

These schools, along with the other schools established and conducted by the Jesuits, have greatly influenced the development of the Catholic parochial school system in the United States. This early zeal for founding parochial schools is typical of the activity of the Germans during all succeeding periods. Wherever they settled in sufficient numbers the schoolhouse soon rose by the side of the parish church, and until the present day they have never ceased to be staunch and unflinching and advocates of the parochial school system.

Societies

The natural inclination and aptitude of the Germans for organization issued in the formation of numerous social and religious associations. Besides parochial and local societies there is one organization which exerted a far-reaching influence, namely, the Central-Verein. The wonderful organization of the Centre Party in the Fatherland and the admirable unity shown by the German Catholics during the *Kulturkampf*, naturally stimulated the German Catholics in the United States to unite their efforts in vast organizations. "Germany is the land of fearless Catholicity, where Catholics have made themselves respected There is a vigor in German Catholicity, both political and doctrinal, that should excite our admiration, and be for us a splendid example for imitation. Who can reflect upon the work of the Centre Party, from Mallinckrodt and Windthorst to the late lamented Lieber, without a feeling of pride and satisfaction?" (Father John Conway, S.J.). -- There is no doubt that the Central-Verein would never become what it now is without the noble example of Catholic Germany. Founded in 1855, the Central-Verein had for its object, above all, the material aid of its members. But gradually, it broadened its programme, and it became one of the objects of the organization "to stand for Catholic interests in the spirit of the Catholic Church". It has been said, and justly, that perhaps no other Catholic organization in the United States can point to a greater number of positive results, tending to promote the welfare of our fellow-men, than the Central-Verein. It has been a firm support of our youthful and flourishing Church, and has nobly contributed towards its gratifying development. For decades it has unflinchingly laboured in the interest of the parochial school and for the preservation of the German language. Chiefly under its influence were founded the Teachers' Seminary, at St. Francis, and the Leo House, an institution in New York City for Catholic immigrants by which thousands have been rescued from bodily and spiritual perdition. The German American *Katholikentage* likewise owed their origin to the activity of the men of the Central-Verein, after the model of the famous annual assemblies of the German Catholics, in the Fatherland. The influence of this splendid organization on the formation of the Federation of Catholic Societies cannot be overrated. -- "The young organization breathes the spirit which animated the Central-Verein during the past fifty years; the programme of the Federation, in its essential parts, is identical with that of the Central-Verein, so that the former helps to further and complete what the vigorous and valiant Germans began." -- Together with

Bishop McFaul of Trenton, the German Archbishop Messmer, of Milwaukee, Wisconsin, is the prime mover and leading spirit of the Federation.

The Press

More than twenty-five weekly papers are published in the United States for the benefit of German Catholics, besides a goodly number of monthly periodicals. The first German Catholic paper, "Der Wahrheitsfreund", was established in 1837, by the Rev. John M. Henni. After an existence of almost seventy years it ceased to appear in 1907. Another weekly which no longer exists, but which for many years rendered essential service to religion, was the "Katholische Kirchenzeitung". Maximilian Oertel, the founder of this weekly, was born at Ansbach, Bavaria, in 1811, and arrived in this country in the beginning of the year 1839, highly commended by the heads of his denomination, to attend Lutheran immigrants in the United States. on 15 March of the following year he was received into the Catholic Church, to which he remained true and faithful throughout the rest of his life, doing excellent service to the Catholic cause as one of the most brilliant editors the Germans ever produced in this country. The "Ohio Waisenfreund", founded in 1873, and edited by the indefatigable Rev. Jos. Jessing, later Monsignore, has a larger circulation than any other Catholic weekly in the country. It has been doing a great amount of good these thirty-five years, the finest monument of its missionary spirit being the "Josephinum", a seminary for the education of candidates for the priesthood. Whereas an English Catholic daily for many years has been a desideratum not yet realized, the German Catholics have two daily papers: "Amerika" (St. Louis), from 1878-1902 under the editorship of the famous Dr. Edward Preuss, and the Buffalo Volksfreund" (Buffalo, New York). In connection with these periodical publications, may be mentioned the "Pastoral-Blatt", for a number of years edited by the Rev. W. Färber, of St. Louis, which existed long before the able English "Ecclesiastical Review" was founded and edited by Dr. Herman J. Heuser.

It is surely deserving of notice that among Catholic publishers in this century the German names of Benziger, Herder, and Pustet stand in the front rank. Nor should it be overlooked, that the translations of German religious works -- as Deharbe's Catechism, Wilmer's "Hand-book of the Christian Religion", Schuster's Bible History, the works of Knecht, Alzog, Brück, Spirago, Schanz, Hettinger, etc. -- have been largely used, and are still being used, for the religious instruction of American Catholics. The words of Father John A. Conway, S.J. (in the preface to Fr. von Hammerstein's work, "Edgar, or from Atheism to the Full Truth") may well be quoted in this connection: "Who can read the words that teem from the German Catholic press without feeling that the defence of Catholic truth is in brave and fearless hands? It is in Germany that the fiercest onslaughts are made upon revealed truth by rationalists, materialists, pantheists, Kantians, Hegelians, evolutionists, etc. But it is from Germany, too, that we get our best defence and our ablest expositions of Catholic doctrines." Thus we see that, although the efforts of the German Catholics, naturally, are concerned in the first place, with the religious affairs of their own people, still their activity has produced beneficial results for the Catholic body in general.

For Germans in General. -- COBB, *The Story of the Palatines* (New York, 1879); VIERBECK, *German Instruction in American Schools* (Washington, 1902); McMaster, *A History of the People of the United States* (New York, 1883-1900); LÖHER, *Geschichte und Zustände der Deutschen in Amerika* (Göttingen, 1855); SEIDENSTICKER, *Die erste Deutsche Einwanderung in Amerika und die Gründung von Germantown im Jahre, 1683* (Philadelphia, 1883); KÖRNER, *Das Deutsche Element in den Vereinigten Staaten, 1818-1848* (New York, 1884); KAPP, *Die Deutschen im Staate New York während des achtzehnten Jahrhunderts* (New York, 1884); JANNET-KÄAMPFE, *Die Vereinigten Staaten Nordamerikas in der Gegenwart* (Freiburg im Br., 1893); KNORTZ, *Das Deutschtum in den Vereinigten Staaten von Nordamerika* (Munich, 1904).

The German Catholics in America. -- SHEA, *History of the Catholic Church in the United States* (New York, 1886-1892); BURNS, *The Catholic School System in the United States* (New York, 1908); ENGELHARDT, *A True History of the Missions and Missionaries of California* (Watsonville, California); SCHWICKERATH, *Jesuits as Missionaries in The Review* (St. Louis, 1901); WILTZIUS, *Catholic Directory* (Milwaukee, annual); HAMMER, *Die Katholische Kirche in den Vereinigten Staaten Nordamerikas* (New York, 1897); SCHAEFER and HERBERMANN, *Records and studies in U.S. Cath. Historical Society*, I, 110; HERBERMANN, *A Catholic German Colony in Ohio in U. S. Catholic Historical Magazine*, IV, 125.

FRANCIS M. SCHIRP

St. Germanus I

St. Germanus I

Patriarch of Constantinople (715-30), b. at Constantinople towards the end of the reign of Emperor Heraclius (610-41); d. there 733 or 740. The son of Justinianus, a patrician, Germanus dedicated himself to the service of the Church and became a cleric at the cathedral of the metropolis. Some time after the death of his father, who had filled various high official positions, at the hands of the nephew of Heraclius, Germanus was consecrated Bishop of Cyzicus, but the exact year of his elevation is not known. According to Theophanes and Nicephorus, he was present in this capacity at the Synod of Constantinople held in 712 at the insistence of the new emperor, Philippicus, who favoured Monothelitism. The object of the council was to re-establish Monothelitism and to condemn the Acts of the Sixth General Council of 681. Even Germanus is said to have bowed to the imperial will, with the majority of the Greek bishops (Mansi, *Conc. Coll.*, XII, 192-96). However, immediately after the dethronement of Emperor Philippicus (713) his successor, Anastasius II, restored orthodoxy, and Monothelitism was now definitively banished from the Byzantine Empire. If Germanus really yielded for a short time to the false teachings of the Monothelites, he now once more acknowledged the orthodox definition of the two wills in Christ. John, Patriarch of Constantinople, appointed by Philippicus to succeed the deposed Cyrus, sent to Pope Constantine a letter of submission and accepted the true doctrine of the Church promulgated at the Council of 681, whereupon he was recognized by the pope as Patriarch of Constantinople. On his death Germanus was raised to the

patriarchal see (715), which he held until 730. Immediately (715 or 716) he convened at Constantinople a synod of Greek bishops, who acknowledged and proclaimed anew the doctrine of the two wills and the two operations in Christ, and placed under anathema Sergius, Cyrus, and the other leaders of Monothelism (q.v.). Germanus entered into communication with the Armenian Monophysites, with a view to restoring them to unity with the Church, but without success. Soon after his elevation to the patriarchal dignity the Iconoclastic storm burst forth in the Byzantine Church, Leo III the Isaurian, who was opposed to the veneration of images having just acceded to the imperial throne (716). Bishop Constantine of Nacoleia in Phrygia, who like some other bishops of the empire condemned the veneration of the pictures and images of Christ and the saints, went to Constantinople, and entered into a discussion with Germanus on the subject. The patriarch represented the traditional use of the Church, and sought to convince Constantine of the propriety of reverencing images. Apparently he was converted to the teaching of the patriarch, but he did not deliver the letter entrusted to him by Germanus for the Metropolitan of Synnada, for which he was excommunicated. At the same time the learned patriarch wrote to Bishop Thomas of Claudiopolis, another Iconoclast, and developed in detail the sound principles underlying the reverencing of images, as against the recent innovations. Emperor Leo III, however, did not recede from his position, and everywhere encouraged the iconoclasts. In a volcanic eruption between the islands of Thera and Therasia he saw a Divine judgment for the idolatry of image-worship, and in an edict (726) explained that Christian images had taken the place of idols, and the venerators of images were idolaters, since, according to the law of God (Ex., xx, 4), no product of the hand of man may be adored. Immediately afterwards, the first Iconoclastic disturbances broke out in Constantinople. The Patriarch Germanus vigorously opposed the emperor, and sought to convert him to a truer view of things, whereupon Leo attempted to depose him. Germanus turned to Pope Gregory II (729), who in a lengthy epistle praised his zeal and steadfastness. The emperor in 730 summoned the council before which Germanus was cited to subscribe to an imperial decree prohibiting images. He resolutely refused, and was thereupon compelled to resign his patriarchal office, being succeeded by the pliant Anastasius. Germanus withdrew to the home of his family, where he died some years later at an advanced age. The Ecumenical Council of Nicaea (787) bestowed high praise on Germanus, who is venerated as a saint in both the Greek and the Latin Church. His feast is celebrated on 12 May. Several writings of Germanus have been preserved (Migne, P.G., XCVIII, 39-454), viz., "Narratio de sanctis synodis", a dialogue "De vitae termino", a letter to the Armenians, and three letters on the reverencing of images, as well as nine discourses in the extravagant rhetorical style of the later Byzantines. Of doubtful authenticity is the "Historia ecclesiastica et mystica", also attributed to him (Migne, loc. cit., 383-454).

PARGOIRE, *L'Eglise Byzantine de 527 a 847* (Paris, 1905; HURTER, *Nomenclator*; KRUMBACHER, *Gesch. der byzantinischen Litteratur* (2nd ed., Munich, 1897), 66 sqq.; HEFELE, *Konziliengesch.*, 2nd ed., III, 363 sqq., 380 sq.; HERGENROTHER AND KIRSCH, *Kirchengeschichte*, 4th ed., II, 6, 16-17, 266.

J.P. KIRSCH

Germany

Germany

I. BEFORE 1556

From their first appearance in the history of the world the Germans represented the principle of unchecked individualism, as opposed to the Roman principle of an all-embracing authority. German history in the Middle Ages was strongly influenced by two opposing principles: universalism and individualism. After Arminius had fought for German freedom in the Teutoburg Forest the idea that the race was entitled to be independent gradually became a powerful factor in its historical development. This conception first took form when the Germanic states grew out of the Roman Empire. Even Theodoric the Great thought of uniting the discordant barbarian countries with the aid of the *leges gentium* into a great confederation of the Mediterranean. Although in these Mediterranean countries the Roman principle finally prevailed, being that of a more advanced civilization, still the individualistic forces which contributed to found these states were not wasted. By them the world-embracing empire of Rome was overthrown and the way prepared for the national principle. It was not until after the fall of the Western Empire that a great Frankish kingdom became possible and the Franks, no longer held in check by the Roman Empire, were able to draw together the tribes of the old Teutonic stock and to lay the foundation of a German empire. Before this the Germanic tribes had been continually at variance; no tie bound them together; even the common language failed to produce unity. On the other hand, the so-called *Lautverschiebung*, or shifting of the consonants, in German, separated the North and South Germans. Nor was German mythology a source of union, for the tribal centres of worship rather increased the already existing particularism. The Germans had not even a common name. Since the eighth century most probably the designations *Franks* and *Frankish* extended beyond the boundaries of the Frankish tribe. It was not, however, until the ninth century that the expression *theodisk* (later German *Deutsch*), signifying "popular," or "belonging to people" made its appearance and a great stretch of time divided this beginning from the use of the word as a name of the nation.

The work of uniting Germany was not begun by a tribe living in the interior but by one on the outskirts of the country. The people called Franks suddenly appear in history in the third century. They represented no single tribe, but consisted of a combination of Low and High German tribes. Under the leadership of Clovis (Chlodwig) the Franks overthrew the remains of the Roman power in Gaul and built up the Frankish state on a Germano-Romanic foundation. The German tribes were conquered one after another and colonized in the Roman manner. Large extents of territory were marked out as belonging to the king, and on these military colonies were founded. The commanders of these military colonies gradually became administrative functionaries, and the colonies themselves grew into peaceful agricultural village communities. For a long time political expressions, such as *Hundreds*, recalled the original military character of the people. From that time the Frankish ruler

became the German overlord, but the centrifugal tendency of the Germanic tribes reacted against this sovereignty as soon as the Merovingian Dynasty began slowly to decline, owing to internal feuds. In each of the tribes after this the duke rose to supremacy over his fellow tribesmen. From the seventh century the tribal duke became an almost independent sovereign. These ducal states originated in the supreme command of large bodies of troops, and then in the administration of large territories by dukes. At the same time the disintegration was aided by the bad administration of the counts, the officials in charge of the territorial districts (*Gau*), who were no longer supervised by the central authority. But what was most disastrous was that an unruly aristocracy sought to control all the economical interests and to exercise arbitrary powers over politics. These sovereign nobles had become powerful through the feudal system, a form of government which gave to medieval Germany its peculiar character. Caesar in his day found that it was customary among the Gauls for a freeman, the "client," voluntarily to enter into a relation of dependence on a "senior." This surrender (*commendatio*) took place in order to obtain the protection of the lord or to gain the usufruct of land. From this Gallic system of clientship there developed, in Frankish times, the conception of the "lord's man" (*homagium* or *hominium*), who by an oath swore fealty to his suzerain and became a *vassus*, or *gasindus*, or *homo*. The result of the growth of this idea was that finally there appeared, throughout the kingdom, along with royalty, powerful territorial lords with their *vassi* or *vassalli*, as their followers were called from the eighth century. The vassals received as fief (*beneficium*) a piece of land of which they enjoyed the use for life. The struggle of the Franks with the Arabs quickened the development of the feudal system, for the necessity of creating an army of horsemen then became evident. Moreover the poorer freemen, depressed in condition by the frequent wars, could not be required to do service as horsemen, a duty that could only be demanded from the vassals of the great landowners. In order to force these territorial lords to do military service fiefs were granted from the already existing public domain, and in their turn the great lords granted part of these fiefs to their retainers. Thus the Frankish king was gradually transformed from a lord of the land and people to a feudal lord over the beneficiaries directly and indirectly dependent upon him by feudal tenure. By the end of the ninth century the feudal system had bound together the greater part of the population.

While in this way the secular aristocracy grew into a power, at the same time the Church was equally strengthened by feudalism. The Christian Church during this era -- a fact of the greatest importance -- was the guardian of the remains of classical culture. With this culture the Church was to endow the Germans. Moreover it was to bring them a great fund of new moral conceptions and principles, much increase in knowledge, and skill in art and handicrafts. The well-knit organization of the Church, the convincing logic of dogma, the grandeur of the doctrine of salvation, the sweet poetry of the liturgy, all these captured the understanding of the simple-minded but fine-natured primitive German. It was the Church, in fact, that first brought the exaggerated individualism of the race under control and developed in it gradually, by means of asceticism, those social virtues essential to the State. The country was converted to Christianity very slowly for the Church had here a difficult problem to solve, namely, to replace the natural conception of life by

an entirely different one that appeared strange to the people. The acceptance of the Christian name and ideas was at first a purely mechanical one, but it became an inner conviction. No people has shown a more logical or deeper comprehension of the organization and saving aims of the Christian Church. None has exhibited a like devotion to the idea of the Church nor did any people contribute more in the Middle Ages to the greatness of the Church than the German. In the conversion of Germany much credit is due the Irish and Scotch, but the real founders of Christianity in Germany are the Anglo-Saxons, above all St. Boniface. Among the early missionaries were: St. Columbanus, the first to come to the Continent (about 583), who laboured in Swabia; Fridolin, the founder of Saeckingen; Pirminius, who established the monastery of Reichenau in 724; and Gallus (d. 645), the founder of St. Gall. The cause of Christianity was furthered in Bavaria by Rupert of Worms (beginning of the seventh century), Corbinian (d. 730), and Emmeram (d. 715). The great organizer of the Church of Bavaria was St. Boniface. The chief herald of the Faith among the Franks was the Scotchman, St. Kilian (end of the seventh century); the Frisians received Christianity through Willibrord (d. 739). The real Apostle of Germany was St. Boniface, whose chief work was in Central Germany and Bavaria. Acting in conjunction with Rome he organized the German Church, and finally in 755 met the death of a martyr at the hands of the Frisians. After the Church had thus obtained a good foothold it soon reached a position of much importance in the eyes of the youthful German peoples. By grants of land the princes gave it an economic power which was greatly increased when many freemen voluntarily became dependents of these new spiritual lords; thus, besides the secular territorial aristocracy, there developed a second power, that of the ecclesiastical princes. Antagonism between these two elements was perceptible at an early date. Pepin sought to remove the difficulty by strengthening the Frankish Church and placing between the secular and spiritual lords the new Carolingian king, who, by the assumption of the title *Dei gratia*, obtained a somewhat religious character.

The Augustinian conception of the Kingdom of God early influenced the Frankish State; political and religious theories unconsciously blended. The union of Church and State seemed the ideal which was to be realized. Each needed the other; the State needed the Church as the only source of real order and true education; the Church needed for its activities the protection of the secular authority. In return for the training in morals and learning that the Church gave, the State granted it large privileges, such as: the *privilegium fori* or freedom from the jurisdiction of the State; immunity, that is exemption from taxes and services to the State, from which gradually grew the right to receive the taxes of the tenants residing on the exempt lands and the right to administer justice to them; further, release from military service; and, finally, the granting of great fiefs that formed the basis of the later ecclesiastical sovereignties. The reverse of this picture soon became apparent; the ecclesiastics to whom had been given lands and offices in fief became dependent on secular lords. Thus the State at an early date had a share in the making of ecclesiastical laws, exercised the right of patronage, appointed to dioceses, and soon undertook, especially in the time of Charles Martel, the secularization of church lands. Consequently the question of the relation of

Church and State soon claimed attention; it was the most important question in the history of the German Middle Ages. Under the first German emperor this problem seemed to find its solution.

Real German history begins with Charlemagne (768-814). The war with the Saxons was the most important one he carried on, and the result of this struggle, of fundamental importance for German history, was that the Saxons were brought into connexion with the other Germanic tribes and did not fall under Scandinavian influence. The lasting union of the Franks, Saxons, Frisians, Thuringians, Hessians, Alamanni, and Bavarians, that Charlemagne effected, formed the basis of a national combination which gradually lost sight of the fact that it was the product of compulsion. From the time of Charlemagne the above-named German tribes lived under Frankish constitution retaining their own old laws, the *leges barbarorum*, which Charlemagne codified. Another point of importance for German development was that Charlemagne fixed the boundary between his domain and the Slavs, including the Wends, on the farther side of the Elbe and Saale Rivers. It is true that Charlemagne did not do all this according to a deliberate plan, but mainly in the endeavour to win these related Germanic peoples over to Christianity. Charlemagne's German policy, therefore, was not a mere brute conquest, but a union which was to be strengthened by the ties of morality and culture to be created by the Christian religion. The amalgamation of the ecclesiastical with the secular elements that had begun in the reign of Pepin reached its completion under Charlemagne. The fact that Pepin obtained papal approval of his kingdom strengthened the bond between the Church and the Frankish kingdom. The consciousness of being the champion of Christianity against the Arabs, moreover, gave to the King of the Franks the religious character of the predestined protectors of the Church; thus he attained a position of great importance in the Kingdom of God. Charlemagne was filled with these ideas; like St. Augustine he hated the supremacy of the heathen empire. The type of God's Kingdom to Charlemagne and his councillors was not the Roman Empire but the Jewish theocracy. This type was kept in view when Charlemagne undertook to give reality to the Kingdom of God. The Frankish king desired like Solomon to be a great ecclesiastical and secular potentate, a royal priest. He was conscious that his conception of his position as the head of the Kingdom of God, according to the German ideas, was opposed to the essence of Roman Caesarism, and for reason he objected to being crowned emperor by the Pope on Christmas Day, 800. On this day the Germanic idea of the Kingdom of God, of which Charlemagne was the representative, bowed to the Roman idea, which regards Rome as its centre, Rome the seat of the old empire and the most sacred place of the Christian world. Charlemagne when emperor still regarded himself as the real leader of the Church. Although in 774 he confirmed the gift of his father to the Roman *res publica*, nevertheless he saw to it that Rome remained connected with the Frankish State; in return it had a claim to Frankish protection. He even interfered in dogmatic questions.

Charlemagne looked upon the revived Roman Empire from the ancient point of view inasmuch as he greatly desired recognition by the Eastern Empire. He regarded his possession of the empire as resulting solely from his own power, consequently he himself crowned his son Louis. Yet on the other hand he looked upon his empire only as a Christian one, whose most noble calling it was

to train up the various races within its borders to the service of God and thus to unify them. The empire rapidly declined under his weak and nerveless son, Louis the Pious (814-40). The decay was hastened by the prevailing idea that this State was the personal property of the sovereign, a view that contained the germ of constant quarrels and necessitated the division of the empire when there were several sons. Louis sought to prevent the dangers of such division by the law of hereditary succession published in 817, by which the sovereign power and the imperial crown were to be passed to the oldest son. This law was probably enacted through the influence of the Church, which maintained positively this unity of the supreme power and the Crown, as being in harmony with the idea of the Kingdom of God, and as besides required by the hierarchical economy of the church organization. When Louis had a fourth son, by his second wife, Judith, he immediately set aside the law of partition of 817 for the benefit of the new heir. An odious struggle broke out between father and sons, and among the sons themselves. In 833 the emperor was captured by his sons at the battle of Luegenfeld (field of lies) near Colmar. Pope Gregory IV was at the time in the camp of the sons. The demeanour of the pope and the humiliating ecclesiastical penance that Louis was compelled to undergo at Soissons made apparent the change that had come about since Charlemagne in the theory of the relations of Church and State. Gregory's view that the Church was under the rule of the representative of Christ, and that it was a higher authority, not only spiritually but also substantially, and therefore politically, had before this found learned defenders in France. In opposition to the oldest son Lothair, Louis and Pepin, sons of Louis the Pious, restored the father to his throne (834), but new rebellions followed, when the sons once more grew dissatisfied.

In 840 the emperor died near Ingelheim. The quarrels of the sons went on after the death of the father, and in 841 Lothair was completely defeated near Fontenay (Fontanetum) by Louis the German and Charles the Bald. The empire now fell apart, not from the force of national hatreds, but in consequence of the partition now made and known as the Treaty of Verdun (August, 843), which divided the territory between the sons of Louis the Pious: Lothair, Louis the German (843-76), and Charles the Bald, and which finally resulted in the complete overthrow of the Carolingian monarchy.

As the imperial power grew weaker, the Church gradually raised itself above the State. The scandalous behaviour of Lothair II, who, divorced himself from his lawful wife in order to marry his concubine, brought deep disgrace on his kingdom. The Church however, now an imposing and well-organized power, sat in judgment on the adulterous king. When Lothair II died, his uncles divided his possessions between them; by the Treaty of Ribemont (Mersen), Lorraine, which lay between the East Frankish Kingdom of Louis the German and the West Frankish Kingdom of Charles the Bald, was assigned to the East Frankish Kingdom. In this way a long-enduring boundary was definitely drawn between the growing powers of Germany and France. By a curious chance this boundary coincided almost exactly with the linguistic dividing line. Charles the Fat (876-87), the last son of Louis the German, united once more the entire empire. But according to old Germanic ideas the weak emperor forfeited his sovereignty by his cowardice when the dreaded Northmen appeared before Paris on one of their frequent incursions into France, and by his incapacity as a

ruler. Consequently the Eastern Franks made his nephew Arnulf (887-99) king. This change was brought about by a revolt of the laity against the bishops in alliance with the emperor. The danger of Norman invasion Arnulf ended once and for all by his victory in 891 at Louvain on the Dyle. In the East also he was victorious after the death (894) of Swatopluk, the great King of Moravia. The conduct of some of the great nobles forced him to turn for aid to the bishops; supported by the Church, he was crowned emperor at Rome in 896. Theoretically his rule extended over the West Frankish Kingdom, but the sway of his son, Louis the Child (899-911), the last descendant of the male line of the German Carolingians, was limited entirely to the East Frankish Kingdom. Both in the East and West Frankish Kingdoms, in this era of confusion, the nobility grew steadily stronger, and freemen in increasing numbers became vassals in order to escape the burdens that the State laid on them; the illusion of the imperial title could no longer give strength to the empire. Vassal princes like Guido and Lamberto of Spoleto, and Berengar of Friuli, were permitted to wear the diadem of the Caesars.

As the idea of political unity declined, that of the unity of the Church increased in power. The Kingdom of God, which the royal priest, Charlemagne, by his overshadowing personality had, in his own opinion, made a fact, proved to be an impossibility. Church and State, which for a short time were united in Charlemagne, had, as early as the reign of Louis the Pious, become separated. The Kingdom of God was now identified with the Church. Pope Nicholas I asserted that the head of the one and indivisible Church could not be subordinate to any secular power, that only the pope could rule the Church, that it was obligatory on princes to obey the pope in spiritual things, and finally that the Carolingians had received their right to rule from the pope. This grand idea of unity, this all-controlling sentiment of a common bond, could not be annihilated even in these troubled times when the papacy was humiliated by petty Italian rulers. The idea of her unity gave the Church the strength to raise herself rapidly to a position higher than that of the State. From the age of St. Boniface the Church in the East Frankish Kingdom had direct relations with Rome, while numerous new churches and monasteries gave her a firm hold in this region. At an early date the Church here controlled the entire religious life and, as the depositary of all culture, the entire intellectual life. She had also gained frequently decisive influence over German economic life, for she disseminated much of the skill and many of the crafts of antiquity. Moreover the Church itself had grown into an economic power in the East Frankish Kingdom. Piety led many to place themselves and their lands under the control of the Church.

There was also in this period a change in social life that was followed by important social consequences. The old militia composed of every freeman capable of bearing arms went to pieces, because the freemen constantly decreased in number. In its stead there arose a higher order in the State, which alone was called on for military service. In this chaotic era the German people made no important advance in civilization. Nevertheless the union that had been formed between Roman and German elements and Christianity prepared the way for a development of the East Frankish Kingdom in civilization from which great results might be expected. At the close of the Carolingian period the external position of the kingdom was a very precarious one. The piratic Northmen boldly

advanced far into the empire; Danes and Slavs continually crossed its borders; but the most dangerous incursions were those of the Magyars, who in 907 brought terrible suffering upon Bavaria; in their marauding expeditions they also ravaged Saxony, Thuringia, and Swabia. It was then that salvation came from the empire itself. The weak authority of the last of the Carolingians, Louis the Child, an infant in years, fell to pieces altogether, and the old ducal form of government revived in the several tribes. This was in accordance with the desires of the people. In these critical times the dukes sought to save the country; still they saw clearly that only a union of all the duchies could successfully ward off the danger from without; the royal power was to find its entire support in the laity. Once more, it is true, the attempt was made by King Conrad I (911-18) to make the Church the basis of the royal power, but the centralizing clerical policy of the king was successfully resisted by the subordinate powers. Henry I (919-36) was the free choice of the lay powers at Fritzlar. On the day he was elected the old theory of the State as the personal estate of the sovereign was finally done away with, and the Frankish realm was transformed into a German one. The manner of his election made plain to Henry the course to be pursued. It was necessary to yield to the wish of the several tribes to have their separate existence with a measure of self-government under the imperial power recognized. Thus the duchies were strengthened at the expense of the Crown. The fame of Henry I was assured by his victory over the Magyars near Merseburg (933). By regaining Lorraine, that had been lost during the reign of Conrad, he secured a bulwark on the side towards France that permitted the uninterrupted consolidation of his realm. The same result was attained on other frontiers by his successful campaigns against the Wends and Bohemians. Henry's kingdom was made up of a confederation of tribes, for the idea of a "King of the Germans" did not yet exist. It was only as the "Holy Roman Empire of the German Nation" that Germany could develop from a union of German tribes to a compact nation. As supporters of the supreme power, as vassals of the emperor, the Germans were united.

This imperial policy was continued by Otto I, the Great (936-73). During his long reign Otto sought to found a strong central power in Germany, an effort at once opposed by the particularistic powers of Germany, who took advantage of disputes in the royal family. Otto proved the necessity of a strong government by his victory over the Magyars near Augsburg (955), one result of which was the reestablishment of the East Mark. After this he was called to Rome by John XII, who had been threatened by Berengarius II of Italy, and by making a treaty that secured to the imperial dignity a share in the election of the pope, he attained the imperial crown, 2 February, 962. It was necessary for Otto to obtain imperial power in order to carry out his politico-ecclesiastical policy. His intention was to make the Church an organic feature of the German constitution. This he could only do if the Church was absolutely under his control, and this could not be attained unless the papacy and Italy were included within the sphere of his power. The emperor's aim was to found his royal power among the Germans, who were strongly inclined to particularism, upon a close union of Church and State. The Germans had now revived the empire and had freed the papacy from its unfortunate entanglement with the nobility of the city of Rome. The papacy rapidly regained strength and quickly renewed the policy of Nicholas I. By safeguarding the unity of the Church of

Western Europe the Germans protected both the peaceful development of civilization, which was dependent upon religion, and the progress of culture which the Church spread. Thus the Germans, in union with the Church, founded the civilization of Western Europe. For Germany itself the heroic age of the medieval emperors was a period of progress in learning. The renaissance of antiquity during the era of the Ottos was hardly more than superficial. Nevertheless it denoted a development in learning, throughout ecclesiastical in character, in marked contrast to the tendencies in the same age of the grammarian Wilgard at Ravenna, who sought to revive not only the literature of ancient times, but also the ideas of antiquity, even when they opposed Christian ideas. Germany now boldly assumed the leadership of Western Europe and thus prevented any other power from claiming the supremacy. Moreover the new empire sought to assert its universal character in France, as well as in Burgundy and Italy. Otto also fixed his eyes on Lower Italy, which was in the hands of the Greeks, but he preferred a peaceful policy with Byzantium. He therefore married his son Otto II, in 972, to the Greek Princess Theophano.

Otto II (973-83) and his son Otto III (983-1002) firmly upheld the union with the Church inaugurated by Otto I. Otto II aimed at a great development of his power along the Mediterranean; these plans naturally turned his mind from a national German policy. His campaign against the Saracens, however, came to a disastrous end in Calabria in 982, and he did not long survive the calamity. His romantic son sought to bring about a complete revival of the ancient empire, the centre of which was to be Rome, as in ancient times. There, in union with the pope, he wished to establish the true Kingdom of God. The pope and the emperor were to be the wielders of a power one and indivisible. This idealistic policy, full of vague abstractions, led to severe German losses in the east, for the Poles and Hungarians once more gained their independence. In Italy Arduin of Ivrea founded a new kingdom; naturally enough the Apennine Peninsula revolted against the German imperial policy. Without possession of Italy, however, the empire was impossible, and the blessings of the Ottonian theory of government were now manifest. The Church became the champion of the unity and legitimacy of the empire.

After the death of Otto III and the collapse of imperialism the Church raised Henry II (1002-24) to the throne. Henry, reviving the policy of Otto I which had been abandoned by Otto III, made Germany and the German Church the basis of his imperial system; he intended to rule the Church as Otto I had done. In 1014 he defeated Arduin and thus attained the Imperial crown. The sickly ruler, whose nervousness caused him to take up projects of which he quickly tired, did his best to repair the losses of the empire on its eastern frontier. He was not able, however, to defeat the Polish King Boleslaw II: all he could do was to strengthen the position of the Germans on the Elbe River by an alliance with the Lusici, a Slavonic tribe. Towards the end of his reign a bitter dispute broke out between the emperor and the bishops. At the Synod of Seligenstadt, in 1023, Archbishop Aribo of Mainz, who was an opponent of the Reform of Cluny, made an appeal to the pope without the permission of the bishop. This ecclesiastical policy of Aribo's would have led in the end to the founding of a national German Church independent of Rome. The greater part of the clergy supported

Aribo, but the emperor held to the party of reform. Henry, however, did not live to see the quarrel settled.

With Conrad II (1024-39) began the sway of the Franconian (Salian) emperors. The sovereigns of this line were vigorous, vehement, and autocratic rulers. Conrad had natural political ability and his reign is the most flourishing era of medieval imperialism. The international position of the empire was excellent. In Italy Conrad strengthened the German power, and his relations with King Canute of Denmark were friendly. Internal disputes kept the Kingdom of Poland from becoming dangerous; moreover, by regaining Lusatia the Germans recovered the old preponderance against the Poles. Important gains were also made in Burgundy, whereby the old Romanic states, France and Italy, were for a long time separated and the great passes of the Alps controlled by the Germans. The close connexion with the empire enabled the German population of north-western Burgundy to preserve its nationality. Conrad had also kept up the close union of the State with the Church and had maintained his authority over the latter. He claimed for himself the same right of ruling the Church that his predecessors had exercised, and like them appointed bishops and abbots; he also reserved to himself the entire control of the property of the Church. Conrad's ecclesiastical policy, however, lacked definiteness; he failed to understand the most important interests of the Church, nor did he grasp the necessity of reform. Neither did he do anything to raise the papacy, discredited by John XIX and Benedict IX, from its dependence on the civil rulers of Rome. The aim of his financial policy was economic emancipation from the Church; royal financial officials took their place alongside of the *ministeriales*, or financial agents, of the bishops and monasteries. Conrad sought to rest his kingdom in Germany on these royal officials and on the petty vassals. In this way the laity was to be the guarantee of the emperor's independence of the episcopate. As he pursued the same methods in Italy, he was able to maintain an independent position between the bishops and the petty Italian despots who were at strife with one another. Thus the ecclesiastical influence in Conrad's theory of government becomes less prominent.

This statesmanlike sovereign was followed by his son, the youthful Henry III (1039-56). Unlike his father Henry had a good education; he had also been trained from an early age in State affairs. He was a born ruler and allowed himself to be influenced by no one; to force of character and courage he added a strong sense of duty. His foreign policy was at first successful. He established the suzerainty of the empire over Hungary, without, however, being always able to maintain it; Bohemia also remained a dependent state. The empire gained a dominant position in Western Europe, and a sense of national pride was awakened in the Germans that opened the way for a national spirit. But the aim of these national aspirations, the hegemony in Western Europe, was a mere phantom. Each time an emperor went to Italy to be crowned that country had to be reconquered. Even at this very time the imperial supremacy was in great danger from the threatened conflict between the imperial and the sacerdotal power, between Church and State. The Church, the only guide on earth to salvation, had attained dominion over mankind, whom it strove to wean from the earthly and to lead to the spiritual. The glaring contrast between the ideal and the reality awoke in thousands the desire to leave the world. A spirit of asceticism, which first appeared in France, took

possession of many hearts. As early as the era of the first Saxon emperors the attempt was made to introduce the reform movement of Cluny into Germany, and in the reign of Henry III this reform had become powerful. Henry himself laid much more stress than his predecessors on the ecclesiastical side of his royal position. His religious views led him to side with the men of Cluny. The great mistake of his ecclesiastical policy was the belief that it was possible to promote this reform of the Church by laying stress on his suzerain authority. He repeatedly called and presided over synods and issued many decisions in Church affairs. His fundamental mistake, the thought that he could transform the Church in the manner desired by the party of reform and at the same time maintain his dominion over it, was also evident in his relations with the papacy. He sought to put an end to the disorder at Rome, caused by the unfortunate schism, by the energetic measure of deposing the three contending popes and raising Clement II to the Apostolic See. Clement crowned him emperor and made him Patrician of Rome. Thus Henry seemed to have regained the same control over the Church that Otto had exercised. But the papacy, purified by the elevated conceptions of the party of reform and freed by Henry from the influence of the degenerate Roman aristocracy, strove to be absolutely independent. The Church was now to be released from all human bonds. The chief aims of the papal policy were the celibacy of the clergy, the presentation of ecclesiastical offices by the Church alone, and the attainment by these means of as great a centralization as possible. Henry had acted with absolute honesty in raising the papacy, but he did not intend that it should outgrow his control. Sincerely pious, he was convinced of the possibility and necessity of complete accord between empire and papacy. His fanciful policy became an unpractical idealism. Consequently the monarchical power began rapidly to decline in strength. Hungary regained freedom, the southern part of Italy was held by the Normans, and the Duchy of Lorraine, already long a source of trouble, maintained its hostility to the king. By the close of the reign of Henry III discontent was universal in the empire, thus permitting a growth of the particularistic powers, especially of the dukes.

When Henry III died Germany had reached a turning-point in its history. His wife Agnes assumed the regency for their four-year-old son, Henry IV (1056-1106), and at once showed her incompetence for the position by granting the great duchies to opponents of the crown. She also sought the support of the lesser nobility and thus excited the hatred of the great princes. A conspiracy of the more powerful nobles, led by Archbishop Anno (Hanno) of Cologne, obtained possession of the royal child by a stratagem at Kaiserswert and took control of the imperial power. Henry IV, however, preferred the guidance of Adalbert, Archbishop of Bremen, who was able for the moment to give the governmental policy a more national character. Thus in 1063 he restored German influence over Hungary, and the aim of his internal policy was to strengthen the central power. At the Diet of Tribur, 1066, however, he was overthrown by the particularists, but the king by now was able to assume control for himself. In the meantime the papacy had been rapidly advancing towards absolute independence. The Curia now extended the meaning of simony to the granting of an ecclesiastical office by a layman and thus demanded an entire change in the conditions of the empire and placed itself in opposition to the imperial power. The ordinances passed in 1059 for the regulation of the papal elections excluded all imperial rights in the same. Conditions in Italy

grew continually more unfavourable for the empire. The chief supporters of the papal policy were the Normans, over whom the pope claimed feudal suzerainty. The German bishops also yielded more and more to the authority of Rome; the Ottonian theory of government was already undermined. The question was now raised: In the Kingdom of God on earth who is to rule, the emperor or the pope? In Rome this question had long been settled. The powerful opponent of Henry, Gregory VII, claimed that the princes should acknowledge the supremacy of the Kingdom of God, and that the laws of God should be everywhere obeyed and carried out. The struggle which now broke out was in principle a conflict concerning the respective rights of the empire and the papacy. But the conflict soon shifted from the spiritual to the secular domain; at last it became a conflict for the possession of Italy, and during the struggle the spiritual and the secular were often confounded. Henry was not a match for the genius of Gregory. He was courageous and intelligent and, though of a passionate nature, fought with dogged obstinacy for the rights of his monarchical power. But Gregory as the representative of the reform movement in the Church, demanding complete liberty for the Church, was too powerful for him. Aided by the inferior nobility, Henry sought to make himself absolute. The particularistic powers, however, insisted upon the maintenance of the constitutional limits of the monarchy. The revolt of the Saxons against the royal authority was led both by spiritual and secular princes, and it was not until after many humiliations that Henry was able to conquer them in the battle on the Unstrut (1075). Directly after this began his conflict with the papacy. The occasion was the appointment of an Archbishop of Milan by the emperor without regard to the election already held by the ecclesiastical party. Gregory VII at once sent a threatening letter to Henry. Angry at this, Henry had the deposition of the pope declared at the Synod of Worms, 24 January, 1076. Gregory now felt himself released from all restraint and excommunicated the emperor. On 16 October, 1076, the German princes decided that the pope should pronounce judgment on the king and that unless Henry were released from excommunication within a year and a day he should lose his crown. Henry now sought to break the alliance between the particularists and the pope by a clever stroke. The German princes he could not win back to his cause, but he might gain over the pope. By a penitential pilgrimage he forced the pope to grant him absolution. Henry appealed to the priest, and Gregory showed his greatness. He released the king from the ban, although by so doing he injured his own interests, which required that he should keep his agreement to act in union with the German princes.

Thus the day of Canossa (2 and 3 February, 1077) was a victory for Henry. It did not, however, mean the coming of peace, for the German confederates of the pope did not recognize the reconciliation at Canossa, and elected Duke Rudolf of Swabia as king at Forchheim, 13 March, 1077. A civil war now broke out in Germany. After long hesitation Gregory finally took the side of Rudolf and once more excommunicated Henry. Soon after this however, Rudolf lost both throne and life in the battle of Hohenmoelsen not far from Merseburg. Henry now abandoned his policy of absolutism, recognizing its impracticability. He returned to the Ottonian theory of government, and the German episcopate, which was embittered by the severity of the ecclesiastical administration of Rome, now came over to the side of the king. Relying upon this strife within the Church, Henry

caused Gregory to be deposed by a synod held at Brixen and Guibert of Ravenna to be elected pope as Clement III. Accompanied by this pope, he went to Rome and was crowned emperor there in 1084. Love for the rights of the Church drove the great Gregory into exile where he soon after died. After the death of his mighty opponent Henry was more powerful than the particularists who had elected a new rival king, Herman of Luxembourg. In 1090 Henry went again to Italy to defend his rights against the two powerful allies of the papacy, the Normans in the south and the Countess Matilda of Tuscany in the north. While he was in Italy his own son Conrad declared himself king in opposition to him. Overwhelmed by this blow, Henry remained inactive in Italy, and it was not until 1097 that he returned to Germany. No reconciliation had been effected between him and Pope Urban II. In Germany Henry sought to restore internal peace, and this popular policy intensified the particularism of the princes. In union with these the king's son, young Henry, rebelled against his father. The pope supported the revolt, and the emperor was unable to cope with so many opponents. In 1105 he abdicated. After this he once more asserted his rights, but death soon closed (1106) this troubled life filled with so many thrilling and tragic events. To Henry should be ascribed the credit of saving the monarchy from the threatened collapse. He has been called the most brilliant representative of the German laity in the early Middle Ages. During his reign began the development, so fruitful in results, of the German cities.

Henry V (1106-25) also adopted the policy of the Ottos. In the numerous discussions of the right of investiture men of sober judgment insisted, as did the emperor, that the latter could not give up the right of the investiture of his vassal bishops with the regalia, that a distinction must be made between the spiritual and secular power of the bishops. The pope now made the strange proposal that the emperor should give up the investiture and the pope the regalia. This proposal to strip the Church of secular power would have led to a revolution in Germany. Not only would the bishops have been unwilling to give up their position as ruling princes, but many nobles, as well as vassals of the Church, would have rebelled. The storm of dissatisfaction which in 1111 broke out in Rome obliged the pope to annul the prohibition of investiture. It was soon seen to be impossible to carry out the permission so granted, and the conflict regarding investitures began again. The ecclesiastical party was again joined by the German princes antagonistic to the emperor, and the imperial forces soon suffered defeats on the Rhine and in Saxony. Consequently the papal party gained ground again in Germany, and the majority of the bishops fell away from Henry. Notwithstanding this he went, in 1116, to Italy to claim the imperial feudal estates of the Countess Matilda, who had died, and to confiscate her freehold property. This action naturally made more difficult the relations between pope and emperor, and in spite of the universal weariness the conflict began anew. The influence of the German secular princes had now to be reckoned with, for at this time certain families of the secular nobility commenced to claim hereditary power and appeared as hereditary dynasties with distinct family names and residences. It was in the age of the Franconian emperors that the dynastic families of the German principalities were founded. These princes acted as an independent power in settling the disagreement between emperor and pope. Callistus II was ready for peace; in 1122 an agreement was reached and the concordat was proclaimed at the Synod

of Worms. In this the pope agreed that in Germany the election of bishops should take place according to canonical procedure in the presence of the king or his representative, and that the bishop-elect should then be invested by the king with the sceptre as a symbol of the regalia. In Germany this investiture was to precede the ecclesiastical consecration, in Italy and Burgundy it was to follow it. The emperor therefore retained all his influence in the appointment to vacant dioceses, and as secular princes the bishops were responsible to him. Notwithstanding this the Concordat of Worms was a defeat for the imperial claims, for the papacy that had been hitherto a subordinate power had now become a power of at least equal rank. It was now entirely free from the control of the German Crown and held an independent position, deriving its dignity wholly from God. The emperor, on the contrary, received his dignity from the papacy. The talented, but intriguing and deceitful, king had greatly strengthened the anti-imperial tendency in all Western Europe. During the great investiture conflict the other kings had freed themselves completely from the suzerainty of the emperor. The pope was the guarantee of their independence, and he had become the representative of the whole of Christendom, while the imperial dignity had lost the attribute of universality. The way was now open to the pope to become the umpire over kings and nations. There was now a truce in the conflict between pope and emperor. Only a minor question had been settled, but the conflict had awakened the intellects of men, and on both sides a voluminous controversial literature appeared. The assertion was now made that the Christian conception of the papacy was not realized by existing conditions. There were also other manifestations of independent thought. The Crusades opened a new world of ideas; historical writing made rapid progress, and art ventured upon new forms in architecture. Commerce and travel increased through the active intercourse with Italy, a state of affairs beneficial to the growth of the cities. Germany grew in civilization although it did not reach the same level of culture which Italy and France had then attained.

Henry V died childless, and his nephew, Duke Frederick of Swabia, the representative of the most powerful ruling family in the empire, hoped to be his successor. The clergy, led by Archbishop Adalbert of Mainz, however, feared that Frederick would continue the ecclesiastical policy of the Franconian emperors, and they succeeded in defeating him as a candidate. At Mainz the majority of the princes voted for Lothair of Supplinburg (1125-37); thus the electors disregarded any hereditary right to the throne. The Hohenstaufen brothers, Frederick and Conrad, did not yield the crown to Lothair without a struggle. The Hohenstaufen family was in possession of the crownlands belonging to the inheritance of the Franconian emperors, and a long struggle ensued over these territories. Lothair's suzerainty was for a while in a very critical position; the Hohenstaufen power increased to such an extent that in 1127 its abettors ventured to proclaim Conrad king. In the end, however, Lothair conquered. A courageous man, but one somewhat inclined to hasty action, he was able to maintain the claims of the empire against Bohemia, Poland, and Denmark. As a statesman, however, Conrad was less aggressive. He allowed the schism of 1130, when Innocent II and Anacletus II contended for the Holy See, to pass by without turning the temporal weakness of the papacy to the benefit of the empire. After a delay Lothair finally recognized Innocent as pope

and brought him to Rome. Here Lothir was crowned emperor in 1133; but the Curia did not agree to his demand for the restoration of the old right of investiture. However, he received the domains of the Countess Matilda as a fief from the pope and thus laid the foundation of the strong position of the house of Welf (Guelph) in Central Europe. In the meantime the two Hohenstaufen brothers were defeated, and Lothair was now able (1136), without fear of an uprising in Germany, to go to Rome for a second time. The object of this further campaign in Italy was to defeat King Roger of Sicily, the protector of the antipope, but the success of the imperial army was only temporary. Differences of opinion as to imperial and papal rights in lower Italy and Sicily endangered at times the good understanding between the two great powers. The emperor grew ill and died on the way home, and after his death the vigorous Roger united all lower Italy, with the exception of Benevento, into a kingdom that held an unrivalled position in Europe for its brilliant and strangely mixed culture. In the struggle between the papacy and the empire this Sicilian kingdom was before long to take an important part.

The political policy of the Church was directed by its distrust of the aims of the Saxon dynasty in lower Italy; consequently by a bold stroke it brought about the election of Conrad III (1138-52), the Hohenstaufen Duke of Franconia, passing over Duke Henry the Proud, ruler of Saxony and Bavaria, and a descendant of Duke Welf (Guelph). The new king demanded from Henry the surrender of the Saxon duchy. Although after a long struggle the double Duchy of Bavaria-Saxony was dissolved, yet the Saxon duchy that was given by the treaty of 1142 to young Henry the Lion, son of Henry the Proud, continued a menace to the Hohenstaufen rule. Conrad was not able to put an end to the disorders in his realm, and the respect felt for the empire on the eastern frontier declined; neither was he able to assert his power in Italy. Yet all these troubles did not prevent his yielding to the fiery eloquence of St. Bernard of Clairvaux and joining the Second Crusade. This crusade, the success of which had been promised by St. Bernard and the pope, failed completely. When Conrad returned home, broken in spirit, he was confronted by the danger of a formidable rising of the Welfs. In 1152 he died. During his reign the intellectual results of the Crusades began to show themselves. Men's imaginations had been stimulated and led them away from traditional medieval sentiment. The world was seized by a romantic impulse and the conception of the Crusades, developed first among the Romanic nations, gave a Romanic colouring to the civilization and morals of the age. For a long time German knighthood, in particular, was characterized by Romanic ideas and manners.

When the new king, Frederick I Barbarossa (1152-90), ascended the throne his German kingdom seemed on the verge of disintegration, and he sought to strengthen his power by a journey through all parts of his realms. Contrary to the policy pursued by his predecessor, he exerted himself to settle the strife between the Welf (Guelph) and Hohenstaufen parties. He wanted to strengthen the Welf power to such extent as to make it evident that this party's interests coincided with those of the Crown. Besides, Saxony, Henry the Lion received also the Duchy of Bavaria which had been taken from his father Henry the Proud. As secular protector of the Church, Frederick came to an agreement with the pope in regard to the latter's adversaries, the citizens of Rome and King Roger

of Sicily. The imperial policy of Frederick was one of vast schemes which he could only carry out when he had a firm footing in Italy. But in Italy the city republics had arisen, and these had entirely cast off his suzerainty. Not realizing the power of resistance of the free communities, Frederick wanted to force the cities to recognize the supremacy of the empire. In case the pope should interfere in the dispute, Frederick was resolved not to permit his intervention in secular affairs. Frederick was filled with an ideal conception of his position as emperor. He believed that the Germans were destined in the history of the world to exercise universal rule. It was this idea, however, that exasperated the Italians and aroused their hatred. Frederick could only carry out this universal policy if Italy were his, and the question of its possession led to renewed struggles between Church and State. When Frederick went to Rome to be crowned emperor in 1155, most of the Italian cities paid their homage to him. On his return home Bavaria was restored in fief to Henry the Lion, the East Mark (later Austria) being first detached from the duchy. This led in the course of time to a development of the mark that proved of great importance for the future history of the empire. Frederick's policy was, in the main, not to interfere with the rights of the German princes as long as they obeyed the laws of the empire. The spiritual princes he attached closely to himself. The most powerful bishops of this period, Rainald of Cologne, Christian of Mainz, and Wichmann of Magdeburg, supported the imperial party. The majority of the bishops looked upon Frederick as a protection against the encroachments of Rome and of the secular rulers. The emperor sought, by strengthening his dynastic power, to make himself independent of both the ecclesiastical and temporal princes; to carry out this policy he depended on his inferior civil officials (*Ministerialen*), who were still serfs, and from whom was hereafter to come the important military nobility. Thus Frederick prepared the way for the flourishing period of chivalry, which was to give its signature to the time now at hand. A romantic, knightly culture arose; poetry flourished; yet the love lyrics of the age often expounded unhealthy views of morals and marriage. Nevertheless, the movement did not penetrate very deep, and the common people remained uncorrupted. Moreover, poetry was not wasted on artificial love songs; Wolfram von Eschenbach had the courage to attempt great problems; Walther von der Vogelweide was the herald of German imperialism. Art undertook to solve great questions, and began to draw its themes from life. Scientific learning, however, had not made equal progress; the time of apprenticeship was not yet passed, while in France and Italy Scholasticism had already shown itself creative. In 1158 Frederick made a second campaign in Italy that closed with the sack of Milan, the subjugation of Italy, and the flight of Pope Alexander III to France. When, however, the rest of Europe sided with the lawful pope, the defeat of the emperor was assured, for the papacy, when supported by all other countries, could not be coerced by Frederick. The emperor's third campaign in Italy (1162-64) ended in the failure of his lower Italian policy, and the outbreak of the plague destroyed the more promising prospects of the fourth expedition. In the fifth campaign (1174) occurred the memorable defeat near Legnano which opened the eyes of the emperor to the necessity of a treaty of peace. In 1177 he made peace with the pope at Venice, and recognized Alexander III, whom he had so obstinately opposed. The papacy had victoriously defended its equality with the empire. In Germany Frederick was obliged to take steps

against the violent proceedings of Henry the Lion. The insubordinate Guelph was deposed and his fiefs divided, Bavaria being given to Otto of Wittelsbach. By the repeated allotment of these lands Frederick in reality helped to break up the empire, and when in 1184 he betrothed his son Henry to Constance, the heiress of the Norman kingdom, he prepared the way for new complications. Frederick took part in the Third Crusade in order that the highest power of Christendom might actively fight against the infidel. He was drowned in Asia Minor, 10 June, 1190; and was, at his death, a popular hero. He had greatly strengthened the feeling of the Germans that they were one great people, though a really national empire was at the time quite out of the question; the achievement of unity was prevented by the international character of intellectual, and partly of social, life.

Frederick's son, Henry VI (1190-97), meant to establish a world power along the Mediterranean. His schemes were opposed by a Saxon-Guelphic combination headed by Richard the Lion-Hearted of England, and also by the German princes, who strove to hinder the increase of the royal power aimed at by Henry. The capture of Richard in 1192 dissolved the league of princes and led to peace with the House of Guelph. In 1194 Henry succeeded in conquering Sicily, and it now seemed as though his imperialistic schemes would gain the day; nevertheless they failed owing to the opposition of the German princes and the pope. When Henry died in 1197 the countries of Western Europe had already taken a stand against the all-embracing schemes of the German emperor. Germany was threatened by the horrors of a civil war. All the anti-national forces were active.

Instead of the crown going to Frederick, son of Henry, who was at Naples, Archbishop Adolph of Cologne sought, by means of the electoral rights of the princes, to obtain it for the son of Henry the Lion, Otto IV (1198-1215). But the Hohenstaufen party anticipated this scheme by securing the election of the popular Duke Philip of Swabia (1198-1208). For the first time the question now arose, which of the princes have the right to vote? The number of electors had not, so far, been defined, yet as early as the election of Lothair and Conrad only the princes had voted, and the right of the Archbishops of Mainz to preside at the election was clearly admitted. Not much later the opinion prevailed that only six ruling princes were entitled to act as electors: the three Rhenish Archbishops, the Rhenish Palgrave, the Duke of Saxony, and the Margrave of Brandenburg; to these was added in the course of time the King of Bohemia. The "Sachsenspiegel" (compilation of Saxon law, c. 1230) caused this view to prevail. At the time of the double election of Otto and Philip the policy pursued by the German princes was a purely selfish one. The energetic Innocent III, who was then pope, claimed the right of deciding the dispute and adjudged the crown to Otto. Thus the latter for a time gained the advantage over Philip. In this conflict the German princes changed sides whenever it seemed to their interest. Archbishop Adolph of Cologne, who had carried the election of Otto, finally fell away from him. Philip gained in authority, and after the successful battle near Wassenberg in 1206 he would have overcome Otto and his ally the papacy, had he not been murdered at Bamberg in 1208 by Otto of Wittelsbach.

Otto IV was now universally acknowledged king. He had promised the pope to give up his claim to the domains of the Countess Matilda of Tuscany and to grant the free election of bishops.

But when at Rome he refused to carry out these promises. However, the pope, though displeased, crowned him emperor in 1209. But when Otto after this wished to revive the imperial claims to Naples, the pope excommunicated him (1210).

In the meantime the supreme position of the empire had become so important a matter that foreign princes meddled in German politics. The great conflict between Philip II Augustus of France and John of England was reflected in the contest between the Guelphs and the Hohenstaufens in Germany. Protected by the French and the pope, Frederick II (1212-50) came to Germany and was crowned at Mainz. The coalition of the English and the Guelphs was broken by the French at the battle of Bouvines (1214), yet Otto kept up the struggle for his rights until his death in 1218. The long conflict had greatly impaired the strength of the Hohenstaufen line; both the imperial and the Hohenstaufen domains had been squandered, and the German princes had become conscious of their power. Like his father, Frederick II made Italy the centre of his policy; but at the same time he intended to keep the control of Germany in his own hands, as the imperial power was connected with this country and he must draw the soldiers needed for his Italian projects from Germany. In order to maintain peace in Germany and to secure the aid of the German princes for his Italian policy Frederick made great concessions to the ecclesiastical princes in the "Confoederatio cum principibus ecclesiasticis" (1220) and to the secular princes in the "Statutum in favorem principum" (1232). These two laws became the basis of an aristocratic constitution for the German Empire. They both contained a large number of separate ordinances, which taken together might serve as a secure basis for the future sovereignty of the local princes. In these statutes the expression *landesherr* (lord of the land) occurs for the first time. In this era Germany was cut up into a large number of territorial sovereignties, consisting of the ecclesiastical territories, the duchies, which, however, were no longer tribal duchies, the margravates, among which the North Mark ruled by Albert the Bear was one of the most important, the palatinates, the countships, and the independent domains of those who had risen from landed proprietors to landed sovereigns. In addition to these were the districts ruled directly by the king through imperial wardens. What Frederick sought to get by favouring the princes he obtained. He had no real interest in Germany, which was at first ruled by the energetic Engelbert, Archbishop of Cologne; after 1220 he visited it only once. It was to him an appendage of Sicily. Frederick's Italian policy threatened the papacy, and he strove by concessions to avert a conflict with the pope. The highly talented, almost learned, emperor was far in advance of his age; an autocratic ruler, he created in lower Italy the first modern state; but by his care for Italy he overstrained the resources of the empire. This brought advantages to the neighbouring Kingdoms of France, and England, now long independent powers, as well as to Hungary, Poland, and the Scandinavian countries. The conflict between the sacerdotal power and the empire had aided the independent development of the states of Western Europe. The possession of Italy and the vow to go on a crusade regulated Frederick's relations with the Curia. In 1212 he was crowned emperor. Repeatedly urged to undertake the promised crusade, and finally excommunicated because he failed to do so, the emperor obtained successes in the East in 1227-29, contrary to the wishes of the pope. The silent acknowledgment of these successes by the Curia was

a victory for Frederick. A rebellion headed by his son Henry was quickly crushed, but the confederates of Henry, the Lombards, assumed a threatening attitude. The emperor was able to bring order out of the confusion in Germany by the policy of yielding to the princes. About the same time began Frederick's struggle with the Lombards and Pope Gregory IX (1227-41). The German princes loyally upheld the emperor, consequently, upon the pope's death, the victory seemed to belong to the imperial party. Innocent IV (1243-54), however, renewed the struggle and from Lyons excommunicated the emperor, whose position now became a serious one. In Germany his son Conrad was obliged to contend with the pretenders, Heinrich Raspe of Thuringia and William of Holland. In Italy, though, conditions seemed favourable, but just at this juncture Frederick died (13 December, 1250), and with his death ended the struggle for the world sovereignty.

The year 1250 marks an era of extraordinary change in Germany. The romance of chivalry passed away, and new forces directed the life of the nation. On account of the extraordinary economic changes the population rapidly increased; the majority of the people were peasants, and this class was rising, but compared with nobles and ecclesiastics the peasants had no weight politically. The important factor of the new era was the municipality, and its development was the beginning of a purely German policy. The glamour of the imperial idea had vanished, men now took their stand on facts and realities. Education found its way among laymen, and it developed with trade. New markets were opened for commerce. The new commercial settlements received "city charters" under the royal cross. The merchants in these settlements needed craftsmen, and these latter from the twelfth century formed themselves into guilds, thus making a new political unit. Councils elected by the cities strove to set aside the former lords of the cities, especially the bishops on the Rhine. In vain the Hohenstaufen rulers supported the bishops against the independence of the towns, but the government in the cities could no longer be put down. In order to protect their rights some of the cities formed alliances, such as the confederation of the Rhenish towns, that was formed as early as the period of the Great Interregnum in order to guard the public peace. These confederations promised to become dangerous opponents of the territorial lords, but such alliances did not become general and, divided among themselves without mutual support, the smaller confederations of towns succumbed to the united princely power. The growth of the towns brought about the ruin of the system of trade by barter or in kind; the rise of the capitalistic system of commerce at once affected German views of life. Up to this time almost wholly absorbed in the supernatural, henceforth the Germans took more interest in worldly things. Unconditional renunciation of the world came to an end, and men grew more matter-of-fact and practical. This change in the German way of thinking was aided by the opposition that sprang up in the towns between the citizens and the former lords of the territory, often the bishops and their clergy. Here and there the influence of the city on the views of the clergy manifested itself. The Dominicans and Franciscans, at least, taught their doctrines in language quite intelligible to the people. The rise of the cities was also of importance in the social life of the day, for the principle, "City air gives freedom" (*Stadtluft macht frei*), created an entirely new class of freemen.

Under the last of the Hohenstaufens the beginnings of a national culture began to appear. Latin had fallen into disuse, and German became the prevailing written language. For the first time Germany felt that she was a nation. This soon brought many Germans into opposition to the Church. In the conflict between the papacy and the empire the former often seemed the opponent of nationalism, and bitterness was felt, not against the idea of the Church, but against its representative. The Germans still remained deeply religious, as was made evident by the German mystics.

The most valuable result of this strengthening of the national feeling was the conquest of what is now the eastern part of the present German Empire. Henry I had sought to attain this end, but it was not until the thirteenth century that it was accomplished, largely by the energy of the Teutonic Order. The Marks of Brandenburg, Pomerania, Prussia, and Silesia were colonized by Germans in a manner that challenges admiration, and German influence advanced as far as the Gulf of Finland. The centres of German civilization in these districts were the Premonstratensian and Cistercian monasteries. This extraordinary success was won by Germans in an era when the imperial government seemed ready to go to pieces. It was the period of the Great Interregnum (1256-73). We find traces of internal chaos as early as the reign of Frederick's son, Conrad IV (1250-54), and the confusion grew worse in the reign of William of Holland, and after him during the nominal reigns of Richard of Cornwall and Alfonso of Castile. At the same time Bohemia rapidly advanced in power under Ottocar II and became a dangerous element for the domestic and foreign policy of Germany. It was Pope Gregory X who restored order in Germany. To carry out his projects in the Holy Land peace must be secured in Western Europe. He therefore commissioned the electoral princes, who now appear for the first time, to elect a new king. In 1273 the princes chose Rudolf of Hapsburg (1273-91), a man of no great family resources. Meantime the imperial power had fallen into decay; the imperial estates had been squandered; there were no imperial taxes; and the old method of obtaining soldiers for the service of the empire had broken down. Rudolf saw how necessary the possession of crown-lands was for the imperial authority, his aim being to create a dynastic force. Ottocar II, King of Bohemia, sought to induce the Curia to object to the election of Rudolf, but the Curia had quickly come to terms with Rudolf concerning conditions in Italy. After his election he demanded from Ottocar the return of the imperial fiefs, and the refusal of the latter led to a war (1276) in which, on the plain called the Marchfeld, Ottocar lost both life and crown. This victory gave Rudolf secure possession of the Austrian provinces. As the German king was not permitted to retain vacant fiefs, he evaded this law by granting Austria, Styria, Carniola, and Lusatia in fief to his sons Albert and Rudolf; in this way the power of the family was greatly increased. Not even Rudolf thought of strengthening the kingly power by constitutional means. He decided to protect the public peace but did not entirely succeed in this. His policy was always influenced by the circumstances of the moment: at one time he favoured the princes, at another the cities; consequently he was never more than half successful. His only great achievement was that he secured for his family a position in Eastern Europe that was destined to give it importance in the future.

Rudolf's successor was Adolf of Nassau (1292-98), not his son Albert, as he had desired. The policy of the new sovereign was to weaken Austria, his natural opponent. Like Rudolf he recognized the necessity of obtaining possessions for his family, for which he tried to lay a foundation in Thuringia. Adolf's success against Frederick the Degenerate of Thuringia caused the electoral princes to incline to Albert. In a battle near Goellheim, fought between Albert and Adolf, Albert, aided by Adolf's numerous enemies, defeated the king, who was killed.

Albert I of Austria, a very able but morose man (1298-1308), was filled with a boundless ambition for power. Without regard for the rights of others, he enforced the recognition of his own rights in his duchy. He desired to preserve the public peace in Germany and opposed the cruel persecution of the Jews customary at this time. He also wished to reorganize the imperial lands, which were to be regained in such a way as to provide a connecting link between the territories of the Hapsburgs in the east and those in the west. If his lands were thus united he would be a match for the strongest of the territorial princes; but the latter opposed this scheme. Albert also roused the anger of the ecclesiastical electors by combining with King Philip IV of France against Boniface VIII, who had not recognized Albert. Boniface now declared his intention of summoning Albert before his tribunal for the murder of Adolf. Supported by the cities, Albert contended successfully with the Rhenish electors, but after a while, in order to carry out his plans for the aggrandizement of his family, he came to terms with the pope, and this put an end to the opposition of these electors. The only opponent of his dynastic schemes now to be dreaded was Wenceslaus II of Bohemia; but the Przemysl line soon died out, and Albert at once claimed their lands and gave them to his son Rudolf as a fief. Before he could carry out his designs on Thuringia he was murdered by John of Swabia, called Johannes Parricida. According to legend, the tyranny of his rule in Switzerland led to a great struggle for freedom on the part of the confederated Swiss. The aim pursued by Albert was always the same: by making Austria powerful to force the other sovereign princes to acknowledge his suzerainty and thus to make the crown hereditary in his family. It is, therefore, not a matter of surprise that after his death the electors decided to select a less mighty prince.

Archbishop Baldwin of Trier managed the matter so skillfully that his brother Henry of Luxembourg (Lützelburg) was chosen (1308-13). A man of gentle, amiable character, Henry was full of visionary enthusiasm, but withal he was a man of energy; consequently he was soon very popular. By birth he was in sympathy with the French. German interests concerned him less. Italy had a great fascination for him; he was ambitious to receive the imperial crown, to be the first after a long interregnum. Clement V had recognized him. The Ghibelline party in Italy greeted him with joy. At first he sought to hold a neutral position in the quarrels of the Italian parties, but this proved to be impossible. The Guelphs, led by King Robert of Naples, began to oppose him. When Henry thereupon wished to attack Naples, the old conflict with the Church again broke out, but death suddenly ended his imperial dreams. Henry's only successful act was the marriage of his son John with the heiress of Bohemia, Elizabeth, the sister of Wenceslaus III; for Germany his reign proved of no advantage. The election of his son John to succeed him was impossible, and the Luxembourg party chose Louis the Bavarian (1314-47) in opposition to Frederick the Fair (1314-30). There was

a double election, each of the candidates being elected by one party, and a civil war broke out, confined, however, mainly to the partisans of the two Houses of Wittelsbach and Hapsburg. The struggle was ended by the capture of Frederick at the battle of Mühldorf (1322); after this Louis was universally recognized.

While this conflict was going on the old strife between Church and State again broke out. At the time of the double election John XXII claimed the rights of an administrator of the country. He asserted that no king chosen by the electors could exercise authority before the pope had given his approval. This over-straining of the papal claims roused a dissatisfaction which continually grew and to which were already added complaints of the worldliness of the Church. The Minorites placed at the disposal of the king eloquent preachers to denounce the worldliness of the papacy, which had rejected as heretical the Franciscan teaching concerning the poverty of Christ and the Apostles. In 1324 Louis was excommunicated because he had not obeyed the papal command to lay down his authority. To this Louis made a sharp reply in the proclamation of Sachsenhausen, in which he denied the claims of the pope and at the same time defended the teaching concerning poverty upheld by the Franciscans. In the conflict with the pope, who supported the candidature of Charles IV of France for the imperial throne, the German cities and the German episcopate, the latter led by Baldwin of Trier, were virtually a unit on the side of Louis. Even the death of Frederick the Fair did not produce a reconciliation with the Curia. It was at this juncture that the writings of the Franciscans, Michael of Cesena and William of Occam began to exert their influence. The spirit of revolution in the Church is shown by the "Defensor Pacis" of Marsilius of Padua, a professor of Paris who went to the Court of Louis the Bavarian. In this the medieval papal ecclesiastical system is attacked. The intellectual ferment enabled Louis to undertake an expedition to Rome. He had been invited to enter Italy by the magnates of northern Italy, especially by the Visconti of Milan and the Scala of Verona. The city of Rome received him with joy, and he was the first German king to receive the imperial crown from the Roman commonwealth which had always regarded itself as the source of all sovereignty. But the fickle populace soon drove him away; the means at his command were too small to carry out the old imperial policy. Again Italy was lost. Notwithstanding the lack of success in Italy, Germany in the main held to Louis, who had been excommunicated again. It was now evident that papal interdicts had largely lost their terrors; the civil communities frequently paid no attention to them, and in some places ecclesiastics were forced, notwithstanding the prohibition, to say Mass. The growth of a worldly spirit in the Church began to undermine respect for it, and Germany was the first country to turn against the ideals of the Middle Ages. Sects opposed to sacerdotalism appeared; mysticism tended to make the soul independent in its progress towards God, without, however, rejecting the sacraments, as was done by some in this era. Yet, unintentionally, mysticism strengthened the tendency to deny the absolute necessity of the intercessory office of the Church. Moreover, mysticism gave a national cast to German religious life, for the intellectual leaders of mysticism, Ekkehard, Suso, and Tauler, wrote and preached in German. The chief strength of this religious movement was among the citizens of the towns. In the conflict between Church and State the cities sided with the emperor, but they were

not yet strong enough without assistance to maintain the authority of a German emperor. Consequently, the position taken by the German princes was decisive for Louis. As he meant to carry on a dynastic policy, as his predecessors had done, he soon came into conflict with these princes, and, in order to be stronger than his opponents, he sought to establish friendly relations with the pope. But although Louis could resolve on vigorous action, yet he lacked the necessary persistence. He was not an able man, nor one of much intellectual power. He tried to make a good impression on every one; as a consequence, he failed with all parties. He opened negotiations with the Curia, but the intrigues of Philip VI of France kept the two parties from concluding peace. This led Louis to take the side of Edward III of England at the beginning of the war between the French and English for the succession to the French throne. This stand won more general sympathy for Louis in Germany. The electors were also influenced by public opinion when they declared at Rense in 1338 that a legitimate German emperor could be created only by their votes; a king so chosen needed no papal recognition, and the pope, by crowning the German king, only gave him the imperial title. Louis was also declared to be entirely without blame in the dispute with the Curia. When Edward III appeared before Louis at Coblenz and the latter appointed him imperial vicar for the territories beyond the Rhine, the emperor had reached the zenith of his power. Nevertheless the fickle Louis, because he hoped, through the mediation of the King of France, to be reconciled with the Curia and to secure the support of the latter for his schemes to aggrandize his family, allied himself with the French in 1341. Instead of peace a worse estrangement with the papal court was the result.

With the consent of the emperor, Margaret Maultasch of Tyrol, who had married John of Luxembourg (Lützelburg), had divorced herself without awaiting the papal decision and married the emperor's son, Louis of Brandenburg. The Luxembourg party at once had recourse to Clement VI. Louis was excommunicated in 1346, and Charles IV of Moravia (1347-78) was, with the help of the pope, chosen German king by five of the electors under humiliating conditions. At first Louis had strong support from the German cities, but his unexpected death secured universal recognition for Charles. Henceforth for nearly a hundred years the Luxembourg-Bohemian dynasty held the throne. The king set up by the Wittelsbach party, Guenther of Schwarzburg, could make no headway against the adroit policy of Charles IV. In 1347 Germany was ravaged by the Black Death; the Jews were immediately accused of poisoning the wells, and a frightful persecution followed. In the midst of the confusion the country was traversed by bands of Flagellants, and these "penitents" were often full of hostility to the Church. While in Italy Petrarch and Cola di Rienzi revived the dream of the universal dominion of the Eternal City, Charles IV regarded Italian affairs with the eyes of a political realist. The Italians said that he went to Rome (1355) to secure the imperial crown like a merchant going to a fair. In Germany Charles sought to settle the election to the crown at the Diets of Nuremberg and Metz in 1356, and he issued the Golden Bull, which was the first attempt to put into writing the more important stipulations of the imperial constitution. Above all, the Bull was intended to regulate the election of the king, and defined what princes should have the electoral vote. The electoral college was to consist of the three Archbishops of Mainz, Trier, and Cologne;

the Count Palatine of the Rhine, the Duke of Saxony (Sachsen-Wittenberg), and the Margrave of Brandenburg; to this number was added later the King of Bohemia. The electors were granted special privileges; besides the royal rights (*regalia*) and those of taxation and coinage, they received the *privilegium de non evocando*, that is, their subjects could not be summoned before the court of another jurisdiction, not even before an imperial one. The royal authority was to find in the electors who were scattered throughout the empire a support against the many petty princes. Other articles of the Golden Bull were to guard the rights of the local princes against their vassals and subjects, especially against the cities. Nothing is said of the share of the pope in the election of the king; the one chosen by the majority of the electors was to be the king. Only the coronation as emperor was left to the pope. The Golden Bull remained the most important part of the fundamental law of the Holy Roman Empire.

Learning flourished under the rule of Charles, who was a scholar among his contemporaries. He was surrounded by highly educated men, one of whom was John of Neumarkt, the head of his chancery. His interest being almost entirely in Bohemia, he showed his care for the advancement of learning chiefly in this country and founded there, 7 April, 1348, the University of Prague. Charles held steadfastly to Catholicism and Christian Scholasticism. But this did not prevent him from carrying on policies independent of the pope. In reorganizing the imperial chancery he encouraged the use of German in the imperial documents and thus assured the victory of the national tongue over Latin. By this action he gave German learning an independent standing.

Charles also furthered the interests of the empire in various other directions. He did not, indeed, overthrow the power of the princes, which had grown strong during the several hundred years of its existence, but he sought by the maintenance of internal peace to preserve his supreme power. To promote the foreign interests of Germany he desired to liberate the papacy from its connexion with France and to persuade the pope to return from Avignon to Rome. Gregory went back to Rome, but the Babylonian Captivity was to be followed by the Great Schism. In the meantime, Charles had largely increased the territorial possession of his family; the Marks of Brandenburg, Lusatia, and Silesia came into his hands. By marriage he hoped to obtain for his son, and thus for his dynasty, both Hungary and Poland. Thus for a time the House of Luxembourg threatened to crash out the Hapsburgs. In two directions only Charles's adroit agreements and diplomatic skill failed of success. The Swiss Confederation seceded more and more completely from the empire, and the cities by their leagues established for themselves an independent position in the empire. Towards the end of his life he secured the election of his son Wenceslaus as German king.

Wenceslaus (1378-1400) reigned without the confirmation of the defenceless pope of that time. The German crown was no longer dependent on the papacy. Other questions far more important than this were now brought into the foreground by the Great Schism. There was a continually growing clamour, which could not be suppressed, for the reform of the Church in its head and members. The demand for reform had infused new life into the whole conception of the Church, and the leaders of this movement still held to Catholic dogmas. The most difficult task of the new king, and one he did not shirk, was to put an end to the schism. He sided with Rome and supported

Urban VI while France, at the head of the Romanic countries, upheld Clement VII. Wenceslaus, however, took no energetic action in ecclesiastical affairs; the internal disorder in Germany did not permit it, for here the confederations of princes, knights, and the cities, struggled with one another. In 1381 the confederation of the Rhenish cities formed a coalition with the league of the Swabian cities and sought with considerable success to obtain the adherence of other Swabian towns and of those of North Germany. Thus strengthened, the cities wished to share in the government of the empire; this desire was opposed by the princes who in military force were superior to the cities. The attempts of the rulers of Austria to overthrow the Swiss confederates failed, but in Germany the army of the Swabian League suffered a crushing defeat in 1388 near Doeffingen. After this Wenceslaus changed his policy and sided with the princes. Confederations of the cities were forbidden. Owing to their lack of union the cities succumbed in this contest for political independence and the territorial princes were the conquerors. The quick-tempered, irascible king sought to strengthen his hold on his hereditary provinces by protecting himself against the other ruling princes, but in this he was not successful. A government by favouritism of the worst kind began which excited the anger of the nobility and the clergy. A dispute with the Archbishop of Prague led to the murder, by the king's command, of the archbishop's vicar-general, John of Pomuk, and this caused open rebellion. In 1394 the nobles with Jost, Margrave of Moravia, as their leader, took the king prisoner; he was soon set free at the instance of the German princes, but his release did not do away with the rule of the nobility in Bohemia. In this era of confusion no attempt was made to oppose the repeated incursions (1388) of Charles VI of France into Germany. Wenceslaus looked on inactively when the French king undertook to carry out a scheme for putting an end to the schism by securing the success of the Avignon pope by a bold stroke; but in 1392 Charles VI became insane, and his plans were brought to nought. The waning influence of the German Empire was everywhere perceptible and called forth universal indignation. The king's lack of capacity for government led the majority of the electors to form a league for the protection of the interests of the country.

Soon after this the three episcopal electors chose Ruprecht, Count Palatine of the Rhine, as King of Germany (1400-10). As only a part of the electors joined in this choice Ruprecht was never more than a pretender, and although he was an ambitious and capable man he never succeeded in uniting the empire. Ruprecht hoped to gain popularity by restoring German influence in northern Italy, and by securing the imperial crown to prove himself the legal sovereign. As Ruprecht had no money, his expedition to Italy was inglorious, and its failure had a bad effect on his position in Germany. Even his final recognition by the pope, who had for a long time held to the Luxembourg dynasty, his faithful supporters, did little to aid Ruprecht's cause, and his throne began to totter. In 1405 Archbishop Johann of Mainz combined the princes against Ruprecht in the League of Marbach which, however, accomplished next to nothing. In the question of the schism Ruprecht supported Boniface IX. As King of the Germans Ruprecht was a failure. During the laxity of government that followed his death the German conquests in the eastern part of the empire were in danger of being lost. A new factor had appeared in history, the Kingdom of Poland.

All this time the confusion in the affairs of the Church had continued to grow worse, and it was now proposed to put an end to the schism by means of a council. The cardinals of the two rival popes called a council at Pisa which deposed Popes Gregory XII and Benedict XIII and elected Alexander V, but Gregory and Benedict could still count on some supporters, and the world thus saw three popes. The greater part of Germany held to the new pope, Alexander V, but the party of the Count Palatine and of the Bishop of Trier held to Gregory. A period of utter confusion and great distress of conscience followed; all the relations of life suffered, the political by no means the least. In Germany the troubles led to a double election; Sigismund of Luxembourg, King of Hungary, the brother of Wenceslaus was elected (1410-37), as was also Jost, Margrave of Moravia. Jost withdrew, and Wenceslaus resigned the government to Sigismund, who in 1411 was generally recognized as emperor. The impotence of the last reign convinced the electors, who had chosen Margrave Jost for reasons of Church politics, that a king who had not large territorial power could accomplish nothing. Consequently they dropped their opposition to Sigismund. The latter's life before his election had been a very eventful one. He had married the daughter and heiress of Louis the Great of Hungary, and had been crowned king of that country in 1387. In the war between Hungary and the Turks he had been completely defeated by Sultan Bajazet; after this he had to contend with a dangerous rebellion in Hungary. Sigismund was talented, eloquent, witty, and exceedingly ambitious; he was inclined to visionary schemes, but he honestly desired to relieve the woeful troubles of his time. In his hereditary dominions, to which Hungary was now added, there was great disorder. Yet notwithstanding this he succeeded in bringing together the great councils of Constance and Basle. Ambition led him to attempt to settle the difficulties in which the Church was involved, but he was also impelled by political considerations. He hoped that a council would aid him in suppressing the religious troubles kindled in his hereditary kingdom of Bohemia by John Hus. It was not zeal for the Church, however, which inspired his interest in the council, as is evident from the general bent of his mind. For with all his interest in literature and learning, Sigismund scrupulously avoided involving himself in theological difficulties; moreover he took pleasure in denouncing the faults of the clergy. Nevertheless it was Sigismund's energy that held together the great council at Constance. It was certainly not his fault that many were not satisfied with the result of this and the following council. The forcible interference of the Council of Constance in the religious difficulties of Bohemia and the burning of John Hus were injurious to Sigismund's dynastic interests, and not in accordance with his political schemes. In Bohemia and Moravia the Hussites at once strove to prevent the king from taking possession of these countries; and it, especially in Bohemia, was a violent religious and national outbreak. The king was held directly responsible for the burning of the national hero and saint. Fanatical hordes led by Ziska repeatedly overthrew Sigismund's army in his crusade against the Hussites, and the storm spread over the adjacent provinces of the empire. Bavaria, Franconia, Saxony, and Silesia were terribly devastated. The imperial government broke down completely. The selfishness of the cities prevented the reform of the German military system, even after its necessity had been proved by further successes of the

Hussites. In 1427 an imperial law for the levying of a war-tax was laid before the Diet at Frankfurt, but it was never carried out.

In addition to the troubles in Bohemia, Sigismund's already insecure position was made more precarious by a fresh invasion of Hungary by the Turks. The only help he received was from Duke Albert V of Austria, his son-in-law and the prospective heir of the great inheritance of the Luxembourg possessions. The jealousy among the German states prevented common action against both foes. Sigismund's chief ambition, after the reunion and reformation of the Church, to unite all the nations of Western Europe in a war against the Turks, became more and more hopeless. The defeat of the Hussites appeared equally impossible, and negotiations were opened with them, peace being finally arranged at Basle. Sigismund induced the pope to weaken in his attitude towards the conciliar theory, and especially to the Council of Basle which was to deal with the Hussite difficulties. To gain his point he had gone to Rome, where he was crowned emperor in 1433. Even in Bohemia where the existing anarchy had been increased by a new religious quarrel, where the moderate Calixtines had obtained a decisive victory over the Taborites under Procopius the Great in 1434, the need of peace grew more and more intense. The year previous to this, 1433, a commission of the Council of Basle had made a number of concessions to the Hussites in the Compact of Basle or of Prague; among these was the granting of the Cup to the laity. On the basis of the Compact a peace was agreed to, which was followed by the recognition (1436) of Sigismund as king in Bohemia. When this was attained Sigismund seemed to lose all concern for the reform of the Church and empire in which before he had shown so keen and active an interest. He can hardly be blamed for the boundless selfishness and jealousy of the princes repeatedly wrecked the work of reform; and the whole responsibility for the scanty gains for the empire achieved during his reign should not be laid on his shoulders. Only two of his measures were to have permanent existence: the transfer of the Mark of Brandenburg to the Hohenzollerns, and the granting of electoral Saxony to the House of Wettin. The great councils passed without bringing the fervently desired reform. Great changes were witnessed in these assemblies. At Basle the pope was regarded simply as a representative of the Church, and the superiority of the council over the pope was openly declared. In 1433 Procopius had been allowed to enter Basle at the head of his heretical followers and to set forth his opinions before the assembled members of the council without molestation. At Basle opinions which were signs of a revolutionary movement in the Church repeatedly appeared. In character this council differed entirely from all earlier ones; the excitement was so great that tumults and brawls occurred. Contrary to the wishes of Rome the council remained at Basle; the fear was that if it were transferred to Italian soil the work of reform would be forgotten. Yet the honest intentions of the majority of the members cannot be doubted. In the end the pope was victorious, and the council was transferred to Ferrara. Some of the members remained at Basle and the spectacle of a conciliar schism was offered to the world.

In this troubled era Albert II (1438-39), Duke of Austria, was chosen emperor. The electors recognized the fact that the centre of gravity of the empire now lay towards the east. Albert, member of the Hapsburg family, had not put himself forward as a candidate, and the electors probably

selected him through fear that the important and necessary eastern territories might fall away from the empire. Before he could come to Western Germany Albert, a rough soldier, died during a campaign against the Turks.

The election now went to the head of the Hapsburg family, the inert and indolent Frederick III, who, as King of the Romans, was Frederick IV (1440-93). During his reign the work of reform in the empire fell completely into abeyance. He too was obliged to face the difficulties in the Church. The electors had decided to remain neutral in the dispute between the pope and the Council of Basle, but this neutrality had been broken, inasmuch as the Diet of Mainz in 1439 accepted the reform decree of Basle, with exception of the assertion of the superiority of the council over the pope. Henceforth bishops and abbots were to be elected canonically, but the king had the right to secure the election of suitable persons by negotiation. Papal reservations and annates were abolished. The Council of Basle, however, held firm]y to its exaggerated conception of the powers of a council, and its members wished to establish the dogma of conciliar superiority by deposing Pope Eugene IV. In this dispute the electors remained neutral. The reform of the Church was more and more lost sight of by the Council of Basle in its struggle with the pope. Frederick, who was appealed to by both Rome and Basle, at first remained neutral; then he proposed the calling of a new council to reunite divided Christianity. Western Europe gradually turned again to the rightful pope, and the pope elected at Basle, Felix V, received but slight recognition. For a time the German attitude of neutrality was maintained, but after a while Frederick gave the impulse to the universal recognition of Pope Eugene. This was brought about by Aeneas Sylvius, later Pius II, an adroit diplomat who was able to influence the king and the leading princes. An agreement was made with Rome in the Concordat of Vienna (1448) in which the Curia made but trifling concessions, while the question of reform received scant consideration. From now on the Synod of Basle, transferred to Lausanne, had only a shadowy existence. The Curia, although sorely pressed, had once more conquered. The general anxiety to avoid a new schism in the Church had far more to do with the settlement of these ecclesiastical troubles than the interference of Frederick. Moreover Frederick showed his lack of skill in other ways. In 1444 the Swiss at the battle of St. Jakob on the Birs, not far from Basle, by their extraordinary courage defeated his French mercenaries, called Armagnacs, and thus frustrated his schemes for restoring the control of the Hapsburgs over the Swiss League. In spite of the constant disorders in the empire and the frequent wars, Frederick never wavered in his belief in the future greatness of the Hapsburg dynasty. It was this confidence that in 1452 led him to Rome, where he was crowned emperor by the pope, the last German king to be crowned at Rome. Directly afterwards came the capture of Constantinople by the Turks, which obliged the emperor to take up arms for the defence of the eastern frontier of his realm. Yet he could neither maintain peace within the empire nor its most important rights. Luxembourg and the possessions of the Wittelsbach family in the Netherlands fell into the hands of Burgundy, the Poles annexed West Prussia, and the remnant of the Teutonic Order in East Prussia was obliged to recognize the suzerainty of the Polish king. Thus the Germanizing influences that had been at work for centuries in what is now the eastern part of the German Empire were destroyed.

The complete breakdown of the power of the empire called forth the demand that the emperor should be either deposed or have a coadjutor, but the lack of harmony among the electors prevented any change. The clamour for internal reform grew louder, but nothing was done except to enact laws for the maintenance of the public peace. During this confusion Frederick's position in his hereditary possessions became very precarious. The Czechs had held the preponderating power in Bohemia ever since the time of the Hussite troubles and now elected George of Podiebrad as king. The Hungarians also chose a ruler for themselves, electing the hero of the wars with the Turks, Matthias I Corvinus. Matthias soon overthrew the Bohemian king, and in 1487 apparently intended to form a great kingdom by uniting the eastern German provinces with the Bohemian, Moravian, and Hungarian territories. Important changes also occurred in the northern part of Germany. The Counts of Holstein, who had carried the German nationality into the northern territory of what is now Germany, had received Schleswig as early as 1386 in fief from Denmark; the two provinces, Holstein and Schleswig, soon grew together. After the death of the last Count of Holstein, King Christian of Denmark was in 1460 elected duke by Schleswig and Holstein. In this way he became a prince of the empire, a point of importance in the near future. This was afterwards to influence the position of the Baltic countries and the German interests there. For centuries the centre of the empire had been in the south, and Germany had no maritime interests. In this case also, as in the Germanization of the east, self-help was the means of attaining the desired end. The Hanseatic League, a union of German mercantile guilds, rapidly extended from Cologne to Reval on the Gulf of Finland. From the middle of the thirteenth century the chief towns of the League were Luebeck and Hamburg. German commerce flourished on all waters, for the members of the League carried the fame of their country across all the seas surrounding the Europe of that day. It is in fact a striking phenomenon that the national feeling was invigorated, while the strength of the empire was weakened by the division into so many petty sovereignties. The Hanseatic League maintained its ascendancy in the Baltic as late as the fifteenth and sixteenth centuries.

At the same time a great power threatened to spring up in the west. By peaceful agreement Charles the Bold, Duke of Burgundy (1467-77), attempted to secure Frederick's consent to his election as King of the Romans and to the elevation of his possessions to the rank of an independent kingdom. But all these ambitious plans came to an end upon the death of Charles at the battle of Nancy in 1477. The duke's possessions fell to Louis XI of France, while Maximilian, son of the Emperor Frederick and son-in-law of Charles the Bold, hastened to the Netherlands, which he secured for himself (1479) by the brilliant battle at Guinegate. He was not, however, able to make himself master of Burgundy and Artois. Moreover, Flanders was not willing to submit to the new regime and it was not until 1489 that it was completely subdued. Somewhat later, on the death of Matthias Corvinus in 1490, Maximilian's energetic action gained for his dynasty the future possession of Hungary and Bohemia, while at the same time he reunited the Tyrol with Austria. Consequently when the old emperor died, all looked to the knightly hero Maximilian for the restoration of the empire.

Thus the outlook was by no means unfavourable at the time Maximilian I (1493-1519) ascended the throne. There were even indications of a healthier condition of internal affairs. The Swabian League, made up of the free cities and of the knights, sought, especially in 1486, to effect an adjustment of those interests of the different estates which most threatened the existence of the empire. Another favourable sign was the rapid development in civilization and culture of the several principalities. No less promising was the decision of the electors, now that the imperial authority had shown its entire impotence to check further decentralization. Turbulent agitation for reform in the cities was another important indication in the same direction. Maximilian tried by vigorous reforms to win the good will of the cities, the aid of which would be essential to him in the expected war with France, but the obstacles to be overcome before reforms could be introduced seemed steadily to increase. The most serious difficulty was and remained the antagonism between the interests of the empire and those of the princes. Maximilian, with his dynastic resources, which were made up of very heterogeneous elements, was not able to overcome these opposing forces. Thus the Diet of Worms in 1495 could not do much to promote reform on account of the opposing interests of the ruling princes, the free knights of the empire, and the imperial cities. At this diet the "Universal Pacification of the Empire" was proclaimed. All private wars were forbidden. An Imperial Chamber was established as a perpetual supreme court for the maintenance of the public peace, and the appointments to it were made by the emperor and the Estates of the empire. So many matters, however, were turned over to this court that it was condemned to inactivity from the outset. Nor was the Imperial Chamber able to promote the public peace, as it lacked all power of enforcing its decrees. Order in the empire could not be attained until the subordinate rulers became strong enough to exercise a vigorous police power in their territories. Maximilian had only agreed to the establishment of this court on condition that a general imperial tax, "the common penny," and military help against France and the Turks should be promised him. Concessions of a very different character had also been demanded by the ruling princes from the king. The powerful Archbishop of Mainz, Berthold of Henneberg, was the first to express the opinion that the administration of the empire should be placed in the hands of the electors, without, however, doing away with the monarchy. This proposition of the Diet of Worms was rejected by Maximilian. Five years later, however, when the promised financial and military aid was not forthcoming, he consented to the appointment of a permanent Imperial Council at Nuremberg. If this council had maintained an active existence for any length of time the king would have become a mere puppet. But after two years the royal power proved strong enough to break down the unnatural limitations imposed on it by the Estates.

During these constitutional struggles within the empire the hostile feeling between France and Germany continued to grow. France, now greatly increased in power, wished to gain a firm foothold in the Italian peninsula, and put forward claims to Naples and Milan. Thus began the long struggle of the Hapsburg dynasty with France for the possession of Italy. Maximilian was unable to checkmate the Italian schemes of the French king. In the end Maximilian even changed his policy, for, in order to gain assistance against Venice, he allied himself with France. Yet even now he reaped no laurels

in Italy. In the Swabian war also, which the Swiss confederated cantons carried on against the Swabian League, his intervention was unsuccessful. As a matter of fact Maximilian was obliged, in the Treaty of Basle (1501), to acknowledge the independence of the Swiss Confederation. In the course of these wars the Swiss had become enthusiastic soldiers, and after this Switzerland could furnish or refuse entire armies of mercenaries, in this way attaining European importance in the great struggle of the Hapsburgs with France. The work of reform in the empire, however, came to a complete standstill on account of these unsuccessful foreign undertakings. The only permanent result of all these efforts was the Imperial Chamber. The course of history could not be reversed: the territorial development of the separate states had been too logical to allow its reversal. A strengthening of the central administration, the preliminary condition for a reform of the empire, was no longer possible. In 1508 Maximilian had assumed the title of "Elected Roman Emperor," thus proclaiming that the imperial dignity was independent of papal confirmation. Restlessly active, he staked everything on the success of those foreign policies that would strengthen his royal power. It was for this reason that he finally returned to his earlier course of action and joined the Holy League against France. The brilliant success of Francis I over the Swiss at Marignano (1515) forced Maximilian to agree to a peace by which the French received Milan, and Venice obtained Verona. In the meantime various imperial diets again took up the question of reform, but the whole reform movement failed entirely, and the separate states gained a complete victory over the central administration. At Maximilian's death practically nothing had been accomplished for the constitution of the empire.

Political and cultural life followed the course of development we have described, the foci being in the several states. Among these states the most prominent were the electoral principalities, which had been granted special honours and privileges by the Golden Bull. The three Rhenish electors were the most important political personages. Saxony was much increased in size by the addition of Meissen. It would have become the leading state of northern Germany had not its territories been divided in 1485 between the Albertine and Ernestine branches of the ruling family. The Electoral Mark of Brandenburg, acquire in 1417 by the Hohenzollerns, was still in the beginnings of its growth. The Hussite wars had almost entirely estranged Bohemia from the empire. The Palatinate of the Rhine, always a home of culture, was still one of its centres. The Duchies of Brunswick-Lueneburg and Bavaria were also prominent. In 1495 the able Counts of Wirtemberg (Württemberg) received Countship of Swabia, which was raised to a duchy. Baden grew into a principality more slowly. More rapid was the development of Hesse, whose sovereigns under the title of Landgraves, were soon to come into prominence. The future of the empire depended on these minor states. The empire lacked imperial civil officials, imperial taxes, an imperial army, a general and systematized administration of imperial justice, while in these subordinate states there arose a defined government, a centralization of the civil officials, a systematic administration of law. This is also true of Maximilian's hereditary possessions, the Austrian provinces. The leaders of progress in this respect also were the imperial cities, in which intellectual life began to flourish. In art they produced an Albrecht Durer and the two Holbeins. A darker side, however, was not

lacking to this brilliant city life. Bloody outbreaks were often caused by a restless proletariat. Dissatisfaction was also rife among the free knights of the empire who had lost their former importance in consequence of the change in the military system, which had again made infantry the decisive element in battle. Moreover discontent was at work among the peasantry. The knights became robber-knights and highwaymen. Though banned by the empire, Franz von Sickingen, without authority, carried on war with the city of Worms. The economic changes had even more ruinous consequences for the peasantry. The age of discovery, of the growth of commerce, and of the great inventions, is also the age in which capital made its appearance as the great power of the world. There was a change in the value of money which brought severe suffering upon the peasantry which was despised and politically without rights, especially in the thickly populated southern part of Germany. Communistic writings appeared, which discussed the position of the peasants. The unrest increased in Franconia, Swabia, and on the upper Rhine, and revolts occurred. It was proposed to found a communistic kingdom of God and all hopes were placed on a strong emperor. Mixed with these desires was the expectation of a thorough reform of ecclesiastical affairs concerning which dissatisfaction was loudly expressed.

The social-religious restlessness continually increased. The period of political confusion had not passed by without leaving its impress on the German character. The brilliant exterior of life covered but thinly the brutality within. There was widespread evidence of the lack of morality in domestic life, of barbarity in the administration of justice, and of inhumanity in war. Loyalty to the Church continually decreased, although a rich and voluminous religious literature had been disseminated by the art of printing. Great preachers, like Geiler von Kaysersberg at Strasburg, also appeared at this time. The Brethren of the Common Life took for their ideal the abnegation of the world. But all this failed to prevent the decline of the authoritative influence of the Church on the life of the people. The Great Schism had severely shaken the position of the papacy. The common people were estranged from the Church. A craving for religious self-help arose, and religious movements antagonistic to the Church won large followings. German learning loosened the bond that up to then had united it to theology. A new intellectual movement disputed the dominance of Scholasticism at the universities. Nicholas of Cusa, Æneas Sylvius, and Gregor von Heimburg prepared the way for Humanism. The medieval ideals having apparently lost their attraction, men turned to others, which advocated the world and its pleasures in opposition to self-abnegation, and instead of medieval universalism preached the freedom of the individual.

In the second half of the fifteenth century Italian Humanism entered Germany in order to break down here as it had done in Italy the absolute domination of the ecclesiastical conception of the world. But Humanism in Germany assumed an entirely different form. In Germany the end sought was not beauty of form in learning, art, and life; here it manifested, rather, a practical, pedagogical, and, finally, religious tendency. Aided by the art of printing, humanism by its delight in experiment and induction, roused other sciences to fresh life, such as the science of history and especially the natural sciences. Individualism, moreover, strengthened the national sentiment and was a powerful force in overthrowing medieval universalism, and in putting an end to the ideal of the medieval

world, the universality of the Kingdom of God. At the close of Maximilian's reign the signs of the times were undoubtedly very threatening, yet closer investigation shows that the Christian idea was still powerful. Notwithstanding the turning away of many from the Church, there were still men in Germany who were filled with this idea. These men did not conceal from themselves the necessity of genuine moral reform. The same power and intensity of Christian feeling that had built the great cathedrals in the later Middle Ages was still alive in the more serious minded part of the nation. Only the elect few carried these feelings over into the succeeding age, and with them the certain expectation of the reform of the Church from within.

II. FROM 1556 TO 1618

After the death of Maximilian I the two great competitors for the imperial crown were Francis I of France and Charles, Maximilian's grandson. Notwithstanding the opposition of Leo X and the alienation of French sympathies, the choice of the electors fell on Charles (28 June, 1519), who was crowned as Charles V at Aachen, on 23 October, 1520, and by Clement VII at Bologna, on 23 February, 1530. In January, 1521, he opened the Diet of Worms and his administration of the Holy Roman Empire lasted until his abdication. In 1556 Charles V resigned the imperial throne. This act implied a serious break in the continuity of the political and religious history of the German people. Charles's reign had lasted for more than a generation, but only an insignificant part of it had been devoted to Germany. His attention had been mainly given to the Netherlands, to Spain, and to the wars with France and the Turks. Consequently from 1520 the defection from the Church had made more and more rapid headway, in spite of the emperor's prohibitory edicts issued at the Diet of Worms (1521) and at the Diet of Augsburg (1530), and shortly after 1540 this apostasy threatened to affect the whole of Germany. At the same time the separatist tendencies of the ruling princes increased in strength. It was not until towards the end of his reign that Charles took measures to check the princes of the empire. By the war in Gelderland (1543), the deposition of the Archbishop of Cologne (1547), and the Smalkaldic War (1546-47), he succeeded in bringing the triumphant career of Protestantism to a standstill, thus saving the greater part of western and southern Germany to Catholicism. Driven from these territories Protestantism overran, during the following decades, the Bavarian and Bohemian-Austrian provinces in the south-east. But even there it was not able to maintain itself. On the other hand, Charles did not succeed in forcing the princes to return to their proper position in the empire and to subordination to the emperor. The most important of the princes were the rulers of the northern states; these were in no wise affected by Charles's military successes, as he did not push his operations as far as northern Germany. The Dukes of Saxon and Bavaria also, who were friendly to Charles and took part in his campaigns, suffered no curtailment of their power. The partial failure of Charles determined the future development of the empire, the basis of which was laid down in the recess of the Imperial Diet of 1555. By it, in the so-called Religious Peace of Augsburg, Germany was divided between the Catholics and the adherents of the Augsburg Confession, and the territorial princes were practically made the political arbiters of the empire. The principle, *cujus regio, ejus religio*, was recognized. The Imperial Chamber

(*Reichskammergericht*) was subjected to the influence of the Estates of the empire. In the newly instituted system of administration by "circles" also, the control of the emperor was no longer permitted. Further, the permanent council of administration (*Reichsdeputationstag*), an organ of centralization developed in 1558 from the system of "circles," was summoned and presided over by the Elector of Mainz as chancellor of the empire and not by the emperor. Economical and judicial legislation devolved on the separate states. At the Diet of Speyer (1570) the princes annulled the supreme authority of the emperor in military matters.

These events implied not only a change in the government of the empire, so that it was controlled by the electors and not by the emperor, but the empire itself became almost a shadow incapable of great administrative actions. Its constitutional powers waned; diets were seldom convoked (only ten up to 1618), the decisions of the Imperial Chamber were not carried out, the administration by "circles" did not take root. The empire failed just as signally, as a European power, in maintaining its interests during the great wars of the reign of Philip II in Western Europe, an exception being the Pacification of Cologne (1579), which sought to restore order in the Netherlands, but to which little heed was paid. Not even the boundaries of the empire were maintained. From about 1580 the Spaniards and Dutch established themselves in the Rhine provinces and Emden, and Spain sought in addition to obtain Alsace. France entangled as many of the south-western sections of the empire as possible in its intrigues, especially the city of Strasburg. James I of England married his daughter to the Elector Palatine. On the Baltic coast the Swedes, Russians, and Poles despoiled the Germans of the more distant territories colonized by them, while the Danes settled in the south-west corner of the Baltic. At the same time the Dutch overthrew the economic supremacy of the Hanseatic League in the Baltic Sea and German Ocean. On the Danube the Hapsburgs were compelled to buy an armistice with the Turks by the payment of tribute. The blame for the helpless condition of the empire rested principally on the reigning princes. They took no interest in its affairs, not because they were lacking in German sentiment, but because the horizon of their ideas was still too restricted, and because either they gave little thought to politics or their attention was absorbed by the details of administration within their own dominions. The governmental organization of their principalities was still very imperfect. The conservation and gradual development of their territories engrossed the energies of the princes, especially of the most powerful among them, the Elector Augustus of Saxony (1553-86) and Duke Albert V of Bavaria (1550-89). They, therefore, avoided war above all things. The only alliance among them that had any stability at that time, the "Landsberg League" of southern Germany (1556-90), had, for its sole object, the maintenance of peace.

The emperors of this period, Ferdinand I (1556-64), Maximilian II (1564-76), Rudolf II (1576-1612), and Matthias (1612-19), not only failed to arouse the princes to a more intelligent treatment of the affairs of the empire, but by their own policy they encouraged the princes to pursue purely personal ends. For, unlike Charles V who had ruled a world-empire, his successors governed territories, the political importance of which barely exceeded that of the majority of German states, and which only surpassed these latter in extent. Accordingly, as none of them were men of pre-eminent ability, their political aims were narrow, their need of peace urgent, and their credit

inadequate, while the credit of the western powers had largely developed since the time of Charles V. Moreover they had harder conditions to face in their own dominions than the other princes. Most of their territories were in the eastern part of Europe where, from the end of the fifteenth century, the landed petty nobles, who formed a large class, opposed with ever-increasing success the progress of the commonalty and the introduction of orderly administration under the control of the sovereign. With this inferior nobility in the dominions of the German Hapsburgs, the Protestants, who attracted to themselves all the opposing elements, made common cause. Thus the emperors were by degrees so harassed in their family possessions that, towards the end of Rudolf's reign, the power fell into the hands of the nobility, and Matthias, though advised by his able minister Cardinal Klesl, was hardly able to maintain his authority.

In the period from 1556 to 1618 the only general movement in the inner politics of the empire, and one that caused important changes in the relative influence of the German rulers, namely, the endeavour to place the ecclesiastical principalities in the hands of the younger sons of reigning princes, was entirely due to the desire of these princes to increase their territories. The ecclesiastical domains in the eastern provinces of Germany were few and insignificant, whereas in the north-west as well as throughout the west and south they were numerous, some being large in extent and of great importance. With exception of the territorially powerful Diocese of Münster and the small diocese of Hildesheim, those in the east and north came under the control of Protestant princes as "administrators" to the aggrandizement of the Houses of Wettin, Hohenzollern, and Guelph. In this way these territories were made ripe for secularization. Bavarian princes became Bishops of Cologne and Hildesheim, which were, thereby, saved from the fate that befell the others. These measures quickened the process of consolidation by which the territories of a few dynastic houses in northern Germany steadily grew in extent, the result being of considerable importance in the future political development of Germany. On the other hand, the attempts of the princes to annex the spiritual principalities of southern Germany failed. Protestantism entered these territories at a later date and with less force than it had in those of northern Germany. Consequently the ecclesiastical lands in the south had more power of resistance than those in the north, while the princes were weaker, because their number was large and their possessions all small, excepting what belonged to the Austrian Hapsburgs on the Upper Rhine and perhaps also the territory belonging to Würtemberg. In these circumstances the Ecclesiastical Reservation (*Reservatum Ecclesiasticum*), adopted at the instance of the Catholics in the Recess of the Imperial Diet of 1555, proved an effective precautionary measure in southern Germany. It provided that any bishop or abbot who turned Protestant could not take advantage of the rule *cujus regio, ejus religio*, but must resign.

The chief opponents of the ecclesiastical principalities in southern Germany were the representatives of the House of Wittelsbach, rulers of the Palatinates and of Bavaria. Prominent because of their noble descent, the Elector Palatine being in fact the ranking temporal elector, they were all poor in land. The branch that ruled the Palatinate of Neuburg acquired a heritage on the Lower Rhine by marrying into the ducal House of Cleves-Juelich, which was becoming extinct. The other branches sought to extend their domains at the expense of their neighbours. What decided

the predominance of the Catholics in the south was the result of two movements which settled the question whether the Protestants, in spite of the successes in 1543-47 of Charles V, were finally to seize Cologne and the whole country of the Lower Rhine and from these centres crush the Catholics of southern Germany. In the first of these contests, the "Cologne War" (1582-84), which arose from the apostasy of Archbishop Gebhard Truchsess, the last Archbishop of Cologne who was not a Bavarian, the Catholics were successful. In the second, the contest over the Cleves-Juelich succession on the extinction of the native ducal family, the inheritance, it is true, passed to Protestant rulers, the Palatines of Neuburg and the Hohenzollerns; but of these the Neuburg line became Catholic in 1612, so that the danger was dispelled once more. As a consequence the Catholic Church gained sufficient time, after the Council of Trent, to accomplish gradually the reconversion of the greater part of southern and western Germany, especially since Bavaria in the south, and Münster as well as Cologne in the west, remained faithful to it. The political consequence of the Catholic victory in the south-west was that this part of the empire, in contrast to the northern sections, continued to be split up into many principalities. This caused a constant state of unrest among the reigning princes and the nobles of the empire in south-western Germany. The electors palatine, especially, were dissatisfied with their fortunes. They pursued within the empire a policy of hostility to the Catholics and to the imperial house that became more and more reckless with each succeeding decade. Moreover they were in league with France and other foreign countries. In accordance with this policy they turned from the Lutheran to the Calvinistic faith and put themselves at the head of all the discontented elements in the empire. Up to 1591 their aim was to bring about a union of all the German Protestant princes, including the Lutheran, for the purpose of enforcing the claims of Protestantism in south-western Germany. Even Saxony eventually took part in these negotiations. At the same time Calvinism also penetrated surreptitiously into central Germany (the so-called Crypto-Calvinism). But in 1592 a complete revulsion took place in Saxony. After that, the only remaining adherents of the palatine princes in central Germany were a few petty reigning princes and counts of that section. One of them, Christian of Anhalt, appears actually to have guided the policies of the electoral palatinate from 1592-1620. After sixteen years more of persistent urging, a few princes of south-western Germany joined the palatine princes in 1608 to form the "Protestant Union." Their value as allies, however, was in inverse ratio to their historical fame. The hopes of foreign succour that the palatine princes had entertained also proved vain; in 1609 the Netherlands concluded an armistice with Spain; in 1610 Henry IV of France was assassinated. In their disappointment the Calvinists brought the entire machinery of the empire to a standstill by breaking up the Imperial Diet in 1613. In their freebooting temper the party was ready to snatch at whatsoever spoil presented itself.

The Calvinistic party was, nevertheless, too weak to inflict any serious harm. The Lutherans, under the leadership of Saxony, drew back more and more. The Catholics, led by Bavaria, maintained a purely defensive attitude. The revival of religious life among them made but slow progress, despite the strenuous exertions of the Bavarian rulers, of the Hapsburgs, and of individual bishops, of whom the Bishop of Würzburg, Julius Echter of Mespelbrunn, was the most prominent, and of the Jesuits.

The situation was in no wise altered by the fact that in 1598 Maximilian I succeeded to the sovereignty of Bavaria. He surpassed all the German princes of that period in ability and energy, and in the course of a few years he made Bavaria the most powerful of the German states. But he was prudent, peaceable, and above all intent on the internal improvement of his principality. Only on one occasion did he offer a decided opposition to the Calvinistic party; in 1607 he seized Donauwörth, which had persecuted its Catholic inhabitants. The Catholic League, which he organized in 1609 to offset the Protestant Union, was of a purely defensive nature.

Thus, in spite of unrest, the peace of the empire was apparently not in immediate danger at the beginning of the seventeenth century. Its impotence, however, was most clearly manifested in its economic and intellectual life. Under Charles V the German mercantile instinct had made the mistake of giving itself largely to the profitable business of money transactions with governments. This was no longer lucrative, but the self-control necessary for the more arduous gains of industrial enterprises now hardly existed. Moreover, political conditions made commerce timid. The free cities of the empire, the centres of mercantile life, had lost the support of the imperial power. The princes were either hostile to them or still biased by their economic views of land and agriculture. Furthermore, the extent of the several principalities was too small to form the basis of commercial undertakings while customs duties closed their frontiers. Foreign competition was already proving a superior force; commerce and manufacture, with the prosperity of which the growth of great states seems universally bound up, were at the point of collapse in Germany. Intellectual life was in an equally discouraging state. Almost without knowing it the nation had been divided by the Reformation into two religious camps, and a large part of it had accepted a wholly different faith. The thoughts of the people were being concentrated more and more on this one fact. They were encouraged in this by the princes who had derived from the schism great advantages in position and possessions, and also by the clergy on either side. The still insurmountable prejudice of the Lutherans of northern Germany against Catholics can be traced to the sermons of their preachers in the sixteenth century. From an entirely different point of view the Jesuits exhorted the Catholics to have as little as possible to do with Protestants. Sectarian strife controlled all minds. Thereby the common consciousness of nationality was just as obscured in the people as it was dulled in the princes by political selfishness.

III. FROM 1618 TO 1713

(1) 1618 to 1648

The political life of the German nation was quickened into fresh activity by the strong character of several princes who in their respective states took up almost simultaneously the fight against the preponderating power of the petty landed nobility. Those among these princes who made their mark on German history were Ferdinand II of Austria, Gustavus Adolphus of Sweden, and, a generation later, Frederick William of Brandenburg, called the Great Elector. In 1617 Frederick II was chosen by his family, on account of the vigour he had shown as ruler of Styria, to be the associate and successor of Matthias. No sooner had the nobles felt Ferdinand's strong hand than they revolted in

Bohemia, where they were most rebellious (1618). As Ferdinand did not have at his disposal the means to suppress it vigorously, the rebellion spread to the Danubian provinces, where it was supported by the rulers of Transylvania. When Matthias died (1619) the insurgents, through the mediation of Christian of Anhalt, went to the extreme of raising the head of the Union, Frederick V of Palatinate, to the throne of Bohemia (August, 1619), in order to obtain the help of the German Protestants. At the same time, however, Ferdinand was chosen emperor by the electors, whereupon Maximilian of Bavaria and the Elector of Saxony promised to fight on his side. The issue at stake was the existence of the Hapsburg dynasty. The struggle was carried on chiefly by troops of the two Wittelsbach lines and the Elector Palatine was defeated by the Duke of Bavaria on 8 November, 1620, at the battle of the White Mountain (Weissenberg) before the gates of Prague. Ferdinand II followed up his victory vigorously and from 1621 to 1628 established a new basis of political administration in his dominions. The multiplicity of heterogeneous Hapsburg territories, bound together almost solely by dynastic unity, was to be replaced by a compact Austrian state. This was to be founded on a system of government based on one official language, the German, on uniformity of administrative principles, on the profession of the Catholic faith by the entire population, and on the steady support of the reigning house by a body of great landed proprietors whose states were made up of the confiscated lands of the landed petty nobility. These great landowners, established in the various dominions of the Hapsburgs and free from separatist traditions, were to represent the principle of a single state as against the peoples of the several provinces.

The consequences of this change of system were soon felt all over Europe. The scheme had in view the organization of so extensive a state that the united Austrian dominion must needs become one of the great powers of Europe. Hitherto great countries had developed only in Western Europe, namely Spain and France. Their fields of conflict were Italy and Burgundy. Now, however, a strong power was rising on the borders of central Europe, which appeared to have unlimited room for expansion in the territories of eastern Europe. By means of its dynastic connexion with Spain it was as well a menace to France. As early as 1623 Austria and Spain supported each other in Switzerland; in 1628 Ferdinand by his power as emperor protected the interests of Spain in the War of the Mantuan Succession. As a result France became the natural enemy of Austria from the very beginning.

It was for this reason that the empire first became interested in the issue of the war in Bohemia. The greater portion of its territory lay between France and Austria. In the paralyzed condition of the empire a war between these two great countries would have to be fought out on imperial territory. It was remarkable that the clouds of war so quickly gathered. For the states of western Europe were, first of all, hampered by internal troubles and by their relations to one another, while the Hapsburgs were occupied at home. Even Maximilian of Bavaria, after the battle of the White Mountain, expected to bring the war to a speedy end by overcoming Christian of Anhalt and a few other adherents of the fugitive Elector Palatine. In order to bring the old Wittelsbach family feud to a final settlement, to seize the Upper Palatinate by way of war indemnity, and to secure the transfer of the electoral dignity from the palatine to the Bavarian line of the house Maximilian occupied

the entire Palatinate. But war once kindled in the empire could not be confined within limits, and it spread slowly but steadily (see THIRTY YEARS WAR). Too much inflammable material had been accumulated by the discontent of the petty princes of the empire, by the religious animosities, by the lack of employment that resulted from the economic decline, and by the occupation of the border provinces by foreign powers. Whenever Maximilian gained a victory his enemies with very little trouble enlisted fresh hosts of mercenaries; the Netherlands furnished the money. Very soon he was obliged to send his army into north-western Germany; thus the war continued to spread.

Two events of the years 1624-29 increased animosities and, finally, in 1630, gave the struggle an international character.

(a) The historical development of the German Hapsburgs had led to so close a connexion between their dynastic power in their own dominions and the imperial authority that the recovery of the former immediately filled Ferdinand with the ambition to restore the latter. When he drove the Elector Palatine out of Bohemia he had also outlawed him as a prince of the empire. Now that the territories in the empire occupied by Maximilian of Bavaria were growing in extent and the war was becoming more general throughout Germany, Ferdinand could hardly avoid assuming its direction. He had not the necessary funds for such an undertaking, because of the persistently blundering economic administration of Austria. But, he accepted Wallenstein's offer to maintain an army for him. Wallenstein was ambitious to be invested, as the head of an army, with extraordinary powers both military and diplomatic. He was a genius as an organizer and a remarkable man, but a *condottiere* rather than a statesman. Nevertheless the emperor placed him (1625) at the head of an army. Wallenstein did not act in conjunction with Maximilian's troops; moreover, he showed little respect either for the historically established relation between emperor and princes, or for the position of the latter in the empire. He quartered his troops in the territories of the princes, levied heavy contributions from their subjects and treated these sovereigns themselves with arrogance, while at the same time he was not a general who rapidly achieved decisive results. The blind jealousy that had animated the princes against Charles V was now directed against Ferdinand. Once more the complaint resounded that the emperor was placing on them "the yoke of brutal servitude," was making himself "monarch" of the empire, and an autocrat.

(b) Maximilian followed up the victory of the Bavarian and imperial forces by restoring Catholicism in the Upper Palatinate. The Catholics demanded the restitution of the small territories in southern Germany of which they had been despoiled since 1550, despite the *Reservatum ecclesiasticum*. Furthermore, overestimating their success in the field, they sought to regain the dioceses in northern Germany that had passed under Protestant administration. The emperor was impelled by his political interests to enforce the claims for restitution in the south, since this would greatly weaken the Würtemberg dynasty, which was an obstacle to the extension of the Hapsburg power in Swabia. In addition he also authorized the reclamation of the bishoprics of northern Germany in the district of the Elbe and at the mouth of the Weser, in order to place them in the hands of an Austrian archduke. Accordingly he issued the Edict of Restitution of 1629. The Calvinistic party of the Palatinate had been totally defeated, and now Lutheranism was in danger

of being confined to a comparatively narrow territory split up into detached districts by Catholic ecclesiastical principalities. On this account all the Protestant states of the empire were filled with distrust and resentment, although ill-prepared to take up arms in self-defence.

Cardinal Richelieu had, meanwhile, overthrown the Huguenots in France and had laid plans to strengthen the French power in Europe by the occupation of desirable positions in upper Italy as well as in Lorraine and on German soil. He saw a menace to his schemes in the growth of the imperial power in the empire and in Ferdinand's interference in the War of the Mantuan Succession. He reminded the princes that France had formerly protected their liberties, impressed them with its peace-loving character, and urged them, especially Maximilian of Bavaria, to refuse to elect the emperor's son King of the Romans and to demand the dismissal of Wallenstein (1629-30). While he thus sought to deprive the emperor of his commander-in-chief and his main army, Richelieu also used every means to induce Gustavus Adolphus, King of Sweden, to invade the empire. The appearance of Wallenstein on the Baltic coast and the invasion of the ecclesiastical principalities on the Elbe by the Catholics disturbed the ambitious King of Sweden. He was the ablest of all the princes who, in the first half of the seventeenth century, sustained the authority of the sovereign against the encroachments of the petty nobility in central and eastern Europe. After a speedily won success in Sweden itself, he set about the task of conquering all the territories on the Baltic in which the princes still suffered the inferior nobles to do as they pleased, thereby securing also for Sweden the control of this sea and a place as one of the great powers. If the Hapsburgs should accomplish their plans for the restoration of Catholicism the schemes of Gustavus Adolphus would be completely frustrated. For, in order to control all the lands on the Baltic and to sever permanently the German provinces of this region from the empire, he must unite them in an organic political system and civilization; this would be impossible unless all of them were separated in religion from the greater part of the rest of Europe by professing Lutheranism. In the summer of 1630 the king landed in Pomerania; in August the emperor sacrificed Wallenstein to the princes.

The success of Richelieu's intrigues and of the invasion of Gustavus Adolphus appeared more alarming at first than the outcome warranted. They did not cause the dynastic power of the Hapsburgs to totter. Gustavus Adolphus was killed at Lützen (1632); his finest troops, the mainstay of his strength, were annihilated at Nördlingen (1634). Thereafter the Swedes could achieve only ephemeral successes by means of a few bold but spasmodic excursions from the coast into the interior of the empire. Years passed before Richelieu was able to replace the army of Gustavus Adolphus by French troops. During the Swedish invasion he had occupied (1630-34) the whole of Lorraine and the region between the Moselle and the Upper Rhine. After the battle of Nördlingen he openly declared war against the emperor (1635), but he did not venture far beyond the Rhine. Within the empire the first successes of the Swedes led to a reconciliation between Maximilian and the emperor, while the continued occupation of German soil by the Swedes and the French declaration of war after Richelieu's assurances of peace influenced most of the other princes to ally themselves again with the emperor, Saxony leading the way. There was a burst of patriotic indignation, such as had not been known for a long time; men were again ready to sacrifice their interests to those of the

empire. In the Peace of Prague (1635) emperor and princes agreed upon the future organization of the empire. This treaty made allowances both for the historical development of the empire and its necessities: the enforcement of the Edict of Restitution was suspended, the autonomy of the Austrian dominions, of Bavaria, and of the great states of northern Germany was recognized, and the exercise of the imperial authority, in so far as it extended to internal affairs, was confined to the smaller territories of the west and south. On the other hand, the administration by "circles" was to be revived and perfected. Against foreign foes all pledged themselves to act in common, no one desired any further separate leagues. In case of war a consolidated imperial army was to enter the field. As early as 1635 the offensive was taken against France and the Swedes. In 1636 Ferdinand III was elected King of the Romans; he was emperor 1637-57.

Thus the political unity of the German nation, sorely as it had suffered from the weakness of the imperial authority, the excessive growth of separatism, and the religious schism, stood the test in the hour of danger. However, its resources, seriously weakened after a struggle of twenty years, were not adequate to carry out the compact made at Prague and to relieve the distress of the empire at one stroke; Austria, in particular, was not equal to its task. It was found impossible to drive the enemy by force out of the empire and to move all the estates to unite with the emperor. For the protection of the frontiers had been neglected and the individual states allowed to cultivate relations with foreign countries too long to permit the attainment of these ends. In western Germany the Landgravate of Hesse became a supporter of the French, while the young Frederick William, Elector of Brandenburg, who had succeeded to his electorate in the latter part of 1640, concluded an armistice with the Swedes. From 1640 on Richelieu was finally able to send French armies into Germany. The inadequacy of the services that Austria rendered the empire and the support it gave the Spaniards, who were hated throughout Germany, reawakened distrust in the emperor. Moreover economic conditions in the German states, after nearly a century of gradual decline, and the ravages since 1621 of the soldiery, became each year more pitiful. The need for rest excluded every other consideration. Even the antagonistic religious parties began to long for peace. The smaller estates of the empire felt no interest in the war and demanded peace at any price with the foreign enemies; even the greater ones, becoming gradually exhausted, declared themselves neutral. In conjunction with the emperor, and even without him, they negotiated for peace at Münster and Osnabrück with France and Sweden, whose influence thereby naturally became much more powerful. But the consciousness that they were parts of the empire did not again die out. A dim perception that Austria in its development as a great power partly belonged largely to eastern Europe had deepened the conviction, which was encouraged by France, that the interests of the empire and Austria were not absolutely identical, that the policy of the one need not of necessity be the policy of the other, and that the empire had needs of its own which should be safeguarded by the estates. In order to meet these exigencies the estates claimed, on behalf of the empire, the right to seek the protection of other great powers as well as of the emperor, so as to find support in all emergencies either on one side or the other. Some declared that these needs were, above all, the restoration and maintenance of peace, and the preservation of the independence of the different estates of the empire, and of the

varied forms of German governmental administration as opposed to the centralization of other countries. The Bishop of Würzburg, John Philip of Schönborn, the most active representative of the inferior estates, was strongly imbued with these principles.

These views were officially recognized by the peace of Westphalia (1648). To procure the evacuation of Germany by the foreign armies France was indemnified by that part of Alsace that belonged to Austria, and Sweden by the territories at the mouths of the Oder and the Weser. The great possessions gained by Austria in Bohemia and in the countries on the Danube were not touched, but it agreed to cease supporting Spain. Within the empire everyone was restored to his own possessions and his own rights. At the same time, however, the possessions of the German princes having military resources were enlarged in such manner that the balance of power was maintained among them. To do this the lands of decadent principalities, especially the lands of the bishoprics of northern Germany which were ready for secularization, were allotted to them. The consolidation of northern Germany into an ever decreasing number of states thus made another great advance, as was evidenced by the fact that towards the end of the war even the much divided possessions of the Guelphs in the north-west were combined to a large extent, like those of the other north German dynasties, under a single government. An attempt was made to assure the mutual recognition of the new territorial boundaries by establishing complete equality between Protestants and Catholics. The Catholics were satisfied with a slight enlargement of their possessions over those they held in the year 1618, the year taken as the standard being 1624, and the Calvinistic Confession was recognized. The new order of things was protected, as regards the emperor, by proclaiming the sovereignty of the princes of the empire, by restoring to them the right to make alliances, and by making France and Sweden the guarantors of the execution of the treaty. As against these two powers, however, it was most inadequately secured; the disturbances in the south-west, it is true, were suppressed, but the division of that region into small states was maintained, and its development thereby impeded. The result was that the frontier bordering on France was ill-protected, while the occupation of the lands at the mouths of the Oder and Weser by the Swedes was a perennial danger to northern Germany.

(2) 1648 to 1673

Frightful as had been the devastation of property and loss of life, the conclusion of peace did not find a ruined people. Both in political affairs and in the advance of civilization the war had brought about the renewal of national vigour. In most of the states the governments gave themselves to arduous work. Some commercial centres gradually revived, and by untiring energy the agriculture of northern Germany recovered its working power. Intellectual life also reawakened and grew apace. In jurisprudence, political science, education, the perfecting of the German language, and poetry, a succession of scholars, by a constantly increasing mastery of form and matter, produced a series of great works. The study of these works during the next two decades matured the all-embracing genius of Leibniz (1646-1716). France, which reached the height of its literary culture in the following generation, was the teacher of Germany, and Catholicism derived especial advantage from the influence of France. The reputation of Catholicism rapidly increased, and it soon exerted

a powerful force of attraction over many high-minded Protestants in Germany which eventually led them into the Church. Around Schönborn especially, who in 1647 had become Archbishop of Mainz and chancellor of the empire, was gathered a circle of Catholics, converts, and well-intentioned Protestants, among the latter Leibniz. From Schönborn emanated an influence that permeated the entire intellectual life of Germany. In the domain of politics Catholic hopes were founded on the military successes of Austria and Bavaria, which had shown themselves the strongest of the German states, on the efforts of Schönborn to infuse life into the administration by "circles," and on his attempt to form alliances among the princes with the ultimate aim of bringing about a general confederation of the estates. Schönborn desired, by means of such a general confederation, to make Germany under his own leadership independent of the favour of the great powers. Although this confederation was to be peaceful in character and could consequently only become a second grade power, he even hoped to make of it a means of establishing a balance of power in Europe between France and Austria, such as some Italians had sought to make of their country in the preceding century. Schönborn's policy was most successful in 1657-58, when Ferdinand III died without leaving an heir who had attained his majority and had been elected King of the Romans, thus giving France an opportunity to attempt to dictate the succession to the imperial crown. Schönborn, however, secured its bestowal upon another Hapsburg, Leopold I (1658-1705); at the same time he united a large number of princes in the Confederation of the Rhine (*Rheinbund*), which looked for support to France.

Still more powerful but not more advantageous for Germany was the influence exercised on the course of events by another reigning prince, Frederick William of Brandenburg, the Great Elector. His contemporaries looked upon him only as the most turbulent of the rulers in the empire. His chief object was the aggrandizement of Brandenburg to the eastward of the Elbe, but in the Peace of Westphalia he had been compensated by new territories in western Germany. Dissatisfied with this arrangement he openly avowed that as the greater part of his dominion bordered on eastern Europe, he, like Austria and even more unscrupulously, did not consider the interests of Germany as identical with those of Brandenburg. When Sweden declared war on Poland in 1655 he took part on the side of the former country with all his resources. In 1658 the new emperor joined forces with him to drive Sweden out of Germany. In order to be more certain of the aid of the imperial troops Frederick William, at the election of the emperor, brought it about that Austria was required to renew its pledges not to support Spain, at which France was preparing to strike the final blow. This threatened Germany once more with serious danger, for France, after forcing Spain into concluding the Peace of the Pyrenees in 1659, in 1660 dictated peace on the Baltic at Oliva and Copenhagen on such terms that Sweden was protected against any diminution of its territories. Then when the Turks, after a long truce, renewed their advance on Vienna in 1662 France forced auxiliaries on Austria as soon as the latter began to offer a sturdy defence. Consequently, after the first victories, Leopold preferred to come to a secret understanding with the Turks at Vasvár (1664). France interfered in every quarrel among the states of the empire.

Aided by the personal charm of its young king Louis XIV, who had assumed the government in 1661, France appeared to have obtained a dominant influence in Germany such as Charles V had formerly held in Italy. What it had vainly striven to gain by war France now acquired during ten years of peace. Apparently in all parts of the empire, including Austria, there was a continually growing need of peace. The subsidies that Louis poured into the exchequers of the impecunious princes, who were just beginning to devise a rational system of taxation, were intended to fetter them. The upper classes in Germany surrendered themselves completely to the influence of French culture and customs. Moreover, French statecraft, economic policy, and military system, which presented to the princes an example of effective administrative organisation, all promised to place Germany more and more under the spell of its western neighbour. The Houses of Guelph and Wittelsbach and the rulers of Saxony allowed themselves to be won over by France. In 1667-68 Louis was able to place a check upon the Elector of Brandenburg, and also upon Austria, the dynastic line of which was now reduced to one person, and threatened to become extinct like that of Spain. Although the Peace of Westphalia led the Germans to take France as a model, yet in many unseen ways it prepared the emancipation of Germany. The national consciousness became quickened in proportion as intellectual life reawakened, and the national spirit once more found a voice. The princes gradually drew back from France, and its friendship was only seriously sought by the House of Wittelsbach. When de Lionne, Louis's adviser in foreign affairs, warned him not to carry out his purpose of attacking the Netherlands until he was sure of the sympathy of the more important German princes, all the efforts of the able French diplomats did not avail to obtain this assurance. Louis, nevertheless, advanced against the Dutch, and a storm of popular indignation broke out in Germany which carried along with it the German princes, with the exception of the Wittelsbach line. In 1674 the empire declared war against France.

(3) 1674-1713

This was the signal for a war of forty years duration, which was divided into three periods. In the first the advantages of efficient generals, well-trained troops, and abundant means were all on the side of France. The contingents of the German princes formed a motley body; in 1675 the Elector of Brandenburg withdrew, and marched into Pomerania against the Swedes. In addition, the allies of the emperor, the Netherlands and Spain, proved inefficient. Only a few isolated exploits, such as the battle of Fehrbellin (1675), revived the fame of German military prowess. In 1679 peace was made between the empire and France at Nimwegen. Louis, however, overestimated his success. On the one hand he calculated on detaching the Elector of Brandenburg permanently from the German cause by compelling him in 1660, to restore all the territory won from the Swedes and then to enter into an alliance with France that would reduce him almost to feudatory dependence. On the other hand, after peace had been signed, France seized various strips of territory on the western frontier of Germany (called the "Reunions"), this unwarranted procedure culminating in the occupation of Strasburg (1781). Such conduct, however, only stimulated the patriotic indignation of the small western states (Alliance of Laxenburg, 1682), while at the same time the rising generation in the larger principalities, including the territories of the Wittelsbach line, was rallying

enthusiastically around the emperor for the Turkish war. The repulse of the Turks at the siege of Vienna (1683), followed by the glorious recovery of Hungary, gave a new, impulse to Austria's political power. With the increase of French interference in German affairs (succession to the Palatinate, 1685; election of the Bishop of Cologne, 1688), German resistance to Louis, in which Brandenburg joined, became unanimous. Louis retorted by renewing war. Although Austria was still engaged in the struggle with the Turks, the military forces of the two sides were almost even. The Margrave Louis William of Baden organized the troops of the small south-western states of Germany in an efficient manner. Austria found in Eugene of Savoy a general and statesman who, in a position similar to Wallenstein's, far surpassed the latter in genius and character. Moreover, the emperor found in England a far more efficient ally than the Netherlands had been. Both sides brought larger and larger armies into the field, until each of them maintained 400,000 men. By the Peace of Ryswick (1697) Louis restored part of the territory of which he had robbed the empire. Austria, by the brilliant victory of Zenta (1697), drove the Turks completely out of Hungary and Transylvania (Treaty of Carlowitz, 1699). The death of the last Spanish Hapsburg (1700) caused a fresh outbreak of the war as early as 1701. This time Austria was able to employ most of its forces against France, England being again the ally of the empire. The allied powers won brilliant victories, some jointly, some separately (Blenheim, 1704, Ramillies and Turin, 1706, Oudenarde, 1708, Malplaquet, 1709). By straining its powers to the utmost France bettered its position after 1709. During the course of the war Austria changed rulers twice, Joseph I reigning 1705-11, Charles VI, 1711-40. After Charles VI ascended the throne England deserted Austria. By the Treaties of Rastatt and Baden in 1713-14 France retained only Alsace out of all its conquests on the German frontier. Meanwhile Austria, which had once more become embroiled with the Turks, again defeated the latter, and imposed terms at the Peace of Passarowitz in 1718 that were extremely favourable to Austrian trade in the Levant. At the same time a war was raging between Russia and Sweden, and the princes of northern Germany took advantage of it to drive Sweden completely out of Germany (treaty of Stockholm between Sweden and Hanover in 1719; between Sweden and Prussia in 1720).

By the victories over the Turks and by its opposition to Louis XIV the Austrian monarchy became in the fullest sense a great power, while France effected no substantial extension of its frontiers. In this way the plans of Ferdinand II were realized and secured for a long period. But at the same time Ferdinand's successors allowed the imperial power and the reorganization of the empire to decline. In the reign of Leopold I the Diet had, indeed, become a permanent body at Ratisbon from 1663, and the empire took part as a whole in all three periods of the war. The contemporary sovereign princes, however, were interested chiefly in the political development of the separate states. Their policies were based on the centralizing and absolutist principles of the government of Louis XIV. These principles were susceptible of application to the individual principalities, but not to the empire, which, by its very nature, was federal and parliamentary. The empire could never have the same bureaucratic form of administration that the separate principalities had now received, nor could it be organized on a fiscal basis similar to theirs. Consequently Austria, Prussia, which had become a kingdom in 1701, and the other larger German states detached

themselves more and more from the empire. Some ruling houses, dissatisfied with the smallness of their territories, which did not admit of extension, were disposed, at the beginning of the new century, to seek new countries. The Elector of Saxony, belonging to the Wettin line, accepted the crown of Poland (1697), while the main branch of the Guelphs ascended the throne of England (1714). The branch of the House of Wittelsbach that ruled Bavaria aspired to the crown of Spain, or at least to the sovereignty of the Spanish Netherlands. When foiled in this they made an alliance with France in 1701; this doomed them to an unfruitful, separatist policy in their territories. Even among the people the conception of imperial unity no longer obtained. It is true that the nation made steady progress towards intellectual unity, as the development of its written language improved. Moreover between 1660 and 1690 the patriotic sentiment of the nation showed itself plainly, but it grew weak again at the very moment that was decisive for a constitutional policy. For the people took but little interest in the aims of the last period of war, the struggle over the Spanish succession while at the same time the entire organic life of a nation was undergoing a vital crisis. Economically the country made but little progress because its resources were too much exhausted and the constant wars permitted no recuperation. Consequently the social organization of the nation, in particular, lost its elasticity; the nobility became arrogant, the middle class decayed, the bureaucracy grew overweening and excluded all others from participation in state affairs. During this period the Germans made no effort to secure national unity. Under these circumstances, notwithstanding the German victories, foreign countries affected in large measure German politics. France continued to be the guaranteeing power. Two other great powers, England and Russia, had considerable influence, the former on Hanover, with which it was connected by a common dynasty, the other on all the German states on the Baltic, especially Prussia.

Catholicism lost its preponderance once more owing both to the renewed decay of political and national life in Germany and to the decline of France. At the beginning of the eighteenth century its progress lay in the field of art, especially in that of architecture. In Vienna and the capitals of the spiritual and temporal lords of southern Germany many architecturally striking buildings were erected; among the great architects and fresco painters of the period were Hildebrand, Prändauer, Fischer of Erlach, Neumann, and the brothers Asam. Protestantism, however, led in learning, as was exemplified by the professors of the University of Halle, Thomasius, Christian Wolff, Francke. Moreover, the close relations of England to Germany now began to make themselves felt, and German Protestantism found in England a powerful and progressive intellectual aid that Sweden had not been able to afford.

IV. FROM 1713 TO 1848

(1) 1713 to 1763

Many petty differences were still left unsettled in 1713, many an ambition was as yet unrealized. In Germany as well as in the rest of Europe questions remained to be settled by diplomatic negotiations, but swords were sheathed. The people had an intense desire for peace. The industrial classes longed to emerge from the miserable hand-to-mouth existence which had been theirs for

so many years, to rise again to the profitable exercise of trades and commerce, and to accumulate capital for larger undertakings. For several decades to come they were obliged to work without visible results. But the strenuous effort produced the will and the strength necessary to achieve the phenomenal economic progress of the German people in the nineteenth century. The prevailing tendency among the princes and nobility was towards the voluptuous enjoyment of the social and artistic pleasures of life, which they gratified by the erection of magnificent buildings and by gorgeous court ceremonials; examples of the indulgence of such tastes were the rulers of Saxony Augustus II (1694-1733) and Augustus III (1733-63), the latter being also King of Poland; Maximilian II Emanuel of Bavaria (1679-1726); Eberhard Louis (1677-1733) and Charles Eugene (1737-93) of Würtemberg. Men of higher aims were Maximilian III Joseph of Bavaria (1745-77), and, among the bishops, especially those of the Schönborn family. In the interior development of the states the princes sought to complete the reorganization of their territories according to the French absolutist and bureaucratic model, as: the introduction of state officials into local government, the collection of taxes in coin and a money basis for trade, the augmentation of the standing armies, repression of the privileges of the nobility, and the extinction of parliamentary and corporative rights. To perfect such a system both persistent and steady effort was needed; the majority of states fell short in this respect. In Hanover the nobles gradually recovered control of the government; in Austria a perilous state of political inertia set in under Charles I. Frederick William I of Prussia (1713-40) was the only sovereign who carried out the work of economic reconstruction with energy. The ideal state which the statesmen of the age of Louis XIV sought to attain, an ideal impracticable in larger countries, was to a great extent realized in Prussia. Small as was Prussia's territory and backward as it was in civilization, it grew, nevertheless, into a power influential out of all proportion to the size of its population and area, thanks to the high efficiency of the administration, to the utilization of all resources for the benefit of the state, and to the unflagging energy of the king himself. Shortly after 1740 Prussia was able to maintain a standing army of more than 100,000 men ready for war, and with this army it could turn the scale in a conflict between the equally balanced forces of the great countries.

In 1740 Frederick II, the Great, succeeded to the throne of Prussia. In the period just passed Austria and France had exhausted themselves in a war begun in 1733 over issues that had not been settled in 1713, namely, the Polish Succession, and the right of France to Lorraine. By the Peace of Vienna in 1738 France obtained Lorraine; Austria, moreover in 1739 lost Belgrad to the Turks. Soon after Frederick's accession in Prussia, the Emperor Charles VI died, leaving a daughter, Maria Theresa (1740-80). France and Bavaria took up arms to prevent her coming to the throne of Austria; this was in direct violation of the promises made to Charles when these countries recognized the Pragmatic Sanction. At the instigation of France the electors chose Charles Albert of Bavaria emperor under the title of Charles VII (1742-45). Frederick the Great took full advantage of Maria Theresa's difficulties; he occupied Silesia and, upon her refusal to surrender it, concluded an alliance with France and Bavaria; the wars that followed upon this were the War of the Austrian Succession (1740-48), the First Silesian War (1740-42), and the Second Silesian War (1744-45). Impaired in

strength during the weak government of Charles VI, Austria seemed ready to fall to pieces under the force of the shock. But the hesitation of Frederick the Great, the aid of England, Austria's ally after 1742, and above all Maria Theresa's political energy and inspiring personality helped Austria to withstand the shock. Silesia, it is true, was not recovered, but Maria Theresa kept all the other provinces and in 1745 her husband, Francis I, was elected emperor. She found in Kaunitz a most valuable guide in matters of foreign policy and a wise assistant in the direction of home affairs. The internal administration was steadily perfected in imitation of Prussia, the army was reorganized by Daun, Laudon, and Lacy. Further, by the new alliance between the three great European powers, Austria, France and Russia, Austria was once more established in a commanding position in Europe. However, Frederick, with the aid of England as ally, prevented the consequences of these measures from becoming immediately apparent. In 1756 he made a fresh attack on Austria while England simultaneously went to war with France for the purpose of acquiring the latter's colonies. The ensuing struggle was the Seven Years War, which exposed the weak points of the schemes of Kaunitz and especially the decline in the military strength of France before their excellences could be turned to use. Moreover Maria Theresa, by summoning as empress the French to enter the country, stifled in the princes all feeling of obligation to the empire, while Frederick by his victory over the French at Rossbach (1757) became a national hero despite the unpopularity of Prussia. In addition, the sturdy resistance that the Prussian king offered to the three powers, even though he failed of victory, made an impression on the political world in Prussia's favour no less great in results than were the consequences in northern Germany of his alliance with England.

(2) 1761 to 1815

After the Treaty of Hubertusburg (1763) Prussia was not only an independent state, it had as well an independent policy. From this time on the rest of northern Germany also became alienated from Austria and southern Germany. These states now received an impulse from England such as they had never had from the empire and Central Europe, for England in this period was rapidly advancing in commerce, industries, and intellectual life, and exhibited an energetic and far-seeing political policy. The mining of the coal and ore deposits in the Rhenish-Westphalian district and in Silesia was undertaken on a large scale, the number of factories increased, the Hanseatic towns took advantage of the American Declaration of Independence to establish transoceanic trade relations that were pregnant with rich results for the future of German commerce, while agriculture east of the Elbe adopted larger methods involving the use of capital in order to develop export trade in grain with England. In addition to Halle other universities in northern Germany became noted as centres of intellectual life; among these were Göttingen, founded in 1737, which had the historians and writers on political science, Schlözer and Spittler, as professors, and Königsberg, where Kant and Kraus taught. Most of the precursors of the classical age of German poetry, as Klopstock and Lessing, were North Germans, so were many of the writers of the Storm and Stress (*Sturm und Drang*) period. And although Goethe and Schiller, the great poets of the classic era, were South Germans, yet they made their homes in the north, the centre from which their influence was exerted being the Court of Weimar. Herder and the two Humboldts were Prussians. The Romantic School

also under the leadership of North Germans, the Schlegels, Hardenberg, Tieck, Schleiermacher, developed around two northern cities, Berlin and Jena. It was through the intellectual ascendancy exerted by northern Germany that Denmark and Holland were brought almost completely within the sphere of German culture. From north-western Germany proceeded the chief influences that in a periodical press created German public opinion (Schlöder's criticisms on contemporary politics in his "Staatsanzeigen," the political writings of Gentz), and encouraged the sense of nationality (Möser, Count Stolberg). It was in this part of Germany that Freiherr vom Stein received his early education and his training in official life. The relatively large area of the states of northern Germany, the result of the last two hundred and fifty years of political evolution, encouraged intellectual progress and was in turn promoted thereby. For the first time northern Germany undertook to outstrip southern Germany in development; along with this, however, the Protestant states once more took the lead of the Catholic states.

It is true that southern Germany immediately strove to compete with northern Germany, but the division of the former section into so many small principalities paralyzed commerce and retarded intellectual progress and the development of industries. Joseph II, joint-ruler with Maria Theresa from 1760 and sole ruler of Austria from 1780 to 1790, desired to remedy this disintegration by annexing Bavaria to Austria and by extending the Austrian power in Swabia and on the Upper Rhine. The latter result he desired to attain by making the city of Constance a great emporium of trade between Italy and Germany. In Austria he set on foot far-reaching projects of reform. On the non-material side he and other rulers strove to infuse new strength into the intellectual and civilizing influence of Catholicity as opposed to Protestantism. Catholicity in southern Germany, which remained closely in touch with French intellectual life, suffered from the paralyzing influence of French rationalism and its destructive critical tendencies. The champions of the Church, foremost among them being the Prince-Abbot Martin Gerbert of St. Blasien, gave it a more national basis again and infused into it a more positive spirit. But they failed, almost without exception, to renounce in principle the rationalistic movement; this failure led many men, as Joseph II, and Wessenberg, into grievous errors. Progress in southern Germany depended ultimately upon progress in Austria. Not only, however, did all the political plans for Germany of Joseph II break down before the opposition of Frederick the Great, as shown in the War of the Bavarian Succession (1778-79) and in the league of princes formed by Frederick against Joseph (1785), but towards the end of Joseph's reign serious revolutionary movements sprang up against him even in his own dominions. A complete reversal of the relative strength of northern and southern Germany seemed imminent. Nevertheless northern Germany did not fully utilize the pre-eminence it had obtained in intellectual progress. In spirit Frederick the Great was not in sympathy with recent developments. The English political system rested on principles differing widely from French absolutism, the methods and aims of which Frederick, following in his father's footsteps, clung to tenaciously. He even carried these somewhat further, especially in regard to economic administration. Taken altogether his political achievements were the greatest and most effective development of the French system. After 1763 by the annexation of West Prussia, obtained through the First Partition of Poland in

1722, he extended his dominions in the district of the Oder and Weichsel Rivers, and by adopting the policy of Catherine II of Russia he secured for his kingdom a strong position among the states of Eastern Europe. Moreover he declared his intention to give special weight to the eastern or Prussian part of his monarchy by making its nobility, the *Junker*, his principal instruments both in the military and civil administration. From the time of their arrival in these districts these nobles had been trained to fight and to colonize. The impulse towards a united northern Germany could in this era only come from Frederick the Great, the middle class of north-western Germany had not as yet made itself felt. In 1786 Frederick died, whereupon Prussia's prestige declined once more. Bereft of a strong political stimulus the intellectual life of Germany, both north and south, took on a cosmopolitan and purely humanitarian character.

Even the outbreak of the French Revolution at first produced in Germany not progress but a shock. The ideas of 1789 were greeted with approval, but when the Revolution became radical in 1792 and involved Germany in war, the people, craving peaceful development, without exception rejected it. Austria, reorganized by Leopold II (1790-92), took up again under Thugut, prime-minister of Francis II, who was Francis I of Austria (1792-1835), the policy of expansion initiated by Joseph II. Thugut, however, preferred to make conquests in Italy rather than in southern Germany, and Napoleon's victories in 1796 compelled him to desist even from these (Treaty of Campo-Formio, 1797). The princes of southern Germany, being left to themselves, now turned to the French government and by humble supplication obtained from it the aggrandizement of their territories at the expense of the ecclesiastical rulers whose dominions were to be secularized. At the Congress of Rastatt (1797-99) France was willing to grant their petitions, but Russia, England, and Austria brought the congress to a premature end by renewing the war with France. Previous to this, in 1792, Prussia had joined Austria in taking up arms against the French Revolution. At the Treaty of Basle (1795), however, it had deserted Austria and, influenced by French diplomacy, disclosed for the first time its ambition to become the ruling power of northern Germany, to annex Hanover and to carry out the secularization of ecclesiastical lands. But Frederick the Great's successors, Frederick William II (1786-97) and Frederick William III (1797-1840), were men of little energy. Moreover at the Second (1793) and Third (1795) Partitions of Poland Prussia had assumed more Polish territory than it could assimilate; its administrative resources, unable to bear the strain put upon them, were paralyzed. Thus the end of the eighteenth century left Germany in complete disorder.

South-western Germany, brought into constant contact with France by active commercial relations, now manifested a desire for comprehensive and efficient political organization. For, by the impetuosity with which the French Revolution preached the principle of nationality and the rights of the individual in the State, the German mind had again become accessible to national ideas and strong political convictions. From the beginning of the nineteenth century the Romantic School extolled the glories of German nationality and the empire, and the younger generation of officials in the several states, especially in Prussia, promoted drastic measures of reform. Napoleon, as the instrument of the times, contributed to the realization of these ideals. Defeating Austria again, both in 1800 (Treaty of Luneville, 1801), and in 1805 (Treaty of Presburg), Napoleon proceeded to make

a new distribution of German territory. By the Treaty of Luneville he annexed the left bank of the Rhine to France. By the partition compacts with Prussia and Bavaria in 1802 and by the Imperial Delegates Enactment of 1803, he secularized such ecclesiastical states as still existed, and in 1805-06 he abolished the rest of the decadent petty principalities in the south, including the domains of the free knights of the empire and of the free cities. He was to retain only three territorial divisions in southern Germany: Bavaria, Württemberg, and Baden. These his creative genius built up into secondary states, similar to those of northern Germany both in area and in their capacity for internal development. The South Germans had at last a clear course for renewed progress. Napoleon hoped thereby to put them under lasting obligation to France; in 1806 he bound them, as well as the central German states, more strongly to himself by the Confederation of the Rhine (*Rheinbund*). In the abolition of the small principalities he gave the death-blow to the Holy Roman Empire, which ceased to exist, 6 August, 1806. The administration and economic condition of the secondary states now rapidly improved, but, contrary to Napoleon's expectations, the sympathies of their inhabitants did not turn to France. Napoleon then overthrew Prussia at the battles of Jena and Auerstädt (1806) and by the Treaty of Tilsit (1807) left to Prussia only its original provinces between the Elbe and the Russian frontier. After this, by means of far-reaching, liberal reforms instituted under the enlightened guidance of Freiherr vom Stein aided by Gneisenau and Scharnhorst, both state and army in Prussia became stronger and more progressive than ever before. In all the German lands on the right bank of the Rhine the educated classes were full of fervid patriotism, and in Austria and Prussia as well the people bore the foreign yoke with impatience. In 1809 a national war against Napoleon broke out in Austria. The Tyrolese under Hofer made a heroic struggle, and Archduke Charles won a victory over the French at Aspern. It is true that Napoleon, notwithstanding all this, finally maintained his ascendancy (Treaty of Schoenbrunn, also called of Vienna, 1809), and Austria, thereafter, by the advice of Metternich, who was prime-minister from 1809 to 1848, adopted a policy of inaction. Pursuing an opposite course, the Prussian people rose in a body in 1813 after Napoleon's disastrous campaign in Russia. This revolt Napoleon did not succeed in crushing; on the contrary, he himself was now defeated in the Wars of Liberation by the coalition of Russia, Austria, Prussia, and England.

The interior of Germany, the true home of Teutonic national life, had been forced almost completely into the background during the eighteenth century by Austria and Prussia. During the Napoleonic era it advanced materially in influence as a result of the formation of the secondary states and the growth of national political opinions. Nevertheless Austria and Prussia re-established their military ascendancy over the interior during the Wars of Liberation. In the Treaties of Paris (1814) and at the Congress of Vienna (1814-15) efforts were made to do justice to both of these circumstances. Under Metternich's guidance Austria reached the climax of its power at the Congress of Vienna. It became the leading state in Europe, but at the same time it made the Danube and the territory east of the Alps the centres of its power and withdrew completely from southern Germany. Prussia, now likewise recognized as a great power and a leading state of Germany, received, on condition of surrendering a part of its Polish possessions, a strong position in the extreme north-west,

but it did not attain the hegemony of northern Germany. The Napoleonic system of secondary states was ratified and amplified, as in the four kingdoms of Bavaria, Würtemberg, Hanover, and Saxony, etc. It was hoped that this settlement would be permanent since it was founded on the joint liability of all the European states, a principle recognized by the Vienna Congress and the maintenance of which was guaranteed both by Prussia and Austria. Moreover the political rivalry between the different faiths was supposed to have been overcome, since of the great powers Austria was Catholic and Prussia Protestant, and both were now on friendly terms. By the award of many Catholic districts to Protestant sovereigns Catholicity had, it is true, sustained great losses in central Germany, Würtemberg being one-third, Baden two-thirds and Prussia almost one-half Catholic. It was thought, however, that none of these states, not even Prussia, could be able thereafter to retain an entirely Protestant character. Moreover Catholicity gained greater influence over the minds of men owing to the Romantic movement and the spread of anti-revolutionary ideas. Metternich, continuing the policy decided upon in 1548 and 1635, committed himself to the following programme: to give a new guarantee to the reawakened national feeling by establishing a German Confederation; that each German state must belong to the Confederation, though without prejudice to its autonomy; that the primary object of the Confederation was to be the defence of the independence and stability of Germany against external foes as well as against revolutionary agitation; but it was also to be allowed to develop into a confederated state by gradually enlarging its authority over the internal affairs of the individual states, such as commerce, economic administration civil and constitutional law. The organ of this confederation was to be a permanent assembly composed of plenipotentiaries appointed by the reigning princes, as in the Imperial Diet prior to 1806. This body was authorized to enact fundamental laws for the Confederation and to organize its administrative machinery (Federal Acts of the Congress of Vienna, 9 June, 1815).

(3) 1815 to 1848

The Federal Diet was in session from 1816 to 1848 and again from 1850 to 1866 without, however, enacting any fundamental laws or creating any administrative machinery. The only result of the deliberations was a fuller and more detailed but not a more definite statement of the problems to be solved by the confederation (Final Federal Act of Vienna, 1820), and this in spite of Metternich's pressure for the working out of these problems. Prussia and the secondary states opposed all progress in the work of the Diet. Even Metternich was no longer really in earnest about it. In the autumn of 1815 he had concluded the Holy Alliance with the Czar and the King of Prussia and had thereby bound himself to a common policy with the great powers of Eastern Europe, the three countries Russia, Austria, and Prussia being then called the eastern powers. This policy, in view of the possibility of revolutionary agitation, opposed the national and constitutional current of the times. Moreover, as Premier of Austria, Metternich's course had to be directed by the fact that, after the troubles of the reign of Joseph II and the losses sustained in war during the last twenty-five years, the country stood in need of absolute rest. Austria kept its people from all foreign commercial competition and in politics avoided contact with foreign nations. Consequently its policy within the confederation was restricted substantially to the safeguarding of its own interests.

Between 1815 and 1848 Prussia and the secondary states also devoted themselves exclusively to the solution of problems within their own boundaries. Up to 1848 Germany witnessed the most complete autonomy of the individual states in its entire history. The need of national unity was once more entirely ignored. In most of the secondary states much was done to improve the administration and the economic policy. Prussia, the self-reliance of which had been still further intensified by the Wars of Independence waged against Napoleon, completed the reforms that had been started in the period before 1815, although not in the German national spirit of their authors but rather in accordance with antiquated Prussian ideas. Even the new western provinces were as far as possible subjected to the old Prussian law as well as the old Prussian ecclesiastical policy and methods of government. At the University of Berlin, founded in 1809 by William von Humboldt, Hegel raised the Prussian conception of the state, filled with the spirit of Protestantism and rooted in absolutism, to the dignity of a philosophical system. He gave this position to the state as the highest and all-controlling form of society. Nevertheless the individual German states had clearly passed the limit of their capacity for organization. Routine dominated state administration. A well-trained but arrogant bureaucracy seized control of the government in Prussia as well in the secondary states and while it carried to excess the traditional political principles, yet it did not enforce them with the firm hand of the rulers of an earlier era. This was especially the case in the conflict concerning mixed marriage in the fourth decade of the century when the Prussian government arrested Archbishop Droste-Vischering of Cologne as an "insubordinate servant of the state" (1837). Its weakness was also plainly shown when the people of western and southern Germany objected to the interfering supervision of the government officials.

The middle class was indebted to Metternich for more than thirty years of uninterrupted peace, during which he protected it from all disturbances both at home and abroad, and they owed to Prussia laws more favourable to commerce than had ever before existed. These were the moderately protective Prussian customs law of 1818 and the founding (1833) of the customs-union (*Zollverein*), which made a commercial unit of Prussia, central and southern Germany. Now for the first time the exertions of the commercial classes during the eighteenth century brought forth ample fruit, and Germany regained the financial ability to undertake large commercial enterprises. Important industries flourished and traffic was increased many-fold, while the middle class gained a clearer perception of the influence of foreign and domestic policies on economic conditions. The leaders (Hansemann, Mevissen, and von der Heydt) in the manufacturing district of the Lower Rhine, the most promising region in Germany from an economic point of view, were ready as early as 1840 to guide the fortunes of Prussia, provided they could obtain political rights. Holding radical views in politics and religion, they adopted also the political demands of their intellectual kinsmen in France, the Liberals: the creation of a constitutional parliament and the remodelling of the body politic in accordance with their social and economic principles. As Prussia like Austria had not granted its subjects a constitution, the struggle of these men for influence was conducted under difficulties. Their efforts, however, were aided by the existence of constitutional government in some of the smaller states since 1819, whereby a number of men, mostly university professors,

were enabled in the several Diets to attack the bureaucratic administrations. These men were also Liberals, but their primary demand was the substitution of popular government for that of the bureaucracy; the leaders were Rotteck and Welcker of Baden; and of the moderates, Dahlmann. As early as 1837 matters came to a crisis in Hanover, while in Baden the contest lasted from 1837 to 1844. In answer to the opposition they called forth the Liberals raised the battle-cry of national unity, claiming that union would be the strongest guarantee of civic liberty. Their programme, as well as the appeal to the moral feeling of the people made by many of their leaders, aroused universal sympathy. As champions both of the principle of national unity and of economic and social progress, they hoped soon to be able to lead the entire people in a struggle against the reactionary administrations of the individual states. The latter, blinded by their particularistic prejudices, did not rally their forces to meet the threatening attack. As early as the forties differences on politico-economic questions weakened the customs-union between Prussia and the states of southern Germany. Metternich had repeatedly urged that Austria become a member of the customs-union. But it now appeared that the social and economic differences, always existing between Austria and the rest of Germany, had been so accentuated by the selfish policy pursued by Austria since 1815 that a strong opposition to its entering the customs-union came from within Austria itself.

The position of the Catholic Church also became critical. The expectations of the Congress of Vienna had not been realized. Catholicity, it is true, owing to the splendid abilities of a number of men, partly the sons of the Church and partly converts, exercised a leading influence in the field of political sciences (Haller, Adam Müller, Frederick von Schlegel, Görres, Jarcke, Radowitz), in history (Buchholtz, Hurter), in art (Cornelius, Overbeck, Veit), and in theology (Möhler, Döllinger, Kuhn, Hefele). But in actual political life and in connexion with the life of the masses it fared ill. The bureaucratic state administration so fettered the Catholic Church that it was hardly able to stir, while Liberalism, for the most part anti-Catholic, threatened to place a gulf between the Church and the people. The deep piety of the people, however, was manifested both in 1844, on the occasion of the pilgrimage to Trier, and in the rejection of German Catholicism (1844-46). The attempt, however, to build up a Christian and anti-revolutionary party in conjunction with a few conservative Protestants (the two von Gerlachs, and the periodical "Politisches Wochenblatt" in Berlin; Görres and his circle of friends in Munich), on the basis of Haller's political teaching, was unpopular and altogether out of sympathy with the actual politico-social and politico-economic development of the nation. Nevertheless a few courageous politicians attacked at the same time the bureaucratic administration and Liberalism; thus Görres published his "Athanasius" in 1837, and founded with friends the periodical "Historisch-politische Blätter" in 1838; others were Andlaw and Buss in Baden, Kuhn and Hefele in Würtemberg, Moritz Lieber in Nassau. In Bavaria the Catholics were represented by the Abel ministry (1837-47). In Austria Metternich favoured them.

V. FROM 1848 TO 1871

The wide-spread political agitation in Western Europe, which from 1846 had been undermining the foundations of the system of government established by the Congress of Vienna, culminated

in Germany in March, 1848. The reigning princes, unprepared for the emergency, turned the governments over to the Liberals and ordered elections for a German Parliament on the basis of universal suffrage. Austria and Prussia, in addition, now granted constitutions to their peoples and, besides the national, summoned local parliaments. On 18 May the German National Parliament was opened at Frankfurt, Heinrich von Gagern presiding. Archduke Johann of Austria was elected provisional imperial administrator. The success of Liberalism was apparently complete, the individual existence of the separate states practically annulled, and the establishment of a constitutional German national State, as opposed to the development as a confederation, seemed assured. The only difficult question was, apparently, how Prussia was to be "merged" into Germany. However, as Frederick William IV of Prussia (1840-61) had expressed his sympathy with German unity, while the Liberals were prepared to make it as easy as possible for Prussia, as the head of the customs-union and the leading Protestant power in Germany, to surrender its individuality as a state, and were ready to offer to Prussia the hereditary imperial crown, the Parliament made light of this obstacle. Austria, rent by grievous national dissensions, seemed ready to step aside of its own accord.

In the autumn of 1848, however, the situation became complicated. The draft of a new constitution made by the Liberals awakened the distrust of the Catholics by its provisions regarding the Church and the schools. At the suggestion of the Pius Association (*Piusverein*) of Mainz, the Catholics flooded the Parliament with petitions, while in October the Catholic societies assembled at Mainz and the German bishops at Würzburg. The Liberals gave way but conditions remained strained. The great mass of Catholics repudiated the proposed settlement of the German question in the "Little German" (*Kleindeutsche*) sense, which advocated the exclusion of Austria from German and the conferring of the imperial dignity upon Prussia; they demanded that Austria should remain part of Germany and should be its leader. This was called the "Great German" (*Grossdeutsche*) view. Simultaneously a radical reaction broke out against the Liberals. Liberalism stood for ethical and political progress only, not for social progress; nevertheless it had received the support of the labouring classes, who were impoverished by the recent industrial development but not ready to become a political organization, because of the Liberal opposition to the existing state of things. Now that the Parliament did nothing to better their condition they flocked to the standards of radical agitators. Before the spring of 1849 repeated disturbances resulted, especially in Southern Germany; furthermore Radicalism obtained a majority in the constitutional assembly of Berlin. The Liberals were not able to make any headway against this movement. Prussian troops had to re-establish the authority of the state, and in the interim the reigning princes had also regained confidence. Austria, now under the leadership of Schwarzenberg (Francis Joseph having been emperor since November, 1848), declared in December, 1848, that it would not suffer itself to be forced out of Germany. The Catholic agitation as well as the politico-economic movements were in Austria's favour. The industrial classes of Southern Germany, inspired by the fear that Prussia would adopt free-trade, desired to secure a politico-economic alliance with Austria, while the great merchants of the Hanseatic cities preferred for the field of their commercial operations Germany with Austria included, an area extending from the Baltic Sea to the Levant, to the lesser Germany

alone. Having imposed a constitution on his kingdom in December, 1848, the King of Prussia refused to accept the imperial crown at the hands of the Frankfurt Parliament (April, 1849). Maximilian II of Bavaria (1848-64), by a strange recourse to the ideas of the seventeenth century, advocated a union of the secondary states, which in conjunction with Prussia but not in subjection to it, should control the policy of Germany (the "Triad").

In May, 1848, the Frankfort Parliament came to an inglorious end. An attempt was made immediately afterwards by Prussia with the aid of the Liberals and the secondary states to agree on a German constitution maintaining the federal principle (The Union, Diet of Erfurt, 1850), and to form merely an offensive and defensive alliance with Austria; this was foiled by Austria. But although Austria forced Prussia to yield in the negotiations at Olmütz in December, 1850, it failed to effect either the renewal of the German Confederation under conditions that would strengthen itself or to gain admission to the customs-union. The German Diet, still unreformed, resumed its deliberations in 1851, while by the treaty of February, 1853 (*Februarvertrag*) the negotiations for Austria's entrance into the customs-union were postponed for six years. Austria and Prussia neutralized each other's influence and nothing was done, either in the customs-union or in the Diet. Consequently the central states, Saxony and Bavaria, von Beust being prime-minister in Saxony and von der Pfordten of Bavaria, regarded themselves as the balance of power. Maximilian II summoned to Catholic Munich Liberal and Protestant professors, nicknamed the "Northern Lights, in order to win the public opinion of all Germany for his "Triad" project. Both of the great powers strove to secure the support of the German press. The failure to secure German unity once more gave the bureaucracy of the individual states the control. It was, however, no longer able to check the growth of democratic ideas among the people, and the masses were more and more influenced by the political and social movement of the times. In 1849-50 Liberalism underwent defeat; it then changed its programme and pursued chiefly economic aims. These were attained partly by founding countless politico-economic associations, such as consumers' leagues, unions of dealers in raw products, and loan associations (Schulze-Delitzsch); partly, and more largely, by controlling the use of capital on a large scale. During the fifties the representatives of great capital were able, by founding large joint-stock banks, principally for the purpose of building railroads and of financing mining enterprises, to attain a leading position in German economic life. The large landed proprietors of the Prussian provinces east of the Elbe had also in 1848 formed an economic, the Conservative, party. They watched over agrarian interests and also aimed at restoring the old Prussian-Protestant character of the Prussian monarchy, and the absolute sovereignty of the king. For a time incompetent leadership hindered their growth. On the other hand the Catholic movement soon spread among the people, though it did not constitute as yet an organized political party. The Catholics, undeceived at last as to the true character of Liberalism, but without entering into relations with the Conservatives, devoted themselves chiefly to the interests of the suffering masses whose social and economic needs had interested Radicalism merely as a pretext for agitation, and who had been neglected by the other parties. Thus arose the organization of journeymen's unions (*Gesellenvereine*) by Kolping of farmers' associations by Schorlermer-Alst, and the attempts to solve the labour

question, which was taken up especially by Ketteler and Jörg. At the same time the Catholics fought against the restoration of Protestant supremacy in Prussia ("Catholic Fraction," 1852, Mallinckrodt, the Reichenspergers), and in the South-West against the unwarranted control of the Church by the bureaucracy. The beginnings of Socialism resembled those of the Catholic movement. The feeling of a community of interests awoke in the labouring classes; but it was not until about 1864 that Lassalle utilized this sentiment for political purposes. Throughout the fifties and sixties the Liberals retained the lead. As early as 1859 they deemed the time propitious for seeking to attain again to political power, without, however, any such revolutionary disturbances as in 1848. The decline of Austria's influence since Schwarzenberg's death (1852) encouraged them. In the Crimean War the temporizing policy of Austria, which offended Russia and did not satisfy the western powers, brought upon that country a serious diplomatic defeat, while in the Italian war it suffered military disaster. In both cases Austria had opposed Napoleon III who by these wars laid the foundation of his prestige in Europe.

The growth of large commercial enterprises in Germany widened the breach between it and Austria so that in 1859 the latter was obliged to consent to a further postponement of its admission into the customs-union. In ecclesiastical politics Austria sought to satisfy the "Great German" aspirations of the Catholics of southern and western Germany by signing the Concordat (1855). Würtemberg and Baden also negotiated with Rome on the subject of a Concordat; but when, in 1859, Austria was defeated they relinquished the project. Austria's discomfiture in 1859 and its failure to form an alliance with Prussia against Napoleon, greatly excited public opinion in Germany, for the impression prevailed that Germany was menaced by France. The Liberals took advantage of this to renew their agitation for the union of Germany into a single constitutional state. In 1860 the Grand Duke Frederick of Baden (1852-1907), whose land was exposed to the attacks of France, entrusted the Liberals with the ministry of Baden. In 1861 the Liberals undertook to force parliamentary government upon Prussia so as to obviate all further opposition on the part of the king to the creation of a consolidated German state. They encountered, indeed, an obstinate resistance from King William I (1861-88), but the prevailing antagonism between the bureaucracy and the people caused the sympathies of almost the entire German nation to be enlisted on the side of the Liberals. The smaller states, becoming anxious, proposed reforms, leading to greater unity, in the constitution of the German Confederation. Austria, where since 1860 von Schmerling had been prime minister, also made advances to the Liberals in order to strengthen its position in Germany (Austrian Constitution, 1861; congress of the princes at Frankfurt, 1863). However, the appointment of Bismarck to the presidency of the Prussian ministry in the autumn of 1862, and the political organization in 1864 of Socialism by Lassalle, again checked the rising tide of Liberalism as early as 1863-64. This was followed by Bismarck's determination to settle once and for all with the sword the antagonism existing since 1848 in German affairs between Prussia and Austria. As Prussian envoy to the Federal Diet in the fifties Bismarck had observed the instability of the lesser German states and the decline of Austria's strength, as well as the methods of Napoleon, especially the use the latter made of the principle of nationalities; but he was also able to see that since 1860 Napoleon's

star was on the wane. To a certain extent he appropriated Napoleon's views in order that Prussia might reap the fruits of what the French emperor had sown in Europe. At the same time he preserved an independent judgment so as to fit his measures to German conditions and proved that his genius contained greater qualities and more elements of success. In the Danish War (1864), fought to settle whether Schleswig and Holstein belonged to Denmark or Germany, he forced the Austrian minister of foreign affairs, Rechberg, to adopt his policy. He then manoeuvred Austria into a position of diplomatic isolation in Europe and, after forming an alliance with Italy, made a furious attack upon Austria in 1866. After two weeks of war Austria was completely defeated at Königgrätz (3 July), and by the middle of July Prussia had occupied all Germany. In the meanwhile Napoleon had intervened. Bismarck put him off with unmeaning, verbal concessions, and in like manner pacified the German Liberals whose continued opposition might hinder the carrying out of his solution of the question of German unity. He then concluded with Austria the Treaty of Prague (23 August, 1866) which partook of the nature of a compromise. Austria separated itself entirely from Germany, the South German states were declared internationally independent, Prussia was recognized as the leader of North Germany, while Hanover, Hesse-Cassel (Electoral Hesse), Hesse-Nassau, Schleswig-Holstein, and Frankfurt were directly annexed to Prussia, and preliminaries were arranged for the adoption of a federal constitution by the still-existing North German states. The constitution of the North-German Confederation, established, 1 July, 1867, was framed by Bismarck so that the federal development of German constitutional law should be guarded, thus the constitution was adopted by treaties with the several sovereign princes, the autonomy of the individual states was assured, and a federal council (*Bundesrat*) was to be the representative of the various governments. The necessary unity of the government was guaranteed (1) by endowing Prussia with large authority in administration, giving it especially the command of the army and direction of diplomatic relations; (2) by assigning foreign affairs, formation of the army, economic interests, traffic and means of communication to the authority of the confederation, the competence of which was to be gradually enlarged (the model here taken being the Federal Acts of the Congress of Vienna of 1815); (3) by creating the Reichstag (Parliament), elected by universal, direct and equal suffrage, as the exponent of the national desire for unity. In the years immediately following the Reichstag passed laws regulating the administration of justice.

Bismarck considered the absence from the confederation of the South German states to be merely temporary. As early as August, 1866, he had secretly made sure of their co-operation in case of war. In 1867 he re-established the customs-union with them; politico-economic questions of common interest were, in future, to be laid before the Reichstag of the North German Confederation which, for this purpose, was to be complemented by delegates from Southern Germany so as to constitute a customs parliament. In all other respects he left diplomatic relations with the states of South Germany *in statu quo*. Attempts on their part to found a southern confederation failed. In like manner Bismarck postponed as long as possible the accounting with France in regard to the unification of Germany, although he foresaw that such an accounting was unavoidable. At a conference held in London, in 1867, he secured the neutralization of Luxembourg. In 1868 he

desired to secure a resolution in favour of national unity from the customs parliament. To attain this he relied on the economic progress which, in consequence of the gradual unification of Germany, continually grew more marked and caused a complete change in a Liberal direction in the legislation on social and economic questions, and in that on the administration of law, both in the North German Confederation and Bavaria. Illustrations of these more liberal changes are: the organization of the postal system by Henry Stephan; introduction of freedom of trade and the right to reside in any part of Germany; enactment of the penal code, 1870. Notwithstanding these results of the efforts towards union, the opposition, led by Ludwig Windthorst, succeeded in obtaining a majority against him.

On 19 July, 1870, war broke out with France, the cause being the candidature of Prince Leopold of Hohenzollern for the Spanish throne. Napoleon had not been able to secure the help of Austria and Italy; furthermore, his army was not prepared for war. Bismarck, on the contrary, fanned to white heat the national enthusiasm of Germany. The German armies quickly crossed the Rhine, and gained a firm footing on the other side by a rapid succession of victories at Weissenburg, Wörth, and the Heights of Spicheren. The main French army under Bazaine was defeated at Metz and shut up inside the city, 14-18 August. The army of relief under MacMahon was defeated at Sedan, 1-2 September. The war became a series of Strasburg fell, 28 September; Metz, 27 October; and Paris, not until 28 January. Meanwhile Gambetta had organized a national militia, 600,000 strong, which, in conjunction with the remains of the standing army, harassed and obstructed the Germans on the Loire and in the North-West from October to January. On 10 May, 1871, by the Peace of Frankfurt, Alsace-Lorraine was restored to Germany as an imperial territory (*Reichsland*). The southern states had already joined the Confederation, which had become the German Empire (with an area of 208,748 sq. miles). The Constitution of the North German Confederation was adopted, with the reservation of certain privileges in favour of Bavaria and Würtemberg. The Constitution was proclaimed 16-20 April, 1871, Prussia being entitled to 17 of the 58 votes in the Bundesrat or Federal Council, and to 236 of the 397 deputies in the Reichstag or Imperial Parliament. William I assumed the title of "German Emperor" at Versailles, 18 January, 1871; the office was made hereditary.

VI. THE NEW GERMAN EMPIRE

(1) 1871-1888

A development that had been in progress for many centuries and had been attended by many complications had practically reached its culmination; the political union of the Germans in a single body politic, without any relinquishment of the federal principle, so far as the relations among the ruling houses were concerned, had been accomplished, advantage being taken of the popular movement towards the unification of the several States into one organic whole. Austria had been excluded from Germany, the political consolidation of Northern Germany was almost complete, and Prussia's economic superiority over the south had been established beyond question. For while Southern and Central Germany (with the exception of Saxony and Nassau), as well as Hanover,

experienced an increase in population of only about 22 to 36 per cent between 1830 and 1880, that of Prussia grew about 60 per cent; and nearly all the coal and ore deposits of Germany were located within the borders of the latter kingdom. Withal, during the ensuing years the united people did not devote themselves exclusively to peaceful pursuits. It is true these received great attention; German commercial and economic interests throughout the world were developed; uniformity was established in weights and measures (1872), coinage (1875), the administration of justice (1879); the laws of the empire were codified; and after a short time close attention was also given to social problems. On the other hand, military preparations (September, 1874), in case France should renew the war, were pushed forward with increasing zeal. Furthermore, the old internal feuds among the religious creeds and parties were resumed with greater passion than ever in consequence of the proclamation of the dogma of Infallibility and of the organization of the Centre party. In all this Bismarck was the leader, while the Liberals constituted the government party (see KULTURKAMPF).

It was not until 1875 that there was any degree of tranquillity and stability. Bismarck recognized that he was lessening the extraordinary esteem in which he was held by the whole world, by his excessive intimidation of France. Moreover, the defeat in France of the Royalists and Catholics by the Radicals and Protestants freed him from apprehension of danger from that quarter. Russia having been estranged from the empire by his anti-French policy, Bismarck sought the friendship of Austria-Hungary. In 1879 he brought about an alliance with Austria, which, when joined by Italy in 1883, became the Triple Alliance, which still subsists -- the league of the great powers of Central Europe. He re-established better relations with Russia by means of the secret treaty with that country in 1887. The election of Leo XIII, the "pope of peace" (1878), disposed Bismarck to come to an understanding with the Catholic Church. But as a preliminary condition he demanded either that the centre party be dissolved or that it become a government party. At the same time he contemplated sweeping changes in internal politics. The Liberal ascendancy, beginning in 1871, had been responsible for the inauguration of an excessive number of economic undertakings, resulting in the financial depression of 1873; in political finance it brought about an almost complete stagnation in the development of the systems of taxation both of the empire and the component states; in social politics it had led to a rapid increase in the ranks of the Social Democrats, who after Lassalle's death had become under Bebel and Liebknecht an international party, in which numerous anarchistic elements were blended. In 1875 there had been a fusion of the Lassalle and Bebel factions; the Gotha programme was drawn up; at the elections of 1877 they scored their first important success. Liberalism had also failed completely in its opposition to the Centre; the latter party had so grown that it controlled more than a quarter of the votes in the Reichstag. Bismarck determined to restrict once more the influence of the Liberals in domestic politics. The transformation of the Conservative faction from an old-Prussian party of landed proprietors into a German Agrarian party (1876) made it capable of further development and useful as a support for Bismarck. He purposed forming a majority by combining this Conservative party with the moderate National Liberals (under Bennigsen

and Miquel), while at the same time, the Centre party having refused to disband, there was the possibility of forming a majority of the Conservatives and the Centre.

Between 1876 and 1879 to organize the administration of the empire, the Reichstag created, subordinate to the chancellor, who under the Constitution was the only responsible official, the following imperial authorities or secretariats of State: Ministry for Foreign Affairs, Imperial Home Office, Imperial Ministry of Justice, Imperial Treasury, Administration of Imperial Railways, Imperial Post Office, Imperial Admiralty, Secretariat for the Colonies (1907). A number of non-political departments were also established, in part under the various secretaries of State, the chief of which was the Imperial Insurance Department; military affairs were placed under the Prussian Minister of War. In 1879 the imperial territory of Alsace-Lorraine was granted autonomy, though this was of a limited character. In 1878, after the attempts made by Hoedel and Nobiling on the life of William I, Bismarck carried out temporary measures for the suppression of Social Democratic agitation, e.g., the Socialist Law forbidding all Social Democratic organizations and newspapers. In the following year, encouraged by the increase in the sense of national unity due above all to the growth of German commerce and industry, he effected the financial and economic-political reform, his battle cry being: "Protection for German Labour!" Small protective duties were imposed upon agricultural and industrial imports, and a tariff for revenue only on colonial wares. The proceeds of both duties were to constitute the chief revenue of the empire, but of these only 130 million marks were to go to the imperial treasury, the rest being divided among the federal states, in return for which the latter, by means of federal contributions (*Matrikularbeiträge*), were to make good the contingent deficits of the empire. During the eighties the duties on agricultural products were gradually raised (especially in 1887), besides which several profitable indirect taxes, e.g., on brandy, tobacco, and stamps, were sanctioned, in order to meet the growing expenditures of the empire. In 1881 an imperial message to the Reichstag announced the inauguration of a policy of social reform in favour of the working classes. Between 1881 and 1889 the compulsory insurance of working-men against sickness, accident, disability, and old age was provided for by legislation. This was Bismarck's greatest achievement in domestic politics. The empire was now for the first time made the centre of the civil interests of the Germans, who up to this time had been occupied chiefly with the doings of their restive states, the management of Church and school having been retained by these. Bismarck, now at the zenith of the second creative period of his life, conceived the idea of organizing labour insurance on the basis of the community of interests of those engaged in the same work. By this means he proposed to establish in the empire self-government in social politics, which would equal in importance the local self-government of communities subordinated to the individual states, and which would complement the establishment of universal suffrage by educating the people for the administration of public affairs.

Bismarck also gave his support to the great German commercial interests which insisted upon the acquisition of colonies; in 1884 South-West Africa, Kamerun, and Togo were acquired; in 1885-86 German East Africa, German New Guinea, and the Bismarck Archipelago. He even went

so far as to risk being embroiled with England, although it was an inviolable fundamental principle of his policy not to encroach on that country's privileges. It appeared as if Bismarck, though he had grown up under wholly different conditions and had been schooled in wholly different ideas, entered into the spirit of the democratic German of the future, with its world-wide commerce and its world-wide economic interests. But the first step taken, he retreated. He did not carry out his scheme of co-operative organization. It was in the fight against the growth of the German democratic tendencies within the empire that he exhausted his strength in the eighties. Domestic peace was promoted in Germany by the final though belated close of the *Kulturkampf* (1886-87); the beneficial effects of this were greatly lessened by the severity and violence of the measures with which Bismarck had begun (1885-86) to break up the national movement of the Prussian Poles, which was the consequence of constantly increasing prosperity and a rise of a middle class among them. Exile, efforts to suppress the Polish language, the expenditure of State funds to colonize Poland with German peasants were the means used. Incapable of respecting political parties and working in harmony with them, he became involved in incessant parliamentary contests with them. Particularly the demands of the Government for an increase in the strength of the army, which was levied by general conscription, brought him into conflict with the Centre and the Left, because of his insistence that the appropriation for army purposes should be made for a period of seven years, instead of for one year, according to the Constitution, or for the term of a parliament. Bitter quarrels also marked the debates on social questions, because Bismarck refused to agree to state protection of workmen, though he had conceded state insurance.

The political parties, all of which had been organized before the creation of the empire, now began to adapt themselves to new conditions, to cast aside issues resulting from the division of Germany into separate states, and to alter their positions to conform to new points of view; but their development was seriously hampered by these conflicts. In 1879 the Liberals had resigned the presidency of the Reichstag in consequence of the adoption of financial and tariff reform. The president was now chosen from the Conservatives, marking the Conservative era of the empire, which down to the present time has been uninterrupted with the exception of the supremacy of the Centre from 1895 to 1906. After their fall from power, the Liberals repeatedly split into factions according to their differences of opinion on commercial policy. The most important section, the National Liberal party, was reorganized in 1884 by Miquel. It became reconciled with Bismarck and regained some seats in the Reichstag, but not its former power. The Conservatives energetically took up the demands for the protection of the working classes. Eventually the Agrarian element among them got the upper hand. They failed, however, to attract into their ranks the smaller middle class, i.e., the small retail traders who had combined to resist the great industrial interests; nor did they win over the officials of the civil service, nor the Christian Socialists among their Evangelical constituents. Consequently, small parties sprang up in the west and south of Germany that were fundamentally Conservative in character but had no connexion with the great Conservative party. The attempt that von Kleist-Retzow made to found a Protestant party of the Centre in the hope of winning over the heir to the throne, Prince William, to its cause, was frustrated by Bismarck's

intrigues, by which the prince was alienated from the Conservatives. The Centre maintained its strength and directed its attention to social politics in the empire and to the school question in the individual states. It became the leading party in the Reichstag, represented by Hitze and von Hertling. In 1890 the "People's Union for Catholic Germany" (*Volksverein für das katholische Deutschland*) was founded. The Social Democrats, prevented by the Socialist Law from agitating their cause publicly, kept up their strength by secret recruitment. By dissolving the Reichstag in 1887, Bismarck secured the most favourable electoral results that had ever fallen to his lot, inasmuch as an overwhelming majority of Conservatives and National Liberals (so-called Kartell-Reichstag) was returned. But he was unable to work harmoniously even with this majority.

(2) From 1888 to 1909

In 1888 William I died. Frederick III, the hope of the Liberals, followed him to the grave in ninety-nine days, and the reign of William II began. The youthful and able ruler wished to make Germany as speedily as possible a sharer in the world's commerce. He realized that, to attain this end, internal tranquillity was as necessary as external peace. He dismissed Bismarck in March 1890 and replaced him by Caprivi (1890-94). Then he saw to it that the all but unanimous desire of the Reichstag to complete the compulsory insurance legislation by comprehensive factory legislation was satisfied. An international conference for the protection of working men was held, March, 1890, and a supplementary law (*Gewerbsordnungs-Novelle*) was passed 1 June, 1891. He moderated the repressive measures against the Poles. He intended to give the Catholics a guarantee that the national schools would continue to be Christian by the proposed National School Law in 1892, but withdrew the bill when the Liberals assumed a hostile attitude, and his pacific aims were thwarted. In foreign affairs he came to an understanding with England in regard to the difficulties that had arisen from the colonial expansion of Germany, e.g., the exchange of Zanzibar for Heligoland in 1890. In the interests of peace likewise he succeeded in concluding commercial treaties with Austria, Italy, Russia, and several smaller states, by lowering the agricultural duties which had become very high. With France he sought to establish relations that were at least free from bitterness. Because of its sovereignty over the Balkans and the East, he devoted special attention to Germany's political relations to Turkey. For he saw that these countries were the best markets for German trade. But trouble soon began. The emperor's autocratic proclivities and his sudden changes of opinion aroused bitter criticism among the people. The new Army Bill of 1893, which proposed to reduce the period of military service to two years, was well-meant on his part, but was so badly managed that it brought him into collision with the Centre (*Dissolution of the Reichstag, 1893*). On the other hand, the commercial treaties, which were opposed by the agricultural party, got the emperor into difficulties with the Conservatives. In 1895 the Reichstag turned a deaf ear to his demands for renewal of sharp repressive measures against agitations that were "hostile to the state" (the so-called "Umsturzvorlage"). His views subsequently became liberalized, his following being recruited mainly from the commercial, industrial, and intellectual classes (Krupp, Ballin, Harnack).

The success of the emperor's policy during the next few years dispelled the clouds of opposition, especially as Caprivi's successor, Chlodwig Hohenlohe (1894-1901), was a man of astute and

conciliatory nature, while in Count Posadowsky, Secretary of State for Home Affairs, the emperor had the support of an extremely competent and energetic man. Germany became Turkey's chief counsellor. The maintenance of friendly relations with the rapidly developing United States of America, despite the opposition of their economical interests and isolated instances of friction between officers, strengthened public confidence in the international situation. By the occupation of Kiao-chau in 1898, Germany secured a footing in Eastern Asia, while the partition of the Samoan Islands and the acquisition of the Carolines (1898-9) gave her a much-desired increase of stations in the Pacific. The German transatlantic merchant marine held for a long period the record for the race across the Atlantic, and, even in Africa and Asia, Germany promised to become a very serious rival of England. The last decade of the nineteenth century was a period of exceptional prosperity throughout the country. From forty-one millions in 1871, the population increased to sixty millions in 1905. The increased national well-being will be realized from the fact that at present the gross value of the agricultural produce amounts to some \$3,525,000,000, and of the industrial output to about \$8,460,000,000. In 1871, two-thirds of the population still lived in the country, whereas in 1900 54.3 per cent lived in towns of more than 2000 inhabitants, and in 1905 19 per cent lived in cities of more than 100,000 inhabitants. In the agricultural districts, however, conditions continued to be healthy -- 31 per cent being cultivated by peasants, 24 per cent being held in large estates, and the remainder in lots of less than 20 hectares (roughly 50 acres). The woodland area still includes one-fourth of the total area.

During this period the national standard of living became more luxurious; revolutionary and anarchistic tendencies began appreciably to disappear. The whole nation was seized by a burning tendency towards the formation of new associations, a spirit to which we owe the foundation of the Catholic People's Union (*der Volksverein*: members in 1908, 600,000), the Farmers' League (1908: 300,000 members), the free (Socialistic) guilds (1908: over 750,000 members), the Christian Endeavour guilds (1908: over 200,000 members), etc. In Parliament, the great political parties (Conservatives, National Liberals, and the Centre) drew closer together; the presidency devolved on the Centre in consequence of its numerical preponderance and the ability of its leaders. In 1899, the constantly recurring conflict between the Crown and the Reichstag on the subject of appropriations for military expenditure was settled by an agreement on the part of the legislative assembly to vote supplies henceforth for the parliamentary period, which had been increased from three to five years in 1888. Among the important measures passed were the completion of the unified legal codes (1896) and the Naval Acts (1898, 1901), which had in view the raising of Germany to a maritime power of the first rank. In 1902 the resolution to restore the high protective duties on agricultural products was passed in the face of the bitter opposition maintained by the Social Democrats for many months (Tariff Bills, on the basis of which the commercial treaties were renewed in 1905). Prussia's project of constructing a canal through her own territory from the Oder to the Rhine met with obstinate resistance, not indeed in the Reichstag, but in the Prussian Diet (rejected in 1899, approved in 1903). In the midst of this era of prosperity Bismarck died (1898).

In foreign politics, however, there came a change for the worse after England's subjugation of the Boers. Under Edward VII, Great Britain forced Germany back from almost all the positions which she had recently occupied. Meanwhile, William II devoted himself to a line of policy calculated to win temporary favour (journey to Jerusalem, 1898; intervention in the Chinese complications, 1900; landing in Tangier, 1905). Prince Buelow, who replaced Hohenlohe in 1900, was unable to stem the ebbing tide. In the Moroccan controversy between Germany and France, Germany, who appealed to an international conference (at Algeciras, 1906), suffered a severe rebuff. By his efforts to separate Austria and Italy from the Triple Alliance and by his ententes with the other Powers of Europe, Edward VII isolated his rival (1907, Triple-Entente between England, Russia, and France). Buelow's Polish policy, which was more drastic even than Bismarck's (cf. the Expropriation Act of 1908), resulted only in disappointments without effectually checking the Polish disturbances. In 1907, owing in part to the financial crisis in America, Germany's commercial prosperity markedly declined. Favoured by the customs tariff, agriculture alone continued to flourish. The revenue of the empire decreased with the commercial profits. At the same time the rising of the Herreros in South-Western Africa in 1904 called for large unforeseen expenditures, while the troubled aspect of the foreign situation necessitated a tremendous increase in the outlay on armaments (cf. Naval statutes of 1908. The "ordinary" expenditure in 1907 was 2329 millions of marks; National debt in 1873: 1800 millions, and in 1908, 4400 millions of marks.) One attempt after another was made at fiscal reform [1904, relaxation of the Franckenstein clause; 1906, 150 million marks (\$35,250,000) yearly taxes were voted; in 1908-09, 500 millions were demanded by the government], but the government is still carried on with a deficit. Thorough recovery has been prevented by the renewed violent dissensions in the nation by party spirit (since 1892) and the clash of opposing ideals.

The coalition, which had formed the majority during the nineties, broke up in 1903. Its most important factor was the Centre, the number of whose seats in the Reichstag and supporters in the constituencies remained stationary even during the period of its parliamentary ascendancy. Therein lay its weakness, since meanwhile its allies, the official Liberal and Conservative parties, gained ground. The Liberals gained in consequence of a movement towards concentration among the Liberals of the Left soon after the beginning of the century (Fusion of the Liberal of the Left, 1906), and of a reconciliation between the National Liberals and the Liberals of the Left by means of a "Young Liberal" movement in their ranks. The Conservatives, who had been growing as a party almost uninterruptedly since 1876, especially after the founding of the "Farmers' League" in 1893, gained by gradually invading the agrarian territory in the west and south-west.

Up to 1906, the Protestant League, founded in 1886, maintained a fanatical agitation amongst the populace to frustrate the endeavours of the Catholics, directed through the Centre, to secure recognition of their equal rights as citizens in the public life of the nation. Yielding to this agitation, first the National Liberals then the Conservatives dissociated themselves from the Centre. Despite its utmost efforts, the Centre failed in 1906 to secure the repeal of the remainder of the Kulturkampf Laws, except to the extent of the two paragraphs of the Jesuit law (i.e., the expulsion clauses).

Furthermore, the so-called "toleration bills," in which the Centre strove by imperial legislation to fix the minimum of rights to be conceded to Catholics in the separate states, although repeatedly presented to the Reichstag after 1900, always met with defeat. When, in 1906, the Christian character of the national schools was finally established by statute in Prussia after an interval of 13 years, the Government drafted the bill in accordance with the wishes of the Conservatives and the National Liberals, and left to the Centre only the right of voting for it.

Another important factor in bringing about the cleavage between the parties was the spread among the wealthier classes, both Liberal and Conservative, of a strong feeling of opposition to further social legislation. This feeling found an outlet in the formation of influential syndicates, and was most bitterly directed against the Centre, as the principal promoter of social remedial measures. An open breach between the parties took place on the question of a relatively insignificant colonial budget. The Government immediately disowned the Centre, and dissolved the Reichstag (13 December, 1906). Since then the situation has been very complicated. As a result of the elections the Centre retained its former voting strength, but was isolated. The Government formed a new coalition, called "the Block," consisting of the Conservatives and the united Liberal party -- the Liberals of the Left had hitherto been in opposition. In this it relied on the feelings of hostility towards the Centre which animated the Protestants and the propertied classes. When the administration, however, made concessions to Liberal principles (extension of the right of association, partial repeal of the stock exchange legislation, promise to introduce popular suffrage into Prussia), the Conservatives, after some hesitation, decided to oppose the Government so again sought an alliance with the Centre. They are stronger than the Liberals, but the sympathies of the Government and of the Anti-Catholic portion of the population will help the Liberals in their contests with the Conservatives. The quarrel amongst the civil parties prevents the further loss of parliamentary seats by the Social Democrats, whose voting power has been steadily increasing since 1890 (in 1907 they cast 3,259,000 votes, 29 per cent of the total, although they won only forty-three seats in the Reichstag as compared with eighty-one in 1903). It also prevents the reconstruction of the programme of the Socialists, many of whom -- especially in South Germany -- favour a peaceful transformation of society. The difference of opinions existing among the Socialist party was clearly evidenced by the violent quarrel between the opposing sections at the Dresden Convention in 1903.

The position of the Government in view of its relations with the parties is at present (Jan., 1909) not very favourable. The administrative organization of the empire hardly suffices. Besides, the shock given to the power of the emperor in November, 1908, in consequence of the popular resentment of his personal interference in politics as revealed in the "Daily Telegraph" interview, has not served to strengthen the Government. On the other hand, its prestige was greatly enhanced by the re-establishment of German influence in international politics, owing to its firm support of Austria-Hungary in the Balkan crisis (1908-9). It has put an end to the isolation of Germany, strengthened the bonds of the Triple Alliance, and promises to result in a rapprochement with Russia.

In dealing with the present situation of German Catholicism, relations between Church and State must be separated from the question of the civic rights of the German Catholics. The authorities of the Church and State work together in a spirit of mutual benevolence, the chief credit for which is due to Cardinal Kopp, since 1886 Prince-Bishop of Breslau. Ecclesiastically speaking, Germany is divided into 5 archbishoprics, 14 suffragan and 6 exempt bishoprics, 3 Apostolic vicariates, and 2 Apostolic prefectures. The clergy are trained for the most part by 15 theological university or lyceum faculties (the most recently established being at Strasburg, 1902), a smaller number in seminaries. Ecclesiastical affairs are not regulated by the empire but by the individual state. In Prussia they rest on the Bull "De Salute Animarum" and the explanatory brief "Quod de Fidelium" of 1821 (although the promise of land endowment for the bishoprics has not been kept), on the constitution of 1850, and on the laws of 1886-87 regulating ecclesiastical polity. In Würtemberg, they rest on the Statute of 1862, in Baden on the Statutes of 1860, in Bavaria on the Concordat of 1817, which has not actually been enforced and which consequently creates a state of legal uncertainty. In these divisions of the empire, the Church has the rights of a privileged corporation. In the Kingdom of Saxony and in Saxe-Weimar, all ecclesiastical ordinances and appointments, even those issued from Rome, as well as the erection of new churches, etc., are subject to the approval of the Government. Appeal to Rome is forbidden. In the other small Thuringian states, and in Brunswick and Mecklenburg, the Catholics even recently had to submit their parochial affairs to the authority of the Protestant pastors, and in part Catholics even now pay tithes to the Protestant pastors for this unsought-for service. The building of churches and establishment of schools are also subject to galling restrictions.

The bishops are elected by the cathedral chapters, except in Bavaria (where they are chosen by agreement between the Government and Rome); in the Upper Rhenish church province, in Osnabrück, and in Hildesheim, the Irish method of election obtains; elsewhere exists the customary submission of a list of candidates to the Government. The establishment of convents is everywhere subject to the approval of the State. In Würtemberg and Baden only female orders are allowed; in Saxony and the smaller Protestant States only nursing sisterhoods. Jesuit institutions are not permitted anywhere. The primary schools are mostly denominational, but are neutral in Baden, in part of Bavaria, and in two provinces of Prussia. They are founded by the State and by the communities, but the local pastors supervise the religious instruction and are generally the local school inspectors. The system of intermediate and higher schools for boys is undenominational almost without exception, and is under either state or municipal control; the schools for girls are mostly under private and denominational management, being largely conducted by nuns. The civil marriage ceremony takes precedence of the religious by an imperial law of 1875; divorce is regulated by the civil code. For Catholic couples separation *a mensâ et thoro* may be granted. Charitable relief work is admirably regulated and carefully stimulated by the focusing of charitable impulses in the *Charitasverband* (Charity Organization Society), founded at Freiburg in 1897. It is working more and more in harmony with social relief work. There is a large number of religious societies; the throngs who assist at all religious festivals are impressive, and the numbers who receive the

sacraments are gratifying. Pilgrimages are numerously attended, the most famous place of pilgrimage in Prussia being Kevelaer, in Bavaria Altötting. Considerable anxiety is inspired by the prevalence of Social Democracy in certain districts, and by the irreligious indifference of the rising generation of the propertied classes.

The civil status of Catholics is not so good. Of the 60,641,272 inhabitants of Germany in 1905, about 36.00 per cent were Catholic (in 1900 only 36.1 per cent as compared with 36.2 per cent in 1871). At present, as formerly, unity infuses life into the Catholic Church. The Catholics are splendidly organized (for politics by the Centre and in sociological respect by the Christian guilds and by *Volksverein*). They are making persistent efforts to secure equal recognition in public life (cf. the agitation afoot in Prussia since 1890 in favour of equal rights for Catholics; the so-called "Self-examination Movement" throughout the empire, that is to say, the general investigation into the injustices suffered by Catholics in the educational and economical life of the country). Recently, the number of Catholic pupils in the intermediate and higher schools has increased, but only on the humanistic side. Their representation in the poly-technic schools as well as in the student bodies at the universities continues to be weak, out of all proportion to those of the other communions. Only in isolated instances are the leading positions in the states and communities filled by Catholics. No Prussian state minister, and only one state secretary is Catholic. Their share in the public wealth does not at all correspond with their numerical strength.

FRANZ KAMPERS MARTIN SPAHN
German Literature

German Literature

I. FROM OLDEST PRE-CHRISTIAN PERIOD TO 800 A.D.

There are no written monuments before the eighth century. The earliest written record in any Germanic language, the Gothic translation of the Bible by Bishop Ulfilas, in the fourth century, does not belong to German literature. It is known from Tacitus that the ancient Germans had an unwritten poetry, which among them supplied the place of history. It consisted of hymns in honour of gods, or songs commemorative of the deeds of heroes. Such hymns were sung in chorus on solemn occasions, and were accompanied by dancing; their verse form was alliteration. There were also songs, not choric, but sung by minstrels before kings or nobles, songs of praise, besides charms and riddles. During the great period of the migrations poetic activity received a fresh impulse. New heroes, like Attila (Etzel), Theodoric (Dietrich), and Ermanric (Ermanrich), came upon the scene; their exploits were confused by tradition with those of older heroes, like Siegfried. Mythic and historic elements were strangely mingled, and so arose the great saga cycles, which later on formed the basis of the national epics. Of all these the Nibelungen saga became the most famous, and spread to all Germanic tribes. Here the most primitive legend of Siegfried's death was combined with the historical destruction of the Burgundians by the Huns in 435, and affords a typical instance of saga-formation.

Of all this pagan poetry hardly anything has survived. The collection that Charlemagne caused to be made of the old heroic lays has perished. All that is known are the "Merseburger Zaubersprüche," two songs of enchantment preserved in a manuscript of the tenth century, and the famous "Hildebrandslied," an epic fragment narrating an episode of the Dietrich saga, the tragic combat between father and son. It was written down after 800 by two monks of Fulda, on the covers of a theological manuscript. The evidence afforded by these fragments, as well as such literature as the "Beowulf" and the "Edda," seems to indicate that the oldest German poetry was of considerable extent and of no mean order of merit.

II. THE OLD HIGH GERMAN PERIOD (c. 800-1050). II. THE OLD HIGH GERMAN PERIOD (c. 800-1050).

Between the years 500 and 700 occurred the High German soundshifting, which divided the dialects of the South, High German, from those of the North, Low German. The history of German literature is henceforth mainly concerned with High German monuments. In fact, until the close of the Middle Ages Southern Germany occupies the leading place in literary production.

The Goths, the first Germanic tribe to be converted, embraced Christianity in the form of Arianism. But they soon gave way to the Franks, who became the dominant people, and the conversion of their king, Clovis, to Christianity, in 496, was of decisive importance. The conversion of Germany, vigorously carried on since the eighth century by Irish and Anglo-Saxon missionaries,

notably by St. Boniface (d. 755), was completed when Charlemagne (d. 814) forced the heathen Saxons to submit to his rule and to be baptized, and united all the German tribes under his sway. Under him and his successors Christianity was firmly established. The clergy became the representatives of learning; the newly established monasteries and their schools, above all those of Fulda and St. Gall, were the centres of culture. The language of the Church was Latin, but preaching and instruction had to be carried on in the vernacular. The prose literature that arose to serve this purpose is only of linguistic interest. The poetry that developed during this period was wholly Christian in character. Examples are the "Wessobrunner Gebet" and the "Muspilli," the latter an alliterative poem on the destruction of the world; both date from the ninth century. The Church, naturally, opposed the old heathen songs and strove to supplant them by Christian poems. Thus arose the Old Saxon epic, the "Heliand," which was composed between 822 and 840 by an unknown poet, at the suggestion of King Louis the Pious. It is written in Low German and is the last great poem in alliterative verse. The story of the Redeemer is here told from a thoroughly German point of view, Christ being conceived as a mild but powerful chief, and His disciples as vassals or thanes. The same subject is treated in the "Evangelienbuch" of Otfried, a monk of Weissenburg, the first German poet known by name. It was completed about 868 and dedicated to Louis the German. While not possessing the literary merit of the "Heliand," it is of the greatest importance because it definitely introduces into German poetry the principle of rhyme, already familiar from the Latin church hymns. Rhyme was also used by the unknown author of the "Ludwigslied" to celebrate the victory of Louis III over the Northmen at Saucourt (881). This is the only song of the period not purely religious in character, though its author was probably a cleric.

During the ninth and tenth centuries German poetry fell into neglect; at the courts of the Saxon (919-1024) and Franconian emperors (1024-1125) and in the monasteries the Latin language was almost exclusively cultivated, and thus a body of Latin poetry arose, of which the tenth-century "Waltharius" (Waltharilied) of Ekkehard, a monk of St. Gall (d. 973), the "Ruodlieb" (1030), and the "Ecbasis Captivi" (c. 940) are the most noteworthy examples. The "Waltharilied" relates an old Burgundian saga and is thoroughly German in spirit, while the "Ecbasis" is the oldest medieval beast epic that we possess. The Latin dramas of the nun Roswitha (Hrotsvitha) hardly belong to German literature.

The great master of German prose in this period was Notker III, surnamed Labeo (about 952-1022), the head of the convent-school of St. Gall. His translations from Boethius, Aristotle, Marcianus Capella, and especially of the Psalter, are the best examples of German prose until the fourteenth century.

III. THE PERIOD OF CHIVALRY AND THE CRUSADES (1050-1300). III. THE PERIOD OF CHIVALRY AND THE CRUSADES (1050-1300).

In the eleventh century, under the influence of the reform movement that emanated from the Burgundian monastery of Cluny, a spirit of stern asceticism begins to dominate in literature. The Church in its struggle with the emperors turned again to the people, to carry through the reforms

of Gregory VII, and although the poets of the beginning of this period were almost exclusively clerics, they at least wrote in German. The literature which they produced consists mainly of rhymed versions of Biblical stories and other sacred themes, and is represented by Ezzo's "Lay of the Miracles of Christ," Williram's paraphrase of the Canticle of Canticles (both c. 1060), and the poems of Frau Ava. Some of the best poetry of this time was inspired by devotion to the Blessed Virgin, as for instance the "Driu Liet von der Maget" by a Bavarian priest named Wernher (c. 1170). In these songs the characteristic German trend towards mysticism is unmistakable. A most noteworthy product of the age is the half legendary "Annolied," a poem in praise of Archbishop Anno II of Cologne (d. 1075). The "Kaiserchronik" (c. 1150), a bulky poem narrating the story of the world, presents a strange medley of legendary and historic lore. The bitter hostility of the ascetic spirit to the worldly life finds expression in the scathing satire of Heinrich von Melk (c. 1160). But asceticism was losing ground; under the influence of the Crusades the prestige of the knightly caste was steadily rising. A compromise with the secular spirit became imperative, and the clerical poets, to keep their audiences and meet the competition of the gleemen, now had recourse to worldly subjects. For their models they turned to France.

A priest named Lamprecht composed the "Alexanderlied" (c. 1130), while a priest of Ratisbon, named Konrad, wrote the "Rolandslied" (c. 1135). In both cases the authors drew from French originals. The minstrels began once more to come to the front, and a number of popular epics date from this period. Among these "König Rother" (c. 1160) is conspicuous. Its subject is an old Germanic saga, and the role which the Orient, Constantinople in this case, plays therein shows the influence of the Crusades. Still more noticeable is this fondness for the Orient in "Herzog Ernst" (c. 1190), where the historical hero, Duke Ernest II of Swabia (d. 1030), is represented as a pilgrim to the Holy Land and the subject of marvellous adventures in the Far East. From this period dates also the first German beast epic, "Reinhart Fuchs," by Heinrich der Glichesaere (c. 1170).

The rule of the Hohenstaufens (1138-1254) marks the first great classic era of German literature. Many causes contributed to bring about a great literary revival. The Crusades instilled new fervour into religious life. Many thousands of German knights followed King Conrad III in the crusade of 1145-47. They were brought into contact on the one hand with the Orient and its wealth of stories and marvels, and on the other with their more cultured French neighbours, whose polished customs and manners they adopted with avidity. Chivalry, an institution essentially Romance in origin and spirit, was thus raised to predominance in the social life of the age. The cultivation of poetry passed chiefly into its hands; the clergy ceased to be the sole purveyors of learning and culture.

The poets of this period are, as a rule, of knightly rank. Many of the poorer knights depended on the generosity of princely patrons, such as the landgraves of Thuringia or the dukes of Austria. The only kinds of poetry cultivated in this epoch were the epic and the lyric, and the former was either courtly or popular. Form received the most careful attention; versification was regulated by the strictest rules; the classic Middle High German, is extremely elegant. This classic poetry was essentially a poetry of caste, and conformed absolutely to the ideals of courtly society. Brilliant as it was, it was mainly a poetry of translation and adaptation.

The courtly epic deals almost exclusively with foreign subjects; its models were derived mostly from France. The subject most in favour was the *matière de Bretagne*, the legends clustering around King Arthur and the Round Table, with which that of the Holy Grail had been combined. This subject was made especially popular by the versions of the French trouvère, Chrétien de Troyes, who exerted great influence on the German courtly epic. Chivalry and the cult of woman are the leading *motifs* of this poetry. The court epic was introduced into Germany by Heinrich von Veldeke, a knight of the Lower Rhineland, whose "Eneit" (c. 1175-86), based on a French model, treats the story of Æneas in thoroughly medieval and chivalric spirit. The court epic was transplanted to Upper Germany by the Swabian, Hartmann von Aue (d. about 1215). In his "Erec" he introduced the Arthurian romance into German literature; his "Iwein" is from the same cycle; his "Gregorius" is an ascetic version of the Oedipus story. His best-known work is "Der arme Heinrich," which, as a purely German story of womanly devotion, occupies a unique position among the creations of the courtly poets -- greatest of these poets is Wolfram von Eichenbach (d. about 1220), whose chief work is his "Parzival," the story of the simpleton who overcomes doubt and temptation and ultimately becomes King of the Holy Grail. As in Goethe's "Faust," we have here the story of a human soul. To the cycle of Grail-romances belong also the so-called "Titurel" fragments, while Wolfram's last work "Willehalm," is a historical legend which, however, remained incomplete. Opposed to Wolfram in spirit is his great rival, Gottfried von Strasburg, whose "Tristan" (c. 1210) is a glorification of sensual love and of somewhat dubious morality. With Gottfried the court epic reached its highest development; with him excessive artificiality begins to appear, and soon this species of poetry declines rapidly. The succeeding poets, in trying to imitate the great masters just mentioned, fall into tedious diffuseness, and their epics too often become a meaningless string of adventures. Rudolf of Ems (d. 1254) and Konrad von Würzburg (d. 1287) are the most gifted among these epigones. The former is the author of narrative poems like "Der gute Gerhard" and "Barlaam und Josaphat," an old Buddhist legend in Christian form. The latter wrote a bulky epic on the Trojan War, for which he used the French romance of Benoît de Sainte-More as a model. Far more meritorious are his shorter romances, like "Herzemaere" and "Engelhard." His "Goldene Schmiede" is a poem in honour of the Blessed Virgin. Thoroughly independent of courtly influence is the powerful and realistic poem "Meier Helmbrecht," a tragic village story written by a Bavarian priest named Wernher der Gärtner (c. 1250).

By the side of the courtly romances developed the popular epic. On the basis of old songs still current among the people, arose about 1200 in Austria the great German epic, the "Nibelungenlied," telling of Siegfried's death at the hands of Hagen and Kriemhild's fearful vengeance. The author is unknown, though he was probably of knightly rank. The poem is in strophic form, and, though the subject is primitively Germanic, the influence of chivalry and Christianity is throughout apparent. In Austria arose also, but little later, the "Gudrunlied," a story of the North Sea, telling of Gudrun's loyal devotion to her betrothed lover, King Herwig of Seeland. Of far less interest are the other popular epics, which also date from the beginning of the thirteenth century; they are mostly related to the saga-cycle concerning Dietrich von Bern. The most notable are the "Rosengarten," "Alpharts

Tod," "Laurin," "Eckenlied," and "Rabenschlacht." Three other epics, "Ortnit," "Hugdietrich," and "Wolfdietrich," take their subjects from the Langobardic saga-cycle; in them the influence of the Crusades is very noticeable.

Lyric poetry also flourished brilliantly in this period. Lyric poetry of a popular kind seems to have existed in Austrian territory long before the Romance influence came in from the North-west; but it was under this Romance influence that the lyric attained its characteristic form. *Minne*, i.e., the conventional cult of woman, is the leading *motif*, but other times, religious or political, are not wanting, and the *Spruch*, a poem of gnomic or sententious character, was also in great favour. Most of the minnesingers were of knightly rank. Tradition mentions Heinrich von Veldeke as the pioneer of minnesong. He was followed by Friedrich von Hansen, Heinrich von Morungen, and Reinmar von Hagenau. A disciple of the last-named, the Austrian, Walther von der Vogelweide (c. 1165-1230), is the greatest and most versatile lyric poet of medieval Germany. He is equally great in the *Minnelied* and in the *Spruch*. He was a staunch partisan of the emperors in their fight against the papacy, and many of his poems are bitter invectives against pope and clergy. But he never attacked the doctrines of the Church; his religious fervour is attested by such poems as that in honour of the Trinity. With his successors the *Minnesang* enters on its decline. Ulrich von Lichtenstein's life, as revealed in his autobiography, "Frauendienst" (1255), shows to what absurdities the worship of woman could go. Neidhart von Reuenthal (d. about 1245) holds up to ridicule the rude life of the peasants and so introduces an element of coarseness into the aristocratic art. Lastly, Reinmar von Zweter (d. about 1260) must be mentioned as a distinguished gnomic poet.

The didactic spirit, which now becomes prominent, is exhibited in longer poems, like "Der wälsche Gast" (1215) of an Italian priest Thomasin of Zirclaere, and especially in Freidank's "Bescheidenheit" (c. 1215-30), i.e., wisdom born of experience, a collection of rhymed sayings. Though these works are strictly pious in tone, outspoken criticism of papal and ecclesiastical matters is frequently indulged in.

Prose was very backward in this period. Latin was the language for history and law. About 1230 appeared the "Sachsenspiegel," a code of Saxon law written in Low German by Eike von Repgowe, and this example produced in Upper Germany the "Schwabenspiegel" (before 1280). The first chronicle in German prose, the "Sachsenchronik," was written by a Saxon cleric (before 1250).

A great impetus was given to German prose by the preaching of the mendicant friars, who were rising into prominence early in the thirteenth century. They reached the hearts of the people, on whom the aristocratic literature of chivalry had no influence. The sermons of David of Augsburg (d. 1272) are not preserved. His disciple, Berthold of Ratisbon (d. 1272), was immensely popular as a preacher. His dramatic, passionate eloquence, born of the sincerity of conviction, turned thousands of his hearers to repentance and a better life.

IV. DECLINE OF POETRY AT THE END OF THE MIDDLE AGES. RISE IV. DECLINE OF POETRY AT THE END OF THE MIDDLE AGES. RISE

The decline of the knightly caste brought with it a decline of the literature of which this caste had been the chief support. The fourteenth and fifteenth centuries were not favourable to the development of an artistic literature. The Empire was losing its power and drifting into anarchy, the emperors were bent chiefly on increasing their dynastic power, while the princes strove to make themselves independent of imperial authority. They were no longer patrons of poetry. The clergy also in great part, followed worldly pursuits and undermined the reverence in which they had been held. The rise of the cities and their commerce was fatal to the prestige of knighthood and its ideals; life became more practical, more utilitarian, less aesthetic, and as a consequence the didactic tone becomes more and more prominent in literature. The universities which sprung up in Germany during this period -- the first being founded at Prague (1348) -- widened the gap between the learned classes and the people and prepared the way for Humanism, which towards the end of the fifteenth century begins to be a force in German letters. The influence of Humanism was not wholly beneficial. It was a foreign institution and fostered Latin as the language of scholarship at the expense of the native idiom. Gradually the Humanists turned against the dominant Scholastic philosophy, and soon a spirit of revolt manifested itself against the Church and its authority. The schisms within the Church and the worldliness of many of its dignitaries stimulated this spirit, which took a violent form, notably in the Hussite movement. The way was thus prepared for the great Lutheran revolt.

The romance of chivalry degenerated into allegory and tedious description, of which a typical instance is the "Theuerdank" (1517), an allegorical description of Emperor Maximilian's courtship of Mary of Burgundy, written at the suggestion of the emperor himself. The heroic epic fared no better, its tone became coarse and vulgar. Rhymed chronicles still supplied the place of histories, the most noteworthy being the chronicle of the Teutonic Order translated from the Latin of Peter von Dusburg by Nikolaus von Jeroschin (c. 1340). Of higher poetic value are the legends, fables, and anecdotes that enjoyed such popularity in this period. The best-known collection of fables was "Der Edelstein," containing a hundred fables translated from the Latin by Ulrich Boner, a Dominican monk of Berne (c. 1340). Of the many didactic poems of this period, by far the most famous was the "Narrenschiff" (Ship of Fools) of the learned humanist Sebastian Brant (d. 1521), which appeared in 1494 and achieved a European reputation. This is a satire of all the vices and follies of the age, of which no less than one hundred and ten kinds are enumerated. A satiric tendency pervades also the "Reinke de Vos," a Low German version from a Dutch original of the famous story of Reynard the Fox (1498). The allusions in this poem to the vices of men high in Church and State are unmistakable.

As for lyric poetry the *Minnesang* dies out, Hugo, Count of Montfort (c. 1423), and Oswald von Wolkenstein (d. 1445) being its last representatives. The cultivation of the lyric is now taken up by the burghers; the *Meistersang* displaces the *Minnesang*. Poetry in the hands of this class became a mere matter of technic, a trade that was taught in schools established for that purpose. The guild system was applied to art, and the candidate passed through different grades, from apprentice to master. Tradition names Mainz as the seat of the oldest school, and Heinrich von

Meissen (d. 1318) as its founder. Of the many cities where schools flourished, none gained such a reputation as Nuremberg, the home of Hans Sachs.

Very little of the poetry of these *meistersingers* has literary merit. The best lyric poetry of this period and the following is found in the *Volkslied*, a song generally of unknown authorship, expressive of the joys and sorrows of people in all stations and ranks of life. Contemporary events often furnished the inspiration, as in Halbsuter's song of the battle of Sempach (1386). Other songs deal with legendary subjects, as for instance the song of Tannhaeuser, the minstrel knight who wandered into the Mountain of Venus and then journeyed to Rome to gain absolution. The religious lyric of this period is largely devoted to the praise of the Blessed Virgin; in this connexion Heinrich von Laufenberg, a priest of Freiburg im Breisgau, later a monk at Strasburg (d. 1460), is specially noteworthy.

Another literary *genre* that now rose into prominence was the drama, the origin of which here as elsewhere is to be sought in the religious plays with which the great Christian festivals, especially Easter, were celebrated. These plays had a distinct purpose; they were to instruct as well as to edify. But gradually they assumed a more secular character, they were no longer performed in the church, but in the marketplace or some public square. Laymen also began to participate, and in the fourteenth century German takes the place of Latin. Besides the Passion, Biblical stories and legends were dramatized. One of the oldest and most striking of such plays is the Tegernsee play "Antichrist" (twelfth century). A famous drama of which the text is preserved is that of the wise and foolish virgins, performed at Eisenach in 1322.

The origin of the secular drama is not wholly clear. In the fifteenth century this *genre* is chiefly represented by the Shrovetide play, which undoubtedly traces its origin to the mummeries and the coarse funmaking indulged in on special occasions, notably on Shrove-Tuesday. No doubt the religious drama exerted its influence on the development of the secular drama. As a rule the latter was extremely crude in form and also incredibly coarse in language and content. The chief place for these plays was Nuremberg, and Hans Folz and Hans Rosenblüt are the best-known authors in this line. In their plays appears the tendency that was to make of this literary *genre* an effective vehicle for satire.

In this period of utilitarianism prose comes to occupy a leading position. The romances of chivalry were turned into prose, foreign romances were translated, and thus arose the *Volksbücher*, of which the most noteworthy is that of Till Eulenspiegel, a notorious wag, around whom gathered all kinds of anecdotes. The original Low German book of 1483 is lost, the oldest High German version dating from 1515. In connexion with translated literature the names of the earliest German humanists, Heinrich Steinhöwel, Niklas van Wyl, and Albrecht von Eyb should be mentioned.

History was now written in German prose. Of prose chronicles we possess a number, as that of Strasburg (to 1362), of Limburg (to 1398), and the Thuringian chronicle of Johannes Rothe, a monk of Eisenach (1421).

But the best German prose of this period is to be found in the writings of the mystics. The founder of this school was Master Eckhart (d. 1327), a Dominican monk, and the Dominican Order

became its chief exponent. Eckhart was accused of pantheism, but repudiated any such interpretation of his utterances. His disciple, Heinrich Seuse (Suso), also a Dominican (d. 1366), was less philosophical and more poetical. The third great mystic, Johannes Tauler (d. 1361), a Dominican of Strasburg, gave the teachings of his predecessors a more practical turn. The service which the mystics rendered to the German language in making it the medium for their speculations can hardly be overestimated.

The greatest preacher of the period was Geiler von Kaysersberg of Strasburg (d. 1510), whose series of sermons based on Brant's "Ship of Fools" was especially famous.

V. THE AGE OF THE REFORMATION (1500-1624)

The effects of Humanism in Germany began to be felt in the attention given by such men as Erasmus and Reuchlin to the study of the Bible in the original languages. For German literature the Reformation was a calamity. The fierce theological strife absorbed the best intellectual energy of the nation. Literature as an art suffered by being pressed into the service of religious controversy; it became polemic or didactic, and its prevailing form was prose.

Martin Luther (1483-1546) is the most important figure of this period and his most important work is his translation of the Bible (printed complete at Wittenberg, 1534; final edition, 1543-45). The German translations before his time had been made from the Vulgate and were deficient in literary quality. Luther's version is from the original, and although not free from errors it is of wonderful clearness and thoroughly idiomatic. Its effect on the German language was enormous; the dialect in which it is written, a Middle German dialect used in the chancery of Upper Saxony, became gradually the norm for both Protestant and Catholic writers, and is thus the basis of the modern literary German. Luther's pamphlets have only historical interest; his catechism and sermons belong to theological literature. His "Tischreden" (Table-Talk) shows the personality of the man. Force and strength of will mark his character and writings. But his firmness often savours of obstinacy, and in dogmatism he yields no tittle to his opponents, while the bluntness, or still better the vulgarity, of his language, gave offence even in an age accustomed to abuse. As a poet he appears in his religious songs, among which "Ein feste Burg" is famous as the battle-hymn of the Reformers. Other writers of Protestant church hymns were Paulus Speratus (d. 1551), Nikolaus Decius (d. 1541), Nikolaus Herman (d. 1561), and Philipp Nicolai (d. 1608).

As a rule, the German Humanists were indifferent to the Reformation, but Ulrich von Hutten (d. 1523) was a zealous partisan of the movement; his writings are mostly in Latin. One of the bitterest enemies of Luther was Thomas Murner, a Franciscan monk (1475-1537), who in his earlier satires castigated the follies of the age. At first he showed sympathy for the reform movement, but when Catholic doctrine was assailed, he turned, and in a coarse but witty satire "Von dem grossen Lutherischen Narren" (1522), he unsparingly attacked the Reformation and its author.

The best poet of the sixteenth century was the Nuremberg shoemaker Hans Sachs (1494-1576) who, although a follower of Luther, was not primarily a controversialist. He displayed amazing productivity in many fields, mastersong, *Spruch*, anecdote, fable, and drama. His Shrovetide plays

display a genial humour that even today is effective. The spirit of the worthy master's verse is thoroughly didactic, and artistic form is altogether lacking.

Towards the middle of the sixteenth century, the Counter-Reformation set in, and regained much of the ground lost to Protestantism, which had now spent itself as a vital force and was divided by the dissensions between Lutherans and Calvinists. The most prominent polemical writer on the Protestant side was Johann Fischart (d. 1590), much of whose satire is directed against the Jesuits, notably his "Vierhörniges Jesuiterhuetlein" (1580). His most ambitious work is the "Geschichtklitterung," a free version of Rabelais's "Gargantua" (1575). Fischart is not an original writer, and his extravagance of language and love for punning make his work thoroughly unpalatable to a modern reader.

Narrative prose is very prominent in the literature of this period. Collections of anecdotes, such as Jörg Wickram's "Rollwagenbuechlein" (1555) and especially "Schimpf und Ernst" (1522) of Johannes Pauli, a Franciscan monk, were very popular. Translations of French and Spanish romances like the "Amadis of Gaul" were also much in favour. Then there were the "Volksbücher," with their popular stories, among which those connected with Faust and the Wandering Jew have become especially famous. Didactic prose was represented by the historical work of Aegidius Tschudi (d. 1572), Sebastian Frank (d. 1542), and Johannes Thurmayer (known as Aventinus; d. 1534); the collections of proverbs and sayings made by Frank and Johann Agricola (d. 1566) are also to be mentioned in this connexion. In theology Bishop Berthold of Chiemsee represents the Catholic side, with his "Tewtsche Theologie" (1528); the Franciscan, Johann Nas (d. 1590), a Catholic convert, in his "Sechs Centurien Euangelischer Wahrheiten" also champions the old Church. The chief Protestant writer was Johann Arndt (d. 1621), author of the "Vier Bücher vom waren Christenthum," one of the most widely read books of the time. Contemporary with Arndt was the famous shoemaker, Jakob Boehme (d. 1624); a mystical philosopher in whose writings profound thoughts and confused notions are strangely blended.

In the dramatic field there was also much activity. Luther, though opposed to the passion play, had favoured the drama on educational grounds. Nikolaus Manuel, a Swiss (d. 1530), used the dramatic form for satirizing the pope and the Catholic Church. The Biblical drama was in favour, and many of the learned writers of school comedies chose their subjects from the Bible, as for instance, Paul Rebhun (d. 1546) and Sixt Birck (d. 1554). The most prolific dramatist of the period was Hans Sachs, who wrote no less than 208 plays, which in spite of their lack of all higher literary quality, make a promising beginning. Towards the end of the sixteenth century, English strolling players appeared in Germany, and through their superior histrionic art gained the favour of the public. Jakob Ayrer (d. 1605), the leading dramatist of that age, shows their influence; still more so Heinrich Julius, Duke of Brunswick-Wolfenbuettel (d. 1613), the first to write German dramas in prose instead of verse.

VI. THE AGE OF RELIGIOUS WORKS (1624-1748). THE POETRY OF VI. THE AGE OF RELIGIOUS WORKS (1624-1748). THE POETRY OF

The religious strife inaugurated by the Reformation culminated in the Thirty Years War (1618-1648) which practically destroyed Germany as a nation. National feeling almost died out. The Catholic League looked for support to Spain and Austria, while the Protestant princes betrayed the national interests to Sweden and France. A servile spirit of imitation was abroad. The German language was neglected and devised in aristocratic circles and was corrupted by the influx of foreign words. Literature was devoid of originality and substance; the formal side absorbed the chief attention of the writers.

The literary leader of this period was Martin Opitz (1597-1639), whose treatise "Von der deutschen Poeterey" (1624) enjoyed undisputed authority as an *ars poetica* for more than a century. Intelligibility and regularity rather than imagination and feeling were to be looked for in poetry. The theory of Opitz was drawn from the practice of French and Dutch Renaissance poets and left no room for originality. The book had a salutary effect, however, in that it put an end to the mechanical counting of syllables and made rhythm dependent on stress. Its protest against the senseless use of foreign words was also laudable. Opitz is the author of a number of poems, moralizing, didactic, religious, or descriptive in character, but of little real merit. His best-known work is "Trostgedicht in Widerwaertigkeit des Kriegs" (1633). The poets who followed the leadership of Opitz are known as the First Silesian School, though not all were Silesians by birth, and included some of real talent like Friedrich von Logau (d. 1655), the witty epigrammatist, and Paul Fleming (d. 1640), the lyricist. The poets of the so-called Königsberg Circle were also followers of Opitz. Among them, Simon Dach (d. 1659) is pre-eminent. In this connexion may be mentioned also, Andreas Gryphius (1616-64), the chief dramatist of the period. His tragedies, based mostly on Dutch models, are marred by their stilted rhetoric and predilection for the horrible; his comedies are far better, though they did not meet with the same favour. It was chiefly diction and versification that benefited by the poets of this school. Literature in their hands was a mere product of scholarship, entirely out of touch with the people. The linguistic societies that sprang up at this time, the most famous of which was *Die fruchtbringende Gesellschaft* (1617), did not change this condition. The language, not the literature, improved through their efforts.

As a reaction against the cold formalism and utilitarianism of the Opitzians, the writers of the Second Silesian School, Christian Hofmann von Hofmannswaldau (1617-79) and Daniel Kasper von Lohenstein (1635-81) fell into the opposite extremes of bombast and exaggeration. Their style was modelled on that of the Italian Marini. The lyric poems of the former and the dramas and novels of the latter are written in an unnatural and inflated style, overloaded with metaphors. In their style, as well as in their immorality, these writings reflect the taste of contemporary courtly society. In opposition to this fashionable tendency, Christian Weise (d. 1708) in his school dramas and satiric novels strove for simplicity, which in his work and that of his followers degenerated frequently into triviality and inanity. The best poetry that the seventeenth century produced was the religious lyrics, especially the hymns. The tone of these poems is no longer one of combat, but rather of pious resignation. The greatest of Protestant writers in this line was Paul Gerhardt (1607-1676). Others deserving of mention are Joachim Neander, Georg Neumark, Johann Franck, and Philipp

Jakob Spener. Among Catholic writers the most prominent were the Jesuit, Friedrich Spe (1591-1635), the intrepid defender of the victims of the witchcraft tribunals, author of the lyric collection "Trutznachtigall," and Johann Scheffler, better known as Angelus Silesius (d. 1677), a convert and later a priest, in whose poetic collections "Heilige Seelenlust" and "Der cherubinische Wandersmann" mysticism again finds a noble expression. Another Jesuit poet, Jacob Balde (1604-68), did his best work in Latin, though his German poems are not without merit.

The novel began to flourish in the seventeenth century. The heroic and gallant romance, of which Lohenstein was the chief exponent, was high in favour with aristocratic society, but of small literary value. The romances of roguery, coming in under Spanish influence, were far better. The prose classic of the century is the "Simplicissimus" of Christoph von Grimmelshausen (d. 1676), a convert to Catholicism. In the form of an autobiography it unfolds a vivid and realistic picture of the period of the Thirty Years War. Defoe's "Robinson Crusoe" brought forth a flood of imitations, of which Schnabel's "Die Insel Felsenburg" was the best. Satire is represented by Christian Reuter's "Schellmuffskys Reisebeschreibung" (1696) and the writings of Johann Balthasar Schupp, a Lutheran pastor of Hamburg (d. 1661), as well as those of Ulrich Megerle, known as Abraham a Sancta Clara (1644-1709), who as court preacher at Vienna was noted for his wit and drollery. German prose began now to be used for philosophy and science. The pioneers in this line were Christian Thomas and Christian Wolff, who inaugurated the Rationalistic movement in Germany.

At the beginning of the eighteenth century German literature was still in a low state. The drama especially was in a bad plight, coarse farces with the clown in the leading role being most in favour. A reform was attempted by the Leipzig professor, Johann Christoph Gottsched (1700-66). His intentions were praiseworthy, but unfortunately he was anything but a poet. Poetry for him was a matter of the intellect; its aims were to be practical. For the mysterious and the wonderful he had no use. Good taste was to be cultivated by imitating the French classic drama, which was supposed to be the best exponent of the practice of the ancients. Gottsched's literary dictatorship was undisputed until he became involved in a controversy with the Swiss critics, Bodmer and Breitinger, who insisted on the rights of imagination and feeling and held up the English poets as better models than the French. Gottsched was defeated and in consequence lost all authority.

Slowly poetry began to improve. This improvement is distinctly noticeable in the descriptive poem "Die Alpen" of Albrecht von Haller (d. 1777) and the graceful verse of Friedrich von Hagedorn (d. 1754). The most popular author of the day was Christian Fuerchtegott Gellert (1715-69), whose fables were familiar to every German household. He also wrote stories, moralizing comedies, and hymns. But neither these writers nor those of the Halle circle, Johann Wilhelm Ludwig Gleim, Ewald Christian von Kleist, and Johann Peter Uz, were in any sense great writers.

VII. THE CLASSIC PERIOD OF GERMAN LITERATURE VII. THE CLASSIC PERIOD OF GERMAN LITERATURE

Many causes contributed to the rise of a great national literature in the eighteenth century. The victories of the Prussian King Frederick the Great quickened national sentiment in all German

lands. This quickening of patriotism is discernible in Klopstock's poems; it encouraged Lessing to begin his campaign against the rule of French classicism. Religious movements also exerted a powerful influence. Pietism came as a reaction against the narrow Lutheran orthodoxy then prevailing, and though it ultimately added but one more petty sect to those already existing, the deepening of religious sentiment that followed it was beneficial to poetry. With the appearance in 1748 of the three opening cantos of "Der Messias" a new era opened for German literature. The author, Friedrich Gottlieb Klopstock (1724-1803), was hailed at once as a poet born not made. Poetry again had a noble content: love, patriotism, and religion. The theme of the "Messias" is the Redemption. In spite of its high seriousness and lofty purpose, the poem is a failure as an epos. Klopstock's gift was lyric; he is at his best in his odes. Impatient of the pedantic rules of versification followed by poets since the days of Opitz, he discarded rhyme altogether and chose for his odes antique metres and free rhythms. This, as well as their involved diction, has stood in the way of their popularity. Another defect that mars all of Klopstock's work is its excessive sentimentalism, a defect that is disagreeably noticeable in most of the literature of that time. The poet's patriotism found vent in odes as well as in patriotic prose dramas, the so-called *Bardiete*, in which an attempt was made to revive Germanic antiquity and to excite enthusiasm for Arminius, the liberator of ancient Germany from Roman subjugation. As drama these productions are utter failures, though their lyric passages are often beautiful; their chief effect was to stimulate the "bardic" movement represented by von Gerstenberg, Kretschmann, and the Viennese Jesuit Denis. Klopstock's Biblical dramas like "Der Tod Adams" (1757) are now wholly forgotten.

Of far greater influence on literature than pietism was rationalism, whose watchword was "Enlightenment." Reason was to be the sole guide in all things; tradition and faith were to conform to it. For dogma of any kind there was no room in such a system, which frequently tended towards undisguised atheism, as with the English Deists and especially the French Encyclopedists. Frederick the Great was an adherent of their views and made them dominant in Church and State as far as Prussia was concerned. In Germany, however, rationalism did not go to the length of atheism; as a rule a compromise between reason and revealed religion was attempted. The broad humanitarianism of the great writers of this period, Lessing, Herder, Goethe, Schiller, shows the influence of the Enlightenment. Certain it is that all these writers were out of sympathy with any of the orthodox forms of Christianity. Often, however, the Enlightenment degenerated into a shallow, prosy rationalism, destitute of all finer sentiment, as in the case of the notorious Nicolai (d. 1811). As a reaction against the one-sided sway of rationalism, came a passionate revolt against the existing order. This revolt was inaugurated by Rousseau and manifested itself in German literature in the *Sturm-und-Drang-Periode* (Storm and Stress Period). The final product of the whole rationalistic movement was the epoch-making "Critique of Pure Reason" of Immanuel Kant.

The representative of the Enlightenment in its best aspect is Gotthold Ephraim Lessing (1729-81), one of the greatest critics of the century. In the "Literaturbriefe," a series of essays on contemporary literature, his wonderful critical ability was first shown. Here Shakespeare is held up as a model and the supremacy of the French drama is challenged. In 1766 appeared the "Laokoon," in which

the spheres of poetry and the plastic arts are clearly defined, and their fundamental differences pointed out. The attempt to establish a national theatre at Hamburg resulted in the "Hamburgische Dramaturgie" (1767-69), wherein Lessing investigates the nature of the drama, and refutes the claim of the French that their classic drama is the true exponent of the practice of the ancients. The rules of Aristotle are accepted as final, but it is shown that the French have misunderstood them, and their German imitators are therefore doubly in error. With all its one-sidedness, the polemic was fruitful for it put an end to pseudoclassicism and made a national German drama possible. Lessing led the way. His "Miss Sara Sampson" (1755) is the first bourgeois tragedy of the German stage. It was followed by "Minna von Barnhelm" (1767), the first German national drama, on a subject of contemporaneous interest with the Seven Years War for a background, and by "Emilia Galotti," the first classic German tragedy (1772) as an adaptation to modern conditions of the story of Appius and Virginia. Lessing's last drama "Nathan der Weise" (1779) was the outcome of the theological controversy in which he had been involved, through the publication of the *Wolfenbuettel* fragments. These had been written by Reimarus and contained a bold attack on Christianity and the Bible. A bitter feud between Lessing and Göze, the champion of Lutheran orthodoxy, was the result in the course of which Lessing wrote a number of polemics in which he asserted that Christianity could exist without, and did exist before, the Bible. When a decree of the Duke of Brunswick forbade further discussion, he had recourse to the stage, and wrote his "Nathan." In this he uses Boccaccio's famous parable of the three rings to enforce the thesis that there is no absolutely true religion. Not faith, but virtuous action is the essence of religion, and all religious systems are equally good. For a dogmatic religion there is, of course, no room in this view, which is a frank expression of Lessing's deistic rationalism. His last prose works, notably "Die Erziehung des Menschengeschlechts" (1780), are philosophical in character and treat of ideas related to those expressed in "Nathan."

A contrast to Klopstock's "seraphic" sentimentalism is offered in the sensualism of Christopher Martin Wieland (1733-1813). He began as a fervid pietist and admirer of Klopstock, and under the influence of rationalism passed to the opposite extreme of sensualism tinged with frivolity before he found his level. His "Agathon" is the first German *Bildungsroman*, presenting a modern content in ancient garb, a method also followed in the "Abderiten" (1780), in which the provincialism of the small town is satirized. His masterpiece is the romantic heroic epic "Oberon" (1780), for which he drew his inspiration from the old French romance "Huon de Bordeaux." His last work, "Aristipp," is a novel in epistolary form, like the "Agathon" in dress, but otherwise modern. Wieland was not a great poet, but the smooth graceful style of his writings and their pleasant wit did much to win the sympathy of the upper classes for German literature.

While Wieland's influence on German literature has been small, that of Johann Gottfried Herder (1744-1803) was decisive and far-reaching, less through his own writings than through the new ideas he proclaimed and the influence of his personality on others, notably Goethe. Rousseau's summons to return to nature was applied by Herder to poetry. Not imitation, but native power makes the poet. Poetry was to be judged as the product of historic and national environment. Natural and

popular poetry like the folk-song was preferred to artistic poetry. These views were developed in a series of essays "Fragmente ueber die neuere deutsche Literatur" (1767) and "Kritische Waelder" (1769) and were still further elaborated in essays on Ossian and Shakespeare in "Von deutscher Art und Kunst einige fliegende Blätter" (1773). Then followed "Stimmen der Voelker in Liedern" (1778), a collection of 182 folk-songs from every age, clime, and nationality. Herder's skill translator or adapter is exhibited here, as also in "Der Cid," a free version from the Spanish through the medium of the French. His original poems, mostly parables and fables, are of little importance. Herder, the founder of the historical method, could not but be hostile to rationalism with its unhistoric methods and one-sided worship of reason. In "Vom Geiste der hebraeischen Poesie" (1783) he showed what a wealth of poetry the Bible contained. In his last work, "Ideen zur Philosophie der Geschichte der Menschheit" (1784-91), the history of the human race is regarded under the aspect of evolution; humanitarianism is the ultimate goal of religious development. This work pointed out the way for the philosophical study of history.

The effect of the work of Klopstock, Herder, and Lessing was immediate. The national movement was taken up by the "Göttinger Hain" poets, of whom the best-known are Johann Heinrich Voss (d. 1826), the translator of Homer, Ludwig Heinrich Christoph Hoelty (d. 1776), the elegiac singer, and the two brothers Stolberg. Connected with them, though not members of the circle, were Matthias Claudius (d. 1815) and the gifted but dissolute Gottfried August Buerger (d. 1794), the ballad writer, whose "Lenore" (1773) has become widely known.

The protest voiced by Rousseau against the existing social order produced in German letters the so-called *Sturm und Drang* (Storm and Stress) movement, which dominated the decade (1770-80). It was a passionate revolt against conventional traditions and standards and manifested itself in the wild dramatic products of such men as von Klinger, Friedrich Müller or Maler Müller, and Lenz, and the lyric effusions of Schubart (d. 1791). But the movement found its best expression in the early work of Germany's greatest poets, Goethe and Schiller.

Johann Wolfgang Goethe (1749-1832) while a student at Strasburg had come under Herder's influence and come under Herder's influence and caught the revolutionary spirit. In his "Goetz von Berlichingen" (1773), the first great historical German drama, the poet gave vent to his dissatisfaction with the social and political conditions of his time. In spite of its irregular form, due to a misguided enthusiasm for Shakespeare the national content of the drama and the forceful diction carried the public by storm. Its popularity was exceeded by "Die Leiden des jungen Werthers" (1774), a novel in letter form, reflecting the morbid sentimentalism of the age; the hero kills himself under the spell of a hopeless passion for the affianced of his friend. The years from 1775 to 1786 were not so fruitful; political and social activity interfered with literary production. The spirit of storm and stress gradually subsided and gave way to the classicism which, especially after his return from Italy (1788), left its stamp on all of Goethe's subsequent work. The apostle of this neo-Hellenism was Johann Joachim Winckelmann (d. 1768), the founder of the historical study of art. He postulated the canons of ancient Greek art as absolute. The classicism that he inaugurated was directly opposed in spirit to the national tendency championed by Herder. Lessing's work had shown the influence

of this neo-Hellenism. Now Goethe became its pronounced follower. The works that he wrote under its influence exhibit perfection of form, notably the dramas "Egmont" (1788), "Iphigenie auf Tauris" (1787), and "Torquato Tasso" (1790). Goethe's literary productions during this period, before 1794, are not numerous; they include the "Romanische Elegien" and the epic "Reineke Fuchs" (1794), a free version in hexameters from the Old Low German. The dramas that arose under the influence of the French Revolution are not very important. In fact Goethe's chief interests at this time were scientific rather than literary. After 1794, however, under the inspiration of Schiller's friendship, the poetic impulse came with new strength. The period of Goethe's and Schiller's friendship (1794-1805) marks the climax of the poetic activity of these two great men. The satiric epigrams known as "Xenien" were the fruit of their joint activity. Then followed a number of their finest ballads. In 1796 Goethe completed "Wilhelm Meisters Lehrjahre," a novel of culture, discursive and didactic, with the stage for its principal theme. The exquisite idyllic epic, "Hermann und Dorothea" (1797), though written in hexameters, is thoroughly German in spirit and subject-matter. After Schiller's death (1805) Goethe's poetic productivity decreased. Some fine lyrics produced in this period are in the "Westoestliche Divan" (1819), a collection of poems in Oriental garb. Most of the poet's work now was in prose. "Die Wahlverwandtschaften" (1809), a psychological novel, depicts the tragic conflict between passion and duty and upholds the sanctity of the marriage tie. In the autobiographical romance "Dichtung und Wahrheit" (1811-33) the poet tells with poetic licence the story of his life. A number of stories were loosely strung together in "Wilhelm Meisters Wanderjahre" (1821), a long didactic novel given over largely to the discussion of ethical and sociological problems. The greatest work of Goethe and of German literature is "Faust," a dramatic poem, the composition of which occupied the poet's entire life. The idea was conceived while Goethe was still a young man at Frankfurt; a fragment containing the Gretchen episode appeared in 1790. Under the stimulus of Schiller's sympathy the first part was completed and published in 1806. The second part was not finished until eight months before the poet's death. It is a colossal drama with humanity for its hero. Weak human nature may fall, under temptation, but its innate nobility will assert itself triumphantly in the end. Faust atones for his errors by a life devoted to altruistic effort, and so his soul after all is saved. The Catholic atmosphere of the closing scene, where the penitent Gretchen intercedes with the Virgin for her lover, betrays the influence of the Romantic School.

If Goethe is the man of universal gifts, Johann Christoph Friedrich Schiller (1759-1805) is preeminently a dramatist. He too received his first impulse from the Storm and Stress movement. His first three dramas, "Die Ræuber" (1781), "Fiesco" (1783), and "Kabale und Liebe" (1784), breathe a spirit of passionate revolt. With all their youthful exaggeration, they reveal unmistakable dramatic power. In "Don Carlos" a calmer spirit reigns and a greater mastery of form is evident. Freedom of thought is the burden of its message. The composition of this work had turned Schiller's attention to history, and for a time the study of history and philosophy got the better of poetic production. The historical works that are the outcome of these studies are valuable rather for their style than as original contributions. Goethe's study of Kant's philosophy was responsible for a

number of works of an aesthetic character, notably "Über naive und sentimentalische Dichtung," where *naive* and *sentimental* are taken as typical of ancient and modern respectively. His friendship with Goethe (1794-1805) won Schiller back to poetry and now followed in rapid succession his dramatic masterpiece: "Wallenstein," a trilogy, the first historic German tragedy in the grand style (1796-99), "Maria Stuart" (1800), and "Die Jungfrau von Orleans" (1801), a noble defence of the Maid of Orléans against the slanders of Voltaire. "Die Braut von Messina" (1803) is a not altogether successful attempt to combine modern spirit with antique form. The poet's last great drama, "Wilhelm Tell" (1804), is, perhaps, the most popular German play. Here he reverts again to the idea of freedom which he championed so passionately in his youthful dramas, and which here found its most convincing expression. The grandly conceived tragedy "Demetrius" remained a fragment, owing to the author's untimely death (1805). As a lyric poet Schiller is far below Goethe. His lyrics lack spontaneity; they are rather the product of reflection and are mostly philosophic in character. His masterpiece in this line is "Das Lied von der Glocke" (1800). He also excels in epigram and gnomic verse, and as a writer of ballads he has few equals.

The great classic drama by no means immediately won its way. Besides the opera, the bourgeois drama ruled the stage and its most popular representatives were Iffland and Kotzebue. The plays of these writers were thoroughly conventional in tone; those of Kotzebue had a distinctly immoral tendency, but they were theatrically effective and immensely popular.

Of prose writers contemporary with Goethe we may mention the historians, Justus Möser (d. 1794) and Johannes von Müller (d. 1809). In philosophy the commanding figure is Immanuel Kant, whose work has exerted a tremendous influence on modern thought. Alexander von Humboldt's (1769-1859) "Kosmos" is a classic of natural science.

In the field of the novel, Jean Paul Friedrich Richter (1763-1825) achieved distinction. His writings, "Quintus Fixlein," "Hesperus," "Titan," and others were enormously popular in their day, but owing to their bizarre style and absolute formlessness, joined to an unbearable discursiveness, they have lost all charm for modern readers. The unfortunate Friedrich Hölderlin (1770-1843) combined the classic with the romantic spirit in unique fashion. His passionate longing for the lost beauty of ancient Greece was expressed in his novel "Hyperion," as well as in some noble lyrics.

VIII. ROMANTICISM AND THE ERA OF REVOLUTION VIII. ROMANTICISM AND THE ERA OF REVOLUTION

With the beginning of the nineteenth century the revolt against the *Aufklärung* (Enlightenment), started by Herder, reasserted itself. There was also a marked revival of religious sentiment. The Romantic School rose into prominence. Art was to be rescued from the sway of rationalism; imagination and emotion were to be set free. Taking as a basis Fichte's philosophy, which proclaimed the ego as the supreme reality, the romanticists proceeded to free creative genius from the barriers of convention and tradition. But the result was often an extreme subjectivism that broke through the restraints of artistic form and lost itself in fantastic visions and vague mysticism. The leaders of the movement turned away from a sordid present to far-away Oriental regions, or to a remote

past like the Middle Ages. This predilection for medievalism coming together with the religious revival gave to the romantic movement a pronounced Catholic tendency. Some of the leading romanticists, Brentano, Görres, Eichendorff, were Catholics; others, like Friedrich Schlegel, became Catholics. Sympathy for Catholicism is noticeable in the work of all the members of the school.

The Romantic movement was also a salutary reaction against the excessive classicism of Goethe and Schiller. The national element was again emphasized. The Middle Ages, depreciated and misrepresented ever since the Reformation, were now shown in a fairer light by historians like von Raumer, Wilken, Voigt, and others. The great medieval literature was rediscovered by scholars like Jakob and Wilhelm Grimm and Lachmann. In fact, the science of Germanic philology owes its origin to the Romantic School. The enthusiasm for foreign literature also bore rich fruit in masterly translations and reproductions. Here lies the main significance of much of the work of the brothers Schlegel, the critical leaders of the Older Romantic School. August Wilhelm von Schlegel (1767-1845) is famous as a translator. His translations of Shakespeare have become German classics, while his renderings from the Spanish (Calderon, Lope de Vega), Italian, and Sanskrit are hardly less meritorious. His brother, Friedrich von Schlegel (1772-1829), who became a convert to Catholicism, enunciated the romantic doctrines in his aphorisms. Through his treatise, "Über die Sprache und Weisheit der Indier" (1808) he became the pioneer of Sanskrit studies in Germany. The work of the Schlegels in criticism and literary history was epoch-making; they taught critics not merely to criticize, but to understand, to interpret, to "characterize." The school found no really great poet to put its theories into practice. Still the poetry of Friedrich von Hardenberg (1772-1801), better known as Novalis, is pervaded by deep feeling. His fragmentary novel "Heinrich von Ofterdingen" is an attempt to show the development of a true romantic poet. Ludwig Tieck (1773-1853) revived the old folk-books, satirized the Enlightenment in his comedies, wrote romantic dramas of no great value, like "Genovera," and a novel of culture "Franz Sternbalds Wanderungen," which had much influence on German painting. After 1821 he turned to the short story, which he was the first to cultivate with success. A second group of romantic writers, the Younger Romantic School, gathered chiefly at Heidelberg. With them the national tendency is more pronounced. Their work shows great talent, but is often spoiled by a lack of artistic restraint. Especially is this the case with Klemens Maria Brentano (1778-1842), a highly poetic but very eccentric character, who together with Achim von Arnim collected and edited an important book of folksongs, "Des Knaben Wunderhorn" (1805-8). Their friend Joseph von Görres (1776-1848), during his period of ardent patriotism, edited old German songs and folk-books; his later activity was largely devoted to the service of the Catholic Church, which found in him a zealous champion. The patriotic tendency is much in evidence in the work of Friedrich de la Motte Fouque (1777-1843), whose fantastic chivalric romances are forgotten, while his fairy-tale "Undine" still lives. The only dramatic poet of a high order connected with the Romantic School is Heinrich von Kleist (1777-1811), among whose dramas "Der Prinz von Homburg" (1810) is regarded as his masterpiece. His novels, of which "Michael Kohlhaas" is the best known, show a graphic power. Zacharias Werner (1768-1823), who ultimately became a Catholic, is chiefly known as the originator of the so-called "fate-tragedies,"

a gruesome species of dramas, in which blind chance is the dominating factor. Characteristic of decaying romanticism are the weirdly fantastic stories of E.T.A. Hoffmann (1776-1822). The influence of the romantic movement continued for some time after the movement had spent itself as a living force. Almost all the poets of the first half of the nineteenth century were more or less affected by it. The national tendency fostered by romanticism was transformed by the Wars of Liberation into patriotic fervour which found expression in the stirring lyrics of Max von Schenkendorf, Theodor Koerner, and Moritz Arndt.

The poets of the Swabian School, who were romantic only in so far as they leaned towards medieval or religious subjects, excelled particularly in the ballad. Their leader was Ludwig Uhland (1787-1862), distinguished as poet and scholar. Besides him there were Justinus Kerner and Gustav Schwab. Some of Kerner's and Uhland's lyrics have become veritable Volkslieder.

Romanticism cast its spell over the lyric, which occupies a large space in the literature of this period. Prominent in this field were Adelbert von Chamisso, Wilhelm Müller, and Joseph von Eichendorff, a Catholic nobleman of Silesia, the most gifted lyricist of the group. Friedrich Rückert (1788-1866) was a voluminous but unequal writer of verse; his fame rests largely on his translations and imitations of Oriental poetry, the difficult forms of which he reproduced with amazing skill. In this he was followed by Count August von Platen (1796-1835), in whose verses form reached perfection, often to the detriment of feeling. The greatest lyric poet, and the most striking literary figure of the day, was Heinrich Heine (1797-1856), a Jewish convert to Protestantism. Unfortunately, his great gifts are marred by the insincerity and immorality of his character; his finest poetic efforts are often impaired or destroyed by a wanton, mocking irony. His prose works, for the most part fragmentary and journalistic in character, are written in a graceful, easy style, and with brilliant wit. The miserable political conditions of Germany were the object of Heine's bitterest satire; but unfortunately religion and morality also became a target for his mockery and cynical wit. Great as his influence was on literature, on the whole it was pernicious. His poems appeared in different collections under the titles of "Buch der Lieder," "Neue Gedichte," and "Romanzero." Of his prose writings the "Reisebilder" (1826) are the best. Another romantic lyricist of the highest order was the Austrian, Nikolaus Lenau (Niembsch von Strehlenau), the poet of melancholy. A strong individuality, uninfluenced by the literary currents of the day, reveals itself in the work of a noble Catholic lady, Annette Elisabeth von Droste-Huelshoff (1797-1848), whose writings throughout show a deeply religious spirit. Her collection entitled "Das geistliche Jahr," poems appropriate for the Sundays and Holy Days of the Catholic year, contains some of the finest religious poetry in the German language. Another genius who stood apart from the currents of the day was Franz Grillparzer (1791-1872), Austria's greatest dramatist. In his work classic and romantic elements were united. Of his many dramatic masterpieces we only mention "Die Ahnfrau," "Sappho," "Das goldene Vlies," "Des Meeres und der Liebe Wellen," and "Der Traum ein Leben." His compatriot, Ferdinand Raimund, is the author of plays deservedly popular. The dramatic productions of Christian Grabbe were too extravagant and erratic to be performed. The most popular playwright of that day, Ernst Raupach, is now forgotten.

The historical novel rose into favour during this period, largely through the influence of Sir Walter Scott. Von Arnim and Tieck had tried their hand at this *genre*, to be followed by Wilhelm Hauff, the author of "Lichtenstein" (1826) and Willibald Alexis (pseudonym for Wilhelm Haering). The latter took his subjects from Prussian history and gave the novel a patriotic tendency. A significant change is marked by the novels of Karl Immermann (1796-1840), who in "Die Epigonen" and "Muenchhausen" (1838) treated contemporary conditions in a satiric vein. The episode of the "Oberhof" in the latter work introduced the village and peasant story into German literature. In this field, Jeremias Gotthelf (Albert Bitzium) and Berthold Auerbach won success. Charles Sealsfield (Karl Postl) is known as a writer of novels of travel and adventure.

The hopes that patriots in 1815 had cherished of a united German had been rudely dispelled. Freedom of thought had been suppressed by the political reaction typified by the Metternich regime. The smouldering discontent broke forth violently at the news of the Paris Revolution (1830) and found its literary expression in the movement known as "Young Germany." The relentless war that was carried on against the existing political order was also directed against religion and morality. The "emancipation of the flesh" was openly proclaimed. Heine had led the attack, and the members of the coterie followed with essays, novels, and dramas, which for the most part, owing to their political and social character, were shortlived. Karl Gutzkow (1811-78) is the leading figure of the coterie. His novels, with their anti-religious and immoral tendencies, have to-day only historical interest, while his dramas, of which the best known is "Uriel Acosta" (1847), are theatrically effective. Next to Gutzkow in prominence was Heinrich Laube (1806-84), whose best work, however, was done as a dramatist and not as a partisan of Young Germany. Women also took part in the movement. Of these the most notable are the Jewess, Fanny Lewald, whose writings display a decided anti-Christian spirit, and Countess Ida von Hahn-Hahn, who began her literary career with novels of high life in which matrimony is treated with levity, and ended by becoming a devout Catholic.

The spirit of revolution inaugurated by Young Germany soon assumed a definite political character and dominated the literary activity from 1840 to the outbreak of 1848. It found its most eloquent expression in the political lyric. In Austria Anastasius Gruen (pseudonym for Count Anton Alexander von Auersperg), Karl Beck, Moritz Hartmann, and Lenau were most prominent in this line; in Germany Herwegh, Hoffmann von Fallersleben, Franz von Dingelstedt, Ferdinand Freiligrath (1810-76), and Gottfried Kinkel were the political leaders of the malcontents. Much of this poetry was necessarily ephemeral; in fact Kinkel, Fallersleben, and Freiligrath owe their fame to their verses not political in character. In the poetry of Count Moriz von Strachwitz and Karl Simrock, the excellent translator of Old German literature, a reaction against the political tendency in literature and in favour of romanticism is evident. The short stories of Adalbert Stifter and the dramas of Friedrich Halm (Freiherr von Muench-Bellinghausen) also show the romantic tinge. The greatest lyricist of the age, Eduard Moerike (1804-75), a Swabian, went his way wholly unconcerned with the questions of the day.

IX. MODERN GERMAN LITERATURE (SINCE 1848). NEW AIMS. IX. MODERN GERMAN LITERATURE (SINCE 1848). NEW AIMS.

The year 1848 marks a great change in the political and literary history of Germany. The great question of German unification now loomed in the foreground, and though a reaction had set in after the revolutionary outbreak, liberal ideas were strong, and interest in political questions was keen. Literature sought to get more in touch with life, and became less exclusively aesthetic. The materialistic tendencies of the age were reflected in and conditioned by the great progress of science and the rise of journalism. The lyric and epic lost ground to the drama and the novel. The classic-romantic tradition still found many followers. In fact, after the turbulence of the Revolution came a return to a more formal and aesthetic art, which, however, kept more or less in touch with the life of the age. An enormous array of names confronts the student of the literature of this period, but only a relatively small number call for notice.

The most prominent lyric poet now was Emanuel Geibel (1815-84), whom poems are distinguished by beauty of form and dignified, patriotic sentiment. He was the leader of the Munich group, which numbered among others Count Adolf von Schack, the art connoisseur and distinguished translator of Firdausi, Herrmann von Lingg and Julius Grosse, the epic poets, Friedrich von Bodenstedt, whose enormously popular "Mirza Schaffy" songs continued the Oriental fashion inaugurated by Goethe's "Divan." The work of one of this group, Paul Heyse, a masterly writer of short stories, is characterized by extreme elegance of form and diction. In his novel "Kinder der Welt" (1873), however, these fine qualities cannot conceal atheistic and immoral tendencies. Among the writers of this period none achieved such popularity as Joseph Victor von Scheffel, with his romantic epic, "Der Trompeter von Saeckingen" (1854) and his historic novel "Ekkehard" (1855). The lyric-epic poem "Amaranth" (1849) of the Catholic Baron Oskar von Redwitz owed its success more to its religious feeling than to any real merit. The neo-romantic productions of other Catholic poets like Behringer, Wilhelm Molitor, and Maria Lenzen failed to make a lasting impression. A Catholic poet of this period who won a permanent place was the Westphalian, Friedrich Wilhelm Weber (1813-94), author of the epic "Dreizehnlinden." A pessimistic atmosphere pervades the Austrian Robert Hamerling's epic, "Ahasver in Rom" (1866). "Die Nibelungen" of Wilhelm Jordan is a noteworthy attempt to revive the great medieval saga in modern alliterative form. This was accomplished with brilliant success by Richard Wagner (1813-83), whose music dramas are among the greatest achievements of modern German art.

A result of the more serious view of life was the new realism that strove to present life truthfully, stripped of the conventional phraseological idealism that had been the vogue since Schiller. This realism manifested itself chiefly in the drama and novel. In the former field its most eminent representative is Friedrich Hebbel (1813-63) with his powerful tragedies "Maria Magdalena," "Herodes und Mariamme," "Gyges und sein Ring," and "Die Nibelungen." Otto Ludwig (1813-65) followed with "Der Erbfoerster" and "Die Makkabaer," as well as the masterly romance "Zwischen Himmel und Erde." These dramas found little favour at the time of their appearance; the realistic

novel fared better. Gustav Freytag (1816-95) won great success with "Soll und Haben," (1855), a novel of bourgeois life. Fritz Reuter (1810-74) used his native Low German dialect for his popular humorous novels, the most important of which are included in "Olle Kamellen" (1860-64). Great originality marks the work of the Swiss, Gottfried Keller (1819-90), regarded by many as the master-novelist of the period. His best production is the series of novels from Swiss life entitled "Die Leute von Seldwyla" (1856). The literary-value of the work of Friedrich Spielhagen (b. 1829), a novelist of undoubted talent, is impaired by its undue treatment of social and political questions, while the great favour accorded to the antiquarian novels of Georg Ebers and Felix Dahn cannot hide their literary defects. Midway between romanticism and realism stands Theodor Storm (1817-88), whose great poetic talent is shown no less in his heartfelt stories, such as "Aquis Submersus." Fiction began to occupy a larger place in literature especially after 1870. We mention only the Swiss, C.F. Meyer, who excels in the historical novel, and Theodor Fontane, whose later works were thoroughly modern and realistic. Peter Rosegger, a Styrian, has won fame with his village stories. Of the numerous women-writers of fiction, the most gifted are Luise von Francois and Marie, Baroness von Ebner-Eschenbach. The chief activity of the last-mentioned writers belongs to the period after 1870.

The Franco-German War of 1870 and the establishment of the new empire had comparatively little effect on literature. Poetry continued to move largely in the old classic-romantic grooves. The graceful but trivial lyrics and epics of Rudolf Baumbach, Julius Wolff, and other imitators of Scheffel's manner best suited popular taste. The passionate lyrics of Prince Emil zu Schoenaich-Carolath deserved their success. The poetry, however, of Martin Greif Eduard von Paulus, Christian Wagner, and Heinrich Vierordt was slow to win recognition. The decade following the great victories of 1870 was not favourable to literary activity. For the moment political, social, and religious questions (as in *Kulturkampf*) were dominant. A spirit of agitation and unrest was abroad. Much of the literature of the time was partisan and polemic, or else catered to the materialistic taste that prevailed and merely aimed to entertain. Of this kind were the dramas of Paul Lindau, cut according to French patterns, and presenting pictures from decadent Parisian life. The more serious drama, favouring historical subjects and affecting the conventional manner of Schiller, is best represented by Ernst von Wildenbruch. By far the most original dramatist was the Austrian, Ludwig Anzengruber (1839-89), whose dramas, "Der Pfarrer von Kirchfeld," "Das vierte Gebot," etc. received almost no recognition until after 1880. The only factors that helped to counteract the materialism and commercialism that ruled the stage were the model performances of the Meiningen troupe and the uncompromising seriousness of Richard Wagner's artistic activity, as demonstrated in the festival performances of Bayreuth.

The mediocrity into which literature had fallen by 1880, its empty formalism, and conventional character, produced another literary revolt, a "Youngest Germany." Poetry was to become more modern. The questions of the day were to be its concern, the faithful reproduction of reality its aim. Instead of harking back to the realism of a Hebbel or Ludwig, the leaders of this movement looked to foreign models for inspiration, to the works of Ibsen, Tolstoy, Dostoyevsky, and Zola. The

realism there found was copied and exaggerated, and the result was a crude naturalism which unduly emphasized the mean, the ugly, and the vulgur. The pessimistic philosophy of Schopenhauer and especially the revolutionary doctrines of Nietzsche added their unwholesome influence and tended towards a perversion of ethical and moral standards. The activity of the movement was at first mainly negative and polemical. Its literary creations have already lost interest. Real literature was not produced until the extreme views were modified. As a reaction against naturalism "symbolism" made its appearance; but the art which it inspired is apt to be so intangible and hyper-aesthetic as to be limited for appreciation to a narrow and exclusive circle.

In the dramatic field Herrmann Sudermann (b. 1857), whose novels "Frau Sorge" (1887) and "Der Katzensteg" (1889), had already attracted attention, won great success. His plays "Die Ehre," "Heimat," "Es lebe das Leben," and others, are very effective, but marred by sensationalism. Sudermann is not a representative naturalist; his technic is a compromise between the older practice and the new theories. A thoroughgoing naturalist is Gerhart Hauptmann (b. 1863) in his first dramas "Vor Sonnenaufgang" (1889) and "Die Weber" (1892). Here the milieu is more important than character or action. In his comedies "Kollege Crampton" and "Der Biberpelz" he showed that naturalism did not preclude humour. His most famous play, the fairy-drama "Die versunkene Glocke" (1896), like "Hanneles Himmelfahrt" before, and "Der arme Heinrich" afterwards, marks a significant turning towards symbolism and neo-romanticism. So far "Fuhrmann Henschel" (1898) is the dramatic masterpiece of naturalism. Of other dramatists of this school mention may be made of Max Halbe (b. 1865), author of "Jugend" (1893) and Otto Erich Hartleben, whose "Rosenmontag" (1900) shows Sudermann's influence. A popular dramatist, though of no particular school, is Ludwig Fulda; his plays, of which "Der Talisman" (1892) is the best known, are pleasing but shallow. The new romanticism, which is exemplified by the dreamy poetry of Maeterlinck, was even less able than naturalism to produce a vital drama. The productions of Hugo von Hofmannsthal (b. 1874) are wholly undramatic, revelling in emotion and devoid of action. His proper field is the lyric, where his talents as well as those of Stefan George (b. 1868) find scope. Symbolism has found its most characteristic expression in the rapturous and vague lyric effusions of Richard Dehmel (b. 1863). After all the best lyric poets of the present are those who do not affect any particular fashion. Such are Detlev von Liliencron, a realist of great power, regarded by many as the foremost German lyricist of to-day, Gustav Valke, Ferdinand Avenarius, Karl Busse, Otto Julius Bierbaum and Anna Ritter. Freiherr Boerries von Muenchhausen has written masterly ballads.

The novelistic literature has grown to enormous proportions, and shows a host of names. Naturalism asserted itself in the novels "Meister Timpe" (1888) and "Das Gesicht Christi" (1897) of Max Kretzer, as well as in the earlier work of Wilhelm von Polenz (1861-1903). With Polenz, however, naturalism has developed into artistic realism, as evidenced by his last novels "Thekla Luedekind" (1899) and "Wurzelocker" (1902). In addition mention may be made of Gustav Frenssen, whose "Jörn Uhl" (1901) gained an enormous success, Adolf Wilbrandt, Thomas Mann, Wilhelm Speck, Georg von Ompteda and Walter Siegfried. Prominent among women writers of fiction are Isolde Kurz, (b. 1853), Helene Boehlau, Marie Eugenie delle Grazie; Carmen Sylva

(Queen Elizabeth of Rumania) and above all Ricarda Huch (b. 1867), whose great novel "Erinnerungen von Ludolf Ursleu" (1893) stands in the front rank of modern fiction.

For bibliography the standard work is GOEDEKE, *Grundriss zur Geschichte der deutschen Dichtung* (2nd ed., GOETZKE, Dresden, 1884--). Useful also are BARTELS, *Handbuch zur Geschichte der deutschen Literatur* (2nd ed., Leipzig, 1909); BREUL, *Handy Bibliographical Guide to the Study of the German Language and Literature* (London, 1895). For modern German literature NOLLEN, *A Chronology and Practical Bibliography of Modern German Literature* (Chicago, 1903) will be found helpful. Of general histories the best are: KOBERSTEIN, *Grundriss der Geschichte der deutschen Nationalliteratur* (6th ed., 5 vols., ed. BARTSCH, Leipzig, 1884--); GERVINUS, *Geschichte der deutschen Dichtung* (5th ed., 5 vols., ed. BARTSCH, Leipzig, 1871-74); WACKERNAGEL, *Geschichte der deutschen Literatur*, ed. and continued MARTIN (2 vols., Basle, 1879-94); SCHERER, *Geschichte der deutschen Literatur* (10th ed., Berlin, 1905); tr. MRS. CONYBEARE (2 vols., Oxford, 1885); VOGT AND KOCH, *Geschichte der deutschen Literatur von den aeltesten Zeiten bis zur Gegenwart* with excellent bibliography and illustrations (2nd ed., 2 vols., Leipzig, 1904). For a presentation from the Catholic point of view consult LINDEMANN, *Geschichte der deutschen Literatur* (7th ed., SALZER, Freiburg, 1897), and SALZER, *Illustrierte Geschichte der deutschen Literatur* (Munich, 1908--). Of works written in English the best are: ROBERTSON, *A History of German Literature* (London and New York, 1902); FRANCKE, *History of German Literature as Determined by Social Forces* (4th ed., New York, 1901); THOMAS, *History of German Literature* (New York, 1909), with excellent bibliography. For special topics and periods some of the most important works are HERFORD, *Studies in the Literary Relations of England and Germany in the 16th century* (Cambridge, 1886); HETTNER, *Literaturgeschichte des 18. Jahrhunderts: Part III: Geschichte der deutschen Literatur im 18. Jahrhundert* (4th ed., HARNACK, Brunswick, 1893-94). For Lessing consult SCHMIDT, *Lessing* (2nd ed., 2 vols., Berlin, 1899); for his religious views BAUMGARTNER, *Lessings religiöser Entwicklungsgang in Stimmen aus Maria-Laach* (Freiburg im Br., 1877). On Goethe see BIELSCHOWSKY (Munich, 1896-1904); tr. COOPER (New York, 1905-08); HEHN, *Gedanken ueber Goethe* (5th ed., Berlin, 1902); the best known English biography, though somewhat antiquated, is that of LEWES (4th ed., London, 1890). For an estimate from a strictly Catholic point of view see BAUMGARTNER, *Goethe, sein Leben und seine Werke* (2nd ed., Freiburg im Br., 1885). On Schiller consult the biography by WYCHGRAM, (3rd ed., Leipzig, 1898). Of English biographies that of CARLYLE is well known; the best is that of THOMAS (New York, 1901). On the Romantic School consult HAYM, *Die romantische Schule* (Berlin, 1870); VAUGHAN, *The Romantic Revolt* (Edinburgh, 1907). For the nineteenth century consult BARTELS, *Die deutsche Dichtung der Gegenwart* (7th ed., Leipzig, 1907), written from a strictly national point of view and not without bias; also MEYER, *Die deutsche Literatur des 19. Jahrhunderts* (2nd ed., Berlin, 1900).

ARTHUR F.J. REMY

Vicariate Apostolic of Northern Germany

Vicariate Apostolic of Northern Germany

(VICARIATE APOSTOLIC OF THE NORTHERN MISSIONS)

Its jurisdiction covers the Grand Duchies of Mecklenburg-Schwerin and Mecklenburg-Strelitz, the Principality of Schaumburg-Lippe, the free Hanse towns, Hamburg, Lübeck, and Bremen, the Principality of Lübeck (capital Eutin), belonging to the Grand Duchy of Oldenburg, and the Island of Helgoland. The Northern Missions, viewed in a wider sense, include also the Prefecture Apostolic of Schleswig-Holstein, coinciding with the Prussian province of that name, which was placed under a separate prelate in 1868. Both vicariate and prefecture are under the permanent jurisdiction of the Bishop of Osnabrück as administrator Apostolic. In the vicariate Catholics number about 79,400 (with 1,925,000 members of other congregations), under 47 secular priests having care of 17 parishes and 17 mission stations. The following religious congregations have houses in the vicariate: Sisters of Mercy of St. Charles Borromeo, 1; Sisters of St. Elizabeth (Grey Nuns), 5; Franciscan Sisters, 2; Ursulines, 2. The Prefecture Apostolic of Schleswig-Holstein contains (1909) 11 parishes, 31 mission stations, 34 secular priests, 35,900 Catholics, and 550,000 of other beliefs; 4 communities of Sisters of St. Elizabeth, and 3 of Franciscan nuns. In summer the Catholic population of the vicariate and prefecture is increased by 17,000 to 20,000 labourers (chiefly Poles) from other parts of Germany, who return to their homes at the beginning of the winter. The spiritual interests of the faithful are inadequately attended to owing to the extent of the parishes, the lack of priests, the poverty of the majority of the Catholics, and, in many places, owing to the intolerance of the Protestant state or municipal governments. A more encouraging picture is presented by the numerous Catholic societies, and by the maintenance of private Catholic schools, despite the fact that the Catholics are often obliged to contribute also to the support of the state and parish schools. A very fruitful activity has been developed in these missions by the Boniface Association.

The Reformation in the sixteenth century caused the loss of almost all Northern Germany to the Church. In 1582 the stray Catholics of Northern Germany, as well as of Sweden, Denmark, and Norway, were placed under the jurisdiction of a papal nuncio in Cologne. The Congregation de propaganda fide, on its establishment in 1622, took charge of the vast missionary field, which at its third session it divided among the nuncio of Brussels (Denmark and Norway), the nuncio of Cologne (North Germany), and the nuncio of Poland (Sweden). The scattered Catholics were chiefly confided to the Jesuits, Franciscans, and Dominicans. Catholics in many places had at their disposal only the chapels established in the houses of the diplomatic representatives of the emperor, and of the Catholic Powers, France and Spain. Sometimes admission even to these chapels was rendered difficult, or entirely prohibited to native Catholics.

In some districts the conversion of the princes, e. g. Duke Johann Friedrich of Brunswick-Lüneburg (1651) and Duke Christian of Mecklenburg-Schwerin (1663), brought Catholics some measure of freedom. The number of Catholics having increased in 1667, chiefly through the above-mentioned Duke of Brunswick, a vicariate Apostolic was established for Northern Germany.

The first vicar was Valerio Maccioni, titular Bishop of Morocco, who resided at Hanover. He died in 1676, and was succeeded by the celebrated Danish convert, Nicolaus Steno, who in 1680 was obliged to leave Hanover, was made Auxiliary Bishop of Münster, and in 1683 returned to the Northern Missions. He died at Schwerin in 1686, and was followed in the vicariate successively by Friedrich von Hörde, Auxiliary Bishop of Hildesheim and titular Bishop of Joppe (1686-96), Jobst Edmund von Brabeck, Bishop of Hildesheim (1697-1702), and Otto von Bronckhorst, Auxiliary Bishop of Osnabrück. Owing to its vast extent, the old vicariate Apostolic was divided by Pope Clement XI into two vicariates (1709): the Vicariate Apostolic of Hanover (or upper and Lower Saxony), embracing the portions of the old vicariate situated in the Palatinate and Electorates of Brandenburg and Brunswick, which was placed in charge of Agostino Steffani, Bishop of Spiga and minister of the Elector Palatine, as vicar Apostolic; the rest of the original vicariate (Denmark, Sweden, Lübeck, Hamburg, Altona, and Schwerin), which retained the title of Vicariate of the North and was placed under the Auxiliary Bishop of Osnabrück. This division lasted until 1775, when Friedrich Wilhelm von Westfalen, Bishop of Hildesheim, reunited under his administration the vicariates except Norway and Sweden.

The French Revolution and the Napoleonic regime brought great relief to Catholics in many cities and states; but the equality granted them by law in some countries was often merely theoretical. At the reorganization of Catholic affairs in Germany after the Napoleonic era, the greater part of the Northern Missions was added to adjacent bishoprics. The only districts remaining mission territory were the Kingdom of Saxony, the Principality of Anhalt, constituted separate vicariates Apostolic in 1816 and 1825 respectively, and the North, which in 1826 was placed temporarily under the jurisdiction of the Bishop of Paderborn. In 1839 Pope Gregory XVI wished to entrust the vicariate to a bishop with his see at Hamburg. Johann Theodor Laurent was appointed vicar and consecrated bishop. Protestant opposition prevented the realization of the plan and Laurent was unable to reach Hamburg. The pope thereupon gave the administration of the vicariate to the Auxiliary Bishop of Osnabrück, Karl Anton Lüppe (d. 1855). The Bishop of Osnabrück has since then been the regular Vicar Apostolic of the Northern Missions, and administrator of the Prefecture Apostolic of Schleswig-Holstein, separated from the vicariate in 1868. In 1869 Denmark was erected into a prefecture, and in 1892 into a vicariate.

JOSEPH LINS

Germia

Germia

A titular see of Galatia Secunda, a suffragan of Pessinus; mentioned by Hierocles in the sixth century (Synec., 698, 4). About 650 it was already an autocephalous archdiocese directly dependent on Constantinople (Ecthesis pseudo-Epiphanii, ed. Gelzer, n. 51). Its condition was the same in the ninth century (Georgii Cyprii Descriptio, ed. Gelzer, n. 51), under Emperor Leo the Wise (901-07) (ibid., n. 61); under Constantine Porphyrogenitus (ed. Gelzer, n. 59); and under Alexius I Comnenus after 1084 (ed. Parthey, n. 87). In the time of Michael Palaelogus, about 1260, Germia must have been an autocephalous metropolitan see, such as it was still under Andronicus II, about 1300, and under Andronicus III, about 1330 (ed. Gelzer, n. 80, 89). But the see was soon to disappear. Lequien (*Oriens christ.*, I, 495) knows of four titular Bishops of Germia. From the time of Justinian I (527-565) the city was entitled Myriangeloi, on account of a church dedicated to St. Michael and the Holy Angels. Justinian went there to take the baths in 556 (Theophanes, *Chronographia*, A.M. 6056). To-day Germia is called Germa. It is a small village in the vilayet and caza of Angora, twenty-one miles south-east of Sivri-Hissar and twelve miles east of the ruins of Pessinus. The ancient baths and the ruins of the inn built by Justinian are still to be seen. Germia must not be confused with Germa, a suffragan see of Cyzicus in the province of the Hellespont, and later an autocephalous archdiocese.

S. VAILHÉ

Gerona

Gerona

DIOCESE OF GERONA (GERUNDENSIS)

The Diocese of Gerona in Catalonia, Spain, suffragan of Tarragona, is bounded on the north by the Pyrenees, on the south and east by the Mediterranean, and on the west by the dioceses of Barcelona and Vich. The district is mountainous, with forests of pine, oak, and chestnut, and numerous mineral springs. Several of the towns are manufacturing centres, and the main railway from France to Barcelona runs through the province, which possesses considerable commercial importance. Its coal mines are a source of wealth, but agriculture is not in a flourishing condition. The episcopal city of Gerona is the chief town of the province of the same name, and it situated at the confluence of the Ter and the Ona. The ancient portion of the city with its once-formidable fortifications stands on the steep hill of the Capuchins, while the more modern section is in the

plain and stretches beyond the river. The bastions of the walls which have withstood so many sieges are still to be seen.

Gerona is the ancient *Gerunda*, a city of the Ausetani. It is said that Sts. Paul and James, on their arrival in Spain, first preached Christianity there, and tradition also has it that St. Maximus, a disciple of St. James, was the first bishop of the district. It is generally held that the see was erected in 247. On 18 June, 517, a synod was convened here, and attended by the Archbishop of Tarragona and six bishops. Canons were promulgated dealing with the recitation of the Divine Office, infant baptism, and the celibacy of the clergy. The city has undergone twenty-five sieges and been captured seven times. In the time of Charlemagne it was wrested temporarily from the Moors, who were driven out finally in 1015. It was besieged by the French under Marshal Hocquisicourt in 1653, under Marshal Bellefonds in 1684, and twice in 1694 under de Noailles. In May, 1809, it was besieged by 35,000 French troops under Vergier, Augereau, and St. Cyr, and held out obstinately under the leadership of Alvarez until disease and famine compelled it to capitulate, 12 December.

The ancient cathedral, which stood on the site of the present one, was used by the Moors as a mosque, and after their final expulsion was either entirely remodelled or rebuilt. The present edifice is one of the noblest monuments of the school of the Majorcan architect, Jayme Fabre, and one of the finest specimens of Gothic architecture in Spain. It is approached by eighty-six steps. An aisle and chapels surround the choir, which opens by three arches into the nave, of which the pointed stone vault is the widest in Christendom (73 feet). Among its interior decorations is a retable which is the work of the Valencian silversmith Peter Bernec. It is divided into three tiers of statuettes and reliefs, framed in canopied niches of cast and hammered silver. A gold and silver altar-frontal was carried off by the French in 1809. The cathedral contains the tombs of Raymond Berenger and his wife. The Collegiate Church of San Feliu is also architecturally noteworthy. Its style is fourteenth-century Gothic, the facade dating from the eighteenth, and it is one of the few Spanish churches which possesses a genuine spire. It contains, besides the sepulchre of its patron and the tomb of the valiant Alvarez, a chapel dedicated to St. Narcissus, who according to tradition was one of the early bishops of the see. The Benedictine church of San Pedro de los Gallos is in Romanesque style of an early date. The present bishop Francisco Pol y Baralt was born at Arenys de Mar in the Diocese of Gerona, 9 June, 1854. The diocese contains 373 parishes, 780 priests, 325,000 Catholics. The Capuchins have a monastery at Olot, and among the cloisters for women in the diocese are those of the Franciscan, the Augustinian, and the Capuchin nuns.

BLANCHE M. KELLY

Gerrha

Gerrha

A titular see in the province of Augustamnica Prima, suffragan of Pelusium in the Patriarchate of Alexandria. The city is mentioned by Pliny (*Hist. Nat.*, VI, 29). Erastosthenes (46, 10) asserts

that the district was formerly under water. Strabo (XVI, 2, 33) places Gerrha between Pelusium and Mt. Cassius. Finally, in the sixth century the geographer Hierocles (Synecdemus, n. 698) speaks of it as being in Augustamnica. Lequien (*Oriens christ.*, II, 551) makes known the names of four bishops of the see: Eudaemon, Pirosus, and Nilanmon, at the end of the fourth century, and at the beginning of the fifth; Stephen, who in 451 assisted at the Council of Chalcedon. Marshes have encroached upon the land in modern times; the abandoned city is found north of Pelusium on the road to El-Arish.

S. VAILHÉ

Jean de Charlier de Gerson

Jean de Charlier de Gerson

The surname being the name of his native place, b. in the hamlet of Gerson 14 December, 1363; d. at Lyons, 12 July, 1429. The hamlet of Gerson has disappeared, but it was then a dependency of the village of Barby not far from Bethel, in the Diocese of Reims, and now included in the department of Ardennes.

His father, Arnould, and his mother, Elizabeth La Chardenière, were noted for their integrity and piety. They had twelve children, of whom Jean was the eldest. He attended the schools of Bethel and Reims and at the age of fourteen entered the famous Collège de Navarre at Paris, where he formed a life-long friendship with the rector, the illustrious Pierre d'Ailly of Compiègne. In 1381 Gerson obtained the degree of licentiate of arts under Maître Jean Loutrier; in 1388 he received that of *Baccalarius Biblicus*; in 1390 he lectured on the "Sententiæ", and in 1392 became a licentiate of theology. He was raised to the doctorate of theology in 1394, being then thirty-one years of age (cf. Denifle, *Chartul. Univers. Paris*, III). Before receiving the doctorate he had written several works. In 1387 he preached before Pope Clement VII of Avignon with a view to calling forth the condemnation of Jean de Monteson, a Dominican, who had denied the Immaculate Conception of the Blessed Virgin, and shortly afterwards he delivered a panegyric on St. Louis, King of France, thus making his debut in the oratorical career that was destined to become so brilliant.

Although Gerson had won the doctorate only a year before his former teacher, Pierre d'Ailly, was named Bishop of Puy (1395), Benedict XIII chose him to succeed d'Ailly in the important position of Chancellor of Notre-Dame and of the university (13 April). Thenceforth he was actively interested in the extirpation of the schism which, for seventeen years, had divided the Church into two hostile parties that were numerically almost equal. The friend of peace and union, he always expressed a sober and moderate opinion in regard to both the Pope of Rome and the Pope of Avignon, and on all occasions showed a strong repugnance to the violent proceedings extolled by certain members of the university (Noël Valois, III, 71, 180). Appointed dean of the church of Saint Donatien at Bruges, Gerson remained there four years (1397-1401). It was at this period that he wrote the treatise, strongly theological and sober in tone, entitled: "Sententia de modo se habendi tempore schismatis" (Schwab, *Johannes Gerson, Professor der Theologie und Kanzler der Universität*

Paris, 97, 152). He had not voted to withdraw obedience from the Pope of Avignon, for whom, in the beginning, France had declared herself (1398). He was one of the first to show that Benedict should be considered neither a heretic nor a schismatic, and that it was in no wise proper to introduce, on this plea, an action against him (Opp. Gersonii, II, ed. 1706, *passim*). Accordingly, he energetically demanded the restoration of obedience, that is to say, the cessation of that abnormal state that constituted a schism within a schism, but this conciliatory attitude, so conformable to his character, incurred much hatred. On 18 November, 1403, he was made curé of Saint-Jean-en-Grève at Paris, accepting the charge in addition to the office of chancellor; this favour was granted by Pope Benedict in recognition of Gerson's fidelity to him during his four years of enforced sojourn in his fortress at Avignon. The chancellor freely and openly rejoiced at the pontiff's release and the university selected him to congratulate Benedict at Marseilles. But this harmony was not to last. The university, again dissatisfied with Benedict, wished to renew the withdrawal of obedience that had so poorly succeeded the first time. D'Ailly and Gerson tried to oppose the movement both before and during the Council of Paris in 1406, and strove to urge upon their colleagues the necessity of more moderate proceedings. After long and animated discussion, they partially succeeded in obtaining that the withdrawal of obedience adopted by the members of the assembly was brought within certain limits (cf. L. Salembier, "Le grand schisme d'Occident", 221).

D'Ailly and Gerson also formed a part of the solemn embassy sent to Benedict in 1407 and tried to prevail upon the pope to resign the papacy by a formal Bull; but the pontiff refused. Thereupon some of the delegates wished openly to break with him, but here again d'Ailly and Gerson caused more peaceable sentiments to triumph and laboured to retard the total rupture (L. Salembier, *op. cit.*, 229). During the following year Gerson attended the Council of Reims and delivered the opening discourse. That same year, because of his efforts at reconciliation, d'Ailly aroused the indignation of the members of the university incensed against Benedict. The king espoused their quarrel and wished to have the bishop of Cambrai arrested; at this juncture Clémanges and Gerson, his ever-faithful pupils, wrote him touching letters of condolence [L. Salembier, "Petrus de Alliaco" (1887), 75; Opp. Gersonii, III, 429]. Gerson himself was soon to become acquainted with human vicissitudes and to be persecuted for another reason. On 23 November, 1407, the Duke of Orleans was assassinated in one of the streets of Paris by the cowardly hirelings of the Duke of Burgundy. With singular audacity, the Duke of Burgundy, John the Fearless (Jean sans Peur), assumed the responsibility of the deed, pleaded his own cause before King Charles VI and chose as his defending counsel, Jean Petit (8 March, 1408) who dared openly to profess the immoral theory of tyrannicide. The chancellor deemed it his duty to bring this doctrine before the Bishop of Paris and the professors of theology. The doctors first condemned seven, then nine of Jean Petit's propositions as erroneous and scandalous and these were thrown into the fire. Later, in the Council of Constance, Gerson again denounced the articles incriminated (June, 1415), and repeated the denunciation seven times within fifteen days. The Fathers passed sentence on this point (6 July), by condemning tyrannicide in a general way without, however, mentioning the name of the powerful Duke of Burgundy; this half-measure satisfied neither Gerson nor the Armagnacs

who were at the council. The chancellor addressed the assemblage in the name of the King of France, 5 May, 1416, and eloquently protested against the too moderate and indefinite sentence aimed at John the Fearless ("Opp. Gersonii", II, 328; V, 353, 355, 362 sq.; Labbe and Mansi, XXVII, 728 sqq., Schwab, op. cit., 609). Gerson had attended neither the Council of Pisa (1409), nor the Council of Rome (1412-13), but he had highly approved of both. His part in the Council of Constance was, however, an important one. He arrived at Constance, 21 February, 1415, with a delegation from the University of Paris. It is not necessary to enter here into the details of the trial of John Hus (Schwab, op. cit., 540-609), of the condemnation of the Flagellants ("Opp. Gersonii", II, 658, 660), of Gerson's differences with the English, nor of his doctrinal strife (1418) with Matthew Grabon, that great enemy of new religious orders ("Opp. Gersonii", I, 467). Mention will be made later of his attitude towards the three popes who then disputed the tiara, and of the theories that he set forth in the council in order to bring about the suppression of the schism.

It was above all his struggles against John the Fearless that brought Gerson into unmerited disgrace. In Paris the Duke of Burgundy had before this provoked a riotous disturbance against him; his house had been plundered and he had only escaped assassination by taking refuge for two months up under the vaulted roofs of Notre-Dame. After the Council of Constance, whilst the pope, the emperor, and the fathers were returning with all due pomp to their respective countries (1418), Gerson learned that John the Fearless had sworn his destruction and that the "nation of Picardy" in the university had demanded that he be disclaimed, recalled, and punished *atrociter* ("Opp. Gersonii", V, 374; Denifle, "Chartul.", etc., IV, 300; Max Lenz, "Revue historique", IX, 470). To prevent his persecutor from having an opportunity to destroy him he left Constance, 15 May, 1418, and with André and Cresio, who had acted as his secretaries at the council, he took the road to exile. He retired to the Benedictine Abbey of Melk (Mölk) in Germany, the abbot of which he had known at Constance. The Archduke Frederick wished to gain him for the University of Vienna, and Gerson repaired thither but did not remain. Finally in November, 1419, the chancellor learned of the death of his sworn enemy, John the Fearless, who, by order of the Dauphin, had been slain on the bridge of the town of Montreau. Gerson at once set out for France but did not return to Paris, which was torn by factions and was still in the hands of the Burgundians. He directed his steps towards Lyons, called thither by his brother who was prior of the Celestines and by the archbishop, Amédée de Talaru (Schwab, op. cit., 767 sqq.). Here he spent his last years in exercises of devotion and in performing his priestly functions. He also while at Lyons wrote various works, some of edification, some on mystical or pastoral theology, one especially being his well-known treatise: "De parvulis ad Christum trahendis". Combining example with precept, he loved to surround himself with little children in the church of Saint-Paul and delighted to teach them the elements of Christian doctrine. These ten years were the sweetest of his militant life, and the regrets of all good men followed him to the grave. Miracles were attributed to him and at least five martyrologies give him the title of Blessed. Over fifty particular councils and many ecclesiastical writers recommend to pastors "this great, pious and learned doctor, this ardent lover of souls, this incomparable director, this model

of ministers of the Gospel". Statues have been raised to his memory at Paris and Lyons; in the church of the Sorbonne his picture is the companion to that of Bossuet.

VIEWS AS TO THE CONSTITUTION OF THE CHURCH: COUNCIL OF VIEWS AS TO THE CONSTITUTION OF THE CHURCH: COUNCIL OF

It is well known that what the theologians of the early part of the fourteenth century lacked most, was a fixed doctrine on what theologians to-day call the *Traité de l'Eglise*. Gallicanism was born of the false principles, or rather of the temporary expedients believed to be a necessity amid the unfortunate events of the Great Schism. Extenuating circumstances can be pleaded in Gerson's favour. He had been instructed by men who were none too stable, and had made a close study of William of Occam, the most evil genius of the fourteenth century. As we have seen, Gerson was generally more sensible and moderate in practice than in theory. Besides, it is now proved that several treatises, sometimes made the basis of an attack on his theological doctrine, were not his at all ("De modis uniendi; octo conclusiones quarum dogmatizatio utilis videtur ad exterminationem moderni schismatis; Sermo factus in die Ascensionis", 1409, etc.). In fact his Protestant or Gallican editors, von der Hardt, Richer, and Ellies-Dupin, have done his memory poor service by exaggerating or envenoming some of his propositions. It is but too true that in regard to the pope and the council, the chancellor maintained erroneous theories which were censurable and later condemned. In his opinion the sovereign pontiff is not the universal bishop possessing immediate power over all the faithful; his power is only subjective and executive ("Opp. Gersonii", II, 259, 279). Far from being infallible, he can even sometimes fall into heresy, in which event, if he still remain pope, the faithful are empowered to bind him, imprison him and even throw him into the sea (Ibid., 221; Noël Valois, IV, 84). Gerson's doctrine concerning the general council is no sounder. He admits the superiority of the Church and the œcumenical council over the pope, as he sees no other means of emerging from schism and returning to unity. With him temporary expedients become principles. It is what might be called ecclesiastical opportunism. Gerson is exclusively rational and practical, and the object of all his argumentation is the justification of the most extraordinary methods of procedure in order to attain the final result desired by him and by all Christendom. Hence, according to him, the sovereign pontiff is amenable to the council which may correct and even depose him ("Opp. Gersonii", II, 201).

Regarding the convocation and composition of this assembly he declares, with d'Ailly, that the first four œcumenical councils were not convened by the authority of the pope and that not only cardinals, but princes, and in fact any Christian, can convoke a council for the election of a single and universally acknowledged pope ("De auferibilitate papæ", in Opp. Gersonii, II, 209 sqq.). He also maintains that pastors may be summoned to such an assembly and may have a deliberate voice as well as bishops ("De potestate ecclesiastica", in ibid., II, 249). None of the faithful should be excluded (ibid., II, 205). In all of these propositions is seen, as it were, a reflection of the extreme theses of the revolutionary Franciscan, William of Occam. Moreover, Gerson's attitude in the Council of Constance was in conformity with his principles. With the delegates from the University

of Paris, he demanded that all three popes immediately tender their resignation (Feb., 1415). A convinced partisan of the superiority of doctors over bishops, he insisted, like d'Ailly, that the doctors of canon and even of civil law should have a voice in the deliberations of the council. This was in consequence of his democratic tendencies (cf. Salembier, *Le grand schisme*, 212, 299). He exalted to excess the omnipotence of the general council and pursued Pope John XXIII with unflagging energy (Schwab, *op. cit.*, 507; von der Hardt, II, 265). He voted for the four famous articles of Constance (March 1415) which are the code of Gallicanism and pave the way for all the schismatic decisions of the assembly of 1682. Besides, he bodily maintained that these revolutionary principles were dogmas and wanted them carved on the stone of all the churches (Opp. Gersonii, II, 275). However in 1416 he was obliged to admit with sadness that voices were still raised in denial of the superiority of the council over the popes. Gerson attributed this "condemnable" obstinacy to the necessity of sycophancy, calling it "a deadly poison with which the organism of the Church is impregnated to the very marrow" (Ibid, II, 247). It is because of these openly erroneous principles that Gerson, like d'Ailly, his master, passed for a precursor of the Protestant Reformation. It is also for this reason that Protestant writers, such as A. Jepp and Winklemann, in Germany, and de Bonnechose, in France, compared him to Wyclif and John Hus. What has gone before, however, proves that these comparisons do Gerson injustice.

GERSON'S MYSTICAL THEOLOGY AND ORATORY

Gerson's mystical theology has its own peculiar and original character; it is that of an eminent and almost impeccable master. First of all he distinguishes it from scientific theology which is abstract and discursive. His mysticism in its essence is an experimental knowledge of God which, by love, one perceives in himself. If the inferior powers remain in darkness, the superior faculties, the intellect, and especially pure love, have the freer play, and therefore constitute a sublime state of transport which surpasses all theoretical learning. This theology does not require great scientific attainments, it is within the reach of the most simple. Moreover, through close union with God, it gives us perfect contentment of soul with the entire and definitive appeasement of our desires (cf. Schwab, *op. cit.*, 325; Ellies-Dupin, "Opp. Gersonii", I, clv). Gerson further distinguishes a practical part in his mystical theology and lays down the conditions and means (*industriæ*) preparatory to contemplation. These *industriæ* are as follows: (1) to await the call of God; (2) to know well one's own temperament; (3) to be heedful of one's vocation and one's state; (4) to aim constantly towards greater perfection; (5) to avoid as much as possible a multiplicity of occupations and, in any event, not to become absorbed in them; (6) to set aside all vain desire for learning, i. e. all idle curiosity; (7) to remain calm and practise patience; (8) to know the origin of the affections and passions; (9) to choose the necessary time and place; (10) to avoid extremes, either of abstinence or excess, in sleeping and eating; (11) to indulge in thoughts that excite pious affections; (12) to banish from one's mind all images, which is preëminently *modus simplicandi cor in meditationibus* and *producendi contemplationem*. Gerson's many treatises are in Vol. III of his works. He was one of the first to recognize and proclaim the supernatural vocation of Joan of Arc. He laboured diligently

to promote devotion to the Blessed Virgin and St. Joseph and even dedicated to this saint a poem of 4600 lines entitled "Josephina". He was not the author of the "Imitation of Jesus Christ", and the reasons for this adverse opinion advanced by Rosweyde, Amort, Malou, Funk and Vacandard, seem convincing.

He was one of the most eminent orators of his time and preached frequently, either in French or Latin, before the university, at court, in the principal churches of the capital or in his parish of Saint-Jean-en-Grève. It was in this parish that he preached the most of his sermons in French; these discourses, sixty-four in number, have been specially studied by the Abbé Bournet, later Bishop of Rodez and cardinal. In plan these instructions are almost the same as modern sermons but Gerson's learning is often deficient in taste and judgment, and he makes sometimes too pompous a display of incongruous quotations. From the point of view of doctrine he treats, for the greater part, ethical subjects and inveighs against intemperance and the dissoluteness of morals. He labours mainly for reform within, frequently exhorts to penance, and threatens his flock with the judgments of God, but does not leave them without words of hope and consolation. His style is far from uniform and differs according to his hearers. Cold and accurate in the setting forth of dogma, he most frequently stirs the passions and resorts largely to allegory and word-painting; his language, although having all the piquancy, naïveté, and originality of the old French chronicles, is always dignified and becoming.

Gerson's works were published directly after the introduction of printing, first at Cologne in 1483 (4 vols. in fol., for details consult Schwab, *op. cit. ad finem*). Both French editions, the one by Richer (Paris, 1635, 4 vols.), the other by Ellies-Dupin (Antwerp, or rather Amsterdam, 1703, 5 vols. in fol.) were prepared under the influence of Gallican ideas and with a view to religious polemics. They were hastily and confusedly compiled without any great care and contain serious defects. However, the one by Ellies-Dupin is fairly complete and the first four volumes embody over 400 of Gerson's treatises. The references to Gerson's works in this article are to this edition.

Louis Salembier
Bl. Gertrude of Aldenberg

Blessed Gertrude of Aldenberg

Abbess of the Premonstratensian convent of Aldenberg, near Wetzlar, in the Diocese of Trier; born about 1227, died 13 August, 1297. She was the youngest of three sisters of Louis VI, margrave of Thuringia, and his wife St. Elizabeth of Hungary. Gertrude's father died on his way to the Holy Land shortly before she was born. She was scarcely two years old, when St. Elizabeth brought her to the convent of Aldenberg, where she afterwards became a nun. In 1248, being then only twenty-one years of old, she was elected Abbess of Aldenberg, over which she ruled forty-nine years. With the inheritance which she received from her uncle, the Margrave of Meissen, she erected a church and a poorhouse. She took personal charge of the inmates of the poorhouse and led a life of extreme mortification. When Urban VI published a crusade against the Saracens, Gertrude and her nuns took the cross and obliged themselves to contribute their share to the success of the crusade by prayer and acts of mortification. In 1270 she began to observe the feast of Corpus Christi in her convent, thus becoming one of the first to introduce it into Germany. Clement VI permitted the ecclesiastical celebration of her feast to the convent of Aldenberg and granted some indulgences to those who visit her relics at that convent.

MICHAEL OTT
Gertrude of Hackeborn

Gertrude of Hackeborn

Cistercian Abbess of Helfta, near Eisleben; born near Halberstadt in 1232; died towards the end of 1292. She belonged to the noble Thuringian family of Hackeborn and was a sister of St. Mechtild. At an early age she entered the Cistercian convent of Rodersdorf, of which she was elected abbess in 1251 when she was only nineteen years of old. In 1253 she founded, with the assistance of her two brothers, Albert and Louis, the convent of Hedersleben. Because her own convent suffered from want of water she obtained from her brothers the castle of Helpeda, of Helfta, with its surrounding land, and transferred her community to that place in 1258. During her rule, the convent of Helfta became the most famous abode of asceticism and mysticism in Germany. She required her nuns to be educated in the liberal arts, but insisted especially on the study of Holy Scripture. Gertrude was a model abbess, remarkable for her piety as well as prudent direction of her nuns. About a year and a half before her death, the abbess was seized with apoplexy, and during her sickness gave to all her nuns an example of heroic patience and resignation to the will of God. The Abbess Gertrude must not be confounded with St. Gertrude "the Great". The Abbess Gertrude never wrote anything, received no extraordinary revelations from God, and has not been canonized.

She was born more than 20 years before Gertrude "the Great", who lived as an ordinary nun in the same convent.

MICHAEL OTT

St. Gertrude of Nivelles

St. Gertrude of Nivelles

Virgin, and Abbess of the Benedictine monastery of Nivelles; born in 626; died 17 March, 659.

She was a daughter of Pepin I of Landen, and a younger sister of St. Begga, Abbess of Andenne. One day, when she was about ten years of old, her father invited King Dagobert and some noblemen to a banquet. When on this occasion she was asked to marry the son of the Duke of Austrasia she indignantly replied that she would marry neither him nor any other man, but that Christ alone would be her bridegroom. After the death of her father in 639, her mother Itta, following the advice of St. Amandus, Bishop of Maestricht, erected a double monastery, one for men, the other for women, at Nivelles. She appointed her daughter Gertrude as its first abbess, while she herself lived there as a nun, assisting the young abbess by her advice. Among the numerous pilgrims that visited the monastery of Nivelles, there were the two brothers St. Follian and St. Ultan, both of whom were Irish monks and were on their way from Rome to Peronne, where their brother St. Furseus, lay buried. Gertrude and her mother gave them a tract of land called Fosse on which they built a monastery. Ultan was made superior of the new house, while Follian remained at Nivelles, instructing the monks and nuns in Holy Scripture. After the death of Itta in 652, Gertrude entrusted the interior management of her monastery to a few pious nuns, and appointed some capable monks to attend to the outer affairs, in order that she might gain more time for the study of Holy Scripture, which she almost knew by heart. The large property left by her mother she used for building churches, monasteries and hospices. At the age of thirty-two she became so weak through her continuous abstinence from food and sleep that she found it necessary to resign her office. After taking the advice of her monks and nuns, she appointed her niece, Wulfetrude, as her successor, in December, 658. A day before her death she sent one of the monks to St. Ultan at Fosse to ask whether God had made known to him the hour of her death. The saint answered that she would die the following day during holy Mass. The prophecy was verified. She was venerated as a saint immediately after her death, and a church was erected in her honour by Agnes, the third Abbess of Nivelles. The towns of Geertruidenberg, Breda, and Bergen-op-Zoom in North Brabant honour her as patron. She is also patron of travellers, and is invoked against fever, rats, and mice, particularly field-mice. There is a legend that one day she sent some of her subjects to a distant country, promising that no misfortune would befall them on the journey. When they were on the ocean, a large sea-monster threatened to capsize their ship, but disappeared upon the invocation of St. Gertrude. In memory of this occurrence travellers during the Middle ages drank the so-called "Sinte Geerts Minne" or "Gertrudenminte" before setting out on their journey. St. Gertrude is generally represented as an abbess, with rats and mice at her feet or running up her cloak or pastoral staff.

MICHAEL OTT
St. Gertrude the Great

St. Gertrude the Great

Benedictine and mystic writer; born in Germany, 6 Jan., 1256; died at Helfta, near Eisleben, Saxony, 17 November, 1301 or 1302. Nothing is known of her family, not even the name of her parents. It is clear from her life (*Legatus*, lib.I, xvi) that she was not born in the neighbourhood of Eisleben. When she was but five years of age she entered the aluminate of Helfta. The monastery was at that time governed by the saintly and enlightened Abbess Gertrude of Hackerborn, under whose rule it prospered exceedingly, both in monastic observance and in that intellectual activity which St.Lioba and her Anglo-Saxon nuns had transmitted to their foundations in Germany. All that could aid to sanctity, or favour contemplation and learning, was to be found in this hallowed spot. Here, too, as to the centre of all activity and impetus of its life, the work of works-the *Opus Dei*, as St. Benedict terms the Divine Office - was solemnly carried out. Such was Helfta when its portals opened to receive the child destined to be its brightest glory. Gertrude was confided to the care of St. Mechtilde, mistress of the aluminate and sister of the Abbess Gertrude. From the first she had the gift of winning the hearts, and her biographer gives many details of her exceptional charms, which matured with advancing years. Thus early had been formed between Gertrude and Mechtilde the bond of an intimacy which deepened and strengthened with time, and gave the latter saint a prepondering influence over the former.

Partly in the aluminate, partly in the community, Gertrude had devoted herself to study with the greatest ardour. In her twenty-sixth year there was granted her the first of that series of visions of which the wonderful sequence ended only with life. She now gauged in its fullest extent the void of which she had been keenly sensible for some time past, and with this awakening came the realization of the utter emptiness of all transitory things. With characteristic ardour she cultivated the highest spirituality, and, to quote her biographer, "from being a grammarian became a theologian", abandoning profane studies for the Scriptures, patristic writings, and treatises on theology. To these she brought the same earnestness which had characterized her former studies, and with indefatigable zeal copied, translated, and wrote for the spiritual benefit of others. Although Gertrude vehemently condemns herself for past negligence (*Legatus*, II, ii), still to understand her words correctly we must remember that they express the indignant self-condemnation of a soul called to the highest sanctity. Doubtless her inordinate love of study had proved a hindrance alike to contemplation and interior recollection, yet it had none the less surely safeguarded her from more serious and grievous failings. Her struggle lay in the conquest of a sensitive and impetuous nature. In St. Gertrude's life there are no abrupt phases, no sudden conversion from sin to holiness. She passed from aluminate to the community. Outwardly her life was that of the simple Benedictine nun, of which she stands forth preeminently as the type. Her boundless charity embraced rich and poor, learned and simple, the monarch on his throne and the peasant in the field; it was manifested

in tender sympathy towards the souls in purgatory, in a great yearning for the perfection of souls consecrated to God. Her humility was so profound that she wondered how the earth could support so sinful a creature as herself. Her raptures were frequent and so absorbed her faculties as to render her insensible to what passed around her. She therefore begged, for the sake of others, that there might be no outward manifestations of the spiritual wonders with which her life was filled. She had the gift of miracles as well as that of prophecy.

When the call came for her spirit to leave the worn and pain-stricken body, Gertude was in her forty-fifth or forty-sixth year, and in turn assisted at the death-bed and mourned for the loss of the holy Sister Mechtilde (1281), her illustrious Abbess Gertrude of Hackeborn (1291), and her chosen guide and confidante, St. Mechtilde (1298). When the community was transferred in 1346 to the monastery of New Helfta, the present Trud-Kloster, within the walls of Eisleben, they still retained possession of their old home, where doubtless the bodies of St. Gertrude and St. Mechtilde still buried, though their place of sepulture remains unknown. There is, at least, no record of their translation. Old Helfta is now crown-property, while New Helfta has lately passed into the hands of the local municipality. It was not till 1677 that the name of Gertrude was inscribed in the Roman Martyrology and her feast was extended to the universal church, which now keeps it on 15 November, although it was at first fixed on 17 November, the day of her death, on which it is still celebrated by her own order. In compliance with a petition from the King of Spain she was declared Patroness of the West Indies; in Peru her feast is celebrated with great pomp, and in New Mexico a town was built in her honour and bears her name. Some writers of recent times have considered that St. Gertrude was a Cistercian, but a careful and impartial examination of the evidence at present available does not justify this conclusion. It is well known that the Cistercian Reform left its mark on many houses not affiliated to the order, and the fact that Helfta was founded during the "golden age" of Citeaux (1134-1342) is sufficient to account for this impression.

Many of the writings of St. Gertrude have unfortunately perished. Those now extant are:

- The "Legatus Divinae Pietatis",
- The "Exercises of St. Gertrude";
- The "Liber Specialis Gratiae" of St. Mechtilde.

The works of St. Gertrude were all written in Latin, which she used with facility and grace. The "Legatus Divinae Pietatis" (Herald of Divine Love) comprises five books containing the life of St. Gertrude, and recording many of the favours granted her by God. Book II alone is the work of the saint, the rest being compiled by members of the Helfta community. They were written for her Sisters in religion, and we feel she has here a free hand unhampered by the deep humility which made it so repugnant for her to disclose favours personal to herself. The "Exercises", which are seven in number, embrace the work of the reception of baptismal grace to the preparation for death. Her glowing language deeply impregnated with the liturgy and scriptures exalts the soul imperceptibly to the heights of contemplation. When the "Legatus Divinae Pietatis" is compared with the "Liber Specialis Gratiae" of St. Mechtilde, it is evident that Gertrude is the chief, if not the only, author of the latter book. Her writings are also coloured by the glowing richness of that Teutonic genius which found its most congenial expression in symbolism and allegory. The spirit

of St. Gertrude, which is marked by freedom, breadth, and vigour, is based on the Rule of St. Benedict. Her mysticism is that of all the great contemplative workers of the Benedictine Order from St. Gregory to Blossius. Hers, in a word, is that ancient Benedictine spirituality which Father Faber has so well depicted (*All for Jesus*, viii).

The characteristic of St. Gertrude's piety is her devotion to the Sacred Heart, the symbol of that immense charity which urged the Word to take flesh, to institute the Holy Eucharist, to take on Himself our sins, and, dying on the Cross, to offer Himself as a victim and a sacrifice to the Eternal Father (Congregation of Rites, 3 April, 1825). Faithful to the mission entrusted to them, the superiors of Helfta appointed renowned theologians, chosen from the Dominican and Franciscan friars, to examine the works of the saint. These approved and commented them throughout. In the sixteenth century Lanspergius and Blossius propagated her writings. The former, who with his confrere Loher spared no pains in editing her works, also wrote a preface to them. The writings were warmly received especially in Spain, and among the long list of holy and learned authorities who used and recommended her works may be mentioned :

- St. Teresa, who chose her as her model and guide,
- Yopez,
- the illustrious Suarez,
- the Discalced Carmelite Friars of France,
- St. Francis de Sales,
- M. Oliver,
- Fr. Faber,
- Dom Gueranger.

The Church has inserted the name of Gertrude in the Roman Martyrology with this eulogy: "On the 17th of November, in Germany (the Feast) of St. Gertrude Virgin, of the Order of St. Benedict, who was illustrious for the gift of revelations."

GERTRUDE CASANOVA

Ven. Gertrude van Der Oosten

Ven. Gertrude van der Oosten

Beguine; born at Voorburch, Holland; died at Delft, 6 Jan., 1358. She was born of peasant parents, and was remarkable from childhood for her piety and prudence. Later, in order to gain a livelihood, she entered into service at Delft, where she likewise devoted herself to practices of piety and charity. Her surname of "van Oosten", or "of the East", is due to her custom of singing a hymn which began: "Het daghet in den Oosten", i.e., "Day breaketh in the East", the composition of which is attributed to herself. She lived devoutly in the world, spending much time in exercises of piety and works of charity, and finally determined to abandon all human ties and give herself to the service of God. With this intent she begged, and with difficulty obtained, entrance into the Beguinage of Delft. Here, though not a religious, nor bound by vows, she profited by the ample opportunities afforded for the exercise of her zeal and charity, as well as by the atmosphere of prayer and seclusion,

to attain to a very high degree of virtue and contemplation. Gertrude evinced great devotion to the mysteries of the Incarnation, especially to the Sacred Passion, on which account she merited to receive on her body the impression of the sacred stigmata, from which the blood flowed freely seven times a day at each of the canonical hours. Distressed and alarmed at the multitude that flocked to witness such a wonder, she begged that the favour might be withdrawn, and her prayer was so far granted that the blood ceased to flow, but the marks of the sacred stigmata remained. At the same time the great spiritual consolation she had enjoyed was favoured with the gift of prophecy, having knowledge, at the actual time, of what took place at a distance as well as of what was to happen in the future.

At length, after many years passed among the Beguines in great fervour, austerity, and devotion, the time of her death approached. She had been wont to speak of her great delight of this day, to meditate on it devoutly, and even to make it a subject of her frequent songs. She died on the feast of Epiphany and buried in the church of St. Hippolytus Delft, the Beguines having neither a church nor a cemetery of their own at the time. Her name has never been inscribed in the Roman Martyrology, though she is commemorated in various others, and her cultus is merely a local one. Her private dwelling is still preserved with veneration, and the cross before which she received the stigmata is annually exposed on the anniversary of her death.

GERTRUDE CASANOVA

Dom Francois Armand Gervaise

Dom François Armand Gervaise

Discalced Carmelite, b. at Paris, 1660; d. at Reclus, France, 1761. After completing his humanities with brilliant success, he joined the Discalced Carmelites, and having been nominated prior of a convent, he chanced to meet Bossuet, who recognized in him a fervent religious, a learned writer, and an eloquent orator. Anxious to embrace a more austere life, he entered La Trappe in 1695, where he became the privileged disciple of the Abbé de Rancé, and made his profession in 1696. In the same year Dom Zozime, who had succeeded the Abbé de Rancé after his resignation, died after a few months of administration, and de Rancé then asked the king, with the pressing recommendation of Bossuet, for Dom Gervaise as his second successor.

Dom Gervaise had given unequivocal proofs of his religious spirit and his eloquence; these qualifications led to the hope that his appointment would be of the greatest advantage to the reform, and consequently on 20 October, 1696, he received the abbatial blessing. But his turbulent administration, which in several points was opposed to that of the Abbé de Rancé, soon procured for him numerous enemies who to well-founded accusations added some that were baseless. Dom Gervaise yielded before the storm and tendered his resignation in 1698. Soon, however, he regretted this step and tried to withdraw his resignation, but without success. Under the abbot chosen to fill his place he left La Trappe and began his wandering life from monastery to monastery, exercising to good purpose his talent as a writer. His style is always well-turned and flowing, but he is

reproached for being sometimes wanting both in exactitude as to his information and in polemical moderation.

We shall mention only a few of his works: the lives of several Fathers of the Church and ecclesiastical writers; the life of Abélard; the life of Abbot Joachim, Prophet; the life of Suger; a criticism on Marsolier's "Life of the Abbé de Rancé", in which he makes his own apology; finally, the history of the Reform of Cîteaux in France, a work in which he does not treat with sufficient consideration the superiors of the order, and which caused his final disgrace. He was obliged to interrupt its publication, and was banished by order of the king to the monastery of the Reclus, in the Diocese of Troyes, where he died. Until the end of his life he remained faithful to the austerities of the life of La Trappe, observing in all its rigour the rule he had embraced.

EDMOND M. OBRECHT

George Gervase

George Gervase

(Jervise.)

Priest and martyr, born at Boscham, Suffolk, England, 1571; died at Tyburn, 11 April, 1608. His mother's name was Shelly, and both his father's and mother's families had been long established in the County of Suffolk. Losing both parents in boyhood, he was kidnapped by pirates and carried off beyond seas, remaining in captivity over twelve years. He lost his religion during that period; but, when at last he was able to return to England, and found that his brother Henry had become a voluntary exile in Flanders in order to be able to practise his religion, George followed him there, and was soon reconciled with the Church. He entered the English College at Douai in 1595, and was ordained priest in 1603. He at once went to the English mission. He laboured very successfully for over two years, but was arrested in June, 1606, and banished with several other clergy. He then made a pilgrimage to Rome, and there endeavoured to enter the Society of Jesus, but, not being admitted for some unknown reason, he returned to Douai, where he received the Benedictine habit. His brother Henry had obtained for him a comfortable living near Lille, being anxious to preserve him from the persecution then raging in England. But George was determined to labour for the conversion of his native land, and succeeded in returning to his native England, but was soon arrested and incarcerated. Refusing to take the new oath of allegiance on account of its infringing on spiritual matters where Catholics were concerned, he was tried, convicted of the offense of merely being a priest, under the statute 27 Elizabeth, and was hanged, drawn, and quartered at Tyburn. Some authorities say he did not receive the Benedictine habit until a short time before his death from Father Augustine Bradshaw.

Gillow, *Bibl. Dict. Eng. Cath.*, s. v.; Challoner, *Memoirs*, II; Snow, *Benedictine Necrology*.

C.F. WEMYSS BROWN

Gervase of Canterbury

Gervase of Canterbury

(GERVAS US DOROBORNENSIS)

English chronicler, b. about 1141; d. in, or soon after, 1210. If his brother Thomas, who like himself was a monk of Christ Church, Canterbury, was identical with Thomas of Maidstone, they came of a Kentish family. St. Thomas of Canterbury received his religious profession on 16 Feb., 1163, and also ordained him. He was one of the monks who buried the saint after his martyrdom, 29 Dec., 1170. Later on he took a prominent part in the disputes between the monks and Archbishop Baldwin (1185-91) and was one of the monks sent to announce to the archbishop an appeal to the pope. In 1189 he was again one of a deputation sent to lay the matter before King Richard I. As yet, Gervase, though one of the senior monks, had held no prominent office, but about this time he was made sacristan, for in 1193 he attended the new archbishop, Hubert Walter, in that capacity. He probably ceased to hold this office in 1197 when he speaks of one Felix, as sacristan. The rest of his life is obscure. He was still writing in 1199 and there are slight indications in another chronicle, the "Gesta Regum", that he continued to write till 1210, when a sudden change in style and arrangement point to a new chronicler. His death may therefore be assumed in or soon after that year. Gervase has occasionally been confused with others of the same name, notable with Gervase of S. Ceneri, and thus he is described as prior of Dover by Dom Brial (*Recueil des Historiens de France*, XVII, 1818), which is impossible on chronological grounds. Sir Thomas Hardy identifies him with Gervase of Chichester, but Dr. Stubbs shows good reasons against this theory, as also against confusing him with Gervase of Melkeley.

The works of Gervase consist of: (1) "The Chronicle", covering the period from 1100 to 1199. It was first printed by Twysden in "Historiae Anglicanae Scriptorum Decem" (London, 1652). (2) The "gesta Regum", which is in part an abridgment of the earlier chronicle, and from the year 1199 an independent source of great value for the early years of John's reign. (3) "Actus Pontificum Cantuariensis Ecclesiae", a history of the archbishops of Canterbury to the death of Hubert Walter in 1205, also printed by Twysden with the chronicle. (4) "Mappa Mundi", a topographical work with lists of bishoprics and ecclesiastical foundations in the various counties of England, Wales, and part of Scotland. The works of Gervase were published in the "Rolls Series" in 1879-80 under the editorship of Dr. Stubbs, whose introduction has been the groundwork of all subsequent accounts of Gervase.

EDWIN BURTON

Gervase of Tilbury

Gervase of Tilbury

(TILBERIENSIS)

Medieval writer, b. probably at Tilbury, in the County of Essex, England, about 1150; d. at Arlington, about 1220. He is supposed to have been related to English royalty. During his youth he entered the service of Henry of Guienne, later he travelled in many parts of Europe, for a time studied canon law at Bologna, where for a brief period he also taught, and was afterwards at the court of King William II of Sicily till 1189. Upon the death of King William he settled permanently in Arles and was appointed Marshal of the Kingdom of Arles in 1198 by King Otto IV; in virtue of this office he accompanied the king to Rome in 1209 on the occasion of his coronation as emperor. During the years 1210-1214 he composed the "Otia imperialia" for the instruction and entertainment of the emperor, who was excommunicated by the pope in the latter part of 1210, and in 1214, after his defeat at the battle of Bouvines, was forced to retire to the principality of Brunswick. This work was also entitled "Liber de mirabilibus mundi", "Solatia imperatoris", and "Descriptio totius orbis". It was divided into three parts, and contained all facts then known concerning history, geography, and physics. During the Middle Ages it was much read and was twice translated into French in the fourteenth century. Opinions differ in modern times concerning its value. Leibniz calls it a "bagful of foolish old woman's tales"; while by others it is considered very important since in it this medieval teacher of jurisprudence recognizes the correctness of the papal claims in the conflict between Church and Empire.

Leibniz edited it (1744) in his "Scriptores rerum Brunsvicensium" (I, 881-1004) with variants from four Parisian manuscripts and a supplement (II, 751-784). Its account of the Frankish and English kings is included by Duchesne in his "Historiae Francorum scriptores coetanei" (I, 19; III, 363-74). Mader edited the same portion in his "De Imperio Romano et Gothorum, Langobardorum, Brittonum, Francorum Anglorumque regnis commentatio" (Helmstadt, 1673). Liebrecht edited a number of geographical and physical excerpts from it (Hanover, 1856). The references to Virgil were published by Spatzier [Altenglische Marchen (Brunswick, 1830), I, 89-92]. Many of the writings of Gervase have perished. He was formerly reputed to be the author of the "Antiquus dialogus de scaccario", but many critics now ascribe the work to another writer.

PATRICIUS SCHLAGER

Sts. Gervasius and Protasius

Sts. Gervasius and Protasius

Martyrs of Milan, probably in the second century, patrons of the city of Milan and of haymakers; invoked for the discovery of thieves. Feast, in the Latin Church, 19 June, the day of the translation of the relics; in the Greek Church, 14 Oct., the supposed day of their death. Emblems: scourge, club, sword.

The Acts (Acta SS., June, IV, 680 and 29) were perhaps compiled from a letter (Ep. liii) to the bishops of Italy, falsely ascribed to St. Ambrose. They are written in a very simple style, but it has been found impossible to establish their age. According to these, Gervasius and Protasius were twins, children of martyrs. Their father Vitalis, a man of consular dignity, suffered martyrdom at

Ravenna under Nero (?). The mother Valeria died for her faith at Milan. The sons are said to have been scourged and then beheaded, during the reign of Nero, under the presidency of Anubinus or Astasius, and while Cajus was Bishop of Milan. Some authors place the martyrdom under Diocletian, while others object to this time, because they fail to understand how, in that case, the place of burial, and even the names, could be forgotten by the time of St. Ambrose, as is stated. De Rossi places their death before Diocletian. It probably occurred during the reign of Antoninus (161-168).

St. Ambrose, in 386, had built a magnificent basilica at Milan. Asked by the people to consecrate it in the same solemn manner as was done in Rome, he promised to do so if he could obtain the necessary relics. In a dream he was shown the place in which such could be found. He ordered excavations to be made in the cemetery church of Sts. Nabor and Felix, outside the city, and there found the relics of Sts. Gervasius and Protasius. He had them removed to the church of St. Fausta, and on the next day into the basilica, which later received the name San Ambrogio Maggiore. Many miracles are related to have occurred, and all greatly rejoiced at the signal favour from heaven, given at the time of the great struggle between St. Ambrose and the Arian Empress Justina. Of the vision, the subsequent discovery of the relics and the accompanying miracles, St. Ambrose wrote to his sister Marcellina. St. Augustine, not yet baptized, witnessed the facts, and relates them in his "Confessions", IX, vii; in "De civ. Dei", XXII, viii; and in "Serm. 286 in natal. Ss. Mm. Gerv. et Prot.", they are also attested by St. Paulinus of Nola, in his life of St. Ambrose. The latter died 397 and, as he had wished, his body was, on Easter Sunday, deposited in his basilica by the side of these martyrs. In 835, Angilbert II, a successor in the See of Milan, placed the relics of the three saints in a porphyry sarcophagus, and here they were again found, January, 1864 (*Civiltà Cattolica*, 1864, IX, 608, and XII, 345).

A tradition claims that after the destruction of Milan by Frederick Barbarossa, his chancellor Rainald von Dassel had taken the relics from Milan, and deposited them at Altbreisach in Germany, whence some came to Soissons; the claim is rejected by Milan (Biraghi, "I tre sepoleri", etc. Milan, 1864). Immediately after the finding of the relics by St. Ambrose, the cult of Sts. Gervasius and Protasius was spread in Italy, and churches were built in their honour at Pavia, Nola, etc. In Gaul we find churches dedicated to them, about 400, at Mans, Rouen, and Soissons. At the Louvre there is now a famous picture of the saints by Lesueur (d. 1655), which was formerly in their church at Paris. According to the "Liber Pontificalis", Innocent I (402-417) dedicated a church to them at Rome. Later, the name of St. Vitalis, their father, was added to the title. Very early their names were inserted in the Litany of the Saints. The whole history of these saints has received a great deal of adverse criticism. Some deny their existence, and make them a Christianized version of the Dioscuri of the Romans. Thus Harris, "The Dioscuri in Christian Legend", but see "Analecta Boll." (1904), XXIII, 427.

FRANCIS MERSHMAN

St. Gery

St. Géry

(Latin *Gaugericus*).

Bishop of Cambrai-Arras; b. of Roman parents, Gaudentius and Austadiola, at Eposium (Yvois, Carignan), France, about the middle of the sixth century; d. 11 August, between 623 and 626. The Diocese of Cambrai-Arras is of recent date compared with the more ancient see of Belgium, Tongres, which dates from the fourth century. The territory, which comprised the Diocese of Cambrai-Arras, like that of Tournai and T rouanne, probably contained Christians before the date of the appearance of its first known bishop, St. Vaast, but their spiritual head must have resided at Reims. The great barbarian invasion of 406 completely overthrew the ecclesiastical organization, but from the beginning of the Merovingian period the Church began to recover, the Diocese of Arras especially being restored by St. Vaast about the beginning of the sixth century. G ery was one of his earliest successors. From his youth G ery led a pious and devout life, and already all things combined to prepare him for the career of zeal and devotion which he was to embrace later on. During one of his episcopal visitations, St. Magneric, Bishop of Trier, was struck by the exemplary conduct of the young man and conceived the project of enrolling him in the ranks of his clerics. G ery was not ordained deacon, say his hagiographers, until he knew the whole Psalter by heart. The episcopal see of Cambrai-Arras soon became vacant, and G ery was called to fill it. King Childebert II gave his consent and instructed  egidius Metropolitan of Reims, to consecrate the new bishop. This installation must have taken place between 585 and 587. Filled with apostolic zeal, G ery devoted his life to the extermination of the paganism which infected the district subject to his authority, and, since the worship of the old gods was deeply rooted in the souls of the barbarous peoples, the bishop destroyed or purchased the idols, which were the objects of their veneration. He erected the church of St-M edard in the chief town of Cambrai. He frequently visited the rural districts and the *villae* at a distance from his episcopal city, displaying particular solicitude for the ransom of captives.

But political events soon introduced a new dominion, when Clotaire II (d. 629) took possession of Cambrai. The bishop went to pay his respects to the conqueror in his villa of Chelles, probably in 613. At the command of the king he was compelled to go to the sanctuary and national place of pilgrimage of the Franks, St. Martin of Tours, there to distribute alms to the poor. In October, 614, G ery assisted at the Council of Paris. He died after an episcopate of thirty-nine years, and was buried in the church of St-M edard at Cambrai. G ery was honoured with a cult immediately after his death. In the time of his successor Bertoald his tomb was already the object of fervent veneration, and the monastery of St-M edard which he had founded profited largely by the offerings made to him. Mention of his feast is already made in the additions to the Hieronymic martyrology, and in the ninth century in the martyrologies of Wandalbert of Prum and of Ramanus Maurus. This feast is celebrated on 11 August. The institution of the feast of his exhumation, 18 November, and of his translation, 24 September dates probably from 1245, as his relics were exhumed in that year by Bishop Guido of Cambrai. Relics of the saint are preserved at Ste-Marie de Liessies, at the Church

of St-Géry at Brussels, at the church of the same name at Arras, at St-Donatien at Bruges, at St. Pierre at Douai, and in other churches of Belgium. St-Géry is the patron of Cambrai, subsidiary patron of Brussels, and he is honoured as a protector at Braine-le-Comte (Hainaut, Belgium). On the reliquary in the form of an ostensorium at the Cathedral of Cambrai, which contains the skull of St. Géry, he is represented in the attire of a bishop, mitre on head, without his crosier, right hand lifted in a gesture of benediction and left folded upon his breast.

L. VAN DER ESSEN

Gesellenvereine

Gesellenvereine

German Catholic societies for the religious, moral, and professional improvement of young men. They owe their origin and present condition to Adolph Kolping, surnamed the Journeymen's Father (*Gesellenvater*). He was born 8 Dec., 1813, of poor parents, and, though he gave early evidence of inclination to study, he was obliged to learn the trade of a shoemaker. As a poor young workman, he became acquainted with the disadvantages suffered by men of his class on their journeys, in factories, and in city lodging-houses. At the age of twenty-three Kolping felt drawn to the priesthood, but reached that goal only in 1845, after years of patient study amidst troubles, privations, and sickness. He was first sent as chaplain to Elberfeld, where a number of journeymen carpenters had founded a choral society with the aid of a teacher and the local clergy. It grew rapidly into a Young Workmen's Society with the acknowledged object of fostering the religious life by means of a closer union among its members, and at the same time of improving their mechanical skill. Kolping frequently addressed the members on subjects of interest to mechanics. He was elected president in 1847, and soon gave to the association the features that have since been distinctive of the *Gesellenverein*, or Society of Young Journeymen. Hitherto little attention had been paid to this class of workmen. Kolping recognized that, to uplift them morally and socially, it was advisable to establish a widespread organization of similar societies. Its first fruits could not fail to be a respectable body of master-workmen. He resolved to make Cologne, one of the great industrial centres of Germany, the seat of his life-work in this direction. In 1849 he was appointed assistant-priest at the cathedral of that city. With a few zealous friends, ecclesiastics and laymen, he founded at once a *Gesellenverein*, and began to instruct its members gratuitously on various subjects. The Cologne society soon acquired its own home, and opened therein a refuge, or hospice, for young travelling journeymen. In his efforts to develop the work Kolping was energetic and undaunted. He was eloquent both as speaker and writer. Filled with the zeal of an apostle, he visited frequently the great industrial centres of Germany, Austria, Switzerland, and Hungary. His propaganda bore good fruit, and in a short time societies of young Catholic journeymen were formed in many Rhenish towns, in Westphalia, and finally throughout the German-speaking world. When Kolping died (4 Dec., 1865), the *Gesellenverein* numbered about 400 branch unions. In 1901 they had reached the number of 1086, with a membership of 80,000 journeymen and 120,000

master-workmen. There are at present more than 1170 unions affiliated to the Central Union at Cologne. Of these there are in Prussia and Northern Germany 505, in Bavaria 222, in the rest of Germany 134. There are 263 in Austria and Hungary, 34 in Switzerland, 8 in Holland, 2 in Luxemburg, 2 in Brussels, 2 at Paris, 1 each in London, Stockholm, Rustchuk (Bulgaria), and Rome. About 360 unions own their own houses — over 220 in Germany, and 90 in Austria-Hungary. There are a general burial fund (established 1904), about 195 local sick funds, besides the general fund, and a general fund to aid travelling journeymen.

These societies or unions aim, in general, at the moral, mental, and professional improvement of young German Catholic journeymen, apprentices, etc. (Gesellen). They develop and cultivate in them strong religious principles and civic virtue. The result is a large and united body of self-respecting and respected master-workmen, distributed over all parts of Germany and throughout the lands bordering on the German Empire. Persuaded that the middle classes can thrive only when they repose on a basis of religion and practical faith, the Gesellenverein cultivates assiduously the religious and moral sense of its members. The entire organization exists primarily for this purpose. There is a quarterly general Communion, and the Easter Communion is preceded by a retreat, or brief spiritual preparation. On Sundays and great holidays special Mass is said for the members of the society. Lectures are given on Sunday evenings by clergymen and laymen; the subjects treated are quite varied, ranging from religious topics to the purely instructive or entertaining. Non-religious festivities, such as excursions, theatricals, evening entertainments, and the like, are allowed, but in moderation, lest they should develop in the members that excessive love of amusement which characterizes modern youth. Since 1890 much attention has been paid to the instruction of members in technical, industrial, and mercantile subjects (538 unions in 1908). Besides providing for Christian doctrine, the societies conduct classes in book-keeping, arithmetic, drawing, literary composition, music, natural sciences, etc. In the larger cities there are free classes in several crafts, e. g., for bakers, tailors, carpenters, workers in metal, painters, shoemakers. This instruction is designed especially for those workmen who aim at establishing a business of their own. Frequently, in the large cities, these classes are attached to local technical and industrial schools, municipal or governmental.

In its organization the Verein contains patriarchal, monarchical and ecclesiastical elements. In accordance with the "general statute" which Kolping framed and which, with various modifications, is still in force, each Verein conducts its own affairs as local circumstances require, yet always with a regard for the general principles of the organization. At the head of each is a Catholic priest, whose control is supreme. He is nominated by the diocesan "Præses" (president) after consultation with the local authorities, and is appointed by the bishop. He is assisted by a board of managers composed partly of citizens actively interested in the work and partly of members chosen by the Verein. The diocesan president acts as intermediary between the bishop and the Vereins, organizes meetings, holds conferences, etc. In Bavaria, Saxony, the Netherlands, and Switzerland, there is, besides the diocesan president, a "central" president, and in Hungary a "federation" president. All these associations are united in the "Catholic Gesellenverein" under the headship of a president

general, who, according to Kolping's enactment, is always the president of the local Verein in Cologne. On account of the importance of this position, the presidents of Vienna, Munich, Breslau, and Munster take part in the election. As a rule, only unmarried Catholic journeymen between the ages of 17 and 25 are admitted — after three months' probation — to regular membership. Those who are married or have completed their apprenticeship are retained on the list of honorary or extraordinary members. No member is allowed to join any association whose aims are opposed to those of the Verein. Each member of a local Verein is at the same time member of all the federated societies; hence the importance of the federation as a whole.

The discussion of political matters and every kind of religious polemic are forbidden in the local Verein. Ample provision is made for the material welfare of the members. Each Verein must secure suitable quarters where its members can assemble at evening, especially on Sundays and festivals, for instruction and social enjoyment. The hospices (over 400 in number) provide board and lodging for resident workmen at an exceedingly moderate cost, and for journeymen gratuitously until they find work. In places where there is no regular hospice, the local Verein secures proper accommodation for journeymen in houses under its control. Excellent service has also been rendered in the way of providing employment, establishing funds for the care of the sick, and opening accounts for savings. The principal publication is the "Kolpingsblatt", which appears weekly at Cologne in an edition of 45,000 copies.

The objects for which Kolping strove have been realized to a remarkable degree, as is evident from the wide development of the work he founded. "The Gesellenverein", says Schäffer, "has extended over hundreds of thousands its protective influence, teaching the ignorant, arousing the lukewarm, filling the timid with earnestness and self-respect, strengthening the weak and saving them from the perils to which so many workmen, especially through the efforts of social democracy, are everywhere exposed". These societies are among the few institutions of Catholic origin which have been appreciated, commended, and even imitated by Protestants. The latter, however, have enrolled but a small number of workmen.

Owing to special conditions the Gesellenverein has so far shown but little signs of development in the United States. The almost total absence of the old trades' organization (apprentice, journeyman, master) in the country, the reluctance of the young artisans to travel from place to place, and the phenomenal development of the factory system have prevented the growth of these societies. To this may be added the fact that efforts to create the Gesellenverein have been made by the German Catholics only. Branches of the Gesellenverein exist in Dayton, O., Paterson, N. J., Chicago, Ill., St. Paul and Minneapolis, Minn., and in New York. The membership varies from 40 (Paterson) to 450 (Dayton). The Dayton branch has a library of 3500 books. All these branches are affiliated to the society at New York, in close relation with the central authority in Germany.

JOSEPH LINS.

Gesta Dei Per Francos

Gesta Dei per Francos

Gesta Dei per Francos is the title adopted by Guibert de Nogent (died about 1124) for his history of the First Crusade. In the eleventh century the name of "Frank" was applied in a general manner to all the inhabitants of Western Europe, being a survival of the political unity established by the Carolingians for the benefit of the Franks. The Byzantine chroniclers never otherwise refer to the Westerns. Hervé, a Norman adventurer in the service of the Byzantine emperors in the eleventh century, is called "Francopoulos" (Son of the Franks). It was therefore quite natural that this name of "Frank" should be used by the Orientals in referring to the crusaders, and it is evident that they called themselves by the same name. "Gesta Francorum" is the title of one of the chief accounts of the Crusades. Since the Crusades the word Frank remains in the east a synonym for Western, and to-day the term is still used in that sense. Moreover, the idea that the Franks were a people chosen by God arose soon after their conversion to Christianity, and finds expression many times in the traditions relative to Clovis, which Gregory of Tours transmits to us. We read in one of the prologues of the Salic Law: "Glory to Christ, who loves the Franks! May He preserve their kingdom! May He replenish their leaders with His grace, for this is the strong and brave nation which has richly covered with gold the bodies of the holy martyrs." With Charlemagne the Franks protected the Roman Church from the Lombard invasion, destroyed paganism among the Saxons, drove back the Mussulmans, and established their protectorate over the Holy Sepulchre. Hence the crusade was, for the men of the eleventh century, merely the crowning of that alliance between God and the Franks, and after the discourse of Urban II at Clermont, it was to the cry of "God wills it!" that all made haste to take the cross.

Guibert, born in Picardy about 1053, was a monk at Saint-Germer-de-Fly, elected Abbot of Nogent-sous-Coucy in 1104, had been a witness of the enthusiasm aroused by the preaching of the crusade, perhaps he had even assisted at the Council of Clermont. Desiring to write an account of the Crusades, he chose this title of the "Doings of God through the Franks", and in his account, wherein the marvellous occasionally mingles with reality, he affirms at different times the Divine mission of the Franks. This work, dedicated to Gaudri, Bishop of Laon, is not an original account of the crusade, and in part follows the anonymous author of the "Gesta Francorum". It is nevertheless not without great value, for it shows the profound impression created throughout Europe by the conquest of the Holy Land. Although Guibert was a contemporary of the events which he relates, they receive already in his account an epic colouring. The interest of these seven books, composed between 1108-1112 consists in their revealing to us the doctrine of the providential rôle, which the men of the Middle Ages assigned to the Westerns, but in Guibert's mind the only Franks worth considering were his compatriots, the French. To them the popes turned when they suffered injuries inflicted by other nations, and he contrasts their conduct with that of the Teutons, in revolt against

the Church. He therefore considers the crusade as a wholly French undertaking (Bk. II, i). When, at the beginning of the seventeenth century, Jacques Bongars (1546-1612) undertook to publish the works of all the known historians of the Crusades, he chose as the title of his collection "Gesta Dei per Francos" (Hanover, 2 v., 1612).

GUIBERT DE NOGENT in *Histor. Occid. Croisades*, IV, 115-263; MONOD, *Le moine Guibert et son temps* (Paris, 1905).

LOUIS BRÉHIER.

Gesta Romanorum

Gesta Romanorum

A medieval collection of anecdotes, to which moral reflections are attached. It was compiled in Latin, probably by a priest, late in the thirteenth or early in the fourteenth century. The ascription of authorship to Berchorius or Helinandus can no longer be maintained. The original object of the work seems to have been to provide preachers with a store of anecdotes with suitable moral applications. Each story has a heading referring to some virtue or vice (e. g. *de dilectione*); then comes the anecdote followed by the *moralisatio*. The collection became so popular throughout Western Europe that copies were multiplied, often with local additions, so that it is not now possible to determine whether it was originally written in England, Germany, or France. Oesterley, its latest critical editor (Berlin, 1872), is of opinion that it was originally composed in England, whence it passed to the Continent, and that by the middle of the fourteenth century there existed three distinct families of Manuscripts: the English group, written in Latin; the Latin and German group; and a third group represented by the first printed editions. The Manuscripts differ considerably as to number and arrangement of articles, but no one Manuscript representing the printed editions exists. Probably the editors of the first printed edition selected stories from various Manuscripts. Their volume was a folio issued from the press of Ketelaer and De Leempt at Utrecht, while a second edition was published by Ter Hoenen at Cologne. Shortly after this collection had been published, an enlarged edition, now known as the Vulgate, was issued, containing 181 stories. This was compiled from the third group of Manuscripts, and was printed by Ulrich Zell at Cologne. All these three editions appeared between 1472 and 1475, and subsequent reprints were numerous. The first English translation, based on the English group of Manuscripts, was issued by Wynkyn de Worde about 1510, and was followed by others. These English editions have many stories in common with the Vulgate, but include others derived from the English Manuscripts. None of the English editions, old or new, give the moralizations in their entirety, full as they are of Catholic teaching, dogmatic and moral. Though the title of the work suggests Roman history as the chief source of the stories, many of them are taken from later Latin or German chronicles, while several are Oriental in character. In estimating the wide influence of the "Gesta" it must be remembered that the collection proved a mine of anecdotes, not only for preachers, but for poets, from Chaucer, Lydgate, and Boccaccio

down through Shakespeare to Schiller and Rossetti, so that many of these old stories are now enshrined in masterpieces of European literature.

OESTERLEY, *Gesta Romanorum* (Berlin, 1872), critical edition, Latin text, and dissertation; SWAN, *Gesta Romanorum*, standard Eng. tr., first published in Bohn's *Antiquarian Library* (1824); edited by WYNNARD HOOPER (London, 1877), With valuable preface, and again by E. A. BAKER (London, 1905). WYNNARD HOOPER'S edition is also reprinted in the *York Library* (London, 1905); WARTON, *History of English Poetry, Dissertation iii*, Vol. III (London, 1781); MADDEN, *Old English Versions of the Gesta Romanorum* (Roxburghe Club, 1838); HERRTAGE, *Introduction* to EARLY ENGLISH TEXTS SOCIETY'S edition of MADDEN'S *Old English Versions* (London, 1879).

EDWIN BURTON.

Gethsemani

Gethsemani

Gethsemani (Hebrew *gat*, press, and *semen*, oil) is the place in which Jesus Christ suffered the Agony and was taken prisoner by the Jews. Saint Mark (xiv, 32) calls it *chorion*, a "a place" or "estate"; St. John (xviii, 1) speaks of it as *kepos*, a "garden" or "orchard". In the East, a field shaded by numerous fruit trees and surrounded by a wall of loose stone or a quickset hedge forms the *el bostan*, the garden. The name "oil-press" is sufficient indication that it was planted especially with olive trees. According to the Greek version and others, St. Mathew (xxvi, 36) designates Gethsemani by a term equivalent to that used by St. Mark. The Vulgate renders *chorion* by the word *villa*, but there is no reason to suppose that there was a residence there. St. Luke (xxii, 39) refers to it as "the Mount of Olives", and St. John (xviii, 1) speaks of it as being "over the brook Cedron". According to St. Mark, the Savior was in the habit of retiring to this place; and St. John writes: Judas also, who betrayed him, knew the place; because Jesus had often resorted thither together with his disciples".

A place so memorable, to which all the Evangelists direct attention, was not lost sight of by the early Christians. In his "Onomasticon," Eusebius of Caesarea says that Gethsemani is situated "at the foot of the Mount of Olives", and he adds that "the faithful were accustomed to go there to pray". In 333 the Pilgrim of Bordeaux visited the place, arriving by the road which climbs to the summit of the mountain, i.e. beyond the bridge across the valley of Josaphat. In the time of the Jews, the bridge which spanned the torrent of Cedron occupied nearly the same place as one which is seen there to-day, as is testified by the ancient staircase cut in the rock, which on one side came down from the town and on the other wound to the top of the mountain. Petronius, Bishop of Bologna (c. 420), and Sophronius, Patriarch of Jerusalem, speak of this immense staircase and two other pilgrims counted the steps. Traces of it are still to be seen on the side towards the city, and numerous steps, very large and well-preserved, have been discovered above the present Garden of Gathsemani. The Pilgrim of Bordeaux notes "to the left, among the vines, the stone where Judas

Iscariot betrayed Christ". In translating the "Onomasticon" of Eusebius, St. Jerome adds to the article Gethsemani the statement that "a church is now built there" (Onomasticon, ed. Klostermann, p. 75). St. Sylvia of Aquitania (385-388) relates that on Holy Thursday the procession coming down from the Mount of Olives made a station at "the beautiful church" built on the spot where Jesus underwent the Agony. "From there", she adds, "they descend to Gethsemani where Christ was taken prisoner" (S. Silviae Aquit. Peregr., ed. Gamurrini, 1888, pp. 62-63). This church, remarkable for its beautiful columns (Theophanes, Chronogr. ad an. 682), was destroyed by the Persians in 614; rebuilt by the Crusaders, and finally razed, probably in 1219. Arculf (c. 670), St. Willibald (723), Daniel the Russian (1106), and John of Wurzburg (1165) mention the Church of the Agony. The foundations have recently been discovered at the place indicated by them, i. e. at a very short distance from the south-east corner of the present Garden of Gethsemani.

A fragmentary account of a pilgrimage in the fourth century, preserved by Peter the Deacon (1037), mentions "a grotto at the place where the Jews the Savior captive". According to the tradition it was in this grotto that Christ was wont to take refuge with his disciples to pass the night. It was also memorable for a supper and a washing of the feet which, according to the same tradition, took place there. Eutychius, Patriarch of Constantinople (d. 583), says in one of his sermons that the Church commemorates three suppers. "The first repast", he says, "together with the purification, took place at Gethsemani on the Sabbath day, the first day, i. e. when Sunday was already begun. That is why we then celebrate the vigil" (P. G., LXXXVI, 2392). The second supper was that of Bethany, and the third was that of Holy Thursday at which was instituted the Holy Eucharist. Theodosius (c. 530) describes this grotto in these terms: "There [in the valley of Josaphat] is situated the basilica of Holy Mary, Mother of God, with her sepulchre. There is also the place where the Lord supped with his disciples. There he washed their feet. There are to be seen four benches where Our Lord reclined in the midst of His Apostles. Each bench can seat three persons. There also Judas betrayed the Saviour. Some persons, when they visit this spot, through devotion partake of some refreshment, but no meat. They light torches because the place is in a grotto". Antonius of Plaisance (570), Arculf, Epiphanius the Hagiopolite, and others make mention of the well known pasch of which the grotto of Gethsemani was witness. In the Church of the Agony the stone was preserved on which, according to tradition, Jesus knelt during His Agony. It is related by the Arculf that, after the destruction of the church by the Persians, the stone was removed to the grotto and there venerated. In 1165 John of Wurzburg found it still preserved at this spot, and there is yet to be seen on the ceiling of the grotto an inscription concerning it. In the fourteenth century the pilgrims, led astray by the presence of the stone and the inscription, mistakenly called this sanctuary the Grotto of the Agony.

In ancient times the grotto opened to the south. The surrounding soil being raised considerably by earth carried down the mountain by the rains, a new entrance has been made on the north-west side. The rocky ceiling is supported by six pillars, of which three are in masonry, and, since the sixth century, has been pierced by a sort of skylight which admits a little light. The grotto, which is irregular in form, is, in round numbers, 56 feet long, 30 feet wide, and 12 feet high in its largest

dimensions. It is adorned with four altars, but of the pictures which formerly covered the walls, and of the mosaic floor, traces only can be found. At a distance of about 130 feet to the south of the grotto is the Garden of Gethsamani, a quadrangular-shaped enclosure which measures about 195 feet on each side. Here are seven olive trees, the largest of which is about 26 feet in circumference. If they were not found there in the time of Christ they are at least the offshoots of those which witnessed His Agony. With the aid of historical documents it has been established that these same trees were already in existence in the seventh century. To the east of the garden there is a rocky mass regarded as the traditional spot where the three Apostles waited. A stone's throw to the south, the stump of a column fitted in a wall pointed out to the native Christians the place where Jesus prayed on the eve of his Passion. The foundations of the ancient church of the Agony were discovered behind this wall.

BARNABAS MEISTERMANN

Abbey of Our Lady of Gethsemani

Abbey of Our Lady of Gethsemani

An abbey of the Order of Reformed Cistercians, commonly called Trappists, established in 1848 in Nelson Co., Kentucky, in the Diocese of Louisville, being the first abbey on American soil. On 26 Oct., 1848, a colony of forty Trappists left the Abbey of Melleray, in the Diocese of Nantes, France, under the leadership of Dom Eutrope Proust, and arrived at New Orleans early in December. They travelled by river to Louisville, Kentucky, where Bishop Flaget, who had greatly desired their coming, received them. On 21 December they took possession of the lands destined for their establishment, and shortly afterwards their number was increased by a second colony of twenty religious from the mother-house. The monks undertook the work of clearing their lands with indomitable energy, and little by little arose the imposing structures which form the present abbey. This is an immense quadrilateral, one side of which is formed by the church, whilst the other three sides contain the monastic quarters, with a commodious guesthouse for those who desire to spend a few days in solitude.

In 1850 a pontifical Brief (21 July) erected the new monastery into an abbey. By a unanimous vote Dom Europe was elected abbot, and on 1 May, 1851, received the abbatial blessing from Bishop M. J. Spalding of Louisville, in the old cathedral of Bardstown. It was the first ceremony of the kind performed and returned to France. He left Dom Benedict Berger in charge, who was soon after elected abbot, and received the abbatial blessing in St. Catherine's Church, New Haven, Kentucky, 9 May, 1861. Dom Benedict insisted with true religious zeal on the observance of the rule, and under his administration the abbey buildings were finished. The church was solemnly consecrated by Archbishop Purcell of Cincinnati, 15 Nov., 1866. Stricken with paralysis in 1887, Dom Benedict resigned his charge in 1889. The administration then passed to Dom M. Edward Chaix-Bourbon, who was elected abbot 9 May, 1890, and received the abbatial blessing in the church of the monastery, 29 September following. Dom Edward applied himself especially to

improve the school attached to the abbey since its foundation. He erected new buildings, and transformed it into a college. During a visit to France, upon the advice of physicians, he had to renounce his hopes of seeing Gethsemani again, and on 24 Jan., 1898, he was succeeded by Dom M. Edmond M. Obrecht, first appointed superior and shortly afterwards elected abbot by unanimous vote; he received the abbatial blessing at Gathsemani, 28 Oct., 1898. Through the generosity of Mgr. Batz of Milwaukee, Dom Edmund was able to create the splendid library which contains more than thirty thousand volumes of the principal authors on ecclesiastical sciences.

That the regime of La Trappe is entirely incompatible with the American temperament is a prejudice without foundation. The community has always numbered some, and now numbers over one-third, Americans amongst its religious, some of whom were raised in luxury, and all have found health and happiness at Gethsemani. Another prejudice is the belief that the Trappist life, being a penitent life, is only intended for criminals. Life at Gethsemi is the same as Cistercian life at Clairvaux, a life of contemplation and penance. Moreover, recent decrees of sovereign pontiffs and the constitutions of the order forbid the reception of men who have given public scandal. The community of Gethsemani is at present (1908) composed of 80 religious: 34 members of the choir, 22 of whom are priests, whilst the others are preparing themselves, by the regular studies, for the priesthood; 46 are lay brothers who are more especially engaged in the work of the farm.

EDMOND M. OBRECHT

Gezireh

Gezireh

Gezireh (or Djezireh), seat of two Catholic residential sees, one Chaldean, the other Syrian. The Chaldean diocese has been known, at least since 410, as Beit-Zabdai ("Notices et extraits des manuscrits", Paris, XXXVII, 272). Its bishop, John, assisted at a council in 497 (op. cit., 310, 316). Under the Nestorians the diocese was regarded as an episcopal, sometimes as an archepiscopal see. Later, it was united to Quardou, a diocese of the Kurds, situated on the opposite bank of the Tigris (op. cit., 680). Since the erection of the Chaldeasn Catholic patriarchate by Julius III, Gezireh has had its own bishops, the succession extending to our own days almost without interruption. The Syrian bishops were at first Jacobites, but, after the conversion to Catholicism of a portion of that sect, a Syrian catholic bishiop was appointed to the see (Lequien, II, 1205, 1579). The present Chaldean Diocese of Gezireh contains four thousand faithful, fourteen priests, seventeen churches and chapels, twelve primary schools for boys and one for girls conducted by the Presentation Sisters. The French Dominicans have a residence there. The Syrian diocese numbers five hundred faithful, eleven native priests, three of whom are regulars, five churches and six primary schools. The city of Gezireh-ibn-Omar, so called to distinguish it from the Gezireh near Bagdad, is situated on the right bank of the Tigris, about 125 miles north of Mossoul in the vilayet of Diarbekir. It has about ten thousand inhabitants, six thousand Catholics. It contains the tombs of several Abbas-side princes.

The soil is well watered; there are superb forests of oaks, and a rich oil-well is situated at a distance of about twenty-five miles.

S. VAILHÉ

August Friedrich Gfroerer

August Friedrich Gfrörer

German historian; b. at Calw, Württemberg, 5 March, 1803; d. at Karlsbad, 6 July, 1861. Obedient to the wishes of his parents, but against his own inclinations, he devoted himself to the study of theology; was a student at the "Little Evangelical Seminary" of Tübingen from 1817-21, and from 1821-25 continued his studies at the higher seminary of the same place. He completed his education by a series of scientific travels through Switzerland and Italy, after which he returned to his alma mater. In 1829, he was appointed vicar in the city of Stuttgart. Having by this time lost all belief in revealed religion, he became convinced that to continue his pastoral duties would involve him in serious conflict; he therefore resigned his vicarage. At the recommendation of Victor von Bonstetten, a friend of his father, he was appointed third librarian of the public library of Stuttgart (1830) with the title of professor. During his numerous hours of leisure he applied himself with vigour and enthusiasm to the study of literature and history. As the fruit of these labours he published in the following year (1831) his work on "Philo und die judisch-alexandrinische Theosophie" (2 vols., Stuttgart, 1831). This work was preparatory to his larger work entitled "Kritische Geschichte des Urchristenthums" (Stuttgart, 1838, in 5 vols.). In it Gfrörer, probably impelled by David F. Strauss's "Leben Jesu", sought to conceive historically the life and teaching of Christ, and, although writing as a rationalist throughout, he strongly disclaims being "an adherent of the modern champion of negative truths: (i.e. of Strauss). In the first part, with the sub-title "Das Jahr des Heils", he investigates the time in which Christ lived; in the second, entitled "Heilige Sage", he treats of the authenticity and literary character of the first three Gospels, and in the third, "Das Heiligthum and die Wahrheit", he discusses the Gospel of St. John. The work, therefore, is a detailed investigation of the character and significance of the New Testament from an historical point of view, and is based on a wealth of materials. At the same time he studied the history of the Thirty Years War, and in 1835 (in Stuttgart) published "Gustav Adolf, König der Schweden und seine Zeit" (4th ed., 1863), in which by emphasizing the political role of the Swedish king he took a position diametrically opposed to the views previously held by Protestants.

An equally profound impression, especially in Catholic circles, was produced by his "Allgemeine Kirchengeschichte" (4 vols., Stuttgart, 1841-46). Closing with the year 1305, it brings into prominence the important part played by the Catholic Church in the development of the German Empire, and justly extols the policy of the popes. Shortly afterwards he was appointed professor of history at the Catholic University of Freiburg (Breisgau) -- an appointment which at first sight appears surprising, inasmuch as he was a rationalist, the results of those investigations were not at all times in harmony with Christian doctrine. His call, however, is quite intelligible in view of the

tendencies of his recent writings, and of his fair treatment of religious questions, which seemed to indicate a gradual return to more conservative religious opinions. In 1848, he was elected to the German Parliament at Frankfort as representative of a district of Würtemberg; he belonged to the greater German party, and was a fanatical opponent of Prussia. It is a notable fact that, while in Parliament, he proposed a motion for the reunion of Catholics and Protestants, but only on condition that the Holy See would promise never to permit the Jesuits or Redemptorists to settle on German soil. In 1853 he entered the Catholic Church, after all the other members of his family had taken the same step. His later publications are: "Geschichte der ost- und westfränkischen Karolinger" (Freiburg, 1848, 2 vols.); "Die Urgeschichte des menschlichen Geschlechts" (Schaffhausen, 1855, 2 vols., incomplete), a demonstration that neither critical history nor the natural sciences, in treating of the origin and earliest history of the human race, can lay claim to certainty, when opposed to the earliest traditions of mankind and especially to Holy Writ; "Papst Gregorius VIII and sein Zeitalter" (Schaffhausen, 1859-61, in 7 vols.), a part of his "Church History", notable for its brilliant scholarship and conscientious research. Many volumes of lectures were published posthumously: "Geschichte des 18. Jahrhunderts" (Schaffhausen, 1862-73; Vols. I-IV by Weiss; second part of the fourth vol. by Tiedemann, Basle, 1884); "Zur Geschichte deutscher Volksrechte im Mittelalter" (Schaffhausen, 1865, 2 vols.); "Byzantinische Geschichten" (Graz, 1872-74, 2 vols.). His "Prophetæ veteres pseudepigraphi latine versi" (Stuttgart, 1840), with translation, is critically unsatisfactory. Gfrörer was a man of unusual ability; he possessed great acumen and great powers of bold and correct combination. He was a prolific author, although his literary researches were sometimes lacking in method.

ALBERDINGK-THYM, A. F. Gfrörer en zijne werken (Haarlem, 1870). It should be noted that the author of this work is Gfrörer's son-in-law. Allgemeine deutsche Biographie, IX, 139-144; VON WEECH, Badische Biographien, I, 300-304; ROSENTHAL, Convertitenbilder, I, 2, 807 sqq.

PATRICIUS SCHLAGER

Ghardaia

Ghardaia

Prefecture Apostolic in the French Sahara, separated in 1901 from the Vicariate Apostolic of Sahara and the Soudan. It includes the region between the Prefecture Apostolic of Morocco, the Dioceses of Algeria and Tunis, the Mission of Tripoli, and 20° N. lat. The inhabitants number about 300,000, all Mussulmans, but of different races, such as Arabs and Berbers. In this vast region are nomadic Arab tribes, such as the Larba, the Chaambas, and the Said Otba; there are sedentary populations in the oases, as those of the oases of Wargla (Uargla), Gurara, Tuat (Twat), Tedikelt, various tribes of the Tuaregs, and lastly the strong and important group of Mozabites in the district of Mzab.

At present the mission comprises three stations, Ghardaia, Wargla and Elgolea. Twelve missionaries and three lay brothers of the Congregation des Missionnaires d' Afrique (White Fathers)

are employed at the different tasks pertaining to a mission in a Mussulman country. Evangelization properly so-called cannot be at once begun in such countries. The task of the missionaries is wholly one of preparation, requiring long and obscure toil of which statistics convey no adequate appreciation. It consists in overcoming by degrees, through benevolent intercourse, the exercise of charity, and instruction, the ancient prejudices which the Mussulmans harbour towards Christians, prejudices that are rooted deeply in the very religion of Mohammed. Only insensibly, therefore, and through appreciation of the benefits conferred by the missionaries and through customary respect for the latter as men of God, do these peoples become detached from Islam, and a new generation grow up in which it is possible to make numerous and permanent conversions, permanent precisely because more numerous, for occasional conversions amid Mussulman surroundings are almost impossible.

CHARLES GUERIN

Ghent

Ghent

DIOCESE OF GHENT (GANDENSIS or GANDAVENSIS).

The Diocese of Ghent at present comprises the whole territory of East Flanders, one of the nine provinces of Belgium. It numbers 1,103,930 inhabitants and 362 parishes. The see was erected by Paul IV ("Super universi", 12 May, 1559) at the request of Philip II, King of Spain and Sovereign of the Low Countries. Till that time Ghent had belonged to the Diocese of Tournai. Situated on the left bank of the Scheldt (Escaut), the new diocese was bounded on the north by the western arm of that river, on the east by the new Dioceses of Antwerp and Mechlin, detached from Cambrai, on the south by Tournai, and on the west by the new Diocese of Bruges ("Ex injuncto", Pius IV, 1560, and "Regimini universalis Ecclesiae" especially for Ghent, 7 August, 1561). Previous to this Charles V had obtained from Paul III the secularization of the monks of the Abbey of Saint-Bavon, at Ghent (22 July, 1536), and in 1541 they transferred their chapter from the ancient abbey to the parochial church of St. John the Baptist, which henceforth bore the name of Saint-Bavon. In 1559 it was decided that this chapter should become that of the cathedral, and that at the death of Viglius, then mitred provost of said chapter, the revenues of the abbacy, or provostship, should become the episcopal revenues.

After the concordat between Pius VII and the First Consul, Bonaparte, the pope called upon all the bishops of France to resign their sees. Prince de Lobkowitz, the Bishop of Ghent, had died at Münster in 1795 and had not been replaced. By the Bull "Qui Christi Domini" (29 November, 1801), Pius VII suppressed all the ancient dioceses throughout the French Republic, and erected sixty new dioceses, among which he re-established that of Ghent, comprising the two departments of Escaut and Lys, i.e. the three ancient dioceses of Ghent, Bruges, and Ypres, to which was added a portion of Mechlin and Dutch Flanders. Gregory XVI detached the part appertaining to Holland (25 August, 1832), and by the erection of the See of Bruges (27 May, 1834), determined the present

jurisdiction of the Diocese of Ghent. Ghent has had twenty-four bishops, of whom the last is Mgr Antoine Stillemans, consecrated 27 January, 1890. Among them, Cornelius Jansenius and Antoine Triest are deserving of more special notice.

The former, who must not be confounded with Jansenius, Bishop of Ypres, the author of the "Augustinus", was professor of theology at Louvain when Philip II sent him as his representative to the Council of Trent. On his return to Flanders, he was named by the king first Bishop of Ghent, in 1568, and this nomination was confirmed by Pius IV on 6 July of the same year. His numerous and learned commentaries on the Holy Scriptures reveal in him an exegete of great merit. The seventh bishop, Antoine Triest, occupied the see from 1622 to 1657. He was a veritable Mæcenas and the cathedral of Saint-Bavon is indebted to him for most of the masterpieces which adorn it. His generosity towards the poor found expression in important charitable foundations and in the zeal which he displayed in the establishment at Ghent of the Mont de Piété, an institution founded to lend to the poor without interest. Bishop Triest bequeathed considerable sums to this work. In 1813, during the episcopate of the Prince de Broglie (1807-1821), the seminarians of Ghent offered an heroic resistance to the despotism of Napoleon. The emperor held the bishop prisoner and twice sought to wrest from him his resignation. He undertook to name a successor, and sent as Bishop of Ghent a canon of Dijon, M. de la Brue de Saint-Bauzille, but all the clergy, with the exception of thirty out of a thousand priests, refused to recognize him. Being called upon to submit to the intruder, the seminarians opposed an energetic refusal, were compelled to enter the imperial regiments, and were taken, some to Wesel, the others to Paris. Many subsequently died at Wesel as a result of contagious diseases and privations of every sort, but remained faithful to their motto: "Rather soldiers than schismatics".

During the episcopate of Mgr Delebecque (1838-64) nine American bishops sent two of their colleagues to ask priests from the Diocese of Ghent, intending to place under their direction and instruction the seminary which they proposed to found at Troy, New York. Mgr Delebecque acceded to this request, and in the month of August, 1864, MM. van den Hende, Gabriels (now Bishop of Ogdensburg), Roelants, and Puissant embarked for America. The Diocese of Ghent continued its collaboration in the seminary at Troy until July, 1896. It was also at Ghent and under the auspices of Mgr Delebecque that the work was founded, in 1859, which is now known as *le Denier de Saint Pierre*, i.e. Peter's Pence.

Among the clergy of Ghent Jean-François Van de Velde (1743-1823) is most deserving of notice. While he acquired a well-merited reputation as professor of Holy Scripture at the University of Louvain, and his published and manuscript works place him in the front rank of the theologians of his time, he is chiefly entitled to notice for the important part which he played in the religious affairs of his country, first, under Joseph II, by his intrepid opposition to the decrees with regard to marriage (1784), and later, under Napoleon, by his decisive intervention at the national council, which the emperor assembled at Paris in 1811, and where, as the counsellor of Mgr de Broglie, he presented a "Mémoire sur l'incompétence du concile national à changer la discipline de l'Eglise, en vertu de laquelle le Pape seul donne l'institution canonique aux évêques nommés" (Memorandum

concerning the incompetency of the national council to alter the discipline of the Church, in virtue of which the pope alone confers canonical institution on the nominated bishops).

One who was well entitled to be called "the Vincent de Paul of Belgium" also deserves mention. The inexhaustible charity of Canon Pierre-Joseph Triest (1760-1836) was extended to all human miseries, and for their more efficacious relief he founded in succession the Sisters of Charity (1803), the Brothers of Charity (1807), the "Association of Maternal Charity" (1822), the Brothers of St. John of God (1825), and the Sisters of the Holy Childhood of Jesus (1835).

We shall speak only of the first and second of these institutions, the development of which was truly extraordinary. The Sisters of Charity now number more than 1300, and their benevolent activity is spread throughout Belgium, Holland, England, the Congo, India (Punjab), and Ceylon, they are engaged not only in the instruction of children, but give intelligent and devoted care to deaf mutes, the insane and incurables. In Europe more than 6000 infirm are sheltered in their houses. The Congregation of the Brothers of Charity, which numbers about 1000 religious, is spread throughout Belgium and has been extended successively to Canada, the United States, England, Ireland, and the Netherlands. At present it possesses 44 establishments where more than 6000 insane, aged, and sick persons and many other unfortunates are cared for. The Brothers teach and care for more than 11,000 children and poor youths, 440 deaf mutes and blind persons, 450 youthful delinquents and 1000 foundlings.

Truly remarkable religious monuments of the diocese are: the cathedral of Saint-Bavon and the churches of Saint-Nicholas, Saint-Jacques, and Saint-Michel at Ghent, the church of Saint-Martin at Alost, and the churches of Notre-Dame and Sainte-Walburge at Oudenarde. From an architectural point of view the cathedral of Saint-Bavon at Ghent is one of the most beautiful churches in Belgium and is undoubtedly the richest in objects of art. Among its numerous works of sculpture the tomb of Bishop Triest, by Jérôme Duquesnoy, is incontestably the masterpiece, and has been rightfully called "the most beautiful work of national statuary". The cathedral of Ghent is deservedly famous for the immortal altar-piece of the brothers Hubert and Jan Van Eyck, known as "The Adoration of the Lamb", which was completed in 1432. The cathedral now possesses only the central panel of the picture, the most important portion of the work. The side panels are at Berlin and at Brussels.

G. VAN DEN GHEYN

Lorenzo di Cione Ghiberti

Lorenzo di Cione Ghiberti

Sculptor; b. at Florence about 1381; d. there, December, 1455. He ushered in the early Renaissance in his native city of Florence as a sculptor in bronze, just as Masaccio led the way in the art of painting, and Brunellesco in architecture.
