The Cappella Paolina, which serves as the parish church of the Vatican, is separated from the Sistine Chapel only by the Sala Regia. It received its name from Paul III, who had it erected in 1540 by Antonio da Sangallo the Younger. Before 1550 Michelangelo painted two frescoes here, the Conversion of Paul and the Crucifixion of Peter. Other paintings in the chapel are by Lorenzo Sabbatini and Federico Zuccaro. The statues in the background are by P. Bresciano. Before the opening of the conclave the Sacred College assembles in this chapel to attend a sermon in which the members are reminded of their obligation quickly to give to the Church her ablest son as ruler and guide. The cardinals then withdraw to the Sistine Chapel. In the Cappella Paolina are sung daily the conclave Solemn Masses "De Spiritu Sancto", at which all members of the conclave must be present.

C. The Chapel of Nicholas V

While the two above-named chapels are situated on the first floor of the palace, which bounds the Cortile di San Damaso, the *Chapel of Nicholas V* (chapel of San Lorenzo) lies on the second floor in the immediate vicinity of the Stanze and Loggie of Raphael. Built by Nicholas V, the chapel was adorned (1450-55) by Fra Angelico with frescoes, depicting chiefly scenes from the lives of Sts. Laurence and Stephen. This wonderful series of paintings is Angelico's greatest work.

D. The Pope's Private Chapel

In the reception rooms of the pope, between the Sala degli Arazzi and the Sala del Trono, lies a smaller room, from which a door leads to the private chapel of the pope, where the Blessed Sacrament is always reserved. Here the pope usually celebrates his Mass, and hither are invited those who are accorded the privilege of receiving Communion from his hand. The lay members of the papal family usually make their Easter Communion in this chapel on the Monday in Holy Week; the prelates of Rome make theirs on Holy Thursday. On both these occasions the pope celebrates. After Mass all are entertained at breakfast in the Sala dei Paramenti, the majordomo representing the pope as host.

E. Cappella della Sala Matilde

On days when a larger number of strangers are admitted to assist at the pope's Mass, the Holy Father uses the Cappella della Sala Matilde, a simple but tastefully decorated chapel which Pius X had erected in the Sala Matilde on the second floor in the middle building.

F. The Chapel of the Swiss Guards

The Chapel of the Swiss Guards lies at the foot of the papal residence in the immediate vicinity of the Portone di Bronzo and the quarters of the Swiss Guards, and in it the services for the Guards are celebrated by their special chaplain. This Chapel of Sts. Martin and Sebastian dates from the sixteenth century, and has a special charm.

The former Cappelle di San Pio V lay on the southern end of the present halls of the library, the chapels being situated under one another on three floors. The middle chapel on the first floor formerly contained the addresses recently transferred to the Casino of Pius IV. The paintings here are by Giorgio Vasari.

VI. THE PALACE AS A PLACE OF RESIDENCE

The Vatican Palace was not intended and built as a residence. Only a comparatively small portion of the palace is residential; all the remainder serves the purposes of art and science or is employed for the administration of the official business of the Church and for the management of the palace. The rooms formerly intended specially for residence are to-day utilized to accommodate collections or as halls of state. Hence, the Vatican can more properly be regarded as a huge museum and a centre of scientific investigation than as a residence. The residential portion of the palace is around the Cortile di San Damaso, and includes also the quarters of the Swiss Guards and of the gendarmes situated at the foot of this section. Of some 1000 rooms in the whole palace about 200 serve as residential apartments for the pope, the secretary of state, the highest court officials, the high officials in close attendance on the pope, and some scientific and administrative officials. This

limited number could be increased only with the most costly and extensive alterations. When the temporal dominion of the pope came to an end in 1870, a large number of the minor officials and servants of the Quirinal Palace had to be sustained during the confusion of the time; these latter were temporarily assigned previously unused rooms of the Vatican. Pius X executed the plan of erecting in the immediate vicinity of the Vatican a special large residence for all these families, where they are now accommodated. This practical innovation affords them pleasant and commodious quarters.

In the eastern wing (facing towards Rome) of the residential section the pope occupies two floors. On the upper floor (the third) he resides with his two private secretaries and some servants; on the second floor he works and receives visitors. One suite of rooms receives the morning, and the other the midday and afternoon sun. The second floor includes the reception rooms, which the visitor enters through the wonderful Sala Clementina, where a division of the Swiss Guards keep watch at the entrance to the papal apartments. The next room is the Anticamera Bassa, in which the servants stand, and in which all summoned to an audience lay aside their wraps. An air-trap opens into the Sala dei Gendarmi, so called because two gendarmes in court uniform are there stationed. A covered way leads backwards through the court to the working-room of the pope. The next hall is known as the Sala del Cantone or Sala della Guardia Palatina, as it is a corner room where during the reception a division of the Palatine Guards are drawn up. The eastern suite of rooms begins with the Sala degli Arazzi, in which three huge Gobelin tapestries resented by Louis XV adorn the walls. Between this and the Sala del Trono is a smaller room which serves to accommodate the Noble Guard, and leads to the pope's private chapel. The floor of the throne room is covered with a specially manufactured and costly Spanish carpet presented to Leo XIII. The room is simply fitted, giving a very impressive and restful effect.

Behind the throne room stands the Anticamera Segreta, at the entrance of which a member of the Noble Guard stands. The old and very valuable Gobelin tapestry which covers the floor is practically indestructible, but is tended with great care. In this room wait the majordomo or the maestro di camera and one or more spiritual chamberlains, when audiences are to be given. Here also wait the cardinals and persons of rank and station until their turn comes, while the others summoned to the audience wait in the throne room or in the other above-named halls. Situated on a corner, this room offers a wonderful view of the city and the Campagna to the east, the Piazza S. Pietro and the Janiculum to the south. Two smaller rooms and the Sala del Tronetto lie between the Anticamera Segreta and the pope's library, which is both his working-room and his reception room for current private audiences. Not far from the entrance of the library stands the pope's unpretentious, large writing-desk, beside which are some seats for visitors. In the middle of this large room, which is splendidly lighted by three windows, stands a broad mahogany table several yards long. The library cases run along the four walls, and above them hang twelve exquisite paintings of animals. Other decorations and fittings of the room combine in perfect harmony; it is an ideal working-room.

Over the Anticamera Segreta, the Sala del Tronetto, and the two adjoining rooms is the pope's private chancellery, accessible only by a staircase from the inner vestibule of the library. Here, under the pope's direction, two secretaries with a staff of assistants transact all the unofficial affairs of the pontiff.

Immediately under these working and reception rooms of the pope is the suite of the secretary of state, who under Pius IX and Leo XIII occupied what are now the private rooms of the pope. Leo XIII assigned this suite temporarily to Cardinal Ledochowski, when he came to Rome from the prison of Ostrowo. These neglected rooms were recently renovated by a Spanish ecclesiastic of wealthy family. Here the secretary of state receives twice weekly the diplomats accredited to the Holy See and numerous other visitors. Along the Scala Pia, built and covered by Pius IX, which leads from the Portone di Bronzo to the Court of St. Damasus, lie the extensive apartments of the maestro di camera and the majordomo. The other residents of the palace are the four spiritual chamberlains in immediate attendance, the monsignor sagrista, the maestro del sacro palazzo (a Dominican, theological adviser of the pope and censor of the books printed in Rome), under-secretary of state, prefect of the Vatican Library, household administrator of the Apostolic Palace, other court and administrative officials, and a few servants.

VII. THE PALACE AS A TREASURY OF ART

The Vatican contains an abundance of works of art, which are now catalogued in every tourist's guide-book. On the one hand are museums and collections and on the other the interior decoration of the palace. The Vatican treasures of art also include much of scientific importance, which will be treated in the following section. Here belong especially the rich treasures exhibited in the library and various other objects. The Vatican works of art represent in their entirety an irreplaceable treasure, which is not actively at the disposal of the Curia, but passively in their possession, since the repair and maintenance of these objects make great claims on the resources of the Holy See. Those who proclaim the riches of the Curia should know that, though the works of art are worth many hundred millions, they have no market value. The Holy See, notwithstanding its difficult financial position, values too highly its civilizing mission to divest itself of these treasures, which are being constantly increased.

A. The Vatican Museums

Cosimo Stornaiolo says in one passage: "The attitude of the Church towards the statues of the false gods and similar works of art was proclaimed by the Christian poet Prudentius in the fourth century as follows (*Contra Symmachum*, 1, 502): 'Let the statues be retained merely as the works of great masters; as such they may constitute the greatest ornament of our native town [Rome] without the misuse of an art which serves the wicked contaminating these memorials.' In accordance with this spirit of the Church, the early Christian emperors issued repeatedly laws against the destroyers of ancient works of art, and medieval Rome saw on all sides -- in its public squares, in the ruins of the ancient palaces, and in the villas of the neighbourhood -- numberless statues of gods, emperors, and renowned men. It is true that, during a period of unrestrained barbarism when

the popes transferred their residence from Rome to Avignon, works in marble found their way to the lime-kilns; but scarcely were these times past, during which Petrarch declares the Romans had degenerated to a nation of cowherds, than the popes, in accordance with their full conviction that the Church was the first-called protectress and patroness of art, devoted their attention to the preservation of the ancient objects of art. The papal palaces thus possess so great an abundance of masterpieces of all ages for the instruction and enjoyment of both the friends and the enemies of the papacy that, were all the other collections of the world destroyed by some catastrophe, the Vatican collection would suffice for the perpetuation of all æsthetic culture, both pagan and Christian. The popes were not alone the first to establish museums, but they have also by their example spurred all other governments of Europe to imitation, and thereby performed a great service in the refining of artistic taste among all modern nations. For the Vatican museums, in contrast to so many others, were instituted purely from æsthetic, and not from historical considerations." These important remarks apply not alone to the museums, but likewise to all the Vatican collections and scientific institutions. The Vatican museums are: (1) The Museo Pio-Clementino; (2) the Galleria Chiaramonti; (3) the Braccio Nuovo; (4) the Egyptian Museum; (5) the Etruscan Museum.

(1) The Museo Pio-Clementino

The first collection of antiquities in the world was made by Popes Julius II, Leo X, Clement VII, and Paul III in the Belvedere. Of the treasures there collected, most of which were a few decades later (especially by Pius V) given away or removed, only a few of the prominent objects maintain their place in the Vatican to-day. To these belong, for example, the Torso of Heracles, the Belvedere Apollo, and the Laocoon. Clement XIV's activity in collecting antiquities was continued by Pius VI with such great success that their combined collections, arranged by Ennio Quirino Visconti, were united in one large museum, named for these popes, the Museo Pio-Clementino. It contains eleven separate rooms, filled with celebrated antiquities.

(a) Sala a croce greca. -- At the expense of half a million lire (\$100,000) Pius VI had the two gigantic porphyry sarcophagi of Sts. Helena and Constantia, the mother and daughter of Constantine the Great, repaired and transferred to this museum, built by Simonetti. Conspicuous among the statues is that of the youthful Octavian, one of the very few ancient statues of which the head was never separated from the trunk. Among the few mosaics is the Cnidian Venus, which is esteemed the most perfect copy of the masterpiece of Praxiteles.

(b) Sala della Biga. -- The masterly restoration of an ancient two-wheeled racing chariot, drawn by two horses, by the sculptor Franzoni has given its name to the beautiful circular room erected by Camporesi. The wheels and one of the horses are new, a fact which only the expert can discern. In this room are also a bearded Bacchus, two discus-throwers, a bearded athlete, sarcophagi, and other works of art.

(c) Galleria dei Candelabri. -- Under Pius VI the very long Hall of Bramante was closed on this side, and was divided into six compartments by arches resting on Dorian columns of vari-coloured marble. In addition to many vessels of costly marbles, eight magnificent candelabra of white marble, after which this hall is named, are especially conspicuous. The exquisitely fine tracings and

arabesques are among the finest examples of this form of art. A Ganymede carried away by an eagle, a local goddess of a town in Antiochia, a Greek runner, and a fighting Persian are the most important among the numerous sculptures. Especially valuable is a sarcophagus with a representation in mezzorilievo of the tragedy of the daughters of Niobe. This hall was selected by Leo XIII to immortalize, through Ludwig Seitz, some of the most important acts of his pontificate. In a deeply thoughtful composition the artist represented St. Thomas Aquinas as the teacher of Christian philosophy, the agreement between religion and science, the union of ancient pagan and Christian art, the Rosary and the battle of Lepanto, and Divine grace in its various activities as working in Sts. Clara of Montefalco, Benedict Labre, Laurence of Brindisi, and John Baptist de Rossi, canonized in 1881. Seitz also painted a symbolic representation of four ideas taken from the Encyclicals of Leo XIII: Christian marriage, the praise of the Third Order of St. Francis, the condemnation of Freemasonry, and the agreement between secular and religious authority. This classical cycle of paintings is important (cf. Senes, "Galleria dei Candelabri, affreschi di Ludovico Seitz", Rome, 1891).

(d) Sala rotonda. -- Built after the model of the Pantheon by Simonetti, this hall contains as its most precious object the bust of the Zeus of Otricoli. Pius IX paid 268,000 lire (\$53,600) for the colossal gilt bronze statue of Hercules. The Barberini Hera, as it is called, is an exquisite work of art. The great mosaic in the floor, in the centre of which is a monster porphyry shell, was discovered at Otricoli in 1780.

(e) Sala delle Muse. -- The eight-cornered hall, which Pius VI commissioned Simonetti to build, was intended to receive the nine Muses under the leadership of Apollo, as well as busts of all those who should have acquired renown in the service of the same. Pius VI here paid brilliant homage to art and science, representing truth with a noble magnanimity against the brutal caricatures of culture of the waning eighteenth century.

(f) Sala degli animali. -- This room contains the richest collection in the world of (about 150) representations of animals from classical antiquity, many of the works of art being of high importance.

(g) Galleria delle statue. -- Innocent VIII (1484-92) had a summer-house erected in the vicinity of the Belvedere, and had it adorned with frescoes by Mantegna and Pinturicchio. Clement XIV and Pius VI had this building altered, and transferred thither such important treasures as the Weeping Penelope, the Apollo Sauroktonos, the Amazon from the Villa Mattei, a Greek monumental stele, the Sleeping Ariadne, and the Barberini Candelabra.

(h) Sala dei Busti. -- In this second division of the former summer-house are over 100 busts of Romans, gods and goddesses, etc.

(i) Gabinetto delle Maschere. -- The floor mosaic with masques, found in the Villa Hadriana at Tivoli in 1780, gives this third division of the summer-house its name. Worthy of special mention is the renowned Satyr, of rosso antico, and the dancing woman of Pentelic marble from Naples.

(j) Cortile del Belvedere. -- The former square court belonging to the ancient Belvedere was adorned in 1775 with a pillared hall, and in 1803 the chamfered corner halls were converted into little

temples. In the first of these stands the unrivalled and celebrated Laocoon group. It was discovered near Sette Sale in 1506, during the reign of Julius II, and was named by Michelangelo the miracle of art. In the second little temple is the admirable Belvedere Apollo, discovered near Grotta Ferrata about 1490. Canova was allowed to exhibit his Perseus and the Two Boxers in the third temple, where, however, they are not seen to advantage. In the fourth temple is the well-known Hermes dating from the fourth century before Christ; formerly this statue was thought to represent Antinous. (k) Gabinetti del Belvedere. -- In the three cabinets, or atria, are conspicuous the statue of Meleager, the above-mentioned Torso of Belvedere, and the sarcophagi and inscriptions relating to the Scipio family.

(2) *The Galleria Chiaramonti*

Thirty-four pilasters indicate the thirty sections into which the Galleria Chiaramonti is divided in the corridor 492 feet long. More than 300 sculptures, mostly of smaller dimensions and of a variety of subjects, are here artistically exhibited. They are chiefly the work of Greek sculptors living in Rome, and are carved after Grecian models. Prominent among the original Greek works are the Daughters of Niobe, a relief in B otian limestone, and the head of Neptune.

(3) *The Braccio Nuovo*

Although many of the halls of the Museo Pio-Clementino, especially those built by Simonetti, viewed from the purely architectonic standpoint, make a very brilliant impression and justly command much admiration, still the Braccio Nuovo is incontestably the crown of the museum buildings. The general impression of absolute perfection and symmetry is effected by the harmonious proportions of the long hail, the method of lighting, and the arrangement of the masterpieces exhibited. This hall was erected by Raphael Stern at the commission of Pius VII, at a cost of 1,500,000 lire (\$300,000). The magnificent barrel-vault is decorated with richly gilt cassettes; the cornices, the fourteen antique columns of giallo antico, cipollino, alabaster, and Egyptian granite, the transverse hall equally dividing the whole, the marble floor, all contribute an appropriate setting for the masterpieces. In this museum stand twenty-eight statues in as many niches, while in the transverse hall are fifteen more. Between the niches on marble consoles are twenty-eight busts; others rest on mural consoles; between these and the cornice beautiful bas-reliefs are set in the walls. At the rear of the hall stands the statue of the Athlete (of Apoxyomenus) cleaning himself of sweat and dust with a scraper. This statue, as well as that of the other Athlete (the Doryphorus, or spearsman), are antique copies of the Greek originals of Lysippus and Polycleetus. The majestic statue of Augustus haranguing his soldiers bears evident traces of having once been painted. Among the abundance of treasures here exhibited is the colossal recumbent figure of the Nile, on whose body play sixteen children representing the sixteen cubits in the annual rise of the river. (Consult Amelung, "Die Skulpturen des vatikanischen Museum", 2 vols., with charts, Berlin, 1905-08.)

(4) *The Egyptian Museum*

The collection of Egyptian objects was begun by Pius VII, but the museum was not opened until 1838, during the pontificate of Gregory XVI. The Cavaliere de Fabris superintended the decorations in Egyptian characters, while the Barnabite Father Aloys Ungarelli arranged the objects

for exhibition. The basis of the museum was supplied by the collections of Andrea Gaddi and Cardinal Borgia of Velletri, and by the objects of public property distributed throughout the Papal States. Other valuable objects were acquired by purchase. Most of the papyrus manuscripts were brought hither in 1818 by the Franciscan Angelo da Pofi. Although the ten halls full of statues, sarcophagi, mummies, sacred animals, and other things, do not attain the importance of the Egyptian museums in Berlin, Paris, London, Turin, and Hildesheim, the Roman is among the first Egyptian collections of second rank. Particularly notable are the sculptures of the modern period and the monuments (interesting for their style) which were prepared during the reign of Hadrian for his villa near Tivoli. (Consult Marucchi, "Il Museo Egizio Vaticano descritto ed illustrato", Rome, 1899; Idem, "Monumenta papyracea ægyptica", Rome, 1891.)

(5) *The Etruscan Museum*

This museum is situated over the Egyptian. To Gregory XVI it owes its foundation; to Pius IX, many of its treasures; to Leo XIII, its decoration and systematic arrangement. The excavations made in Western Etruria between 1828 and 1836 furnished the basis of the museum, which contains statues, sarcophagi, bowls, vessels of every kind and shape, mosaics, lamps, and numerous other objects of every description, giving a highly graphic picture of the art of ancient Italy and the customs of the Etruscans. This entirely unique collection is of prime interest. (Consult Nogara, "I Vasi antichi del Museo Etrusco e della Biblioteca dei Palazzo Vaticano", Rome, 1912; Nogara and Pinza, "La tomba Regolini Galassi e gli altri materiali coevi del Museo Gregoriano-Etrusco", Rome, 1912.)

B. The Vatican Pinacotheca

Among the valuable treasures of art, manuscripts, archives, and collections which Napoleon confiscated on his campaigns and conveyed to Paris, were the most prominent art treasures of the Vatican and the churches in the Papal States. When these treasures were brought back from Paris in 1815, Pius VII formed them into a collection, added other paintings, and formed them into a picture-gallery. This (the Vatican Pinacotheca) was first lodged in the Appartamento Borgia, then transferred to the third story of the palace, immediately adjacent to the former suite of the secretary of state. The disadvantages of this situation increased when Pius X entered into personal occupation of the suite of the secretary of State. The rooms were not architecturally fitted for a picture-gallery, and the constant stream of visitors caused annoyance. After long considerations as to convenience and safety from fire, Pius X decided to remove the collection to the rooms on the ground floor of the Vialone del Museo. These rest on stout arches, and in them the papal equipages of ancient and modern times had been kept. To these were added two rooms which were adjacent to the old library of Sixtus IV and had previously been used as a magazine. Louis Seitz, assisted by some other artists and in constant consultation with the sub-Prefect of the Apostolic Palaces, Mgr. Misciatelli, was intrusted with the gigantic task of transferring these priceless treasures and decorating the rooms. Seitz died before the work was finally completed. The artistic spirit shown in the whole plan and decoration of the new pinacotheca is worthy of admiration. The arrangement is perfect, and the effect of the whole will improve with time.

The few masters allowed to foregather in the old picture-gallery were Raphael, Leonardo da Vinci, Fra Angelico da Fiesole, Guercino, Caravaggio, Crivelli, Garofalo, Bartolomeo Mantegna, Murillo, Francesco Cossa, Perugino, Bonifazio, Domenichino, Titian, Ribera, Pinturicchio, Giulio Romano, Francesco Penni called il Fattore, lo Spagna, Sassoferrato, Niccolò da Foligno, Melozzo da Forli, Valentino Baroccio, Guido Reni, N. Poussin, A. Sacchi, Moretto, Paolo Veronese, and Correggio. Beside Leonardo da Vinci and Fra Angelico, the Venetian School is represented by Crivelli, Titian, and Paolo Veronese; the Bolognese by Domenichino's "Communion of St. Jerome" and Guido Reni's "Crucifixion of St. Peter"; the Lombardic by the "Pietà" of Amerighi da Caravaggio; the French by Pierre Valentin's "Martyrdom of Sts. Processus and Martianus"; and other Schools by various canvasses. Altogether 56 masterpieces had to be transferred from the old to the new gallery. In 1904, when the Greek abbey of Grottaferrata celebrated its ninth centenary with an exhibition of its forgotten treasures, 181 valuable Byzantine paintings were there acquired for the Vatican. To these were added 40 taken from the Lateran and other collections in the Apostolic palaces, making an addition of 221 besides the 56 from the old gallery. All the paintings which were not judged worthy to be exhibited side by side with the masterpieces of the earlier collection have been transferred to a magazine adjoining the gallery, where they may be examined by artists. A very simple opening celebration was held at the end of 1909. In the gallery itself is the marble bust of Pius X, by Seebock, which is the pope's favourite likeness of himself. The light, which enters through the lofty circular windows, is regulated hourly by shades, and the paintings are always excellently illuminated. The large rooms have been divided into sections, so that the distribution of the paintings into separate compartments renders the general effect harmonious. The collection of paintings in the Pinacotheca is priceless in value. (Concerning the origin of the Vatican Pinacotheca consult Platner-Bunsen, "Beschreibung den Stadt Rom", II, 2nd ed., 415; for works on the new Pinacotheca, see the official report, "La Nuova Pinacoteca Vaticana", with chants, Rome, 1909.)

C. The Gallery of Modern Paintings

Not so much artistic value, which is comparatively small, as the glory of the Church is seen in the majority of the pictures collected in the small Gallery of Modern Paintings. With few exceptions they are estimable achievements of Roman artists, and are devoted to the glorification of those saints who have been canonized in the second half of the past century. They hang in a single large hall, beside which is accommodated the colossal canvas of Matejko representing the saving of Vienna by John Sobieski in 1683. This unique painting was purchased for Leo XIII in 1884 with a subscription started by a wealthy Pole. In a third hall are exhibited the frescoes of Podesti, among which is conspicuous the great picture (the heads of all the personages are painted from portraits) depicting the promulgation of the doctrine of the Immaculate Conception by Pius IX. Before this painting stands a magnificent shrine, in which the text of the Bull of Promulgation, translated into many languages is preserved. The shrine was presented to Pius IX by the French clergy in 1878.

D. The Appartamento Borgia

On the first floor of the palace, looking towards the north and the Cortile del Belvedere, one may enter from the Loggie of Giovanni da Udine these apartments which Alexander VI had erected in what is called the Old Palace (of Nicholas V). These rooms received their title from Alexander's family name, Borgia. Here on 18 January, 1495, Alexander received King Charles VIII of France and entered into long negotiations with him. Here also Charles V was accommodated, when, a few years after the sack of Rome, he returned victorious from Tunis and was received by the pope as the conqueror of the Turk. Succeeding popes did not occupy this suite, utilizing the Stanze di Raffaello, because there they had better light and air. From many sources it appears that, until the close of the seventeenth century, the Appartamento Borgia was occupied by the cardinal nephews, or, as they were later called, secretaries of state. After the Palace of Sixtus V had been completed under Clement VIII (cf. Colnabrini, "Ruolo degli appartamenti e delle stanze nel Palazzo Vaticano al tempo di Clemente VIII", Rome, 1895), the Stanze di Raffaello and the apartments of Alexander VI were neglected, and during the seventeenth and eighteenth centuries they were used only for conclave purposes. About the middle of the eighteenth century the Sale Borgia were used only as a refectory for the lower officials of the palace during Holy Week. During the French occupation of Rome, these rooms suffered much injury from the soldiery, so that immense sums had to be spent by Pius VII for architectural repair. When the Appartamento Borgia was used as the Pinacotheca, the marble cross-beams were removed from the windows, and replaced with iron grating, and everything was done to secure suitable lighting for the works of art. As every endeavour proved unsatisfactory, the paintings were removed in 1821 to the third story, and the pope then established here a museum of statues, known as the Museo Miscellaneo (for a detailed description see Platner-Bunsen, *op. cit.*; cf. the drawings of Craffonara and Guattani, and also Massi, "Indicazione antiquaria delle Sale Borgia", Rome, 1830).

As the Appartamento Borgia consisted of six rooms, and only the first four were employed for the museum, the remaining two were turned over to the Vatican Library, to which they are adjacent. In the winter of 1838-39 the museum was limited to the first two rooms, and the two which were then vacated were likewise transferred to the library. Finally, Pius IX added also the last two halls to the library, distributing the marble works between the Vatican and the Lateran museums. Having acquired the renowned library of Cardinal Angelo Mai on 8 September, 1854, the pope had this housed in the first two rooms of the Appartamento, closing them to the public. The artistic creations of Pinturicchio which adorn the walls were, however, restored to the admiration of the public when Leo XIII opened the Borgia suite, establishing there the consulting library of printed books by Decree of 20 April, 1889. The ceilings and lunettes, which preserve the paintings of the great Umbrian artist, had suffered little despite the vicissitudes of the Sale Borgia, but the walls and the floor had received serious damage. Louis Seitz maintained, however, that a thorough cleaning and the covering of the damaged places with colour would sufficiently restore the frescoes, so that Pinturicchio's original work remains.

General architectural restoration was successfully undertaken. The doors which had been broken through the walls were closed up, and the former doors reopened. After the removal of the white

colouring which covered the walls, extensive traces of the old ornamentation were revealed, and the whole restored in the spirit of the Alexandrine epoch. Plaster blisters which had formed on the paintings were secured in place without the slightest damage to the frescoes. The floor required complete reconstruction. Remnants of the original majolica floor were discovered, and with the aid of these, and special technical studies, a new parquetry for the floor was elaborated in perfect harmony with the remaining fittings of the Borgia suite. The complete fitting of the rooms was not attempted; but the huge walls were beautifully furnished in exquisite taste. In 1897 Leo XIII solemnly opened the Appartamento Borgia, declaring it an integral portion of the Vatican collections which were accessible to the general visitor. Simultaneous with this manifestation of the pope's sympathy with art appeared the following work, dedicated to him: "Gil affreschi del Pinturicchio nell' appartamento Borgia del Palazzo Apostolico Vaticano, riprodotti in Fototipia e accompagnati da un Commentario di Francesco Ehrle, S.J. prefetto della Biblioteca Vaticana, e del Commendatore Enrico Stevenson, direttore del Museo Numismatico Vaticano" (Rome, 897). When Pius X occupied the former suite of the secretary of state, the Appartamento Borgia was temporarily devoted to the secretariate. The rooms were then beautifully furnished for residence, thus restoring the *ensemble* they presented in the time of Alexander VI and his successors (cf. Ehrle-Stevenson, pp. 26-27). When a special suite of rooms was later prepared for the secretary of state, the Appartamento Borgia was again opened to the public.

(1) The first of the six rooms, Sala dei Pontefici, was not part of the pope's private apartments, being a public hall in which audiences were given and consistories held. The beautiful stucco decorations harmonize well with the paintings of Giovanni da Udine and Perrin del Vaga, who painted the Zodiac and some representations of stars.

(2) In the second hall, Sala dei Misteri, the mysteries of the life of Christ are depicted. Here are the Annunciation, the Nativity, the Adoration of the Magi, the Resurrection and the Ascension of Christ, the Descent of the Holy Ghost, and the Assumption of the Blessed Virgin. Besides the general sketch for the pictures and other decorations in this hall, the lifelike figure of Alexander VI is from Pinturicchio's hand, as are also the figures of the prelates represented in the Assumption. All the rest was painted by his assistants; attempts have been made to prove that these belonged to one of the Italian Schools.

(3) Sala dei Santi is the name given to the third hall, which contains a series of scenes from the lives of Sts. Catherine of Siena, Barbara, Paul and Anthony, and Sebastian. All these glorious frescoes were executed by Pinturicchio himself, as was the beautiful circular picture of the Madonna and the scene of the Visitation.

(4) Grammar, dialectics, rhetoric, geometry, arithmetic, music, and astrology, that is the seven liberal arts, were represented by Pinturicchio, with the extensive aid of his assistants, in the fourth hall, Sala delle arti liberali. These paintings have suffered more from dampness than those in the other rooms.

(5-6) The last two rooms, del Credo and delle Sibille, are situated in the Torre Borgia. The decorations in these rooms are not by Pinturicchio and have been injured by overpainting. A Latin

inscription records the munificence of Leo XIII, who "restored this dwelling . . . to its pristine dignity and dedicated it in the twentieth year of his pontificate". (Cf. Jesorone, "L'antico Pavimento delle Logge di Raffaello in Vaticano", Naples, 1891; Volpini, "L'appartamento Borgia", Rome, 1887.)

E. Stanze di Raffaello

The Stanze di Raffaello are an exact reproduction of the Appartamento, but are situated one floor higher. They thus include four rooms in the Palace of Nicholas V and two in the Torre Borgia, which serve for the Exhibition of Modern Paintings. As explained above, the popes, who once occupied the Appartamento Borgia, later removed one story higher, into the rooms which are known to-day as the Stanze di Raffaello, because they were painted by Raphael. Julius II desired a comparatively simple pictorial decoration of his suite, and entrusted the task to the painters Piero della Francesca, Luca da Cortona, Bartolomeo della Gatta, Pietro Perugino, and Bramantino da Milano. During the progress of the work the architect Bramante Lazzari of Urbino persuaded the pope to summon his nephew Raphael Sanzio from Florence to assist the others. One of the walls of the third room, the Stanza della Segnatura, was assigned to the young Raphael, who between 1508 and 1511 painted there "Theology" and the "Disputa"; these works so delighted the pope that he entrusted to Raphael the decoration of the entire Stanze. All other paintings were removed with the exception of those in the vault of the fourth room, where Pietro Perugino, Raphael's teacher, had, in four parts, depicted: the adoration of the Blessed Trinity by the Twelve Apostles, the Saviour with Mercy and Justice at his side, the Father enthroned on the rainbow, and the Redeemer between Moses and Jacob. Raphael could not accomplish this task, with his other commissions, unaided. The sketches are all his, but many of the paintings were executed by his assistants and pupils, some after his death in 1520.

(1) The first hall is called the Sala di Costantino. The frescoes were executed after Raphael's death by Giulio Romano, Francesco Penni, and Raffaello dal Colle. The chief incident depicted on the longitudinal wall is the battle of Milvian Bridge, which Constantine the Great fought against Maxentius. The baptism of Constantine, the presentation of Rome to Sylvester I by the emperor, and the latter's address to his troops concerning his dream (*In hoc signo vinces*) are all important compositions. The smaller pictures and the socle paintings are of a simpler kind. The painting of the ceiling was not finished until the reign of Sixtus V.

(2) The paintings in the second hall, the Stanza d'Eliodoro, are almost exclusively by Raphael. His most important fresco is the "Mass of Bolsena", which represents how a priest, who did not believe in transubstantiation was converted when the Blood ran from the Host after the Consecration. "The Retreat of Attila" represents Leo I (beside whom stand the Apostles Peter and Paul), with the features of Leo X, and the pope's attendants are to some extent contemporary portraits. This is an extremely effective and superbly coloured painting. The light effects in the third fresco "The Deliverance of St. Peter", are wonderful. From the fourth picture, "Expulsion of Heliodorus from the Temple at Jerusalem" (II Mach., iii), the hall has taken its name. The brilliant painting, strength

of expression, and harmonious colour effects form the basis of the fame of this masterpiece. The paintings on the ceiling are poorly preserved.

(3) In the Stanza della Segnatura (the supreme court of justice, which sat here under the presidency of the pope) Raphael began his works. On the ceiling are "Theology", "Poetry", "Philosophy", and "Justice". On the walls, under "Theology", is the "Disputa", the fundamental ideas for which were taken, according to the latest theories of Wilpert, from the "Last Judgment" of Pietro Cavallini, at Santa Cecilia in Rome. Wilpert has established doubtful identities of the saints. The name "Disputa", though inappropriate, has clung to the painting. The difficulties presented by the conditions of the hall were splendidly overcome by Raphael in the second picture, "Parnassus". Apollo and the Muses, with Homer, Dante, Virgil, Sappho, Pindar, Horace, and many other personages, are here united in one composition, which breathes forth the gladness and poetic strivings of the Renaissance. In the "School of Athens" all branches of knowledge are represented and powerfully characterized. Plato and Aristotle are the centres of the organically arranged groups; Socrates, Diogenes, Ptolemy, and Zoroaster are also easily recognizable. Other forms are not clearly distinguishable except the portraits of some contemporaries. To the extreme right Raphael has painted himself beside Sodoma. On the wall containing the windows are some smaller paintings and the glorification of canon and civil law. Here again are portraits of contemporaries, especially those of Julius II and Leo X.

(4) In the fourth hall, the Stanza dell' Incendio, Perin del Vaga has painted Leo III taking the oath of purgation before Charlemagne; Giulio Romano, the victory of Leo III over the Saracens at Ostia; Francesco Penni, the fire in the Borgo, a painting from which the room has taken its name. The crowning of Charlemagne at old St. Peter's is more conventional and superficial in conception. Raphael's sketches for this hall reveal the summit of his artistic development (1517). The ceiling paintings are by Perugino. Numerous smaller works are painted beside and under the chief paintings in the Stanze. The majority of the frescoes still remain in an almost perfect condition, due to the zealous solicitude with which the works are cared for.

F. Loggie di Raffaello

Immediately adjacent to the Stanze of Raphael, which begin on the second story of the Loggie of the Court of St. Damasus, lie the well-known Loggie named after the Umbrian master. They were unprotected from all inclemencies of the weather until 1813, when Pius VII erected large windows. The wonderful frescoes were painted in accordance with the sketches of Raphael and under his constant personal supervision, by Giulio Romano, Giovanni da Udine, and other artists in 1517-19. The whole plasterwork is by Giovanni da Udine, who also painted all the ornaments. The long passage is divided by thirteen vaults into as many sections. The frescoes of the ceiling in the vaults, twelve of which contain scenes from the Old Testament, and one from the New Testament, are the chief attraction of the Loggie. These quadrilateral, framed paintings, four in each vault, display rich imagination and marvellous beauty of composition, and are among the most characteristic creations of the master. The graceful and charming reliefs, the delicate ornaments, the sitting, standing, hopping, and dancing figures, and the numerous other admirable details make the Loggie an inexhaustible source of the richest inspiration for every artist.

G. The Loggie di Giovanni da Udine

Immediately under the Loggie of Raphael, on the first floor, are the Loggie of Giovanni da Udine. The general scheme for this suite is likewise due to Raphael, but the execution was the independent task of Giovanni. The caps of the vaults are beautifully decorated with leaf and tendril-work, enlivened by animals of all kinds. In the rear of the Loggie, under a magnificent Renaissance portal of great delicacy, dating from the time of Leo X, the marble bust of Giovanni is exhibited. The other portions of the Loggie of the first and second floors were painted in entirely unpretentious fashion under Clement VIII and Alexander VII by Lanfranco, Marco da Faenza, Paul Schor, Consoni, and Mantovani. These are not accessible to the general public.

H. Galleria degli Arazzi

In a modestly decorated hall, immediately adjacent to the Galleria dei Candelabri, hang the famous twenty-seven pieces of tapestry -- called arazzi. Woven of silk, wool, and gold thread by van Orlay and van Coxis in Brussels at a cost of \$3400 each (present value, \$12,000), these tapestries have always been the subject of great admiration, and numerous copies may be found in Berlin, Loreto, Dresden, Paris, and other places. Raphael made cartoons for ten of the Galleria tapestries; his pupils Penni and Perin del Vaga executed twelve others in accordance with smaller sketches of the master; five are works of more recent date. The first series formerly adorned the unpainted lower portion of the walls of the Sistine Chapel; the second series were intended for the Consistorial Hall. Seven of the original cartoons of Raphael were purchased in France by Charles I of England, and they may now be seen in the South Kensington Museum. During the sack of Rome in 1527 the tapestries were stolen, but Julius III succeeded in having them restored. When Rome was occupied by the French in 1798, they were again seized and bartered to a Genoese Jew, from whom Pius VII acquired them in 1808. This rough handling damaged the tapestries, weakening and blurring the colours, but they are now carefully preserved. (Consult Farabulini, "L'arte degli Arazzi e la nuova Galleria dei Gobelins at Vaticano", Rome, 1884.)

I. Studio del Musaico

The Vatican possesses an extensive studio for mosaic painting. The number of different coloured glass-pastes used exceeds 11,000. Almost all the altars in St. Peter's furnish evidence of the perfection to which this art has been carried in the imitation of renowned paintings. In the studio, which is at once an exhibition and salesroom for the mosaics manufactured, the visitor can see how the various artists work. Even smaller works demand the patient labour of many years. The pope is wont to choose a specially beautiful example of mosaic work as a present for royalty.

At the conclusion of this section it may be said that there is a vast number of other works of art distributed here and there throughout the Vatican Palace, but not accessible to the general public. To these belong the paintings of the Zuccari in the Torre dei Quattro Venti, the Bathroom of Cardinal Bibiena, the chiaroscuro in a hall on the second floor, etc.

VIII. THE PALACE AS A SCIENTIFIC INSTITUTE

This topic -- with an emphasis on the Vatican Archives and the Vatican Library -- will be treated in a separate article.

IX. THE STATE HALLS OF THE VATICAN

State halls for the celebration of various solemnities in the Vatican Palace came into existence gradually as their need became apparent; they reflect in their general decoration the taste prevailing at the periods of their construction. Although not so numerous as those in many royal palaces, the halls of the Vatican stand first in historical importance. Great events of interest for both profane and ecclesiastical history have taken place within them during the past centuries. As regards situation, there are two groups of rooms -- the first in the immediate vicinity of the Sistine Chapel and the second before and in the papal suite. The former group includes the Sala Regia, Sala Ducale, and Sala dei Paramenti; in the second are the Sala Clementina, Sala Concistoriale, Sala degli Arazzi, and Sala dei Trono.

A. The Sala Regia

Although not intended as such, this broad room is really an antechamber to the Sistine Chapel, reached by the Scala Regia. To the left of the entrance formerly stood the papal throne, which is now at the opposite side before the door leading to the Cappella Paolina. The hall was begun under Paul III by Antonio da Sangallo the Younger and was completed in 1573. The elegant barrelvault is provided with the highly graceful and very impressive plaster decorations of Pierin del Vaga. The stucco ornaments over the doors are by Daniele da Volterra. The longitudinal walls are broken on the one side by two, and on the other by three, large doors, between which Giorgio Vasari and Taddeo Zuccaro have introduced very powerful frescoes, whose effect is more than ornamental. They depict momentous turning-points in the life of the Church, among others the return of Gregory XI from Avignon to Rome, the battle of Lepanto, the raising of the ban from Henry IV, and the reconciliation of Alexander III with Frederick Barbarossa. This hall served originally for the reception of princes and royal ambassadors. To-day the consistories are held in it, and an occasional musical recital in the presence of the pope; during a conclave it is a favourite promenade for the cardinals.

B. The Sala Ducale

The Sala Ducale lies between the Sala Regia and the Loggie of Giovanni da Udine. Formerly there were here two separate halls, which were converted into one by Bernini by the removal of the separating wall (the position of which is still clearly perceptible). The decorative paintings, which are of a purely ornamental nature, are by Raffaellino da Reggio, Sabbatini, and Matthæus Brill. In this impressive hall were formerly held the public consistories for the reception of ruling princes. It now serves occasionally for the reception of pilgrims, the consecration of bishops, when (as rarely happens) this is undertaken by the pope, or is used for the accommodation of specified divisions of the papal household, when the pope holds a consistory in the Sala Regia, proceeds to the Sistine Chapel, or sets out with great solemnity for St. Peter's.

C. The Sala dei Paramenti

The Sala dei Paramenti lies a little to the left of the Sala Ducale, and adjoins immediately the Loggie of Giovanni da Udine. It receives its name from the fact that the pope assumes the pontifical vestments in one room of this suite before attending Divine service in the Cappella Sistina. The Sacred College assembles in another room to accompany the pope. Both rooms, which are not accessible to the public, are decorated with tapestries of beautiful colour, the walls are overarched with red damask, and the ceiling richly gilt. Here the members of the papal court assemble for breakfast after receiving their Easter Communion from the pope.

D. The Sala Clementina

The Sala Clementina is a gigantic hall, two stories high, situated on the second floor, at the entrance to the papal apartments, and reached by the Scala Nobile. At the rear of this hall a division of the Swiss Guard is posted. The doors to the right lead to the apartments of the pope, those on the left to the Loggie, and those in the rear immediately to the Consistorial Hall. The magnificent marble wainscoting is over six feet; above it rise bold ornamental frescoes of splendid perspective, extending along the rounded ceiling. From the middle of the ceiling hangs a colossal chandelier, whose green patina combines wonderfully with the whole harmony of colours. Frequent repetitions of the coat of arms of Clement VIII, the builder of the hall, have been arranged by the artist with excellent taste. This great hall serves to-day as a waiting-room, as a vesting-room in the case of great receptions in the Consistorial Hall, and on rare occasions for the reception of pilgrimages or large deputations.

E. The Sala Concistoriale

The long but rather narrow Consistorial Hall lies behind the Sala Clementina, and behind the Antecamera bassa to the right of that Sala. Erected by Clement XIII, it is employed for secret consistories, for official sessions under the presidency of the pope (postulations and the like), as well as for solemn receptions. The poor light afforded by the northern exposure of the room is still further reduced by dark red hangings on the walls. Some large oil paintings, representing religious subjects give life to the walls, and the coffered ceiling is richly gilt. Between the ceiling and the oil paintings are, besides rich ornamental painting, a number of landscape frescoes of delicate tone. At the rear of the hall stands a more elaborate than beautiful throne, which dates from the Vatican Exhibition; simple, but monumental, wooden stalls extend along the walls.

F. The Sala degli Arazzi

The Sala degli Arazzi receives its name from the vast framed Flemish tapestries which decorate every wall. As these magnificent pieces hang very low, the visitor can closely examine the fineness of the workmanship. Above the tapestries have been painted, since the time of Paul V, landscape frescoes, which alternate with the arms of this pope. A beautifully carved cornice supports the richly gilt coffered ceiling, which looks down on a mosaic marble floor. Curtains of white silk, with outside curtains of ungathered green silk, exclude too glaring a light. Perfect taste and harmony of colour exist throughout this immense hall.

G. The Sala del Trono

Reference has been already made to the Throne Room. It may be added that to the right and left of the throne on two great marble tables stand two very valuable ancient clocks. Between the two windows, exactly opposite the throne, is an ivory crucifix of extraordinary dimensions and artistic value.

X. THE STATE STAIRCASES OF THE VATICAN

There are three state staircases in the Vatican. The first and best-known is the Scala Regia, which leads up to the Sala Regia. It was built under Alexander VII by Bernini, who, by the skilful arrangement of the columns supporting the curves, has entirely concealed the narrowing of the staircase towards the top. The second staircase, erected by Pius IX, leads from the Portone di Bronzo, the chief entrance to the Vatican, directly up to the Cortile di San Damaso. Constructed of granite steps several yards wide, the staircase has on the outer side a marble balustrade of corresponding bulk; the base is of Breccia marble, and above it as far as the ceiling extends artificial marble. A large painted window adorns the side looking towards the Piazza S. Pietro. Half-way up is the apartment of the sub-prefect of the Apostolic Palaces, while above, on the same floor as the Cortile di San Damaso, is the apartment occupied by the maestro di camera. This staircase is called after the name of its builder, Scala Pia. The third state staircase is the Scala Nobile, which leads from the Cortile di San Damaso to the third story, to the suite of the secretary of state, and runs past the papal apartments to the private suite of the pope. Light is admitted on the ground floor by the painted windows renovated by the Prince Regent of Bavaria after the powder explosion of 1882, and on the second floor by those donated by the Collegium Germanicum at the same period. The steps are of white marble; yellow artificial marble covers the walls, while the base is of pure marble. Rich plaster decorations cover the barrel-vault. The whole well of the staircase is simple, but of rare impressiveness and pleasing colour.

XI. THE ADMINISTRATIVE BOARDS OF THE VATICAN

The supreme board of administration within the palace is the Prefettura dei Sacri Palazzi Apostolici, at the head of which stands as prefect the secretary of state. He is assisted by the sub-prefect, who, as executive and supervising official, possesses extensive authority. All artistic and scientific undertakings are subject in so far as their economic aspect is concerned, to the decision of the prefect. The departments of building, furnishing, administration of the magazine, household management, fire brigade, accountancy, the stables, printing works, gardening, and some other divisions are administered, under the supervision of the prefect, by more or less independent boards, whose directors -- e.g. the foriere maggiore and the cavallerizzo maggiore -- in some cases hold a high rank at Court (cf. *Die kathol. Kirche unserer Zeit*, I, pp. 286-88). Both the household and magazine authorities have so completely completed their tasks since 1903 that it is no longer necessary to make special plans for the fitting of rooms etc. on the occasion of great solemnities such as conclaves. Pius X has everything arranged in a permanent fashion and preserved in the store-rooms, and in this manner has introduced considerable savings. The department of building, which under Leo

XIII was rather neglected, is now busy with perfecting the architectural condition of the palace. The sub-prefect is restoring to their former condition a large number of magnificent halls, which during the course of the last century were subdivided vertically and horizontally to make smaller rooms. In the execution of these works some important discoveries have been made. Very important and thorough repairs were made throughout the palace. The floor of the Galleria Lapidaria was laid with bricks, the windows closed very badly, and the general condition of this magnificent corridor left very much to be desired. Repairs being thus urgently needed, a mere rectification of the damages would not be sufficient. Moreover such a proceeding would be contrary to the traditions of the Curia, which executes in monumental fashion whatever it undertakes. When the floor, windows, arches, and masonry were all overhauled in the Appartamento Borgia, the Collections of ancient pagan carvings, which were exhibited along the walls under the inscriptions, received an unusual increase. The reduction of the stud was begun under Leo XIII and completed under Pius X, so that the pope now possesses comparatively few horses. The extremely strict discipline which Pius X has introduced into all branches of the Vatican administration, has met with splendid success.

XII. THE JURIDICAL AND HYGIENIC BOARDS OF THE VATICAN

Experience has proved it necessary that the Curia should maintain a tribunal before which all legal disputes relating in any way to the Vatican administration might be decided. The Italian courts are in such cases powerless and inefficacious, because their jurisdiction ceases at the palace gates. As there must ever be recriminations wherever there are numerous relations with the commercial world, where there are crowds of clerks and great circulation of money, two "Commissioni Prelatie per decretare intorno alle controversie e contestazioni con le amministrazioni palatine" were created by Decree of 20 February 1882, to decide all claims made against the Curial administration. The title possesses a juristic interest: the official bodies are called *commissioni*, not *tribunali*; *decretare*, and not *giudicare* or *decidere*, is used; and the processes are termed *controversie* and *contestazioni*. Although the Decree manifestly avoids giving the name of court of justice to the new institution, it is such *de facto*. The two commissions then created are each composed of three prelates, who have the decision of processes both in first and also in second instance. The court of third instance is formed by the union of the other two under the presidency of the general auditor of the Apostolic Chamber. All the prelates have a legal training, and in each of the first two courts are a president and two colleagues. Each court has a prelate as petitioner and a secretary. It is a notable feature that, for the execution of all judgments which are legally given against the Vatican administration, nothing is provided.

The procedure of these courts is as follows: The process is begun by written documents placed in the hands of the president. The defendant lodges a written answer within a certain interval, after which further pleas and counterpleas may continue. On the conclusion of the written explanations or after the expiration of a certain interval, during which no further counterpleas are forthcoming, the decision is given and published by exhibition in the Secretariate. The interval for appeal is six months, dating from the day of the publication of judgment. These courts employ every means to

establish the facts as they actually are: the examination of witnesses, the administration of oaths, decisive or supplementary oaths, the examination of experts, etc. The costs of court are regulated on the basis of the provisions of the Papal States. The tribunal of the prefecture, of which the competence cannot be exactly established, has an inquisitor and a secretary. Before this court are heard criminal charges.

The sanitary service and the hygienic department were reorganized on 14 November, 1893. In accordance with modern requirements, exhaustive measures were taken in all matters connected with these departments. In particular the water service was thoroughly renovated. The sanitary corps is under the direction of the physician in ordinary to the pope, under whom also stand five other physicians and some assistants. Two of the physicians are appointed for day duty, and two for night; the fifth attends the Swiss Guards. The assistants represent the physicians, when these are unable to attend, but on all solemn occasions, when an unusually great number of persons assemble, they must (like the physicians) be always in attendance. The sanitary service and hygienic department are subordinate to the Prefecture of the Apostolic Palaces. The Vatican dispensary, which was formerly in the Cortile di San Damaso, was recently transferred to the quarters of the Swiss Guards, and lies at the door of the Torrione di Nicolò V which leads to the city. Consequently it is easily accessible to the inhabitants of the Borgo, who avail themselves very freely of it. It is entrusted to three Brothers of Mercy, and delivers all medicines at the rates appointed by the urban council of Rome in favour of the poor. A list hanging up in the dispensary shows to what residents and servants of the palace medicines are to be given gratis.

XIII. THE POLICING OF THE VATICAN

There is within the Vatican a well-organized service of police and guards. Military and police bodies protect persons and property, and the fire department prevents damage from fire. The special military guardians of the palace are the Swiss Guards; entrusted with the specifically police duties are the gendarmes. The Palatine Guards are rather a guard of honour, and the Noble Guard a mounted bodyguard with very limited service. The fire brigade is formed by the Guardie del Fuoco. In view of the peculiar political position of the pope in Rome, the careful guarding of the Vatican presents special difficulties; but, despite the objectionable attitude of the Italian police commissioners in the Borgo, few contretemps are to be complained of. For among the great throngs to the papal assemblages there are always some ready to seize the opportunity to create a disturbance, if the slightest pretext offers itself.

A. The Swiss Guards

The commander of the Swiss has the rank of a colonel of the regular troops and is addressed with this title. The other officers, therefore, have a rank three grades higher than their name indicates, and all the guards without exception possess the rank of sergeant in the regular troops. The quartermaster acts also as secretary of the commanding officer and as ordnance officer. The corps has its special chaplain and chapel, SS. Martino e Sebastiano, built by Pius V in 1568. Every candidate for the Guards must be a native Swiss, a Catholic, of legitimate birth, unmarried, under

twenty-five years of age, at least five feet and eight inches in height, healthy, and free from bodily disfigurements. Whoever is not eligible for military service in Switzerland, is likewise refused admission into the Guards. The following papers are required: a certificate from his home (or a pass), baptismal certificate, and testimonial as to character, all signed by the authorities of his parish. After a year of good conduct the cost of the journey to Rome is refunded; this refund may, however, be paid in instalments after a period of seven months. Applications for admission are to be addressed directly to the commanding officer. Those who wish to retire from the Guards may freely do so after giving three months' notice. After eighteen years' service each member of the Guards is entitled to a pension for life amounting to one-half of his pay, after twenty years to a pension amounting to two-thirds of his pay, after twenty-five years to five-sixths of his pay, and after thirty years to his full pay.

The duties of the Guards are as follows: They are responsible for the guarding of the sacred person of the pope and the protection of the Apostolic Palaces, all exits from the palace to the city and the entrance doors to the papal apartments being entrusted to their charge. They have also to take up their position in all pontifical functions in the papal chapels and in all other religious functions both within and without the Apostolic Palaces (the latter are now confined to St. Peter's) at which the pope assists. They have also other duties regulated by ancient traditions or more recent decrees. In addition, they have to appear for service at the order of the prefect of the Apostolic Palaces (the majordomo) and the maestro di camera. The religious privileges of the guards are very extensive. In all public processions the Swiss Guards take their place immediately behind the Noble Guard. As guards they are subject to the prefect of the Apostolic Palaces and were not in earlier times subject, like the regular troops, to the Ministry of War. When the pope occupies the *sedia gestatoria*, he is surrounded by six of the Swiss Guards, who carry the large swords known as "double-handed". The commander (colonel) of the Guards is an ex-officio privy chamberlain, and has the *entrée* into the Anticamera Segreta; the lieutenant (major) and the sublieutenant (captain of the first class) are ex officio honorary chamberlains, and have the *entrée* only to the Throne Room, which lies before the Anticamera Segreta. The Swiss Guards are fully armed, and have to submit to a strict course of exercises and gymnastics. Football is zealously cultivated by them in the Cortile del Belvedere, and their trumpet corps is splendidly organized. On solemn occasions, such as special functions in the German Cemetery near St. Peter's (Campo Santo Teutonico), which is also the burial-place for the Guards, the trumpet corps appears in public.

Even in the fifteenth century the popes possessed a body-guard of the Catholic Swiss. In 1505, at the instance of the Swiss Cardinal Schinner, a treaty was made by Julius II with the two cantons of Zurich and Lucerne, in accordance with which these cantons had to supply constantly 250 men as a body-guard to the pope. Since this date there has always been about the pope a corps of Swiss Guards (cf. Baumgarten, "Katholische Kirche unserer Zeit", I 297 sqq.; "Kirchliche Handlexikon", s.v. "Schweizergarde"). At present the Guards possess a strength of exactly 100 men (including the six officers), who suffice not alone for the complete discharge of the various duties of the corps but also for the maintenance of a watch (formerly essentially more strict and extensive) over the

pope during the night. Their old picturesque uniform of black, red, and yellow, in sixteenth-century style, is still retained. A black hat with red strings has recently replaced the very ugly helmet. While exercising, on night watch, or in barracks, the men wear a steel-blue undress uniform, consisting of wider tunic, knee-breeches, dark-blue stockings, and laced boots, but while on guard duty they wear dark-yellow stockings and buckled shoes. On especially solemn occasions both men and officers appear in military uniform with weapons and helmets. The barracks of the Guards lies at the foot of the Palace of Sixtus V. A portion of the building was erected in 1492 during the reign of Alexander VI. The canteen of the Guards furnishes them with their board. The religious privileges of the Guards are very extensive and their regulation pertains to their chaplain who consults the Holy Father in this regard. The care of their other privileges appertains to their commander.

B. The Papal Gendarmes

The corps of Gendarmes of the Apostolic Palaces consists of Italians, who must measure at least five feet nine inches, have completed an entirely unobjectionable period of service in the Italian army, and have secured good certificates of character from both the secular and religious authorities. Upon them devolves the policing of the palace and the gardens, and they are also employed in the honorary service of the Anticamera. They have a barracks in the gardens and another near the quarters of the Swiss Guards. Like the Swiss Guards, they also have a music corps, which gives a concert on feasts in the Cortile di S. Damaso. The gendarmes are subject to the Prefect of the Apostolic Palaces; their commander has the court rank of honorary chamberlain and bears the official title of "Delegato per i servizi di Sicurezza e Polizia". The corps musters 62 men.

C. The Guardia d'Onore

The Palatine Guard, as it exists to-day, extends back to Pius IX. In the Regolamento of 14 December, 1850, he decreed that the two bodies of militia, the *civici scelti* and the *capotori*, should be united into one body under the new name of the Guardia Palatina d'Onore. In 1860 this guard was increased and placed on the footing of a regiment of 748 men with 2 battalions and 8 companies. Before 1870 the services of this regiment were not confined to the palace, watch-duties in the city and military operations in war being assigned them. After 1870 the regimental band of 63 men was disbanded, and the corps greatly diminished. The lieutenant-colonel in command has the rank of colonel. As distinguished from the Swiss Guards, who are appointed for the guarding of the pope's person, the Palatine Guard perform such duties in the papal service as are detailed in the directions of the majordomo and the maestro di camera. All the members of the corps are Roman citizens; they perform their few duties gratis, but receive 80 lire annually for their uniforms. During the conclave a company of the Palatine Guard is stationed in the Cortile del Maresciallo under the command of the hereditary Marshal of the Conclave, Prince Chigi.

D. The Guardia Nobile

This most distinguished corps of the papal military service has an interesting history. The mounted guard of the popes was formerly formed of the corps of *cavalleggieri* (light cavalry). By Motu Proprio of 1744 Benedict XIV gave these mounted guards a new organization, fixing their number at 90. After the disbanding of these troops during the confusion of the French Revolution,

Pius VII formed a new body-guard composed of the remainder of the *cavalleggieri* and the old *cavaliers delle lance spezzate*. A Decree of 11 May, 1801, ordered the institution of the Noble Guard (*guardie nobili di corpo*), the Spanish noble guards being taken as the model. The political revolutions under Napoleon I prevented the proper formation of the new corps, so that the reorganization effected by warrant of the Cardinal-Secretary of State, Ercole Consalvi, of 8 November, 1815, was found necessary. The petition of Count Giovanni Mastai Ferretti (afterwards Pius IX) for admission into the Guards (26 June, 1814), which was rejected on account of his weak health, is still preserved in the archives of the Noble Guard. Leo XIII amalgamated the existing two companies and in accordance with the changed conditions of the time, gave them new regulations, and declared that the corps should consist of 1 captain, 1 lieutenant, 1 sublieutenant, 8 lance-corporals, 1 lance-corporal as corps adjutant, 8 cadets, 1 cadet as adjutant, 48 guards, 1 quarter-master, 1 equerry, 1 armourer, 1 master of ordnance, and 4 trumpeters. The whole corps thus numbered 77 men. The captain ranks as a lieutenant-general of regulars, and the other grades accordingly. One-third of the simple members of the corps enjoy the rank of captain, one-third that of lieutenant, and the remaining third that of sublieutenant.

In place of the earlier cabinet couriers, the Noble Guards have the exclusive right of conveying the tidings of their elevation to the "crown cardinals" in Catholic lands, as well as to nuncios of the first class when raised to the cardinalate, and also of bringing to their residences the red hat. Conditions for reception into the corps are as follows: age, 21-25; testimonial as to good character from the parish-priest, bishop, or other ecclesiastical authorities; 60 years line of a nobility recognized in the Papal States, with the same tests as in the Order of Malta; height, at least five feet and seven inches; and perfect bodily health. The post of commander lies at the free disposal of the pope, and is always entrusted to a Roman prince. Otherwise promotion is regulated exclusively by length of service. The Noble Guard makes its appearance in public only when the pope takes part in a public function; when the pope withdraws, he is followed by the Noble Guard. During a vacancy of the Holy See, the corps stands at the service of the College of Cardinals. The Gonfaloniere, or standard-bearer, of the Holy Roman Church, with the rank of lieutenant general, has the right of wearing the uniform of the Noble Guard. (Cf. Baumgarten, "Kathol. Kirche unserer Zeit", I, 290-93.)

E. The Guardie dei Fuoco

The Vatican fire-brigade, which is organized according to the most modern methods, is employed also for other duties, since they are rarely needed on their main duty. The brigade possesses no special features.

XIV. THE VATICAN AS A BUSINESS CENTRE

The Vatican must be regarded as the administrative centre of the Catholic Church, since it is the residence of the supreme head of that Church, and from it the whole Church is governed. From here the pope issues a Decree or Motu Proprio, advises the prefects or managing cardinals of the congregations, and in all important matters his personal business activity is always clearly indicated. From this standpoint the Vatican is a business centre of the first rank. Other extensive business

transacted in the palace is less well known. Since the seizure of the Papal States by the Piedmontese makes it impossible to hold the conclave for the election of a new pope (notwithstanding the assurances of the Law of Guarantees -- see below, section XVI) outside the Vatican, this important business must be transacted there. Conclaves were held at the Vatican in 1878 and 1903. On each occasion such exact particulars of their distinctive features were given to the newspapers and other periodicals, that there is no need of giving any details here (cf. CONCLAVE, PIUS X).

The most important of the numerous bodies which have their general offices in the palace is the Secretariate of State. All the offices of this department (in so far as it deals with political and ecclesiastico-political matters) are situated on the third floor of those portions of the old Apostolic Palace which were built by Nicholas V, Callistus III, Pius II, and Julius II, and surround the Cortile del Papagallo and the Cortile del Maresciallo. They lie above the Sala dei Chiaroscuro, the Chapel of Nicholas V, and the adjoining rooms. Before 1870 the Secretariate of State had its seat in the Quirinal, but was on 20 September of that year changed provisionally to the sections of the Vatican Palace erected by Gregory XIII, Sixtus V, and Clement VIII, and situated under the Sala Concistoriale, the Sala degli Arazzi, and the Throne Room and some adjacent rooms. Meanwhile, by raising the walls and the roof, Cardinal Antonelli had a number of new apartments created, and thereby found at his disposal twenty-one rooms, in which are now found not alone the offices of the Secretariate of State, but also those (7) of the earlier independent Congregation for Extraordinary Ecclesiastical Affairs (*see* THE ROMAN CONGREGATIONS). Here are transacted all the numerous affairs which, according to the existing regulations, fall within the jurisdiction of these two congregations. When recently the Secretariate of Briefs was placed under the direction of the secretary of state, the offices of this great department were transferred to the Vatican Palace and established in the unoccupied halls of the old picture-gallery. All the bureaux of the Secretariate of State are now on the same floor. The extent of business transacted here is evidenced by the archives. In the archives for "Ordinary" affairs (the first section of the Secretariate), all the "positions" -- as the huge fascicles are called -- from the year 1860 are preserved. Every ten years the then oldest decade here preserved is removed to the secret archives. The inventories (called *rubricelle*), which are added to the collections from day to day, render it possible to discover immediately any particular document. The exceedingly difficult and tedious task of making these inventories, is persevered in only on account of their proved utility. Regarding the work and organization of the above-named, formerly independent congregations (now treated as the Second Section of the Secretariate of State) see THE ROMAN CONGREGATIONS.

A whole series of Roman Congregations hold either regularly or on special occasions their sessions in the Vatican. When not held in the council-room in the suite of the Secretariate of State, special rooms are provided for them. Every Tuesday and Friday morning the secretary of state receives the ambassadors and envoys accredited to the Holy See, so that all diplomatic affairs not transacted by correspondence are conducted in the Vatican. The secret, semipublic and public consistories are held either in the Sala Concistoriale or in the Sala Regia. Only in exceptional cases is a consistory held outside the palace -- in the Aula situated above the porch of St. Peter's. Accessible

only from the Sala Regia (except by the small staircase for servants), this enormous and lengthy hall forms no organic portion of the palace. The last of the consistories was held there on 30 November, 1911. The offices of the Secretariates of Latin Briefs and of Briefs to Princes, which form distinct departments, are also found in the palace (cf. Baumgarten, "Die kathol. Kirche unserer Zeit", I, 491-94). A place of great activity is the Secret Chancery of the Holy Father; here are discharged all affairs pertaining to the pope in so far as they do not belong to any of the special departments. Within the sphere of this department, besides the purely private affairs of the pope, are numberless petitions which were formerly referred to the now abolished Secretariate of Memorials.

The Alms, to be distributed according to certain principles, are entrusted to the Secret Almoner of the pope, who is always a titular archbishop. His offices lie near the quarters of the Swiss Guards. All donations accruing in the form of Peterspence are administered separately by the "Commissione Cardinalizia amministratrice dei Beni della Santa Sede". The offices lie in the loggie of the third story in the eastern wing of the palace. To ensure in so far as feasible the possessions of a number of small chapters from possible seizure by the Italians, the pope has directed that all titles to annuities from these should be preserved in the Vatican. For the administration of this property a "Commissione per le opere di religione" has been instituted, which pays over to the proper parties the accruing interests and assists the corporations both with advice and actively, when they are meditating some financial transaction, whether the purchase of a new title or the exchange of old titles for others. The "Commissione Cardinalizia per gli studi storici", whenever they hold their meetings, also assemble in the Vatican. In conclusion must still be mentioned the numerous offices of the palatine administration, which is naturally very extensive. This collection of heterogeneous departments for the transaction of business is inevitable, since the Holy See is compelled to concentrate everything in the Vatican as far as possible.

XV. THE TIPOGRAFIA POLIGLOTTA VATICANA

By the Bull, "Eam semper ex" of 27 April, 1587, Sixtus V established a printing-office for the printing of the official edition of the Latin Vulgate which he had undertaken (cf. Baumgarten, "Die Vulgata Sixtina von 1590 u. ihre Einführungsbulle", Münster, 1911, pp. 1-12). Since that time there has existed a *Typographia Vaticana*, in the rooms on the ground floor in the middle of the southern wing of the palace, and thus under the old reading-room of the Vatican Library. Shortly after its foundation in 1626, the Congregation of the Propaganda also established a printing-office, which, in accordance with the needs of the missions, soon developed into a *Typographia Polyglotta* (cf. Prior, "Die kathol. Kirche unserer Zeit", I, 406-07). After enjoying an epoch of international repute, this institution had in recent years fallen to a low level owing to the absence of expert management and sufficient funds. Pius X therefore resolved to unite it with the Vatican Press. This amalgamation was effected when the Vatican Press, whose printing machines were to a great extent out-of-date and whose quarters were inadequate, was thoroughly reorganized and transferred to new quarters (1910).

The old riding-school of the Noble Guard, known as the Cavallerizza, lying on the Torrione di Niccolo V, was completely reconstructed in 1909 and fitted for the reception of a great first-class printing-office. The latest and best machines were procured, the lighting splendidly regulated, and the arrangement of the offices made in the most practical way. Hither was transferred the *Typographia Vaticana* with all the valuable type of the *Polyglotta* of the Propaganda, and given the new name of "*Tipografia Poliglotta Vaticana*". At the same time there was inaugurated an improvement of methods, which guaranteed substantial savings and greater capacity as compared with former arrangements. The general department of the new printing-offices was established in the high basement and ground-floor; the secret department on the first floor of the new building. The staffs of the two departments are completely separate, both departments have different entrances, which are closed during working hours. The printing-office serves in the first place for the various official purposes of the Curia. Then, according to its capacity, it undertakes printing commissions entrusted to it by outsiders. Thus, for example, a portion of the monumental work of the *Görresgesellschaft* on the Council of Trent was printed here. The "*Acta Apostolicæ Sedis*", the circulation of which amounts almost to 10,000 copies, the "*Gerarchia Cattolica*", the new choral editions, and similar works are the best known of the official productions of the Vatican Press.

XVI. THE LEGAL POSITION OF THE VATICAN

In the Law of Guarantees of the Italian State, which came into force on 13 May 1871, it was explicitly declared that all residences of the pope on Italian soil should enjoy immunity and should be extraterritorial. It follows that the Vatican Palace must be immune and extraterritorial in the eyes of the Italian authorities. Consequently, all action of the Italian authorities must stop at the gates of the Vatican; the inhabitants of the palace cannot be taxed, subpoenaed, or summoned to defend themselves. All consignments directed expressly to the administration of the palace are duty-free, and all letters addressed to the pope from Italy require no stamps. The official telegrams of the Vatican authorities are sent gratis to all parts of the world. These and other exceptions from the ordinary laws of Italy are the consequences of the Law of Guarantees, in so far as they are not expressly mentioned therein. The Radicals and the Freemasons have already frequently demanded the abrogation of the Law of Guarantees, urging that it is a purely Italian law, and may therefore be abrogated by the same agents as made it. This statement is false. The Vatican is extraterritorial, not according to Italian, but according to international law, as is clearly shown in the negotiations preceding its adoption. Both the Lower Chamber and the Senate voted on the law with the clear intention of bringing it to pass through international law that the Catholics of the whole world should to a certain extent be set at ease as to the position of their supreme head. The Italian legislative agents freely assumed obligations towards the Powers and all Catholics, as was an absolute necessity of the politics of the day. These obligations can under no circumstances be set aside at the wishes of one party. The plea that the pope did not recognize the law is entirely beside the question; his refusal was foreseen by the legislators, and notwithstanding it, as the premier then declared, Italy as under an obligation to pass the law. It thus follows incontestably that it is not in the power of

the Italian legislative agents to alter in any way the present legal position of the Vatican Palace. The pope is, however, personally indifferent as to whether the Italian Government may in the future perpetrate further injustices in addition to those of the past. One who has had to endure so much, will not remain without consolation should another cross be added to those he already bears.

There is, however, no obstacle to the cultivation of certain relations between the Vatican and Italian authorities, such indeed being rendered indispensable by the social intercourse of the present day. For example, since the pope refuses to exercise *de facto* the right of punishment theoretically vested in him, malefactors (should any crime be committed) are turned over to the Italian authorities for the thorough investigation of their cases. Warnings on various points are sent from the Italian to the Vatican authorities, so that the latter may be on their guard. Communications of a confidential nature may be exchanged, but in such a manner that neither of the parties enters into any obligation nor prejudices its position; when necessary it is effected through recognized channels unofficially. When the pope attends a solemnity in St. Peter's, the basilica is then and then only regarded as belonging to the Vatican; on other occasions it is regarded as a *monumento nazionale*. By tacit agreement the whole policing during these services lies in the hands of the Vatican authorities. But there are also a great number of Italian detectives in civilian dress, who, assisted by the Vatican authorities, bar objectionable persons from the edifice and quietly remove those who by any means may have obtained entrance. The ambulance stations in St. Peter's, rendered necessary by the assemblage of from thirty to forty thousand persons, are established by the sanitary board of the Vatican.

The above information makes sufficiently clear both the theoretical juristic and the practical position of the relations between the Vatican and the Italian authorities. In the article LAW OF GUARANTEES will be found a more explicit statement of the relations between the Holy See and the Italian Government. Pius IX at the time of the violent occupation in 1870 by the troops of Victor Emmanuel refused to recognize the right of the Italian Government, and his successors, Leo XIII and Pius X, constantly maintained the same attitude. Both pontiffs have, on various occasions, declared themselves as unalterably opposed to the recognition of the claim of the Italian Government to temporal sovereignty in Rome.

In addition to works given at the end of certain sections, an abundance of literature on the Vatican Palace will be found in comprehensive works on the history of the popes, such as those by RANKE, PASTOR, VON REUMONT, GREGOROVIVUS; treatises on art by CROWE AND CAVALCASELLE, VERMIGLIOLI, SCHMARSOW, VASARI; chronicles, by BURKHARD and INFESSURA; *Annales ecclesiastici* of BARONIUS, RINALDUS, and their continuators; *Bullarium Romanum* and other collections of documents; and BLANI, *Bibliographie italico-française, ou Catalogue méthodique de tous les imprimés en langue française sur l'Italie ancienne et moderne* (1475-1835) (2 vols., Paris, 1886-87). Numerous guides for travellers and pilgrims contain a great quantity of more or less reliable information. Among the best comprehensive and accurate works may be mentioned: CHATTARD, *Nuova descrizione del Vaticano e della Sacrosanta Basilica di San Pietro* (Rome, 1762-67); TAJA, *Descrizione del Palazzo Apostolico*

Vaticano (Rome, 1750); PISTOLESI, *Il Vaticano descritto ed illustrato* (8 vols., Rome, 1819-38), with numerous plates and illustrations; DONOVAN, *Rome Ancient and Modern and Its Environs* (Rome, 1844).

PAUL MARIA BAUMGARTEN

The Vatican as a Scientific Institute

The Vatican Palace, as a Scientific Institute

Regarded from the point of view of scientific productivity, the Vatican is the busiest scientific workshop in Rome. Scientific materials of the highest order and in astonishing abundance are stored up in the palace, access to them is easily obtained, and the conditions for work are most favourable. Apart from the most modern scientific theories, for which of course the Vatican treasures offer no materials, information on all branches of human knowledge may be found there. The sources which the Vatican affords for the history of the sciences have heretofore suffered from a great, and to some extent absolute, neglect. This remark applies with special force to philosophy, theology, history, literature, philology in all its branches, jurisprudence, geography, ethnology, and art, for all of which categories the most important materials are to be found here. (Concerning the manner of handling these sources, see INSTITUTES, ROMAN HISTORICAL.) Despite the depressed financial position of the Curia, the pope annually increases his appropriations for the cultivation of science within the walls of the Vatican; this offers clear testimony as to the attitude of the Church towards scientific pursuits. Over this research she exercises only remote supervision; the investigator is at perfect liberty to pursue his studies, all facilities and guidance being given him. One need only recall the names of Bethmann, Munch, Mommsen, Duchesne, Kehr, Lämmer, Sickel, Pastor, and dozens of others, turn to their works, and learn their views, to be convinced of the scientific liberality of the Vatican; (Cf; Walsh, "The Popes and Science. The History of the Papal Relations to Science during the Middle Ages and Down to our Time", New York, 1911.)

A. THE VATICAN ARCHIVES

(1) The Contents of the Archives

It was only natural that the Church from the first centuries of her existence should devote great care to the collection of all important documents and to preserving them in the manner then customary. There is very little information to be found concerning the manner and extent of these archival collections, since the documentary treasures of early Christianity have been lost. Extensive remains of documents antedating the thirteenth century no longer exist, and of the papal registers of the preceding period we retain only scanty, though valuable, remnants [cf. the interesting and comprehensive work of Wilhelm Peitz, "Das Original-register Gregors VII im Vatikanischen Archiv (Reg. Vat. 2) nebst Beiträgen zur Kenntnis der Original-register Innocenz' III. und Honorius' III. (Reg. Vat. 4-11)", Vienna, 1911 (Sitzungsberichte)].

The existence of the Vatican secret archives really began with Innocent III (1198), so that it possesses the documents of seven centuries. The abundance of the materials requires, in view of

the prime importance of the institutions, a special, though quite summary treatment. A fairly reliable estimate of the arranged documents -- an appraisal of their value can be only provisionally attempted as yet -- has established the fact that there are in round numbers 60,000 volumes, cassettes, and bundles. In the cassettes are frequently many dozens of separate documents; in the bundles of Acts from 100 to 200 letters with their enclosures are occasionally found; while the huge folio volumes of the registers of the fourteenth century contain as many as 2000 documents and even more. It is thus impossible to furnish even an approximately accurate estimate of the number of letters, reports, documents, protocols, minutes, etc. in every stage of preparation, which are contained in the secret archives. Were there not every guidance to this vast collection of valuable materials scholars would find their task of research almost impossible. However, in the working-room of the assistant archivist is a whole library of Indices (681 in number), which have been compiled during the last 300 years for the convenience of the administration and, in individual cases, for the use of scholars. In 1901 a guide to this labyrinth of Indexes was issued under the title, "Inventarium indicum in secretiori Archivo Vaticano unica serie existentium". Gisbert Brom (Guide aux Archives du Vatican, 2nd ed., revised and augmented, Rome, 1911) also gives excellent notes on the contents of the various divisions of the Indices. Besides many others, Johannes de Pretis (1712-27), his brother Petrus Donninus de Pretis (1727-40), and Josephus Garampi (1749-72) did especially important work on the Indices. Garampi and his assistants wrote out 1,500,000 labels, which (pasted into 124 huge folio volumes) form an inexhaustible mine. Felix Contelori (1626-44), in addition to work on the Indices, arranged and copied the most imperilled documents of the archives. By the recent publication of his "Manuductio ad Vaticani Archivi Regesta", Gregorio Palmieri, O.S.B., has supplied a very useful help to the study of the "Regesta". The Indices are alphabetical or chronological repertoires, which must be regarded exclusively as pure administrative helps, not as aids to scholarly investigation (see Brom, *op. cit.*, 7-14).

Passing over the Guardaroba and Biblioteca Segreta, "which have none other than a nominal existence", and the still uninvestigated portions of the Archivi dei Memoriali, del Buon Governo, and dell' Uditore SSmo., the following are the chief groups of the archival materials:

- (a) Archivio Segreto;
- (b) Archive of Avignon;
- (c) Archive of the Apostolic Chamber;
- (d) Archive of Sant' Angelo;
- (e) Archive of the Dataria;
- (f) Consistorial Archive;
- (g) Archive of the Secretariate of State;
- (h) Various Collections.

(a) *Archivio Segreto*

The whole archive is called Archivio Segreto, from the name of its oldest portion, which, however, retains its specific name. It contains seventy-four *armari*, or presses, in which are:

- the volumes of the Vatican Registers (Armar. 1-28);
- the "Diversa Cameralia" (29-30) and "Collectoria cameræ apostolicæ" (57);
- the Registers of Transcripts (31-37, 46-49, 52-54, 59-61);
- the Register of Briefs (38-45);
- the Indices (50-51, 56, 58);
- the "Tridentina et Diversa Germaniæ" (62-64);
- the "Introitus et Exitus Cameræ" (65-74);
- the "Instrumenta Miscellanea".

(b) Archive of Avignon

The archival materials, collected by the Avignon obedience during the Avignon exile (1305-76) and the time of the Schism, together with the administrative acts of the County of Venaissin, form the Archive of Avignon, which was gradually (the last portion in 1783) transferred to Rome. The series of the "Introitus et Exitus" found in this section, of the "Obligaciones et Solutiones" and of the "Collectoriæ Cameræ", together with the "Diversa Cameralia" and the "Introitus et Exitus" of the Archivo Segreto form to-day the Archive of the Apostolic Chamber.

(c) Archive of the Apostolic Chamber

The four chief portions of this archive have just been mentioned. These are by no means four complete series of volumes; on the contrary, very important and extensive portions of this archive are bound up with the volumes of the Avignon Registers, while other documents must be sought in other places. Consequently, the making of an exact inventory of all cameral acts is urgently called for. In the section "Obligaciones et Solutiones" some of the volumes belong to the Apostolic Chamber and some to the Chamber of the College of Cardinals.

(d) Archive of Sant'Angelo

Sixtus IV, Leo X, and Clement VIII are the founders of this archive, since it was their opinion that the most important documents and titles of possession of the Roman Curia would be best preserved in Sant'Angelo, as the strongest bulwark of Rome. In 1798 the contents of the archive were transferred to the Vatican, where they received special quarters under the name of "Archivio di Castello", and are still kept separate. In the *capsul* and *fascēs* of this archive a great variety of things are treated.

(e) Archive of the Dataria

The three great sections of this archive contain:

- (i) the Register of Petitions (Register Supplicationum), which begin with 1342;
- (ii) the Lateran Register of Bulls, which contains the Bulls sent out by the Dataria between 1389 and 1823;
- (iii) the Briefs the Datania, a name which is not quite exact. These Briefs, as distinguished from those mentioned above (a, 4), were issued in answer to petitions.

(f) Consistorial Archive

Such of the archival materials as are found in the secret archives (the other portions are in the archives of the Consistorial Congregation in the library) consist of the "Acta Camerarii" (1489-1600),

"Acta Cancellarii" (1517-64), "Acta Miscellanea" (1409-1692), and "Acta Consistorialia" (1592-1668; 1746-49).

(g) *Archive of the Secretariate of State*

Despite the great gaps to be found in this section, this archive possesses the greatest importance for the political and ecclesiastico-civil history of modern times. It includes the following subdivisions:

(i) Nunciatures and Legations -- Germania (1515-1809), -- Francia (1517-1809), -- Spagna (1563-1796), -- Polonia (1567-1783), -- Portogallo (1535-1809), -- Inghilterra (1565-1689; 1702-04), -- Genova (1572-84; 1593-1604), -- Venezia (1532-34; 1561, 1562, 1566-1798), -- Napoli (1570-1809), -- Colonia (1575-1799), -- Monaco di Baviera (1786-1808), -- Paci, that is negotiations for various treaties (1628-1715), -- Svizzera (1532-1803), -- Firenze (1572-1809), -- Savoia (1586-1796), -- Avignone (1564-1789), -- Fiandra (1553-1796; to which section also belong five bundles of letters embracing the years 1800-09 and 1814 and 1815), -- Malta (1572-1792), -- Bologna (1553-1791), -- Ferrara (1597-1740), -- Romagna (1597-1740), -- Urbino (1664-1740), -- Diversi, that is copies of letters and other things, all of which refer to the sixteenth and seventeenth centuries. From this list one may see both the richness and the great importance of this division.

(ii) Letters of Cardinals. -- This contains the correspondence between the Secretariate of State and the various cardinals for the period from 1523 to 1803. Here are thus contained both the minutes of the letters dispatched and the originals of letters received from the cardinals. There are, besides, in this collection numerous letters from princes, legates, bishops, etc.

(iii) Letters of bishops and prelates. -- The letters of the bishops and prelates contain not only ecclesiastico-political but also purely political information, so that they possess a high value for profane history. The original letters and the minutes of the answers dispatched extend from 1515 to 1797.

(iv) Letters of princes and titled persons. -- Many distinguished personages (including bishops and prelates) are found among the writers of this collection of letters, which contains a large series of volumes with answers. The division extends over the years 1513-1815, and has been as yet little availed of.

(v) Letters of private individuals. -- Most of the documents of this collection emante from the pens of those who, while in communication with the Curia, do not belong to the above-named categories. To a great extent the writers are private people. There are, however, some letters from bishops, prelates, and nobles, which should have been included elsewhere. The letters extend from 1519 to 1803.

(vi) Letters of military men. -- Here are collected all the documents connected with the history of the Curial wars between 1572 and 1713.

(vii) *Varia Miscellanea* (not to be confounded with other Vatican *Miscellanea*). -- Besides numerous volumes containing transcripts of Acts of the sixteenth and seventeenth centuries, there are here collected all those documents which could not well be included in the other divisions: instructions, travelling experiences, concordats, tractates of all kinds, diaries of conclaves, etc. The whole collection is of great importance.

(h) Various Collections

The "Varia Miscellanea" have absorbed the Biblioteca Ceva as well as the chief portion of the Biblioteca Ciampini. The Biblioteca Spada, in so far as it is yet in the archives, was embodied in the nunciature of France. The following, however, remain independent collections:

- Biblioteca Pio, manuscripts of Cardinal Pio Carlo di Savoia, purchased by Benedict XIV in 1753. They should consist of 428 volumes, but many are missing.
- Biblioteca Carpegna the library of manuscripts of Cardinal Gaspare Carpegna, which originally consisted of 229 volumes. The scientific interest of these volumes is not very great.
- Biblioteca Bolognetti, consisting mainly of copies of documents of the sixteenth and seventeenth centuries. This belonged to the Bolognetti-Cenci family, which assigned it to the Vatican archives in 1810.
- Biblioteca Ronconi, a small collection of twenty manuscripts, which belonged to a former official of the archives.
- Papers of Cardinal Garampi, the 251 bundles of Acts belonging to the effects of Cardinal Garampi and containing partly originals and partly copies of documents pertaining to his diplomatic activity in Poland and Germany.
- Manuscripts of G. B. Gonfalonieri, eighty-nine volumes which belonged to the former custodians of the Archive of Sant'Angelo, and, while relating mainly to Spain and Portugal, have also some importance for the nunciature of Cologne.
- "Registro Dandini", the diplomatic correspondence of Cardinal Dandini for the years 1541-59 in six volumes.
- (viii) "De caritate S. Sedis Apostolicæ erga Gallos", forty-two volumes and eighteen bundles detailing the help given by the Holy See to the French emigrants during the Revolution.
- Buon Governo, a huge archive of the old Congregation del Buon Governo, which was entrusted with the economic administration of the Papal States from 1592. The archive was transferred to the Vatican in 1870, fills sixteen rooms, and has a special custodian.
- "Avvisi" a series of 124 volumes, extending over the period 1605-1707 and composed of the manuscript journals and newspapers of the seventeenth century.
- Farnesiane papers, twenty bundles of documents which disappeared in some unknown manner from the Neapolitan Carte Farnesiane, and were purchased and placed in this archive by Leo XIII in 1890. They do not contain any politically important papers.
- Borghese Archive. -- The huge Borghese Archive may be termed "an integral portion of the Segretaria di Stato during the pontificates of Clement VIII, Leo XI, and Paul V". Leo XIII acquired this great archive in 1892. With the aid of the inventories of the Vatican Archives and the Vatican Library some guidance as to the 2000 volumes may be obtained.
- "Bolle e Bandi". -- In addition to the two other series of this kind which stand in the "Varia Miscellanea" there is this third, which extends from 1525 to 1854. The printing on the title pages possesses a high value for the history of culture.
- "Varia Diplomata" includes all the archives of orders and monasteries to be found in the Secret Archives. Some are of exceptional interest and prime importance. As many of the archives are not yet arranged, they are not yet generally accessible.

(2) Statistics

The estimate of 60,000 volumes, cassettes, and bundles of Acts, contained in the archives, does not include such huge collections as that of the Buon Governo and other smaller collections. The following list, giving the number of volumes arranged according to the collections, conveys an idea of the extent of the archives:

- Volumes of Vatican Registers. 2,048
- Transcripts 968
- Briefs. 7,654
- Tridentinum 154
- Diversa Germaniæ. 34
- Volumes of Avignon Registers. 394
- Introitus et Exitus Cameræ. 608
- Obligaciones et Solutiones. 100
- Collectoriæ Cameræ. 509
- Diversa Cameralia 253
- Supplicationes. 7,011
- Lateran Volumes of Registers. 2,161
- Dataria Briefs. 850
- Acta Consistorialia 114
- Nunciatures:
 - Germania 709
 - Francia. 615
 - Spagna 439
 - Polonia. 382
 - Portogallo 204
 - Inghilterra. 18
 - Genova 10
 - Venezia. 360
 - Napoli 411
 - Colonia. 297
 - Monaco di Baviera. 49
 - Paci 60
 - Svizzera 322
 - Firenze. 185
 - Savoia 281
 - Avignone 344
 - Fiandra. 194
 - Malta. 165
 - Bologna. 317
 - Ferrara. 104
 - Romagna. 76
 - Urbino 42
- Letters of cardinals. 189
- Letters of bishops and prelates 380

- Letters of princes and titled persons 277
- Letters of private individuals. 315
- Letters of military men 79
- Varia Miscellanea 2,051
- Biblioteca Pio. 300
- Biblioteca Carpegna 200
- Biblioteca Bolognetti 340
- Biblioteca Ronconi. 20
- Garampi papers. 251
- Gonfalonieri manuscripts. 89
- Registro Dandini. 6
- De caritate S. Sedis erga Gallos. 60
- Avvisi. 124
- Farnesiane papers 20
- Borghese archive. 2,000
- Bolle e Bandi 80

The above-named collections thus include in the aggregate 35,000 volumes in round numbers. Of loose parchment and paper documents, letters, and similar papers there are 120,000 -- a fairly trustworthy estimate. Consequently, although the collections already accessible by no means reach the expectations which have been entertained regarding the extent of the archives, it is yet evident that the supply of materials is extraordinarily great. A great proportion of the volumes are in the largest folio form and of unusual thickness. The contents of the volumes are of great importance, inasmuch as the questions treated are of vast interest. All these considerations render the Secret Archives of the Curia by far the most important archives in the world. Other collections not mentioned by Brom have been acquired in recent times. From the Santini effects 200 volumes of Acts of the Datania were purchased in 1909. On 13 April, 1910, a number of parchment documents were acquired from a family in Terni. The historically famous scheme of Curial reform from the pen of Cardinal Sala (under Pius VII) came into the possession of the archives on 18 June, 1910. On 15 December, 1910, the Holy Father presented three volumes which are registered under Malta 124 A, 124 B, and Arm. II, vol. 178. On the same date a certain Santarelli donated five volumes treating of the College of Writers of Briefs, and on 25 February, 1911, all the papers of Cardinal Mattei passed into the possession of the archives. In conclusion, it must be remarked that the Registers of Briefs, mentioned above (a, iv), have not passed definitively into the possession of the archives, but have only been deposited there; while the Indices, without which the use of the former is scarcely possible, have been again withdrawn. Those engaged in research must, therefore, apply to the archivist of Briefs, one of the officials in the Secretariate of State.

(3) The Administration of the Archives

The scientific management of the archives is entrusted to a cardinal with the title of archivist of the Vatican Secret Archives. All economical questions, such as the salaries of the officials and the expenditure necessary from time to time, are referred to the Prefecture of the Apostolic Palaces. The archives have, therefore, no regular budget for expenditure. The practical administration is

entrusted to the assistant archivist, who issues all instructions to the other officials. He is assisted by a secretary, who, besides fulfilling other duties, supplies information concerning research work and other scientific *qu sita*. Five writers (*scriptores*) are engaged on the making of inventories and the superintendence of all transcripts to be dispatched to scholars dwelling outside Rome. To these officials is also entrusted the administration of certain important sections of the archives. The work-room is placed under the charge of two custodians (*custodes*), of whom one is the director of the Scuola Paleografica of the archives. Of the five *bidelli*, or servants, one is *capo sala*, that is, it is his special task to register the number of the manuscript required, to deliver it to the student, and to receive it back at the conclusion of the period of study. For the repair and rebinding of injured volumes and the restoration of documents two *ristauratori* have been appointed. A special clerk is employed exclusively with the pasting on of the number labels and with the pagination of all the codices which previously were without page or folio numbers. Finally, there is a porter who watches over the entrance door in the Torre dei Quattro Venti.

Besides the work-room, the office of the assistant archivist, and the old work-room, fifty rooms (including a large number of very extensive halls) are under the charge of the administration. The sixty places (usually all occupied) in the work-room can be increased to eighty to accommodate an unusually large body of investigators. In exceptional cases, women are permitted to study in the archives. The working year extends from 1 October to 27 June. During the working year 1909-10, 6018 application forms for volumes were received; during the year 1910-11 only 4800. The difference is due to the fact that since October, 1910, it has been allowed to apply for two or even three successive manuscripts on the same form -- a privilege which was not previously allowed. The last inventory was made in July, 1910.

(4) History

Concerning the earliest attempts to create archives in the Vatican, the reader is referred to the work of the present writer on the Camera Collegii Cardinalium (1898), which treats also of the creation of an archive of the Sacred College. In the years 1611-13 Paul V had the present archive buildings constructed by the cardinal librarian, Bartolomeo Cesi; these are situated at the western narrow side of the Salone Sistino, the hall of state built by Sixtus for the library. The same pontiff devoted large sums to the perfecting and repair of the materials. This Secret Archive of the Vatican was from the very beginning regarded as an administrative institution for the facilitation of Curial affairs. Consequently, it was so planned as to answer the needs it was intended to fill. When subsequently, during the heated literary warfare against the Protestant innovations, it became necessary to make the collected treasures accessible to the great historians of that age, it lost nothing of its original character. In his work, "Costituzione deli' archivio Vaticano e suo primo indice sotto il Pontificato di Paolo V, manoscritto inedito di Michele Lonigo" (Rome, 1887), Gasparolo gives an accurate description of the collections deposited in the archives at its foundation. Since that time the following important collections have been added: the Archive of the Secretary of State in 1660; Archive of Avignon, of which the last portion was added in 1783; Archive of Sant' Angelo, 1798; Archive of the Congregazione del Buon Governo, 1870; Archive of the Dataria, 1892; Borghese

Archive, 1893; Archive of Memorials 1905; Archive "dell' Uditore Santissimo", 1906; Consistorial Archive, 1907; and the Archive of Briefs, 1909 (cf. Marini, "Memorie storiche degli Archivi della Santa Sede", 1825). (Concerning the opening of the secret archives see INSTITUTES, ROMAN HISTORICAL.)

By Motu Proprio of 1 May, 1894 (Fin dal principio), Leo XIII founded in the Vatican Archives an institute for palæography and diplomatics, his Decree being published on 15 May in a letter to Cardinal Hergenrother, the learned archivist of the Church ("Leonis papæ XIII allocutiones, epistolæ, etc.", Bruges, 1887, 76). In the "Studi e documenti di storia e di diritto", VI (1885), 106-08, the text of the "Ordinamenti per la Scuola di paleografia presso l'archivio Pontificio Vaticano" may be found. The first professor was Isidoro Carini, whose successor is (1912) Angelo Melampo. Lectures are delivered thrice weekly from November to June, and students who successfully compete in the written and oral examinations receive a diploma in archival research and diplomatics (cf. Carini, "Prolusione al corso di paleografia e critica storica, inaugurato nella pontificia scuola Vaticana il 16 Marzo, 1885", Rome, 1885; "Argomenti di Paleografia e Critica Storica trattati nella Pontificia Scuola Vaticana ne' tre corsi del 1885, 1886, 1887", Rome, 1888). For the extensive works of organization, the activity of the leading archivists in the preparation of the Indices, the nature and contents of the many hundreds of Indices, the reader is referred to Brom, *op. cit.*

(5) Apart from the secret archives

There are in the Vatican Palace other archives, which may be divided into ecclesiastical, juridical, ecclesiastico-political, and purely administrative archives, according to the bodies to which they belong. Most important historically is that of the Apostolic penitentiary; the older collections, of which until recently scholars knew nothing, are kept in the Vatican. The large archive of the Sacra Rota Romana, which is of fundamental importance for juridical questions and the history of jurisprudence, is accommodated in a small annex in the Vatican Gardens, adjacent to the entrance to the museum. All the collections of the archive of the Secretariate of State antedating 1860 are included in the secret archives; later papers are preserved in a special archive on the third story of the palace, where is also the archive of the Congregation for Extraordinary Ecclesiastical Affairs. This archive admits no investigator, and questions on particular points addressed to it by scholars have failed to receive pertinent answers. As may be deduced from the already published earlier Acts of the archive of the Papal Ceremoniare, the volumes of this archive contain very interesting information. The extremely valuable archive of the Cappella Sistina, the papal choir, is deposited in the Vatican Library, though only in the character of a loan. Special archives are possessed by the administrations of the majordomo, the maestro di camera, the master of the sacred palace, the administrations of the Peterspence, the Elemosineria, the Computesteria, the Floreria, the maestro di casa, the three corps of guards, and the gendarmes. Other archives are too unimportant for mention here. There is at present some thought of gradually uniting with the secret archives the most important of the above collections and other ecclesiastical archives existing in Rome outside the Vatican.

B. THE VATICAN LIBRARY

The Vatican Library is the first among the great libraries of the world in the importance of its materials, but in the number of its manuscripts a few libraries surpass it, and in the number of printed books it is surpassed by many. This condition but accords with its historical development: the Vatican was founded as a manuscript library, has always been regarded as such, and is to-day administered as such by those in charge. The printed books which have been acquired, either through inheritance, or gift or by purchase, are intended solely to facilitate and promote the study of the manuscripts. This fact must be borne in mind to understand the attitude of the administration of the library. (Consult Barbier de Montault, "La Bibliothèqve Vaticane et ses annexes", Rome, 1867. A number of essays on the library are contained in: "Al Sommo Pontefice Leone XIII. Omaggio giubilare della Biblioteca Vaticana", Rome, 1889; "Nel Giubileo Episcopate di Leone XIII. Omaggio della Biblioteca Vaticana", Rome, 1893. The former contains the pertinent literature.)

(1) The Manuscripts

The whole fund of manuscripts may be divided into closed (historical) and open collections. The former are collections which came to the library complete, and are administered as one entity. As no additional manuscripts from the same sources can henceforth be obtained, these collections form a unit with a *numerus clausus*. The open collections are those to which are added new acquisitions made by the library (either separately or a few together), which do not form a complete collection in themselves. Separated according to the languages of the manuscripts, there are sixteen open, and thirty-six closed, divisions; the open all bear the name of "Codices Vaticani", while the closed are known according to their origin. Scientific access to these treasures is facilitated by the Indices, concerning which we shall speak below. The following details, based on information supplied by Father Ehrle, S.J., prefect of the library, are the most accurate that have ever been given of the Vatican collections. The figures for the open collections represent the state of the library on 1 December, 1911; owing to the acquisition of new manuscripts, these figures are gradually increasing, especially those for the first two categories-Latini and Græci.

•Vaticani Latini	11,150
•Vaticani Græci	2,330
•Vaticani Hebraici	599
•Vaticani Syraici	472
•Vaticani Arabici	935
•Vaticani Turcici	80
•Vaticani Persiani	83
•Vaticani Coptici	93
•Vaticani Æthiopicici	77
•Vaticani Slavi	23
•Vaticani Rumanici	1
•Vaticani Georgiani	2
•Vaticani Armeni	14
•Vaticani Indiani	39
•Vaticani Sinici	20
•Vaticani Samaritani	3

•Burghesiani.	381
•Notai d'Orange	377
•Palatini Latini.	2,017
•Palatini Græci	432
•Urbinales Latini	1,767
•Urbinales Græci	165
•Urbinales Hebraici.	128
•Reginæ Latini.	2,103
•Reginæ Græci	190
•Reginæ Pii II Græci.	55
•Ottoboniani Latini	3,394
•Ottoboniani Græci	472
•Capponiani	288
•Barberini Latini	10,000
•Barberini Græci	590
•Barberini Orientales.	160
•Borgiani Latini.	760
•Borgiani Græci	26
•Borgiani Syriaci	169
•Borgiani Coptici	132
•Borgiani Hebraici.	18
•Borgiani Arabici	276
•Borgiani Persiani.	21
•Borgiani Turcici	77
•Borgiani Armeni.	90
•Borgiani Indiani	31
•Borgiani Tonsinici	22
•Borgiani Sinici.	521
•Borgiani Illyrici.	22
•Borgiani Æthiopici	33
•Borgiani Georgiani	16
•Borgiani Hibernici	2
•Borgiani Islandici	1
•Borgiani Slavi	1

The total of the collections reaches 40,658 manuscripts, to which must be added between 8000 and 10,000 manuscripts in the two Barberini archives, and still awaiting detailed examination and arrangement. There are, therefore in the Vatican Library some 50,000 manuscripts; the first sixteen sections are the above-mentioned open collections; the others are all closed. The collection of Manuscripta Zeladiana was given to Toledo, while the printed books of the same collection remained in the Vatican Library. The Codices Vaticani in various languages are traceable to the old collections of the library of the fifteenth century or to the growth of the library; to this collection new departments have been gradually added.

(2) Printed Books

No exact calculation of the number of printed books has been yet undertaken. Estimates conscientiously made yield the following figures:

- Bibliotheca Leonina (consultation library) . . . 60-70,000
- Bibliotheca Barberini (closed department) . . . 25-30,000
- Bibliotheca Palatina (closed department) . . . 10-12,000
- Bibliotheca Zeladiana (closed department) . . . 4-5,000
- Bibliotheca Mai (closed department) 25-30,000
- Prima Raccolta (closed department) 10-11,000
- Raccolta Generale 200,000

The total of printed books is thus in round numbers 350,000, which may be said to constitute a very considerable library. The Consultation Library is, as its name suggests, composed of works which immediately promote or facilitate the study of the manuscripts. The Prima Raccolta is the collection of books which was formed in the Vatican between 1620 and 1630; in the Raccolta Generale are gathered all the works (arranged according to the various branches of knowledge) which have been secured by the Vatican at any period or will hereafter be secured, provided that they do not specially pertain to the Consultation Library. The name of the other collections are quickly explained: Barberini, because it emanated from the princely house of that name; Palatina, because it came to Rome from the Heidelberg library of the Elector Palatine (Palatinus elector); Zeladiana, because it belonged to the effects of Cardinal Zelada; Mai, part of the effects of Cardinal Mai. Among all these books are found a larger percentage of rarities than is usual in comprehensive libraries.

(3) The Accommodation of the Manuscripts and Books

The manuscripts are accommodated in their old, low-sized, painted wooden cases, which are distributed along the walls of the halls of the library. When removed from the cases the greatest care is necessary lest anything should be lost. As there are various ways in which damage might be done to the manuscripts, the library administration has prevailed on the Prefect of the Apostolic Palaces to establish eight fire-proof magazines into which they may be transferred. For these magazines have been utilized a portion of the old reading room, the room of the cardinal librarian, and two other rooms. This alteration was made possible only by the removal of the Vatican Printing Office into new quarters. As the halls of the printing office lay below the old reading-room, and right beside the rooms in which the Bibliotheca Barberini has been accommodated, these halls were easily annexed to the library. The new reading-room was then established on the ground floor, and fitted with a water-power elevator for the transferring of manuscripts from the magazines situated immediately overhead; this afforded greater security and convenience, the manuscripts being more promptly procured. All these innovations were of great importance for the promotion of studies. The reading-room is convenient to the Consultation Library, and contains almost twice as many desks as the old reading-room.

All the work in the new magazines was completed at the beginning of 1912, and the transference of the manuscripts begun. The two Barberini Archives now stand on the third floor of the new magazines. In consequence of this reconstruction work, the printed books will be arranged as

follows: Among the smaller rooms of the former printing office is a cabinet for the Prefect of the Library, a hall for the Bibliotheca Mai and other rooms in which the Heidelberg books (Palatini) and portions of the Raccolta Generale are to be accommodated. Two halls will be devoted to the Biblioteca Barberini, a book collection of very high value. In the hall of the Consultation Library with its two antechambers will be placed, in addition to the Consultation Library proper, the Autori Classici and the two departments of biography and history (the Collezioni Generali). To the old presses for the manuscripts in the state-halls of the library, now vacated, will be transferred the collections on canon and civil law, the works on art and its history, and the remainder of the Raccolta Generale, in so far as it is not accommodated in the old printing offices.

(4) Inventories and Catalogues

Inventories and Catalogues which are essential for the guidance of the reader, are available for both manuscripts and printed books. They are either in manuscript or printed. Those for the manuscripts consist of 170 volumes of manuscript and 17 volumes of printed inventories. The preparation of the Latin inventories was begun in 1594. All the inventories are in the reading-room; catalogues for the printed books are to be found partly in the reading-room, and partly in the Consultation Library.

The preparation of manuscript catalogues for special divisions of the manuscripts was begun at an early date. All of these are still retained in their manuscript form; their printing was commenced as early as the seventeenth century. For example, Anastasius Kirscher published a catalogue of the Coptica Vaticana in his "Prodromo Coptico" (1636); in the years 1675-93 appeared a detailed catalogue of the Hebraica by Giulio Bartolucci, in 1747 the catalogue of the Capponiana, and in 1821 that of the Cicognara collection. Apart from these and similar publications, there are in the reading-room fifteen volumes of printed inventories of manuscripts: (1) Mai, "Catalogus codicum Bibliothecæ Vaticanæ (Orientalia)" (1831). (2-4) Assemani S.E. and J.S., "Bibliothecæ apostolicæ Vaticanæ Codicum Manuscriptorum Catalogus": I, "Codices Ebraici et Samaritani" (1756); II, III, "Codices chaldaici sive syriaci" (1758, 1759). (5) Stevenson (sen.), "Codices Palatini græci" (1885). (Cf. Syllburgius, "Catalogus librorum manuscriptorum græcorum in Bibliotheca Palatina Electorali" in "Monumenta pietatis et literaria virorum . . . illustrium selecta", Frankfort-on-the-Main, 1702.) "Codices græci Reginæ Sueciæ et Pii II" (1888). (6) Feron and Battaglini, "Codices Ottoboniani græci" (1893). (7) Stornajolo, "Codices Urbinates græci" (1895). (8) Stevenson (jun.), "Codices Palatini latini", I (1886). (9) Salvo-Cozzo, "Codici Capponiani" (1897). (10) Vatasso and Franchi de' Cavalieri, "Codices Vaticani latini", I (codd. 1-678), 1902. (11-12) Stornajolo, "Codices Urbinates latini", I (1902), codd. 1-500; II (1912), 500-1000. (13-15) Marucchi, "Monumenta papyracea ægyptia" (1891). "Monumenta papyracea latina" (1895). "Il grande papiro egicio della Biblioteca Vaticana" (1889).

There are in addition six special catalogues, not compiled by the officials of the library: (1) Poncelet "Catalogus Codicum hagiographicorum latinorum" (1910). (2) "Hagiographi Bollandiani et Franchi de' Cavalieri, Pius. Catalogus codicum hagiographicorum græcorum" (1899). (3) Ehreneweger, "Libri liturgici manuscripti" (1897). (4) Forcella, "Catalogo dei manoscritti riguardanti

la storia di Roma, che si conservano nella Biblioteca Vaticana" (4 vols., Rome, 1879-85). (5) Bertini, "Codici Vaticani riguardanti la Storia Nobiliare" (Rome, 1906). (6) Crispo-Moncada, "I Codici Arabi, nuovo fondo della Biblioteca Vaticana" (Palermo, 1900).

The volumes by Stevenson on the Codices Palatini have been revised by de Rossi, who prefixed his renowned treatise: "De Origine, Historia, Indicibus Scrinii et Bibliothecæ Sedis Apostolicæ Commentatio", pp. cxxxii (cf. also de Rossi, "La Biblioteca della Santa Sede Apostolica ed i Cataloghi dei suoi manoscritti", 1884). Four other inventories on the Codices latini, Urbinates græci, and Vaticani græci are in the press. A further volume on the Vaticani latini and one on the Borgiani arabici are also in preparation. For the books of the consultation library there is an exhaustive card catalogue according to the system of Staderini. For the collections of the Prima Raccolta there are seven folio volumes of Indices, and for these two volumes of inventories. A manuscript catalogue of the *incunabula* ("Editiones Sæculi XV Bibliothecæ Vaticanæ", in large folio), in three volumes with appendix, also stands in the consultation library. Of the exceedingly valuable Miscellanea bequeathed by de Rossi there is a bulky manuscript inventory of 1898 and an alphabetical index. The Biblioteca Barberini has its old excellent catalogue in imperial folio, ten of the volumes being accessible to the public. For the other departments there are also catalogues, e.g. twenty volumes for the Raccolta Generale, a catalogue of the Zeladiana in Cod. Vat. Lat. 9198, etc., which upon request is placed at the disposal of scholars in exceptional cases. Among the printed catalogues of books is that of Enrico Stevenson, Jun., "Inventario dei libri stampati Palatino-Vaticani" (1886-91). The authorities of the Vatican Library are preparing (1912) a "Catalogo dei cataloghi mss. della Biblioteca Vaticana", which will be of high scientific and practical interest. It will show that as early as the sixteenth century the Vatican Library possessed catalogues of such perfection that we admire them even to-day.

All readers who wish to use only printed literature are carefully excluded from the library. In view of the exclusively manuscript character of the Vatican as a scientific institution, this is readily comprehensible. The accommodations of the Vatican Library are entirely inadequate to meet the demands of the general public in search of printed books. Should the Vatican Library thus lose its unique position, the other large libraries of Rome instituted for the consultation of printed books, would suffer. Furthermore, the present conditions have been sanctioned by the past, and have been fully tested by experience. (Consult Ehrle, "Zur Gesch. der Katalogisierung der Vaticana" in "Historisches Jahrbuch der Görres-Gesellschaft", 1890, 718-27.)

(5) Manuscript-repairing and Bookbinding Department

The Vatican has always possessed a bookbinding department, and also a department for renovating manuscripts as well as the skill of the period allowed. In the last decades special chemico-scientific attention has been devoted to the preservation and freshening of faded parchment manuscripts as well as to the preservation of paper manuscripts whose existence is wholly or partially threatened by a corroding ink. One of the most successful library boards in these investigations is that of the Vatican, which has since 1896 extensively employed every discovery that contributed to the preservation of its manuscript treasures. At the proposal of the prefect of the

Vaticana an international conference to consider the question of the preservation of manuscripts assembled at St. Gall in the summer of 1898, and its consultations were attended with the greatest success (cf. Posee, "Handschriften-Konservierung. nach den Verhandlungen der St. Gallener Internationalen Konferenz zur Erhaltung und Ausbesserung alter Handschriften von 1898, sowie der Dresdener Konferenz deutscher Archivare von 1899", Dresden, 1899). A series of model restorations were made in the Vatican repair-shop, not only of its own valuable manuscripts, but also those of ecclesiastical possession elsewhere. In his "Note upon the Present State of the Vercelli Gospel" in the "Second Report of the Revision of the Vulgate" (Rome, 1911, pp. 20 sqq.), Abbot Gasquet describes a particularly difficult work of this kind. Besides these works, which are performed by specially trained and careful workers, the binding of the manuscripts is also undertaken, the arms of the reigning pope and of the present cardinal librarian being placed on the binding. The coats of arms are omitted from the covers of printed books. A fire, which broke out in this shop some years ago, caused little damage, but it led to the introduction throughout the whole library of mechanical appliances against fire. In this respect the Vatican surpasses every other library.

(6) The Publications of the Vatican Library

The administration of the Vatican Library makes it its aim, since the fundamental reorganization of the whole institution by the prefect, Father Ehrle, S.J. (who resigned his place voluntarily to Father Ratti of Milan in 1912), to employ officials with a view to their own literary productions. This policy, which in a comparatively short time has produced splendid results, has made possible six great undertakings of fundamental importance for science. The first collection bears the title: "Codices e Vaticanis selecti, phototypice expressi, jussu Pii Papæ X, consilio et opera procuratorum Bibliothecæ Vaticanæ. Series major". This work deals with the most important and beautiful manuscripts of the Vatican; by phototype reproduction, these become accessible to persons unable to visit Rome. Eleven volumes of this collection have appeared: (1) "Fragmenta et Picturæ Vergilianæ codicis Vaticani 3225" (60 francs; edition exhausted); (2) "Picturæ, Ornamenta, complura scripturæ Specimina codicis Vaticani 3867, qui codex Vergilii Romanus audit" (100 francs; edition exhausted); (3) "Miniature del Pontificale Ottoboniano: codex Vat. Ottobon. 501" (25 francs); (4) "Bibliorum SS. Græcorum codex Vaticanus 1209 (codex B) Pars prima: Vetus Testamentum", I, 1-394 (230 francs); II, 395-944 (320 francs); III, 945-1234 (150 francs); "Pars altera: Novum Testamentum" (170 francs); the scientific introduction to this work will appear in 1912; (5) "Il Rotulo di Giosue, codex Vatic. Palat. græcus 431" (160 francs); (6) "L'originale del Canzoniere di F. Petrarca, codex Vatic. 3195" (100 francs); (7) "Frontonis aliorumque fragmenta, quæ codice vaticano 5750 rescripto comprehenduntur" (300 francs); (8) "Il menologio greco dell' imperatore Basilio II (976-1025), cod. Vatic. græcus 1613" (400 francs); (9) "Cassii Dionis Cocceiani Historiarum Romanorum lib. LXXIX, LXXX, quæ supersunt, cod. Vatic. græc. 1288. Præfatus est Pius Franchi de' Cavaliere" (50 francs); (10) "Le Miniature della Topografia Cristiana di Cosma Indicopleuste, cod. Vatic. græc. 699. Con introduzione di Msgr. Cosimo Stornajolo" (120 francs); (11) "I disegni di Giuliano da Sangallo: Codex Vatic. Barber. lat. 4424. Con introduzione del Prof. Dott. C. Hulsen" (400 francs). Three volumes are already in the press and to be issued during 1912: (1) "Paleo-grafia

Musicale Vaticana. Con introduzione di M. Bannister M.A."; (2) "Ciceronis Liber 'De Republica' rescriptus. Cod. Vatic. 5757"; (3) "Terentii Com diæ picturis illustratæ. Cod. Vatic. 3868".

With this *Series major* is associated as a second undertaking the *Series minor*, of which the following two volumes have appeared: (1) "Miniature delle Omilie di Giacomo Monaco (cod. Vatic. Urbin. græc. 1162) e dell' Evangelario Greco urbinato (cod. Vatic. Urbin. græc. 2). Con breve prefazione e sommaria descrizione di Msgr. Cosimo Stornajolo" (40 francs); (2) "Pagine scelte di due codici appartenenti alla Badia di S. Maria di Coupar-Angus in Scozia. Con una breve descrizione di H.M. Bannister M.A. Contributo alla storia della scrittura insulare" (5 francs). Of the third undertaking, the "Collezione Paleografica Vaticana", a single fascicle has appeared: "Le Miniature della Bibbia: Codex Vatic. Regin. græc. 1 e del Saltario: Codex Vatic. Palat. græc. 381" (55 francs). The fourth collection is called "Collezioni Archeologiche, Artistiche e Numismatiche dei Palazzi Apostolici, pubblicate per ordine di Sua Santità, a cura della Biblioteca Vaticana, dei Musei e delle Gallerie Pontificie". For this work the collaboration of the officials not alone of the library, but also of the museums and galleries, has been requisitioned. Four volumes have already appeared: (1) "Gli avori dei Musei Profano e Sacro della Biblioteca Vaticana, pubblicati per cura della medesima, con introduzione del Barone Rodolfo Kanzler" (edition exhausted); (2) "Le Nozze Aldobrandine, i paesaggi con scene dell' Odissea e le altre pitture murali antiche conservate nella Biblioteca Vaticana e nei Musei Pontifici. Con introduzione del Comm. B. Nogara" (250 francs); (3) "Le Monete e le Bolle Plumbee Pontificale del Medagliere Vaticano, descritte ed illustrate dal Cav. C. Serafini. Tome I (615-1572)" (80 francs), with introduction by Le Grelle, "Saggio di storia delle collezioni numismatiche Vaticane"; (4) "I Mosaici antiehi conservati nei Palazzi Pontifici del Vaticano e del Laterano. Con introduzione del Comm. B. Nogara" (200 francs). In the press are (1) Nogara and Pinza, "La Tomba Regolini Galassi e gli altri materiali coevi del Museo Gregoriano-Etrusco. Voll. 4 (3 di testo ed. 1 di tavole)"; (2) Nogara, "I vasi antichi del Museo Etrusco e della Biblioteca Vaticana".

The fifth collection, "Le Piante Maggiori di Roma nel Secolo XVI e XVII, riprodotte in fototipia a cura della Biblioteca Vaticana. Con introduzione di Francesco Ehrle, S.J.", is the result of the personal research of the prefect of the Vatican. It embraces six numbers and two supplements: (1) "Roma al tempo di Giulio III. La Lianta di Roma di Leonardo Bufalini del 1551, riprodotta per la prima volta dalla stampa originale" (20 francs); (2) "Roma prima di Sisto V. La Lianta di Roma Du Pérac-Lafréry del 1577. Contributo alla storia del commercio delle stampe a Roma nel secolo XVI e XVII" (15 francs); (3) "Roma al tempo di Urbano VIII (1623-1644). La Pianta di Roma Maggi-Maupin-Losi, di quaranta fogli, riprodotta da uno dei tre esemplari completi, fin adesso conosciuti" (in the press); (4) "Roma al tempo di Paolo V (1605-1621). La Pianta di Antonio Tempesta del 1606" (in preparation); (5) "Roma al tempo di Urbano VIII (1632-1644). La Pianta di Roma pubblicata da Goert van Schayck (Gottifredo Scaichi) nel 1630" (in preparation); (6) "Roma al tempo di Innocenzo XI (1676-1689). La Pianta di Roma di Giovanni Battista Falda del 1676" (in preparation). Supplements: (1) "La grande Veduta Maggi-Mascardi (1615) dei Tempio e del Palazzo Vaticano, stampata coi nomi originali. Con introduzione di Francesco Ehrle" (to

appear shortly); (2) "La Pianta della Campagna Romana del 1547, in sei fogli, riprodotta in fototopia della copia Vaticana, unica finora. Con introduzione di Tommaso Ashby" (in preparation).

As the last and most comprehensive, and furthermore, on account of the smaller expense in preparation, the most accessible, collection is the "Studi e Testi". The twenty-three fascicles which have already appeared contain either the results of systematic research among the Vatican manuscripts with a definite purpose, or shavings and parings which fall from the work-table while more important works are being accomplished. From the following arrangement of the works according to authors this twofold distinction becomes apparent. Marco Vatasso has published fascicles 1, 2, 4, 10, 14, 16, 17, 18, and 20: (1) "Antonio Flaminio e le principali poesie dell'autografo Vaticano 2870"; (2) "Le due Bibbie di Bovino, ora codici Vaticani latini 10510, 10511, e le loro note storiche"; (3) "Aneddoti in dialetto romanesco del secolo XIV, tratti dal codice Vatic. 7654"; (4) "Per la storia del dramma sacro in Italia"; (5) "Del Petrarca e di alcuni suoi amici"; (6) "Initia Patrum aliorumque scriptorum ecclesiasticorum ex Mignei Patrologia et ex compluribus aliis libris conlecta" (2 vols.); (7) "Frammenti d'un Livio del quinto secolo recentemente scoperti: Codice Vaticano latino 10696"; (8) "I codici Petrarcheschi della Biblioteca Vaticana". Pio Franchi de' Cavalieri published fascicles 3, 6, 8, 9, 19, and 22: (1) "La Passio SS. Mariani et Jacobi"; (2) "I Martiri di S. Teodoto di Ancisa e di S. Ariadne di Prinnesso con un'appendice sul testo originale del Martirio di S. Eleutherio"; (3) "Note agiografiche: a. Ancora del martirio di S. Ariadne; b. Gli Atti di S. Giustino"; (4) "Nuove Note agiografiche: c. Il testo originale del martirio di Agape, Irene e Chione; d. Gli Atti di S. Crispina. e. I Martiri della Massa Candida. f. Di una probabile fonte della leggenda dei SS. Giovanni e Paolo"; (5) "Hagiographica: a. Osservazioni sulle leggende dei SS. Martiri Mena e Trifone. b. Della leggenda di S. Pancrazio Romano. c. Intorno ad alcune reminiscenze classiche nelle leggende agiografiche del secolo IV"; (6) "Note agiografiche, fascicolo terzo".

Giovanni Mercati published the fascicles 5, 7, 11, 12, and 15: (1) "Note di letteratura biblica e cristiana antica"; (2) "Antiche reliquie ambrosiano-romane, con un excursus sui frammenti dogmatici ariani del Mai"; (3) "Varia Sacra: Fasc. 1. a. Anonymi Chiliastæ in Matthæum Fragmenta. b. Alcuni supplementi agli scritti dei Dottori Cappadoci e di S. Cirillo Alessandrino"; (4) a. "Un frammento delle ipotiposi di Clemente Alessandrino. b. Paralipomena Ambrosiana con alcuni appunti sulle benedizioni del Cereo pasquale"; (5) "Opuscoli inediti del Beato Cardinal Giuseppe Tommasi tratti in luce". Enrico Carusi published fascicle 21: "Dispacci e lettere di Giacomo Gherardi, nunzio Pontificio a Firenze e Milano 1487-1490". Eugene Tisserant published fascicle 23: "Codex Zugninensis rescriptus Veteris Testamenti. Texte grec des manuscrits Vatican Syriaque 162 et. Mus. Brit." Additionel 14665, édité avec introduction et notes. Of the published fascicles there still remains: "Catalogo sommario della Esposizione Gregoriana aperta nella Biblioteca Vaticana dal 7 all' 11 Aprile, 1904, a cura della Direzione della medesima Biblioteca. Ediz. seconda." In the press is: Mercati and Ferrini, "Basilicorum paratitla". The following are in preparation: (1) Mercati, "Psalmorum hexaplorum reliquiæ e codice rescripto Ambrosiano"; (2) Vatasso, "Cronache Forlivesi di Maestro Giovanni de Pedrino (1411-1464). Una versione in dialetto del secolo XIV delle Armonie evangeliche d'Ammonio"; (3) Carusi, "Diario di Fiorenza dall'anno 1482, di Giusto d'Anghiari";

(4) Nogara, "Il libro XXXII della Storia d'Italia di Flavio Biondo dai codici Vatic. 1940-1946". All these collections may advantageously be used as works of reference on the Vatican Library. The Vatican stands at the head of the world's libraries in its number of scientific publications, despite its comparatively small staff and insufficient funds.

(7) The Administration of the Vatican Library

Since the time of Marcello Cervini, the first cardinal who was named (1548) librarian of the Apostolic Library, this official has borne the honorary title of *Protettore della Biblioteca Vaticana*. In him is vested in general the supreme direction of the library, which he represents in all questions and under all circumstances relating to the library as a whole or to the administration in general. Under him there is, for the technical and scientific management of the library, a prefect -- formerly there were two -- who has to decide all questions referring to the ordinary administration and to issue such instructions as these questions may demand. The position of assistant librarian, revived by Leo XIII, is at present vacant. For the chief language or groups of languages represented in the Vatican manuscripts there are six ordinary and five honorary *scriptores*, to whom is entrusted the scientific cultivation of the departments committed to them. Thus, including the prefect, there are twelve scientific general officials. For the collections connected with the library, e.g. the Cabinet of Coins and Medals (*Il Medagliere*) and the Christian Museum (*Museo Sacro*), there are four directors, whose duty is the scientific supervision of their collections. Under the supervision of one of the *scriptores*, six assistants discharge all the duties connected with the printed books, besides superintending special portions of the library. The prefect is assisted by a secretary, who has in addition the duty of keeping the accounts. Seven *bidelli* (library attendants) bring the manuscripts and books to the readers, transfer the departments to their new quarters when a change has been determined on, and keep everything in order in the Consultation Library. In the repair-shop and book-bindery four men are permanently employed.

The salaries of the officials are exceedingly modest. No official, not even the prefect, receives more than fifty dollars a month. The title of "Scriptor of the Vatican Library" has been held by such men as Giovanni de Rossi, Mariano Rampolla del Tindaro, Stevenson, and many others, and is to-day borne by such world-famous scholars as Mercati, Franchi de' Cavalieri, Vatasso, etc. The annual budget of the library is the ridiculously small sum of 6000 dollars. On extraordinary occasions great loans have been secured -- e.g., \$100,000 when the Barberini Library was purchased. During his term of office, Father Ehrle raised the budget to about 7000 dollars by obtaining contributions from his friends and acquaintances. In all financial questions the library is subordinate to the Prefecture of the Apostolic Palaces. The archives of the library contain no acts extending back beyond the time of the first cardinal librarian; more recent administrative acts are, however, complete. In earlier times all manuscripts whose publication was adjudged untimely, dangerous, likely to cause misunderstandings etc., were marked on the back with a small black cross. When such a codex was asked for, the prefect decided whether or not it should be delivered to the particular scholar. This custom led to distinctions not always of a very agreeable kind, and was entirely discontinued by Father Ehrle, so that any scholar can procure without further ceremony any

manuscript which he desires. In the case of the exceptionally valuable codices or those which have to be handled with special care, the readers must observe all the directions which the prefect has found it necessary to impose.

The administration shows the greatest complaisance in its dealings with scholars, and admits outside the regular four-hour period of study those whose time is very limited. The same rule applies to Thursday, which is a free day, and to the holidays proper. The library is open from 1 October to 27 June -- in winter from 9 a.m. to 1 p.m., and in summer from 8 a.m. to 12 noon. On all Thursdays, feasts, certain memorial days, the holidays of Christmas, the Carnival, and Easter, and on some other occasions, it is closed. The library ordinances issued by Sixtus V are carved in marble at the entrance. These have received timely alterations in the "Chirographa" of Clement XII, Benedict XIV, and Clement XIII, as well as in the Decree "Ex audientia Sanctissimi" of Pius IX; in particular, a number of the holidays which proved especially burdensome to strangers have been abolished. By Motu Proprio of 9 September, 1878, Leo XIII made further alterations, among others the revival of the office of assistant librarian. Finally, on 21 March, 1885, the same pontiff issued a new "Regolamento della Biblioteca Vaticana" together with a "Calendario per l'apertura e per lo studio e servizio della B. Vaticana". After these regulations had remained in force for a three years' trial, they were revised and raised to a permanent law by Motu Proprio of 1 October, 1888, which is still binding.

(8) The Collections connected with the Library

The exhibition in the library halls of the costly presents received by the popes in the course of the last hundred years from emperors, kings, princes, and rich private persons, has converted some of these halls into a museum, which, while possessing great attraction for strangers and decorating the rooms, is without any real scientific value. Countless other objects, however, have been collected for scientific reasons. A beginning was made by Benedict XIV (1740-58), when in 1744 he bought the magnificent collection of old Christian glasses belonging to Cardinal Gaspare Carpegna and transferred them to the library. This collection forms the basis of the celebrated Museo Cristiano. Next comes the Vettori collection of gems, the second great acquisition of the same pontiff. During the nineteenth century this museum grew to such an extent, owing to the excavations in the catacombs, that the largest pieces (such as the sarcophagi, the inscriptions, mosaics etc.) had to be transferred to the Lateran, where a second Museo Cristiano of greater importance has been established.

The remaining most valuable objects of the lesser arts of gold, silver, bronze, enamel, glass, bone, ivory, lead, etc., form an unrivalled collection of its kind. The well-known medallion with the heads of Sts. Peter and Paul, the golden pectoral cross found on the Campo Verano (to which de Rossi has devoted a special monograph), the triptych of Penicaud of Limoges, and many other objects belong to the chief glories of this museum. Baron Kanzler has published an *édition de luxe* on the collection of ivory carvings. The above-named Vettori was the first custodian of this collection, which was later placed immediately under the prefect of the library. Under Leo XIII

Giovanni Battista de Rossi was named prefect of the museum, an honour intended only for him. To-day the directors of this division are again subordinate to the prefect of the library.

The Medagliere or numismatic collection was opened in 1555 under Marcellus II. Clement XII (1730-40) added many objects to the collection, but Benedict XIV (1740-48) became its great benefactor, by acquiring the incomparable Albani collection. This glorious cabinet of coins is described by Venuti in his "Antiqua Numismata maximi moduli ex Museo Cardinalis Albani in Vaticanam Bibliothecam translata" (2 vols., Rome, 1739-44). The acquisition of the Carpegna and Scilla collections also falls into this period. Many of the objects were sold by the French or -- a fact which could not be detected in individual cases -- were secretly incorporated in the Paris collection, so that the Medagliere returned to Rome greatly diminished. Pius VII resumed the task of collecting, and the department was continually increased, the Ranchi collection being recently added (1901) at the expense of 64,000 lire (\$12,800). After the discarding of valuable duplicates, for which 32,000 lire was obtained, the Medagliere stands again at the grand total of 70,000 pieces. Among its most celebrated exhibits are the uninjured *s grave* and the oldest papal coins. The custodian Serafini has recently issued the first volume of the scientific description of this collection.

The objects of pagan art in gold, silver, amber, etc., which came to the Holy See with the Museo Carpegna, the carved stones, enamels, glasses, carved ivories, figurines, etc., and the small bronze busts and tablets were accommodated by Pius VI in magnificent cases at the end of the long manuscript gallery at the entrance to the museum. Such was the foundation of the Pagan Museum, which to-day stands under the direction of Commendatore Nogara, and to which other Cimelia were later added. The department is subordinate to the prefecture of the library. Connected with this department (although not in the same hall) is the collection of ancient pagan frescoes begun by Pius VII when he purchased the Aldobrandini "Marriage". Under Gregory XVI and Pius IX further frescoes, obtained from the walls of the old Roman houses, were added. The hall in which these pieces are exhibited was painted by Guido Reni. Beside them are the brick stamps (classified and bequeathed by Marini), a kind of factory mark impressed by the ancients on the bricks, which is of the highest importance for the chronology of classical buildings. Here were also the 33 majolica plates which Leo XIII had conveyed from Castel Gandolfo to Rome, but which are now in the Appartamento Borgia. Concerning the Aldobrandini "Marriage" and analogous objects Nogara has published an *édition de luxe*.

The hall for the Latin papyrus documents, richly fitted with costly marbles, was magnificently painted by Raphael Mengs. Here are collected more documents belonging to the period 444 to 854 than are contained in any other collection in the world. The collection was begun by Paul V, continued by Clement XII and Benedict XIV, while the costly decorations were completed by Pius VII. In each of the twenty-four receptacles in the walls are from one to three papyrus fragments. Besides the monumental work of Gaetano Marinis, "Papyri diplomatici", Marucchi has recently treated the "Monumenta papyracea latina." The Cabinet of Drawings and Engravings contains originals by Sandro Botticelli, Raphael, Mantegna, and many other woodcuts and steel engravings, extending back to the time of Albrecht Dürer. This is a small but excellent collection. In the former

Chapel of Pius V were once preserved the addresses received by Pius IX, Leo XIII, and Pius X from all the countries of the world. Begun in 1867, the collection was recently transferred to the Casino di Pio IV in the Vatican Gardens when this hall had to be used for the special purposes of the library, but still remains under the direction of the prefect of the library. In similar manner the pre-Raphaelite paintings of the thirteenth and fourteenth centuries and a number of Byzantine tablets, which were accommodated in special halls of the library, have been transferred to the picture-gallery.

(9) History of the Library

Like every great church, that of Rome found it necessary from the beginning to form a collection of archival materials and books. This was of the greatest importance for the transaction of business, for the scientific pursuit of theology, for reference etc. Owing to the frequent change of the Curial headquarters, the wars and sieges of Rome, and numerous other vicissitudes, the collections of this kind have suffered great damage. The fate of the old papal library has been the subject of many inquiries, of which the most scholarly is that of de Rossi (referred to above) and the most extensive that of Ehrle ("Die Frangipani und der Untergang des Archivs und der Bibliothek der Päpste am Anfang des 13. Jahrhunderts" in "Mélanges offerts à M. Emile Chatelain . . . par ses élèves et ses amis 15 avril 1910", Paris, 1910). The following may be also consulted: Zanelli, "La Biblioteca Vaticana della sua origine fino al presente" (Rome, 1857), and Faucon, "La Librairie des Papes d'Avignon, sa formation, sa composition, ses catalogues (1316-1420)" (Paris, 1887). For the new acquisitions made down to the present day the only reliable source is Carini, "La Biblioteca Vaticana proprietà della Santa Sede Memoria Storica" (Rome, 1892). (Cf. Crispo Moncada, "La Biblioteca Vaticana e Monsignor Isidoro Carini", Palermo, 1895.) What were the book treasures of the Holy See at the end of the thirteenth century, whence they came, how a new library was formed at Avignon, and how this library attained its greatest extent under Clement VI, may be learned from the above works, as may also the fate of these collections.

Martin V restored the seat of the Curia to Rome, and, both by exercising the right of spoil (see *JUS SPOLI*) and also by purchases, laid the foundation of a library, which was extended and enriched by Eugene IV. Under the latter pontiff the library contained 340 manuscripts, of which traces are still found in the "Fondo antico Vaticano". But the great humanist pope, Nicholas V (1447-55), was the true founder of the Vaticana, which may be regarded as the fourth papal library. This pontiff acquired the remains of the imperial library of Constantinople which had been scattered by the Turks, and was able to bequeath at his death 824 codices, of which a large number can be pointed out in the Vaticana to-day. The succeeding popes added smaller collections, and Sixtus IV gave a permanent basis to the library by the construction of its glorious halls. On the ground floor of the palace in the Cortile del Papagallo and under the Appartamento Borgia he had four halls painted by Melozzo da Forlì and his pupil Ghirlandajo, with coloured windows by Hermannus Teutonicus. In three of these halls stood work tables, to which (as was then customary) the manuscripts were fastened with chains, while in the fourth were twelve chest-like receptacles and five presses filled with codices; the furniture of inlaid wood adorns to-day the Appartamento Borgia.

The pope purchased the library of Gaspare da Sant'Angelo in 1482, employed numerous copyists, and encouraged his librarian Platina (appointed in 1475) to restore the Vaticana to its former position of renown. The library had a public division for the Latin and Greek languages, and a private section (afterwards transferred to Sant' Angelo), in which the documentary treasures of the Roman Church were preserved. Under Sixtus the collection grew to 2527 codices, of which 770 were Greek and 1757 Latin. (Cf. Fabre, "La Vaticana de Sixte IV" in "Mélanges d'archéol. et d'hist.", XV.)

The great growth of the Libreria Palatina, as it was called, continued, and under Innocent VIII it included 3650 manuscripts and printed works. Besides other acquisitions, Alexander VI secured forty Bobbio codices from Tommaso Inghirami; Julius II added new rooms to the four halls to provide sufficient space for the collection. Leo X donated to the library his own Greek codices (cf. Heiberg, "Les premiers manuscrits grecs de la Bibliothèque Papale", Copenhagen, 1892), so that under him the library contained 4070 books and manuscripts -- a number unexampled at that time. The first cardinal librarian and protector of the library, which office had previously been managed only by prelates, was Marcello Cervini, who was appointed in 1548. Cardinal Cervini (afterwards Marcellus II) presented to the library more than 240 codices and many books; about 250 others were added before the reign of Gregory XIII (1572-85), who conceived the plan of a new library building. This plan was realized by Sixtus V (1585-90) in 1588, through the instrumentality of Fontagna. The new building divided the huge court of the Belvedere into two parts, and thus originated the famous Salone Sistino della Libreria Vaticana -- giving to the library the name by which it was henceforth known. Cesare Nebbia and Giovanni Guerra painted the hall, which accommodated in elegant cases the treasures of the Vaticana. (Cf. Pansa, "Della Libreria Vaticana Ragionamenti", Rome, 1592; Roccha a Camerino, "Bibliotheca Apostolica Vaticana a Sixto V P. M. . . . translata", Rome, 1591; Müntz, "La Bibliothèque du Vatican au XVI siècle", Paris, 1886; Idem, "La Bibliothèque du Vatican au XV, siècle", Paris, 1887; Stevenson, "Topografia e Monumenti di Roma nelle pitture di Sisto V della Biblioteca Vaticana", Rome, 1898.)

Sixtus V had a work-room erected beside the Salone, and this was decorated with the paintings of the sibyls by Marco da Faenza and the landscapes of Paul Brill. Hither were transferred the wooden panelling and furnishings of the Palatina, carved by Giovannino dei Dolci. The brothers Guglielmo and Tommaso Sirleto, Antonio Carafa, and Marcantonio Colonna transferred their entire collections of manuscripts and prints to the Vaticana. The renowned scholar Orsini, who possessed the greatest private collection of the sixteenth century, was *corrector* (= *scriptor*) *gr cus* of the Vaticana, and in 1600 bequeathed to it 413 manuscripts (30 Italian, 270 Latin, and 113 Greek) with many printed works (cf. De Nolhac, "La Bibliothèque de Fulvio Orsini", Paris, 1887). The number of the Greek Codices Vaticani thus mounted from 1287 to 1400. Paul V transferred to the library 212 Greek and Latin Codices, 30 Bobbienses (presented by Silvarezza), and 100 manuscripts from the Biblioteca Altemps. He also purchased for 1974 scudi (\$2000) 83 manuscripts from the effects of Prospero Podiani (1616), 25 Coptic from the effects of Raimondo (1614), the whole library of Cardinal Pole, and many other collections (see Batiffol, "La Vaticane de Paul III et Paul V", Paris, 1890; Idem, "L'abbaye de Rossano. Contribution à l'histoire de la Vaticane", Paris, 1891). Under

Urban VIII the Latin codices grew to 6026 in 1627, and to 6458 in 1640; the number of Greek in 1630 was 1566. This pontiff added a room to the Salone Sistino, and in 1630 separated the office of prefect of the Archives from that of custodian of the library. He made great purchases of books, and, owing to the pressure brought upon him by the Ethiopian Hospice behind St. Peter's, donated his thirty-nine parchment manuscripts and some printed works to the Vaticana. In 1622 the Vaticana was presented with the Heidelberg Library (called the Palatina) by Elector Maximilian of Bavaria. This was accommodated in a newly-erected side wing of the palace, to the left of, and adjacent to, the Salone Sistino. To-day this collection contains 1996 Latin and 432 Greek codices, besides numerous printed works. (Cf. the inventories mentioned above; Theiner, "Schenkung der Heidelberger Bibliothek durch Maximilian I. an Gregor XV. und ihre Versendung nach Rom; mit Originalschriften", Munich 1844; Mazzi, "Leone Alacci e la Palatina di Heidelberg", Bologna, 1893; Wilke, "Gesch. der Heidelberger Buchersammlungen", 1817; Bahr, "Die Entführung der Heidelberger Bibliothek nach Rom", 1845; Wille, "Aus alter und neuer Zeit der Heidelberger Bibliothek", 1906; "Kirchl. Handlex.", s.v. "Heidelberg".)

Less than forty years after this great acquisition followed a second, when Alexander VII added to the Vaticana the manuscripts of the valuable library of the dukes of Urbino; the printed works were used as the nucleus for the library of the university founded by the popes (Sapienza), which consequently is even to-day known as the Alessandrina. The codices of the Urbino collection included 1767 *latini et vulgares*, 165 *græci*, and 128 *hebraici et arabici*. For the polemics concerning this amalgamation and an estimate of the value of the Bibliotheca urbinas consult Raffaelli, "La imparziale e veritiera Istoria della Unione della Biblioteca di Urbino alla Vaticana", Fermo, 1877; Valenti, "Trasferimento della Biblioteca Ducale d'Urbino a Roma", 1878. The valuable library of Christina Alexandra (q.v.) of Sweden, which passed from her heir Cardinal Decio Azzolini to his nephew Pompeo Azzolini, was purchased from the latter by Alexander VIII (1689-91) and added to the Vaticana. The duplicates were donated to the pope's nephew Cardinal Ottoboni, and the codices transferred to the Vatican archives. To the Vaticana then accrued 2102 Latin and 190 Greek manuscripts, which were placed in the gallery to the right of the Salone Sistino. In the same collection are still found 45 "Codices græci Pii Papæ II", added in 1754. (Cf. Manteyer, "Les manuscrits de la Reine Christine aux archives du Vatican" in "Mélanges d'archéol. et d'hist.", XVII, 1897.)

Although a number of Orientalia were formerly to be found in the Vaticana, Clement XI (1700-21) may be regarded as the real founder of the very extensive Oriental section of the library. He procured for it several hundred of these manuscripts, which he had purchased throughout the entire East through Oriental scholars specially commissioned for this task (see Carini, *op. cit. sup.*). Clement XIII added the whole collection of manuscripts belonging to the brothers Assemani and consisting of 202 Syro-Chaldean, 180 Arabian, and 6 Turkish manuscripts. Numerous smaller acquisitions were made, amounting in all to about 500 manuscripts. On 7 Dec., 1746, Benedict XIV purchased the "Fondo Capponiano" (288). For 5500 gold *scudi* he later purchased the whole collection of Cardinal Pietro Ottoboni (d. 1748), who possessed 3300 manuscripts, obtained partly from the Altemps and Sforza collections, and partly from the inheritance of Queen Christina.

Including some later additions, there are now in the Ottoboniana 3394 Latin and 472 Greek codices. In this, as in the other above-mentioned closed collections, there are manuscripts of the highest value. (Cf. Ruggieri-Marini, "Memorie storiche degli Archivi della Santa Sede e della Biblioteca Ottoboniana ora riunita alla Vaticana", Rome, 1825.) Under Clement XIV and Pius VI the Vaticana and collections associated with it underwent many vicissitudes. In 1797, 500 manuscripts were confiscated *jure belli* by the French Directory (cf. "Recensio Manuscriptorum, qui ex universa Bibliotheca Vaticana selecti procuratoribus Galliarum traditi fuere", Leipzig, 1803-very rare). Of these manuscripts all except 36 were restored to the Vaticana.

In the nineteenth century the Vaticana acquired, besides several hundred manuscripts, the papers of Angelo Mai, Gaetano Marini, Visconti, Mazzucchelli, and de Rossi, and a portion of the Maurinist correspondence through Cardinal Fesch. Through the purchase, by Leo XIII, of the manuscripts belonging to the Borghese family, almost 300 codices from the old Avignon library, which had found their way via Avignon-Aldobrandini to the Borghese, were thus restored to the Vaticana; furthermore, 100 real Burghesiani, purchased by the Borghese, were found in the collection. These acquisitions, with the archival materials which are found in the secret archives, cost 225,000 francs. A still more extensive library was purchased by Leo XIII for 525,000 francs in 1902, the Barberini Archive being then added to the Vaticana. The transference of the Codices Borgiani from the Propaganda to the Vaticana brought a very notable addition to the collection of Orientalia, besides adding to the Latin and Greek sections (see BORGIA, STEFFANO). These final and important additions of Leo XIII, together with the acquisition of the Codices Regiæ, Capponiani, Urbinates, and Ottoboniani, combine with the great Vaticani collection to form the Apostolic Library of the Vatican. (Cf. Carini, "Di alcuni lavori ed acquisiti della Biblioteca Vaticana nel pontificato di Leone XIII", Rome, 1892.)

(10) The Legal Status of the Library

The assertions that the Vatican Library was the property not of the Church or of the Holy See, but of the late Papal States, were meant to prepare the way for the eventual seizure of the library, or at least its withdrawal from the operation of the Law of Guarantees. These assertions called forth answers which made clear the baseless ignorance in historical matters of the inventors and propagators of this theory. Isidoro Carini (op. cit.), then prefect of the Vatican Library, by disclosing its general, and especially its financial, history, furnished the most convincing proof that it derived its income from ecclesiastical properties or the private chattels of the popes, that the library officials derived their salaries not from the state treasurer, but from the majordomo (a papal court official), and that in fine no sound argument could be brought forward to dislodge the Vaticana from its position among the private possessions of the Apostolic See. This demonstration was successful at every point.

C. THE SPECOLA VATICANA

A third centre of zealous scientific work at the Vatican is the observatory (see VATICAN OBSERVATORY).

D. THE GALLERIA LAPIDARIA (CORRIDOIO DELLE ISCRIZIONI)

Stimuli to scientific study are offered in abundance by the Gallery of Inscriptions, which connects the Museo Chiaramonti with the Appartamento Borgia. No less than 6000 inscriptions in stone, as well as numberless cippi, sarcophagi, capitals, statues, architectonic fragments, and other remains, are here collected, and have recently been greatly increased. Gaetano Marini, the second founder of Latin epigraphy, systematically inserted in the walls on one side the Christian, and on the other the pagan, inscriptions. Begun under Clement XIV, and continued under Pius VI, the work was completed under Pius VII. Here took place the first memorable meeting between the young de Rossi and Cardinal Angelo Mai.

E. THE LOGGIE AND THE GALLERIA DELLA CARTE GEOGRAFICHE

The Loggie of Geographical Charts is situated on the third floor in the Cortile di San Damaso over the Loggie of Raphael. The gallery is adjacent to the Galleria degli Arazzi. The material offered in both places for the history of cartography has been as yet only incompletely utilized. The charts undoubtedly represent highly important achievements. The paintings date from the end of the sixteenth century, being executed by Antonio Dante according to the sketches of his brother Ignazio.

PAUL MARIA BAUMGARTEN

Vatican Council

Vatican Council

The Vatican Council, the twentieth and up to now [1912] the last ecumenical council, opened on 8 December, 1869, and adjourned on 20 October, 1870. It met three hundred years after the Council of Trent.

I. INTRODUCTORY HISTORY

A. Previous to the Official Convocation

On 6 December, 1864, two days before the publication of the Syllabus, Pius IX announced, at a session of the Congregation of Rites, his intention to call a general council. He commissioned the cardinals residing at Rome to express in writing their views as to the opportuneness of the scheme, and also to name the subjects which, in their opinion, should be laid before the council for discussion. Of the twenty-one reports sent in, only one, that of Cardinal Pentini, expressed the opinion that there was no occasion for the holding of an ecumenical council. The others affirmed the relative necessity of such an assembly, although five did not consider the time suitable. Nearly all sent lists of questions that seemed to need conciliar discussion. Early in March, 1865, the pope appointed a commission of five cardinals to discuss preliminary questions in regard to the council. This was the important "Congregazione speciale direttrice per gli affari del futuro concilio generale", generally called the directing preparatory commission, or the central commission. Four more cardinals were added to the number of its members, and besides a secretary it was given eight consultors. It held numerous meetings in the interval between 9 March, 1865, and Dec., 1869. Its first motion was that bishops of various countries should also be called upon for suggestions as to matters for discussion, and on 27 March, 1865, the pope commanded thirty-six bishops of the Latin Rite designated by him to express their views under pledge of silence. Early in 1866 he also designated several bishops of the Oriental Rite under the same conditions. It was now necessary to form commissions for the more thorough discussion of the subjects to be debated at the council. Accordingly, theologians and canonists, belonging to the secular and regular clergy, were summoned to Rome from the various countries to co-operate in the work. As early as 1865 the nuncios were asked to suggest names of suitable people for these preliminary commissions. The war between Austria and Italy in 1866 and the withdrawal of the French troops from Rome on 11 Dec. of the same year caused an unwelcome interruption of the preparatory labours. They also made the original plan, which was to open the council on the eighteenth centenary festiva of the martyrdom of the

two great Apostles, 29 June, 1867, impossible. However, the pope made use of the presence at Rome of nearly five hundred bishops, who had come to attend the centennial celebration, to make the first public announcement of the council at a consistory held on 26 June, 1867. The bishops expressed their agreement with joy in an address dated 1 July. After the return of the French army of protection on 30 Oct., 1867, the continuance of the preparations and the holding of the council itself seemed again possible. The preparatory commission now debated exhaustively the question who should be invited to attend the council. That the cardinals and diocesan bishops should be summoned was self-evident. It was also decided that the titular bishops had the right to be called, and that of the heads of the orders an invitation should be given to the abbots *nullius*, the abbots general of congregations formed from several monasteries, and lastly, to the generals of the religious orders. It was considered wiser, on account of the state of affairs at the time, not to send an actual invitation to Catholic princes, yet it was intended to grant admission to them or their representatives on demand. In this sense, therefore, the Bull of Convocation, "*Æterni Patris*", was promulgated, 29 June, 1868; it appointed 8 Dec., 1869, as the date for the opening of the council. The objects of the council were to be the correction of modern errors and a seasonable revision of the legislation of the Church. A special Brief, "*Arcano divinæ providentiæ*", of 8 Sept., 1868 invited non-Uniate Orientals to appear. A third Brief, "*Jam vos omnes*", of 13 Sept., 1868, notified Protestants also of the convoking of the council, and exhorted them to use the occasion to reflect on the return to the one household of faith.

B. Reception of the Promulgation

Although the Bull convoking the council was received with joy by the bulk of the Catholic masses, it aroused much discontent in many places, especially in Germany, France, and England. In these countries it was feared that the council would promulgate an exact determination of the primatial prerogatives of the papacy and the definition of papal infallibility. The dean of the theological faculty of Paris, Bishop Maret, wrote in opposition to these doctrines the work "*Du concile générale et de la paix religieuse*" (2 vols., Paris 1869). Bishop Dupanloup of Orléans published the work "*Observations sur la controverse soulevée relativement à la définition de l'infailibilité au prochain concile*" (Paris, Nov., 1869). Maret's work was answered by several French bishops and by Archbishop Manning. Archbishop Dechamps of Mechlin, Belgium, who had written a work in favour of the definition entitled "*L'infailibilité et le concile générale*" (Paris, 1869), became involved in a controversy with Dupanloup. In England a book entitled "*The Condemnation of Pope Honorius*" (London, 1868), written by the convert, Le Page Renouf, aroused animated discussions in newspapers and periodicals. Renouf's publication was refuted by Father Botalla, S.J., in "*Honorius Reconsidered with Reference to Recent Apologies*" (London, 1869). Letters from French correspondents in the first number for Feb., 1869, of the "*Civiltà Cattolica*", which stated that the majority of French Catholics desired the declaration of infallibility, added fresh fuel to the flames. In particular, it led to the appearance in the discussion of Ignaz Döllinger, provost of St. Cajetan and professor of church history at Munich. From now onwards Döllinger was the leading spirit of the movement in Germany hostile to the council. He disputed most passionately the Syllabus

and the doctrine of papal infallibility in five anonymous articles that were published in March, 1869, in the "Allgemeine Zeitung" of Augsburg. A large number of Catholic scholars opposed him vigorously, especially after he published his articles in book form under the pseudonym of "Janus", "Der Papst und das Konzil" (Leipzig, 1869). Among these was Professor Joseph Hergenröther of Würzburg, who issued in reply "Anti-Janus" (Freiburg, 1870). Still the excitement over the matter grew in such measure that fourteen of the twenty-two German bishops who met at Fulda early in Sept., 1869, felt themselves constrained to call the attention of the Holy Father to it in a special address, stating that on account of the excitement the time was not opportune for defining papal infallibility. The papal notifications addressed to the schismatic Orientals and the Protestants did not produce the desired effect. The European Governments received from Prince Hohenlohe, president of the Bavarian ministry, a circular letter drawn up by Döllinger, designed to prejudice the different Courts against the coming council; but they decided to remain neutral for the time being. Russia alone forbade its Catholic bishops to attend the council.

C. Preparatory Details

In the meantime zealous work had been done at Rome in preparation for the council. Besides the general direction that it exercised, the preparatory commission had to draw up an exhaustive order of procedure for the debates of the council. Five special committees, each presided over by a cardinal and having together eighty-eight consultants, prepared the plan (*schemata*) to be laid before the council. These committees were appointed to consider respectively:

- dogma;
- church discipline;
- orders;
- Oriental Churches and missions;
- ecclesiastico-political questions.

It may justly be doubted whether the preliminary preparations for any council had ever been made more thoroughly, or more clearly directed to the aim to be attained. As the day of its opening approached, the following drafts were ready for discussion:

- three great dogmatic drafts, (a) on the Catholic doctrine in opposition to the errors which frequently spring from Rationalism, (b) on the Church of Christ and, (c) on Christian marriage;
- twenty-eight drafts treating matters of church discipline. They had reference to bishops, episcopal sees, the different grades of the other clergy seminaries, the arrangement of philosophical and theological studies, sermons, the catechism, rituals, impediments to marriage, civil marriage, mixed marriages, improvement of Christian morals, feast days, fasts and abstinences, duelling, magnetism, spiritualism, secret societies, etc.;
- eighteen drafts of decrees had reference to the religious orders;
- two were on the Oriental Rites and missions; these subjects had also been considered in the other drafts of decrees.

In addition a large number of subjects for discussion had been sent by the bishops of various countries. Thus, for instance, the bishops of the church provinces of Quebec and Halifax demanded the lessening of the impediments to marriage, revision of the Breviary, and, above all, the reform and codification of the entire canon law. The petition of Archbishop Spalding of Baltimore treated,

among other things, the relations between Church and State religious indifference, secret societies, and the infallibility of the pope. The definition of this last was demanded by various bishops. Others desired a revision of the index of forbidden books. No less than nine petitions bearing nearly two hundred signatures demanded the definition of the bodily Assumption of the Blessed Virgin. Over three hundred fathers of the council requested the elevation of St. Joseph as patron saint of the Universal Church.

II. PROCEEDINGS OF THE COUNCIL

A. Presiding Officers, Order of Procedure, Number of Members

On 2 Dec., 1869, the pope held a preliminary session in the Sistine Chapel, which was attended by about five hundred bishops. At this assembly the officials of the council were announced and the conciliar procedure was made known. The council received five presidents. The Chief presiding officer was to have been Cardinal Reisach, but as he died on 22 Dec., Cardinal Filippo de Angelis took his place, 3 Jan., 1870. The other presiding officers were Cardinals Antonio de Luca, Andrea Bizarri, Aloisio Bilio, and Annibale Capalti. Bishop Joseph Fessler of Sankt Pölten, Lower Austria, was secretary to the council, and Monsignor Luigi Jacobi under-secretary. The Constitution "Multiplices inter" announcing the conciliar procedure contained ten paragraphs. According to this the sessions of the council were to be of two kinds: private sessions for discussing the drafts and motions, under the presidency of a cardinal president, and public sessions, presided over by the pope himself for the promulgation of the decrees of the council. The first drafts of decrees debated were to be the dogmatic and disciplinary ones laid before the assembly by the pope. Proposals offered by members of the council were to be sent to a congregation of petitions; these petitions or postulates were to be examined by the committee and then recommended to the pope for admission or not. If the draft of a decree was found by the general congregation to need amendments, it was sent with the proposed amendments to the respective sub-committee or *deputatio*, either to the one for dogmas or for discipline, or religious orders, or for Oriental Rites. Each of these four sub-committees or deputations was to consist of twenty-four persons selected from the members of the council, and a cardinal president appointed by the pope. The deputation examined the proposed amendments, altered the draft as seemed best, and presented to the general congregation a printed report on its work that was to be orally explained by a member of the deputation. This procedure was to continue until the draft met with the approval of the majority.

The voting in the congregation was by *placet*, *placet juxta modum* (with the corresponding amendments), and *non placet*. Secrecy was to be observed in regard to the proceedings of the council. In the public sessions the voting could only be by *placet* or *non placet*. The Decrees promulgated by the pope were to bear the title, "Pius Episcopus, servus servorum Dei: sacro approbante Concilio ad perpetuam rei memoriam". The northern right transept of St. Peter's was arranged as the hall of sessions. Between 8 Dec., 1869, and 1 Sept., 1870, four public sessions and eighty-nine general congregations were held here. There were in the entire world approximately one thousand and fifty prelates entitled to take part in the council, and of these no less than seven

hundred and seventy-four appeared during the course of the proceedings. In attendance at the first public session were 47 cardinals, 9 patriarchs, 7 primates, 117 archbishops, 479 bishops, 5 abbots *nullius*, 9 abbots general, and 25 generals of orders, making a total of 698. At the third public session votes were cast by 47 cardinals, 9 patriarchs, 8 primates, 107 archbishops, 456 bishops, 1 administrator Apostolic, 20 abbots, and 20 generals of orders, a total of 667. There was an attendance at the council from the United States of America of all of the 7 archbishops of that time, 37 of the 47 bishops, and in addition 2 vicars Apostolic. The oldest member of the council was Archbishop MacHale, of Tuam, Ireland; the youngest, Bishop (now Cardinal) Gibbons.

B. From the Formal Opening to the Definition of the Constitution on the Catholic Faith in the Third Public Session

(1) The First Debates

After the formal opening of the council by the pope at the first public session on 8 Dec., 1869, the meetings of the general congregation began on 10 Dec. Their sessions were generally held between the hours of nine and one. The afternoons were reserved for the sessions of the deputations or sub-committees. First, the names of the members of the congregation of petitions were communicated; this was followed by the elections to the four deputations. The first matter brought up for debate was the dogmatic draft of Catholic doctrine against the manifold errors due to Rationalism, "De doctrina catholica contra multiplices errores ex rationalismo derivatos". The discussion of it was taken up on 28 Dec. in the fourth general congregation. After a debate lasting seven days, during which thirty-five members spoke, it was sent by the tenth general congregation held on 10 Jan., 1870, to the deputation on faith for revision. There had been held in the meantime on 6 Jan. the second public session. This had been previously determined upon, on 26 Oct., 1869, by the central commission for the making of the confession of faith by the members of the council. The subjects discussed from the tenth to the twenty-ninth meeting of the general congregation (on 22 Feb.) were the drafts of four disciplinary decrees, namely, on bishops, on vacant episcopal sees, on the morals of ecclesiastics, and on the smaller Catechism. Finally they were all sent for further revision to the deputation on discipline.

(2) The Parties

Such slow progress of the work had probably not been expected. The reason of the disagreeable delay was to be found in the question of infallibility, which had called forth much excitement even before the council. Directly after the opening of the session its influence was evident in the election of the deputations. It divided the fathers of the council into two, it might almost be said hostile camps; on all occasions the decisions and modes of action of each of these parties were determined by its attitude to this question. On account of the violent disputes which had been carried on everywhere for the past year over the question of papal infallibility the overwhelming majority considered the conciliar discussion and decision of the question to be imperatively necessary. On the other hand the minority, comprising about one-fifth of the total number, feared the worst from the definition, the apostasy of many wavering Catholics, an increased estrangement of those separated from the Church, and interference with the affairs of the Church by the Governments of the different

countries. The minority, therefore, allowed itself to be guided by opportunist considerations. Only a few bishops appear to have had doubts as to the dogma itself. Both parties sought to gain the victory for their opinions. As however the minority was soon obliged to recognize its powerlessness, it endeavoured by protracting the discussions of the council at least to delay, or even to prevent, a decision as long as possible. Most of the German and Austro-Hungarian members of the council were against the definition, as well as nearly half of the American and about one-third of the French fathers. About 7 of the Italian bishops, 2 each of the English and Irish bishops, 3 bishops from British North America, and 1 Swiss bishop, Greith, belonged to the minority. While only a few Armenian bishops opposed the definition, most of the Chaldean and Greek Melchites sided with the minority. It had no opponents among the bishops from Spain, Portugal, Belgium, Holland, and Central and South America. The most prominent members of the minority from the United States were Archbishops Kenrick of St. Louis and Purcell of Cincinnati, and Bishop Vérot of St. Augustine; these were joined by Archbishop Connolly of Halifax, Nova Scotia. Prominent members of the majority were Archbishop Spalding of Baltimore, Bishops Williams of Boston, Wood of Philadelphia, and Conroy of Albany.

Conspicuous members of the council from other countries were: France: among the minority, Archbishops Darboy of Paris, Ginoulhiac of Lyons, Bishops Dupanloup of Orléans, and David of Saint-Brieuc; among the majority, Archbishop Guibert of Tours, Bishops Pie of Poitiers, Freppel of Angers, Plantier of Nîmes, Raess of Strasburg. Germany: minority Bishops Hefele of Rottenburg, Ketteler of Mainz, Dinkel of Augsburg; majority, Bishops Martin of Paderborn, Senestréy of Ratisbon, Stahl of Würzburg. Austria Hungary: minority, Archbishops Cardinal Rauscher of Vienna, Cardinal Schwarzenberg of Prague, Haynald of Kalocsa, and Bishop Strossmayer of Diakovar; majority, Bishops Gasser of Brixen, Fessler of Sankt Pölten, Riccabona of Trent, Zwerger of Seckau. Italy: minority, Archbishop Nazari di Calabiana of Milan, Bishops Moreno of Ivrea, Losanna of Biella; majority, Valerga, Latin Patriarch of Jerusalem, Bishops Gastaldi of Saluzzo, Gandolfi of Loreto. England: minority, Bishop Clifford of Clifton; majority, Archbishop Manning of Westminster. Ireland: minority, Archbishop MacHale of Tuam; majority, Archbishops Cullen of Dublin and Leahy of Cashel. The East: minority, Jussef, Greek-Melchite Patriarch of Antioch; majority, Hassun, Patriarch of the Armenians. Switzerland: minority, Bishop Greith of St-Gall; majority, Bishop Mermillod of Geneva. Important champions of the definition from the countries which sent no members of the minority were Archbishop Dechamps of Mechlin, Belgium, and Bishop Payà y Rico of Cuenca, Spain.

(3) Change of Procedure: the Hall of Assembly Reduced in Size

Various memorials were now sent the Holy Father petitioning for new rules of debate for the sake of a corresponding progress in the proceedings of the council. Consequently, the conciliar procedure was more exactly defined by the Decree "Apostolicis litteris", issued on 20 Feb., 1870. According to this Decree, any member of the council who wished to raise an objection to the draft under discussion was to send in his proposed amendments in writing, in order that they might be thoroughly considered by the respective deputation. In the general congregation the discussion of

a draft as a whole was always to precede the discussion of the individual parts of the draft of a decree. The members of a deputation received the right to speak in explanation or correction when not on the list of speakers. Speakers who wandered from the subject were to be called back to it. If a subject had been sufficiently debated the president, on the motion of at least ten members of the council, could put the question whether the council desired to continue the discussion or not, and then close the debate at the wish of the majority. Although these rules made for an evident improvement, still the minority was not satisfied with them, especially in so far as they contemplated a possible shortening of the debates. They expressed their dissatisfaction in several petitions which, however, had no success. On the other hand, every effort was made to satisfy another complaint which had reference to the bad acoustics of the council hall. Between 22 Feb. and 18 March, that is between the twenty-ninth and thirtieth sessions of the general congregation, the council hall was reduced about one-third in size for the use of the general congregations, so that the fathers who were thus brought closer together could understand the speakers better. The hall was restored to its original size for each of the public sessions.

(4) Completion of the First Constitution

The interruption thus caused was used by the deputation on Faith to revise the draft of the Decree "De doctrina catholica" in accordance with the wishes of the general congregation. On 1 March, Bishop Martin of Paderborn laid before the deputation the first part of the revision, the work of Father Joseph Kleutgen, S.J. It consisted of an introduction and four chapters with the corresponding canons. After an exhaustive discussion in the deputation, it was ready to be distributed to the fathers of the council on 14 March as the actual "Constitutio de fide catholica". A report in writing was also added by the deputation. Archbishop Simor of Gran gave the oral report on 18 March in the thirtieth general congregation. The debate began on the same day, and was closed after seventeen sessions on 19 April, in the forty-sixth general congregation. Over three hundred proposed amendments were brought up and discussed. Although many objections were made by both sides, yet the new rules of procedure made possible a relatively smooth course to the debates. The only disturbing incident was the passionate speech of Bishop Strossmayer of Diakovár on 22 March in the thirty-first general congregation; it called forth a storm of indignation from the majority, which finally forced the speaker to leave the tribune. On 24 April, the first Constitution, "De fide catholica", was unanimously adopted in the third public session by the 667 fathers present, and was formally confirmed and promulgated by the pope.

C. The Question of Papal Infallibility

(1) Motions calling for and opposing Definition

The opponents of infallibility constantly assert that the pope convoked the council of the Vatican solely to have papal infallibility proclaimed. Everything else was merely an excuse and for the sake of appearances. This assertion contradicts the actual facts. Not a single one of the numerous drafts drawn up by the preparatory commission bore on papal infallibility. Only two of the twenty-one opinions sent in by the Roman cardinals mentioned it. It is true that a large number of the episcopal memorials recommended the definition, but these were not taken into consideration in the

preparations for the council. It was not until the contest over papal infallibility outside of the council grew constantly more violent that various groups of members of the council began to urge conciliar discussion of the question of infallibility. The first motion for the definition was made on Christmas, 1869, by Archbishop Dechamps of Mechlin. He was supported by all the other Belgian bishops, who presented a formal opinion of the University of Louvain, which culminated in a petition for the definition. The actual petition for the definition was first circulated among the fathers of the council on New Year's Day, 1870. Several petitions from smaller groups also appeared, and the petitions soon received altogether five hundred signatures, although quite a number of the friends of the definition were not among the number of subscribers. Five opposing memorials circulated by the minority finally obtained 136 names. Upon this, early in Feb., the congregation for petitions unanimously, with exception of Cardinal Rauscher, requested the pope to consider the petition for definition. Pius IX was also in favour of the definition. Therefore on 6 March, the draft of the Decree on the Church of Christ, which had been distributed among the fathers on 21 Jan., was given a new twelfth chapter entitled "Romanum Pontificem in rebus fidei et morum definiendis errare non posse" (The Roman Pontiff cannot err in defining matters of faith and morals). With this the matter dropped again in the council.

(2) *The Agitation Outside the Council*

The petitions concerning infallibility called forth once more outside the council a large number of pamphlets and innumerable articles in the daily papers and periodicals. About this time the French Oratorian Gratry and Archbishop Dechamps of Mechlin opposed each other in controversial pamphlets. A letter published by Count Montalembert on 27 Feb., 1870, in which he spoke of an idol which had been erected in the Vatican, attracted much attention. In England, Newman gave anxious expression of his fears as to the bad results of the declaration of infallibility in a letter written in March, 1870, to his bishop, Ullathorne of Birmingham. The most extreme opponent was Professor Döllinger of Bavaria. In his "Römische Briefe vom Konzil", published in the "Allgemeine Zeitung" and issued in book form (Munich, 1870), under the pseudonym of "Quirinus", he used information sent him from Rome by his pupils, Johann Friedrich and Lord Acton. In these letters he did everything he could by distorting and casting doubts upon facts, by scorn and ridicule, to turn the public against the council. This was especially so in an article of 19 Jan., 1870, in which he attacked so severely the address on infallibility, which had just become known, that even Bishop Ketteler of Mainz, an old pupil of Döllinger's and a member of the minority, protested publicly against it. The Governments of the different countries also took measures on the subject of infallibility. As soon as the original draft of the decree "De ecclesia" with its canons was published in the "Allgemeine Zeitung", Count von Beust, Chancellor of Austria, sent a protest against it to Rome on 10 Feb., 1870, which said that the Austrian Government would forbid and punish the publication of all decrees that were contrary to the laws of the State. The French minister of foreign affairs, Daru, also sent a threatening memorandum on 20 Feb. He demanded the admission of an envoy to the council, and notified the other Governments of his steps in Rome. Austria, Bavaria, England, Spain and Portugal declared their agreement with the memorandum. The president of the

Prussian ministry, Bismarck, would not change his attitude of reserve, notwithstanding the urgency of von Arnim, the ambassador at Rome. On 18 April, the leader of the agitation, Count Daru, retired from his post in the ministry. The president of the French ministry, Ollivier, assumed charge of foreign affairs; he was determined to leave the council free.

(3) *The Debates in the Council*

In the meantime the bishops of the minority in the council had constantly sought to block the matter, and especially to exert influence to this end on Cardinal Bilio, the president of the deputation on faith. If the members of the majority had not urged the fulfilment with the same perseverance, papal infallibility would never have reached debate. Finally, on 29 April, during the forty-seventh general congregation, the president interrupted the second debate on the smaller Catechism by the announcement that as soon as possible the fathers should receive for examination the draft of a Constitution, "De Romano Pontifice" which would contain the dogma of the primacy and of the infallibility of the pope. For this purpose the deputation on faith had altered the eleventh and twelfth chapters of the old draft of the Constitution "De ecclesia". On 9 May it was distributed among the fathers in printed form as the "Constitutio prima de ecclesia", consisting of 4 chapters and 3 canons. For a full month (13 May 13 June) the general debate over the draft as a whole was carried on in fourteen general congregations, and sixty-four, mostly very long, speeches were delivered. The following special debates over the separate chapters and canons lasted more than a month. Not less than a hundred speakers took part in the discussions, which were carried on from 6 June to 13 July, in 22 congregations. Most of the speeches were on the fourth chapter, which treated papal infallibility. The most prominent speakers of the minority were: French; Darboy, Ginoulhiac, Maret; German; Hefe, Ketteler, Dinkel; Austrian; Raucher, Schwarzenberg, Strossmayer; United States of America and Canada; Vérot and Connolly. Archbishop Kenrick of St. Louis, who lost his opportunity to speak by the closing of the general debate, published in pamphlet form his "Concio in concilio habenda, at non habita". On the other hand the conciliar speech published under the name of Bishop Strossmayer is a forgery perpetrated by an apostate Augustinian monk from Mexico, José Agostino de Escudero, who was then in Italy (cf. Grandera- Kirch III, 189). The majority were chiefly represented by the French members of the council; Pie and Freppel; the Belgian member, Dechamps; the English member, Manning; the Irish, Cullen; the Italian members, Gastaldi and Valerga; the Spanish member, Paya y Rico; the Austrian, Gasser; the German members, Martin and Senestrey; the American member, Spalding. Several members of the minority as Kenrick, Bauseher, Hefe, Schwarzenberg, and Ketteler, discussed the question of infallibility in pamphlets that they individually issued, to which naturally the majority were not slow to reply. The most important of these answers was the "Animadversiones of the conciliar theologian, W. Wilmers, S.J., in which the writings of the last four of the antagonists just mentioned were, in succession, thoroughly confuted. Scarcely in any parliament have important matters ever been subjected to as much discussion as was the question of papal infallibility in the Vatican Council in the course of two months all the reasons pro and con had been again and again discussed, and only what had been already often said could now be repeated. Consequently in the eighty-second general congregation

held on 4 July, most of those who still had the right to speak, not only of the majority, but also of the minority, renounced the privilege, and the cardinal president was able, amid general applause, to close the debates.

(4) Final Voting and Definition

The time of the eighty-third, eighty-fourth, and eighty-fifth general congregations was almost entirely occupied with the reports of the deputation on faith concerning the last two chapters. The report of Prince Bishop Gasser on the fourth chapter was a very notable one. In the eighty-fifth general congregation held on 13 July a general vote was taken on the entire draft. There were present 601 fathers. Of these 451 voted *placet*, 62 *placet juxta modum* (conditional affirmative), 88 *non placet*. Of the North American bishops only 7 voted *non placet*; these were Kenrick, Vérot, Domenec, Fitzgerald, MacQuaid, MacCloskey, and Mrac. Bishop Fitzgerald still voted *non placet* in the fourth public session, while on this occasion Bishop Domenec voted *placet*. The other five did not attend this session. In the eighty-sixth general congregation the fathers condemned, on the motion of the president, two anonymous pamphlets which calumniated the council in the coarsest manner. One, entitled "Ce qui se passe au Concile", culminated in the assertion that there was no freedom of discussion at the council. The other, "La dernière heure du Concile", repeated all the accusations that the enemies of the council had raised against it, and exhorted the bishops of the minority to stand firm and courageously vote *non placet* in the public session. On account of the war which threatened to break out between Germany and France, a number of fathers of both opinions had returned home. Shortly before the fourth public session a large number of the bishops of the minority left Rome with the permission of the directing officers of the council. They did not oppose the dogma of papal infallibility itself, but were against its definition as inopportune. On Monday, 18 July, 1870, one day before the outbreak of the Franco-German War, 435 fathers of the council assembled at St. Peter's under the presidency of Pope Pius IX. The last vote was now taken; 433 fathers voted *placet*, and only two, Bishop Aloisio Riccio of Cajazzo, Italy, and Bishop Edward Fitzgerald of Little Rock, Arkansas, voted *non placet*. During the proceedings a thunderstorm broke over the Vatican, and amid thunder and lightning the pope promulgated the new dogma, like a Moses promulgating the law on Mount Sinai.

D. The Council from the Fourth Public Session until the Prorogation

At the close of the eighty-fifth general congregation a "Monitum" was read which announced that the council would be continued without interruption after the fourth public session. Still, the members received a general permission to leave Rome for some months. They had only to notify the secretary in writing of their departure. By 11 Nov., St. Martin's day, all were to be back again. So many of the fathers made use of this permission that only a few more than 100 remained at Rome. Naturally these could not take up any new questions. Consequently the draft of the decree on vacant episcopal sees, which had been amended in the meantime by the deputation of discipline, was again brought forward, and debated in three further general congregations. The eighty-ninth, which was also to be the last, was held on 1 Sept. On 8 Sept. the Piedmontese troops entered the States of the Church at several points; on Tuesday, 20 Sept., a little before eight o'clock in the

morning,, the enemy entered Rome through the Porta Pia. The pope was a prisoner in the Vatican. He waited a month longer. He then issued on 20 Oct. the Bull, "Postquam Dei munere", which prorogued the council indefinitely. This day was the day after a Piedmontese decree had been issued organizing the Patrimony of Peter as a Roman province. A circular letter issued by the Italian minister, Visconti Venosta, on 22 Oct., to assure the council of the freedom of meeting, naturally met with no credence. A very remarkable letter was sent from London on the same day by Archbishop Spalding to Cardinal Barnabo, prefect of the Propaganda at Rome. In this letter he made the proposition, which met the approval of Cardinal Cullen, Archbishop Manning, and Archbishop Dechamps, to continue the council in the Belgian city of Mechlin, and gave ten reasons why this city seemed suitable for such sessions. Unfortunately the general condition of affairs was such that a continuation of the council even at the most suitable place could not be thought of.

III. ACCEPTANCE OF THE DECREES OF THE COUNCIL

After the council had made its decision everyone naturally looked with interest to those members of the minority who had maintained their opposition to the definition of infallibility up to the last moment. Would they recognize the decision of the council, or, as the enemies of the council desired would they persist in their opposition? As a matter of fact, not a single one of them was disloyal to his sacred duties. As long as the discussions lasted they expressed their views freely and without molestation, and sought to carry them into effect. After the decision, without exception, they came over to it, The two bishops who on 18 July had voted *non placet* advanced to the papal throne at the same session and acknowledged their acceptance of the truth thus defined. The Bishop of Little Rock said simply and with true greatness, "Holy Father, now I believe." It is not possible in this brief space to mention the accession of each member of the minority. As concerns the members from North America who are of special interest here, Bishop Vérot of St. Augustine gave his adhesion to the dogma while still at Rome in a letter addressed on 25 July to the secretary of the council. Bishop Mrac of Sault-Saint-Marie sent his declaration of adherence at the latest by Jan., 1872. A year later Bishop Domenec of Pittsburgh did the same. In 1875 Bishop MacQuaid of Rochester, if not earlier, announced his adherence to the dogma by its formal and public promulgation. When Archbishop Kenrick of St. Louis returned to his diocese on 30 Dec., 1870, he made an address at the reception given him, in which he first gave the reasons that had decided his position at the council as long, as the question was open to discussion, and then closed with the declaration that, now the council had decided, he submitted unconditionally to its decree. He expressed himself similarly in a letter of 13 Jan., 1871, to the prefect of the Propaganda. When Lord Acton questioned the archbishop in regard to his submission, the latter replied by a long letter dated 29 March, 1871, which shows, it may be, a certain discontent, but which clearly confirmed his belief in the infallibility of the pope. In the same way the distinguished Frenchmen and Englishmen who, outside of the council, had expressed opinions antagonistic to the promulgation of infallibility, e.g. Gratry, Newman, Montalembert, and finally, as it appears, Acton, also submitted after the decision had been made. On the other hand, in Germany a number of Professor Döllinger's

adherents apostatised from the Church and formed the sect of Old Catholics. Döllinger also apostatized, without, however, connecting himself with any other denomination. In Switzerland the opponents of the council united in a sect called Christian Catholics. Outside of these, however the Catholics of the entire world, both clergy and laity, accepted the decision of the council with great joy and readiness. After the close of the Franco-German War the German Government made the dogma of infallibility the excuse for what is called the *Kulturkampf*. Yet the bishops and priests were ready to bear loss of property, imprisonment, and exile rather than be disloyal to any part of their ecclesiastical duties. The Austrian Government took the opportunity offered by the definition to relieve itself from uncomfortable obligations, and declared that, as the other contracting party had changed, the Concordat with the Roman See was annulled. Excepting in a few Swiss cantons, the promulgation of the decision of the council did not encounter any actual difficulties elsewhere.

IV. THE RESULTS

In comparison with the large scope of the preparations for the council, and with the great amount of material laid before it for discussion in the numerous drafts and proposals, the immediate result of its labours must be called small. But the council was only in its beginnings when the outbreak of war brought it to a sudden close. It is also true as is known, that reasons within the council prevented a larger result from its sessions. Thus it was that in the end only two not very large Constitutions could be promulgated. If, however, the contents of these two constitutions be examined their great importance is unmistakable. The contents meet in a striking manner the needs of the times.

A. The dogmatic Constitution on the Catholic Faith defends the fundamental principles of Christianity against the errors of modern Rationalism, Materialism, and atheism. In the first chapter it maintains the doctrine of the existence of a personal God, Who of His own free volition for the revelation of His perfection, has created all things out of nothing, Who foresees all things, even the future free actions of reasonable creatures, and Who through His Providence leads all things to the intended end. The second chapter treats the natural and supernatural knowledge of God. It then declares that God, the beginning and end of all things can also be known with certainty by the natural light of reason. It then treats the actuality and necessity of a supernatural revelation, of the two sources of Revelation, Scripture and tradition, of the inspiration and interpretation of the Holy Scriptures. The third chapter treats the supernatural virtue of faith, its reasonableness supernaturalness, and necessity, the possibility and actuality of miracles as a confirmation of Divine Revelation; and lastly, the founding of the Catholic Church by Jesus Christ as the Guardian and Herald of revealed truth. The fourth chapter contains the doctrine, especially important to-day, on the connection between faith and reason. The mysteries of faith cannot, indeed, be fully grasped by natural reason, but revealed truth can never contradict the positive results of the investigation of reason. Contrariwise, however, every assertion is false that contradicts the truth of enlightened faith. Faith and true learning are not in hostile opposition; they rather support each other in many ways. Yet faith is not the same as a philosophical system of teaching that has been worked out and

then turned over to the human mind to be further developed, but it has been entrusted as a Divine deposit to the Church for protection and infallible interpretation. When, therefore, the Church explains the meaning of a dogma this interpretation is to be maintained in all future time, and it can never be deviated from under pretence of a more profound investigation. At the close of the Constitution the opposing heresies are rejected in eighteen canons.

B. The other dogmatic Constitution is of equal, if not greater, importance; it is the first on the Church of Christ, or, as it is also called in reference to its contents, on the Pope of Rome. "The introduction to the Constitution says that the primacy of the Roman pontiff, on which the unity, strength, and stability of the entire Church rests, has always been, and is especially now, the object of violent attacks by the enemies of the Church. Therefore the doctrine of its origin, constant permanence, and nature must be clearly set forth and established, above all on account of the opposing errors. Thus the first chapter treats of the establishment of the Apostolic primacy in the popes of Rome. Each chapter closes with a canon against the opposing dogmatic opinion. The most important matter of the Constitution is the last two chapters. In the third chapter the meaning and nature of the primacy are set forth in clear words. The primacy of the Pope of Rome is no mere precedence of honour. On the contrary, the pope possesses the primacy of regularly constituted power over all other Churches, and the true, direct, episcopal power of jurisdiction, in respect to which the clergy and faithful of every rite and rank are bound to true obedience. The immediate power of jurisdiction of the individual bishops in their dioceses, therefore, is not impaired by the primacy, but only strengthened and defended. By virtue of his primacy the pope has the right to have direct and free relations with the clergy and laity of the entire Church. No one is permitted to interfere with this intercourse. It is false and to be rejected to say that the decrees issued by the pope for the guidance of the Church are not valid unless confirmed by the *placet* of the secular power. The pope is also the supreme judge of all the faithful, to whose decision all matters under examination by the Church can be appealed. On the other hand, no further appeal, not even to an ecumenical council, can be made from the supreme decision of the pope. Consequently the canon appended to the third chapter says: "When, therefore, anyone says that the Pope of Rome has only the office of supervision or of guidance, and not the complete and highest power of jurisdiction over the entire Church, not merely in matters of faith and morals, but also in matters which concern the discipline and administration of the Church throughout the entire world, or that the pope has only the chief share, but not the entire fullness of this highest power, or that this his power is not actual and immediate either over all and individual Churches, or over all and individual clergy and faithful, let him be anathema."

The fourth chapter, lastly, contains the definition of papal infallibility. First, all the corresponding decrees of the Fourth Council of Constantinople, 680 (Sixth Ecumenical), of the Second Council of Lyons, 1274 (Fourteenth Ecumenical) and of the Council of Florence, 1439 (Seventeenth Ecumenical), are repeated and confirmed. It is pointed out, further, that at all times the popes, in the consciousness of their infallibility in matters of faith for the preservation of the purity of the Apostolic tradition, have acted as the court of last instance and have been called upon as such. Then

follows the important tenet that the successors of St. Peter have been promised the Holy Ghost, not for the promulgation of new doctrines, but only for the preservation and interpretation of the Revelation delivered by the Apostles. The Constitution closes with the following words: "Faithfully adhering, therefore, to the tradition inherited from the beginning of the Christian Faith, we, with the approbation of the sacred council, for the glory of God our Saviour, for the exaltation of the Catholic religion, and the salvation of Christian peoples, teach and define, as a Divinely revealed dogma, that the Roman pontiff, when he speaks *ex cathedra*, that is, when he, in the exercise of his office as shepherd and teacher of all Christians, by virtue of his supreme Apostolic authority, decides that a doctrine concerning faith or morals is to be held by the entire Church, he possesses, in consequence of the Divine aid promised him in St. Peter, that infallibility with which the Divine Saviour wished to have His Church furnished for the definition of doctrine concerning faith or morals; and that such definitions of the Roman pontiff are of themselves, and not in consequence of the Church's consent, irreformable."

What is given above is essentially the contents of the two Constitutions of the Vatican Council. Their import may be briefly expressed thus: in opposition to the Rationalism and Free-thinking of the present day the first Constitution gives authoritative and clear expression of the fundamental principles of natural and supernatural understanding of right and true faith, their possibility, necessity, their sources, and of their relations to each other. Thus it offers to all of honest intention a guide and a firm foothold, both in solving the great question of life and in all the investigations of learning. The second Constitution settles finally a question which had kept the minds of men disturbed from the time of the Great Schism, and the Council of Constance, and more especially from the appearance of the four Gallican articles of 1682, the question of the relation between the pope and the Church. According to the dogmatic decision of the Vatican Council, the papacy founded by Christ is the crown and centre of the entire constitution of the Catholic Church. The papacy includes in itself the entire fullness of the power of administration and teaching bestowed by Christ upon His Church. Thus ecclesiastical particularism and the theory of national Churches are forever overthrown. On the other hand, it is extravagant and unjust to say that by the definition of the primacy of jurisdiction and of the infallibility of the pope the ecumenical councils have lost their essential importance. The ecumenical councils have never been absolutely necessary. Even before the Vatican Council their decrees obtained general currency only through the approval of the pope. The increasing difficulty of their convocation as time went on is shown by the interval of three hundred years between the nineteenth and twentieth ecumenical councils. The definitions of the last council have, therefore, brought about the alleviation that was desirable and the necessary legal certainty. Apart from this, however, the hierarchy united with the pope in a general council is, now as formerly, the most complete representation of the Catholic Church.

Lastly, as regards the drafts and proposition which were left unsettled by the Vatican Council, a number of these were revived and brought to completion by Pius IX and his two successors. To mention a few: Pius IX made St. Joseph the patron saint of the Universal Church on 8 Dec., 1870, the same year as the council. Moral and religious problems, which it was intended to lay before

the council for discussion, are treated in the encyclicals of Leo XIII on the origin of the civil power (1881), on freemasonry (1884), on human freedom (1888), on Christian marriage (1880), etc. Leo XIII also issued in 1900 new regulations regarding the index of forbidden books. From the beginning of his administration Pius X seems to have had in view in his legislative labours the completion of the great tasks left by the Vatican Council. The most striking proofs of this are: the reform of the Italian diocesan seminaries, the regulation of the philosophical and theological studies of candidates for the priesthood, the introduction of one catechism for the Roman church province, the laws concerning the form of ritual for betrothal and marriage, the revision of the prayers of the Breviary, and, above all, the codification of the whole of modern canon law.

(1) Archives of the Vatican Council: All official papers relating to the preparations for the Vatican Council, its proceedings, and the acceptance of its decrees, have been preserved in the Vatican Palace, in two rooms which were set apart for them. The speeches made at the general congregations exist in shorthand notes and handwriting; in addition, Pius IX also arranged to have them printed, The first four folio volumes were issued by the Vatican Press in 1875-8, the fifth and final volume appeared in 1884. About a dozen copies of each volume are in the archives.

(2) Collections of Official Documents: CECCONI, *Storia del Concilio ecumenico Vaticano scritta sui documenti originali. Antecedenti*, I (Rome, 1873), II, in III pts. (Rome, 1879); FRIEDRICH, *Documenta ad illustrandum Concilium Vaticanum* (II pts., Nördlingen, 1871). FRIEDBERG, *Sammlung der Aktenstücke zum ersten vatikanischen Konzil mit einem Grundriss der Geschichte desselben* (Tübingen, 1872); MARTIN, *Omnium Concilii Vaticani quae ad doctrinam et disciplinam pertinent documentorum collectio* (Paderborn, 1873); the most complete collection is *Acta et decreta sacrosancti oecumenici Concilii Vaticani*, ed. SCHNEEMAN AND GRANDERATH (Freiburg, 1892); this collection is in the *Collectio Lacensis* vol VII. The decrees of the council have often been published as at Rome by the Propaganda, at Freiburg. and Ratisbon.

(3) Historical Accounts: (a) Catholic: by the secretary of the council, FESSLER, *Das vatikanische Concilium, dessen äusere Bedeutung und innere Verlauf* (Vienna, 1871); MANNING, *The True Story of the Vatican Council* (London, 1877); OLLIVIER, *L'église et l'état au concile du Vatican* (2 vols., Paris, 1879); GRANDERATH AND KIRCH, *Geschichte des vatikanischen Konzils von seiner ersten Ankündigung bis zu seiner Vertagung, nach den authentischen Dokumenten* (3 vols., Freiburg, 1903 and 1906); FROND, *Actes et histoire du concile oecuménique de Rome* (8 vols., Paris, 1869), numerous illustrations; GRANDERATH in WETZER AND WELTE, *Kirchenlexikon*, s. v. *Vatican. Concil.* (b) Non-Catholic: FRIEDRICH, *Tagebuch während des vatikanischen Konzils geführt* (2nd ed., Nördlingen, 1873); IDEM, *Geschichte des vatikanischen Konzils* (3 vols., Bonn, 1877-87); MOZLEY, *Letters from Rome on the Occasion of the Ecumenical Council 1869-1870* (2 vols., London, 1891); MIRBT in *Realencyklopädie für protest. Theol.*, s. v. *Vatican. Concil.* In addition, consult the biographies of the most distinguished members of the council. The most important works and pamphlets that appeared during the council are mentioned in the course of the article.

(4) Explanations of the Decrees of the Council: GRANDERATH, *Constitutiones dogmaticoe s. oecumen. Concilii Vaticani, explicat* (Freiburg. 1892); VACANT, *Etudes théologiques sur les constitutions du concile du Vatican* (2 vols., Paris, 1895).

K. KIRCH

Vatican Observatory

Vatican Observatory

The Vatican Observatory now bears the official title, "Specola Astronomica Vaticana". To understand its history it is necessary to remark that the designations *osservatorio* or *specola* are not restricted to astronomy, but may mean any elevated locality from which aerial phenomena are observed. From this point of view the history of the Specola Vaticana has passed through four successive stages.

(1) The first period of the Vatican Observatory is thus described in the Motu Proprio of 1891 by Leo XIII:

Gregory XIII ordered a tower to be erected in a convenient part of the Vatican buildings, and to be fitted out with the greatest and best instruments of the time. There he held the meetings of the learned men to whom the reform of the calendar had been entrusted. The tower stands to this day, a witness to the munificence of its author. It contains a meridian line by Ignazio Danti of Perugia, with a round marble plate in the centre adorned with scientific designs. When touched by the rays of the sun that are allowed to enter from above, the designs demonstrate the error of the old reckoning and the correctness of the reform.

The first half of this narration is based upon a tradition supported by Gili and Calandrelli (see LILIUS); it is connected with the Vatican Observatory, at least as far as the locality is concerned. The tower is 73 metres above sea level and stands over the museum and library, between the courtyards Belvedere and della Pigna. It is often called the "Tower of the Winds"

(2) The second period of the Vatican Observatory deals mainly with the person of Mgr. Filippo Luigi Gili, whose life has been written by Lais. Gili was born in Corneto in 1756, and died in Rome, in 1821, a beneficed clergyman of St. Peter's Basilica. He was a universal genius, well versed in physics and in biology, in archeology and in the Hebrew language. The Gregorian Tower was then in charge of the Vatican librarian, to which office Cardinal Zelada had been appointed in 1780. Zelada wished to honour the traditions of the tower by devoting its upper part to an observatory. In 1797 he obtained the sanction of Pius VI, and placed over the entrance to the tower the Latin inscription *Specula Vaticana*. The upper story was fitted up with meteorological and magnetic instruments, with a seismograph, a Dolland telescope, a small transit and pendulum clock, and the observatory was given in charge of Mgr. Gili. From 1800 to 1821 Gili made an uninterrupted series of meteorological observations, reading the instruments twice a day (after 6 a. m. and 2 p.

m.), according to the programme of the Mannheim Meteorological Society. The observations of about seven years of the long series are published, while the rest are in great part preserved as manuscripts in the Vatican Library. There are also deposited astronomical observations of eclipses, comets, Jupiter's satellites, and of a transit of Mercury. Gili's scientific activity extended beyond the Vatican Observatory and beyond Rome. The meridian line in front of St. Peter's, with the obelisk as gnomon and the readings of the seasons by the length of the shadow, is due to him; so are also the signs on the floor of St. Peter's Basilica, indicating the lengths of the greatest churches of the world, likewise the two old clocks of French and Italian style, in the front of the basilica, and finally the first lightning rod on St. Peter's cupola. Similar memories of him exist in various churches and cities of Italy. The tombstone in Ara Coeli calls him a man "mitissimi ingenii, modestiæ singularis, pius". At the death of Gili the Vatican Observatory was discontinued, for the following reason: Pius VII and Leo XII raised the standard of studies in the papal states. The latter pope, in his Apostolic letter, "Quod divina sapientia", gave instructions about observatories, publications, and intercourse with foreign scientists. In 1787 the observatory at the Roman College had been founded, under Calandrelli, and was declared preferable to the Vatican, as more accessible to students in the city, and not obstructed by the great cupola of St. Peter's (*Giornale Arcadico*, II, p. 407). On the advice of Father Boscovich the instruments were then transferred from the Gregorian Tower to the Roman College.

(3) The revival of the Vatican Observatory in its third period was occasioned, on the one hand, by the loss to the Church of the Roman College and its observatory in 1870, and on the other, by the exposition of instruments presented to Leo XIII by the Italian clergy for the celebration of his golden jubilee of priesthood, in 1888. The Barnabite Father Denza, well-known as founder of the Italian Meteorological Society, then proposed to Leo XIII to preserve the instruments in the Gregorian Tower, and to restore that locality to its former purposes. The plan was accepted and a series of the best instruments was procured, partly from donations by Hicks in London, partly by purchase of self-registering apparatus from Richard in Paris. From the observatory of the late Marquis of Montecuccoli in Modena, of which Denza had been director, a four-inch equatorial, a three-inch transit instrument, and four pendulum clocks with two chronometers, were acquired. Father Denza had still broader plans. The year before in 1887, Mouchez had organized the cooperation of a number of observatories for continuing Argelander's observations to fainter magnitudes by means of photography. At the second meeting of the committee in Paris, in 1889, Denza declared his intention to join in the work. For this purpose, Leo XIII ceded to the Vatican Observatory a second tower, more than 400 metres distant from the Gregorian. It is the western of the two towers remaining from the Leonine Fortress, which had been built for defence against the Saracens in 848-53. With a diameter of 17 metres and a thickness of 4.5 metres in the lower walls, it seemed large and strong enough to support the thirteen-inch photographic refractor which was ordered from Gauthier in Paris. During the four years following, the observatory remained in charge of the vice-director, Father Lais, of the Oratory who has conducted the photographic work from the beginning, all at his own expense. From 1898 until 1905 the directorship was in the hands of

the Augustinian Father Rodriguez, a specialist in meteorology. Seven volumes were published during the third period of the observatory, four under Denza, the fifth under Lais, and the last two under Rodriguez.

(4) The fourth and present period of the Vatican Observatory began with the appointment in November, 1904, by Pius X of Archbishop (now Cardinal) Maffi as President of the Specola. His first step was to remedy the great difficulty caused by the separation of the two towers. According to his plans, the Gregorian Tower was to be abandoned to historical archives, and the second round tower of the old Leonine Fortress, with the adjoining summer residence of Leo XIII, was to be given over to astronomy. The two old towers were to be connected with each other by a passage over the fortification wall, with an iron bridge spanning a gap of 85 metres in length. For carrying out these plans, the author of the present article was designated in the audience given to Cardinal Maffi on 14 March, 1906, and officially appointed on 26 April. The fortification wall, a thousand years old, which extends about 400 metres, is now crowned with four rotary domes, covering the astrographic refractor in the Leonine Tower, and a new sixteen-inch visual telescope in the second tower, called Torre Pio X. A four-inch equatorial stands on a half round bastion, at the west end of the bridge, and a photoheliograph at the east end of the old wall, over the barracks of the gendarmes. The old transit instrument is mounted on a vault over the main walls of the new residence. After the material restoration of the observatory, the main problems were a library and the measuring of the astrographic plates. The rich meteorological library was consigned to the Pontifical Academy Lincei, and the old meteorological and seismic instruments were mainly sent to the observatory in Valle di Pompei. An astronomical library is now filling two rooms of the new residence; old treasures were secured to it by the loan of the scientific collection from the Vatican Library, the latter confining itself to historical and literary branches. The astrographic plates are being measured with two new Repsold machines, which are placed in a neighbouring convent, in charge of three Sisters. For nearly four years the director enjoyed the cooperation of Father Stein, S.J., by which it was possible to publish the first three numbers of the new series, besides minor essays, and the last two series of the atlas of variable stars. At the reunion of the Astrographic Congress at Paris in 1909, P. Lais presented thirty charts reproduced by himself on silver-bromide paper.

DENZA, *La Nuova Specola Vaticana* in *Atti, Acad. Pont. N. Lincei* XLIII (1889); ZAHM, *The Observatory of the Vatican* in *The Cosmopolitan* (1895), well illustrated but not exact in all details; STEIN, *Restauri della Specola Vaticana* in *Rivista di Fisica etc.*, IX (Pavia, 1908); HAGEN, *Vaticanische Sternwarte* in *V. J. S. Astron. Ges.*, XLV (1910); MAFFI, *Specula Vaticana, Inaugurazione* (Rome, 1910); PARR, *The Vatican Observatory of Today in Knowledge* (1911), correct, except the additions by the editors.

J.G. HAGEN

Vaudreuil

Vaudreuil

Philippe de Rigaud, Marquis de Vaudreuil

Governor of Canada, born in Languedoc, France, in the first half of the seventeenth century, of Louis R. de Vaudreuil and Marie de Chateau-Verdun; died at Quebec, 10 October, 1725. In the king's musketeers, in which he served (1659-76), he ranked as brigadier and finally as colonel. He went to Canada (1687) in command of a marine detachment. After the massacre of Lachine he prevented the Iroquois from assailing Montreal (1689). In 1690 he shared in the defense of Quebec against Phips. In 1698 he received the Cross of St. Louis, and replaced, as Governor of Montreal, Callières, who was promoted Governor-General of Canada. In 1702 the fief still bearing his name was given him. He again succeeded Callières (1703), his prudence and experience fitting him to govern the colony at that trying period. He was loved by the people and feared by the Indians with whom he strove to strengthen an alliance, while the English colonies sought to shake their fidelity. He adopted one of the captives of the Abenaki raids, Esther Wheelwright, who entered the Ursuline cloister in Quebec, and was later appointed first superior after the conquest. In 1710 he fortified Quebec against the threatened attack of Admiral Walker, whose fleet was shipwrecked off Egg Island (1711). Peace being restored, Vaudreuil encouraged agriculture, commerce, and education. The Country was divided into 82 parishes, Montreal was fortified by a wall, and a census taken, giving an entire population of 25,000 souls, of which 7000 were in Quebec and 3000 in Montreal. He received the Grand Cross of St. Louis (1721), and ordered the construction of Fort Niagara. His wife, Louise Elizabeth Joybert, who bore him twelve children, had been appointed (1708) under-governess to the royal children.

Louis Philippe, Count de Vaudreuil

Second son of preceding, b. at Montreal, 1691; d. 27 Nov., 1763. Entering the army at the age of seven he ranked as captain in 1738, and received the Grand Cross of St. Louis (1745). Transferred to the navy as chief of a squadron, he took part (1747) in a combat off Cape Finistère between the fleets of M. de l'Estenduère and Admiral Hawke, one of the most terrible engagements on record. After eight hours, the French admiral was about to yield, when Vaudreuil, commanding the *Intrépide*, hastened to the front, and, bearing the brunt of the enemy's broadsides, forced them to cease firing. In reward he was appointed lieutenant-general of the naval forces.

François-Pierre, Marquis de Vaudreuil

Brother of preceding, b. 3 Feb., 1703. He was appointed lieutenant (1724), Knight of St. Louis (1738), king's lieutenant (1748), and Governor of Three-Rivers (1749). He fought with Montcalm at Chouagen (Oswego), contributing to the victory by crossing the river with the vanguard. He was Governor of Montreal from 1755 until the conquest forced him to emigrate to France.

Pierre, Marquis de Vaudreuil-Cavagnal

Second governor of that name and the last under the French rule, fifth son of the former governor, b. at Quebec, 22 Nov., 1698; d. in France about 1767. He successively ranked as major of the troops (1726), Knight of St. Louis (1730), Governor of Three-Rivers (1733), of Louisiana (1742), Governor-General of Canada (1755) during the period of the Seven Years War. To his demand of reinforcements, France responded by sending Montcalm, Lévis, Bouchard, Bougainville, who,

though unable to save New France, covered her with glory. The merit of the victories, Oswego, William-Henry, Carillon, has heretofore been too largely attributed to Vaudreuil, who never appeared in battle and merely issued orders that were often a hindrance instead of a help to the experienced and clear-sighted commander-in-chief, thereby rendering his exploits doubly heroic. Vaudreuil even tried in his correspondence to belittle Montcalm's merit, and was too easily influenced by Bigot and his unscrupulous clique who dilapidated the public treasure to the detriment of the army and of the nation. This apparently rigorous judgment is supported by the latest historical researches. After the fatal battle of the Plains of Abraham, Vaudreuil withdrew to Montreal; when, despite the victory of Lévis over Murray at St. Foy (1760), the French lost all hope, he signed the capitulation of Canada, and retired to France.

Louis Philippe de Rigaud, Comte de Vaudreuil

Eldest son of preceding, b. at Quebec, 1723; d. in France, 1802; entered the navy in 1741. When the American revolutionary war began he refused the governorship of San Domingo to remain at sea. He commanded the *Fendant* at the conquest of Grenada by d'Estaing, captured 6 million livres of booty in his cruises, conquered Senegal (1779), took part in five other engagements, one of which, off the Chesapeake, resulted in the surrender of Cornwallis. At the disaster of Dominica he saved 12 ships and retreated successfully. Louis XVI thanked him personally and gave him the Grand Cross of St. Louis (1789). During the French Revolution he was elected to the States General; he defended the Tuileries (1792), and emigrated, returning to France under the Consulate.

LIONEL LINDSAY

Herbert Vaughan

Herbert Vaughan

Cardinal, and third Archbishop of Westminster; b. at Gloucester, 15 April, 1832; d. at St. Joseph's College, Mill Hill, Middlesex, 19 June, 1903; he came of a family which had been true to the Catholic Faith all through the ages of the persecution. Its members had suffered for their faith in fines and imprisonment and double land taxes. Sometimes, too, they suffered for their politics. In the Civil War they sided with Charles I and were nearly ruined. After the Stuart rising in 1715, John Vaughan of Courtfield refused to take the oath of allegiance to the House of Hanover, and two years later his name appears in a list of "Popish Recusants Convict". When "Prince Charlie" in 1745 raided south to Derby, two of the Vaughans rode back with him to Scotland, and fought by his side at Culloden. Driven into exile, both took service under the Spanish king, and the younger rose to the rank of field-marshal. The son of the elder brother, the great-great-grandfather of the cardinal, was allowed to come back to England and to resume possession of the family estates at Courtfield, in Herefordshire.

Colonel John Vaughan, the cardinal's father, married, in 1830, Eliza, daughter of Mr. John Rolls, of the Hendre, Monmouthshire, and an aunt of the first Lord Llangattock. Mrs. Vaughan became a convert to the Catholic Faith shortly before her marriage and was, in many ways, a remarkable woman. It was her habit to spend an hour every day in prayer before the Blessed Sacrament, begging of God that He would call her children to serve Him in the choir or in the sanctuary. In the event all her five convents, and of her eight sons six became priests, three of them bishops. Herbert, the eldest born, went to the Jesuit College at Stonyhurst in the spring of 1841, and remained until the summer of 1847. From Stonyhurst he went to the Jesuit College at Brugelette, in Belgium, for three years. From an early age his thoughts had been turned to the priesthood. His mother, writing when he was only fourteen, said she was confident that he would be a priest. His father's dearest wish was to see him win distinction as an English soldier, but when he was only sixteen he had made up his mind to give himself to the Church. On leaving Brugelette he went to the Benedictines at Downside Abbey for twelve months as an ecclesiastical student. In the autumn of 1851 he arrived in Rome to attend the lectures at the Collegio Romano, and there for a time he shared lodgings with the poet, Aubrey de Vere. The student years in Rome were a time of trial and difficulty. Wretched and incapacitating health made the labour of study a constant strain. In the intimate diary which he kept at this time he constantly reproaches himself for his excessive impetuosity in speech and action. He was ordained, at the age of twenty-two, on 28 October, 1854, at Lucca, and said his first Mass in Florence at the Church of the Annunziata on the following day.

During all his student years he had hoped to be a missionary in Wales, but at Cardinal Wiseman's call he now accepted the position of vice-president at St. Edmund's College, Ware, the principal ecclesiastical seminary for the south of England. He went there in the autumn of 1855, after spending some months in a voyage of discovery among the seminaries of Italy, France, and Germany. Though not yet at the canonical age for the priesthood, and younger than some of the students, he was already vice-president at St. Edmund's. The position, a difficult one in any case, was made impossible when it became known that he had recently become an Oblate of St. Charles and therefore was a disciple of Manning. At once he was involved in the controversy between Wiseman and his chapter which darkened and embittered the last years of the cardinal's life. Wiseman was the friend and protector of Manning, and Vaughan was regarded as the representative of a man suspected of a wish to bring all the ecclesiastical education of Southern England under the control of the Oblates. Litigation followed in Rome, and the Oblates eventually withdrew from St. Edmund's. Vaughan looked back upon his work at St. Edmund's with a sad sense of frustration. The disappointment worked in two ways. He began to look for external work in the immediate present and, for the future, he dreamed dreams. He collected money and built a church in the county town, Hertford, and founded a mission at Enfield. But he wanted to do something great for God. Since he was a boy his constant prayer had been that whatever else was withheld he might live an intense life. He resolved to consecrate himself to the service of the Foreign Missions. Blessed [now St.-tr. note] Peter Claver was his ideal hero and saint, and his first purpose was to go himself to Africa or Japan.

But, gradually, after many months of indecision, he came to want something which should be more permanent than anything dependent on the life of an individual. A great college which should send out an unending stream of missionaries to all the heathen lands seemed a worthier object of effort. He had no money but he had a sublime faith, a perfect courage, and he determined to go abroad and beg, and to begin with the Americas. With the approval of Wiseman and the blessing of the pope he set sail for the Caribbean Sea in December, 1863. Landing at Colon, he crossed the Isthmus of Panama, then part of New Granada. The Government was at war with the Church, and the clergy were forbidden to say mass or to administer the sacraments until they had taken an oath to accept the Constitution, which required what was regarded as an acknowledgement of the supremacy of the civil power in spiritual matters. The churches were all closed and, though hundreds of people were dying of small-pox, they were left to die without the help of a priest. That was enough for Vaughan. he threw himself into the work, said Mass, heard confessions, and gave extreme unction without the least regard for the government prohibition. He was summoned before the president and told to desist. He had promised to say Mass the next morning in the house of a dying woman and to give her Viaticum. He kept his promise, but was taken before the prefect of the town. His offence being admitted he was required to give bail, and instructions were given that he should not be allowed to leave the port. It was clear that he could do no more good in Panama, so, forfeiting his bail, he at once went on board a United States steamer and sailed for San Francisco. Here, in spite of the limitations but to his appeals for money, during a stay of five months he succeeded in collecting \$25,000. From California he went back to Panama, intending to beg his way through Peru and Chili, then ride across the Andes into Brazil and thence to sail for home or for Australia. In Peru he collected \$15,000, and nearly twice as much in Chili. In March, 1865, he left the cities of the Pacific but, instead of crossing the Cordilleras, he sailed round the Horn in "H.M.S. Charybdis". In Rio he had an interview with the emperor and money came in fast. In June his campaign was brought to an abrupt close by a letter of recall from Manning, who had just been appointed Archbishop of Westminster, and Vaughan sailed for England in June, 1865.

In the following March the College for Foreign Missions was started in a hired house at Mill Hill, some eight miles from London. It began in a very humble way. Vaughan determined to keep the money he had collected in America as a permanent endowment for the college, as a fund for the maintenance of the students; and when the growing numbers of the students made it necessary to build there was nothing for it but to beg again. Happily friends came to his aid, as they did in a wonderful way all his life, and in March, 1871, a new college, built on a freehold site, was opened with a community of thirty-four. In the autumn of the same year St. Joseph's Missionary Society had assigned to it its first sphere of work among the coloured population of the United States. To make himself familiar with the conditions of the problem on the spot Vaughan went back to America, and travelled all through the southern states. He was away seven months, and in that time he visited St. Louis, New Orleans, Mobile, Savannah, Memphis, Natchez, and Charleston, making careful investigation in each place as to the spiritual provision for the negro race. Shortly after his return to England his direct supervision of St. Joseph's College was brought to an end by his appointment

as Bishop of Salford. But though St. Joseph's now had its local superior, Vaughan, to the end of his life, was the head of the Missionary Society. He may have done more conspicuous and important work in his life, but there was none that was dearer to his heart than the founding of this great college, which is still doing the things he planned. His missionaries are at work in the Philippines, in Uganda, in Madras, in New Zealand, in Borneo, in Labuan, in the Basin of the Congo, in Kashmir, and in Kafiristan. In 1919 they gave baptism to more than 10,000 pagans.

Among the results of Vaughan's first visit to the United States must be reckoned a new appreciation of the power of the Press. He came back resolved to own a paper of his own, and eventually bought "The Tablet". It proved a fortunate investment from every point of view. During the time of the great controversy which preceded the definition of papal infallibility, under the direct editorship of Herbert Vaughan "The Tablet", for services to the Catholic cause, received the special thanks of the Holy See.

Vaughan was consecrated Bishop of Salford on 22 October, 1872. His first concern was for ecclesiastical education and the proper supply of priests for the diocese. The seminarians were scattered about in different colleges, some in England and some abroad. When they had completed their theological studies at Ushaw, or in Rome, Paris, Valladolid, or Lisbon, they returned to the diocese almost as strangers to each other and to their bishop. Bishop Vaughan planned what he called a pastoral seminary. It was to be attached to his own house, and when clerical students came from Ushaw or seminaries abroad, they were to live with him for a year and, while continuing their ecclesiastical studies, were to be trained by experienced priests in the practical work of a parish. The bishop explained that he had no money for building, but 18,000 was collected and the seminary was built as he desired. He next considered how best to secure a regular supply of candidates for Holy orders. He knew that among the poorer classes there were always boys who, having all the required dispositions for the clerical state, lacked the funds necessary for their education. To meet the difficulty, the bishop endeavoured to secure the foundation of a number of burses for the education of ecclesiastical students. In the case of students whose parents were in easy circumstances the difficulty seemed to take another form. With the principal Catholic secondary schools in Lancashire in the hands of the religious orders, an undue proportion of those youths who had vocations for the priesthood would join the regulars and so lessen the ranks of the secular clergy. The bishop thought this difficulty was incidentally met when he had made up his mind to open a commercial college in Manchester. Soon after opening St. Bede's he acquired the Manchester Aquarium, and converted it into a central hall and museum for the college. Four years after this purchase the south wing of the college was opened, and the central block was completed in 1884. St. Bede's has long since taken its place as one of the recognized and permanent centres of Catholic life in England, and at the time of the cardinal's death 2000 boys already had been educated within its walls.

Meanwhile litigation in Rome had begun between the English hierarchy and the representatives of the religious orders on a number of important points of jurisdiction and discipline that had been agitated since the restoration of the hierarchy in 1850; such as the exemption of regulars from

episcopal jurisdiction; the right of bishops to divide parishes or missions cared for by regulars, and to give the newly-divided parish to secular priests; the obligations of regulars engaged in parish work to attend diocesan conferences or synods; their right to found new houses or schools, or to convert existing institutions to other purposes; the right of bishops to visit canonically institutions in charge of regulars, to inspect accounts, etc. Though Cardinal Manning was the principal in this litigation, the hierarchy deputed Bishop Clifford and Clifton and Bishop Vaughan to represent them in Rome, the latter being intimately concerned in the matter, as a test case had been a claim of the Society of Jesus to reopen in Manchester a college which they had once closed. After a year and a half spent in this matter at Rome, the Bull "Romanos Pontifices" (q.v.) was issued to govern the relations between the religious orders and the bishops in all missionary countries. When Bishop Vaughan first went to Salford he found the diocese comparatively well equipped in regard to its elementary schools, but in most other respects without any sufficient diocesan organization. Long before he left the whole administration was placed on a thorough business footing. Strenuous efforts were made to reduce the burden of debt which weighed upon the diocese. The people were very poor, but they gave generously out of their poverty, and before he left for Westminster the bishop had the satisfaction of knowing that the general debt had been reduced by more than 64,000. The diocesan synods, which formerly had been held every seven years, were made annual. The system of administering the affairs of the diocese through the establishment of deaneries was greatly extended, the dean being made responsible for the proper administration of the missions within the limits of his deanery. A Board of Temporal Administration was formed to advise the bishop on all matters connected with finance. Vaughan was always eager to identify himself in every possible way with the public life of the people of Manchester, with every movement for social reform, and every crusade in behalf of temperance, or sanitation, or the improvement of the houses of the working-classes. Lancashire soon came to recognize in him a large-hearted citizen to whom the interests of no class or creed were alien. When he went to Westminster, the proposal to commemorate a great episcopate by placing a marble bust of him in the Manchester Town Hall, at the public cost, was carried without a dissentient voice.

In the autumn of 1884 "a horrible suspicion forced itself on his mind" that every year a multitude of children were being lost to Catholicism, through the neglect of parents, from the operation of the workhouse system, and through the efforts of proselytizing societies. A house-to-house census of the whole Catholic population of Manchester and Salford was at once undertaken, and every child in every family had to be traced and accounted for, in whatever part of the country it might have migrated. The bishop instructed his clergy to throw aside all other occupations that were not imperative, for the sake of this work, "let them have fewer services in the churches if these were a hindrance in hunting out the souls that were astray". By May, 1886, the census was complete. Out of an estimated Catholic population of 100,000 in Manchester and Salford, 74,000 persons were individually registered. Of the children under sixteen no less than 8445 were reported as in danger of losing their faith, and of these 2653 were described as being in extreme danger. Then the Rescue and Protection Society was started. The bishop gave 1000 to its funds on the spot, and the episcopal

income for the same object, during the time he remained in Salford. His example was contagious and the people gave generously in money and service. At the outset the bishop issued a public challenge to the Protestant philanthropic societies of the city. Their plea for accepting and detaining Catholic children in their institutions was that the children were destitute. Bishop Vaughan himself boldly undertook to maintain every destitute Catholic child in Manchester and Salford. Public opinion instantly sided with the bishop. In some cases, however, the societies were obdurate, and time after time the law courts had to vindicate the right of poor Catholic parents to recover the guardianship of their own children. One by one the Protestant institutions were emptied of their Catholic inmates.

A greater task remained. The whole workhouse system of Lancashire had to be changed. In the year 1886 it was found that there were over 1000 catholic children in the fourteen workhouses of Manchester and the neighborhood and that, on the average, 103 Catholic children left the workhouse schools every year. The bishop's report showed that 80 per cent of these were lost to the Catholic church. It was no part of the duty of the Lancashire guardians when they placed these children out in service to take care that they were placed in Catholic families. The bishop did not blame the guardians. The faith of a workhouse child, always part of a timid minority, was generally weak and was easily lost amid new Protestant surroundings. At that time London was far ahead of Lancashire in the fairness of its treatment of Catholic Poor Law children. In Middlesex it was already the custom to hand over Catholic children to Catholic Certified Homes with an agreed sum for their maintenance. In Lancashire there were no Catholic Certified Homes for the children. To create such homes the bishop knew would require a vast sum, but his faith in the inexhaustible charity of his people was once more justified. Two great homes were quickly provided and in each case the certificate of the Local Government Board was obtained. There remained the task of persuading the Boards of Guardians to utilize the opportunity now brought to their doors. It was a strong card in the bishop's hand that he could promise that every child handed over to a Catholic Home should cost the guardians considerably less than if it stayed in the workhouse. The more economical working of the Catholic Homes was, of course, due to the fact that the members of the religious orders who managed them gave their services without payment. Finally, homes were provided for Catholic waifs and strays of whatever sort, whether they came within the reach of the Poor Law or not. Before the bishop left Salford the Rescue and Protection Society had caught up with its work and was fairly abreast with the evil. It is possible even for one who writes under the shadow of Westminster Cathedral, and remembers St. Bede's and the missionary College at Mill Hill, to think that it was then Cardinal Vaughan achieved the greatest work of his life.

Cardinal Manning died on 14 January, 1892. There never was any doubt in the public mind as to who would succeed him. Vaughan faced the prospect with something like dismay. He thought the day of his strength was nearly done, and that at sixty he was too old to be transplanted to the new world of Westminster. He wrote privately to the pope protesting that he was better fitted to be a Lancashire bishop than the English metropolitan. Rome gave no heed to the letter, and Vaughan was appointed Archbishop of Westminster on 29 March, 1892. In May he was enthroned, in August

he received the sacred pallium, and in December he knew that he was to be made a cardinal. He received the red hat from the hands of Leo XIII on 9 January, 1893, with the presbyterial title of Sts. Andrew and Gregory on the Caelian. One of the first works to which the archbishop set his hand was to try to improve the education of the clergy by uniting all the resources in men and money of several dioceses for the support of a central seminary at Oscott. In the autumn of 1894 he took steps to reverse the policy which had sought to prevent Catholic parents from sending their sons to the universities of Oxford and Cambridge. The bishop's prohibition was being disregarded and evaded, and he thought it better that it should be withdrawn, and steps taken to secure for the Catholic undergraduates such safeguards for their faith in the way of chaplains and special courses of lectures as the circumstances would allow. He lived long enough to be assured that the change for which he was responsible had been completely successful.

During the next few years a great deal of the cardinal's time and attention was taken up by a controversy which arose out of the movement in favour of corporate reunion associated with the name of Lord Halifax. Representing a small fraction of the Anglican body, Lord Halifax and his friends, warmly encouraged by certain French ecclesiastics, thought the way to reconciliation would be made easier if what they called "a point of contact" could be found which might serve to bring the parties together. It was thought, for instance, that a consideration of the question of Anglican orders might lead to discussion and then to friendly explanations on both sides. If an understanding could be arrived at in regard to the validity of the orders of the English Church, other conferences might be arranged dealing with more difficult points. The cardinal felt that the subject chosen for discussion was unhappily selected. the validity of Anglican orders was mainly a question of fact, and was not one which admitted of any sort of compromise. Moreover even if the orders of the Anglican Church were admitted to be valid, that body would still be as much outside the unity of the Church as the Arians and Nestorians of the past or the Greeks of to-day. However, he was quite willing that all the facts of the case should be investigated anew—all he insisted on was that the investigation should be as thorough as possible and made by a body of historical experts. A strong commission was appointed consisting of Father de Augustinis, S.J., M. l'Abbe Duchesne, Mgr. Gasparri, Abbot Gasquet, O.S.B., Rev. David Fleming, O.S.F., Canon Moyes, Rev. Dr. T. Scannell, and Rev. Jose de Llevaneras. The commission held its first conference on 24 March, 1896. When after a series of meetings the process of investigation was finished, the collected evidence was laid before the cardinals of the Holy Office, who delivered judgment on 16 July, 1896, and declared the orders of the Anglican Church to be certainly null and void. This decision was confirmed by the Bull, "Apostolicae Sedis", published on the thirteenth of the following September.

When the cardinal came to Westminster he came resolved to build a great cathedral. His predecessor had secured a site, but the site was mortgaged for 20,000, and there was no money for building. Few men ever collected more money than Cardinal Vaughan, though to him it was always "hateful work". In July, 1894, he made his first public appeal for the cathedral. In June of the following year the foundation stone was laid and the cardinal had 75,000 in the bank. It was a cathedral of no mean proportions that he meant to build. The design of Bentley (q.v.) combined

the idea of a Roman basilica with the constructive improvements introduced by the Byzantine architects. A little later the sale of a city church which the shifting of the population had made superfluous enabled the cardinal, after setting aside 20,000 for a new church, to add 48,000 to the credit of the cathedral building fund. In June, 1902, he made his last appeal. He asked for another 16,000, and it came. The cathedral was opened for public worship a year later, and Cardinal Vaughan was there before the high altar in his coffin. During he last years of his life the cardinal suffered from almost continuous ill-health. He laboured strenuously to the last, especially in the cause of the denominational schools. He had fought their fight for a quarter of a century and had the satisfaction of seeing the great Act of 1902 safely on the statute books. On 15 March, 1903, he left Archbishop's House for ever. St. Joseph's College, Mill Hill, had been his first love and it was his last; he went there to die and he chose it for his place of burial. He lingered on until the nineteenth of June, when the end came a few hours after he had made his public profession of faith in the presence of the Westminster Chapter. When the body was laid out for burial an iron circlet was found driven into the flesh of the left arm. Cardinal Vaughan was a man of strong vitality, and his energies were devoted, with rare singleness of purpose, to one end—the salvation of souls. He loved directness in thought and speech, and had little taste for speculation or analysis. He knew how to win and to hold the allegiance of men, and the touching extracts from his intimate diary which were published after his death showed him to have been a man of exceptional and unsuspected humility.

SNEAD-COX, *The Life of Herbert, Cardinal Vaughan* (2 vols., London, 1910).

J.G. SNEAD COX

Roger William Vaughan

Roger William Vaughan

(BEDE).

Second Archbishop of Sydney, b. at Courtfield, Herefordshire, 9 January, 1834; d. at Ince-Blundell Hall, Lancashire, 17 August, 1883. He was the second son of Colonel John Vaughan and Eliza his first wife, and was thus the younger brother of Cardinal Vaughan, Archbishop of Westminster. Being delicate he was educated at home under the influence of his saintly mother till he was seventeen, when he went to Downside. There he decided to become a Benedictine, and, in 1855, having finished his novitiate, he was sent to Rome, where he studied at the Benedictine house of St. Paul-Outside-the-Walls. A year after his ordination (1859) he returned to Downside, where he took charge of the mission. In November, 1861, he became professor of philosophy, and, a year later, cathedral prior at St. Michael's Priory, Belmont, a post which he held till 1872. While at Belmont he wrote his great work, "*The Life and Labours of St. Thomas Aquinas*" (London, 1871-2; 2nd ed., 1890). In 1872 he was chosen as coadjutor to Archbishop Polding of Sydney, an event which justified the premonition he always had that he was destined to work in Australia. He was consecrated as titular Archbishop of Nazianzus by Archbishop Manning at Liverpool, on 19 March,

1872, and during the summer sailed for Australia. Five years later, on Dr. Polding's death (16 March, 1877), he succeeded him as Archbishop of Sydney. The remaining six years were devoted to apostolic work, especially preaching, in which he was indefatigable in spite of the strain on a constitution never strong. He proved a capable administrator, fighting energetically for Catholic interests, especially those of primary education, which he provided for by the foundation of Catholic schools. He also took great interest in the completion of his cathedral which he lived to open. He was a man of great holiness, and so far as possible continued even when archbishop to lead the life of a simple monk. While visiting England for the sake of his health he died suddenly at his uncle's house.

EDWIN BURTON

Louis-Nicolas Vauquelin

Louis-Nicolas Vauquelin

Born at Saint-André d'Hebertot, Normandy, 16 May, 1763; died 14 Nov., 1829. In youth as apprentice to an apothecary of Rouen he developed a liking for chemistry. Later he went to Paris and met Foureroy, who had been influenced by Lavoisier and the latter's insistence upon the importance of quantitative measurements. Later he became even more accomplished than his master in the field of analytical chemistry. In fact he did nothing in any other branch of clinical work, and although he wrote voluminously, as many as three hundred and seventy-eight papers being published by him, none of his work had any other direction than that of giving descriptions of analytical operations and results. It made no difference whether it was in vegetable or mineral chemistry, or whether physiological or pathological, his work was only analytical, but of course it led to large advances in the field of the constitution of substances he studied. In 1812 he published a manual of assaying. He was one of the first to instruct students by means of practical laboratory teaching. The most illustrious of these followers was Thenard. In 1798 Vauquelin discovered oxide of beryllium in beryl. He also isolated chromium from lead ores. With Berzelius he ascertained correctly the composition of carbon bisulphide, which had been first made by Lampadius in 1796. He discovered quinic acid, asparagin, camphoric acid, and other organic substances. His death, which was very edifying, occurred while he was on a visit to his birthplace.

CHARLES F. MCKENNA

Laurence Vaux

Laurence Vaux

(VOSE).

Canon regular, author of a catechism, martyr in prison, b. at Blackrod, Lancashire, 1519; d. in the Clink, 1585.

Educated at Manchester and Oxford, he was ordained in 1542, and took the degree of B. D. at Oxford in 1556. He was first a fellow, and then, 1558, warden of Manchester College, a parish church which had been endowed as a collegiate by Thomas, fifth Baron la Warr, 1421, and re-established by Queen Mary, 1557. In 159 Elizabeth's ecclesiastical commissioners held a visitation in Manchester College, and summoned the warden and fellows before them. However, knowing what to expect, Vaux had removed himself and the college deeds and church place to a place of safe hiding. He was now a marked man, and after a time he took refuge in Louvain, 1561. Here he seems to have kept a school for the children of the English exiles, then comparatively numerous, for whom in fact he compiled his catechism. Meanwhile in England there was considerable uncertainty among the faithful as to how far it was lawful to conform outwardly with the State religion. Pius V commissioned two of the exiles at Louvain, Doctors Sanders and Harding, to publish his decision, informing the Catholics that to frequent the Established services was a mortal sin. Vaux was in Rome in 1566; in a private audience the pope instructed him more fully as to the scope of his decision, and finally the task of making known the papal sentence in England was delegated to him. He returned therefore and conducted a vigorous and successful campaign against the schismatical practice, especially in his native Lancashire. This activity drew down the anger of the Government on his head, and in February, 1568, a queen's writ was issued for his arrest; this document mentions also Allen, though he was not in the country at the time. Vaux again escaped and returned to Louvain.

Here, now at the age of fifty-four, he sought and obtained admission among the canons regular in the Priory of St. Martin's. He was clothed in the habit on St. Lawrence's Day, 10 August, 1572, and made his profession the following May. Before taking the vows he drew up a legal document to provide for the safe custody of the deeds and valuables which he had saved from the commissioners at Manchester, "until such time as the college should be restored to the Catholic Faith, or until Catholics should live in it". So great was the esteem in which Father Lawrence was held by the canons that shortly after his profession he was appointed sub-prior; and when the prior resigned in 1577, to pass over to the Carthusians, there was a strong movement to elect Vaux in his stead. Some, however, apparently feared that he would use his position to introduce a large number of his fellow-countrymen with a view to training them for the English Mission; a marginal note in the "Priory Chronicle" records, "*Caenobium nostrum in seminarium pene erectum Anglorum.*" Three years later at the instance of Allen, he was summoned to Reims by papal authority to take up once more the perilous missionary work in England; the Chronicle notes his departure "with the blessing and leave of his Prior", 24 June, 1580. Vaux left Reims on 1 Aug., and Boulogne on the 12th, arriving that day at Dover in company with a Catholic soldier named Tichborne and a Frenchman, who turned traitor. Escaping detection at Dover, the two Englishmen passed on to Canterbury, and thence to Rochester, where they were arrested on information lodged by the spy.

After several examinations Vaux was finally committed by the Bishop of London to the Gatehouse Prison, Westminster. According to an account of the arrest in the "Douay Diaries", Bishop Aylmer demanded: "What relation are you to that Vaux who wrote a popish catechism in English?" The aged priest admitted his authorship and that confession settled his fate.

For the first three years of his imprisonment, owing chiefly to the wealth and influence of noble friends, Vaux was treated with comparative mildness. In a letter which he sent to the Prior of St. Martin's a few months after his arrest he speaks quite cheerfully of his condition and surroundings. But later another letter addressed to John Coppage, Aug., 1583, was intercepted and the following sentence underlined by some member of the Council: *My friends here be many and of much worship, especially since my Catechism came forth.* This communication also mentioned the disposal of as many as 300 copies in the Manchester district alone. Thereupon the aged confessor was transferred to the Clink. According to Strype, he was brought up again before the relentless Aylmer, in 1585, and found guilty "and so in danger of death". What happened further we do not know; if actually sentenced, he must have been reprieved. In all probability he was abandoned to a lingering death in prison. The common tradition is represented by this contemporary item from St. Martin's Chronicle: "The venerable Father Lawrence Vaux, martyr. . .for the confession of the Catholic Faith thrown into prison, where he was starved to death, and so gained the crown of martyrdom, 1585." Vaux's catechism, to which we may fairly attribute his imprisonment and death, was first published in Louvain, in 1567. Six further editions in rapid succession, emanating from Antwerp and Liège, testified to its widespread popularity and effectiveness. The Liège, 1583, issue was reprinted with an excellent biographical introduction for the Chetham Society by Thomas Graves Law, in 1885. This edition contains also Vaux's paper on "The Use and Meaning of Ceremonies", and a few further pages of instruction added by the Liège publisher. The catechism is practically formed on the same lines as its successor of today, explaining in sequence the Apostles' Creed, the Pater and Ave (but the latter has not the second half, *Holy Mary*), the Commandments (these at considerable length), the sacraments, and the offices of Christian justice. The treatise on the ceremonies discusses the use of holy water, candles, incense, vestments, etc. The style is old-fashioned, but the matter in both is as useful and edifying today as it was four centuries ago.

Catholic Record Society's *Miscellanea*, II; DODD, *Ch. Hist. of Engl.*; Douay Diaries; GILLOW, *Bibl. Dict. of Engl. Cath.*, s.v.; LAW in his *Introduction to Vaux's Catechism* (Chetham Society, 1885); PITTS, *De Angliae Scriptoribus* (1619); *The Rambler* (London, 1857).

VINCENT SCULLY

Vaux-De-Cernay

Vaux-de-Cernay

A celebrated Cistercian abbey situated in the Diocese of Versailles, Seine-et-Oise, in what was called the "Isle-de-France". In 1118 Simon de Neuffle and his wife Eve donated the land for this foundation to the monks of Savigny, in order to have a monastery built there in honour of the Mother

of God and St. John Baptist. Blessed Vital, Abbot of Savigny, accepted their offer, and sent a band of monks under the direction of Arnaud, who became their first abbot. Besides their first benefactors, numerous others of the nobility came to the aid of the new community. As soon as they were well established, many postulants presented themselves for admission, rendering possible the foundation of Breuil-Benoit (1137) in the Diocese of Evreu. In 1148 Vaux-de-Cernay, with the entire Congregation of Savigny, entered the Order of Citeaux and became a filiation of Clairvaux. Up to this period their substance was only enough for them to live on, but from this time they became prosperous, built a church in the simple Cistercian style, and little by little, constructed the other regular places. Many of its abbots became well known. Andrew, the fourth, died Bishop of Arras; Guy, the sixth, was the most celebrated, having been delegated by the General Chapter to accompany the Fifth Crusade in 1203. Three years later he was one of the principal figures in the crusade against the Albigenses, in recognition of which service he was made Bishop of Carcasone (1211) and is commemorated in the Cistercian Menology. His nephew Peter, also a monk of Vaux-de-Cernay, accompanied him on this crusade, and left a history of both the heresy and the war. It was under his successor, Abbot Thoas, that Porrois, a monastery of Cistercian nuns (later on the famous Abbey of Port-Royal), was founded and placed under the direction of the abbots of Vaux-de-Cernay. The ninth abbot, Thibault de Marley (1235-47), was canonized and worked many miracles both before and after death. Towards the end of the fourteenth century the monastery began losing its fervour, both on account of too great wealth and because of the disturbed state of the times. But after the introduction of commendatory abbots (1542) there was little left besides the name of monks. In the seventeenth century it was restored in spirit by embracing the Reform of the Strict Observance of Denis Largentier. It was during this time that its commendatory abbot was John Casimir, King of Poland. The monastery was suppressed at the revolution (1791) and its members (twelve priests) dispersed. The buildings, after passing through various hands, are now partly restored and are much admired both by artists and archaeologists.

EDMOND M. OBRECHT

Thomas Vavasour

Thomas Vavasour

English Catholic physician, pensioner of St. John's College, Cambridge, b. about 1536-7; d. at Hull, 2 May, 1585. On 25 June, 1549, at the disputations held before the king's commissioners at Cambridge, Vavasour was one of the disputants in favour of Transubstantiation and the Sacrifice of the Mass. He subsequently went to Venice where he took the degree of M.D., and on 20 Nov., 1556, he received a licence from the College of Physicians of London to practise for two years. His house was "by the common school house" in the city of York; there Mass was said in 1570. In 1572 he was accused of having entertained Blessed Edmund Campion. In Nov., 1574, after he had been confined to his own house in the city of York for nearly nine months, he was sent into solitary confinement in the Hull Castle. Grindal describes him as "sophistical, disdainful, and illuding arguments with irrision, when he was not able to solute the same by learning", and adds that "his great anchor-hold was in urging the literal sense of *hoc est corpus meum*, thereby to prove transubstantiation". By June, 1579, he was back again in his house, where Mass was again said. Later on he was in the Gatehouse, Westminster, from which he was released on submitting to acknowledge the royal supremacy in religious matter; but he was again imprisoned as a recusant in Hull Castle, York where he died. His wife, Dorothy, died in the New Counter, Ousebridge, York, 26 Oct., 1587.

JOHN B. WAINWRIGHT

Francois Vavasseur

François Vavasseur

Humanist and controversialist, b. at Paray-le-Monial, 8 Dec., 1605; d. at Paris, 16 Dec., 1681. He entered the Society of Jesus, 25 Oct., 1621, taught humanities and rhetoric for seven years, then positive theology and Scripture at Bourges, and later at Paris. His first work was a paraphrase of the Book of Job in Latin hexameters (1637), resumed and accompanied by a commentary in 1679. He published also "Theurgicon" (1644), on the miracles of Christ, "Elegiarum liber" (1656), "De ludicra dictione" (1656); took an active part in the Jansenistic controversy ("Cornelius Jansenius Iprensis suspectus", Paris, 1650), and defended himself against the charge of having written pamphlets concerning the Calaghan affair (De libello suppositio dissertatio, 1653). In this last writing he defined accurately the style of the Port-Royal writers before the "Provinciales", a

monotonous, colourless, unrelieved style, burdened with complicated periods. He wrote a sharp and learned criticism of the "Epigrammatum delectus" of Port-Royal (1659), "De epigrammate liber et epigrammatum libri tres" (1669), showing delicate and solid knowledge of Catullus, Martial, and the Greek anthology. He was sensitive on this subject and took issue with his confere Rapin, who had practically declared that no modern had written a good epigram (*Remarques sur les nouvelles réflexions du R.P. Rapin Jésuite, touchant la poétique*, 1675). De Lamoignon, Rapin's protector, had Vavasseur's pamphlet suppressed. "Pere Vavasseur was a learned man, one of those critical and severe minds which find something to bite even in good works, and which let nothing pass" (Sainte Beuve, "Port-Royal", III, 528). His other works include sermons, a commentary on Osee, and a dissertation on the beauty of Christ. All his writings were collected by Jean le Clerc (Amsterdam, 1709). His Latin writings had appeared previously in Paris (1683).

SOMMERVOGEL, *Bibl. de la compagnie de Jesus*, VIII (Paris, 1898), 499; SAINTE-BEUVE, *Port Royal*, III, 49, 28, 625.

PAUL LEJAY

Blessed Joseph Vaz

Blessed Joseph Vaz

A Goanese priest, Apostle of Ceylon [Sri Lanka], b. at Goa, 21 April, 1651; d. at Kandy, 16 Jan., 1711. His parents were Christians of the Konkani Brahmin caste. He learned Portuguese in Sancoale, his father's village, and Latin in Baulim, his mother's village, studied rhetoric at the Jesuit college and philosophy and theology at the College of St. Thomas Aquinas, Goa, was ordained in 1676, and became a favourite preacher and confessor. Hearing of the oppressed state of the Catholics of Ceylon under the Dutch, Father Vaz desired to go to their rescue, but was for the time being appointed Superior of the Kanara Mission, a post which he occupied for three years. On his return to Goa in 1684 he spent his time preaching in the villages, and joined the Oratorians then recently established in Goa, of which congregation he was soon made superior. In 1686 he obtained permission to give up this office and to proceed to Ceylon. On landing at Jaffna he found a strong Calvinistic propaganda going on in the island, and the Catholic religion proscribed and under persecution. He was therefore forced to wear disguise, and to do his work in secret. Afterwards, taking up his residence in a village called Sillale where the Catholics were numerous and resolute, he succeeded in reviving the spirit of the faithful. But this aroused afresh the vigilance of the Dutch, and he was forced to change his quarters for Putlam, where he worked with great success for a whole year. He then fixed on Kandy, the capital of a native independent state, as his centre of operations. Being on his arrival denounced as a Portuguese spy, he was quickly put into prison, where, however, the Catholics gained access to him, thus enabling him to continue his good work. In the end he won the favour of the king, regained his liberty, and began to extend his operations to other parts of the island.

About 1699 several Oratorians and other priests were sent to help him in his labours. The news of his success having reached Rome, Mgr de Tournon, the papal legate, was directed to enter into communication with him. The legate conceived the idea of erecting Ceylon into a diocese with Father Vaz as first bishop, but the latter dissuaded him from this. In his later years Father Vaz had much to suffer from declining health, and in 1710 was unable to leave Kandy. The subject of his beatification was first urged upon the consideration of the Holy See about 1737 by Dom Francisco de Vasconcellos, S.J., Bishop of Cochin, who also claimed jurisdiction over Ceylon. The process was begun in Goa, and a number of miracles were registered. But the non-fulfilment of certain essential formalities led Benedict XIV to cancel the proceedings, with an order, however, that they should be re-instituted. In South Kanara, he is generally known as Venerable Father Joseph Vaz. Mgr Zaleski, Delegate Apostolic of the East Indies, wrote of him in 1894, that he has "unfortunately been almost entirely forgotten. In Europe and even in India, there are still some who remember his name, and in Ceylon, the theatre of his Apostolic labours, his name is still mentioned by the older generation; but the rising generation hardly know what they owe to him. And yet, his is a name that ought to endure for ever".

[*Note:* In 1995, Joseph Vaz was beatified by Pope John Paul II in Colombo, Sri Lanka.]

DO REGO, L'Apostolo di Ceylan -- P. Giuseppe Vaz della Congregazione dell' Oratorio di S. Filippo Neri (Venice, 1753), tr. ZALESKI, Life of Fr. Joseph Vaz (Calcutta, 1896); Mangalore Magazine (1905-09). Two pamphlets on the life of Father Vaz have been recently printed with the object of reviving his memory among his countrymen.

ERNEST R. HULL

Lorenzo di Pietro Vecchietta

Lorenzo di Pietro Vecchietta

Painter, sculptor, goldsmith, and architect, b. at Castiglione di Val d'Orcia, 1412; d. there, 1480. He is said to have been the pupil of Taddeo Bartoli and Giacomo della Quercia. In sculpture he was influenced largely by Donatello, with whom he came into personal contact; in painting he adhered to the traditions of Siena. His noblest work is at the Hospital of Santa Maria della Scala, Siena, to which he gave a chapel dedicated to Our Lady and decorated with painting and sculpture by his own hand. The frescoes include an Annunciation, a Nativity, a Last Judgment, all badly damaged, and an allegory of the Ladder with children ascending to heaven, which records the tradition of a local foundation and gives its name to the institution. Over the high altar is the striking bronze figure of the Risen Christ keyed to Donatello's harsher manner, also two angels bearing candles. The fine bronze tabernacle was removed by Pandolfo Petrucci and is upon the high altar of the cathedral. A series of frescoes in the Baptistery of S. Giovanni were executed with the assistance of pupils, but much is identified as Vecchietta's own; the Evangelists, the Four Articles of the Creed, the Assumption, containing some lovely angels' heads, and symbolical figures of Virtues. In the Galleria di belle Arti are a Madonna and some minor works; a St. Martin in the

Palazzo Saracini; two panels in the Palazzo Publico, a sermon and miracle of St. Bernardino (sometime attributed to di Giorgio), and a beautiful Our Lady of Pity. The ascetic and rather formal figures of Sts. Peter and Paul in the old Mercanzia, Loggia de' Nobili, date about 1458 to 1460. A silver bust or statute of St. Catherine of Siena, known to have been made by Vecchietta at the time of the saint's canonization, disappeared after the siege of Siena (1555). Outside Siena the artist's chief painting, an Assumption, of (1451), is in the church at Pienza; in Florence a Madonna panel and the bronze tomb statute of Marianus Soccinus the Elder (removed from S. Domenico, Siena), a noted Siennese jurisconsult, are in the Uffizi. Vecchietta was the master of Francesco di Giorgio and Neroccio.

M.L. HANDLEY

Vedas

Vedas

The sacred books of ancient India. The Sanskrit word *veda* means "knowledge", more particularly "sacred book". In its widest sense the term designates not only the sacred texts, but also the voluminous theological and philosophical literature attached thereto, the Brahmanas, Aranyakas, Upanishads, and Sutras (see BRAHMINISM). But usually the term *veda* applies only to the four collections (*Samhitas*) of hymns and prayers composed for different ritualistic purposes: the Rig-Veda, Sama-Veda, Yajur-Veda, and Atharva-Veda. Of these only the first three were originally regarded as canonical; the fourth attained to this position after a long struggle. The language of the Vedas is an artificial literary language fully perfected, and is not a mere popular dialect. In this respect it resembles the later classical Sanskrit, from which it differs considerably in phonology and inflections. Though differences exist in the language of the four Vedas, still there is such agreement on cardinal points as against later Sanskrit that the term Vedic, which is in common use for the oldest form of the language of India, is amply justified.

I. THE RIG-VEDA

("Veda of verses"; from *ric*, or before sonants *rig*, "laudatory stanza") is the oldest and most important of these collections. In its present form it contains 1028 hymns (including eleven supplementary ones in the eighth book), arranged in ten *mandalas* (cycles), or books, which vary in extent, only the first and tenth being approximately equal. The poems themselves are of different authorship and date from widely different periods. According to the generally accepted view the oldest of them dates back to 1500 B.C., when the Aryan conquerors spread over the Punjab in Northern India and occupied the land on both sides of the Indus. The texts themselves show that the collection is the result of the work of generations of poets, extending over many centuries.

Books II to VII inclusive are each the work of a single poet, or *rishi* (seer), and his descendants; hence they are aptly called "family books". Book III is attributed to the family of Vishvamitra, IV to that of Vamadeva, V to that of Vasishtha. The hymns in books I and X are all composed by different families. The ninth consists exclusively of hymns addressed to Soma, the deified plant, the juice of which was used for the Soma sacrifice. Books II to VII are the oldest, and book X the most recent, in point of origin.

The monotony of the Rig-Veda is due not only to the nature of its mythological content, but also to the fact that hymns to the same deity are usually grouped together. Thus, approximately 500 hymns are addressed to two gods alone: Indra, the god of lightning and storms, and Agni, the god of fire. The element of nature-worship is a marked feature in most of the hymns, with are invocations of different deities. The value of the great collection as presenting the earliest record of the mythology of an Indo-European people is apparent. Several of the gods go back to the time of Indo-Iranian unity, e.g. Yama (the Avestan Yima), Soma (haoma), Mitra (the later Persian Mithra). Some of the divinities, especially the higher ones, still exhibit the attributes which enable us to trace their origin to the personification of natural phenomena. Thus Indra personified thunder, Agni fire, Varuna the sea, Surya the sun, Ushas the dawn, the Maruts the storm, and others were of a somewhat similar character. Indra was the favourite god of the Vedic Aryans; almost one fourth of all the hymns in the Rig-Veda are addressed to him and they are among the best in the collection. Next to Indra stands Agni. The hymns in his praise are often obscure in thought and turgid in phraseology and abound in allusions to a complicated ritual. Many hymns are in honour of Soma. Other gods invoked are the two Ashins, somewhat resembling the Diocuri of ancient Greece, the terrible Rudra, Parjanya the rain-god, Vayu the wind-god, Surya the sun-god, Pushan the protector of roads and stray kine. Prayers are also addressed to groups of divinities like the Adityas and the Vishve Devas (all the gods). Only a few hymns sing the praise of Vishnu and of Shiva in his earlier form as Rudra, though these two deities became later the chief gods of the Hindu pantheon. Goddesses play a small part, only Ushas, the goddess of dawn, has some twenty hymns in her honour; these poems are of exceptional literary merit.

The number of secular hymns are small, but many of them are of particular interest. They are of various content. In one (book X, 34) a gambler laments his ill luck at dice and deplors the evil passion that holds him in his grasp. In the same book (X, 18) there occurs a funeral hymn, from which important information may be gained concerning the funeral rites of the Vedic age. Evidently cremation was most in vogue, though burial was also resorted to. There are also some riddles and incantations or prayers exactly like those in the Atharva-Veda. Historical references are occasionally found in the so-called *danastutis* (praises of gifts), which in most cases are not independent poems, but laudatory stanzas appended to some ordinary hymn, and in which the poet gives thanks for generosity shown to him by some prince. Some six or seven hymns deal with cosmogonic speculations. It is significant that some of the hymns, chiefly in book X, are cast in the form of a dialogue. Here we may possibly discern the beginnings of the Sanskrit drama. The poetry of the Rig-Veda is neither popular nor primitive, as it has been erroneously considered, but is the production

of a refined sacerdotal class and the result of a long period of cultural development. It was intended primarily for use in connection with the Soma sacrifice, and to accompany a ritual, which, though not so complicated as at the time of the Brahmanas, was far from simple. The Rig-Veda has come down to us in only one recension, that of the Shakala school. Originally there were several schools: The "Mahabhashya" (great commentary), about the second century B.C., knows of twenty-one, while some later writings know of two only. In these schools the transmission of the hymns was most carefully attended to; a most elaborate mnemonic system was devised to guard against any changes in the sacred text, which has thus come down to us practically without variants.

Editions of the Rig-Veda were published by Max Muller, "Rig- Veda-Samhita with the Commentary of Sayancharya" (6 vols., London, 1849-74; 2nd ed., 4 vols., 1890-95); "The Hymns of the Rig-Veda in the Samhita and Pada Texts" (2nd ed., 2 vols., London, 1877); Aufrecht, "Samhita Text", in Roman characters (2nd ed., Bonn, 1877); selections in Lanman's "Sanskrit Reader" (Boston, 1884); Bothlingk, "Sanskrit-Chrestomathie" (3rd ed., Leipzig, 1897); Windisch, "Zwölf Hymnen des Rig-Veda", with Sayana's commentary (Leipzig, 1883). Translations were made into: English verse by Griffith (2 vols., Benares, 1896-97); selections in prose by Max Muller in "Sacred Books of the East", XXXII (Oxford, 1891); continued by Oldenburg, *ibidem*, XLVI (1897); German verse by Grassmann (2 vols., Leipzig, 1876-77); German prose by Ludwig (6 vols., Prague, 1876-88). On the Rig-Veda in general see: Kaegi, "The Rig-Veda", tr. Arrowsmith (Boston, 1886); Odenberg, "Rig- Veda", books I-Vi in "Göttinger Gesellschaft der Wissenschaften", new series, XI (Berlin, 1909).

II. THE SAMA-VEDA

("Veda of chants") consists of 1549 stanzas, taken entirely (except 75) from the Rig-Veda, chiefly from books VIII and IX. Its purpose was purely practical, to serve as a text- book for the *udgatar* or priest who attended the Soma sacrifice. The arrangement of the verses is determined solely by their relation to the rites attending this function. The hymns were to be sung according to certain fixed melodies; hence the name of the collection. Though only two recensions are known, the number of schools for the veda is known to have been very large. The Sama- Veda was edited: (with German tr.) by Benfey (Leipzig, 1848); by Satyavrata Samashrami in *Bibl. Ind.* (Calcutta, 1873); Engl. tr. by Griffith (Benares, 1893).

III. THE YAJUR-VEDA

("Veda of sacrificial prayers") consists also largely of verses borrowed from the Rig-Veda. Its purpose was also practical, but, unlike the Sama-Veda, it was compiled to apply to the entire sacrificial rite, not merely the Soma offering. There are two recensions of this Veda known as the "Black" and "White" Yajur-Veda. The origin and meaning of these designations are not clear. The White Yajur=3DVeda contains only the verses and sayings necessary for the sacrifice, while explanations exist in a separate work; the Black incorporates explanations and directions in the work itself, often immediately following the verses. Of the black there are again four recensions,

all showing the same arrangement, but differing in many other respects, notably in matters of phonology and accent. By the Hindus the Yajur-Veda was regarded as the most important of all the Vedas for the practice of the sacrificial rites. The four recensions of the Yajur-Veda have been separately edited: (1) "Vajasaneyi Samhita" by Weber (London and Berlin, 1852), tr. Griffith (Benares, 1899); (2) "Taittiriya S." by Weber in "Indische Studien", XI, XII (Berlin, 1871-72); (3) "Maitrayani S." by von Schroeder (Leipzig, 1881-86); "Kathaka S." by von Schroeder (Leipzig, 1900-09).

IV. THE ATHARVA-VEDA

("Veda of the atharvans or fire priests") differs widely from the other Vedas in that it is not essentially religious in character and not connected with the ritual of the Soma sacrifice. It consists chiefly of a variety of spells and incantations, intended to curse as well as to bless. There are charms against enemies, demons, wizards, harmful animals like snakes, against sickness of man or beast, against the oppressors of Brahmans. But there are also charms of a positive character to obtain benefits, to insure love, happy family-life, health and longevity, protection on journeys, even luck in gambling. Superstitions from primitive ages were evidently current among the masses. To some of the spells remarkably close parallels can be adduced from Germanic and Slavic antiquity. The Atharva-Veda is preserved in two recensions, which, though differing in content and arrangement, are of equal extent, comprising 730 hymns and about 6000 stanzas, distributed in twenty books. Many of the verses are taken from the Rig-Veda without change; a considerable part of the sayings is in prose. The books are of different age; the first thirteen are the oldest, the last two are late additions. Book XX, consisting entirely of hymns in praise of Indra, all taken from the Rig-Veda, was undoubtedly added to give the Atharva's connection with the sacrificial ceremonial and thus to insure its recognition as a canonical book. But this recognition was attained only after a considerable lapse of time, and after the period of the Rig-Veda. In the "Mahabharata" the canonical character of the Atharva is distinctly recognized, references to the four Vedas being frequent. Though as a whole this collection must have come into existence later than the Rig-Veda, much of its material is fully as old and perhaps older. For the history of religion and civilization it is a document of priceless value. The Atharva-Veda has been edited by Roth and Whitney (Berlin, 1856); Engl. tr. in verse by Griffith (2 vols., Benares, 1897); prose by Bloomfield in "Sacred Books of the East", XLII; by Whitney, revised by Lanman (2 vols., Cambridge, Mass, 1905). Consult Bloomfield, "The Atharveda" in "Grundriss der Indoarischen Philologie", II (Strasburg, 1899).

On the Vedas in general consult: MACDONNELL, History of Sanskrit Literature (New York, 1900), 29-201, bibl. 439-42; BAUMGARTNER, Gesch. der Weltliteratur, II (Freiburg, 1902); WINTERNITZ, Gesch. der indischen Literatur, I Der Veda (Leipzig, 1905); PISCHEL, Die indische Literatur in Kultur der Gegenwart I, VII (Berlin and Leipzig, 1906), 164-174, bibl. 212.

ARTHUR F.J. REMY

Andreas de Vega

Andreas de Vega

Theologian and Franciscan Observantine, b. at Segovia in Old Castile, Spain, at unknown date; d. at Salamanca probably in 1560. He studied at the University of Salamanca, and was a professor there when he became an Observantine of the Franciscan Order. He continued his work as a teacher in the monastery of the Observantines where the learned Alphonso de Castro also taught. Both were distinguished in speculative theology. Vega was a moderate Scotist who at the same time held to St. Bonaventure. The Emperor Charles V sent Vega as theologian together with other scholars to the Council of Trent. At Trent he came into connection with Cardinal Petrus Pacheco, Bishop of Jaen (consequently called "Giennensis"), who was a patron of the Franciscan Order. Vega was conspicuous in the preliminary discussions of the canon of the Scriptures and on the Vulgate, which were treated in the Decree promulgated in the fourth session of the council, 8 April, 1546. He also took a prominent part in the preliminary discussions on the dogma of justification, and drew attention to himself at the same time by his debates with Dominicus de Soto, the Dominican who defended the dogmas of rigid Thomism. The Decree was promulgated in the sixth session on 13 January, 1547. Previous to the council Vega had written to defend the Catholic doctrine of justification against the Protestants, "De justificatione, gratia fide, operibus et meritis quaestiones quindecim" (Venice, 1546). The dedication to Cardinal Pacheco is dated Trent, 1 January, 1546. After the promulgation of the Decree he wrote in its defence at Trent and Venice, "Tridentini decreti de justificatione exposition et defensio lib. XV distincta" (Venice, 1548). In the last two books he confutes Calvin's "Acta synodi tridentinae cum antidoto" (Geneva, 1547). This was Vega's most important work and it was so highly esteemed by Peter Canisius that he had it reprinted at Cologne (1572) in one volume with Vega's previous work, "De justificatione". Reprints were issued at Cologne (1585) and at Aschaffenburg (1621). A posthumous work by Vega was also published, his "Commentaria in Psalmos" (Alaclà de Henares, 1599).

MICHAEL BIHL

Johannes Veghe

Johannes Veghe

German preacher and religious writer, b. at Münster in Westphalia about 1435; d. there, 21 September, 1504. His father seems to have been a physician. In 1450 he matriculated at the University of Cologne; in the register of students he is called "Johannes ten Loc alias Veghe clericus Monasteriensis". In 1451 he entered the house of the Brethren of the Common Life of Münster, in 1469 became first rector of the house of the Brethren at Rostock, returned to Münster in 1471, and was made rector there in 1475. On account of ill health he resigned in 1481 and became confessor to the Sisters of Niesink at Münster; this position which he retained until his death, gave him time to gratify his literary tastes. He lived to see the victory of Humanism (q.v.) in Münster and Westphalia; the Humanists Murrnellius and Hermann von dem Busche in their poems praise his pious life and his study of religious books. His earliest work is his "Geistliche Jagd", dedicated to Duke Magnus II of Mecklenburg. This is a description of a spiritual chase, whose object is God; all the details of an actual hunt are applied to the sphere of spiritual things. This work was followed by the : "Marienrost", in which Veghe wishes to show how and why we should appeal to the Blessed Virgin; "Geistliches Blumenbett" (Lectulus Floridus), dedicated to the Sisters of Niesink; and "Weingarten der Seele", which treats in three books of the progress of man from the beginning of Christian life to perfection. Veghe's main work consists of sermons delivered in Low German before the Sisters of Niesink 1492. They are splendid examples of pulpit oratory, notable for the keen observation of nature and knowledge of the human heart; the mode of expression is vigorous and racy. His absolute mastery of the language, and the simple, natural style, will, in the opinion of Triloff, perpetuate the fame of Veghe in the history of Low German literature. His sermons were edited by Professor Franz Jostes in 1883. In dogma Veghe held rigidly to the teachings of the Church, but he would not accept the gaining of indulgences for the dead, who he believed were entirely under the hand and judgment of God. He was genuinely religious, not hypocritical, and at the same time cheerful and kindly.

KLEMENS LOFFLER
Maffeo Vegio

Maffeo Vegio

(MAPHEUS VEGIUS.)

Churchman, humanist, poet, and educator, b. at Lodi, Italy, 1406; d. at Rome, 1458. The details of his life are gathered chiefly from his writings. Born of distinguished parents, his mother being of the house of Lauteria, Vegio passed his early youth at Lodi and Milan, where he completed his elementary studies under capable teachers. One of them, a great admirer of St. Bernardine of Siena, often took his pupils to hear the sermons of the saint of whom Vegio was later to be the biographer. At his father's direction Vegio undertook the study of philosophy in the University of Pavia, changing

later to jurisprudence, and, finally, to letters, to which his tastes had always inclined him. He was passionately devoted to the ancient Latin poets and especially to Virgil. He produced his first volume of poems when sixteen years of age. For about ten years Vegio taught poetry and jurisprudence at the University of Pavia. He became an enthusiastic promoter of the revival of letters. Pope Eugenius IV appointed him Secretary of Papal Briefs, and later Apostolic Datary and a canon of St. Peter's. Vespasiano speaks of him at this time as a secular priest, but the date of his ordination is not known. In the service of the Church, Vegio's studies turned more to the Fathers and sacred sciences than to the classics, to St. Augustine instead of Virgil. Chiefly through his devotion to Augustine, Vegio was attracted to the Augustinians, and joined the order. He was buried in the Chapel of St. Monica, which he had caused to be erected in the Church of St. Augustine, Rome.

Vegio's poetical works are as follows: "Poemata et epigrammata", written about 1422; "De morte Astyanactis", on the death of Hector's son and the grief of Andromache (Cagli, 1475); "Velleris aurei", six books on the quest of the Golden Fleece (Cologne, 1589); "In supplementum Æneidos", which Vegio added to Virgil's "Æneid" to describe the destiny of Æneas, and which became the basis of his fame among later humanists (Paris, 1507); "Antoniados, sive de vita et laudibus S. Antonii" (Deventer, 1490). His prose works are: "De perseverantia religionis" (Paris, 1511); "De quattuor hominis novissimis, morte, judicio, inferno et paradiso meditationes" (Paris, 1511); "Vita Sancti Bernardi Senensis" in "Acta SS.", May, V, 117; "Sanctae Monicae translationis ordo. Item de S. Monicae vita et ejus officium proprium", unedited: "Declamatio seu disputatio inter solem, terram, et aurum, audiente Deo et homine assistente", allegorical dialogue (Milan, 1497); "Philalethes, seu veritas invisita exulans", allegorical dialogue addressed to his brother Eustachius (Brescia, 1496); "De felicitate et miseria" (Milan, 1497); "Liber de significatione verborum in jure civili" (Vicenza, 1477), not extant; "de rebus antiquis memorabilibus Basilicæ S. Petri Romæ", valuable archaeological study, in four books, of St. Peter's Rome, in "Acta SS.", June, VII, 52; "De educatione liberorum et eorum claris moribus", a treatise, in six books, on the education of children and their moral foundation. The first three treat of the duties of parents and teachers in education; the last three of the duties of the young to God, to their fellow-men, and themselves, of the several virtues, good manners, the use of time, etc. It is his most important work, and was for a long time attributed to Filelfo. It has the distinction of being the most Christian in spirit of all the humanistic educational treatises. It approves the study of pagan literature only in conjunction with sacred learning, the study of the Scriptures and the Fathers, makes provision for the education of girls, and considers the formation of a sound moral and Christian character to be the supreme end of education. Many editions of the work have appeared, the latest at Tournai, 1854 (Fr. tr., 1513; Ger. tr. 1856).

PATRICK J. MCCORMICK
Diocese of Veglia

Diocese of Veglia

(VEGIENSIS ET ARBENSIS).

In Austria, suffragan of Görz-Gradisca. Parallel to the Dinaric Alps are a number of rocky islands, separated from the mainland by a deep, though narrow, strait. The largest of them is Veglia, which in the year 1000 had a bishop, Vitalis, who was present at a synod in Spoleto. Eugene III made it a suffragan of Zara, but since 1828 it has been under Görz. Bartholomaeus Bozarich was present at the assembly of bishops in 1849 and his successor was a member of the Vatican Council. Still more ancient is the See of Ossero (Lusin, Absor, Auxerensis), to whose bishop Pope John VIII wrote in 870. The fifty-fifth bishop, Raccamarich, was transferred to Cattaro in 1818, and Ossero and Veglia were united. The See of Arbe (Scardona) is even more ancient. Its first known bishop attended a council at Salona in 530. The fifty-eighth bishop, Galzigna (d. in 1823), was also the last, as his diocese was merged in that of Veglia. Although Veglia is a triple see, it contains only 809,000 Catholics, 95 secular priests, 64 regulars, and 68 nuns.

COLESTIN WOLFSGRUBER

Michael Vehe

Michael Vehe

Born at Bieberach near Wimpfen; died at Halle, April, 1559. He joined the Dominicans at Wimpfen, and was sent to Heidelberg in 1506, where he taught in 1512 and received the doctorate in theology in 1513. In 1515 he was appointed regent of the Dominican house of studies at Heidelberg; later Cardinal Albert of Mainz chose him as theologian and put him in charge of the Church of Halle, Saxony. He was summoned to Augsburg (1530) to refute the Lutheran Confession of Faith and took a prominent part in a debate against the Lutherans in 1534, at Leipzig. He wrote: "Von dem Gesetz der Niessung des h. hochw. Sacraments" (Leipzig, 1531), and "Errettung der beschuldigten kelchdieb" (Leipzig, 1535) on Communion under one species; "Wie unterschiedlicher wiess Gott und seine heiligen sollen geehret werden" (Leipzig, 1532), a treatise on the veneration of the saints; "Assertio sacrorum quorundam axiomatum" (Leipzig, 1537), on the point controverted by the Reformers; these writings are the best apologetical treatises that appeared in Germany during the sixteenth century. Vehe also published "Ein neue Gesangbuchlein" (Leipzig, 1537; Hanover, 1853), a collection of hymns. He was called to the bishopric of Halberstadt, 21 Feb., 1559.

HURTER, Nomenclator, II, 1249 sqq.; Script. ord. praed., II, 95; Bull. ord. praed., IV, 678; VEESENMEYER, Kleine Beitrage zur Gesch. des Reichstags in Augsburg, 1530 (Nurnberg, 1830), 115; Gaumker, Das kath. deutsche Kirchenlied, I (Freiburg, 1886), 124 sqq.

IGNATIUS SMITH

Religious Veil

Religious Veil

In ancient Rome a red veil, or a veil with red stripes, distinguished newly-married women from the unmarried. From the earliest times Christ was represented to the Christian virgin as a husband, the only One, according to St. Paul (I Cor., vii, 34), she had to please. It was natural that the bride of Christ should, as the vestal virgins had done, adopt the veil, which thus symbolized not so much the purity as the inviolable fidelity to Christ which was to be revered in her. "There is here", said St. Optatus, "a sort of spiritual marriage" ("De schismate Donatistarum", VI; P. L., XI, 1074).

The taking of the veil then suggested an obligation of constancy, which forbade, first, illicit sexual intercourse, and afterwards marriage itself. Virgins took this veil themselves, or received it from the hands of their parents. It was worn also by widows, who made a profession of continence, and was called *velum*, *velamen*, *maforte*, *flammeus* (*flammeum*), *flammeus virginalis*, *flammeus Christi* (Wilpert, "Die gottgeweihten Jungfrauen in den ersten Jahrhunderten der Kirche", p. 17). In addition to this private taking of the veil, there was early instituted another solemn clothing, which was performed by the bishop on feast days during the Holy Sacrifice (see St. Jerome, "Ad Demetriadem", ii; P.L., XXII, 1108; and St. Ambrose, "De lapsu virginis consecratae", v; P.L., XVI, 3726). Sometimes the bishop deputed a priest for this purpose (Fulgentius Ferrandus, "Breviarum canonum", can. xci; P.L., LXVII, 957). After a short time, the solemn consecration of virgins was reserved to the bishop, while priests gave the veil to widows. These virgins and widows were not all cloistered; those who entered a monastery received from the abbess a veil which symbolized their religious profession, and the virgins at twenty-five years of age received solemnly from the bishop the veil, which was the mark of a special consecration.

The veil thus became in convents of women the distinctive sign of the different conditions. Suarez (De religione, tr. VI, t. I, col. 11, n. 5) mentions the following as in use, or as having been in use: the veil of probation, generally white, given to novices; the veil of profession; the veil of virginal consecration, given only to virgins at the age of twenty-five years; the veil of ordination, which the nun received at the age of forty years, on becoming a deaconess, with the privilege of intoning the office and reading the homilies in choir (cap. Diaconissam, 23, c. xxvii, q. 1); the veil of prelature, which abbesses obtained as a reward at the age of sixty years (cap. Iuenculas, 12, c. xx, q. 1); the veil of continence, which with widows took the place of the veil of the virgins (cap. Vidua, 34, c. xxvii, q. 1). Tamburinus (De iure abbatissarum, d. 27, q. 2) mentions also a veil of penitence, given to penitent sisters. Several of these veils fell into disuse; at present, we know only the veil which forms part of the religious habit. Even that has disappeared in some newly founded

congregations, e.g. the Little Sisters of the Poor. Where it still exists it is customary that the veil of novices should be white. The nuns of the mendicant orders did not receive the veil of the virgins, the imposition of which was still customary in the fifteenth century and did not disappear till the end of the sixteenth century. In the eighth and ninth centuries it was found necessary to issue ecclesiastical decrees to restrain abbesses from usurping the function of the bishop and solemnly conferring the veil themselves. See the capitularies of Aachen of 789, c. lxxvi (Mon. Germ. Hist.: Capit. Reg. Franc., t. I, n. 22, can. lxxvi, p. 60); Charlemagne, can. xiv, promulgated at the Sixth Council of Paris (829), l. I, c. xliii (Hardouin, "Conc.", t. IV, col. 1321; Abelard, Ep. viii, in P.L., CLXXVIII, 318 B). In the twelfth century Abelard made a rule that a white cross on the head should distinguish the veil given to virgins by the bishop from that of the other nuns (Ep. viii, P.L., CLXXVIII, 301).

The Roman Pontifical contains the imposing ceremony of the consecration of virgins. The gift of the veil is accompanied by these words: "Receive the sacred veil, that thou mayst be known to have despised the world, and to be truly, humbly, and with all thy heart subject to Christ as His bride; and may He defend thee from all evil, and bring thee to life eternal." Wilpert quotes a very ancient form, which is common to the different liturgies: "Receive, O virgin, this holy veil, and wear it without stain until thou shalt appear before the judgment seat of Our Lord Jesus Christ, before Whom every knee shall bow, of those that are in heaven, on earth, and under the earth, for all eternity, Amen."

See VIRGINITY; also the Pontificale Romanum: De benedictione et consecratione virginum; MUJIK AND PERSCHINKA, Kunst und Leben in Alterthum (Vienna and Leipzig, 1909); DARENBERG, SAGLIO, AND POTTIER, Dictionnaire des antiquites grecques et romaines (Paris, 1904), s. v. Matrimonium.

A. VERMEERSCH

Philipp Veit

Philipp Veit

Painter, b. at Berlin, 13 Feb., 1793; d. at Mainz, 18 Dec., 1877. Veit was a grandson of the philosopher Mendelssohn. In 1815 he went to Rome, where he studied under Overbeck and Cornelius as their best pupil. In 1830 he settled at Frankfort, and in 1854 at Mainz. In 1808 his mother Dorothea and her second husband Friedrich Schlegel had become Catholics, and he followed them in to the Church in 1810. About the same time also he decided to become a painter. He studied drawing under Matthai at Dresden, but by 1811 he went to Vienna where he first tried to paint portraits, producing several, but the blending of the colours, to which he gave special attention, caused him much trouble. In 1813 he took an honourable part in the War of Liberation. After this he went to Italy, but first he painted a beautiful "Madonna with the Child and John the Baptist", which he left at Heiligenstadt near Vienna. He joined in the work of the colony of German painters at Rome, and his share of the frescoes for the villa called Casa Zuccari was the "Temptation of Joseph", and also

the fresco of "The Seven Years of Plenty", which is unusually well done. The colouring in this last mentioned fresco was fresher than that of his artist friends; this is even more evident in the cartoon which is at Frankfort.

He painted in place of Cornelius in the Villa Massimi the "Paradise" of Dante, not in the grand style, but in a poetic manner that was full of feeling. He also painted here the lowest eight divisions of Dante's "Heaven". A fresco painted by him in the Museo Chiaramonti treats the re-dedication of the Colosseum as a place of worship. In Sta Trinita de' Monti there is a Crowning of the Virgin which is much admired. At Frankfort, Veit was the director of the Stadel Institute, and he made it one of the chief centres of German Romantic art. He drew a large number of pupils around him, among them Settegast who was later his son-in-law, and Rethel, who always acknowledged that he had been greatly aided by Veit.

Besides a few portraits, Veit painted the well-known pictures of the Emperors Charlemagne, Frederick II, Otto I, and Henry VII, in the Hall of the Emperors at Frankfort. Taken together, these portraits convey the ecclesiastical conception of the medieval empire as it appeared to the mind of this painter, who was so strongly imbued with the ideas of Christian Romanticism. The "Two Marys at the Grave" has much greater artistic value. This pen-and-ink sketch of the women sorrowing on the still closed grave is harmonious throughout, and full of fine feeling; it was intended for the religious foundation at Neuburg. A contrast to this last is the "Presentation in the Temple", in which a certain majesty is happily expressed. Veit painted an "Assumption of the Virgin" for the cathedral. During his residence at Frankfort he worked with restless energy to perfect the technic of drawing and colour, and to justify the demands of a moderate realism, and of popular art as typified by Schadow at Dusseldorf. If, in so doing, he turned aside from the style of Overbeck and Cornelius, nevertheless he gained a more vigorous manner for himself by these efforts. His greatest work, "Christianity bringing the Fine Arts into Germany", was painted in the years 1833-36; it was transferred to canvas in 1877. In the centre stands Religion full of gentle graciousness; to the right Boniface, the Apostle of Germany, preaches Christianity in her name to the attentively listening youth; an old bard and a priestess turn away, although the sacred oak has just been cut down at the command of the apostle. Religion turns towards this side, holding in her hand the palm-branch, the promise of peace. With the right hand she points to the Gospel as the source of truth. Christian life flourishes about her, and on the left side of the picture there are seen representations of Christian poetry, of medieval knighthood, of music, and farther in the background the symbolical figures of other arts, the monk dead to the world, but devoted to learning; finally a Gothic building and a civilized city. As a painting belonging to the realm of imagination the work belongs to the best of its class. When Lessing's "Huss before the Council" was placed opposite his own painting by way of contrast, Veit, wounded in his religious convictions, went to Sachsenhausen and later accepted a call to Mainz. As director of the picture gallery of Mainz he painted in the cathedral pictures from sacred history under the windows of the main nave, a task for which his graceful but not vigorous brush had hardly sufficient dramatic force. One of his latest works is a portrait of himself, a

masterpiece of delineation of character and of colour. A skilful writer, he left, among other productions, ten lectures on art, which have been edited by L. Kaufmann (Cologne, 1891).

SPAHN, Philipp Veit (Leipzig, 1901).

G. GIETMANN

Johann Emanuel Veith

Johann Emanuel Veith

Preacher, b. of Jewish parents at Kuttienplan, Bohemia, 1787; d. at Vienna, 6 Nov., 1876. In 1801 he took the philosophical course at the University of Prague and later studied medicine. In 1808 he obtained a degree in medicine at Vienna; in a short time he was professor and then director of the school of veterinary medicine. He wrote poetry, and a play of his was acted in one of the theatres of Vienna. He also published a valuable compendium in two volumes of veterinary surgery, and an outline of botanical medicine. In 1816 he became a Christian, and in 1817 began the study of theology. He also became a personal friend of Father Hofbauer, was his physician, and was urged by him to devote himself to preaching after ordination. Veith was ordained, 26 Aug., 1821, and the next month joined the Redemptorists at Maria Stiegen. He was a Redemptorist preacher at Maria Stiegen, 1821-30; preacher at the Cathedral of St. Stephen, 1831-45; retired cathedral preacher, until his total blindness, 1845-63; finally, a writer of ascetic devotional works until his death. His sermons exist in manuscript up to 1825; their publication began with "Die Leidenswerkzeuge Christi" (1826); "Die Worte der Feinde Christi" (1827); "Das Friedensopfer" (1828); "Lebensbilder aus der Passionsgeschichte" (1829); "Das Vater Unser" (1830); "Die heiligen Berge" (1821); "Der verlorne Sohn" (1832); "Die Samaritin" (1833); "Die Erweckung des Lazarus" (1842); "Mater dolorosa" (1843); "Die Heilung des Blindgeborenen" (1844); "Eucharistia" (1846); "Die Säulen der Kirche" (1847); "Misericordia" (1848); "Politische Passionspredigten" (1849); "Weitleben und Christentum" (1850); "Charitas" (1851); "Der Weg, die Wahrheit, und das Leben" (1854); "Prophetie und Glaube" (1855); "Die sechs Fastensonntage nach ihren Kalendernamen" (1857); "Die Perikopen-Reihen der sechs Fastwochen" (1858); "Die Mächten des Unheils" (1859); "Die zwölf Stufenpsalmen" (1862); "Die Anfänge der Menschenheit" (1863). Among his homilies are: "Homiletische Vorträge für die Sonn- und Festtage" (7 vols.); "Homilienkranz für das katholische Kirchenjahr" (5 vols.); "Vorträge über die sonntäglichen Perikopen von Advent bis Pfingsten". Among his collections of homilies are to be found sermons on the feast days of the ecclesiastical year; he also published sermons of this class in two vols.: "Festpredigten, zumeist in einer Doppelreihe". Of the sermons on special occasions may be named: "Die Cholera predigt" (1831); and "Austrias Trauer, Drei Reden bei den Exequien für Kaiser Franz I" (1835).

Veith took pains to give his sermons an attractive and tasteful form; their language is classic. In the third part of his "Erzählungen und Humoresken" he gives the delightful "Aphorismen für Diener der Kirche von einem Kirchendiener". He never made use of the arts of secular orators to create a sensation; least of all did he wish to be a fashionable preacher. Veith's pulpit was always

surrounded by those classes of society which usually do not attend such services. Priests, scholars, literary men, artists, and students came with eagerness to hear him proclaim the Word of God. In the summer of 1869 Veith received an English translation of his "Leidenswerkzeuge" from Theodore Noethen, parish priest at Albany, U.S.A., the work itself being published at Boston. He published three prayer-books: "Jesus meine Liebe", "Erkenntnis und Liebe"; "Christus gestern, heute, und ewig". From 1863 Veith was both blind and deaf. He could not preach any longer but he succeeded in writing lectures on spiritual exercises for publication, and supplemented and completed his books of meditations: "Denkbüchlein von Leiden Christi"; "Erklärender Text zu Führichs 15 Mysterien des Rosenkranzes"; "Meditationen über den 118. Psalm"; "Hundert Psalmen"; "Der Leidensweg des Herrn"; "Die Epistelreihe des Kirchenjahres in ihrem Verhältnisse zu den Evangelien"; also the posthumous work "Kohleth und Hoheslied". Veith was buried in the Matzleinsdorfer cemetery of Vienna.

LOWE, Johann Emanuel Veith (Vienna, 1879), with portrait; IDEM, Der hundertste Jahrestag der Geburt Johann Emanuel Veiths in HELFERT's Oesterr. Jahrbuch, XI (Vienna, 1887), 171-84; WOLFSGRUBER, Veith als Homiletiker; SWOBODA, Erster homiletischer Kurs (Vienna, 1911); Vortrage und Verhandlungen (Vienna, 1911), 129-48.

CÖLESTIN WOLFSGRUBER

Diego Rodriguez de Silva y Velazquez

Diego Rodriguez de Silva y Velazquez

Spanish painter, b. at Seville 5 June, 1599 (the certificate of baptism is dated 6 June); d. at Madrid, 7 August, 1660. His father, Juan Rodriguez, belonged to the Portuguese family of Silva; the child took the name of his mother, Gerónima Velazquez. He entered the studio of the aged Herrera, but could not stand his temper, and soon left for the studio of Pacheco, whose school at Seville was the most frequented. Although one of the most tiresome of romanticizing painters, Pacheco was a cultured mind, appreciative of a genius opposed to his own. As a critic, poet, and man of the world, Pacheco was the centre of the first literary salon in the city, and from this society young Velazquez received an education through contact and conversation with superior men. Before he was twenty he had married Pacheco's daughter Dona Juana. Two daughters were born to him before 1622, when the young painter decided to seek his fortune at Madrid.

Here, through Canon Fonseca, a friend of his, who held a post at Court, he was enabled to visit the royal collections at the Alcazar, Prado, and especially the Escorial, with its matchless collection of Tintoretto's and Titian's. This was the sole benefit of his visit, and after some several months Velazquez returned to Seville. When Philip IV raised the Sevillian Olivarez to power, Fonseca summoned Velazquez back to Madrid, and he obtained permission to paint the king's portrait in the court of the riding school. This portrait, now lost, was an event. Thenceforth Velazquez had the exclusive right to paint the person of the king. By a patent of 31 October, 1623, he was appointed

painter of the chamber, with a salary of twenty ducats payable out of the appropriation for court surgeons and barbers.

For thirty-seven years Velazquez's fortune lasted; even the fall of Olivarez, in 1643, did not lessen the royal favour towards Velazquez, who rose one degree in official functions with each year, becoming in turn gentleman of the bed-chamber, master of the wardrobe, and finally (1652) *aposenador*, or quartermaster of the royal migrations. His life was now that of a functionary occupied with multifarious duties in a Court noted for the oddities of its protocol, and the strictness of its etiquette. This monotonous and somewhat empty existence was varied by sojourns at Aranjuez and gala excursions which entailed upon Velazquez serious cares and unpleasant tasks; only two journeys to Italy, twenty years apart (1629, 1649), brought him a breath of fresh air, freedom, and relaxation. The artist, however, did not suffer in consequence of these conditions. He had solicited all these offices, and they brought him consideration and honour. At the end of a corridor at the Alcazar, in a world of ministries and bureaux, he lived his own life, which he has shown us in a picture by his son-in-law, Mazao, in a vast, bare Arabian apartment, with a rose in a glass shedding its petals before a bust of the king. Philip, indeed, always carried about with him a key to the studio of Velazquez, and went daily to spend an hour there--to find a brief distraction from the sense of weariness which is expressed in his melancholy countenance. This intimacy was Velazquez' romance; it lends a peculiar charm to the long series of portraits the painter made of his royal friend.

This peculiar situation makes Velazquez a figure somewhat apart in the Spanish School. In an art almost exclusively religious he alone is a lay painter; he alone scarcely ever painted for convents and churches; he alone had occasion to paint historical pictures, mythological scenes, and nudes; he was almost alone in avoiding the scenes of martyrdoms and scenes of torture so characteristic of Spanish painting. These facts, however, point to no conclusion concerning Velazquez' sentiments; for instance, it does not follow that he was not a good Catholic, though it may well be that he was not a mystic.

Compare the Olympian, majestic serenity of his splendid "Crucifixion" of the Prado, with the distorted, pale Christs of Theotocopuli; the evident difference is that between simple respect and religious passion. At bottom no one is less unrestrained in his art than Velazquez, no one gives us fewer confidences nor fewer opportunities to read the secret of his heart. He felt no compulsion to produce something; he was not tormented by any thirst for glory or for self-expression. About 200 canvases constitute his entire output, three-quarters of them portraits, and the facility exhibited borders on the marvellous. Velazquez seems to have had no imagination; his work is perhaps the most remarkable existing example of exclusively naturalistic and realistic art. He never invented anything; he never showed any desire to seem original; he only sought more and more rapid and artistic ways of expressing facts without any intermingling of personality, painting with the same indifference still life or an historical scene, a king or a buffoon, the body of a young girl or a monstrous dwarf; sweeping the universe with his imperturbable gaze and embracing without love or repugnance all forms of life, whether beautiful or hideous, like an impassive mirror of nature. His whole art, his whole ideal, all the interior life and the progress of this incomparable painter,

lay in a more and more perfect reproduction of things. It may be said that, starting from a pure realism, Velazquez reaches in his last works a sort of impressionism or phenomenalism, and it is this which for forty years has constituted him the foremost master of modern painting.

His first works were those executed at Seville before his journey to Madrid and his first contact with the Italian masters. These belong to the class of *bodegones*, or pictures of still life, and are exclusively mere studies. The young painter sought to express simple objects, fruits and vegetables, kitchen utensils, jars, and *alcarazas*; he was studying, and he learned to translate things directly, constructed his vocabulary without troubling masters, and consulted only nature itself. This was the method of Rembrandt's early work, as also of Chardin's and, in more recent times, of Cézanne's. Most of the important pictures of this early period are now outside of Spain. Such are "The Water-Carrier of Seville" (c. 1618) (Apsley House); the "Two at Breakfast" (same collection); the "Three at Breakfast" (the Hermitage); the "Blind Woman" in the possession of Sir Francis Cook; "Christ in the House of Martha and Mary" (National Gallery, London), which, despite its title, is a scene at an inn with two coarse women; lastly the "St. Peter" of the Beruete collection and the "Nativity" of the Prado (1619), which is the author's largest picture of this date and likewise the best of all.

During the seven years (1623-29) which preceded the first journey to Italy we know that he painted, besides various portraits mentioned below, a large composition called the "Expulsion of the Moriscoes" (1677) which unfortunately perished in the burning of the Alcazar and not even an engraving of it remains. But to the same period belongs an important picture, the "Bacchus", or "The Drunkards", dating doubtless from 1628, and permitting us to judge of his progress. This, also, despite its mythological title, is a very real subject; each face is a portrait, one of those portraits of rustics and beggars, a company recruited from a picturesque rabble, which became fashionable about the beginning of the eighteenth century through the reaction against the idealist system, and which in Spain furnished the material for the picaresque romance. Otherwise the work is magnificent: each head, with its brick-dust tint and sunburnt skin, is superbly forceful and brilliant; the bodies of the two half-clad lads are splendid bits. But, as a whole, the picture is cloudy, lifeless, heavy, and characterized by a crass sensuality.

At this juncture Velazquez made the acquaintance of Rubens, who had come to Madrid on a mission to the King of Spain. Rubens' prodigious activity stirred the apathy of the Andalusian artist; animated by curiosity and a new insight, the young man set out for Italy shortly after the departure of the Fleming. He stayed there a year, visited Venice and Rome, and returned by way of Naples, bringing back from the journey the fruit of contact with Italy and the antique, a new conception of the meaning of art. This was soon made manifest in two large pictures which Velazquez painted after his return, but had perhaps begun in Italy, "Joseph's Coat" (Escorial) and the "Forge of Vulcan" (Prado) (c. 1631). As in "The Drunkards", the idea and characters, the subject and types, were, despite the title, of a popular nature; the "Forge" especially is a genre picture taken from life and but little altered. He here begins to employ that silvery and exquisitely limpid tone which he

constantly made more delicate and fluid, and which was thenceforth the great resource of his poetry and the chief agent of his transformations.

This progress of art in Velazquez is shown chiefly in the work of this period, "Christ at the Column" (National Gallery, London) and the "Crucifixion" of the Prado, which Théophile Gautier has compared to a beautiful ivory crucifix on a background of dark velvet. But Velazquez' genius reached its grandest expression at this time in the famous and magnificent picture of "The Lances" (see SPAIN, full-page illustration). The subject is well known: the surrender of Breda, the meeting of the two approaching forces, Nassau followed by his Dutch gunners, Spinola at the head of the picket of lances which gives its name to the work, and the charming gesture of military comradeship, whereby the victor welcomes the vanquished. Two races face each other in a living contrast of faces and costumes, an abundance of portraits, picturesqueness, and colour, a charm and brilliancy of expressions which perhaps have never been equalled in any school. The beauty of the horse, the spirit of the arrangement, the apparent facility, the grandeur of the landscape, the quantity of ambient air, the breadth of the colour scheme, the particular sonorousness of tone, the style, at once natural and joyfully heroic, constitute this immense canvas a unique triumph at this period of Velazquez' work. The central group impersonates Spanish courtesy in its noblest and most chivalrous aspect. The importance of the subject, the dimensions of the work, the incomparable success of plastic expression, picturesque and natural interest with a significance for Spain which some years later "The Night Watch" was to have for Holland, while for clearness of expression, value of colours and physiognomies, Velazquez had the advantage. We may seek in vain in the seventeenth century for anything comparable to this historic canvas. Yet it may be asked is this Velazquez' masterpiece? Has it the immense virtuosity presumed for such a canvas as properly its own? Is not this decorative grandeur borrowed from Veronese or Titian? The very popularity of the work shows that it was according to a received formula, and if Velazquez had died immediately after "The Lances", he still would have been one of the foremost painters of the world, one of the most wonderful artists of the Venetian family, but we should not have known the most intimate and original side of his genius.

For twenty years his portraits formed the chief part of his work. "He only knows how to paint heads", his enemies said of him. "They pay me a great compliment", replied the phlegmatic artist, "for I know of no one else who can do as much." The royal family, Philip IV, his brother the cardinal infante, his two wives, his young son Don Balthazar Carlos, the infanta Margaret, constitute nearly all the contributions to his incomparable gallery; from 1624 to 1660 there are more than twenty portraits of the king himself, and it is doubtful if there exists elsewhere a similar artistic monograph or biography of the same individual; but taken together with those of his circle--his brother, his wives, and his children--these portraits assume a new value and constitute a human document of the first order; they form the reconstruction of a vanished circle, the natural history of the agony of a race. There is to be found nowhere a collection of portraits of such powerful and pathetic interest.

The portraits of Velazquez are distinguished for their absolute truth and the total absence of striving for effect. No royal personage, especially in the seventeenth century, was ever surrounded

with less pomp; compared with these portraits Rigaud's "Louis XIV" seems theatrical and bombastic; Van Dyck's "Charles I" foppish, beruffled, and flippant. The black dress, black cloak, black shoes and stockings, the puritanical-looking *golilla* or Spanish collar, give to Velazquez' portraits a strange severity; we feel the supreme dignity and distinction of a grandeur which is not indebted to costumes or accessories; the prince shows himself and wins our recognition by his presence alone: *Yo el Rey*. A new stage is marked by the portraits of the king, the cardinal infante, and Balthazar Carlos in hunting costume, made about 1635 for the decoration of a pavilion of the Torre del Pareja; between these three figures treated in a tone of bistre bordering on monochrome the artist has sought new relations and a sort of harmony expressed in the motif, the landscape, the atmosphere, and above all the choice of the tone. An exercise of the same kind, with immense progress in the orchestration, consists of the portraits of the king, Olivarez, and the infante, on horseback, made to adorn a hall of the Prado. After so many masterpieces, it is still a question whether Velazquez ever produced anything happier or more complete than the splendid Infante Balthazar Carlos astride his little chestnut horse, galloping briskly on an April morning on the bare and joyous slopes of the sierras.

Besides these royal series mention must be made of some separate portraits, such as the "Lady in Black" of the Museum of Berlin, the full-length portrait of Admiral Pulido Pareja (1639, Longford Castle), and especially the face of the sculptor Martinez Montanez (Madrid, c. 1645), one of the master's simplest and most extraordinary works. To this period (from 1640) belong two new series in which Velazquez' formula becomes elaborated into his latest manner and the qualities of observer, artist, and harmonist are blended to produce the unparalleled masterpieces of 1655. These are the two series of "Dwarfs" and "Infantes". The seven or eight pictures of dwarfs--the "Niño de Valecas" or the "Boho de Coria" possessed by the Museum of Madrid--afford a glimpse of the familiar life of the Spanish Court in the seventeenth century which nothing can replace; without them we could not imagine the hardness of this world of feasting and luxury which, to enhance its joy by contrast, suffered all the miseries of life to creep in its shadow. The unconscious cruelty which takes such pictures for granted is what Velazquez has in common with the ferocious side of his race and, for example, with the sanguinary art of Ribera. This collection of frightful studies, these pictures of cripples, goblins, abortions, might serve to illustrate a treatise on teratology. The painter shows neither affection nor disgust; he was no repugnance to painting what nature is not ashamed of creating and what the sun shines upon. This gallery of monsters is, after all, one of his most fascinating creations.

In the parallel series of portraits--the infantas at Vienna, Madrid, and in the Louvre--the great painter's otherwise far from tender work is endowed with the peculiar characteristic derived from the presence of women. And yet a strange picture, indeed, of the eternal feminine is presented by these young figures, paralyzed by etiquette, deformed by ridiculous and extravagant fashions. The artist, thenceforth the finished master of his technic, and possessed of the language which was to be the element of his last works, confined himself to playing like a virtuoso with details of reality which took his fancy. He no longer sought to imitate nature itself, to paint slavishly the substance of things, but was content to barely evoke the appearance and arrange on his canvas just what would

suggest the whole impression. He ceased to paint facts or, rather, the only facts which he depicted were his intimate sensations. For him, reality henceforth consisted only in the reflexion of things perceived in his consciousness, and this abbreviated reflexion, this new and inner reality, was what he threw into his picture. Thus proceeding slowly and from experience to experience, the painter passed from the mere copying of material facts to the most individual and original expression known in painting. In this period (1649-50) occurred the painter's second journey to Italy, commemorated by three or four masterpieces, the two landscapes of the Villa Medici, preserved at Madrid, which possess all the grace of the most delightful Corots, and the portrait of Velazquez' mulatto slave Juan de Pareja (Castle Howard), with which the artist precluded the magnificent portrait of Pope Innocent X (Palazzo Doria), the finest portrait of a pope save Raphael's Julius II.

On his return to Madrid the painter, now definitely freed from all shackles, and strong enough to handle all ideas as he pleased, produced one after another the most decided, and most precious of his works. Such, for example, were the two famous philosophers, the "Æsop", and the "Menippus" of the Prado, the most beautiful example of this class of Spanish mendicancy akin to the "Drunkards" of thirty years earlier. Such, likewise, were the two companion pictures, the only existing fragments of an entire decoration—the "Mercury and Argus" of the Prado and the "Venus with the Mirror" of the National Gallery. The "Mars" and the "Coronation of the Virgin", at the Prado, are less pleasing, and original works. For a long time, owing to the nature of his ideas and the constant development of his researches, Velazquez devoted himself to the solution of a more important problem. We have seen how in "The Lances" he had attempted historical painting, and what prevented him from succeeding therein. Thenceforth he devoted himself to a new idea through a whole series of works, to express directly, in the fashion of a portrait, not merely an historical scene nor a single figure but a complete action of daily life. Thus, small pictures such as the "Boar Hunt" (Callace Collection, c. 1636), "Balthazar Carlos in the Riding School" (Wallace Collection, c. 1640), and the "View of Saragossa" lead us up to Velazquez' grandest works, those which contain all his genius and present the highest expression of his art, such as "The Spinners" and "The Maids of Honour" (Las Meninas) (c. 1655-56). In subject they are both genre pictures, but of hitherto unknown dimensions and treated in the "historical" size. The former shows a workshop which is being visited by two ladies; the latter, an inner chamber of the Alcazar in which Velazquez is shown painting the young infanta, who is surrounded by her ladies in waiting, her dueñas, her dwarfs, and her dog. Into these everyday scenes is introduced an element of selection, of fantasy, caprice, genius—a something subjective and purely individual, without which such pictures could never have been conceived. Such groups as these were formed again and again in the noisy and overheated work-rooms or the coolness of dark palaces, but they demanded a supreme artist.

To translate these wholly intellectual facts of a quite peculiar order of existence, the artist did not make use of known lines or colours; he employed splashes, vague coloured splashes without parallel in form and with no more relation to the world of real facts than the colourless dust on the butterfly's wing bears to the rich diapering which the eye perceives. Everything becomes more elliptical, more uncertain and unreal, and assumed an appearance of a special nature, no longer that

of visible and material phenomena, but of their reflexion in the artist's soul, on a rarely sensitive surface; the operations of the hand become imperceptible and mysterious, and show an agility and caprice bordering on the miraculous; the complete whole takes form before our eyes with a verisimilitude which seems fantastic, and we have no longer a meaningless scene, but a real vision. These two works, writes Raphael Mengs, are the theology or the "Summa" of painting. They seem to exist outside of all the expedients of art and as by a mysterious fiat. Through them an entirely new path was opened to the painting of things. Every other scene of life has the same claim to be depicted, provided it has for observer and interpreter such a witness as Velazquez; it was a new viewpoint of nature, a method of fruitful and infinite application. We are assured that on seeing the "Meninas" the king was so charmed with the work that he perceived only one oversight, and taking up a brush, painted on the breast of the artist's own portrait the grand cross of St. James. Whatever the worth of the legend, the coveted order was none the less granted to Velazquez 12 June, 1658. He had given proof of his *limpieza de sangre*, that is, that he had in his family not a drop of Jewish or Moorish blood, that he had never worked for his living, that he had never made a trade of painting, that he had never practised his art save as a recreation and in the service of the king.

To these last years belong some busts (London, Turin, Madrid) which Velazquez made of the prince, stirring works, in which we discern beneath the coldness of the mask the interior tragedy which froze the charming countenance of the poet that Philip IV had been. The last, and one of the most charming, of Velazquez' works is the "Anchorites" of the Prado, which is perhaps his most airy and luminous, his tenderest and most poetic work. After his return from Italy, filling the post of royal *apostador*, he was charged with all the preparations for the journey on the occasion of the Peace of the Pyrenees and the marriage of Louis XIV with the infanta. Worn out by this excess of labour, the painter was attacked, on his return, by a fever which proved fatal. Philip IV keenly felt the loss of his friend. In the margin of a report of the Junta de Obras y Bosques, ordering that 1000 ducats of the painter's estate be returned to the budget of the Alcazar, of which Velazquez had been superintendent (proving that his management had been negligent and irregular), the King wrote the heart-broken words: "I am crushed" (*Quedo adbatido*).

In his sphere Velazquez had no superiors and perhaps no equals. Not only must all painting compared with one of his seem artificial and forced, so that in the wonder-crowded Prado, he seems the sole painter, but we must discern in him one of the finest minds and serenest souls that has ever been on earth, a glance capable of embracing and understanding nature, the whole of life without omission or scorn, passion or hatred, and of reproducing it in its true aspect as it appeared in the mirror of his thought. Alone of all the Spanish painters, although the most local of all, he is universal. But no more than any other master of his class did he form pupils worthy of him. No school emerged from "The Spinners" and "The Weavers". Rare pictures were connected with them, such as the family picture of J.B. del Mazo, mentioned above, and the "Santa Forma" of Coello in the Escorial, after which we find no companion to "The Maids of Honour" until Goya's "Family of Charles IV". But modern art is chiefly connected with Velazquez; the work of Whistler, for example, or of Lucien Simon, to mention only these two, are attempts to utilize the lesson of the last works of Velazquez.

It was more than two centuries before European painting reached the point to which extraordinary genius had brought this Catholic Spaniard of the time of Philip IV.

LOUIS GILLET

Venezuela

Venezuela

A republic formed out of the provinces which, under Spanish rule, constituted the captaincy general of the same name. This republic has an area of 280,918 square miles, lying between the meridians of 62° and 73° W. longitude, and between 1° 8' and 12° 16' N. latitude. Its surface is distributed as follows: mountain ranges, 92,913 square miles; table lands, 1591 square miles; plains, 228,993 square miles; lakes, 7509 square miles; lands liable to inundation, 24,544 square miles; the remainder being swamps, uninhabitable *paramos*, and small islands. It is bounded on the north by the Atlantic Ocean and the Caribbean Sea, which it has a coastline of 898 miles; south, by the Republic of Brazil, from which it is separated by the great Parima range; east, by the Atlantic Ocean and British Guiana; west, by the Republic of Colombia. Without including the rivers that rise in Colombia, there are 1047 rivers in Venezuela, the principal being the Orinoco, which rises in the forest regions and by means of the Casiquiare branch unites with the Rio Negro, which, again, flows into the Amazon; it then flows north and afterwards east, and discharges by means of eighty mouths into the Atlantic ocean, after a course of 1323 miles. The other rivers are the Apure, Meta, Cuyuni, Quariare, Cuara, Puruni. There are also two lakes, the Maracaibo and the Valencia; 204 lagoons, among which are the Tacarigua, the Sinamaica and the Guasaconica; three principal gulfs, the Maracaibo, the Triste, and the Paria. The highest mountain peaks are the Sierra Nevada, 16,437 ft.; Naiguata, 10,500 ft.; Maraguata, 9000 ft. There are no volcanoes, but some thermal springs, the most famous being those of Trincheras in Carabobo, Cuiva in Coro, and Guarume in the Guarico.

CLIMATE AND NATURAL RESOURCES

Venezuela is divided into three well-defined zones; first, the mountainous, formed by a direct arm of the Andes penetrating through Tachira and Trujillo, and running along the sea coast to the peninsula of Paria; secondly, the zone of the plains which extend to the banks of the Orinoco; thirdly, the forest region, which extends from the right bank of the Orinoco to the Brazilian boundary line. In the first of these zones all varieties of climate are to be found, from the cold of the Sierra Nevada of Mérida, to the genial warmth of the foot-hills; and excepting the coast, which is warm and unhealthy, the remainder, which forms a great agricultural belt, is both salubrious and fertile. In the plains, where the climate is warm, pastures abound, and all kinds of live stock are raised, cattle, sheep, goats, hogs, horses, mules, asses. In this zone may also be seen large stretches of plain covered with a luxuriant growth of wild flowers, and alive with flocks of numberless birds of the most marvellously variegated plumage. In the forest zones all kinds of timber and dye woods, medicinal plants, etc. are to be found, and also enormous birds, crocodiles, and boas. The climate here is, for the most part, warm and unhealthy. Mammals abound, chiefly monkeys, bears, jaguars, panthers, ocelots, pumas, water dogs, and manatees.

The annual mean temperature of some of the principal cities is: Caracas, 66° 43'; Valencia, 80°; Maracaibo, 86° 20'; Barquisemeto, 77° 54'; Ciudad BolBolivariacute; var, 86° 40'; Mérida, 64° 36' Fahrenheit. The country has extensive mineral products, copper in Aroa, gold in Guiana, hard coal in Coro, Barcelona, and Maracaibo, mene in Cumaná, saline deposits along the coast of Barcelona, Carabobo, Mayarita, and Maracaibo, and large quantities of asphalt in Barcelona and Maracaibo. The principal agricultural products are coffee, cocoa, and sugar-cane, besides a great abundance and variety of fruits. Cattle-raising is extensively carried on in the plains. The population, at the census of 1911, was 2,713,703; that of the capital, Caracas, 72,429.

COMMERCE AND INDUSTRIES

As the most important product of exportation has always been coffee, and the market price of this has been so low during recent years, the economic situation of the country has suffered. To this other causes, especially political, have also contributed. The official computation for the year 1910 gave the amount of exports as 64,184,206.63 bolivars (\$12,387,552 or &\$163;2,477,510). Among the exports of Venezuela are: cotton, starch, hemp sandals, asphalt, cocoa, coffee, rubber, copper, coconut, copaiba, cinchona, horn, hides, divi-divi, fresh fruits, cabinet woods, gold, feathers, sarsaparilla, tobacco in leaf. In manufactures Venezuela is still backward, but a movement in this direction is progressing. Some establishments, such as the weaving mills of Caracas and Valencia, and the oil factory of Valencia, have been very successful, and other such enterprises are in contemplation. There are twelve lines of railroad. Their income in 1910 from passenger traffic was 1,653,488.04 bolivars (\$319,124 or &\$163;63,825) and from all sources 9,239,363.32 bolivars (\$1,783,197 or &\$163;356,620).

CIVIL HISTORY

The coast of Venezuela was discovered by Christopher Columbus during his third voyage, on 1 August, 1498. Its name, meaning "Little Venice", was given it by reason of the fact that Alonso de Ojeda, who first explored the coast, in 1499, found a small aboriginal village built on piles in one of the gulfs to the west. Modified into *Venezuela*, the name afterwards served to designate the whole territory of the captaincy general (cf. Felipe Fejera, "Manual de Historia de Venezuela"). The Spanish conquest was complete in the year 1600. Since then there has existed in Venezuela a regularly organized society with peculiar ethnic characteristics and a self-developed culture. The colony was under the administration of governors and captains general during the seventeenth and eighteenth centuries. The first decisive step toward political emancipation taken by the country was the Conspiracy of 19 April, 1810, by means of which it was wrested from the control of the captain general, Vicente Empran. The definitive Declaration of Independence was issued by the Congress 5 July, 1811. This Declaration contains the following confession of faith: "Taking the Supreme Being as witness to the justice of our actions and the rectitude of our intentions; imploring His Divine and heavenly aid, and protesting before Him, in the moment of our birth to that dignity which His Providence restores to us, our desire to live and die free; believing and maintaining the Holy Catholic and Apostolic Religion of Jesus Christ as the first of our duties. . ." The War of Independence ended with the battle of Carabobo, won by the Liberator Simón Bolívar, 24 June, 1821. When the Republic of Colombia, formed by Bolívar out of the States of Nueva Granada, Ecuador, and Venezuela, was dismembered, the last-named of these three states became the Republic of Venezuela, in 1830. Since that date the development of the country has been retarded by internecine struggles, which, however, have not entirely impeded all advance towards culture and material progress. In the early days of independence, General José Antonio Páez, the hero of the War of Independence, was prominent in political affairs, aided by Dr. José María Vargas and Gen. Carlos Soublette. Following this, for a period of ten years, the country wavered between content and discontent under the rule of the brothers José Tadeo and José Gregorio Monagas, also celebrated leaders in the War of Independence. To José Gregorio Monagas is due the abolition of Slavery. The Monagas were overthrown in 1858, after which began the bloody and disastrous rule of the Federación, lasting five years, and terminating in the triumph of the Federal cause and the elevation of Juan Crisostomo Falcón to the supreme power. His rule was characterized by administrative inefficiency and a state of turmoil lasting until 1868. After a precarious regime, known as *El Gobierno Azul*, which consisted in a fusion of the parties, Guzmán Blanco came into power in 1870. During his term of office, a period of twenty years, strife and bloodshed continued, and Venezuela suffered from a despotism such as she had not known up to this time. Intellectually gifted and possessed of great energy, he availed himself of a spectacular political policy and, carefully measuring the elements with which he had to deal, was able to dominate persons and events completely. He would have been able to direct his country into safer paths and to have established her once for all in the foremost ranks of the truly progressive nations, had not his desire for personal aggrandizement so led him astray that he discarded all the established methods of civilization, concealed internal decay under a show of material progress, and laid the foundations

of that political venality which has ever since so seriously retarded the progress of the republic. Rojas Paul and Andueza Palacio followed him, and would have been able to establish peace and advance the welfare of the nation had not political ambition once more asserted itself, bringing with it revolution and military ascendancy. The last of these governments by bloodshed was that of Cipriano Castro, which lasted nine years and ended in December, 1908. With the celebration of the first centenary of its independence the entire nation demanded peace; the government then proclaimed, and has since endeavoured to procure, the establishment of law and order.

The United States of Venezuela is now composed of twenty federal states and a federal district, the seat of the national government, the capital of which is Caracas. Outside the limits of the Federal District the president had no executive authority except in such cases as are provided for by the constitution. The supreme executive power is vested in the president, assisted by the cabinet ministers and the Council of State. The legislative body consists of a Senate and a House of Representatives which meet in ordinary sessions once a year and may be convoked for extra sessions by the president. The judicial power is represented by the Federal Court and the Court of Cassation, whose members are elected by Congress from candidates presented by the various States. There are lesser tribunals to meet various needs. The political organization in the several states is similar to that of the national government. The president of the Council of State fills the office of vice-president for the republic or the state. The president is elected for a term of four years.

EDUCATION

Though internal disturbances in Venezuela have not altogether impeded the advance of civilization, they have somewhat retarded it. Education, however, never completely neglected, has acquired new vigour and extension. Guzmán Blanco issued a decree to extend it throughout the whole country, and although this has not been very effective, owing to the poor organization of the school system, it cannot be denied that much good has resulted. The total number of students in the primary grade in the entire republic for the third quarterly session in 1909 was 48,869, of which only 5799 attended private schools, the remainder attending the national schools, federal and municipal. In the secondary schools there were 3565 students, 1343 of whom attended private schools. In the fourth quarterly session of 1910 there were 50,991 students registered for the primary schools. Nevertheless, attention having been concentrated upon the principal cities and towns of importance, the interior of the republic has remained in a state of illiteracy. At present the Government is endeavouring to give a more efficient organization to the educational system, both by providing suitable buildings and increasing the number of students, as in supervising the management of the schools, and finding the best means of extending their usefulness. The Government also takes an equal interest in the secondary schools, both those maintained at government expense and the many and excellent private schools which exist throughout the country. In July, 1909, one hundred and two such schools were registered, sixty-three of these being private schools. In these schools the courses are literacy, mercantile, and philosophic. For the higher branches there are two universities, a school of engineers, and the episcopal seminaries. There are

eight schools for the fine arts, and fourteen manual training schools. The average of education is not low among the Venezuelans; they are naturally intelligent and assimilate knowledge readily. The one drawback is a lax system in the various courses. Medical science, in its various branches, has many representatives who stand high in their profession; judges and lawyers of high reputation represent the law; in belles-lettres Venezuelan writers have produced works that bear comparison with the best product of the other Spanish-speaking nations, and in the fine arts, such painters as Tovar y Tovar, Arturo Michilena, and Cristobal Rojas have produced works of which their country is justly proud. The Press in Venezuela has considerable merit: it is unfortunate that the influence of modern anti-religious ideas, for which no antidote is provided, should tinge with unbelief otherwise creditable work; notwithstanding this, it cannot be generally said that the Venezuelans are irreligious.

RELIGIOUS HISTORY

The religion of Venezuela has always been the Catholic faith. Missionary work was very efficaciously done in the early days: the Capuchins, in particular, carried that work very far forward, and many of the settlements of Venezuela were founded by them and reached a high degree of prosperity under their direction. Nevertheless, there have been undeniable shortcomings in public morality, due to the interference of extrinsic causes. One of the greatest glories of the religious orders and of the Spanish nation is the record of their unselfish devotion to the social redemption of the American races. The religious always defended the aborigines against their cruel assailants, being the first to claim for them the rights of humanity, and the kings of Spain fostered these humane and Christian views, promulgating a great body of laws--the *leyes de las Indias*--which will always be a monument of the noble principles which inspired those monarchs in their dealings with the aborigines. The Franciscans and Dominicans had the chief part in their civilizing work. In Venezuela they exercised their ministry with fruitful results; and when the conquest was completed, they still continued their mission with the greatest zeal. According to Dr. Francisco Gonzalez Guzmán in his "Historia Contemporanea de Venezuela", vol. II, pp. 34; 35:

Before 1830 there were forty convents in Venezuela: at Caracas, those of San Francisco, San Jacinto, San Felipe, the Mercedes, and the Capuchins; at Barcelona, of San Francisco; at Pívitú, of San Francisco; at Barquisimeto, of San Francisco; at Focuyo, of San Francisco, and of San Domingo; at Carora, of San Francisco; at Valencia, of San Francisco; at Cumaná, of San Francisco and of San Domingo; at Cumanacoa, of San Francisco; on the Gulf of Santa Fe, that of San Domingo; at Cabruta, the Jesuits; at Angostura (Ciudad BolBolivariacute; var), the Jesuits; at San Francisco, that of the same name; at Caripe, of San Francisco; at Mérida, San Domingo, San Agustín, and Candelaria; at Asunción, of San Francisco and of Santo Domingo; at Guanare, of San Francisco; at San Cristóbal, of San Agustín; at Trujillo, of San Francisco and of San Domingo; at Guasipati, of San Francisco; at Upata, of San Francisco; at Caruachi, of San Francisco; at Gury, of San Francisco; at Tupuquen,

of San Francisco; at Santa Maria, of San Francisco; at Maracaibo, of San Felipe and the Jesuits.

About the year 1830 there were in Venezuela the following communities of nuns: at Caracas, that of the Concepciones, founded in 1617 by Dona Juana Villela and her daughters, Spanish ladies, and authorized by the King of Spain, 3 March, 1619; that of the Discalced Carmelites of Santa Teresa, founded by Dona Josefa Melchora de Ponte y Aguirre, Dona Mejías, and Don Miguel de Ponte, authorized by royal warrant of 1 October, 1725, the building begun in 1726 and opened 19 May, 1732; and the Dominicanesses established in 1817. The convent of the Dominican nuns at Trujillo was begun in 1599 and opened in 1617. That of the Clarissas of Mérida was founded in 1651 by Don Juan de Bedoya. The Beaterio of Valencia was founded by the Revs. Juan José Rodríguez Felipe, Dr. Carlos Hernández de Monagas, and Dr. Juan Antonio Hernández de Monagas. The first idea of these charitable priests was to establish a college for the education of young girls, and this object was contemplated in the authorization given by Archbishop Francisco de Ibarra, 28 January, 1806. Dr. Carlos Hernandez de Monagas having been assassinated, and the Rev. Rodriguez Felipes being absent, Dr. Antonio Hernandez de Monagas, with the consent of Archbishop Coll y Prat, given 3 March, 1814, turned the college into a *beaterio*. In accordance with the archbishop's authorization, the girls were to be taught by Carmelite *beatas* (devout women), who were to observe the monastic vows so long as they wished to live in the Beaterio. Archbisho Coll y Prat received the vows of, and gave the veil to, the first *beatas* in 1814.

The secularized clergy likewise contributed to the work of civilization. An illustrious phalanx of priests, conspicuous by the austerity of their lives, their learning and piety, and comprising members of the most distinguished families, maintained the dignity of the priesthood and the deep popular reverence for ministers of religion. This deep and broad rooting of faith and piety, watered with the blood of martyrs, explains their wonderful persistence among the Venezuelan people of the present day, in spite of all the assaults of this present age. The influence for good which the bishops have had upon the civilization of Venezuela has been brought out clearly by Pedro M. Arcaya, a judge of the national courts in "El episcopado en la formación de la sociedad venezolana", published on the occasion of the Centenary of Independence (5 July, 1905), in the special commemorative number issued by "La Religión", of Caracas. Recalling a number of facts, taken at random, illustrative of the meritorious work of Bishops Gonzalo de Angulo, Antonio Gonzalez de Acuna, and Mauro de Tovar, Dr. Arcaya draws these conclusions:

In the sixteenth century, and almost as late as the middle of the seventeenth, the royal power was undoubtedly less efficacious for order than was that of the Church.

The former depended very much on the actual force which supported it; and that force was not in evidence to any great degree in the colony; European troops seldom appeared there, and indeed the territory was too large for the armies and fleets at the Spanish king's disposal. It was, therefore, almost exclusively through the influence of the Church that the habits of civilized life could be implanted in the country--habits which, but for the Church, the conquerors would have lost, and which, as a matter of fact, they did lose to a great extent, by contact with aboriginal savagery. The conquest would probably have ended in ferocious civil wars, in which the Europeans would have lost ground, and would have sunk to the level of the tribes who were their adversaries, had not the Church spoken to their conscience, reviving the sentiments of justice and duty, which, in the heat of the struggle, had been supplanted by base passions. The retrogression had been terrible, and to restore the moral level of these people was a difficult undertaking. To this work, and to that of inculcating into the Indians and the negro slaves the moral and religious principles which form the basis of civilization, the Venezuelan bishops applied themselves with extraordinary energy. They encountered great resistance, and, in order to accomplish their civilizing mission, they had not only to use persuasion and gentleness, but actually to assume a sort of dictatorship so as to break up abuses, protect the weak, chastise iniquity, and finally lay the foundations of a society inspired by justice and not brute force. They made great progress in this direction; and if the work was not, after all, solidly accomplished, it was not through the lack of any efforts of theirs, but because the conditions were difficult in the extreme. In this way, then, the quasi-dictatorship of our first bishops was just and beneficial. Venezuelan society was in its medieval stage; the same phenomenon was reproduced which had occurred in Europe, when the bishops and abbots were the only persons capable of protecting the masses against the excesses of chieftains and warrior bands.

The first episcopal see in Venezuela was that of Caro, founded pursuant to a Bull of Clement VII which was published 21 July, 1531. This see was transferred to Caracas in 1637, and elevated to archiepiscopal rank by a Bull of Pius VII 24 November, 1803. The Dioceses of Mérida and Guayana were created at a much later period, while those of Barquisimeto, Calabozo, and Zulia came into existence in the course of the nineteenth century. The union of Church and State has always obtained in the Republic of Venezuela, though this union has suffered the trials incidental to modern political ideas, trials which with each repetition render the situation of the Church in its relations with the civil power more precarious. No sooner was the Colombian nationality constituted than the State, by the Law of 28 July, 1824, assumed to the fullest extent those prerogatives over the Churches of America which, under the name of *Patronato*, the popes had conferred upon the Catholic kings. Without any fresh ratification or negotiations with the Holy See with respect to this privilege, Venezuela, when it separated from the Colombian Union, incorporated the *Patronato* in

its legislation (14 October, 1830), in consequence of which a note, accompanied by documents, was formulated, in which the Archbishop of Caracas and other Venezuelan prelates asked the Constituent Congress for the suspension of the law in question. On 21 March, 1833, an Act of congress declared it to be once more in vigour, and this law, with possible applications, the Government has continued to maintain as the principle of its relations with the Holy See. The steps taken to conclude a concordat, as prescribed by the Law of *Patronato*, "to prevent disputes and complaints in the future", have so far had no satisfactory results, while the convention with the Holy See, concluded in 1862, was repudiated by the Constituent Assembly of 1864, which resolved: "That the national executive open fresh negotiations with His Holiness in order to establish a concordat in relation with the laws of the Republic and in harmony with the spirit and letter of the Constitution which has just been ratified". The diplomatic mission sent to Rome for this purpose was not successful.

Conflicts between the ecclesiastical and civil authorities occurred in the earliest period of the Republic's existence. The first of these arose out of the refusal of Ramón Ignacio Méndez, Archbishop of Caracas, to swear allegiance, without qualification, fully, and in the form prescribed by the Constituent Congress, to the Constitution ratified in 1830. This refusal, based chiefly on the absence from the Constitution of any explicit recognition of Catholicism as the religion of the State, resulted, in spite of endeavours on the part of the Government to solve the difficulty amicably, in the exile of the archbishop, together with Mariano Talavera y Garces, titular Bishop of Tricala, Vicar Apostolic of Guayana, and Buenaventura Arias, titular Bishop of Jericho, Vicar Apostolic of Mérida, who associated themselves with their metropolitan. The exile lasted seventeen months, the prelates (with the exception of Mgr. Arias, who died 21 November, 1831) returning in April, 1832, after reaching an understanding with the Government. We may add, in passing, that Mgr. Arias left behind him a holy memory, the populace even crediting him with miracles. Another conflict, with Archbishop Méndez, arose in 1836. The prelate refused canonical institution to the persons nominated as dean and archdeacon, and the matter was taken up to the Supreme Court. To the same tribunal was afterwards referred the complaint of the Government against a pastoral letter in which Mgr. Méndez protested against the abolition of tithes, declaring this legislative act to be null. The result was another exile for the archbishop, who embarked for Curacao, 30 November, 1830, never to return, as he died on Colombian territory, 6 August, 1839.

The most lamentable quarrel between the Church in Venezuela and the Government was that in which Archbishop Silvestre Guevara y Lira and President Antonio Guzmán Blanco were the principals. The latter having won the battle which definitively established his power, in 1870, his Government at Caracas requested of the archbishop the celebration of a *Te Deum* in thanksgiving for the bloody victory. The prelate replied that there would be no objection to complying with the request of the Government, but that it seemed to him more fitting to defer this religious function until the general amnesty, offered by the president during the campaign, had been put into effect, so that the public participation of the Church in the rejoicings of the victors might not be coincident with the mourning of families for the shedding of blood and for the many captives who lay in prison.

This postponement was not satisfactory to the Government; Dr. Diego B. Urbaneja, its most influential member, seizing the opportunity to satisfy a private grudge, announced to Mgr. Guevara that his banishment was decreed. In justice to Guzmán Blanco it must be recorded that he received the news of this banishment with no expression of satisfaction, and that, after his return to Caracas, in the discharge of his official duties, he took steps to effect the prelate's recall and to re-establish the harmony which had been so rashly interrupted.

Unfortunately no good understanding could be reached, as political passions helped to make the rupture more and more irremediable, and the disastrous results became lamentable in the extreme. Guzmán kept no restraint on his anger; he visited it upon the whole Church and its most prized institutions, and, to destroy the influence of the priesthood completely, thenceforward set on foot a systematic persecution which, unhappily, met with complete success. He expelled with savage violence the last communities of religious women left in Venezuela, despoiling them of their possessions; he suppressed the seminaries, despoiling them also, and bringing ruin on that budding revival of ecclesiastical education which already constituted a fair hope for the country's progress in civilization; he destroyed churches, took possession of buildings, pious institutions, and sacred property of every kind, abolished revenues, secularized the cemeteries, defamed the clergy, and, eliminating every element of distinction in the sacred ministry that could hinder his plan for the ruin of the Church, opened the field to mediocrity and low intrigue, bringing in ecclesiastics incapable of any lofty social influences, whose indecorous character reflected upon the Church itself—a course abundantly fruitful of misfortune and innumerable evils. Guzmán Blanco put the finishing touch to the legislation which, from the beginning of the republic, had been creating obstacles to the liberty of association, so far as religious communities are concerned, by decreeing the total suppression of convents in the country and prohibiting their restoration in future. He moreover aimed at setting up in Venezuela a national Church independent of Rome, but without the slightest success. Finally, he sought to bring about the relaxation of the clergy by recognizing, in the legislation establishing civil marriage, unions entered into by those in Holy orders; the design, however, was frustrated by an outraged public conscience, and this article of the Code was suppressed.

The struggle terminated in 1875, when Mgr. Guevara abdicated the See of Caracas at the suggestion of Pius IX and through the mediation of Mgr. Rocca Cocchia, delegate Apostolic. But the wounds inflicted on the Church were deep, the consequent diminution of her strength was dangerous, and the process of convalescence which followed was, in the existing political conditions of the country, necessarily slow in its inception. At present the reaction seems hardly to be commencing, the fatal consequences having gone to extreme lengths, and the problem of bringing that reaction to a successful issue is fraught with difficulties. During the twenty years of Guzmán Blanco's tyranny, laws were imposed on Venezuela which greatly hampered the salutary action of the Church. These laws continue to exist because, unhappily, the same principles of antagonism are dominant among the legislators of the country; though, by reason of the good will which subsequent rulers of the republic have entertained towards the Church, they have effected less harm than they might have done under a more drastic application. To ensure compliance with the law,

the *Registro Civil*, created by Guzmán Blanco, prohibited the recording of baptisms in parish books without a corresponding entry in the public register of births; and in subsequent amendments of the Code additional provisions have been made to the prejudice of the Church's rights in the custody of parochial archives. With the same purpose in view, the civil marriage instituted by Guzmán Blanco prescribed, under heavy penalties, the precedence of the civil over the religious ceremony, and surrounded the former with so many formalities and difficulties as to make marriage extremely difficult. This law has become a constant source of public demoralization. On account of the difficulties here indicated, aggravated by abuses on the part of subordinate officials and the extortion of pecuniary payments which the law itself prohibits, marriages have become very infrequent, while it has been extremely difficult for the Church to exercise her moral power in this respect.

Concubinage is not infrequent in the country. In the last reform of the Civil Code, Cipriano Castro, exercising a brutal despotism over the national conscience, introduced a divorce law, though repugnant to the people. The present (1912) government of Venezuela, however, presided over by Juan Vicente Gomez, has taken effective steps to improve the situation, perceiving plainly the deplorable moral and social effects which have resulted from the degradation of the marriage contract and heeding the zealous remonstrance of the bishops. A recently issued government order (12 October, 1911) has for its object the extermination of these abuses, and promises, moreover, to lay once more before the national congress the bill for revision of the laws concerning civil marriage. It must also be stated that the administration of Gen. Gómez has shown marked consideration to the Church, thereby affording a remedy for many of the evils that have beset her.

The Venezuelan Code recognizes the right of the Church to acquire and possess property, but curtails it to a great degree by closing the two most usual and effective ways of acquiring property for ecclesiastical institutions, viz., donations and bequests. The Code prohibits acquisition of property in these ways by churches, and even persons in Holy orders are forbidden to receive anything under testamentary disposition or by gift outside of the eighth civil (fourth ecclesiastical) degree. Thus the Church in Venezuela, despoiled of almost all that it once possessed, has been unable to recover itself in this respect, and is placed in pecuniary straits which preclude it from energetic social action and from rising out of the prostrate condition in which it was left by the persecutor. As a matter of fact, it can count only on the poor offerings of the faithful for the functions of religion, while the clergy with difficulty support themselves on stipends. The State now provides, under the head of ecclesiastical appropriations, only for the maintenance of prelates and chapters, and that with really insufficient sums, although, when the tithes were abolished by the Decree of 6 April, 1833, an engagement was entered into "to defray the expenses of public worship". This ecclesiastical budget has been incessantly mutilated, so that the state subvention becomes more and more precarious. The Government, however, punctually takes care of the church buildings and exempts from import duties all articles intended for the service of religion.

When the power of Guzmán Blanco was broken, a reaction in favour of the Church set in, and in consequence, as well as by the operation of the inevitable law of human progress, certain advantages gained for the interests of religion may now be discerned in the country. To be sure,

this recovery has been only very slow; the Church has nothing to rely upon but the good will of those who wield of the supreme power, so that there is always the fear of some despotic excess on their part, or of their falling under some sinister influence. There have, moreover, been very unfortunate periods in the administration of the Church; a certain section of Venezuelan "intellectuals" are far from sympathetic with the Catholic cause, and the Church does not possess in Venezuela any large number of subjects capable of pushing the defence of Catholicism with brilliant success. There is nothing but the inherent power of the Faith to operate in society and in individual souls for the recovery of its legitimate influence.

In 1886 the Government itself introduced into Venezuela the Sister of Charity of St. Joseph of Tarbes and entrusted to them the service of the hospitals. The Sisters founded educational establishments for girls, which are still considered among the best of their kind in the country. The two best are at Caracas; but the congregation also has efficiently conducted colleges at Valencia, Puerto Cabello, and Barquisimeto. Later on, another congregation of Sisters of Charity, those of St. Anne (Spanish), established themselves at Maracaibo, Mérida, and Ciudad Bolívar; at present, however, they are found only at Maracaibo. Other institutes of women afterwards began to appear in the country, devoted to the service of charity, catechetical teaching, and, in some degree, the contemplative life, but not cloistered. Among these may be mentioned in particular the Little Sisters of the Poor of Maiquetia, the Servants of the Most Holy Sacrament, and the Franciscan Sisters. All of these work with great abnegation for the respective objects of their institutes, and do a great deal to maintain the influence of religion among the people.

With a view to providing for the evangelization of the aborigines, some thousands of whom still live as savages in the regions of the Orinoco, the Government invited Capuchin monks to Venezuela in 1891. The work among the Indians has not been successfully completed, but the Capuchins have done very meritorious work as missionaries, assisting prelates in their apostolic journeyings, preaching to the people in many districts, and greatly fostering piety in the cities where they are stationed. At present they have residences at Caracas and Maracaibo. At the invitation of the Government, the Salesians came to Venezuela in 1894. This congregation has been obliged to exercise its mission slowly and has not yet attained the full development of its programme; it has, however, proceeded with a persistent firmness the efficacy of which is seen in the results obtained in the education of youth. It now has a considerable establishment at Caracas, a college at Valencia, and one at Maracaibo. Its members have rendered devoted service in the salvation of souls. In 1899 the Augustinian Recollects came to Venezuela; their ministrations have been utilized by the bishops in parochial work. They are employed in the Archdiocese of Caracas and the Dioceses of Guayana and Zulia. In 1903, at the invitation of the Government, the Sons of Mary Immaculate established themselves at Caracas, where they are known as the French Fathers. There they conduct a magnificent college and at the same time afford valuable assistance to the clergy of the capital in the care of souls. Lastly, in the same year, 1903, the Dominican Fathers, also under government protection, took possession of the Church of the Sacred Heart of Jesus at Caracas. They are gaining more and

more in the esteem of society at large and the appreciation of the metropolitan. Certain members of their community are now engaged in teaching in the seminary of Caracas.

All these elements of religious progress, although the numbers of the communities have been small in each case, have entered Venezuela in spite of the existence of special laws against them and in virtue of the religious liberty guaranteed to Venezuelans. Certain it is that, owing to that mistrust of Catholicism which in these days disturbs the judgment of politicians throughout the world, the last two Constitutions adopted in this country embody restrictions which may be considered invidious to the Church and which, given the occasion, could be used as a weapon against her; at the same time, these restrictions might very well serve to protect her in view of the peculiar way in which power is exercised in the Republic of Venezuela. One most important compensation made to the Church by the Government was the legal re-establishment of the seminaries in virtue of an executive order of General Cipriano Castro, issued 28 September, 1900. These institutions now no longer lead the diminished existence that was formerly theirs. That of Caracas, known as the metropolitan, is divided into a great and a little seminary; the Government contributes to its support, and its professorships of ecclesiastical science have the official character of *cátedras universitarias*. The Dioceses of Mérida and Barquisimeto also possess seminaries with lesser academic privileges, and one is now being organized in the Diocese of Zulia. These foundations encourage fair hopes for the future, even though the number of students be small owing to the paucity of genuine vocations in the scanty population.

A large proportion of the secular clergy of Venezuela conscientiously discharge the duties of their ministry, labouring to foster piety, teaching the Catechism, and performing other parochial offices. Nor must it be overlooked that in the last ten years very efficacious efforts have been made by worthy priests for the Catholic revival in the fatherland. It is a lamentable fact, indeed, that, whether through the shortcomings of individuals, melancholy relaxations of discipline, or other internal troubles, deficiencies are still evident. Certain co-operative enterprises--for the instruction of youth, for propaganda through the Press, for the warfare against particular vices, and other activities of equal importance--are still awaiting their hour in Venezuela. As to religious instruction in schools and colleges, the State, having assumed the burden of public education, making it gratuitous and obligatory, explicitly authorizes the teaching of religion in elementary schools. Principals of colleges, on their part, anxious that their establishments, most of them excellent centres of mental culture, should also be in good esteem among Catholics, are almost invariably attentive to the duty of giving their pupils religious instruction and making them fulfil their religious obligations, and at the same time of fostering piety among them.

In the religious conditions, and consequently the progress of social culture, throughout vast tracts of the national territory, much is lacking. In all parts of the country the Faith exists, but daily life does not always correspond with belief. This is due to the constraints which the government places upon the free exercise of the Church's activities. It must be taken into account that the religious institutes, for this reason, and on account of the fewness of their subjects, exercise their activities only with great difficulty in the capital and in some other important centres of population.

Alcoholism, sensuality, and gambling are the predominant vices; it must be admitted, too, that speculation and other political abuses have greatly helped to pervert the moral sense of Venezuelan society. Of the 2,713,703 inhabitants only 3361 are Protestants and 247 Jews. In Guayana and Goajira there are still remnants of the aboriginal tribes, a total of 98,932 souls for whose evangelization it has not been possible to do very much up to the present time, notwithstanding the efforts of the Government. During the last few years, owing to a misinterpretation of the law of freedom of worship, the Protestants have begun to spread their doctrines among the people, but the Government, by a recent decree, 24 October, 1911, put a stop to this propaganda by designating exactly the limits within which, according to the Constitution, representatives of other religions may exercise their ministerial functions.

The archdiocese (see CARACAS) has a numerous chapter and eighty-two parishes, besides twenty-two affiliated churches and private chapels. It has two seminaries, a great and a little. There are 35 male religious, taking all the regular institutes together. The congregations of women aggregate 242 sisters. The present archbishop (1911) is Mgr. Juan Bautista Castro, whose zeal has always manifested itself in the defence of the Church, and especially as an apostle of the Divine Eucharist, for the adoration of which he has consecrated at Caracas the sanctuary of the Santa Capilla, where perpetual homage is rendered to the Blessed Sacrament with daily Exposition. He is the founder of the Congregation of Servants of the Most Holy Sacrament. It is in this part of Venezuela that the religious movement is most intense. The administration of this Church, as of most of the Venezuelan Churches, was formerly regulated by the synodal constitutions enacted at Caracas in 1687; at present all the dioceses are governed under the Pastoral Instruction promulgated by the Venezuelan episcopate in the Conference of 23 May to 27 July, 1904. This Instruction is based upon the decrees of the Plenary Council of Latin America. It is signed by Juan Bautista Castro, Archbishop of Caracas, and Antonio María Durán, Antonio Ramón Silva, Felipe Neri Sendrea, and Francisco Marvez, Bishops respectively of Guayana, Mérida, Calabozo, and Zulia; Aguedo Felipe Alvarado, at that time vicar capitular, now Bishop, of Barquisimeto, also assisted at the conferences. The Catholic Press has flourished at Caracas, even though, in the existing conditions of the country, it has never been materially prosperous; it is represented by periodicals which defend the interests of the Church with boldness. The present most fully authorized organ is "La Religión", which has existed for twenty years; the "Heraldo Cathólico", a weekly, exercises a very salutary influence, as well as several monthly reviews of a devotional character--such as the "Mensajero Venezolano del Corazón de Jesús", "El Santísimo Sacramento"--and periodicals published by religious houses--such as the "Boletín del Pan de San Antonio". The "Boletín Eclesiástico de la Arquidiócesis" is a model of its kind. Mention should here be made of the Eucharistic Congress, to commemorate the twenty-fifth anniversary of the Perpetual Adoration of the Blessed Sacrament at Caracas, celebrated there in December, 1907.

Mariano Marti, twenty-seventh Bishop of Venezuela and fifteenth of Caracas, bequeathed to posterity a very important work. In the compilation entitled "Documentos para la historia de la vida publica del Libertador de Colombia, Peru y Bolivia", by General José Félix Blanco, vol. I, pp. 501,

502, we read: "I visited the diocese, making lists of and descriptions of all the villages, the distances, products, occupations of the inhabitants, etc. In the absence of a general census of Venezuela, the lists drawn up by Marti, on his visitation of half of what was the Province of Venezuela, have served as the most probable data of the Venezuelan population towards the end of the seventeenth century. These statistical works of Marti's furnished the first data which the governments of Venezuela obtained in the way of a formal census. A large folio volume, unpublished, of the visitations of this bishop is to be found in manuscript in the National Library at the capital of the United States of Venezuela (1875). Bishop Marti laid down wise rules for the reformation of the customs and services of churches. He died at Caracas, 20 February, 1792."

The Diocese of Mérida (q.v.) has for its territory the States of Mérida, Trujillo, Tachira, and Zamora in the most mountainous region of the republic. Its present bishop (1911) is Mgr. Antonio Ramón Silva. In this diocese the traditions of ecclesiastical discipline are well maintained, with a grateful memory of the bishops of old who organized its administration and bravely defended the rights of the Church, as well as of priests meritorious for wisdom, austerity, and patriotism. Among the former should be mentioned Lasso de la Vega (Don Ramón), who, as a senator in the first Congresses of Colombia, admirably discharged his duties towards the interests of religion, and by whose intervention relations between the republic and the Holy See were first established. Transferred to the Diocese of Quito, he died there 4 April, 1831. In 1904, when his tomb was opened, with a view to building a more artistic one, "his body was found in a state of good preservation, so much so to permit of its being vested anew in pontificals and piously laid to rest in a new coffin" (from a report sent by the secretary of the Archbishop of Quito to the present Bishop of Mérida). We may also mention Juan Hilario Boset, who died 26 May, 1873, while suffering exile on account of a pastoral which he issued in reference to the Civil Marriage Law. The present bishop has created the diocesan press, from which "Documentos para la historia de la Diócesis de Mérida" is being published—a work of individual zeal and the first great step taken in Venezuela towards the production of an ecclesiastical history. Here, too, is published the "Boletín Diocesano". There are other Catholic publications in the diocese—such as "El Castillo" of Valera, "La Colmena" of Fábiba, the "Ángel Guardián" of Mérida.

The Diocese of Guayana (see SAINT THOMAS OF GUIANA) covers the whole southern, south-eastern, and eastern portion of the republic. To its second bishop, José Antonio Mohedano (d. 1804), belongs the credit of introducing into Venezuela the cultivation of coffee; in 1783, while still parish priest of Chacao, in the neighbourhood of Caracas, he set out the first plantation of this shrub, which has become a great source of agricultural prosperity to the nation. This diocese numbers in the list of its prelates Mariano Talavera y Garcés, "the Orator of Colombia", and Mariano Fernández Fortique, an eminent man of letters. Bishop Talavera, who governed the diocese only as vicar Apostolic, edited a periodical called the "Cronica Eclesiastica de Venezuela", in which he gave some excellent data for the religious history of the country. It has not been possible to adequately cultivate this widely extended field of souls: the diocese has 102 parishes and only 40

priests all told. Such are the obstacles which the zeal and good will of the present bishop (1911), Mgr. Antonio Maria Durán, has had to encounter.

Within the Diocese of Barquisimeto (q.v.) is included the territory of Coro, which was the first episcopal see of the country. It was at Coro that the Holy Sacrifice of the Mass was first celebrated on Venezuelan soil, in 1527, under a *cují* (myrrh) tree. The cross which was used for the altar on this occasion was carefully preserved, and in 1864 Juan Crisóstomo Falcón restored it and erected a monument to it in the same city. The present bishop of this diocese (1911), Mgr. Aguedo F. Alvarado, has infused much energy into its administration ever since his occupancy of the vicariate capitular, which lasted ten years. By means of pastoral visitations, organized as missions, and other resources of his apostolic zeal, the religious spirit of his flock has been greatly developed and strengthened. The diocese has its ecclesiastical bulletin and some Catholic periodicals—such as "Rayos de Luz" of Barquisimeto and "La Paz" of Guarico. The Sisters of St. Joseph of Tarbes serve in a hospital here and conduct a school for girls. The Little Sisters of the Poor of Maiquetia have houses at Barquisimeto and El Focuyo.

The Diocese of Calabozo (q.v.) comprises the central and south-eastern portions of the republic, where the plains of Venezuela are chiefly situated. This diocese is poorly supplied with clergy. The present bishop is Mgr. Felipe Neri Sendrea.

The Diocese of Zulia (q.v.) covers only the State of Zulia, in the extreme north-eastern part of the republic. Maracaibo, its capital, is a city of great importance, remarkable, also, for its religious fervour and attachment to Catholic principles. The present bishop (1911) is Mgr. Arturo Celestino Alvarez, consecrated 6 November, 1910.

THEJERA, Manual de historia de Venezuela para uso de las escuelas y colegios (1895); GONZALEZ GUINAN, Historia contemporanea de Venezuela (a monumental work issued under government auspices); GIL FORTOUL, Historia constitucional de Venezuela (1907-09); La Religion (commemorative number issued on the first centenary of Venezuelan independence, 5 July, 1911); Anuario estadístico de Venezuela, correspondiente a 1908 (1910); Gaceta Oficial, de Venezuela, no. 71,399 (statistical synopsis etc., 1910).

N.E. NAVARRO

Venice

Venice

Venice, the capital of a province in Northern Italy, is formed of a group of 117 small islands joined together by 378 bridges mostly built of stone. These islands are partly natural, partly artificial, constructed by means of piles driven into the bottom of the shallow sea, as all the houses of the city are built upon a network of rows of piles. The islands are separated by a number of canals, three of which are larger than others; the Grand Canal, which traverses the city in the shape of a letter S, the Giudecca, and the S. Marco, which is the widest of all. The city is connected with the mainland by a railroad which crosses the lagoon on a bridge 2 miles 2555 feet in length.

Transportation within the city is carried on by means of gondolas and also, on the three large canals, by small steamers. The lagoon of Venice is divided into the "dead" and the "living". The former (*Laguna Morta*) is a system of little salt lakes and marshes formed by the sedimentary deposits of the streams flowing down from the Alps, and extends from the mouth of the Po to that of the Isonzo; the latter (*Laguna Viva*) is a shallow body of salt water out of which rises a few small islands, among them the group which forms the city itself. The *Laguna Viva* is separated from the Adriatic by a narrow strip of land (the Lido) which extends from Chioggia to Cortellazzo at the mouth of the Piave. The strip of land is reinforced at many points with Istrian marble, and has a number of openings for the passage of ships, being thus broken up into the several Lidi of Pellestrina, Malmocco, and S. Erasmo. There is a tide in the "live" lagoon, rising at certain times to a height of between 9 and 10 feet, when it floods the pavements of Venice. The city is a commercial and military port girdled by six forts distributed about the *Laguna Viva*.

CHURCHES

St. Marks's, which, since 1807, has also been the cathedral, was built in 829, when Venetian merchants purchased the relics of St. Mark at Alexandria. In the eleventh century it was remodelled in imitation of the Basilica of the Apostles at Constantinople. The succeeding centuries, especially the fourteenth, all contributed to its adornment, and seldom did a Venetian vessel return from the Orient without bringing a column, capitals, or friezes, taken from some ancient building, to add to the fabric of the basilica. Its whole pavement is mosaic; it contains gold, bronze, and the greatest variety of stones. The façade is decorated with mosaics of different periods, Byzantine sculptures, and statues of the Evangelists and the Saviour. The four horses of gilded bronze above the great doorway once adorned the Arch of Trajan; they were transferred to the Hippodrome at Constantinople, and in 1204 Enrico Dandolo brought them to Venice. The mosaics of the atrium and the interior belong partly to the tenth century. The plan of the interior consists of three longitudinal and three transverse naves. Over the high altar is a baldacchino on columns decorated with eleventh-century reliefs; the altarpiece is the famous *Pala d'oro* (Golden Pall), Byzantine metal-work of the year 1105, originally designed for an antependium. Behind the high altar is another altar with alabaster columns. The choir stalls are embellished with inlaying by Fra Sebastiano Schiavone, and above them on both sides are three reliefs by Sansovino. On the two marble pulpits of the ambo are statuettes by the Massegne brothers (1394). Also in the choir are Sansovino's bronze statues of the Evangelists and Caliari's of the Four Doctors. The crypt is underneath the choir. In the baptistery is a beautiful font with a bronze cover by Tiziano Minio, Desiderio da Firenze, and Francesco Segala (sixteenth century). The *Capella Zeno* (mausoleum of Cardinal Zeno, 1501) is the work of Al. Leopardi, Ant. Lombardi, and Paolo Savino. In the treasury of St. Mark's is an episcopal chair of the seventh century. The campanile, 321 $\frac{1}{3}$ feet high, was built in 900 and repeatedly restored. Sansovino added the graceful *loggetta* in 1540. In 1902 the campanile fell, damaging the library of St. Mark's; it has now (1912) risen again to its ancient splendour.

S. Moise (1668); S. Maria del Giglio (by Sardi, 1680, with statues of the Barbaro family); the church of the discalced (Longhena, 1649; façade by Sardi, 1693; frescoes by Tiepolo; high altar by Pozzo); S. Maria of the Jesuits (Rossi, 1750; façade by Fattoretto; high altar by Pozzo; pictures by Titian and Tintoretto; tomb by Girolamo Campagna); S. Pantaleone (pictures by Fumiani, Solari, Vivarini, Gio. Alemanno; relief by Mariono Cedrino); the Madonna del Rosario (Massari, 1726; pictures by Tintoretto and Tiepolo); S. Maria della Salute (by Longhena, built after the plague of 1630; plan, octagonal with cupola; pictures by Luca Giordano, Titian, Tintoretto, and Giusto le Court). These churches are in the Barocco style with a profusion of many-coloured marbles in which all the magnificence of Venice is displayed. In the Gothic style are: S. Stefano (fourteenth century, restored in 1904; contains marble balustrade with statues by Lombardi; Madonna dell'Orto [1460; pictures by Tintoretto, who is buried there, Dan. Van Dyck, the younger Palma (Giovane), Giov. Bellini, Cima da Conegliano, etc.]; SS. Giovanni e Paolo (1333; the largest church after St. Mark's. It contains pictures by Vivarini and Lorenzo Lotto; statues and other sculpture by Vittoria and Bartolo di Francesco; wood-carving by Andrea Brustolon. In it are also important monuments of the doges). Also of Gothic was S. Maria del Carmine, but modernized in the seventeenth century (pictures by Cima da Conegliano, Tintoretto, Lorenzo Lotto, bronze relief by Verrocchio), as also S. Maria dei Frari (1250; statues of Al. Vittoria, Andrea Vincentino, Donatello, Sansovino; and numerous tombs). In the Renaissance style are S. Fantino di Scarpagnino (1507; choir by Sansovino); S. Giobbe (by Ant. Gambello and Pietro Lombardi, 1451; pictures by Paris Bordone, Previtali, Giovanni Bellini, Salvoldo; majolica by Luca della Robbia); S. Alvise (pictures by Tiepolo); S. Giuliano (the work of Sansovino); S. Salvatore (by Giorgio Spaventa and Tullio Lombardi, 1506; the façade, 1663; pictures by Girolamo Campagna, Titian, Giovanni Bellini; statues by Al. Vittoria and Danese Cattaneo; important tombs); S. Bartolomeo (pictures by Sebastiano del Piombo); S. Giovanni Crisostomo (Maria Carducci, 1497; pictures by Giovanni Bellini and Seb. Del Piombo; relief by Tullio Lombardi); Santi Apostoli (the Communion of St. Lucia, by Tiepolo); S. Zaccaria (which still keeps much of its Gothic character; on its façade is a statue of the saint by Al. Vittoria; pictures by Giov. Bellini and Tintoretto; the altars carved in wood in the chapel of S. Tarasio); S. Maria Formosa (pictures by Palma Vecchio, Vivarini, Leandro da Bassano, Sassoferrato), S. Maria dei Miracoli (by Tullio Lombardi, vaulting painting by Pennacchi); S. Francesco della Vigna (by Sansovino and Fra Francesco di Giorgio, has pictures by Girol. Da S. Croce, Fra Ant. Da Negroponte, Giov. Bellini, Paolo Veronese; statues by Al. Vittoria); the *scuola*, or guild, of S. Giorgio degli Schiavoni (pictures by Vittorio Carpaccio and Vinc. Catena); S. Giorgio dei Greci di Serate (iconostasis with Byzantine paintings by Lombardi); S. Giuseppe di Castello (pictures by Tintoretto and Paolo Veronese); S. Pietro di Castello (one of the oldest churches in Venice, contains the relics of St. Lawrence Giustiniani); S. Giovanni Elemosinario (1525; pictures by Titian and Pordenone); S. Cassiano (Palma Vecchio and Tintoretto), the guild of S. Rocco (works of Tintoretto, Titian, and others); S. Sebastiano (1506; works of Paolo Veronese, who is buried in the church; tomb by Sansovino), the Redentore (Palladio's masterpiece; pictures by Tintoretto, Girolamo Campagna, and others). On the island of S. Lazzaro there has been since 1716 an

establishment of the Armenian Mechitarists, famous for their Oriental publications. The cathedral (seventh and tenth centuries) of Torcello is worthy of mention, with its mosaics of the twelfth century. Torcello was at one time a city of importance. The seminary, the work of Longhena (1670), contains a museum of sculpture and a picture gallery; its faculty confers degrees in philosophy, theology, and canon law.

NON-RELIGIOUS BUILDINGS

The Palace of the Doges is said to date from the ninth century; its actual form, a singularly graceful type of Gothic, dates from the fifteenth and fourteenth. Chief among the artists who wrought upon it are Pierpaolo Masegne, the three Buon, Ant. Rizzo, Pietro Lombardo, and Scarpagnino. The Giants' Staircase takes its name from the colossal statues of Mars and Neptune by Sansovino. The halls contain paintings by Tintoretto, Paolo Veronese, Palma Giovane, Titian, Tiepolo, Andrea Vicentino, Gabriele Caliari. The doge's private apartments now house the Archaeological Museum. The Marciana Library (Library of St. Mark) is in the old Mint, while the Libreria Vecchia, the work of Sansovino and the most magnificent non-religious edifice in Italy, is now the Royal Palace. The Academy of the Fine Arts, in the guild of S. Maria della Carità, contains pictures almost exclusively of the Venetian School. In the Middle Ages the arsenal gave employment to 16,000 labourers, where that are now 3000; the annexed museum of nautical objects and arms contains the model of the Bucentaur, the ship on which the doge annually, on the feast of the Ascension, celebrated the nuptials of the sea, casting a ring into it. The Art Exposition Palace, founded in 1895, is used for the international art exposition which takes place every other year. The International Gallery of Modern Art was opened in 1905 in the Pesaro Palace. Since 1880 there has been established in the Fondaco de' Turchi the Civic Museum, containing pictures, antique statues, warlike trophies, portraits and busts, medals, coins, specimens of Venetian industries, costumes etc. One portion of this exhibition is housed in the Correr Palace. Among the most important bridges are the Rialto and the Bridge of Sighs. The finest private palaces are along the Grand Canal. Of the public monuments we shall note only the equestrian statue of the *Condottiere* Bartolommeo Colleoni, modelled by Verrocchio and cast by Al. Leopardi.

The principal industries are ship-building, silk-spinning, galloons and laces, glass (Murano), objects of art. The sea baths of the Lido are the most elegant in Italy. Besides the seminary, there are two lyceum-gymnasia, a national boarding-school, a technical institute, a normal school for girls, a fine-arts institute, a nautical institute, technical and commercial schools, a school of marine engineering, etc.; also a municipal and a military hospital, special hospital for phthisis, two lunatic asylums, two orphanages, two observatories, six theatres. The exports in 1905 amounted to 2,576,000,000 tons (*tonnelate*).

HISTORY

The beginnings of Venice go back to the flight of the inhabitants of the Venetian state to the islands of the lagoon between Chioggia and Grado, when, in 452, Attila devastated Northern Italy.

Nevertheless it is certain that these islands had already been inhabited in Roman times. The fugitives from the mainland in the fifth century greatly augmented the population. About 520 Cassiodorus represents the inhabitants of the islands as governed by tribunes, inhabiting pile-structures, occupied with fishing and in the navigation of distant seas; salt was their medium of exchange. The Lombard invasion resulted in a further increase of this lagoon population; it remained under the rule of Byzantium, which had the sagacity to allow a great measure of autonomy to the tribunes. The latter probably resided in the cities. In 697 a doge (*dux*) was elected for the whole lagoon, to put an end to the conflicts between various tribunes and provide a more efficacious defence against the Lombards and the Slavs. The first doge was Anafestus Paulucius, a noble of Heraclea, then the capital of the state. The military command was vested in a *magister militum*. The third doge, Ursus I (726-37), at the request of Gregory III delivered Ravenna, which had fallen into the hands of the Lombards (735); he, however, was killed (737) in a popular tumult. For five years the state authority was entrusted to the *magister militum*, instead of doges; but that functionary held office for only one year, with the title of hypatos, or consul. In 742 the office of doge was restored and entrusted to Deusdedit, son of Ursus I, who transferred the capital to Malamocco. He was slain (755) by a certain Galla, who, after a dogeship of fourteen months, was slain in his turn. Dominicus Monegarius (756-64) became doge, two tribunes, however, being associated with him. He was expelled by the Byzantine party, and Maurizio Galbaio (764-87) was elected. For security against the Lombards and Franks, Galbaio leaned on Byzantium, and obtained that his son Giovanni should be associated with him in office and have the right of succession. Giovanni (787-805) also had an associate in his son Maurizio. By reason of the slaying (803) of Joannes, Patriarch of Grado, his nephew and successor, Fortunatus, organized a conspiracy; the doges were driven out and the Frankish party brought about the election of Oberlierus (805-10). In the ninth century the commerce of the Venetians was very extensive. Their flag was respected even by the Saracens, and their factories sprang up in all the ports of the East. From that time they traded with the Christian Slavs, and sold to the Mussulmans of Spain and Africa. Popes Zacharias and Adrian tried to prevent this, while for some time Charlemagne excluded them from the markets of the Empire.

In 775 took place an event which may be called the foundation of the State of Venice, the establishment of an episcopal see on the little island of Olivolo, the jurisdiction of which extended over the islands of Luprio, Dorosoduro, and Rialto, taken from the Diocese of Malamocco. These islands thus formed a new polity. With the conquests of Charlemagne in Italy and Istria, the Venetian islands were threatened on all sides. Obelierius pursued a policy of alliance with the Franks, and helped them to gain possession of the maritime cities of Istria; but a Byzantine fleet aided the Byzantine party to expel Obelierius, and Angelo I Participazzo was made doge (810). Pipin, son of Charlemagne, then attempted the conquest of the Lagoon; Brandolo and Malamocco fell into his hands, but the Venetians made head against him on Rialto. Protracted negotiations followed between Charlemagne and Byzantium. The Venetian Lagoon remained under the Byzantine sway, and Charlemagne granted the Venetians freedom of commerce throughout the Empire. From this period the doge's seat was the island of Rialto; the city, formed by the combination of the surrounding

islands, including Olivolo, the episcopal see, began to call itself Venetiae. Then followed the reign of Participazzo (864-81) and of his sons Giustiniano (829) and Giovanni (deposed, 836). Doges Pietro Tradonico (836-64) and Orso Participazzo (864-81) fought victoriously against the Croats and Saracens. Giovanni Participazzo (881-88), son of Orso, was deposed for his Francophilism. Pietro (888-911) defended the state against the Hungarians (906). After Orso Praticipazzo II (912-32) there began, with Pietro Candiano (932-39), the policy of expansion on the mainland; Comacchio, at the mouths of the Po, and Capo d'Istria. Then followed Pietro Badoario (932-42) and Pietro Candiano III, who was forced to abdicate in favour of his son Pietro Candiano IV (959-76).

Under the latter we meet for the first time with the Grand Council, the assent of which was necessary to all laws; besides the laity, it also included the bishops of the Venetian States. The new Government prohibited the sale to Saracens of slaves and of any merchandise which could be used in war against Christians. But in 976 the doge's palace was set on fire, and he himself killed as he attempted to escape. His partisans, supported by the Emperor Otto II, drove out (978) his successor, Pietro Orscolo I, who became a disciple of St. Romuald. Under Memmo, the next doge, certain rebels attempted to place Venice under the sway of Otto II, but the republic defended itself, and in 983 peace was restored. Memmo was obliged to become a monk (992). Under Pietro Orscolo II (992-1009) the prestige of the republic revived. The Latin cities of the Istrian and Dalmatian coasts, incessantly menaced by the Slavs, voluntarily acknowledged the dominion of Venice, and from that time the doge, with the consent of the Emperor of Constantinople, was styled Duke of Dalmatia. He gained a splendid victory over the Saracens at Bari (1003). His son Ottone (1009-26) was suspected of wishing to bring the state under Western imperial domination, and died a prisoner at Constantinople. He was succeeded by the weak Pietro Barvolano (1030), under whom Peter, King of Hungary, son of the Doge Ottone, tried to get possession of Dalmatia. After grievous internal conflicts, Flavanico became doge in 1033 and enacted wise laws against hereditary dogeship. Domenico Contareno (1043-71) was fortunate in the defence of Dalmatia against the Hungarians. At this time the office of procurator of St. Mark was instituted, instead of that of state treasurer, making a clear separation between the personal patrimony of the doge and the state revenues. Domenico Silvio married a daughter of the Emperor Constantine Ducas, and, at the request of Alexius Comnenus, made war at sea against the Normans; he was fortunate at first, but was defeated at Corfu in 1084, with the loss of nine large ships and 13,000 men, which led to his deposition. Vitale Faledro (1084-96) retrieved the loss with the victory of Botrinto. Alexius Comnenus, by the famous Golden Bull (1084), granted the Venetians freedom from tributes and imposts, a full liberty of commerce, exemption from Greek jurisdiction, an appropriation for the Church of St. Mark, and an income for the doge, with the title of Protosebastos. From this time Venice is an independent state.

The Doge Vitale Michiel (1096-1112) participated in the First Crusade only when he saw the Genoese and Pisans bringing back booty from Palestine; and, in general, the Venetians turned the succeeding crusades to their own advantage. Alexius Comnenus, perceiving this, refused the bull of investiture to Domenico Michiel (1117-29) and had the Venetian ships sequestered. The

Venetians, however, defeated by the Mussulmans near Jaffa (1123), turned against the Greeks, and from that time even the nominal sovereignty of Constantinople was at an end. It was especially by their aid that, in 1124, Tyre was taken, one-third of the city being assigned to them. In 1171 another expedition against Manuel Comnenus was necessary; it had small success, however, on account of the plague, and the Doge Vitale Michiel II (1156-72) fell a victim to the fury of the populace. Another reform in the government was then introduced, increasing the powers of the Grand Council at the doge's expense. At the same period Venice joined the Lombardic League, without, however, showing any excessive zeal for a cause which mattered but little to her, and thus the Peace of 1177, between Alexander III and Frederic Barbarossa, was solemnized at Venice, as being a neutral city. With the Doge Enrico Dandolo (1192-1205) began the most glorious period of the republic. Assuming command of the French crusading army, he used it to reduce to obedience Trieste and Zara, which had placed themselves under the sway of Hungary, and then turned against Constantinople, where the Latin Empire had been set up. Venice obtained three quarters in the capital, most of the Peloponnesus, the eastern shores of the Adriatic, the Sea of Marmora, and the Black Sea, the coasts of Terraglia, Ægina, Corfu, and other islands of the Archipelago, and the rule over about 8,000,000 of new subjects. In these vast dominions the doge found compensation for his diminished power, as the appointment of *podesta* and other magistrates belonged to him, and thereby he could always win the friendship of those who entertained ambitions. These conquests before long became veritable fiefs of the principal families, which thus had an interest in preserving and increasing them without calling upon the State for any help to that end. The Government even purchased the island of Crete from the Marquis of Monferrato. Venice had now become the greatest power in the Mediterranean, and this stirred up the rivalry of Genoa, which republic, in 1257 and 1258, suffered two naval defeats. Genoa then formed an alliance with Michael Palaeologus, who recovered Constantinople, and Venice, her possessions threatened, engaged in a war with her rival (1262-79), in which the Genoese were, on the whole, worsted. In 1292 the war recommenced with greater ferocity. The Genoese were victorious at Laiazzo on the Black Sea (1294); the Venetians at Galata (1296). In 1297 the Genoese under Spinola wasted the coasts of Dalmatia. In 1298 the Venetian fleet was destroyed by Lamba d'Oria, a victory which brought about the Peace of Milan (1299). Venice now needed consolidation. The Venetians had meanwhile become interested in Italian affairs.

In the thirteenth century the election of the doge was reserved to the Greater Council, composed of 480 members taken from certain families. The doge could do nothing without his councillors the obligation of the office were restated afresh for every new doge, and he must swear to observe them. Affairs of greater moment were discussed by councillors, who invited a certain number of members of the Council (*pregadi*) of whom the Senate was afterwards constituted. In 1297 it was enacted that only those who had sat in the Greater Council and their descendants should be eligible; thus was formed an aristocracy which monopolized the offices of State. The conspiracy of Boemondo Tiepolo (1310), for the restoration of democratic government, was repressed by the Doge Gradenigo (1289- 1310); the Council of Ten was instituted to guard the existing constitution, and the most

important matters were afterwards reserved to it. At first provisional, it became permanent in 1335; the individual members, however, held office for only one year. In 1454 the three inquisitors of State were instituted for cases of high policy; it was thanks to this institution that Venice remained a republic, and no one succeeded in becoming its *Signore*. Besides, until 1506 there was no juridical distinction between nobles and plebeians. In the fourteenth century Venice began to extend her dominion on the mainland, joining the league against Mastino della Scala, from whom it took Treviso (1338), Castelfranco, and Ceneda. The possession of Crete had to be defended by force of arms in 1307 and 1365.

About the same time (1334 and 1342) alliances were formed with the Byzantines and the Knights of Rhodes against the Turks, who were beginning to render navigation unsafe. The Genoese having taken the island of Sico and interfered with Venetian navigation in the Black Sea, war again broke out in 1350. There was fighting on the Bosphorus (1352) and off the coasts of Sardinia (1353), where the Genoese were beaten; and then peace was restored, Venice having to abandon all her ports in the Red Sea.

In 1355 the Doge Marion Falieri was beheaded, charged with having conspired to overturn the Government and make himself Lord of Venice. This incident occasioned new limitations to the rights of the doge. Next followed the war with Hungary for the possession of Dalmatia, in which all its neighbours took sides against the republic, and Venice lost the greater part of Dalmatia (1358). The possession of the island of Tenedos was the cause of a war with Genoa, assisted by other foes of Venice. The Venetians, victors at Anzio (1378), were defeated at Pola (1379). Checked by the Genoese at sea and by Francesco Carrara, Lord of Padua, on land, Venice would then have made peace, had not the conditions been exorbitant. A new armament was prepared, with which Vettor Pisani blockaded the Genoese fleet at Chioggia, forcing it to surrender (1380). By the Peace of Turin, however, Venice had to cede all Dalmatia to Hungary, Trieste to the Patriarch of Aquileia, Treviso to the Duke of Austria, Tenedos to Byzantium. But the loss was soon recovered. The Genoese were defeated near Modono in 1403; in 1406 Padua and all the possessions of Francesco Carrara were taken and the prince and his sons strangled in prison. Then the Emperor Sigismund seized the Dalmatian coast, while Verona and all the Scala possessions were annexed between 1403 and 1405 by Venice, which not long after took Friuli, Udine, Feltre, and Belluno from the Patriarch of Aquileia. In the meantime the Venetian possessions had been growing in the Morea and Albania (1390-1400), and the republic was co-operating with the Christian princes against the Ottomans.

In 1423 the republic joined the league of Francesco Gonzaga, Nicolo d'Este, and Florence against Filippo Maria Visconti. Venetian troops routed the Visconti forces at Maclodio (1427), and Filippo Maria ceded Bergamo and Brescia to Venice. The war being renewed, the Venetian squadron defeated the Genoese allies of the Visconti at Portofino (1431). When peace was made, Venice retained her acquisitions. In 1437 she again allied herself with Florence against the Visconti, and the war lasted until 1441, when she had taken Ravenna from the Polenta. When Francesco Sforza became Duke of Milan, Venice united with the King of Naples against him, to increase her territory on the mainland; but Nicholas V brought about the Peace of Lodi (1454), which was designed to

ensure Italian equilibrium. So soon was Venice again embroiled with Florence that it seemed as though she aimed at dominating the whole peninsula, but she was forced to keep still (1468). In 1480 a pretext was made to serve for a war against the Duke of Ferrara. Then all the Italian states united against the republic, and even Sixtus IV, after the Venetian victory of Velletri (1482), withdrew from his alliance with Venice. Still, from this war, too, Venice carried off an augmentation of her Italian territory. At the same time, however, the Turks took from Venice the greater part of the Ægean Islands, as well as Negropont and all her possessions in the Morea, and pushed their conquests as far as Friuli, threatening the republic's Italian possessions. In 1479 Venice had to renounce all claims to the territory taken from her by the Turks. Not less disastrous was the war against the Turks from 1498 to 1503. These losses were to some degree compensated by the acquisition of Cyprus, ceded in 1489 by Caterina Cornaro, widow of the last king, and Zante and Cephalonia. But another great blow for Venice was the discovery of the maritime route to India in 1498. To the discovery of the New World two Venetians, Giovanni Caboto and his son Sebastiano, contributed; with English vessels they discovered Newfoundland, Labrador, and Nova Scotia. Still more famous are the travels of the Venetian Marco Polo in the interior of Asia, extending as far as China, in the thirteenth century.

After the accession of Julius II and the fall of Cesare Borgia, the Venetians invaded the Romagna. Julius II then formed the League of Cambrai, which, besides the pope and the princes of Southern Italy, included the emperor, Spain, and France, at that time mistress of the Duchy of Milan (1508). At first it seemed that the last hour of Venice had come; in Apulia the Spanish took the coast towns which Venice had occupied during the wars between France and Spain for the possession of Naples; at Agnadello the French defeated the bulk of the Venetian army, and Brescia, Cremona, and Peschiera were occupied by France (1509); the Venetians were driven out of Romagna, while other portions of their territory were seized by the Bonzaga and the Duke of Ferrara. Maximilian had the imperial standard raised at Verona, Vicenza, and Padua. But the pope and Spain, having accomplished their purpose, withdrew from the league, and the emperor was obliged to recross the Alps the same year. The pope formed another league, the Holy League (1511), against the French and their Italian allies, especially the Duke of Ferrara. On the death of Julius II, Venice formed an alliance (League of Blois, 1513) with France for mutual assistance against the emperor, or against the Turks, or for the reconquest of the Milanese. But the Spaniards and Imperialists, having defeated the French, occupied all the Venetian possessions on the mainland. The unexpected arrival of Francis I in Italy (1515) made it possible, however, for Venice to recover everything. Again in 1521 and 1525 Venice was the ally of France against Spain, without suffering by the victories of Charles V. The Turks meanwhile went on gaining victories; Venice joined the league of Spain and the pope, but, believing that she had been betrayed at the battle of Prevesa (1538), concluded an unfavourable peace with the Turks, paying them a tribute for the islands which she still retained. In 1569 the Sultan Selim II set about the conquest of Cyprus, which was heroically defended; the city of Famagosta was the last to surrender (18 August, 1571). Meanwhile an alliance had been formed with the pope and Spain, and the allied fleet defeated the Turks at Lepanto (October, 1571). Venice, however, making

peace on her own account, surrendered her claims to Cyprus. The republic was beginning to decline politically and commercially. The habits and customs of the feudal nobility had been introduced among the Venetian nobles, and thus an aristocracy had been formed without wealth, and which it was not longer possible to provide with offices in foreign possessions. This ruined nobility, with a keen appetite for luxury and pleasures, was a constant element of political disturbance and of foreign intrigue.

A serious difficulty with Pope Paul V arose out of the trial of certain priests by lay tribunals, contrary to the provisions which had then recently been made. Gaining nothing by an interdict, the pope prepared for war; but the intervention of Henry IV of France effected a reconciliation (1606-07). The Protestants sought to profit by this occasion to pervert the population of Venice. Venice, indeed, had always granted a wide liberty to the various creeds, though she would not permit her own subjects to apostatize. Forced by the Italian princes to combat the Uscochs Uskokken (Croatian Christians who had escaped from the Turks and become pirates), she made war against the empire at Friuli. In the Valtellina controversy Venice was allied with the Protestant Grisons, out of hatred for Spain. In 1644 a Turkish fleet attacked Canea, a city of Crete which Venice had kept in her possession by the expenditure of blood and treasure. Canea fell before the arrival of the Venetian fleet aided by the pope and the Knights of Malta and of St. Stephen. This war lasted until 1669, when Candia fell, after a siege of twenty-four years, attacked by sea, by land, and underground. The victories over the Turks near Phocaea (1649), in the Cyclades (1651), and near the Dardanelles (1652, 1656 and 1657), could only retard the issue of this unequal war. Francesco Morosini capitulated, and was allowed to depart with all the honours of war. In 1695 he resumed command and conquered all the Morea as far as Corinth. The war ended with the Peace of Carlowitz (1699), which secured to Venice the Morea and the Ionian Isles free of tribute. In 1714 the Turks returned to the attack, and, with the Peace of Passarowitz (1718), Venice lost all her conquests in the Balkan Peninsula except a few towns in Albania.

The period of peace which followed was favourable to literature and the sciences, but luxury and licence increased; the philosophy of the Encyclopaedists, together with indifference to religion, had sown the seed of revolutionary doctrines. The nobles of the mainland, in particular, were becoming restless, desiring a share in the government, which had been accessible only to Venetians. The last warlike action of the republic was the expedition of Angelo Emo against the Barbary States (1784-86). The war between Napoleon and Austria in 1796 soon passed from Lombardy to Venetian territory, the republic being unable to defend its neutrality. When the Veronese rose against their French garrison (17-21 April, 1797), Bonaparte used the pretext to arrest the inquisitors of State and to change the Venetian Government from aristocratic to democratic. To effect this change, French troops entered the city, seized all the ships, the treasury, and a great many works of art. Soon after this, by the Treaty of Campoformio, Napoleon gave Venice, with its territory on the mainland, to Austria. Thus ended the republic. In 1805 Austria abandoned all Italian possessions, and thus Venice was united to the Napoleonic Kingdom of Italy. In 1814 the viceroy Eugene, to save Lombardy, retroceded Venetia to Austria. The news of the Revolution of Vienna and the

Milanese Insurrection, in 1848, found a ready echo in Venice, where the Austrian garrison, the Italians excepted, departed after peacefully capitulating. Daniele Manin was at the head of the provisional government, which the cities of the mainland accepted; they soon after joined the union with Piedmont under Carlo Alberto, as had already been done by Venice, and in a few days news arrived of the cessation of hostilities between Piedmont and Austria. The Venetian republic was then re-established (11 August, 1848). The Neapolitan general Guglielmo Pepe commanded the Venetian troops against the Austrians who came to retake the city. It was besieged in October; on 24 August, 1849, after a bombardment of twenty-four days, it surrendered. In 1866 Austria ceded Venice to Napoleon III, who gave it to the Kingdom of Italy.

COMMERCIAL HISTORY

The city itself was chiefly occupied in the importation from Africa, the Levant, and the Black Sea, of the greatest variety of raw products, such as hides, minerals, salt, wax, sugar, borax, wool, silk, spices, drugs, guns, ivory, ostrich feathers, parrots, gold dust, etc. The Venetians also exploited the iron and copper mines of Friuli, Cadore, and Carnizia. From Lombardy and their own possessions on the mainland came their exportations of woollen, silk, and linen fabrics. The manufacturers of the Venetian dominions might not export directly; everything must pass through the capital. They maintained important relations with the city of Augsburg, from which the products were distributed through the North. On the other hand, the silver of the Tyrolean mines was brought to Venice. The special industries of Venice were the manufacture of chemicals-- cream of tartar, cinnabar (vermilion), shellac, white lead, and *triacca* (the "universal medicine"), sugar-refining, tanning, the preparation of furs imported from Russia, the manufacture of imitation pearls and gems, and goldsmith's work. The industries had their guilds, with chapels of their own in various churches. It was in Venice that banks of deposit and circulation originated, and Venice was the first state to raise a public loan (1156, the *monte vecchio*; the *monte nuovo* was issued in 1580; the *nuovissimo*, in 1610). Banking law had its origin in Venice. As early as 1253 marine insurance was made obligatory by law. The Doge Renier Zeno (1253-68) had a code of navigation and commerce compiled. One important branch of commerce was the supply of the African Mussulman princes with tools and timber for building, a practice forbidden under excommunication by the popes because it tended to the perpetuation of piracy. Printing was an important industry. Venice was also a thriving centre of the slave trade.

ART

In Venice art found an exceptionally favourable field. The traditions of centuries, however, and relations with the East retarded the influence of that new art impulse which had reached other Italian cities in the thirteenth century. In painting, especially, Venetian artists in the fourteenth century were still trammelled by the Byzantine tradition. The first art to become emancipated was architecture, architects and workmen from the mainland being employed. It appears that the Romanesque style, no less than the Gothic, in Venice felt the influence of the environment. When,

with its conquests on the mainland, the republic had become an Italian power; it soon became one of the principal centres of art; its immense wealth, both public and private, afforded opportunity to the choicest geniuses for the creation of the works already mentioned in this article. It is to be noted, however, that few of the famous artists of the so-called Venetian School were really Venetians. They were mostly natives of the Venetian provinces, and therefore Lombards. First to inaugurate the revival, or *rinascimento*, in painting was the Paduan Guardiento (1365), a pupil of Giotto. Next the three Muranesi, Antonio, Giovanni, and Andrea, were eminent, influenced by the German and Flemish schools, and the Vivarini, Bartolommeo (1450-99) and Luigi (1461-1503). These, as well as Jacobello del Fiore, Carlo Crivelli, Fra Francesco da Negroponte, and also Jacopo and Gentile Bellini, exhibit, as compared with the contemporary Lombards, an art still in the archaic stage. With Giovanni Bellini Venetian art attains perfection, while at the same time displaying its own special prerogative, mastery of colouring. To this School belong the following Venetians: G. B. Cima (da Conegliano); Vittore Carpaccio; Giorgio Barbarelli (Giorgione), from whom his fellow student, Tiziano Vecelli (Titian), learned much; Sebastiano del Piombo, who carried to Rome the art of colour; the two Palma, the elder of whom (Palma Vecchio) has various styles at his command; Jacopo Robusti (Tintoretto), the master of lights and shadows of whom Titian was jealous, and who knew how to combine beauty and idealism with Titian's power and naturalness; Paolo Veronese, the exponent of the Venetian School. But after him the repute of Venetian painting was soon brought low by his successors. Only with Giovanni Battista Tiepolo, a pupil of G. B. Piazzetta, in the eighteenth century, does Venetian painting, with a still more perfect technic, celebrate a glorious resurrection. Even in the nineteenth century the Venetian painters remained faithful to the tradition of their School; conspicuous among them, Giacomo Favretto and Giulio Ciardi. In sculpture even more than in painting Venice took her artists from abroad. The most distinguished of the fifteenth century were Pietro Lombardo and his sons Tullio and Andrea. Verrocchio modelled perhaps the finest equestrian statue in the world. Also eminent were Alessandro Leopardi and his sons, and the brothers Antonio and Lorenzo Bregno, to whose credit are the finest monuments in the various churches of the city.

ECCLESIASTICAL HISTORY

The Venetian islands at first belonged to the Diocese of Altino or of Padua. It is certain that Bishop Tricidius of Padua took refuge on the island of Malamocco. But when Tricidius returned to Padua there still remained a bishop at Malamocco (Methamancus), and the Venetian islands remained under his jurisdiction until 775. In that year, with the consent of Adrian I and the Patriarch of Grado, an episcopal see was erected on the island of Olivolo (afterwards called Castello) with jurisdiction over Gemini, Rialto, Luprio, and dorsoduro. The first bishop (nominated by the doge) was Obelerius, who was invested and enthroned by the doge, and consecrated by the patriarch. The rest of the islands which now form Venice remained under the Patriarch of Grado. To succeed him (798), the doge named a certain Cristoforo, whom, on account of his extreme youth, Giovanni, Patriarch of Grado, refused to consecrate. Giovanni was killed, and his successor, after much

hesitation, consecrated Cristoforo. Under the fourth bishop, Orso, the relics of St. Mark were brought to Venice; the legend, that St. Mark himself had preached the Gospel at Venice, grew up in later times. As many bodies of saints had already been brought from the East, so, following the conquest of Constantinople, a still greater number now came to Venice, besides the Madonna called Nicopoeia, which is still in St. Mark's. Marco II Michel (1225) finally secured the exemption of the clergy from lay jurisdiction, except in cases involving real property. Jacopo Albertini (1311) became attached to the schism of Louis of Bavaria, whom he crowned with the Iron Crown (1327), and was therefore deposed. Under Nicolo' Morosini (1336) the dispute between the clergy and Government concerning the mortuary tithes was settled, though it began afresh under Paolo Foscari (1367) and was ended only in 1376.

During the Schism of the West, Venice always adhered to the Roman obedience. In 1457, upon the death of Domenico Michel, Patriarch of Grado, Nicholas V suppressed the patriarchate and the Bishopric of Csastello, incorporating them both in the new Patriarchate of Venice (Bull, "Regis aeterni"), thus Venice succeeded to the whole metropolitan jurisdiction of Grado, including the sees of Dalmatia. The election of the patriarch belonged to the Senate, and this practice sometimes led to differences between the republic and the Holy See. In like manner parishoners elected their parish priests, by the right of patronage. Girolamo Quirini, O.P. (1519-54), had many disputes with the clergy, with the Government, and with the Holy See; to avoid these disputes, the Senate decreed that in future no one but a senator should be eligible. Those elected after this were frequently laymen. Giovanni Trevisano, O.S.B. (1560), introduced the Tridentine reforms, founding the seminary, holding synods, and collecting the regulations made by his predecessors (*Constitutiones et privilegia patriarchatus et cleri Venetiarum*). In 1581 the *visita Apostolica* was sent to Venice; a *libellus exhortatorius* was published, in which the *visita* highly praises the clergy of Venice.

In 1807, by favour of the Viceroy of Italy, the Neapolitan Nicola Gambroni was promoted to the patriarchate and of his own authority transferred the patriarchal seat to the Basilica of St. Mark, uniting the two chapters; he reduced the number of parish churches from seventy to thirty. The work of enlarging the choir of the basilica brought to light the relics of St. Mark (1808). In 1811 Napoleon intruded into the See of Venice Stefano Bonsignore, Bishop of Faenza, but in 1814 that prelate returned to his own see. In 1818 the Dioceses of Torcello and Carole were merged in that of Venice, while the dioceses of the Venetian territory were placed under its metropolitan jurisdiction. Cardinal Giuseppe Sarto, afterwards Pius X, succeeded in 1893; he was refused recognition by the Italian Government, which claimed the right of nomination formerly employed by the Emperor of Austria and in earlier times by the Venetian Senate, but after eleven months this pretension was abandoned.

The suffragans of Venice are Adria, Belluno and Feltre, Ceneda, Chioggia, Concordia, Padua, Treviso, Verona, and Vicenza. The diocese contains 45 parishes (32 in the city), about 160 churches, chapels, etc; 250 secular and 280 regular priests; 12 houses of male and 32 of female religious; 150,000 souls; 5 institutes for boys and 15 for girls. It has one Catholic daily (*La Difesa*) and two weeklies.

U. BENIGNI

Veni Creator Spiritus

Veni Creator Spiritus

The most famous of hymns" (Frere), is assigned in the Roman Breviary to Vespers (I and II) and Terce of Pentecost and throughout the octave. The Church also sings it at such solemn functions as the election of popes, the consecration of bishops, the ordination of priests, the dedication of churches, the celebration of synods or councils, the coronation of kings, etc. It is also sung in the more private devotions attending the opening and closing of that scholastic year in institutions of learning. The Congregation of Rites decreed (20 June, 1899) that the Eastertide doxology (*Deo Patri sit gloria -- Et Filio qui a mortuis -- Surrexit ac Paraclito -- In s culorum s cula*) should always be used, no matter what, the feast or season of the year might be. The Vatican Graduale (1908) gives the older text, (attestation of which does not go back beyond the ninth century) and also, under the heading "secundum usum recentiore", the present Breviary text, which is a revision, in the interest of classical prosody, of the older text, by the correctors of the Breviary under Urban VIII. The doxology of the older text (which is probably not original with the text itself) is: "Sit laus

Patri cum Filio -- Sancto simul Paraclito -- Nobisque mittat Filius -- Charisma Sancti Spiritus". This doxology is generally associated with the hymn "*Beata nobis gaudia*". It is unnecessary to indicate here the points of revision, since the printing of both texts in the Vatican Graduale makes comparison easy. Hymnologists think the revision uncalled for.

Dreves (*Analecta Hymnica*, L, 195) places the hymn in the section he devotes to Rabanus Maurus (d. 856), Abbot of Fulda and Archbishop of Mainz, and shows (p. 194) the importance of the manuscript evidence in his favour. Frere (*Introduction to Hymns Ancient and Modern*, historical edition, p. xxii) thinks the hymn can with some confidence be ascribed to him; as does also Blume (1908). Added support of the ascription is found in the scansion of the line *Qui Paraclitus dicitur* (revised into *Qui dicitur Paraclitus*"), where, in accordance with precedent found in Rabanus, *Paraclitus* is accented on the penultimate syllable, as against the almost universal medieval custom of accenting it on the ante-penultimate, an illustration of which is found in the third line of the doxology (which is not part of the original hymn). Guéranger with many others, ascribed the hymn to Charlemagne, but with slight ground except his zeal for the doctrine of the Procession of the Holy Ghost from Father and Son. The legendary story of Ekkehard V contains its own refutation. The hymn has also been attributed to St. Ambrose and to St. Gregory the Great, but without real evidence for either ascription. No ancient writer ascribes it to St. Ambrose, nor can a good argument be based on its inclusion of two lines (*Infirma nostri corporis -- Virtute firmans perpeti*) from the "*Veni Redemptor gentium*" (which is certainly by St. Ambrose) or on the phrasal similarity of its two lines "*Accende lumen sensibus -- Infunde amorem cordibus*" with the line "*Infunde lumen cordibus*" of the hymn "*O lux beata Trinitas*" (which is probably by St. Ambrose). Borrowing from celebrated hymns was a common practice of medieval hymnodists. Mone ascribes it to St. Gregory because of its classical metre and occasional rhymes, and especially its prayerfulness, which he declares is a feature of St. Gregory's hymns; and the scansion of *Paraclitus* (with the accent on the penultimate) he considers referable to the learning of such an author.

The hymn was probably first assigned to Vespers. One eleventh-century manuscript has it at both Lauds and Vespers, two others have it at Lauds. Its use at Terce is said to have begun at Cluny -- a highly appropriate assignment, as it thus commemorates the descent of the Holy Ghost at the third hour of the day (*Acts*, ii, 15). In the council held at Reims in 1049, Pope Leo IX presiding, it was sung at the commencement of the third session in place of the ordinary antiphon, "*Exaudi nos, Domine*". It is found in several pontificals of the same century. It is the only Breviary hymn retained by the Protestant Episcopal Church, a translation being given in the Prayer Book (*Ordering of Priests*). There are about sixty English versions. Warton styles the translation of Dryden most elegant and beautiful. It begins:

Creator Spirit, by whose aid
The world's foundations first were laid,
Come visit every pious mind,
Come pour Thy joys on human kind;
From sin and sorrow set us free,
And make Thy temples worthy Thee.

JULIAN, *Dict. of Hymnology* (2nd ed., London, 1907), 1206-1211, 1720; DREVES, *Lateinisehs Hymnendichter des Mittel-alters, II.* in *Analecta Hymnica, L* (Leipzig, 1907), 193-4 (Latin text. MS. references, additional stanzas, notes), 180-1, biographical notice of Rabanus; FRERE, *Introduction to Hymns Ancient and Modern.* (hist. ed., London, 1909) p. (see hymns Nos. 180, 181, for text and two trs., two harmonized plainsong melodies, modern settings and comment); PIMONT, *Les hymnes du bréviare romain, III* (Paris, 1884), 125-143, extensive comment: "The other two hymns of Pentecost are mostly narrative, while the *Veni Creator* is entirely an address to the Holy Ghost. This characteristic trait, and the exceptional beauty of the hymn, have always made it dear and venerable to Holy Church . . . The Dominicans sing it only at Terce. Other manuscripts locate it at Matins. The ancient *Ordinarium* of Laon indicates its use at all the canonical hours. The nuns of the *Paraclete* (Nogent-sur-Seine) repeated the first stanza seven times at Terce, five times at Sext, and thrice at None." He refers to MARTÈNE, *De antiq. rit. eccl.*, III, iv, c. 28; HENRY, *The Hymn "Veni Creator Spiritus"* in *Amer. Eccl. Review* (June, 1897), 573-596, text and original translation. comment; SHIPLEY, *Annus Sanctus* (London, 1874), gives trs. by AYLWARD (161), ANON. in *Evening Office*, 1710 (165), HUSENBETH (167), R. CAMPBELL (170). and in the Appendix, 10, 11, 26, 27, trs. of the *Primers* of 1604, 1619, 1685, 1706 (this last being Dryden's); MONE, *Lateinische Hymnen des Mittelalters, I* (Freiburg, 1853), 241-243; DANIEL, *Thesaurus Hymnologicus, I*, 213-215; IV, 124-126; DUFFIELD, *Latin Hymn-Writers and their Hymns* (New York, 1889), 114-131, text and original tr., biography of Rabanus, for whose authorship Duffield contends vigorously; *The Seven Great Hymns of the Medieval Church* (7th ed., New York, 1868), 134-139); *Amer. Eccl. Review* (May, 1900, 525), decree S.C.R. (20 June, 1899) concerning the doxology; IDEM (Oct., 1896, 432-434), the singing of the *Veni Creator* before the sermon at High Mass; JOHNER, *A New School of Gregorian Chant* (New York, 1906, p. 87) gives the melody with marked accents and calls attention to "the upward movement from the first to the third line . For imitative hymns: DREVES, *Analecta Hymnica, XII*, 139; XXI, 52, 56; XXX (three hymns); XLIII, 211; XXXIII, 23. OIT, *L'Innodia ambrosiana in Rassegna Gregoriana. VI* (1907), 490, gives the melody of the hymn *Hic est dies verus Dei*, shows that it is the same as that of the *Veni Creator*, remarks that "all the spirit of the Ambrosian hymnody is felt in this fresh and vivacious melody", and thinks that "the music probably belongs to Saint Ambrose; BLUME, *Ein neuer Markstein in der liturgischen Hymnodie in Stimmen aus Maria-laach, LXXV, No. 1* (July, 1, 1908), 6and footnote, for comment on revision.

H.T. HENRY

Veni Sancte Spiritus Et Emitte Coelistus

Veni Sancte Spiritus Et Emitte Coelitus

The sequence for Pentecost (the "Golden Sequence"). It is sung at Mass from Whitsunday until the following Saturday inclusively, and comprises ten stanzas of the form:

Veni, Sancte Spiritus,

Et emitte coelitus
Lucis tuae radium.

Some hymnologists bind two such stanzas into one, doubtless in order to complete the rhythmic scheme for the third line, as in the case of the "Lauda Sion" and the "Stabat Mater". The peculiar feature of the "Veni Sancte Spiritus, however, the persistence throughout the hymn of the same rhythmic close in "ium" For all the stanzas -- a feature imitated in Dr. Neale's translation (given in the Baltimore Manual of Prayers"). This version of the Anglican hymnologist is only less popular than that of Brother Caswall, which is found alike in Protestant and Catholic hymnals and in the "Raccolta" (Philadelphia, 1881). Dean Trench and others follow Durandus in ascribing the authorship of the sequence to Robert II, who reigned in France from 997-1031. With Cardinal Bona, Duffield gives it to Hermann Contractus (q.v.) and argues earnestly for the ascription. The sequence has indeed been found in manuscripts of the eleventh century, and of the twelfth, but written by a later hand, and the conclusion is drawn that it dates sometime after the middle of the twelfth century. This makes probable the ascription to Stephen Langton (q.v.), made by a writer whom Cardinal Pitra thinks an English Cistercian who lived about the year 1210. More probable is the ascription to Innocent III made by Ekkehard V in his "Vita S. Notkeri", written about 1220. Ekkehard, a monk of St. Gall, says that his abbot, Ulrich, was sent to Rome by Frederick II, conferred with the pope on various matters, and was present at the Mass of the Holy Spirit celebrated before the Holy Father. The sequence of the Mass was Sancti Spiritus adsit nobis gratia". Hereupon Ekkehard remarks (what he probably learned from Abbot Ulrich himself on his return to St. Gall) that the pope himself "had composed a sequence of the Holy Spirit, namely Veni Sancte Spiritus". The older sequence yielded but gradually to its rival, which was almost universally assigned to one or more days within the octave. The revised Missal of 1570 finally assigned it to Whitsunday and the octave. The revision (1634) under Urban VIII left it unaltered. Well styled by medieval writers the "Golden Sequence", it has won universal esteem, the reasons for which are set forth by Clichtoveus, who in his "Elucidatorium" considers it "above all praise because of its wondrous sweetness, clarity of style, pleasant brevity combined with wealth of thought (so that every line is a sentence), and finally the constructive grace and elegance displayed in the skilful and apt juxtaposition of contrasting thoughts . Daniel applauds this appreciation. Gihl spends not a little space in his work on the Mass in praise of the hymn, and Julian accords it a careful and appreciative tribute.

KAYSER, Beiträge zur Gesch. u. Erklärung der alten Kirchen-hymnen, II (Paderborn, 1886), 61-76, a good commentary; JULIAN, Dict. of Hymnol. (2nd ed., London, 1907), 1212, 1721, discussion of authorship, first lines of trs., etc.; to his list should be added: BAGSHAWE, Breviary Hymns and Missal Sequences (London, s. d.), 36: "Come, O Holy Spirit, down; DONAHOE, Early Christian Hymns (New York, 1908), 149: "Holy Spirit, come and shine"; Irish Monthly (Nov., 1887): O Holy Spirit, come!"; Missal for the Use of the Laity (London, 1903), 410: Holy Spirit, come possess us, a four-lined stanza, etc. The version frequently used by Catholic sodalities is a revision of that by AUSTIN (1668): "Come Holy Spirit, send down those beams which gently flow in silent streams" etc. For indulgences, plenary and partial, attached to the recitation of the sequence,

see tr. of the Raccolta. TRENCH, *Sacred Latin Poetry* (3rd ed., London, 1874), 198-9 for text with notes, and 197 for biographical notice of Robert II; Trench thinks the sequence "the loveliest . . . of all the hymns in the whole circle of Latin sacred poetry". DUFFIED, *The Latin Hymn Writers and Their Hymns* (New York, 1889), 149-68 (prose tr., 163). DREVES, *Analecta Hymnica* (Leipzig), for hymns founded on the sequence, e.g., IX, p. 199: *Veni sancte Spiritus, Katharin coelitus Invitatus meritor; Consolator optime, Doctor disertissime, Katharinam instruens; O lux beatissima* etc.; for other illustrations see: X., 32, 122, 253; XXXVIII, 166; XXI, 56; XXXIX, 30; XL, 52; XLI, 195; XLII, 69. *Hymns Ancient and Modern* (hist. ed., London, 1909), 263-6 for Latin text, tr. based on CASWALL, plainsong and modern setting. *The Vatican Graduale* (Rome, 1908) gives the typical and official plain, song. SHIPLEY, *Annus Sanctus* (London, 1874), for trs. (pp. 164, 166, 169, 173; also, in Appendix, pp. 33-4, Primers of 1685 and 1706). *The Seven Great Hymns Of The Mediæval Church* (7th ed., New York, 1868), 126-33, text and tr. of WINKWORTH. MARCH, *Latin Hymns* (New York, 1875), 92 (text), 268 (grammatical notes). JOHNER, *An New School of Gregorian Chant* (New York, 1906), 115: "Do not lengthen the accented syllables, as otherwise an unpleasant 6-8 time is unavoidable".

H.T. HENRY

Veni Sancte Spiritus Reple

Veni Sancte Spiritus Reple

A prose invocation of the Holy Ghost. The Alleluia following the Epistle of Whitsunday comprises two parts: (1) a chant in the fourth tone: "Alleluia, alleluia. V. Emitte Spiritum tuum, et creabuntur; et renovabis faciem terræ" (Ps. ciii, 30, Vulgate edition, with change of "emittes" into "emitte"); (2) a chant in the second tone: "Alleluia. V. Veni sancte Spiritus, reple tuorum corda fidelium, et tui amoris in eis ignem accende . A rubric directs all to kneel when the *Veni Sancte Spiritus*" begins. Then follows the sequence (see VENI SANCTE SPIRITUS ET EMITTE COELITUS). An invocation much used in schools and in private devotions is constructed from the above "Alleluia by taking first the *Veni...accende*", then the "Emitte...terræ", and concluding with the prayer of the feast: "Deus qui corda...gaudere" (omitting the words *hodierna die*). From the plainsong melody (composed in the eleventh century) of this *Veni* was developed the exquisite plainsong of the sequence following it.

MEARNS in JULIAN, *Dict. of Hymnol.* (2nd ed., London, 1907), 1215, 631 ("Komm heiliger Geist, Herre Gott"); ESLING, tr. in *Catholic Record*, VII (Philadelphia), 43, 44; MARBACH, *Carmina Scripturarum* (Strasburg, 1907), 207-8, liturgical uses; *La Tribune de Saint-Gervais* (May, 1907), 115-6, analysis of plainsong; DREVES, *Analecta Hymnica*, X, 32 (twelfth-cent. hymn founded on prose prayer, sequence, and hymn *Veni Creator*). Prose trs. in: YOUNG, *Roman Hymnal*, I (New York, 1884); *Crown of Jesus* (1862); *Altar Hymnal* (1884), etc. Tr. of component parts in *Missal for the Use of the Laity* (London, 1903), 409.

H.T. HENRY

Diocese of Venosa

Venosa

(VENUSIN.)

Diocese in Southern Italy. The city is situated on a high precipitous hill, one of the most advanced posts of the Apennines, overlooking a fertile plain. Near its sixteenth century cathedral, the SS. Trinita stands an old Benedictine abbey founded by the first Norman counts. Venosa is the native place of Horace. It was an important Samnite city, and was captured in 291 B.C. by the Romans, who made it a Latin colony. It resisted Hannibal in the Punic War, and during the Civil War was stormed by Metellus. It was flourishing as late as the fourth century. Among its antiquities is a Jewish cemetery. The earliest events at Venosa are the martyrdoms of the Twelve Brothers (286) and of Feliz, Bishop of Tabara in Africa, and his companions (303). Stephanus (498) is the first Bishop of Venosa whose date is known accurately. The names of other bishops up to the Norman conquest have not been preserved. Buono (1223) was assassinated by a cleric; Lamberto Arbaudo (1509) embellished the cathedral, which was demolished a little later to permit the erection of fortifications. In 1818 the See of Lavello, suffragan to Bari, founded in 1042 when the Norman count Arnichino fixed his seat at Lavello, was united to Venosa. The diocese is suffragan to Accrenza and contains 8 parishes, 48,300 inhabitants, 54 secular priests, and 2 convents of nuns.

CAPPELLETTI, *Le chiese d'Italia*, XX; CIMAGLIA, *Antiquitates venusinae* (Naples, 1757); DE LORENZO, *Venosa e la regione del Vulture in italia artistica* (Bergamo, 1906).

U. BENIGNI

Ventimiglia

Diocese of Ventimiglia

(VENTIMILIENSIS)

Located in the Province of Porto Maurizio, northern Italy. The city is situated on the Gulf of Genoa, having a small harbour at the mouth of the Roia. It contains a fine cathedral with a fifth-century baptistery. The Church of S. Michele is erected on the foundations of a pagan temple. Some antiquities are collected in the town hall. Ventimiglia is the ancient Albiun Intemelium, the capital of the Intemelii, a Ligurian tribe which long resisted the Romans, but was forced in 115 B.C. to submit to Scaurus. In A.D. 69 the city was sacked by the army of Otho and Vitellius. In the Gothic wars it was besieged by the Byzantines and the Goths, and suffered from the raids of Rotharis, King of the Lombards, but flourished again under King Rodoaldo. In the tenth century it was attacked by the Saracens of Frassineto. Berengarius made his son Conrad first Count of Ventimiglia. In 1139 the Genoese attacked it by land and sea and forced it to surrender; the count continued to hold the city and countship as a vassal of the victors. The city rebelled more than once against the Genoese and sided with their enemies. It was thus temporarily held by the dukes of Savoy (1389

and 1746) and Ladislas, King of Naples (1410). In general it shared the fortunes of Genoa. The most ancient Christian mention of Ventimiglia is the alleged preaching of Sts. Marcelinus (Bishop of Embrn), Vincentius, and Dominus (fourth century).

It is probable that it had a bishop from the fifth century; the first known is Joannes (680). Among his successors were: Cardinal Antonio Pallavicino (1484) and Alessandro Fregoso, both more distinguished as warriors than as clerics; Filippo de'Mari (1519), who restored ecclesiastical discipline; Carlo Visconti (1561), later a cardinal; Carlo Grimaldo (1565), who distinguished himself at the Council of Trent; Girolamo Curlo (1614), who died by poison in Corsica, whither he had been sent as Commissary Apostolic; Gianfrancesco Gandofli (1622), who negotiated the peace between Savoy and Genoa; Antonio Maria Bacigaluppi (1773), who converted the episcopal residence into a seminary. The diocese, which has been suffragan to Genoa since 1775, contains 65 parishes, 96,000 inhabitants, 250 secular and regular priests, 6 houses of religious men, 37 convents of nuns, 3 educational institutions for boys, and 10 for girls. There are 4 religious periodicals published in the diocese.

U. BENIGNI

Gioacchino Ventura di Raulica

Gioacchino Ventura di Raulica

Italian pulpit orator, patriot, philosopher, b. at Palermo, 8 Dec., 1792; d. at Versailles, 2 Aug., 1861. He entered the Society of Jesus in 1808, and in 1817, when the Society was suppressed in Sicily, joined the Theatines. Ordained a priest, he distinguished himself as a Catholic journalist and apologist, as a preacher, especially by his "Funeral Oration of Pius VII" (1823), as an exponent of the systems of de Lamennais, de Maistre, and de Bonald. He was appointed by Leo XII professor of canon law at the Sapienza, and in 1830 was elected Superior-General of the Theatines. He published his "De methodo philosophandi" in 1828 and "Bellezze della Fede" in 1839. After his generalship (1830-33) he preached in Rome. His eloquence, though somewhat exaggerated and prolix, was vehement and direct, with a noble bearing, a magnificent voice, and an affecting delivery, and it won him great renown. In Paris, though not perfectly master of French, he almost rivalled Lacordaire. With the accession of Pius IX, Ventura became politically prominent. His "Funeral Oration of O'Connell" (1847) glorified the union of religion and liberty. His eulogy of liberty on the "Morti di Vienna" sounded almost like a diatribe against kings in general. It was put on the Index; the author nobly submitted.

Ventura maintained the lawfulness of the Sicilian Revolution (cf. his "Sul riconoscimento della Sicilia, etc.", Palermo, 1848; "Menzogne diplomatiche", etc.). His ideal was an Italian Confederation under the presidency of the pope. During the exile of Pius IX at Gaeta, Ventura's position in Rome was a delicate and compromising one. Though refusing a seat in the Roman Assembly, he advocated

the separation of the ecclesiastical and temporal powers, and in the name of the Sicilians recognized the Roman Republic. As commissioner from Sicily, he was present at an unseemly politico-religious ceremony in St. Peter's, but took no active part in the services. He opposed French intervention in behalf of the pope and when Oudinot attacked Rome, spoke of Pius IX in words which he bitterly regretted. On the downfall of the Triumvirs (1849), he went to Montpellier and then to Paris (1851). Here he made an ineffectual attempt to convert his former friend de Lamennais. His Conferences at the "Madeleine" etc. were published as "La raison philosophique et la raison catholique" (1852---). In 1857 he gave the Lenten Sermons at the Tuileries before Napoleon III; these appeared as "Le pouvoir politique chrétien". Ventura's philosophical views received final expression in "La tradizione e semi-pelagiani della philosophia", "Saggio sull' origine dell' idee", "Philosophie chrétienne" (Paris, 1861). He is a moderate Traditionalist of the Bonald-Bonnetty School. Ventura's private life was irreproachable. In spite of some blunders he remained a loyal Catholic and died an edifying death. His works were published as: "Opere Complete" (31 vols., Milan, 1854-64); "Opere Postume", (Venice, 1863).

JOHN C. REVILLE

Venturino of Bergamo

Venturino of Bergamo

Preacher, b. at Bergamo, 9 April, 1304; d. at Smyrna, 28 March, 1346. He received the habit of the Order of Friars Preachers at the convent of St. Stephen, Bergamo, 22 January, 1319. From 1328 to 1335 he won fame preaching in all the cities of upper Italy. In February, 1335, he planned to make a penitential pilgrimage to Rome with about thirty thousand of his converts. His purpose was misunderstood, and Benedict XII, then residing at Avignon, thought that Venturino wished to make himself pope. He wrote letters to Giovanni Pagnotti, Bishop of Anagni, his spiritual vicar, to the Canons of St. Peter's and St. John Lateran's, and to the Roman senators empowering them to stop the pilgrimage. This complaint to the Dominican Master General resulted in an ordinance of the Chapter of London (1335) condemning such pilgrimages. The pope's letters and commands, however, did not reach Venturino, and he arrived in Rome, 21 March, 1335. He was well received,

and preached in various churches. Twelve days later he left Rome, without explanation, and the pilgrimage ended in disorder. In June, he requested an audience with Benedict XII at Avignon; he was seized and cast into prison (1335-43). He was restored to favour by Clement VI, who appointed him to preach a crusade against the Turks, 4 January, 1344; his success was remarkable. He urged the pope to appoint Humbert II of Dauphiné, whose friend and spiritual adviser he had been, leader of the crusade, but Humbert proved incapable and the crusade came to naught. Venturino's writings consist of sermons (now lost) and letters.

C. O'NEIL

Raffaele Venusti

Raffaele Venusti

(VENOSTA.)

Born at Tirano, Valtellina, northern Italy, about the end of the fifteenth century; died at Venice, in 1543; he joined the Canons Regular of SS. Salvatore, devoting himself to theological and canonical studies, and winning fame as a powerful Catholic controversialist against the Lutherans and Calvinists. When the discussion concerning the divorce of Henry VIII of England arose, Venusti was invited both by the king and by the Emperor Charles V, the protector of Catherine of Aragon, to write an expression of his views on the question. His polemical and apologetic works were printed in 1543; they treat of the truth of the Catholic doctrine as opposed to Protestantism, especially of the notes of the true Church, free will, the councils, etc. These writings have a special historical value as representing the first phase of anti-Lutheran, anti-Calvinistic Catholic polemics, a phase which gave way later to the writings of Catholic theologians like Melchior Cano and the early Jesuit theologians. This class to which Venusti belonged is, in theology, parallel to the group of Catholic apologists in the field of history, who were predecessors of Baronius in his controversies with the Centuriators of Magdeburg.

Nuovo dizionario storico (Bassano, 1796); see also the works relating to the order of the Canons Regular of SS. Salvatore.

U. BENIGNI

Vera Cruz

Vera Cruz

(VERAE CRUCIS or JALAPENSIS).

Diocese of the Mexican Republic, suffragan of the Archbishopric of Mexico. Its area covers all the State of Vera Cruz with the exception of one or two parishes in the northern part which

belong to Tamaulipas, one in the western part which belongs to the Diocese of Tulancingo and a few others in the southern part which are a part of the Bishopric of Tehuantepec. Its population amounts to 1,124,368. The capital of the State, which is the residence of the bishop, is Jalapa, 4335 feet above the level of the sea, and has a population of 24,816 inhabitants. (Census of 1910). When Hernando Cortés landed at what is now the seaport of Vera Cruz on 2 April, 1519 (Good Friday, whence the town obtained its name) he was accompanied by Father Fray Bartolome de Olmedo, who was intrusted with the spiritual direction of the new colony founded by this audacious leader. With them was the licenciado, Juan Diaz, and the deacon, Geronimo Aguilar, who, having been kept a prisoner by the Indians for a few years, knew their language and acted as interpreter for the expedition. From a letter written by Hernando Cortés to the Emperor Charles V, it is known that on 15 Oct., 1524, there were parishes, with their rectors, sextons, and ornaments, in Vera Cruz.

During the first century of the existence of the colony, Vera Cruz was considered of such importance, and Christianity had made such headway, that the establishment of a bishopric was thought advisable. In consequence, the viceroy, Martin Enriquez, brought over a royal decree in which the name of Father Fray Domingo Tineo Dominico was presented for the bishopric; but when the nomination was received in 1567, a year had already elapsed since the candidate had died at Puebla. While passing through Vera Cruz, Bishop Luis de Penalver of New Orleans, who had been promoted to the Metropolitan See of Guatemala, was asked by the Church Board of Vera Cruz to visit the coast of Sotavento which had not been visited by a bishop for a period of forty years; Bishop Penalver complied with this request and in his report showed the necessity of establishing a bishopric in that country with Vera Cruz in its episcopal see. This request was granted in 1804 but was never fulfilled. Futile attempts were also made in 1835 and 1845; finally, Pius IX, in a secret consistory on 19 March, 1863, named Francisco Suarez Peredo, Bishop of Vera Cruz, and the bishop established his residence in Jalapa, the city in which his successor still resides. The parishes of this diocese were taken from the Bishopric of Puebla and Oaxaca; since its establishment it has always been suffragan of the Archbishopric of Mexico. It has a seminary with a few alumni; 57 parochial schools and 11 Catholic colleges which have about 5205 students; it has 61 parishes and 3 permanent vicariates. There are 3 Protestant colleges with 113 students and 5 Protestant churches in this diocese. The most important city of the Diocese is Vera Cruz, the principal seaport of the Republic of Mexico, situated not far from the town founded by Cortés. Only a few ruins are left to-day to attest the good work inspired by the faithful of the times, where stood a great many convents at the time of the colony. It was there that the Franciscan Fathers, the Dominican Fathers, the Barefooted Carmelites, and other orders made their residences.

VERA, Catecismo geog.-hist. estadist, de la Iglesia Mexicana (Amecameca, 1881).

CAMILLUS CRIVELLI

Verapoly

Archdiocese of Verapoly

(VERAPOLITANA.)

Located on the Malabar Coast, India, having the Diocese of Quilon as suffragan; extends northwards to the River Ponany, southwards to the Rani River, bounded on the east by the Ghaut line and on the west by the Indian Ocean. The Catholic population within the confines of the archdiocese is divided into two parts--those of the Syrian Rite, called Thomas Christians, who are under the personal (and quasi-territorial) jurisdiction of the three Vicars Apostolic of Trichur, Ernakulam, and Changanerry; and those of the Latin Rite, originally converts of the Portuguese missionaries, who are territorially under the jurisdiction of the archbishop. These later form a Catholic population of 75,389, having 31 churches and 25 chapels, served by 25 European Fathers of the Carmelite Order (mostly Spaniards), about 40 native secular priests of the Latin Rite, and of the Syrian Rite. There are besides in monastic enclosure 10 Carmelite Fathers of the First Order and 12 of the Third Order, making a total of about 90 priests. Also 19 Carmelite Nuns of the Third Order, 6 Brothers of St. Teresa, and 15 catechists. Candidates for the priesthood are sent partly to St. Joseph's Central Seminary, Puttenpally, under the direction of the Carmelite Fathers, and partly to Kandy. The archbishop's present residence is at Ernakulam in the Cochin State, but the cathedral is at Verapoly.

History

This district was occupied in the first instance by a large community of Christians claiming to have been converted by St. Thomas the Apostle, and using a Syrian Rite. These were brought under the jurisdiction of the Portuguese after the Synod of Diamper in 1599, and ruled by Jesuit archbishops at Angamalé, and afterwards at Cranganore. After a few years, there arose a factional dispute which led to a revolt of practically the whole community. Carmelite missionaries were sent by Alexander VI in 1637 to bring about a reconciliation between the people and the Jesuits; but failing this they managed at least to bring the majority of them into ecclesiastical unity under their own rule. Thereupon the Carmelites (under Propaganda) were placed in full charge of the Syrian Christians, while those of the Latin Rite, who had been converted by Portuguese missionaries, were attached to the Diocese of Cochin. When the Dutch in 1663 drove the Portuguese out of Cochin, the Carmelites extended their care to the Latin Christians in Dutch territory. After 1700 the See of Cranganore acquired once more the allegiance of a certain portion of the Syrian Christians -- the rest, with the Latin Christians, remaining under the Carmelite Vicar Apostolic of Verapoly or Malabar. During this time the lines between the two jurisdictions were practically indefinite, and the faithful passed freely from one side to the other. In more recent times the vicar Apostolic had, besides Malabar, active centres along the coast northwards up to Portuguese limits, including Mangalore and Carwar; and there was a free interchange of missionaries between the Malabar and the Bombay vicariates. In 1838 by the Brief *Multa praeclare* jurisdiction was totally withdrawn from the Portuguese Sees of Cochin and Cranganore, though in many places the Portuguese clergy still remained in possession and maintained their claims to jurisdiction as derived from Goa.

The Vicariate of Verapoly, which extended indefinitely even as far as Tanjore, was curtailed by dividing of the Vicariate of Quilon in 1845, and the Vicariate of Mangalore in 183. Further

retrenchments occurred when the hierarchy was established in 1886. By this act Verapoly was made into an archbishopric; Quilon became a suffragan bishopric; the *padroado* Diocese of Cochin was restored, but with limits much smaller than formerly; the next year the Syrian Christians were assigned to two new vicars Apostolic of the Latin Rite at Kottayam and Trichur, who thus took the place of the suppressed See of Cranganore; and only Latin Christians in the remaining territory were left to form the Archdiocese of Verapoly.

Succession of Vicars Apostolic (all Carmelites)

Joseph a Sta. Maria de Sebastiani 1656 (1661), retired before the Dutch in 1663; Alexander de Campo, 1663-1678; Thomas de Castro, 1675-1684; Raphael de Figuredo Salgado, 1681, retired on account of quarrels in 1694; Angelus Francis of St. Teresa, 1700, was in 1709 entitled "Vicar Apostolic of Cranganore and Cochin" on account of long vacancy of those sees, died 1712; John Baptist Multedo of St. Teresa, 1714-1750; Florence of Jesus of Nazareth, 1750-1773; Francis de Sales a Matre Dolorosa, 1774-1787; John Mary of St. Thomas, 1780 (died before consecration); John Mary of Jesus, 1784 (death not marked); Raymond of St. Joseph, 1803-1816; Miles Prendergast, 1819, resigned 1831; Francis Xavier Pescetto of St. Anne, 1831-1844; Ludovico Nartini of St. Teresa, 1839, resigned 1859; Bernardino Baccinelli of St. Teresa, 1847 (1859), 1868, received archiepiscopal rank; Leonardo Mellano of St. Louis, 1868, received archiepiscopal rank 1860, became first Archbishop of Verapoly in 1887, died 1897; Bernard of Jesus, present archbishop since 1897.

Religious Institutions

For Men

St. Teresa's Monastery, Ernakulam, with 7 Discalced Carmelite Fathers of the First Order and 3 lay brothers; Monastery of the Immaculate Conception, Magnumel, near Verapoly, with 9 Tertiary Carmelite Fathers, and 9 lay brothers, besides novices; St. Philomena's Monastery, Cunemao, near Verapoly, with 3 Tertiary Fathers, 3 lay brothers and some postulants.

For Women

St. Teresa's Carmelite Convent, with 7 Tertiary sisters; St. Joseph's Convent, Verapoly, with 8 sisters; and St. Joseph's Convent, Kottayam, with 4 sisters, besides novices in each convent.

Educational Institutions for Boys

St. Joseph's Preparatory Seminary, founded in 1908, with 16 students; St. Albert's High School, Ernakulam, teaching up to matriculation with 600 pupils, of whom above 100 are boarders.

For Girls

St. Teresa's Convent Boarding School, Ernakulam, with 191 pupils; St. Joseph's Boarding School Convent, Verapoly, with 95 pupils; St. Joseph's Convent Boarding School with 144 pupils; all under Tertiary Carmelite sisters. Also 10 vernacular schools and 123 parochial schools, with a collective roll of 4625 boys and 2918 girls.

Charitable Institutions for Boys

St. Joseph's Orphanage, Ernakulam, vernacular, English and industrial schools, with 30 orphans; Good Shepherd Orphanage, Kottayam, under Brothers of St. Teresa, with industrial school, etc., 28 orphans.

For Girls

St. Teresa's Orphanage, Ernakulam, with 84 orphans; St. Joseph's Orphanage, Verapoly, with 45 orphans; St. Joseph's Orphanage, Kottayam, with 39 orphans, all under Carmelite Sisters.

Various

St. Joseph's Hospital, Magnumel, and dispensary with 128 indoor and about 12,000 outdoor patients during the year. Four catechumenates at Verapoly, Magnumel, Cranganore and Kottayam. The number of conversions recorded in 1909 was 632. The publications of the archdiocese are: "Messenger of the Sacred Heart" in Malayalam; "Promptuarium Canonico-Liturgicum" for the clergy; both printed at the Industrial School Press, Ernakulam.

ERNEST R. HULL

Ferdinand Verbiest

Ferdinand Verbiest

Missionary and astronomer, b. at Pitthem near Coutrai, Belgium, 9 Oct., 1623; d. at Peking, 28 January, 1688. He entered the Society of Jesus on 2 Sept., 1641, and studied theology at Seville, where he defended public theses in 1655. In 1658 with thirty-five new missionaries he accompanied Father Martin Martini on his return to China after having secured at Rome the Decree of Alexander VII for the toleration of the Chinese rites (see RICCI, MATTEO). He reached Macao in 1659, and was exercising his ministry in Shen-si when in 1660 he was called to Peking to assist, and eventually to replace, Father Adam Schall in his astronomical labours. He was among those imprisoned during the persecution of 1664. Father Schall, the chief of those accused, being unable to make himself understood by his judges, Father Verbiest, himself loaded with nine chains, defended him with courage and eloquence. In fact the Church in China owed to Father Verbiest the recovery of peace and greater security than it had before the outbreak. In 1668 the young emperor commanded a public test, which allowed the priest to prove beyond dispute the merits of European astronomy compared with the ancient astronomy of China. Father Verbiest and the mandarin who had instigated the persecution and who had taken Father Schall's place as president of the bureau of mathematics, were each commissioned to determine in advance the length of the shadow thrown by a gnomon of a given height at noon of a certain day; then the absolute and relative positions of the sun and the planets on a given date; and finally the moment of a lunar eclipse. The results of the test, which the emperor, ministers, and nobles established in person, were a triumph for the astronomy for the missionaries. Father Verbiest was immediately placed at the head of the Bureau of Mathematics, and, out of consideration for him, his exiled brethren were authorized to return to their missions.

Thenceforth K'ang-hi's benevolence towards Father Verbiest and the Christian religion increased steadily. The emperor requested the priest to construct instruments like those of Europe, and in

May, 1674, Verbiest was able to present him with six, made under his direction: a quadrant, six feet in radius; an azimuth compass, six feet in diameter; a sextant, eight feet in radius; a celestial globe, six feet in diameter; and two armillary spheres, zodiacal and equinoctial, each six feet in diameter. These large instruments, all of brass and with decorations which made them notable works of art, were, despite their weight, very easy to manipulate, and a credit to Verbiest's mechanical skill as well as to his knowledge of astronomy and mathematics. They are still in a perfect state of preservation, and at the time of the expedition against the Boxers (1900) the international troops admired them on the platform of a tower of the imperial palace where Father Verbiest installed them more than two centuries and a half ago. K'ang-hi made use of the talents of the Belgian Jesuit in various other ways, e.g. the transportation of enormous blocks of stone, the construction of an aqueduct, and the casting of canons. Not only did Father Verbiest cast 132 cannons of far superior power than those possessed by the Chinese, but he invented a new gun- carriage.

At the same time the missionary had to write in Chinese a collection of works explaining the construction of the instruments, their object, and the manner of using them. The emperor also desired him to compile astronomical tables indicating the movements of the planets and the solar and lunar eclipses for 2000 years to come; moreover, he had him give on certain days a course in mathematics and astronomy, at which many of the great mandarins as well as the 160 students of the Bureau of Mathematics assisted. In his desire to acquire the European sciences, K'ang-hi himself became a pupil of the missionary; for five whole months he summoned him almost daily to his presence, setting aside in his behalf all the laws of Chinese etiquette and detaining him for whole days, while Father Verbiest explained the astronomical books compiled in Chinese by himself and his fellow-religious, and finally studying like a school-boy under his direction arithmetic, rectilinear and spherical geometry, geodesy, topography, etc. On beholding the earnestness with which K'ang-hi endeavoured to learn especially the chart of the heavens, Father Verbiest began to hope that "as a star of old brought the magi to the adoration of the true God, so the princes of the Far East through knowledge of the stars would be brought to recognize and adore the Lord of the stars". K'ang-hi did not fulfil this hope, but his bent for the European sciences, by inclining him to favour more and more the missionaries who made them known to him, became the means of salvation for thousands of his subjects. Through his influence with the emperor Father Verbiest did more for the spread of the Gospel than any of the missionaries who preached it in the provinces; nevertheless he found time for the direct exercise of the apostolate, especially in the composition of short works in Chinese on the principles of the Christian religion. As he says in one of his letters, books which the Chinese always welcomed as gifts, and which were especially esteemed coming from his pen, were a means of conveying the truth to persons to whom the missionaries would otherwise not have access. K'ang-hi recognized the services of the missionary by conferring on him successively the highest degrees of the mandarin. The liberty to preach, the only reward Father Verbiest looked for, was almost the sole benefit he derived from his dignities.

It would seem that the use of the human sciences, which had so powerfully assisted Father Ricci to found the Chinese mission, and permitted Father Verbiest to save it, would henceforth not be

misrepresented. But such was not the case, and, as is well known, it was a missionary from China who considered it his duty to carry to Rome, and by means of his writings to spread throughout the world, impassioned accusations against the methods of the Jesuit missionaries. Among the replies elicited by the attack of Father Navarrete there is one by Father Verbiest; it was not published, but was read at Rome and thence came an ample justification of the worthy missionary astronomer. Innocent XI, to whom he had dedicated the Chinese translation of the Missal printed at Peking and another work containing his astronomical observations, answered him on 3 December, 1681, by a Brief which means much more than a commonplace expression of thanks: "It has pleased us especially", says the pope, "to learn from your letter with what wisdom and seasonableness (*quam sapienter atque opportune*) you have made use of the profane sciences for the salvation of the Chinese peoples and the advancement and benefit of the Christian faith: employing them to repel the false accusations and calumnies which have been heaped upon the Christian name, opening the way to that high degree of favour with the Chinese king and his advisers, which has obtained both that you yourself should be delivered from the harsh persecutions which you have long endured with the greatest courage, and the power to recall your fellow-missionaries from exile and to restore to religion not only its former liberty and splendour, but to inspire it with the hope of daily progress. . ."

In 1677 Father Verbiest was appointed vice provincial, i.e. superior of all the Jesuit missions of China. This nomination was a stimulus to seek new means of developing the work confided to his direction, with which object he addressed (15 Aug., 1678) a circular letter to all the members of his order in Europe. In it he set forth the hopes which more than ever were held out to the Faith in China, together with the impossibility for the missionaries taken in the field, with the fewness of their number and the inadequacy of their resources, to gather in all the harvest. He then urged his brethren in Europe by most touching arguments to come in as great numbers as possible to reinforce this body of overworked labourers, and also to procure for the mission the material resources necessary for founding new Christian communities, supporting catechists, establishing schools, etc. While seeking assistants in Europe he endeavoured to obtain them also in China itself. The question of a native clergy had arisen at the beginning of the mission. There were difficulties in the way. Hitherto no Chinese had been raised to the priesthood, though many of them had entered the Society and had rendered good service to the mission as catechists. The persecution of 1664, which for nearly five years deprived the Christians of their European missionaries, emphasized more urgently the need of Chinese priests. There is a memoir of the consultation then ordered by the Jesuit superiors; it was drawn up for the father general by Father Verbiest, and is dated from Peking, 12 June, 1678. Herein the vice-provincial energetically advocated the necessity of ordaining Chinese priests; to better assure their perseverance he urged that none be raised to the priesthood save young or mature men who had previously been received and tried in the Society. Moreover, he desired that these Chinese priests might be allowed to say Mass and administer the sacraments in the Chinese language, which permission had been granted in principle by Paul V, as early as 1615. Among the things which Father Verbiest particularly recommend to Father Couplet, sent to

Rome in 1680 as procurator of the missions of China, was a request for a confirmation of this permission. His gift to the pope of the Chinese translation of the Missal by Father Buglio was calculated to support this request, but Father Couplet's negotiations in this respect were without result.

Father Verbiest was more fortunate in his appeal to his brethren in Europe. Well seconded by F. Couplet in his journeys with a Chinaman through Italy, France, and the Low Countries, this appeal aroused numerous and ardent volunteers. The strongest contingent of aspirants was furnished by France. Louis XIV, who had several times received Father Couplet and Michael, the Chinaman, at Versailles, longed for the glory of founding at his own expense a French mission, which would simultaneously serve the interest of religion and science in the Far East. And his ministers rightly divined how much France's commercial expansion would gain thereby. Consequently, six Jesuits were taken from the chosen staff of the college of Paris. Having previously been made fellows of the Academy of Sciences and given the title of mathematicians to the king, they set sail from Brest, 3 March, 1685, with the embassy which the king was sending to Siam. Five of them set out from Siam in 1687 and landed at Ning-po in China on 23 July. The authorization to penetrate to the interior, which the Viceroy of Chekiang and even the Tribunal of Rites at Peking would have refused them, was granted them by the emperor at Father Verbiest's request. The arrival of these recruits was a great consolation to the venerable missionary. Nevertheless he was not to have the joy of receiving them at Peking, which they reached (7 February) ten days after his death. They arrived in time for his funeral which K'ang-hi delayed in order that it might be more solemn. On 11 March Father Verbiest's remains were carried to the burial-place formerly given to Father Ricci.

Scientif.* (1912).

JOSEPH BRUCKER

Verbum Supernum Prodiens

Verbum Supernum Prodiens

The first line of two hymns celebrating respectively the Nativity of Christ and the Institution of the Holy Eucharist. The hymnologist Daniel remarks on the obvious relation between the Nativity and the Eucharist "by which through all ages the Word made Flesh will dwell among us" as justifying the similar forms of the two hymns (Thesaurus, I, 254).

The Nativity Hymn

In its unrevised form the second line was: "A Patre olim exiens". The correctors of the Breviary under Urban VIII changed it into its present Breviary form: "E Patris aeterni sinu". Sometimes ascribed to St. Ambrose or to St. Gregory the Great, its authorship is unknown. Mone supposed it to be of the second half of the fifth century; but although Advent may possibly date back that far, the hymn is probably much later. From the tenth century it has been the usual hymn for Matins, although given in a few manuscripts to Lauds. Originally the hymn was rhymed throughout in couplets (with one exception). The revision under Urban VIII left not a single strophe unchanged, in the removal of its many unclassical prosodic features.

The Eucharist Hymn

Its second line is: "Nec Patris linquens dexteram". Left untouched by the revisers of Urban VIII, it lacks classical prosody, is in accentual rhythm, and rhymes alternately:

Verbum supernum prodiens
Nec Patris linquens dexteram,
Ad opus suum exiens
Venit ad vitae vesperam.
The Word of God proceeding forth
Yet leaving not the Father's side,
And going to His work on earth,
Had reached at length life's eventide.

The hymn is assigned to Lauds of Corpus Christi (q.v.) and is commonly ascribed to St. Thomas Aquinas. Some scholars compare the Office of Corpus Christi with that of the older Cistercian breviaries (1484-1674), and suggest that St. Thomas probably borrowed (while revising) seven of the responsories of Matins from it, and also probably the hymn "Verbum Supernum". In the Cistercian Office the hymn comprised nine stanzas divided into two hymns (for Matins and Lauds respectively), whereas now the hymn has only six stanzas. The Cistercian hymn was sung to the melody of the Advent hymn, "Verbum Supernum", whereas we now sing the Eucharistic hymn to the different melody of the Ascensiontide hymn, "Aeterne Rex Altissime". "It is very natural to suppose that this choice (a common melody, as in the Cistercian Office, for both of the Verbum Supernum hymns) was the primitive one" (Morin).

H.T. HENRY

Archdiocese of Vercelli

Vercelli

(VERCELLENIS).

Archdiocese in the Province of Novara, Piedmont, Italy. The city of Vercelli is an important commercial centre for agricultural produce. The cathedral, erected and enlarged by St. Eusebius, formerly adorned with precious pillars and mosaics, was remodelled in the ninth century, and radically changed in the sixteenth by Count Alfieri. Like the other churches in the city it contains valuable paintings, especially those of Gaudenzio Ferrari, Giovenone, and Lanino, who were natives of Vercelli. Noteworthy also are Sta. Maria Maggiore and Sant' Andrea. The latter was erected by Cardinal Guala Bicchieri (1219) together with the old Cistercian monastery, one of the most beautiful and best preserved Romanesque monuments in Italy. There is an Institute of the Beaux-Arts, containing paintings by Vercellese artists. There are many relics of the Roman period, e.g. an amphitheatre, hippodrome, sarcophagi, many important inscriptions, some of which are Christian. There are old charitable institutions, like the hospital founded by Cardinal Guala Bicchieri (1124), which has an annual revenue of more than 600,000 *lire* (\$117,000); the hospices for orphan girls (1553), and for boys (1542), and mendicant homes. The archives of the metropolitan chapter contain valuable MSS., including an evangelarium of the fourth century, the "Novels" of Justinian, the "Leges Langobardorum", the "Capitulare regum Francorum", also hagiographical MSS. not all of which have been critically examined, and a very old copy of the "Imitation of Christ", which is relied upon as an argument for attributing the authorship of the work to John Gersen. The civil archives are not less important, and contain documents dating from 882. The extensive seminary contains a large library.

Vercellae (*Vercelum*) was a city of the Libici, or Lebecili, a Ligurian tribe; it became an important *municipium*, near which in 101 B.C. Marius defeated the Cimbri and the Teutones, and Stilicho annihilated the Goths 500 years later. It was half ruined in St. Jerome's time. After the Lombard invasion it belonged to the Duchy of Ivrea. From 885 it was under the jurisdiction of the bishop, who was a count of the empire. It became an independent commune in 1120, and joined the first and second Lombard leagues. Its statutes are among the most interesting of those of the medieval republics. In 1197 they abolished the servitude of the glebe. In 1228 the University of Pavia was transferred to Vercelli, where it remained till the fourteenth century, but without gaining much prominence. Only a university school of law has been maintained. During the troubles of the thirteenth century it fell into the power of the Della Torre of Milan (1263), of the Marquesses of Monferrato (1277), who appointed Matteo Visconti captain (1290-9). The Ghibellines (Tizzoni) and Guelphs (Avogadri) disputed the city from 1301 to 1334, the latter party being expelled several times, thus enabling the Marquess of Monferrato to take Vercelli (1328), which voluntarily placed itself under the Viscount of Milan in 1334. In 1373 Bishop Giovanni Fieschi expelled the Visconti, but Matteo reconquered the city. Facino Cane (1402), profiting by the strife between Giovanni Maria

and Filippo Maria Visconti, took Vercelli, but was driven out by Teodoro di Monferrato (1404), from whom the city passed to the dukes of Savoy (1427). In 1499 and 1553 it was captured by the French, and in 1616 and 1678 by the Spaniards. In 1704 it sustained an energetic siege by the French, who failed to destroy the fortress; after this it shared the fortunes of Savoy. In 1821 Vercelli rose in favour of the Constitution.

According to an ancient lectionary the Gospel was first preached here in the second half of the third century by Sts. Sabinianus and Martialis, bishops from Gaul, when they were returning to their dioceses. The episcopal see was not established till after the Peace of Constantine. The first bishop was St. Eusebius, a Sardinian, a lector of the Roman Church and a strenuous opponent of Arianism. From Vercelli the Gospel spread through the valley of the Po and its environs; towards the end of the fourth century, perhaps even during the episcopate of St. Eusebius, new dioceses were erected. From Eusebius to Nottingo (830) there were forty bishops, whose images were preserved in the Eusebian basilica, so called because St. Eusebius dedicated it to St. Theonestus, martyr, and was interred in it. He introduced the common and monastic life among his clergy, from whom bishops for the surrounding territory were often selected. Among his successors were: St. Simenus (370), who baptized and consecrated St. Ambrose; St. Honoratus (396), who administered the Viaticum to St. Ambrose; St. Justinianus (living in 451); St. AEmilianus (about 500) built an aqueduct for the city at his own expense; St. Flavianus (541); St. Celsus (665); Norgaudus (844) restored common life among the canons; Liutuardus (880), who had been archchancellor of Charles the Fat (deposed later); and who was slain during the invasion of the Huns (899), like Regenbertus (904- 24); Atto (d. 960), reformer of ecclesiastical discipline; Petrus (978), imprisoned in the Holy Land by the Egyptian Mussulmans; Leo (999), chancellor of Otto III and Henry II; Gisulfus (1133) re-established common life among the canons in 1144; St. Albertus (1185-1204), founder of the chair of theology, later Patriarch of Jerusalem; Renerio Avogadro (1296) opposed the partisans of the heretic Fra Dolcino; Guglielmo Didier (1437), an elector of Felix V, antipope; Giuliano della Rovere (1502), later Pope Julius II (1503); Cardinal Guido Ferrerio (1562), founder of the seminary, embellished the cathedral and introduced the Tridentine reform; Gianfrancesco Bonomo (1572) continued the reform and replaced (1573) the Eusebian Rite by the Roman. In 1817 the Diocese of Vercelli, then suffragan of Turin (but previously of Milan) was made an archdiocese, the first archbishop being Giuseppe di Grimaldi. The dioceses suffragan to Vercelli are: Alessandri, Biella, Casale, Novara, Vigevano. The archdiocese contains 136 parishes; 250,000 inhabitants; 447 secular and 33 regular priests; 7 houses of religious (men) and 4 of nuns; 4 educational institutes for boys and 8 for girls. The religious periodicals are "L'unione" (weekly) and "La santa infanzia" (monthly).

U. BENIGNI

Carlo Vercellone

Carlo Vercellone

Biblical scholar, born at Biella, Milan; died at Rome, 19 January, 1869. He entered the Order of the Barnabites, at Genoa, in 1829; studied philosophy at Turin and theology at Rome, under Aloysius Ungarelli; taught the sacred sciences at Alessandria, Turin, Perugia, and Parma; and, in 1847, was made president of the college of the Barnabites at Rome, a position which he held together with the charge, first, of procurator, and then general of his order, and with various offices in several Roman Congregations, until his death. His first publication was (1857) the edition (5 quarto volumes) of the Vatican manuscript (B) of the Scriptures prepared by Cardinal Mai under the auspices of Leo XII and printed from 1828 to 1838, to which he added by way of preface a letter to the reader. That this edition was far from perfect, Mai himself had well realized, and Vercellone publicly acknowledged in the above-mentioned letter; he at once set out to have it corrected mainly from Mai's notes, the outcome of his labours being a new octavo edition of the New Testament (Rome, 1859), prefaced by an excellent epistle. A few months before, a poor reprint of the New Testament edition of 1857 had been struck off at Leipzig for a London firm. Yet critics persisted in thinking a new and accurate edition of the "Vaticanus" was imperatively needed, and Pius IX manifested his intention to carry out the design and entrust it to Vercellone. The latter helped Tischendorf in the preparation of his "Nov. Test. Vat." (Leipzig, 1867).

In 1868, appeared the first volume of the "Bibliorum sacrorum graecus codex vaticanus, auspice PIO IX...editus", the work of Vercellone and the Basilian monk Cozza; the second volume (Genesis-Josue) followed in 1869, shortly before Vercellone's death, and the others in 1870, 1871, 1872, and 1881, Cajetan Sergio and Canon Henry Fabiani having replaced Vercellone. Vercellone's critical studies on the text of the Latin Vulgate, although he brought the work only as far as IV Kings, contributed more to his fame than the editing of the Vatican manuscript. These studies, with important and valuable prolegomena, appeared (2 vols., 1860-64) under the title, "Variae lectiones Vulgatae latinae editionis Bibliorum", and may be said to have paved the way to the revision of the Vulgate now in progress. As preparatory to his edition of the Greek Bible, Vercellone wrote "Ulteriori studii sul N. T. greco dell' antichissimo Cod. Vaticano" (Rome, 1866); in 1867 he published a critical study, "La Storia dell' adultera nel Vangelo di s. Giovanni" (Rome), in which he defended the authenticity of the passage (John, vii, 53-viii, 11). He also edited nine pamphlets of Gerdil on the Hierarchy of the Church. In 1869 he published a "Discours sur l'histoire des langues semitiques de Renan", in which he refuted some of the assertions of the French critic.

CHARLES L. SOUVAY

Jacinto Verdaguer

Jacinto Verdaguer

Poet, b. at Riudeperas, Province of Barcelona, Spain, 17 April, 1845; d. at Vallvidrera, Barcelona, 10 June, 1902. While in training to receive Holy orders, he early showed his literary instincts by competing for the prizes offered in the *Jochs Florals* or poetical tournament, held yearly for the purpose of stimulating composition in the vernacular of the eastern part of the Iberian peninsula. Religious faith, country, and love are the main themes promoted by the *Jochs Florals*, and on the first two of these Verdaguier wrote with signal success, winning his first prize in 1861. He was ordained in 1870. In 1877 he published his most famous work, one of the most notable in the history of modern Catalan, the epic "La Atlantida" which quickly attracted attention and was translated in Spanish, French, Italian, English, and German. The "Oda a Barcelona" of 1883 was followed by the epic legend, "Canigó" (dealing with the times of the reconquest of Spain from the Moors and locating its scenes in the Pyrenees region). Then came the noted "Idilis y cants místichs" (1879), the "Cansons de Montserrat" (1880), the "Caritat" (1885), the "Patria" (1888), the "Cants religiosos pel poble" (1882), the "Somni de Sant Joan" (1887), the "Jesus Infant" (1890-05), the "Sant Francesch" (1895), the "Flors de Calvari" (1896), the "Santa Eularia" (1898), etc.

Obres completes ordenades y anotades (7 vols., Barcelona, 1905-1908); La Atlantida ab la traduccio Castellana per Melcior de Palau (Barcelona, 1878); Sp. tr. PALAU (Madrid, 1906); SAVINE, L'Atlantide, porme traduit du Catalan de Mossen Jacinto Verdaguier (Paris, 1884); this contains the Catalan text with the French and an interesting essay on la renaissance de la poesie catalane.

J.D.M. FORD

Giuseppe Verdi

Giuseppe Verdi

Composer, b. at Le Roncole, Parma, Italy, 10 October, 1813; d. at S. Agata, near Busseto, 27 January, 1901. From his earliest years he evinced an extraordinary musical aptitude, and at the age of ten became organist of the village church. From 1826 to 1829 he took lessons from Provesi, organist of Busseto cathedral, and in 1831 went to Milan to study under Lavigna. On the death of Provesi (1833) Verdi returned to Brusset, where he remained for five years, during which he married Margherita Barezzi; in 1838, however, he settled in Milan. His first opera, "Oberto", was performed in 1839 and gave a foretaste of the young composer's abilities, but the production of "Nabuco" (9 March, 1842), followed by "Lombardi" (11 Feb., 1843), showed that a rising star had appeared. The success was accentuated by "Ernani" (9 Mar., 1844), and Verdi's fame as an operatic composer was assured. Several other operas followed in the years 1844 and 1846, and he declined an offer as conductor of Drury Lane Theatre, London, in succession to Costa, though his reception in England was not over cordial. His "Luisa Miller" (8 Dec., 1849) added to his triumphs, and with it ended his fame in one style of opera. Verdi entered on a new phase in 1850, and his "Rigoletto" (produced at Venice on 11 March, 1851) astonished the musical world. Then followed "Ll Travatore" (19 Jan., 1853) and "La Traviata" (6 Mar., 1853), all three being still popular. "Un Ballo in Maschera"

(17 Feb., 1859) completed his triumph in a new style of writing. "Don Carlos" (11 Mar., 1867) and "Aida" (produced at Cairo, 24 Dec., 1871) represent what has been aptly termed Verdi's third style. "Aida" is not only an advance on "Rigoletto", but is clearly a development of genius so strong that it may well be regarded as a new style.

Meantime Verdi visited England in 1855 and again in 1862, when he conducted his "Inne delle Nazioni" at Her Majesty's Theatre. His last visit was in 1875, when he was at the zenith of his powers. It was rumoured that he had laid down his pen forever after the production of "Aida", but on 5 Feb., 1887, he astonished even his warmest admirers by a four-act opera, "Otello" (libretto by Boito). On 5 Feb., 1893, his "Falstaff" was given at La Scala, and he was created Marchese of Busseto by the King of Italy. For an octogenarian this opera was a *tour de force* in musical annals. Its dramatic qualities place it on a level with Wagner's operas, and Verdi's handling of the comic element showed an undreamt-of power. Indeed it has been truly said that "Otello" and "Falstaff" rank as a fourth style of Verdi. His place in music is as an operatic composer of the first rank, and he considerably influenced the Italian School of the second half of the nineteenth century.

Verdi deserves to be reckoned in the category of church composers; his "Requiem" (written for the anniversary of Manzoni's death) is a work of art, and continues to find much favour; it was first performed at Milan on 22 May, 1874. Among his religious compositions are: "Pater Noster", for five voices; an "Ave Maria", for soprano solo and strings (both performed in 1880); a "Te Deum", for two four-part choirs, voices, and orchestra; a "Stabat Mater", four-part, and two motets in honour of the Blessed Virgin. These four appeared in 1898, and were performed in Paris on 7 April, 1899. Verdi's Catholic spirit was shown by his resigning his office as member of the Italian parliament for Busseto; and, subsequently, when, on being appointed a senator by the King of Italy (1875), he went to Rome to be duly admitted, but never assisted at a single sitting. Professor Dickenson in his "Music in the History of the Western Church" writes: "In Verdi also we have a truly filial devotion to the Catholic Church, united with a temperament easily excited to a white heat when submitted to his musical inspiration." By his will Verdi bequeathed an endowment fund for a home for aged musicians.

POUGIN, Verdi (Paris, 1881); STREATFIELD, Masters of Italian Music (London, 1895); MAZZUCATO in GROVE, Dict. of Music and Musicians (new ed., London, 1910), s. v.

W.H. GRATTAN-FLOOD

Verdun

Diocese of Verdun

(VIRODUNENSIS.)

Comprises the Department of the Meuse. Suppressed by the Concordat of 1802, and subsequently united to the Diocese of Nancy, Verdun was re-established by the Bull of 27 July, 1817, and by the Royal Decree of 31 October, 1822. It was formed practically of the entire ancient Diocese of Verdun, portions of the ancient Dioceses of Trier, Châlons, Toul, Metz, and Reims, and became

suffragan of the Archdiocese of Besançon. For the late tradition attributing the foundation of the Church of Verdun to St. Sanctinus, disciple of St. Denis the Areopagite, after he had founded the Church of Meaux, see MEAUX. Certain local traditions state that Sts. Maurus, Salvinus, and Arator were bishops of Verdun after St. Sanctinus, but the first bishop known to history is St. Polychronius (Pulchrone) who lived in the fifth century and was a relative and disciple of St. Lupus de Troyes. Other bishops worthy of mention are: St. Possessor (470-86); St. Firminus (486-502); Vitonus (Vanne) (502-29); St. Désiré (Desideratus) (529-54), St. Agricus (Airy) (554-91), friend of St. Gregory of Tours and of Fortunatus; St. Paul (630-48), formerly Abbot of the Benedictine Monastery of Tholey in the Diocese of Trier; and St. Madalvaeus (Mauve) (753-76). The legend according to which Peter, successor of Madalvaeus, received the Diocese of Verdun from Charlemagne as a reward for the cession of the town of Pavia or Treviso to the Franks, is no longer accepted. Peter became Bishop of Verdun in 781, named to that office by Adrian I at the request of Charlemagne; shortly afterwards he was accused of conspiring against the emperor but was cleared of the accusation at the Synod of Frankfort (794). Bishop Dado (880-923) caused the "Gesta episcoporum Virodunensium" to be begun by Bertharius, a Benedictine of Saint-Vanne, afterwards continued down to 1250 by Lawrence, another monk of Saint-Vanne, and later by an anonymous writer.

Verdun, which had been originally a Roman *civitas*, shared the destiny of Lorraine in the Middle Ages and formed part of Lower Lorraine. The counts of Verdun belonged to the family of Ardennes of which Godfrey of Bouillon, the hero of the First Crusade, was an illustrious member. The Emperor Otto III in 997 conferred on Bishop Haymon of Verdun and his successors the titles of counts of their episcopal city and princes of the Holy Roman Empire with all the rights of sovereigns, especially that of naming for life a count subject to the commands of the bishop (*Comte viager*). These "episcopal counts" also called *voués (advocati)* continued to be selected by the bishops of Verdun from the family of Ardennes, and there were frequent quarrels between the bishops and the voués. Thus Godfrey of Bouillon, Voué of Verdun, was in conflict with Thierry the Great, Bishop of Verdun from 1047 to 1088, before leaving for the Crusade, and renounced his rights to the countship. During the first half of the twelfth century, Renauld le Borgne, Count de Bar and Voué of Verdun, governed the town as a tyrant and resisted the authority of the bishops for thirty-five years. The feast entitled "Commemoration of the Miracles of the Virgin Mary" is celebrated in the diocese on 20 October, in honour of the final victory of Bishop Albero (1131-56) over "le Borgne" to whom the former ceded Clermontois and Vienne-le-Château. From this time the voués of Verdun were suppressed. The concessions obtained from the Emperor Louis of Bavaria in 1227 by the people of Verdun were the cause of a two-years' war between them and Bishop Raoul de Torote (1224-45). Jacques de Troyes, later pope under the name of Urban IV, was Bishop of Verdun from 1252-1255. Among other bishops are: Liébauld de Cusance (1379-1403), who signed a treaty with King Charles VI of France by which French dominion was established in Verdun; Cardinal Louis de Bar (1419-30); Guillaume de Fillastre (1437-49), historian of the Golden Fleece (*Toison d'Or*); and Cardinal Jean de Lorraine (1523-44). Nicolas Psaulme (1548-75) successfully withstood the inroads of Protestantism in the diocese. At the Council of Trent he

vigorously attacked the system of commendatory abbots. It was during his episcopate that the Constable de Montmorency conquered in the name of Henry II, King of France, the "Three Bishoprics" of Metz, Toul, and Verdun (1552), though theoretically they remained territories of the empire until the Peace of Westphalia in 1648. Other incumbants of the see were Charles de Lorraine, Cardinal de Vaudemont (1585-87), and Eric de Lorraine Vaudemont (1593-1610) to whom, at the end of 1603, after many difficulties, Clement VIII gave full power to legalize the marriage of the Catholic Henry, heir to the Duchy of Lorraine, to his Calvinist cousin Catherine, sister of Henry IV.

Under the old regime the bishops of Verdun were suffragans of Trier. Eugene III visited Verdun to consecrate the new cathedral on 11 November, 1147. This cathedral was built at the order of Bishop Albero by the architect Garin, its cloister being a masterpiece of flamboyant Gothic, built from 1509 to 1517. The Abbey of Tholey was given in 634 to the church of Verdun by the rich deacon Adalgisus, its founder, out of esteem for his friend Bishop Paul. Until the time of Charlemagne it was the chief ecclesiastical school for the clergy of Verdun. The Benedictine Abbey of Vasloge, later Beaulieu, founded in 642 by St. Rouyn, numbered among its abbots in the eleventh century Blessed Richard (d. 1046), Abbot of Saint-Vanne, who reformed it, and St. Poppon, who died in 1048. The Benedictine Abbey of Saint-Vanne de Verdun was founded in 952 to replace a community which had established in the same church by St. Vitonus. Among the abbots of Saint-Vanne may be mentioned the aforesaid Blessed Richard, who dissuaded the Emperor St. Henry from becoming a monk of Saint-Vanne when he came to Verdun for that purpose about the year 1024; also Abbot Conon, who played an important part in the conflict of investitures, and who died in 1178. For the important monastic reforms of the beginning of the seventeenth century, which, thanks to the prior Dom Didier de la Cour, emanated from the Abbey of Saint-Vanne, see BENEDECTINE ORDER. The superb Church of Saint-Vanne was destroyed in 1832 and its cloister, which had been converted into barracks, was burned in 1870. The Abbey of Saint-Paul de Verdun was founded (970-973) by Bishop Viefrid. It was originally occupied by Benedictines, but in 1135 by Premonstratensians, and was finally destroyed in 1552. The Benedictine Abbey of Saint-Airy de Verdun, founded between 1025 and 1042, opened public schools about the year 1100, which enjoyed renown for a number of years. In 709 a monastery dedicated to St. Michael was established on Mount de Châtillon by Vulfoad, mayor of the palace under Childeric, King of Austrasia. Abbot Maragdus, a friend of Charlemagne, transferred it in 819 to the borders of the Meuse, thus founding the town of Saint-Mihiel. The reform inaugurated by the congregation of Saint Vanne was introduced into this monastery in 1606 by Cardinal Charles de Lorraine, one of its abbots. Cardinal de Retz was also an abbot of Saint-Mihiel and occupied the castle of Commercy, where he wrote his "Memoirs on the Fronde", and which castle he restored and afterwards sold to Charles IV of Lorraine.

The castle and town of Vaucouleurs belonged to the lords of Joinville, one of whom wrote the life of St. Louis. At this town Joan of Arc presented herself to Robert de Baudricout, offering her services against the English who were then besieging Orléans. Before the foundation of the Fortress of Montmedy there existed, on the rock dominating the town, a chapel under the protection of the

Blessed Virgin which in the sixth century had replaced a statue of the Gaulish Mercury. The Diocese of Verdun figures largely in the history of art, owing to the sculptor Ligier Richier (1500-72), a pupil of Michelangelo. His mausoleum of Rene de Chalons, Prince of Orange, at Bar-le-Duc and his Holy Sepulchre in the church of Saint-Mihiel are admirable works of art. A council held at Verdun in 947 dealt with the conflict between Hugues and Artaud both of whom claimed the See of Reims, finally retained by Artaud. At Tusey (Tusiicum) near Vaucouleurs, a council, convened by Charles the Bald and Lothaire, was held in 860. The synodal letter despatched by the council and revised by Hincmar, dealt with usurpers of ecclesiastical benefices and maintained against the doctrine of Gottschalk that Jesus died for all men without exception. The Treaty of Verdun signed in 843 by the three Kings, Lothaire, Charles the Bald, and Louis the German, definitively confirmed the division of Charlemagne's empire. A number of saints are connected with the history of the diocese of whom the following are worthy of mention: St. Euspicius, who during the siege of Verdun in 502 by Clovis, prevailed on him to spare the town and received the territory of Micy near Orléans on which to build an abbey; he was an uncle of St. Vanne (Vitonus), Bishop of Verdun, and of St. Mesmin (Maximinus) from whom the Abbey of Micy received its name. St. Wandrille (Wandregesilus), b. in Verdun in 570, founder of the Monastery of Fontenelle and his nephew St. Gou, also born in Verdun and a monk of Fontenelle; St. Rouyn (Rodingus) of Irish origin, who founded the Abbey of Beaulieu in the episcopate of St. Paul and died in 708 at the age of 117; also Blessed Pierre of Luxembourg (1369-1387), Bishop of Metz and cardinal, son of Gui de Luxembourg, Count de Ligny. Father Gerbillon (1634-1707), a Jesuit, who played an important part in the Chinese Missions, came originally from Verdun, and the celebrated and learned Dom Calmet (1672-1757) was born at Mesnil la Horgne.

The chief pilgrimages of the diocese are: Notre Dame d'Avioth, near Montmédy, dating from the twelfth century, with a sanctuary dating from the fourteenth to the fifteenth centuries; Notre Dame de Benoite Vaux; Notre Dame de la Belle Epine, at Bouchon; Notre Dame du Guet, at Bar-le-Duc, dating from 1130; Notre Dame des Vertus, at Ligny; Ste Anne d'Argonne, dating from 1338; and Notre Dame of La Voûte at Vaucouleurs. Before the application of the law of 1901 regarding the associations, the following orders were represented in the Diocese of Verdun: Capuchins; Clerks Regular of our Saviour and several orders of teaching brothers. Among orders for women were: Canonesses Regular of St. Augustine of the Congregation of Our Lady, founded at Corbeil (Seine et Oise) in 1643, in 1816 they were charged with the education at Versailles of the daughters of the Chevaliers de St. Louis and were transferred to Verdun in 1839; also the Sisters of Compassion, a teaching order founded in 1846 with a mother-house at St-Hilaire-en-Woevre. At the end of the nineteenth century the religious congregations directed: 64 infant schools, 7 orphan asylums for girls, 2 houses of charity, 1 dispensary, 3 houses for nursing the sick in their homes, 1 house of retreat, 1 lunatic asylum, and 18 hospitals. In 1905 at the end of the concordatory regime there were 283,480 inhabitants, 30 first-class parishes, 444 succursals and 34 vicariates.

et du pays verdunois (Verdun, 1867-1869); ROBINET AND GILANT, Pouille du diocese de Verdun (Verdun, 1888-1904); DUFOUR, Eglise cathedrale de Verdun (Verdun, 1863); LABANDE, Le charite a Verdun (Verdun, 1894); GABRIEL, Verdun, notice historique (Verdun, 1888).

GEORGES GOYAU

Verecundus

Verecundus

Bishop of Junca, in the African Province of Byzacena, in the middle of the sixth century, when the question of the Three Chapters was raised. at Chalcedony, in the beginning of 552. Pope Vigilius's "Judicatum" having excited almost universal discontent, both the pope and the Emperor Justinian agreed the question should be settled in a general council to be held at Constantinople. Verecundus, with Primasius of Hadrumeta, went to represent the Province of Byzacena, and arrived at Constantinople towards the middle of 551. At once the Greek bishops set out to induce them by promises and threats to anathematize the Three Chapters. Both resisted strenuously at first, and, in the grave difficulties then besetting Pope Vigilius, stood by his side; and when the latter had taken refuge in the Basilica of St. Peter's, both, in union with him, issued a sentence of excommunication against Theodore Askidas and of deposition against Mennas, the patriarch of the imperial city (17 August, 551). Soon, however, the conditions became so unbearable that on 23 December Pope Vigilius, although his residence was carefully watched, managed to escape across the Bosphorus and to reach the Church of St. Euphemia at Chalcedon. Thither Primasius and Verecundus followed him a few days later. Verecundus, up to the end an ardent champion of the Three Chapters, died shortly afterwards. After Verecundus's death, Primasius was moved by ambition to relent from his unyielding attitude.

As an ecclesiastical writer, Verecundus is little known. His works, edited by Cardinal Petra (Spicil. Solesm.", IV, Paris, 1858) consist first of a collection of historical documents on the Council of Chalcedon, "Excerptiones de gestis Chalcedonensis Concilii", of which we possess two recensions; secondly, of an exegetical commentary in nine books upon the Canticles of the Old Testament; and thirdly, of a poem of 212 hexameter lines, "De satisfactione poenitentiae", in which exquisite thoughts are unfortunately presented in a very incorrect form. St. Isidore of Seville (De vir. ill., vii) attributes also to Verecundus another poem on resurrection and judgment, which is possibly no other than the "De iudicio Domini" or "De resurrectione mortuorum", found among the works of Tertullian and St. Cyprian.

Bardenhewer, *Patrology*, tr. Shahan (St. Louis, 1908); Hefele, *Conciliengeschichte*; Fr. tr. Leclercq, III (Paris, 1909), ii, 41 sq.

CHARLES L. SOUVAY

Paolo Vergani

Paolo Vergani

Italian political economist, b. in Piedmont, 1753; d. in Paris, about 1820. As a student, he devoted himself especially to ecclesiastical and civil law, and history. Having won distinction in theology, and been ordained priest, he went to Rome the better to prosecute his studies and soon became a canon of St. John Lateran. It was then that he wrote the "Trattato sulla pena di morte" (2nd ed., Milan, 1780), the "Discorso sulla giustizia criminale", and "Dell' enormità del duello", which earned for him a distinguished position among the jurists of the eighteenth century and particularly contributed to the reform of the criminal law. It was also probably due to them that he was appointed assessor general of finances and commerce, and inspector of agriculture and the arts. He wrote on the financial system of the Pontifical States as reformed by Pius VI (Rome, 1791), taking the position of an advocate of import duties for the protection of home industries, and maintaining that agriculture cannot be the only source of wealth in a state. He displays at the same time a thorough acquaintance with the history of political economy. In this work the author makes a remarkable appeal to religion and the duty of Christian charity, asserting the necessity of protecting and fostering the home industries, which provide occupation for so large a number of people, while manufacturing and foreign importation give work to only a few. This literary activity was interrupted for some thirty years: the Lateran Chapter having been dispersed in 1811, Monsignor Vergani went to Paris and there supported himself by giving lessons in Italian. He published also "la législation de Napoléon le Grand considéré dans ses rapports avec l'agriculture" (Paris, 1812) and "Essai historique sur le dernière persécution de l'église" (1814).

U. BENIGNI

Pier Paolo Vergerio, the Elder

Pier Paolo Vergerio, the Elder

Humanist, statesman, and canonist, b. at Capodistria, 23 July, 1370; d. at Budapest, 8 July, 1444 or 1445. He studied rhetoric at Padua, canon law at Florence (1387- 89) and at Bologna (1389-90); taught logic at Padua and Florence, and was tutor of the princes of Carrara at their court at Padua. After 1406 we find him at Rome as secretary to Innocent VII and Gregory XII. Later he became canon of Ravenna and took part in the Council of Constance in 1414. The next year he was one of the fifteen delegates who accompanied the Emperor Sigismund to Perpignan, where an endeavour was made to induce Benedict XIII to renounce his claims. From 1417 to his death he was secretary to the Emperor Sigismund. In July, 1420, he was the chief orator of the Catholic party at the Hussite disputation at Prague. Though never married and probably in minor orders, he was not a priest. The following of his works have been printed: "Pro redintegranda uniendaque Ecclesia", edited with introduction and notes by Combi in "Archivio storico per Trieste, l'Istria ed il Trentino" (Rome, 1882), 351-74; "Historia rincipum Carrariensium ad annum circiter MXXXLV", edited by Muratori,

"Rerum ital. Script.", XVI, 113-184; "Vita Petrarcae", edited by Tommassini in "Petrarca redivivus", (Padua, 1701); "De ingenuis moribus ac liberalibus studiis" (Venice, 1472). His letters, 146 in number, were edited by Luciani (Venice, 1887). There are still in manuscript: a Latin version of Arrian's "Gesta Alexandri Magni"; a Life of Seneca; a panegyric on St. Jerome; a few comedies, satires, and other poems.

BISCHOFF, Studien zu P. P. Vergerio dem Aeltern (Berlin, 1909); KOPP, Pietro Paolo Vergerio der erste humanistische Padagog (Lucerne, 1894); BADUBER, P. P. Vergerio il seniore (Capodistria, 1866); WOODWARD, Vittorino da Feltro and other Humanist Educators (Cambridge, 1897); JACHINO, Del pedagoga Pier Paolo Vergerio (Florence, 1894); BUSCHBELL, Reformation und Inquisition in Italien und die Mite des 16. Jahrhunderts (Paderborn, 1910), 103-54.

MICHAEL OTT

Polydore Vergil

Polydore Vergil

Born at Ubino about 1470; died there probably in 1555. Having studied at Bologna and Padua, he became successfully secretary to the Duke of Urbino and chamberlain to Alexander VI. He became famous by two early works, "Proverbiorum libellus" and "De inventoribus rerum", which attained extraordinary popularity. In 1501 the pope sent him to England as a sub-collector of Peterspence. He became intimate with Henry VII, who in 1505 commissioned him to write the history of England, and he obtained much preferment, including the archdeaconry of Wells. On 22 Oct., 1510, he was naturalized as an English subject. Subsequently to a visit to Rome in 1514, he offended Wolsey who had entrusted him with business, and was imprisoned and deprived of his sub-collectorship. Though finally released, he avenged himself by writing a hostile view of Wolsey in his history, which profoundly influenced later English historians. This work was published in 1533 and is specially valuable for his account of Henry VII's reign. In the third edition (Basle, 1555) the work is continued from 1509 to 1538. He is the first of the modern historians, consulting authorities, weighing evidence, and writing a connected story, not a simple chronicle. His other works are too numerous to specify. Throughout the religious changes he remained loyal, though not a fervent, Catholic. He kept in touch with Italy by frequent visits, and the religious changes under Edward VI led him to return there to spend his last years in his native land.

There is no complete biography, but references to him and his career are found in all the numerous sources for the reigns of Henry VII and Henry VIII. The best connected accounts are: ELLIS, Prefaces to the History of England published by the Camden Society (London, 1844); ARCHBOLD in Dict. Nat. Biog., s.v.

EDWIN BURTON

St. Vergilius of Salzburg

St. Vergilius of Salzburg

Irish missionary and astronomer, of the eighth century. Vergilius (or Virgilius, in Irish *Fergal*, *Ferghil*, or *Feirghil*) is said to have been a descendant of Niall of the Nine Hostages. In the "Annals of the Four Masters" and the "Annals of Ulster" he is mentioned as Abbot of Aghaboe, in Queen's County. About 745 he left Ireland, intending to visit the Holy land, but, like many of his countrymen, who seemed to have adopted this practice as a work of piety, he settled down in France, where he was received with great favour by Pepin, then mayor of the Palace under Childeric III. After spending two years at Cressy, near Compiègne, he went to Bavaria, at the invitation of Duke Otilo, and within a year or two was made Abbot of St. Peter's at Salzburg. Out of humility, he "concealed his orders", and had a bishop named Dobdagrecus, a fellow countryman, appointed to perform his episcopal functions for him. It was while Abbot of St. Peter's that he came into collision with St. Boniface. A priest having, through ignorance, conferred the Sacrament of Baptism using, in place of the correct formula, the words *Baptizo te in nomine patria et filia et spiritu sancta*", Vergilius held that the sacrament had been validly conferred. Boniface complained to Pope Zachary. The latter, however, decided in favour of Vergilius. Later on, St. Boniface accused Vergilius of teaching a doctrine in regard to the rotundity of the earth, which was "contrary to the Scriptures". Pope Zachary's decision in this case was that "if it be proved that he held the said doctrine, a council be held, and Vergilius expelled from the Church and deprived of his priestly dignity" (Jaffe, "Biblioth. rerum germ.", III, 191). Unfortunately we no longer possess the treatise in which Vergilius expounded his doctrine. Two things, however, are certain: first, that there was involved the problem of original sin and the universality of redemption; secondly, that Vergilius succeeded in freeing himself from the charge of teaching a doctrine contrary to Scripture. It is likely that Boniface misunderstood him, taking it for granted, perhaps, that if there are antipodes, the "other race of men" are not descendants of Adam and were not redeemed by Christ. Vergilius, no doubt, had little difficulty in showing that his doctrine did not involve consequences of that kind. (See ANTIPODES.)

After the martyrdom of St. Boniface, Vergilius was made Bishop of Salzburg (766 or 767) and laboured successfully for the upbuilding of his diocese as well as for the spread of the Faith in neighbouring heathen countries, especially in Carinthia. He died at Salzburg, 27 November, 789. In 1233 he was canonized by Gregory IX. His doctrine that the earth is a sphere was derived from the teaching of ancient geographers, and his belief in the existence of the antipodes was probably influenced by the accounts which the ancient Irish voyagers gave of their journeys. This, at least, is the opinion of Rettberg ("Kirchengesch. Deutschlands", II, 236).

Dict. of Christian Biog., s. v. Vergilius; OLDEN in Dict. of National Biography, s. v. Fergil; KRETSCHMER, *Die physische Erdkunde* (Vienna, 1889).

WILLIAM TURNER
Friedrich Heinrich Vering

Friedrich Heinrich Vering

A German canonist, b. at Liesborn in Westphalia, 9 March, 1833; d. at Prague, 30 March, 1896. After completing his course at the gymnasium of Paderborn in 1850, he studied law at the Universities of Bonn and Heidelberg, graduated at the latter university in 1856, was admitted there as *privatdocent* of Roman and canon law in 1857, and became professor extraordinary in 1862. He held this position until 1875 when he accepted the chair of canon law at the newly-erected university of Czernowitz in Bukowina, Austria. In 1879 he became professor of canon law at the German University of Prague, holding this position till his death. He was one of the leading German canonists of the nineteenth century. Though a layman, he was a staunch defender of the rights of the Church against the encroachments of the State. His best known work is his comprehensive text-book on canon law: "Lehrbuch des katholischen, orientalischen und protestantischen Kirchenrechts" (Freiburg, 1876; 3rd ed., *ibid.*, 1893). His two other important works are: "Geschichte und Institutionen des römischen Privatrechts" (Mainz, 1865, 5th ed., entitled: "Gesch. und Pandekten d. röm. und heutigen gemeinen Privatr.", Mainz, 1887); and "Römisches Erbrecht in historischer und dogmatischer Entwicklung" (Heidelberg, 1861). He also wrote the eighth volume of Philipps's "Kirchenrecht" (Mainz, 1889) and numerous smaller juridical treatises. From 1860 he was, with Moy de Sons, joint editor, and from 182, sole editor, of "Archiv für katholisches Kirchenrecht" (Mainz).

Alte und neue Welt, XXXI (Einsledeln, 1896), 574, and Deutscher Hausschatz (Ratisbon, 1896).

MICHAEL OTT

Vermont

Vermont

One of the New England states, extends from the line of Massachusetts, on the south 42° 44' N. lat. to the Province of Quebec in Canada, on the north, at 45° N. lat. Its eastern boundary, throughout its entire length, is the Connecticut River which separates it from New Hampshire; it is bounded on the west by the State of New York, from which it is separated by Lake Champlain for a distance of more than one hundred miles south from the Canadian border. Its area is 10,212 sq. miles. Its length between Massachusetts and Canada being 158 miles, and its width on the northerly border 88 miles, while it narrows to a width of 40 miles on its southerly border.

PHYSICAL CHARACTERISTICS

The Green Mountains, from which the State derives its name, extend through its entire length, about midway between the easterly and westerly borders. Five of these mountains exceed 4000 feet in elevation, the highest, Mount Mansfield, being 4389 feet above sea-level. Several parallel ranges of mountains lie upon either side of the main chain and the surface of the state generally is broken and diversified, the mountain slopes being densely covered with forest growths, principally

of spruce and other evergreen trees. The scenery is everywhere attractive, and in many districts very beautiful. Five rivers flow westerly and northerly into Lake Champlain; three flow northerly to Lake Memphremagog, on the Canadian border; eleven are tributaries of the Connecticut, on the east; while two run in a southerly direction to the Hudson. Not only do the streams of Vermont water beautiful and fertile valleys, but along their courses they furnish valuable water power for manufacturing purposes. The climate is healthful, although subject to sudden changes. The mean annual temperature for the different parts of the state varies from 40°; the highest temperature runs from 90 to 100° F. and the lowest from 30 to 45° F. The average annual rainfall is from 30 to 45 inches.

RESOURCES

The soil of Vermont is very fertile, especially in the river valleys. The low rolling hills are excellent for tillage purposes; the uplands furnish good pasturage and the mountain sides produce much valuable timber. Agriculture is the chief industry of the people, and the state leads all others in the production of butter and cheese, in proportion to population, while in the amount of these products it is surpassed by only nine states. On the eastern slope of the mountains, in the Counties of Windsor, Washing, and Caledonia, granite of excellent quality is produced and its manufacture forms an extensive and important industry. the westerly portion of Rutland County is one of the principal slate producing regions of the country. Marble is found n several localities on the western mountain slope, principally in Rutland, Bennington, and Addison counties, which furnish about three-fourths of the finer grade marble produced in the United States. A large number of manufacturing establishments are in operation, producing a great variety of products, many of which, like the Fairbanks scales, made at St. Johnsbury, and the Howe scales made at Rutland, are shipped to distant countries. The value of the agricultural output of the state in 1910, comprising corn, wheat, oats, rye, buckwheat, potatoes, and tobacco, aggregated \$21,491,400. A summary, issued by the United States Census Bureau for the year 1909, shows that the capital employed in manufacturing in the state was \$62,658,741; the number of wage-earners employed in the several factories was 33,106, and the total wages paid them was \$15,221,059. The total value of the manufactured products was \$63,083,611.

POPULATION

The first census taken in 1791 showed a population of 85,499, which had nearly doubled in 1800. Rapid gains were made in each succeeding decade up to 1850, after which the increase was smaller owing to emigration to the western parts of the country. In 1910 the total population was 355,956. The state contains six cities and two hundred and forty organized towns.

LEGISLATURE AND JUDICIARY

The Legislative Assembly consists of a senate with thirty members, apportioned among the counties according to population, and chosen by the votes of the several counties; and a house of

representatives, in which each town and city has one member. The governor, members of the Legislature, state and county officers are elected biennially, in the even years, in September, and the sessions of the Legislature convene in October following. The Supreme court of the state consists of five judges, elected for a term of two years by the two houses of the Legislature in joint assembly. Regular terms of this court are held in Montpelier in January, February, May, and October, with one session each year at Rutland, St. Johnsbury, and Brattleboro. In each county is a court which holds two sessions annually, the presiding judges being elected by the Legislature in joint assembly. Associated with the presiding judge in each county court are two assistant judges, elected by the freemen of the several counties. Probate courts are established in the several counties, being divided into two probate districts for each. The state is represented in the National Congress by two senators and two representatives. Since 1903 the liquor traffic has been regulated by a local option law under which the voters of each town or city determine its policy at the annual town elections in March.

HISTORY

Starting from Quebec, in the spring of 1609, Samuel Champlain ascended the St. Lawrence and Richelieu Rivers, accompanied by two Frenchmen and about sixty Algonquin Indians. He entered the lake which bears his name on 4 July, and upon seeing the mountain range extending upon the eastern shore, he exclaimed "Voila les monts verts", thus giving their name to the mountains and the state. A month was spent in exploring the lake and the adjacent country. Proceeding southward, Champlain reached another large lake, now called Lake George, to which he gave the name of St. Sacrement. The first settlement by white men, within the borders of the state, was made by the French on Isle la Motte, in Lake Champlain, in 1666. It was called Fort St. Anne, and was occupied until about 1690. The French claimed the territory as far south as the south end of Lake Champlain, and forts were built by them early in the eighteenth century at Crown Point and Ticonderoga, on the west side of the lake. At about the same time they established a settlement on the east shore at Chimney Point, in the present town of Addison. This settlement together with one in what is now the town of Alburg, Vermont, flourished until Canada was ceded to the British. The first English settlement within the present limits of the state was made about 1690, in the present town of Vernon. This was an extension of the settlement of Northfield, in Massachusetts, which a later survey showed to be north of the boundary of that colony. In 1724 Fort Dummer was built on the west bank of the Connecticut River near the present village of Brattleboro. This also was supposed to be within the territory of Massachusetts, but a survey made in 1741 established the northern boundary line of the colony several miles south of the fort.

During the period covered by the Colonial wars, the country was the gateway through which the contending forces advanced to attack each other, the troops of each side being generally accompanied by savage allies. Raiding expeditions were frequent, and the country was so exposed to attack as to make settlement and development practically impossible; but after the final conquest of Canada by the British in 1760, this feature being practically removed, settlements increased very rapidly, the rich lands of the valley being much sought after. In 1761 a settlement was made in

Bennington, under a charter granted by New Hampshire in 1749, and others grew up near it in the next few succeeding years. Newbury on the eastern border of the state near the Connecticut River was permanently settled in 1762. Before the close of 1765, 150 townships lying west of the Connecticut River had been granted by Governor Wentworth of New Hampshire to purchasers from the New England colonies, and the country became known by the name of the "New Hampshire Grants". In granting charters, the Governor of New Hampshire had acted upon the theory that the western boundary of that colony was an extension of the west line of Connecticut and Massachusetts, substantially 20 miles east of the Hudson River, but in 1765 claim was made, by the Governor of New York, that the easterly boundary of New York was the Connecticut River. Several townships were granted by New York in the disputed territory, regardless of the authority of New Hampshire, and the titles of purchasers from New Hampshire were declared to be void. The dispute was carried to the courts of New York, whose decision was adverse to the settlers, and in 1770 a convention at Bennington declared that the inhabitants would resist by force the claims of New York. For defense against the aggression of New York, committees of safety in several towns were established, and a regiment of militia called "Green Mountain Boys" was organized with Ethan Allen as colonel commandant. Few of the settlers complied with the demand that their lands be repurchased from New York, and the officers of the latter colony found it impossible to execute the judgments of the courts of Albany.

In spite of an order made by the British king in council on 24 July, 1767, prohibiting all further grants by the Government of New York pending the settlement of the questions involved, the colonial Government continued to make grants, to press its claims, and attempted to organize counties in the disputed territory, with courts and county officers. Indictments were filed against many of the settlers in the courts at Albany, but the principals could not be apprehended nor brought to trial. A convention of the settlers prohibited the holding of offices and the accepting of grants of land under the authority of New York, and obedience to these orders was enforced. The only legislative authority recognized was that of the conventions of settlers and the country became in fact an independent state, which it was formally declared to be by a convention held at Windsor on 4 June, 1777, and it continued as such until its admission into the Union in 1791. Upon the outbreak of the Revolutionary War, the Green Mountain Boys gave valuable aid to the cause of the patriots. On 10 May, 1775, Ethan Allen in command of a small party captured the fortress at Ticonderoga and made its garrison prisoners. On the following day Crown Point was captured by troops under Captain Seth Warner. A large number of settlers joined the expedition of General Montgomery against Canada and participated in the capture of St. Johns and Montreal, and in an unsuccessful assault upon Quebec. On 7 July, 1777, the rear guard of the American army, retreating from Ticonderoga, gave battle to the advancing British forces at Hubbardton. Colonel Warner commanded the patriot forces, composed largely of Green Mountain Boys. After an obstinate struggle, the patriot forces were finally greatly outnumbered and forced to retreat. On 16 August following the same troops participated, with a force from New Hampshire under General John Stark, in the important battle of Bennington, which resulted in a victory for the patriots that helped

to bring about the final surrender of Burgoyne's army. In the war of 1812 the state furnished its full quota of 3000 troops for service; in addition more than 2500 of the inhabitants volunteered for the defence of Plattsburg, and participated in MacDonough's victory on 11 Sept., 1814. The state's troops were among the first to respond to the call of President Lincoln for service in the Civil War in 1861; they served principally in the Army of the Potomac and participated in all its engagements and campaigns. The total number of men furnished for the national forces was 35,242, or a little more than one-half of the total available population between the ages of 18 and 45.

EDUCATIONAL SYSTEM

The University of Vermont, founded at Burlington in 1890, provides instruction in the arts, engineering, chemistry, agriculture, and medicine. In 1910 it had a teaching staff of 53 in the collegiate departments and 37 in the professional departments, with an attendance of 498 students. Middlebury College has 18 professors and instructors with 334 students enrolled; Norwich University has 15 professors and instructors, and 172 students; St. Michael's College (Catholic) at Winooski Park, near Burlington, has 14 professors and 125 students; there are 18 academies with a total attendance of 1350 students, and 71 high schools, which in 1910 had 3650 students. Public schools are required to be maintained by the several towns and cities throughout the state, the total attendance in 1910 being 66,615. The total number of public schools is 2489 with 3266 teachers. The state agricultural college is located at Burlington, and is a department of the University of Vermont; in 1910 it had 35 students, and the medical department of the University had 168 students. There are 25 Catholic parochial schools with 16 teachers and 5950 pupils. In the original township allotments lands were reserved for the maintenance of schools in each town, and the income is used to defray the expense of public schools. State supervision is exercised through a superintendent elected by the General Assembly.

MEANS OF TRANSPORTATION

There are 1094 miles of steam railway in the state, of which the three principal systems run to Montreal and Canadian points on the north, and to New York and Boston on the south and east. The Grand Trunk Railway Company of Canada controls and operates the Central Vermont system extending from the Canadian border to the Connecticut River; the Rutland Railroad system extending from Bellows Falls, on the east, and Bennington on the South, through the Western part of the state to the Canadian border, is controlled and operated by the New York, New Haven, and Hartford Railroad Company, which also controls the line extending from the southern border of the state northerly through the Connecticut valley. In all the cities and some of the larger towns there are electric street railways, which in 1910 comprised a total of 135 lines. The ports of Lake Champlain have water transportation to Canadian points, and by means of the Champlain Canal, to the Hudson River.

ECCLESIASTICAL

As already noted, the state was discovered and named by a Catholic nobleman, Samuel Champlain, whose high character is shown by the sentiment he often expressed, that the "salvation of one soul is of more value than the conquest of an empire". The first sacred edifice to be erected within the state was the little chapel at Ft. Anne, which was built in 1666, and the Sacrifice of Mass there offered up was the earliest Christian service within the territory that now comprises the State of Vermont. Father Dollier de Casson came to the fort from Montreal in the winter of 1666 and ministered to the spiritual wants of a battalion of soldiers stationed at the fort. Father de Casson, in his youth, had been a soldier in France, and tradition credits him with wonderful physical strength; it is related that he was able to stand, with his arms outstretched, and hold up an ordinary man with each hand. He was of a most cheerful and genial disposition, as well as courageous and zealous in his missionary work. A mission was preached by three Jesuit Fathers at Fort St. Anne in 1667, and in 1668 confirmation was administered there by Mgr Laval, Bishop of Quebec. This was, undoubtedly, the first administration of confirmation in New England, and probably in the United States. In the early years of the seventeenth century, the Jesuits established several missions in the vicinity of Lake Champlain; they had a chapel at a permanent Indian settlement near the present village of Swanton, and another in the town of Ferrisburg. A Swedish naturalist, Peter Kalm, who went through Lake Champlain in 1749, says: "Near every town and village, peopled by converted Indians, are one or two Jesuits. There are, likewise, Jesuits with those who are not converted, so that there is, commonly, a Jesuit in every village belonging to the Indians."

Vermont was included within the jurisdiction of the Diocese of Baltimore, established in 1789, and the bishops of Quebec continued to look after the spiritual interests of the Catholic settlers and Indians. When the Diocese of Boston was formed in 1810 Vermont became part of its territory. In the early years of the nineteenth century, there were no resident priests in Vermont, but missions were given from time to time. Father Matignon, of Boston, visited Burlington in 1815 and found in that place about 100 Catholic Canadians. Commencing about 1818 Father Migneault, from Chamblay, Canada, looked after the settlers on the shores of Lake Champlain for several years. He was appointed vicar-general of this part of the diocese by the Bishop of Boston and continued in that capacity until 1853. In 1808 Fannie Allen, daughter of General Ethan Allen, the hero of Ticonderoga, became converted to the Catholic Faith, and entered the novitiate of Hotel-Dieu, Montreal, where she was received as a member of the order, and after a most exemplary life died there on 10 Sept., 1819. Orestes A. Brownson, the noted Catholic author and philosopher, was a native of the state. He was born in Stockbridge, Windsor County, in 1803. Father Fitton, of Boston, came to Burlington for a short time in the summer of 1829. Rt. Rev. Bishop Fenwick, second Bishop of Boston, visited Windsor in 1826. The first resident priest in Vermont was Rev. Jeremiah O'Callaghan, who in 1830 was sent by Bishop Fenwick to Vermont, and visited successively Wallingford, Pittsford, Vergennes, and Burlington. He settled at Burlington, where his influence and pastoral zeal radiated far and wide for nearly a quarter of a century. His field of labour extended from Rutland to the Canadian line, a distance of about 100 miles, and from the shores of Lake Champlain to the Connecticut River.

In 1837 Rev. John Daley who is still lovingly remembered by many of the generation which is passing, came to the southern part of the state. He is described as an "eccentric, but very learned man". During the time of his zealous labours in Vermont, he had no particular home; he usually made his headquarters at Rutland or Middlebury. He was in every sense a missionary, travelling from place to place wherever there were Catholics, and stopping wherever night overtook him; he remained in the state until 1854 and died at New York in 1870. Bishop Fenwick made his first pastoral visit, as Bishop of Boston, to Vermont in 1830, and in 1832 he dedicated the first church built in Vermont in the nineteenth century. This was erected at Burlington under the supervision of Father O'Callaghan. A census of the Catholic population of Vermont, taken in 1843, showed the total number to be 4940. At about this time emigration from European countries, particularly from Ireland, increased very rapidly, and there was a great increase in the Catholic population. In 1852 a meeting of the bishops of the province of New York decided to ask the Holy See to erect Vermont into a diocese, with Burlington as the capital city, and Bishop Fitzpatrick of Boston proposed for Bishop of Burlington, Very Rev. Louis De Goesbriand, Vicar-General of Cleveland, Ohio. On 29 July, 1853, the Diocese of Burlington was created and Father De Goesbriand named as bishop. He was consecrated at New York by the papal ablegate, Mgr Bedini, on 30 Oct., 1853, and on 5 Nov. arrived at Burlington, where he was installed the following day by Bishop Fitzpatrick. Bishop De Goesbriand entered upon his work with the greatest zeal, making a visitation of the entire diocese. He then found about 20,000 Catholics scattered throughout Vermont. In 1855 he visited France and Ireland for the purpose of securing priests for the Diocese of Vermont, in which work he was eminently successful, and he brought to the diocese in the succeeding years, several priests who did splendid work in the up-building of the Church in Vermont.

The first diocesan synod was held at Burlington, 4 Oct., 1855. Rev. Thomas Lynch was appointed vicar-general in 1858. The cathedral at Burlington was built under the supervision of Bishop De Goesbriand, work having commenced in 1861; it was completed and dedicated on 8 Dec., 1867. Bishop De Goesbriand laboured for the welfare and prosperity of his diocese with tireless zeal and gratifying success during thirty-eight years. In 1892 on account of advancing years and failing health, he requested the appointment of a coadjutor. Rev. J. S. Michaud, then pastor of Bennington, Vermont, was appointed. Bishop De Goesbriand retired to the orphanage, which he himself had founded, and there on 3 Nov., 1899, he died at the age of 84. Bishop Michaud died on 22 Dec., 1908, and Rev. J.J. Rice, D.D., then pastor of St. Peter's Church, Northbridge, Massachusetts, was selected as his successor. Bishop Rice was consecrated on 14 April, 1910.

There are now in the Diocese of Burlington 97 churches of which 72 have resident priests and 25 are missions. There are 93 secular priests and 14 priests of religious orders. Twenty parishes maintain parochial schools, attended by 5950 pupils. There are three academies for boys, and six for young ladies; an orphan asylum is maintained at Burlington, which cares for 220 children. Two orphan schools have 252 pupils, making the total number of young people under Catholic care 6202. Two hospitals are maintained, one at Burlington and one at St. Johnsbury. The Loretto Home for aged women at Rutland, under the care of the Sisters of St. Joseph, was built and equipped by

the late Rev. Thomas J. Gaffney, almost entirely with his private funds. The Catholic population in the diocese in 1911 was 77,389 divided almost equally between Irish and Canadians, by birth or descent. There are two Polish congregations, and a small percentage of other nationalities. The principal non-Catholic denominations are: Congregationalists, 20,271 members, 197 churches, 186 ministers; Baptists, 8623 members, 105 churches, 111 ministers; the Methodists, 16,067 members, 182 churches, 161 ministers; the Episcopalians, 3926 communicants, 36 ministers, 52 parishes; Free Baptists, 4000 members, 60 churches; Adventists, 1750 members, 35 churches.

LEGISLATION

The first Constitution of Vermont was adopted in 1877 and provided (Art. 3, chap. 1): "That all men have the natural and unalienable right to worship Almighty God according to the dictates of their own consciences and understanding, regulated by the word of God, and that no man should, nor of right can be compelled to attend any religious worship, or erect or support, any place of worship, or maintain any minister, contrary to the dictates of his conscience; nor can any man who professes the Protestant religion be justly deprived or abridged of any civil right as a citizen on account of his religious sentiment or peculiar mode of religious worship. . . Nevertheless, every sect ought to observe the Sabbath or Lord's Day, and keep up and support some sort of religious worship, which to them shall seem most agreeable to the revealed word of God." The same Constitution (Chap. 2, sec. 9) provided "that each member of the House of Representatives, before he takes his seat, shall make and subscribe the following declaration, viz. I do believe in one God, the creator and governor of the universe, the rewarder of the good and the punisher of the wicked; and I do acknowledge the scriptures of the old and new Testament to be given by Divine Inspiration, and own and profess the Protestant religion". The Constitution was revised and amended in 1786 and the clause requiring a test declaration was dropped entirely from the revision. The words "who professes the Protestant religion" were also eliminated from the third article of chapter 1, leaving the declaration one of freedom of worship for all. And such was the provision of the Constitution adopted after the admission of Vermont to the Union in 1793.

No legislation nor constitutional provisions, discriminating in favour of one sect, or against another, have ever since been enacted in the state. The exercise of any business or employment, except such only as works of necessity and charity, and the resorting to any ball or dance, or any game, sport, or house of entertainment or amusement on Sunday, is prohibited by statute. The administration and voluntary taking of an unnecessary oath is made penal by statute (Pub. Stat., sec. 5917). The provision was originally a part of the anti-Masonic legislation enacted in 1833. the ordinary form of oaths which are administered without the use of the Bible and while the recipient holds his right hand raised, commences with "You do solemnly swear" and ends with "So help you God". The statute provides (Pub. Stat., sec. 6268) that the word "swear" may be omitted and the word "affirm" substituted, when the person to whom the obligation is administered is religiously scrupulous of swearing or taking an oath in the prescribed form, and in such case the words: "So help you God" are also omitted, and the words: "Under the pains and penalties of perjury" are

substituted. The daily sessions of each house of the Legislature are opened by prayer. 1 January and 25 December are legal holidays (Sec. 2690). It is provided by statute that no priest nor minister of the Gospel shall be permitted to testify in court to statements made to him by a person under the sanctity of a religious confessional (Pub. Stat., sec. 1594).

The Catholic Diocese of Burlington is a corporation under a special charter from the Legislature. Incorporation of churches can be had by the filing of articles of association with the Secretary of State, signed by five or more persons (Pub. Stat., sec. 4237); and this may be done without the payment of charter fees or taxes (Pub. Stat., sec. 802). All real and personal estate, granted, sequestered, or used for public, pious or charitable uses, and lands used for cemetery purposes, and the structures thereon are exempt from taxation (Pub. Stat., sec. 496). Divorces from the bond of matrimony may be decreed by the several county courts. Five causes for divorce are recognized by law, for any one of which may be also granted a divorce from bed and board. In 1910, 369 divorces were granted in the state. Marriages may be solemnized by a justice of the peace in the county for which he is appointed, or by a minister of the Gospel ordained according to the usage of his denomination, who resides in the state or labours steadily in the state as a minister or missionary. The number of marriages solemnized in 1910 was 2992. The state prison is located at Windsor, the house of correction at Rutland, and the industrial school at Vergennes. The free exercise of religious belief is granted to prisoners by Public Statutes, Sec. 6075. All bequests to charitable, educational, or religious societies or institutions, existing under the laws of the state, are exempted from the payment of the state inheritance tax of 5% (Pub. Stat., sec. 822). Blasphemy and profanity are punishable as crimes, the former by a fine not exceeding \$200. All persons who have arrived at the use of reason are amenable to the penalty for profanity (Pub. Stat., secs. 5896-7).

Licences for the sale of intoxicating liquors are granted only in towns and cities which vote to grant them at the annual March elections. They are restricted in number, one for each 1000 inhabitants or major fraction thereof. Licencees must be legal voters, and more than twenty-five years of age. No licences can be exercised within 200 feet of a church or school; sales can be made only on the street floor of the building specified, and no screens or obstructions can be maintained so as to prevent a view from the street; tables, chairs, stalls, and sofas are prohibited on the licensed premises, and all licensed drinking-places are required to close at ten o'clock in the evening. Those authorized to sell liquor in packages are required to close at 7 P.M. All places are to close on Sundays, legal holidays, election days, and the days of circus exhibitions and agricultural fairs; no liquor can be furnished to a minor for his own or another's use, or to a habitual drunkard or a person known to have been intoxicated within six months. Minors are not allowed to be employed in licensed places.

THOS. W. MALONEY

La Verna

La Verna

An isolated mountain hallowed by association with St. Francis of Assisi, situated in the centre of the Tuscan Appenines, and rising about 4000 feet above the valley of the Casentino. Its name (Latin, Alverna) is said to come from the Italian verb *vernare*, to make cold or freeze. On 8 May, 1213, La Verna was given to St. Francis by Count Orlando of Chiusi as a retreat "specially favourable for contemplation". Thither the saint withdrew in August, 1224, to keep a forty days fast in preparation for Michelmas, and it was while praying on the mountain-side that he received (on or about 14 Sept.) the stigmata. Thenceforth La Verna became sacred ground. Pope Alexander IV took it under his protection. In 1260 a church was consecrated there in presence of St. Bonaventure and several bishops. A few years later the Chapel of the Stigmata was erected, through the munificence of Count Simone of Battifole, near the spot where the miracle took place. An older chapel, S. Maria degli Angeli, which was built 1218 for St. Francis by Orlando, is approached from the sacristy of the Chiesa Maggiore, which was begun in 1348, but not finished until 1459. From the latter church the friars dwelling on La Verna go in solemn procession twice daily (at 2 P.M. and at midnight) to the Chapel of the Stigmata. On the Feast of the Stigmata (17 Sept.) and on other festivals, large crowds of priests with their people from neighbouring parishes, as well as strangers, visit the mountains, and on such occasions the friars often accommodate and entertain between 2000 and 3000 pilgrims. The convent was partly destroyed by fire in the fifteenth century; it suffered desecration also during the war of this century. In 1810, and again in 1866, the friars were expelled in consequence of the suppression of religious orders. At present they are in possession of La Verna which belongs, however, to the municipality of Florence.

SBARALEA, *Bullarium Franciscanum*, IV (Rome, 1768), 156, gives a copy (made in 1274 by the sons of Orlando) of the deed confirming the gift of La Verna to St. Francis. The original of this deed is preserved at Borgo San Sepolero. MENCHERINI, *Guida illustr. della Verna* (2nd ed., Quaracchi, 1907), 462, gives details of historical and traditional events connected with the mountain, as well as a complete list of its flora; IDEM, *L'Appenino Serafico prose di Vari autori sulla Verna* (Quaracchi, 1908), 262; CARMICHAEL, *In Tuscany* (London, 1901), 221-44; DE SELICOURT, *Homes of the First Franciscans* (London, 1905), 278-316; JORGENSEN, *Pilgrim Walks in Franciscan Italy* (London, 1908), 135-76; ECKENSTEIN, *Through the Casentino* (London, 1902), 33-50; NOYES, *The Casentino and its Story* (London, 1905), 139-88.

PASCHAL ROBINSON

Tommasina Vernazza

Tommasina Vernazza

Born at Genoa, 1497; died there, 1587. Her father, Ettore Vernazza, was a patrician, founder of several hospitals for the sick poor in Genoa, Rome, and Naples. Her godmother was St. Catherine

Fieschi-Adorno. At the early age of 13, Tommasina entered the monastery of St. Maria delle Grazie, and became a canoness regular, taking the name of Battistina. She filled at various times the office of treasurer, novice-mistress, and prioress. She wrote, among other things, a commentary on the Pater Noster; "The Union of the soul with God"; "Of the knowledge of God"; "Of prayer"; "Of the heavenly joys and of the means of attaining them"; "Of those who have risen with Christ"; meditations, spiritual canticles, and letters to eminent men of her time. Possevin speaks of her writings as inspired. Her works were published at Venice in 3 vols. in 1588. They have been published many times since in 4 or 6 vols.; in Genoa 6 editions have been issued.

VERNAZZA, *Opere Spirituali* (Venice, 1588; Genoa, 1785); ROSSINI, *Lyceum Lateranense Cesenae* (1622); SERRA, *Storia letteraria* (Genoa, 1832); SEMERIA, *Storia ecclesiastica di Genova* (Turin, 1838); RONCO, *Sonetti inediti* (Genoa, 1819); BOERI, *Una Gloria di Genova* (1906).

A. ALLARIA

Jules Verne

Jules Verne

Novelist, b. at Nantes, France, 1828; d. at Amiens, 1905. His first literary venture was a little play, *Les pailles rompues*", which was produced on the stage in the early fifties, but the difficulty he experience in overcoming the ill-will of the theatre managers discouraged him, and he began to publish, in the "Musée des Familles", novelettes after the fashion of Edgar Allan Poe. One of them, "A Drama in the Air", attracted the attention of the public. The subject is this: a madman embarks by mistake in the car of an aeronaut, and while in the air he tries to kill his companion. Verne had discovered his forte and it was his good fortune at this juncture to find in his publisher, Mr. Herzel, a man of sound judgment, who advised him not to waste his strength, but to limit his energies to the kind of novel he seemed to have discovered. Verne followed this advice, and success crowned his talent and strenuous work. Most of his novels have had a vogue that has been denied many a masterpiece of French literature, and this vogue has not been limited to France; it has spread beyond its frontiers. Verne was wont to show to visitors, not without a certain legitimate pride, the translations of his works kept in his library, where they occupied a goodly number of shelves, on which every language seemed to be represented. This wonderful success was undoubtedly due to the charming talent of the writer and the public's fondness for novels of adventure, but there was another cause for it, at least in so far as France was concerned. The French reading public had become tired of the pale copies of Dumas' stories that were published in the early fifties, and it was Verne's good luck and merit to revive in an attractive manner a kind of novel that seemed to be exhausted. With no less dexterity, and, it must be said, with no greater regard to accuracy, than that displayed by Dumas in his adaptation of history to the whims and fancies of story-telling, he brought science into the realm of fiction, and whatever may be the final verdict on the value of his work, he deserves the commendation that none of his books contains anything offensive to good taste or morals. Verne lived and died a Catholic.

The following are the best-known of his novels that have been translated into English: "Around the World in Eighty Days"; "Twenty Thousand Leagues under the Sea"; "Michael Strogoff"; "A Floating City, and the Blockade Runners"; "Hector Servadac"; "Dick Sands"; "A Journey to the Centre of the Earth"; "The Mysterious Island"; "From the Earth to the Moon"; "The Steam House"; and "The Giant Raft".

P. MARIQUE

Pierre Vernier

Pierre Vernier

Inventor of the instrument which bears his name, b. at Ornans, Franche-Comte, c. 1580; d. there, 14 Sept., 1637. His father was his teacher in science. He became captain and castellan, for the King of Spain, of the castle at Ornans, and councillor and director general of moneys in the County of Burgundy. At Brussels, 1631, he published and dedicated to the Infanta, the treatise "La construction, l'usage, et les propriétés du quadrant nouveau de mathématiques", describing the ingenious device on which his fame now rests. To a quadrant with a primary scale in half degrees Vernier proposed to attach a movable sector, thirty-one half degrees in length but divided into thirty equal parts (each part consisting then of a half degree plus one minute). In measuring an angle, minutes could be easily reckoned by noticing which division line of the sector coincided with a division line of the quadrant. Christopher Clavius (q.v.) had mentioned the idea but had not proposed to attach permanently the scale to the alidade. The name *vernier*, now commonly applied to a small movable scale attached to a sextant, barometer, or other graduated instrument, was given by Lalande who showed that the previous name nonius, after Peter Nunez, belonged more properly to a different contrivance.

DELAMBRE, *Histoire de l'astronomie moderne*, II (Paris, 1821), 119-25; LALANDE, *Bibliographie astronomique* (Paris, 1803), 196.

PAUL H. LINEHAN

Veroli

Diocese of Veroli

(VERULANA).

Located in the Province of Rome. The city of Veroli (Verulae) is situated on the crest of the Hernican Mountains, at the elevation of 1640 feet above the sea level, with the River Cora running beneath it. Its antiquity is evidenced by the remains of Pelargic walls. Upon the loftiest portion stand the ruins of a very ancient castle which served as a prison for John X. The textile industry, which still flourished in the middle of the nineteenth century, is now reduced to very small portions. The cathedral and episcopal palace received their present form from Bishop Ennio Filonardi in the beginning of the sixteenth century. Some very precious manuscripts and documents are preserved

in the archives of the chapter, among them the Breviary of St. Louis, Bishop of Tolosa. Adjoining the cathedral is the Church of St. Salome, whose body is believed to be preserved there. S. Erasmo still retains its Gothic porch, though its interior has been entirely transformed. The seminary has a rich library, the gift of Bishop Vittorio Giovardi, who had the seminary rebuilt in 1753. At the same period a school of canon and civil law, founded as early as 1538, was combined with the seminary.

Veroli was a city of the Hernici, and thus was allied with the Romans against the Volsei; remaining so during the Samnite War, it was able to preserve its autonomy. In 872 it was taken by the Saracens. In 1144 Roger I besieged it in vain. It served as a place of retreat for Alexander III and other popes. A memorable event in its history was the meeting which took place there between Honorius III and Frederick II. The humanists Giovanni Sulpizio and Aonio Palcario (Antonio Pagliari), the latter burned in 1570 for his writings in support of Protestantism, were natives of Veroli. The city boasts of having received the light of the Gospel from St. Mary Salome, whose relics, it is said, were discovered in 1209 through a vision seen by one Thomas. Nevertheless, no bishop is known before Martinus (743). The martyrs Blasius and Demetrius are still venerated there. Among the bishops worthy of mention are Agostino (1106) and Faramondo (1160), who had been abbots of Casamari; Giovanni (1223), the restorer of clerical discipline; Ennio Filonardi (1503), who was distinguished in the nunciature; Gerolamo Asteo (1608) a Conventual, founder of the seminary and author of many works, mostly unpublished; Domenico de Zaulis (1690), who restored the cathedral and other churches; Antonio Rossi (1786), who, with his whole chapter, took the oath of allegiance to Napoleon.

The diocese is immediately subject to the Holy See. It has 37 parishes, with 7000 souls; 100 secular and 100 regular priests; 10 houses of male religious, 11 of sisters; 4 schools for boys, and 5 for girls.

CAPERNA, *Storia di Veroli* (Veroli, 1907); CAPPELLETTI, *Le Chiese d'Italia*, VI, 467; RONDININI, *Monasterii. . .deCasae Mario brevis historia* (Rome, 1707).

U. BENIGNI

Francois Veron

François Véron

French controversialist, b. at Paris about 1575; d. at Charenton, 1625. After brilliant studies under the Jesuits he became one and taught in several colleges. In order to devote himself more freely to preaching and controversy against Protestants, he left the Society. He did not hesitate to challenge every minister he encountered, even the most learned and famous, such as Moulin, Blondel, Daillé, or Bochart. His conferences with them and many other occasional or controversial writings he afterwards published. Having secured from King Louis XIII letters patent authorizing him to deliver his sermons in public and to conduct conferences with the ministers or any other Protestants wheresoever he pleased, he went to Paris, to Charenton, where he was cure for ten years (1638-48), because Calvinism had there its chief stronghold, to Saintonge, Béarn, Brie, Champagne,

Lorraine, Normandy etc. Enormous success crowned his zeal, which was supported by animation of spirit, facility of speech, extensive and solid learning, and courage. He preached before audiences of 9000 or 10,000 persons; ministers like Boule, after having heard him, abjured Calvinism after thirty years in the ministry. "He has vanquished more ministers", wrote publicly the congregation of the Propagation of the Faith, "than another could have seen, alone he has converted more heretics to the Catholic faith than a thousand others." Véron became the most celebrated controversialist in France; the general assembly of the clergy assigned him a pension of 600 livres yearly and accepted the dedication of some of his books of which it defrayed the expenses; the Estates of Languedoc undertook his support while he preached in their province; Gregory XV sent his encouragement. He was invited to give lessons in controversy at the Collège de France and to teach his method at Saint-Lazaire under St. Vincent de Paul and at St. Sulpice under M. Olier.

This method Véron set forth in a theoretical treatise and illustrated by his other works. Since the Protestants reject Tradition and admit only Holy Scripture as the source and ground of faith they must be required to show all their dogmas in the Bible, and all the articles of their Confession of Faith which they cannot support with formal and explicit texts from the Sacred Books should be considered as untenable. On the other hand, it is of great importance to set forth the doctrine of the Church in all its purity; thus explained, it is entitled to the respect and the acceptance of heretics; hence it is important to separate authentic points of doctrine from what the heretics confuse with it, for example all the opinions of the schools, historical errors, popular legends, or private practices. By this matter of simplifying Catholic dogma and of showing consideration to Protestants, Véron sometimes aroused the protests of certain Catholics; his treatise on the primacy of the church wherein he refutes Blondel's work of the same name was even placed on the Index at Rome (Jan., 1643). He was also accused of sometimes using blustering language and excessive harshness against his adversaries, who used the same towards him. Véron next attacked the Jansenists, writing three books against them during the last years of his life.

WORKS

Apart from his anti-Jansenistic works and some partial translations of the Bible all of Véron's writings have to do with controversy. They are about eighty in number. Several of them are only a few pages in length; some are successive redactions of the same work under different names. Three are worthy of mention because they summarize nearly all the others: (1) "La méthode nouvelle, acile et solide de convainere de nullité la religion prétendue réformée", published in 1615, re-edited in 1617, 1618, 1619, 1623, in several cities of France, translated into English, Dutch, and German, read and praised by Leibnitz, reprinted by Migne in his "Theologiae cursus completus" (Paris, 1860); (2) "L'epitome de toutes les controverses de religion en ce siècle" (1 vol., Paris, 1638; re-edited in 2 and 3 vols., translated into Latin, and abridged); (3) "Règle de la foi catholique" (Paris, 1649), approved by the general assembly of the French clergy, by the faculty of theology of Paris, translated into Latin, read and praised by Leibniz, reprinted several times abroad and three times in France in the nineteenth century.

LA BOUDERIE, Notice sur la vie de Fr. Véron et sur ses ouvrages; DE BACKER, Biblioth. des écrivains de la Comp. de Jesus, III (Paris, 1876); FERET, Un cure de Charenton au XVII siècle (Paris, 1881); La Faculté de théologie de Paris, IV, Époque moderne (Paris, 1906).

ANTOINE DEGERT

Verona

Verona

(VERONENSIS.)

Diocese in Venetia (Northern Italy). The city, situated on both branches of the River Adige, is the centre of extensive agricultural industry. In the days of the Venetian Republic it was already an important fortress, and was surrounded with walls and other defences by the Veronese Fra Giocondo, and remained so under the Austrian domination and under the Kingdom of Italy. The headquarters of the Third Army Corps are in the Castel S. Pietro, on a hill formerly occupied by the Ostrogothic and Lombard kings and the Visconti.

CHURCHES AND PRINCIPAL BUILDINGS

The duomo (cathedral) is in the Romanesque style of the twelfth century, with additions of the fifteenth. It has an ambo by Sanmicheli; pictures by Liberale da Verona (Adoration of the Magi) and Titian (Assumption), and frescoes by Falconnetto. Adjoining it is S. Giovanni in Fonte, with a baptismal font decorated with reliefs of the twelfth century; in the cloister are remains of ancient marbles and mosaics. In the palace of the canons is the capitular library, rich in precious manuscripts. S. Maria Antica is surrounded with the tombs (*arche*) of the Scaligeri, lords of Verona, in the form of Gothic shrines, or *tempietti*, enclosing their sarcophagi (Can Grande, with equestrian statue; Can Signorio, the finest work, by Bonino da Campione). S. Anastasia, the Dominican church (1261), is Gothic; the sculptures of the great door represent scenes from the life of St. Peter Martyr; inside is the *gobbo* (hunchback), bearing the holy-water font, also pictures by Niccolò Giolfino, Giunesello da Folgaria (Entombment of Christ), Liberale, and Girolamo dai Libri; frescoes by Antichiero, Vittore Pisano (St. George), and Michele da Verona. S. Bernardino, fifteenth century, is adorned with frescoes by Giolfino, Morone, and others; noteworthy is the Pellegrini chapel, by Sanmicheli (1557). Of S. Zeno Maggiore mention is made as early as the time of St. Gregory the Great; in its present form it dates back to the eleventh century, and was restored in 1870. Its doorway is decorated with Biblical sculptures by Nicolaus and Guilelmus, and the bronze doors themselves are sculptured with scenes from the life of St. Zeno. The ambo is crowned with marble statues (1200). The statue of St. Zeno is of the ninth century, and a Madonna enthroned in the midst of saints is by Mantegna. Adjoining the church was a Benedictine abbey, which was suppressed in 1770. S. Fermo Maggiore, a Gothic church (1313), belonged first to the Benedictines, then to the Franciscans; its façade is adorned with marbles and with the sarcophagus of the physician Aventino Fracastoro (1350); it contains pictures by Caroto, also by Giambattista del Moro, Liberale, and Torbido, frescoes of the

fourteenth century; the marble pulpit dates from 1396. Santi Nazzero e Celso, a very ancient church, restored in the fourteenth and sixteenth centuries, contains pictures by Montagna and frescoes by Farinato and Falconetto. S. Maria in Organo was restored by Sanmicheli in 1481, and contains frescoes by Marone; in its choir and sacristy are *intarsie* (inlaid decorations) by Fra Giovanni (1499). Among the other churches are S. Giorgio in Braide, S. Stefano, and S. Eufemia (thirteenth century).

A very fine public piazza is that known as the Erbe, the ancient forum of the city, surrounded by imposing and historical residences--the Palazzo Maffei, the Mazzanti, once the residence of the Scaligeri, the Case dei Mercanti (1210), the Casa della Fontana (tenth century)--and an ancient statue known as the Verona. In the middle of the piazza is the tribune where, in the Middle Ages, trials used to be held. The Piazza dei Signori is surrounded by the Palazzo dei Giurisconsulti [Lawyers (1263)] and the Palazzo della Ragione (1193). The court house and the prefecture were formerly palaces of the Scaligeri; the Council Building, the old Municipio (1476), has a tower (the Civica) 272 feet high. Other buildings are: the Rocca (Keep) of Can Grande II; the Teatro Filarmonico, containing the lapidary museum; the Palazzo Lavezzola Pompeii, built by Sanmicheli in 1530, containing the civic museum, with its prehistoric discoveries, Roman and medieval sculpture, and a special collection of Veronese painters. The communal library contains 100,000 volumes and 3100 manuscripts. Noteworthy among the Roman antiquities are the arena, which is in better preservation than the Colosseum at Rome; the remains of a theatre, the greater axis of which is 502 feet in length; the Borsari Gates (265); the Arch of the Lions. The ancient Christian cemetery has not been found.

HISTORY

Verona, or Veronia, was a city of the Euganei, who were obliged to cede it to the Cenomani (550 B.C.). With the conquest of the Valley of the Po the Veronese territory became Roman (about 300 B.C.); Verona had the franchise in 59. The city derived importance from being at the intersection of many roads. With the taking of Verona (A.D. 489) the Gothic domination of Italy began; Theodoric built his palace there, and in Germanic legend the name of Verona is linked with his. This city remained in the power of the Goths all through the Gothic war, with the exception of a single day in 541, when an Armenian officer effected an entrance. Dissensions which arose among the Byzantine generals in regard to booty enabled the Goths to regain possession. In 552 Valerian vainly endeavoured to gain an entrance, and only the complete overthrow of the Goths brought about its surrender. In 569 it was taken by Alboin, King of the Lombards, in whose kingdom it was, in a sense, the second city in importance. There Alboin himself was killed by his own wife in 572. The dukes of Treviso often resided there. At Verona Adalgisus, son of Desiderius, in 774 made his last desperate resistance to Charlemagne, who had destroyed the Lombard kingdom. Verona was then the ordinary residence of the kings of Italy, the government of the city becoming hereditary in the family of Count Milo, progenitor of the counts of San Bonifacio. From 880 to 951 the two Berengarii resided there. Otto I ceded to Verona the marquisate dependent on the Duchy of Bavaria.

The splendor of the city in those days, dominated by its forty-eight towers, is described in a Latin ode of which we shall speak later on. The increasing wealth of the burgher families eclipsed the power of the counts, and in 1100 we find Verona organized as a commune. The San Bonifacio could at most hold the office of podestè of the city now and then. Verona, at first undecided, was forced by Vicenza to join the Lombard League. This, however, gave rise to the factions of Guelphs and Ghibellines in Verona. When Ezzelino IV was elected podestè, in 1226, he was able to convert the office into a permanent lordship, and in 1257 he caused the slaughter of 11,000 Paduans on the plain of Verona (Campi di Verona). Upon his death the Great Council elected as podestè Mastino della Scala, and he converted the "signoria" into a family possession, though leaving the burghers a share in the government. Failing to be re-elected podestè in 1262, he effected a *coup d'état*, and was acclaimed *capitano del popolo*, with the command of the communal troops. It was not without long internal discord that he succeeded in establishing this new office, to which was attached the function of confirming the podestè. In 1272 Mastino was killed by the faction of the nobles. The reign of his son Alberto as *capitano* (1277-1302) was one incessant war against the counts of San Bonifacio, who were aided by the House of Este. Of his sons, Bartolommeo, Alboino, and Can Grande I, only the last shared the government (1308); he was great as warrior, prince, and patron of the arts; he protected Dante, Petrarch, and Giotto. By war or treaty he brought under his control the cities of Padua (1328), Treviso (1308), and Vicenza.

Alberto was succeeded by Mastino II (1329-51) and Alberto, sons of Alboino. Mastino continued his uncle's policy, conquering Brescia in 1332 and carrying his power beyond the Po. He purchased Parma (1335) and Lucca (1339). After the King of France, he was the richest prince of his time. But a powerful league was formed against him in 1337---Florence, Venice, the Visconti, the Este, and the Gonzaga. After a three years war, the Scaliger dominions were reduced to Verona and Vicenza. His son Can Grande II (1351-59) was a cruel, dissolute, and suspicious tyrant; not trusting his own subjects, he surrounded himself with Brandenburg mercenaries. He was killed by his brother Cansignorio (1359-75), who beautified the city with palaces, provided it with aqueducts and bridges, and founded the state treasury. He also killed his other brother, Paolo Alboino. Fratricide seems to have become a family custom, for Antonio (1375-87), Cansignorio's natural brother, slew his brother Bartolommeo, thereby arousing the indignation of the people, who deserted him when Gian Galeazzo Visconti of Milan made war on him. Having exhausted all his resources, he fled from Verona at midnight (19 October, 1387), thus putting an end to the Scaliger domination, which, however, survived in its monuments. His son Can Francesco in vain attempted to recover Verona (1390). Guglielmo (1404), natural son of Can Grande II, was more fortunate; with the support of the people, he drove out the Milanese, but he died ten days after, and Verona then submitted to Venice (1405). The last representatives of the Scaligeri lived at the imperial court and repeatedly attempted to recover Verona by the aid of popular risings. From 1490 to 1517 the city was in the power of the Emperor Maximilian I. It was occupied by Napoleon in 1797, but on Easter Monday the populace rose and drove out the French. It was then that Napoleon made an end of the Venetian Republic.

In 1866, on the anniversary of the defeat of Königrätz, the Austrians evacuated Verona, their strongest fortress in Venetia, which thus became Italian.

For the origins of the Church in Verona the important document is the "Carmen Pipinianum" (ninth century), in which, besides a description of the city and an enumeration of its churches, there is a list of the first eight bishops, from St. Euprepus to St. Zeno, who died in 380. Less important is the famous *pianeta* (chasuble) of Classe, Ravenna, on which are represented not only the bishops of Verona, but also other saints and bishops of other dioceses venerated at Verona in the ninth century. St. Zeno having been the eighth bishop, the period of St. Euprepus, and therefore of the erection of the see, must be placed not before the peace given to the Church under Gallienus (260), but rather under the first period of the reign of Diocletian, when the Church enjoyed peace. In the same "Carmen" mention is made of Sts. Firmus and Rusticus, martyred at Verona, probably under Maximian. The list of the earliest bishops is as follows: Euprepus, Dimidrianus (Demetrianus), Simplicius, Proculus, Saturninus, Lucilius, present at the Council of Sardica in 343 (called Lucillus by St. Athanasius and Lucius in the signatures of the bishops at Sardica), Gricinus, Zeno. This St. Zeno is called a martyr in the "Carmen" and is placed in the time of Gallienus. At any rate the existence of a distinguished St. Zeno, Bishop of Verona, a contemporary of St. Ambrose, and author of a series of religious discourses, is historically attested, and as, on the other hand, the ancient documents know but one bishop of that name, it must be concluded that, as early as the ninth century, the legend had corrupted chronology. For the rest, we know from the sermons of St. Zeno how deeply paganism was still rooted in Verona in his time, particularly in the country districts. His successor was Syagrius. Other bishops were: St. Petronius (c. 410); Gaudentius (465); St. Valens (522-31); Solatius and Junior, who joined the schism of the Three Chapters; Hanno (about 758); Ratoldus, who imposed community life on the canons (806) and reorganized the education of the clergy. Among the masters of his school the deacon Pacificus was eminent for his knowledge of Greek and Hebrew. Nottingus (840) was the first to denounce the heretic Godescalcus. Adelardus (876) was excommunicated for invading the monastery of Nonnantula. Ratherius (930), a Benedictine and a distinguished author, was thrice driven from his see by usurpers, among whom was the notorious Manasses of Arles. He, too, fostered learning in the cathedral school. Joannes (1027) was distinguished for sanctity and learning. Bruno (1073), who wrote some interpretations of Scripture, was killed by one of his chaplains.

In the time of Bishop Ognibene (1157), a distinguished canonist, Pope Lucius III died at Verona, in 1183, after meeting Barbarossa and holding a synod there. There, too, was held the conclave which elected Urban III, who spent nearly all of his brief pontificate at Verona. Bishops Jacopo da Breganze (1225) and Gerardo Cossadocca (1254) were exiled by the tyrant Ezzellino. Manfredo Roberti (1259) suffered insult and imprisonment at the hands of the Ghibellines. Bonincontro (1295) died in the odour of sanctity. Bartolommeo della Scala (1336), a Benedictine, was calumniated to his nephew Mastino, Lord of Verona, who slew him with his own hand, and among the penalties for this crime inflicted by Benedict XII was the revocation of the privilege of nominating bishops. Pietro della Scala reformed the lives of the clergy and vainly endeavoured to bring the canons under

his own jurisdiction instead of that of the Patriarch of Aquileia. When the Visconti obtained possession of Verona, Pietro was banished. Francesco Condulmer (1439) founded the college of acolytes to add to the beauty of public worship and to form a learned and pious clergy; the school still exists. This institution was necessary because, with the establishment of the University of Verona, the cathedral school had been suppressed, and the young clerics who attended the university were at that time dispensed from officiating in church functions: the acolytes of the new college were obliged both to study and to attend ecclesiastical functions. Ermolao Barbaro also did much for the reform of the diocese. Cardinal Giovanni Michele (1471) was a munificent restorer of the cathedral and the episcopal palace, as also was Cardinal Marco Cornaro (1592). For Gian Matteo Giberti (1524) and Pietro and Luigi Lippomano (1544, 1548) see articles under their respective names. Agostino Valier (1565) was a cardinal. Sebastiano Pisani (1650) was a zealous pastor. Giovanni Bragadino (1733) was a mirror of all the virtues; in his episcopate the Patriarchate of Aquileia was suppressed, and Benedict XIV brought the chapter under the bishop's jurisdiction, at the same time laying down wise rules for the government of the diocese. Giovanni Andrea Avogadro (1790) abdicated the see to return to the Society of Jesus. Benedetto de Riccabona (1854), A Tyrolese, was a model pastor. The present bishop is Bartolommeo Cardinal Bacilieri (1900). Councils of Verona worthy of note are those of 1184, at which the pope presided, and 1276, against the Patarenes who were somewhat numerous in the Veronese territory, even among the clergy.

At Verona is the mother-house of the Sons of the Sacred Heart of Jesus and their college for the Central African missions. The Congregation of the Stigmatini was also founded at Verona. Natives of this city were the architects Fra Giocondo, a Dominican, and Sanmichele; the painter Paolo Caliari (known also as Paolo Veronese), Falconetto, Liberali, Francesco and Girolamo dai Libri, Brusasorci, and others; among men of learning, Guarino, Lipomanno, Maffei, Bianchini, and others. The diocese was suffragan of Aquileia, then of Udine; since 1818 it has been suffragan of Venice. It has 262 parishes with 400,500 faithful; 786 secular priests; 132 regular priests; 17 houses of male religious; 45 of Sisters; 4 colleges for boys; 7 for girls. The Catholic Press consists of "Verona Fedele" (a daily paper), three weeklies, and the monthly "La Nigrizia".

St. Veronica

St. Veronica

In several regions of Christendom there is honored under this name a pious matron of Jerusalem who, during the Passion of Christ, as one of the holy women who accompanied Him to Calvary, offered Him a towel on which he left the imprint of His face. She went to Rome, bringing with her this image of Christ, which was long exposed to public veneration. To her likewise are traced other relics of the Blessed Virgin venerated in several churches of the West. The belief in the existence of authentic images of Christ is connected with the old legend of Abgar of Edessa and the apocryphal writing known as the "Mors Pilati". To distinguish at Rome the oldest and best known of these images it was called *vera icon* (true image), which ordinary language soon made *veronica*. It is thus designated in several medieval texts mentioned by the Bollandists (e.g. an old Missal of Augsburg has a Mass "De S. Veronica seu Vultus Domini"), and Matthew of Westminster speaks of the imprint of the image of the Savior which is called Veronica: "Effigies Domenici vultus quae Veronica nuncupatur". By degrees, popular imagination mistook this word for the name of a person and attached thereto several legends which vary according to the country.

- In Italy Veronica comes to Rome at the summons of the Emperor Tiberius, whom she cures by making him touch the sacred image. She thenceforth remains in the capitol of the empire, living there at the same time as Sts. Peter and Paul, and at her death bequeaths the precious image to Pope Clement and his successors.
- In France she is given in marriage to Zacheus, the convert of the Gospel, accompanies him to Rome, and then to Quiercy, where her husband becomes a hermit, under the name of Amadour, in the region now called Rocamadour. Meanwhile Veronica joins Martial, whom she assists in his apostolic preaching.
- In the region of Bordeaux Veronica, shortly after the Ascension of Christ, lands at Soulac at the mouth of the Gironde, bringing relics of the Blessed Virgin; there she preaches, dies, and is buried in the tomb which was long venerated either at Soulac or in the Church of St. Seurin at Bordeaux. Sometimes she has even been confounded with a pious woman who, according to Gregory of Tours, brought to the neighboring town of Bazas some drops of the blood of John the Baptist, at whose beheading she was present.
- In many places she is identified with the Haemorrhissa who was cured in the Gospel.

These pious traditions cannot be documented, but there is no reason why the belief that such an act of compassion did occur should not find expression in the veneration paid to one called Veronica, even though the name has found no place in the Hieronymian Martyrology or the oldest historical Martyrologies, and St. Charles Borromeo excluded the Office of St. Veronica from the Milan Missal where it had been introduced. The Roman Martyrology also records at Milan St. Veronica de Binasco, the Order of St. Augustine, on 13 January, and St. Veronica Giuliani on 9 July.

ANTOINE DEGERT

St. Veronica Giuliani

St. Veronica Giuliani

Born at Mercatello in the Duchy of Urbino, Italy, 1660; died at Citt` di Castello, 9 July, 1727. Her parents, Francesco Giuliani and Benedetta Mancini, were both of gentle birth. In baptism she was named Ursula, and showed marvelous signs of sanctity. When but eighteen months old she uttered her first words to upbraid a shopman who was serving a false measure of oil, saying distinctly: "Do justice, God sees you." At the age of three years she began to be favoured with Divine communications, and to show great compassion for the poor. She would set apart a portion of her food for them, and even part with her clothes when she met a poor child scantily clad. These traits and a great love for the Cross developed as she grew older. When others did not readily join in her religious practices she was inclined to be dictatorial. In her sixteenth year this imperfection of character was brought home to her in a vision in which she saw her own heart as a heart of steel. In her writings she confesses that she took a certain pleasure in the more stately circumstances which her family adopted when her father was appointed superintendent of finance at Piacenza. But this did not in any way affect her early-formed resolution to dedicate herself to religion, although her father urged her to marry and procured for her several suitors as soon as she became of marriageable age. Owing to her father's opposition to her desire to enter a convent, Veronica fell ill and only recovered when he gave his consent.

In 1677 she was received into the convent of the Capuchin Poor Clares in Citt` di Castello, taking the name of Veronica in memory of the Passion. At the conclusion of the ceremony of her reception the bishop said to the abbess: "I commend this new daughter to your special care, for she will one day be a great saint." She became absolutely submissive to the will of her directors, though her novitiate was marked by extraordinary interior trials and temptations to return to the world. At her profession in 1678 she conceived a great desire to suffer in union with our Saviour crucified for the conversion of sinners. About this time she had a vision of Christ bearing His cross and henceforth suffered an acute physical pain in her heart. After her death the figure of the cross was found impressed upon her heart. In 1693 she entered upon a new phase in her spiritual life, when she had a vision of the chalice symbolizing the Divine Passion which was to be re-enacted in her own soul. At first she shrank from accepting it and only by great effort eventually submitted. She then began to endure intense spiritual suffering. In 1694 she received the impression of the Crown of Thorns, the wounds being visible and the pain permanent. By order of the bishop she submitted to medical treatment, but obtained no relief. Yet, although she lived in this supernaturally mystical life, she was a practical woman of affairs. For thirty-four years she was novice-mistress, and guided the novices with great prudence. It is noticeable that she would not allow them to read mystical books. In 1716 she was elected abbess and whilst holding that office enlarged the convent and had a good system of water-pipes laid down, the convent hitherto having been without a proper water supply. She was canonized by Gregory XVI in 1839. She is usually represented crowned with thorns and embracing the Cross.

FATHER CUTHBERT

Augustin Verot

Augustin Verot

Third Bishop of Savannah, first of St. Augustine, b. at Le Puy, France, May, 1804; d. at St. Augustine, 10 June, 1876. He studied at St-Sulpice, Paris, was ordained priest by Archbishop de Quelen, 20 Sept., 1828, subsequently joined the Society of St-Sulpice, and in 1830 came to Baltimore. He taught science, philosophy, and theology at St. Mary's College and the seminary until 1853, when, being appointed pastor at Ellicot's Mills, he continued four years in missionary activity. Nominated Vicar Apostolic of Florida, 11 Dec., 1857, he was consecrated titular Bishop of Danabe, 25 April, 1858, by Archbishop Kenrick in the cathedral of Baltimore. Religious conditions in Florida, owing chiefly to repeated mutations and instability in both civil and ecclesiastical regimes, were disheartening. Unbounded zeal and resourcefulness characterized Bishop Verot's administration from the beginning. The new vicariate had only three priests. He sought assistance in France and soon the churches at St. Augustine, Jacksonville, and Key West were repaired, new ones were erected at Tampa, Fernandina, Palatka, Mandarin, and Tallahassee and provided with resident pastors, religious communities were introduced, and Catholic schools inaugurated. In July, 1861, Bishop Verot was translated to the See of Savannah, retaining meanwhile vicarial powers over Florida. Religion suffered enormously during the disastrous periods of the Civil War and the subsequent "reconstruction". The bishop's unflinching courage and energy inspired his afflicted people with patience and resolution in repairing the great losses they sustained in their religious and material interests. The Florida vicariate was constituted a diocese in March, 1870, and Bishop Verot became first Bishop of St. Augustine, concentrating henceforth all his efforts on the work begun there fourteen years previously. Contemporaneous files of the "Catholic Directory" disclose his just appraisal of the latent material resources of a then undeveloped region. Florida owes to Bishop Verot's initiative much of its present material as well as religious progress. He was amongst the first to advocate its claim as a health resort and its adaptability for the culture of products which have since become valuable. He made an annual visitation of the whole diocese, establishing churches and schools at advantageous points, and aiming to lay a broad and solid foundation on which his successors might build. He loved to revive the memory of Florida's early martyrs. His numerous contributions on religious and historical themes in contemporary periodicals possess permanent value; his best-known writings are his "Pastoral on Slavery" and his "Catechism". He took a prominent part in the Councils of Baltimore and in the Vatican Council (see FLORIDA).

JAMES VEALE

Giovanni Da Verrazano

Giovanni da Verrazano

Navigator, b. about 1485, of good family, at Val di Greve, near Florence; executed at Puerto del Pico, Spain, November, 1527.

Entering the naval service of Francis I of France, he soon became famous as a corsair, preying on the ships of Spain and Portugal, one of his prizes in 1522 being the treasure-ship sent to Charles V by Cortés with Mexican spoils, valued at nearly two million dollars.

In Jan., 1524, he began a voyage of discovery to the New World on behalf of his patron Francis I, during which he kept a log-book of his experiences. In 1556 Ramusio published in his collection of voyages a letter written by Verrazano giving an account of his voyage to the coast of North America and its exploration from 30 degrees to 50 degrees N. lat. It is the first post-Columbian description of the North Atlantic coast, and gives the first description of New York Bay and harbour and the present Hudson River. Thence he sailed along Long Island Sound to Block Island and Newport, of which he makes mention. From this note-book of the voyage his brother Hieronimo drew in 1529 a map of the North Atlantic coast, which is now in the museum of the Propaganda at Rome, and testifies to the accuracy of Verrazano's observations along the coast as far as a point in the present State of Maine, whence he returned to France, arriving at Dieppe in July, 1524.

Little that is authentic is known of his subsequent career; Spanish records relate that he was captured in 1527, while cruising off the coast of Cadiz, and executed by order of the Emperor Charles V. The authenticity of his letter descriptive of his voyage along the Atlantic coast has given rise to an extensive historical controversy, but the most recent researches affirm its reliability as well as that of his brother's map, the best sixteenth-century map extant in its original form, which has special influence on the subsequent cartography of the time.

A bronze statute, set up in 1910, by his admiring fellow-countrymen, facing the mouth of the great river on whose east bank the metropolis of the United States has grown, proclaims their conviction that Giovanni da Verrazano, and not Henry Hudson, was its discoverer.

THOMAS F. MEEHAN
Hospice-Anthelme Verreau

Hospice-Anthelme Verreau

A French-Canadian priest, educator, and historian, b. at l'Islet, P.Q., 6 Sept., 1828, of Germain V. and Ursule Fournier; d. at Montreal in 1901. After terminating his classical course at the Quebec

Seminary, he taught at Ste Thérèse College, and, in 1857, was appointed principal of the newly founded Jacques-Cartier Normal School, an office he held until his death. He was made a Lit.D. of Laval (1878) and a Fellow of the Royal Society of Canada. In 1873 he was commissioned by the Quebec Government to investigate certain European archives for materials relating to Canadian history. Besides many contributions to the Historical Society of Montreal, of which he was the first president, and to the Royal Society, he published (1870-73) two volumes of memoirs concerning the invasion of Canada by the Americans. His chief publications are: "Notice sur la fondation de Montréal"; "Des commencements de l'église du Canada"; "Jacques-Cartier; Questions du calendrier civil et ecclésiastique; Questions de droit politique, de législation et d'usages maritimes". These works of patient research and erudition are written in a chaste, clear, and easy style. He elucidates some very obscure historical points regarding the true motives animating the founders of Ville-Marie. As an educator he was incomparable, ever striving to realize his lofty ideal of those who are called to train youth for life's duties. This he strove to obtain through love of God and country, by a firm and just discipline, whereby order was observed, study seriously pursued, application duly controlled, and Christian politeness inculcated.

MORGAN, *Bibliotheca canadensis* (Toronto, 1898); CASGRAIN, *Annuaire de l'Université Laval* (Quebec, 1902); DESROSIERS, *Les Ecoles Normales de la Prov. De Quebec* (Montreal, 1909).

LIONEL LINDSAY

Count Pietro Verri

Count Pietro Verri

Economist, b. at Milan, Dec., 1728; d. there, 29 June, 1797. After studying at Monza, Rome, and Parma, he entered the Austrian army. Returning home, he devoted himself to the study of administration and political economy. He became vice-president (1772), and then president (1780), of the Chamber of Counts; but retired to private life in 1786. With his brother Alessandro (1741-1816), the philosopher Beccaria, and other, Verri founded the "Società del Caffè", in which the chief problems of philosophy, economy, and literature were discussed. His chief works are: "Meditazioni sull' economia politica" (Leghorn, 1771), translated into French and German; "Discorsi sull' indole del piacere e del dolore, sulla felicità e sulla economia politica" (Milan, 1781); "Riflessioni sulle leggi vincolanti principalmente nel commercio dei grani" (Milan, 1796); "Memorie storiche sull' economia politica nello stato di Milano" (published after the author's death in Custodi's collection); and some memoranda on coinage in the Milanese territory. He also wrote small dramatic works. His economic theories are midway between Physiocracy and the theories of Smith. He advocated the breaking up of large estates in favour of small holdings. His greatest merit is to have formulated and expounded the theory of demand and supply, in defence of which he carried on a controversy with Melchiorre Gioia. His works have been printed in Custodi's "Scrittori classici

italiani di economia politica" (Milan, 1803-16) and, in part, in Ferrara's "Biblioteca del' Economista" (Turin, 1852).

BIANCHI, Elogio storico di P. Verri (Cremona, 1803); CUSTODI, Notizie sulla vita del P. Verri (Milan, 1843); BOUVY, Le comie P. Verri (Paris, 1889); PECCHIO, Hist. de l'economie politique en Italie, tr. GALLOIS (Paris, 1830); MCCULLOCH, Literature of Political Economy (London, 1845); Nouveau dict. d'economie politique, s.v. Verri.

U. BENIGNI

Andrea Del Verrocchio

Andrea del Verrocchio

Born at Florence, 1435; d. at Venice, 1488. He was called Andrea di Michele di Francesco de' Cioni, but for his true name he substituted that of his master, the goldsmith Giuliano Verrocchio. Some authorities hold that he frequented the studies of Donatello and Baldovinetti, but in any case the impress of his early education with a goldsmith is strongly evident in his work. He always retained a very keen taste for delicate chasing, which taste is especially manifested in the equestrian statue of Colleoni, wherein the horse's head and the harness are chased like a piece of jewellery. He excelled in depicting the charms of children and womanly grace. Nevertheless he was not married, but lived in the household of a married sister, who had many children. Although favoured with the friendship of Lorenzo de' Medici, honoured with important commissions, and reputed the greatest artist of his time, he seems never to have known the favours of fortune. His art, which often shone with a radiantly smiling beauty, seems to have been the reflection of a happy and cheerful life. He was both painter and sculptor, but chiefly the latter.

His chief sculptural works were: the tomb of Piero and Giovanni de' Medici, in the Church of San Lorenzo, in marble and bronze, without religious emblem. His "David" in bronze was in the national museum (the Bargello), Florence. The "Child holding a dolphin", in bronze, made to adorn a fountain of the Villa Medici at Careggi, is in the courtyard of the Palazzo Vecchio at Florence. These three works were ordered from Verrocchio by Lorenzo the Magnificent. In the terra-cotta "Madonna" made for the hospital of Santa Maria Novella "supreme distinction of thought is united to the most scrupulous observation of nature" (A. Michel). The marble bust of the "Flower-girl" is in the Bargello. The silver bas-relief of the "Decollation of St. John the Baptist", which adorned the altar of the baptistery of San Giovanni, is preserved in the cathedral museum (Opera del Duomo), Florence. The marble monument erected in memory of Cardinal Forteguera in the cathedral of Pistoia was designed by Verrocchio but executed by his pupils.

His two masterpieces, both in bronze, were the "Incredulity of St. Thomas" (1483) and the "Colleone" (1479-88). The first group, wherein the artist has touchingly represented Christ urging the doubting Apostle to put his hand in His pierced side, was ordered by the Council of Merchants and placed outside the Church of San Michele, in a beautiful niche made by Donatello. But Verrocchio erred in making so much of the draperies, for this exaggerated realism greatly distracts

the attention from a subject so pathetic in itself. The second work was the splendid equestrian statue which the Republic of Venice ordered to honour the memory of the celebrated *condottiere*, Bartolommeo Colleoni of Bergamo, who had commanded the Venetian troops. While casting it Verrocchio was seized with a chill, which ended fatally. The statute was completed by the Venetian Alessandro Leopardi, who had the audacity to sign a work of which he had only finished the casting and perfected the details. The statute was not erected until 1495; it is still to be seen on the Piazza dei Santi Giovanni e Paolo. Assuredly, "we have a right to say that this equestrian statute is the finest in the world" (J. Burckhardt).

Only two paintings can with certainty be assigned to Verrocchio, the "Baptism of Christ", which was made for the Convent of San Salvi at the gates of Florence, and which is now at the Academy of Fine Arts in the same city; and the "Madonna" of the Duomo of Pistoia, long ascribed to Lorenzo di Credi, on the word of Vasari, but which a document published by Signor Chiti assigns to Verrocchio. The "Baptism" (c. 1470) is an oil painting, at that time still a great novelty in Florence. Accordingly, it shows traces of grouping and experiment. Its different parts are of unequal value, which led Vasari to assert boldly that the angel respectfully guarding the garments of Christ is by Leonardo da Vinci. It is more perfect than the other figures in the picture. The "Baptism" marked an epoch in the history of Italian painting, because the accuracy of design and the refinement of the model were an innovation whereby Verrocchio broke with the school of the frescoists, less correct and broader in execution. But these technical studies, so evident especially in the angular figure of St. John Baptist, explain why Vasari called Verrocchio's manner "alquanto dura e crudetta". The perfection of the landscape which forms the background of the picture foreshadows modern art, because "for the first time the artist gives attentive observance to the study of values, the gradation of colours, especially to the unity of the figures with the environment" (M. Raymond). This "somewhat rough and crude" manner disappears in the "Madonna" of Pistoia. This delightful composition represents the Blessed Virgin between St. John the Baptist and St. Zeno, supporting the Infant Jesus Who lifts His little hand to bless.

Critics do not agree with regard to the other pictures ascribed to Verrocchio; nevertheless he may be unhesitatingly credited with the beautiful "Annunciation" at the Uffizi, and the graceful "Madonna with the Carnation", in the Old Pinacothek at Munich. The authorship of the Madonnas at the museums of Berlin and London is disputed. Verrocchio was perhaps the greatest artist of the second half of the fifteenth century. On the boundary of two ages, between the old Florentine school, about to disappear, and the School of the Renaissance in course of formation, he was not, like the masters of preceding periods, a Christian artist, because he rejected the purpose of placing art at the service of a moral and religious idea; he was not as yet an artist of the Renaissance neglecting the soul to study the body, for he did not attempt to imitate antiquity; instead of drawing his inspiration from the statutes which he has bequeathed to us, and of becoming exclusively enamoured of the plastic beauty of corporeal forms, he preferred to observe living nature, and like his predecessors continued to subordinate form to the expression of the feelings of the soul, but, more

skilful than they, he succeeded in perfecting his methods of expression, because his drawing is more correct and his modelling more scientific.

Hence Verrocchio's powerful influence over painting; his studio was the centre of resistance to the invasion of antique influence; and his pupils Lorenzo di Credi, Perugino, and Leonardo da Vinci continued to spread the doctrine of the Florentine School. This doctrine may be summarized as follows: art should be spiritual, that is, it should make form serve the expression of thought and sentiment.

GASTON SORTAIS

Versailles

Versailles

(VERSALIENSIS).

Diocese; includes the Department of Seine-et-Oise, France. Created in 1790 by the Civil Constitution of the Clergy, this diocese was maintained by the Concordat of 1802; it included also the Department of Eure-et-Loir, detached from it in 1822 by the restoration of the Diocese of Chartres. It was made up of considerable parts of the ancient Dioceses of Paris, Chartres, Rouen, Sens, and some cantons belonging formerly to the Dioceses of Beauvais, Senlis, and Evreux. At the beginning of the seventeenth century Versailles was a mere village, whose *seigneur* was Antoinede Loménie. Louis XIII bought it in 1632, and had a small château built there. The present château was begun under Louis XIV by Mansart (1661), the gardens were designed by Lenôtre; the interior decorations were entrusted to Lebrun. Louis XIV lived there in 1672 and constantly from 1682. The residence was finished in 1684, and a town soon grew up. The French monarchs resided at Versailles for more than century; here was signed (3 Sept., 1783) the treaty between France and England, acknowledging the independence of the United States; here took place (1 May, 1789) the opening of the States-General, and it was here too, in the hall of the Jeu de Paume, that the delegates of the Third Estate, and some members of the other two estates (nobility and clergy), constituted themselves a national assembly. It was from Versailles that the parisian populace took Louis XVI and his family (6 Oct., 1789), and brought them back to Paris. The Grand Trianon was built under Louis XIV by Mansart; the Petit Trianon was given by Louis XVI to Marie Antoinette. The chapel of the château was built 1699- 1710; the Theophilantropists worshipped

there during 1794-95. "This chapel", Pératé says, "is, in the whole and its details, one of the most perfect monuments that Louis XIV ever built."

Saint-Cyr, near Versailles, is famous for the educational institute that Madame de Maintenon founded there for young girls. The city of St-Cloud, whose château dates from Louis XIV, owes its origin to the Monastery of Novigentum, founded by St. Clodald or Cloud, son of King Clodomir (d. About 560). At St-Cloud, Jacques Clément attempted the life of Henry III. There also Bonaparte executed against the "Assembly of the Five Hundred" the *coup d'état* of 18 Brumaire. Nearby is Meudon, once the parish of Rabelais. The town of St-Germain-en-Laye, whose present château dates from Louis XIV, owes its origin to a convent founded during the eleventh century by King Robert; Louis XIII died there. Louis XIV was born there, and James II of England died there. The Benedictine Abbey of Morigny, near Etampes, was founded about 1102 by a nobleman called Ansaeu. He established in it monks from St-Gerner de Flaix, a monastery in the Diocese of Beauvais. At the beginning of the eleventh century the abbey and revenues of St-Martin d'Etampes, said to have been founded by Clovis, were given to the monks of Morigny by Philip I. On 3 Oct., 1120, Calixtus II consecrated the church of Morigny. In Jan., 1131, Innocent II consecrated an altar to St. Lawrence there; Abelard and St. Bernard were present at this ceremony. The Abbey of Morigny was united in 1629 to the Congregation of St-Maur, and has ceased to exist since the French Revolution. In 1092, 1099, 1130 councils took place at Etampes (in the latter of which, on the advice of St. Bernard, the bishops sided with Innocent II, against the antipope Anacletus); also in 1147. At Poissy, St. Louis was baptized. The Dominican priory, founded at Poissy in 1304, was celebrated.

The "Colloquy of Poissy" took place (1561) between Catholic theologians under the Cardinal of Lorraine, and Montluc, Bishop of Valence, and Calvinist theologians under Theodore Beza. It opened on 9 Sept., in the refectory of the abbey, before Charles IX and Catharine de'Medici. A second sitting took place 16 Sept., and was followed by two conferences between the theologians on both sides. The colloquy had no result. The town of Isle-Adam, in the Diocese of Versailles, belonged, since the twelfth century, to the family of the Villiers de l'Isle-Adam, whose most famous member was Philippe de l'Isle-Adam (1464-1534), Grand Master of the Order of Jerusalem, who in 1522 held Rhodes for six months against 200,000 Turks. The monastery of Port-Royal was situated in the commune of St-Lambert, at the hamlet of Vaumurier. Among the natives of the present territory of the Diocese of Versailles may be mentioned: Duplessis-Mornay (1549-1623), surnamed the "pope of the Huguenots", author of a treatise on "The Institution of the Eucharist", and who was defeated by the Catholic theologians at the Conference of Fontainebleau (1600); Pierre du Moulin (1568-1658), a Calvinist theologian, who composed for James I of England several apologetic writings, and taught theology at Sedan; Abbé de l'Épée (1712-89), inventor of a method for teaching the deaf and dumb; Abbé Guénéé (1717-1803), born at Etampes, author (1769) of the well-known "Lettres de plusieurs Juifs Portugais etc., à M. De Voltaire"; Marquise de La Rochejacquelein (1772-1857), author of memoirs concerning the War of La Vendée.

The chief pilgrimages of the diocese are: Notre-Dame de Bonne Garde, at Longpoint (ninth century); St. Bernard, Philip the Fair, and St. Jeanne de Valois visited this sanctuary; Notre-Dame de Pontoise (1226) to which St. Louis, Charles V, and Louis XIV were very generous; Notre-Dame des Anges, at Clichy l'Aunois (1212); the pilgrimage of the Holy Tunic of Christ that Charlemagne, who had received it from the Empress Irene gave (August, 800) to his daughter Theodrade, Abbess of Argenteuil, and that was transferred (1804) from the priory, destroyed during the Revolution, to the parish church of Argenteuil. There were in the Diocese of Versailles before the Law of Associations (1901): Assumptionists; Capuchins; Cistercians of the Immaculate Conception; Jesuits; Missionaries of Notre-Dame of Africa; Resurrectionists; Salesians of Don Bosco; and several orders of teaching brothers. Several orders of women arose in this diocese: the Hospitaller Augustines of Etampes, founded in 1515; the Maid-Servants of the Sacred Heart of Jesus (hospitals and teaching), founded in 1866 with mother house at Versailles; the Sisters of the Holy Childhood, with mother house at Versailles. Religious congregations conducted in the diocese at the end of the nineteenth century: 7 infant asylums; 121 infant schools; 5 special homes for sick children; 2 mixed orphan asylums; 12 orphan asylums for boys; 54 orphan asylums for girls; 3 apprenticeship houses; 3 refuges and asylums for imperilled girls; a work-house for beggars; 29 houses of nuns for taking care of sick persons at home; 44 hospitals; 1 hospital for incurables. The Diocese of Versailles had (1905) 707,325 inhabitants, 64 first class parishes, 520 second class parishes, 38 curacies, recognized by the Concordat.

BAUNARD, *L'Episcopal Francais depuis le Concordat jusqu'a la Separation* (Paris, 1907); PERATE, *Versailles* (Paris, 1904); DE NOLHAC, *Histoire du château de Versailles* (Paris, 1900); BRADBY, *The Great Days of Versailles: Studies from Court life in the later years of Louis XIV* (London, 1906); FARMER, *Versailles and the Court under Louis XIV* (London, 1906); GRIMOT, *Histoire de la Ville de l'Isle-Adam, et notice biographique de ses seigneurs* (Pontoise, 1885); MONT-ROND, *Essais historiques sur la ville d'Etampes* (2 vols., Etampes, 1836-37).

GEORGES GOYAU

Versions of the Bible

Versions of the Bible

Synopsis

- GREEK: Septuagint; Aquila; Theodotion; Symmachus; other versions.
- VERSIONS FROM THE SEPTUAGINT: Vetus Itala or Old Latin; Egyptian or Coptic (Bohairic, Sahidic, Akhmimic, and Fayûmic, i.e. Middle Egyptian or Bashmuric); Ethiopic and Amharic (Falasha, Galla); Gothic; Georgian or Grusian; Syriac; Slavic (Old Slavonic, Russian, Ruthenian, Polish, Czech or Bohemian, Slovak, Serbian or Illyrian, Croation, Bosnian, Dalmatian); Arabic; Armenian.
- VERSIONS FROM THE HEBREW: Chaldaic; Syriac (Peschitto); Arabic (Carshuni); Persian; Samaritan Pentateuch; Vulgate; other Latin versions.

- HEBREW VERSIONS OF THE NEW TESTAMENT
- VERSIONS FROM MIXED SOURCES: Italian; Spanish; Basque; Portuguese; French; German; Dutch and Flemish; Scandinavian (Danish, Swedish, Norwegian, Icelandic); Finnish (Estonian, Laplandish); Hungarian; Celtic (Irish, Scottish, Breton or Armoric, Welsh or Cymric).
- MISCELLANEOUS: Aleutian; Aniwa; Aneitumese; Battak; Benga; Bengali; Chinese; Gipsy or Romany; Hindu; Hindustani; Japanese; Javanese; Mexican; Modern Greek.
- ENGLISH VERSIONS

GREEK

(1) The Septuagint

The Septuagint, or Alexandrine, Version, the first and foremost translation of the Hebrew Bible, was made in the third and second centuries B.C. An account of its origin, recensions, and its historical importance has been given above (see SEPTUAGINT VERSION). It is still the official text of the Greek Church. Among the Latins its authority was explicitly recognized by the Fathers of the Council of Trent, in compliance with whose wishes Sixtus V, in 1587, published an edition of the Vatican Codex. This, with three others, the Complutensian, Aldine, and Grabian, are the leading representative editions available.

(2) Version of Aquila

In the second century, to meet the demands of both Jews and Christians, three other Greek versions of the Old Testament were produced, though they never took the place of the Septuagint. Only fragmentary remains of them are preserved, chiefly from Origen's "Hexapla" (q.v.). The first and the most original is that of Aquila, a native of Sinope in Pontus, a proselyte to Judaism, and according to St. Jerome, a pupil of Rabbi Akiba who taught in the Palestinian schools, 95-135. Aquila, taking the Hebrew as he found it, proves in his rendering to be "a slave to the letter". When his version appeared, about 130, its rabbinical character won approval from the Jews but distrust from the Christians. It was the favoured among the Greek-speaking Jews of the fourth and fifth centuries, and in the sixth was sanctioned by Justinian for public reading in the synagogues. Then it rapidly fell into disuse and disappeared. Origen and St. Jerome found it of value in the study of the original text and of the methods of Jewish interpretation in the early Christian years.

(3) Version of Theodotion

Another Greek version practically contemporaneous with Aquila's was made by Theodotion, probably an Ephesian Jew or Ebionite. It held a middle place among the ancient Greek translations, preserving the character of a free revision of the Septuagint, the omissions and erroneous renderings of which it corrected. It also showed parts not appearing in the original, as the deuterocanonical fragments of Daniel, the postscript of Job, the Book of Baruch, but not the Book of Esther. It was not approved by the Jews but was favourably received by the Christians. Origen gave it a place in his "Hexapla" and from it supplied parts missing in the Septuagint. St. Irenæus used its text of Daniel, which was afterwards adopted in the Church.

(4) Version of Symmachus

This appeared at the close of the second century. Its author was an Ebionite of Jewish or Samaritan origin. Giving the sense rather than the letter of the Hebrew, he turned its idioms into good Greek, used paraphrases, and translated independently of the earlier versions. His work, though finished and intelligible to readers ignorant of Hebrew, sometimes failed to give the real meaning of the original. It was but little used by the Jews. St. Jerome admired its literary qualities and was often guided by it in preparing the Vulgate.

(5) Other Greek Versions

In limited portions of the Hexapla, Origen made use of other partial Greek versions which he designated as the Quinta, Sexta and Septima, from the numerical position of the columns assigned them in his work, but their authors are unknown and very little can be said of the merits of the versions.

VERSIONS FROM THE SEPTUAGINT

(1) The "Vetus Itala" or Old Latin

The origin of the oldest Latin version or versions is involved in much uncertainty. Some contend that there was but one primitive version, others show with strong arguments that there were several. It is generally admitted that long before the end of the second century, Latin translations, though rude and defective, of Tobias, I and II Machabees, and Baruch were in use and that towards the close of the same period, there existed at least one version of the whole Bible, based on the Septuagint and on Greek manuscripts of the New Testament. This was the *Vetus Itala*, or Old Latin. Its New Testament is possessed complete in some thirty-eight manuscripts, but its Old-Testament text has survived only in parts. As it contained both the protocanonical and the deuterocanonical books and parts of books of the Old Testament, it figured importantly in the history of the Biblical Canon. It exercised a vast influence on the Vulgate and through it on modern translations and the Church language. In the latter part of the fourth century, the text of the Itala was found to have variant readings in different parts of the Church. Pope Damasus therefore requested St. Jerome to undertake its revision. Guided by old Greek manuscripts, he corrected its mistakes and emended such translations as affected the true sense of the Gospels, and probably followed the same method in revising all the books of the New Testament, which he put forth at Rome about 383. In that year, working from the commonly received text of the Septuagint, he made a cursory revision of the Psalter, which was used in the Roman Church until the time of St. Pius V, and is still retained at St. Peter's, Rome, in the Ambrosian Rite at Milan, and in the Invitatory psalm of Matins in the modern Breviary. About 388, using the Hexaplar text as a basis, he revised the Psalter more carefully and this recension, called the Gallican Psalter from becoming current in Gaul, is now read in the Breviary and in the Vulgate. From the same sources he later corrected all the Old-Testament books that he judged canonical, but even in his own day all this revision, excepting the book of Job was lost. The unrevised text of the greater part of the Old Latin Version continued in use in the Western Church until it was supplanted by the Vulgate.

(2) Egyptian, or Coptic, Versions

The first Christians of Lower Egypt commonly used Greek, but the natives generally spoke Coptic (see EGYPT, VI, COPTIC LITERATURE), which is now recognized in four dialects, viz.: Bohairic, Sahidic, Akhmimic and Fayûmic (Middle Egyptian). As Christian communities formed and flourished, the Bible was translated into these dialects and it is generally admitted that some versions, if not all, date back to the second century. That they were independent translations from the Greek seems certain, and Biblical criticism has therefore profited by the light they have thrown on the Septuagint and the New-Testament manuscripts. Of these versions the most important are in Bohairic or Memphite, the language used at Memphis and Alexandria, and the Sahidic, the language of the upper Thebais. The former is entirely extant and since the eleventh or twelfth century has been the standard text of the Church in Egypt. The latter exists in large fragments, but little has so far been found of the others.

Fayûmic (Middle Egyptian) or as it has been termed *Bashmuric* (*Bushmuric*), one of the Coptic dialects according to the division of Athanasius, Bishop of Cos (eleventh cent.), is the name now applied to some fragmentary versions published as the "Codices Basmyrici" by Zoega ("Catalogus", Rome, 1810).

(3) Ethiopic and Amharic Versions

Early in the fourth century, St. Frumentius preached the Gospel in Abyssinia and there laid the foundation of the Ethiopic Church. Its version of the Scriptures probably dates from the close of the following century. It undoubtedly originated from the Septuagint and Greek manuscripts, but present texts do not certainly represent the original version and may possibly be a later translation from the Arabic or Coptic.

Falasha Version

This is an Old Testament in Geez, the sacred speech of Abyssinia, among the Falasha in North Abyssinia, who follow the Jewish religion and claim to be descended from the Jewish exiles of the time of Solomon.

Amharic Versions

As a language, the Amharic supplanted the Geez about 1300 and is still in use. Catholic missionaries have made it the medium of their translations of portions of the Scriptures, but the first Amharic Bible was completed in 1810-20 by Asselin de Cherville, French consul at Cairo. A Bible Society reprint appeared in 1842, and a new edition was prepared in 1875 by Krapf, aided by several Abyssinian scholars.

Galla Version

A Gospel of St. Matthew in the language of the South Abyssinian Galla was published by Krapf (Ankobar, 1842). A Galla New Testament in Amharic characters was edited by a Bible Society in 1876; Genesis and Psalms, 1873; Exodus, 1877.

(4) Gothic Version

The Goths embraced the faith in the third century but in the fourth they fell into Arianism. Their Bishop Ulfilas (318-388), after devising an alphabet, produced a version of the Scriptures from the Septuagint Old Testament and from the Greek of the New. Extant fragments, the oldest of which

are of the fifth and sixth century, bear traces of the Septuagint recension of Lucian and of the Syriac versions of the New Testament.

(5) Armenian Version

History

In 406 the Armenian alphabet was invented by Mesrob, who five years later completed a translation of the Old and New Testament from the Syriac version into Armenian. This translation was recognized as imperfect, and a few years later Joseph of Baghim and Eznak, disciples of Mesrob, were sent to Edessa to make a new version from the Syriac. When they returned bringing some copies of the Greek version it was seen that their work would be greatly benefited by the use of this "authentic" copy. Consequently some of the translators, including Moses Chorenensis, were sent to study Greek at Alexandria, where the final revision was made, the Old Testament being translated from the Septuagint according to the "Hexapla" of Origen. This version was without delay officially adopted by the authorities in the Armenian Church. Comparatively little use has been made of the Armenian version by scholars engaged in critical work on the Bible, as few of them in the past knew Armenian, and the version moreover was believed to have been modified according to the Peschitto, and even revised under King Haitho II (1224-70), according to the Vulgate. The insertion in particular of the text concerning the three heavenly witnesses (I John, v, 7) was attributed to him, since it was found in Uscan's first printed edition of the Armenian Bible (Amsterdam, 1666). Modern investigation reveals no solid ground for believing in these revisions. As regards I John, v, 7, it is not necessary to assume its insertion by anyone before Uscan, whose edition is lacking in critical value and embodies many emendations and additions taken from the Vulgate. The Armenian version follows quite closely the "received" Greek text. The variations in the manuscripts are probably due to divergencies in the Greek sources. The version is a witness to the general reading of certain Greek copies of the fifth century.

Principle Editions

The first part of the Armenian version to be printed was the Psalter, published at Venice in 1565 by Abgar. In 1666 Uscan (probably Bishop of Uschovank in Erivan) published at Amsterdam a complete Bible in 4to, and in 1668 a New Testament in 8vo. The former work leaves much to be desired from the standpoint of critical accuracy. Apart from the insertion of the verse I John, v, 7, Ecclesiasticus and IV Esdras were simply translations from the Vulgate made by Uscan himself and the Apocalypse was scarcely less so. The work begun by Uscan was continued and perfected by the Mechitarists (q.v.) and Zohrab published a New Testament (1789), and a critical edition of the whole Bible (1805). Another was issued in 1859. In both these editions the verse I John, v, 7, was omitted as it was not to be found in any of the older manuscripts. The Protestant Bible societies have brought out several editions of the Armenian version both in the classical and in the modern language. Among the former are: Complete Bible (St. Petersburg, 1814; Calcutta, 1817); Old and New Testament separately (St. Petersburg, 1817). Editions in the modern dialect are, among others: Complete Bible (Moscow, 1835); Psalter (Basle, 1844); New Testament (Constantinople, 1860).

(6) Georgian, or Grusian, Versions

Apparently kindred to the Armenian and probably derived from in the sixth century is the Gregorian version, showing the influence of the Septuagint and the Greek New Testament. It was revised after the Slav translation by Prince Wakuset (Moscow, 1743), and has appeared later with many changes (e.g., Moscow, 1816; St. Petersburg, 1818).

(7) Syriac Versions

In the earliest years of Christianity, a Syriac version of the Old Testament made directly from the Hebrew text was employed in the Syrian Church, but in the seventh century, Paul, Bishop of Tella, gave the Monophysites a translation (617) from the Septuagint. It followed literally Origen's Hexaplar text and was later revised by James of Edessa (died 907). In the sixth century there had appeared a version of the Psalter and New Testament from the Greek at the request of Philoxenus, by whose name it has been known. A century later it appeared at Alexandria in a recension of great critical value.

(8) Slavic Version

Saints Cyril and Methodius preached the Gospel to the Slavs in the second half of the ninth century, and St. Cyril, having formed an alphabet, made for them, in *Old Ecclesiastical Slavic*, or *Bulgarian*, a translation of the Bible from the Greek. Toward the close of the tenth century this version found its way into Russia with Christianity, and after the twelfth century it underwent many linguistic and textual changes. A complete Slav Bible after an ancient codex of the time of Waldimir (d. 1008) was published at Ostrog in 1581. When Empress Elizabeth ordered a new revision of St. Cyril's translation (1751), the translators used the Ostrog edition, correcting it according to the Septuagint and changing the Old Slavonic in great part to *Modern Russian*. This has remained the norm for later Russian Bibles.

The *United Ruthenians* have a version approved by their bishops and printed at Poczajow (1798) and Przemysl (1862).

The first complete *Polish* Bible was printed at Cracow in 1561, 1574, and 1577. As it was proved unsatisfactory for Catholics, Jacob Wujek, S.J., undertook a new translation from the Vulgate (Cracow, 1593), which was praised by Clement VIII, and reprinted frequently. Other Polish Bibles are a Socinian version (Cracow, 1563), and a Unitarian from the Hebrew by von Budey (Czaslaw, 1572).

In the *Czech*, or *Bohemian*, tongue, thirty-three manuscript versions of the entire Bible and twenty-eight of the New Testament are known to have existed in the fifteenth century. A New Testament was printed at Pilsen in 1475 and 1480. A complete Bible by John Pytlik and others appeared at Prague in 1488. In the sixteenth century there were six versions of the whole Bible and sixteen of the New Testament. In the seventeenth century the Jesuits edited the so-called St. Wenceslaus Bible at Prague (1677, 1715, and later). A new translation was made by Durych and Prochaska (Prague, 1778, 1786, 1807). Protestant versions appeared at Pressburg (1787, 1808), Berlin (1807, 1813), and Kisek (1842).

A *Slovak* version of the Bible for Catholics was made by Bernolak (Gran, 1829).

A *Serbian, or Illyrian*, version of the Bible was made by Kassich (1632). There are also two manuscript versions, by Stephen Rosy (1750) and Burgadelli (1800).

A *Croatian* version of the Bible was made by Stephen Istranin and Anton Dalmatin in the sixteenth century.

The Vulgate was translated into *Bosnian* by Peter Katanic. O.S.F. (Budapest, 1831).

A *Dalmatian* version with commentary by John Skaric appeared at Vienna (1857-61); a Bible Society edition, the Old Testament by George Danicic and the New Testament by Vuk Karadzic, was also published there (1868).

(9) Arabic Versions

There exist six or seven Arabic translations of portions of the Old Testament according to the Septuagint, some of them belonging to the tenth century.

VERSIONS DIRECTLY FROM THE HEBREW

(1) Chaldaic Versions or Targums

After the Babylonian Captivity, the Jews developed a large use of the Chaldaic, or Aramaic, tongue. To meet their needs the Sacred Books were translated into this dialect, and used in the public services of the synagogues not later than the second century B.C. At first the translations were oral, being largely paraphrastic interpretations with comments. In time rules of exegesis were determined, the translations were fixed in writing, and were thus widely circulated even before the time of Christ. Of these Chaldaic versions, called Targums (Paraphrases), there is none extant containing the entire Hebrew Bible.

- The earliest is on the Pentateuch and is known as the Targum of Onkelos, whom tradition has identified with Aquila and whose Greek translation has something of the same literal character. This Targum, however, was produced by some other, probably in Babylon in the third century.
- A Targum on the Prophets, in its present form of the fourth century, is attributed to Jonathan ben Uzziel, to whom the Talmud alludes as a disciple of Hillel. In style it resembles the Targum of Onkelos, but its paraphrase is freer.
- A Targum on the Pentateuch, said to be of Jeruskalmi, or of Pseudo-Jonathan, is also a freer rendition and belongs to the sixth or seventh century.
- There are also Targums on the Hagiographa, Psalms, Job, Proverbs, etc. (See TARGUM.)

(2) Syriac Versions

The Peschitto

As early as the second century, portions of the Hebrew Bible, as the Pentateuch, the Prophets, and the Psalms, had been translated into Syriac and were in use in the Syrian Church. Gradually the remaining books were given out with versions from the Greek of all the deuterocanonical books except Ecclesiasticus, which was rendered from the Hebrew. The fourth century found the Syrian Christians possessed of a complete translation of the Old Testament, which is known since the ninth century as the Peschitto or "Simple". This name denotes its literal fidelity, or, as others think, a meaning like Vulgate, or *Communis*, or again indicates its distinction from the version of Paul of Tella, its source, which contains the critical additions of the Hexaplar text. It is the first version

of the Hebrew Scriptures made for and by Christians. In antiquity and importance, it ranks next to the Septuagint, according to which it was revised later. A recent edition of the Peschitto was issued from the Dominican printing-press at Mossul (1887-91).

- Of Syriac versions of the New Testament, one of the earliest is the Diatessaron of Tatian (q.v.).
- The Peschitto New Testament, like the Old, is still used in the Syrian Church; it was in circulation in the fourth century and existed, in part at least, in the third.
- In 1842 a portion of what is believed to be an independent Syriac version was found in Egypt. Since its publication in 1858 by Dr. Cureton, it is known as the Curetonian text.
- The Sinaitic text of a Syrian version consists of fragments found at Mt. Sinai in 1892, and seems an independent version of great antiquity.

(3) Arabic Versions

An Arabic version of the Hebrew Bible was made in the tenth century by Saadia ha Gaon. Only its Pentateuch, Minor Prophets, Isaias, Psalms, and Job have been preserved. In 1671 an Arabic Bible was published at Rome under the direction of Sergius Risi, Archbishop of Damascus. It appeared in numerous later editions. A mutilated reprint of it (London, 1822) was circulated by the Bible Society. To offset this Protestant influence, complete Arabic versions were issued both by the Dominicans at Mossul (1875-8) and the Jesuits at Beirut (1876-8).

Carshuni (Karshuni) Version

This is an Arabic version made in Syriac characters for Syrian Christians chiefly of Mesopotamia, Aleppo, and adjacent parts. A New Testament in Carshuni characters containing in two columns the Syriac Peschitto and the Arabic of the Codex of Erpenius was published at Rome (1703) for the Maronites of Lebanon. A Bible Society edition appeared at Paris (1827).

(4) Persian Version

In the first half of the sixteenth century Rabbi Jacob Tawus translated literally the Massoretic text of the Pentateuch.

(5) Samaritan Version of the Pentateuch

From at least the fourth century B.C. the Samaritans used a copy of Hebrew Law. It was written in archaic Hebrew characters and differed in some respects from the original. Many of its readings have found favour with not a few Biblical scholars. It was translated with a literal fidelity into Samaritan in the second century B.C. This version was printed in the Polyglots of 1645 and 1647.

(6) The Vulgate

While revising the text of the Old Latin Version, St. Jerome became convinced of the need in the Western Church of a new translation directly from the Hebrew. His Latin scholarship, his acquaintance with Biblical places and customs obtained by residence in Palestine, and his remarkable knowledge of Hebrew and of Jewish exegetical traditions, especially fitted him for a work of this kind. He set himself to the task A.D. 390 and in A.D. 405 completed the protocanonical books of the Old Testament from the Hebrew, and the deuterocanonical Books of Tobias and Judith from the Aramaic. To these were added his revision of the Old Latin, or Gallican, Psalter, the New Testament, revised from the Old Latin with the aid of the original Greek, and the remaining deuterocanonical books, and portions of Esther, and Daniel, just as they existed in the Itala. Thus

was formed that version of the Bible which has had no less influence in the Western Church than the Septuagint has had in the Eastern, which has enriched the thought and language of Europe and has been the source of nearly all modern translations of the Scriptures. The Hebrew text used by St. Jerome was comparatively late, being practically that of the Massorettes. For this reason his version, for textual criticism, has less value than the Peschitto and the Septuagint. As a translation it holds a place between these two. It is elegant in style, clear in expression, and on the whole, notwithstanding some freedoms in the way of restricted or amplified readings, it is faithful to the sense of the original. At first it met with little favour. It was looked upon by some as a perversion suggested and encouraged by the Jews. Others held it to be inferior to the Septuagint, and those who recognized its merits feared it would cause dissensions. But it gradually supplanted the Old Latin Version. Adopted by several writers in the fifth century, it came into more general use in the sixth. At least the Spanish churches employed it in the seventh century, and in the ninth it was found in practically the whole Roman Church. Its title "Vulgate", indicating its common use, and belonging to the Old Latin until the seventh century, was firmly established in the thirteenth. In the sixteenth the Council of Trent declared it the authentic version of the Church.

From an early day the text of the Vulgate began to suffer corruptions, mostly through the copyists who introduced familiar readings of the Old Latin or inserted the marginal glosses of the manuscripts which they were transcribing. In the eighth century Alcuin undertook and completed (A.D. 801) a revision with the aid of the best manuscripts then current. Another was made about the same time by Theodulph, Bishop of Orléans. The best known of other and subsequent recensions are those of Lanfranc (d. 1089), of St. Stephen, Abbot of Cîteaux (d. 1134), and of Cardinal Nicolas (d. 1150). Then the universities and religious orders began to publish their "Correctoria biblica", or critical commentaries on the various readings found in the manuscripts and writings of the Fathers. After the first printing of the Vulgate by Gutenberg in 1456, other editions came out rapidly. Their circulation with other Latin versions led to increasing uncertainties as to a standard text and caused the Fathers of the Council of Trent to declare that the Vulgate alone was to be held as "authentic in public readings, discourses, and disputes, and that nobody might dare or presume to reject it on any pretence" (Sess. IV, decr. de editione et usu sacrorum librorum). By this declaration the Council, without depreciating the Hebrew or the Septuagint or any other version then in circulation and without forbidding the original texts, approved the Vulgate and enjoined its public and official use as a text free from error in doctrine and morals. It was left to the Holy See itself to provide for a corrected revision of the Vulgate, but the work went on but slowly. Contributing towards the desired end, John Henten, O.P., published at Louvain, 1547, as amended text with variants, which was favourably received. The same was republished at Antwerp, 1583, with a larger number of variants, by the Louvain theologians under the direction of Lucas of Bruges. In 1590 a Roman edition was prepared by a commission of scholars. After revising it, Sixtus V ordered it to be taken as the standard text. After his death a further revision was carried out under the direction of Franciscus Toletus, S.J., and finally the work was printed in 1598, with its title unchanged: "Biblia Sacra Vulgatæ editionis, Sixti V Pontificis Maximi jussu recognita et edita". This was under the pontificate

of Clement VIII, and his name has appeared in the title since 1641. This revision is now the officially recognized version of the Latin Rite and contains the only authorized text of the Vulgate. That it has numerous defects has never been denied, yet it ranks high in the evidence it affords of the competent scholarship that produced it. To bring it into closer touch with the latter developments of textual criticism is the purpose that induced Pius X to entrust to the Benedictines the work of further revision. The importance of this enterprise consists in this that it will reproduce, as correctly as possible, the original translation of St. Jerome, and will thereby furnish biblicists with a reliable clue to an ancient Hebrew text, differing in many details from the Septuagint, or the Massoretic Text (BELLARMINE; VULGATE, REVISION OF).

Other Latin Versions

After St. Jerome the first to translate the Old Testament from the Hebrew into Latin appears to have been Cardinal Carton (d. 1307), Bishop of London, whose work has been lost. Of numerous versions, many of which have perished or are preserved only in manuscripts, noteworthy are the Psalms from the Hebrew by Felix Pratensis, O.S.A. (Venice, 1515). Another Psalter with a version of Job was made by Aug. Justinian, O.P. (Paris, 1516). Kantes Pagninus, O.P. (d. 1514), made an interlinear version of both the Old and New Testaments from the original languages, which by its literal fidelity pleased Christians and Jews and was much used by the Reformers. A revision of this translation resulting in a text even more literal was made by Arias Montano. His work appeared in the Antwerp Polyglot (1572). Another literal version was undertaken by Thomas Malvenda, O.P. (d. 1628), as the basis of an extensive commentary but death ended his labours at the fifteenth chapter of Ezechiel. His work was published at Lyons (1650). In 1763 the Oratorian F. Houbigant edited his "Biblia Veteris Testamenti", rendered from the Hebrew. In the "Biblia Maxima" (Paris, 1660), J. de la Haye, O.Min., collected a great number of variant readings of older Latin versions. A revision of the Vulgate (Venice, 1542, 1557) by Isadore Clarius gave offence on account of many arbitrary changes in the text and was put on the Index.

Among the Reformers, Latin Scriptural labours were largely confined to commentaries and the translation of single books, e. g. Melancthon, Proverbs (1524); Luther, Deuteronomy (1525); Brentius, Job (1527); Drach, Psalms (1540), Daniel (1544), and Joel (1565). A complete Hebrew-Latin Old Testament was given out by Sebastian Münster (Basle, 1534-46). Another Latin version of the Old Testament (Zurich, 1543, and Paris, 1545), bearing the name of Leo Juda, was partly the work of Bibliander, who translated Ezechiel, Daniel, Job, Ecclesiastes, Canticles, and the last forty-eight psalms. Its Apocrypha were translated from the Greek by P. Cholin. A version whose author, Castalion, affected a style of classic elegance, was printed at Basle in 1551. Other versions were put forth by Tremellius and Junius or du Jon (Frankfurt, 1575-9), and by Luc and Andrew Osiander, who sought to correct the Vulgate after the Hebrew.

HEBREW VERSIONS OF THE NEW TESTAMENT

In 1537 Sebastian Münster published an old translation of the Gospel of St. Matthew, in a rabbinical Hebrew by Schemtob Isaac. Improved editions were made by Tillet (1555), and by Herbst

(Göttingen, 1879). The four Gospels were done into classic Hebrew by a converted Jew, Giona, at Rome (1668). The first complete New Testament in Hebrew was made by Elias Hutter and was published in the Nuremberg Polyglot (1600), revised by Robertson (London, 1666). A corrected New Testament in Hebrew was given out by Caddock (London, 1798). A number of Bible Society versions have appeared since 1818, and in 1866 Reichhardt and Biesenthal edited a text with accents and vowels. This was revised by Delitzsch in 1877.

MIXED SOURCES

Italian Versions

Evidences of early versions of at least portions of the Scriptures for liturgical purposes, public readings, and private devotion are not wanting in the history of the Church among any of the peoples to whom her missionaries carried the Gospel. Leaving them and even many later recensions unnoticed, this article will touch on only the more important versions which have had some part and influence in national religious life. In Italy popular knowledge of the Bible in the thirteenth and fourteenth centuries was spread chiefly by the Franciscan and Dominican Friars. A complete version in the vernacular, a manuscript preserved in the National Library at Paris, was made by Nicholas de Nardo, O.P., in 1472. The first printed Bible (Venice, 1471) was due to Nicholas Malermi, O. Camald. A revision of this, with notes, rubrics, and résumés largely after the Biblical commentaries of Nicholas of Lyra, was made by Marine de Veneto, O.P. (Venice, 1477). Santes Marmochini, O.P. (d. 1545), corrected the heretical version of Bruccioli according to the Vulgate (Venice, 1538, 1547, etc.). Two noteworthy translations of the New Testament were made by Zaccaria Florentini, O.P. (Venice, 1542), and Domenico Gigli (Venice, 1551). The most widely used complete version was produced by Antonio Martini, Archbishop of Florence (Turin, 1776-81). It was approved by Pius VI and has been widely circulated.

The first complete Protestant Bible in Italian was printed at Geneva (1562). It was made up of the slightly revised heretical text of Bruccioli's Old Testament (1532), which was a perversion of the Latin of Kantes Pagninus, and not, as pretended, a translation from original sources, and of the apostate Massimo Teofilo's New Testament, first published at Lyons (1551), and revised by Gallars and Beza. This was adopted by the Bible societies. Martini's translation was also taken and shaped to Protestant purposes by the British and Foreign Bible Society (New Testament, 1813, and Bible, 1821).

Spanish Versions

Several manuscripts of early Spanish versions, e.g. the Biblia Alfonsina, and some made from the Hebrew, are preserved at the Escorial, Madrid. A later work (sixteenth century) is called the Bible of Quiroga, a convert from Judaism, who rose to be cardinal inquisitor. The first printed Bible (Valencia, 1478), following an Old-Testament version from the French and Latin by Romeu de Sabrugera, O.P., was in the Catalonian dialect and was the work of the General of the Carthusians, Boniface Ferrer (d. 1417), a brother of St. Vincent Ferrer, O.P. His manuscript was revised and extensively corrected by Jaime Borrell, O.P. A later translation, of classic elegance and with copious

notes, by Philip Scio de S. Miguel, was published at Madrid (1794). Another with a paraphrastic commentary in the text was given out at Madrid (1823) by Amat, but the work is said to have been taken from a manuscript of Father Petisco, S.J. A New Testament by Francisco do Enzinas (Antwerp, 1543) was later much used by the British and Foreign Bible Society. It also adopted a complete version from the Vulgate by the apostate Cassiodore Reyna (Basle, 1596), and a revision of this by the apostate Cypriano de Valera (Amsterdam, 1602). A Lutheran version, the so-called Biblia del Oso, was published by Juan de Valdes (Basle, 1567-69). The Bible of Ferrara, or the Bible of the Jews, was a Spanish version from the Hebrew by Abraham Usque, a Portuguese Jew. Under a pseudonym he issued an edition of the same for Christians. It gained considerable authority and was many times reprinted. A revision by Jos. Athias appeared at Amsterdam in 1661.

Portuguese Versions

A Portuguese Bible for Catholics was issued by Ant. Pereira de Figueiredo at Lisbon (1784). A New Testament (Amsterdam, 1712), and the Pentateuch and historical books (1719) by J. Ferreira a Almeida, a "convert from Rome", supplied the Bible societies with a version for Portuguese Protestants.

Basque Versions

A New Testament by Jean Licarrague (Rochelle, 1571) is probably the earliest Biblical work in the Basque tongue. The first Catholic New Testament, translated by Jean Haraneder and later revised by two priests, was published at Bayonne (1855). A complete Bible after the Vulgate was edited at London (1859-65), under the patronage of Prince Lucien Bonaparte. Various portions of the Scriptures and revisions have appeared since.

French Versions

Versions of the Psalms and the Apocalypse, and a metrical rendering of the Book of Kings, appeared as early as the seventh century. Up to the fourteenth century, many Bible histories were produced. A complete version of the Bible was made in the thirteenth century; the translation of the various parts is of unequal merit. The fourteenth century manuscript Anglo-Norman Bible follows it closely. Independent of either in the manuscript Bible of King John the Good, which though unfinished is described as a "work of science and good taste". Done in the second half of the fourteenth century, it is largely the work of the Dominicans Jean de Sy, Jehan Nicolas, William Vivien, and Jehan de Chambly. Another incomplete version based on the thirteenth-century Bible was the work of Raoul de Presles and is known as the Bible of Charles V. About 1478, appearing at Lyons among the *incunabula* of France, is a New Testament by Julian Macho and Pierre Farget, and the books of the Old Testament history, published six times. A complete version done literally from the Vulgate and the Greek New Testament was given out by Lefèvre d'Étaples (Antwerp, 1530, 1534, 1541). After revisions by Nicolas de Leuze (Antwerp, 1548), and by Louvain theologians (1550), it remained a standard for over a century. Only verbal improvements were the versions of Pierre de Besse (1608), Pierre Frizon (1621), and Béron (1647). By order of Louis XIII, Jacques Corbin edited his version of the Vulgate (Paris, 1643-61). A translation by René Benoist (Paris, 1566) savoured of Calvinism and aroused much controversy. Well known and widely read were

the Latin-French editions of Calmet (Paris, 1770-16) and de Carrières (Paris, 1709-17); the latter gave out the French alone (1741), but it was not without errors. A version from original sources (Cologne, 1739; Paris, 1753, 1777, 1819) was the work of Le Gros. Another popular French-Latin Bible was put forth by de Vence (Paris, 1748, 1750). It was revised and furnished with Carrières's translation and a commentary after Calmet by Rondet (Paris, 1767-73; Nîmes, 1779). A translation which went through some six editions despite inaccuracies was published at Paris (1821-2) by de Genoude. Bourassé and Janvier gave out a complete version at Tours in 1865. Arnaud published his translations at Paris (1881), but perhaps the most popular of the French versions is that of J.-B. Glaire (Paris, 1871-3, later edited with notes by M. Vigouroux. These complete versions but partially represent the extensive Biblical work of the French Catholics.

The first and nearest approach to a national Protestant version for France was made (Serrières, 1535) by Pierre-Robert Olivetan, Calvin's cousin. He was supposed on his own statement to have translated independently, but it is clear that he used almost wholly the New Testament with the interlinear version of Pagninus. Corrected by Calvin, it was republished at Geneva in 1545, and later in other editions, the principal one being the revision (1588) of the pastors of Geneva. This was supplanted by the recension of Osterwald (1744), an improvement in style, but a work replete with errors. Others differing but little from the Olivetan-Genevan versions were edited by Castalio (Basle, 1555) and Martin (Amsterdam, 1707). A version from original sources, and accepted by the Oxford University Press for national official use, was given out by Segond (Geneva, 1874; Nancy, 1877; and Geneva, 1879).

The Jansenists are represented in a New Testament translation (Amsterdam, 1667) by Isaac Le Maistre de Sacy and Antoine Arnauld. The work contained many errors and the writers' bias appeared in frequent alterations. A version of the whole Bible was undertaken by de Sacy in 1666, but death intervened; it was completed by du Fossé and Huré (Paris, 1682-1706; Brussels, 1705-30; Nîmes, 1781). Whilst the work was never censured as a whole, several of its New-Testament books were condemned by individual bishops. A Jewish Bible by S. Cahen, presenting both the Hebrew and the French with notes philological, etc., was issued at Paris (1831-51), but its text has been found incorrect and its notes often contradictory. A Rationalist Bible after the Hebrew and Greek by Ledrain appeared at Paris (1886-96).

German Versions

The history of Biblical research in Germany shows that of the numerous partial versions in the vernacular some go back to the seventh and eighth centuries. It also establishes the certainty of such versions on a considerable scale in the thirteenth and fourteenth centuries, and points to a complete Bible of the fifteenth in general use before the invention of printing. Of special interest are the five complete folio editions printed before 1477, nine from 1477 to 1522, and four in Low German, all prior to Luther's New Testament in 1522. They were made from the Vulgate, differing only in dialect and presenting variant readings. Their worth even to this day has been attested by many scholars. Deserving notice as belonging to the same period are some fourteen editions of the Psalter and no less than ninety editions of the Epistles and Gospels for Sundays and Holy Days.

On the authority of a Nuremberg manuscript, Jostes (*Histor. Jahrbuch*, 1894, XV, 771, and 1897, XVIII, 133) establishes the fact of a complete translation of the Bible by John Rellach, O.P., of Constance (before 1450), and thinks it was the first German version printed. A New Testament by Beringer (Speyer, 1526) was in part a correction of Luther's version. In 1527 another New Testament was put forth by Emser who worked from the Vulgate and an older version, likewise correcting Luther.

In 1534 John Dietenberger, O.P., gave out a complete version at Mainz based on a primitive translation with aid from Emser's New Testament and from the deuterocanonical books by Leo Juda. His agreement in places with Luther is due to the use by both of a common source. The Dietenberger Bible underwent frequent revision, and up to 1776 had fifty-eight complete editions. It was revised (1) by Caspar Ulenberg (Mainz, 1549, 1617; Cologne, 1630); (2) by the theologians of Mainz, i.e. Jesuits (1661, 1662, etc.), from whom it received the title of the Catholic Bible; (3) by Th. Erhard, O.S.B. (Augsburg, 1722, 6th ed., 1748); (4) by G. Cartier, O.S.B. (Constance, 1751); (5) by Ignatius Weitenauer (Augsburg, 1783-89), whose version with notes was valued even by Protestants for its fidelity and literary excellence. An important new translation of the Vulgate was published at Augsburg (1788-97) by H. Braun, O.S.B. This was revised by Feder (Nürnberg, 1803) and by Allioli (Landshut, 1830, 1832). In successive editions the last named has almost wholly changed the original so that it is now known only by his name. It is much esteemed as a literary rendering and is widely read. An excellent version made from the Vulgate and compared with original sources was put forth by Loch and Reischl (Ratisbon, 1851-66). From original sources D. Brentano began and Th. A. Dereser finished a version (Frankfurt, 1799-1828), with notes savouring of Rationalism. A second edition was emended by J.M. Scholz. This account includes only the most representative versions made by German Catholics.

Luther's Biblical translations, begun in 1522, when he issued his New Testament, and carried on to 1545, when he finished the deuterocanonical books and the first complete edition of his Bible, have retained a strong hold on German and other Protestants and by many are esteemed as little less than inspired. He saw to many corrections and revisions himself, and his work went through some ten editions in his own lifetime. Though supposed to translate from the originals, he made use of the Latin version of Lyra, the Hebrew-Latin interlinear of Pagninus, and an older German translation of the Vulgate whose order he retained. His renderings were often excessively free and at times he arbitrarily changed the sense of the original. The Swiss Zwinglians adopted such portions of Luther's work as had appeared before 1529. That year they added their own version of the Prophets and the deuterocanonical books by Leo Juda, the whole being called the Zurich Bible. In 1860-8 this work was revised and is still in use. An Anabaptist version was made by Hetzer (Worms, 1529), and Calvinist versions by Parens (1579) and by Piscator (Herborn, 1602-4). A Socinian Bible was given out by Crellius (Racovia, 1630). In the eighteenth century versions reflecting different beliefs and doctrinal attitudes were put forth by Michaelis (1709), Moldenhauer (1774), Grynæus (1776), and Vögelin (1781). Of several nineteenth-century versions the most important

is that of de Wette and Augusti (Heidelberg, 1809-14). A complete revision by Wette was published in 1831-3 and later. It is considered a good translation but excessively literal.

A Jewish-German Bible (Old Testament) by Athias appeared in 1666. It was reproduced in the *Biblia Pentapla* (Hamburg, 1711). Another Jewish version (Berlin, 1838) was the work of Arnheim, Fuchs, and Sachs.

Dutch and Flemish Versions

The first Bible for Catholics in Holland was printed at Delft in 1475. Among several issued from the press of Jacob van Leisveldt at Antwerp, one (1540) with the text of the Vulgate is called the *Biblia Belgica*. The first authoritative version for Catholics was translated from Henten's Vulgate by Nicholas van Wingham, Peter de Cort, and Godevaert Stryode, O.P. (Louvain, 1545). After seventeen complete editions it was revised according to the Clementine Vulgate and became the celebrated Bible of Moerentorf or Moretus (1599). This revision reached more than a hundred editions, and is still used. Among several unfinished versions, one by Th. Beelen was carried out by a group of ecclesiastics, viz. Old Testament (Bruges, 1894-6). Beelen's New Testament had previously appeared at Louvain (1859-69).

A complete Bible based largely on Luther's version was given out by Jacob Van Liesveldt at Antwerp in 1526. In 1556 it was superseded by Van Utenhove's version after Luther and Olivetan. The Calvinists of Holland completed in 1637 a so-called state Bible, a version said to be from original sources, but greatly influenced by the English Authorized Version, reproducing in a great measure its remarkable felicity of style.

Scandinavian Versions

In the fourteenth century, versions of the Sunday Epistles and Gospels were made for popular use in Denmark. Large portions of the Bible, if not an entire version, were published about 1470. The historical books of the Old Testament and the Apocalypse in Swedish are all that are preserved of a complete version made in the fifteenth century and derived from earlier translations in use in the time of St. Bridget (d. 1373). In the beginning of the fourteenth century, King Hakon V provided for a Norwegian translation of the historical books of the Old Testament, with glossary. (Cf. *Danish Heptateuch* edited by Molbech, Havnian, 1828.) Scandinavian Protestant Bibles for the most part are translated from Luther's version. A complete Danish Bible was published 1550 under the direction of Christian Pedersen (revised in 1824). Two independent versions were given out by Lindberg and Kalkar. In 1541 the first Swedish version appeared; it has been frequently revised. An Icelandic version was published at Holum in 1584.

Finnish Version

A translation of the New Testament by Michael Agricola, a Lutheran, was made for the Finns and published at Stockholm (1548), and a complete Bible from original sources by several scholars was put forth in 1642, 1758, 1776, etc. A less successful version of the Bible was issued by Henry Florin at Abo (1685). Numerous Bible Society editions of both Testaments appeared later. In the Esthonian dialect, a New Testament by John Fisher (1686), and the Old Testament by Fisher and Gosekenius (1689), are noteworthy. Other complete Bibles from partial versions of an earlier date

were made in the Esthonian dialect of Reval (Berlin, 1876) and in the Esthonian of Dorpot (1850). A Laplandish version of the whole Bible was published at Hernösand (1811).

Hungarian Versions

A fourteenth-fifteenth-century manuscript in Vienna gives parts of the Old Testament from the Vulgate by the Friars Minor, Thomas and Valentine. A fifteenth-century manuscript of the whole Bible at Gran, the Codex Jordanszky, is believed to contain at least in part a version that was made by Ladislaus Bathory, Hermit of the Order of St. Paul (d. 1456). John Sylvester, or Serestely, O.P., is credited with a translation of the New Testament which was published at Novæ Insulæ (1541) and Vienna (1574). A complete version was made towards the end of the sixteenth century by Stephen Szántó (Latin, Arator). In 1626 a translation after the Vulgate was put forth at Vienna by George Káldi, S.J. Having ecclesiastical approbation, it gained a wide circulation and is still in use after having been printed in many editions. A version after the Protestant Genevan Bible was made by Caspar Károly in 1590. It was revised by Albert Molnar (Hanau, 1608). Other translations appeared by Caspar Heltai (Klausenberg, 1551-64) and by George Csipkés (Leyden, 1717). Andrew Torkos (Wittenberg, 1736) and G. Bárány (Lauban, 1754) gave out Lutheran versions.

Celtic Versions

Irish

Ancient Gaelic versions of the Psalms, of a Gospel of St. Matthew, and other sacred writings with glosses and commentaries are found as early as the seventh century. Most of the literature through subsequent centuries abounds in Scriptural quotations. A fourteenth-century manuscript, the "Leabhar Braec" (Speckled Book), published at Dublin (1872-5), contains a history of Israel and a compendious history of the New Testament. It has also the Passion of Jesus Christ, a translation from the apocryphal Gospel of Nicodemus. Another fourteenth-century manuscript, the "Leabhar Buide Lecain", also gives the Passion and a brief Old-Testament history. Some scholars see in these writings indications of an early Gaelic version of the Scriptures previous to the time of St. Jerome. A modern Protestant Gaelic New Testament, begun from the original Greek by John Kearney, 1574, Nicholas Walsh (later Bishop of Ossory), and Nehemias Donellan (later Archbishop of Tuam), and finished by William O'Donnell and Mortogh O'Cionga (King), was printed in 1602. An Old-Testament version from original sources by Dr. Bedell was published at London (1686). A second edition in Roman characters was published (1790) for the Scottish Highlanders. A version of Genesis and Exodus was made by Connellan (London, 1820), and also by John MacHale, later Archbishop of Tuam (1840).

Scottish

In Scotland the Synod of Argyll gave out a Gaelic version of fifty psalms (Glasgow, 1659), and all the psalms in 1715. A Psalter was also made by Robert Kick (Edinburg, 1684). A complete Bible, based on earlier versions of the Testaments, was published for the London Bible Society (London, 1807), and a revision of it was ordered by the General Assembly of the Presbyterian Church at Edinburgh (1826). A New Testament from the Latin for Catholics by P. MacEachain appeared at Aberdeen in 1875.

Breton, or Armoric, Versions

A New Testament was in existence at the end of the fifteenth century, but the first complete Bible was published by Le Gonidec at St. Briec (1866), and a Protestant version by M. Le Coat appeared at London in 1890. These versions differ in dialect.

Welsh, or Cymric, Versions

Partial versions were made before the fifteenth century, but a translation by Celydd Sfan was known to be in existence about 1470. A New Testament, decreed by Parliament in 1526, was edited by several scholars in 1557. A revision of this and an Old Testament version by William Morgan appeared at London in 1588. This was got out in a revision which was practically a new translation by Richard Parry and John Davies (London, 1620). It was the standard for later reprints. A more convenient edition, including the Book of Common Prayer, etc., was published by Pryce (London, 1630). A version made at Oxford (1690) was called the Bishop Lloyd's Bible and was the first to be printed in Roman characters. The Moses Williams' Bible (London, 1718) was put forth by the Society for the Promotion of Christian Knowledge. The British and Foreign Bible Society grew out of the efforts of Thomas Charles to provide Bibles for the people of Wales. Its first Welsh Bible following an edition of 1752 was printed in 1806.

MISCELLANEOUS VERSIONS**Aleutian**

An Aleutian version of St. Matthew was made by the Russian priest, Ivan Veniaminoff, in 1840 for the Aleutian Islanders.

Aniwa

The Gospels of St. Matthew and St. Luke were translated into the dialect of the Island of Aniwa by Paton (Melbourne, 1877).

Aneitumese Versions

For the inhabitants of the Island of Aneiteum, New Hebrides Islands, a New Testament was made by Geddie and Inglis (1863), and an Old Testament version by Inglis (1878).

Battak Versions

A New Testament for the Battaks of Sumatra was made in the Toba dialect by Nommensen (Elberfeld, 1878); another by Schreiber, revised by Leipoldt, was made in the Mandeling dialect (1878).

Benga Versions

A version of St. Matthew in 1858, and of the other Gospels and the Acts later, revised by Nassau in 1874, was provided for the people south of the Congo River, who use the Benga dialect.

Bengali Versions

This was a New Testament by Carey (Serampur, 1801; 8th ed., 1832), and an Old-Testament version (1802-09). The Old Testament also appeared at Calcutta (1833-44). Revisions of both Testaments were made by Wenger (1873) and by others.

Chinese Versions

Among earlier translations is a version of St. Matthew by Anger, a Japanese Christian (Goa, 1548). The Jesuit Father de Mailla wrote an explanation of the Gospels for Sundays and feasts in 1740, and it is still used. The four Gospels with notes were edited by J. Dejean, Apostolic missionary (Hong-Kong, 1892). Other partial versions were made by missionaries, but the first Bible for Protestant use was the work of Lassar and Marshman (Serampur, 1815-22). Another version is credited to Dr. Morrison. Aided by Milne he translated the Old Testament, to which he added the New Testament of Hodgson; the whole was published at Malacca (1823; new edition, 1834). A company of Protestant missionaries gave out a new translation of the New Testament in 1850 and of the whole Bible in 1855 at Shanghai and Hong-Kong. This, which was the generally adopted version, came out in a new edition at Shanghai (1873). An Old Testament in the Mandarin colloquial dialect was made by Schereschewsky and published at Peking (1875). These translations in general are unsatisfactory.

Gypsy or Romany Version

A Gospel of St. Luke by G. Borrow was published at Madrid (1837). It is said to have been the first book ever printed in this tongue. It was revised and reissued in 1872.

Hindi Version

A New Testament was published by Carey (Serampur, 1811); and the whole Bible, after the Hindustani, by Bowley (1866-69).

Hindustani Versions

A translation of the Psalms and the New Testament was made by Schulze, a Danish missionary, and published at Halle (1746-58). another New Testament by Henry Martyn appeared at Serampur (1814). There was also a Bible Society edition at Calcutta (1817) and one at London (1819); the Pentateuch (1823), and the Old Testament (1844). Other editions have followed.

Japanese Versions

A version of St. John's Gospel and of the Acts was edited in *katakana* (square type) at Singapore (1836) by Charles Gutzlaff. The four Gospels and the Acts were put forth in a very imperfect *hiragana* (round type) version at Vienna (1872) by Bettleheim, who was aided by an American student of Japanese origin. A company of revisers and translators gave out the Gospels of Saints Matthew, Mark, and John and the Acts at Yokohama in 1871 and a New Testament in 1879. A later and better version was provided by the Baptists, and the Old Testament (except the deuterocanonical books) was published in 1888. A version of Saints Matthew and Mark (1895) and of Saints Luke and John (1897), edited at Tokio, was made by Fathers Péri and Steichen, aided by a native *littérateur*, M. Takahashigorô.

Javanese Version

Gottlob Brücker published a New Testament at Serampur in 1831. This was made a Bible Society revision in 1848, and under the same auspices an Old-Testament version appeared in 1857 and later.

Mexican Versions

The first known Biblical undertaking in Mexico was a version of the Gospels and Epistles in 1579 by Didacus de S. Maria, O.P., and the Book of Proverbs by Louis Rodríguez, O.S.F. A Bible Society version of the New Testament was made in 1829, but only the Gospel of St. Luke was printed.

Modern Greek Version

A New Testament for Catholics was made by Colletus (Venice, 1708). A Protestant edition by Maximus of Kallipoli was published at Geneva or Leyden in 1638. It appeared in later revisions. A Bible Society version of the Old Testament was published in England (1840); a New Testament at Athens (1848).

ENGLISH VERSIONS

What prevented the earliest English missionaries from translating the Scriptures into the vernacular, or what caused the loss of such immediate translations, if any were made, is hard to determine at this late date. Though Christianity had been established among the Anglo-Saxons in England about the middle of the sixth century, the first known attempt to translate or paraphrase parts of the Bible is Cædmon's song, "De creatione mundi, et origine humani generis, et tota Genesis historia etc." (St. Bede, "Hist. eccl.", IV, xxiv). Some authors even doubt the authenticity of the poetry ascribed to Cædmon. The English work in Bible study of the following nine centuries will be conveniently divided into three periods comprising three centuries each.

A. Eighth to Tenth Century

In the first period extending from the eighth to the tenth century we meet: (1) St. Bede's translation of John, i, 1-vi, 9; (2) interlinear glosses on the Psalms; (3) the Paris Psalter; (4) the so-called Lindisfarne Gospels; (5) the Rushworth version; (6) the West-Saxon Gospels; (7) Ælfric's version of a number of Old-Testament books.

(1) The proof for the existence of St. Bede's work rests on the authority of his pupil Guthberht who wrote about this fact to his fellow-student Cuthwine (see Mayor and Lumby, "Bedæ hist. eccl.", 178).

(2) The "Glossed Psalters" have come down to us in twelve manuscripts, six of which represent the Roman Psalter, and six the Gallican. The oldest and most important of these manuscripts is the so called Vespasian Psalter, written in Mercia in the first half of the ninth century.

(3) The Paris Psalter advances beyond the glosses in as far as it is a real translation of Ps. i, 1-1, 10, ascribed by some scholars to King Alfred (d. 901), though others deny this view. Cf. William of Malmesbury. "Gesta regum Anglorum", II, 123.

(4) The Lindisfarne Gospels, called also the Durham Book, the Book of St. Cuthbert, present the Latin text of the Gospels dating from Redfrith, Bishop of Lindisfarne (698-721), with the so-called Northumbrian Gloss on the Gospels, added about 950 by Aldred. Cf. Dr. Charles O'Conor, "Bibl. stowensis", II (1818-19), 180.

(5) The Rushworth version of the first Gospel, with glosses on the second, third, and fourth Gospels, based on the Lindisfarne glosses. Faerman, a priest of Harewood (Harwood), made the

translation of St. Matthew and furnished the glosses on St. Mark, i, 1-ii, 15; St. John, xviii, 1-3; the rest of the work is taken from Owun's glosses.

(6) The West-Saxon Gospels are a rendering of the Gospels originating in the south of England about the year 1000; seven manuscripts of this version have come down to us. Cf. W.W. Skeat, "The Gospels in Anglo-Saxon etc." (Cambridge, 1871-87).

(7) Ælfric himself states in his work "De veteri testamento", written about 1010, that he had translated the Pentateuch, Josue, Judges, Kings, Job, Esther, Judith, and the Books of the Machabees. The translator frequently abridges, slightly in Genesis, more notably in the Book of Judges and the following books; he adopts a metrical form in Judith. Cf. Nieder in "Zeitschrift für historische Theologie" (1855-56).

B. Eleventh to Fourteenth Century

The second period coincides with the Anglo-Norman time, extending from the tenth to the thirteenth or fourteenth century. During this time, French or the Anglo-Norman dialect reigned supreme among the upper classes, and in academic and official circles, while English was confined to the lower classes and the country-districts. The Bible renderings during the twelfth, thirteenth, and early fourteenth centuries were in French, whether they were made in England or brought over from France. Before the middle of the fourteenth century the entire Old Testament and a great part of the New Testament had been translated into the Anglo-Norman dialect of the period (cf. Berger, "La Bible française au moyen âge", Paris, 1884, 78 sqq.). As to English work, we may note two transcripts of the West-Saxon Gospels during the course of the eleventh century and some copies of the same Gospels into the Kentish dialect made in the twelfth century. The thirteenth century is an absolute blank as far as our knowledge of its English Bible study is concerned. The English which emerged about the middle and during the second half of the fourteenth century was practically a new language, so that both the Old English versions which might have remained, and the French versions hitherto in use, failed to fulfil their purpose.

C. Fourteenth Century and After

The third period extends from the late fourteenth to the sixteenth or early seventeenth century, and has furnished us with the pre-Wyclifite, the Wyclif, and the printed versions of the Bible.

(1) Pre-Wyclifite Translations

Among the pre-Wyclifite translations we may note:

- The West Midland Psalter, probably written between 1340 and 1350; some attribute it to William of Shoreham. It contains the whole Psalter, eleven canticles, and the Athanasian Creed, and is preserved in three manuscripts (cd. Bülbring, "The Earliest Complete English Prose Psalter", I, London, 1891).
- Richard Rolle's (d. 1349) English version of the "Commentary on the Psalms" by Peter Lombard spread in numerous copies throughout the country (cf. Bramley, "The Psalter and Certain Canticles...by Richard Rolle of Hampole", Oxford, 1884).
- Here belongs a version of the Apocalypse with a commentary; the latter was for some time attributed to Wyclif, but is really a version of a Norman commentary from the first half of the thirteenth

century. Its later revisions agree so well with the Wyclif version that they must have been utilized in its preparation.

- The Pauline Epistles were rendered in the North Midlands or the North; they are still extant in a manuscript of the fifteenth century.
- Another version of the Pauline Epistles, and of the Epistles of St. James and St. Peter (only the first) originated in the south of England somewhere in the fourteenth century (cf. the edition of A. C. Paves, Cambridge, 1904).
- A scholar of the north of England translated also commentaries on the Gospels of St. Matthew, St. Mark, and St. Luke.
- Several manuscripts preserve to us a version of the Books of Acts and the Catholic Epistles, either separately or in conjunction with a fragmentary Southern version of the Pauline Epistles and part of the Catholic Epistles, mentioned under (5). Cf. A. C. Paves, "A Fourteenth-Century English Biblical Version", Cambridge, 1904.
- Besides these versions of particular books of Holy Scripture, there existed numerous renderings of the Our Father, the Ten Commandments, the Life, Passion, and Resurrection of Christ, and of the parts read on Sundays and Feastdays in the Mass. In general, if we may believe the testimony of Archbishop Cranmer, Sir Thomas More, Foxe the martyrologist, and the authors of the Preface to the Reims Testament, the whole Bible was to be found in the mother tongue long before John Wyclif was born (cf. "American Ecclesiastical Review", XXXII, Philadelphia, June, 1905, 594).

(2) *Wyclifite Versions*

The Wyclifite versions embrace the earlier and the later version of this name.

The *Early Version* was probably completed in 1382, the Later Version about 1388 (cf. Madden and Forshall, "The Holy Bible . . . made from the Latin Vulgate by John Wycliffe and his Followers", Oxford, 1850; Gasquet, "The Old English Bible and other Essays", London, 1897, pp. 102 sqq.). It is quite uncertain what part Wyclif himself took in the work that bears his name. As far as the New Testament is concerned, Wyclif's authorship of the Early Version is based on his authorship of the "Commentary on the Gospels", the text of which is said to have been used in the Early Edition; the style of this text is claimed to resemble the style of the translation of the Book of Acts, the Epistles, and the Apocalypse. But the style of the text of the "Commentary" resembles that of the Later Version rather than that of the Early Version; besides, passages from both the Old and the New Testament of the Early Version are quoted in the "Commentary on the Gospels". It would be folly, therefore, not to assign the authorship of the "Commentary" to a time posterior to the Early Edition. As to the Old Testament, the translator's original copy and a coeval transcript are still extant, but both break off at Baruch, iii, 19, with the words: "explicit translacionem Nicholay de herford". It is claimed that the similarity of style and mode of translating shows that Nicholas of Herford translated the Old Testament up to Bar., iii, 19. It is claimed, furthermore, that the remaining portion of the Old Testament was translated by one hand, the one who made the version of the New Testament. But both these claims rest on very slender evidence. The extant translator's copy is written in not less than five hands, differing in orthography and dialect. Nicholas, therefore, translated at most only the portion ending with Bar., iii, 19. Besides, the magnitude of the work renders it

most probable that other translators beside Wyclif and Nicholas took part in the work, and that already existing versions were incorporated or utilized by the translators.

The Early Edition was complete indeed, as far as the translators considered the books canonical, but it was soon found lacking in the necessary qualities of style and English idiom. It is at times unintelligible and even nonsensical from a too close adherence to the Latin text. A revision was, therefore, found necessary and taken in hand shortly after the completion of the Early Version. The principles of the work are laid down in the prologue of the so-called *Later Version*. We do not know either the revisers or the exact date of the revision. John Purvey, the leader of the Lollard party, is generally assumed to have taken a large part in the work. The style and idiom of the Later Version are far superior to those of the Early, and there can be little doubt as to its popularity among the Wyclifites. But the Lollards soon introduced interpolations of a virulent character into their sacred texts; violence and anarchy set in, and the party came to be regarded as enemies of order and disturbers of society. It is small wonder that the ecclesiastical authorities soon convened in the Synod of Oxford (1408) and forbade the publication and reading of unauthorized vernacular versions of the Scriptures, restricting the permission to read the Bible in the vernacular to versions approved by the ordinary of the place, or, if the case so require, by the provincial council.

(3) *Printed English Bibles*

We are now entering the period of printed English Scriptures. France, Spain, Italy, Bohemia, and Holland possessed the Bible in the vernacular before the accession of Henry VIII; in Germany the Scriptures were printed in 1466, and seventeen editions had left the press before the apostasy of Luther. No part of the English Bible was printed before 1525, no complete Bible before 1535, and none in England before 1538.

(a) William Tyndale was the first to avail himself of the new opportunities furnished by the press and the new learning. Tyndale went early to Oxford, thence to Cambridge; he was ordained priest, and professed among the Franciscan Fathers at Greenwich. In 1524 he went to Hamburg and from there to Wittenberg to visit Luther. Assisted by William Roye, like himself an apostate Franciscan from the monastery at Greenwich, he translated the New Testament, and began to have it printed in Cologne in 1525. Driven from Cologne, he went to Worms where he printed 3000 copies, and sent them to England in the early summer of 1526. The fourth edition was printed at Antwerp (1534). In 1530 Tyndale's Pentateuch was printed, in 1531 his book of Jonas. Between the date of Tyndale's execution, 6 Oct., 1536, and the year 1550 numerous editions of the New Testament were reprinted, twenty-one of which Francis Fry (*Biographical Descriptions of the Editions of the New Testament*, 1878) enumerates and describes (see Westcott, "Hist. of the English Bible", London, 1905).

(b) Miles Coverdale, born about 1488, educated at the Augustinian monastery at Cambridge, was ordained priest in that order about 1514. After 1528 we find him on the Continent in Tyndale's society. He was favoured by Edward VI, but was imprisoned under Queen Mary in 1553; after obtaining his freedom, he remained on the Continent till the death of Mary, after which he returned to England, and died in February, 1569. He prepared a complete English Bible, the printing of

which was finished 4 Oct., 1535. He was the first to omit the deuterocanonical books in the body of the Old Testament, adding them at the end as "apocrypha". His work is a second-hand eclectic translation, based on the Latin and the German versions.

(c) The London booksellers now became alive to the ready sale of the Bible in English; Grafton and Whitchurch were the first to avail themselves of this business opportunity, bringing out in 1537 the so-called Matthew's Bible. Thomas Matthew is an *alias* for John Rogers, a friend and fellow-worker of Tyndale. The Matthew's Bible is only a compilation of the renderings of Tyndale and Coverdale.

(d) In 1539 the Matthew's Bible was followed by Taverner's edition of the Bible, a work which in our day would be considered a literary "piracy", being nothing more than a revision of the Matthew text. Though Taverner was an accomplished Greek scholar and somewhat of an English purist, his edition had no influence on the subsequent translations.

(e) About 1536 Cromwell had placed Coverdale at the head of the enterprise for bringing out an approved version of the English Bible. The new version was based on the Matthew's Bible. Coverdale consulted in his revision of the Latin Version of the Old Testament with the Hebrew text by Sebastian Münster, the Vulgate, and Erasmus's edition of the Greek for the New Testament. The work was ready for the press in 1538, and the printing was begun at Paris, but had to be transferred to London on 17 December of the same year. In April of the following year the edition was finished, and owing to its size the version was called the Great Bible. Before 1541 six other editions issued from the press.

(f) During the reign of Mary a number of English reformers withdrew to Geneva, the town of Calvin and Beza, and here they issued in 1557 a New Testament with an introduction by Calvin. It was probably the work of William Whittingham, and it was the first English Bible which had its text divided into "verses and sections according to the best editions in other languages".

(g) Whittingham's work was soon superseded by an issue of the whole Bible, which appeared in 1560, the so-called Geneva Bible, also known as the Breeches Bible from its rendering of Gen., iii, 7, "they sewed fig leaves together and made themselves breeches". The Old Testament represented the text of the Great Bible thoroughly revised with the help of the Hebrew original and other sources, while the New Testament consisted of Tyndale's latest text revised in accordance with Beza's translation and commentary. The handy form and other attractive features of the work rendered it so popular that between 1560 and 1644 at least 140 editions were published.

(h) After the accession of Elizabeth an attempt was made to improve the authorized Great Bible and thus to counteract the growing popularity of the Calvinistic Geneva Bible. Bishop Parker divided the whole Bible into parcels, and distributed them among bishops and other learned men for revision. The resultant version was ready for publication on 5 October, 1568, and became generally known as the Bishops' Bible. Several editions were afterwards published, and the Great Bible ceased to be reprinted in 1569, excepting its Psalter which was introduced into the Bishops' Bible in 1572, and admitted exclusively in 1585. The Bishops' Bible is noted for its inequality in style and general merit; it could not replace the Geneva Bible in the English home.

(i) In October, 1578, Gregory Martin, assisted chiefly by William (later Cardinal) Allen, Richard Bristow, Thomas Worthington, and William Reynolds began the work of preparing an English translation of the Bible for Catholic readers. Dr. Martin rendered into English one or two chapters every day; the others then revised, criticised, and corrected the translation. Thus the New Testament was published at Reims in 1582 with a preface and explanatory notes. The notes were written chiefly by Bristow, Allen, and Worthington. The Old Testament was published at Douai (1609-10) through the efforts of Dr. Worthington, then superior of the seminary. The translation had been prepared before the appearance of the New Testament, but the publication was delayed "for lack of good means" and "our poor estate in banishment". The religious adherence to the Latin text is the reason of the less elegant and idiomatic words and phrases found in the translation. The original Douai Version has undergone so many revisions that "scarcely any verse remains as it was originally published". Dr. Challoner probably merits the credit of being the principal reviser of the Douai Version (1749-50); among the many other revisers we may mention Archbishop Kenrick, Dr. Lingard, Dr. John Gilmary Shea.

(j) The Reims Version had its influence on the Authorized Version, which was begun in 1604 and published in 1611 (see Carleton, "The Part of the Reims in the Making of the English Bible", Oxford, 1902). The work was distributed among six committees of scholars, the Bishops' Bible being taken as the basis to work on. A body of rules was drawn up which contained both a scheme of revision and general directions for the execution of their work. The actual work of revision occupied about two years and nine months, and an additional nine months were required for the final preparation of the press. But even after its publication in 1611 deliberate changes were introduced silently and without authority by men whose very names are often unknown.

(k) In February, 1870, the Convocation of Canterbury appointed a committee to consider the subject of an authorized revision of the Authorized Version. After the report of the committee had been presented in May and had been adopted, two companies were formed for the revision of the Old and the New Testaments respectively. The members of each company were partly appointed, partly invited. The revision of the New Testament was completed in 407 meetings, distributed over more than ten years, and was finally presented to Convocation on 17 May, 1881; the revision of the Old Testament occupied 792 days, and was finished on 20 June, 1884. The revised Apocrypha did not appear until 1895. At first the work of the revisers satisfied neither the advanced nor the conservative party, but in course of time it has grown steadily in popularity.

A.J. MAAS

Richard Verstegan

Richard Verstegan

(Alias ROWLANDS).

Publisher and antiquarian, born at London, about 1548; died at Antwerp 1636 (?). His grandfather, who had migrated from Guelderland, took the name Rowlands, and Richard was sent to Oxford (Christchurch) under this name in 1565. Being a Catholic he found it impossible to obtain a degree, and finally returned to Antwerp, assuming his proper family name. His first important work was his "Theatrum crudelitatis hæreticorum nostri temporis" (Paris, 1583), with illustrations of the late martyrdoms in England, continuing the idea of Persons', "De persecutione" (1582). Sir Edward Stafford, the English ambassador to France, declared that these pictures were libels on

Queen Elizabeth. The book was confiscated and destroyed (one page survives in trs., London, Record Office, "Dom. Eliz.", 165, f. 77), and Verstegan was arrested and in danger of being extradited (January, 1584). Through the influence of Cardinal Allen and the papal nuncio the author was soon free again. On 25 April, 1584, he went to Rome (Foley, V, 555) to beg aid from the pope. This was refused (15 May), but he afterwards obtained a Spanish pension. Returning to Antwerp, he published a fuller edition of his "Theatrum" (1588, 1592; French tr., 1607). He was at this time corresponding agent for Cardinal Allen at Rome, the Catholics in England, and especially for the Jesuits (some fifty of his letters, 1591-95, are in the Archives of Westminster and of Stonyhurst). He also composed several political tracts (Calendar of State Papers Addenda, 1589, p. 290), and printed an answer to the Proclamation of October, 1591 (A Declaration of great Troubles intended against the Realm, 1592), which was answered by Francis Bacon ("Works", ed. Spedding, 1862, VII, 146); he took a leading part in the writing and publication in 1595 of "Dolman's Conference" (see ROBERT PERSONS). During the heated Appellant controversy he seems to have written a manuscript tract in answer to Watson, which drew upon him the furious abuse of Anthony Copley.

His main occupation was the publication of Catholic books of devotion, sometimes signed by his initials, but never with his name either as composer or publisher. The earliest known English post-Reformation manuals (see PRAYER-BOOKS) and primers (q.v.) were brought out by him, and, 25 March, 1595, he applied for the monopoly of printing the latter (Stonyhurst MSS., "Anglia", ii, n. 4). He also wrote verse with little poetic fire, but with facility and a homely, simple taste, sometimes rising, as in "Our Lady's Lullaby", to religious song of real merit. The translations of hymns in the Primer of 1599, presumably by him, are again above the average. He published a small collection of verse, "Odes in imitation of the Seaven Penitential Psalms", s.l., 1601. His chief work was, "A Restitution of decayed Intelligence in Antiquities" (Antwerp, 1605), remarkable as perhaps the first endeavour to persuade Englishmen that they should regard with special predilection the remains of Anglo-Saxon in their language, customs, and laws, a matter in which (despite obvious faults) he was far in advance of his age, when the influence of Latin was so predominant. It is probable that he translated and published many more works than can now be traced to him, but the later Dutch works, sometimes attributed to him, should no doubt be ascribed to a younger man, probably his son, of the same name. Exile and other hardships sometimes embittered his pen; but his correspondence and publications show us a man of faithful and affectionate mind, and of varied talents, a diligent collector of literary and scientific curiosities, with a wide circle of literary friends.

Besides the correspondence, mentioned above, and introductions to his various works see: *French Correspondence* (London, Record Office, January, 1584); *Roman Transcripts* (ibid., May, 1584); WOOD, *Athenæ Oxonienseæ* (1813), ii, 392; SMITH in *Dict. Nat. Biog.*, a.v. Rowlands, Richard; GILLOW, *Bibl. Dict. Eng. Cath.*, a.v.; KELLY, *New Review* (July, 1897), a literary estimate.

J.H. POLLEN

John Vertin

John Vertin

Third Bishop of Marquette, U.S.A., b. at Doblice, Diocese of Laibach (Carniolia), Austria, 17 July, 1844; d. at Marquette, 26 Feb., 1899. He received his classical education at Rudolfswert, and came to America at the age of nineteen. His pious parents presented him to Bishop Baraga, who, upon adopting him into the diocese, sent him to St. Francis, Wisconsin, where he completed his theological training. On 31 Aug., 1866, he was ordained priest. For twelve years he laboured zealously, displaying great administrative ability. Upon the resignation of Bishop Mrak, Leo XIII elevated him to the episcopate, and he was consecrated at Negaunee, Michigan, 14 Sept., 1879. The greatness of his mind and heart are reflected in the management of his diocese and in untold charities.

ANTOINE IVAN REZEK

Rene-Aubert, Sieur de Vertot

Réné-Aubert, Sieur de Vertot

French historian, b. at Benetot, Normandy, 25 Nov., 1655; d. in Paris, 15 June, 1735. He was for some time a pupil of the Jesuit Fathers, seminary at Rouen, which he left at the end of two years to enter the Capuchin Order. His health was here greatly impaired by his austerities, and his family, alarmed, obtained permission for him to join the Premonstratensian Canons. He was afterwards appointed pastor to several small parishes in Normandy. In 1690, at the suggestion of Fontenelle and the Abbé de Saint-Pierre, he wrote his "Histoire de la conjuration de Portugal". The book was received with favour, and in 1695 appeared the "Histoire des révolutions de Suède". In 1703 Vertot was made a member of the "Académie des inscriptions". Besides contributions to the "Mémoires of the Académie and other minor works, he wrote the "Révolutions romains" (1719) and "Histoire des chevaliers hospitaliers de Saint-Jean de Jérusalem". It is related, in connection with the latter, that in answer to an offer of additional data, he said, "Mon siege est fait",-"My siege is finished", a phrase misconstrued by some of his critics and interpreted as an expression of Vertot's utter disregard for historical accuracy. The truth seems to be that he simply wished to get rid of an intruder who was trying to force upon him documents whose authenticity was very doubtful. On the other hand it must be acknowledged that Vertot's talent as an historian is more of a literary than of a critical character.

PIERRE J. MARIQUE

Veruela

Veruela

A celebrated Cistercian monastery and church dedicated to the Blessed Virgin. It is situated five miles north-west of Borja, Saragossa, Spain. The monastery and church, forming one edifice, were founded in 1146 by Pedro de Atarés, to whom the Blessed Virgin appeared, and whom she directed in the discovery of a hidden statue of herself. The statue was placed in the monastery chapel, where it is still venerated. Pedro de Atarés did not live to see the completion of the buildings, whose construction took more than twenty years, but before his death he was enrolled among the Cistercians, who were dwelling in the partly-finished cloister. The most famous abbots of Veruela were Fernando de Aragón (1498- 1577) and Lope Marco (d. 1560). The former was nominated abbot by Charles V in 1537, and two years later became Archbishop of Saragossa; V. la Fuente calls him one of the most eminent Spanish clergymen of the sixteenth century (*España Sagrada*, L, 223). He was succeeded by Lope Marco who, as his epitaph tells us, raised the monastery "ex terreo marmoreum, ex Augusto amplum". But his grotesque Renaissance addition of the living apartments did not improve the Gothic church and cloister. The chapter house at the southern side of the cloister, an exact representation of the Westminster cloister, is Byzantine. The great buildings, including church, monastery, house, and cloister, constructed at different times and in different styles, surrounded by a wall that dates back to feudal times, present an imposing and beautiful appearance. Antonio José Rodríguez, styled by Menéndez y Pelayo "one of the most remarkable cultivators of medical moral studies" (*Ciencia española*, III, 440), lived at Veruela and died within its walls in 1777. Gustavo Becquer, the Spanish poet, made Veruela his abode while the religious were prevented from living there. From 1835 to 1877 the buildings were in the hands of seculars, and from this date down to the present day they have been occupied by the Jesuits, who, assisted by the duchess of Villahermosa, a descendant of Pedro de Atarés, restored the church and monastery. Of the Jesuits who lived at Veruela Padre Costa was theologian to the Vatican Council; L.I. Fiter revived the "Congregaciones Marianas" in Spain; Antonio Rota, now secretary of the Society of Jesus, was the rector of Veruela when in 1888 the image of the Blessed Virgin was solemnly crowned.

The fact of the apparition is attested by ABARCA, ZURITA, and ARGENSOLA in their *Anales de Aragón*. PIFERRER, *Noviliario de los reinos y senorios de España*, IV; YEPES, *Cronica de San Benito*, VII (Valladolid, 1621), 370; DE ZARAGOZA, *Teatro hist. de las iglesias del reino de Aragón*, IV, 74; *Definitiones congregationis cisterciensis coronae Aragónum* (Valladolid, 1790); DE UZTARROZ, *Cronologia de las imagenes aparecidas de N. Senora en Aragón* (Saragossa, 1644); TORRE, *Resena hist. de N. S. de Veruela* (Barcelona, 1881); NONELL, *La santa duquesa* (Madrid, 1892); QUADRADO, *Aragón in España, sus monumentos y artes* (Barcelona, 1886); there is at present in the archives of Veruela an extensive collection of documents gathered by FITER who began to write a complete history of Veruela. There is also a MS. *Brevis hist. regalis monasterii Berolae, ab ejus fundatione quae fuit anno 1146 usque ad annum 1738*.

WILLIAM FURLONG

Andreas Vesalius

Andreas Vesalius

(WESALIUS.)

The reorganizer of the study of anatomy; b. at Brussels, 31 Dec., 1514; d. in a Greek city on his journey home from Jerusalem in 154. He was descended from a German family of physicians called Witing (Wytinck), which came from Wesel on the Rhine, and was the son of Andreas Vesalius, court-apothecary to the Emperor Charles V. As a boy he showed great interest in the dissection of animals. After pursuing his early studies at Louvain, he went about 1533 to the University of Paris, where Johannes Quinterus of Andernach and Jacobus Sylvius taught medicine. At the university Vesalius gave his attention largely to anatomy, especially that of the bones which he found in cemeteries and at the place of execution. He dissected entire animals, and gained in this way so much knowledge that at the request of his teachers and fellow-students he publicly dissected a corpse and explained its parts. In 1536 he returned to Louvain and made a public dissection there, the first in eighteen years. He also published a more accurate Latin translation of the ninth book of Almansor of Rhazes. In 1537 he went to Venice, thence to Padua, where he took the degree of Doctor of Medicine, and on 6 Dec. was appointed professor of surgery and anatomy at Padua. Contrary to custom, Vesalius dissected the bodies himself and explained the different parts: the former usage had been for a surgeon to dissect while a physician read aloud suitable chapters from Galen or the "anatomic" of Mundino. In 1538 he published the "Tabulae anatomicae" from his own drawings and those of the painter Johann Stephan of Kalkar; this was the first fruits of his investigations. His labours led him to the conviction that Claudius Galenus had never dissected the dead body of a human being, and that Galen's celebrated "anatomy" lacks the stamp of truthfulness, as it is based almost entirely on the dissection of apes. In 1540 he began his celebrated work "Fabrica", in 1542 went to Basle in order to supervise the printing of it, returned to Padua at the end of 1543 after the publication was completed, spent a short time in Bologna and Pisa, and in 1544 was appointed court physician to the Emperor Charles V. Up to the time of the emperor's abdication in 1556, Vesalius accompanied Charles on all his journeys and campaigns. After the abdication he entered the service of King Philip II of Spain. For unknown reasons, in the spring of 1564 he undertook a pilgrimage to the Holy Land, from which he never returned.

The services of Vesalius to anatomy were that he was the first to lead the way to independent investigation in the examination of the structure of the human body, and in the teaching concerning it, and that he discovered the numerous errors of Galen. In so doing he destroyed the foundation of the whole teaching of Galenism and of the belief in its authority, and pointed out the way for the free investigation of nature. However, the numerous followers of Galen began a bitter struggle against the daring investigator, and even the medical school of Padua turned against him. Jacobus Sylvius called him a madman (*vesanus*) and declared that an advance beyond the knowledge of Galen was impossible, and that Galen had not erred, but probably the human body had changed

since then. Bartholomew Eustachus of Rome declared he would rather err with Galen than accept the truth from the innovator. His enemies even sought to prevent his appointment as physician to the emperor and spread slanders broadcast, so that Vesalius, depressed by his troubles, threw a large part of his manuscript and works into the fire. Nevertheless his works and drawings were frequently used by opponents unrighteously for their own advantage.

His most important works are: "Paraphrasis in nonum librum Rhazae ad Almansorem" (Basle, 1537); "Tabulae anatomicae" (Venice, 1538); "Epistola docens venam axillarem dextri cubiti in dolore laterali secandam" (Basle, 1543, 1555); "De humani corporis fabrica libri septem" (Basle, 1543, 1555), his chief work, containing numerous plates, and repeatedly reprinted: "Suorum de humani corporis fabrica librorum epitome" (Basle, 1543); "Epistola rationem modumque propinandi radicis Chynae decocti, quo nuper invictissimus Carolus V imperator usus est, pertractans" (Basle, 1546); "Anatomicarum Gabrielis Fallopii observationum examen" (Venice, 1564); "Opera omnia anatomica et chirurgica", ed. by H. Boerhaave and B. S. Albinus (Leyden, 1725). In addition, in "Galenii opera omnia" (Venice, 1541), the following translations: I, ii, p. 49, "Galenii de nervorum dissectione liber"; I, ii, p. 50, "Galenii de venarum arteriarumque dissectione liber"; I, ii, p. 58, "Galenii de anatomicis administrationibus libri novem". The treatise "Gabrielis Cunei Mediolanensis apologiae Franc. Putei pro Galenii anatome examen" (Venice, 1564) is not by Vesalius, as H. Haeser ("Lehrbuch der Geschichte der Medizin", II, 1881, 39) believes.

The story, that towards the end of his life Vesalius came into conflict with the Inquisition, is found in a letter, written at Paris under date of 1 Jan., 1565, by Hubertus Languetus to Kaspar Peucer. A rumour brought from Spain said that Vesalius had dissected a distinguished man whose heart still beat, and was therefore accused of murder by the family of the deceased. In order to secure a more severe punishment the family also made an accusation of atheism against him before the Inquisition. Only the personal intervention of Philip II saved him from the death penalty, and Vesalius was obliged as penance to undertake a pilgrimage to Jerusalem and Mount Sinai. Modern historians regard the report as a malicious invention, and all the more as, according to his own statement, Vesalius never had an opportunity in Spain to perform a dissection. At that era a scholar with so many enemies, one who generally struck out new ideas in opposition to the commonly-held opinion, could easily be accused of heresy. To many his relations with Protestant scholars appeared suspicious. When a young man he had a dispute about 1536 with the theologians of Louvain because he differed from them as to the seat of the soul. About the same time an opponent characterized Vesalius in connection with a dispute about blood-letting, as the "Luther of the physicians". There is not a single sentence in his writings which has even the appearance of heresy. In speaking of the seat of the soul he blames the theologians for wishing to solve such questions without understanding anatomy. Personally he avoided expressing his opinion, in order not to fall under suspicion of heresy. In that age there could be only one reason for such a dangerous journey as one to the Holy Land, namely strong religious feeling.

ROTH, Andreas Vesalius Bruxellensis (Berlin, 1892), an exhaustive authority.

LEOPOLD SENFELDER

Vespasian

Vespasian

(TITUS FLAVIUS VESPASIANUS).

Roman Emperor, b. at Reate (now Rieti), the ancient capital of the Sabines, 18 Nov., A.D. 9; d. there, 23 June, 79. His father was a prosperous tax-gatherer and moneylender, while the fact that his mother's brother was a senator may have at least encouraged him to enter the public service. Early in his career he had opportunities to become familiar with conditions in the Levant, where he served as quaestor; before entering his thirty-fourth year he had filled still more important magistracies. After serving with the army in Germany, he made a successful expedition into Southern Britain in command of the Second Legion, and attained consular rank in A.D. 51. Ten years later he was proconsul in Africa. He first appears in history as a member of the imperial suite when he accompanied Nero on a tour through Greece; but Vespasian was evidently a very poor courtier, for it is said that he fell asleep in Nero's presence while the emperor was reciting one of his own poems. In spite of this offensive conduct, and either because Nero could be sensible enough to forget personal animosities when reasons of state demanded, or because no one else could be found who was not still more objectionable, Vespasian was appointed to conduct the war against the Jews—an appointment which proved the immediate cause of his elevation to the purple.

Brutal oppression by successive Roman governors, culminating in the atrocities of Gessius Florus, had stirred the Jews to an insurrection in which the Roman garrison of Jerusalem was slaughtered. Many considerations obliged the Roman Court to take a serious view of this disturbance, not the least being the widespread belief that a new power originating in Judea was destined to supplant Rome in the mastery of the world. Taking with him his son Titus, Vespasian, in 66, invaded Judea, entering upon the last war in which the Jews were to take part as a nation. The siege of Jerusalem, in which more than half a million of the inhabitants perished, was conducted by Titus, and ended in the fall of the city (2 Sept., 70), and the final destruction of the Temple. In the meantime Nero's career had ended in suicide, his successor, Galba, had been killed by Otho, and Otho, in his turn dethroned by partisans of Vitellius, had followed Nero's last example. While the Jewish war was still in progress the soldiers in Egypt proclaimed Vespasian emperor (1 July, 69), and their comrades in Judea confirmed the choice. Ostensibly, at least, he had made no bid for the diadem, but his soldiers were sincerely attached to him, and the debauchee Vitellius, Nero's parasite and favourite, whom the legions in Germany had proclaimed, was as unpromising from a military point of view as he was morally worthless. Vespasian remained at his post in Judea, while his lieutenant, Antonius Primus, with the armies of Pannonia and the Balkan Peninsula, invaded Italy, routed the Vitellian forces near Cremona, and stormed Rome, which was defended by the Praetorian Guard and the populace (20 Dec., 69). It was not until the following summer that the new emperor left the conduct of affairs in Palestine to his son Titus and entered the city to receive confirmation at the hands of the Senate.

Vespasian's assumption of the imperial authority ended one of those spasms of civil war which had shaken Rome at intervals ever since the days of Marius and Sulla. His reign was distinctly an era of reform. Titus, who was to become one of the most beneficent pagan rulers in history, was associated as Caesar in his father's administration. The dignity of the Roman Senate was revived, largely by elimination of the disreputable elements; the law of treason, an odious legal cloak for tyranny, was abrogated; the courts of law were reformed; military discipline was placed upon a fairly secure basis. Vespasian, who was a master of financial administration, knew how to lavish his wealth in adding to the splendour of the imperial city, and it was in his reign that the Colosseum was begun. Abroad, the final conquest of Judea was followed by the suppression of a serious rising in Gaul and the consolidation of Roman authority in Britain by Cneius Agricola, who built the chain of forts between the Firths of Clyde and Forth. Still more important to the subsequent progress of civilization was the period of tranquility for the infant Church which began in this reign. The official classes of Rome then regarded the Christians vaguely as a Jewish sect, and as such the latter was subject to the impost of half a shekel for rebuilding the Capitoline temple, which had been destroyed when Rome was stormed for Vespasian; but this tax does not seem to have been the occasion of any general harsh treatment. Tertullian (*Apologia*) and Eusebius (*Hist. eccl.*) agree in acquitting Vespasian of persecution. St. Linus, the pope whose death occurred during this period, cannot be proved to have suffered martyrdom, while St. Apollaris of Ravenna, though a martyr, may very well have suffered at the hands of a local mob.

The character of this emperor showed very little, if anything, of the pagan tyrant. Though himself a man of no literary culture, he became the protector of his prisoner of war, the Jewish historian Josephus, a worshipper of the One God, and even permitted him the use of his own family name (Flavius). While this generosity may have been in some degree prompted by Josephus's shrewd prophecy of Vespasian's elevation to the purple, there are other instances of his disposition to reward merit in those with whom he was by no means personally sympathetic. Vespasian has the distinction of being the first Roman Emperor to transmit the purple to his own son; he is also noteworthy in Roman imperial history as having very nearly completed his seventieth year and died a natural death: being in feeble health, he had withdrawn to benefit by the purer air of his native Reate, in the "dewy fields" (*rosei campi*) of the Sabine country. By his wife, Flavia Domitilla, he left two sons, Titus and Domitian, and a daughter, Domitilla, through whom the name of Vespasian's empress was passed on to a granddaughter who is revered as a confessor of the Faith.

E. MACPHERSON
Vespasiano Da Bisticci

Vespasiano da Bisticci

(*Or* FIORENTINO.)

Florentine humanist and librarian, b. in 1421; d. in 1498. He was chiefly a merchant of choice books, and had a share in the formation of all the great libraries of the time. When Cosimo de' Medici wished to create the Laurentian Library of Florence, Vespasiano advised him and sent him by Tommaso Parentucelli (later Nicholas V) a systematic catalogue, which became the plan of the new collection. In 22 months Vespasiano had 200 volumes made for Cosimo by 25 copyists. Most of them were, under the circumstances, books of theology and liturgical chant. He had performed important services for the diffusion of classical authors when Nicholas V, the true founder of the Vatican Library, became pope. He devoted fourteen years to collecting the library of the Duke of Urbino, organizing it in a quite modern manner; it contained the catalogues of the Vatican, of St. Mark's Florence, of the Visconti Library at Pavia, and even that of Oxford. Vespasiano had only a mediocre knowledge of Latin, and he is one of the few writers of the time who acknowledged it. He left a collection of 300 biographies, which is a source of the first rank for the history of fifteenth-century humanism: "Vite di uomini illustri del secolo XV", published by Mai, "Spicilegium Romanum", I, Rome, 1839; by Frati, Bologna, 1892. He is certainly inferior to the great Italian historians, such as Machiavelli and Guicciardini, but he admirably depicts the atmosphere of the period. His accounts plunge the reader into the very atmosphere of Florence; they contain delicate pictures of manners, charming portraits, noble female figures, of which last point it is possible to judge by reading the biography of Alessandro Bardi (ed. Mai, 593). The general tone is that of a grave moralist, who shows the dangers of the Renaissance, especially for women, warns against the reading of the novelists, and reproaches the Florentines with usury and illicit gains. Vespasiano is a panegyrist of Nicholas V, the great book-lover; he is severe to the point of injustice against Callistus III, the indifferent lender of books, which, however, he did not give over to pillage, as Vespasiano accuses him of doing.

PAUL LEJAY

Vespers

Vespers

This subject will be treated under the following headings:

- I. Vespers in the sixth century;
- II. The origin of Vespers;
- III. The Office of Vespers in the Middle Ages: Variations;

- IV. The latest changes;
- V. Symbolism: the Hymns;
- VI. Importance.

I. Vespers in the Sixth Century

In the sixth century the Office of Vespers in the Latin Church was almost the same as it has been throughout the Middle Ages and up to the present day. In a document of unquestionable authority of that period the Office is described as follows: The evening hour, or *vespertina synaxis*, is composed of four psalms, a capitulum, a response, a hymn, a versicle, a canticle from the Gospel, litany (*Kyrie eleison, Christe eleison*), Pater with the ordinary finale, *oratio*, or prayer, and dismissal (Regula Sancti Benedicti, xvii). The psalms recited are taken from the series of psalms from Pss. cix to cxlvii (with the exception of the groups cxvii to cxxvii and cxxxiii to cxlii); Pss. cxxxviii, cxliii, cxliv are each divided into two portions, whilst the Pss. cxv and cxvi are united to form one. This disposition is almost the same as that of the "Ordo Romanus", except that the number of psalms recited is five instead of four. They are taken, however, from the series cix to cxlvii. Here, too, we find the capitulum, versicle, and canticle of the "Magnificat". The hymn is a more recent introduction in the Roman Vespers; the finale (litanies, Pater, versicles, prayers) seems all to have existed from this epoch as in the Benedictine *cursus*. Like the other hours, therefore, Vespers is divided into two parts; the psalmody, or singing of the psalms, forming the first part, and the capitulum and formulæ the second. Vesper time varied according to the season between the tenth hour (4 p. m.) and the twelfth (6 p. m.). As a matter of fact it was no longer the evening hour, but the sunset hour, so that it was celebrated before the day had departed and consequently before there was any necessity for artificial light (Regula S. Benedicti, xli). This is a point to be noted, as it was an innovation. Before this epoch this evening synaxis was celebrated with all the torches alight. The reason of this is that St. Benedict introduced in the *cursus*, another hour--that of Compline--which was prescribed to be celebrated in the evening, and which might be considered as a kind of doubling of the Office of *Lucernarium*.

II. Origin of Vespers: Period anterior to the Sixth Century

The Rule of St. Benedict was written about 530-43 and represents the Office of Vespers drawn up in the manner shown above. Much earlier than this we find an evening Office corresponding to both that of Vespers and that of Compline. Its name varies. In St. Benedict we find the name *vespera* which has prevailed, whence the French word *vêpres* and the English *vespers*. Cassian calls it *Vespertina synaxis*, or *Vespertina solemnitas* (P. L., XLIX, 88-9). The name, however, by which it was most widely known during that period was *Lucernalis* or *Lucernaria hora* (l. c., 126). This name is characteristic. It was so called because at this hour a number of candles were lighted, not only to give light, but also for symbolical purposes. The "Peregrinatio", which gives the liturgical order as practised at Jerusalem and the date of which is probably the fourth century, calls it *Lichnicon*. This is the Latin transcription of the Greek word *lychnikon*, which corresponds to the word *Lucernarium* (cf. AMBROSIAN LITURGY AND RITE). The author tells us that this Office took

place at the tenth hour (four o'clock in the evening); it is really the Office *des lumières*, i.e. of the lights; it was celebrated in the Church of the Holy Sepulchre; all the lamps and torches of the church were lighted, making, as the author says, "an infinite light". The Lucernal psalms were sung, after which followed the recitation of the supplication and commemorations or litanies, then the prayers, and finally the blessing and dismissal. In the "Antiphony of Bangor", an Irish document of the sixth century, Vespers are called *hora duodecima*, which corresponds to six o'clock in the evening, or *hora incensi*, or again *ad cereum benedicendum*. All these names are interesting to note. The *hora incensi* recalls the custom of burning incense at this hour, while at the same time the candles were lighted. The term *ad cereum benedicendum* presents a still greater interest because it reminds us that the ceremony of the lights at Vespers was symbolic and very solemn. In Prudentius (fourth century) we find a hymn entitled "Ad incensum lucernæ" which, according to some critics, would appear to have been composed for the hour of the *Lucernarium* (Arevalo, "Prudenti carmina", I, 124, ed. 1788; cf. also Cabrol, "Les églises de Jérusalem, la discipline et la liturgie au IVe siècle", 47). Others see in this an allusion to the ceremony of the paschal candle. However, the *Lucernarium* may have had, at that time, some analogy with the ceremony of Holy Saturday, and the hymn could thus be adapted to one or the other. In the "Old Gallican Sacramentary" (Thomasi, "Opera", VI, 395) we find for Holy Saturday an *oratio ad duodecima*, designed to celebrate the light as well as the Resurrection, which would seem thus to favour our hypothesis. St. Basil also speaks of a hymn being sung at the moment when the torches were lighted, doubtless the famous hymn--"Lumen hilare" (cf. Cabrol, l. c., 47-8).

Vespers, then, was the most solemn Office of the day and was composed of the psalms called *Lucernales* (Ps. cxl is called *psalmus lucernalis* by the Apostolic Constitutions, VIII, xxxv; cf. II, lix; also Cabrol, l. c.). The "Peregrinatio" does not mention the number of psalms sung at this hour, but Cassian, who, a short time after the "Peregrinatio", describes this Office as it was celebrated by the monks of Egypt, says they recited twelve psalms as at Vigils (Matins). Then two lessons were read as at Vigils, one from the Old, and the other from the New, Testament. Each psalm was followed by a short prayer (P. L., XLIX, 83-4, 88-9). For the rest Cassian agrees with the "Peregrinatio". He says the Office was recited towards five or six o'clock and that all the lights were lighted. This evening synaxis is looked upon as a souvenir of the evening sacrifice of the Old Law. The use of incense, candles, and other lights would seem to suggest the Jewish rites which accompanied the evening sacrifice (Ex., xxix, 39; Num., xxviii, 4; Ps. cxl., 2; Dan., ix, 21; Par., xxiii, 30; cf. Haneberg, "Die relig. Alterth. der Bibel", Munich, 1869, p. 362). It may thus be seen that the *Lucernarium* was, together with Vigils, the most important part of the Offices of the day, being composed of almost the same elements as the latter, at least in certain regions. Its existence in the fourth century is also confirmed by St. Augustine, St. Ambrose, St. Basil, St. Ephraem, and, a little later, by several councils in Gaul and Spain, and by the various monastic rules (see texts in Bäumer-Biron, l. c., 78, 80, 118-27, 188-98, 208, etc.). The "Apostolic Constitutions" (VIII, xxi, 34, 35) describe it in almost the same terms as the "Peregrinatio". Before the fourth century we find allusions to the evening prayer in the earlier Fathers, Clement I of Rome (Clemens Romanus),

St. Ignatius, Clement of Alexandria, Tertullian, Origen, the Canons of St. Hippolytus, St. Cyprian (for texts see Bäumer-Biron, l. c., I, 20 sqq., 73-4, 76, 78). Pliny, in his famous letter at the beginning of the second century, speaks of liturgical reunions of the Christians in the morning and in the evening: "coetus antelucani et vespertini" (Ep., x, 97). Vespers is, therefore, together with Vigils, the most ancient Office known in the Church.

III. Office of Vespers in the Middle Ages: Variations

We have already remarked that the institution of the Office of Compline transformed the *Lucernarium* by taking from it something of its importance and symbolism, the latter at the same time losing its original sense. We have seen that St. Benedict calls it only *Vespera*, the name which has prevailed over that of *Lucernarium* (cf. Ducange, "Glossarium med. et inf. lat.", s.v. *Vesperae*). The Gallican Liturgy, the Mozarabic Liturgy, and, to a certain extent, the Milanese, have preserved the *Lucernarium* (cf. Bäumer-Biron, l. c., 358). The Greek Church retains the "Lumen hilare" and some other traces of the ancient *Lucernarium* in the Offices of Vespers and Compline (cf. Smith, "Dict. Christ. Antiq.", s.v. *Office, Divine*). In the Rule of St. Columbanus, dated about 590, Vespers still has twelve psalms, amongst which are Pss. cxii and cxiii, the Gradual psalms, Pss. cxix sqq. (cf. Gougaud, "Les chrétientés celtiques", 309; "Dict. d'arch. chrét. et de liturgie", s.v. *Celtique*, 3015). The "Antiphony of Bangor", a document of Irish origin, gives for Vespers Ps. cxii and also the "Gloria in excelsis". For modifications since the twelfth century, cf. Bäumer-Biron, l. c., II, 54 sqq.

IV. Latest Changes

The Decree "Divino afflatu" (1 Nov., 1911) involves some important changes in the old Roman Office. New psalms are appointed for each day of the week. These psalms are to be recited with their antiphons, not only at the Office *de tempore* (Sundays and feriæ) but also on feasts of a lesser rite than doubles of the second class, that is to say, on simples, semidoubles (double minors), and double majors. On feasts which are doubles of the second class and *a fortiori* of the first class, as well as on feasts of the Blessed Virgin, the Holy Angels, and Apostles, the psalms are proper to the feast as heretofore. On all feasts, of whatever rite, the second part of Vespers, that is, the capitulum, hymn, antiphon of the "Magnificat", is taken from the *Sanctorale*. On semi-doubles and those of a lesser rite the suffrages are now reduced to a single antiphon and orison which is common to all the saints heretofore commemorated, whilst the *preces* ("Miserere" and versicles) formerly imposed on the greater feriæ are now suppressed.

V. Symbolism: the Hymns

Notwithstanding the changes brought about in the course of time, Vespers still remains the great and important Office of the evening. As already pointed out, it recalls the *sacrificium vespertinum* of the Old Law. In the same manner as the night is consecrated to God by the Office of the Vigil, so also is the end of the day by Vespers. It terminates, as Matins formerly terminated,

and Lauds at present terminates, by a lection, or reading, from the Gospel, or *canticum evangelii*, which, for Vespers, is always the "Magnificat". This is one of the characteristic traits of Vespers, one of the liturgical elements which this particular Office has retained in almost all regions and at all times. There are, however, a few exceptions, as in some liturgies the "Magnificat" is sung at Lauds (cf. Cabrol in "Dict. d'arch. et de liturgie", s.v. *Cantiques évangéliques*). This place of honour accorded so persistently to the canticle of Mary from such remote antiquity is but one of the many, and of the least striking, proofs of the devotion which has always been paid to the Blessed Virgin in the Church. The psalms used at Vespers have been selected, from time immemorial, from Pss. cix to cxlvii, with the exception of Ps. cxviii, which on account of its unusual length does not square with the others, and is consequently ordinarily divided up into parts and recited at the little hours. Pss. i to cviii are consecrated to Matins and Lauds, whilst the three last psalms, cxlviii to cl, belong invariably to Lauds. The series of hymns consecrated to Vespers in the Roman Breviary also form a class apart and help to give us some hints as to the symbolism of this hour. The hymns are very ancient, dating probably, for the most part, from the sixth century. They have this particular characteristic--they are all devoted to the praise of one of the days of the Creation, according to the day of the week, thus: the first, "Lucis Creator optime", on Sunday, to the creation of light; the second, on Monday, to the separation of the earth and the waters; the third, on Tuesday, to the creation of the plants; the fourth, on Wednesday, to the creation of the sun and moon; the fifth, on Thursday, to the creation of the fish; the sixth, on Friday, to the creation of the beasts of the earth; Saturday is an exception, the hymn on that day being in honour of the Blessed Trinity, because of the Office of Sunday then commencing.

VI. Importance

We can now see the great importance which the Church appears to have attached always to the Office of Vespers. It is the only one which has remained popular (excepting, of course, the Holy Sacrifice which we do not consider here as an Office) among pious Christians up to the present day. Matins and Lauds, on account of the hour at which they are celebrated, have always been more or less inaccessible to the faithful; likewise the little hours, except, perhaps, Terce, which serves as an introduction to the Mass. Vespers, on the contrary, occupies a privileged place towards the end of the day. On Sundays it is the Office most likely to bring the faithful together in church for the second time and thus becomingly completes the Divine Service for that day. This is why, in the majority of Catholic countries, the custom of Sunday Vespers has been for so long a time, and is still, maintained. It is quite conformable to tradition, moreover, to invest this Office with a particular solemnity. The Vesper psalms, as well as the hymns and antiphons, are well calculated to edify the faithful. Lastly, the ancient custom of having a lection or reading from the Old, or from the New, Testament, or from the homilies of the Fathers, might well in certain cases and to a certain extent be re-adopted, or serve as the subject-matter for the sermon which is sometimes delivered at this service.

F. CABROL

Music of Vespers

Music of Vespers

The texts (e.g. antiphons, psalms, hymn) sung in Vespers vary according to the feast or the season of the church year; and in churches where it is obligatory to recite publicly the Canonical Hours of the Divine Office the Vespers must follow the direction of the "Ordo". The Second Plenary Council of Baltimore (1868) decreed (no. 379) that complete vespers be sung on Sundays and feasts in all churches, as far as possible, after the Roman fashion, and that vespers never be replaced by other exercises of piety; "for the solemn worship approved by bishops of the Church and flourishing through so many centuries must be deemed pleasing to Almighty God". To facilitate the introduction of Vespers, the council further legislated (no. 380) that the rudiments of Gregorian chant be taught in parish schools, "so that gradually the greater part of the congregation might be enabled to join with the sacred ministers and the choir" in singing. A Rescript of the Congregation of Sacred Rites (11 Mar., 1882, Montereyen. et Angelor. n. 3539, 3) declared that the custom which had obtained in certain churches, of singing some verses of all or of some psalms in Vespers and of omitting the others, should be wholly eliminated; and two years later the Third Plenary Council of Baltimore (1884) decreed (no. 118): "Moreover we will and command . . . that, where the office of Vespers is performed, complete Vespers, that is, with integral psalms, be sung."

The difficulty of preparing different antiphons, psalms, etc., for the various Sundays and feasts overtaxed the powers of ordinary choirs; and happily a decree of the S.R.C. (29 Dec., 1884, Lucionen. n. 3624, 12) met the difficulty by declaring that in mere parish churches, where there is no obligation of public recitation of the Divine Office, but where Vespers are sung for the devotion of the people, the Vespers may be taken from any Office, such as that of the Most Blessed Sacrament or of the Blessed Virgin, provided that the sacred ministers privately recite the Vespers proper to the day. It is therefore clear that in practically all churches in English-speaking countries the choir may repeat the same Vespers, selected from any appropriate feast, for every Sunday or feast. Composers and publishers of church music have further simplified the task of the choir by issuing brochures which contain all the ceremonial or rubrical directions in English, in their appropriate place, and

which give easy musical settings to the antiphons, psalms, etc., or furnish easy accompaniments to the plainsong melodies. Must the Vespers thus selected at the pleasure of the priest or the choirmaster be complete in every part, e.g., the antiphons? Johner (p. 14) declares that "such Vespers must accord in every respect with the Vespers of the Office selected". The Provincial Council of Milwaukee follows the Fourth Provincial Council of Cincinnati in the desire that "in vespers on Sundays the antiphons, the entire five psalms, and the hymn proper to the occurring feast should never be omitted, unless the bishop deems it impossible to observe this rule on account of local circumstances". In this connection, the discussion in the "Ecclesiastical Review" (Dec., 1911) should be consulted.

The texts must be either sung or "recited" in a clear and intelligible manner. The portions that must be sung are: the first verse of the "Magnificat", the first and last verse of the hymn, the verses where genuflection is prescribed (e.g. "Veni Creator", "O Crux Ave" on the Feasts of the Holy Cross, "Ave Maris Stella") or where all bow the head (e.g. the "Gloria Patri"). The "Ceremonial of Bishops" permits alternate verses of the "Magnificat" to be supplied by the organ, provided the choir meanwhile recites the text in an intelligible voice or--a better arrangement--a single chanter sings the text to accompaniment of the organ. The S.R.C. (Senogallien., 4 Mar., 1901, V) permits a similar arrangement for the psalms, but adds the condition that there be a poverty of voices (e.g. one or two voices on each side of the choir, as the Ephemerid. liturg., XV, 353, interprets). The "Ceremonial of Bishops" forbids the playing of the organ on Sundays of Lent and Advent, except Gaudete and Lætare Sundays (the third of Advent and the fourth of Lent); but a Rescript of the S.R.C. (11 May, 1911) permits the organ to be played when it is necessary for sustaining the voices, provided it ceases when the voices cease. The S.R.C. (Senogallien., 4 Mar., 1901, VII) requires a pause to be made at the asterisk in each verse of the psalms, "any custom whatsoever to the contrary notwithstanding".

The general musical character of vespers is indicated in the "Instruction on Sacred Music" issued by Pius X (22 Nov., 1903), no. IV, 11. Classical polyphony or modern music may be used, although the Gregorian chant is the typical setting for the texts. While the antiphons should regularly be in the assigned Gregorian melodies, it is permitted occasionally to sing them in figured music; but in this case "they must never have either the form of a concert melody or the fullness of a motet or cantata". While the "Gloria Patri" and "Sicut erat" may also be in figured music, the psalms should regularly be in Gregorian chant; but on greater feasts the verses in Gregorian chant may be alternated with verses in *falsibordoni* or "with verses similarly composed in a proper manner". Single psalms may sometimes be sung wholly in modern music, "provided the form proper to psalmody be preserved in such compositions; that is, provided the singers seem to be psalmodizing among themselves, either with new motifs, or with those taken from the Gregorian chant or based upon it". The "Instruction" immediately adds that "psalms known as *di concerto* are, therefore, forever excluded and prohibited". These *di concerto* psalms are "theatrical compositions . . . with soli, chorus, and orchestra, comprising adagios, allegros, and often dance airs" (Duclos, 106, footnote 2). Pius X alludes to these in his letter to Card. Respighi (8 Dec., 1903): "For the devout psalmody

of the clergy, in which the people also used to join, there have been substituted interminable musical compositions on the words of the Psalms, all of them modelled on old theatrical works, and most of them of such meagre artistic value that they would not be tolerated for a moment even in second-rate concerts. Certain it is that Christian piety and devotion are not promoted by them; the curiosity of some of the less intelligent is fed, but the majority, disgusted and scandalized, wonder how it is that such an abuse can still survive. We, therefore, wish the cause to be completely extirpated, and that the solemnity of vespers should be celebrated according to the liturgical rules indicated by us." As to the hymn, the "Ceremonial of Bishops" permits recitation of alternate stanzas with accompaniment of organ.

JOHNER, *New School of Gregorian Chant* (New York, 1906), 9-14; BENEDICTINES OF STANBROOK, *Grammar of Plainsong* (London, 1905), 68-9; POTHIER, *Les mélodies grégoriennes* (Tournai, 1880), 240-68; TERRY, *Catholic Church Music* (London, 1907), 21-38 (Church legislation), 125-6 (Order of Vespers), 128 (Pontifical Vespers), 136 (Vespers of the Dead); DUCLOS, *Sa sainteté Pie X et la réforme de la musique religieuse* (Rome, 1905), 105-7; FINN, WELLS, and O'BRIEN, *Manual of Church Music* (Philadelphia, 1905), 90-4, 134-5; JOHNER, *Die Psalmodie nach der Vaticana* (Ratisbon, 1911); *Ecclesiastical Rev.*, Feb., 1904, 184-8 (Letter of Pius X to Card. Respighi): "There is much to be corrected or removed in the chants of the Mass . . . but that which needs a thorough renewal is the singing of Vespers of the feasts celebrated in the different churches and basilicas. The liturgical prescriptions of the 'Cæremoniale episcoporum', and the beautiful musical traditions of the classical Roman school, are no longer to be found. . . . And do you, Lord Cardinal, neither grant indulgences nor concede delays. The difficulty is not diminished but rather augmented by postponement, and since the thing is to be done, let it be done immediately and resolutely. . . . The Vesper service will, indeed, be notably shortened. But if the rectors of the churches desire on a special occasion to prolong the function somewhat . . . [they may] have a suitable sermon after the vespers, closed with Solemn Benediction of the Most Holy Sacrament"; LEMAISTRE, *Vatican Chant* (New York, 1905), 69-95; BENEDICTINES OF SOLESMEZ, *Rules for Psalmody* (Rome, 1904), no. 598, English ed.; IDEM, *Psalmi in notis pro vesperis et officiis in omnibus dominicis et festis duplicibus* (Rome, 1909), no. 590, gives the texts in full under each of the eight psalm tones in notation; PIÉRARD, *Psautier-vespéral, séméiographie nouvelle* (Rome, 1908); BONVIN, *On Recitation in Church Music* (March, 1906, 145-56).

H.T. HENRY
Sicilian Vespers

Sicilian Vespers

The traditional name given to the insurrection which broke out at Palermo on Easter Tuesday, 31 March, 1282, against the domination of Charles of Anjou. It was only in the fifteenth century, during the excitement aroused by the passing of Charles VIII (Nov., 1494), that the expression "Sicilian Vespers" and the legend of the Easter bells calling the insurgents to arms seem to have

originated. Charles of Anjou, Count of Provence and brother of St. Louis, had received from Urban IV the crown of the Two Sicilies which had been taken from the Hohenstaufens. Having defeated Manfred in 1256, he established his authority by force, and cruelly repressed the Ghibelline revolt led by Conradin in 1268, in consequence of which 130 barons were condemned to death. As undisputed master of the Two Sicilies, he resumed the ambitious designs of his predecessors, the Norman and Hohenstaufen kings, and sought to establish his dominion in the Mediterranean. In 1281 he was on the point of attaining his object; in 1277 he had purchased the rights of Mary of Antioch to the Kingdom of Jerusalem, he was the protector of the Kingdom of Armenia, the Emir of Tunis was paying him tribute, and his soldiers occupied a portion of the Morea. Finally, at his instance Pope Martin IV had excommunicated the Emperor Palæologus. Then, concluding a treaty which assured him the assistance of the Venetian fleet (3 July, 1281), Charles was organizing a formidable crusade for the conquest of Constantinople, when the revolt of 31 March, 1282, obliged him to direct his arms against Sicily and save the Byzantine Empire.

It was long held on the authority of Giovanni Villani (d. 1348) that this revolt was the result of a plot between Michael Palæologus, Pedro III, and the Sicilian barons, whose active agent was a gentleman of Salerno, Giovanni da Procida. In a famous book, "*La Guerra del Vespero Siciliano*", the first edition of which appeared at Palermo in 1842, the Sicilian patriot Amari endeavoured to show that the insurrection of 1282 was a wholly spontaneous popular movement due to the oppressive administration and fiscal tyranny of Charles of Anjou. The legend of Giovanni da Procida did not appear until the fourteenth century, in works such as the "*Ribellamentu di Sicilia*" (Biblioth. Script. Aragon., I, 241-74), or in a letter of King Robert of Naples (1314). Contemporary historians [Saba Malaspina, Dean of Malta ("*Rerum sicularum historia*", ed. Muratori, "*SS. Rer. Ital.*", VIII, 785-874), who wrote about 1285; Bartolommeo de Neocastro, author of an "*Historia Sicula*" (ed. Muratori, "*SS. Rer. Ital.*", XIII, 1013-1196)] speak only of a popular outbreak of fury consequent upon injuries and annoyances of all kinds inflicted on the people by French barons and the officers of Charles of Anjou. A search of the State archives of Naples and Barcelona has led to the same conclusion.

What is certain is that on 31 March the insurrection broke out, amid cries of "Death to the French", after vexatious searches had been carried on by the command of the Governor of Palermo, who wished to deprive the inhabitants of the right of bearing arms. Within a few weeks the revolt spread over the entire island and more than 8000 French were massacred. The towns of Sicily formed a sort of federal republic and placed themselves under the protection of the Holy See. It was only when Charles of Anjou appeared before Messina with all his troops that the Sicilian nobles called to their aid King Pedro III of Aragon, and the other towns only approved this action when it seemed to them impossible to resist Charles of Anjou.

Amari's theory, though fundamentally correct, is too sweeping. The popular and spontaneous nature of the uprising of 1282 is an indisputable fact, but on the other hand the negotiations between Michael Palæologus and Pedro of Aragon unquestionably took place. In these Giovanni da Procida played a part which it is impossible to define precisely, and possibly certain of the Sicilian nobles were aware of this intrigue. There was at least a coincidence between the coalition against Charles

of Anjou and the popular insurrection of the Sicilian Vespers. The results of this revolt were considerable, as it proved the death blow to all the projects for the domination of the East formed by Charles of Anjou. The crusade against Constantinople did not take place, and Charles of Anjou began the long and fruitless warfare against the House of Aragon, which exhausted his resources without obtaining Sicily. A compromise between the rival dynasties was only effected in 1302.

LOUIS BRÉHIER

Amerigo Vespucci

Amerigo Vespucci

A famous Italian navigator, born at Florence, 9 March, 1451; died at Seville, 22 February, 1512; he was the third son of Ser Nastagio, a notary of Florence, son of Amerigo Vespucci. His mother was Lisabetta, daughter of Ser Giovanni, son of Ser Andrea Mini; her mother was Maria, daughter of Simone, son of Francesco di Filicaia. The date of Vespucci's birth, formerly much discussed, is now definitively established by the books of the Ufficio delle Tratte, preserved in the Reale Archivio di Stato of Florence, where the following passage is found: "Amerigo, son of Ser Nastagio, son of Ser Amerigo Vespucci, on the IX day of March MCCCCLI" (1452, common style). The mother of Amerigo's father was Nanna, daughter of Mestro Michele, of the Onesti of Pescia, and sister of Mestro Michele, the father of Nicolè and of Francesco, who resided in the *magistrato supremo* of the Priors in the Republic of Florence.

Vespucci received his first instruction from his uncle Giorgio Antonio, a Platonic philosopher who was a teacher of the greater part of the Florentine nobility. Amerigo cultivated the study of literature, including that of the Latin language, as is shown by a small autograph codex in the Biblioteca Ricardiana of Florence, entitled "Dettati da mettere in latino" at the end of which there is written the following: "This booklet was written by Amerigo Se Anastagio Vespucci." He also wrote a letter in Latin to his father, dated 19 October, 1476, in which he gives an account of his studies. Possibly Vespucci had relations with Toscanelli, who, as is known, died in 1482, two years after Amerigo left for Spain. Thereafter, Amerigo devoted himself to the study of physics, geometry, astronomy, and cosmography, in which sciences he made rapid progress.

After the death of his father, which occurred about the year 1483, Amerigo, perhaps on account of the unfortunate circumstances of his family, became steward in the house of Lorenzo di Pierfrancesco de' Medici, with various charges that were multiplied in proportion as he acquired the confidence and the affection of the sons of Pierfrancesco, of whose rural and commercial interests he became superintendent, as appears from numerous letters written to him, which have recently been published. From 1478 to 1480 he was attached to the embassy at Paris, under his relative Guido Antonio Vespucci, ambassador of Florence to Louis XI of France. Accordingly, he wrote many reports to the Signoria, which are preserved in the Archivio di Stato at Florence. The sojourn of Vespucci at Paris, and that of Duke Rene of Lorraine at Florence, earlier, explain why Vespucci should have sent to Duke Rene' a copy, in Latin, of the letter of the four voyages, written

in Italian to the *gondolfiere perpetuo* Piero Soderini, and why one of the earliest editions of Vespucci's voyages (the third) should have been made at Paris in 1504. The offices that Vespucci held from the younger branch of the house of Medici explain why the former, between November of 1491 and February of 1492, joined, at Seville, Giannetto di Lorenzo Berardo Berardi, chief of a house, established at that city, which had close financial relations with the younger branch of the Medici, that is, with Lorenzo di Pierfrancesco and his son. Through his intelligence, he became one of the chief agents of that firm, which, later, had a leading part in fitting out the oceanic expeditions that led to the discovery of the New World.

The successful voyages of Christopher Columbus increased Vespucci's desire to take a part in the general European movement to seek a western passage to the Indies. Having obtained three ships from Ferdinand, King of Castille, Vespucci was able to undertake his first voyage. Accordingly, he set sail from Cadiz on 10 May, 1497, sailing toward the Fortunate Islands, and then laying his course towards the west. After twenty-seven or thirty-seven days, on 6 or 10 April, he touched the mainland (Guiana or Brazil?), and was well received by the inhabitants. In this first voyage he may have entered the Gulf of Mexico and coasted along a great portion of the United States, as far as the Gulf of St. Lawrence. Then he returned to Spain, and landed at Cadiz on 15 October, 1498. There is no other relation of this first voyage than that contained in the first letter of Amerigo Vespucci concerning the islands newly found in his four voyages, addressed to Piero Soderini, *Gonfaloniere* of Florence.

On 16 May, 1499, Vespucci sailed from Cadiz on his second voyage, with Alonzo de Ojeda and Juan de la Cosa. He directed his course to Cape Verde, crossed the Equator, and saw land, on the coast of Brazil, at 4° or 5° S., possibly near Aracati. From there, he coasted along the Guianas and the continent, from the Gulf of Paria to Maracaibo and Cape de la Vela; he discovered Cape St. Augustine and the River Amazon, and made notable observations of the sea currents, of the Southern Cross and other southern constellations. He returned to Spain in September, 1500. There two expeditions were undertaken in the service of Spain; the third and the fourth, in that of Portugal. In consequence of the long fatigues of his second voyage, Vespucci was taken ill of the quartan ague. When his health was re-established, he wrote an account of his voyage to Lorenzo di Pierfrancesco de' Medici.

On 14 May, 1501, he sailed from Lisbon to Cape Verde, and thence westward, until, on 1 January, 1502, he came to a gulf at 13° S., to which he gave the name of Bahia de Todos Santos, and upon the shores of which the city of Bahia now stands. From there he coasted along South America, as far as the Plata. On his return, he discovered the island of South Georgia, at 54° S., and 1200 miles east of Tierra del Fuego. He arrived at Lisbon on 7 September, 1502. On his fourth voyage, he sailed with Gonzal Coelho from Lisbon, on 10 June, 1503, touched land at the Cape Verde Islands, and bent his course towards the Bay of All Saints. At Cape Frio, having found great quantities of brazil-wood, he established an agency, exactly on the Tropic of Capricorn. Thereafter, he coasted along the continent, nearly to the Rio de la Plata, and then returned to Lisbon, where he arrived on 18 June, 1504. Vespucci made a fifth voyage with Juan de la Cosa, between May and

December, 1505; they visited the Gulf of Darien, and sailed 200 miles up the Atrato River. During that voyage, they collected gold and pearls, and received information of there being a great abundance of those substances in that region. This voyage was repeated by the two navigators in 1507. Of these two expeditions, however, there is no special account by Vespucci. It should be added that, in 1506, Vespucci was busy in Spain, fitting out the expedition of Pinzón, which was abandoned in March, 1507.

The facts regarding the voyages of Vespucci are accepted as given in the above narrative by the majority of the authoritative biographers of that navigator; but the inexactness of the printed texts, the difficulty of identifying the names of places, used by Vespucci, with the modern ones, and the error of attributing sincerity to all assertions contained in official documents, especially in those relating to legal proceedings, have given rise to enormous confusion in all that relates to the voyages of Amerigo Vespucci, of which the chief base for future criticism will be the investigation of the apocryphal codices of the narratives of the voyages of Vespucci, written at the time when the authentic ones appeared. Vespucci was certainly held in high esteem in Spain, where he established himself after his voyages in the service of Portugal. In 1505, by a royal decree of 14 April of that year, he had received Spanish naturalization, and a decree of 6 August, 1508, named him *piloto mayor de España*, a title corresponding to the modern one of head of the admiralty, and which was borne by Vespucci until his death.

Amerigo Vespucci married Maria Cerezo, apparently in 1505. The only precise information concerning her is furnished by the royal decree of 28 March, 1512, according her a pension, on account of the satisfaction given by her husband as *piloto mayor*, which pension was confirmed by the decree of 16 November, 1523. On the other hand, a decree of 26 December, 1524, grants the remainder of her pension to her sister Catalina Cerezo; which proves that Maria died between the two latter dates, and that she left no children. With Amerigo Vespucci, however, was the son of his brother Antonio, Giovanni, who was born on 6 March, 1486, and who was named *piloto mayor* in 1512, upon the death of his predecessor and uncle, Amerigo. For information concerning him, see HARRISSE, "The Discovery of North America" (1892), 744-5.

It is impossible to determine, here, the place of Amerigo Vespucci in the history of the discovery of the New World, in relation to those of Christopher Columbus, of Sebastian Cabot, and of the brothers Pinzón. First it is necessary to distinguish between the geographical, and the social, discovery of America. The former is due to the Icelanders, who established, on the eastern coast of Greenland, a colony that was maintained from the tenth to the fifteenth century, of the history of which a very good compendium is given by Fischer in "The Discoveries of the Norsemen in America" (London, 1902); in connection with this work there should be consulted the collection of documents concerning the relations of the Church of Rome with Greenland during these centuries, published by order of Leo XIII.

The discovery of America was due to the failure of the crusade against the Turks which was attempted by Pius II, and the success of which was frustrated by the rivalry and corruption of the states of Europe at that time. Europe then felt the necessity of going to the East by another way, of

seeking the East by way of the West, a motto that became the flag of the navigators of that age. Paolo Toscanelli, whose sincerity of religious sentiment was not less than his great merit of scientific attainment (see the present writer's work on Toscanelli, I, 1894, in the "Raccolta Colombiana", part V), foresaw, before Portugal foresaw it, that the time had come for that country to take the place of Italy as the intermediary of the commerce between Europe and Asia, and therefore, as the starting-point of navigators and adventurers, seduced by the desire of being the executors of the great emprise. Columbus was the first to reach land to the west--one of the islands of the Bahamas--on 12 October, 1492, convinced that he had reached one of the islands of eastern Asia. He was followed by Vespucci, Cabot, and many others, each proposing to himself to reach the land of spices, that is, India.

We may not, here, enter into the very intricate question of which, of the three navigators named, was the first to tread the mainland of the New World. For that, it would be necessary to have before us the correct texts of all the fundamental documents concerning those navigators. As regards Columbus, the "Raccolta Colombiana", published by the Italian Government on the occasion of the fourth centenary of the discovery of America, is an exhaustive document. Very important, for all the history of the discovery of America, are the collection of Navarrete, the books and documents published by Harrisse, the Duchess of Alba, and many others. But as regards Vespucci, there are, at Florence, the apocryphal synchronous copies of all the accounts of his voyages, except the text that was used for the publication of the "Mundus novus", of which accounts, as will be seen further on, a correct edition is lacking.

The first editions of the documents relating to the voyages of Vespucci may be classified as follows:

A. Parisian text.-- A. "Mundus novus" (third voyage), 1st ed., 1503 or 1504. B. Florentine texts-- Ba. Letter of the four voyages in the years 1497-98, 1499-1500, 1501-2, 1503-4; 1st ed., 1507; Bb. Letter published by Baldini in 1745, relating to the second voyage; Bc. Letter published by Bartolozzi in 1789, relating to the third voyage; Bd. Letter published by Baldelli Boni in 1827, relating to the third voyage. C. Venetian texts:- Ca. Letter of Girolamo Vianello to the Signoria of Venice, dated 23 December, 1506, relating to a fifth voyage, published for the first time by Humboldt, in 1839. Cb. Letter of Francesco Corner to the Signoria of Venice, dated 19 June, 1508, relating to a sixth voyage, published for the first time by Harrisee, in 1892.

The principal question turns, at once, upon the authenticity of the voyage and upon that of the publications A, Ba, Bb, Bc, Bd, Ca, and Cb. In general, a very erroneous confusion is made between two points: nearly every one admits the authenticity of the publications A and Ba, but many reject the authenticity of the first voyage, made by Vespucci in the years 1497 and 1498, and described in the publication Ba. Some, as Varuhagen and others, deny the authenticity of the texts Bb, Bc, and Bd, while others hold the contrary opinion with regard to one or another, or to all three, of these texts. Nearly all regard as inadmissible the fifth and the sixth voyages, narrated in the texts Ca and Cb.

For the various editions of the "Mundus novus", the publication of Sarnow and of Trubenbach is exhaustive, but there is no critical edition of any of the other texts, which were printed with many errors; while, as has been said, the apocryphal, though contemporary, texts of all of them are preserved at Florence. The present writer proposed the preparation of a critical edition of this kind, and the proposition was approved by three National Geographical Congresses of Italy, held at Florence (1898), at Milan (1901), and at Naples (1904), respectively, and by the International Congress of Americanists, held at Stuttgart, in August, 1904. Recently, a commission has been created at Florence, for the execution of that purpose, under the presidency of the Marchese Filippo Corsini, president of the Society of Geographical and Colonial Study resident at Florence; of this commission, Professor Attilo Mori, of the Military Geographical Institute, and the writer of this article are members. Until the publication in question appears, it will be useless to discuss the genuineness of the voyages of Vespucci, basing such discussion upon the incorrect texts that are now available--exception being made of the "Mundus novus", cited above. Those seeking further details in regard to these codices may consult HARRISSE, "Biblioteca americana vetustissima" (1868), and "Additions" (1872). All the works of that author, whether bibliographical or historical, are the basis for any work on the discovery of America.

It is well known today that Vespucci was in no way responsible for the fact that his name, and not that of Columbus, was given to the new World, and therefore, that he certainly does not deserve the charge of theft that has been made against him by many; among them, the famous American publicist, Emerson, who was led into error by partisan writers. On the other hand, the affectionate correspondence between the two great navigators would suffice to disprove all unworthy accusations. The charge received some support from the efforts of a considerable portion of the clergy, throughout the world, to obtain the canonization of Columbus, which, however, was unsuccessful, when the merits of the case were examined, by order of Leo XIII, on the occasion of the fourth centenary of the discovery of America. At that time, the general outcry against Amerigo Vespucci was so great that the famous American statesman Blaine, upon the occasion of the exposition at Chicago, published a book under the title of "Columbus and Columbia," in order that it might not be contaminated by the unholy name of Vespucci.

It may be remarked that, at the time of the discovery of America, as is now clearly proven, the narratives of the voyages of Vespucci were more widely disseminated, by far, than were those of the voyages of Columbus, and that Florence was the chief centre for the diffusion of news on the discovery of the New World. To the close relations that existed between Gianfrancesco Pico, Duke della Mirandola, and Florence, and between Gian Francesco and the learned German, Matthew Ringmann, who, in 1504, edited one of the most important editions of the "Mundus novus", under the title of "De ora antartica per regem Portugalliae pridem inventa", and to the close relations between Ringmann and the geographer Martin Waldseemuller (Hylacomilus), is due the fact that when, in 1507, Waldseemuller published the celebrated work "Cosmographiae introductio", at Saint-Dié, in Lorraine, he gave the name of America to the New World, arguing that, since the three continents then known, Europe, Asia, and Africa, had names of women, it was proper to give

the newly-discovered continent also the name of a woman, taking it from the baptismal name of the discoverer of the new continent, Vespucci. Many attempts were made to name the New World Columbia, as justice seemed to demand, but all such efforts failed. The writer has tried to clear up these points and to prove the honesty of Vespucci; and his efforts have received the approbation of the Numismatic and Archaeological Society of New York; for, the latter, having resolved to strike, each year, a medal commemorative of some benefactor of America, decided that the first of these medals should be coined in honour of Amerigo Vespucci, and requested the writer to propose the best portrait of the great navigator for reproduction. The Society accepted the writer's suggestion and gave the preference to the portrait of the Galleria degli Uffizi of Florence, which is generally considered to be the most genuine, but thought that they should take into account the great map of Waldseemuller, of 1507, on which there is a portrait of Amerigo Vespucci; and therefore, the medal was struck with the two portraits, one on either side.

In the following bibliography, we have deemed it useless to cite the general works upon America, and upon its discovery, which, although not concerning Vespucci specially, refer to him, as are those of ASENSIO, FISKE, GAFFAREL, HERRERA, HUGUES, HUMBOLDT, IRVING, PAYNE, ROBERTSON, ROSELLY DE LORGUES, TIRABOSCHI, WINDSOR, etc., for which the reader is referred to the articles AMERICA and COLUMBUS; we have, on the contrary, limited our citations to the works that have brought new facts to light, and are not, therefore, expositions of the opinions of their authors. For the bibliography of the various editions of the voyages of Vespucci and of the authors who wrote concerning them between the years 1492 and 1551, see HARRISSE, *Biblioteca americana veuistissima* (New York, 1866); IDEM, *Additions* (Paris, 1872); and for the same, but, to the present day, see FUMAGALLI, *Bibliographia di Amerigo Vespucci in BANDINI, Vita di Amerigo Vespucci illustrata e commentata da Gustavo Uzielli* (Florence, 1898), 104-28. Some may find it strange that certain authors are not cited, as, for example, Hugues, who has written numerous very learned works on Vespucci, totally devoid, however, of criticism; they are all cited in the *Bibliografia* of Fumagalli. Hugues and Varnhagen regard as apocryphal some narratives of voyages of Vespucci that are regarded by other writers as being the most authentic; and they base this view on the fact that the narratives in question were published two or three centuries after the death of Vespucci. By that reasoning, one should declare the commentary of Pietro Alighieri on the "Divine Comedy" to be apocryphal, for it was published five centuries after Dante's death. Hugues and Berchet, however, in accordance with that reasoning, have omitted some of the accounts of the voyages of Vespucci, contained in the "Raccolta Colombiana", part V, vol. II, and, like all students of Vespucci, except Sarnow and Trubenbach, they have entirely omitted any critical study of the texts of the narratives, accepting the current publications as they stand, without taking heed to compare them with the codices. RAMUSIO, *Navigazioni et viaggi*, I (Venice, 1550-59); BANDINI, *Vita e lettere di Amerigo Vespucci* (Florence, 1745); BARTOLOZZI, *Ricerche storico-critiche circa alle scoperte di Amerigo Vespucci* (Florence, 1789); CANOVAI, *Viaggi d'Amerigo Vespucci* (Florence, 1817); BALDELLI-BONI, *Il milione*, I (Florence, 1827), p. liii-lix; NAVARRETE, *Coleccion de los viages y descubrimientos*, III (Madrid, 1825-37); HUMBOLDT, *Examen critique*

de l'histoire du nouveau continent, XI (Paris, 1836-39), 157; SANTAREM, Recherches sur Americ Vespuce et ses voyages (Paris, 1842); AVEZAC, Les voyaes d'Americ Vespuce au compte de l'Espagne in Bulletin de la societe de geographie de Paris (1858); VARNHAGEN, Amerigo Vespucci, Son caractere, ses ecrits (meme les moins authentiques), sa vie et ses navigations (Lima, 1865); HARRISSE, Bibliotheca americana vetustissima. Additions (Paris, 1872), p. xxviii; IDEM, The Discovery of North America (London, 1892); TOSCANELLI, Notes et documents concernant les rapports entre l'Italie et l'Amerique (Florence, 1893); MARKHAM, Vespucci. The Letters and other Documents illustrative of his Career (London, 1894); HARRISSE, Americus Vespuccius (London, 1895); THATCHER, The Continent of America: its Discovery and its Baptism (New York, 1896); UZIELLI, Amerigo Vespucci davanti la critica storica in Atti del Congresso Geografico Italiano (Florence, 1898); BANDINI, Vita di Amerigo Vespucci, illustrata e commentata da Gustavo Uzielli (Florence, 1898); MASETTI BENCINI AND HOWARD SMITH, La vita di Amerigo Vespucci in Firenze (Florence, 1903); SARNOW AND TRUBENBACH, Mundus novus (Strasburg, 1903); FISCHER AND WIESER, The oldest Map with the name of America of the year 1507 and the Carta Marina of the year 1516 by M. Waldseemuller (Ilacomilus) (Innsbruck, 1903); Proceedings and Papers of the American Numismatic and Archaeological Society of New York City, 46th annual meeting (1904), 8-15.

GUSTAVO UZIELLI

Vestibule (Porch)

Vestibule (Porch)

A hall projecting in front of the façade of a church, found from the fifth century both in the East and the West. In western Europe it was generally a narrow open ante-chamber with sloping roof and closed on the smaller sides, which were probably, when connected with the main buildings, provided with apses, as in the baptistery of San Giovanni at Rome. In the East, especially in Syria, this ante-chamber was given a fine façade, and was flanked by two towers. It was also frequently closed in front in Oriental countries and entered by one or three doors, and often had two stories, as in the churches of Turmanin and Suweda. The purpose of the vestibule, at least in western Europe, was not to provide a resting-place for penitents, but to deaden the noise outside. In medieval times Italy held firmly to the simple open chamber with sloping roof. North of the Alps, however, the vestibule developed into a projecting structure united with the main building, recalling the Syrian churches. The method of construction shown in the palace church of Charlemagne at Aachen, an ante-structure of several stories between the two western round towers, was adopted in the early Romanesque period, especially by the Cluniac monks. The Romanesque architecture also made use of a covered ante-structure placed before the west front. This style was first used on a large scale in the cathedral at Speyer, where the vestibule has three stories. The churches in which the main entrance was on the side aisle had a vestibule or portico (called the "Paradise") on the same aisle, as in the cathedrals at Münster and Paderborn. The name "Paradise", originally given to the

atrium, was given later to the ante-chamber. In Gothic architecture the vestibule was reduced in size, and became an ornamental baldachino-like structure, which also served as an entrance, as in the cathedral at Freiburg in Baden. The name "Paradise" for the vestibule explains the festival, popular among the common people and called the Expulsion of Adam, held at Halberstadt as early as 1391, and which took place in the vestibule. In the Middle Ages alms were distributed and offerings made in the vestibule. The latter was used at times also for judicial proceedings, and in many such ante-chambers the announcements of the standard weights and measures were posted up, as at Freiburg in Baden the standard weight of bread in 1270, 1317, and 1320.

In Italy the architecture of the Renaissance and of the Rococo style held to the vestibule, which had been made sacred by tradition. Alberti considered its use necessary on all occasions. Even basilicas, as San Giovanni in Lateran and Santa Maria Maggiore, received new porticoes, which in the two churches mentioned were constructed as loggias in two stories. These vestibules were detrimental to both churches, concealing the façades and giving the buildings a somewhat secular appearance. The Carmelite church at Arezzo has a vestibule with columns built by Benedetto da Majano.

BEDA KLEINSCHMIDT

Vestments

Vestments

IN WESTERN EUROPE

By liturgical vestments are meant the vestments that, according to the rules of the Church or from ecclesiastical usage, are to be worn by the clergy in performing the ceremonies of the services of the Church, consequently, above all, at the celebration of the Mass, then in the administration of the sacraments, at blessings, the solemn recitation of the canonical hours, public services of prayer, processions, etc. The liturgical vestments of the Latin Rite are: the amice, alb, cincture, maniple, stole, tunicle, dalmatic, chasuble, surplice, cope, sandals, stockings (or buskins), gloves, mitre, pallium, succinctorium, and fanon. The pope has the most elaborate and the greatest number of liturgical vestments, for all the vestments mentioned belong to him. The vestments of the priest are the amice, alb, cincture, maniple, stole, chasuble--vestments which the priest wears at the celebration of the Mass--then, in addition, the surplice and the cope. Besides the vestments worn by the priest the liturgical dress of the bishop includes also the tunic, dalmatic, sandals, buskins, gloves, and mitre; those of the archbishop include further the pallium. The subdiaconal vestments consist of the amice, alb, cincture, maniple, and dalmatic; those of the deacon of amice, alb, cincture, maniple, stole, and dalmatic. Finally, the lower clergy wear the surplice as a liturgical vestment, a vestment that belongs to all the grades of ordination.

IN THE EAST

There are also liturgical vestments in the Oriental Rites. They are fewer than the sacerdotal vestments of western Europe and vary from these also as regards form, nature, and use. Nevertheless the sacerdotal vestments of the East and West agree in essentials. The liturgical vestments worn in all Oriental Rites as well as in western Europe are: the under-tunic (alb), the cincture, stole, chasuble, and omophorion (pallium). In the East the chasuble is still bell-shaped, but, according to present usage, is slit in front in some rites. It is customary only in a few of the Eastern Rites to use the humeral veil and the mitre as in the Latin Rite, still, some, instead of a mitre, have a hat like the tiara, a covering like a turban, or, lastly, a cowl or veil. the vestments peculiar to the Oriental Rites are: the sakkos, the outer vestment of the Greek bishop, which is like a dalmatic; the epigonation of the Greeks and Armenians, a rhombic-shaped ornament of bishops and prelates that hangs on the right side to below the knee, hence the name; lastly the epimanikia, cuffs, or gloves with the part for the hand cut off, customary in all Oriental Rites. Pontifical vestments are the liturgical head-covering, excepting in the Armenian Rite where the priest also wears such a covering for the head, the sakkos, the omophorion, the epigonation, and the epimanikia.

Liturgical Vestments in a more General Sense

Besides the vestments worn by the clergy there are various other articles of clothing worn by ecclesiastics which are not, it is true, designated as *vestes sacrae*, but which, nevertheless, in a general sense can be included among the liturgical vestments. Thus, in the Latin Rite, there are the *cappa magna*, the *amess*, the *mozetta*, the *rochet*, the *biretta*; in the Greek Rite the *mandyas* (mantle) of the bishops, and the *biretta*-like covering for the head called *kamelaukion*, which, when worn by monks or bishops, has a veil called *exokamelaukion*.

Origin

The liturgical vestments have by no means remained the same from the founding of the Church until the present day. There is as great a difference between the vestments worn at the Holy Sacrifice in the pre-Constantinian period, and even in the following centuries, and those now customary at the services of the Church, as between the rite of the early Church and that of modern times. Just as the ceremonies that today surround the celebration of the Sacred Mysteries are the product of a long development, so are also the present liturgical vestments. It was sought at an earlier era to derive the Christian priestly dress from the vestments of the Jewish religion. Yet even a superficial comparison of the liturgical vestments of the New Covenant with those of the Old should have sufficed to show the error of such an opinion. The Christian vestments did not originate in the priestly dress of the Old Testament, they have, rather, developed from the secular dress of the Graeco-Roman world. The influence of the dress of the Mosaic cult upon the form of the Christian priestly dress can only be conceded in this sense that the recollection of it must have made the use of liturgical garments specially reserved for the services of the Church appear not only entirely in keeping with the dignity of the mysteries of religion, but even necessary. This influence, however, was clearly general in character, not such as to make the Jewish priestly dress the prototype of the Christian.

Development

Four main periods may be distinguished in the development of the Christian priestly dress. The first embraces the era before Constantine. In that period the priestly dress did not yet differ from the secular costume in form and ornament. The dress of daily life was worn at the offices of the Church. In times of peace and under normal conditions better garments were probably used, and these were especially reserved for the celebration of the Sacred Mysteries. It would undoubtedly have scandalized the faithful if they had seen the dusty, dirty, or worn garments. The opinion which St. Jerome expresses--"The Divine religion has one dress in the service of sacred things, another in ordinary intercourse and life"--is certainly true also for the pre-Constantinian period, which it is hardly permitted to regard as a period of liturgical barbarism. It is even possible, though not demonstrated, that, as early as the close of the pre-Constantinian period, liturgical insignia came into use among the bishops and deacons, as the orarion, or stole, and the omophorion or pallium.

The second period embraces the time from about the fourth to the ninth century. It is the most important epoch in the history of liturgical vestments, the epoch in which not merely a priestly dress in a special sense was created, but one which at the same time determined the chief vestments of the present liturgical dress. The process of development which was completed in this period includes five essential elements: definitive separation of the vestments worn at the liturgical offices from all non-liturgical clothing, and especially from that used in secular life; separation and definitive settlement of certain articles of dress; introduction of the *sacrales distinctiva*; employment of the vestments definitively assigned for use at the Divine offices with retention of the ordinary clothing under these vestments; lastly, introduction of a special blessing for the vestments intended for liturgical use. It cannot be decided positively how far this development was consummated by means of mere custom, and how far by positive ecclesiastical legislation. However, it may be taken as certain that the growth of a priestly dress did not proceed everywhere at an equal pace, and it is very probable that this development was completed earlier and more rapidly in the East than in Western Europe, and that the Orient was the prototype for Western Europe, at least with regard to certain garments (stole and pallium). It was of much importance for the forming of a special priestly costume differing from the garments ordinarily worn, that the *poenula* (cloak or mantle) and the long tunic, which came into universal use in the third century and were also worn in the offices of the Church, were gradually replaced in daily life, from about the sixth century, by the shorter tunic and the more convenient open mantle. The Church did not join in this return to the former fashion, but retained the existing costume, which was more suitable to the dignity of the Divine offices; this fact in itself was the beginning of a rubrically distinct priestly dress. As regards the influence of Rome upon the development of a liturgical costume in other parts of Western Europe, such influence cannot have been of much importance outside of Italy before the eighth century. The case, however, was different in the eighth century, and as early as the ninth century Roman custom was authoritative nearly everywhere in the West. The great simplicity of the liturgical dress in the pre-Carolingian era is very striking. The dignified shape with many folds that is constantly met in the sculpture and pictures of that era did not in fact require decoration, which at that time was limited almost exclusively to the *clavi*, the red ornamental trimming of the dalmatic.

The third period, extending from the ninth to the thirteenth century, completed the development of the priestly vestments in Western Europe. It ceased to be customary for the acolytes to wear the chasuble, stole, and maniple. The tunic became the customary vestment of the subdeacons; the chasuble was the vestment exclusively worn at the celebration of the Mass, as the pluvial, the liturgical caps, took its place at the other functions. Another, and new vestment is the surplice, which, appearing in the course of the eleventh century, began in steadily increasing measure to replace the alb. In the third period, above all, the pontifical dress received its definitive form. This was the natural result of the enormous advance in the secular importance of the bishops and of their position in public life, which occurred in the Carolingian era. Vestments such as sandals and stockings became exclusively episcopal ornaments. New pontifical vestments were the gloves, the succinctorium, and the mitre, to which were added among the German bishops the rational, an imitation of the pallium. When Amalarius wrote his treatise, "De officiis ecclesiasticis" at the beginning of the ninth century, eleven garments were included among liturgical vestments: amice, alb, cingulum, maniple, stole, tunic, dalmatic, chasuble, sandals, pontifical stockings, and the pallium. In the time of Innocent III the liturgical vestments numbered seventeen, the fanon, that is the papal amice, not being included among these. Protestants have claimed that the development of the priestly dress in the third period was due to the formulation of the dogma of Transubstantiation. However, this is entirely incorrect. As early as about 800, therefore, before the discussion concerning the Eucharist, the liturgical dress was complete in all its essential parts. The introduction of the pluvial, or cope, and the surplice arose from the desire to be more comfortable; but the development of the pontifical costume was based, as has been said, upon the important secular position which the bishops enjoyed from the Carolingian era, which naturally brought about a corresponding enrichment of the pontifical dress. The doctrine of Transubstantiation exerted no influence upon the development of the liturgical vestments.

In the Greek Rite--the development of the liturgical dress in the other Oriental Rites cannot be traced in this period--only the pontifical dress was enriched. The new pontifical vestments were: the sakkos, still a patriarchal vestment; the epimanikien; the epigonation, in so far as this vestment had not already been introduced before the ninth century; the epigonation first had the form of a handkerchief and was called enchirion (hand-cloth, handkerchief), it was not named epigonation until the twelfth century.

In the fourth period, from the thirteenth century to the present time, the history of the liturgical vestments is almost entirely the history of their rubrical evolution, their adornment with embroidery and ornamental trimmings, and the nature of the material from which they are made. For the various particulars the reader is referred to what is said in the articles devoted to the various vestments. In general the tendency in the fourth period has been towards greater richness of material and ornamentation, but, at the same time, towards greater convenience, therefore, a constantly increasing shortening and fitting to the figure of the vestments, naturally impairing the form and aesthetic effect of the vestments. The mitre alone has been permitted to grow into a tower disproportionate in shape. Taking everything together, the development which liturgical vestments have experienced

since the thirteenth century, and more especially since the sixteenth century, hardly appears to be a matter of satisfaction, notwithstanding all the richness and costliness of ornamentation, but rather a lamentable disfigurement caused by the taste of the time.

In the East there has been little or no development in the fourth period. The one vestment which has been added to the liturgical dress of the Greek Rite is the episcopal mitre.

Liturgical Vestments and Protestantism

As is known, all denominations of Protestantism rejected the doctrine of the sacrifice of the Mass and of the priesthood. It would therefore have been logical if all denominations had done away with liturgical vestments. For even though they are not in themselves essential to the Sacrifice of the Mass, being only something external, yet by their entire history they are connected most intimately with it. Of all the Protestant denominations logical action was taken only by the Reformed Churches (Calvinist and Zwinglian), which did away entirely with the Mass and the Mass vestments, and substituted for these vestments in the church service a dress taken from secular life. On the other hand, the Lutherans did not show themselves so logical. It is true that, in agreement with their rejection of celibacy and the degrees of Holy orders, they rejected the cincture, the symbol of chastity, as well as the maniple and stole, the insignia of the higher orders, but they retained the alb or surplice and the chasuble for the celebration of Communion; and this was the case in Germany until the eighteenth century; in isolated cases the surplice is worn there even now; it is worn also in Scandinavia, where the bishops retained the cope, and in Denmark up to the present time. In England the first edition of the Book of Common Prayer in 1549 still permitted the surplice, alb, chasuble, cappa, and tunic; three years later, however on account of the greatly increased strength of Calvinism, the second edition of the Prayer Book only allowed the rochet and surplice. It is true that the third edition, of 1559, issued during the reign of Elizabeth, restored the force of the regulations of the first edition, but only in theory. In practice the regulations of the second edition prevailed. Further, the attempt of the bishops at the Convocation of Canterbury to save at least the cappa and surplice had no permanent success on account of the domination of Puritanical opinions. Not even the surplice, the minimum of liturgical dress, remained in universal use. A movement for the revival of the old liturgical vestments began in England with the appearance of Ritualism. Although the ecclesiastical authorities fought the revival with determination, yet it has continually advanced until now there are at least 2000 Anglican churches where the old liturgical vestments have been reintroduced.

Blessing of the Liturgical Vestments

Not all the vestes sacrae necessarily require a blessing. This is strictly commanded only for the amice, alb, maniple, stole, chasuble, and perhaps also the cincture. The blessing of the liturgical vestments is a prerogative of the bishop; others can bless them only when specially empowered to do so. Vestments that have been blessed lose the blessing when the form is essentially altered, when they are much worn, and are therefore unworthy of the holy service, finally, when very greatly repaired. On account of the lack of positive information, it cannot be even approximately settled as to the time at which the blessing of liturgical vestments was introduced. The first certain statements

concerning the blessing of liturgical vestments are made by the pseudo-Isidore and Benedict Levita, both belonging to the middle of the ninth century, but the oldest known formula of blessing, which is in the Pontifical of Reims, belongs to the end of the ninth century, for the benedictory prayers the Pontifical of Egbert of York are an interpolation of the tenth century. From the twelfth century and especially in the later Middle Ages, the forms of blessing were very numerous. The blessing of the vestments was probably always the prerogative of the bishop, though this is not expressly mentioned before Gilbert of Limerick in the early part of the twelfth century. In the Oriental Rites the blessing of the liturgical vestments is also customary; it is given by the bishop, but in case of necessity the priest can perform the ceremony. The benedictory prayers in the Greek Rite are very similar to those in the Latin Rite. It is perhaps even more difficult to determine the time when the blessing of the vestments in the Oriental Rites began than to settle its date in Western Europe.

Symbolism

It has been said at times that mystical considerations were the cause of the introduction of liturgical vestments and consequently of their existence. But this is absolutely wrong. These mystical considerations did not create the priestly dress; they are, rather, the result of the appearance of these vestments and of the defining of the individual ones. The omophorion and orarion were the first to receive symbolical interpretation, which was given by Isidore of Pelusium (died about 440); the earliest symbolism of the entire priestly dress of the Greek Rite is found in the *Historia ekklesiastike*, probably of the eighth century. This work was the basis of the symbolical interpretation of the sacred vestments among the Greek liturgists until the late Middle Ages. In Western Europe the first attempt to give a symbolical meaning to the vestments of the Mass is found in what is called the Gallican explanation of the Mass. However, it was not until the ninth century that a more complete symbolism of the priestly dress was attempted in Gaul. The mystical interpretation became from this time a permanent theme for the writers on the liturgy, both in the Middle Ages and in modern times. In the symbolical interpretation of the sacred vestments, Amalarius of Metz became especially important. Even in his lifetime Amalarius aroused much opposition on account of his symbolism, which, it must be acknowledged, was not seldom peculiar, labored, and arbitrary. In the end, however, his mystical interpretations, which in reality contained many beautiful and edifying thoughts were greatly admired and were a model for liturgists until far into the thirteenth century. Various traces of the influence of Amalarius's interpretations are evident even in the late Middle Ages. A symbolism, however, appeared even as early as the ninth century in certain liturgical prayers, the prayers that are spoken when putting on the sacred vestments, and the words pronounced by the bishop at an ordination, when he gives the garments to the newly ordained. It should, however, be said that up to the twelfth century these prayers appear only occasionally in the Sacramentaries, Missals, and Pontificals, but after this they soon appeared more frequently in those books. It is a striking fact that the symbolism of these prayers often pursues its own course without regard to the interpretations of the liturgists. It was not until towards the end of the Middle Ages that a greater agreement arose between the symbolism of the liturgists and what might be called the official

symbolism of the Church expressed in the prayers in question; this official symbolism, moreover, differed greatly at different periods and in different places.

Characterization of the Symbolism

This is not the place to enter into the details of the many interpretations which the various liturgical vestments have received and which, notwithstanding the chaff, contain much pure wheat. (For such detailed presentation cf. Braun, "Geschichte der liturg. Gewandung", pp. 701 sqq.) It must suffice here to give them a general characterization. The symbolism customary among the liturgists from the ninth to the eleventh century is a *moral* symbolism, that is the liturgical vestments were made to symbolize the official and priestly virtues of their wearers. In the twelfth century there were added to this the *typico-dogmatic* symbolism, in which the vestments were expounded in reference to Christ Whose representative is the priest, and soon they symbolized Christ's Incarnation, the two Natures of Christ, the unity and relation to each other of these natures before long the virtues of Christ, His teaching, and soon, lately, His relations to the Church. Curious to say the vestments were not made to symbolize Christ's Passion and Death. This last symbolism, which may be called typico-representative, first appeared in the course of the thirteenth century, and quickly became very popular, because it was the most easily expressed and consequently most easily understood by the people. The people interpreted the vestments as symbolizing the instruments of Christ's Passion, as the cloth with which Christ's head was covered (amice), the robe put on him in mockery (alb), the fetters (cincture, maniple), etc., and the priest who was clothed with these was regarded as typifying the suffering Saviour. A fourth method of interpretation may be called the *allegorical*. This method of interpretation looks upon the priest at the altar as the warrior of God, who fights with the foe of the God of the people, and regards his vestments as his weapons in this spiritual struggle. The first traces of this symbolism are found in the ninth and tenth centuries, but are not seen in a developed form until the twelfth century. However this last method of symbolism was never very widespread. As early as the Middle Ages the moral symbolism was customary in the putting on of the vestments, and in the prayers of the ordination service. The typical reference to Christ was always foreign to them.

Up to the fifteenth century it was customary among the Greek liturgists to make use, almost exclusively, of typical symbolism. It was not until later that they employed moral symbolism; this symbolism apparently arose while putting on the vestments, a custom of prayer that had in the meantime come into use. In these prayers the liturgical vestments symbolize the virtues of their wearers.

JOSEPH BRAUN

Veszprem

Veszprém

(VESPRIMIENSIS.)

Diocese in Hungary, suffragan of Gran, one of the sees founded about 1009 by King St. Stephen, or perhaps by Queen Gisela, his wife. Later records make no mention of a foundation by the queen. But the see owes much to the queen who caused the beautiful cathedral with its four spires to be built; it was completely destroyed by fire in 1276. Queen Gisela gave rich donations to the church, especially gold and silver plate. She also selected Veszprém as her place of burial, and her example was followed by several of the succeeding queens of Hungary. From the earliest times the bishop possessed the right of crowning the queen, and was *ex officio*, her chancellor. The bishopric was one of the richest episcopates in Hungary during the fourteenth century. A celebrated school offered facilities for theological studies as well as for the study of law. When, in 1276, the town was destroyed in the conflicts between the lords of Németsújvár and those of Csák, the cathedral, the school, and the library were demolished. After the battle of Mohács (1526) the Turks destroyed the possessions of the see; shortly afterwards, the Reformation seriously affected ecclesiastical life. The battles, which were fought against the Turks in this part of Hungary, greatly injured the see; the ecclesiastical and religious life was ruined in spite of the endeavours of prominent bishops like Francis Forgách, George Lippay, George Szelepesenyi, and George Széchenyi. It was not until 1686, after the fall of Turkish suzerainty in Hungary, and the conquest of Buda, that better times came. The work of reconstruction began in 1711 and was completed in the reigns of Charles III and Maria Theresa. In 1777 several districts of the diocese were taken away and incorporated in the newly- established sees of Stuhlweissenburg and of Steinamanger. Of the later bishops of Veszprém the following are particularly notable: Martin Biró, one of the most zealous opponents of Protestantism; Joseph Kopacsy (1825-41), afterwards Archbishop of Gran; John Ranolder (1848-75), prominent in public instruction and the education of girls. Since 1888 Baron Charles Horning is bishop. The diocese consists of the "Komitate" of Veszprém, Zala, and Somogy. It is divided into 5 archdeaneries and vice-archdeaneries. It has 9 active and 19 titular abbeys; 5 active and 12 titular provostships; 226 parishes; 18 monasteries and 23 convents of women with 140 and 228 inmates, respectively. The chapter consists of 12 active and of 6 titular canons; the number of clergy is 358. The diocese has a Catholic population of about 613,477.

A. ALDASY

The Royal Veto

The Royal Veto

(In the appointment of Bishops in Ireland and England.)

Although the penal laws enacted against the Catholics of Ireland and of England were still on the statute book towards the close of the eighteenth century, they were less strictly administered than before. Several causes helped to bring this about. The Catholics formed the vast majority of the population of Ireland. Their sympathies were thought to be with the French whom England had at that time cause to fear. The penal laws had utterly failed of their purpose, and the Government hoped to reach that purpose by other means. The authority of the bishops and the priests, the influence of both on the people, was great; and the Government thought if it could direct or control the influence of the bishops it would secure the allegiance of the people. It hoped thus to fetter the action of the Catholic Church in Ireland. The Government saw an opportunity when the College of Maynooth was about to be founded. The Irish bishops were asked if they would agree that the president or professors of the proposed college be appointed by Government; if they would consent that the bishops be appointed by the king; and how they would advise the pope if such a proposal about the appointment of bishops were laid before him. The bishops on 17 Feb., 1795, rejected the first and second proposals categorically. To the third they answered that they would advise the people "not to agree to his Majesty's nomination if it could be avoided; in unavoidable, the king to nominate one of three to be recommended by the Provincial bishops".

In connection with the Union, Pitt intended to bring in a Catholic Relief Bill, or at least he so pretended; and he sought for such security of Catholic loyalty as might allay the prejudices which he should have to encounter in England. He commissioned Lord Castlereagh to make such arrangements as would satisfy the king that no priest whose loyalty the king should have reason to suspect would be appointed to an Irish bishopric. Ten bishops, trustees of Maynooth College, met on 17 Jan., 1799, to transact college business. Castlereagh submitted his views to them, reminding them of the suspicion of disloyalty under which the Catholics of Ireland lay since the insurrection of the year before. The ten bishops embodied their reply in certain resolutions, of which this was one: "That in the appointment of the Prelates of the Roman Catholic Religion to vacant sees within the kingdom, such interference of government as may enable it to be satisfied of the loyalty of the person appointed, is just, and ought to be agreed to." And as a way towards that security, they expressed the opinion that the name of the priest chosen to be submitted to the pope might be transmitted to the Government, but that the Government should declare within a month whether there was any cause to suspect his loyalty. They did not leave to the Government to decide the reasonableness of such suspicion, for they said "if government have any proper objection against such candidate". Moreover they laid it down that no security given must in the working out "infringe the discipline of the Roman Catholic Church, or diminish the religious influence which the Prelates

of the Church ought justly to possess over their respective flocks", and that any agreement made "can have no effect without the sanction of the Holy See".

Those were not resolutions of the Irish episcopate, but simply the opinion of ten bishops who had met to transact business of another kind; they were driven against their wish to give an opinion. On 15 June, 1799, Cardinal Borgia, prefect of Propaganda, having heard a report that Dr. Troy, Archbishop of Dublin, was leader of a party which was disposed to compromise the jurisdiction of the Holy See by assenting to some plan about church discipline, wrote to him asking him for the facts. On 17 Aug., 1799, Dr. Troy replied to the cardinal declaring it was quite false that any plan had been arranged, and having given an account of the meeting and resolutions of the Maynooth trustees he adds: "As to the proposal itself, the Prelates were anxious to set aside or elude it; but being unable to do so, they determined to have the rights of the Church secured." In the spring of 1800, Dr. Troy, writing on the same topic to his agent at Rome, Father Concannon, says: "We all wish to remain as we are; and we would so, were it not that too many of the clergy were active in the wicked rebellion, or did not oppose it. If the Prelates had refused to consider the proposal, they would be accused of a design to exercise an influence over the people, independent of government, for seditious purposes. Nothing but the well grounded apprehension of such a charge, though groundless in itself, would have induced the Prelates to consider the proposal in any manner. . . If we had rejected the proposal *in toto* we would be considered as rebels. This is a fact. If we agreed to it without reference to Rome we would be branded as schismatics. We were between Scylla and Charybdis." The opinion thus expressed by those ten bishops in Jan., 1799, was never published by them. It was not meant for publication; the bishops never took official cognizance of it except to discard it. Every pronouncement of the Irish bishops from that time forward rejected absolutely any proposal which would allow the British Government to meddle in appointments to Irish bishoprics.

In 1805 Fox and Lord Grenville presented to Parliament a petition to relieve the Irish Catholics from their civil disabilities. In the debate which followed, Sir John Hippisley spoke in a general way of securities for Catholic loyalty. That was the first time any such proposal was made in public; but nothing definite was proposed. On 25 May, 1808, Grattan, in moving for a parliamentary committee to consider the claims of the Catholics, said he was authorized by them to propose "that no Catholic bishop be appointed without the entire approbation of His Majesty". On 27 May, Lord Grenville presented a petition for the Catholics in the Lords, and, in moving for a committee, proposed an effective veto for the king on the appointment of bishops. What is known as the "veto" thus assumed a definite form as a public question in Ireland and in England. How did the Irish bishops meet it? Dr. Milner tells us in his "Supplementary Memoirs of the English Catholics" that "both in conversation and in correspondence they universally disavowed" what had been said by the promoters of the bill on the subject of the veto; and on 14 September they met and officially protested against the veto. In 1810 Grattan gave notice that he would again bring the Catholic claims before Parliament. On 1 Feb. the English Catholic Board held a meeting in London at which a series of resolutions were carried, including one which involved the veto. It is known as the 5th resolution.

Charles Butler, the leader of the English Catholic vetoists, says of that resolution that it "was with the single exception of the Vicar Apostolic of the Midland District, *agent of the Irish bishops*, unanimously adopted". He was Dr. Milner, whom the Irish bishops had commissioned in 1807 to represent them. The Irish bishops at once condemned the 5th resolution. In May, Grattan's motion for a committee to consider the Catholic petition was defeated. Early in June Lord Donoughmore made a like motion in the House of Lords, which was also defeated. But here was the parting of the ways between the great body of the Irish Catholics led by the bishops, and the English Catholics, with whom were the vicars Apostolic except Milner.

In 1813 Grattan, Canning, and Castlereagh brought in what purported to be a Catholic Relief Bill, with a condition which would practically place the appointment of bishops in the hands of a board of commissioners to be named by the king; it also provided that anyone exercising special functions or receiving documents from the Holy See without the knowledge and approbation of that Board, was to be considered guilty of a misdemeanour. Those uncatholic conditions notwithstanding, an amendment to the Bill was proposed and carried, which would still disable Catholics "to sit and vote in Parliament". Thus the Bill was lost; bigotry had defeated itself. The Irish bishops had declared that they could not accept the Bill "without incurring the guilt of schism". A few days after, at a meeting of the Irish Catholic Board in Dublin, O'Connell proposed that their thanks be sent to the bishops. Some of the laity, who were in agreement with the English Catholics, opposed the vote; but it was carried by a very large majority. The vetoists were disappointed at the defeat of the Bill of 1813. It then occurred to them that if they could get the Holy See in any way to countenance it, the mark of schism attached to it by the Irish bishops would no longer stain it. They therefore represented to Propaganda the great benefit which the Catholic religion would derive from Emancipation, and the harmlessness of the vetoistic conditions on which the Government had offered it. Dr. Milner was represented to the aged secretary of Propaganda, Mgr. Quarantotti, as one whose uncompromising attitude would fasten the chains more painfully on the Catholics; the assent of the vicars Apostolic of England was set forth as evidence that the veto claimed in the Bill did not contain any element of danger for religion; the motive for the opposition in Ireland was made to appear political rather than religious.

In the light of these representations Mgr. Quarantotti, whilst rejecting certain conditions of the Relief Bill as not lawful, declared that securities for the loyalty of bishops which the Government claimed might be allowed. That was the famous Rescript of February, 1814. It did not contain an order, but rather a permission, its words being: "Haec cum ita sint, indulgemus" etc., thus leaving the Catholics free to accept or refuse Emancipation on the condition offered. It raised a storm, however, in Ireland. The Irish bishops deputed Dr. Murray and Dr. Milner to represent to the pope, who had been a prisoner when it was issued, that there was danger in the Rescript such as it was. Pius VII declared that Mgr. Quarantotti "ought not to have written that letter without authority from the Holy See". He appointed a commission to examine the question. In the meantime, Murat marched on Rome, and the pope fled to Genoa. On 26 April, 1815, Cardinal Litta, prefect of Propaganda, in a letter set forth the only conditions under which the Catholics could safely accept

Emancipation. It rejected all arrangements hitherto proposed. The claim of the Government to examine communications between the Catholics and the Holy See "cannot even be taken into consideration". As to the appointment of bishops, it said that quite enough provision had been made for their loyalty in the Catholic oath; but for their greater satisfaction it permits "those to whom it appertains" to present to the king's ministers a list of the candidates they select for bishoprics; it insisted, however, that if those names were presented, the Government must, if it should think any of them "obnoxious or suspected" name him "at once"; moreover, that a sufficient number, from amongst whom the pope would appoint the bishop, must always remain even after the government objection.

The Catholics of Ireland had become so mistrustful of the Government that they still feared danger and they sent deputies to Rome to make known their feelings to the pope. Two replies were sent, one to the bishops and the other to the laity. The pope insisted on the terms of Cardinal Litta's letter, pointing out its reasonableness under the trying circumstances. According to the terms of the letter it would, in fact, be the fault of the ecclesiastics who had the selection of candidates if any undesirable person were left for papal appointment. Cardinal Litta's letter was the last papal document issued on the veto question. The controversy between vetoists and anti-vetoists was, however, kept alive by the passions which it had raised. The Catholic cause grew so hopeless that in December, 1821, O'Connell submitted to Dr. Blake, the Vicar-General of Dublin, a sort of veto plan, to get his opinion on it. Soon after the prospect grew brighter; O'Connell founded the Catholic Association in 1823, through which he won Emancipation six years later for the Catholics of Ireland and England--without a veto.

M. O'RIORDAN

Conrad Vetter

Conrad Vetter

Preacher and polemical writer, b. at Engen in the present Grand Duchy of Baden, 1547; d. at Munich, 11 October, 1622. He entered the priesthood and vigorously championed the Catholic cause in speech and writing. While prefect of music in the collegiate church for nobles, at Hall, he became more thoroughly informed concerning the Society of Jesus. As all he learned of it agreed with his desires, he asked to be received into the Society, and in 1576 entered the novitiate at Munich. After completing his studies he was made academic preacher at Munich, on account of his unusual gift for oratory. He subsequently preached for several years at Ratisbon, where many Lutherans were brought back to the Church by his sermons. At the same time Vetter developed an

extraordinary activity as a writer. It is stated that his writings, large and small, number nearly one hundred; they were chiefly polemical. Unfortunately the tone is ordinarily not very refined. Vetter used all the coarseness of which the Swabian tongue is capable to disparage Luther; so that involuntarily Luther's similar style is recalled. In spite of this, or perhaps exactly for this reason, the little books found a large sale and were often reprinted. Catholic contemporaries sought to defend Vetter's method of writing, among them was Duke Maximilian who defended him against the Count Palatine of Neuburg. He was highly regarded by the Dukes of Bavaria, William V, and Maximilian.

N. SCHEID

Louis Veuillot

Louis Veuillot

Journalist and writer, b. at Boynes, Loiret, 11 Oct., 1813; d. in Paris, 7 April, 1883. He was the son of a poor cooper and at the age of thirteen was obliged to leave the primary schools and earn his living, obtaining a modest position with a Paris attorney, the brother of the then famous poet Casimir Delavigne. The poet's friends frequented the lawyer's studio, even the clerics among them being more or less engaged in literary pursuits, and in these surroundings the youthful Veuillot became conscious of his vocation as a writer. He was encouraged by some well-intentioned friends, some of whom gave him advice and lessons. He devoted every free moment, especially at night, to the study of literature and history. At seventeen he was the editor of a newspaper at Rouen, and shortly after of another at Perigueuz. Attention was soon drawn to his talent as manifested in his style and wit and he was called to enter Parisian journalism, where his successes followed one another rapidly. But he was troubled to know what political party he should adopt definitively. Political questions under discussion at that time (reign of Louis-Philippe) did not seem interesting to the young writer, imbued with eagerness and strength. He did not despise religion, but he lacked almost any conception of it, and he complained that he did not know what use to make of his life and his devotion. A friend who had just turned to the practice of religion took him to Rome and there he discovered the splendours of faith. When he returned to Paris he had sworn to devote himself completely to the cause of Catholicism.

In France at that time this cause had very few resolute and active partisans. The Government declared itself favourable to religion, but it also feared to displease the public, still more or less animated by the prejudices and hatreds diffused by Voltaire and the Revolution. Veuillot wrote several works entirely devoted to depicting the beauty of Christian doctrine and life and then he found the journal of which he stood in need, the "Univers", which had been established some years previously and was still unknown and almost without financial resources. At this juncture friends

of Veuillot's in official positions offered him an enviable post. He had as yet acquired no fortune, being content to gain a livelihood and to assist his family, but he refused all the advantages offered him and became a Catholic journalist, resolved never to be anything else. The chief question then being discussed (1843-50) was liberty of teaching, which was claimed by the Catholics headed by Montalembert. Transformed by the ardour and talent of Veuillot, the "Univers" became the organ of the party and contributed greatly to its ultimate success. But this struggle was long and impassioned. The unbelieving Press and, in general, even that which claimed or imagined itself to be favourable to religion, passionately opposed the Catholic journalist. The widespread prejudices would not suffer Catholics to display daring, talent, or wit. These three qualities Veuillot possessed abundantly, and the use he made of them won him not only much renown and admiration but also inflexible hatred. In 1844 he was sentenced to a month's imprisonment for having in the "Univers" undertaken the defence of the Abbé Combalot, a preacher whom the Government had just condemned in connection with the controversy concerning the university. Even among Catholics there was a party which always remained hostile to him. After the partial triumph of liberty of instruction (1850), Veuillot found himself in conflict with his former friend Montalembert, with bishops (especially Mgr Dupanloup), and other persons who reproached him with carrying doctrinal intransigentism too far and with defending religion with too great violence, though all he asked for the Church was mere liberty.

Under the Second Empire this double conflict continued. Veuillot combated free-thinking, which assumed a philosophical character, and the liberal world, which sought, then, "to reconcile religion with modern ideas". In 1859, during the war of Napoleon III with Austria, Veuillot foresaw that this undertaking would result inevitably in the destruction of the temporal sovereignty of the pope, and he pointed out the dangers of the Napoleonic policy. Soon the "Univers" was suppressed by the Government for having published the Encyclical, "Nullis certe", in which Pius IX denounced the same dangers (29 Jan., 1860). Deprived of his journal Veuillot devoted himself to writing pamphlets and books which made a great stir. All were devoted to a single cause, religious truth. In 1867 he was once more able to publish the "Univers". The subjects which engaged him were of the utmost importance to France, Europe, and the world. They may be classified in three categories: the visible decline of the imperial régime, the European conspiracy against the temporal power of the pope, the Vatican Council and its preliminaries. The discussions were incessant. Veuillot withstood the opposition of ten journals. His adversaries included men of talent, such as Prévost-Paradol, Guérout, About, and many others who represented free-thinking, philosophy, or the revolutionary policy known as Liberal, and during this time he was often the object of attacks from Catholic sources.

This double conflict became still more acute prior to and during the session of the council. Numerous and prolonged discussions were sustained by Veuillot with the free-thinkers, who were extremely irritated by the announcement of the council, and with the Catholic opponents of the doctrine of infallibility. Several times in the course of the disputes entered into by the "Univers", Pius IX declared himself in favour of that journal which several bishops were attacking vigorously,

while many others defended it. Veillot refrained from allying himself with any political party. His rule of conduct formulated in 1842 was: "Avoid factions of all kinds; we belong only to our Church and our country." He supported or opposed the successive Governments according to the manner in which they treated the Church. Hence, after having vigorously upheld the Second Empire he withdrew his support when Napoleon III favoured the free-thinking or revolutionary ideas. In 1871 he supported Comte de Chambord who wished to restore the Christian monarchy.

Veillot's work as a journalist is comprised in 12 volumes entitled, "Mélanges religieux, historiques, politiques et littéraires". This collection represents the political and religious history of a period of forty years, many of the articles being masterpieces. This is acknowledged by the free-thinkers themselves, who recognize Veillot not only as an incomparable journalist but as one of the greatest writers of France. Since his death his reputation has continued to spread. In the free-thinking world, where formerly he was furiously attacked, his talent and character are now admired. Besides countless works as a journalist, he wrote also romances and poems, all inspired by a love of religious faith. Of his voluminous correspondence, and eminent critic, a skeptic, but one always respectful towards religion, M. Jules Lemaitre, says that it is "With that of Voltaire-for what different reasons-the most extraordinary ever left by a man of letters". The same critic says again, "Among writers who count, Veillot seems to me the best in the tradition of the language, while he is likewise one of the most free and individual. . . I do not hesitate to number him among the half-dozen very great prose writers of the century." Louis Veillot's brother, Eugene Veillot, intimately sharing his life, labours, and combats, himself a very brilliant polemist, and who until his death at the age of 87 (1905) continued to edit the "Univers", wrote an account in three volumes of his brother's career and history.

The works of Louis Veillot comprise 58 volumes. They are: "Les Pèlerinages de Suisse" (2 vols., 1838); "Pierre Saintive" (1839); "Rome et Lorrette" (1841); "Histoires et fantaisies" (1844-66); "Agnes de Lauwens: Mémoires de Soeur Saint-Louis" (1845); "L'honnête femme" (1844; 1908); "Les Français en Algérie" (1845); "Les libre penseurs" (1848; 1866); "L'esclave Vindex"; "Le lendemain de la victoire"; "La légalité"; (pamphlets, 1851; 1871); "La vie de la bienheureuse Germaine Cousin" (1854; 1909); "Le droit du seigneur au moyen-Age" (1854); "La guerre et l'homme de guerre" (1855); "Cà et Là" (2 vols. 1859; 1874); "Le parfum de Rome" (2 vols. 1861; 1867); "Le fond de giboyer" (1863); "De quelques erreurs sur la papauté" (1859); "La Vie de Notre Seigneur Jésus-Christ" (1864; large illustrated edition, 1875); "Les odeurs de Paris" (1867); "Corbin et d'Aubecourt" (1854; 1869); "Paris pendant les deux sieges" (2 vols., 1871); "Rome pendant le concile" (1876; from the *Mélanges*); "Moliere et Bourdaloue" (1877); "Oeuvres poetiques" (1878); "Etudes sur Victor Hugo" (1886); "Cara" (posthumous poems); "Mélanges" etc. (22 vols. in 4 series, 1856; 1859; 1876; 1909); "Correspondance" (7 vols. 1884; 1885; 1887; 1892).

EUGENE TAVERNIER

Vexilla Regis Prodeunt

Vexilla Regis Prodeunt

This "world-famous hymn, one of the grandest in the treasury of the Latin Church" (Neale), and "surely one of the most stirring strains in our hymnology" (Duffield), was written by Venantius Fortunatus, and was first sung in the procession (19 Nov., 569) when a relic of the True Cross, sent by the Emperor Justin II from the East at the request of St. Radegunda, was carried in great pomp from Tours to her monastery of Saint-Croix at Poitiers. Its original processional use is commemorated in the Roman Missal on Good Friday, when the Blessed Sacrament is carried in procession from the Repository to the High Altar. Its principal use however, is in the Divine Office, the Roman Breviary assigning it to Vespers from the Saturday before Passion Sunday daily to Maundy Thursday, and to Vespers of feasts of the Holy Cross, such as the Finding (3 May), the Exultation (14 September), the Triumph (16 July, "pro aliquibus locis").

Originally the hymn comprised eight stanzas. In the tenth century, stanzas 7 and 8 were gradually replaced by new ones ("O crux ave, spes unica", and the doxology, "Te summa Deus trinitas"), although they were still retained in some places. Stanza 2 survived the omission of the other two, and passed from the manuscripts into many printed breviaries. The correctors of the Breviary under Urban VIII revised the whole hymn in the interest of classical prosody. They omitted stanzas 2, 7, and 8, which are as follows:

Confixa clavis viscera
Tendens manus, vestigia
Redemptionis gratia
Hic immolata est hostia.

Fundis aroma cortice,
Vincis sapore nectare,
Iucunda fructu fertili
Plaudis triumpho nobili.

Salve ara, salve victima
De passionis gloria
Qua vita mortem pertulit
Et morte vitam reddidit.

Pimont thinks the hymn has lost nothing by the omissions, and that "Its movement is more active and its unction more penetrating". The correctors also replaced the last two lines of the first stanza by those of the eighth, and changed "reddidit" into "protulit", giving us the stanza as now found in our breviaries:

Vexilla regis prodeunt,
 Fulget crucis mysterium,
 Qua vita mortem pertulit
 Et morta vitam protulit.

[Abroad the royal banners fly
 And bear the gleaming Cross on high-
 That Cross whereon Life suffered death
 And gave us life with dying breath.]

It is unnecessary to indicate more in detail the changes wrought by the correctors, as our Breviaries give the revised text, and the Vatican Graduale gives the ancient text. In general, the changes made by the correctors in the Church hymns are not liked by hymnologists. Some exceptions taken by the Abbé Pimont to those made in the "Vexilla Regis" are noted in the appended bibliography. The Vatican Graduale gives plain evidence of the desire and purpose of the Commission on Plain Chant, established by Pius X, to restore the original texts. The Antiphonary (1912) gives equal evidence of an intention to retain the revised texts. Thus the Graduale (1908) gives only the ancient form of the hymn, while the Antiphonary gives only the revised form. Curiously, the Processionale (1911) gives both forms.

"Vexilla" has been interpreted symbolically to represent baptism, the Eucharist, and the other sacraments. Clichtoveus explains that as vexilla are the military standards of kings and princes, so the vexille of Christ are the cross, the scourge, the lance, and the other instruments of the Passion "with which He fought against the old enemy and cast forth the prince of this world". Kayser (p. 397) dissents from both, and shows that the vexillum is the cross which (instead of the eagle) surmounted, under Constantine, the old Roman cavalry standard. This standard became in Christian hands a square piece of cloth hanging from a bar placed across a gilt pole, and having embroidered on it Christian symbols instead of the old Roman devices. The splendour and triumph suggested by the first stanza can be appreciated fully only by recalling the occasion when the hymn was first sung--the triumphant procession from the walls of Poitiers to the monastery with bishops and princes in attendance and with all the pomp and pageantry of a great ecclesiastical function. "And still, after thirteen centuries, how great is our emotion as these imperishable accents come to our ears!" (Pimont). Gounod took a very plain melody based on the chant as the subject of his "March to Calvary" in the "Redemption", in which the chorus sings the text at first very slowly and then, after an interval, fortissimo. There are about forty translations into English verse.

MEARNS AND JULIAN in Dict. of Hymnology (2nd ed., London, 1907), 1219-22, 1721, first lines etc. of thirty-five translations, to which list should be added: BAGSHAW, Breviary Hymns and Missal Sequences (p. 53: "Behold the Royal Standard raised"); DONAHOE, Early Christian Hymns (p. 82: "Behold the Standard of the King"); HENRY, The Poet of Passiontide in American Ecclesiastical Review (March, 1891), 179-192 ("Behold the banners of the King"), together with Latin text and historiac and exegetical comment. DUFFIELD, The Latin Hymn-Writers and Their Hymns (New York, 1889), 88-95. NEALE, Mediaeval Hymns and Sequences (3rd ed., London,

1867), 6-8; the version of this felicitous Anglican hymnologist and translator is also given in the (Baltimore) Manual of Prayers, p. 612. KAYSER, *Geschichte und Erklärung der ältesten Kirchenhymnen*, I (Paderborn, 1881), 395-411. PIMONT, *Les Hymnes du Bréviaire Romain*, III (Paris, 1884), 30-46, thinks the correctors erred in transferring the last two lines of the eighth stanza to the first stanza (footnote, pp. 36-38), and also in changing "reddidit" to "protulit", since "reddidit" is the more exact and theologically appropriate word (footnote, p. 34), and dislikes the "Dicendo nationibus" of the third stanza as a correction of the original "Dicens: in nationibus", this latter being the reading of all the old manuscripts and an exact reproduction of the Vulgate reading, Psalm xcv, 10 (except that "gentibus" is used for "nationibus"): "Can it be believed that the presence of a trochee in the third foot, surely inoffensive enough, would suffice for its rejection?" Holding that Justin Martyr's charge that the Jews had suppressed the "a ligno" is now untenable, Pimont thinks that Fortunatus may have borrowed it from some of the Latin Fathers who maintained its correctness, or perhaps from a copy of the Psalms in which a gloss had crept into the text. Apropos of this stanza, Julian (*loc. cit. supra*) thinks its best English translation is that of BLOUNT in *The Office of the Blessed Virgin Mary in English* (1687), which first appeared in Blount's *Office of Holy Week* (Paris, 1670), "Abroad the regal banners Fly":

"That which the Prophet-King of old
Hath in mysterious Verse foretold,
Is now accomplisht, whilst we see
God ruling nations from a Tree".

SHIPLEY, *Annus Sanctus* (London 1874) 94-100, gives trs. of KENT, AYLWARD, CAMPBELL, *Evening* (1710); and in the appendix, trs. of Primers of 1604, 1619, 1685, 1706. MARBACH, *Carmina Scripturarum* (Strasburg, 1907), p. 197 for various liturgical uses of "Regnavit a ligno Deus". Hymns Ancient and Modern, historical edition (London, 1909), xx, xxi, xxii, xxxiv and pp. 148-9 for harmonized plainsong, modern setting, comment, DREVES, *Lateinische Hymnendichter des Mittelalters* in vol. L of *Analecta Hymnica* (Leipzig, 1907), pp. 74-75, for manuscript readings and brief sketch of Fortunatus. Church Music (March, 1908), p. 140. for answers to questions arising out of the different texts. (Unrevised and revised) of the hymn in the Breviary and Graduale (Vatican Edition).

H.T. HENRY

Antonio Francesco Vezzosi

Antonio Francesco Vezzosi

Member of the Theatine Congregation and biographical writer, born at Arezzo, Italy, 4 October, 1708; died in Rome, 29 May, 1783. At an early age he determined to devote himself entirely to the service of God and in 1731 he entered the Theatine Congregation. On account of his unusual abilities he was appointed professor of philosophy at the seminary at Rimini (1736-38). In 1742 he was sent to Rome as professor of theology at San Andrea della Valle. While here he became favourably

known for his fine scholarship and loyal orthodoxy. His superiors entrusted him, therefore, with the editing of the collected works of Cardinal Tommasi (11 vols., Rome, 1749-69). The attention of Benedict XIV was thus called to him, and in 1753 the pope appointed him professor of church history at the College of the Sapienza and examiner of candidates for the episcopal office. Later he was also elected general of his congregation. Among his publications are an oration on Leo X, "De laudibus Leonis" (Rome, 1752), and the biographical work, excellent for that era and still useful, "I scrittori de' Chierici regolari detti Teatini" (2 vols., Rome, 1780), which forms the basis of the "Bibliotheca Teatina" of P. Silvos.

PATRICIUS SCHLAGER

Jose Viader

José Viader

Born at Gallimes, Catalonia, 27 August, 1765. He received the habit of St. Francis at Barcelona in May 1788, joined the missionary College of San Fernando de Mexico in 1795, and was sent to California in the following year. Appointed assistant at the Indian mission of Santa Clara, he served there steadily until 1833, when he returned to Spain by way of Mexico and Cuba. For thirty-three years Father Viader was the faithful companion of the saintly Father Magin Catala. As such he fearlessly resisted the encroachments of the military and colonists, carried on the correspondence, and drew up the reports, which Father Catala countersigned. Hence it is that numerous letters of Father Viader concerning Mission Santa Clara still exist, whereas not one has thus far been discovered written by Father Catala. Father José, albeit an exemplary religious, knew how to make use of his great physical strength and courage. On one occasion three Indians suddenly fell upon him, but he defeated them all, and they became his best friends. In 1818 he accompanied the presidente of Misi6n San Jos6 to San Francisco and San Rafael; but otherwise he never left his Indians for any length of time. Like nearly all the missionaries, he in 1826 declined to take the oath of allegiance to the so-called Republic of Mexico.

ZEPHYRIN ENGELHARDT

Viaticum

Viaticum

Name

Among the ancient Greeks the custom prevailed of giving a supper to those setting out on a journey. This was called *hodoiporion* "Convivium, quod itineris comitibus præbetur" (Hedericus, "Lex. græc-lat."). The provision of all things necessary for such a journey, viz. food, money, clothes,

utensils and expense, was called *ephodion*. The adjectival equivalent in Latin of both these words is *viaticus*, i.e. "of or pertaining to a road or journey" (Facciolati and Forcellini, "Lexicon"). Thus in Plautus (Bacch., 1, 1, 61) we read that Bacchis had a supper prepared for his sister who was about to go on a journey: "Ego sorori meæ coenam hodie dare volo viaticam", and (Capt. 2, 3, 89), "Sequere me, viaticum ut dem trapezita tibi", and in Pliny (VII, ep. 12, in fine), "Vide ut mihi viaticum reddas, quod impendi". Subsequently the substantive "viaticum" figuratively meant the provision for the journey of life and finally by metaphor the provision for the passage out of this world into the next. It is in this last meaning that the word is used in sacred liturgy.

Formerly it meant anything that gave spiritual strength and comfort to the dying and enabled them to make the journey into eternity with greater confidence and security. For this reason anciently not only any sacrament administered to persons at the point of death, baptism (St. Basil, "Hom. in sac. Bapt."; St. Gregory Nazianzen, "Orat. de bapt."), confirmation, penance, extreme unction (Moroni, "Diz. di erudizione stor.-eccl."), Eucharist (Fourth Council of Carthage, cap. 78, calls it "viaticum Eucharistiæ"), but even prayers offered up or good works performed by themselves or by others in their behalf, e.g. alms-deeds (St. Cyprian), and finally anything that tended to reconcile the dying with God and the Church came under this designation. In the course of time "viaticum" was applied to the Eucharist generally, but finally it acquired its present fixed, exclusive, and technical sense of Holy Communion given to those in danger of death. The Catechism of the Council of Trent (De Euch. sacr., n. 3) says: "Sacred writers call it the Viaticum as well because it is the spiritual food by which we are supported in our mortal pilgrimage, as also because it prepares for us a passage to eternal glory and happiness". As early as A. D. 325 the Holy Eucharist given to the dying was called the "last and most necessary Viaticum" (Council of Nice, can. 13). Although Aubespine, Bishop of Orléans, in his note on this canon says that "viaticum" here means only the reconciliation and absolution granted at the hour of death to public penitents who had not performed the prescribed canonical penance, yet Macri (Hierolexicon) declares that it means simply "Sacramentum Eucharistic, cui antonomastice nomen veri muniminis convenit". Innocent I (402-17), in "Ad Exsuperium", and the First Council of Orange, 441, employed this word in the same sense.

Minister

Formerly Viaticum was administered not only by bishops and priests, but also by deacons and clerics of inferior orders and even by lay people. During the persecutions lay people carried consecrated particles to their homes and administered Holy Communion to themselves, and it is natural to conclude that they received it as Viaticum in the same manner. Dionysius of Alexandria ("Ep. ad Fabium Antioch." in Eusebius, "Hist. eccl.", VI, xlv) relates that Serapion, an old man in danger of death, received Viaticum from his nephew, a mere boy, who had received the consecrated particle from a priest. From a Decree of the Council of Reims (Regino, "De eccl. disc.", I, cxx) it appears that sometimes even females carried the Viaticum to the dying, which practice the Council strictly forbade. Apparently for a while it was difficult to eliminate this abuse, for Hincmar, Archbishop of Reims, required the diocesan visitors to inquire whether the priests gave Communion to the sick with their own hands or by others', "per se et non per quemlibet", and whether they gave

the consecrated particle to any lay person, "cuiquam laico", to carry it home for the sake of giving it to the dying (Martène, "De antiq. eccl. rit.", I, I, v, 2). After the tenth century no mention is made of lay persons carrying Viaticum to the dying, but deacons regularly administered it, and from two manuscript codices in the monastery of Casalis Benedicti it is evident that subdeacons carried it to the house of the sick person, but that the priest administered it (Martène, *ibid.*). At present only parish priests or their assistants carry and administer it to the dying. In case of necessity a deacon may be delegated, and if the necessity be urgent this delegation need not be waited for (Lehmkuhl, II, 135).

Subject

All, even children who have reached the age of reason (Decr., "Quam singulari", præscriptio VIII, 8 Aug., 1910), are bound by Divine precept to receive the Viaticum when they are in danger of death, according to the opinion of theologians and the rule of the Church; though it is disputed whether one who is now in danger of death and who has within the last few days received Holy Communion is so bound by Divine precept. The obligation in the latter case is not clear, as the previous Communion in all probability satisfies the Divine law (Slater II, v, 1; Lehmkuhl, II, n. 146). St. Liguori says that according to the more probable opinion the obligation exists (VI, n. 285, dub. 2, sec. sent.). If a person becomes dangerously ill on the day on which he received Holy Communion out of devotion, it is disputed whether he may, or is bound to, receive it as Viaticum (Slater and Lehmkuhl, *ibid.*). Benedict XIV (De syn. dioec., VII, xi, n. 2) leaves the decision of this question to the prudent discretion of the priest, but St. Liguori (*ibid.*, tertia sent.) thinks that the sick person is bound to receive it if the danger comes from an external cause, but not if he were already ill or if the danger already existed in some internal though unknown cause, as might be presumed in case of sudden illness, e.g. apoplexy and the like. Viaticum, like Holy Communion, out of devotion, may not be given to persons who are insane and who have never had the use of reason (Rit. Rom., Tit. IV, n. 10). To persons labouring under insanity from fever or other causes and at the time incapable of sentiments of piety, Communion cannot be administered; if, however before they became insane they evinced pious and religious sentiments and led a good life and it is apprehended that they will not recover their reason until they are dying, Viaticum may be administered to them in their delirium provided there be no danger of irreverence (Catech. of Council of Trent, II, vi, n. 64). It should not be administered when there is danger of irreverence to the sacrament from incessant coughing, difficulty of breathing or swallowing, and frequent vomiting. In all these cases, a little food or drink may be given first, to try whether the person can receive without danger of rejecting the Sacred Host. The same may be done in case of delirium also. Many recommend the trial to be made with an unconsecrated particle (O'Kane, "On the Rubrics" n. 782). Public sinners ("Publici usurarii, concubinarii, notorie criminosi, nominatim excommunicati aut denunciati"-Rit. Rom., Tit. IV, cap. iv, n. 1) are not allowed to receive Viaticum until they have repaired, as far as circumstances will permit (the confessor must decide in each case the nature and extent of this obligation), the injuries and scandals of which they have been the cause.

Species

Formerly Viaticum was usually administered under the species of bread, because the Blessed Sacrament, which was to be carried to the house of the dying person, was customarily reserved under this form only. The incident, related above, of the aged Serapion would indicate this, for the boy was instructed by the priest to dip the consecrated particle into water before giving it to his uncle. To this rite the Fourth Council of Carthage (Can. 76) seems to allude, because it states "infundatur ori eius Eucharistia" when Viaticum was to be given to dying persons, who, on account of the parched state of the throat, were unable to swallow the Host. About the twelfth century the custom of receiving Holy Communion out of devotion under both species began to be disused (Chardon "Storia dei sacramenti", I, III, vii). It cannot be doubted that, as long as this custom prevailed, Viaticum was often administered in the same manner when it was given after Mass, celebrated in the room of the dying person, which was frequently done. Menard, in his notes on the "Gregorian Sacramentary" says that it contained two separate forms for the administration of Viaticum, "Corpus Domini nostri Jesu Christi custodiat te in vitam æternam" and "Sanguis Domini nostri Jesu Christi redimat te in vitam æternam". Sometimes the Host was dipped into the Precious Blood, as is evident from many ancient Rituals, and the Council of Tours prescribes "Sacra oblatio (Host) intincta debet esse in Sanguine Christi, ut veraciter presbyter possit dicere-Corpus et Sanguis Domini proficiat tibi" (Martène, *ibid.*). Although anciently it was the custom to receive Holy Communion during Mass under both species (also Viaticum after Mass), yet it was never believed that those who communicated under the species of bread only did not receive, whole and entire, the Body and Blood of Christ. At present Viaticum is administered, at least on the Latin Church, under the form of bread only.

Rites and Ceremonies

Things to be prepared.-(a) By the priest.-The pyx, a small corporal, and a purificator in small burse, a white (even on Good Friday) stole, and a Ritual. (b) In the sick room.-A table (near the foot of the bed, or in some other position in which it is easily visible to the sick person), a crucifix (although this is not prescribed by the rubric), two lighted wax candles, a wineglass containing a little water for purifying the priest's fingers, a clean cloth or napkin for the sick person, a vase containing holy water, and a sprinkler of box or other wood. (c) On the altar.-Two lighted wax candles, the key of the tabernacle and a burse with a large corporal (if the particle is to be transferred from the ciborium to the pyx in this case also an ablution cup and a finger towel). It frequently happens that all the necessary things are not prepared in the sick room, therefore it will be expedient for the priest to carry with him two wax candles, holy water, and a small communion-cloth.

The priest, having placed the pyx in the burse, which should hang on his breast by a cord round his neck goes to the sick person's house, reciting on the way the "Miserere" and other psalms and canticles he may know by heart. At the door of the sick-room he says: "Pax huic domui" and if there be no one to answer, he replies himself: "Et omnibus habitantibus in ea", enters the room, puts on his stole, takes out the pyx, places it on the table, genuflects, and rises. Then he takes the holy water and sprinkles first the sick person in the form of a cross, i.e. in front of himself, then on

his (own) left, then on his (own) right, after which he sprinkles some around him on the floors and walls of the room and on those present, saying in the meantime: "Asperges me . . . dealbabor", to which he adds the first verse of the "Miserere", "Gloria Patri" "Sicut erat", and then repeats the antiphon "Asperges me", etc. which must not be changed during Paschal time. He immediately subjoins the versicles "Adjutorium", etc. and the prayer "Exaudi nos", etc.

If the sick person has not previously confessed, the priest should ask those present to leave the room; then he hears the confession, imposes a light penance, and may recall the sick person's attendants. Even if the priest had previously heard the confession, he should not administer Viaticum until he has given the sick person an opportunity to confess again, if he desires it. The priest then goes to the table, genuflects, and uncovers the pyx, and the communion-cloth or napkin is adjusted under the chin of the sick person who recites the "Confiteor", if he be able; if not, it is said in his name by one of the bystanders, or, when there is no one able to do this, by the priest himself. After the "Confiteor" the priest genuflects, rises, and turns towards the sick person, taking care, however, not to turn his back to the Blessed Sacrament. In this position he says "Misereatur" and "Indulgentiam" using the words *tui, tuis, tuorum*, and *tibi*. (The singular is used when Communion is given to one who is sick, except in the rare case in which it is given during Mass, when the plural form is used. "Sacrorum Rituum Cong.", 16 Nov., 1906.) The priest then turns to the table, genuflects, and takes the particle between the thumb and index finger of the right hand and holds the pyx in his left hand under the particle. The "Ecce Agnus Dei" and the "Domine non sum dignus" are said as prescribed for the ordinary Communion in the church. The sick person should say the "Domine non sum dignus" with the priest, at least once, in a low tone (Rit. Rom. Rubr., 19). Instead of the "Corpus Domini", the form "Accipe frater (soror)" etc. is used, whether the sick person is fasting or not, for it is always used when the sick person is in probable danger of death. It is a very probable opinion that Communion may be administered the next day, and even every day, and while the danger continues the form should always be "Accipe frater" (O'Kane, *op. cit.*, 777). If difficulty is experienced in swallowing the Host on account of the parched condition of the throat, a little water may be given to the sick person before he receives Holy Communion, or the Host may be placed in some wine or water in a spoon or a little wine or water may be given immediately after receiving the Host.

If the danger of death be imminent, but the person be able to receive, all the prayers, as far as the "Misereatur", may be omitted. In case of extreme necessity the priest may even omit the "Misereatur" and the following, and give Communion immediately. In these cases the prayers which were omitted are not supplied afterwards, even though the state of the sick person should allow this. If it be feared that the person will be unable to swallow the Host before death, it should not be given. If it be given and death ensue before he can swallow it, it should be removed from his tongue and placed either in a corporal or in some vessel and kept in some secure place and in due time put into the sacrarium. Should the Host not be visible in the mouth, nothing further need be done (Dunne, "The English Ritual Explained", 67; De Herdt, III, n. 191; O'Kane, *op. cit.*, n. 823). If the priest, after bringing the Blessed Sacrament, finds unexpectedly that the sick person is

unable to communicate, he may give benediction with it to the sick person. But he is never allowed to bring the Blessed Sacrament for this purpose when he knows that the person will be unable to receive. Should the sick person be unable to retain the Sacred Host, it should be removed and carried to the church in a corporal or clean vessel. There it should be kept in a becoming place until it corrupts, when it should be put into the sacrarium.

After the Communion the priest purifies the pyx and his fingers in a small glass of water, and the water is given by the priest, or one of the attendants, to the sick person to drink. If the latter be unable or unwilling to take it, it may be thrown into the sacrarium or into the fire at the house. The priest may, if he wish, purify the pyx and his fingers by rubbing them with one part of the little purificator previously moistened with water. The purificator should then not be used again before it is washed. The priest then says "Dominus vobiscum" and the prayer "Domine sancte", etc. If no particle remains in the pyx he blesses the sick person with his hand in the same manner as after Communion in the church, using the form "Benedictio Dei", etc. O'Kane (n. 835) thinks that since we use "tui" instead of "vestri" in the "Misereatur", there is sufficient reason to justify the use of "super te" instead of "super vos" in this blessing; the rubric "eum manu benedicit" seems to favour this opinion, although authors who give the form in full say it ought to be "super vos". If a particle remain in the pyx, the priest genuflects, puts the pyx in the burse, and, without saying anything, gives the blessing with the pyx, puts off his stole and surplice, and returns to the church reciting on the way the Psalm, "Laudate Dominum de coelis", etc. (This rubric ought to be observed, when the priest is obliged to give Viaticum to person in different houses, until the last particle is given, for the rubric says: "Si altera particula Sacramenti superfuerit".) Having arrived at the church he places the pyx on the corporal, genuflects, descends to the lowest step and there recites the versicles "Panem de coelo", etc. and "Dominus vobiscum" and the prayer "Deus qui nobis", etc., after which he announces the indulgence of seven years and seven quarantines to those who accompanied the Blessed Sacrament *with* a light, and five years and five quarantines to those who accompanied it *without* a light. He then ascends to the predella, genuflects, gives the blessing to the assembled people in the church with the pyx and places the latter in the tabernacle in the customary manner.

From the Mass of Maundy Thursday till the Mass of Holy Saturday the colour of the stole must be white, the "Gloria Patri" is recited at the end of the Psalms, and the blessing with the pyx may be given in the room of the sick person, but not in the church. It may happen that Viaticum is to be given during Mass, e.g. to a criminal about to be executed, in an hospital or private house, when the sick person is in view of the altar. The rites and ceremonies observed in such cases are exactly the same as when Communion is given in the church, except that the form will be "Accipe frater (soror)". The colour of the vestment will be suited to the Mass. When Viaticum is administered to two or more persons at the same time, it is given to them successively, as in the church, provided they be in the same apartment or in apartments opening into each other. In this case "Misereatur *vestri . . . vestris*" and "Indulgentiam . . . *vestrorum . . . vobis*" are said; the ablution may be given to any one of them, and need not be divided; in the prayer "Domine sancte" the words "fratri nostro"

or "sorori nostræ" are changed into "fratribus nostris", or, if all are females, "sororibus nostris", and at the end the blessing with the pyx is given only once to all together.

A.J. SCHULTE

Clerics of Saint Viator

Clerics of Saint Viator

St. Viator, lector of the cathedral at Lyons, France, lived in the fourth century and is the earliest type of the teacher of the cathedral schools, In the exercise of the then important functions of the lectorate, namely in reading and expounding the Scriptures to the people and in catechizing the children, he displayed that zeal and ability for which he was held in such high esteem by his bishop, Saint Just, and by the Christian flock of Lyons. Hagiographers refer to him as "a most holy youth, who on account of his eminent virtues was much beloved by his bishop". After the Council of Aquileia (381) St. Just decided to spend the remainder of his life in the penitential solitudes of Thebais, and selected young Viator as the companion of his voluntary exile. Both the aged bishop and his youthful lector died in the odour of sanctity in an austere monastery of Scété in the year 389. The feast of St. Viator, according to the Roman martyrology, is observed on 21 October.

Because St. Viator had sanctified himself in teaching the young, he was selected as the patron of a community of parochial clerics or catechists, who are priests and teaching brothers living on a footing of religious equality. This community, known as the Clerics of St. Viator, was founded in the year 1835 by the Very Rev. Father Louis-Joseph Querbes, pastor of the village of Vourles in the Archdiocese of Lyons. Desirous of securing Christian teachers for his own and for neighbouring parishes, where sad havoc had been wrought by the Reign of Terror, Father Querbes established at Vourles as early as 1829 a school for the training of lay teachers, which was soon officially sanctioned by the Royal Council of Public Instruction. In 1835 this organized band of secular teachers developed into a community of priests and brothers with the vows of religion, and was approved by the archiepiscopal authority of Lyons. With the assistance of the Roman Jesuits, Father Querbes obtained the approbation of the statutes of his new community from Gregory XVI in 1838. Under the generalship of Father Querbes the membership of the community increased so rapidly that before the time of his death (1 Sept., 1859) there existed three provinces of the society in France and one in Canada; and the Clerics, besides teaching very many parochial schools, conducted the boarding colleges of Camonil (Rodez), St-Michel (Paris), St. Angeau College, the

Deaf and Dumb College of Rodez, schools of agriculture at Blancotte and Notre-Dame de Treize-Pierres, and at Fontaines-sur-Saone a well-equipped publishing house from which were issued a large number of practical school classics and educational magazines such as "L'Ecole et la Famille" and "L'Ange Gardien", setting forth the necessity of co-operation between home, church, and school, pastor, parent, and teacher in view of the best educational results.

All the important houses of the community have been suppressed in France, where some two hundred members of the institute are still teaching in what are called *Ecoles Libres*. The exiled members are conducting flourishing schools in Spain and in Belgium, where the superior-general now resides. In 1847 Bishop Bourget, of Montreal, obtained from Father Querbes teachers for a small college recently founded in Joliette, Canada. Father S. Champagneur, C.S.V., who was appointed president of the college, opened a novitiate in Joliette in 1848, and became provincial superior of the new obedience of Canada, which developed rapidly in membership and efficiency. Soon Bourget College arose in Rigaud, the Deaf and Dumb School and the St. Louis School in Montreal, the St. Viator School in Juliette, and ten commercial colleges in the villages of the Province of Quebec. With this impetus the community continued to make rapid strides under the successors of Father Champagneur, Fathers Lajoie, Beaudry, and Ducharme, who found it necessary to enlarge the colleges of Bourget and Joliette. This last is now known as the Seminaire de Joliette, and is admittedly one of the best-equipped colleges of the Dominion. Having now three hundred priests and brothers, the Provincial administration was able to accept the large Ecole St. Jean Baptiste, Montreal, and to open colleges in St. Joseph de Levis, Berthier, Terrebonne, Boucherville, St. Remi, and to take charge of a large number of primary schools.

In the United States the Clerics of St. Viator, sometimes called Viatorians, have since 1865 had important parochial schools in Bourbonnais, Kankakee, St. George, Aurora, and Chicago, Illinois, in St. Joseph's parish, Cohoes, New York, in the cathedral parish, Ogdensburg, New York, and in Baker City, Oregon. In all these schools, except that of Bourbonnais, the Brothers have gradually been replaced by Sisters. The members of the community are now exercising their educational activities almost exclusively in high school and college work. Owing chiefly to this change in the educational conditions of the country, the Brothers of the American province more often embrace the larger opportunities offered by their community to pursue courses leading to the priesthood. The most important institution of the Viatorians in the United States is St. Viator College, Bourbonnais, Illinois, which grew out of the original district or village school, first into a commercial academy in 1865 upon the arrival of Father P. Beaudoin, and Brothers Martel and Bernard; then in 1868 with Father Thomas Roy, recently from Canada, the young school evolved into a classical college. The institution won the patronage of the public and the favour of the ecclesiastical authorities. After nine years of work Father Roy, whose memory was enshrined by his students in the beautiful Roy Memorial Chapel, returned in broken health to Canada, and was succeeded by Father M. J. Marsile, who directed the growing institution for over a quarter of a century. Under Father Marsile's presidency, courses and faculties in theology, philosophy, science, and languages were strengthened, and several branches were added to divers other courses to answer, the need of

the times. In his honour his students built the Marsile Alumni Hall as a memorial. In 1906 the several buildings of St. Viator College were destroyed by fire. Courses were continued in improvised quarters and new buildings were erected. Father Marsile then resigned the presidency and Rev. J. P. O'Mahony, C. S. V., was appointed his successor. The college for several years has had a yearly enrollment of over three hundred students, and nearly three hundred priests and religious are numbered among its alumni. The list of commercial graduates and alumni who have entered the professions of law and medicine is larger still. St. Viator College has, besides a preparatory department and high school, the four years' college course proper. There is also, chiefly for the scholastics of the community, a complete four years' course of theology, to which diocesan students are admitted.

In 1910 Bishop O'Gorman, of Sioux Falls, South Dakota, purchased from the Federal Government a group of ten school buildings situated in Chamberlain, and placed these in the hands of the community of St. Viator. The Knights of Columbus took an active interest in the founding of the new institution, which therefore was called Columbus College. In the United States the Viatorians have also undertaken the care of parishes. They have now charge of: the Maternity parish, Bourbonnais, Illinois; St. Edward's and St. Viator's, Chicago; St. Mary's, Beaverville, Illinois; and in Chamberlain, Pukwana, and Plankinton, South Dakota; and the five missions attached to the parish of McMinnville, Oregon. In years past they were pastors in St. George, Manteno, Aurora, Dwight, Brimfield, and St. Jean Baptiste, Chicago, Illinois. In 1882 the establishments of the middle west became independent of the Canadian province and were erected into a separate obedience. Very Rev. Father C. Fournier was appointed superior, and opened a novitiate in Bourbonnais, 6 Oct., 1882. In 1888 the novitiate and the headquarters of the provincial administration were moved to Chicago. During the twenty-five years of his incumbency as provincial and master of novices, Father Fournier supplied the new province with the needed force of well-trained teachers for the various schools of his jurisdiction. Very Rev. A. Corcoran came to the assistance of Father Fournier for four years as provincial (1898-1902). Upon the death of Father Corcoran, Father Fournier again resumed the burden of the provincial direction. Resigning in 1908, he was succeeded by Very Rev. J. A. Charlebois, the present superior. As teaching Christian doctrine by word and example is the most important function of the Christian educator, every catechist of St. Viator is required by the rule to write a complete course of religious instruction. The brother catechists twice every day read selected portions of the Holy Scripture, of the Catechism of the Council of Trent, and of the Following of Christ. Priests and Brothers make daily a half hour meditation on the life of Christ and the virtues of religious life, read regularly ascetical works such as the "Christian Perfection" of Rodriguez, hear or say daily Mass, receive Holy Communion daily, and besides morning and evening prayers and beads in common, make a daily visit to the Blessed Sacrament or assist at benediction. The community rules require careful personal research in preparation for teaching. The books, school classics, published by members of the Congregation range from the elementary reading and spelling books to manuals of belle-lettres, from language primers and the small catechism to literary criticism and apologetics, from arithmetic to the higher mathematics.

Manual of the Clerics of St. Viator (Bourbonnais, Illinois, 1890); Directoires et reglements organiques de L'Institu des Clercs St-Viateur (Paris, 1900); QUERBES, Livre d'Or (Ms., Jette, Belgium); BOURGET, Vie de St-Viateur (Montreal, 1897); BOLLANDISTS, Vita Brevis Sancti Justi; SURIUS, Vita proluxior Sancti Justi; GOUILLOUD, Deux grands eveques de Lyon (Lyons, 1890); Breviary of Lyons; Feast of St. Viator, 21 Oct., Martyrology of Adon (858); Roman Martyrology, 2 Sept. and 21 Oct.; Collections de l'annuaire de l'institutet des lettres circulaires du superieur general (Jette, Belgium); L'Ecole et La Famille (pedagogical monthly, Fontainessur-Saone, France); L'Ange Gardien (devotional monthly, Paris); The Viatorian (college monthly, Bourbonnais, Ill.); The Missionary (Washington, D. C., June, 1912); The Catholic Church in the U.S. (New York, 1912).

EUGENE LOUIS RIVARD

Vicar

Vicar

(Lat. *vicarius*, from *vice*, "instead of")

In canon law, the representative of a person clothed with ordinary ecclesiastical jurisdiction. The office of vicar was in use among the ancient Romans, that being the title of officials subordinate to the praetorian prefects. In the ecclesiastical forum, from very early times, we read of vicars of the Apostolic See, such as the archbishops of Thessalonica. Bishops also had their vicars, such as the archdeacons and archpriests, and likewise the rural priest, who, in the first ages, had the cure of souls outside of episcopal cities. In course of time, all of these officials became part of the ordinary magistracy of the Church. These vicars are treated in the Decretum of Gratian and in the Decretals of Gregory IX, but vicars-general of bishops first appear in the sixth book of Decretals and in the Clementines of the "Corpus juris canonici". After the institution of vicars-general, the office of archdeacon ceased almost entirely when the Council of Trent had limited the powers of such officials. That council (Sess. XXV, c. xvi, "De ref.") completely abrogated other vicarships that were incompatible with clerical discipline. A vicar differs from a vicegerent, who is constituted by a prelate in place of a vicar. The vicar himself without special faculties cannot substitute another vicar with equal powers in his own place. The jurisdiction of vicars is generally ordinary, but sometimes only delegated. The former archdeacons and archpriests and the present vicars capitular and some others have ordinary power in consequence of their office, but by the present discipline vicars Apostolic and vicars forane have only delegated power conferred by special commission. Vicarial jurisdiction in general can not be called merely mandatory (which is ultimately delegated power), for many vicars have a tribunal distinct from that of the prelate represented by them. As to their powers: vicars are constituted either *in divinis*, as parochial vicars and auxiliary bishops, or created vicars in jurisdiction, as vicars capitular and vicars general, to exercise power in the external forum, either voluntary or contentious. Some writers also distinguish vicars *a lege*, or those whose powers are perpetual and prescribed in law, and vicars *ab homine*, who depend entirely on

delegated powers and are removable at will. Neither bishops nor inferior prelates can constitute vicars except in cases permitted by canon law. The powers of vicars are not affected by the mode of appointment, that is whether they are freely nominated or elected. When vicars have ordinary jurisdiction, their rights and duties in general are the same as those of other ordinary prelates, but their particular obligations must be learnt from the office they hold. The same is to be said of the cessation of their powers, which are terminated by resignation, etc., with the addition, however, of some special regulations for particular vicarships, as that of vicar-general.

WERNZ, *Jus decretalium*, II (1899); AICHLER, *Compendium juris ecclesiastici* (Brixen, 1895).

WILLIAM H.W. FANNING

Vicar Apostolic

Vicar Apostolic

(1) In the early ages of the Church, the popes committed to some residentiary bishops the duty of watching over ecclesiastical matters in a certain region, as the Archbishop of Arles for Gaul and the Archbishop of Thessalonica for Illyria. These prelates were called vicars Apostolic.

(2) Prelates with the title of vicar Apostolic are sometimes commissioned by the Holy See to administer dioceses which are vacant, or whose bishops are prevented from exercising their ordinary jurisdiction by some impediment. These vicars Apostolic have the powers of vicars capitular (q.v.) and at times receive also some extraordinary faculties, which much be learnt from their Brief of appointment.

(3) In regions where the ordinary hierarchy of the Church has not yet been established, and which consequently fall under the ordinary and immediate jurisdiction of the pope in a special manner, the Holy See usually governs such missionary regions by means of a delegate who has received episcopal consecration to some titular see, and who is designated a vicar Apostolic.

These prelates generally have the same powers that bishops have by common law in their own dioceses, and the Congregation of Propaganda also concedes to them various extraordinary faculties. All these powers, however, are delegated, not ordinary. As they are not diocesan bishops, they have not cathedral or chapter (S.C. Prop., 27 Nov., 1858). Without special concession from the Holy See, they may not concede the usual forty days indulgence, nor erect a throne in a church, nor wear the *capa magna*, nor have their names inserted in the canon of the Mass (Collect. S.C. Prop., 1883 n. 139, etc.). While they may not constitute ordinary vicars-general, they can give special faculties to various priests to assist them in administering the vicariate. They must, in addition, name some proper secular or regular cleric who, in case of their unexpected demise, may rule the region as pro-vicar until other provision is made. The pro-vicar has the same faculties as the vicar, except those that flow from episcopal consecration. He can, however, in case of necessity consecrate chalices, patens, and portable altars, with oils consecrated by some bishop. Regulars in a missionary district must communicate their letters patent to the vicar Apostolic, and in the cure of souls are

subject to his authority. Vicars apostolic are appointed outside of Consistory by a special pontifical brief, and later this provision is merely published in Consistory. All matters concerning the promotion of vicars Apostolic are conducted by Propaganda on the lines of the Constitution, "Gravissimum", of Benedict XIV (18 Jan., 1757) and the later Decrees of the Holy See (Collect. S.C. Prop., n. 38-87). There are about 150 vicariates in existence at present.

WILLIAM H.W. FANNING

Vicar Capitular

Vicar Capitular

The administrator of a vacant diocese, elected by a cathedral chapter. On the death of a bishop, the canons of a cathedral chapter (where such exists) inherit the episcopal jurisdiction as a body corporate. Within eight days of the vacancy of the see, however, they must meet and constitute a vicar capitular (Conc. Trid., Sess. XXIV, c. xvi, de ref.). If they neglect this duty, the right passes to the metropolitan, or, in case the metropolitan see is in question, to the senior suffragan bishop, or, when the diocese is exempt, to the nearest bishop. In constituting a vicar capitular, a strict form of election need not be followed; but if suffrages are cast, they should be secret, and no one may vote for himself. The vicar chosen should be a doctor of licentiate in canon law if possible, and though a canon is commonly to be chosen yet this is not required for validity.

On his election the vicar succeeds to all the ordinary episcopal jurisdiction that the chapter had inherited, nor can the chapter reserve any part of the jurisdiction to itself, nor constitute only a temporary vicar, nor remove him. Faculties which are committed to bishops by the Holy See for a term of years, pass also to the vicar capitular (S. Off., 22 Apr., 1898), in which are included the powers usually granted for dealing with a certain number of cases (S. Off., 3 May, 1899). Canonists usually hold that perpetual delegations to ordinaries, sanctioned by the Council of Trent, pass likewise to the vicar capitular. Faculties, however, which had been granted to the bishop personally are not extended to the vicar. There are, nevertheless, some limitations on the power of a vicar capitular, even as regards ordinary episcopal jurisdiction. Thus, he may not convoke a synod or visit the diocese unless a year has elapsed since these offices were performed. He may not grant indulgences. He should not undertake any new work or engagements that might prejudice the action of the in-coming bishop. Hence, during the first year of vacancy, he can promote to sacred orders only those who are obliged to receive that dignity through possession of a benefice. The vicar cannot grant the benefices of free collation, nor may he suppress them and unite them to the cathedral chapter. He may not alienate the goods of the cathedral church or of the episcopal mensa. He can, however, grant permission for the alienation of the goods of inferior churches. He can neither begin nor pursue a judicial process concerning the goods or rights of the cathedral church. The vicar cannot give permission for the erection of a new monastery or a new confraternity (S.C. Ind., 23

Nov., 1878). Canonists usually declare that a vicar capitula can receive extern clerics into his diocese, but deny that he can excommunicate the home clergy. If the vicar is in episcopal orders, he can perform all that belongs to the ministry of consecration; otherwise he may invite a bishop from another diocese to exercise such functions. If the vicar die or resign, the chapter must elect another within eight days, but the newly-elect must not be one who has already received the nomination to the vacant see. In case the removal of the vicar capitular becomes necessary, this may be done only by the Holy See. The office of a vicar capitular ceases when the bishop who has been promoted to the diocese presents his letters of appointment to his cathedral chapter. The new bishop has the right of demanding an account from the chapter and vicar capitular of all their acts of administration, and of punishing any dereliction of duty.

LAURENTIUS, *Institutiones juris ecclesiastici* (Fribourg, 1903); TAUNTON, *The Law of the Church* (London, 1906), s.v.; WERNZ, *Jus decretalium*, II (Rome, 1899); FERRARIS, *Bibliotheca canonica*, VII (Rome, 1891), s.v.

WILLIAM H. W. FANNING
Vicar-General

Vicar-General

The highest official of a diocese after the ordinary. He is a cleric legitimately deputed to exercise generally the episcopal jurisdiction in the name of the bishop, so that his acts are reputed the acts of the bishop himself.

The wide powers of administration now enjoyed by the vicar-general belonged formerly to the archdeacon. The latter official was the first among the seven deacons, a number long retained in many churches, and he held office, not by reason of priority of ordination, but by free appointment of the bishop. To him was generally committed the external administration of the diocese, including the control of the inferior clergy and the right of visiting and correcting all the clerics by judicial procedure.

In the sixth century, there were both urban and rural archdeacons, and the dioceses were divided into districts ruled by these officials. This custom began in France and later spread all over Europe. By the eleventh century, the jurisdiction of archdeacons had become ordinary and stable. They had courts of first instance, and, besides their contentious jurisdiction, they had wide administrative powers, so much so indeed that they became obnoxious to the legitimate exercise of the bishop's authority. In consequence, from the twelfth century onwards, we find new diocesan assistants of the bishop, later called vicars-general, or officials, removable at the will of the ordinary.

Vicars-general are not named in the Decretals of Gregory IX, but they are frequently referred to in the Sixth Book of Decretals (e.g., cap. ii, iii, "De off. Vic.", I. 13 in 6) and in the Clementines (cap. ii, "De reser.", 1.2. in Clem). In large dioceses in England and some other countries, a distinction was made between the vicar-general, who had voluntary jurisdiction or administration, and the official, who had contentious jurisdiction, but this distinction was never received into the common

law, and the titles *vicar-general* and *official* are used indiscriminately for the same person in the Decretals and the Tridentine decrees. The institution of vicars-general greatly limited the powers of the archdeacons, and finally the latter officials were reduced by the Council of Trent (Sess. XXIUV, c. xii, "De ref.") to mere honorary dignitaries in cathedral chapters.

According to the present discipline, the vicar-general is deputed by the bishop to exercise the latter's jurisdiction with a certain universality of power. Bishops could not of themselves be competent to establish officials with the same ordinary faculties which they themselves have, and consequently the office of vicar-general rests on powers communicated by the pope and common law. The bishop, therefore, cannot concede to the vicar-general any jurisdiction except within the bounds allowed by the law or legitimate custom, or express Apostolic indults. The jurisdiction of the vicar-general is necessarily universal in the whole diocese, both for persons and causes, with a universality, however, not absolute, but moral, and therefore, though the bishop can restrict it both as to places and causes, he cannot so limit it that it ceases to be general, at least morally. It is in the discretion of the bishop to constitute a vicar-general for his diocese, but he cannot suppress an office instituted by common law.

The office of vicar-general is unique, and therefore there should not be several of them in one diocese, either acting in concert or governing a special part of the diocese (S.C.C., 21 Feb., 1614). However, separate vicars-general may be appointed for the faithful of a different rite or language (C. 14, X, 1, 31). The cleric appointed as vicar-general should be of legitimate birth, tonsured, and celibate. He should have attained his twenty-fifth year and be commendable for the probity of his life, his prudence, and his knowledge of canon law, in which he should be a doctor or licentiate, or at least equivalently qualified. Statutes of particular councils and rescripts of Roman Congregations declare that the vicar-general should not have the cure of souls, but this is nowhere prescribed in common law, and though an urban parish, or a capitular office, or the rectorship of a seminary are hindrances to the liberty of a vicar-general, yet they are not strictly incompatible with it. Regulars cannot be appointed vicars-general without the permission of their religious superiors, and they need, in addition, the license of the Holy See to live outside their monasteries. It is expedient that the vicar-general should not be a blood relation of the bishop or a cleric of the diocese, but there is no general law to this effect, though the *schema* of the Vatican Council contains one (Jus. Pont. de Prop. Fid., VI, append.).

The power of the vicar-general, by reason of his office and deputation, extends to all causes in the ordinary episcopal jurisdiction, except those which common law or the bishop may have reserved or made dependent on a special mandate. The tribunal of the vicar-general is one with the bishops, and therefore there is no appeal from one to the other. The vicar-general cannot substitute another cleric in his place to exercise his whole jurisdiction, but he may appoint delegates for special causes. Owing to the dependence of the jurisdiction of the vicar on that of the bishop, it ceases or is impeded with the latter. When, however, the vicar is acting in a special case as a strict delegate, he may even then finish the cause he had begun. The jurisdiction of a vicar-general, according to most canonists, is of a class by itself between ordinary and delegated, and it may be called quasi-ordinary, because,

on the one hand, it is connected with a certain office by legal enactment and, on the other, it is exercised not in his own, but another's name. As ordinary jurisdiction, however, is always exercised by him as a matter of fact, there is no reason why his power should not be called ordinary. By virtue of a general mandate, the vicar-general exercises ordinary jurisdiction in the name of the bishop, but for some causes he needs a special mandate. These are: to make a visitation of the diocese, to confer benefices of free collation, to punish the excesses of clerics or remove them from their benefices or offices, to use the bishop's Tridentine faculties of dispensation and suspension, to concede dimissorial letters for receiving orders. All of the above require a special mandate by explicit law, but others of a similar nature, according to canonists, also require this mandate. They are: to suppress, unite, or divide benefices, to admit resignations for the purpose of exchanging benefices, to convoke a diocesan synod, to erect monasteries and confraternities. The office of a vicar-general expires with his death or resignation; with the cessation of the bishop's jurisdiction; with the revocation of his vicarial mandate, which must, however, be justified by a grave cause and against which, if his honour be impugned, he has recourse to the Holy See.

WILLIAM H.W. FANNING

Hermann von Vicari

Hermann von Vicari

Archbishop of Freiburg in Baden, b. at Aulendorf in Wurtemberg, 13 May, 1773; d. at Freiburg, 14 April, 1868. In 1789 he received tonsure at Constance and obtained a canonry, studied law until 1795 at Vienna, and after a brief practice began the study of theology. In 1797 he was ordained priest, and made ecclesiastical councillor and official of the episcopal curia at Constance. After the suppression of the diocese (1802) the Archbishop of Freiburg appointed him cathedral canon, in 1827 vicar-general, and in 1830 cathedral dean. In 1822 he was appointed Auxiliary Bishop of Macra, in 1836 and 1842 diocesan administrator, and in 1842 archbishop. As archbishop, Vicari endeavoured to release the Church of Baden from the bonds of Josephinism and the principles of Wessenberg, and to defend its rights against the civil Government. To overcome prevalent religious indifference he emphasized the rights of bishops in training and appointing the clergy, and enforced discipline as regards mixed marriages. In a violent dispute with the Government over his prohibition of a Requiem Mass for deceased Protestant rulers he was victorious, as also in later contests about the schools. Though placed under police supervision and held prisoner in his palace, his unwavering determination brought about the reorganization of Catholic life in Baden. He founded a seminary for boys out of his private means, established a theological house of studies, and appointed learned and ascetic men of sound religious convictions as professors at the ecclesiastical seminary. In

numerous pastoral letters and exercises he animated the priests for their high calling, exhorted them to the faithful fulfilment of their duties, especially in the administration of the sacraments, and punished disobedience with great severity. He was energetic in his support of the secular authority, and in the revolutionary years of 1848-1849 he exhorted the Catholics to remain loyal.

KUBEL, Hermann von Vicari (Freiburg, 1869); HANSJAKOB, Hermann von Vicari (Wurzburg, 1873).

PATRICIUS SCHLAGER

Vicar of Christ

Vicar of Christ

(Lat. *Vicarius Christi*).

A title of the pope implying his supreme and universal primacy, both of honour and of jurisdiction, over the Church of Christ. It is founded on the words of the Divine Shepherd to St. Peter: "Feed my lambs. . . . Feed my sheep" (John 21:16-17), by which He constituted the Prince of the Apostles guardian of His entire flock in His own place, thus making him His Vicar and fulfilling the promise made in Matthew 16:18-19.

In the course of the ages other vicarial designations have been used for the pope, as Vicar of St. Peter and even Vicar of the Apostolic See (Pope Gelasius, I, Ep. vi), but the title Vicar of Christ is more expressive of his supreme headship of the Church on earth, which he bears in virtue of the commission of Christ and with vicarial power derived from Him. Thus, Innocent III appeals for his power to remove bishops to the fact that he is Vicar of Christ (cap. "Inter corporalia", 2, "De trans. ep."). He also declares that Christ has given such power only to His Vicar Peter and his successors (cap. "Quanto", 3, *ibid.*), and states that it is the Roman Pontiff who is "the successor of Peter and the Vicar of Jesus Christ" (cap. "Licet", 4, *ibid.*). The title Vicar of God used for the pope by Nicholas III (c. "Fundamenta ejus", 17, "De elect.", in 6) is employed as an equivalent for Vicar of Christ.

WILLIAM H.W. FANNING

Vice

Vice

(Lat. *vitium*, any sort of defect) is here regarded as a habit inclining one to sin. It is the product of repeated sinful acts of a given kind and when formed is in some sense also their cause. Its specific characterization in any instance must be gathered from the opposition it implies to a particular virtue. It is manifest that its employment to designate the individual wicked act is entirely improper. They differ as the habit of doing something is distinguished from the act of that thing. Hence a man may have vices and yet be at times guilty of no sin, and conversely the commission of isolated sins does not make him vicious. Such guilt as he may have contracted in any case is charged directly

to the sinful act, not to the vice. Hence the teaching of St. Thomas Aquinas that, absolutely speaking, the sin surpasses the vice in wickedness. Even though the sin be removed by God the vice, if there was one, may still remain, just as failure to act in any direction does not necessarily and straightway destroy the habit which perchance existed. The habit of sinful indulgence of any sort is to be extirpated by unrelenting vigilance and the performance of contrary acts over a space more or less protracted according as the vice was more or less inveterate. Obviously this applies to vices antagonistic to acquired virtues, for so far as the infused virtues are concerned they can be recovered only, as they were originally obtained, through the gratuitous bounty of God. It is interesting to note that according to St. Thomas after one has been rehabilitated, in the state of grace and has received, let us say, the infused virtue of temperance, the vice of intemperance does not continue formally as a habit but only as a sort of disposition and as something which is in process of destruction. (*in via corruptionis*).

JOSEPH F. DELANY

St. Vicelinus

St. Vicelinus

Bishop of Oldenburg, apostle of Holstein, b. at Hameln about 1086; d. 12 Dec., 1154. Orphaned at an early age, he received his primary education at Hameln. He left secretly for Paderborn, where he enjoyed the home and instructions of Hartmann, and soon surpassed his companions and assisted in the management of the cathedral school. He was called to Bremen to act as teacher and principal of the school, and was offered a canonry by Archbishop Frederic. In 1122 he went to Laon in France to complete his studies (Hauck, "Kirchengesch. Deutschl.", Leipzig, 1903, IV, 600); this is doubted by Schirren (Beitrag zur Kritik alterer holst. Geschichte, 1876, 38). On his return he was ordained priest by St. Norbert of Magdeburg. Archbishop Adalben sent him among the Wends, and in the fall of 1126 Henry, Prince of the Obotrites, gave him a church in Lubeck. At the death of Henry (22 March, 1127) Vicelinus returned to Bremen, and was appointed pastor at Wippenthorp. This gave him an opportunity to work among the Holstians and neighbouring Slavs. His preaching gathered crowds of eager listeners, and many priests aided him in founding the monastery of Neumunster, according to the Rule of St. Augustine, which was liberally endowed by the archbishop. Wars among the tribes in 1137 caused the missionaries to abandon their labours for two years. Vicelinus sent two priests to Lubeck, but with little success. At his suggestion King Lothair intended to build a fortress and monastery at Segeburg, but death prevented him. Some years later Vicelinus established a house at Hogersdorf. In 1149 he was made Bishop of Oldenburg, where he did much for the spiritual and temporal welfare of his diocese. In 1152 he was struck by paralysis and lingered amid much suffering for two years. His body was transferred to Bordesholm in 1332, and buried before the main altar. In 1874 the small Catholic parish at Hameln had his picture engraved on a new bell. He is usually represented with a church resting on his left arm; his feast is celebrated on 12 Dec.

KREUSCH, Kirchengesch. Der Wendenlande (Paderborn, 1902), 35; STRUNCK, Leben der Heiligen Westfalens, I (Munster, 1863), 123; HELMODI, Chron. Slav.; Bibl. Hag. Lat., II, 1236.

FRANCIS MERSHMAN

Gil Vicente

Gil Vicente

Portuguese dramatist, b. about 1470; he was living in 1536. He took up the study of law but abandoned it for literature. As a lyric poet he is represented by some humorous poems in the "Cancioneiro" of Garcia de Resende. He owes his fame to his plays, and with good reason he is styled the father of the Portuguese drama. He wrote in all no fewer than 42 pieces, of which 10 are in Spanish, 14 in Portuguese, and the rest in mingled Spanish and Portuguese. It had already become the fashion for the leading Portuguese authors to write in Spanish as well as in their native tongue, and this fashion was to continue throughout the Renaissance. Many of Vicente's plays were composed for the purpose of celebrating religious and national festivals; others commemorate events in the life of the royal family; still others are quite popular in their tone and were intended by him to serve the ends of entertainment only. The first of his plays was the "Visitacao" (in Spanish), which celebrates the birth of John III, King of Portugal (1502). He recited it himself in the chamber of the Spanish mother of John III. It is known that ladies and gentlemen of the Court, as well as the poet himself, played parts in his dramas when they were produced in the palace. Like the classic dramas of Spain, they are regularly in verse, and they contain lyrics of his own with melodies composed also by him, as well as other popular lyrics and melodies introduced for particular effect. For the sake of convenience the plays may be grouped under the headings of autos (the more peculiarly religious pieces), comedias and tragi-comedias, and farces. The 17 autos are usually called his "Obras de devocao". They reveal an influence of the contemporaneous Spanish dramatist, Juan del Encina, while contemporaneous Spaniards, like Lucas Fernandez and Torres Naharro, may possibly have inspired his profane compositions. But he was never a servile imitator; the life of the time is reflected again and again by him in an original and interesting manner, and, in spite of uncouthness of form, his little dramas remain very readable. Of course, only a genuinely devout Catholic could have written his "Obras de devocao". The first edition of his works was published at Lisbon in 1561-2.

Eds. of the Obras de Gil Vicente (Hamburg, 1834, and Lisbon, 1852), a good critical ed. is needed; MICHAELIS DE VASCONCELLOS in GREBER, Grundriss der romanischen Philologie, II, ii, 270 sqq.; MENENDEZ Y PELAYO, Antologia de poetas liricos castellanos, VII (Madrid, 1898), clxiii; SANCHES DE BAENA, Gil Vicente (Marinha Grande, 1894); BRAGA, Eschola de Gil Vicente, etc. (Oporto, 1898); IDEM; Gil Vicente e as origens de teatro nacional (Oporto, 1898); BRAGA is always to be used with caution.

J.D.M. FORD

Diocese of Vicenza

Diocese of Vicenza

(VICENTINA).

The city is the capital of a province in Venetia (Northern Italy). The surrounding country is agricultural, but there are also quarries of marble, sulphur, copper, and silver mines, and beds of lignite and kaolin; mineral springs also abound, the most famous being those of Recoaro. Among the industries worthy of mention are the woollen and silk, pottery, and musical instruments. The cathedral, dating from early in the eleventh century, and restored in the thirteenth, sixteenth, and nineteenth, possesses numerous pictures and sculptures, nearly all of them by Vicentine artists (Cittadello, Celestia, Liberi, Ruschi). The Church of the Ara Coeli (1244), formerly belonging to the Clarisses, contains statues by Marinali and Cassetti, and paintings by Tiepolo. The Churches of the Carmine (1372) and S. Caterina (1292), formerly belonging to the Humiliati, possess notable pictures. S. Corona (1260) was built by the Dominicans after the death of Ezzelino, and is pictures by Montagna ("The Magdelene") and Relline ("Baptism of Christ"). Other churches are: S. Croce (1179), SS. Felice e Fortunato (eighth century), SS. Filippo e Giacomo (twelfth century), S. Lorenzo of the Friars Minor (1280), in the Gothic style, contains the tombs of many illustrious Vicentines. In the cloister of S. Maria of the Servites (1319) took place the miracles of St. Philip Benizi de Damiani. The most remarkable secular buildings are the theatre, built by Palladio in 15890 for the Accademia degli Olimpici, and the Basilica--the building itself Gothic of 1444, though Palladio built the outer portico in two orders. Near the latter are the clock tower (1224-1446), 268 feet in height, and the Rotondo, another work of Palladio's (1570), with four porticoes. There are numerous private palaces which were transformed by Palladio and his pupils. A special feature is the multitude of towers which still remain. The Communal Library was founded by Count Giovanni M. Bertolo. The Museum contains a picture-gallery exclusively devoted to Vicentine painters. Of the philanthropic institutions many, like the hospital, date back to the fourteenth century, others to the fifteenth.

Vicentia was a city of the Veneti, from whom it was taken by the Gauls. In Roman times it was of little importance, though it had the franchise in 45 B.C. It suffered by the incursions of the Goths and the Huns, but is not mentioned in connection with the Gothic War. In the eighth century we find a Lombard Duke of Vicenza. When the Othos handed over the government of the city to the bishop, its communal organization had an opportunity to develop, and separated itself from the episcopal authority. It took an active part in the Lombard League, compelling Padua and Treviso to join, and its podesta, Ezzelino III, il Balbo, was captain of the league. When peace was restored, however, the old rivalry with Padua, Bassano, and other cities was renewed, besides which there were the internal factions of the Vivaresi (Ghibellines) and the Maltraversi (Guelphs). The tyrannical Ezzelino IV drove the Guelphs out of Vicenza, and caused his brother, Alberico, to be elected podesta (1230). The city joined the Second Lombard League against Frederick II, and was sacked by that monarch (1237), after which it formed part of Ezzelino's dominions. On his death the old

government was restored--a *consiglio maggiore* of four hundred members and a *consiglio minore* of forty members--and formed a league with Padua, Treviso, and Verona. Three years later the Vicentines entrusted the protection of the city to Padua, so as to safeguard republican liberty; but this protectorate (*custodia*) quickly became dominion, and for that reason Vicenza in 1311 voluntarily submitted to the Scaligeri of Verona. In 1404 it submitted to Venice, and thenceforward shared the history of that republic. It was besieged by the Emperor Sigismund, and Maximilian I held possession of it in 1509 and 1516. In 1848 it rose against Austria, but was recovered after a stubborn resistance. Vicenza was the native city of the historian Ferreto dei Ferreti (fourteenth century), the poet Trissino (1478-1553), the traveller Pigafetta, companion of Magalhaes, the architects Palladio and Scamazzi, and the engraver Valerio Belli.

Among its patron saints the city venerates St. Lontius, bishop and martyr, and Sts. Theodore and Apollonius, bishops and confessors in the fourth century. The Christian cemetery discovered recently near the Church of Sts. Felix and Fortunatus, dates from the earlier half of the fourth century, and these two saints were probably martyred under Diocletian. The first bishop of whom there is any certain record is Horontius (590), a partisan of the Schism of the Three Chapters. Other bishops were: Vitalis (901), high chancellor of King Berengarius; Girolano (1000), deposed by Henry II for political sedition; Torengo, in whose episcopate a number of bishops rebelled against the episcopal authority; Blessed Giovanni Ccciafronte (1179-85), a Benedictine, slain by one of his own vassals. Uberto was deposed by Innocent III as a despoiler of church property, but the canons put off until 1219 the election of his successor, Gilberto, who was forced by the tyranny of Ezzelino to live in exile. Blessed Bartolommeo da Breganze (1256), a Dominican, had previously been Bishop of Nicosia, in Cyprus, and legate in Syria. Under Bishop Emiliani (1409) took place the apparition of the Blessed Virgin on Monte Berico which led to the foundation of the famous sanctuary, 3280 feet above the sea level. Pietro Barbo (1451) was afterwards Pope Paul II. Cardinal Giovanni Battista Zeno (1468) was distinguished for his sanctity and learning. Matteo Priuli (1563) founded the seminary and made efforts for reform. Alvise M. Ganrielli (1779) restored many churches and the seminary. The See of Vicenza was suffragan of Aquilcia, then of Udine, and since 1818 of Venice. The diocese contains: 219 parishes, with 477,000 souls; 699 secular and 39 regular priests; 10 houses of male religious and 52 sisters; 4 schools for boys, and 52 for girls. The Catholic Press comprises "Il Berico" (tri-weekly, Vicenza), "La Riscossa" (tri-weekly, Breganze), and six other periodicals.

CAPPELLETTI, *Le chiese d'Italia*, X; CASTELLINI, *Storia della città di Vicenza* (14 vols., Vicenza, 1782-1822); RICCARDO, *Storia dei Vescovi Vicentini* (Vicenza, 1786); GIAROLO, *La necropoli cristiana di Vicenza* (Vicenza, 1909).

U. BENIGNI

Diocese of Vich

Diocese of Vich

(Vicensis, Ausonensis).

Suffragan of Tarragona, bounded on the north by Gerona, on the east by Gerona and Barcelona, on the south by Barcelona and Tarragona, on the west by Tarragona and Lerida. It lies within the four Catalonian provinces, but the greater part of it in that of Barcelona. The capital has 9500 inhabitants. Vich is of very ancient origin; it was called Ausa by the Romans, and Iberian coins bearing this name have been found there. The Goths called it Ausona. After its destruction by the Moors only one quarter (Viculus) was rebuilt, and this was called Viculus Ausonensis, from which the name Vich was derived. The introduction of Christianity was undoubtedly very remote, as martyrs of Ausa are recorded in the time of Decius, and in the earliest records of the Tarraconensian sees the Bishop of Vich is one of the very first mentioned. None, however, is mentioned by name until 516 when Cinidius is named as assisting at the provincial Council of Tarragona and Gerona. Aquilinus (589-99) attended the third Council of Toledo; Esteban, the fourth and one at Egara; Dominus, the sixth of Toledo; Guericus, the eighth; Wisefredus sent his vicar to the thirteenth, and attended in person the fifteenth and sixteenth. With this bishop ends the history of the Church of Ausona before the Saracen invasion. The reconquest of Vich was begun in the time of Louis the Pious, who confided the civil government to Borrell, Count of Ausona, all ecclesiastical matters being under the direction of the Archbishop of Narbonne. In 826 Vich fell once more into the hands of the Moors and was finally reconquered by Wilfred the Hairy, independent Count of Barcelona.

Wilfred dedicated to the Blessed Virgin the famous monastery of Ripoli, which was already in existence in 888, and obtained from the Archbishop of Narbonne the consecration of Godmarus as Bishop of Vich. The bishops and the family of Moncada disputed the right of sovereignty over the city until 1315, when the Bishop Berenguer Gaguardia ceded his rights to the king, James II, who also purchased the rights of the Moncadas. It is disputed whether the Church of San Pedro Apóstol or S. Maria la Rotonda was the first cathedral church. For centuries the bishops celebrated the first Christmas Mass in this church, and the third in that of San Pedro. The very ancient Church of S. Maria was rebuilt from the foundations by Canon Guillermo Bonfil in 1140, and consecrated forty years later by Bishop Pedro Retorta. In 1787 it was demolished to make room for the new Cathedral. Bishop Jorge (915- 38) reconsecrated the Church of Ripoli and also consecrated that of S. Maria de Manresa. Bishop Atton (960-72) is worthy of mention as a great promoter of studies. Many persons availed themselves of the advantages offered by his reforms, among them Gerbert, the monk of Orleans, afterwards Pope Sylvester II, who was distinguished for his learning. Another of the most illustrious bishops of Vich was Oliva (1018-46), son of the Count of Besahi, and Abbot of Ripoli where he reconstructed and richly decorated the church. The dedication took place 15 January, 1032. He also, with the help of Ermesinda, Countess of Barcelona, reconstructed the cathedral and dedicated it to Sts. Peter and Paul on 31 August, 1038. In the time of his successor Guillermo I the relics of its patron saints, the martyrs Lucianus and Marcianus, were found at Vich, and a council was held for the restoration of peace among the faithful. Berenguer Seniofredo reformed the chapter, expelling lax members and introducing regular observance. Berenguer obtained for himself the dignity of Archbishop of Tarragona, which was contested by the Bishop of Narbonne.

Among the Spanish bishops who attended the Council of Trent was Acisclo Moya de Contreras, Bishop of Vich, who was accompanied by the theologian Pedro Mercado.

Of the more recent bishops, Jose Morgades y Gili deserves special mention. He restored the monastery of Ripoli, destroyed and pillaged by the revolutionists, and reconsecrated its church on 1 July, 1893. He also established at Vich an archaeological museum where he collected many treasures of medieval art which had been dispersed among the ancient churches of the diocese. The present Bishop of Vich is Jose Torras y Bages, a man of great culture and learning. The greatest glory of Vich of modern times is Jaime Balmes, the foremost Spanish philosopher of the nineteenth century, whose remains are interred in the cloister of the cathedral. His first centenary was celebrated at Vich by a Catholic Congress. The original cathedral, which had but a single nave, thick walls, and few windows, was replaced by that built by Bishop Oliva. As early as the thirteenth century Bishop Raimundo de Anglesola wrote a pastoral letter exhorting his people to contribute towards repairing the cathedral. In 1401 Bishop Diego de Heredia added a transept, and in 1585 the door of San Juan was added, but the necessity of a complete reconstruction was soon recognized, and towards the end of the eighteenth century the building was torn down, and the corner stone of the new one was laid on 24 September, 1781. It was consecrated on 15 September, 1803. It is classic in design, a combination of Doric and Tuscan, with a facade of white stone enriched with a beautiful balustrade. It has three entrances, corresponding to the three naves, and colossal statues of its six patrons. The interior is Corinthian. All the monuments and altars were destroyed when the old church was demolished, except the high altar which is of alabaster, in the Gothic style, and was given early in the fifteenth century by D. Bernardo Despujol. Among the chapels that of S. Bernardo Calvo (1233-43), who assisted Jaime I in the conquest of Valencia, deserves special mention. The two-storied Gothic cloister is exceedingly beautiful. A handsome Gothic doorway leading to the chapter house has been preserved.

The conciliar seminary was begun in 1635 by Gaspar Gil and was finally finished, by command of Benedict XIV, by Manuel Munoz in 1748. The present seminary is located in the former Jesuit College. It has sent out many famous men, among them Balmes and the poet Mosén Jacinto Verdager, author of "La Atlantida". The episcopal palace was destroyed in the wars of 1640 and rebuilt by degrees, being completed by Bishop Veyan. The archaeological museum is in this building. the University of Vich never attained to any great importance; it is not known when or by whom it was founded. Philip III granted it the privilege of conferring degrees, but only in philosophy and the arts (1599). Philip V, in the Cortes of Barcelona (1702), granted it the power to confer degrees in theology and other higher sciences. Manresa, where St. Ignatius Loyola wrote his Spiritual Exercises, is situated in the Diocese of Vich. His memory is venerated in the Santa Cueva, which has been converted into a church, and a magnificent college of the Jesuits built near it. Among the celebrated natives of Vich should be mentioned the Trinitarian St. Miguel de los Santos and Padre Claret, confessor of Isabella II and founder of the Congregation of the Missionaries of the Immaculate Heart of Mary.

RAMON RUIZ AMADO
Francescoe de Vico

Francescoe de Vico

Astronomer, b. at Macerata, States of the Church, 19 May, 1805; d. at London, England, 15 Nov., 1848. Entering the Society of Jesus at San Andrea, Rome, and showing peculiar aptitude for mathematics and astronomy, he was appointed professor of these branches at the Roman Collega and assistant to the director of the observatory, Father Dumouchel, whom he succeeded as director in 1839. Under his direction the observatory acquired a European reputation, and his labours in astronomy made him famous. Science owes to him many important discoveries. Unwearied in activity, he held correspondence with the most celebrated astronomers, and was a frequent contributor to scientific publications. He was a charter member of the Italian Society of Science, and was elected to membership in many scientific societies at home and abroad. He received the Lalande prizes of the French academy, and six times won the gold medal offered by the King of Denmark to the first discoverer of a telescopic comet. One of these medals is in the museum at Georgetown University, U.S.A. Father de Vico left Rome towards the end of March, the political disturbances of 1848 making his stay impossible. Arago, then Minister of Marine, wished to retain him at Paris, but the threatening outlook of affairs in Europe and the cordial invitation from Georgetown College to assume charge of its recently founded observatory impelled him to come to the United States. He arrived on 22 July, 1848, and, with characteristic activity, spent the whole of the first night with Lieutenant Maury at the U.S. Naval Observatory, Washington. The honourable reception, the frank and liberal treatment accorded him, and the generous offerings made to him, were powerful inducements to retain him in America, and he accepted the position of director of the observatory at Georgetown College. Clear-sighted and prompt in planning for future work, after a few weeks stay at Georgetown, he returned to England to expedite necessary business arrangements; at Liverpool he contracted typhus fever, and, although he recovered, his constitution had been undermined, and he fell into a decline.

As de Vico's most important works may be mentioned: "The Discovery of six Comets" (see Poggendorff, *infra*); "The Discussion of the Rotation-period of the planet Venus". the dispute between the periods of twenty-four days and twenty-three hours had been kept up for a century, and was settled by him by the important discovery that the spots on the planet Venus could be observed in the day-time, at least under the Italian sky. He gave the period twenty-three hours, twenty-one minutes, and twenty-two seconds, which was generally accepted until Schiaparelli (1890) maintained that the rotation coincided with the revolution, as is the case with our moon. De

Vico's value was, however, justified, among others, by A. Muller (1898) and Belopolsky (1911). His various astronomical works are contained in the "Memorie" of the Roman College for the years 1836 to 1847, besides minor articles in the astronomical journals ("Comptes Rendus" and "Astronomische Nachrichten"). In addition to his scientific attainments, de Vico acquired reputation as a musical composer; his compositions were produced in the churches in Rome on the principal feasts, and his "Lamentations", published under the title "Antiphons and Responses of Matins and Lauds for the Last Three Days of Holy Week" (London, 1887) are famous in sacred music.

E.I. DEVITT

Victimae Paschali Laudes Immolent Christiani

Victimae Paschali Laudes Immolent Christiani

The first stanza of the Easter sequence. Medieval missals placed it on various days within the octave, but the Roman Missal assigns it daily from Easter to the following Saturday inclusively. On the authority of an Einsiedeln manuscript of the eleventh century, its authorship has been ascribed to Wipo (q.v.). With less apparent reason it has been ascribed to Notker Balbulus (q.v.) by Cardinal Bona, to Robert II of France by Durandus, and even to Adam of St. Victor (although found in manuscripts antedating his birth). It shares with certain of Notker's sequences their varying stanzaic form and almost casual assonance, but makes an advance in the frequency of rhyme; it thus marks a transition from the Notkerian sequences to the regular rhymic and stanzaic form of those of Adam of St. Victor. As the only sequence in quasi-Notkerian form retained in our Missal, it is of great interest hymnologically. "Vos" in the line "Praecedet vos in Galilaeam", in the typical Missal (1900), was replaced in the Vatican Graduale (1908) by "suos", the original word; this brings the line into appropriate syllabic conformity with the similar line in the preceding stanza, "Et gloriam vidi resurgentis". Although the lines in any one stanza will vary in syllabic length, a comparison of stanzas will show perfect numerical correspondence in the lines. Thus, stanzas 2 and 3:

Agnus redemit oves
Christus innocens Patri
Reconciliavit
Peccatores

Mors et Vita duello
Confluxere mirando;
Dux vitae mortuus
Regnat vivus.

The first two lines in the stanzas have seven syllables each; the third line has six; the fourth line, four. The chant melody is the same for each stanza. Another melody is found for the next two stanzas, which are also in perfect syllabic correspondence:

Die nobis, Maria.
 Quid vidisti in via?
 Sepulchrum Christi viventis
 Et gloriam vidi resurgentis.

Angelicos testes.
 Sudarium et vestes.
 Surrexit Christus spes mea;
 Praecedet suos in Galilaea.

Finally, comparing the original sixth stanza (omitted in the reform of the Missal by the Council of Trent, when, also, "Suos" was changed into "vos" and "Amen. Alleluia." was added to the sequence), perfect correspondence is again found:

Credendum est magis soli
 Mariae veraci
 Quam Judaeorum
 Turbae fallaci.

Seimus Christum surrexisse
 A mortis vere.
 Tu nobis victor
 Rex miserere.
 Amen. Alleluia.

Dr. Neale, in his "Epistola" (published in Daniel, IV), speaks (p. 22) of the wonderful art of building proses or sequences, and expresses (p. 10) his surprise at the deep ignorance, displayed by liturgists, of the rhythm of the Notkerian proses. Daniel also (V, p. 58) is shocked at the judgment of Frantz, -that the text is trivial, considered as poetry, and that the sequence has retained its popularity because of its good melody. The text of the "Victimae Paschali Laudes" has, however, so rarely appeared in correct form, that the syllabic correspondence cannot be perceived. Modern commentators often replace "surrexisse", "suos" by "vos", and omit "vidi" from the fourth stanza. The apparently irregular rhythms and casual rhymes or assonances have combined to give pause to translators, who render the sequence in our regular English stanza (as C.S. Calverley):

Our salvation to obtain
 Christ our Passover is slain:
 Unto Christ we Christians raise
 This our sacrifice of praise,
 or (like Caswall) rhyme with apparently equal casualness:

Forth to the paschal Victim, Christians, bring
 Your sacrifice of praise:

The Lamb redeems the sheep. . .
 What thou sawest, Mary, say,
 As thou wentest on the way. . .

or vary the verse lengths while keeping rhyme (like C.B. Pearson in the Baltimore "Manual of Prayers"), or frankly adopt prose (like the version in the "Missal for the Use of the Laity", London, 1903).

This "magnificent sequence . . . this triumphal hymn" (P. Wagner) assumed a scenic character as early as the thirteenth century, became a portion of the "Office of the Sepulchre", entered into many paschal Mystery Plays, and served as a model for many imitations in honour of the Blessed Virgin and the saints.

MEARNS and JULIAN in Dict. of Hymnology (London, 1907), 1222-4, 1722, with bibliographical references; to the list of trs. add: BAGSHAW, Breviary Hymns and Missal Sequences (London, s.d.), no. 80; ESLING in Catholic Record, V, 12; DONAHOE, Early Christian Hymns, S. II (Middletown, Conn., 1911); and prose tr. in Missal for the Use of the Laity (London, 1903). KAYSER, Beitrage zur Gesch. u. Erklarung der altesten Kirchenhymnen, II (Paderborn, 18886), 37-60, with variant texts, rubrics, in full, of the Sepulcri Officium. comment. WAGNER, Origine et Developpement du Chant Liturgique, etc., tr. BOUR (Rome, Tournai, 1904), 264-5, gives corrected text: "It became quite as celebrated as the Media vita of Notker . . . In Germany it has maintained a glorious popularity even down to our own times through the hymn Christus ist erstanden". Wagner adds that he published in the Gregoriusblatt (1896), no. II sq., two imitations "which could be sung to the triumphant and much-loved melody of Wipo". JOHNER, A New School of Gregorian Chant (New York, 1906), 15: "the melody is imbued with a spirit of triumphal joy . . . The jubilant scimus Christum surrexisse . . . should be sung with emphasis and solemnity, tempo moderato, not dragged." The tr. of LEESON, omitted from the hist. ed. of Hymns Ancient and Modern (London, 1909), is given by OULD, Book of Hymns (Edinburgh, 1910). BATES, The English Religious Drama (New York and London, 1893), omits "vidi" and has "vos" for "suos". COURTHOPE, History of English Poetry, I (London and New York, 1895), 394-5, omits "vidi" and has "vos" for "suos", dates the beginning of modern drama from the use of the "Victimae paschali laudes" in the Sepulcri Officium and the representations thence developed. THOMPSON in DUFFIELD, The Latin Hymn Writers and Their Hymns (New York, 1889), thinks the undoubted poems of Wipo do not "show the fine ear for rhythm which the author of the Victimae paschali laudes must have possessed. The sequence was one of those Easter hymns in which Luther took such delight. He calls this a "very beautiful hymn", especially finding delight in the second verse Mors et Vita. . ." See also EASTER-The Easter Office and Mass.

H.T. HENRY
 Pope St. Victor I

Pope St. Victor I

(189-198 or 199), date of birth unknown. The "Liber Pontificalis" makes him a native of Africa and gives his father the name of Felix. This authority, taking the "Liberian Catalogue" as its basis, gives the years 186-197 as the period of Victor's episcopate. The Armenian text of the "Chronicle" of Eusebius (Leipzig, 1911, p. 223) places the beginning of Victor's pontificate in the seventh year of the reign of the Emperor Commodus (180-87) and gives it a duration of twelve years; in his "Church History" (V, xxxii, ed. Schwarts, Leipzig, 1902, p. 486) Eusebius transfers the beginning of the pontificate to the tenth year of the reign of Commodus and makes it last ten years. During the closing years of the reign of Commodus (180-192) and the early years of Septimius Severus (from 193) the Roman Church enjoyed in general great external peace. The favourable opinion of the Christians held by Commodus is ascribed to the influence of a woman named Marcia. According to the testimony of Hippolytus ("Philosophumena", IX, 12) she had been brought up by the presbyter Hyacinthus, was very favourably inclined towards the Christians, perhaps even a Christian herself (Hippolytus, loc. cit., calls her *philotheos* God-loving). One day she summoned Pope Victor to the imperial palace and asked for a list of the Roman Christians who had been condemned to forced labour in the mines of Sardinia, so that she might obtain their freedom. The pope handed her the list and Marcia, having received from the emperor the required pardon, sent the presbyter Hyacinthus to Sardinia with an order of release for the Christian confessors. Callistus, afterwards pope, who had been among those deported, did not return to Rome, but remained at Antium, where he received a monthly pension from the Roman Christians. Irenaeus ("Adv. Haereses", IV, xxx, 1) points out that Christians were employed at this period as officials of the imperial Court. Among these officials was the imperial freedman Prosenes, whose gravestone and epitaph have been preserved (De Rossi, "Inscriptiones christ. urbis Romae", I, 9, no. 5). Septimius Severus, also, during the early years of his reign, regarded the Christians kindly, so that the influence of Christian officials continued. The emperor retained in his palace a Christian named Proculus who had once cured him. He protected Christian men and women of rank against the excesses of the heathen rabble, and his son Caracalla had a Christian wet nurse (Tertullian, "Ad Scapulam", IV). Christianity made great advances in the capital and also found adherents among the families who were distinguished for wealth and noble descent (Eusebius, "Hist. eccl.", V, xxi).

Internal dissensions during this era affected the Church at Rome. The dispute over the celebration of Easter (*see* EASTER CONTROVERSY) grew more acute. The Christians at Rome, who had come from the province of Asia, were accustomed to observe Easter on the 14th day of Nisan, whatever day of the week that date might happen to fall on, just as they had done at home. This difference inevitably led to trouble when it appeared in the Christian community of Rome. Pope Victor decided, therefore, to bring about unity in the observance of the Easter festival and to persuade the Quartodecimans to join in the general practice of the Church. He wrote, therefore, to Bishop Polycrates of Ephesus and induced the latter to call together the bishops of the province of Asia in order to discuss the matter with them. This was done; but in the letter sent by Polycrates to Pope Victor he declared that he firmly held to the Quartoceciman custom observed by so many celebrated and holy bishops of that region. Victor called a meeting of Italian bishops at Rome, which is the

earliest Roman synod known. He also wrote to the leading bishops of the various districts, urging them to call together the bishops of their sections of the country and to take counsel with them on the question of the Easter festival. Letters came from all sides: from the synod in Palestine, at which Theophilus of Caesarea and Narcissus of Jerusalem presided; from the synod of Pontus over which Palmas as the oldest presided; from the communities in Gaul whose bishop of Irenaeus of Lyons; from the bishops of the Kingdom of Osrhoene; also from individual bishops, as Bakchylus of Corinth. These letters all unanimously reported that Easter was observed on Sunday.. Victor, who acted throughout the entire matter as the head of Catholic Christendom, now called upon the bishops of the province of Asia to abandon their custom and to accept the universally prevailing practice of always celebrating Easter on Sunday. In case they would not do this he declared they would be excluded from the fellowship of the Church.

This severe procedure did not please all the bishops. Irenaeus of Lyons and others wrote to Pope Victor; they blamed his severity, urged him to maintain peace and unity with the bishops of Asia, and to entertain affectionate feelings toward them. Irenaeus reminded him that his predecessors had indeed always maintained the Sunday observance of Easter, as was right, but had not broken off friendly relations and communion with bishops because they followed another custom (Eusebius, "Hist. eccl.", V, xxiii-xxv.) We have no information concerning the further course of the matter under Victor I so far as it regards the bishops of Asia. All that is known is that in the course of the third century the Roman practice in the observance of Easter became gradually universal. In Rome itself, where Pope Victor naturally enforced the observance of Easter on Sunday by all Christians in the capital, an Oriental named Blastus, with a few followers, opposed the pope and brought about a schism, which, however, did not grow in importance (Eusebius, loc. cit., B, xx). Pope Victor also had difficulties with a Roman priest named Florinus, who probably came from Asia Minor. As an official of the imperial court, Florinus had become acquainted in Asia Minor with St. Polycarp, and later was a presbyter of the Roman Church. He fell into the Gnostic heresy and defended the false learning of Valentine. St. Irenaeus wrote two treatises against him: "On the Monarchy [of God] and that God is not the Author of Evil", and "On the Ogdoad". Irenaeus also called Victor's attention to the dangerous writings of Florinus, who was probably degraded from his priestly functions by the pope and expelled from the Church (Eusebius, "Hist. eccl.", V, xv, 20).

During the pontificate of Victor a rich Christian, Theodotus the Leather-seller, came from Constantinople to Rome and taught false doctrines concerning Christ, Whom he declared to be merely a man endowed by the Holy Ghost, at baptism, with supernatural power. The pope condemned this heresy and excluded Theodotus from the Church. The latter, however, would not submit, but, together with his adherents, formed a schismatic party, which maintained itself for a time at Rome. Victor may also have come into contact with the Montanists. Tertullian reports ("Ad Praceam", 1) that a Roman bishop, whose name he does not give, had declared his acceptance of the prophecies of Montanus, but had been persuaded by Praxeas to withdraw. Duchesne ("Histoire ancienne de l'église", I, 278) and others think Tertullian means Pope Eleutherius, but many investigators consider it more probable that he meant Pope Victor, because the latter had had much to do with the

inhabitants of Asia Minor, and because, between 190 and 200, Praxeas had gone from Rome to Carthage, where he was opposed by Tertullian. The question cannot be decided positively.

Jerome calls Pope Victor the first Latin writer in the Church (Chronicon, ad an. Abr. 2209); he mentions small treatises (*mediocria de religione volumina*, loc. cit.; cf. "De viris illustribus", XXXIV: "Victor, thirteenth bishop of the Roman city, the writer of certain *opuscula* on the paschal question and others, ruled the Church ten years under Severus"). Besides the letters touching the Easter controversy none of St. Victor's works is known. Harnack tried to prove that he was the author of the treatise against the dice-throwers ("De alcatoribus"), erroneously ascribed to St. Cyprian (see "Texte und Untersuchungen," V, Leipzig, 1899), though the opinion is how universally rejected (cf. Harnack, "Geschichte der altchristl. Literatur", II, pt. II, 370). It was during Victor's administration, perhaps, that the canon of Scripture used at Rome, and which has been partially preserved in the Muratorian Fragment, was drawn up. In the note concerning him in the "Liber Pontificalis" (ed. Duchesne, I, 137) the Easter controversy is also mentioned; in addition, the introduction of *sequentes* among the clergy is also attributed to him. It is not certain what this means, whether it applies to the acolytes, or to the assistants who appeared later at Rome for such clergy as were much occupied with the administration of their cures. In any case the note is one of those which the author arbitrarily inserted into the biographies of the various popes, and has, accordingly, no historical value. The same is true of the ordinance respecting the administration of baptism in cases of necessity ascribed to Pope Victor by the same author.

J.P. KIRSCH

Pope Victor II

Pope Victor II

(GEBHARD, COUNT OF CALW, TOLLENSTEIN, AND HIRSCHBERG.)

Born about 1018; died at Arezzo, 28 July, 1057. The papal catalogues make him a native of the Bavarian Nordgau, while most German sources designate Swabia as his birthplace. His parents were Count Hartwig and Countess Baliza; the Emperor Henry III recognized him as a collateral kinsman, and he was a nephew of Bishop Gebhard III of Ratisbon, who at the court Diet of Goslar presented him (Christmas Day, 1042) to Henry III as a candidate for the episcopal see of Eichstatt. The emperor hesitated at first because Gebhard was only twenty-four years old, but, on the advice of the aged Archbishop Bardo of Mainz, he finally consented to invest him with this important see. Gebhard proved to be a good bishop and a prudent statesman. He was in the emperor's retinue when the latter was crowned at Rome in 1046; he took part in the synod presided over by Leo IX at Mainz in October, 1049, and in the consultations between the pope and the emperor at Ratisbon and Bamberg in 1052. By this time he had become the most influential councillor of Henry III. It was

upon his advice that in 1053 a German army, which was on its way to join Leo IX in his war against the Normans, was recalled, an advice which he is said to have regretted when he was pope (Leo Marsicanus in his "Chronaicon Casinense", II, 89, in P.L., CLXXIII, 692). Early in the same year he became regent of Bavaria for the three year old Henry IV. In this capacity he had occasion to prove his loyalty towards the emperor by defend the rights of the empire against the deposed Duke Conrad, the counts of Scheyern, and his own uncle, Bishop Gebhard of Ratisbon.

After the death of Leo IX (19 April, 1054) Cardinal-subdeacon Hildebrand came to the emperor at the head of a Roman legation with the urgent request to designate Gebhard as pope. At the Diet of Mainz, in September, 1054, the emperor granted this request, but Gebhard refused to accept the papal dignity. At a court Diet held at Ratisbon in March, 1055, he finally accepted the papacy, but only on condition that the emperor restored to the Apostolic See all the possessions that had been taken from it. The emperor consented to this condition and Gebhard accompanied Hildebrand to Rome, where he was formally elected and solemnly enthroned on Maundy Thursday, 13 April, 1055, taking the name of Victor II. Even as pope he retained the Diocese of Eichstatt. Victor II was a worthy successor of Leo IX. With untiring zeal he combated, like his predecessor, against simony and clerical concubinage. Being well supported by the emperor, he often succeeded where Leo IX had failed. On Pentecost Sunday, June 4, 1055, he held a large synod at Florence, in presence of the emperor and 120 bishops, where former decrees against siony and incontinence were confirmed and several offending bishops deposed. To King Ferdinand of Spain he sent messengers with threats of excommunication if he should continue in his refusal to acknowledge Henry III as Roman Emperor. Ferdinand submitted to the papal demands. Before the emperor returned to Germany he transferred to the pope the duchies of Spoleto and Camerino. Early in 1056 Victor II sent Hildebrand back to France to resume his labours against simony and concubinage, which he had begun under Leo IX. He appointed the archbishops Raimbaud of Arles and Pontius of Aix papal legates to battle against the same vices in Southern France. Late in the summer of the same year he accepted the urgent invitation of the emperor to come to Germany, arriving at Goslar on 8 September. He accompanied Henry III to Botfeld in the Hartz Mountains where on 5 October he witnessed the untimely death of the emperor. Before his death, the emperor entrusted his six-year-old successor, Henry IV, and the regency of the kingdom to the pope. On 28 October, after burying the emperor in the cathedral at Speyer, he secured the imperial succession of Henry IV by having him solemnly enthroned at Aachen. He still further strengthened the position of the boy-king by recommending him to the loyalty of the princes at the imperial Diet which he convened at Cologne early in December, and at the court Diet of Ratisbon on Christmas Day.

Leaving the regency of Germany in the hands of Agnes mother of Henry IV, Victor returned to Rome in February, 1057, where he presided over a council at the Lateran on 18 April. On 14 June he created Frederick, whom he had a month previously helped to the abbacy of Monte Cassino, Cardinal-priest of San Crisogono thus gaining the friendship of the powerful Duke Godfrey of Lorraine, a brother of the new cardinal. He then went to Tuscany, where he settled (23 July) a jurisdictional dispute between the palace of St. Donatus near Arezzo; five days later he died. His

attendance wished to bring his remains to the cathedral at Eichstatt for burial. On their way thither, the remains were forcibly taken from them by some citizens of Ravenna and buried there in the Church of Santa Maria Rotonda, the burial place of Theodoric the Great.

The chief sources for the life of Victor II are the narrations of an anonymous writer of Herrieden, ANONYMUS HASERENSIS, a contemporary of Henry IV; they are printed in *Mon. Germ. Hist.: Script.*, VII, 263 sq.; MANN, *The Lives of the Popes in the Middle Ages*, VI (London, 1910), 183-206; JORIS, Victor II, pape et regent de l'empire in *Revue du monde catholique* (1862-3), IV 560-72; V, 46-61; HOFER, *Die deutsch. Papste*, II (Ratisbon, 1839), 217-68; STEINDORFF in *Allgemeine deutsch. Biographie*, XXXIX (Leipzig, 1895), 670-3; IDEM, *Jahrbucher des deutsch. Reiches unter Heinrich III*, I, II (Leipzig, 1874-81); MEYER VON KNONAU, *Jahrb. des deutsch. Reiches unter Heinrich IV. u. DUCHESNE, II, 277.

MICHAEL OTT

Pope Blessed Victor III

Pope Blessed Victor III

(DAUFERIUS or DAUFAR).

Born in 1026 or 1027 of a non-regnant branch of the Lombard dukes of Benevento; died in Rome, 16 Sept., 1087. Being an only son his desire to embrace the monastic state was strenuously opposed by both his parents. After his father's death in battle with the Normans, 1047, he fled from the marriage which had been arranged for him and though brought back by force, eventually after a second flight to Cava obtained permission to enter the monastery of S. Sophia at Benevento where he received the name of Desiderius. The life at S. Sophia was not strict enough for the young monk who betook himself first to the island monastery of Tremite in the Adriatic and in 1053 to some hermits at Majella in the Abruzzi. About this time he was brought to the notice of St. Leo IX and it is probable that the pope employed him at Benevento to negotiate peace with the Normans after the fatal battle of Civitate. Somewhat later Desiderius attached himself to the Court of Victor II at Florence and there met two monks of Monte Cassino, with whom he returned to their monastery in 1055. He joined the community, and was shortly afterwards appointed superior of the dependent house at Capua. In 1057 Stephen IX (X) who had retained the abbacy of Monte Cassino came thither and at Christmas, believing himself to be dying, ordered the monks to elect a new abbot. Their choice fell on Desiderius. The pope recovered, and, desiring to retain the abbacy during his lifetime, appointed the abbot-designate his legate for Constantinople. It was at Bari, when about to sail for the East, that the news of the pope's death reached Desiderius. Having obtained a

safe-conduct from Robert Guiscard, the Norman Count (later Duke) of Apulia, he returned to his monastery and was duly installed by Cardinal Humbert on Easter Day, 1058. A year later he was ordained cardinal-priest of the title of S. Cecilia and received the abbatial blessing.

Desiderius was the greatest of all the abbots of Monte Cassino with the exception of the founder, and as such won for himself "imperishable fame" (Gregorovius). He rebuilt the church and conventual buildings, established schools of art and re-established monastic discipline so that there were 200 monks in the monastery in his day (see MONTE CASSINO). On 1 Oct., 1071, the new and magnificent Basilica of Monte Cassino was consecrated by Alexander II. Desiderius's great reputation brought to the abbey many gifts and exemptions. The money was spent on church ornaments of which the most notable were a great golden altar front from Constantinople, adorned with gems and enamels and "nearly all the church ornaments of Victor II which had been pawned here and there throughout the city" [Chron. Cass., III, 18 (20)]. The bronze and silver doors of the Cassinese Basilica which Desiderius erected remain, and in the Church of S. Angelo in Formis near Capua some of the frescoes executed by his orders may still be seen. Peter the Deacon gives (op. cit., III, 63) a list of some seventy books which Desiderius caused to be copied at Monte Cassino; they include works of Sts. Augustine, Ambrose, Bede, Basil, Jerome, Gregory of Nazianzus, and Cassian, the registers of Popes Felix and Leo, the histories of Josephus, Paul Warnfrid, Jordanus, and Gregory of Tours, the "Institutes" and "Novels" of Justinian, the works of Terence, Virgil, and Seneca, Cicero's "De natura deorum", and Ovid's "Fasti".

Desiderius had been appointed papal vicar for Campania, Apulia, Calabria, and the Principality of Beneventum with special powers for the reform of monasteries; so great was his reputation with the Holy See that he "was allowed by the Roman Pontiff to appoint Bishops and Abbots from among his brethren in whatever churches or monasteries he desired of those which had been widowed of their patron" (Chron. Cas., III, 34).

Within two years of the consecration of the Cassinese Basilica, Pope Alexander died and was succeeded by Hildebrand. Undoubtedly the chief importance of Desiderius in papal history lies in his influence with the Normans, an influence which he was able repeatedly to exert in favour of the Holy See. Already in 1059 he had persuaded Robert Guiscard and Richard of Capua to become vassals of St. Peter for their newly conquered territories: now Gregory VII immediately after his election sent for him to give an account of the state of Norman Italy and entrusted him with the negotiation of an interview with Robert Guiscard. This took place on 2 Aug., 1073, at Benevento. In 1074 and 1075 he acted as intermediary, probably as Gregory's agent, between the Norman princes themselves, and even when the latter were at open war with the pope, they still maintained the best relations with Monte Cassino (end of 1076). At the end of 1080 it was Desiderius who obtained Norman troops for Gregory. In 1082 he visited the emperor at Albano, while the troops of the Imperialist antipope were harassing the pope from Tivoli. In 1083 the peace-loving abbot joined Hugh of Cluny in an attempt to reconcile pope and emperor, and his proceedings seem to have aroused some suspicion in Gregory's entourage. In 1084 when Rome was in Henry's hands

and the pope besieged in Sant' Angelo, Desiderius announced the approach of Guiscard's army to both emperor and pope.

Though certainly a strong partisan of the Hildebrandine reform the gentler Desiderius belonged to the moderate party and could not always see eye to eye with Gregory in his most intransigent proceedings. Yet when the latter lay dying at Salerno (25 May, 1085) the Abbot of Monte Cassino was one of those whom he named as fittest to succeed him. Desiderius was by no means willing to assume the mantle of Gregory VII, experience had taught him that his power and utility lay in being a middleman, yet at a time when the Church was surrounded by powerful enemies his influence with the Normans made him the most obvious candidate. The Romans had expelled the antipope from the city, and hither Desiderius hastened to consult with the cardinals on the approaching election; finding, however, that they were bent on forcing the papal dignity upon him he fled to Monte Cassino, where he busied himself in exhorting the Normans and Lombards to rally to the support of the Holy See. When autumn came Desiderius accompanied the Norman army in its march towards Rome, but becoming aware of the plot which was on foot between the cardinals and the Norman princes to force the tiara upon him, he would not enter Rome unless they swore to abandon their design; this they refused to do, and the election was postponed. At about Easter (Chron. Cass., III, 66) the bishops and cardinals assembled at Rome summoned Desiderius and the cardinals who were with him at Monte Cassino to come to Rome to treat concerning the election. On 23 May a great meeting was held in the deaconry of St. Lucy, and Desiderius was again importuned to accept the papacy but persisted in his refusal, threatening to return to his monastery in case of violence. Next day, the feast of Pentecost, very early in the morning the same scene was repeated. The consul Cencius now suggested the election of Odo, Cardinal-Bishop of Ostia (afterwards Urban II), but this was rejected by some of the cardinals on the grounds that the translation of a bishop was contrary to the canons. The assembly now lost all patience; Desiderius was seized and dragged to the Church of St. Lucy where he was forcibly vested in the red cope and given the name of Victor (24 May, 1086). The church had been without a head for twelve months all but a day. Four days later pope and cardinals had to flee from Rome before the imperial prefect of the city, and at Terracina, in spite of all protests, Victor laid aside the papal insignia and once more retired to Monte Cassino where he remained nearly a whole year. In the middle of Lent, 1087, a council of cardinals and bishops was held at Capua at which the pope-elect assisted as "Papal vicar of those parts" (letter of Hugh of Lyons) together with the Norman princes, Cencius the Consul, and the Roman nobles; here Victor finally yielded and "by the assumption of the cross and purple confirmed the past election" (Chron. Cass., III, 68). How much his obstinacy had irritated some of the prelates is evidenced in the letter of Hugh of Lyons preserved by Hugh of Flaviony (Mon. Germ. Hist.: Script. VIII, 466-8).

After celebrating Easter in his monastery Victor proceeded to Rome, and when the Normans had driven the soldiers of the Antipope Clement III (Guibert of Ravenna) out of St. Peter's, was there consecrated and enthroned (9 May, 1087). He only remained eight days in Rome and then returned to Monte Cassino. Before May was out he was once more in Rome in answer to a summons

for the Countess Matilda, whose troops held the Leonine City and Trastevere, but when at the end of June the antipope once more gained possession of St. Peter's, Victor again retired to his abbey. In August a council was held at Benevento, at which he renewed the excommunication of the antipope and the condemnation of lay-investiture, and anathematised Hugh of Lyons and Richard, Abbot of Marseilles. When the council had lasted three days Victor became seriously ill and retired to Monte Cassino to die. He had himself carried into the chapter-house, issued various decrees for the benefit of the abbey, appointed with the consent of the monks the prior, Cardinal Oderisius, to succeed him in the Abbacy, just as he himself had been appointed by Stephen IX (X), and proposed Odo of Ostia to the assembled cardinals and bishops as the next pope. He died 16 Sept., 1087, and was buried in the tomb he had prepared for himself in the chapter-house. In the sixteenth century his body was removed to the church, and again translated in 1890. The cultus of Blessed Victor seems to have begun not later than the pontificate of Anastasius IV, about 60 years after his death (*Acta SS. Loc. cit.*). In 1727 the Abbot of Monte Cassino obtained from Benedict III permission to keep his feast (*Tosti, I, 393*).

Pope Victor III is a far less impressive figure in history than Desiderius the great Abbot of Monte Cassino, but there is abundant evidence that it was largely his failing health that made him so reluctant to accept the great position which was thrust upon him, indeed Ordericus tells us that he was taken ill when saying the first Mass after his consecration, so that during his papacy "he hardly got through a single Mass", *vix una tantum missa perfunctus* (P.L., CLXXXVIII, p. 578). On 5 Aug., 1087, when Victor was holding the Council at Benevento, an army consisting of Roman, Genoese, Pisan, and Amalfitan troops sent by him to Africa under the Banner of St. Peter captured the town of El Mahadia, and forced the Mohammedan ruler of Tunis to promise tribute to the Holy See and to free all Christian slaves. This event may perhaps be considered as the beginning of the Crusades. The only literary work of Victor which we possess is his "Dialogues" on the miracles wrought by St. Benedict and other saints at Monte Cassino. There is also a letter to the bishops of Sardinia to which country he had sent monks while still Abbot of Monte Cassino. In his "De Viris illustribus Casinensibus", Peter the Deacon ascribes to him the composition of a "Cantus ad B. Maurum" and letters to Philip of France and Hugh of Cluny which no longer exist.

The chief source is the *Chronicon Cassinense*, in *Mon. Germ. Hist.: Script.*, VII, reprinted in P.L., 173; some autobiographical details are to be met with in his own *Dialogues*, P.L., 149. See also MABILLON, *Acta SS.*, Sept., V, 373 sqq.; WATTERICH, *Pontificum Romanorum Vitae*, I (Leipzig, 1862), in which (562) is to be found the letter of Hugh of Lyons mentioned above; *Liber Pontificalis*, ed. DUCHESNE, II (Paris, 1892), 292; JAFFE, *Regesta Pont. Rom.*, I (Leipzig, 1885), 655-6. The best English account is MANN, *Lives of the Popes*, VII (London, 1910), 218-244. For Desiderius's relations with the Normans see CHALANDON, *Hist. de la Domination Normande en Italie et en Sicile* (Paris, 1907); BOHMER, Victor III in *Realencyklopadie fur protestantische Theologie*, XX (Leipzig, 1908); GREGOROVIVUS, *Hist. of Rome in the Middle Ages*, tr. HAMILTON, IV (London, 1894-1900); MILMAN, *Latin Christianity*, IV (London, 1872); TOSTI,

RAYMUND WEBSTER

Victor IV

Victor IV

Two antipopes of this name.

I. Cardinal Gregory Conti, elected in opposition to Innocent II in the middle of March, 1138, by the partisans of the Pierleoni family, as successor to Anacletus II. At the end of two months, however, Gregory submitted on 29 May to Innocent and renounced his office.

II. Octavius, Cardinal of St. Cecilia, d. at Lucca, 20 April, 1164. He was elected 7 Sept., 1159, by a small minority of the cardinals (four or five), the clergy of St. Peter's, and the Roman populace, while at the same time the majority of the college of cardinals elected the chancellor Rolando who assumed the title of Alexander III. Octavian belonged to one of the most powerful Roman families (Counts of Tusculum), had been cardinal since 1138, and was very popular on account of his liberality, accessibility, and splendour of living. He was considered a great friend of the Germans, and rested his hopes on the Emperor Frederick Barbarossa. Yet it is not to be assumed that the emperor had desired his election; Rolando was certainly not agreeable to him, yet neither was it to his interest to have an antipope. As a matter of fact the emperor was at first neutral and called upon the bishops not to take sides; the decision, the emperor said, should be reserved for the action of the Church. As the chief protector of the Church, therefore, he convoked a synod at Pavia (February, 1160). It decided, as was to be expected, for Victor, and pronounced an anathema upon Alexander, while Alexander on his side excommunicated the emperor. The attempt to secure Victor's recognition was never completely successful in Germany, where Bishop Eberhard of Salzburg was his principal opponent. France and England sided with Alexander; Spain, Hungary, Ireland, and Norway followed their example. King Louis VII of France wavered, indeed, once more in 1162, but the disastrous meeting with the emperor at Saint-Jean-de-Losne had as its result that the king held firmly to the obedience of Alexander. During the years 1162-65 Alexander lived in France, and from 1163 the pope exerted himself to gain more of Germany for his cause. All uncertainty came to an end at the death of Victor IV. His successor was Paschal III.

KLEMENS LOFFLER

Victor (Bishop of Tunnunum)

Victor

Bishop of Tunnunum (Tonnenna, Tunnuna) in Northern Africa and zealous supporter of the Three Chapters; died about 569, probably in confinement at a monastery in Constantinople. On account of his fanatical adherence to the three Chapters, which had been condemned by an edict of Justinian I in 544, he was first imprisoned in the monastery of Mandrakion, then exiled to the Balcaric Islands on the Mediterranean Sea, and finally to Egypt. In 564 he was summoned before the emperor and the Patriarch of Constantinople, with five other African bishops, and ordered to submit to the emperor's edict. All of them remained obstinate and were imprisoned in different monasteries of Constantinople. Victor is the author of a celebrated chronicle from the creation of the world to the end of the year 566. Only that part of the chronicles which extends from 444 to 566 is extant. It is of great historical value, dealing chiefly with the Eutychian heresy, the controversy about the Three Chapters, and giving some details concerning the Arians and the invasion of the Vandals. It was first edited by Canisius in 1600, is reprinted in Migne, P.L., LXVIII, 941-62, and was newly edited by Mommsen in "Mon. Germ. Hist. Auct. Antiq.", XI, (Berlin, 1894), 178-206. The chronicle was continued to 590 by Joannes Gothus, founder of the Abbey of Biclár in Spain (Migne, P.L., LXXII, 859-70 and Mommsen, loc. cit., 211-20). Victor is probably also the author of "De Poenitentia", a treatise formerly attributed to St. Ambrose and printed in Migne, P.L., XVII, 971-1005.

PAPENCORDT, *Geschichte der Vandalischen Herrschaft in Afrika* (Berlin, 1837), 359-65; HOLDER EGGER, Victor von Tunnuna in *Neues Archiv für ältere deutsche Geschichtsforschung*, I (Berlin, 1876), 298 sq.; LECLERCQ, *L'Afrique Chrétienne*, II (Paris, 1904), 271-72; STOKES in *Dict. Christ. Biog.*, IV, 1126.

MICHAEL OTT

Victoria

Victoria

(VICTORIEN. IN INS. VANCOUVER.)

Diocese in southwestern British Columbia, of which province it is the capital, was known until recently, first, as the Diocese, and later, as the Archdiocese of Vancouver. It is the mother-diocese of British Columbia, for at its establishment in 1847 it comprised the mainland of this province and all the coast island, including the Queen Charlotte group. In 1863 the mainland became an Apostolic vicariate, and was afterwards erected into the Diocese of New Westminster, at which time the diocese of Vancouver was restricted to Vancouver Island and adjacent islands. Alaska, after its cession to the United States in 1867, was attached to this see, and remained so until 1894 when it became a prefecture Apostolic (see ALASKA). In 1904 the title was changed to that of the

archdiocese, and in 1909 to that of the Diocese of Victoria, the Archdiocese of Vancouver being then transferred to Vancouver City, B.C.

As early as 1778 Franciscan missionaries reached Nootka on the west coast of the island. Later, a sprinkling of settlers established themselves in the southern part, in what was known as Fort Camosun, a name afterwards changed to Victoria, in honour of the reigning Queen of England. In 1843 Father Bolduc volunteered to minister to the spiritual necessities of these pioneers. In 1847 Rev. Modeste Demers (q.v.), a missionary of Oregon, was called to take charge of the newly created See of Vancouver. He had already acquired personal knowledge and experience regarding the territory known as British Columbia, and, before taking possession of his see, he went to Europe to secure priests and means for his needy diocese. Father, afterwards Bishop, Lootens was one of the generous volunteers. With characteristic energy, foresight, and wisdom, Bishop Demers soon organized the district assigned him. To aid him, he brought the Sisters of St. Ann in 1858, and, the following year, the Oblates of Mary Immaculate. The latter were given charge of the natives of the entire diocese, and established themselves with headquarters at Esquimalt; they remained until 1864. The former, devotedly both to education and the care of the sick, are still actively engaged in various parts of the diocese, and have two institutions in Victoria, St. Ann's Academy for girls and St. Joseph's Hospital.

Before the death of Bishop Demers in 1871, he appointed as his administrator, the Reverend C. J. Seghers, (q.v.), who two years later became bishop. The apostolic zeal of his saintly predecessor marked his six years' tenure of office, when Bulls from Rome appointed him coadjutor to Archbishop Blanchet of Oregon, with right of succession, and the Rev. J. B. Brondel succeeded him in Victoria. Five years later, the latter was transferred to Helena, Montana, and Archbishop Seghers, at his own suggestion, was appointed to the vacant see of Vancouver. Right Rev. J. N. Lemmens (b. in Schimmert, Holland, in 1850) was ordained at the American College of Louvain, Belgium, in 1875, and came the following year to Victoria. In 1884, he was sent to represent the diocese at the Third Plenary Council of Baltimore. After the tragic death of Archbishop Seghers, Father Lemmens was consecrated Bishop of Vancouver, in 1888. A lasting monument to his energetic efforts is the Gothic cathedral, which was completed in 1892. He died in 1897 in Guatemala, Central America, where he was spending some months for the double purpose of soliciting contributions towards the payment of the cathedral debt, and of aiding the exiled Archbishop of Guatemala by administering confirmation throughout the diocese. His successor, Right Rev. Alexander Christie, took possession of his see in 1898, and the following year was promoted to the Archdiocese of Oregon City. Right Rev. Bertram Orth succeeded in 1899, and in 1903 was raised to the dignity of archbishop of the newly established ecclesiastical province of British Columbia. Owing to failing health, he resigned in 1908, and in 1909 Right Rev. Alexander MacDonald, of Antigonish, Nova Scotia, was consecrated in Rome under the title of Bishop of Victoria. Bishop MacDonald is well-known as a writer on religious subjects and questions of the day.

The Indian missions both on the east and on the west coast of the island were established by the secular clergy of the diocese, and were, until recently, under their sole direction. In 1900, the

Benedictine Fathers of Mount Angel, Oregon, and in 1903, the Fathers of the Company of Mary, came to take a share in the work of the diocese. There are 2,500 Catholic Indians, and the total Catholic population is 10,000. There are 8 schools, 1 college, 5 convents, 24 churches, 13 missions, 19 priests, and 40 stations.

A.J. BRABANT

Vicarite Apostolic of Northern Victoria Nyanza

Vicariate Apostolic of Northern Victoria Nyanza

The Mission of Victoria Nyanza, founded in 1878 by the White Fathers of Cardinal Lavigerie, was erected into a vicariate apostolic 31 May, 1883, with Mgr. Livinhac as the first vicar Apostolic. When the latter was raised to the superior-generalship of the Society of White Fathers (October, 1889), the Holy See appointed Mgr. Hirth as his successor. A Decree of 6 July, 1894, divided Victoria Nyanza into three autonomous missions: that of Southern Nyanza in the German Protectorate, of which Mgr. Hirth retained the government and became the first titular; those of the Upper Nile and Northern Nyanza, in English territory, the former given to the Fathers of Mill Hill and the second to the White Fathers. From the 18 provinces of Uganda the Decree of 1894 detached that of Kyaggive and Kampala Mengo, which it placed under the jurisdiction of the Fathers of Mill Hill, and gave to Northern Nyanza the remaining 17 provinces of the Kingdom of Uganda, the three Kingdoms of Unyoro, Toro, and Ankole, and in the Belgian Congo an isosceles triangle whose top was the northern point of Lake Albert Nyanza and whose base followed the 30th degree of longitude. Three races share the portion of Northern Nyanza lying in the English protectorate; the first, that of the Baganda, is represented by 670,000 inhabitants, and has given the strongest support to evangelization, and in 1886 had the courage and the honour to give to the Church its first negro martyrs. The second race, the Banyoro, is represented by 520,000 aborigines; the third, the Bahima (Hamites), the leading class in the shepherd Kingdom of Ankole, is in a minority not exceeding 50,000 souls. The total population of Northern Nyanza equals therefore about 1,500,000 inhabitants, of whom 1,400,000 are in English territory, and 360,000 in the Congo country.

At the time of its creation (July, 1894) Northern Nyanza had an administrator, 17 missionaries divided among 5 stations, 15,000 neophytes and 21,000 catechumens. In July, 1896, the date of the death of Mgr. Guillerman, the first vicar Apostolic, the vicariate had 6 stations, 21 missionaries, and 20,000 baptized Christians. In July, 1911, it had 1 bishop, Mgr. Henri Streicher (preconized 2 Feb., 1897), Bishop of Tabarca and second vicar Apostolic of Southern Nyanza, 118 missionaries divided among 28 stations, 113,810 neophytes and 97,630 catechumens. All the missionaries of Northern Nyanza, including the vicar Apostolic, are members of the Society of White Fathers founded by Cardinal Lavigerie. As yet the native clergy consists only of 2 subdeacons, 4 minor clerics, and 4 tonsured clerics. They are assisted by 28 European religious of the Society of White Sisters, and by an institute of native religious called the Daughters of Mary. Eleven hundred and five Baganda and Banyoro teachers cooperate in the educational work and in the service of 832

churches or chapels. The Vicariate of Northern Nyanza has 894 scholastic establishments, viz. a lower seminary with 80 students, an upper seminary with 16 students in philosophy and theology, a high school with 45 pupils, most of them the sons of chiefs, a normal school with 62 boarders, and 890 primary schools in which free instruction is given to 19,157 pupils, of whom 11,244 are boys and 7913 girls. The annual report of the vicar Apostolic from June, 1910, to June, 1911, shows 7930 confirmations, 1154 marriages, 578,657 confessions heard, 1,236,126 communions administered, and the gratuitous distribution of 394,495 remedies. The headquarters of the mission is at Villa Maria, near Masaka, Uganda. There are situated the residence of the bishop, the two seminaries, a flourishing mission station, the central house of the White Sisters, the novitiate of the native sisters, and a printing establishments where there is published monthly in the Ruganda language an interesting 16-page magazine entitled "Munno", which has 2000 native subscribers. Entebbe is the seat of the procurator of the vicariate.

HENRY STREICHER

Southern Victoria Nyanza

Southern Victoria Nyanza

Vicariate apostolic erected from the mission of Nyanza, 13 June, 1894, lies north of the Vicariate of Unyanyembe, and comprises the land surrounding the southern half of Lake Victoria Nyanza from Lake Kivu in the west to Lake Natron in the east, on the Anglo-German frontier (36° E). The mission thus including the northern portion of German East Africa is entrusted to the White Fathers, who first settled in the district in 1883, when expelled from Uganda (see UPPER NILE, VICARIATE OF THE). They were well received by the Wasukuma and the Unyamwezi, but these people being engaged chiefly as porters for caravans, have all the vices natural to a roving life and but little inclination for religion; progress among them has been slow, but the fruit is permanent. About 1896 a mission was established on the island of Ukerewe, as a result of numerous conversions made there for some years previous by a native who had been baptized in 1889 at the first mission headquarters Notre-Dame de Kamoga and had returned to spread the light among his fellow-islanders. As polygamy and divorce are practically unknown in Ukerewe good progress has been made. In 1900 the Mission of the Sacred Heart, Isavi, near Lake Kivu, in Ruanda was established among the Bahutus, a simple laborious race, rarely indulging in polygamy. The Catholic natives of the vicariate are a source of great consolation to the missionaries, they recite the rosary daily, very many attend daily Mass, and most of them approach the sacraments weekly; they have a strong filial devotion to the Blessed Virgin and some, especially those of Baganda race, give proof of a very high degree of virtue and a wonderful delicacy of sentiment.

Statistics

Mgr. John Joseph Hirth, titular bishop of Teveste, born at Niederspechbach, near Altkirch, 26 March, 1854, appointed vicar Apostolic, 13 July, 1894, resides at Rubia; there is also a coadjutor vicar, Mgr. Joseph Sweens, titular Bishop of Capsa, born at Boise-le-due, Holland, 22 May, 1855;

ordained 1882; joined the White Fathers, 1889; was appointed director of the lay-brothers at Maison-Carrée, Algiers, in 1891, and later superior at Marienthal; in 1901 he went to Africa and established the mission of Marienheim; in 1909 he was named visitor of his congregation, was nominated coadjutor to Mgr. Hirth, 1 Jan., 1910, and consecrated at Bois-le-duc. The vicariate contains about 2,500,000 pagans, 7000 Catholics, 12,000 catechumens, 30 White Fathers; 23 lay brothers; 6 Missionary Sisters of Notre-Dame-d'Afrique; 20 churches or chapels; 15 stations; 85 schools with 3900 pupils; 190 catechists; 4 orphanages and 5 dispensaries; and a meteorological station belonging to the missionaries. Current details of the missions in German Africa are given in "Gott will es" (Maria-Gladbach), published by the "Afrikaverein deutscher katholiken".

LE ROY in PIOLET, *Les missions cath. Franc. au dix-neuvième siècle*, V (Paris, 1902), 458-66.

A.A. MACERLEAN

St. Victorinus

St. Victorinus

An ecclesiastical writer who flourished about 270, and who suffered martyrdom probably in 303, under Diocletian.

He was bishop of the City of Pettau (Petabium, Poetovio), on the Drave, in Styria (Austria); hence his surname of Petravionensis or sometimes Pictaviensis, e.g. in the Roman Martyrology, where he is registered under 2 November, which long caused it to be thought that he belonged to the Diocese of Poitiers (France). Until the seventeenth century he was likewise confounded with the Latin rhetorician, Victorinus Afer. According to St. Jerome, who gives him an honourable place in his catalogue of ecclesiastical writers, Victorinus composed commentaries on various books of Holy Scripture, such as Genesis, Exodus, Leviticus, Isaias, Ezechiel, Habacuc, Ecclesiastes, the Canticle of Canticles, St. Matthew, and the Apocalypse, besides treatises against the heresies of his time.

All his works have disappeared save extracts from his commentaries on Genesis and the Apocalypse, if indeed these texts are really a remnant of his works, concerning which opinions differ. These latter with a critical annotation are published in Migne's P.L., V (1844) 301-44. It is certainly incorrect to regard him as the author of two poems, "De Jesu Christo" and "De Pascha", which are included in the collection of Fabricius. Born on the confines of the Eastern and Western Empires, Victorinus spoke Greek better than Latin, which explains why, in St. Jerome's opinion, his works written in the latter tongue were more remarkable for their matter than for their style. Like many of his contemporaries he shared the errors of the Millenarians, and for this reason his works were ranked with the apocrypha by Pope Gelasius.

LEON CLUGNET

Caius Marius Victorinus

Caius Marius Victorinus

(Called also VICTORINUS MARIUS, or MARIUS FABIVS VICTORINUS, and frequently referred to as VICTORINUS AFER.)

A fourth-century grammarian, rhetorician, philosopher, and theologian, b. in Africa about the year 300. In pursuance of his profession as teacher of rhetoric he migrated to Rome where he attained such fame and popularity that in 353 a statue was erected in his honour in the Forum of Trajan (Jerome, "Chron." ad an. 2370). Details regarding his life come almost entirely from Jerome or Augustine, the latter of whom calls him a man of the highest learning and thoroughly skilled in the liberal arts. In addition to his activities as a teacher he was a copious author and wrote or translated many works. Three works written before his conversion still exist: "Liber de Definitionibus"; a commentary on the "De inventione" of Cicero; and a treatise on grammar, "Ars grammatica". Works from the same period which have perished are: a treatise on logic, "De syllogismis hypotheticis"; commentaries on the "Topica" and the "Dialogues" of Cicero; a translation and commentary of Aristotle's "Categories"; a translation of the same author's "Interpretation"; translations of Porphyry's "Isagoge", and works of other Neo-Platonists. The conversion of Victorinus, which took place before 361, was brought about, according to Augustine, through study of the Bible. A seeming reluctance at first to enroll himself in the Christian community was compensated for afterwards by his insistence on making his profession of faith as publicly as possible. His accession to the Church, which was received with joy by the Christians of Rome, did not cause Victorinus to abandon his profession, and he continued to teach until the edict of Julian in 362, closing the teaching profession to Christians, caused him to retire.

Nothing more is known of his subsequent career except what can be gleaned from his writings. The range and fulness of these manifest his diligence and zeal in defence of his faith. Most of the writings of his Christian days have perished. Those which survive are an anti-Arian treatise, "Liber de generatione divini Verbi"; a work "Adversus Arium" in four books, a tract "De Hoimooousio Recipiendo"; three hymns "De Trinitate"; commentaries on St. Paul's Epistles to the Galatians, to the Ephesians, and to the Philippians. Other works of doubtful authenticity are "Liber ad Justinum manichaeum"; "De verbis scripturae: Factum est vespere et mane dies unus"; "Liber de physicis". Many references in his own writings show that Victorinus was the author of many other works of a theological, exegetical, or polemical character. He is also credited with the translation of some of Origen's works and the authorship of other Christian hymns. Though a man of varied books and great erudition Victorinus is little studied. This neglect is largely attributed to the fact that his style is obscure and burdensome in the extreme. Recent study of his works tends to enhance his position

in the history of pedagogy, letters, and theology, and above all as a potent influence in disseminating Neo-Platonic doctrines in the West.

There is no critical edition of the works of Victorinus. P.L., VIII, is the most accessible. KOFFMANN, *De Mario Victorino philosopho christiano* (Breslau, 1880); MONCEAUX, *Histoire litteraire de l'Afrique chretienne*, 111 (Paris, 1905), 373-422.

PATRICK HEALY

Victor of Capua

Victor of Capua

A sixteenth-century bishop about whose life nothing is known except what is found in his epitaph (C.I.L., 4503), which has been preserved, though the tomb itself has disappeared. This inscription simply states that his episcopate of thirteen years ended in April, 554. The authenticity of the inscription and its chronological data admit of no doubt. Victor is commemorated in the Roman Martyrology on 17 Oct., as "eruditione et sanctitate conspicus". His original writings, preserved only in fragments, show him to have been a devoted student and a man of wide and varied learning. His best known work is the "Codex fuldensis", one of the most ancient MSS. of the Vulgate, prepared under his direction, and which he himself revised and corrected. In this codex the place of the Four Gospels is taken by a harmony of the Gospels, or as he himself terms it in the preface, a single Gospel composed from the four. Victor was not certain that the harmony he used was identical with the "Diatesseron" of Tatian. The discovery of the text of the latter work and recent investigation have made it clear that this Latin harmony used by Victor was drawn up about A.D. 500. The anonymous author of this work simply substituted the Latin of St. Jerome's Vulgate for the Greek of Tatian, and at times changed the order or inserted additional passages. Many of the discrepancies may be due however to subsequent changes. Other works by Victor were: "De cyclo paschali" written about 550 in refutation of the "Cursus paschalis" of Victorius. Only a few fragments of this work have survived (P.L., LXVIII, 1097-98; Pitra, "Spic. Solesm.", I, 296); commentaries on the Old and New Testament, for the most part catenae of quotations from the Greek exegetes; "Libellus reticulus seu de arca Noe" (Pitra, "Spic. Solesm.", I, 287), containing an ingenious allegorical computation showing that the dimensions of the ark typified the years of Christ's earthly life; "Capitula de resurrectione Domini" dealt with some of the chief difficulties regarding Christ's genealogy and the hour of the Crucifixion as recorded in the Evangelists.

UGHELLI, *Italia sacra*, VI, 306; PITRA, *Spicileg. Solesm.*, I (Paris, 1852), p. 1 sq., 265 sq., 287, 296; ZAHN, *Gesch. d. neutestam. Kanons*, II, 535; BARDENHEWER-SHAHAN, *Patrology*, p. 628.

PATRICK HEALY

Victor Vitensis

Victor Vitensis

An African bishop of the Province of Byzacena (called VITENSIS from his See of Vita), b. probably about 430. His importance rests on his "Historia persecutionis Africanæ Provincie, temporibus Geiserici et Hunerici regum Wandalorum". This is mainly a contemporary narrative of the cruelties practised against the orthodox Christians of Northern Africa by the Arian Vandals. Formerly divided into five books, this work is now usually edited in three, of which the first, dealing with the reign of Geiseric (427-77), is derived from the accounts of others, while the second and third, covering the reign of Huneric, are a strictly contemporary account of events, of which the author was in the main an eyewitness. No exception can be taken to the accuracy of Victor's narratives, except that at all times he exaggerates, but when allowance is made for the stress of feeling under which the work was written, it can be seen that he records little that did not happen. Victor throws much light on social and religious conditions in Carthage and on the African liturgy of the period. His history contains many valuable documents not otherwise accessible, e.g. the Confession of Faith drawn up for the orthodox bishops by Eugenius of Carthage and presented to Huneric at the conference of Catholic and Arian bishops in 484. Two documents: a "Passio beatissimorum martyrum qui apud Carthaginem passi sunt sub impio rege Hunerico (die VI. Non. Julias 484)" and a "Notitia Provinciarum et Civitatum Africae", formerly appended to all the MSS. and now incorporated in the printed editions, are probably not Victor's. The former may be the work of one of his contemporaries; the latter is a list of the Catholic bishops summoned to the conference of 484, arranged according to provinces, with an exact indication of the ecclesiastical geography of that portion of Africa.

The early editions of Victor are found in MIGNE, LVIII, 179-276. Newer and more critical editions by HALM (Berlin, 1879) in Mon. Germ. Hist.: Auct. Antiq., III, 1; and PETSCHENIG (Vienna, 1881); Corpus Scrip. Eccles. Lat., VII; FERRERE, De Victoris Vitensis libro qui inscribitur historia persecutionis Africanæ Provincie (Paris, 1898).

PATRICK HEALY

Marco Girolamo Vida

Marco Girolamo Vida

Italian Humanist, b. at Cremona about 1490; d. in 1566. He came to Rome under Julius II; a priest and canon regular, he presented, in the rather lax Court, the greatest example of severity of morals. The Humanists were called upon to produce a great Christian epic. Vida undertook it, and in order that he might work at it Leo X gave him the priory of St. Sylvester at Frascati. The work, the "Christias", was not finished until after the death of Leo X (Cremona, 1535). The subject goes beyond the life of Christ and is in reality the establishment of Christianity, for Vida accords much space at the end of his poem to the spread of the Gospel. There is no mythological element in the

six cantos; hence the unity of tone is more perfect than in Sannazaro's "De partu Virginis". Vida was also the author of short poems, such as "De Bombyce", "De ludo scaccorum" (on chess), and of a second serious and extensive work, "De arte poetica", written before 1520 (published in 1527). This didactic poem is interesting as an expression of the ideas of Humanism concerning poetry and because of its great influence. Vida dealt only with the ancients and their imitators, wholly neglecting writers in the vernacular. The general conception of his "Ars poetica" is inspired by Quintilian. The writer takes the future poet almost at the cradle, and describes the education and care which he should receive. He instructs him in invention, composition, and especially style, emphasizing particularly the harmony of the verse and defining imitative harmony, examples of which, taken from Virgil, have passed into classical teaching, e.g. "ruit Oceano nox, procumbit-humi bos, conuolsum remis rostrisque stridentibus aequor". While Boileau exaggerates the difficulties of poetry and multiplies the duties of the poet, Vida undertakes to cultivate a taste for poetry and to remove the obstacles from the poet's path. In consequence of his plan Vida treats only of poetry in general. To him the model and prince of poets was Virgil, while he depreciates Homer, criticising his prolixity, repetition, and low style. He was the source of arguments later made use of in France by the partisans of the moderns; Vida was the first to assert that the word "ass" used by Homer did not belong to the noble style. He carried prejudice so far as to congratulate the Latin language for being ignorant of compound words so frequent in Greek. Vida's own style is elegant, clear, harmonious, and ordinarily simple. He was warm in admiration, especially in his eulogies of Virgil, but he is verbose, and if by chance he imitates Horace he dilutes him. The poem is now of interest only as a manifestation of Classicism in modern literature.

SANDYS, *Hist. of Classical Scholarship*, II (Cambridge, 1908), 117, 133; VISSAC, *De Marci Hieronymi Vidae poeticorum libris tribus* (Paris, 1862), a thesis.

PAUL LEJAY

Antonio Vieira

Antonio Vieira

Missionary, diplomat, orator, b. at Lisbon, 6 February, 1608; d. at Bahia, Brazil, 18 July, 1697. Brought when a child to Bahia, he studied under the Jesuits, and entered the Society of Jesus in 1623, pronouncing his first vows in 1625. At eighteen he was teaching rhetoric, and shortly after writing commentaries on the "Canticle of Canticles", the tragedies of Seneca, and the "Metamorphoses" of Ovid. Ordained priest in 1635, he immediately astounded all by his eloquence. When the Dutch besieged Bahia (1640), he delivered his "Discourse for the Success of the Portuguese Arms", called by the sceptical Raynal the most extraordinary outburst of Christian eloquence. Portugal, under John IV, had thrown off the Spanish yoke in 1640. The following year Vieira went to Lisbon with young Mascarenhas, whom the viceroy had commissioned to assure the new king of the loyalty of the colonists. John, recognizing the Jesuit's merit, made him tutor to the Infante Dom Pedro, court preacher, and a member of the Royal Council. Vieira did efficient work in the

War and Navy Departments, revived commerce, urged the foundation of a national bank and the organization of the Brazilian Trade Company. A champion of freedom, he maintained that no citizen should be exempt from taxation, and denounced the severity of the Portuguese Inquisition. He advocated a purely defensive war with Spain, and to his skilful plans are partly due the victories on Elvas, Almeixal, Castello-Rodrigo, and Montes-Claros.

At different periods (1646, 1647, 1650) John IV sent Vieira on diplomatic missions, to Paris, The Hague, London, and Rome. The Jesuit little relished such honours, and steadily refused the official title of ambassador and the offer of a bishopric. In 1652 he returned to Maranhão. But so fearless were his denunciations of the slave owners and their excesses that in 1654 he was obliged to return to Lisbon, where he pleaded the cause of the outraged Indians. He was successful, and sailed for Brazil in 1655. Six years he worked for the Indians, translating the Catechism into their rude idioms, teaching them the arts of peace, travelling hundreds of miles on the Amazon and its tributaries, winning even the fierce Nheengaibas by his eloquence, but again arousing the hatred of the slave owners, who in 1661 "exiled" him to Lisbon. The corrupt Alphonso VI had succeeded John IV, and Vieira found many enemies at Court. For his leniency to the converted Jews, for alleged doctrinal errors, for his ultra-patriotic "Sebastianism", and his too credulous acceptance of the prophecies of Bandarra, who foretold a millennium in which Portugal and the Church should rule the world, for his harmless, but extravagant, "As Esperanças do Portugal" and "Clavis Prophetarum", he was condemned by the Portuguese Inquisition, forbidden to preach, and kept a prisoner from Oct., 1665, to Dec., 1667. Under Pedro II the Inquisition reversed its sentence. But Rome was a safer residence, and from 1669 to 1675 he found there an enthusiastic welcome. Clement X, the cardinals, his general, the great preacher Oliva, that erratic princess Christine of Sweden, who vainly begged him to become her director, and high and low were fascinated by his eloquence. But Vieira, amid his triumphs, longed for his Indians of Maranhão, and after a brief stay in Portugal sailed for South America in 1681. Trial and tribulation again faced him. Worn out by his labours as preacher, superior, and visitor of the missions, slanderously accused of conniving at the murder of a colonial official, denounced to his superiors for illegal canvassing in a provincial congregation of his order, and cleared of the charge only when in his grave, he died, sorrowing, but unbroken, in his ninetieth year. The slaves and the poor were his chief mourners.

Vieira is one of Portugal's greatest figures in the seventeenth century. Southey (*History of Brazil*) calls him one of the greatest statesmen of his country. A thorough-going Jesuit, Vieira was also a progressive administrator with large and democratic views. His character, though streaked with a vein of extravagance, was of the noblest. He had lofty conceptions, and, in their execution, was independent and bold. In the midst of courts, he remained humble and mortified. He had one dream, to see Portugal the standard-bearer of civilization and Christianity in the old and new world. As a prose writer he is perhaps the greatest Portugal has produced. As an orator he is undoubtedly one of the world's masters, equally great in the cathedrals of Europe and the rude shrines of Maranhão. He is not free from the bad taste and artificial "gongorism" imported from Spain, but he is clear, popular, and practical, profoundly original and frequently sublime. In this respect he

does not suffer by comparison with Bossuet himself. He has variety, dialectical skill, imaginative colouring, pathos, power, and even humour. He is amazingly fertile; he has, for instance, 30 sermons on the Rosary, 18 on Saint Francis Xavier, 14 on the Eucharist. He had mastered the Scriptures, and his interpretations, if forced at times, are always striking. Vieira's works have been frequently published, as for example, "Obras Completas" (Lisbon, 1854), fairly complete with 15 volumes of sermons alone, 500 letters, etc.; this edition, however, omits many manuscripts kept in the British Museum and the National Library, Paris; "Obras Completas" (Porto, 1907); "Sermões Selectos" (6 vols., 1852-53); "Cartas" (3 vols., Lisbon, 1735). For a complete list of Sommervogel and Cabral's fine work, "Vieira Pregador".

JOHN C. REVILLE

Nicholas Viel

Nicholas Viel

Died 1625, the first victim of apostolic zeal on the shores of the St. Lawrence. After persistently asking for three years, he at length obtained the favour of consecrating his life to the Canadian missions. He arrived at Quebec, 28 June, 1623, accompanied by Brother Sagard, the future historian. After a few days rest he set out for the Huron country, which he reached with great difficulty, taking up his residence in the village of St. Nicolas (Toanche), but did not remain long before joining Father Le Caron stationed at St. Joseph (Carhagouha). Here he began earnestly to study the language, collecting the first elements of a dictionary, and sowing the good seed of faith amidst great difficulties and tribulations. In the spring of 1624 he found himself completely isolated, Fr. Le Caron and Br. Sagard having left for Quebec. The following year he consented to accompany a band of Hurons going down to Quebec, with the intention of making a few days retreat and then returning to his missions. It is known that he never reached Quebec, but was drowned in the last chute of the Riviere des Prairies, which from that time bears the name of Sault-au-Recollet. The neophyte Auhaitsique, whom he had instructed and baptized, met with the same fate. It was learned later that this was not

an accident; but that a few Hurons, enemies of religion, drowned them in hatred of the Faith. If we can rely on the "Martyrologe des Recollets", Father Viel was buried in St. Charles's Chapel, 25 June, 1625.

ART. MELANCON

Vienna

Vienna

Vienna -- the capital of Austria-Hungary, the residence of the emperor, and the seat of a Latin archbishopric -- is situated at the north-east end of the Alps, mainly on the right bank of the Danube.

I. THE CITY OF VIENNA

(1) History

The first settlers on the site were Celts, about five hundred years before Christ. Shortly before the Christian era the land was occupied by the Romans under Tiberius, stepson of the Emperor Augustus; a permanent Roman camp for the thirteenth legion was established on the spot, and remains of this camp still exist. The first mention of the place in Roman literature is in Pliny's encyclopedia (about A.D. 77), where it is called *Vianiomina*, while the inscriptions extant use only the form *Vindobona*. During the reign of Domitian, *Vindobona* was a naval port, under Trajan it was the station for the tenth legion, the legion of the imperial family. During his struggle with the Marcomanni Marcus Aurelius often stayed at *Vindobona* and finally died there. After this there began an amalgamation of the Romans resident at *Vindobona* with the Germans who were forcing their way into the empire. Caracalla raised *Vindobona* to the rank of a municipality with mayors (*duumviri*) and town councils. The martyrdom, about 303, of St. Florian during the persecution of Galerius proves that as early as the third century Christianity had gained entrance into Vienna. In 427 *Vindobona* together with Pannonia, to which it belonged, fell to the Eastern Roman Empire; in 448 it was ceded to Attila and after his death was independent. During the migrations Vienna was conquered and plundered by the Huns and Ostrogoths, most of its inhabitants taking refuge in the mountains. Vienna is first mentioned again in the Chronicles when Charlemagne advanced down the Danube in 791, destroyed the Empire of the Avars, and formed the East Mark out of the region between the River Enns and the mountains called *Wienerwald*. There is but little mention of Vienna in the succeeding era, which signifies that no legal changes had occurred within its walls. According to ancient tradition the oldest parish church of Vienna was founded in the Carolingian period. This was St. Rupprecht's, built on a Roman foundation and probably dedicated by Archbishop Arno of Salzburg. In the tenth century the East Mark was held for a time by the Magyars, but restored to the empire, when it was settled by Bavarian peasants. Then it was transferred by the

Saxon kings to the Babenbergs. Conquered by the magyars in 1030, it was restored to the empire by the victory of the German King Henry III over the Magyar King Aba.

By the middle of the twelfth century Vienna was a town of importance and a centre of German civilization in eastern Europe. The four churches, of which only one was a parish church, no longer met religious needs; consequently in 1137 a second parish church, that of St. Stephen, was founded. The church was solemnly dedicated in 1147 in the presence of the German Emperor Conrad III, of Bishop Otto of Freising, and of other German nobles who were going to the East on a Crusade. In 1156 the East Mark became an independent duchy and the bishops to whose diocese it belonged built residences for themselves at Vienna. Thus there arose within the city walls the residences of the Bishops of Salzburg, Freising, and Seckau, of the Abbots of Klosterneuburg, Melk, Göttweig, Heiligenkreuz, etc. Through the favour of the Babenberg dynasty a flourishing church life developed. In 1158 Henry Jasomirgott founded what is called the Scotch monastery (*Schottenkloster*) for Irish Benedictines, who were called Scots by the common people; until 1418 the monks were entirely Irish. Leopold VI built the church of St. Michael near the new palace for the people of his court and the citizens who lived near the palace. He also invited Dominicans from Hungary, after his return from Palestine gave a house and chapel to the Franciscans, and offered a friendly reception to the Teutonic Knights; who thereupon built a house of their order at Vienna. At about the same time the Knights of St. John of Jerusalem settled in the town. The churches of St. Paul and St. Nicholas, the convents of the Cistercian nuns of St. Nicholas, of the Penitents of St. Mary Magdalen, and other convents were built outside the city walls. Leopold VI sought, although unsuccessfully, to release Austria from the ecclesiastical control of the Bishops of Passau and to make Vienna the see of an independent bishopric. In 1198 the city had already its own jurisdiction; in 1221 Leopold VI gave it a new municipal law, the privileges of which were still further increased by the last of the Babenberg dynasty, Frederick II (1230-46). All these circumstances increased the importance and prosperity of the city, so that Vienna became the most prominent city on the Danube as a prosperous commercial place, the home of noted Minnesingers, a centre of much visited tournaments, etc. Towards the close of the thirteenth century a decided change took place for Vienna; it became the centre of the great empire which the Habsburgs acquired in the course of centuries, of which Rudolph laid the foundation. The citizens of Vienna fought readily under the flag of the Habsburgs against the Magyars (1291, 1403), the Hussites (1421-25), the Bohemians and Moravians, Matthias Corvinus, the Turks, etc., and received from the ruling house a charter whereby their rights could not be infringed either by nobles or ecclesiastics; these rights included the holding of fiefs, free election of burgomaster and city councillors, jurisdiction over life and property, while they undertook the defence of the city. Duke Rudolph IV (1358-65), in particular, suppressed most of the courts existing in the city, limited the right of sanctuary, and forbade the building of houses without the consent of the city council. In order to make Vienna a centre also of learning he founded in 1365 a university, which he endowed richly and to which he invited distinguished scholars from Germany and France. He added a cathedral chapter to the parish church of St. Stephen, and made the crypt of the church the place of burial for the Habsburg dynasty. He also enlarged the church and laid

the corner-stone of the high south tower. His brother and successor, Albert III (1366-95), encouraged the university and acquired Trieste, thus making the commerce of Vienna independent of Venice. In the first half of the fifteenth century the prominent position of Vienna was still maintained, although the university was ravaged by the pest, the Hussites advanced almost as far as the city, and the good relations of Vienna with the ruler were disturbed, because Vienna sided with the Antipope Felix V, while Frederick III adhered to Eugenius IV. There is a celebrated description of Vienna during this era written by Aeneas Sylvius, later Pope Pius II, who was one of the most distinguished men of Vienna during the years 1443-55; he asserts that of all the cities on the Danube none is richer, has a larger population, nor is more charming than Vienna, the chief town of the country and the queen of the cities of Eastern Europe. Through the efforts of Frederick III Vienna was raised to the rank of a diocese.

In the second half of the fifteenth century Vienna began to decline. After the advance of the Turks into Europe the feeling of security had disappeared, and on account of the debasement of the currency and the dearness of living foreign merchants avoided Vienna more and more. The spread of Humanism led to violent conflicts at the university, which lost much of its renown. The revolt in 1461 of a large part of the citizens against Frederick III, which cost the burgomaster his office and life, the siege of the city by Matthias Corvinus in the years 1482-8, and the supremacy of this king for the five years 1485-90, caused the prosperity of the city to decay. The growth of the power of the Habsburg dynasty during the reign of Maximilian was no benefit to the city of Vienna itself. After the discovery of the sea-route to the East Indies and the discovery of America, international commerce followed another course; this led to a great decline in the importance of Vienna for trade with Italy and the East. When, after the death of Maximilian, Vienna revolted against his grandson Ferdinand, a new municipal Constitution was introduced, which annulled the former autonomy and a large part of the ancient rights and privileges of the city and strengthened the power of the sovereign. To the internal confusion was added the danger of the Turks, who advanced farther and farther up the Danube and on 19 September, 1525, appeared before Vienna. The heroism of the besieged, who abandoned all the suburbs of Vienna in order to concentrate for the protection of the inner city, forced Sultan Suleiman to abandon the siege in the middle of October and to withdraw after murdering 2000 prisoners. As, however, the Turks ruled a large part of Hungary and constantly renewed the war from this base, Vienna was now constantly in danger of conquest by them. The effects of the Reformation were fully as destructive for Vienna as the danger from the Turks. The new doctrine found entrance first among the nobility and then spread through a large part of the population, as at first the Government did not take strong measures against the innovations. The work of the Counter-Reformation was not zealously promoted until the Jesuits were called to Vienna in 1551, and until, in particular, the reigns of the emperors Ferdinand II and III. Unlike Rudolph II, these rulers preferred to live at Vienna, to which they invited numerous artists, poets, musicians, and scholars. The citizens were obliged to take an oath to conform to the catholic religion; large numbers of monasteries and brotherhoods laboured to revive the Catholic religion, partly by preaching and partly by education and training. Besides the disastrous effects

of the danger from the Turks and the Reformation, the prosperity of Vienna was also kept in check by the fact that on account of the danger of its position it had to be turned into a strong fortress, a condition very unfavourable to the health of the city. Terrible devastation was caused by the plague during the years 1541, 1570, 1586, and 1679.

Vienna had to suffer another siege by the mortal foe of Christendom during the reign of Emperor Leopold I. Influenced by Louis XIV of France, the sultan sent directly against Vienna an army of 200,000 men under the command of the Grand Vizier Kara Mustapha; this army appeared before the city before the gathering of the imperial army had been completed. The defenders of Vienna were led by Count Rudiger von Starhemberg, Bishop Leopold Kollonitz, who laboured unweariedly for the wounded and for the obtaining of provisions, and the burgomaster, Johann Andreas von Liebenberg. The Turks began the attack 13 July, 1683, and made violent assaults almost daily; the number of defenders sank from day to day, hunger and misery appeared, and the hospitals were full of sick and wounded. It was not until early in September that the relieving army, which had collected at Tulln, set out for Vienna; the commander-in-chief was the King of Poland, John Sobieski; among his generals were Charles of Lorraine, Maximilian Emmanuel of Bavaria, Margrave Louis of Bavaria, and others. The memorable battle began on 12 September; the Christian army descended from the Kahlenberg in three charges and won a brilliant victory over the Turks. Thenceforth Austria and Germany were permanently relieved of the danger of invasion by the Turks, and Vienna was released from its difficult position of being the outpost of Christendom.

The eighteenth century brought a new internal organization of the empire for the provinces of Austria. The erection of large ecclesiastical and secular buildings made it a capital worthy of the emperor and his empire. Thus the ties uniting Vienna and its rulers were constantly drawn together. Consequently the Viennese welcomed the Pragmatic Sanction, by which Charles VI secured the unity and indivisibility of the monarchy: they hailed with joy the entry of the Empress Maria Theresa and the birth of her son Joseph II. Vienna also tolerated in some degree the reforms that Joseph II wished to introduce in ecclesiastical and secular affairs, odious though they were in themselves because by his friendliness towards the citizens he had done much for the beautifying and improvement of the city. When, after the death of Francis I, Ferdinand I came into power and none of the much-needed reforms were undertaken, although such were urged by the estates, discontent constantly increased and the conviction that absolutism could not be maintained became almost universal. The Liberals and Democrats of all countries violently attacked the Austrian Government as the chief enemy of all political and intellectual advance. This discontent found expression in 1848, when the revolutionary wave from France spread over almost the whole of Europe. Vienna took the lead in the movement in Austria which aimed to overthrow the existing system of absolutism. On 16 March, 1848, Emperor Ferdinand proclaimed a Constitution, granted the freedom of the press, and the right of the people to bear arms, but the Radical leaders kept up the discontent of the people, notwithstanding the concessions, and succeeded in having the Constitution rejected as insufficient. On 2 December, 1848, Francis Joseph became emperor in succession to his uncle Ferdinand, who abdicated voluntarily. Vienna now developed rapidly as the capital and residence

of the ruler. Its prosperity was only temporarily interrupted by economic crises and wars as in 1859 and 1866. In 1895 the supremacy of the Liberal party in the city council was broken by the Christian Socialists. Under the guidance of the great burgomaster, Karl Lüger (1897-1910), Vienna became not only one of the best administered cities economically, but there also sprang up such an abundance of institutions for public and social benefit as no other large city of the world can show. Religious life has also enjoyed a great revival under the supremacy of the Christian Socialists.

(2) Statistics

On 31 December, the city of Vienna numbered, including the garrison, 2,004,493 inhabitants; of these 1,767,223 were Catholics (including 3723 adherents of the Greek Rite and 125 adherents of the Armenian Rite), about 60,000 Protestants, and about 150,000 Jews. The city is divided into 21 administration districts; of these 20 lie on the right bank of the Danube proper, 9 constitute Old Vienna which up to 1891 was separated from the adjacent districts by a circle of fortifications. Ecclesiastically there are 4 city deaneries, 76 parishes with the same number of parish churches, 77 monastery churches, chapels of ease, and public chapels, and about 100 private chapels. In 1912 there were in the city 308 secular priests of the diocese, 103 regulars, and 45 priests from other dioceses, 44 houses of 25 male orders, and 121 houses of 27 female orders. Besides the chief officials of the archdiocese, Vienna is also the see of the Apostolic field vicariate of the imperial and royal army and navy, which is immediately under the direction of the pope. Only the most important of the churches can here be mentioned: the cathedral of St. Stephen, a Gothic building of three naves of equal height, with a south tower 449.5 feet high. The cathedral is the most important Gothic building of the Austrian territories; it was dedicated in 1147 as a small Romanesque church, after the fire of 1293 was rebuilt in the Gothic style during the fourteenth to sixteenth centuries, and since 1852 has been completely restored by the architects, Ernst Fr. Schmidt and Hermann. The *Votiv Kirche* of Our Saviour, one of the most beautiful Gothic churches of modern times, was built 1856-79 according to the plans of Ferstel, in commemoration of the escape of the Emperor Francis Joseph from assassination in 1853. It has a very rich facade and two towers each 316 feet high. The church of Maria Stiegen (Maria on the riverbank), the national church of the Czechs, was built in the fourteenth and fifteenth centuries in the Late Gothic style; the heptagonal tower was erected in 1536. The "Karlskirche", an elaborate structure in the Baroque style with a huge cupola, is the masterpiece of Fischer von Erlach, and was erected 1715-37. The parish church "zu den sieben Zufluchten" was built by Muller (1848-61), in the Italian Roundarched style with an octagonal cupola and two towers each 223 feet high; the church of the Lazarists was built 1860-62 in Early Gothic style after the design of F. Schmidt; St. Brigitta, a Gothic church, erected in 1862-73 by the same architect; the Gothic church of the Augustinians, dating from the fourteenth century, contains the celebrated monument by Canova of Maria Christina, daughter of the Empress Maria Theresa; the Capuchin church erected in the Baroque style (1622-32) contains the crypt of the imperial family with 132 coffins; St. Pete, the second oldest church of Vienna, rebuilt in the Baroque style (1702-13) by Fischer von Erlach. Associational church life is highly developed in the city of Vienna, and there are numerous Catholic charitable institutions.

II. THE DIOCESE OF VIENNA

(1) History

The territory which now belongs to the Diocese of Vienna was subject, from the time the Germans acquired it, to the jurisdiction of the Bishop of Passau, who was represented in Vienna by an official. At the beginning of the thirteenth century Duke Leopold VI began negotiations with Rome for the founding of a separate bishopric for Vienna, but these efforts failed owing to the opposition of the Bishops of Passau. Like the rulers of the Babenberg dynasty the first princes of the house of Habsburg also desired to make Vienna an independent diocese. However Emperor Frederick III was the first to bring it about; in 1469 two dioceses were established at the same time in the Austrian territories by the Bull "In supramae dignitatis specula"; these sees were placed directly under the control of the pope: one was for the city of Vienna, which then contained three parishes, and for the fourteen, later sixteen, parishes of its immediate vicinity; the second was for the city of Wiener-Neustadt. The right to appoint the bishops of these two small dioceses was given by Pope Paul II to Emperor Frederick III and his successors. The church of St. Stephen was made the cathedral church of the Diocese of Vienna. The Bishop of Passau did not withdraw his opposition until 1481, consequently it was not until this year that the Bull of erection could be formally proclaimed in the presence of a papal envoy, Bishop Alexander of Forli, and a deputy of the Archbishop of Salzburg, the primate of Germany. In 1471 Frederick III appointed as first bishop Count Leopold of Spaur, who was not, however, able to occupy his see. The small endowment of the dioceses was the main reason why during the first century administrators rather than bishops were generally appointed. The first administrator was Johann Beckenslör or Peckenschlager (1480-82), formerly Archbishop of Gran, from which he had been driven by the Magyars; he received the archiepiscopal See of Salzburg in 1482. This bishop was succeeded by Bernhard Rohrer (1482-87), who could only exercise his office for a short period on account of the siege and occupation of Vienna by Matthias Corvinus. The diocese was administered during the supremacy of Matthias Corvinus by his court preacher, Urban Docsi.

After Vienna came again under the control of the Habsburgs the succession of administrators was as follows: Matthias Scheidt (1490-93), Bishop of Seckau; Johann Vitéz (1493-99), private secretary to Matthias Corvinus and a zealous promoter of Humanism; Bernhard Pollheim of Wartenberg (1499-1504), formerly rector of the University of Padua, and Franz Bakacs of Erdod (1504-09), Bishop of Raab. After a vacancy of several years the diocese was administered by Georg Slatkonja, Bishop of Piben in Istria (1513-22); Petrus Bonomo, Bishop of Trieste and governor of the Austrian Netherlands (1522-23), and Johann of Revellis (1523-39), chief almoner of Archduke Ferdinand. Distinguished administrators were Johann Faber (1533-41) and Frederick Nausea (1541-52). After the death of Nausea's successor, Christopher Werthwein (1552-53), the cathedral chapter undertook the administration of the Diocese, Blessed Peter Canisius aiding it by advice and deed in the struggle against the religious innovations. Bishop Anthony Bruns, who was appointed in 1558, received the Archdiocese of Prague in 1561. His successor Urban Sagstetter, a zealous

defender of the ancient Faith, resigned in 1568, on account of the violent opposition he encountered among the clergy and laity, who were largely inclined to Lutheranism. After his resignation the chapter undertook the spiritual administration. Johann Kaspar Neubock (1574-94), formerly professor at the University of Freiburg in the Breisgau, was the first of the unbroken series of the actual Bishops of Vienna. During his episcopate the Protestant movement, which he opposed to the best of his ability, although without great success, reached its culmination at Vienna. His successor Cardinal Melchior Klesl (1598-1630) introduced the Counter-Reformation in Austria with the aid of Emperors Ferdinand II and III and carried it to a successful termination. Anthony Wolfrath of Cologne (1631-39), who was also Bishop-Abbot of Kremsmünster, obtained for himself and his successors the dignity of a prince of the empire.

Among the most distinguished of his successors were: the zealous and energetic Prince-Bishop Philip Frederick Count of Breuner (1639-69), the Capuchin Emmerich Sinelli (1680-85), councillor of the emperor, during whose episcopate the memorable siege of Vienna by the Turks occurred; Francis Ferdinand Freiherr von Rummel (1609-16), who was the tutor of the later Emperor Joseph I; Prince-Bishop Sigmund Count von Kollonitz (1716-51), nephew of Bishop Kollonitz of Wiener-Neustadt, who won imperishable glory during the siege of Vienna. During this episcopate Pope Innocent XIII, at the request of Emperor Charles VI, raised the Diocese of Vienna in 1722 to the rank of an archdiocese and gave it the formerly exempt Diocese of Wiener-Neustadt as suffragan. In 1729 the diocese was enlarged by the addition of the parishes in the "district under the Wienerwald" which had formerly belonged to Passau. His successor John Joseph Count von Trautson (1751-57) was regarded as a free-thinker on account of his leniency towards Protestants and his enmity to the Jesuits, although he was zealous for the training and discipline of the clergy. During the episcopate of Cardinal Anthony Christopher von Migazzi (1757-1803), the keen adversary of the Josephine system, the Diocese of Vienna received its present boundaries. In 1789 the Diocese of Wiener-Neustadt was suppressed and incorporated in that of Vienna; in addition Vienna received the parishes of the "district under the Mannhartsberg" in Lower Austria, and five parishes of the Diocese of Raab. At the same time the two Dioceses of Lins and St. Polten, which Joseph II had erected against the wish of the pope and of the Bishop of Passau, were made suffragans of Vienna. Migazzi was followed by Sigmund Anthony Count von Hohenwart (1803-20), who had been a tutor of the Emperor Francis II, and was distinguished for charity and his care for the training of the clergy; Leopold Maximilian Firmian (1820-31), formerly administrator of Salzburg; Eduard Milde (1831-53), the celebrated pedagogue; Cardinal Othmar Rauscher (1851-75), a noted statesman and orator. Rauscher's successors were also raised to the cardinalate: John Rudolph Kutschker (1876-81), a distinguished scholar in canon law; Celestin Joseph Ganglbauer (1881-89), noted for his kindness and benevolence, who was formerly abbot of the Benedictine Abbey of Kremsmünster; Anthony Joseph Gruscha (1890-1911), who like his predecessor did much to relieve the lack of churches; Gruscha also deserves great praise for his labours in regard to Catholic associational life in Vienna, especially in respect to the Catholic Gesellenverein, which he and Kolping founded in Austria. He was the president of its central association for Austria-Hungary while still archbishop.

The present archbishop is Francis Xavier Nagl, b. at Vienna 26 November, 1855, rector of the German national church, Santa Maria dell'Anima at Rome in 1889, Bishop of Capo D'Istria in 1899, coadjutor at Vienna with the right of succession in 1910, Prince Archbishop of Vienna 5 August, 1911, made cardinal 27 November, 1911.

(2) Statistics

The Archdiocese of Vienna forms with the suffragan dioceses of Linz and St. Polten the ecclesiastical Province of Vienna. The archdiocese includes the eastern part of the Archduchy of Austria below the Enns, namely the two former administrative departments of the "District under the Wienerwald" and the "District under the Mannhartsberg". At the beginning of 1912 it included 4 city deaneries in Vienna and 25 rural deaneries, 526 parishes, 4 vicariates, 54 benefices, 20 positions for assistant priests, 1 prince archbishop, 2 coadjutor bishops, 903 secular priests, 640 regular priests (these figures include resident priests who do not belong to the diocese); 2,564,240 Catholics. The cathedral chapter consists of 2 auxiliary bishops, 1 cathedral provost, 1 cathedral dean, 1 custos, 1 cantor, 1 scholasticus, 10 canons, 12 honorary canons. The institutions for the training of the priesthood are the Catholic theological faculty of the University of Vienna with 14 professors and (1911) 237 students; the clerical seminary under the direction of the prince-archbishop with 112 students; the seminary for boys with 240 pupils; and the theological schools conducted by the orders in their monasteries: the school of the Augustinian Canons at Klosterneuburg, of the Mechitarists at Vienna, of the Cistercians at Heiligenkreuz, of the Society of the Divine Word at Maria-Enzersdorf. For the priests of other dioceses there are the higher institute of St. Augustine for secular priests, intended for priests from all the dioceses of Austria, and the Pazmanian college for the dioceses of Hungary that was founded in 1623 by Cardinal Pázamány. The public higher and middle schools of Austria are established on an inter-denominational basis. The Catholics of the diocese, however, have a large number of private schools and institutions of learning which are generally conducted by members of religious orders and are largely intended for the education of girls. Among the schools for boys should be mentioned: the Jesuit gymnasium at Kalksburg, the gymnasiums of the Benedictines and Mechitarists in Vienna, the boarding schools for seminarians of the Piarists, Redemptorists, the Pious Workers, and of the School Brothers. The ancient monasteries for men which still exist in the archdiocese are: the Abbey of Klosterneuburg of the Reformed Lateran Augustinian Canons, founded in 1106 by Margrave St. Leopold, which has 96 members; the Benedictine Schottenkloster at Vienna, founded in 1158 by Henry Jasomirgott, which has a gymnasium with 77 members; the Cistercian Abbey of Heiligenkreuz-Neukloster with a high-school for boys preparing for the priesthood, with 63 members; it was also founded by St. Leopold (1135).

Other orders and congregations are: Mechitarist, 1 monastery at Vienna with 45 members; Dominican, 2 monasteries, with 29 members; Minorite, 3 houses, 24 fathers; Franciscan, 3 houses, with 42 members; Capuchin, 2 houses, with 18 members; Calced Carmelites, in Vienna, with 5 members; Discalced Carmelites, 1 house, 19 members; Servites, 2 houses, with 14 members; Brothers of Mercy, 2 houses, with 45 members; Trinitarians in Vienna, with 9 members; Barnabites, 4 houses, with 19 members; Jesuits, 5 houses, with 144 members; Camillans, 1 monastery, 13

members; Piarists, 3 houses, 16 fathers; Lazarists, 3 houses, 87 members; Redemptorists, 3 monasteries, 103 members; Resurrectionists, 1 house, 7 members; Salesians of Don Bosco, 1 house, 12 members; Brothers of Mary, 2 houses, 25 members; Oblates of St. Francis of Sales, 2 houses, 12 members; Salvatorians, 2 houses, 31 members; the Society of the Divine Word, 3 houses, 357 members; of the Christian Schools, 9 houses, 357 members; Pious Workers, 5 houses, 94 members; total, 66 monasteries, 640 priests, 229 clerics, 508 brothers, 342 novices and candidates. The 30 female orders and congregations represented in the archdiocese had, at the close of 1911, 252 houses and 5180 members. The most important, represented by the number of members, are: Daughters of the Divine Saviour, 918; Sisters of Mercy of St. Vincent de Paul, 492; Sisters of Mercy of the Third Order of St. Francis, 478; Sisters of the Poor Child Jesus, 379; Daughters of Christian Love of St. Vincent de Paul, 374; Daughters of Divine Love, 274; Sisters of Mercy of the Holy Cross, 223; School Sisters of the Third Order of St. Francis, 211; Nuns of the Holy Heart of Jesus, 120; Poor School Sisters of Notre Dame, 114; Ursuline Nuns, 109; there are also Nuns of the Good Shepherd, Sisters of St. Elizabeth, Salesian Nuns, Carmelite Nuns, Sisters of St. Charles Borromeo, Missionaries of Mary, Sisters of the Perpetual Adoration; Daughters of the Childhood of Jesus and Mary; Sisters of the Mother of Sorrows, etc. Most of the female orders devote themselves to the care of the sick in and outside of hospitals, or take charge of primary and middle schools and schools for girls, of homes for children, asylums, institutions, etc. Of late years Catholic associational life has developed greatly. Among the most important societies are: the Catholic School Union for Austria the Society for the training of Catholic Teachers, the Austrian Leo Society for the promotion of Christian learning, literature, and art; there are also societies for journeymen, for men, workmen, youths, the St. Vincent de Paul societies, etc. Outside of Vienna the most important churches are the old cathedral at Wiener-Neustadt, the church of St. Othmar at Modling, the monastery churches at Klosterneuburg and Heiligenkreuz.

JOSEPH LINS

University of Vienna

University of Vienna

Foundation of the University

Next to the University of Prague that of Vienna is the oldest university of the former Holy Roman Empire. It was founded on 12 March, 1365, by Rudolph IV, Duke of Austria, and its charter confirmed on 18 July of the same year by Urban V, a faculty of theology not being included in the papal authorization. The school, planned on too large a scale and not sufficiently endowed, did not prosper; moreover the duke died on 27 July at Milan. About 1380 his successor, Albert III, called teachers from Paris and obtained permission from Urban VI, 20 Feb., 1384, for the establishment of a theological faculty. After the drawing up of the university statutes in 1385, and of the statutes of the faculties of theology, law, medicine, and philosophy on 1 April, 1389, the organization of the university on the model of Paris was complete. All members of the university, scholars, bachelors,

licentiates (who were obliged to lecture for a certain period), and doctors, were divided into "nations", Austrian, Rhenish, Hungarian, and Saxon. Each "nation" elected a proctor from its membership; the head of the university was the rector elected semi-annually by the proctors, while his council was composed of the proctors and the deans of the faculties. The university was subject to the ruler of the country, who was its patron, but otherwise it was autonomous and had its own jurisdiction. The permanent ecclesiastical representative of the university was the cathedral provost of St. Stephen's, who was chancellor of the university and conferred the academic degrees.

During the first century of its existence the university repeatedly proved that it was founded as an institution of the Church chiefly for the extension and defence of the Faith. An address of loyalty (rotulus) was sent to each newly-elected pope with a request for the confirmation and increase of the privileges. As an ecclesiastical corporation the university took an active part in the Councils of Pisa (1409), Constance (1414), and Basle (1431), and in several provincial synods. In that era of incessant disorder and scanty revenues, the continued existence of a university was possible only when closely connected with the Church and under the protection of the papacy. The popes granted important rights, e.g., the privilege, granted on 20 Feb., 1384, and 27 May, 1399, that distant benefices of priests teaching and studying at Vienna could be administered by a vicar; the appointment of ecclesiastical conservators (17 Aug., 1411; 21 May, 1434; 12 July, 1513); ecclesiastical jurisdiction with the right of pronouncing excommunication (27 May, 1420; 16 Feb., 1441; 12 July, 1513; 1 July, 1517), and the right of trying and judging heretics (16 Feb., 1441). Physicians (28 March, 1452) were protected by a letter of the Bishop of Passau in 1406 excommunicating quacks. The subject matter taught was confined to prescribed books, the method of teaching rigidly scholastic. The theological students were limited to the Scriptures and dogmatic theology, pastoral theology and Hebrew being added later. At first, in the faculty of law, canon law alone was taught, but Roman law was added in 1484; medicine was still entirely under the spell of sterile Arabian theories. The widest range of subjects belonged to the philosophical (liberal arts) faculty, which, as the introductory course to the three "higher faculties", had the largest number of students. Among the celebrated mathematicians and astronomers of this faculty were Johannes of Gmunden (about 1380-1442), George of Peurbach (1423-61), and Johannes Muller of Konigberg, also called Regiomontanus (1453-76). A distinguished theologian and statesman was Thomas Ebendorffer (1387-1464), noted for his part in the Council of Basle.

Period of Prosperity and Humanism

During the reign of Maximilian I (1493-1519) the university enjoyed its first period of prosperity; with the rise of Humanism about 1490, the influence of the Church steadily decreased.

Decline: Reforms

The disorders after Maximilian's death and the appearance of Luther's doctrines in Austria caused the university to decline rapidly. As early as 1511 it refused to send a representative to a council. The laxity of the medical and philosophical faculties in regard to heretics obliged the theological faculty on 14 July, 1526, to give back to the bishop authority in such matters. During the years 1525-30 the number of students steadily declined, the faculty of law was hardly more

than nominal, and in 1529 that of theology had but two professors. Only the strong hand of Ferdinand I (1522-1564) saved the university from complete decay; reforming statutes were promulgated on 2 Aug., 1533; 15 Sept., 1537, and 1 Jan., 1554. It was placed under the direction of a superintendent with large powers, who was appointed by the sovereign. Teachers having regular salaries were appointed to each faculty; the faculties of medicine and theology had each three such professors, the faculty of law four. The period of study was made five years, for the philosophical course two years. In the medial department more attention was to be paid to practical branches; in the law course Roman law was made the most important study. In 1551 Ferdinand I called the Jesuits to Vienna to revive the religious spirit and on 17 Nov., 1558, gave them two permanent theological professorships. The Jesuits established a Latin school and a house of studies, and gave philosophical courses that were largely attended.

Non-Catholic tendency and the Counter-Reformation

From 30 March, 1546, each new professor was obliged to submit to an examination of his orthodoxy, in order to prevent the admission of heretics. This regulation was annulled on 5 Sept., 1564, by Maximilian II (1564-76), who also ordained that instead of the customary formal profession of Catholic Faith, the candidate for degrees had only to declare himself a Catholic--disregarding the Bull of Pius IV (13 Nov., 1564). The emperor withdrew one professorship from the Jesuits and, at the demand of the Diet, ordered the house of studies to be closed. During the reign of Rudolph II (1576-1612), who was by education a strict Catholic, a Counter-Reformation was begun. This was due to the efforts of the cathedral provost Melchior Khlesl, appointed chancellor of the university in 1579. The first step was the publication on 2 July, 1581, and 31 March, 1591, of the papal Bull of 13 Nov., 1564; the entrance of Protestants into the university was thus prevented. In 1565 the Jesuits attempted to obtain university degrees for the students trained at their school, but their appeal was rejected both at this date and in 1573. The university was not altogether wrong in regarding as an infringement of its privileges the permission granted the Jesuits in 1570 to hold philosophical and theological courses in their college. It felt its very existence threatened, especially as the Jesuits, e.g. in 1593, had one thousand students, while the entire university had but two hundred. The dispute was settled by Emperor Matthias (1612-19) on 25 Feb., 1617, who again granted the Jesuits two professorships in theology, and in addition three in philosophy. Finally, during the reign of Ferdinand II (1619-37), the entire theological and philosophical faculties were handed over to the Jesuits, and their college was incorporated into the university (21-22 Oct., 1622; 17 Nov., 1622; 9 Aug., 1623; *Sanctio pragmatica* of 13 Oct., 1623, confirmed by Ferdinand II on 4 May, 1640). The Society renounced in perpetuity any claim to the dignity of rector of the university, but on the other hand the rector of the Jesuit college had a seat and vote directly after the superintendent appointed by the ruler. The election of professors and the methods of teaching were left to the Society.

The intent of the *Sanctio pragmatica* was to make the University Catholic in its future development. This end was the easier to attain as the Jesuits controlled all the preparatory schools. The matter, however, was more difficult in regard to the students of law and medicine, among whom many were still openly or secretly non-Catholic. The restriction to Catholics was finally

effected in these departments by decrees and by the edict of 17 Nov., 1651, which expelled all non-Catholics from the country. Following the example of other universities, as Paris, Cologne, and Mainz, Ferdinand III (1637-57) appointed (17 May, 1649) the feast of the Immaculate Conception as the church feast of the university; henceforth before attaining a degree, the rectorship, or a professorship, the candidate was obliged to profess his belief in the Immaculate Conception. From 2 Dec., 1656, the dean-elect had also to make this profession. The Dominicans alone were exempted (31 Oct., 1649) from this obligation, but on this account they were excluded from the position of dean. Thanks to the zeal and learning of the Jesuits, the theological and philosophical departments flourished greatly; those of law and medicine, however, lagged behind. The reform of studies carried out by Ferdinand I had not the desired success in these two branches, as money was lacking, and the very scanty salaries of the professors were seldom paid. The great disadvantage in the faculty of law was that German common law, though necessary in practice, was not taught. The students of medicine were more fortunate, for after winning the baccalaureate they generally attended an Italian university, particularly Padua, where better facilities for study were offered, and a shorter period of attendance required. Thus the members of the faculty of medicine were generally physicians educated in Italy, as Johann Wilhelm Mannagetta (d. 1660), and Paul de Sorbalt (d. 1691). However, owing to the lack of students and of equipment, there was no stimulus to work. Numerous proposals of reform were made, such as those of 1629, 1687, and 1735, but all attempts to bring the two faculties to a higher level failed on account of the financial embarrassment of the Government.

Reorganization in the Reign of Maria Theresa: University a State Institution

During the reign of Maria Theresa (1740-80) the university was completely reconstructed. What led to this change was the calling to Vienna in 1745 of Gerhard van Swieten (1700-72), a medical professor at Leyden, as court physician and university professor. The reforms of the medical faculty, which he planned, went into effect on 7 February: i.e. the designation of van Swieten as director of studies, appointment of professors by the empress, not as before by the university consistory, rigid supervision of the examinations by the Government, establishment of a professorship of chemistry, founding of a botanical garden, and the delivery of clinical lectures in the hospital. The university soon excelled the University of Leyden, previously so celebrated; this was effected by the appointment of distinguished teachers, as, in 1749, for chemistry and botany, Alexander Ludwig Laugier, whose successor in 1769 was Nikolaus Jacquin; in 1754, for practical therapeutics, Anton de Haen, whose successor in 1776 was Maximilian Stoll; and Ferdinand Leber, in 1761, for surgery. The theological and philosophical faculties were reformed in 1753. The professors of philosophy were forbidden to dictate their lectures to the students as formerly, or to teach the Aristotelean doctrine. The plan drawn up for the reform of the department of law by Prince-Archbishop Count Trautson and Sigismund Popowitsch, professor of eloquence, was put in force in 1753. New courses in constitutional law, the law of nature, feudal law, the Theresian laws for the hereditary Austrian dominions, and, as an experiment, history, were established. The director of studies was Johann Franz von Bourguignon. Up to 1757 all matters pertaining to instruction were controlled by

Prince-Archbishop Count Trautson, the "protector of studies". The position of superintendent was abolished in 1754.

These reforms took from the university the last vestiges of its former autonomy, made it entirely subsidiary to the purposes of the State, and turned the professors into state officials. Intellectual life was restricted by the directors of studies who prescribed the text-books to be used, and by the Government censorship of books. The medical faculty suffered least from these limitations and continued to develop. The aim of the prevailing system was to exclude entirely the influence of the Church and of the Society of Jesus; its leading spirits were van Swieten and, in the course of time, the freemason Joseph von Sonnenfels (1733- 1817). Thus in 1755 the conferring of the degrees at St. Stephen's was abolished, and the influence of the chancellor limited; in 1757 the Jesuit rector was removed from the university consistory, and in 1759 the directors of studies belonging to the Society were removed. The court commission of studies, with van Swieten as vice-president, was created on 23 March, 1760, as the chief board of supervision. In the same year the commission made a request for the admission of Protestants to the courses in law and medicine, but did not secure this until 1778. From 18 Jan., 1782, the university was open to all creeds. The suppression of the Society of Jesus in 1773 necessitated the reorganization of the theological and philosophical faculties. The property of the Jesuits went to the fund for stipends for students (*Jesuitfond*); ex-Jesuits were excluded from the new appointments to the theological chairs. The process of separating the University from the Church continued during the last years of the reign of Maria Theresa and still more during the reign of Joseph II (1780-90). Abbot Stefan Rautenstrauch of Branau wrote a text-book on canon law, pervaded with the spirit of Febronius, that received the approval of the Government in 1776. The oath before receiving a degree, and in general everything that had the appearance of an ecclesiastical celebration at the graduation exercises, was done away with in 1785. Prince-Archbishop Count Migazzi protested repeatedly, although in vain, in 1786 against the university text-books which contained false statements and attacks upon the Church. The university sank to a training school for government officials, the students of theology included. This intellectual servitude checked all scientific activity, and in the succeeding years brought the university into a condition of stagnation from which it could be rescued only by a fundamental reformation of the bureaucratic system.

Self-Governing University since 1848

The first step towards self-government was taken (on 12 March, 1848) by a general assembly of the university, which petitioned Ferdinand I (1835-48) for freedom of teaching and study. On 20 March the newly-appointed minister of instruction, Freiherr von Somaruga, promised the speedy granting of academic freedom, and at the same time announced a reform of the courses of study. The medical faculty, still the most important one, made proposals regarding the restoration of the old autonomy, such as the election of rector and deans by the professors. On 30 Sept., 1849, this was granted by the provisional law on the organization of academic authorities. A distinction was made in the faculties between the group of professors and that of the doctors or teachers below professors in rank, each electing a dean. On 13 Oct., 1849, the "general ordinances concerning the

system of studies at the royal and imperial universities", with exception of the theological studies, was issued; on 1 Oct., 1850, "the general regulations for studies". On 9 Jan., 1865, the year of the celebration of the fifth centenary of the existence of the university, fifty-eight professors presented to the minister of instruction, von Schmerling, a memorial which denounced the exclusively Catholic as no longer just. Pursuant to the law of 28 April, 1873, on the organization of academic administration, the attainment of an academic dignity is now independent of the candidate's faith. The Catholic character of the university is at present limited to the theological faculty, for the "Protestant theological institute" that was raised to a faculty in 1850 is not a part of the university. On 11 Oct., 1884, the new university building on the Franzen-Ring was dedicated in the presence of Emperor Francis Joseph. In 1857 the "new university house", built in 1756, was given to the academy of sciences. New statutes for the regulation of the examinations for the doctorate in the three secular faculties were issued on 15 April, 1872. The course of study in the medical school requires five years, in the other faculties four years are necessary.

The reform of the theological faculty indicated a complete break with the Febronian-Josephinist system. There was a meeting of the bishops at the invitation of the Government on 30 April, 1849; the assembly made the demand that the competent bishop should have influence over the appointment of professors, that he should appoint half of the board of examiners, and that all should be obliged before appointment to make the Tridentine Confession of Faith. This request was granted on 30 June, 1850. The plan of study approved by the Government on 29 March, 1858, and still in use, was worked out by Prince-Archbishop Rauscher. The present statutes governing the examination for the doctorate were issued on 16 Jan., 1894. In respect to the ceremony of conferring degrees it was ordained on 19 May, 1880, that the protector or the dean of the faculty of which the rector was a member should be the presiding officer in case the rector was not a Catholic.

On 18 Oct., 1849, temporary statutes were issued regulating the study of law and political economy; on 2 Oct., 1855, these ordinances were revised, and on 20 April, 1893, the present statutes respecting studies and examinations for the doctorate were promulgated. The original freedom of study was limited in so far that students must pass three state examinations at fixed times. The medical faculty, which even before 1848 had a high reputation, gained a world-wide renown both by the calling of foreigners to professorships, as Ernst Brucke (1849-92), Johann Oppolzer (1850-71), and Theodor Billroth (1865-94), and others, and by the work of native investigators, as Karl Rokitansky (1844-78), Joseph Hyrtl (1845-74), Joseph Skoda (1846-81), and Ferdinand Hebra (1849-80). The statutes of 1872, respecting examinations for the doctorate, those concerning the organization of the medical instruction (1 June, 1872) and of the practical tests in the examination for the medical degree (24 Oct., 1872), put an end to the institute for partially trained medical men (surgeons) and instead only permitted the gaining of "the doctorate of the entire science of medicine" (*medicinae universae doctor*), with which the right to practise medicine is united. On 21 Dec., 1899, a new series of statutes suited to modern needs was issued in regard to the examinations for the doctorate. In the philosophical faculty the former two years' preparatory course was transferred to the gymnasium (18 May, 1845); the departments of natural science (chemistry, natural history)

were taken over from the medical faculty on 16 Nov., 1849. Besides increasing the number of professorial chairs, seminars and institutes for scientific research and for the training of teachers of the intermediate schools were established. Among the distinguished scholars of this faculty should be mentioned: in physics, Christian Doppler (1850-53); in astronomy, Karl von Littrow (1842-77); in photographic optics, Josef Max Petzval (1837- 77); in the history of art, Rudolf von Eitelberger (1852-85); in classical philology, Hermann Bonitz (1849-67).

University Statistics (on 1 October, 1911)

Theology: 8 regular and 2 auxiliary professors, 4 *Privatdozenten*; law: 17 regular and 13 auxiliary professors, 41 *Privatdozenten*; medicine: 24 regular and 22 auxiliary professors, 197 *Privatdozenten*; philosophy: 54 regular and 25 auxiliary professors, 95 *Privatdozenten*, 255 lecturers and teachers. In the winter of 1910- 11 the total number of students was 9922. Of this number 241 studied theology, 3956 law, 2491 medicine, 3234 philosophy; in the summer of 1911 the student-body numbered 8457; 226 of its members studied theology, 3467 law; 2053 medicine, 2711 philosophy. Total amount of endowments 4,539,600 *Kronen*. The university and its institutes is supported by the treasury of the State.

KINK, *Gesch. der kaiserlichen Universitat in Wien* (Vienna, 1854); ASCHBACH, *Gesch. der wiener Universitat im II. Jahrhunderte* (3 vols., Vienna, 1865-88). Supplement to third vol. By HARTL and SCHRAUF (Vienna, 1898); *Gesch. der wiener Universitat 1848-1898* (Vienna, 1898); WAPPLER, *Gesch. der theologischen Fakultat* (Vienna, 1884); SCHRAUF, *Acta facultatis medicae* (3 vols., Vienna, 1894-1904), covers the years 1399-1558; SENFELDER, *Acta facultatis medicae, 1558-1724* (3 vols., Vienna, 1908-1912), a continuation of the preceding work. A complete bibliography is given in ERMAN and HORN, *Bibliographie der deutschen Universitaten, II* (Leipzig, 1904-5), 1051-95.

LEOPOLD SENFELDER

Council of Vienne (1311-12)

Council of Vienne (1311-12)

Pope Clement V, by the Bull "Regnans in coelis" of 12 Aug., 1308, called a general council to meet on 1 Oct., 1310, at Vienne in France for the purpose "of making provision in regard to the Order of Knights Templar, both the individual members and its lands, and in regard to other things in reference to the Catholic Faith, the Holy Land, and the improvement of the Church and of ecclesiastical persons". The Bull was sent to the kings of the respective Christian countries and to the archbishops of the various church provinces. The archbishops of every church province with two or three bishops, as designated in the individual Bulls, were to appear in person at the council, the bishops remaining at home were to transfer their rights to their colleagues who had been personally called. The bishops and prelates of all kinds were also to bring to the council proposals and motions in writing concerning the points to be improved in church life. A special Bull of 8 Aug., 1308, directed the Order of Knights Templar to send suitable *defensores* to the council, before

which the grand master and the other chief officials had been commanded to appear in person. The council, however, could not open at the appointed time, on account of the trials of the Templars which were begun in the various countries, and the process respecting Boniface VIII which Clement V had undertaken at the appeal of the French king Philip the Fair. The Bull "Alma mater" of 4 April, 1310, postponed the opening of the council until 1 Oct., 1311, on account of the investigation of the Templars that was not yet finished. In September the pope went to Vienne with the cardinals and on 16 Oct., 1311, the first formal session of the council was held in the cathedral there. This was the Fifteenth Ecumenical Council. In his opening address the pope again designated the three following points as the main tasks of the council: the matter of the Templars; the assistance to be given the Holy Land; and the reform of the clerical order and of morals.

The Acts of the council have disappeared, with the exception of a fragment which Father Ehrle, S. J., found in a manuscript in the National Library at Paris (see below). Consequently there is no positive certainty as to the course of the synod. The number of its members is also variously stated by the authorities. Villiani ("Chron.", IX, XXII, ed. Muratori, "Script", XIII, 454) enumerates 300 bishops, while other authorities whose testimony is more probable give 114 bishops, to which should be added a number of abbots and proxies. The best known proceedings of the council are those respecting the Templars. A commission was appointed to examine the official records concerning the order, in which commission the various classes of participants in the council and the different countries were represented. From the members of this commission was formed a smaller committee of archbishops and bishops presided over by the Archbishop of Aquileia, which was to examine exhaustively the official records and the abstracts of these. The pope and the cardinals negotiated with the members of this commission respecting the matter. The majority of the cardinals and nearly all the members of the commission were of the opinion that the Order of Knights Templar should be granted the right to defend itself, and that no proof collected up to then was sufficient to condemn the order of the heresy of which it was accused without straining the law. As early as the beginning of December, 1311, the cardinals and commission had voted to this effect. The pope was in a difficult position, on account of the insistence of the powerful French king. In February, 1312, the king himself appeared with a great retinue before the gates of the city of Vienne, and vehemently demanded the suppression of the Templars in a letter of 2 March, addressed to the pope. Clement now adopted the expedient of suppressing the Order of Knights Templar, not by legal method (*de jure*), but on the plea of solicitude for the Church and by Apostolic ordinance (*per modum provisionis sen ordinationis apostolicae*). The pope announced this decision in an assembly of the cardinals, on 22 March, 1312. On 3 April the second formal session of the council was held; the French king and his three sons were present, and the decision respecting the suppression of the Templars was promulgated. The Bull of Suppression "Vox clamantis" is dated 22 March, 1312. The pope had retained for himself the decision as to the persons and the lands of the Templars; two further Bulls were issued to cover these points on 2 and 6 May. During the council, apparently at this second session, Boniface VIII was declared to have been a lawful pope, and absolved from the accusations brought against him. Nevertheless, an earlier Decree issued by

Clement V was renewed, whereby the King of France was absolved from all responsibility for what he had done against Boniface and the Church.

The synod also took up the question of the Holy Land. In the third formal session, held 6 May, a letter from the King of France was read aloud, in which he promised to take the cross, together with his sons and large numbers of the nobility, and to begin the Crusade within six years. If he should die before this time his eldest son would undertake the expedition. Upon this, it was decided to lay a church tithe for six years for this purpose, which was to be raised throughout Christendom for the Holy Land. Concerning the raising of this tithe, cf. Kirsch, "Die papstlichen Killektorien in Deutschland" (Paderborn, 1894), 18. In France the revenues drawn from the tithe for six years were given to the king, who used the money for the war against Flanders. The Crusade never took place, although both the Kings of England and of Navarre had agreed to it at the council.

As already mentioned, the bishops were directed before the meeting of the council to bring with them written suggestions as to the reform of the Church. The pope renewed this demand at the opening of the council. Only three of the proposals sent in are known up to now, namely the treatise of William Durandus, Bishop of Mende, on the holding of the council ("De modo celebrandi generalis concilii"), that of Major, Bishop of Angers [in "Collection des documents inedits sur l'hist. de France. Melanges historiques"; II (1877), 471 sqq.], and that of James Dueze, later Pope John XXII [published by Verlaque, "Jean XXII" (Paris, 1883), 522 sqq.]. This material was divided into two parts for discussion by the council: improvement of morals and protection of the independence of the Church. The countless complaints, opinions, and suggestions that were handed in by prelates as well as by secular nobles were systematically arranged and treated. Still it is not known what decrees on these questions resulted from the discussions of the council itself and were promulgated in the third and last session. All that is certain is that a number of decrees on these subjects were proclaimed. These were issued later on 25 October, 1317, by John XXII, together with other decrees of Clement V, which the latter had been prevented by death from promulgating. John published them as the collection of the laws of the Church, the Clementines, "Corpus Juris Canonici". The decrees passed at the council which are found in this collection refer to the disputes concerning the Franciscan Spirituals (condemnation of the three propositions attributed to Petrus Johannes Olivi), the dispute about poverty among the Minorites, the mendicants, the visitation of convents by the bishops, the Beguines, the observance of the ecclesiastical hours, administration of religious foundations, matters relating to benefices, the founding of professorships for the Oriental languages at the Curia and at the four chief universities, the management of the Inquisition, and various ordinances respecting the clergy. The council closed with the third formal session, 6 May, 1312.

J.P. KIRSCH

Franz Michael Vierthaler

Franz Michael Vierthaler

A distinguished Austrian pedagogue, b. at Mauerkirchen, Upper Austria, 25 September, 1758; d. at Vienna, 3 October, 1827. As his parents were poor, he was a choir-boy at the Benedictine Abbey of Michaelbeuren and at Salzburg. At Salzburg he also attended the gymnasium and from 1776-77, he took the law course at the university, though his favourite study was classic languages. In 1783 he became instructor at the Virgilian college for nobles at Salzburg. By teaching history he was led to write his "Philosophische Geschichte der Menschheit" (7 vols., 1787-1819). The first volume attracted attention and gained for Vierthaler, in 1790, the position of director of the seminary for teachers at Salzburg, which the archbishop had established for the betterment of the primary schools. In the same year he began a course of catechetical instruction for the students of the seminary for boys, and in 1791 pedagogical lectures at the university. In 1796 he was made court librarian. During 1800-02 he edited the "Salzburger Literaturzeitung" and from 1799-1806 the "Salzburger Staatszeitung". He married in 1802; in 1803 he was appointed supervisor of the public schools in the Duchy of Salzburg, and in 1804 supervisor of the two orphan asylums. Three years later, when Salzburg was made part of Austria, the Austrian Government called him to Vienna, where he took charge of the orphan asylum.

Vierthaler was a strong advocate of practical training in teaching. He kept up a correspondence with the young teachers from the seminary and encouraged their zeal. He prepared a unified plan of studies for schools that he visited, sought to provide good and cheap school-books and other aids to study, and succeeded in arousing public interest in the cause of the schools. His three chief pedagogical works are: "Elemente der Methodik und Pädagogik" (1791); "Geist der Sokratik" (1793); "Entwurf der Schulerziehungskunde" (1794). He was a master in his calling, distinguished by the clearness, simplicity, and practicalness of his teachings. He laid more emphasis than other teachers of his era on the principle that instruction should subserve education. The aim of his pedagogical method was a "noble humanity transfigured by God". The basis of all his efforts was the Catholic Faith which he placed above everything else. Like Overberg he regarded the personality of the teacher as the most important thing in education. In many respects he was ahead of his times, e.g. in his high estimation of the teaching of the natural sciences and of physical training; also in his opposition to corporal punishment. Besides his pedagogical writings Vierthaler wrote a large number of school-books and books for children; among these are an edition of the Gospels and Epistles and a geography of Salzburg.

ANTHALLER, Franz Michael Vierthaler, der Salzburger Pädagoge (Salzburg, 1880); VIERTHALER, *Pädagogische Hauptschriften*, ed. VON DER FUHR (Paderborn, 1904); VON DER FUHR, *Michael Vierthaler u. seine Zeit* (Berlin, 1909).

KLEMENS LÖFFLER

François Vieta, Seigneur de la Bigottière

François Vieta, Seigneur de La Bigottière

(VIÈTE.)

Father of modern algebra, b. at Fontenay-le-Comte (Poitou), 1540; d. in Paris, Feb., 1603. The son of a solicitor, he made his early studies under the Franciscans of his native place. He studied law in the University of Poitiers, returned to Fontenay at nineteen, and soon took rank with the leading barristers at the province, numbering Mary Stuart among his clients. Indifferent in religion, and with his legal practice ruined by the religious wars, he accepted the position of tutor to Catherine, the eleven-year-old daughter of Jean de Parthenay, Sieur de Soubise, a militant Huguenot. Three years later, at the marriage of his pupil, he left the Château du Parc and went to La Rochelle. Here he gained as clients and friends the Huguenots, Coligny, Condé, the Queen of Navarre, Henry of Navarre, and Françoise de Rohan, who, like his former pupil, Catherine, Viscountess de Rohan by second marriage, remained his benefactress for life. Of his wife little beyond the name is known. The title of Sieur de La Bigottière he probably assumed. He became a barrister in Paris and later a councillor of the Parlement in Rennes. For some years he was in disfavour with Henry III, despite the efforts in 1585 of his friend Henry of Navarre. To the latter, as king, Vieta, while councilor of the Parlement in Tours, rendered signal service by discovering the key to the Spanish cipher. During his last years, spent mainly in Paris, he was *maître des requêtes* (master of requests) and royal privy councillor. He was a Catholic at his death. His kindly treatment of Adrianus Romanus, a rival scholar, indicates a generous nature.

To Vieta as a mathematician Huygens, Halley, Chasles, and Fourier have given high rank. He made the use of letters as symbols of quantity a general custom. He was highly skilful in the treatment of equations, knew the relations between the positive roots and the coefficients, and devised solutions for the equations of the second, third, and fourth degrees by methods different from the existing ones. He enumerated the principle of homogeneity. He extended the tables of Rheticus, gave formulae for the sine and cosine of a multiple angle, and attempted to find the value of π by means of infinite series. To a considerable extent he applied algebra to geometry and trigonometry and geometry and trigonometry to algebra. His collected works were published by Van Schooten, "*Opera Mathematica*", Leyden, 1646.

BERTRAND in *Revue des Deux Mondes* (15 May, 1897), or *Eloges Académiques*, new series, 143-76 (Paris, 1902); CHASLES, *Comptes rendus de L'Acad. Des Sci.*, XII, XIII (1841); FILLON ET RITTER, *Notice sur la vie et les ouvrages de François Viète* (Nantes, 1850); GAMBIER, *Le mathématicien François Viète, Généalogie de sa famille* (La Rochelle, 1911); HUTTON, *Tracts*

on Math. And Phil. Subjects, II (London, 1812), 260-74; RITER, *Bullettino di Bibliografia e di Storia delle Sci. mat. E fis.*, I (Rome, 1868), 223-27.

PAUL H. LINEHAN

Denis-Benjamin Viger

Denis-Benjamin Viger

French-Canadian statesman and writer, b. at Montreal, 19 Aug., 1774; d. 1861. After studying classics and philosophy at the Sulpician college of his native city, he joined the bar, was elected (1808) member of Parliament for Montreal, and re-elected for other constituencies for 1810, 1814, and 1827. He was sent (1828) to represent French Canadian interests against Lord Dalhousie's administration before the English Parliament. In 1830, though a member of the Upper House, he spent two years refuting Attorney-General Stuart's memoir. His patriotism did not impair his loyalty. Yet, in 1838, he was imprisoned for nineteen months, refusing bail, and demanding a trial. After the union of the Canadas, he was twice returned to Parliament (1841 and 1845). His knowledge of constitutional law urged him to side with Governor Metcalfe, and accept Lafontaine's heritage as premier; whereby he assumed the responsibility of dividing the Liberal party. His friends misunderstood him and suspected him of inclining towards British influence. He was accused of personal ambition, though he acted through loftier motives—the dread lest responsible government be compromised. In a pamphlet, "La crise ministerielle" (1844), he rightly defines constitutional government. He was the first president of the national society of St. Jean-Baptiste. Fordham University gave him the degree of LL.D. (1853). He wrote many newspaper articles and several important political treatises demonstrating England's interest in maintaining the laws, usages, and education of Lower Canada. He contributed to the foundation of the newspapers "La Minerve" and "L'Aurore des Canadas". His writings are noted for their logic, depth, and erudition.

BIBAUD, *Le Pantheon canadien* (Montreal, 1891); TURCOTTE, *Le Canada sous l'Union* (Quebec, 1871); ROYAL, Viger in *Journal d'Instruction publique* (March, 1861); MORGAN, *Bibliotheca canadensis* (Ottawa, 1867).

LIONEL LINDSAY

Jacques Viger

Jacques Viger

French-Canadian antiquarian and archaeologist, b. at Montreal, 7 May, 1787; d. 12 Dec., 1858. He studied at the Sulpician college of Montreal. During the war of 1812 he served as captain in the "Voltigeurs" under de Salaberry. He was elected the first Mayor of Montreal (1833), and strove to improve its sanitary condition. Although he wrote little, his reputation as an archaeologist was universal, and the greatest contemporary historians of France and the United States have drawn from his collection of MSS., the fruit of forty years research. He compiled a chronicle under the

title of "Sabretache" (28 vols.), wherein he gathered plans, maps, portraits, with valuable notes illustrating many contested historical points. He was the founder of the "Historical Society of Montreal". Pius IX honoured him with the knighthood of the Order of St. Gregory the Great.

BIBAUD, *Le Pantheon canadien* (Montreal, 1891); MORGAN, *Bibliotheca canadensis* (Ottawa, 1867).

LIONEL LINDSAY

Vigevano

Vigevano

(VIGLEVANENSIS.)

Diocese in Lombardy, Province of Pavia. The city is a great agricultural centre. As late as the middle of the nineteenth century, gold was obtained from the Ticino in the neighbourhood, but that industry has since been abandoned. The cathedral was built in 1100, rebuilt in the sixteenth century, and in the seventeenth by Bishop Caramuel Lobkowitz, 1680, himself an architect, who also contributed to the expense. The Church of S. Pietro Martiere was built, with the adjacent Dominican convent, by Filippo M. Visconti in 1445; the convent is now used for government offices and courts. Among the civil edifices is the castle, once a fortress, built by Bramante in 1492, by order of Ludovico il Moro, and now a royal palace.

The earliest notices of Vigevano date from the tenth century, when it was favoured as a residence by King Arduin for the sake of the good hunting in that vicinity. In the next period it was a Ghibelline commune, and was accordingly besieged and taken by the Milanese in 1201 and again in 1275. In 1328 it surrendered to Azzone Visconti, and thereafter shared the political fortunes of Milan. In the last years of the Visconti domination it sustained a siege by Francesco Sforza, himself a native of the city. With the Treaty of Worms (1743) it passed to the King of Sardinia. Blessed Matteo Carreiro, O.P., died at Vigevano. Until 1530 the town belonged to the Diocese of Novara and had a collegiate chapter. Francesco Sforza procured the erection of the see and provided its revenues. The first bishop was Galeazzo Pietra, succeeded by his nephew Maurizio Pietra (1552); both of these promoted the Tridentine reforms, and the work was continued by their successors. Marsilio Landriani (1594) distinguished himself in various nunciatures and founded a Barnabite college for the education of young men. Giorgio Odescalchi (1610) was a very zealous pastor; the process of his beatification has been commenced. Giovanni Caramuel Lobkowitz (1675) was an example of pastoral virtue and zeal and the author of many works, philosophical, theological, ascetical etc., though his "Theologia fundamentalis" was censured. Pier Marino Sonnani (1688), a Minorite, who enlarged the seminary, had to maintain a struggle against the spread of the doctrines of Miguel Molinos. Nicola Saverio Gamboni was intruded into the see by Napoleon in 1801. The diocese is suffragan of Vercelli. It contains 75 parishes, 180,000 souls, 250 secular and regular priests, 1 house of male religious, 1 of sisters, and 3 girls' schools. One weekly and two monthly periodicals are published.

U. BENIGNI

St. Vigilus (Bishop of Trent)

St. Vigilus

Bishop of Trent, martyr, patron of Trent and of Tyrol, b. c. 353; d. 26 June, 405; feast 26 June. The name of his father was not known (*Acta SS.*, June, VII, 143), though given by some as Theodosius. His mother Maxentia (*Acta SS.*, Apr., III, 781) and his brothers Claudian (*Acta SS.*, March, I, 426) and Magorian (*Acta SS.*, March, II, 398) are numbered among the saints. At an early age he came with his parents to Trent (possibly he was born there), and pursued his studies at Athens, becoming noted for his sanctity and learning; here he seems to have formed a friendship with St. John Chrysostom. He went to Rome and thence in 380 returned to Trent, where the people by acclamation chose him their bishop. He was consecrated by Valerian, Bishop of Aquileia, or possibly by St. Ambrose of Milan who donated the episcopal insignia and showed a paternal solicitude for Vigilus; he urged him (*Ep.* 29 in P.L., XVI, 982) to strongly oppose marriages with heathens. Vigilus laboured strenuously to convert the Arians in the city of Trent and the many idolaters throughout the diocese. He preached the Gospel in the districts of Brescia and Verona, beyond the confines of his diocese, and there erected some thirty parishes placing his missionary companions as pastors and bishops. Among these were Sts. Sisinnius, Martyrius, and Alexander (*Acta SS.*, May, VII, 37), natives of Cappadocia, whom Vigilus had brought from Milan, and who after a short apostolate were martyred; parts of the relics were sent to Milan and others to Constantinople.

Accompanied by his brothers and a priest named Julian, Vigilus then went west of Trent to the Rendena Valley to teach the Gospel to the worshippers of Saturn. At a place, which is now the parish of Rendena, he offered the Holy Sacrifice of the Mass and threw the statue of Saturn into the River Sarka. Enraged at this the idolaters stoned him to death. The body was brought back to Trent and buried in the church built by Vigilus. The acts of his life and martyrdom were immediately sent to Rome. Innocent I gave them to the Emperor Honorius as a protection on one of his military expeditions. He seems to have made a formal canonization, for Benedict XIV ("*De canonizat. SS.*", Prato, 1839, I, ch. iv, no. 12) calls Vigilus the first martyr canonized by a pope. Eugippius, the successor of Vigilus in the See of Trent, enlarged the cathedral and dedicated it to St. Vigilus. In 1386 the right hand was separated from the body and put into a precious reliquary. Many churches in Tyrol bear the name of the saint. He is the author of the work, "*De Martyrio SS. Sisinnii, Martyrii et Alexandri*", in P.L., XIII, 549.

FRANCIS MERSHMAN

Vigilius

Vigilius

Bishop of Tapsus, in the African Province of Byzacena. Mentioned in the "Notitia" appended to the History of Victor Vitensis, among the bishops who were present at the conference of Catholic and Arian bishops in Carthage summoned by the Vandal King Huneric in 484. With the exception of this fact nothing certain is known regarding the previous or subsequent career of Vigilius. It is conjectured that he fled to Constantinople at the time the Catholic bishops were exiled from Africa by the Vandals. His writings show that he took an active part in the controversies which were then agitating the Eastern Church. A dialog, "Contra Arianos, Sabellianos, et Photinianos; Athanasio, Ario, Sabellio, Photino et Probo iudice, interlocutoribus", is undoubtedly the work of his hands. He also wrote a treatise, "Contra Eutychetem", in five books, which contains a valuable summary of the arguments against Eutychianism. He refers to this book to two or three works he had composed against the deacon Maribadus, and against the Arian bishop Palladius. A large number of other works have been attributed to Vigilius, but without sufficient evidence. Among these are: "Contra Maribadum Arianum"; "Contra Palladium Arianum"; a dialogue "Contra Arianos"; twelve books "De Trinitate"; "Contra Felicianum Arianum"; "Solutiones objectionum Arianorum", and a "Collatio cum Pascentio Ariano". Many of these works are preserved among the writings of other authors. The hypothesis that Vigilius was the author of *Quicumque* has been shown to have no foundation (Kunstle, "Antipriscilliana", Freiburg, 1905, 109).

A complete edition of the works of Vigilius was prepared by CHIFFLET (Dijon, 1664), reprinted in P.L., LXII; FICKER, Studien zu Vigilius von Tapsus (Leipzig, 1897); BARDENHEWERSHAHAN, Patrology, 615.

PATRICK J. HEALY

Pope Vigilius

Pope Vigilius

Reigned 537-55, date of birth unknown; died at Syracuse, 7 June 555. He belonged to a distinguished Roman family; his father Johannes is called *consul* in the *Liber pontificalis* (ed. Duchesne, I, 298), having received that title from the emperor. Reparatus, a brother of Vigilius, was a senator (Procopius, *De bello gothico*, I, 26). Vigilius entered the service of the Roman Church and was a deacon in 531, in which year the Roman clergy agreed to a Decree empowering the pope to determine the succession to the Papal See. Vigilius was chosen by Boniface II as his successor, and presented to the clergy assembled in St. Peter's. The opposition to such a procedure led Boniface in the following year to withdraw his designation of a successor and to burn the Decree respecting it. The second successor of Boniface, Agapetus I (535-36), appointed Vigilius papal representative (Apocriary) at Constantinople; Vigilius thus came to the Eastern capital. Empress Theodora sought

to win him as a confederate, to revenge the deposition of the Monophysite Patriarch Anthimus of Constantinople by Agapetus and also to gain aid for her efforts in behalf of the Monophysites. Vigilius is said to have agreed to the plans of the intriguing empress who promised him the Papal See and a large sum of money (700 pounds of gold). After Agapetus's death on 22 April, 536, Vigilius return to Rome equipped with letters from the imperial Court and with money. Meanwhile Silverius had been made pope through the influence of the King of the Goths. Soon after this the Byzantine commander Belisarius garrisoned the city of Rome, which was, however, besieged again by the Goths. Vigilius gave Belisarius the letters from the Court of Constantinople, which recommended Vigilius himself for the Papal See. False accusations now led Belisarius to depose Silverius. Owing to the pressure exerted by the Byzantine commander, Vigilius was elected pope in place of Silverius and consecrated and enthroned on 29 March, 537. Vigilius brought it about that the unjustly deposed Silverius was put into his keeping where the late pope soon died from the harsh treatment he received. After the death of this predecessor Vigilius was recognized as pope by all the Roman clergy. Much in these accusations against Vigilius appears to be exaggerated, but the manner of his elevation to the See of Rome was not regular. Empress Theodora, however, saw that she had been deceived. For after the latter had attained the object of his ambition and been made pope he maintained the same position as his predecessor against the Monophysites and the deposed Anthimus. It is true that there is an alleged letter from the pope to the deposed Monophysite patriarchs, Anthimus, Severus, and Theodosius, in which the pope agrees with the views of the Monophysites. This letter, however, is not regarded as genuine by most investigators and bears all the marks of forgery (cf. Duchesne in *Revue des quest. histor.* (1884), II, 373; Chamard, *ibid.*, I (1885), 557; Grisar in *Analecta romana*, I, 55 sqq.; Savio in *Civiltà catt.*, II (1910), 413-422]. The pope did not restore Anthimus to his office.

It was not until the year 540 that Vigilius felt himself obliged to take a stand in regard to Monophysitism which he did in two letters sent to Constantinople. One of the letters is addressed to Emperor Justinian, the other to the Patriarch Menas. In both letters the pope supports positively the Synods of Ephesus and Chalcedon, also the decisions of his predecessor Leo I, and throughout approves of the deposition of the Patriarch Anthimus. Several other letters written by the pope in the first years of his pontificate, that have been preserved, give information respecting his interposition in the ecclesiastical affairs of various countries. On 6 March, 538, he wrote to Bishop Caesarius of Arles concerning the penance of the Austrasian King Theodobert on account of his marriage with his brother's widow. On 29 June, 538, a decretal was sent to Bishop Profuturus of Braga containing decisions on various questions of church discipline. Bishop Auxanius and his successor, Aurelian of Arles, entered into communication with the pope respecting the granting of the pallium as a mark of the dignity and powers of a papal legate for Gaul; the pope sent suitable letters to the two bishops. In the meantime new dogmatic difficulties had been developing at Constantinople that were to give the pope many hours of bitterness. In 543 Emperor Justinian issued a decree which condemned the various heresies of Origen; this decree was sent for signature both to the Oriental patriarchs and to Vigilius (cf. ORIGEN AND ORIGENISM).

In order to draw Justinian's thoughts from Origenism, Theodore Askidas, Bishop of Caesarea in Cappadocia, called his attention to the fact that the condemnation of various representatives of the Antiochene school, who had championed Nestorianism, would make union with the Monophysites much easier. The emperor, who laid much stress upon winning over the Monophysites, agreed to this, and in 543 or 44 he issued a new edict condemning the *Three Chapters* (see CONSTANTINOPLE, COUNCILS OF). The Oriental patriarchs and bishops signed the condemnation of these Three Chapters. In Western Europe, however, the procedure was considered unjustifiable and dangerous, because it was feared that it would detract from the importance of the Council of Chalcedon. Vigilius refused to acknowledge the imperial edict and was called to Constantinople by Justinian, in order to settle the matter there with a synod. According to the *Liber pontificalis* on 20 November, while the pope was celebrating the feast of St. Cecilia in the Church of St. Cecilia in Trastevere, and before the service was fully ended, he was ordered by the imperial official Anthimus to start at once on the journey to Constantinople. The pope was taken immediately to a ship that waited in the Tiber, in order to be carried to the eastern capital, while a part of the populace cursed the pope and threw stones at the ship. Rome was now besieged by the Goths under Totila and the inhabitants fell into the greatest misery. Vigilius sent ships with grain to Rome but these were captured by the enemy. If the story related by the *Liber pontificalis* is essentially correct, the pope probably left Rome on 22 November, 545. He remained for a long time in Sicily, and reached Constantinople about the end of 546 or in January, 547.

Vigilius sought to persuade the emperor to send aid to the inhabitants of Rome and Italy who were so hard pressed by the Goths. Justinian's chief interest, however, was in the matter of the Three Chapters, and as Vigilius was not ready to make concessions of this point and wavered frequently in his measures, he had much to suffer. The change in his position is to be explained by the fact that the condemnation of the writings mentioned was justifiable essentially, yet appeared inopportune and would lead to disastrous controversies with Western Europe. Finally, Vigilius acknowledged in a letter of 8 Dec., 553, to the Patriarch Eutychius the decisions of the Synod of Constantinople and declared his judgment in detail in a Constitution of 26 February, 554. Thus at the end of a sorrowful residence of eight years at Constantinople the pope was able, after coming to an understanding with the emperor, to start on his return to Rome in the spring of 555. While on the journey he died at Syracuse. His body was brought to Rome and buried in the Basilica of Sylvester over the Catacomb of Priscilla on the Via Salaria.

J. P. KIRSCH

Giacomo Barozzi da Vignola

Giacomo Barozzi da Vignola

A theoretical and practical architect of the Transition Period between the Renaissance and Baroque styles; b. at Vignola in 1507; d. in 1573. He was the pupil and successor of Michelangelo. His two books, "Regole delle cinque ordini d'architettura" (1563) and the posthumous "Due regole

della prospettiva pratica", had great influence for centuries. This is partly because he presents with skill the rigid sequence and the beautiful relation of parts in ancient architecture, and partly because his writings present a standard for work easily grasped by amateurs and persons of small ability. These writings place him in the same class with Serlio and Palladio. He built near the Piazza Navona a small palace in strict accordance with his own rules. The lowest story was embellished with Doric columns beneath a vigorous Doric frieze; the middle story with Ionic columns; while above the top story was a cornice with brackets, the whole forming a simple and graceful façade. The most celebrated of his secular buildings was the Farnese castle at Viterbo, which shows the impressions made upon him during a visit to France: the exterior is a pentagonal fortress; within is a fine circular court in the Renaissance style. The first Jesuit church at Rome, the famous Gesu, built by him, although itself restrained in manner, prepared the way for the Baroque style. Here Vignola connected the dome with a nave, giving the latter such breadth and height, in contrast with the very narrow aisles, that the central space produces a preponderating effect, the aisles showing as mere rows of chapels. Appropriately furnished and decorated, such a structure is well adapted to the services of the Church. The plan has been frequently repeated both in Jesuit and other churches. The porch of the Gesu was built by Giacomo della Porta; its uniting volutes between the stories and the ornamentation around the doorway also became models for the succeeding period. Maderna was one of the first who, in the completion of St. Peter's, was strongly influenced by Vignola. From 1564 Vignola carried on Michelangelo's work at St. Peter's and constructed the two subordinate domes according to Michelangelo's plans, yet with a successful independence. Besides buildings erected at an earlier date at Bologna and Montepulciano, mention should be made of his work in the Villa Giulio for Pope Julius II, the Church of the Angels at Assisi, and lastly the much-admired little Church of Sant' Andrea at Rome on the Pontemolle road, a square structure with a cupola.

WILLICH, Monographie (Strasburg, 1906). See also the well-known works of VASARI and QUATREMERE DE QUINCY.

G. GIETMANN

Simon Vigor

Simon Vigor

French bishop and controversialist, b. at Evreux, Normandy, about 1515; d. at Carcassonne, 1 Nov., 1575. Son of Raynaud Vigor, a court physician, he went to Paris about 1520, where his studies included Greek, Hebrew, and Latin; later he devoted himself to theology. Admitted to the College of Navarre in 1540, in the same year he became rector of the University of Paris. In 1545 he became a doctor of theology and was appointed penitentiary of Evreux. Thenceforth he devoted himself to pastoral and controversial preaching with great success. He was called upon to speak at Rouen, Paris, Metz, and elsewhere. When conferences took place at Saint-Germain near Paris (1562) between the Catholics and the Calvinists defended by Theodore Beza and others, Vigor was one of those chosen to defend the Catholic cause in the name of the Sorbonne. In 1563 he was among

the twelve theologians representing the Sorbonne at the Council of Trent, where he took part in the discussions on clandestine marriages and indulgences, and distinguished himself by his vast erudition. He was instrumental in cementing amicable relations between Cardinal Hosius of Warsaw, papal legate to the council, and Francisco Torres (Turrianus), and won the confidence of Cardinal de Lorraine whom he accompanied on his visit (Feb., 1563) to Ferdinand I at Innsbruck.

On his return to France Vigor became pastor of the Church of St. Paul-de-Paris, the royal parish, theologian of the chapter of Notre-Dame, and court preacher. He persevered in his combat against the Protestants with an ardour which drew on him for some of his propositions (March, 1564) if not the censure, at least the displeasure, of the Sorbonne. He converted several of them, among others the learned Pierre Pithou, the Varo of France. After preaching a Lent at Amiens, he stated that at his arrival he had found there more than 800 heretics and at his departure there remained only forty. In 1566 he held, together with Claude de Saintes, against the Calvinist ministers Jean de l'Epine and Sureau de Rosier, a conference of which the acts were printed (Paris, 1582). According to G n brard the defeat of the ministers was so overwhelming that the subsequent Calvinist synod forbade conferences to be held thenceforth with Catholics. These successes had made Vigor famous when in 1572 Gregory XIII raised him to the See of Narbonne. After his consecration he went to his diocese, and began at once to eradicate the evils his diocese had suffered, in being long without a resident bishop. He never returned to Paris or to his home, being wholly engaged in converting the Protestants of his own and the neighbouring dioceses, in which work death overtook him. After his death the Bishop of Rennes in a letter to Gregory XIII called him the Athanasius or Hilary of his time, and Duval praised him as a model of learning and piety, a pillar of the Roman Church. There were edited after his death five volumes of his "Sermons ou pr dications chretiennes et catholiques" (Paris, 1577-88); several times reprinted.

LAUNOY, Regii Navarrae gymnasii parisiensis historia in Opera omnia, IV (Paris, 1732), pt. i; DUPIN, Hist. des auteurs eccl. du XVII siecle, II (Paris, 1703), pt. ii; FERET, La faculte de theologie de Paris: epoque moderne, II (Paris, 1901), 181.

ANTOINE DEGERT

Juan Bautista Villalpandus

Juan Bautista Villalpandus

Born at Cordova, Spain, in 1552; entered the Society of Jesus in 1575; died on 22 May, 1608. His fame rests mainly on a "Commentary on Ezechiel". This commentary, begun by Jerome Prado (d. 1595), who treated the first twenty-six chapters, was completed by Villalpandus and published at Rome (1596-1604), in three volumes: the first contained Prado's explanation of cc. i- xxvi; the second Villalpandus's remarks on the thirteen chapters following; the third an illustrated description of Jerusalem and the Temple with all its furniture. Villalpandus had prepared for this work by a study of classical antiquity, particularly of Greek and Roman architecture, in which he was regarded as master. Whatever the merit of his commentary, and the praise bestowed upon his description of

the City and Temple of Jerusalem, which was one regarded by some as "classical" and "a true masterpiece" (Dupin), for the modern reader, better acquainted with Oriental architectural art, the writer's strict adherence to classical standards of architectural beauty mars his description and renders it less accurate. Starting from the idea that a temple designed, as it were, by God Himself, should embody all conceivable splendour and gorgeousness, he fancied the sanctuary at Jerusalem to be a display of porticoes and courts paved with porphyry flags, depicted the walls covered with rich Parian marble, and described a furniture of golden vases, candelabra, tables, little in keeping with actual reality. Still less happy were his endeavours to prove against evidence that the "Explanations epist. B. Pauli Ap.", which he had quoted several times in his "Commentary on Ezechiel", and of which he gave the *editio princeps* (Rome, 1598), was the work of St. Remigius of Reims, and not of Remigius of Auxerre.

HURTER, Nomenclator Literarius, III (Innsbruck, 1907), 235-7; ROSENMULLER, Ezech. Vaticinia, I (Leipzig, 1826), 32; DUPIN; Bibl. des auteurs eccl. du XIII siecle, I (Paris, 1719); SIMON, Hist. crit. du N.-T. (Paris, 1693), xxvi.

CHARLEY L. SOUVAY

Giovanni Villani

Giovanni Villani

Florentine historian, b. about 1276; d. of the plague in 1348. Descended from a wealthy family of merchants, he devoted the whole of his life to commerce, being a member of the Peruzzi company and afterwards of the Bonaccorsi. Business took him to Flanders, on three occasions; like a good Florentine he took part in politics, was priore several times, and served as an official of the zecca, or mint, where he introduced some wise changes. He was thrice entrusted with the maintenance of the fortifications. In 1341 he was one of the hostages given by the Florentines to Ferrara in pledge for the money to be paid for the purchase of Lucca. The failure of the Peruzzi bank, in 1346, occasioned by the insolvency of the Kings of England and of Sicily, caused Villani's imprisonment. At Rome in 1300 Villani conceived the idea of writing the history, or chronicle, of Florence, which he divided into twelve books. He begins with the Tower of Babel, passes rapidly over the history of Rome and Italy, to the year 1080, but treats the history of Tuscany more minutely. For the periods of which he has no direct knowledge he follows his authorities without much discernment. But from the middle of the thirteenth century his chronicle becomes an excellent historical source; even in its style one perceives that the author now feels on firm ground. Errors are not entirely absent even here; but his own experience of the world, the facilities which the commercial relations of Florence afforded him for obtaining trustworthy information of foreign events, the close connection of Florentine politics with the politics of all Italy, the Empire, and France, his own share in the government of the city, were circumstances highly favourable to the work of the historian. Unlike most medieval historians, Villani is interested in the economic life both of the State and of private individuals. He records statistical data, informs us of the cost of provisions, and gives details of

the finances of the State. Thus he may be considered the most modern of the medieval historians. Although a Guelph and a Black, he does not disguise his disapproval of wrong done by his own party. He is devoted to the Church, including the temporal government of the pope; yet he has bitter things to say of Boniface VIII, the supporter of the Blacks. His greatest defect is in his method of exposition, which fails to co-ordinate the various facts from one point of view—a defect, however, pardonable in a man occupied in commerce. His chronicle was brought down to the year 1363 by his younger brother Matteo, and to 1410 by Filippo, Matteo's son. The best edition of the "Chronica" is that of Magheri (Florence, 1823), preceded by biographical notices.

MILANESI, *Doc. riguardanti Gio. Villani in Archivio stor. ital.* (1856), I sqq.; VOLPE, *Il trecento in Storia letteraria d'Italia* (Milan, s.d.), 377-82; fuller biographical matter, *ibid.*, 445.

U. BENIGNI

Arnaldus Villanovanus

Arnaldus Villanovanus

(ARNALDUS OF VILLANUEVA, or VILLENEUVE, or BACHUONE).

Celebrated in his day as a physician, pharmacist, and alchemist, b. between 1235 and 1240; d. at sea near Genoa, 1312 or 1313. Like much else connected with this very unusual man, most of the details of his life are obscure. The latinized form of his native town is Villanova; there were not a few towns of this name at that period in Spain, France, and Italy. Some identify it with Villanueva in Catalonia, Diocese of Valencia, others with Villeneuve-Loubet in the arrondissement of Grasse, France. He died while on his way to visit the sick pontiff, Clement V. Well versed in the classical languages, Hebrew, and Arabic, he also understood all that was then known of the natural sciences, especially medicine and pharmacology. At Barcelona he had John Casamila as teacher, thought highly of Galen, and among the Arabs cared only for Rhazes. He taught medicine, botany, and alchemy at Barcelona, Montpellier, and Paris. His life was a wandering one; besides the cities just mentioned, he lived for considerable periods of time at Lyons, Avignon, Rome, Florence, Bologna, Naples, and Palermo. He was considered superior to all other physicians and alchemists, so that he was frequently summoned by popes and princes. Thus he was at times at the papal Court during the reigns of Innocent V, Boniface VIII, Benedict XI, and Clement V. He was also the personal physician of Pedro III and James II of Aragon, Robert of Naples, and Frederick II of Sicily. He was repeatedly obliged to go from place to place because the Inquisition in Spain and Paris sentenced him to banishment on account of his fantastic writings, which were at times heretical. Owing to the large number of writings still extant bearing his name, some evidently spurious, others doubtful, it is not easy to judge Villanovanus. His reputation in alchemy was excelled only by that of Raymond Lully, who was regarded as his pupil. Modern criticism has assigned to an earlier age many chemical discoveries that were formerly ascribed to Villanovanus, as acids, alcohol, distillation etc. Yet a number of his works were very important in placing medicine and pharmacology on a scientific basis; besides an independent judgment they show ripe experience

and great humanity. Although a layman he wrote much on theology. His alchemistic and astrological bent led him into erroneous opinions regarding the Church, the Mass, Antichrist, the end of the world, and the person of Christ. The first complete edition of his works was issued at Lyons in 1504, reissued at the same place in 1520 and 1532 (folio). The most complete edition is that of Taurellus (Basle, 1585), with a biography of Arnaldus. For the individual works see, in particular, Haser, *op. cit.* in bibliography below. Several of them were repeatedly reprinted before 1500.

HOEFER, *Histoire de la chimie* (Paris, 1842); HASER, *Geschichte der Medicin* (Jena, 1875); VON MEYER, *Geschichte der Chemie* (Leipzig, 1905); HERGENROTHER-KIRSCH, *Handbuch der allgemeinen Kirchengeschichte* (2 vols., Freiburg, 1904).

JOSEPH ROMPEL

Jacques-Melchior Villefranche

Jacques-Melchior Villefranche

Publicist, b. at Couzon-sur-Saone, 17 Dec., 1829; d. at Bourg, 10 May, 1904. After excellent classical studies at the lesser seminary of Largentière, he entered the telegraphic service, in which capacity in 1855, during the Crimean War, he directed the telegraphic bureau of Varna, the first landing-place of the Franco-Russian troops. In 1870 as telegraphic director at Versailles he was attached to the service of telegraphic communications of the army of Le Mans. In 1875 he left the telegraphic service, and assumed the editorship of the "Journal de l'Ain", in which he defended the cause of religious liberty. His campaigns against the laws of scholastic secularization were widely noted. His activity as a writer was very great. His "Fables" (1851) and his "Fabuliste Chrétien" (1875) were welcomed in many houses of education. A number of historical and judicial romances from his pen have long been read, especially "Cineas, ou Rome sous Néron" (1869), which was translated into several foreign languages. But his most lasting works are historical: "Pius IX, son histoire, sa vie, son siècle" (1874), reprinted nineteen times; "Vie de Dom Marie-Augustin, Marquis de Ladouze, fondateur de la Trappe de Notre Dame des Dombes" (1876); "Vie de l'abbé Olivieri, fondateur de l'oeuvre du rachat des jeunes negresses" (1877); "Histoire des Martyrs de Gorcum, du Japon et autres canonisés par Pie IX" (1882); "Vie de Dom Bosco" (1887); "Vie du Père Chevrier, fondateur du Prado à Lyon" (1894); and "Histoire de Napoleon III" (2 vols., 1896). Mention should also be made of the controversial pamphlet published in 1891 and entitled "Le Concordat, qu'on l'observe loyalement ou qu'on le dénonce"; it should always be consulted for the religious history of the republic. In this pamphlet Villefranche struck at the policy which, according to a captious formula, was in favour of the strict application of the Concordat, and which, in fact, resulted in despoiling the Church of certain of its rights on the pretext that they were not explicitly contained in the concordatory text.

GEORGES GOYAU

Geoffroi de Villehardouin

Geoffroi de Villehardouin

Maréchal de Champagne, warrior, and first historian in the French language, b. about 1150; d. at Messinople, 1213. As early as 1191 he was Maréchal of Champagne. His life is known only by the occurrence of his name in some charters and by very meagre details in his history. In 1199, with other knights of Champagne, he took the cross at the tourney of Ecry-sur-Aisne. Thibaud III, Count of Champagne, named him as one of the embassy sent by the crusading barons to Venice. After the death of Thibaud III he assisted in electing Boniface de Montferrat as leader of the Crusade (1201). He returned to Venice in 1202 and was engaged in preventing the Crusaders from embarking from other ports. He is silent concerning his share in the intrigues which resulted in changing the direction of this Crusade, but this share must have been very important, for he always participated in the deliberations of the principal leaders and was associated in all their undertakings. At Zara he laboured to restrain the dissidents who wanted to fulfil their vow and set sail for Palestine. At the first siege of Constantinople he was in the fifth battle with Matthieu de Montmorency. He was one of the agents sent to replace Isaac Angelus on the throne. He was also in the embassy commissioned to request Alexis IV to observe the treaty concluded by him. In 1204, after the foundation of the Latin Empire, he became Maréchal of "Romanie", and undertook to settle the quarrel between the Emperor Baldwin and Boniface de Montferrat. He took part in the expedition against the Bulgars (1205) and, after the defeat of the Crusaders at Adrianople (April, 1205) and the disappearance of the emperor, he rallied the army and valiantly directed its retreat. Under Henry II he took part in a naval battle against Theodore Lascaris and received from the emperor the fief of Messinople (Mosynopolis, near the ancient Abdera). After the death of Boniface de Montferrat (1207) Villehardouin seems to have played no further part.

His account of the Conquest of Constantinople, "dictated" to him after 1207, is a narration of all the events in which the author took part and of which he was a witness. He begins with the preaching of the Crusade by Foulque de Neuilly, and ends suddenly with the death of Boniface de Montferrat. A continuation, under the name of Henri de Valenciennes, which relates portions of the reign of Emperor Henry, was added by copyists. Villehardouin's book is of inestimable value because it is one of the oldest books composed in French prose. Besides, the author is one of the earliest representatives of the class of historical memoirs which characterize all the literatures of Europe. Owing to its literary qualities of sobriety, exactness, and clearness, it furthermore gives most reliable information regarding the sentiments of the Western knights who were drawn to the Orient and the impressions produced on them by the magnificence of Byzantine civilization. The description of the arrival of the Crusaders before Constantinople (ed. Natalis de Willy, p. 73) is justly celebrated for the depth of the impression which it reveals. Unhappily, its testimony is not sufficient to afford an exact idea of the Crusade of Constantinople. He tells posterity only what he wishes, and refrains from making known the secret details of the negotiations in which he took part, and which are necessary to understand the reason for diverting the Crusade towards

Constantinople. His sincerity is not therefore complete; moreover, his point of view is that of the great barons, for whose conduct he makes an incessant apology. Hence it is necessary to supplement his testimony by that of Robert de Clari, who represents the knights. His book has had many editions, including those of: Ducange, "Hist. de l'empire de Constantinople sous les empereurs françois" (Paris, 1657), the text of which is defective; in the edition of the Société de l'hist. de France (Paris, 1838); de Wailly, "Le conquête de Constantinople avec la continuation de Henri de Valenciennes" (Paris, 1872); Bouchet (Paris, 1891, with notes), English translation by Sir F.T. Marzial (Everyman's Library, 1908).

LOUIS BREHIER

Jean-Paul-Alban Villeneuve-Barcement

Jean-Paul-Alban Villeneuve-Barcement

Vicomte de, b. at Saint-Auban, Var, 8 Aug., 1784; d. at Paris, 8 June, 1850. After having taken part in the prefectorial administration of the Empire and the Restoration he became councillor of State in 1828, but in 1830 refused to take the oath to the Government of Louis-Philippe. He was a deputy from 1830 to 1831 and from 1840 to 1848 held a seat among the Legitimists. In 1832 when the Duchess of Berri was planning to land in Provence, he accepted from her the commission of royal commissary in the Var, but he soon returned to Paris and devoted himself chiefly to studies in political economy, and in 1848 was appointed a member of the Academie des Sciences Morales. He realized the importance of the social question when he visited Lille, where there were 32,000 paupers, that is nearly half the population. The idea of combating pauperism was thenceforth in his mind. As a deputy he was one of the foremost authors of the law of 1841 limiting child labour, a law which for the first time in France embodied the principle of legal protection for labourers; he caused to be inserted in the fiscal law of 1847 an amendment dispensing from stamp tax and registration the acts necessary to the marriage of the poor and the legitimization of their children. As an economist he stood apart from the school of Adam Smith and Jean-Baptiste Say, whom he regarded as Materialists. He considered that political economy should concern itself less with production of wealth than with its distribution and the general diffusion of well-being; and believed that the State ought to interfere in the regulation of labour to protect the weak against the "new feudalism of patrons". In his "Livre des affiges" he depicts a bishop complaining with equal bitterness of the industrial proprietors who think only of increasing their gains and of the legislators who are concerning solely with enacting penal prohibitions against labour organizations. His idea of a salary was the "vital and family salary", sufficient to sustain both the workman and his family, and he held that the employer ought to receive a profit only after the payment of this salary. The chief writings in which his ideas are set forth are the "Economie politique chrétienne, ou recherches sur la nature et les causes du paupérisme en France et en Europe, et sur les moyens de la soulager et

de la prévenir" (Paris, 1834); "Histoire de l'économie politique, ou études historiques, philosophiques et religieuses sur l'économie politique des peuples anciens et modernes" (Paris, 1841); "Le livre des affligés" (Paris, 1841).

GEORGES GOYAU

Louis-Rene Villerme

Louis-René Villermé

French economist, b. at Paris, 10 March, 1782; d. there, 16 Nov., 1863. He was devoted to medical studies, and later to social questions. He wrote two important memoirs on the mortality among prisoners and promiscuity in gaols (1820, 1829) and established the "Annales d'hygiène" (1829). His works on vital statistics were regarded as a refutation, on many points successful, of Doubleday's "True Law of Population". His chief title to renown is his "Tableau de l'état physique et moral des ouvriers employés dans les manufactures de coton, de laine et de soie" (184), which was the result of lengthy investigation. It showed how the hand combining of cotton, engenders pneumonia, and contained a protest against excessive child-labour in manufacturing; Villerme's cry of warning was thus the origin of the law of 1841 on child labour. The period of 1848 was marked by three works of Villermé: "Les associations ouvrières" (1849); "Les cités ouvrières" (1850); "Les accidents produits dans les ateliers par les appareils mécaniques" (1858). To Villermé belongs the credit of having given an accurate diagnosis of the industrial evils which social Catholicism later sought to remedy. A Liberal in political economy, he was timid when it came to organizing remedies, but he brought to the observation and exposition of the social evil the exactitude employed by a physician in the diagnosis of a patient's malady. He was a member of the Academie des Sciences Morales et Politiques from about 1833.

GEORGES GOYAU

Cistercian Abbey of Villers

Cistercian Abbey of Villers

Situated on the confines of Villers and Tilly, Duchy of Brabant, present Diocese of Namur (Belgium), and first monastery of the order in this territory. In April, 1146 (most probably), St. Bernard sent twelve monks and five lay- brothers from Clairvaux, under the direction of Abbot Lawrence, to establish themselves at Boverie, from whence, after over a year of struggle against discouragement and failure, they transferred their monastery to a more suitable location, about

three miles distant, where a modest oratory and dwelling were soon erected. The early years were replete with sufferings for the new community, but little by little, as it became known, the nobles of the vicinity came to its aid with material assistance. Abbot Charles (1197- 1209) laid the foundations for the magnificent church, the ruins of which even to-day profoundly impress the beholder, but it was not completed until about the year 1300; he also began the construction of the new monastery. With the increase of temporal prosperity, and their minds free from such anxieties, the spiritual growth of the members of the community became the more remarkable; vocations were multiplied and the abbey attained great renown as an abode of sanctity. In 1231 and 1238 it founded the monasteries of Grand Pre and Lieu St. Bernard. Towards the middle of the thirteenth century Villers was at the height of its glory; its revenues were very large, both spiritual and temporal powers regarded it with the greatest favour, and it numbered amongst its members over 100 monks and 300 lay-brothers. More than 50 monks and lay-brothers, who lived during this period, are honoured as saints and Blessed in the Order of Citeaux. Prominent among these were its first thirteen abbots, especially Gérard I, who died Bishop of Tournai (1166), and Conrad de Seyne, who died Cardinal-Bishop of Porto. Gradually the selection of the abbots became the prerogative of the sovereign, and the monastery suffered from the intrusion of unworthy prelates; it also suffered from political disorders, so that at one time the entire community were obliged to quit the abbey for nearly twenty years. In 1776 the community still numbered 54 monks and 11 lay-brothers, but shortly afterwards (1796) the abbey fell under the law of suppression. Later on the Belgian Government purchased the ruins, restored them and preserves them as a monument of the historic past.

EDMOND M. OBRECHT

Vilna

Vilna

(VILENSIS).

Vilna, the capital of Lithuania, is situated at the junction of the Rivers Vileika and Vilja; population 165,000 in 1910. Its foundation is traced back to the twelfth, and even, by Polish writers, to the tenth century; but its historical origins must be referred to the year 1323, when Giedymin,

Grand Prince of Lithuania, set up his capital there, wrote a letter to John XXII, and made treaty with the Brethren of the Sword. The German Crusaders partly devastated the city in 1383. When the grand Prince Jagiello, in 1383, received baptism and married Hedwige, Queen of Poland, taking the name of Wladislaus II, and uniting Poland with Lithuania, the religious and political prosperity of Vilna began. In 1577 it became the seat of a flourishing academy which gained a great literary reputation, especially under the Jesuits. In the later half of the seventeenth century and the earlier of the eighteenth it suffered much from war, fire, and pestilence. United with Russia in 1794, it ceased to be the capital of the Grand Duchy of Lithuania. The Polish insurrection of 1831 and 1863 exposed it to cruel reprisals; from 1870 it has developed industrially and commercially.

Bishops

The Diocese of Vilna owes its foundation to Wladislaus II Jagiello (1383-1434), who was active in propagating Catholicism in Lithuania. In 1387 Jagiello sent Dobrogost, Bishop of Posen, as ambassador to Urban VI (1378-87) to petition for the erection of an episcopal see at Vilna and the appointment of Andrew Wasilon (then Bishop of Ceretenska) to fill it. This was granted and the foundation of a collegiate church of ten canons authorized. Under Wasilon's rule, the Churches of St. John, St. Martin, and St. Anne were built at Vilna. Upon his death, in 1398, he was succeeded by the Franciscan James Plichta (1398-1407), in whose time the cathedral was burnt down. Among his successors were: Peter of Kustynia (1414-21), whom Martin V invested with full powers to bring back the Orthodox of Lithuania to the bosom of the Catholic Church; Matthias of Trok (1421-53), a Lithuanian, who sent representatives to the Council of Basle and set up the Inquisition to combat the Hussites, founded many churches and strenuously defended the rights and privileges of the Lithuanians. Under John Losowicz (1467-81) many Ruthenians were converted to Catholicism and the Franciscans (Bernardines) were established at Vilna. Albert Tabor, a Lithuanian, invited the Dominicans to Vilna and entrusted to them the Church of the Holy Spirit; Albert Radziwill (1508-19) died in the odour of sanctity; John the Lithuanian (1519-37) held the first diocesan synod at Vilna in 1526; Prince Paul Holszanski (1534-55) restored his cathedral in the Gothic style and held a synod in 1555; Valerian Protasewicz Suszkowski (1556-80) had to contend for the celibacy of the clergy and the use of Latin in the Liturgy; he brought the Jesuits, among whom was Peter Skarga, to Vilna.

Prince George Radziwill (1581-91) fostered the Academy of Vilna, founded a seminary, under the direction of the Jesuits, introduced the regulations of the Council of Trent, and, having been made a cardinal, was transferred to the Diocese of Cracow in 1591. The chapter then entrusted the administration of the diocese to the suffragan bishop, Ciprian. At his death, in 1594, the clergy were divided into factions on the choice of a successor, until Sigismund III nominated Benedict Wolna (1600-15), who exerted himself efficaciously for the canonization of St. Casimir of Poland, in whose honour the first stone of a church was laid at Vilna in 1604. He succeeded in his efforts to have St. Casimir regarded as patron of Lithuania. His successor, Eustachius Wollowicz (1616-30), founded hospitals, invited the Canons Regular of the Lateran to Vilna, and energetically combated the Protestants and the Orthodox. Abram Wojna (1631-49) introduced the Fatebene Brethren and

strenuously opposed Calvinism. George Tyszkiewicz (1650-6) annexed the whole of Courland to his diocese. Alexander Sapięha (1666-71) founded the Church of Sts. Peter and Paul, taking St. Peter's for his model. The diocese then comprised 25 deaneries with 410 churches. Constantius Casimir Brzostowski (1687-1722) brought the Piarists to Vilna and encouraged the development of the religious orders. In the episcopate of Michael Zienkiewicz (1730-62) there arose sad conflicts between the Jesuits and the Piarists, resulting in the closing of the Piarist schools. Prince James Massalski (1762-94) encouraged the reform of the clergy, and devoted his immense fortune to the churches of his diocese.

After the annexation of Lithuania by Russia, the Diocese of Vilna no longer enjoyed freedom of relations with the Holy See. In 1795 the chapter nominated David Pilchowski vicar *in spiritualibus*. Livonia was added to the diocese, and John Nepomucene Kossakowski (1798-1808) was appointed bishop. He did much for the prosperity of the seminary. After his death the chapter became involved in a conflict with Siestrzencewicz, the Catholic Metropolitan of St. Petersburg, who usurped rights exclusively belonging to the Holy See. Siestrzencewicz forced upon the chapter, as administrator of the diocese, Geronimo Strojnowski (1808-15), upon whose death he arrogated to himself the government of the diocese with the title of Primate of Lithuania. In 1827, after Siestrzencewicz's death, the vicar capitular, Milucki, ruled the diocese for a short time. In 1828 Andreas Klagiewicz was appointed administrator; he was sent to the interior of Russia during the Polish insurrection of 1831, and returned to Vilna in 1832, was preconized Bishop of Vilna in 1839, and took possession of the see on 28 June, 1841. He died the same year, after witnessing the ruin of the Ruthenian Uniat Church in his diocese and a most ferocious persecution of Catholicism. The chapter elected John Cywinski as vicar suffragan; he had the grief of seeing the University of Vilna closed, the clergy and churches of his diocese completely despoiled of their property, and died on 17 Nov., 1846. In 1848 he was succeeded by Wenceslaus Zylinski, who was transferred in 1856 to the metropolitan See of Mohilev, but continued to govern his former diocese until 1858. Adam Stanislaus Krasinski was expelled from the diocese in consequence of the Polish insurrection, but nevertheless continued to govern the diocese until 1883, when he withdrew to Cracow. His successor, Charles Hrynieweki, was exiled to Jaroslav after two years of the episcopate, and in 1890 abdicated and withdrew to Galicia. During his exile Ludovic Zdanowicz governed the diocese as vicar patriarchal. In 1890 Anthony Francis Audziewicz, a canon of St. Petersburg and a learned theologian, was appointed Bishop of Vilna. He died in 1895; the diocese was then governed by Louis Zdanowicz, titular Bishop of Dionysias. In 1897 Canon Stephen Alexander Zwerowicz succeeded, and was transferred in 1902 to the See of Sandomir. His place was taken by Baron Edward Ropp, who set about organizing the Catholic movement in the diocese, thereby incurring the hostility of the Russian Government. Bishop Ropp having been banished to Pakov, the diocese was entrusted to Casimir Nicholas Michalkiewicz as administrator Apostolic.

The bishops of Vilna, presiding over a vast diocese and being senators of Lithuania, could not give all their attention to the spiritual necessities of their flock; hence, from the fifteenth centuries they had coadjutors or suffragans. Many of these, particularly in the sixteenth and seventeenth

centuries, were titular bishops of Methone (Peloponnesus). Among the most famous may be mentioned George Casimir Ancuta (d. 17370, author of "Jus plenum religionis catholicae in regno Poloniaw", showing that the Protestants and Orthodox had not the same rights as the Catholics. Beginning from the seventeenth century there were also suffragans for Belorusi. In 1798 Pius VI recognized the ancient See of Brest as suffragan of Vilna. So also the ancient Diocese of Livonia, suppressed in 1797, had become suffragan to Vilna, and in 1798 had for its first bishop Adam Kossiafkowski (d. 1828); in 1848, however, it was annexed to the Diocese of Samogitia or Kovno.

Synods

The flourishing Catholic life of the Diocese of Vilna is attested by the large number of synods held there. The first of these was in 1502, under Bishop Tabor. Then followed the synods of 1526, for the reform of manners and the organization of the parochial schools; those of 1528, to collect funds for the restoration of the cathedral; of 1555, to oppose the spread of Lutheranism; of 1582; of 1607, which made many regulations for the administration of the sacraments and the discipline of the clergy; of 1630, which regulated the administration of ecclesiastical property; of 1654, to aid the state with new imposts; of 1669 with its disciplinary regulations; of 1685, with ordinances relating to the administration of the sacraments and the life of the clergy; of 1744, with regulations in regard to the catechism, mixed marriages, and spiritual exercises. After the synod of 1744, under Bishop Michael Zienkowicz, no others were held, but the bishops addressed to their clergy pastoral letters, some of them of notable import.

Churches

The diocese possesses splendid churches and venerable sanctuaries. Of the former the largest and most beautiful are at Vilna, although many, violently wrested from the Catholics, have become Russian Orthodox churches. The cathedral, dedicated to the Blessed Trinity, St. Stanislaus, and St. Wladislaus, was erected in virtue of a Bull of 12 March, 1387. Burned down in 1399, it was rebuilt in the Gothic style in 1399 by Grand Duke Witold. Again destroyed in 1531 and 1662, its restoration was begun in 1769 and finished in 1801. It contains splendid chapels, especially those of St. Casimir and of the Immaculate Conception. Other important churches are those of Holy Cross, founded in the fourteenth century on the spot where, in 1366, fourteen Franciscans were martyred by the pagans; the Church of St. Martin, founded by Jagiello in 1380 on the ruins of an ancient pagan temple; St. Anne, founded for the Germans by Anna, the consort of Witold, in 1392; St. John the Evangelist, founded in 1386 and enriched with privileges by Leo X; Corpus Domini, founded by the Archconfraternity of the Blessed Sacrament in 1573; and the Church of the Guardian Angels. To these must be added the numerous churches of the religious order, which flourished in Lithuania, but of which few traces remain. The Dominicans, who in the fifteenth century had a church dedicated to the Holy Spirit, built in 1679-88 another, which in 1844 was given up by them and transformed into a parish church. The Bernardines undertook at Vilna, in 1469, the construction of a wooden church, rebuilt in stone in 1500; it was burnt down in 1794 and restored in 1900. This order was forced to leave the diocese in 1864. The Church of Sts. Peter and Paul was given to the Lateran Canons in 1638; they abandoned it in 1864. St. Casimir, with the annexed Jesuit college, founded

in 1604, was turned into an Orthodox church in 1832. St. Ignatius Loyola, founded by the Jesuits in 1622, is now the club of the officials. The Carmelite Church of St. Teresa has a miraculous image of the Madonna. The Augustinians, Trinitarians, Brigittines, Carmelite Sisters, Piarists, Visitandines, and others also had churches, to which must be added numerous chapels. After the Polish Revolutions of 1863, the diocese saw all its religious violently expelled. The monasteries were converted into barracks, the churches given to the Orthodox or the secular clergy, the libraries dispersed, the possessions of the religious confiscated. In 1910 there remained only one monastery of Benedictine Sisters (connected with the Church of St. Catherine at Vilna) with six septuagenarian nuns, a Bernardine convent at Slonim with four septuagenarian nuns, a Franciscan monastery at Grodno with a single friar, and, in the same city, a convent of Brigittine Sisters with two religious. The efforts made since 1905 by the various orders to re-establish themselves in the diocese have been fruitless.

Statistics

The Diocese of Vilna contains 1,4200,000 faithful distributed among 23 rural deaneries as follows: Bialystok, 20 parishes and stations, 101,761 souls; Bielsk, 20 parishes, 66,125 souls; Brest, 3 parishes, 14212 souls; Dzisna, 15 parishes, 66,536 souls; Giedrojce, 13 parishes, 58,813 souls; Grodno, 20 parishes, 58,116 souls; Kobryn, 2 parishes, 7925 souls; Lida, 14 parishes, 65,100 souls; Merez, 20 parishes, 82,948 souls; Nadwilejski, 8 parishes; 41,053 souls; Oszmiana, 11 parishes, 61,032 souls; Prwjany, 7 parishes, 11,648 souls; Radun, 15 parishes, 83,451 souls; Slonim, 7 parishes; 30,337 souls; Sokolka, 14 parishes, 75,709 souls; Swienciang, 19 parishes, 93,716 souls; Swir, 11 parishes, 48,266 souls; Troki, 20 parishes, 88,856 souls; Vilna (city), 30 churches and chapels, 141,104 souls; Vilna (district), 9 parishes, 52,690 souls; Wilejka, 10 parishes, 35,783 souls; Wisniew, 15 parishes, 83,900 souls; Wolkowysk, 16 parishes, 58,825 souls. Besides the cathedral parish the city of Vilna contains those of St. John Baptist, the Holy Spirit, St Teresa, Sts. Philip and James, St. Raphael the Archangel, St. Francis of Assisi, All Saints, the Holy Apostles Peter and Paul. The Catholic population of the city is 96,000 souls. Dependent upon the parish of St. Teresa is the chapel of the miraculous image of Our Lady of Ostrobrama, the centre of many pilgrimages in Lithuania, and venerated also by the Orthodox. The chapel containing the miraculous image stands upon an arch, and the street which passes under this arch is occupied at all hours of the day by a crowd of prostrate suppliants; no one passing under the arch -- not even the Hebrews -- will neglect to uncover the head in token of reverence.

The secular clergy number about 440 priests. The cathedral chapter comprises 5 prelates and 3 canons. The secular clergy are educated in the seminary, which has 15 professors and 160 students. Its foundation dates from 1582; it was closed in 1862; reopened in 1872, and had but two students, but their number gradually increased. At Brest there was a petit seminaire, which was closed in 1830; the seminary at Bialystok was closed in 1842. The clergy has always exerted, and still exerts, a beneficial influence upon popular education. At the beginning of the nineteenth century twenty-five parochial elementary schools were in operation at Vilna; schools and colleges were conducted by the Jesuits, the Uniat Basilians, the Piarists, and other religious orders. The monastic libraries were

centres of culture. As late as the seventeenth century there were 101 monasteries in Lithuania. The library of the Missionaries of Vilna contained 8284 volumes; that of the Piarists, 7000; that of the Bernardines, 4142. The University of Vilna possessed 20,000 volumes of theology, part of which were given to the Theological Academy of St. Petersburg, to the University of Kiev, and to the Public Library of Vilna.

In consequence of the fierce persecution stirred up against Catholicism, the scientific glory of the Diocese of Vilna became obscured; but the Faith remained firmly rooted in the hearts of the people. Vilna is perhaps the most devout city in the Russian Empire, and its piety is all the more admirable because the paucity of secular clergy and the complete lack of religious orders render it difficult for the people to fulfil their religious duties. Of late years, however, the bitter quarrels between the Polish and Lithuanian Nationalists led to divisions in the Catholic camp. The Lithuanian clergy that in all the churches of the diocese Lithuanian shall be equally considered with Polish in religious instruction and in supplementary devotions. A portion of the Polish clergy are opposed to these claims. But wise measures taken by the ecclesiastical authorities have allayed the animosity, and opportune concessions to the Lithuanians have, at least in appearance, removed the causes of discord.

A. PALMIERI

St. Vincent

St. Vincent

(MALDEGARIUS).

Founder and abbot of the monasteries of Hautmont and Soignies, b. of a noble family at Strepyles Binche, Hainault, early in the seventh century; d. at Soignies, 14 July, 677. That he was not of Irish descent, as stated by Jean du Pont and some Irish writers, has been proved by Mabillon and the Bollandists. About 635 he married the noble Waldetrude, also venerated as a saint, and by her had two sons and two daughters, all of whom are honoured as saints. Their names were: Landric, Bishop of Meaux; Dentelin, who died as a boy of seven years; Aldetrude and Madelberte, both of whom became abbesses of Maubeuge. It is probable that Vincent visited Ireland on a mission of King Dagobert I, who esteemed him very highly, though there is no historical basis for the statement made in his anonymous life, written about the eleventh century, that King Dagobert made him ruler over Ireland. He is said to have brought with him from Ireland a number of missionaries, chief among whom were Sts. Fursy, Foillan, Ultan, Eloquius, Adalgisus, and Etto. About 642 he founded the monastery of Hautmont, near Maubeuge, where he himself became a monk about 643, being invested with the religious garb by Bishop St. Aubert of Cambrai, while his wife took the veil and lived in a cell which later became the monastery of Mons. His holy life and his fame as a spiritual guide attracted to the monastery many of his former friends, who put themselves under his spiritual direction. In the hope of finding great seclusion he erected a new monastery at Soignies whither he withdrew with a few of his monks about 670.

MICHAEL OTT

St. Vincent

St. Vincent

Deacon of Saragossa, and martyr under Diocletian, 304; mentioned in the Roman Martyrology, 22 Jan., with St. Anastasius the Persian, honoured by the Greeks, 11 Nov. This most renowned martyr of Spain is represented in the dalmatic of a deacon, and has as emblems a cross, a raven, a grate, or a fire-pile. He is honoured as patron in Valencia, Saragossa, Portugal etc., is invoked by vintners, brickmakers, and sailors, and is in the Litany of the Saints. His Acts were read in the churches of Africa at the end of the fourth century, as St. Augustine testifies in Sermon 275. The present Acts (*Acta SS.*, III Jan., 6) date from the eighth or ninth century, and were compiled from tradition. *Anal. Boll.*, I, 259, gives another life. All agree in substance with the metric life by Prudentius (*P.L.*, LX, 378). He was born at Saragossa; his father was Eutricius (Euthicius), and his

mother, Enola, a native of Osca. Under the direction of Valerius, Bishop of Sargossa, Vincent made great progress in his studies. He was ordained deacon and commissioned to do the preaching in the diocese, the bishop having an impediment of speech. By order of the Governor Dacian he and his bishop were dragged in chains to Valencia and kept in prison for a long time. Then Valerius was banished, but Vincent was subjected to many cruel torments, the rack, the gridiron, and scourgings. He was again imprisoned, in a cell strewn with potsherds. He was next placed in a soft and luxurious bed, to shake his constancy, but here he expired.

His body was thrown to be devoured by vultures, but it was defended by a raven. Dacian had the body cast into the sea, but it came to shore and was buried by a pious widow. After peace was restored to the Church, a chapel was built over the remains outside the walls of Valencia. In 1175 the relics were brought to Lisbon; others claim that they came to Castres in 864. Cremona, Bari, and other cities claim to have relics. Childeric I brought the sole and dalmatic to Paris in 542, and built a church in honour of St. Vincent, later called St-Germain-des-Prés. Regimont, near Bezières, had a church of the saint as early as 455. Rome had three churches dedicated to St. Vincent; one near St. Peter's, another in Trastevere, and the one built by Honorius I (625-38) and renewed by Leo III in 796. A pilaster found in the basilica of Salona in Dalmatia shows an inscription of the fifth or sixth century in honour of the saint (Rom. Quartalschrift, 1907, Arch. 135).

FRANCIS MERSHMAN

St. Vincent de Paul

St. Vincent de Paul

Born at Pouy, Gascony, France, in 1580, though some authorities have said 1576; died at Paris, 27 September, 1660. Born of a peasant family, he made his humanities studies at Dax with the Cordeliers, and his theological studies, interrupted by a short stay at Saragossa, were made at Toulouse where he graduated in theology. Ordained in 1600 he remained at Toulouse or in its vicinity acting as tutor while continuing his own studies. Brought to Marseilles for an inheritance, he was returning by sea in 1605 when Turkish pirates captured him and took him to Tunis. He was sold as a slave, but escaped in 1607 with his master, a renegade whom he converted. On returning to France he went to Avignon to the papal vice-legat, whom he followed to Rome to continue his studies. He was sent back to France in 1609, on a secret mission to Henry IV; he became almoner to the Queen Marguerite of Valois, and was provided with the little Abbey of Saint-Léonard-de-Chaume. At the request of M. de Berulle, founder of the Oratory, he took charge of the parish of Clichy near Paris, but several months later (1612) he entered the services of the Gondi, an illustrious French family, to educate the children of Philippe-Emmanuel de Gondi. He became the spiritual director of Mme de Gondi. With her assistance he began giving missions on her estates; but to escape the esteem of which he was the object he left the Gondi and with the

approval of M. de Berulle had himself appointed curé of Chatillon-les-Dombes (Bresse), where he converted several Protestants and founded the first conference of charity for the assistance of the poor. He was recalled by the Gondi and returned to them (1617) five months later, resuming the peasant missions. Several learned Paris priests, won by his example, joined him. Nearly everywhere after each of these missions, a conference of charity was founded for the relief of the poor, notably at Joigny, Châlons, Mâcon, Trévoux, where they lasted until the Revolution.

After the poor of the country, Vincent's solicitude was directed towards the convicts in the galleys, who were subject to M. de Gondi as general of the galleys of France. Before being convoyed aboard the galleys or when illness compelled them to disembark, the condemned convicts were crowded with chains on their legs onto damp dungeons, their only food being black bread and water, while they were covered with vermin and ulcers. Their moral state was still more frightful than their physical misery. Vincent wished to ameliorate both. Assisted by a priest, he began visiting the galley convicts of Paris, speaking kind words to them, doing them every manner of service however repulsive. He thus won their hearts, converted many of them, and interested in their behalf several persons who came to visit them. A house was purchased where Vincent established a hospital. Soon appointed by Louis XIII royal almoner of the galleys, Vincent profited by this title to visit the galleys of Marseilles where the convicts were as unfortunate as at Paris; he lavished his care on them and also planned to build them a hospital; but this he could only do ten years later. Meanwhile, he gave on the galley of Bordeaux, as on those of Marseilles, a mission which was crowned with success (1625).

Congregation of the Mission

The good wrought everywhere by these missions together with the urging of Mme de Gondi decided Vincent to found his religious institute of priests vowed to the evangelization of country people--the Congregation of Priests of the Mission (q.v.).

Experience had quickly revealed to St. Vincent that the good done by the missions in country places could not last unless there were priests to maintain it and these were lacking at that time in France. Since the Council of Trent the bishops had been endeavoring to found seminaries to form them, but these seminaries encountered many obstacles, the chief of which were the wars of religion. Of twenty founded not ten had survived till 1625. The general assembly of the French clergy expressed the wish that candidates for Holy Orders should only be admitted after some days of recollection and retreat. At the request of the Bishop of Beauvais, Potierdes Gesvres, Vincent undertook to attempt at Beauvais (September, 1628) the first of these retreats. According to his plan they comprised ascetic conferences and instructions on the knowledge of things most indispensable to priests. Their chief service was that they gave rise to the seminaries as these prevailed later in France. At first they lasted only ten days, but in extending them by degrees to fifteen or twenty days, then to one, two, or three months before each order, the bishops eventually prolonged the stay of their clerics to two or three years between philosophy and the priesthood and there were what were called *seminaries d'ordinands* and later *grands seminaries*, when lesser ones were founded. No one did more than Vincent towards this double creation. As early as 1635 he

had establish a seminary at the Collège des Bons-Enfants. Assisted by Richelieu, who gave him 1000 crowns, he kept at Bons-Enfants only ecclesiastics studying theology (*grand seminarie*) and he founded besides Saint-Lazare for young clerics studying the humanities a lesser seminary called the Seminary of St. Charles (1642). He had sent some of his priests to the Bishop of Annecy (1641) to direct his seminary, and assisted the bishops to establish others in their dioceses by furnishing priests to direct them. At his death he had thus accepted the direction of eleven seminaries. Prior to the Revolution his congregation was directing in France fifty-three upper and nine lesser seminaries, that is a third of all in France.

The ecclesiastical conference completed the work of the seminaries. Since 1633 St. Vincent held one every Tuesday at Saint-Lazare at which assembled all the priests desirous of conferring in common concerning the virtues and the functions of their state. Among others Bossuet and Tronson took part. With the conferences, St. Vincent instituted at St-Lazare open retreats for laymen as well as priests. It is estimated that in the last twenty-five years of St. Vincent's life there came regularly more than 800 persons yearly, or more than 20,000 in all. these retreats contributed powerfully to infuse a Christian spirit among the masses, but they imposed heavy sacrifices on the house of St-Lazare. Nothing was demanded of the retreatants; when there was question of the good of souls Vincent thought little of expense. At the complaints of his brethren who desired that the admission of the retreatants should be made more difficult he consented one day to keep the door. Towards evening there had never been so many accepted and when the embarrassed brother came to inform him that there was no more room he merely replied "well, give mine".

Work for the Poor

Vincent de Paul had established the Daughters of Charity almost at the same time as the *exercices des ordinands*. At first they were intended to assist the conferences of charity. When these conferences were established at Paris (1629) the ladies who joined them readily brought their alms and were willing to visit the poor, but it often happened that they did not know how to give them care which their conditions demanded and they sent their servants to do what was needful in their stead. Vincent conceived the idea of enlisting good young women for this service of the poor. They were first distributed singly in the various parishes where the conferences were established and they visited the poor with these ladies of the conferences or when necessary cared for them during their absence. In recruiting, forming, and directing these servants of the poor, Vincent found able assistance in Mlle Legras. When their number increased he grouped them into a community under her direction, coming himself every week to hold a conference suitable to their condition. (For further details see Sisters of Charity.) Besides the Daughters of Charity Vincent de Paul secured for the poor the services of the Ladies of Charity, at the request of the Archbishop of Paris. He grouped (1634) under this name some pious women who were determined to nurse the sick poor entering the Hotel-Dieu to the number of 20,000 or 25,000 annually; they also visited the prisons. Among them were as many as 200 ladies of the highest rank. After having drawn up their rule St. Vincent upheld and stimulated their charitable zeal. It was due to them that he was able to collect the enormous sums which he distributed in aid of all the unfortunates. Among the works, which

their co-operation enabled him to undertake, that of the care of foundlings was one of the most important. Some of the foundlings at this period were deliberately deformed by miscreants anxious to exploit public pity. Others were received into a municipal asylum called "la couche", but often they were ill-treated or allowed to die of hunger. The Ladies of Charity began by purchasing twelve children drawn by lot, who were installed in a special house confided to the Daughters of Charity and four nurses. Thus years later the number of children reached 4000; their support cost 30,000 *livres*; soon with the increase in the number of children this reached 40,000 *livres*.

With the assistance of a generous unknown who placed at his disposal the sum of 10,000 *livres*, Vincent founded the Hospice of the Name of Jesus, where forty old people of both sexes found a shelter and work suited to their condition. This is the present hospital of the incurables. The same beneficence was extended to all the poor of Paris but the creation of the general hospital which was first thought of by several Ladies of Charity, such as the Duchesse d'Aiguillon. Vincent adopted the idea and did more than anyone for the realization of what has been called one of the greatest works of charity of the seventeenth century, the sheltering of 40,000 poor in an asylum where they would be given a useful work. In answer to St. Vincent's appeal the gifts poured in. The king granted the lands of the Salpêtrière for the erection of the hospital, with a capital of 50,000 *livres* and an endowment of 3000; Cardinal Mazarin sent 100,000 *livres* as first gift, Président de Lamoignon 20,000 crowns, a lady of the Bullion family 60,000 *livres*. St. Vincent attached the Daughters of Charity to the work and supported it with all his strength.

St. Vincent's charity was not restricted to Paris, but reached to all the provinces desolated by misery. In that period of the Thirty Years War known as the French period Lorraine, Trois-Evêchés, Franche-Comté, and Champagne underwent for nearly a quarter of a century all the horrors and scourges which then more than ever war drew in its train. Vincent made urgent appeals to the Ladies of Charity; it has been estimated that at his reiterated requests he secured 12,000 *livres* equivalent to \$60,000 in our time (1913). When the treasury was empty he again sought alms which he dispatched at once to the stricken districts. When contributions began to fail Vincent decided to print and sell the accounts sent him from those desolated districts; this met with great success, even developing a periodical newspaper called "Le magasin charitable". Vincent took advantage of it to fund in the ruined provinces the work of the *potages économiques*, the tradition of which still subsists in our modern economic kitchens. He himself compiled with minute care instructions concerning the manner of preparing these *potages* and the quantity of fat, butter, vegetables, and bread which should be used. He encouraged the foundation of societies undertaking to bury the dead and to clean away the dirt which was a permanent cause of plague. They were often headed by the missionaries and the Sisters of Charity. Through them also Vincent distributed to their land. At the same time, in order to remove them from the brutality of the soldiers, he brought to Paris 200 young women whom he endeavored to shelter in various convents, and numerous children whom he received at St-Lazare. He even founded a special organization for the relief of the nobility of Lorraine who had sought refuge in Paris. After the general peace he directed his solicitude and his alms to the Irish and English Catholics who had been driven from their country.

All these benefits had rendered the name of Vincent de Paul popular in Paris and even at the Court. Richelieu sometimes received him and listened favorably to his requests; he assisted him in his first seminary foundations and established a house for his missionaries in the village of Richelieu. On his deathbed Louis XIII desired to be assisted by him: "Oh, Monsieur Vincent", said he, "if I am restored to health I shall appoint no bishops unless they have spent three years with you." His widow, Ann of Austria, made Vincent a member of the council of conscience charged with nominations to benefices. These honors did not alter Vincent's modesty and simplicity. He went to the Court only through necessity, in fitting but simple garb. He made no use of his influence save for the welfare of the poor and in the interest of the Church. Under Mazarin, when Paris rose at the time of the Fronde (1649) against the Regent, Anne of Austria, who was compelled to withdraw to St-Fermain-en-Laye, Vincent braved all dangers to go and implore her clemency in behalf of the people of Paris and boldly advised her to sacrifice at least for a time the cardinal minister in order to avoid the evils which the war threatened to bring on the people. He also remonstrated with Mazarin himself. His advice was not listened to. St. Vincent only redoubled his efforts to lessen the evils of the war in Paris. Through his care soup was distributed daily to 15,000 or 16,000 refugees or worthy and poor; 800 to 900 young women were sheltered; in the single parish of St. Paul the Sisters of Charity made and distributed soup every day to 500 poor, besides which they had to care for 60 to 80 sick. During this time Vincent, indifferent to dangers which he ran, multiplied letters and visits to the Court at St-Denis to win minds to peace and clemency; he even wrote a letter to the pope asking him to intervene and to interpose his mediation to hasten peace between the two parties.

Jansenism also made evident his attachment to the Faith and the use to which he put his influences in its defense. When Duvergier de Hauranne, later celebrated as the Abbé de St-Cyran, came to Paris (about 1621), Vincent de Paul showed some interest in him as in a fellow countryman and a priest in whom he discerned learning and piety. But when he became better acquainted with the basis of his ideas concerning grace, far from being misled by them, he endeavored to arrest him in the path of error. When the "Augustinus" of Jansenius and "Frequent Communion" of Arnauld revealed the true ideas and opinions of the sect, Vincent set about combating; he persuaded the Bishop of Lavaur, Abra de Raconis, to write against them. In the Council of Conscience he opposed the admission to benefices of anyone who shared them, and joined the chancellor and the nuncio in seeking means to stay their progress. Stimulated by him some bishops at St-Lazare took the initiative in relating these errors to the pope. St. Vincent induced 85 bishops to request the condemnation of the five famous propositions, and persuaded Anne of Austria to write to the pope to hasten his decision. When the five propositions had been condemned by Innocent X (1655) and Alexander VII (1656), Vincent sought to have this sentence accepted by all. His zeal for the Faith, however, did not suffer him to forget his charity; he gave evidence in behalf of St-Cyran, whom Richelieu had imprisoned (1638), and is said to have assisted at his funeral. When Innocent X had announced his decision he went to the solitaries of Port-Royal to congratulate them on the intention they had previously manifested of submitting fully; he even begged preachers renowned for their

anti-Jansenist zeal to avoid in their sermons all that might embitter their adversaries. The religious orders also benefited by the great influence of Vincent. Not only did he long act as director to the Sisters of the Visitation, founded by Francis de Sales, but he received at Paris the Religious of the Blessed Sacrament, supported the existence of the Daughters of the Cross (whose object was to teach girls in the country), and encouraged the reform of the Benedictines, Cistercians, Antonines, Augustinians, Premonstratensians, and the Congregation of Grandmont; and Cardinal de Rochefoucault, who was entrusted with the reform of the religious orders in France, called Vincent his right hand and obliged him to remain in the Council of Conscience.

Vincent's zeal and charity went beyond the boundaries of France. As early as 1638 he commissioned his priests to preach to the shepherds of the Roman Campagna; he had them give at Rome and Genoa the *exercices des ordinands* and preach missions on Savoy and Piedmont. He sent others to Ireland, Scotland, the Hebrides, Poland, and Madagascar (1648-60). Of all the works carried on abroad none perhaps interested him so much as the poor slaves of Barbary, whose lot he had once shared. These were from 25,000 to 30,000 of these unfortunates divided chiefly between Tunis, Algiers, and Bizaerta. Christians for the most part, they had been carried off from their families by the Turkish corsairs. They were treated as veritable beasts of burden, condemned to frightful labour, without any corporal or spiritual care. Vincent left nothing undone to send them aid as early as 1645 he sent among them a priest and a brother, who were followed by others. Vincent even had one of these invested with the dignity of consul in order that he might work more efficaciously for the slaves. They gave frequent missions to them, and assured them the services of religion. At the same time they acted as agents with their families, and were able to free some of them. Up to the time of St. Vincent's death these missionaries had ransomed 1200 slaves, and they had expended 1,200,000 *liveres* in behalf of the slaves of Barbary, not to mention the affronts and persecutions of all kinds which they themselves had endured from the Turks. This exterior life so fruitful in works had its source in a profound spirit of religion and in an interior life of wonderful intensity. He was singularly faithful to the duties of his state, careful to obey the suggestions of faith and piety, devoted to prayer, meditation, and all religious and ascetic exercises. Of practical and prudent mind, he left nothing to chance; his distrust of himself was equalled only by his trust in Providence; when he founded the Congregation of the Mission and the Sisters of Charity he refrained from giving them fixed constitutions beforehand; it was only after tentatives, trials, and long experience that he resolved in the last years of his life to give them definitive rules. His zeal for souls knew no limit; all occasions were to him opportunities to exercise it. When he died the poor of Paris lost their best friend and humanity a benefactor unsurpassed in modern times.

Forty years later (1705) the Superior-General of the Lazarists requested that the process of his canonization might be instituted. Many bishops, among them Bossuet, Fénelon, Fléchier, and Cardinal de Noailles, supported the request. On 13 August, 1729, Vincent was declared Blessed by Benedict XIII, and canonized by Clement XII on 16 June, 1737. In 1885 Leo XIII gave him as patron to the sisters of Charity. In the course of his long and busy life Vincent de Paul wrote a large number of letters, estimated at not less than 30,000. After his death the task of collecting them was

begun; in the eighteenth century nearly 7000 had been gathered; many have since been lost. Those which remained were published rather incorrectly as "Lettres et conférences de s. Vincent de Paul" (supplement, Paris, 1888); "Lettres inédites de saint Vincent de Paul" (Coste in "Revue de Gascogne", 1909, 1911); "Lettres choisies de saint Vincent de Paul" (Paris, 1911); the total of letters thus published amounts to about 3200. There have also been collected and published the saint's "Conférences aux missionnaires" (Paris, 1882) and "Conférences aux Filles de la Charite" (Paris, 1882).

ANTOINE DEGERT

St. Vincent Ferrer

St. Vincent Ferrer

Famous Dominican missionary, born at Valencia, 23 January, 1350; died at Vannes, Brittany, 5 April, 1419. He was descended from the younger of two brothers who were knighted for their valour in the conquest of Valencia, 1238. In 1340 Vincent's father, William Ferrer, married Constantia Miguel, whose family had likewise been ennobled during the conquest of Valencia. Vincent was their fourth child. A brother, not unknown to history, was Boniface Ferrer, General of the Carthusians, who was employed by the antipope Benedict XIII in important diplomatic missions. Vincent was educated at Valencia, and completed his philosophy at the age of fourteen. In 1367 he entered the Dominican Order, and was sent to the house of studies at Barcelona the following year. In 1370 he taught philosophy at Lerida; one of his pupils there was Pierre Fouloup, later Grand Inquisitor of Aragon. In 1373 Vincent returned to the Dominican "Studium arabicum et hebraicum" at Barcelona. During his stay there famine was prevalent; filled with compassion for the sufferers; Vincent foretold, while preaching one day, the near approach of ships bearing wheat. His prediction was fulfilled. In 1377 he was sent to continue his studies at Toulouse, where, in his own words, "study followed prayer, and prayer succeeded study". In 1379 Vincent was retained by Cardinal Pedro de Luna, legate of the Court of Aragon, who was endeavouring to win King Peter IV to the obedience of Avignon. The saint, thoroughly convinced of the legitimacy of the claims of the Avignon pontiffs, was one of their strongest champions. From 1385 to 1390 he taught theology in the cathedral at Valencia.

After this Vincent carried on his apostolic work while in Pedro de Luna's suite. At Valladolid he converted a rabbi, later well known as Bishop Paul of Burgos. At Salamanca Queen Yolanda of Aragon chose him for her confessor, 1391-5. About this time he was cited before the Inquisition for preaching publicly "the Judas had done penance", but Pedro de Luna, recently raised to the papal chair as Benedict XIII, cited the case before his tribunal and burned the papers. Benedict then called him to Avignon and appointed him confessor and Apostolic penitentiary. Notwithstanding the indifference of so many prelates in the papal Court, he laboured zealously among the people. He steadfastly refused the honours, including the cardinalate, which were offered to him. France withdrew from the obedience of Avignon in September, 1398, and the troops of Charles VI laid

siege to the city. An attack of fever at this time brought Vincent to death's door, but during an apparition of Christ accompanied by St. Dominic and St. Francis he was miraculously cured and sent to preach penance and prepare men for the coming judgment. Not until November, 1399, did Benedict allow Vincent Ferrer to begin his apostolate, furnished with full powers of a legate *a latere Christi*. For twenty years he traversed western Europe, preaching penance for sin and preparation for judgment. Provence was the first field of his apostolate; he was obliged to preach in squares and open places, such were the numbers that flocked to hear him. In 1401 he evangelized Dauphiny, Savoy, and the Alpine region, converting many Catharins and Waldensians. Thence he penetrated into Lombardy. While preaching at Alexandria he singled out from among the hearers a youth who was destined to evangelize Italy, Bernadine of Siena. Another chosen soul with whom Vincent came in contact while in Italy was Margaret of Savoy. During the years 1403-4 Switzerland, Savoy, and Lyons received the missionary. He was followed by an army of penitents drawn from every rank of society, who desired to remain under his guidance. Vincent was ever watchful of his disciples, and never did the breath of scandal touch this strange assemblage, which numbered at times 10,000. Genoa, Flanders, Northern France, all heard Vincent in turn. It would be difficult to understand how he could make himself understood by the many nationalities he evangelized, as he could speak only Limousin, the language of Valencia. Many of his biographers hold that he was endowed with the gift of tongues, an opinion supported by Nicholas Clemangis, a doctor of the University of Paris, who had heard him preach.

In 1408 Vincent was at Genoa consoling the plague-stricken. A meeting had been arranged there between Gregory XII and Benedict XIII in the hope of putting an end to the schism. Vincent again urged Benedict to have pity on the afflicted Church, but in vain. Disappointed, he returned to Spain. It would be difficult to overestimate the influence which he exercised in the Iberian peninsula. Castile, Aragon, Valencia, Murcia, Granada, Andalusia, and Asturias were visited in turn, and everywhere miracles marked his progress; Christians, Jews, and Moslems were all lost in admiration of the thaumaturgus. From 1408 until 1416 he worked almost continuously south of the Pyrenees. At different times in Spanish history strenuous attempts had been made to convert the Jewish people, baptism or spoliation being the alternatives offered to them. This state of affairs existed when Vincent began to work among them; multitudes were won over by his preaching. Ranzano, his first biographer, estimates the number of Jews converted at 25,000. In the Kingdom of Granada he converted thousands of Moors. Vincent was often called upon to aid his country in temporal affairs, as the counsellor of kings and at one time the arbiter of the destiny of Spain. In 1409 he was commissioned by Benedict XIII to announce to Martin of Aragon the death of his only son and heir.

After Martin's death, the representatives of the Kingdoms of Aragon, Valencia, and Catalonia appointed Vincent one of the judges to determine the succession to the Crown. At the judgment, known as the Compromise of Caspe, he took the leading part and helped to elect Ferdinand of Castile. Vincent was one of the most resolute and faithful adherents of Benedict XIII, and by his word, sanctity, and miracles he did much to strengthen Benedict's position. It was not until 1416,

when pressed by Ferdinand, King of Aragon, that he abandoned him. On 6 January, preaching at Perpignan, he declared anew to the vast throng gathered around his pulpit that Benedict XIII was the legitimate pope, but that, since he would not resign to bring peace to the Church, Ferdinand had withdrawn his states from the obedience of Avignon. This act must have caused Vincent much sorrow, for he was deeply attached to Benedict. Nevertheless, it was thought that Vincent was the only person sufficiently esteemed to announce such a step to the Spanish races. John Dominici was more fortunate in his attempts to pave the way for reunion, when he announced to the Council of Constance the resignation of Gregory XII. Vincent did not go to the Council of Constance; he continued his apostolic journeys through France, and spent the last two years of his life in Brittany, where consciences without number were reformed and instructed in a Christian way of life.

Vincent felt that he was the messenger of penance sent to prepare men for the judgment. For twenty years he traversed Western Europe preaching penance and awakening the dormant consciences of sinners by his wondrous eloquence. His austere life was but the living expression of his doctrine. The floor was his usual bed; perpetually fasting, he arose at two in the morning to chant the Office, celebrating Mass daily, afterwards preaching, sometimes three hours, and frequently working miracles. After his midday meal he would tend the sick children; at eight o'clock he prepared his sermon for the following day. He usually travelled on foot, poorly clad. Among St. Vincent's writings are: *De suppositionibus dialecticis*"; *De natura universalis*"; *De moderno ecclesiae schismate*", a defence of the Avignon pontiffs; and *De vita spirituali*". His "Sermons" were published at Antwerp (1570), Augsburg (1729), and Lyons (1816); and his complete works at Valence (1591). He was canonized by Calixtus III at the Dominican Church of Santa Maria Sopra Minerva, Rome, 3 June, 1455.

The earliest biographer of St. Vincent Ferrer is RANZANO, see *Acta SS.*, I April, 482-512; ANTIST, *Vida y historia del apostolico predictor. ALBERT REINHART

Blessed Vincent Kadlubek

Blessed Vincent Kadlubek

(KADLUBO, KADLUBKO).

Bishop of Cracow, chronicler, b. at Karnow, Duchy of Sandomir, Poland, 1160; d. at Jedrzejow, 8 March, 1223. The son of a rich family in Poland, he made such progress in his studies that in 1189 he could sign his name as Magister Vincentius (Zeissberg, in "Archiv fur osterreichische Geschichte", XLII, Vienna, 1870, 25), from which some conclude that he was then a canon of Cracow and principal of the cathedral school. Another document of 1212 (Zeissberg, 29) bears his signature as *quondam Sandomirensis praepositus*. At the death of Bishop Fulk of Cracow 11 Sept., 1207, the chapter voted for Vincent. Innocent III approved the election 28 March, 1208, and Vincent was consecrated by Henry Kielicz, Archbishop of Gnesen. Poland was then in a state of political and ecclesiastical demoralization, and Innocent had asked the archbishop, his schoolmate, to bring about a reform in clergy and people. Vincent worked in harmony with his metropolitan, and in visitations and sermons sought to obey the papal instructions. He assisted the religious in his diocese, and made notable donations to the monasteries of Sulejow, Koprzywnica, and Jedrzejow. It was also through his influence that in 124 peace was restored between Andrew of Hungary and Leszek of Poland who were contending for the possession of Galicia.

In 1218 Vincent sent in his resignation, and, after its acceptance by Honorius III entered the Monastery of Jedrzejow. He was the first Pole to receive the habit of the Cistercians (Starovolscius, 56). In due time he made his profession and lived in retirement until his death. He was buried before the high altar of the abbey church. In 1682 John Sobieski petitioned the Holy See for his beatification. A similar request was made in 1699 by the General Chapter of the Order of Cîteaux. On 18 Feb., 1764, Clement XIII ratified his cult on supplication of Wojciech Ziemicki, Abbot of Jedrzejow.

Works

"Chronica seu originale regum et principum Poloniae", in four books. The first three are in the form of a dialogue between Archbishop John of Gnesen (1148-65) and Matthew, Bishop of Cracow (1145-65). The first is legendary the second is based on the chronicle of Gallus, the third and fourth contain matters in Vincent's own experience. Some claim that the work was written at the request of King Casimir, others say at the request of King Leszek, while Vincent was bishop; and others, that it was written in the seclusion of the monastery. The latest edition of the work is by Bielowski in "Mon. Pol. hist.", II (Lemberg, 1870).

Cistercienser Chronik, XXI, 65; JOECKER, Gelehrten Lexicon, II, 2043; MANRIQUE, Annales Cist., IV, 136; HURTER, Nomenclator; Vita et Miracula Servi Deir Vincentii Kadlubkonis; SINOME STAROVOLSCIO, Scriptorum (Cracow, 1642)

Vincent of Beauvais

Vincent of Beauvais

Priest and encyclopedist. Little is known of his personal history. The years of his birth and death are uncertain, the dates frequently assigned being 1190 and 1264 respectively. It is thought that Vincent joined the Dominicans in Paris shortly after 1218; with the exception of visits to Louis IX at Royaumont, he spent all his religious life in the monastery at Beauvais. A man of industry, Vincent undertook a systematic and comprehensive treatment of all branches of human knowledge. In the preparation of this colossal work, he was helped in the purchase of books by his royal patron Louis IX. The general title of Vincent's work is "Speculum majus". The first part, "Speculum naturale", contains thirty-two books and 3718 chapters, and treats of theology, psychology, physiology, cosmography, physics, botany, zoology, mineralogy, agriculture. Book IX, chap. 40, contains an early reference to the use of the magnet for the purpose of navigation. The edition of the "Speculum naturale" in the Wheeler collection in the Library of the American Institute of Electrical Engineers (New York) was printed in Strasburg, probably in the year 1468. It is in two royal folio volumes containing 694 double column pages of 66 lines to the column. Like other *incunabula*, it was published without title-page, folio-number or printer's imprint. The second part, "Speculum doctrinale", in seventeen books and 2374 chapters, treats of logic, rhetoric, poetry, geometry, astronomy, instincts, passions, education, industrial and mechanical arts, anatomy, surgery, medicine, jurisprudence, and administration of justice. The third part, "Speculum historiale", in thirty-one books and 3793 chapters, brings the history of the world to A.D. 1250. A fourth part, "Speculum morale", appears in some additions, but its authenticity is questioned, Daunou (1761-1840) affirming that it cannot be attributed to Vincent. The "Speculum majus" contains 80 books, divided into 9885 chapters, figures which give some idea of the magnitude of the work accomplished by the Dominican Friar in the first half of the thirteenth century. Other works of Vincent of Beauvais are: "De eruditione filiorum regalium"; "Tractatus consolatorius de morte amici", addressed to St. Louis on the death of one of his sons in 1260.

BROTHER POTAMIAN

St. Vincent of Lerins

St. Vincent of Lérins

Feast on 24 May, an ecclesiastical writer in Southern Gaul in the fifth century. His work is much better known than his life. Almost all our information concerning him is contained in Gennadius, "De viris illustribus" (lxiv). He entered the monastery of Lérins (today Isle St. Honorat), where under the pseudonym of Peregrinus he wrote his "Commonitorium" (434). He died before 450, and probably shortly after 434. St. Eucherius of Lyons calls him a holy man, conspicuous for eloquence and knowledge; there is no reliable authority for identifying Vincent with Marius Mercator, but it is likely, if not certain, that he is the writer against whom Prosper, St. Augustine's friend,

directs his "Responsiones ad capitula objectionum Vincentianarum". He was a Semipelagian and so opposed to the doctrine of St. Augustine. It is believed now that he uses against Augustine his great principle: "what all men have at all times and everywhere believed must be regarded as true". Living in a centre deeply imbued with Semipelagianism, Vincent's writings show several points of doctrine akin to Casian or to Faustus of Riez, who became Abbot of Lérins at the time Vincent wrote his "Commonitorium"; he uses technical expressions similar to those employed by the Semipelagians against Augustine; but, as Benedict XIV observes, that happened before the controversy was decided by the Church. The "Commonitorium" is Vincent's only certainly authentic work extant. The "Objectiones Vincentianae" are known to us only through Prosper's refutation. It seems probable that he collaborated, or at least inspired, the "Objectiones Gallorum", against which also Prosper writes his book. The work against Photinus, Apollinaris, Nestorius, etc., which he intended to compose (Commonitorium, xvi), has not been discovered, if it was ever written. The "Commonitorium", destined to help the author's memory and thus guide him in his belief according to the traditions of the Fathers, was intended to comprise two different *commonitoria*, the second of which no longer exists, except in the *résumé* at the end of the first, made by its author; Vincent complains that it had been stolen from him. Neither Gennadius, who wrote about 467-80, nor any known manuscripts, enable us to find any trace of it.

It is difficult to determine in what the second "Commonitorium" precisely differed from the first. The one preserved to us develops (chapters i-ii) a practical rule for distinguishing heresy from true doctrine, namely Holy Writ, and if this does not suffice, the tradition of the Catholic Church. Here is found the famous principle, the source of so much discussion particularly at the time of the Vatican Council, "Magnopere curandum est ut id teneatur quod ubique, quod semper, quod ab omnibus creditum est". Should some new doctrine arise in one part of the Church, Donatism for example, then firm adherence must be given to the belief of the Universal Church, and supposing the new doctrine to be of such nature as to contaminate almost the entirety of the latter, as did Arianism, then it is to antiquity one must cling; if even here some error is encountered, one must stand by the general councils and, in default of these, by the consent of those who at diverse times and in different places remained steadfast in the unanimity of the Catholic Faith (iii-iv). Applications of these principles have been made by St. Ambrose and the martyrs, in the struggle with the Donatists and the Arians; and by St. Stephen who fought against rebaptism; St. Paul also taught them (viii-ix). If God allows new doctrines, whether erroneous or heretical, to be taught by distinguished men, as for example Tertullian, Origen, Nestorius, Apollinaris, etc. (x-xix), it is but to test us. The Catholic admits none of these new-fangled doctrines, as we see from I Tim., vi, 20-21 (xx-xxii, xxiv). Not to remove all chance of progress in the faith, but that it may grow after the manner of the grain and the acorn, provided it be in the same sense, *eodem sensu ac sententia*; here comes the well known passage on dogmatic development. "*crescat igitur. . .*" (xxiii). The fact that heretics make use of the Bible in no way prevents them from being heretics, since they put it to a use that is bad, in a way worthy of the devil (xxv-xxvi). The Catholic interprets Scripture according to the rules given above (xxvii-xxviii). Then follows a recapitulation of the whole "Commonitorium" (xxix-xxx).

All this is written in a literary style, full of classical expressions, although the line of development is rather familiar and easy, multiplying digressions and always more and more communicative. The two chief ideas which have principally attracted attention in the whole book are those which concern faithfulness to Tradition (iii and xxix) and the progress of Catholic doctrine (xxiii). The first one, called very often the canon of Vincent of Lérins, which Newman considered as more fit to determine what is not then what is the Catholic doctrine, has been frequently involved in controversies. According to its author, this principle ought to decide the value of a new point of doctrine prior to the judgment of the Church. Vincent proposes it as a means of testing a novelty arising anywhere in a point of doctrine. This canon has been variously interpreted; some writers think that its true meaning is not that which answered Vincent's purpose, when making use of it against Augustine's ideas. It is hardly deniable that despite the lucidity of its formula, the explanation of the principle and its application to historical facts are not always easy; even theologians such as de San and Franzelin, who are generally in agreement in their views, are here at variance. Vincent clearly shows that his principle is to be understood in a relative and disjunctive sense, and not absolutely and by uniting the three criteria in one: *ubique, semper, ab omnibus*; antiquity is not to be understood in a relative meaning, but in the sense of a relative consensus of antiquity. When he speaks of the beliefs generally admitted, it is more difficult to settle whether he means beliefs explicitly or implicitly admitted; in the latter case the canon is true and applicable in both senses, affirmative (what is Catholic), and negative or exclusive (what is not Catholic); in the former, the canon is true and applicable in its affirmative bearing; but may it be said to be so in its negative or exclusive bearing, without placing Vincent completely at variance with all he says on the progress of revealed doctrine?

The "Commonitorium" has been frequently printed and translated. We may quote here the first edition of 1528 by Sichardus and that of Baluze (1663, 1669, 1684, Paris), the latter being the best of the three, accomplished with the help of the four known manuscripts; these have been used again in a new accurate collation by Rauschen, for his edition ("Florilegium patristicum", V, Bonn, 1906); a school-edition has been given by Julicher (Frieberg, 1895), and by Hurter (Innsbruck, 1880, "SS. Patrum opuscula selecta", IX) with useful notes.

J. DE GHELLINCK

Leonardo da Vinci

Leonardo di Ser Piero da Vinci

Florentine painter, sculptor, architect, engineer, and scholar, and one of the greatest minds of the Renaissance; born at Vinci, near Florence, in 1452; died at Cloux, near Amboise, France, 2 May, 1519, natural son of Ser Piero, a notary, and a peasant woman. He was reared carefully by

his father, and was remarkably gifted and precocious. Few artists owed so little to circumstances and teachers. He was quite self-made. His work was small in bulk, and what remains may be counted on fingers of both hands. Few men had such varied talent and amassed such encyclopedic knowledge; his method as an artist was original with him, science was the measure of beauty, he combined fact with poetry and made use of both to carry on wide investigations in nature and to reproduce life according to the very laws of life. There are three periods in Leonardo's biography: The Florentine period (1469-82); the Milanese period (1483-99); the Nomadic period (1500-19).

I. THE ARTIST

Florentine Period (1469-82)

At an early age, doubtless about his fifteenth year, Leonardo entered Verrocchio's studio which about 1465 was the foremost in the city. Among his associates was Pietro Vanucci called Perugino. A sculptor and painter, Verrocchio was not an artist of the highest genius, but he played an important part in the history of art. The contemporary of Castagno and Pollaiuolo, he centralized their labours, codified their efforts, and circulated the results of their studies; in a certain sense Florentine naturalism was organized in his studio. The work of both generations was summed up in a work common to master and pupil, Verrocchio's "Baptism of Christ", in the Academy of Florence, wherein Leonardo painted the face of one of the angels who hold the garments of Jesus. In the midst of a work which, although a conscientious study, is dull and prosaic this ravishing countenance shines with a divine life. Under these conditions young Leonardo acquired the technique of his craft, all the progress attained by the Florentine School about the middle of the fifteenth century, but he gave to it a new value and incomparable beauty. As Verrocchio's collaborator in all branches of art he assisted in the preliminary studies and the preparatory researches for the famous equestrian statue of the *condottiere* Colleone. He was also admitted to the celebrated garden of the Medicis, where they had gathered a collection of antiquities, then the foremost in the world, and which they had, moreover, made a museum and a school, or academy, of fine arts. The young artist nevertheless almost entirely escaped the superstition of antiquity, and this is a clear proof of his wonderful independence. The artists of the next generation, especially Michelangelo, scarcely beheld life save through the marble veil of Graeco-Roman sculpture; Leonardo, on the other hand, borrowed almost nothing from the past; a few details in a candelabrum in the small "Annunciation" of the Louvre, rare sketches such as the "Dancers" of the Academy of Venice, a warrior's head at London (British Museum), these constitute nearly the whole of his debt to antiquity. In this sense Leonardo is the first of the "moderns".

We possess very few of the works of his youth. Apart from the face of the angel in the "Baptism of Christ" spoken of above, we can ascribe to him with certainty only the delicate miniature "Annunciation" of the Louvre, the portrait of a young woman in the Liechtenstein Gallery at Vienna, and two small terra-cottas in the South Kensington Museum, London; a "Madonna and Child", and a bust of St. John the Baptist. Drawings have preserved for us the traces of other projects, e.g., in "Adoration of the Shepherds" (drawing at the Louvre), but we have almost no information concerning

this period. A landscape drawing dated 1573 and another study dated 1578 (Uffizi) are the first certain dates we encounter in his life. The following note has also been found: ". . . bre 1578 cominciai le due Madonne"; but no one knows what became of these Madonnas, nor even if they were executed. However, a great many studies, leaves covered with sketches, heads of young women, children playing with cats, etc., show the direction of his researches. He had already conceived this type of mother and child in which the divine expression results only from human race and the poetry of life carried to its highest degree. This was the formula of the Renaissance, of the Madonnas of Raphael and Andrea del Sarto, and which Leonardo himself soon applied in the immortal masterpieces, the "Virgin of the Rocks" and "St. Anne and the Blessed Virgin".

Milanese Period (1483-99)

In 1481 Ludovico il Moro assumed in the name of his nephew, Gian Galeazzo, the regency of the Duchy of Milan. He was one of the most remarkable princes in that age of tyrants of genius: clever, magnificent, ambitious, and cruel. A letter of which a copy forms part of the celebrated "Codex Atlanticus", in the Ambrosian Library, Milan, has preserved the terms in which Leonardo offered his services to this formidable lord; among other terms were read:

"(1) I have a process for constructing very light, portable bridges, for the pursuit of the enemy; others more solid, which will resist fire and assault and may be easily set in place and taken to pieces. I also know ways of burning and destroying those of the enemy. . . (4) I can also construct a very manageable piece of artillery which projects inflammable materials, causing great damage to the enemy and also great terror because of the smoke . . . (8) Where the used of cannon is impracticable I can replace them with catapults and engines for casting shafts with wonderful and hitherto unknown effect; briefly, whatever the circumstances I can contrive countless methods of attack. (9) In the event of a naval battle I have numerous engines of great power both for attack and defense: vessels which are proof against the hottest fire, powder or steam. (10) In times of peace I believe that I can equal anyone in architecture, whether for the building of public or private monuments. I sculpture in marble, bronze and terra cotta; in painting I can do what another can do, it matters not who he may be. Moreover I pledge myself to execute a bronze horse to the eternal memory of your father and the very illustrious House of Sforza, and if any of the above things seem impracticable or impossible I offer to give a test of it in your Excellency's park or in any other place pleasing to your lordship, to whom I commend myself in all humility."

Leonardo was at this time thirty years of age and very handsome. He was an accomplished gentleman, and had a keen mind for the invention of fables. His contemporaries, for example the storyteller Bandello, relate the charms of his conversation. He was a musician, being given to improvising verses while accompanying himself on a lute of his own invention, shaped like a bucranium and possessing wonderful sonorousness. For the fêtes, ballets, and amusements, and

interludes of which the Renaissance was so fond, Leonardo was unequalled. At the time of Louis XII's entry into Milan a mechanical lion crossed the banquet hall, halted before him a shower of lilies. This machine Leonardo had invented. Such was Leonardo when towards the end of 1482 he entered the service of Ludovico il Moro. One of his earliest Milanese works was the delightful "Woman with a Marten", which is believed to be the portrait of Cecilia Gallerani, Ludovico's mistress, and which is now at Cracow, in the collection of Count Czartorisky. Unfortunately, the work has been much injured by restorations, but it is the first truly modern work of its kind, wherein feminine grace, subtlety of analysis, refinement of the moral personality, and not merely resemblance of features, constitute the subject of the picture. The pretty profile of "Beatrice d'Este" at the Ambrosian and the so-called "Lucrezia Crivelli" (also called "La Belle Ferroniere") of the Louvre have nothing in common with Leonardo.

At Milan, also, in the early years of his sojourn there, he completed his first large picture, the wonderful "Virgin of the Rocks". Besides copies there are two of these pictures in existence, differing somewhat in details, one at the Louvre and the other at the National Gallery. There have been endless discussions with regard to their authenticity. The truth is that they are both originals, the first in point of time being that of the Louvre, the execution of which, extremely minute in detail, still shows something of the somewhat dry methods of Verrocchio's studio. The other and somewhat later one repeats the same *motif* for the convent of San Francesco, Milan. On the side panels Ambrogio da Predis painted angels playing on musical instruments. These side panels are with the central picture at the National Gallery. But Leonardo did not finish the picture he had begun, its Madonna and the landscape are the work of a pupil and a mediocre pupil. On the other hand the angel kneeling behind the Infant Jesus whose attitude differs from that of the Paris Angel, is one of the artist's most perfect creations. Both pictures are poetical. The fantastic landscape, the dolomite grotto of prismatic rocks, the ineffable art of the "pyramidal" grouping, the often copied triangle of which the base is formed by two beautiful children, and the summit of the head of a smiling virgin; the grace and life of the *motif*, the selection of the moment, the perfection of the model, the depth of the atmosphere, and even the smallest details of the herbs, the stones, the slight ripples in a surface of transparent water -- all this endows the "Virgin of the Rocks" with an imperishable charm, making it one of the works which open a new world to the imagination and fixing eternally the poetry of the subject. Without Leonardo Raphael's "Madonna", his "Belle Jardinière" and "Madonna of the Goldfinch" would not exist and even their charm does not equal that of their sublime model.

Leonardo's most important work at Milan is his "Last Supper" which he painted in the refectory of the Dominican convent of Sta Maria delle Grazie. This masterpiece is now little more than a ruin, the disaster being largely due to the painter's methods. Fresco seemed to him too summary and hurried a process and he painted in oil on the wall. Dampness soon soaked into and ruined the work, and as early as the middle of the sixteenth century the damage was irreparable. Vandalism did the rest. In 1652 a door was opened in the wall mutilating the feet of Christ and two Apostles. In 1726 and 1770 daubers wrought a masterpiece of injury with their restorations, and finally in

1797 a French army occupied the convent and made a stable of the refectory; even Bonaparte's orders could not prevent the men from mutilating the "Last Supper"; such was the long martyrdom of the masterpiece. Only in recent years have precautions been taken to preserve the remains; the wall has been separated and the hall dried but this tardy care threatens to complete the destruction of the picture. It is to be feared that it will scale and crumble to dust. However there exist /bin/bash: grpe: command not found memorials and copies of it. Few works have exercised a similar fascination and been as often reproduced from the beginning. Some of these copies have been collected in the refectory of Sta Maria delle Grazie; among them the best of all, which was formerly at Castellazzonear Milan, is believed to be by Solari. An excellent copy is preserved at Ponte Capriasca, a neighbouring parish of Lugano. The Academy of London has one, which was formerly at the Certosa of Pavia and attributed to Oggionno or to Gianpietrino. There are two at Paris, one at the Louvre, and the other at St. Germain l'Auxerrois. All these copies, which are fairly correct as regards the composition, vary in detail and especially show great difference of colouring.

Still more valuable are the separate studies of heads, although the most of them may be originals; the most important series are at Strasburg and Weimar. The famous head of Christ in crayon at the Brera seems to be a study of Sodoma or of Cesare da Sesto and to have no relation to the "Last Supper". None of these helps to the study of the masterpiece should be neglected, but despite its ruinous condition there are impressions which can only be given by the picture itself, which still preserves the atmosphere, the moving tonality, a peculiar pathos which seems the sorcery or presence of genius. Its extraordinary superiority is apparent when we compare it with all the extant "Last Supper" with those of Giotto, Castagno, or Ghirlandajo. The old representations become antiquated and obsolete and a new order of ideas is inaugurated. With regard to its subject the theme of the "Last Supper" may be divided into two distinct movements: the institution of the Sacrament and the "Unus vestrum". Leonardo has chosen the moment at which Christ declares that there is a traitor in the company. We are shown the effect of a speech on twelve persons, on twelve different temperaments: a single ray and twelve reflections (Burckhardt). The subject has been well analyzed by Goethe. It is clear that in a drama of this class, a kind of "seated" drama, of which the subject is interior disquiet, surprise, anguish, it suffices to show the persons at half length; busts, face, and hands suffice to manifest the moral emotion; the table with its damask cloth by almost completely concealing the lower limbs offered the ingenious artist a resource which he knew how to use. The difficulty under these conditions was to succeed in constituting a whole with these thirteen figures seated side by side; the greatest weakness of the old painters was composition; each table companion seemed isolated from his neighbour.

With an instinct of genius Leonardo divided his actors into two groups, two on each side of Christ, and he linked these groups so as to imbue the general outline with a certain continuity, animated by a single movement. The whole is like the successive undulations of a vast wave of emotions. The fatal word uttered by Christ seated at the middle of the table produces tumult which symmetrically repels and agitates the two nearest groups and which lapses as it is communicated to the two groups farther removed. The intimate composition of each group is no less wonderful.

Stupefaction, sorrow, indignation, denial, vengeance, the variety of expression which the painter has gathered together in this picture, the depth of the analysis, the veracity of the types and physiognomies, the power and the accumulation of contrasts are without parallel in all previous art; the countless studies made for each piece denote in the author a world of new preoccupations. Each head is the "monograph" of a human passion, a plate of moral anatomy. It will be readily understood how such a work cost the artist ten years of preparation. None ever summarized in a single picture a similar total of life. The hands possess incomparable beauty and eloquence. Here for the first time and for the whole future was created the definitive formula of historic painting.

On the wall opposite the "Last Supper" Leonardo had painted (1495), in the great Montorfano Crucifixion, portraits of Ludovico il Moro, his wife Beatrice d'Este, and their sons Maximilian and Francesco. Only whitish traces and uncertain lineaments of these portraits remain. Finally in 1893 Professor Müller Walde discovered in the castle of Milan under a rough cast of the hall of the Torre delle Asse a whole decoration painted by Leonardo in 1498; it is a trellis of laurel, vines, and foliage. The artist conveyed the illusion of a hall of verdure. To this period likewise belong the studies of St. Anne. Together with the cult of the Immaculate Conception the end of the fifteenth century saw the rise of that of the mother of the Blessed Virgin. The work of the learned Trithemius, "*De laudibus sanctissimæ matris Annæ*", dates from 1494 (cf. Shankell, "*Der Kultus der heilige Annas am susgange Mittelalters*", Freiburg, 1893). Leonardo composed two different versions of this subject, one of them being now at the Louvre, the other at the London Academy. That of the Louvre is unfinished. The Virgin is only sketched, the head of St. Anne alone showing that modelling in which Leonardo is unrivalled. Art possesses few groups more charming than that of these two women, one seated on the other's knees. Together with the "Last Supper" Leonardo's greatest Milanese work must have been the equestrian statue of Ludovico il Moro, the famous "bronze horse" which he pledged himself to cast in the letter quoted above. He worked on this constantly for more than fifteen years (1483-99). A plaster model was cast in 1489, but the artist was dissatisfied within and made another which was moulded in 1493. He then turned his attention to preparations for casting. But the French came in 1499 and besides driving out the duke they broke the plaster model of his statue. We have only countless sketches, studies, and drawings of this masterpiece and Leonardo's books dealing with the anatomy and science of the horse.

Nomadic Period (1500-19)

By Ludovico's fall Leonardo was left unemployed, and he was in no hast to seek another position and there began for him a period of wandering. Completed works grow more and more rare, each of them showing traces of more complicated ambitions. From this period date most of his scientific works. After fifty he began to gather the elements of a new synthesis which was never completed. The last twenty years of his life were given to this activity and these experiences. From Milan, Leonardo went to Mantua where he sketched (1500) the portrait of the Marchesa Isabella d'Este, the cartoon of which is one of the wonders of the Louvre. Then he went to Venice (1501) and thence to Florence; from there he entered the service of Cæsar Borgia as military engineer and head of the corps of engineers in his Romagna campaign. After Cæsar's fall he returned to Florence and seems

to have stayed there for three or four years. Then he began see-sawing between Florence and Milan, finally taking up his residence in the latter city where he was called by a law-suit concerning the property left by his father. In 1514 we find him at Rome, but at the end of the year he returned to Florence; in 1515 came journeys to Pavia, Bologna, and a last stay for some months at Milan. Finally in 1516 he accepted the invitation of King Francis I to come to France and left Italy, never to return.

During these wandering years there are only two places where we find undoubted proofs of his activity, at Florence (1501-06) and Milan (1506-13). At Florence he executed two of his most famous works now unfortunately lost or destroyed. The Signori of Florence had for the decoration of its council hall opened a contest for the portrayal of two patriotic subjects drawn from the annals of the Republic. One was an occurrence of the war against Pisa in 1304 and was confided to Michelangelo; the other commemorated the victory of Anghiari Maria Visconti. This was the subject treated by Leonardo. The rival cartoons were exhibited in 1505 and were an event in the history of the school. All the youth of the artist world hastened to copy them, but in the midst of all this Michelangelo was called to Rome and abandoned his work. Warned by his experience with the "Last Supper" Leonardo refrained from painting in oil, but would not be satisfied with fresco; he fancied some process of encaustic (one of the rare instances in him of the influence of the ancients). The attempt was unfortunate. The coat did not dry and the colours flowed together. But the artist was not discouraged and continued his work. The cartoon still existed in the eighteenth century; it is not known when it or that of Michelangelo disappeared. The latter is known only through a famous engraving by Marcantonio Raimondi. Leonardo did not fare so well. Apart from countless sketches there exists only a single group of his work, that of the knights of the "Battle of the Standard" which has been preserved by a drawing of Rubens (Louvre) and an engraving of Edelinck. Nevertheless there are few more important battle pieces in the art work of the sixteenth and seventeenth centuries. All the chasses of Rubens and the Flemish school are but variations and repetitions of this furious *melée*. The Adoration of the Magi in the Uffizi is unfortunately only a sketch, a rough cartoon, chiefly interesting for the information it gives concerning the basis of Leonardo's painting and his manner of preparing a picture. It belongs to the same period (about 1505) as that work of the artist which is most popular, most complete, and most closely associated with his name as that which best sums up in a woman's face all the research, grace, and seductiveness of his genius. This is the portrait of Madonna (Monna) Lisa, wife of Ser Giocondo, and universally known as *Jaconde* (*La Gioconda*), and which, acquired directly from the artist by Francis I, and preserved for three centuries at Fontainebleau, disappeared, 21 August, 1911, under mysterious circumstances, from the Louvre, where it had been since 1793.

The numerous copies of this enchanting face, those of the museums of Madrid, Munich, Quimper, and St. Petersburg, the Torlonia Gallery at Rome, and the Mozzi Gallery, Florence, of the Villa Sommariva on Lake Lugano, of the Hume and Woodburn collections at London, can scarcely console us for the loss of the masterpiece. Leonardo never painted anything with more love. He devoted four years to this single face. Vasari relates what delicate care he took to amuse his graceful

model during the sittings and to bring to her lips that imperceptible smile, which has been taken to mean such depth and perfidy and which is merely the serene expression of a harmonious soul, of moral peace and health, with a slight tinge of Florentine irony. Its place in the Louvre is occupied by another of Leonardo's works, one of the last really authentic of his productions, the enigmatic St. John Baptist. Here the depth and complexity of his intentions, above all the systematic use of chiaroscuro, lead to odd and equivocal results. But the spoiled work formulated the whole language of chiaroscuro, and fixed its laws with a clearness which has never been surpassed.

The following pictures preserve the memory of others of Leonardo's works of which the originals are lost. The St. John the Baptist or Bacchus full length, seated, amid a landscape; the picture belongs to a date previous to 1505 and is contemporary with the *Giaconda*. Ancient copies are at the Louvre and at Sant'Eustorgio, Milan. The *Leda*; same period; copy (by Bacchiacca?) at the Casino Borghese; others in the Ruble collection, Paris, and the Oppler collection, Cologne; drawing by Raphael at Windsor. The Resurrection at the Museum of Berlin is apocryphal. The famous wax bust required in 1909 by the same museum is the work of an English forger who worked about 1840. Finally the charming wax Head of the Wicar Museum, at Lille, belongs probably to the school of Canova, which robs it of none of its exquisite grace. The last picture of Leonardo's which we possess is the splendid sketch of St. Jerome in the desert in the collection at the Vatican. It dates from 1514. Leonardo spent the last three years of his unquiet life in France. The king gave him a pension of 7000 crowns and had given him a dwelling in the Château of Cloux near Amboise. At this period the master was very tired, and his faculties were declining. He was still engaged with the question of canalization and studied ways of regulating the course of the Loire and making it navigable. He died amid these occupations at the age of 67. A legend, popularized by Ingres's picture, relates that he passed away in the arms of Francis I; but on that day the king was at Saint-Germain-en-Laye.

II. THE SCHOLAR

Art represents only a small part of Leonardo's activity. Always and especially at Milan from 1506 his genius was absorbed in scientific matters, but these researches had begun in Verrocchio's studio, as is shown by the letter of 1482 to Ludovico il Moro. It is impossible to give here a detailed analysis even of his principal works, for his studies included all branches of knowledge. On the other hand their strictly personal nature, the secret and deliberately cabbalistic practices with which he loved to surround them, the methods of abbreviation and cryptography of which he made use in order to conceal his discourse (he wrote from right to left, in an inverted hand which could probably only be read with the aid of a mirror), all this mystery removes a great deal of interest from the treasures of observation which Leonardo consigned to countless manuscripts. In fact by refusing to disclose his discoveries, by wishing to retain the monopoly of his processes and secrets, he condemned this portion of his work to oblivion and sterility. However, his art is in so many ways connected with his science that the former cannot be known without an acquaintance with the latter. In his drawings of flowers, plants, landscapes, and in his studies of persons, it is impossible

to say whether it is the botanist, the geologist, the anatomist or the artist who interests us most. In Leonardo, knowledge and art are never separate. The characteristics frequently seen in the men of the Renaissance, the encyclopedic turn of mind so striking in a Leone Battista Alberti, a Bramante, or a Dürer, is never more brilliantly evident than in Leonardo da Vinci. His method is based exclusively on observation and experiment. He recognized no mistress save nature. Neither in science nor in art did he admit the authority of either the ancients or the scholastics.

Furthermore he clearly understood: (1) that science should be subject to formulation in mathematical laws; (2) that science has power over nature, and ability to foresee phenomena and at need to reproduce or imitate them. This granted, there were few questions which this tireless mind did not study, and to which he did not bring ingenious views and new solutions. Often he perceived truths established by modern science. Long before Bacon and with a far different range of application he invented the positive sciences. As a geologist, for example, he discerned that there was a "history of the earth", that the outside of the globe was not formed at a single stroke, and in this history, guided by studies of hydraulics, he successfully saw through the function of water. He divined the true nature of fossils. In botany he formulated the laws of the alternation of leaves, that of the eccentricity of trunks, and that of solar attraction. As an anatomist (he had dissected nine bodies) he gave figures concerning the insertion of the muscles and their movements which specialists still admire for their accuracy. He devised the earliest theories concerning the muscular movements of the cardiac valves. By his studies in embryology he laid the foundations for comparative anatomy. In mechanics he understood the power of steam and if he did not invent any action machines he at least made it an agent of propulsion, for he invented a steam cannon. He composed explosives and shells. But perhaps his most "modern" title to fame lies in his having laid down the principle of aviation, devoting years to this task. He foresaw nearly all the forms, parachute and montgolfier, but by boldly adhering to the "heavier than air" principle he constructed the first artificial bird. Long series of studies analyze with astonishing clearness the flight of the bird, the form and movement of the wing Leonardo distinguishes between the soaring flight and that made by successive flappings, in each case defining the action of the air and the part played by it; he understands that the bird rises obliquely on an aerial inclined plane, forming under it a kind of angle and that currents form in the concavity of the wing which serve it as momentary supports to recover its equilibrium, like the waves on which the car is rested to propel the boat.

Leonardo was more a scholar than a philosopher, nevertheless his wholly naturalistic science implies a certain philosophy, which if it is neither the kind of paganism nor the materialism in which the Renaissance so often resulted cannot be called truly Christian. Either through prudence or through scorn of abstract ideas Leonardo seems to have avoided declaring himself on this subject. Nevertheless it is easy to see that the idea of miracles is repugnant to his imagination. He admits or would logically admit only an immanent Providence, a God who refrains from intervention in the universe like to God of Lucretius or the Stoics. It is also certain, and he does not conceal it, that he did not like the monks. However, as an artist, he accommodated himself perfectly to the Christian

tradition. His art, though not at all mystic, is in its forms certainly less pagan than that of Raphael or even Michelangelo. He died a very Christian death.

His manuscripts are now divided among several depositories. The most important are (1) the gigantic collection in the Ambrosian Library of Milan called the Codex Atlanticus consisting of 393 folio pages on which are pasted more than 1600 leaves of notes; (2) at Paris in the library of the Institut twelve manuscripts numbered from A to M; (3) at London three volumes at South Kensington, a manuscript of 566 pages at the British Museum, and at Windsor splendid anatomical plates and drawings. Other books are in the possession of Count Manzoni and the Earl of Leicester. The treatise on painting is his first work. It was printed at Paris in folio in 1651 in the Italian text by Raphael du Fresne and almost immediately translated into French by Fréart de Chambray. More correct editions have since been issued, notably that of Manzi (1817), and that of Ludwig made according to a Vatican manuscript (3 vols., at Vienna, 1883). Ventura compiled a memoir on Leonardo's scientific works properly so called which he presented to the Institute in 1797. He announced that this would soon be followed by the publication of original documents, but this promise was not kept. In 1872 the Italian Government issued a limited number of copies of a de luxe work, "Saggio dell' opere di L. da V.", containing extracts from the Codex Atlanticus with twenty-four facsimiles. In 1889 J.P. Richter issued at London, under the title "The Literary Works of Leonardo da Vinci", two quarto volumes comprising more than 1500 extracts and fragments of manuscripts. Systematically classified, with beautiful reproductions.

However, Ravaisson-Mollier had undertaken the entire publication of the manuscripts of the Institut in a model edition with facsimiles of the original text, transcription in ordinary characters and French translation (6 vols. for., Paris, 1881-92). The example at Milan a manuscript of Leonardo's belonging to Prince Trivulzio. And since 1892 the Accademia dei Lincei has published completely the Codex Atlanticus. If the London manuscript were published we should have as complete knowledge as possible of this extraordinary man who united in himself the triple or quadruple genius of an Apelles, an Aristides, a Euclid, and an Archimedes. Mention must be made of Leonardo's artistic influence. His influence on painting was supreme; it has been shown above what paths his genius opened to historical painting, to portraiture, to scenes of sanctity, landscapes, and the art of chiaroscuro. But this general action, profound as it was, did not give rise to a school at Florence. Leonardo's pupils and imitators properly so called must be sought for at Milan. There were very numerous, and nothing enables us to judge better of his ascendancy than the revolution of taste which his appearance determined in Milanese painting. The national school of Foppa, Zenale, Borgognone was suddenly cast into the shade, eclipsed by a host of disciples, among them Solario, Ambrogio da Predis, Cesare de Sesto, Marco d'Oggione, Boltraffio, some of them very gifted and talented men. To them we owe the multitude of copies which often take the place of lost works of the master; but only two or three pupils attained an absolute independent expression, and were other than reflections of Leonardo: these included the gentle and prolific Bernardino Luini and the troubled, passionate, and very unequal Sodoma.

Breve vita de Leonardo da Vinci, scritta da anonimo del 1500, manuscript of the Magliabecchiana, at Florence in Archiv. storico italiani, XVI (1872); PACIOLI, De divina proportione (Venice, 1509), ed. EINTERBERG (Vienne, 1888); VASARI, ed. MILANESE, IV; LOMAZZO, Trattato della pittura (Milan, 1584); Idea del tempio della pittura (1590); DELECLUZE, Leonardo de Vinci (Paris, 1841); GOVI, MONGERI, BOITO, Saggio delle opere di L. da V. (Milan, 1872); RICHTER, The literary work of L. da V. (London, 1883); UZIELLI, Ricerche intorno a L. da V. (Florence, 1872; 2nd series, Rome, 1884; new ed., Turin, 1896); LERMOLIEFF, Kunstkritische Studien über italienische Malerei (Leipzig, 1890-93); RAVAISSON-MOLLIER, Les manuscrits de L. da V. (Paris, 1881 sqq.); FRIZZONI, Arte italiana del Rinascimento (Milan, 1891); WALDE, Leonardo da Vinci (Munich, 1889-90); Beiträge zur Kenntniss des Leonardo de Vinci (Berlin, 1897-8); M=DCNTZ, Léonard de Vinci (Paris, 1899); S=C9AILLES, Léonard de Vinci, l'artiste et le savant (Paris, 1892); BELTRAMI, L. da V. La sala delle Asse nel costello di Milano (Milan, 1902); GRONAU, L. da V. (London, 1903); Il codice atlantico (Milan, 1904); CAROTII, Le opere di Leonardo, Bramante e Raphello (Milan, 1905); SEIDLITZ, L. da V. (Berlin, 1910). CARMICHAEL, The Virgin of the Rocks in The Month (London, Jan., 1912), 33-43; Leonardo da Vinci's Notebooks, arranged and rendered into English by E. McCURDY (London, 1906); O'SHEA, The Genius of Leonardo da Vinci in Catholic World, XI (New York, 1895), 235-45. VASARI's Life has been translated into English by HORNE (New York, 1903).

LOUIS GILLET

St. Vindicianus

St. Vindicianus

Bishop of Cambrai-Arras, b. if tradition is to be believed, perhaps at Beaulaincourt, near Bapeaume, about 620; d. 2 March, probably between 693 and 712. This is the birthplace indicated in the documents dating much later than the saint's death, but which claim to reproduce an ancient local tradition. Nothing is known of his early years. On the death of St. Aubert, Bishop of Cambrai-Arras (about 668), Vindicianus was elected his successor. In any case he was bishop of this see in the reign of Thierry III of Neustria (about 673). The author of the "Gesta episcoporum Cameracensium", who is generally well informed, declares that he does not know the duration of the episcopate of Vindicianus. Legend has crept into the history of the holy bishop, but the following facts may be regarded as certain. In 673 Vindicianus supervised the translation of the body of St. Maxellende to Caudri. In the same year he consecrated the monastery of Honnecourt sur l'Escaut, which was given in 685 to St. Bertin. In 675 he signed a charter of donation in favour of the abbey at Maroilles, rendered illustrious by St. Humbert. In the same year he consecrated the church at Hasnon. He was probably in relation with St. Arnaud of Tongres, since we find his signature to the latter's testament in 679. In 681 he claimed for his diocese the honour of possessing the body of St. Léger, the unfortunate victim of the political strife which was then filling Neustria with blood, but he did not succeed, the remains of St. Léger being confided to Ansoald, Bishop of Poitiers. His

predecessor, St. Aubert, had founded the Monastery of St. Vaast, the building of which he had been unable to complete; Vindicianus finished it, apparently in 682, and placed it temporalities under the protection of Thierry III, who conferred numerous gifts on the monastery. In 685 a certain Hatta was placed at its head by Vindicianus. In the following year the latter dedicated the church at Hamaye, and acted at the exhumation of the bodies of Sts. Eusebia and Gertrude, who had been abbesses of the monastery of that name.

The events of his life after this date (686) are unknown. He was buried at Mont-St-Eloi. The region was ravaged by the Normans in the ninth century, and on more than one occasion the relics of the saint were in danger, until in 1030 Bishop Gerard of Cambrai had his body removed to the episcopal city. After having been at Douai and Arras, the relics were returned to Mont-St-Eloi in 1453. After still further translations, especially in 1598 and 1601, the body was finally placed in the cathedral at Arras.

L. VAN DER ESSEN
Vineam Domini

Vineam Domini

An Apostolic Constitution issued by Clement XI against the Jansenists on 16 July, 1705. It was occasioned by the following incident: A Jansenist priest, ostensibly the confessor of a dying ecclesiastic, proposed seven questions to the doctors of the Sorbonne for solution. The most prominent of these questions was the one whether absolution can be granted to an ecclesiastic who confessed that he rejects, in the sense of the Church, the five propositions condemned by Innocent XII as Jansenistic; but, since it was not clear to the penitent that these propositions are actually contained in the "Augustinus" of Jansenius, he thought it sufficient to observe a "respectful silence" (*silence respectueux*) concerning this question of fact, and, with this restriction, signed the formula prescribed by Alexander VII. Forty doctors of the Sorbonne, among them Ellies Du Pin, Petitpied, Bourret, Sarrasin, and Natalis Alexander, decided that absolution could not be withheld, since the case was neither new nor extraordinary, and since the penitent's opinion was not condemned by the Church. Though the decision was given secretly on 20 July, 1701, the Jansenists published the case in July, 1702, with the signatures of the forty doctors of the Sorbonne: "Cas de conscience par un confesseur de Province . . . résolu par plusieurs docteurs de la Faculté de Théologie de Paris Lettre de M. . . . Chanoine de B. à M. T. D. A." It is reprinted in Du Plessis, "Collection judiciorum", III (Paris, 1736), 413-7. As probable authors of the "Cas de conscience" are mentioned: Eustace,

the confessor of Port-Royal (Ste-Beuve, "Port-Royal", VI, 169); Fréhel, *curé* of Notre-Dame-du-Port, at Clermont (Le Roy, loc. cit. infra, 98); Du Pin (Guarnacci, "Vitae et res gestae pontif. E card.", II, cap. xi); Petitpied; Alquebille Perrier; and others. Whoever may have been its author, Roulland, a doctor of the Sorbonne, edited it, and Cardinal Noailles knew of its existence before it was published, and is even said to have promised his own signature. Its appearance caused a great stir among the Catholics of France, for the solution of the case was equivalent to the revival of one phase of Jansenism, the opinion that the pope has not the power to decide on questions of doctrinal fact, i.e. whether a certain book contains or does not contain errors against faith. The solution was condemned by Clement XI in his Brief "Cum nuper", dated 12 February, 1703. The pope at the same time urged King Louis XIV and Archbishop Noailles of Paris to take energetic measures against all recalcitrants. Despite the banishment of five doctors of the Sorbonne who refused to submit, the controversy continued, and King Louis XIV, seconded by the Bourbon King Philip V of Spain, requested the pope to issue a Constitution condemning the so-called respectful silence. Since Louis XIV insisted that the Constitution should contain no expressions contrary to the Gallican Liberties, its issue was somewhat delayed and finally, after its contents had been communicated to the king, the Constitution "Vineam Domini Sabaoth" appeared at Rome on 16 July, 1705.

This Constitution begins with a confirmation of the three Bulls- "Cum occasione" (Innocent X), "Ad Sacram", and "Regiminis Apostolici" (Alexander VII)-that had been previously published against Jansenism, and contains their entire text. Then follows a defence of Clement IX and Innocent XII against the calumnies and misinterpretations of the Jansenists. To this is added a severe rebuke of those who, by what they term respectful silence, pretend to obey the Apostolic Constitutions while in reality they deceive the Church and the Holy See. The Constitution ends with a solemn declaration that a respectful silence is by no means sufficient, *obsequioso illo silentio nequaquam satisfieri*, that all the faithful are obliged to reject and condemn as heretical, not only with their mouth, but also with their heart, the sense which was condemned in the previously mentioned five propositions of the book of Jansenius, and which the words of the propositions naturally have. "Damnatum in quinque praefatis propositionibus Jansenii libri sensum, quem illarum verba praese ferunt, ut praefertur, ab omnibus Christi fidelibus ut haereticum, non ore solum, sed et corde rejci ac damnari debere."

The Constitution arrived in France while the Assembly of the French Clergy was in session. It was accepted by the Assembly on 21 August, not, however, until it had been decided to accompany the Constitution with the declaration that "the papal constitutions are binding on the whole Church when they have been accepted by the bishops", thus making it appear that the Constitution received its binding force by the acceptance of the bishops. On 31 August, the Constitution was made a state law. It was accepted by all the French bishops with the exception of Percin de Montgaillard, Bishop of Saint-Pons, who published a *mandement* in defence of "respectful silence". The *mandement* was censured by Clement XI on 18 January, 1710, and the bishop finally submitted in a long letter to Clement on 28 February, 1713. The Sorbonne accepted the Bull on 1 Sept., 1705. The nuns of

Port-Royal refused to accept it, except with certain restrictions, and, in consequence, the king obtained the pope's permission to suppress their monastery. (See PORT ROYAL.)

On 31 August, 1706, Clement XI addressed a Brief to Cardinal Noailles and another to Louis XIV, in which he scathingly reproved the French bishops for "usurping the plenitude of power which God has given exclusively to the Chair of St. Peter", and demanded that they recant the scandalous declaration which they had appended to his Constitution "Vineam Domini". After various evasions Cardinal Noailles was finally prevailed upon, as the president of the Assembly, to sign, on 29 June, 1711, a document drawn up by the pope in which it was expressly stated that the acceptance of the bishops is not necessary to give the papal constitutions their binding force.

MICHAEL OTT

Violence

Violence

Violence (Lat. *vis*), an impulse from without tending to force one without any concurrence on his part to act against his choice. The stimulus or moving cause must come from without; no one can do violence to himself. The person compelled to act or to abstain from action not only does not assist this external force but resists and as far as possible strives against it: if he is merely indifferent, there is no violence. Violence cannot affect the will directly, i.e. the elicited acts of the will, since it is contrary to the essential notion of an act to the will that it should not be free. Acts however that are merely commanded by the will and exercised through the medium of some other faculty, internal or external, may be coerced, since these faculties may be impeded by violence from putting into execution the behests of the will. Not only elicited acts of the will, but likewise acts commanded by the will, are called voluntary. Since, then, acts commanded by the will may suffer violence, violence to that extent causes involuntariness and freedom from imputability. It is apparent that in so far as coercion is irresistible, the agent is not responsible for the external act resulting. Volition, and consequently imputability, proceeds from an internal principle; violence from without. Violence that is not absolute may be weakened or overcome by resistance: the more vehement it is, the more is our freedom limited. He, then, who can, by resisting, repel violence and does not, at least indirectly, desire to suffer violence. If the will yield a reluctant but nevertheless real consent, we are culpable, though in a less degree than if there had been no reluctance. Often fear and force go hand in hand, since not infrequently force begets fear, but they are not to be confounded. In what is done through violence the will is quiescent, but in what is done through fear the will is active. An act performed through fear is voluntary in the concrete, involuntary in the abstract, i.e. it is willed under the circumstances, but in itself it is not desired. [See FEAR; IMPEDIMENTS, CANONICAL (*vis et metus*), VII, 698a.]

ANDREW B. MEEHAN

Giovanni Battista Viotti

Giovanni Battista Viotti

Founder of the modern school of violinist, b. at Fontanetto, Piedmont, 23 May, 173; d. 3 March, 1824. He studied under Giovannini, and at Turin under Pugnani, with whom he went on a tour n 1780. He showed not only an extraordinary virtuosity, but wrote several concertos for the violin, and his playing in Germany, Russia, and France attracted considerable attention. For a time he was attached to the Court of Marie Antoinette, and he lived with Cherubini in 1785 and 1786. Owing to the Revolution, he quitted Paris, and arrived in London in July, 1792. He succeeded Cramer as leader at the King's Theatre, and was in the highest esteem as a teacher, but owing to base intrigue he had to leave England in 1798. Returning to London in 1801 he resumed his violin classes, but had a disastrous experience as a wine merchant. Again devoting himself to the violin, he returned to Paris in 1814 and was Director of the French Opera from 1819 to 1822. Unfortunately, his directorate was not a financial success and he came back to London in the spring of the year 1824. As a composer, he enriched violin music by his numerous concertos and sonatas, and by a few dainty songs. However, it is as a virtuoso and as the founder of modern violin playing that Viotti will be remembered. Among his pupils were Pixis, Rode, Alday, Vacher, Labarne, and others.

W.H. GRATAN-FLOOD

Saint Virgilius

St. Virgilius

(VIRGILE).

Archbishop of Arles, died c. 610. According to a life written in the eighth century he was born in a village of Aquitaine, became a monk, Abbot of Lerins, and Bishop of Arles, where he built a basilica of Saint Stephen and another of the Saviour. This life, accepted in its outlines by Mabillon and the Bollandists, is the scarcely modified reproduction of the Life of St. Maximus, Bishop of Riez, written by the patrician Dynamius before the death of Virgilius. According to Gregory of Tours, Virgilius was first Abbot of the Monastery of St. Symphorien at Autun, and through the support of Syagrius, Bishop of Autun, succeeded Lizier as Bishop of Arles. In his great zeal for the conversion of the numerous Jews whom trade attracted to Provence, Virgilius did not hesitate to employ force; whereupon St. Gregory the Great wrote (591) to Virgilius and to Theodore, Bishop of Marseilles, praising their good intentions but recommending them to confine their zeal to prayer and preaching. On 1 Aug., 595, St. Gregory extended to Virgilius the title of pontifical vicar, granted to the bishops of Arles by Pope Zosimus (519); this dignity made him the intermediary between

the Gallic episcopate and the Apostolic See. King Childebert was urged by the pope to assist Virgilius in exterminating simony from the Churches of Gaul and Germania. St. Gregory several times requested Virgilius (596, 601) to extend a welcome to Augustine and his monks whom he was sending to England. On another occasion he recommended to his protection a monastery belonging to the Patrimony of the Roman Church of which Lizier had taken possession. In a letter to Virgilius and to Syagrius, Bishop of Autun, the pope complains (July, 599) of their negligence in not preventing the marriage of Syagria, a woman who, having embraced the religious life, had been violently given in marriage. In 601 St. Gregory advised Virgilius to assemble a council against simony and to induce the Bishop of Marseilles to reform his house. On 23 Aug., 613, Boniface IV sent the pallium to Virgilius's successor Florian.

ANTOINE DEGERT

Virgin Birth of Christ

Virgin Birth of Christ

The dogma which teaches that the Blessed Mother of Jesus Christ was a virgin before, during, and after the conception and birth of her Divine Son.

I. THE VIRGIN BIRTH IN CATHOLIC THEOLOGY

Councils and Creeds

The virginity of our Blessed Lady was defined under anathema in the third canon of the Lateran Council held in the time of Pope Martin I, A.D. 649. The Nicene-Constantinopolitan Creed, as recited in the Mass, expresses belief in Christ "incarnate by the Holy Ghost of the Virgin Mary"; the Apostles' Creed professes that Jesus Christ "was conceived by the Holy Ghost, born of the Virgin Mary"; the older form of the same creed uses the expression: "born of the Holy Ghost and of the Virgin Mary". These professions show:

- That the body of Jesus Christ was not sent down from Heaven, nor taken from earth as was that of Adam, but that its matter was supplied by Mary;
- that Mary co-operated in the formation of Christ's body as every other mother co-operates in the formation of the body of her child, since otherwise Christ could not be said to be born of Mary just as Eve cannot be said to be born of Adam;
- that the germ in whose development and growth into the Infant Jesus, Mary co-operated, was fecundated not by any human action, but by the Divine power attributed to the Holy Ghost;
- that the supernatural influence of the Holy Ghost extended to the birth of Jesus Christ, not merely preserving Mary's integrity, but also causing Christ's birth or external generation to reflect his eternal birth from the Father in this, that "the Light from Light" proceeded from his mother's womb

as a light shed on the world; that the "power of the Most High" passed through the barriers of nature without injuring them; that "the body of the Word" formed by the Holy Ghost penetrated another body after the manner of spirits.

Church Fathers

The perpetual virginity of our Blessed Lady was taught and proposed to our belief not merely by the councils and creeds, but also by the early Fathers. The words of the prophet Isaias (vii, 14) are understood in this sense by

- St. Irenaeus (III, 21; see Eusebius, H.E., V, viii),
- Origen (Adv. Cels., I, 35),
- Tertullian (Adv. Marcion., III, 13; Adv. Judæos, IX),
- St. Justin (Dial. con. Tryph., 84),
- St. John Chrysostom (Hom. v in Matth., n. 3; in Isa., VII, n. 5);
- St. Epiphanius (Hær., xxviii, n. 7),
- Eusebius (Demonstrat. ev., VIII, i),
- Rufinus (Lib. fid., 43),
- St. Basil (in Isa., vii, 14; Hom. in S. Generat. Christi, n. 4, if St. Basil be the author of these two passages),
- St. Jerome and Theodoretus (in Isa., vii, 14),
- St. Isidore (Adv. Judæos, I, x, n. 3),
- St. Ildefonsus (De perpetua virginit. s. Mariæ, iii).

St. Jerome devotes his entire treatise against Helvidius to the perpetual virginity of Our Blessed Lady (see especially nos. 4, 13, 18).

The contrary doctrine is called:

- "madness and blasphemy" by Gennadius (De dogm. eccl., lxix),
- "madness" by Origen (in Luc., h, vii),
- "sacrilege" by St. Ambrose (De instit. virg., V, xxxv),
- "impiety and smacking of atheism" by Philostorgius (VI, 2),
- "perfidy" by St. Bede (hom. v, and xxii),
- "full of blasphemies" by the author of Prædestin. (i, 84),
- "perfidy of the Jews" by Pope Siricius (ep. ix, 3),
- "heresy" by St. Augustine (De Hær. h., lvi).

St. Epiphanius probably excels all others in his invectives against the opponents of Our Lady's virginity (Hær., lxxviii, 1, 11, 23).

Sacred Scripture

There can be no doubt as to the Church's teaching and as to the existence of an early Christian tradition maintaining the perpetual virginity of our Blessed Lady and consequently the virgin birth of Jesus Christ. The mystery of the virginal conception is furthermore taught by the third Gospel and confirmed by the first. According to St. Luke (1:34-35), "Mary said to the angel: How shall this be done, because I know not man? And the angel answering, said to her: The Holy Ghost shall come upon thee, and the power of the most High shall overshadow thee. And therefore also the Holy which shall be born of thee shall be called the Son of God." The intercourse of man is excluded in the conception of Our Blessed Lord. According to St. Matthew, St. Joseph, when perplexed by

the pregnancy of Mary, is told by the angel: "Fear not to take unto thee Mary thy wife, for that which is conceived in her, is of the Holy Ghost" (1:20).

II. SOURCES OF THIS DOCTRINE

Whence did the Evangelists derive their information? As far as we know, only two created beings were witnesses of the annunciation, the angel and the Blessed Virgin. Later on the angel informed St. Joseph concerning the mystery. We do not know whether Elizabeth, though "filled with the Holy Ghost", learned the full truth supernaturally, but we may suppose that Mary confided the secret both to her friend and her spouse, thus completing the partial revelation received by both.

Between these data and the story of the Evangelists there is a gap which cannot be filled from any express clue furnished by either Scripture or tradition. If we compare the narrative of the first Evangelist with that of the third, we find that St. Matthew may have drawn his information from the knowledge of St. Joseph independently of any information furnished by Mary. The first Gospel merely states (1:18): "When as his mother Mary was espoused to Joseph, before they came together, she was found with child, of the Holy Ghost." St. Joseph could supply these facts either from personal knowledge or from the words of the angel: "That which is conceived in her, is of the Holy Ghost." The narrative of St. Luke, on the other hand, must ultimately be traced back to the testimony of Our Blessed Lady, unless we are prepared to admit unnecessarily another independent revelation. The evangelist himself points to Mary as the source of his account of the infancy of Jesus, when he says that Mary kept all these words in her heart (2:19, 51). Zahn [1] does not hesitate to say that Mary is pointed out by these expressions as the bearer of the traditions in Luke 1 and 2.

A. How did St. Luke derive his account from the Blessed Virgin? It has been supposed by some that he received his information from Mary herself. In the Middle Ages he is at times called the "chaplain" of Mary [2]; J. Nirsch [3] calls St. Luke the Evangelist of the Mother of God, believing that he wrote the history of the infancy from her mouth and heart. Besides, there is the implied testimony of the Evangelist, who assures us twice that Mary had kept all these words in her heart. But this does not necessitate an immediate oral communication of the history of the infancy on the part of Mary; it merely shows that Mary is the ultimate source of the account. If St. Luke had received the history of the infancy from the Blessed Virgin by way of oral communication, its presentation in the third Gospel naturally would show the form and style of its Greek author. In point of fact the history of the infancy as found in the third Gospel (1:5 to 2:52) betrays in its contents, its language, and style a Jewish-Christian source. The whole passage reads like a chapter from the First Book of Machabees; Jewish customs, and laws, and peculiarities are introduced without any further explanation; the "Magnificat", the "Benedictus", and the "Nunc dimittis" are filled with national Jewish ideas. As to the style and language of the history of the infancy, both are so thoroughly Semitic that the passage must be retranslated into Hebrew or Aramaic in order to be properly appreciated. We must conclude, then, that St. Luke's immediate source for the history of the infancy was not an oral, but a written one.

B. It is hardly probable that Mary herself wrote the history of the infancy as was supposed by A. Plummer [4]; it is more credible that the Evangelist used a memoir written by a Jewish Christian, possibly a convert Jewish priest (cf. Acts 6:7), perhaps even a member or friend of Zachary's family [5]. But, whatever may be the immediate source of St. Luke's account, the Evangelist knows that he has "diligently attained to all things from the beginning", according to the testimony of those "who from the beginning were eyewitnesses and ministers of the word" (Luke 1:2).

As to the original language of St. Luke's source, we may agree with the judgment of Lagarde [6] that the first two chapters of St. Luke present a Hebrew rather than a Greek or an Aramaic colouring. Writers have not been wanting who have tried to prove that St. Luke's written source for his first two chapters was composed in Hebrew [7]. But these proofs are not cogent; St. Luke's Hebraisms may have their origin in an Aramaic source, or even in a Greek original composed in the language of the Septuagint. Still, considering the fact that Aramaic was the language commonly spoken in Palestine at that time, we must conclude that Our Blessed Lady's secret was originally written in Aramaic, though it must have been translated into Greek before St. Luke utilized it [8]. As the Greek of Luke 2:41-52 is more idiomatic than the language of Luke 1:4-2:40, it has been inferred that the Evangelist's written source reached only to 2:40; but as in 2:51, expressions are repeated which occur in 2:19, it may be safely inferred that both passages were taken from the same source.

The Evangelist recast the source of the history of the infancy before incorporating it into his Gospel; for the use of words and expressions in Luke 1 and 2 agrees with the language in the following chapters [9]. Harnack [10] and Dalman [11] suggest that St. Luke may be the original author of his first two chapters, adopting the language and style of the Septuagint; but Vogel [12] and Zahn [13] maintain that such a literary feat would be impossible for a Greek-speaking writer. What has been said explains why it is quite impossible to reconstruct St. Luke's original source; the attempt of Resch [14] to reconstruct the original Gospel of the infancy or the source of the first two chapters of the first and third Gospel and the basis of the prologue to the fourth, is a failure, in spite of its ingenuity. Conrady [15] believed that he had found the common source of the canonical history of the infancy in the so-called "Protevangelium Jacobi", which, according to him, was written in Hebrew by an Egyptian Jew about A.D. 120, and was soon after translated into Greek; it should be kept in mind, however, that the Greek text is not a translation, but the original, and a mere compilation from the canonical Gospels. All we can say therefore, concerning St. Luke's source for his history of the infancy of Jesus is reduced to the scanty information that it must have been a Greek translation of an Aramaic document based, in the last instance, on the testimony of Our Blessed Lady.

III. THE VIRGIN BIRTH IN MODERN THEOLOGY

Modern theology adhering to the principle of historical development, and denying the possibility of any miraculous intervention in the course of history, cannot consistently admit the historical actuality of the virgin birth. According to modern views, Jesus was really the son of Joseph and

Mary and was endowed by an admiring posterity with the halo of Divinity; the story of his virgin birth was in keeping with the myths concerning the extraordinary births of the heroes of other nations [16]; the original text of the Gospels knew nothing of the virgin birth [17]. Without insisting on the arbitrariness of the philosophical assumptions implied in the position of modern theology, we shall briefly review its critical attitude towards the text of the Gospels and its attempts to account for the early Christian tradition concerning the virgin birth of Christ.

A. Integrity of the Gospel Text

Wellhausen [18] contended that the original text of the third Gospel began with our present third chapter, the first two chapters being a later addition. But Harnack seems to have foreseen this theory before it was proposed by Wellhausen; for he showed that the two chapters in question belonged to the author of the third Gospel and of the Acts [19]. Holtzmann [20] considers Luke 1:34-35 as a later addition; Hillmann [21] believes that the words *hos enouizeto* of Luke 3:23 ought to be considered in the same light. Weinel [22] believes that the removal of the words *epei andra ou ginoko* from Luke 1:34 leaves the third Gospel without a cogent proof for the virgin birth; Harnack not only agrees with the omissions of Holtzmann and Hillmann, but deletes also the word *parthenos* from Luke 1:27 [23]. Other friends of modern theology are rather sceptical as to the solidity of these text-critical theories; Hilgenfeld [24], Clement [25], and Gunkel [26] reject Harnack's arguments without reserve. Bardenhewer [27] weighs them singly and finds them wanting.

In the light of the arguments for the genuineness of the portions of the third Gospel rejected by the above named critics, it is hard to understand how they can be omitted by any unprejudiced student of the sacred text.

- They are found in all manuscripts, translations, and early Christian citations, in all printed editions — in brief, in all the documents considered by the critics as reliable witnesses for the genuineness of a text.
- Furthermore, in the narrative of St. Luke, each verse is like a link in a chain, so that no verse can be removed as an interpolation without destroying the whole.
- Moreover, verses 34 and 35 are in the Lucan history what the keystone is in an arch, what a diamond is in its setting; the text of the Gospel without these two verses resembles an unfinished arch, a setting bereft of its precious stones [28].
- Finally, the Lucan account left us by the critics is not in keeping with the rest of the Evangelist's narrative. According to the critics, verses 26-33 and 36-38 relate the promise of the birth of the Messiah, the son of Joseph and Mary, just as the verses immediately preceding relate the promise of the birth of the precursor, the son of Zachary and Elizabeth. But there is a great difference: the precursor's story is filled with miracles — as Zachary's sudden dumbness, John's wonderful conception — while the account of Christ's conception offers nothing extraordinary; in the one case the angel is sent to the child's father, Zachary, while in the other the angel appears to Mary; in the one case Elizabeth is said to have conceived "after those days", while there is nothing added about Mary's conception [29]. The complete traditional text of the Gospel explains these differences, but the critically mutilated text leaves them inexplicable.

The friends of modern theology at first believed that they possessed a solid foundation for denying the virgin birth in the Codex Syrus Sinaiticus discovered by Mrs. Lewis and Mrs. Gibson

in 1892, more accurately investigated in 1893, published in 1894, and supplemented in 1896. According to this codex, Matthew 1:16 reads: "Joseph to whom was espoused Mary the Virgin, begot Jesus who is called Christ." Still, the Syriac translator cannot have been ignorant of the virgin birth. Why did he leave the expression "the virgin" in the immediate context? How did he understand verses 18, 20, and 25, if he did not know anything of the virgin birth? Hence, either the Syriac text has been slightly altered by a transcriber (only one letter had to be changed) or the translator understood the word *begot* of conventional, not of carnal, fatherhood, a meaning it has in verses 8 and 12.

B. Non-historical Source of the Virgin Birth

The opponents of the historical actuality of the virgin birth grant that either the Evangelists or the interpolators of the Gospels borrowed their material from an early Christian tradition, but they endeavour to show that this tradition has no solid historical foundation. About A.D. 153 St. Justin (Apol., I, xxi) told his pagan readers that the virgin birth of Jesus Christ ought not to seem incredible to them, since many of the most esteemed pagan writers spoke of a number of sons of Zeus. About A.D. 178 the Platonic philosopher Celsus ridiculed the virgin birth of Christ, comparing it with the Greek myths of Danae, Melanippe, and Antiope; Origen (c. Cels. I, xxxvii) answered that Celsus wrote more like a buffoon than a philosopher. But modern theologians again derive the virgin birth of Our Lord from unhistorical sources, though their theories do not agree.

The Pagan Origin Theory

A first class of writers have recourse to pagan mythology in order to account for the early Christian tradition concerning the virgin birth of Jesus. Usener [30] argues that the early Gentile Christians must have attributed to Christ what their pagan ancestors had attributed to their pagan heroes; hence the Divine sonship of Christ is a product of the religious thought of Gentile Christians. Hillmann [31] and Holtzmann [32] agree substantially with Usener's theory. Conrady [33] found in the Virgin Mary a Christian imitation of the Egyptian goddess Isis, the mother of Horus; but Holtzmann [34] declares that he cannot follow this "daring construction without a feeling of fear and dizziness", and Usener [35] is afraid that his friend Conrady moves on a precipitous track. Soltau [36] tries to transfer the supernatural origin of Augustus to Jesus, but Lobstein [37] fears that Soltau's attempt may throw discredit on science itself, and Kreyher [38] refutes the theory more at length.

In general, the derivation of the virgin birth from pagan mythology through the medium of Gentile Christians implies several inexplicable difficulties:

- Why should the Christian recently converted from paganism revert to his pagan superstitions in his conception of Christian doctrines?
- How could the product of pagan thought find its way among Jewish Christians without leaving as much as a vestige of opposition on the part of the Jewish Christians?
- How could this importation into Jewish Christianity be effected at an age early enough to produce the Jewish Christian sources from which either the Evangelists or the interpolators of the Gospels derived their material?

- Why did not the relatives of Christ's parents protest against the novel views concerning Christ's origin?

Besides, the very argument on which rests the importation of the virgin birth from pagan myths into Christianity is fallacious, to say the least. Its major premise assumes that similar phenomena not merely may, but must, spring from similar causes; its minor premise contends that Christ's virgin birth and the mythical divine sonships of the pagan world are similar phenomena, a contention false on the face of it.

The Jewish Origin Theory (Isaias 7:14)

A second class of writers derive the early Christian tradition of the virgin birth from Jewish Christian influence. Harnack [39] is of the opinion that the virgin birth originated from Isaias 7:14; Lobstein [40] adds the "poetic traditions surrounding the cradle of Isaac, Samson, and Samuel" as another source of the belief in the virgin birth. Modern theology does not grant that Isaias 7:14, contains a real prophecy fulfilled in the virgin birth of Christ; it must maintain, therefore, that St. Matthew misunderstood the passage when he said: "Now all this was done that it might be fulfilled which the Lord spoke by the prophet, saying; Behold a virgin shall be with child, and bring forth a son," etc. (1:22-23). How do Harnack and Lobstein explain such a misunderstanding on the part of the Evangelist? There is no indication that the Jewish contemporaries of St. Matthew understood the prophet's words in this sense. Hillmann [41] proves that belief in the virgin birth is not contained in the Old Testament, and therefore cannot have been taken from it. Dalman [42] maintains that the Jewish people never expected a fatherless birth of the Messiah, and that there exists no vestige of such a Jewish interpretation of Isaias 7:14.

Those who derive the virgin birth from Isaias 7:14, must maintain that an accidental misinterpretation of the Prophet by the Evangelist replaced historic truth among the early Christians in spite of the better knowledge and the testimony of the disciples and kindred of Jesus. Zahn [43] calls such a supposition "altogether fantastic"; Usener [44] pronounce the attempt to make Isaias 7:14 the origin of the virgin birth, instead of its seal, an inversion of the natural order. Though Catholic exegesis endeavours to find in the Old Testament prophetic indications of the virgin birth, still it grants that the Jewish Christians arrived at the full meaning of Isaias 7:14, only through its accomplishment [45].

The Syncretic Theory

There is a third theory which endeavours to account for the prevalence of the doctrine of the virgin birth among the early Jewish Christians. Gunkel [46] grants that the idea of virgin birth is a pagan idea, wholly foreign to the Jewish conception of God; but he also grants that this idea could not have found its way into early Jewish Christianity through pagan influence. Hence he believes that the idea had found its way among the Jews in pre-Christian times, so that the Judaism which flowed directly into early Christianity had undergone a certain amount of syncretism. Hilgenfeld [47] tries to derive the Christian teaching of the virgin birth neither from classical paganism nor from pure Judaism, but from the Essene depreciation of marriage. The theories of both Gunkel and Hilgenfeld are based on airy combinations rather than historical evidence. Neither writer produces any historical proof for his assertions. Gunkel, indeed, incidentally draws attention to Parsee ideas,

to the Buddha legend, and to Roman and Greek fables. But the Romans and Greeks did not exert such a notable influence on pre-Christian Judaism; and that the Buddha legend reached as far as Palestine cannot be seriously maintained by Gunkel [48]. Even Harnack [49] regards the theory that the idea of virgin birth penetrated among the Jews through Parsee influence, as an unprovable assumption.

A.J. MAAS
Virginia

Virginia

Surnamed "The Old Dominion", "The Mother of States and of Statesmen", one of the thirteen original states, and the most southern of the Middle Atlantic division, lies between 36°31' and 39°27' N. lat., and 75°13' and 83°37' W. long. Its area is 42,627 sq. miles, of which 40,262 square miles represent land and 2365 square miles, water. Its greatest measurement from east to west is 476 miles, and from north to south, 192 miles. The boundaries are, north, West Virginia and Maryland; east, Maryland and the Atlantic Ocean; south, North Carolina and Tennessee; and west, Kentucky and West Virginia. The state contains one hundred counties.

POPULATION

The population of Virginia in 1910 was 2,061,612; whites, 1,389,809; negroes, 671,096; Indians, Chinese, and Japanese, 707. The general increase during the last decade was 11.2 per cent, that of the negroes only 1.6 per cent. In 1890 the negroes formed 38.4 per cent of the total population; in 1900, 35.6 per cent; in 1910, 32.6 per cent; their relative decrease being due to absence of negro immigration, neglect of hygiene, exposure, overcrowding, poverty, and, in many cases, lack of ambition and energy, or indulgence in alcoholic or other excesses. The density of population in 1910 was 51.2 persons per square mile.

The state contains 19 cities, all, except Hampton and Williamsburg, being independent of counties. They are, with their population of 1910: Richmond, (127,628), the State capital and former capital of the Confederacy, noted for historic associations and monuments; Norfolk (67,452), Virginia's great shipping port; Roanoke (34,874), called "The Magic City", because of its rapid growth; Portsmouth (33,190), a progressive city with one of the country's greatest naval yards; Lynchburg (29,494), known as "the Hill City", because of its many hills, one of the richest per capita cities in the United States; Petersburg (24,127), of Civil War fame; Newport News (20,205), at the mouth of the James River, famed for its ship-building and immense shipments to all quarters of the globe of coal and grain; Danville (19,020), one of the greatest tobacco cities in the world; Alexandria (15,329), of historic interest and a Potomac port for Virginia's products; Staunton (10,604), with fine educational and corrective institutions; Charlottesville (6765), the seat of the University of Virginia; Bristol (64227); Fredericksburg (5874); Winchester (5864); Clifton Forge (5748); Hampton (5505); Radford (4202); Buena Vista (3245); and Williamsburg (2714).

The church membership (1906) was 793,546, of which the Baptists numbers 415,987; Methodists, 200,771; Presbyterians, 39,628; Protestant Episcopal, 28,487; Disciples, 26,248; Lutherans, 15,010; the remainder consisting of Dunkers, Christians, and other denominations. The Catholics were given as 28,700. The total value of Church property of all denominations in 1906 was \$19,699,014, and the Church debt \$996,367. Owing to dearth of Catholic immigration, the Church depends for accessions principally on natural increase and conversions. Seventy years ago the Catholic population was but 3000. In 1912 the faithful numbered 41,000, composed mainly of native Americans, Irish,

Germans, italians, Bohemians, Poles, Slavs, and Syrians, with a few French, Belgians, and other nationalities. There is one parish each for Germany, Italians, and Bohemians.

PHYSICAL CHARACTERISTICS

Virginia is divided into six great natural sections: (1) Tidewater, (2) Middle, (3) Piedmont, (4) Blue Ridge, (5) The Valley, and (6) Appalachia. Some make a seventh division into Trans-Appalachia. Certain sections possess some things in common, yet all differ greatly in topography, climate, soil, and resources. The altitude varies from a few feet in Tidewater to more than 5000 feet in the mountainous regions. The highest mountains are Mount Rogers (5700 feet) and the Peaks of Otter (3993 feet). Nearly the whole of the state is drained by five large rivers, navigable to the head of Tidewater, and their tributaries; namely the Potomac, Rappahannock, York, James, and Roanoke or Staunton, all flowing in an easterly direction; while the Shenandoah, Kanawha, or New, and Holston, or Tennessee rivers, drain the valley. Because of the gradual, and sometimes abrupt, lowering of the river beds from their elevated sources to the basins into which they empty, an almost limitless supply of waterpower is found within the borders of the state. The state s famed for natural wonders, including the Natural Bridge; Luray, Weyer's, Madison, Blowing, and Saltpetre caverns; Mountain Lake, Balcony Falls, Natural Tunnel; and the great Dismal Swamp (30 by 10 miles, extending into North Carolina), with beautiful Lake Drummond (7 by 5.5 miles), in the centre. There are 68 accredited mineral springs. The climate is mild, the temperature varying from an average mean annual of 64° in Tidewater to 48° in the mountains, the average temperature being 56°. The rainfall is plentiful, averaging from 32 to 60 inches. The border ranges of mountains protect the state from unusual storms and hurricanes. Government statistics show the piedmont region to be the most helpful belt in the United States.

RESOURCES

In agriculture Virginia ranks as one of the foremost states of the union. Every product grown in the other states, except the tropical and semi-tropical, thrives upon her soil. The total value of farm lands with buildings, implements, machinery, and live stock, in 1910 was \$625,065,000; an increase in a decade of 93.2 per cent. The farms embrace more than three-fourths of the total land area, or 19,494,636 acres; over one-half representing improved acreage. The number of farms was 184,018, of which 84 per cent was free of debt; the average value per farm, including equipment, being \$3397, and of farm land per acre, \$20.24. Tidewater, the great trucking section, and the Valley of Virginia, are considered the most fertile regions. The trucking has increased 500 per cent in thirty years. In 1910 the Norfolk truckers shipped 4,555,200 packages of truck. There are many varieties of fruits, including the Albemarle pippins, recognized as the best-flavoured of all apples. The orchard are numerous, some yielding \$500.00 per acre. The state ranks first in peanuts (output, 4,284,000 pounds; value, \$4,240,000), second in tobacco (output, 132,979,000 pounds; value, \$12,169,000), and fourth in fertilizers (output 364,63 tons; value, \$6,56,000). In 1910 the yield in bushels was, corn, 38,295,000 (value, \$28,886,000); wheat, 8,077,000 (\$8,776,000); Irish potatoes,

8,771,000 (\$5,668,000); sweet potatoes and yams, 5,270,000 (\$2,681,000); oats, 2,884,000 (\$1,610,000); rye, 438,000 (\$344,000); buckwheat, 332,000 (\$196,000); barley, 254,000 (4180,000); and in tons of hay and forage 823,000 (\$10,257,000). The cultivation of alfalfa (now 3126 acres) is rapidly increasing. The total value of crops in 1910 was \$236,000,000 from 3,300,000, an increase over 1900 of nearly 100 per cent. The farming interests are greatly furthered by the Commissioner of Agriculture, literature, farmers' institutes, inspectors of fertilizers, seed and lime laws, a horticultural society, test farms, and a truck and an agricultural station.

The rapid development of dairying is due principally to the efforts of the dairy and pure food department. The number of dairy cows (1910) was 356,000 (value \$10,285,000). Effective means towards the eradication of tuberculosis and other diseases existing amongst cattle are employed by the state. With an abundance of forage crop, a long grazing season, and mild winters, the conditions for stock raising are peculiarly favourable. Thousands of beef and other cattle are annually exported. Within 30 years the sheep industry has increased 150 per cent. The value of live stock in 1910 was \$74,891,000. Virginia has (1911) taken the lead of the other states in fisheries, the annual output totalling \$7,500,000, thus distributed: oysters, \$3,500,000; crabs and clams, \$1,000,000; menhaden fish, \$1,250,000; from pound nets, \$1,500,000; other fish, \$250,000. The increase over four years is 300 per cent. Of the nearly 3000 square miles of salt-water bottom, 4000 acres are set aside for oyster planting and about 200,000 acres as a reserve, making the Virginia waters one of the greatest oyster sections in the world. Tidewater abounds in water-fowl such as the canvasback, black mallard, water-goose, and teal. There are various species of birds, including quails, woodcocks, and sora, with some wild deer, bears, foxes, and wild turkeys, and many rabbits, squirrels, opossums, muskrats, and lesser game.

Every wood, except the sub-tropical, including the valuable hardwoods, is grown in Virginia. The Tidewater section contains vast forests of pine and cypress and much cedar, willow, locust, juniper, and gum. In the inland region abound the oak, walnut, hickory, chestnut, beech, birch, maple, poplar, ash, cherry, elm, and sycamore; whilst the mountains are rich in white pine, spruce, and hemlock. The bark of the oak and sumac leaves are much used in tanning and dyeing. In 1909 there were 2,102,000,000 feet of cut lumber, an increase in 10 years of over 100 per cent.

Beneath the soil of Virginia are found geologic rocks of all ages, with almost every known mineral of commercial value. The estimated yearly mineral output in 1905 was \$30,000,000. The minerals may be divided into (1) building and ornamental stone, including the famous Richmond and Virginia granites, sandstone, slate, and limestone; (2) cement and cement materials; (3) clays, sands, marls, and gem minerals; (4) metallic minerals, embracing iron, copper, zinc, lead, gold, silver, tin, nickel, and cobalt; in 1910 Virginia produced 800,000 tons of iron ore and 444,976 tons of pig iron; (5) non-metallic minerals, including graphite, sulphides, sulpharsenides, the halides, embracing sodium chloride, or common salt, oxides, silicates, phosphates, nitrates, sulphates, and the hydrocarbons: namely, coal, coke and their by-products, gas, tar, and ammonia. There are in the state 1900 square miles of coal fields, the production (1910) being 5,000,000 tons, and of coke,

1,435,000 tons. In 1910 the shipment of coal from Hampton Roads was greater than from any other port in the world. Newport News alone exported 786,000 tons (value, \$2,083,000).

Manufactures

In 1909 the output in manufactures amounted to \$219,794,000; capital, \$216,392,000, an increase over 1900 of over 100 per cent. The output from iron and machine works alone in 1911 was \$24,143,000; capital, \$24,982,000; wages, \$8,206,000; and from tobacco manufactures, \$21,445,000; capital, \$6,321,000; wages, \$2,378,000. Some of the other principal products, in order of output, are flour and grist, woodenware, leather, cotton goods, paper and pulp, and boots and shoes. The total manufacturing capital in 1912 should reach \$260,000,000, with output of about \$285,000,000. If to these last figures is added the value of the products of farms, fisheries, forests, and mines, the yearly production of the state (1912) should approximate \$435,000,000.

Banking, Real Estate, Insurance

There were in Virginia (December, 1911) 130 national banks with total resources, \$151,932,000, a marked increase since 1900. The resources of state banks (April, 1912) amounted to \$73,862,000. In Richmond alone the bank clearings (1911) were \$392,000,000; deposits, \$45,800,000; loans and discounts, \$43,000,000. The total valuation of real estate (1911), other than mineral lands and standing timber, was \$486,339,000, divided as follows: counties, \$267,923,000; cities, \$218,416,000. Of the total, the whites owned \$461,242,000; the negroes, \$25,097,000. The building operations in the city of Richmond equalled \$6,017,000. The gross insurance risks written in Virginia (1910) were as follows: fire insurance, \$315,957,000; marine insurance, \$21,697,000; life insurance, \$225,717,000.

TRANSPORTATION

The Atlantic Ocean, Chesapeake Bay and its numerous inlets, with large navigable rivers, give Virginia direct water communication with every seaport. Hampton Roads, the manoeuvring place of the United States fleet, is considered one of the world's finest bodies of water. Extensive shipping is carried on by Norfolk (1911: exports, \$10,880,000; imports, \$2,010,000), Newport News (exports, \$5,821,000; imports, \$982,000), Portsmouth, and Fort Monroe. The principal river ports are Richmond, on the James; Petersburg, on the Appomattox; West Point, on the York; Fredericksburg, on the Rappahannock; and Alexandria, on the Potomac. The steam railroads in Virginia number 41; with branch lines listed separately, 50. The total mileage (1910) was 4609. The principal lines are the Atlantic Coast Line; Chesapeake and Ohio; New York, Philadelphia, and Norfolk; Norfolk and Western; Richmond, Fredericksburg, and Potomac; Seaboard Air Line; Southern; Virginia and South-western; Virginian; and Washington Southern. There are 22 electric railroads, some of great length, extending between cities. Much is being done for public highways by the good roads movement, due in part to the increasing use of automobiles.

EDUCATION

A. General

The Constitution requires the General Assembly to maintain an efficient system of public free education. The schools for whites and negroes are separate, for both of which annual appropriations are made. The State appropriations for 1912 were more than double those of the last six years, being as follows: elementary and high schools, \$1,733,081; higher institutions, approximately \$500,000; total, \$2,233,081. The local funds raised from taxation and otherwise for elementary and high schools amounted to \$3,434,357, giving grand total for public educational purposes of \$5,667,438. State aid is refused to all denominational schools, although provision is made for their incorporation, as also for that of all religious and charitable institutions. Statistics of public schools (1911) show: school population, 616,168; total enrolment, 409,397; in high schools, 16,471; average daily attendance, 263,241; teachers, 10,676; number of school houses, 6838; school revenue, \$5,073,000; salaries of teachers, \$2,935,000; annual cost of buildings, \$1,021,000; libraries and class apparatus, \$30,000; total value school property, \$8,553,000, an increase in 6 years of over 100 per cent. The University of Virginia was begun by Thomas Jefferson in 1819. There are departments of law and of medicine. It numbers amongst its graduates some of the state's most illustrious sons. In 1911 there were 96 professors, 24 officials, 784 students, and including the summer school, 2070. Other advanced state institutions are William and Mary College, Virginia Polytechnic Institute, Virginia Military Institute, Miller Manual Labour School, and the Female State Normal School. Among private schools, Washington and Lee University, Lexington, with law school, and the Lynchburg Women's College, like the University of Virginia, have a high rank. Other colleges, many of a denominational character, are Bridgewater, Eastern, Emory and Henry, Fredericksburg, Hampden-Sidney, Hampton Normal and Agricultural Institute, Hawthorne, Hollins, Martha Washington, Mary Baldwin, Newmarket Polytechnic Institute, Randolph-Macon, Richmond, with law school, Richmond Women's, Roanoke Southern Female; Staunton Military, Stonewall Jackson Institute, Sweetbriar, Virginia Christian, Virginia Intermont, and Virginia Union (coloured university). There are many business colleges, various seminaries of different denominations for white and for coloured, and three highly-rated medical colleges: the Medical College of Virginia, the University College of Medicine, both of Richmond, and the Medical College attached to the University of Virginia.

B. Catholic

Each parish in the larger, as in some of the smaller, cities, has its own parochial school or schools. There are three colleges: namely, Old Point Comfort, under the Xaverian Brothers, the Richmond Benedictine Military, and Van de Vyver (coloured), Richmond. St. Emma's Industrial and Agricultural School for Coloured Boys and St. Francis' Institute for Coloured Girls, Rock Castle, were founded and are supported, the one by General and Mrs. Edward Morrell, the other by Mother Mary Katherine Drexel [Tr. note-now Blessed Mary Katherine Drexel], both of Pennsylvania. The Benedictine Fathers have charge of St. Joseph's Institute, and the Benedictine Sisters of St. Edith's Academy, Bristow. The Xaverian Brothers teach in academies at Richmond, Norfolk, Portsmouth, and Newport News, whilst the Christian Brothers labour at Rock Castle. The

teaching Sisters are Sisters of Charity; of Charity of Nazareth; Visitation; Benedictine; of the Holy Cross; of St. Francis; of the Blessed Sacrament; and of Perpetual Adoration.

CHARITIES AND CORRECTIONS

A. General

There are city and county almshouses, private charitable organizations, many the result of denominational efforts, with various orphanages and homes for the aged. These, with the associated charities, nurses' settlements, free dispensaries, and charity hospitals, are doing a most commendable work. The white and the coloured are provided each with a school for the deaf, dumb, and blind, and one each for delinquent youths. A sanatorium for tuberculosis patients is maintained by the State at Catawaba. There are four state asylums for the insane: namely, the Eastern, Williamsburg; the Western, Staunton; the South-western, Marion; and the Central (coloured), Petersburg. A late institution is the Epileptic Colony, Amherst County, near Lynchburg. The state convicts not working on the public roads are located either in the penitentiary, Richmond, or at the James River State Farm. There were (1 Jan., 1912) 2135 state convicts, of whom 84 per cent were coloured. Of the 89 women prisoners, only 3 were white, the remainder being negroes.

B. Catholic

The Catholics have 4 orphanages (inmates, 215), 1 coloured infant asylum (inmates, 65), 4 industrial schools, 2 each for boys and girls, half for coloured (pupils, 395), and 1 home for the aged, conducted by the Little Sisters of the Poor, form of religion being no bar to entrance (inmates, 200). For the relief of the poor are found in various parishes conferences of St. Vincent de Paul, and women's aid and benevolent societies.

GOVERNMENT

The governor and lieutenant-governor are elected by the people for four years, and the secretary of State, treasurer, and auditor, by the General Assembly for two years. The legislature embraces 40 senators, popularly chosen for four years, and 100 representatives for two years. Biennial sessions of sixty days, unless extended by vote to ninety days, begin the second Wednesday in January. Five judges, chosen by the legislature for twelve years, form the Supreme Court of Appeals. There are also circuit and county courts, and various state departments. The right to vote is given to male citizens of the United States, twenty-one years of age, who have resided in the state one year and in the city or county in which they offer to vote three months preceding an election. A capitation tax is also levied.

NATIONAL INSTITUTIONS

Fort Monroe, with its extensive fortifications and garrison, together with a National Soldiers' Home near Hampton, Fort Meyer near Washington, and the Norfolk (Portsmouth) Navy Yard, are government institutions of renown. The principal national cemeteries are at Alexandria, Arlington, Fredericksburg, Hampton, Petersburg, Seven Pines, and Richmond.

LEGISLATION AFFECTING RELIGION

The following data concerning legislation has been carefully compiled by Attorney Maurice A. Powers, Secretary Treasurer of the Richmond Bar Association; Violation of the Sabbath by labouring at any trade or calling, except household or other work of necessity or charity, hunting on Sunday, carrying dangerous weapons on Sunday, or to a place of religious worship, and disturbance of religious worship, are misdemeanours, and punishable either by fine or imprisonment, or both. Profane cursing and swearing, publication of obscene books and pictures, and, generally, all offences against morality and decency are likewise misdemeanours. Officers of the State must take and subscribe an oath to support the State and Federal Constitutions, to faithfully and impartially discharge the duties of their respective offices, and against duelling. Jurors are required to take an oath to try the case according to the law and the evidence. Witnesses in the several courts are sworn to tell the truth, the whole truth, and nothing but the truth. Any person required to take an oath, if he has religious scruples against doing so, may make a solemn affirmation. No form is prescribed for the administration of oaths; but they are usually administered by using the Bible to swear upon, or by uplifted hand. New Year's, Christmas, and Thanksgiving Days are legal holidays, but no holy days, as such, are recognized by law. Daily, while in session, the General Assembly is opened with prayer, but its use is not sanctioned by legislative provision.

Church Incorporations

The incorporation of a church or a religious denomination is prohibited by Section 59 of Article IV of the Constitution of Virginia, but, to a limited extent, conveyances, devises, and dedications of lands to a Church, or unincorporated religious society, as a place of public worship, or as a burial place, or a residence for a minister, are valid.

Tax, Jury, and Military Exemptions

Churches, church lots, church rectories, and public burying-grounds, not held for speculative purposes, are exempt from taxation, as is also the property of literary, educational, and charitable institutions, actually occupied and used solely for the specific purposes indicated. Legacies and devises to such institutions are not subject to the collateral inheritance tax. Ministers of the Gospel are exempted from jury duty. Exemptions from military service are the same as provided by the statutes of the United States.

Matrimony and Divorce

A minister of any religious denomination, with authority from any county or corporation court, may witness the rites of marriage, or the court may appoint one or more persons to celebrate such rites. Marriages must be under a license and solemnized as provided by the statutes of the State. Parental consent, or consent of guardian, is necessary when the contracting parties, or either of them, are under the age of twenty-one years. In addition to the direct line of consanguinity, no man may marry his step-mother, sister, aunt, son's widow, wife's daughter, or her granddaughter, or her stepdaughter, brother's daughter or sister's daughter; and no woman may marry her stepfather, uncle, daughter's husband, husband's son or his grandson or stepson, brother's son, sister's son, or

husband of her brother's, or sister's, daughters. Marriages between white and coloured persons are forbidden, and marriages between such persons and between persons under the age of consent, the age of consent of the male being fourteen years and of the female twelve years, and bigamous marriages, are void without decree of court. Seven years' absence of the husband or wife without knowledge that he or she be living, will entitle the other to remarry without incurring the penalty for bigamy. The statutory grounds for divorce a vinculo are: consanguinity or affinity within the prohibited degrees; want of mental or physical capacity existing at the time of the marriage; felony; desertion for a period of three years; pregnancy of the wife at the time of marriage, by some person other than the husband; and prostitution of the wife before marriage. Divorces a mensa are granted for cruelty, reasonable apprehension of bodily hurt, and abandonment. One year's residence in the state of either the husband or wife is necessary to the jurisdiction of the court. From 1867 to 1886, 2635, and from 1887 to 1907, 12,129 divorces were granted.

Denominational Appropriations

Appropriations by the General Assembly of money or other property to any Church or denominational or sectarian institution, directly or indirectly controlled by any Church or denominational or sectarian society, are prohibited by the Constitution; nor has the General Assembly power to make any appropriation of money or other property to any charitable institution which is not owned or controlled by the State.

Intoxicating Liquors

The General Assembly has full power to enact local option, or dispensary laws, or any other laws, controlling, regulating, or prohibiting, the manufacture or sale of intoxicating liquors; but local option has been to the present time (1912) the policy of the legislature. On 1 January, 1912, 66 of the 100 counties, and 8 of the 19 cities of the state had no form of liquor license.

Wills and Bequests

No person of unsound mind, or under twenty-one years of age, is, by law, capable of making a will, except that minors, eighteen years of age or over, may, by will, dispose of their personal estate. A will to be valid must be signed by the testator, or by someone for him, in his presence, and by his direction, in such manner as to make it manifest that the name is intended as a signature, and, moreover, unless the will be wholly written by the testator, the signature must be made, or the will acknowledged by him, in the presence of two witnesses, present at the same time, and the witnesses must subscribe the will in the presence of the testator, but no form of attestation is necessary. Wills are revoked by the marriage of the maker. A devisee or legatee under a will is a competent witness thereto, if the will may not otherwise be proved, but the devise or legacy to him is void. The influence which will vitiate a will must amount to force and coercion, destroying free agency. Bequests to incorporated charitable institutions are valid, but those to unincorporated institutions generally fail for uncertainty as to the beneficiaries.

HISTORY

Spanish Settlements (1526-70)

Eighty-one years before the coming of the English to Jamestown in 1607, a settlement was made in Virginia by Spaniards from San Domingo, under the leadership of Lucas Vasquez de Ayllon, one of the judges of the island, who, 12 June, 1526, had obtained from the King of Spain a patent empowering him to explore the coast for 800 leagues, make settlements within three years and Christianize the natives. Accompanied by the Dominican Fathers Antonio de Montesinos and Antonio de Cervantes with Brother Peter de Estrada, the expedition set sail in three vessels from Puerto de la Plata, June, 1526. It was composed of no less than 600 persons of both sexes, with horses and extensive supplies. Entering the Virginia capes and ascending a wide river (the James), the Spaniards landed at Guandape, which Ayllon named St. Michael. Rude buildings were erected and the Sacrifice of the Mass offered in a log chapel. On the death by fever of Ayllon, 18 October, 1526, Francis Gomez succeeded to the command. The severity of the winter, the rebellion of the settlers, and the hostility of the Indians caused the abandonment of the settlement in the spring of 1527, the party setting sail in two of the vessels. The one containing the remains of Ayllon foundered with all on board, leaving only 150 souls to reach San Domingo.

Menendez, the Governor of Florida, sent to Virginia a second Spanish expedition, which settled on the Rappahannock River at Axacan, 10 September, 1570. It was composed of Fathers Segura, Vice-Provincial of the Jesuits, and Louis de Quiros, with six Jesuit brothers and some friendly Indians. Bent on a permanent settlement, the missionaries carried chapel furnishings, implements, and necessary winter supplies. A log house with chapel served as residence. Don Luis de Velasco, so named by the Spaniards, a treacherous Indian guide, led a party of Indians who slew Father Quiros and Brothers Solis and Mendez, 14 February, 1571. Father Segura, with the remaining brothers, Linares, Redondo, Gabriel Gomez, and Sancho Zevalles, met a similar fate four days afterwards. In the late spring a Spanish pilot was sent to Axacan to get news of the missionaries. He returned, bringing an account of their murder, whereupon Menendez again sailed to Axacan and had eight of the murderers hanged, they being converted and baptized before their execution by Father Rogel, a Jesuit missionary.

English Colonization (1607-1775)

Sebastian Cabot probably explored the Virginia shores in 1498. In 1584, 1585, and 1587, Sir Walter Raleigh sent fleets to the coast of North Carolina, but no permanent settlement was effected. The name "Virginia", in honour of Queen Elizabeth, was given to all the territory from the French colonies on the north to the Spanish settlements on the south, and from the Atlantic to the Pacific Oceans. In 1606 when Virginia extended to the 34th to the 45th parallels, it was divided by James I between the London and the Plymouth companies, the former getting the land from the 34th to the 41st parallels. Colonists to the number of 143, the prime mover being Captain John Smith, set sail from England in three small ships. Passing up a large river, which they named the James, they formed on its shores the first permanent English settlement in America, 13 May, 1607, calling the place Jamestown. That the English settlement was on the exact spot (Guandape) where the Spaniards had settled the preceding century, appears from the relation of Ecija, the pilot-in-chief of Florida, who was sent to Virginia by the Spanish in 1609, to learn the movements of the English. His

statement is practically conclusive, since he possessed Spanish charts and maps of the coast, which he studied accurately, and made careful measurements to establish his assertion, written only 83 years after the landing in Virginia of the Spaniards under Ayllon. It is probable that some evidences of the Spanish occupation remained to help determine the English in their choice of Guandape as a place of settlement. The colonists elected Edward Wingfield president and proceeded to construct houses and a suitable fort. Meantime, Captain Christopher Newport, who had commanded the vessels, with Captain John Smith and 23 others, explored the James River as far as the falls (now Richmond), 10 June, 1607; this event they commemorated by setting up a cross. On the party's return to Jamestown, Smith found himself in disgrace, and the colony upset, owing to an attack by the Indians. He was arrested and tried for ambitious machinations, the charge being the result of jealousy. President Wingfield acquitted him and restored him to favour, after which Smith became the real leader, and, later, the president of the colony. As might be expected, the colonists had many ups and downs. The arrival of Lord Delaware, Sir Thomas Gates, and Sir George Somers prevented the abandonment of the colony. About 1611 settlements were made at Henrico (now Dutch Gap), and where the James and Appomattox Rivers join near Bermuda Hundred. Some ten years later new settlements were made on Chesapeake Bay and the James, York, and Potomac Rivers. The marriage of John Rolfe, 1613, to Pocahontas, the daughter of the great chieftain, Powhatan, helped for a time the maintenance of peace between the English and the Indians.

In 1619 slavery was introduced. The same year a shipload of young women, to serve as wives for the colonists, came to Virginia. One hundred and twenty pounds of tobacco was the purchase price of a wife. The London Company was dissolved in 1624, Virginia becoming a colony of the Crown. During the troubles with Parliament, Virginia remained loyal to the king, Charles I. Tobacco constituted the great staple and wealth of the colonists. King Charles appointed Sir George Yeardley governor of the colonies, to succeed Samuel Argall, recalled. From time to time, Indian massacres of the whites occurred. Owing to the tyranny of Lord Berkeley, Nathaniel Bacon, with some followers, headed a rebellion against him in 1676, which did not accomplish its purpose, owing to Bacon's death. Berkeley's successors were Sir Herbert Jeffries, Sir Henry Chicheley, and Lord Culpeper. William and Mary College, the oldest college, after Harvard, in the United States, was founded in 1693, and the seat of government, shortly after (1698), transferred to Williamsburg. Governor Spotswood proved a far greater governor than any of his predecessors. Under his able rule of twelve years, beginning in 1710, Virginia made marked progress. In the French and Indian War, which began in 1754, George Washington won distinction during the regime of Governor Dinwiddie. Braddock's defeat was due to his not following Washington's advice. Francis Fauquier succeeded Governor Dinwiddie.

Revolutionary Period (1775-81)

Owing principally to the wars carried on by the mother-country, the colonies were burdened with taxation, and this, too, without representation. Nor were they allowed to trade with any nation other than England. These were the primary causes of the Revolutionary War, which was fanned into flame by the passage of the Stamp Act and Patrick Henry's historic speech in St. John's Church,

Richmond. Other great Virginia statesmen of the time who helped the cause of liberty were Thomas Jefferson, Richard Henry Lee, Peyton Randolph, Edmund Pendleton, Richard Bland, George Mason, George Wythe, James Monroe, James Madison, and John Marshall. Washington was appointed Commander-in-Chief of the Continental Army, 15 June, 1775, and the war began in earnest. George Mason wrote the Bill of State Rights, which was followed by the Declaration of Independence, composed by Thomas Jefferson and adopted by the colonists, 4 July, 1776. Each colony was to have a governor, legislature, and three courts. Patrick Henry was elected as Virginia's first governor. The Seal of Virginia was adopted from the suggestion of George Wythe. This was followed by a law ensuring liberty of conscience as to religion. Henry would not stand for re-election, and Jefferson was chosen second governor. In 1779 Richmond became the state capital. The British were defeated in their ships from shore at Hampton, but (1779) burned Norfolk, and in 1781 Richmond was burned and occupied by Benedict Arnold. The war ended with the surrender of Cornwallis to Washington, assisted by Lafayette, Rochambeau, and Count De Grasse, at Yorktown, 19 Oct., 1781.

American Period (1781-1861)

A special Virginia convention, 2 to 25 June, 1788, adopted the code of laws proposed by the Philadelphia National Convention of May, 1768. In the war with the British of 1812 some little fighting occurred along the Virginian coast at and near Norfolk and Hampton. Meantime Virginia grew in wealth, power, and influence. The state constitution was revised at Richmond, 5 October, 1829. A serious negro insurrection took place under Nat Turner in 1831. The slave question became now a paramount issue. Virginia, as far back as 1778, with other states, introduced in congress a bill for the abolition of slavery, which was defeated by the New England states, which made money by importing slaves to be sold to the South, and by the cotton states, desirous of negro service for the plantations. Later, after being freed from the presence of the negroes, New England became the hotbed of abolition. Because of agricultural interests, Virginia was naturally a slave state. The agitation of the slave question, together with that of state rights, grew in bitterness, culminating in John Brown's raid at Harper's Ferry, October, 1859, which helped materially to precipitate the Civil War.

The Confederacy (1861-65)

Virginia brought about a peace conference of the States at Washington with no result, 4 February, 1861. Lincoln's call for 75,000 troops caused Virginia to secede from the Union, 17 April, the vote of the General Assembly being ratified by the people, 23 May. Jefferson Davis had already been chosen President of the Confederacy. It was with untold reluctance and grief that the state was practically forced out of the Union, for which she had fought, and to further whose interest she had supplied seven presidents, the revolutionary commander-in-chief, the drafter of the Bill of Rights and that of the Declaration of Independence, a Patrick Henry, the mouthpiece of liberty, a chief justice, John Marshall, and many other national heroes of renown. The state could not remain neutral. The question was whether she would take up arms against the North or her sister states of the South. The Confederate capital was removed from Montgomery, Alabama, to Richmond, 21

May, 1861, and the command of the Virginia forces tendered to Col. Robert E. Lee, who later became commander-in-chief. General Thomas (Stonewall) J. Jackson proved his mainstay, and, with Lee, won widespread fame. Virginia also gave to the Confederacy Generals Joseph E. Johnston, J.E.B. Stuart, Jubal A. Early, and other notable military leaders. The state became a veritable battlefield, the scene of many of the most sanguinary conflicts of all time. The Southern troops, at first victorious, were later overcome by superior numbers and the tremendous resources of the North; the war being virtually ended by Lee's surrender to Grant at Appomattox, 9 April, 1865.

The so-called "Reconstruction Days" were the darkest in the history of the state. Her former prestige gone, many of her best sons killed, or maimed, in war, families broken up and scattered, agriculture and industries paralyzed, burdened with debt, the negro problem to handle, and part of her territory formed into another state, the prospects of Virginia after the war were gloomy in the extreme. The South was put under federal military rule and became the rendezvous of unscrupulous office seekers and fraudulent persons.

Recent Progress (1870-1912)

The state was restored to her constitutional rights, 26 January, 1870. Headway gained against adverse conditions, slow at first, gradually became more rapid, until within the last twenty years the progress of Virginia has been marked, a striking indication of which was evinced in the character, quality, and quantity of the state exhibits at the Jamestown Tercentenary Exposition of 1907. The great debt of \$45,718,000 in 1871 had in 1911 been reduced to \$25,159,000. With the occurrence of the Spanish-American War in 1898, Virginia readily sent her sons to the front, including Major-General Fitzhugh Lee, who had also proved a valiant Southern leader during the Civil War. The Constitutional Convention of 1901-2 made radical changes concerning qualifications for the right of suffrage.

RELIGIOUS CONDITIONS

The state constitution allows full religious liberty, yet during colonial times, because of the establishment of the English Church, intense hostility was shown to adherents of other beliefs and to Catholics in particular. In vain did Lord Baltimore attempt to plant a Catholic colony in Virginia (1629-30). Soon stringent legislation was enacted against Catholics. In 1641 a decree declared that adherents of the pope were to be fined 1000 pounds of tobacco if they attempted to hold office. The following year all priests were given five days within which to leave the colony. In 1661 all persons were obliged to attend the Established services or pay a fine of £20. The governor issued orders to magistrates, sheriffs, constables, and people to be diligent in the apprehension and bringing to justice of all Catholic priests. The records of Norfolk County (1687) show Fathers Edmonds and Raymond arrested for exercising their priestly offices. In 1699 Catholics were deprived of their right of voting, and later a fine of 500 pounds of tobacco was imposed upon violators of the law. They were declared incompetent as witnesses in 1705, and in 1753 such incompetency was made to cover all cases. In 1776, however, Virginia declared for religious freedom, and ten years later, enacted a special statute further guaranteeing the same.

Seal of the Confessional-Concerning the seal of the confessional there has been no legislative enactment, nor judicial decision by Virginia's supreme court of appeals. However, a particular judge has rendered a decision in favour of the Church's position in the interesting case which follows. At Richmond in October, 1855, Very Rev. John Teeling, D.D., the vicar-general, was summoned to testify against John Cronin, who, prompted by jealousy, had fatally wounded his wife, whose confession Dr. Teeling had heard as she lay dying. The priest was ordered to reveal her confession. Dr. Teeling's reply, that any other priest would in substance have made, was as follows: "Any statement made in her sacramental confession, whether inculpatory or exculpatory of the prisoner, I am not at liberty to reveal." In various ways were questions put to the priest, who always refused to answer concerning the confession, and finally explained to the court his motives. Judge John A. Meredith, who presided, then gave the following decision, which was spoken of for years afterwards as the "Teeling Law": "I regard any infringement upon the tenets of any denomination as a violation of the fundamental law, which guarantees perfect freedom to all classes in the exercise of their religion. To encroach upon the confessional, which is well understood to be a fundamental tenet in the Catholic Church, would be to ignore the Bill of Rights, so far as it is applicable to that Church. In view of these circumstances, as well as other considerations connected with the subject, I feel no hesitation in ruling that a priest enjoys a privilege of exemption from revealing what is communicated to him in the confessional."

Catholic Missionary Period (1526-1820)

An account of the Spanish settlements and missions of 1526 and 1570 has been given elsewhere. Bishop Richard Challoner, of the London District, to whom the early English missions were intrusted, wrote, in 1756, that he had about twelve Jesuit missionaries in Maryland and four in Pennsylvania, who also attended the few Catholics in Virginia upon the borders of Maryland. Rev. John Carroll (Afterwards bishop and archbishop), who, before his consecration as bishop, laboured much in Virginia, in a letter (1785) to Cardinal Antonelli stated that there were 200 Catholics in Virginia, attended four or five times a year by a priest. He added, however, that many more Catholics were said to be scattered throughout the state. The coming to Richmond in 1791-92 of the Rev. Jean Dubois (afterwards third Bishop of New York) marked an epoch for Catholicism in Virginia. He carried letters of introduction from Lafayette to the greatest Virginian families, the General Assembly then in session giving him the use of a hall in the State Capitol, where he offered the first Mass ever said in Richmond. During his stay he instructed Patrick Henry in French, the latter in turn teaching him English. The successors of the Abbe Dubois in the capital city were Fathers Mongrand, Michel, McElroy, Baxter, Mahoney, Walsh, Horwe, and Hoerner. In 1794 Rev. John Thayer was labouring at Alexandria where he was succeeded two years later by Rev. Francis Neale, who built there a brick church. Rev. James Bushe began a church at Norfolk in 1796. He was succeeded by Very Rev. Leonard Neale (Afterwards Archbishop of Baltimore). Fathers Lacy, Delaney, Stokes, Cooper, Van Horsigh, Hitzelberger, O'Keefe, and Doherty were later missionaries of note. In the Valley of Virginia laboured successively Fathers Cahill, Gildea, Florid, Mahoney, Du Hamille, and McElroy.

Notable Catholics

Besides the names of the great bishops and zealous priests already mentioned, it is proper to note those of Rev. Abram J. Ryan, the "Poet Priest of the South", and Rev. John B. Tabb whose verses are read abroad. Besides the notable Catholic laymen already noted, mention should be made of the names of Rear-Admiral Boarman, U.S.N.; United States Senators John W. Johnston and John S. Barbour; Judge Anthony M. Keiley, Judge of the International Court, Egypt; Major Peter J. Otey, congressman; Dr. George Ben Johnston, Richmond, surgeon, and Dr. Daniel J. Coleman; John J. Lynch, reformer; Mr. and Mrs. Thomas F. Ryan, donors of churches, schools, convents, and charitable institutions; Joseph Gallego; Captain John P. Matthews; William S. Caldwell; Mark Downey; John Pope; and Michael Murphy.

The conversion to the Faith about 1832 of Mrs. Letitia Floyd Lewis, daughter of Governor John Floyd, which, owing to her prominence, caused a sensation throughout the state, was followed by that of her two sisters, Mrs. Lavalette Floyd Holmes, wife of the erudite Professor George F. Holmes of the University of Virginia; Mrs. Nicotai Floyd Johnston, wife of Senator John W. Johnston, and of three of her brothers, Hon. Benjamin Rush Floyd (a formidable opponent of Know-nothingism), Dr. William Preston Floyd, and Colonel George Rogers Floyd. Then followed the conversion of her father, John Floyd, when ex-governor, and of her mother, Mrs. Letitia Preston Floyd, their son, John B. Floyd, like the father, becoming governor of the state, and also later secretary of war under President Buchanan. Mrs. Letitia Preston Floyd was herself the sister of General Francis Preston, who valiantly served his country in the War of 1812, and in the halls of Congress. The conversion of the Floyd and Johnston families led into the Catholic Church other members of the most distinguished families of the South.

F. JOSEPH MAGRI

Virginity

Virginity

Morally, virginity signifies the reverence for bodily integrity which is suggested by a virtuous motive. Thus understood, it is common to both sexes, and may exist in a woman even after bodily violation committed upon her against her will. Physically, it implies a bodily integrity, visible evidence of which exists only in women. The Catholic Faith teaches us that God miraculously preserved this bodily integrity, in the Blessed Virgin Mary, even during and after her childbirth (see Paul IV, "Cum quorundam", 7 August, 1555). There are two elements in virginity: the material element, that is to say, the absence, in the past and in the present, of all complete and voluntary delectation, whether from lust or from the lawful use of marriage; and the formal element, that is the firm resolution to abstain forever from sexual pleasure. It is to be remarked, on the one hand,

that material virginity is not destroyed by every sin against the sixth or ninth commandment, and on the other hand that the resolution of virginity extends to more than the mere preservation of bodily integrity, for if it were restricted to material virginity, the resolution, at least outside the married state, might coexist with vicious desires, and could not then be virtuous.

It has been sometimes asked whether there is a special virtue of virginity; and in spite of the affirmative answer of some authors, and of the text of St. Thomas, II-II:152:3, the statement of which cannot be taken literally, the question must be answered in the negative. Formally, virginity is but the purpose of perpetually preserving perfect chastity in one who abstains from sexual pleasure. Ordinarily this purpose is inspired by a virtue superior to that of chastity; the motive may be religious or apostolic. Then the superior virtues of charity or religion will ennoble this purpose and communicate to it their own beauty; but we shall not find in it any splendour or merit of another virtue. The resolution of virginity is generally offered to God under the form of a vow. The counsel of virginity is expressly given in the New Testament; first in Matt., xix, 11, 12, where Christ, after reminding His disciples that besides those who are unfit for marriage by nature, or by reason of a mutilation inflicted by others, there are others who have made the same sacrifice for the kingdom of heaven, recommends them to imitate these. "He that can take, let him take it." Tradition has always understood this text in the sense of a profession of perpetual continence. St. Paul again, speaking (I Cor., vii, 25-40) as a faithful preacher of the doctrine of the Lord (*tamquam misericordiam consecutus a Domino, ut sim fidelis*), formally declares that marriage is permissible, but that it would be better to follow his counsel and remain single; and he gives the reasons; besides the considerations arising from the circumstances of his time, he gives this general reason, that the married man "is solicitous for the things of the world, how he may please his wife: and he is divided"; whereas he that is without a wife directs all his care to his own bodily and spiritual sanctification, and is at liberty to devote himself to prayer.

The Church, following this teaching of St. Paul, has always considered the state of virginity or celibacy preferable in itself to the state of marriage, and the Council of Trent (Sess. XXIV, Can. 10) pronounces an anathema against the opposite doctrine. Some heretics of the sixteenth century understood Christ's words, "for the kingdom of heaven", in the text above quoted from St. Matthew, as applying to the preaching of the Gospel; but the context, especially verse 14, in which "the kingdom of heaven" clearly means eternal life, and the passage quoted from St. Paul sufficiently refute that interpretation. Reason confirms the teaching of Holy Scripture. The state of virginity means a signal victory over the lower appetites, and an emancipation from worldly and earthly cares, which gives a man liberty to devote himself to the service of God. Although a person who is a virgin may fail to correspond to the sublime graces of his or her state, and may be inferior in merit to a married person, yet experience bears witness to the marvellous spiritual fruit produced by the example of those men and women who emulate the purity of the angels.

This perfect integrity of body, enhanced by a purpose of perpetual chastity, produces a special likeness to Christ, and creates a title to one of the three "aureolæ", which theologians mention. According to the teaching of St. Thomas (Supplement, 96) these "aureolæ" are particular rewards

added to the essential happiness of eternity, and are like so many laurel wreaths, crowning three conspicuous victories, and three special points of resemblance to Christ: the victory over the flesh in virginity, the victory over the world in martyrdom, and the victory over the devil in the preaching of the truth. The text of St. John (Apoc., xiv, 1-5) is often understood of virgins, and the canticle which they alone may sing before the throne denotes the "aureola" which is given to them alone. It is most probable that the words in the fourth verse, "These are they who were not defiled with women: for they are virgins", are really spoken of virgins, though there are also other interpretations; perhaps, those who "were purchased from among men, the firstfruits to God and to the Lamb: And in their mouth there was found no lie: (loc. cit., 4, 5) are the martyrs; they are declared to be without spot, as in an earlier chapter (vii, 14); they are said to "have washed their robes, and have made them white in the blood of the Lamb".

In the article NUNS it is shown how Christian virgins have been one of the glories of the Church since the first ages, and how very ancient is the profession of virginity. Under RELIGIOUS LIFE is treated the difficulty of proving the strict obligation of perseverance before the fifth century, when we meet with the letter of Innocent V (404) to Vitricius (chapters xiii, xiv; cf. P.L., XX, 478 sqq.). Even at an earlier period still, the bishop presided at the clothing, and the consecration of virgins became a sacramental rite, in which the prayers and benedictions of the Church were added to the prayers and merits of those who presented themselves, in order to obtain for them the grace of fidelity in their sublime profession. In the fourth century no age was fixed for the consecration; virgins offered themselves quite young, at ten or twelve years of age. As there were children offered by their parents to the monastic life, so also there were children vowed to virginity before their birth, or very shortly after. Subsequently the law was passed which forbade consecration before the age of twenty-five years.

The ceremony prescribed in the Roman Pontifical is very solemn, and follows, step by step, that of an ordination. It is reserved to the bishop, and can never be repeated. The days fixed for the solemnity were at first the Epiphany, Easter week, and the feasts of the Apostles. The third Council of the Lateran gave permission to consecrate virgins on all Sundays, and custom sometimes extended the permission (C. Subdiaconos, 1, De temp. ordinat., 1, 10). The ceremony takes place during Mass; the archpriest certifies the worthiness of the candidates, as he does that of the deacons. After the introductory hymns, the pontiff first asks them all together if they are resolved to persevere in their purpose of holy virginity; they answer: "Volumus" (we are). Then he asks each on severally: "Dost thou promise to preserve perpetual virginity"? and when she answers, "I do promise", the pontiff says, "Deo gratias". The litany of the saints is then sung, with a double invocation on behalf of the virgins present: "Ut præsentēs ancillas benedicere ... sanctificare digneris" ("That though wouldst vouchsafe to bless and sanctify thy handmaidens here present"). It is to be remarked that the third invocation, "et consecrare digneris" ("That Thou wouldst vouchsafe to consecrate them"), which is added for major orders, is omitted here. The hymn "Veni Creator" follows, after which the pontiff blesses the habits, which the virgins put on. He then blesses the veil, the ring, and the crown. After the singing of a very beautiful preface, the bishop gives three articles to the virgins

with the formulæ used in ordinations, and the ceremony ends with a benediction, some prayers, and a long anathema directed against any persons who attempt to seduce the virgins from their holy profession. Sometimes after the Mass, the bishop gave them, as also to the deaconesses, the Book of Hours, to recite the Office.

From the fourth century the virgins wore a modest dress of dark colour; they were required to devote themselves to prayer (the canonical hours), manual labour, and an ascetic life. After the eighth century, as enclosure became the general law for persons consecrated to God, the reason for this special consecration of persons, already protected by the walls of the monastery and by their religious profession, ceased to exist. Secret faults committed before or even after admission to the monastery led to questions which were very delicate to decide, and which became the subject of controversy. Was one who had lost her virginity to make the fact known at the price of her reputation? Was it enough to present herself as a virgin in order to be able to receive consecration? (See for example "Theol. moralis Salmaticensium", Q. xvi de 6 et 9 præcepto, i, n. 75; or Lessius, De justitia", etc., IV, ii, dub. 16.) The ceremony became more and more rare, though examples were found still in the thirteenth and fourteenth centuries; but it was not practiced in the Mendicant orders. Saint Antoninus knew it in the fifteenth century; while St. Charles Borromeo in vain tried to revive it in the sixteenth. The abbess alone received and still receives a solemn benediction.

Virginity is irreparably lost by sexual pleasure, voluntarily and completely experienced. "I tell you without hesitation", writes St. Jerome in his twenty-second Epistle to St. Eustochium, n. 5 (P.L., XXII, 397) "that though God is almighty, He cannot restore a virginity that has been lost." A failure in the resolution, or even incomplete faults, leave room for efficacious repentance, which restores virtue and the right to the aureola. Formerly virginity was required as a condition for entrance into some monasteries; at the present day, in most congregations, a pontifical dispensation is necessary for the reception of persons who have been married (the Order of the Visitation however is formally open to widows); but bodily integrity is no longer required. If the candidate's reputation is intact, the doors of monasteries are open to a generous repentance as to a generous innocence. (See NUNS; RELIGIOUS LIFE; VOWS; VEIL, RELIGIOUS.)

A. VERMEERSCH

Devotion to the Blessed Virgin Mary

Devotion to the Blessed Virgin Mary

Down to the Council of Nicaea

Devotion to Our Blessed Lady in its ultimate analysis must be regarded as a practical application of the doctrine of the Communion of Saints. Seeing that this doctrine is not contained, at least explicitly in the earlier forms of the Apostles' Creed, there is perhaps no ground for surprise if we do not meet with any clear traces of the cultus of the Blessed Virgin in the first Christian centuries. The earliest unmistakable examples of the "worship" -- we use the word of course in the relative sense -- of the saints is connected with the veneration paid to the martyrs who gave their lives for

the Faith. From the first century onwards, martyrdom was regarded as the surest sign of election. The martyrs, it was held, passed immediately into the presence of God. Over their tombs the Holy Sacrifice was offered (a practice which may possibly be alluded to in Revelation 6:9) while in the contemporary narrative of the martyrdom of St. Polycarp (c. 151) we have already mention of the "birthday", i.e. the annual commemoration, which the Christians might be expected to keep in his honour. This attitude of mind becomes still more explicit in Tertullian and St. Cyprian, and the stress laid upon the "satisfactory" character of the sufferings of the martyrs, emphasizing the view that by their death they could obtain graces and blessings for others, naturally and immediately led to their direct invocation.

A further reinforcement, of the same idea, was derived from the cult of the angels, which, while pre-Christian in its origin, was heartily embraced by the faithful of the sub-Apostolic age. It seems to have been only as a sequel of some such development that men turned to implore the intercession of the Blessed Virgin. This at least is the common opinion among scholars, though it would perhaps be dangerous to speak too positively. Evidence regarding the popular practice of the early centuries is almost entirely lacking, and while on the one hand the faith of Christians no doubt took shape from above downwards (i.e. the Apostles and teachers of the Church delivered a message which the laity accepted from them with all docility) still indications are not lacking that in matters of sentiment and devotion the reverse process sometimes obtained. Hence, it is not impossible that the practice of invoking the aid of the Mother of Christ had become more familiar to the more simple faithful some time before we discover any plain expression of it in the writings of the Fathers. Some such hypothesis would help to explain the fact that the evidence afforded by the catacombs and by the apocryphal literature of the early centuries seems chronologically in advance of that which is preserved in the contemporaneous writings of those who were the authoritative mouthpieces of Christian tradition.

Be this however as it may, the firm theological basis, upon which was afterwards reared the edifice of Marian devotion, began to be laid in the first century of our era. It is not without significance that we are told of the Apostles after the Ascension of Christ, that "all these were persevering with one mind in prayer with the women, and Mary the mother of Jesus, and with his brethren" (Acts 1:14). Also attention has rightly been called to the fact that St. Mark, though he tells us nothing of our Christ's childhood, nevertheless describes Him as "the son of Mary" (Mark 6:3), a circumstance which, in view of certain known peculiarities of the Second Evangelist, greatly emphasises his belief in the Virgin Birth.

The same mystery is insisted upon by St. Ignatius of Antioch, who, after describing Jesus as "Son of Mary and Son of God", goes on to tell the Ephesians (7, 18, and 19) that "our God, Jesus Christ, was conceived in the womb of Mary according to a dispensation of the seed of David but also of the Holy Ghost," and he adds: "Hidden from the prince of this world were the virginity of Mary and her childbearing and likewise also the death of the Lord -- three mysteries to be cried aloud". Aristides and St. Justin also use explicit language concerning the Virgin Birth, but it is St. Irenaeus more especially who has deserved to be called the first theologian of the Virgin Mother.

Thus he has drawn out the parallel between Eve and Mary, urging that, "as the former was led astray by an angel's discourse to fly from God after transgressing His word, so the latter by an angel's discourse had the Gospel preached unto her that she might bear God, obeying His word. And if the former had disobeyed God, yet the other was persuaded to obey God: that the Virgin Mary might become an advocate for the virgin Eve. And as mankind was bound unto death through a virgin, it is saved a through virgin; by the obedience of a virgin the disobedience of a virgin is compensated" (Irenaeus, V, 19). No one again disputes that the clause "born of the Virgin Mary" formed part of the primitive redaction of the Creed, and the language of Tertullian, Hippolytus, Origen, etc., is in thorough conformity with that of Irenaeus; further, though writers like Tertullian, Hevidius, and possibly Hegesippus disputed the perpetual virginity of Mary, their more orthodox contemporaries affirmed it.

It was natural then that in this atmosphere we should find a continually developing veneration for the sanctity and exalted privileges of Mary. In the paintings of the catacombs more particularly, we appreciate the exceptional position that she began, from an early period, to occupy in the thoughts of the faithful. Some of these frescoes, representing the prophecy of Isaias, are believed to date from the first half of the second century. Three others which represent the adoration of the Magi are a century later. There is also a remarkable but very much mutilated bas-relief, found at Carthage, which may be probably assigned to the time of Constantine.

More startling is the evidence of certain apocryphal writings, notably that of the so-called Gospel of St. James, or "Protevangelion." The earlier portion of this, which evinces a deep veneration for the purity and sanctity of the Blessed Virgin, and which affirms her virginity *in partu et post partum*, is generally considered to be a work of the second century. Similarly, certain interpolated passages found in the Sibylline Oracles, passages which probably date from the third century, show an equal preoccupation with the dominant role played by the Blessed Virgin in the work of redemption (see especially II, 311-12, and VIII, 357-479). The first of these passages apparently assigns to the intercession "of the Holy Virgin" the obtaining of the boon of seven days of eternity that men may find time for repentance (cf. the Fourth Book of Esdras, vii, 28-33). Further, it is quite likely that the mention of the Blessed Virgin in the intercessions of the diptychs of the liturgy goes back to the days before the Council of Nicaea, but we have no definite evidence upon the point, and the same must be said of any form of direct invocation, even for purposes of private devotion.

The Age of the Fathers

The existence of the obscure sect of the Collyridians, whom St. Epiphanius (d. 403) denounces for their sacrificial offering of cakes to Mary, may fairly be held to prove that even before the Council of Ephesus there was a popular veneration for the Virgin Mother which threatened to run extravagant lengths. Hence Epiphanius laid down the rule: "Let Mary be held in honour. Let the Father, Son, and Holy Ghost be adored, but let no one adore Mary" (*ten Marian medeis prosknueito*). Nonetheless the same Epiphanius abounds in the praises of the Virgin Mother, and he believed that there was some mysterious dispensation with regard to her death implied in the words of Revelations 12:14: "And there were given to the woman two wings of a great eagle that she might fly into the

desert unto her place." Certain it is, in any case, that such Fathers as St. Ambrose and St. Jerome, partly inspired with admiration for the ascetic ideals of a life of virginity and partly groping their way to a clearer understanding of all that was involved in the mystery of the Incarnation, began to speak of the Blessed Virgin as the model of all virtue and the ideal of sinlessness. Several striking passages of this kind have been collected.

- "In heaven", St. Ambrose tells us, "she leads the choirs of virgin souls; with her the consecrated virgins will one day be numbered."
- St. Jerome (Ep. xxxix, Migne, P. L., XXII, 472) already foreshadows that conception of Mary as mother of the human race which was to animate so powerfully the devotion of a later age.
- St. Augustine in a famous passage (De nat. et gratis, 36) proclaims Mary's unique privilege of sinlessness
- In St. Gregory Nazianzen's sermon on the martyr St. Cyprian (P.G., XXXV, 1181) we have an account of the maiden Justina, who invoked the Blessed Virgin to preserve her virginity.

But in this, as in some other devotional aspects of early Christian beliefs, the most glowing language seems to be found in the East, and particularly in the Syrian writings of St. Ephraem. It is true that we cannot entirely trust the authenticity of many of the poems attributed to him; the tone, however, of some of the most unquestioned of Ephraem's compositions is still very remarkable.

- Thus in the hymns on the Nativity (6) we read: "Blessed be Mary, who without vows and without prayer in her virginity conceived and brought forth the Lord of all the sons of her companions, who have been or shall be chaste or righteous, priests and kings. Who else lulled a son in her bosom as Mary did? Who ever dared to call her son, Son of the Maker, Son of the Creator, Son of the Most High?"
- Similarly in Hymns 11 and 12 of the same series, Ephraem represents Mary as soliloquizing thus: "The babe that I carry carries me, and He hath lowered His wings and taken and placed me between His pinions and mounted into the air, and a promise has been given me that height and depth shall be my Son's" etc.

This last passage seems to suggest a belief, like that of St. Epiphanius already referred to, that the holy remains of the Virgin Mother were in some miraculous way translated from earth. The fully-developed apocryphal narrative of the "Falling asleep of Mary" probably belongs to a slightly later period, but it seems in this way to be anticipated in the writings of Eastern Fathers of recognized authority. How far the belief in the "Assumption" which became generally prevalent in the course of a few centuries, was independent of or influenced by the apocryphal "Transitus Mariae", which is included by Pope Gelasius in his list of condemned apocrypha, is a difficult question. It seems likely that some germ of popular tradition preceded the invention of the extravagant details of the narrative itself.

In any case, the evidence of the Syriac manuscripts proved beyond all question that in the East before the end of the sixth century, and probably very much earlier, devotion to the Blessed Virgin had assumed all those developments which are usually associated with the later Middle Ages. In some manuscripts of the "Transitus Mariae" -- dating from the late fifth century -- we find mention of three annual feasts of the Blessed Virgin:

- one two days after the feast of the Nativity,

- another on the 15th day of Iyar, corresponding more or less to May, and
- a third on the 13th (or 15th) day of Ab (roughly August), which probably is the origin of our present feast of the Assumption.

Moreover, the same apocryphal relation contains an account of the Blessed Virgin's miracles, purporting to have been forwarded from the Christians of Rome, and closely resembling the "Marienlegenden" of the Middle Ages. For example we read:

Often here in Rome she appears to the people who confess her in prayer, for she has appeared here on the sea when it was troubled and raised itself and was going to destroy the ship in which they were sailing. And the sailors called on the name of the Lady Mary and said: 'O Lady Mary, Mother of God, have mercy on us,' and straightway she rose upon them like the sun and delivered the ships, ninety-two of them, and rescued them from destruction, and none of them perished.

And again we are told:

She appeared by day on the mountain where robbers had fallen upon people and sought to slay them. And these people cried out saying: 'O Lady Mary Mother of God, have mercy on us.' And she appeared before them like a flash of lightning, and blinded the eyes of the robbers and they were not seen by them" (ib., 49).

Of course the wild extravagance of this apocryphal literature cannot be questioned. It is all pure invention and a comparison of the various texts of the "Transitus" shows that this treatise in particular was continually being modified and added to in its various translations, so that we cannot be at all sure that the "Liber qui appellatur transitus, id est Assumptio, Sanctae Mariae apochryphus," condemned by Pope Gelasius in 494, was identical with the Syriac version just cited. But it is highly probable that this same Syriac version was then in existence, and apocryphal as the text may be, it undoubtedly testifies to the state of mind of at least the less instructed Christians of that period. Neither is it likely that feasts would be spoken of and ascribed to the institutions of the Apostles themselves if no such commemoration existed in the locality in which this fictitious narrative was so widely popular. In point of fact, scholars give good reason for believing that a feast described as *mneme tes hagian Oeotokou kai aeikarthenou Marias* was celebrated at Antioch as early as the year 370, while from the circumstance that it was connected with the Epiphany we may probably identify it with the first of the feasts referred to in the Syriac Transitus.

There is also confirmatory evidence for such a feast to be found in the hymns of Balai, a Syriac writer of the beginning of the fifth century; for not only does this writer use the most glowing language about Our Lady, but he speaks in such terms as these: "Praise to Thee Lord upon the memorial feast of Thy Mother" (Poem 4, p. 14, and Poem 6, p. 15). Another clear testimony is that of St. Proclus, who died Patriarch of Constantinople, and who in 429 preached a sermon in that city, at which Nestorius was present, beginning with the words "The Virgin's festival (*parthenike*

panegyris) incites our tongue today to herald her praise." In this, we may further note, he describes Mary as

handmaid and Mother, Virgin and heaven, the only bridge of God to men, the awful loom of the Incarnation, in which by some unspeakable way the garment of that union was woven, whereof the weaver is the Holy Ghost; and the spinner the overshadowing from on high; the wool the ancient fleece of Adam; the woof the undefiled flesh from the virgin, the weaver's shuttle the immense grace of Him who brought it about; the artificer the Word gliding through the hearing" (P.G., LXV, 681).

This discourse illustrates in a remarkable degree how the controversies which bore fruit in the canons of Ephesus and the title *theotokos* had led to a deeper understanding of the part of the Blessed Virgin in the work of Redemption.

Turning to another Eastern land, we find a very remarkable monument of Marian devotion among the Coptic Ostraca (p. 3), dated to about A. D. 600. This fragment bears in Greek the words: "Hail Mary full of grace, the Lord is with thee; blessed art thou amongst women and blessed is the fruit of thy womb, because thou didst conceive Christ, the Son of God, the Redeemer of our souls". This oriental variant of the Ave Maria was apparently intended for liturgical use, much as the earliest form of the Hail Mary in the West took the shape of an antiphon employed in the Mass and Office of the Blessed Virgin. Relatively late as this fragment may seem, it is the more valuable because the direct mention of the Blessed Virgin in our earliest liturgical form is of rare occurrence. None such, for example, is found in the prayer-book of Serapion, or in the liturgy of the Apostolic Constitutions, or in the fragments of the Canon of the Mass preserved to us in the Ambrosian treatise "De Sacramentis". Certain Syriac hymns by Cyrillon as (c. 400) and especially by Rabnlas of Edessa (d. 435) speak of Mary in terms of warm devotion; but as in the case of St. Ephraem there is a certain element of uncertainty regarding the authorship of these compositions. On the other hand the dedication of many early churches undoubtedly afford an indication of the authoritative recognition at this period extended to the cultus of the Blessed Virgin. Already at the beginning of the fifth century St. Cyril wrote: "Hail to thee Mary, Mother of God, to whom in towns and villages and in island were founded churches of true believers" (P.G., LXXVII, 1034). The Church of Ephesus, in which in 431 the Ecumenical Council assembled, was itself dedicated to the Blessed Virgin. Three churches were founded in her honour in or near Constantinople by the Empress Pulcheria in the course of the fifth century, while at Rome the Church of Santa Maria Antiqua and Santa Maria in Trastevere are certainly older than the year 500. Not less remarkable is the ever increasing prominence given to the Blessed Virgin during the fourth and fifth centuries in Christian art. In the paintings of the catacombs, in the sculptures of sarcophagi, in the mosaics, and in such minor objects as the oil flasks of Monsa, the figure of Mary recurs more and more frequently, while the veneration with which she is regarded is indicated in various indirect ways, for example by the large nimbus, such as may be seen in the pictures of the Crucifixion in the Rabulas manuscript of

A.D. 586 (reproduced in THE CATHOLIC ENCYCLOPEDIA, VIII, 773). As early as 540 we find a mosaic in which she sits enthroned as Queen of Heaven in the centre of the apex of the cathedral of Parenzo in Austria, which was constructed at that date by Bishop Euphrasius.

The Early Middle Ages

With the Merovingian and Carolingian developments of Christianity in the west came the more authoritative acceptance of Marian devotion as an integral part of the Church's life. It is difficult to give precise dates for the introduction of the various festivals, but it has already been pointed out in the article CALENDAR that the celebration of the Assumption, Annunciation, Nativity and Purification of Our Lady may certainly be traced to this period. Three of these feasts appear in the Calendar of St. Willibrord of the end of the seventh century, the Assumption being assigned both to 18 January, after the practice of the Gallican Church, and to August (which approximates to the present Roman date), while the absence of the Annunciation is probably due only to accident. Again we may quite confidently affirm that the position of the Blessed Virgin in the liturgical formula of the Church was by this time securely established. Even if we ignore the Canon of the Roman Mass which had taken very much the form it now retains before the close of the sixth century, the "praefatio" for the January festival of the Assumption in the Gallican Rite, as well as other prayers which may safely be assigned to no later date than the seventh century, give proof of a fervent cultus of the Blessed Virgin. In poetic language Mary is declared not only marvellous by the pledge which she conceived through faith but glorious in the translation by which she departed" (P. L., LXII, 244-46), the belief in her Assumption being clearly and repeatedly taken for granted, as it had been a century earlier by Gregory of Tours. She is also described in the liturgy as "the beautiful chamber from which the worthy spouse comes forth, the light of the gentiles, the hope of the faithful, the spoiler of the demons, the confusion of the Jews, the vessel of life, the tabernacle of glory, the heavenly temple, whose merits, tender maiden as she was, are the more clearly displayed when they are set in contrast with the example of ancient Eve" (ib., 245). At the same period numberless churches were erected under Mary's dedication, and many of these were among the most important in Christendom. The cathedrals of Reims, Chartres, Rouen, Amiens, Nîmes, Evreux, Paris, Bayeux, Séz, Toulon etc., though built at different dates, were all consecrated in her honour. It is true that the origin of many of these French shrines of Our Lady is impenetrably shrouded in the mists of legends. For example, no one now seriously believes that St. Trophimus at Arles dedicated a chapel to the Blessed Virgin while she was still living, but there is conclusive evidence that some of these places of pilgrimage were venerated at a very early date. We learn from Gregory of Tours (Hist. Fr., IX, 42) that St. Rhadegund had built a church in her honour at Poitiers, and he speaks of others at Lyons, Toulouse, and Tours. We also possess the dedication tablet of a church erected by Bishop Frodomund in 677 "in honore almae Mariae, Genetricis Domini", and as the day named is the middle of the month of August (*mense Augusto medio*), there can be little doubt that the consecration took place upon the festival of the Assumption, which was at that time beginning to supplant the January feast. In Germany the shrines of Altötting and Lorch profess to be able to trace their origin as places of pilgrimage to remote antiquity and though it

would be rash to pronounce too confidently, we may probably feel safe in assigning them at least to the Carolingian period.

In England and Ireland the evidence that from the earliest period Christianity was strongly leavened with devotion to Mary is very great. Bede tells us of the church consecrated to the honour of Our Lady at Canterbury by St. Mellitus, the immediate successor of Augustine; we also learn from the same source of many other Mary churches, e.g. Weremouth and Hexham (this last dedication being due to the miraculous cure of St. Wilfrid after invoking the Mother of God), and Lastingham near Whitby, while St. Aldhelm, before the end of the same seventh century, informs us how the Princess Bugga, daughter of King Edwin, had a church dedicated to the Blessed Virgin on the feast of her Nativity:

Istam nempe diem, qua templi festa coruscant,
Nativitate sua sacrauit Virgo Maria.

And Our Lady's altar stood in the apse:

Absidem consecrat Virginis ara.

Probably the earliest vernacular poetry in the West to celebrate the praise of Mary was the Anglo-Saxon; for Cynewulf, slightly before the time of Alcuin and of Charlemagne, composed most glowing verses on this theme; for example to quote Gollancz's translation of "the Christ" (ii, 214-80):

Hail, thou glory of this middle-world!
The purest woman throughout all the earth.
Of those that were from immemorial time
How rightly art thou named by all endowed
With gifts of speech! All mortals throughout earth
Declare full blithe of heart that thou art bride
Of Him that ruleth the empyral sphere.

To speak in detail of all that we find in the writings of Aldhelm, Bede, and Alcuin would be impossible; but it is well to note the testimony of an Anglican writer with regard to the whole period before the Norman Conquest. "The Saint," he says, "most persistently and frequently invoked, and to whom the most passionate epithets were applied, trenching upon the Divine prerogatives, was the Blessed Virgin. Mariolatry is no very modern development of Romanism"; and he instances from a tenth-century English manuscript now at Salisbury, such invocations as "Sancta Redemptrix Mundi, Sancta Salvatrix Mundi, ora pro nobis"; The same writer after referring to prayers and practices of devotion known in Anglo-Saxon times, for example the special Mass already assigned to the Blessed Virgin on Saturdays in the Leofric Missal, comments upon the strange delusion, as he regards it, of many Anglicans, who can look upon a Church which tolerated such abuses as primitive and orthodox.

Not less remarkable are the developments of devotion to the Mother of God in Ireland. The calendar of Aengus at the beginning of the ninth century is very remarkable for the ardour of the language used whenever the Blessed Virgin's name is introduced, while Christ is continually referred to as "Jesus Mac Mary" (i.e. Son of Mary). There is also besides certain Latin hymns, a very striking Irish litany in honour of the Blessed Virgin, which as regards the picturesqueness of the epithets applied to her, yields in nothing to the present Litany of Loreto. Mary is there called "Mistress of the Heavens, Mother of the Heavenly and earthly Church, Recreation of Life, Mistress of the Tribes, Mother of the Orphans, Breast of the Infants, Queen of Life, Ladder of Heaven." This composition may be as old as the middle of the eighth century.

The Later Middle Ages

It was characteristic of this period, which for our present purpose may be regarded as beginning with the year 1000, that the deep feeling of love and confidence in the Blessed Virgin, which hitherto had expressed itself vaguely and in accordance with the promptings of the piety of individuals, began to take organized shape in a vast multitude of devotional practices. Long before this date a Lady altar was probably to be found in all the more important churches -- St. Aldhelm's poem on the altars takes us back to before the year 70 and many records testify that at such altars paintings, mosaics, and ultimately sculptures reproduced the figure of the Blessed Virgin to delight the eyes of her clients. The famous seated figure of the Madonna with the Divine Infant at Ely dated from before 1016. The statue of the Blessed Virgin at Coventry, round the neck of which Lady Godiva's rosary was hung, belongs to the same period. Even in Aldhelm's day Our Lady was besought to hearken to the prayers of those who bent the knee before her shrine.

Audi clementer populorum vota precantum
Qui . . . genibus tundunt curvato poplite terram.

It was especially for such salutations that the Ave Maria, which probably first became familiar as an antiphon used in the Little Office of the Blessed Virgin, won popular favour with all classes. Accompanying it each time with a genuflection, such as tradition averred that the Angel Gabriel himself had made, Mary's clients repeated this formula before her images again and again. As it was destitute at first of its concluding petition, the Ave was felt to be a true form of salutation, and in the course of the twelfth century came into universal use. To the same epoch belongs the wide popularity of the Salve Regina, which also seems to have come into existence in the eleventh century. Though it originally began with the words "Salve Regina Misericordia" without the "Mater", we cannot doubt that something of the vogue of the anthem was due to the immense diffusion of the collections of Mary-stories (Marien-legenden) which multiplied exceedingly at this time (twelfth to fourteenth century), and in which the Mater Misericordia *motif* was continually recurrent. These collections of stories must have produced a notable effect in popularising a number of other practices of devotion besides repetitions of the Ave and the use of the Salve Regina, for example the repetition of five salutations beginning "Gaude Maria Virgo," the recitation of five psalms, the initials of which make up the word Maria, the dedication of the Saturday by special practices to the Blessed

Virgin, the use of assigned prayers, such as the sequence "Missus Gabriel," the "O Intemerata," the hymn "Ave Maris Stella," etc., and the celebration of particular feasts, such as the Conception of the Blessed Virgin and her Nativity. The five *Gaudes* just mentioned originally commemorated Our Lady's "five joys" and to match those joys spiritual writers at first commemorated five corresponding sorrows. It was not until late in the fourteenth century that seven sorrows or "dolours" began to be spoken of, and even then only by exception.

In all these matters the first impulse seems to have come very largely from the monasteries, in which the Mary-stories were for the most part composed and copied. It was in the monasteries undoubtedly that the Little Office of the Blessed Virgin (see *PRIMER*) began to be recited as a devotional accretion to the Divine Office, and that the *Salve Regina* and other anthems of Our Lady were added to *Compline* and other hours. Amongst other orders the Cistercians, particularly in the twelfth century, exercised an immense influence in the development of Marian devotion. They claimed a very special connection with the Blessed Virgin, whom they were taught to regard as always presiding unseen at the recitation of Office. To her they dedicated their churches, and they were particular in saying her hours, giving her special prominence in the *Confiteor* and frequently repeating the *Salve Regina*. This example of a special consecration to Mary was followed by other later orders, notably by the Dominicans, the Carmelites, and the Servites. Indeed, almost every such institution from this time forward adopted some one or other special practice of devotion to mark its particular allegiance to the Mother of God. Shrines naturally multiplied, and although some, as already noted, are in their origin of later date than the eleventh century, it was at this period that such famous places of pilgrimage arose as Roc Amadour, Laon, Mariabrunn near Klosterneuburg, Einsiedeln etc., and in England, Walsingham, Our Lady Undercroft at Canterbury, Evesham, and many more.

These shrines, which as time went on multiplied beyond calculation in every part of Europe, nearly always owed their celebrity to the temporal and spiritual favours which it was believed the Blessed Virgin granted to those who invoked her in these favoured spots. The gratitude of pilgrims often enriched them with the most costly gifts; crowns of gold and precious gems, embroidered garments, and rich hangings meet us at every turn in the record of such sanctuaries. We might mention, to take a single example, that of Halle, in Belgium, which was exceptionally rich in such treasures. Perhaps the commonest form of votive offerings took the shape of a gold or silver model of the person or limb that had been cured. For example Duke Philip of Burgundy sent to Halle two silver statues, one representing a knight on horseback, the other a foot-soldier in gratitude for the cure of two of his own bodyguard. Often again the special vogue of a particular shrine was due to some miraculous manifestation which was believed to have occurred there. Blood was said to have flowed from certain statues and pictures of Our Lady which had suffered outrage. Others had wept or exuded moisture. In other cases, the head had bowed or the hand been raised in benediction.

Without denying the possibility of such occurrences, it can hardly be doubted that in many instances the historical evidence for these wonders was unsatisfactory. That popular devotion to the Blessed Virgin was often attended with extravagance and abuse, it is impossible to deny.

Nevertheless we may believe that the simple faith and devotion of the people was often rewarded in proportion to their honest intention of paying respect to the Mother of God. And there is no reason to believe that these forms of piety had on the whole a delusive effect, and fostered nothing but superstition. The purity, pity, and motherliness of Mary were always the dominant motive, even the "Miracle" of Max Reinhardt, the wordless play which in 1912 took London by storm, persuaded many how much of true religious feeling must have underlain even the more extravagant conceptions of the Middle Ages.

The most renowned English shrines of Our Lady, that of Walsingham in Norfolk, was in a sense an anticipation of the still more famous Loreto. Walsingham professed to preserve, not indeed the Holy House itself, but a model of its construction upon measurements brought from Nazareth in the eleventh century. The dimensions of the Walsingham Santa Casa were noted by William of Worcester, and they do not agree with those of Loreto. Walsingham measured 23 ft. 6 in. by 12 ft. 10 in.; Loreto, 31 ft.3 in. by 13 ft. 4 in.

In any case the homage paid to Our Lady during the later Middle Ages was universal. Even so unorthodox a writer as John Wyclif, in one of his earlier sermons, says: "It seems to me impossible that we should obtain the reward of Heaven without the help of Mary. There is no sex or age, no rank or position, of anyone in the whole human race, which has no need to call for the help of the Holy Virgin." So again the intense feeling evoked from the twelfth to the sixteenth century over the doctrine of the Immaculate Conception is only an additional tribute to the importance which the whole subject of Mariology possessed in the eyes of the most learned bodies of Christendom. To give even a brief sketch of the various practices of Marian devotion in the Middle Ages would be impossible here. Most of them -- for example the Rosary, the Angelus, the Salve Regina etc. and the more important festivals -- are discussed under separate headings. It will be sufficient to note the prevalence of the wearing of beads of all possible fashions and lengths, some of fifteen decades, some of ten, some of six, five, three, or one, as an article of ornament in every attire; the mere repetition of Hail Marys to be counted by the aid of such Pater Nosters, or beads, was common in the twelfth century, before the time of St. Dominic; the motive of meditating on assigned "mysteries" did not come into use until 300 years later. Further, we must note the almost universal custom of leaving legacies to have a Mary-Mass, or Mass of Our Lady, celebrated daily at a particular altar, as well as to maintain lights to burn continually before a particular statue or shrine. Still more interesting were the foundations left by will to have the Salve Regina or other anthems of Our Lady sung after Compline at the Lady altar, while lights were burned before her statue. The "salut" common to France in the seventeenth and eighteenth centuries formed only after development of this practice, and from these last we have almost certainly derived our comparatively modern devotion of Benediction of the Blessed Sacrament.

Modern Times

Only a few isolated points can be touched upon in the development of Marian devotion since the Reformation. Foremost among these may be noticed the general introduction of the Litany of Loreto, which though, as we have seen, it had precursors in other lands as remote as Ireland in the

ninth century, not to speak of isolated forms in the later Middle Ages, itself only came into common use towards the close of the sixteenth century. The same may also be said of any general adoption of the second part of the Hail Mary. Another manifestation of great importance, which also like the last followed close after the Council of Trent, was the institution of sodalities of the Blessed Virgin, particularly in houses of education, a movement mainly promoted by the influence and example of the Society of Jesus, whose members did so much, by the consecration of studies and other similar devices, to place the work of education under the patronage of Mary, the Queen of Purity. To this period is also due, with some occasional exceptions, the multiplication in the calendar of minor feasts of the Blessed Virgin, such as that of the Holy Name of Mary, the festum B.V.M. ad Nives, de Mercede, of the Rosary, de Bono Consilio, Auxilium Christianorum, and so on. Still later in date (seventeenth century at earliest) is the adoption of the custom of consecrating the month of May to the Blessed Virgin by special observances, though the practice of reciting the Rosary every day during the month of October can hardly be said to be older than the Rosary Encyclicals of Leo XIII. Not much controversy was maintained regarding the Immaculate Conception after the indirect pronouncement of the Council of Trent, but the dogma was only defined by Pius IX in 1854. Undoubtedly, however, the greatest stimulus to Marian devotion in recent times has been afforded by the apparitions of the Blessed Virgin in 1858 at Lourdes, and in the numberless supernatural favours granted to pilgrims, both there and at other shrines, that derive from it. The "miraculous medal" connected with the church of Notre-Dame des Victoires at Paris also deserves mention, as giving a great stimulus to this form of piety in the first half of the nineteenth century.

HERBERT THURSTON

The Name of Mary

The Name of Mary

The Blessed Virgin Mary is the mother of Jesus Christ, the mother of God.

The Hebrew form of her name is *miryam* denoting in the Old Testament only the sister of Moses. In I Par., iv, 17, the Massoretic text applies the same name to a son of Jalon, but, as the Septuagint version transcribes this name as *Maron*, we must infer that the orthography of the Hebrew text has been altered by the transcribers. The same version renders *miryam* by *Marian*, a form analogous to the Syriac and Aramaic word *Maryam*. In the New Testament the name of the Virgin Mary is always *Mariam*, excepting in the Vatican Codex and the Codex Bezae followed by a few critics who read *Maria* in Luke, ii, 19. Possibly the Evangelists kept the archaic form of the name for the Blessed Virgin, so as to distinguish her from the other women who bore the same name. The Vulgate renders the name by *Maria*, both in the Old Testament and the New; Josephus (*Ant. Jud.*, II, ix, 4) changes the name to *Mariamme*.

It is antecedently probable that God should have chosen for Mary a name suitable to her high dignity. What has been said about the form of the name *Mary* shows that for its meaning we must investigate the meaning of the Hebrew form *miryam*. Bardenhewer has published a most satisfactory

monograph on the subject, in which he explains and discusses about seventy different meanings of the name *miryam* (Der Name Maria. Geschichte der Deutung desselben. Freiburg, 1895); we shall be able to give only an outline of his work. Fr. von Hummelauer (in Exod. et Levit., Paris, 1897, p. 161) mentions the possibility that *miryam* may be of Egyptian origin. Moses, Aaron, and their sister were born in Egypt; the name *Aaron* cannot be explained from the Hebrew; the daughter of Pharaoh imposed the name Moses on the child she had saved from the waters of the Nile; hence it is possible that their sister's name Mary was also of Egyptian origin. This seems to become even probable if we consider the fact that the name Mary was not borne by any woman in the Old Testament excepting the sister of Moses. But the question why was not the name Mary more common in the Old Testament, if it was of Hebrew origin, is answered by another question, why was the name Mary chosen by the parents of Our Blessed Lady and by a number of others mentioned in the New Testament, if the word was Egyptian? Though the meaning of Mary as derived from the Egyptian *Mery*, *Meryt* (cherished, beloved), is most suitable for an only daughter, such a derivation is only possible, or at best barely probable.

Most interpreters derive the name Mary from the Hebrew, considering it either as a compound word or as a simple. *Miryam* has been regarded as composed as a noun and a pronominal suffix, or of a noun and an adjective, or again of two nouns. Gesenius was the first to consider *miryam* as a compound of the noun *meri* and the pronominal suffix *am*; this word actually occurs in II Esd., ix, 17, meaning "their rebellion". But such an expression is not a suitable name for a young girl. Gesenius himself abandoned this explanation, but it was adopted by some of his followers, e.g. by J. Grimm (Das Leben Jesu; sec. edit., I, 414-431, Regensburg, 1890) and Schanz (Comment. uber d. Ev. d. hl. Matthäus, p. 78, Freiburg, 1879). One of the meanings assigned to the name Mary in Martianay's edition of St. Jerome's works (S. Hier. opp., t. II, Parisiis, 1699, 2°, cols. 109-170, 181-246, 245-270) is *pikra thalassa*, *bitter sea*. Owing to the corrupt condition in which St. Jerome found the "Onomastica" of Philo and of Origen, which he in a way re-edited, it is hard to say whether the interpretation "bitter sea" is really due to either of these two authorities; at any rate, it is based on the assumption that the name *miryam* is composed of the Hebrew words *mar* (bitter) and *yam* (sea). Since in Hebrew the adjective follows its substantive, the compound of the two words ought to read *yam mar*; and even if the inverse order of words be admitted as possible, we have at best *maryam*, not *miryam*. Those who consider *miryam* as a compound word usually explain it as consisting of two nouns: *mor* and *yam* (myrrh of the sea); *mari* (cf. Dan., iv, 16) and *yam* (mistress of the sea); *mar* (cf. Is., xl, 15) and *yam* (drop of the sea). But these and all similar derivations of the name Mary are philologically inadmissible, and of little use to the theologian. This is notably true of the explanation *photizousa autous*, enlightening them, whether it be based on the identification of *miryam* with *me'iram* (part. Hiphil of 'or with pronominal suffix of 3 plur.), or with *mar'am* (part. Hiphil of *ra'ah* with pron. suffix of 3 plur.), or again with *mar'eya* (part. Hiphil of *raah* with Aramaic fem. termination *ya*; cf. Knabenbauer, Evang. sec. Matt., pars prior, Parisiis, 1892, p. 43).

Here a word has to be added concerning the explanation *stella maris*, star of the sea. It is more popular than any other interpretation of the name Mary, and is dated back to St. Jerome (De nomin.

hebraic., de Exod., de Matth., P.L., XXIII, col, 789, 842). But the great Doctor of the Church knew Hebrew too well to translate the first syllable of the name *miryam* by star; in Is., xl., 15, he renders the word *mar* by *stilla* (drop), not *stella* (star). A Bamberg manuscript dating from the end of the ninth century reads *stilla maris* instead of *stella maris*. Since Varro, Quintillian, and Aulus Gellius testify that the Latin peasantry often substituted an e for an i, reading *vea* for *via*, *vella* for *villa*, *speca* for *spica*, etc., the substitution of *maris stella* for *maris stilla* is easily explained. Neither an appeal to the Egyptian Minur-juma (cf. Zeitschr. f. kathol. Theol., IV, 1880, p. 389) nor the suggestion that St. Jerome may have regarded *miryam* as a contracted form of *me'or yam* (cf. Schegg, Jacobus der Bruder des Herrn, Munchen, 1882, p. 56 Anm.) will account for his supposed interpretation *stella maris* (star of the sea) instead of *stilla maris* (a drop of the sea).

It was Hiller (Onomasticum sacrum, Tübingen, 1706, pp. 170, 173, 876) who first gave a philological explanation of *miryam* as a simple word. The termination *am* is according to this writer a mere formative affix intensifying or amplifying the meaning of the noun. But practically *miryam* had been considered as a simple noun long before Hiller. Philo (De somn., II, 20; ed. Mangey, II, 677) is said to have explained the word as meaning *elpis* (hope), deriving the word either from *ra'ah* (to see, to expect?) or from *morash* (hope); but as Philo can hardly have seriously believed in such a hazardous derivation, he probably presented Mary the sister of Moses as a mere symbol of hope without maintaining that her very name meant hope. In Rabbinic literature *miryam* is explained as meaning *merum* (bitterness; cf. J. Levy, Neuhebraisches und chaldaisches Wörterbuch über die Talmudim und Midraschim, Leipzig, 1876-89, s.v. *merum*); but such a meaning of the word is historically improbable, and the derivation of *miryam* from *marar* grammatically inadmissible. Other meanings assigned to *miryam* viewed as a simple word are: *bitter one*, *great sorrow* (from *marar* or *marah*; cf. Simonis, Onomasticum Veteris Testamenti, Halae Magdeburgicae, 1741, p. 360; Onom. Novi Test., ibid., 1762, p. 106); *rebellion* (from *meri*; cf. Gesenius, Thesaur. philol. critic. ling. hebr. et chald. Beter. Testamenti, edit. altera, Lipsiae, 1835-38, II, p. 819b); *healed one* (cf. Schäfer, Die Gottesmutter in der hl. Schrift, Münster, 1887, pp. 135-144); *fat one*, *well nourished one* (from *mara*; cf. Schegg, Evangelium nach Matthäus, Bd. I, München, 1856, p. 419; id., Jacobus der Bruder des Herrn, München, 1882, p. 56; Furst, Hebr. und chald. Hanwörterb. über d. alte Test., Leipzig, 1857-1861, s.v. *miryam*); *mistress* (from *mari*; cf. v. Haneberg, Geschichte d. biblisch. Offenbarung, 4th edit., Regensburg, 1876, p. 604); *strong one*, *ruling one* (from *marah*; cf. Bisping, Erklärung d. Evang. nach Matth., Münster, 1867, p. 42); *gracious or charming one* (from *ra'am* which word does not have this meaning in the Old Testament; cf. v. Haneberg, 1, c.); *myrrh* (from *mor*, though it does not appear how this word can be identified with *miryam*; cf. Knabenbauer, Evang. sec. Matth., pars prior, Parisiis, 1892, p. 44); *exalted one* (from *rum*; cf. Caninius, De locis S. Scripturae hebraicis comment., Antverpiae, 1600, pp. 63-64).

In 1906 Zorrell advanced another explanation of the name Mary, based on its derivation from the Egyptian *mer* or *mar*, to love, and the Hebrew Divine name *Yam* or *Yahweh* (Zeitschrift für katholische Theologie, 1906, pp. 356 sqq.). Thus explained the name denotes "one loving Yahweh" or "one beloved by Yahweh". We have already pointed out the difficulty implied in an Egyptian

origin of the name Mary. Probably it is safer to adhere to Bardenhewer's conclusions (l. c., pp. 154 sq.): *Mariam* and *Maria* are the later forms of the Hebrew *miryam*; *miryam* is not a compound word consisting of two nouns, or a noun and an adjective, or a noun and a pronominal suffix, but it is a simple though derivative noun; the noun is not formed by means of a prefix (*m*), but by the addition of a suffix (*am*). Presupposing these principles, the name *miryam* may be derived either from *marah*, to be rebellious, or from *mara*, to be well nourished. Etymology does not decide which of these derivations is to be preferred; but it is hardly probable that the name of a young girl should be connected with the idea of rebellion, while Orientals consider the idea of being well nourished as synonymous with beauty and bodily perfection, so that they would be apt to give their daughters a name derived from *mara* Mary means therefore *The beautiful* or *The perfect one*.

A.J. MAAS

The Blessed Virgin Mary

The Blessed Virgin Mary

The Blessed Virgin Mary is the mother of Jesus Christ, the mother of God.

In general, the theology and history of Mary the Mother of God follow the chronological order of their respective sources, i.e. the Old Testament, the New Testament, the early Christian and Jewish witnesses.

I. MARY PROPHESED IN THE OLD TESTAMENT

The Old Testament refers to Our Blessed Lady both in its prophecies and its types or figures.

Genesis 3:15

The first prophecy referring to Mary is found in the very opening chapters of the Book of Genesis (3:15): "I will put enmities between thee and the woman, and thy seed and her seed; she shall crush thy head, and thou shalt lie in wait for her heel." This rendering appears to differ in two respects from the original Hebrew text:

(1) First, the Hebrew text employs the same verb for the two renderings "she shall crush" and "thou shalt lie in wait"; the Septuagint renders the verb both times by *terein*, to lie in wait; Aquila, Symmachus, the Syriac and the Samaritan translators, interpret the Hebrew verb by expressions which mean to crush, to bruise; the Itala renders the *terein* employed in the Septuagint by the Latin "servare", to guard; St. Jerome [1] maintains that the Hebrew verb has the meaning of "crushing" or "bruising" rather than of "lying in wait", "guarding". Still in his own work, which became the Latin Vulgate, the saint employs the verb "to crush" (*conterere*) in the first place, and "to lie in wait" (*insidiari*) in the second. Hence the punishment inflicted on the serpent and the serpent's retaliation are expressed by the same verb: but the wound of the serpent is mortal, since it affects his head, while the wound inflicted by the serpent is not mortal, being inflicted on the heel.

(2) The second point of difference between the Hebrew text and our version concerns the agent who is to inflict the mortal wound on the servant: our version agrees with the present Vulgate text

in reading "she" (*ipsa*) which refers to the woman, while the Hebrew text reads *hu'* (*autos, ipse*) which refers to the seed of the woman. According to our version, and the Vulgate reading, the woman herself will win the victory; according to the Hebrew text, she will be victorious through her seed. In this sense does the Bull "Ineffabilis" ascribe the victory to Our Blessed Lady. The reading "she" (*ipsa*) is neither an intentional corruption of the original text, nor is it an accidental error; it is rather an explanatory version expressing explicitly the fact of Our Lady's part in the victory over the serpent, which is contained implicitly in the Hebrew original. The strength of the Christian tradition as to Mary's share in this victory may be inferred from the retention of "she" in St. Jerome's version in spite of his acquaintance with the original text and with the reading "he" (*ipse*) in the old Latin version.

As it is quite commonly admitted that the Divine judgment is directed not so much against the serpent as against the originator of sin, the seed of the serpent denotes the followers of the serpent, the "brood of vipers", the "generation of vipers", those whose father is the Devil, the children of evil, *imitando, non nascendo* (Augustine). [2] One may be tempted to understand the seed of the woman in a similar collective sense, embracing all who are born of God. But seed not only may denote a particular person, but has such a meaning usually, if the context allows it. St. Paul (Galatians 3:16) gives this explanation of the word "seed" as it occurs in the patriarchal promises: "To Abraham were the promises made and to his seed. He saith not, and to his seeds, as of many; but as of one, and to his seed, which is Christ". Finally the expression "the woman" in the clause "I will put enmities between thee and the woman" is a literal version of the Hebrew text. The Hebrew Grammar of Gesenius-Kautzsch [3] establishes the rule: Peculiar to the Hebrew is the use of the article in order to indicate a person or thing, not yet known and not yet to be more clearly described, either as present or as to be taken into account under the contextual conditions. Since our indefinite article serves this purpose, we may translate: "I will put enmities between you and a woman". Hence the prophecy promises a woman, Our Blessed Lady, who will be the enemy of the serpent to a marked degree; besides, the same woman will be victorious over the Devil, at least through her offspring. The completeness of the victory is emphasized by the contextual phrase "earth shall thou eat", which is according to Winckler [4] a common old-oriental expression denoting the deepest humiliation [5].

Isaias 7:1-17

The second prophecy referring to Mary is found in Isaias 7:1-17. Critics have endeavoured to represent this passage as a combination of occurrences and sayings from the life of the prophet written down by an unknown hand [6]. The credibility of the contents is not necessarily affected by this theory, since prophetic traditions may be recorded by any writer without losing their credibility. But even Duhm considers the theory as an apparent attempt on the part of the critics to find out what the readers are willing to bear patiently; he believes it is a real misfortune for criticism itself that it has found a mere compilation in a passage which so graphically describes the birth-hour of faith.

According to IV Kings 16:1-4, and II Paralipomenon 27:1-8, Achaz, who began his reign 736 B.C., openly professed idolatry, so that God gave him into the hands of the kings of Syria and Israel. It appears that an alliance had been concluded between Phacee, King of Israel, and Rasin, King of Damascus, for the purpose of opposing a barrier to the Assyrian aggressions. Achaz, who cherished Assyrian proclivities, did not join the coalition; the allies invaded his territory, intending to substitute for Achaz a more subservient ruler, a certain son of Tabeel. While Rasin was occupied in reconquering the maritime city Elath, Phacee alone proceeded against Juda, "but they could not prevail". After Elath had fallen, Rasin joined his forces with those of Phacee; "Syria hath rested upon Ephraim", whereupon "his (Achaz') heart was moved, and the heart of his people, as the trees of the woods are moved with the wind". Immediate preparations must be made for a protracted siege, and Achaz is busily engaged near the upper pool from which the city received the greater part of its water supply. Hence the Lord says to Isaias: "Go forth to meet Achaz. . . at the end of the conduit of the upper pool". The prophet's commission is of an extremely consoling nature: "See thou be quiet; hear not, and let not thy heart be afraid of the two tails of these firebrands". The scheme of the enemies shall not succeed: "it shall not stand, and this shall not be." What is to be the particular fate of the enemies?

- Syria will gain nothing, it will remain as it has been in the past: "the head of Syria is Damascus, and the head of Damascus is Rasin".
- Ephraim too will remain in the immediate future as it has been hitherto: "the head of Ephraim is Samaria, and the head of Samaria the son of Romelia"; but after sixty-five years it will be destroyed, "within threescore and five years Ephraim shall cease to be a people".

Achaz had abandoned the Lord for Moloch, and put his trust in an alliance with Assyria; hence the conditional prophecy concerning Juda, "if you will not believe, you shall not continue". The test of belief follows immediately: "ask thee a sign of the Lord thy God, either unto the depth of hell or unto the height above". Achaz hypocritically answers: "I will not ask, and I will not tempt the Lord", thus refusing to express his belief in God, and preferring his Assyrian policy. The king prefers Assyria to God, and Assyria will come: "the Lord shall bring upon thee and upon thy people, and upon the house of thy father, days that have not come since the time of the separation of Ephraim from Juda with the king of the Assyrians." The house of David has been grievous not merely to men, but to God also by its unbelief; hence it "shall not continue", and, by an irony of Divine punishment, it will be destroyed by those very men whom it preferred to God.

Still the general Messianic promises made to the house of David cannot be frustrated: "The Lord Himself shall give you a sign. Behold a virgin shall conceive, and bear a son, and his name shall be called Emmanuel. He shall eat butter and honey, that he may know to refuse the evil and to choose the good. For before the child know to refuse the evil, and to choose the good, the land which thou abhorrest shall be forsaken of the face of her two kings." Without answering a number of questions connected with the explanation of the prophecy, we must confine ourselves here to the bare proof that the virgin mentioned by the prophet is Mary the Mother of Christ. The argument is based on the premises that the prophet's virgin is the mother of Emmanuel, and that Emmanuel

is Christ. The relation of the virgin to Emmanuel is clearly expressed in the inspired words; the same indicate also the identity of Emmanuel with the Christ.

The connection of Emmanuel with the extraordinary Divine sign which was to be given to Achaz predisposes one to see in the child more than a common boy. In 8:8, the prophet ascribes to him the ownership of the land of Juda: "the stretching out of his wings shall fill the breadth of thy land, O Emmanuel". In 9:6, the government of the house of David is said to be upon his shoulders, and he is described as being endowed with more than human qualities: "a child is born to us, and a son is given to us, and the government is upon his shoulders, and his name shall be called Wonderful, Counsellor, God the Mighty, the Father of the World to Come, and the Prince of Peace". Finally, the prophet calls Emmanuel "a rod out of the root of Jesse" endowed with "the spirit of the Lord. . .the spirit of wisdom and of understanding, the spirit of counsel, and of fortitude, the spirit of knowledge and of godliness"; his advent shall be followed by the general signs of the Messianic era, and the remnant of the chosen people shall be again the people of God (11:1-16).

Whatever obscurity or ambiguity there may be in the prophetic text itself is removed by St. Matthew (1:18-25). After narrating the doubt of St. Joseph and the angel's assurance, "that which is conceived in her is of the Holy Ghost", the Evangelist proceeds: "now all this was done that it might be fulfilled which the Lord spoke by the prophet, saying: Behold a virgin shall be with child, and bring forth a son, and they shall call his name Emmanuel." We need not repeat the exposition of the passage given by Catholic commentators who answer the exceptions raised against the obvious meaning of the Evangelist. We may infer from all this that Mary is mentioned in the prophecy of Isaias as mother of Jesus Christ; in the light of St. Matthew's reference to the prophecy, we may add that the prophecy predicted also Mary's virginity untarnished by the conception of the Emmanuel [7].

Micheas 5:2-3

A third prophecy referring to Our Blessed Lady is contained in Micheas 5:2-3: "And thou, Bethlehem, Ephrata, art a little one among the thousands of Juda: out of thee shall be come forth unto me that is to be the ruler in Israel, and his going forth is from the beginning, from the days of eternity. Therefore will he give them up till the time wherein she that travaileth shall bring forth, and the remnant of his brethren shall be converted to the children of Israel." Though the prophet (about 750-660 B.C.) was a contemporary of Isaias, his prophetic activity began a little later and ended a little earlier than that of Isaias. There can be no doubt that the Jews regarded the foregoing prediction as referring to the Messiah. According to St. Matthew (2:6) the chief priests and scribes, when asked where the Messiah was to be born, answered Herod in the words of the prophecy, "And thou Bethlehem the land of Juda. . ." According to St. John (7:42), the Jewish populace gathered at Jerusalem for the celebration of the feast asked the rhetorical question: "Doth not the Scripture say that Christ cometh of the seed of David, and from Bethlehem, the town where David was?" The Chaldee paraphrase of Mich. 5:2, confirms the same view: "Out of thee shall come forth unto me the Messiah, that he may exercise dominion in Israel". The very words of the prophecy admit of hardly any other explanation; for "his going forth is from the beginning, from the days of eternity".

But how does the prophecy refer to the Virgin Mary? Our Blessed Lady is denoted by the phrase, "till the time wherein she that travaileth shall bring forth". It is true that "she that travaileth" has been referred to the Church (St. Jerome, Theodoret), or to the collection of the Gentiles united with Christ (Ribera, Mariana), or again to Babylon (Calmet); but, on the one hand, there is hardly a sufficient connection between any of these events and the promised redeemer, on the other hand, the passage ought to read "till the time wherein she that is barren shall bring forth" if any of these events were referred to by the prophet. Nor can "she that travaileth" be referred to Sion: Sion is spoken of without figure before and after the present passage so that we cannot expect the prophet to lapse suddenly into figurative language. Moreover, the prophecy thus explained would not give a satisfactory sense. The contextual phrases "the ruler in Israel", "his going forth", which in Hebrew implies birth, and "his brethren" denote an individual, not a nation; hence we infer that the bringing forth must refer to the same person. It has been shown that the person of the ruler is the Messias; hence "she that travaileth" must denote the mother of Christ, or Our Blessed Lady. Thus explained the whole passage becomes clear: the Messias must be born in Bethlehem, an insignificant village in Juda: his family must be reduced to poverty and obscurity before the time of his birth; as this cannot happen if the theocracy remains intact, if David's house continues to flourish, "therefore will he give them up till the time wherein she that travaileth shall bring forth" the Messias. [8]

Jeremias 21:22

A fourth prophecy referring to Mary is found in Jeremias 21:22; "The Lord has created a new thing upon the earth: A woman shall compass a man". The text of the prophet Jeremias offers no small difficulties for the scientific interpreter; we shall follow the Vulgate version of the Hebrew original. But even this rendering has been explained in several different ways: Rosenmuller and several conservative Protestant interpreters defend the meaning, "a woman shall *protect* a man"; but such a motive would hardly induce the men of Israel to return to God. The explanation "a woman shall *seek* a man" hardly agrees with the text; besides, such an inversion of the natural order is presented in Isaias 4:1, as a sign of the greatest calamity. Ewald's rendering, "a woman shall *change into* a man", is hardly faithful to the original text. Other commentators see in the woman a type of the Synagogue or of the Church, in man the type of God, so that they explain the prophecy as meaning, "God will dwell again in the midst of the Synagogue (of the people of Israel)" or "the Church will protect the earth with its valiant men". But the Hebrew text hardly suggests such a meaning; besides, such an explanation renders the passage tautological: "Israel shall return to its God, for Israel will love its God". Some recent writers render the Hebrew original: "God creates a new thing upon the earth: the woman (wife) returns to the man (her husband)". According to the old law (Deuteronomy 24:1-4; Jeremias 3:1) the husband could not take back the wife once repudiated by him; but the Lord will do something new by allowing the faithless wife, i.e. the guilty nation, to return to the friendship of God. This explanation rests upon a conjectural correction of the text; besides, it does not necessarily bear the Messianic meaning which we expect in the passage.

The Greek Fathers generally follow the Septuagint version, "The Lord has created salvation in a new plantation, men shall go about in safety"; but St. Athanasius twice [9] combines Aquila's

version "God has created a new thing in woman" with that of the Septuagint, saying that the new plantation is Jesus Christ, and that the new thing created in woman is the body of the Lord, conceived within the virgin without the co-operation of man. St. Jerome too [10] understands the prophetic text of the virgin conceiving the Messias. This meaning of the passage satisfies the text and the context. As the Word Incarnate possessed from the first moment of His conception all His perfections excepting those connected with His bodily development, His mother is rightly said to "compass a man". No need to point out that such a condition of a newly conceived child is rightly called "a new thing upon earth". The context of the prophecy describes after a short general introduction (30:1-3) Israel's future freedom and restoration in four stanzas: 30:4-11, 12-22; 30:23; 31:14, 15-26; the first three stanzas end with the hope of the Messianic time. The fourth stanza, too, must be expected to have a similar ending. Moreover, the prophecy of Jeremias, uttered about 589 B.C. and understood in the sense just explained, agrees with the contemporary Messianic expectations based on Isaias 7:14; 9:6; Mich. 5:3. According to Jeremias, the mother of Christ is to differ from other mothers in this, that her child, even while within her womb, shall possess all those properties which constitute real manhood [11]. The Old Testament refers indirectly to Mary in those prophecies which predict the incarnation of the Word of God.

II. OLD TESTAMENT TYPES AND FIGURES OF MARY

In order to be sure of the typical sense, it must be revealed, i.e. it must come down to us through Scripture or tradition. Individual pious writers have developed copious analogies between certain data of the Old Testament and corresponding data of the New; however ingenious these developments may be, they do not prove that God really intended to convey the corresponding truths in the inspired text of the Old Testament. On the other hand, it must be kept in mind that not all truths contained in either Scripture or tradition have been explicitly proposed to the faithful as matters of belief by the explicit definition of the Church. According to the principle "Lex orandi est lex credenti" we must treat at least with reverence the numberless suggestions contained in the official prayers and liturgies of the Church. In this sense we must regard many of the titles bestowed on Our Blessed Lady in her litany and in the "Ave maris stella". The Antiphons and Responses found in the Offices recited on the various feasts of Our Blessed Lady suggest a number of types of Mary that hardly could have been brought so vividly to the notice of the Church's ministers in any other way. The third antiphon of Lauds of the Feast of the Circumcision sees in "the bush that was not burnt" (Exodus 3:2) a figure of Mary conceiving her Son without the loss of her virginity. The second antiphon of Lauds of the same Office sees in Gideon's fleece wet with dew while all the ground beside had remained dry (Judges 6:37-38) a type of Mary receiving in her womb the Word Incarnate [12]. The Office of the Blessed Virgin applies to Mary many passages concerning the spouse in the Canticle of Canticles [13] and also concerning Wisdom in the Book of Proverbs, 8:22-31 [14]. The application to Mary of a "garden enclosed, a fountain sealed up" mentioned in Canticles 4:12 is only a particular instance of what has been said above. [15] Besides, Sara, Debbora, Judith, and Esther are variously used as figures of Mary; the ark of the Covenant, over which the presence of

God manifested itself, is used as the figure of Mary carrying God Incarnate within her womb. But especially Eve, the mother of all the living (Genesis 3:20), is considered as a type of Mary who is the mother of all the living in the order of grace [16].

III. MARY IN THE GOSPELS

The reader of the Gospels is at first surprised to find so little about Mary; but this obscurity of Mary in the Gospels has been studied at length by Blessed Peter Canisius [17], Auguste Nicolas [18], Cardinal Newman [19], and Very Rev. J. Spencer Northcote [20]. In the commentary on the "Magnificat", published 1518, even Luther expresses the belief that the Gospels praise Mary sufficiently by calling her (eight times) the Mother of Jesus. In the following paragraphs we shall briefly group together what we know of Our Blessed Lady's life before the birth of her Divine Son, during the hidden life of Our Lord, during His public life and after His resurrection.

Mary's Davidic ancestry

St. Luke (2:4) says that St. Joseph went from Nazareth to Bethlehem to be enrolled, "because he was of the house and Family of David". As if to exclude all doubt concerning the Davidic descent of Mary, the Evangelist (1:32, 69) states that the child born of Mary without the intervention of man shall be given "the throne of David His father", and that the Lord God has "raised up an horn of salvation to us in the house of David his servant". [21] St. Paul too testifies that Jesus Christ "was made to him [God] of the seed of David, according to the flesh" (Romans 1:3). If Mary were not of Davidic descent, her Son conceived by the Holy Ghost could not be said to be "of the seed of David". Hence commentators tell us that in the text "in the sixth month the angel Gabriel was sent from God. . .to a virgin espoused to a man whose name was Joseph, of the house of David" (Luke 1:26-27); the last clause "of the house of David" does not refer to Joseph, but to the virgin who is the principal person in the narrative; thus we have a direct inspired testimony to Mary's Davidic descent. [22]

While commentators generally agree that the genealogy found at the beginning of the first Gospel is that of St. Joseph, Annius of Viterbo proposes the opinion, already alluded to by St. Augustine, that St. Luke's genealogy gives the pedigree of Mary. The text of the third Gospel (3:23) may be explained so as to make Heli the father of Mary: "Jesus. . .being the son (as it was supposed of Joseph) of Heli", or "Jesus. . .being the son of Joseph, as it was supposed, the son of Heli" (Lightfoot, Bengel, etc.), or again "Jesus. . .being as it was supposed the son of Joseph, who was [the son-in-law] of Heli" [23]. In these explanations the name of Mary is not mentioned explicitly, but it is implied; for Jesus is the Son of Heli through Mary.

Her parents

Though few commentators adhere to this view of St. Luke's genealogy, the name of Mary's father, Heli, agrees with the name given to Or Lady's father in a tradition founded upon the report of the Protoevangelium of James, an apocryphal Gospel which dates from the end of the second century. According to this document the parents of Mary are Joachim and Anna. Now, the name *Joachim* is only a variation of *Heli* or *Eliachim*, substituting one Divine name (Yahweh) for the

other (Eli, Elohim). The tradition as to the parents of Mary, found in the Gospel of James, is reproduced by St. John Damascene [24], St. Gregory of Nyssa [25], St. Germanus of Constantinople [26], pseudo-Epiphanius [27], pseudo-Hilarion [28], and St. Fulbert of Chartres [29]. Some of these writers add that the birth of Mary was obtained by the fervent prayers of Joachim and Anna in their advanced age. As Joachim belonged to the royal family of David, so Anna is supposed to have been a descendant of the priestly family of Aaron; thus Christ the Eternal King and Priest sprang from both a royal and priestly family [30].

The hometown of Mary's parents

According to Luke 1:26, Mary lived in Nazareth, a city in Galilee, at the time of the Annunciation. A certain tradition maintains that she was conceived and born in the same house in which the Word became flesh [31]. Another tradition based on the Gospel of James regards Sephoris as the earliest home of Joachim and Anna, though they are said to have lived later on in Jerusalem, in a house called by St. Sophronius of Jerusalem [32] *Probaticea*. *Probaticea*, a name probably derived from the sanctuary's nearness to the pond called *Probaticea* or *Bethsaida* in John 5:2. It was here that Mary was born. About a century later, about A.D. 750, St. John Damascene [33] repeats the statement that Mary was born in the *Probaticea*.

It is said that, as early as in the fifth century the empress Eudoxia built a church over the place where Mary was born, and where her parents lived in their old age. The present Church of St. Anna stands at a distance of only about 100 Feet from the pool *Probaticea*. In 1889, 18 March, was discovered the crypt which encloses the supposed burying-place of St. Anna. Probably this place was originally a garden in which both Joachim and Anna were laid to rest. At their time it was still outside of the city walls, about 400 feet north of the Temple. Another crypt near St. Anna's tomb is the supposed birthplace of the Blessed Virgin; hence it is that in early times the church was called St. Mary of the Nativity [34]. In the Cedron Valley, near the road leading to the Church of the Assumption, is a little sanctuary containing two altars which are said to stand over the burying-places of Sts. Joachim and Anna; but these graves belong to the time of the Crusades [35]. In Sephoris too the Crusaders replaced by a large church an ancient sanctuary which stood over the legendary house of Sts. Joachim and Anna. After 1788 part of this church was restored by the Franciscan Fathers.

Her Immaculate Conception

The Immaculate Conception of Our Blessed Lady has been treated in a special article.

The birth of Mary

As to the place of the birth of Our Blessed Lady, there are three different traditions to be considered.

First, the event has been placed in Bethlehem. This opinion rests on the authority of the following witnesses: it is expressed in a writing entitled "De nativ. S. Mariae" [36] inserted after the works of St. Jerome; it is more or less vaguely supposed by the Pilgrim of Piacenza, erroneously called Antoninus Martyr, who wrote about A.D. 580 [37]; finally the popes Paul II (1471), Julius II (1507), Leo X (1519), Paul III (1535), Pius IV (1565), Sixtus V (1586), and Innocent XII (1698) in their

Bulls concerning the Holy House of Loreto say that the Blessed Virgin was born, educated, and greeted by the angel in the Holy House. But these pontiffs hardly wish to decide an historical question; they merely express the opinion of their respective times.

A second tradition placed the birth of Our Blessed Lady in Sephoris, about three miles north of Bethlehem, the Roman Diocaesarea, and the residence of Herod Antipas till late in the life of Our Lord. The antiquity of this opinion may be inferred from the fact that under Constantine a church was erected in Sephoris to commemorate the residence of Joachim and Anna in that place [38]. St. Epiphanius speaks of this sanctuary [39]. But this merely shows that Our Blessed Lady may have lived in Sephoris for a time with her parents, without forcing us to believe that she had been born there.

The third tradition, that Mary was born in Jerusalem, is the most probable one. We have seen that it rests upon the testimony of St. Sophronius, St. John Damascene, and upon the evidence of the recent finds in the Probatia. The Feast of Our Lady's Nativity was not celebrated in Rome till toward the end of the seventh century; but two sermons found among the writings of St. Andrew of Crete (d. 680) suppose the existence of this feat, and lead one to suspect that it was introduced at an earlier date into some other churches [40]. In 799 the 10th canon of the Synod of Salzburg prescribes four feasts in honor of the Mother of God: the Purification, 2 February; the Annunciation, 25 March; the Assumption, 15 August; the Nativity, 8 September.

The Presentation of Mary

According to Exodus 13:2 and 13:12, all the Hebrew first-born male children had to be presented in the Temple. Such a law would lead pious Jewish parents to observe the same religious rite with regard to other favourite children. This inclines one to believe that Joachim and Anna presented in the Temple their child, which they had obtained by their long, fervent prayers.

As to Mary, St. Luke (1:34) tells us that she answered the angel announcing the birth of Jesus Christ: "how shall this be done, because I know not man". These words can hardly be understood, unless we assume that Mary had made a vow of virginity; for, when she spoke them, she was betrothed to St. Joseph. [41] The most opportune occasion for such a vow was her presentation in the Temple. As some of the Fathers admit that the faculties of St. John the Baptist were prematurely developed by a special intervention of God's power, we may admit a similar grace for the child of Joachim and Anna. [42]

But what has been said does not exceed the certainty of antecedently probable pious conjectures. The consideration that Our Lord could not have refused His Blessed Mother any favours which depended merely on His munificence does not exceed the value of an *a priori* argument. Certainty in this question must depend on external testimony and the teaching of the Church.

Now, the Protoevangelium of James (7-8), and the writing entitled "De nativit. Mariae" (7-8), [43] state that Joachim and Anna, faithful to a vow they had made, presented the child Mary in the Temple when she was three years old; that the child herself mounted the Temple steps, and that she made her vow of virginity on this occasion. St. Gregory of Nyssa [44] and St. Germanus of Constantinople [45] adopt this report; it is also followed by pseudo-Gregory of Nazianzus in his

"Christus patiens". [46] Moreover, the Church celebrates the Feast of the Presentation, though it does not specify at what age the child Mary was presented in the Temple, when she made her vow of virginity, and what were the special natural and supernatural gifts with which God endowed her. The feast is mentioned for the first time in a document of Manuel Commenus, in 1166; from Constantinople the feast must have been introduced into the western Church, where we find it at the papal court at Avignon in 1371; about a century later, Pope Sixtus IV introduced the Office of the Presentation, and in 1585 Pope Sixtus V extended the Feast of the Presentation to the whole Church.

Her betrothal to Joseph

The apocryphal writings to which we referred in the last paragraph state that Mary remained in the Temple after her presentation in order to be educated with other Jewish children. There she enjoyed ecstatic visions and daily visits of the holy angels.

When she was fourteen, the high priest wished to send her home for marriage. Mary reminded him of her vow of virginity, and in his embarrassment the high priest consulted the Lord. Then he called all the young men of the family of David, and promised Mary in marriage to him whose rod should sprout and become the resting place of the Holy Ghost in form of a dove. It was Joseph who was privileged in this extraordinary way.

We have already seen that St. Gregory of Nyssa, St. Germanus of Constantinople, and pseudo-Gregory Nazianzen seem to adopt these legends. Besides, the emperor Justinian allowed a basilica to be built on the platform of the former Temple in memory of Our Lady's stay in the sanctuary; the church was called the New St. Mary's so as to distinguish it from the Church of the Nativity. It seems to be the modern mosque el-Aksa. [47]

On the other hand, the Church is silent as to Mary's stay in the Temple. St. Ambrose [48], describing Mary's life before the Annunciation, supposes expressly that she lived in the house of her parents. All the descriptions of the Jewish Temple which can claim any scientific value leave us in ignorance as to any localities in which young girls might have been educated. Joas's stay in the Temple till the age of seven does not favour the supposition that young girls were educated within the sacred precincts; for Joas was king, and was forced by circumstances to remain in the Temple (cf. IV Kings 11:3). What II Machabees 3:19, says about "the virgins also that were shut up" does not show that any of them were kept in the Temple buildings. If the prophetess Anna is said (Luke 2:37) not to have "departed from the temple, by fastings and prayer serving night and day", we do not suppose that she actually lived in one of the temple rooms. [49] As the house of Joachim and Anna was not far distant from the Temple, we may suppose that the holy child Mary was often allowed to visit the sacred buildings in order to satisfy her devotion.

Jewish maidens were considered marriageable at the age of twelve years and six months, though the actual age of the bride varied with circumstances. The marriage was preceded by the betrothal, after which the bride legally belonged to the bridegroom, though she did not live with him till about a year later, when the marriage used to be celebrated. All this agrees well with the language of the Evangelists. St. Luke (1:27) calls Mary "a virgin espoused to a man whose name was Joseph"; St.

Matthew (1:18) says, when as his mother Mary was espoused to Joseph, before they came together, she was found with child, of the Holy Ghost". As we know of no brother of Mary, we must suppose that she was an heiress, and was obliged by the law of Numbers 36:6 to marry a member of her tribe. The Law itself prohibited marriage within certain degrees of relationship, so that the marriage of even an heiress was left more or less to choice.

According to Jewish custom, the union between Joseph and Mary had to be arranged by the parents of St. Joseph. One might ask why Mary consented to her betrothal, though she was bound by her vow of virginity. As she had obeyed God's inspiration in making her vow, so she obeyed God's inspiration in becoming the affianced bride of Joseph. Besides, it would have been singular among the Jews to refuse betrothal or marriage; for all the Jewish maidens aspired after marriage as the accomplishment of a natural duty. Mary trusted the Divine guidance implicitly, and thus was certain that her vow would be kept even in her married state.

The Annunciation

The Annunciation has been treated in a special article.

The Visitation

According to Luke 1:36, the angel Gabriel told Mary at the time of the annunciation, "behold, thy cousin Elizabeth, she also hath conceived a son in her old age, and this is the sixth month with her that was called barren". Without doubting the truth of the angel's words, Mary determined at once to add to the pleasure of her pious relative. [50] Hence the Evangelist continues (1:39): "And Mary, rising up in those days, went into the hill country with haste into a city of Juda. And she entered into the house of Zachary, and saluted Elizabeth." Though Mary must have told Joseph of her intended visit, it is hard to determine whether he accompanied her; if the time of the journey happened to coincide with one of the festal seasons at which the Israelites had to go to the Temple, there would be little difficulty about companionship.

The place of Elizabeth's home has been variously located by different writers: it has been placed in Machaerus, over ten miles east of the Dead Sea, or in Hebron, or again in the ancient sacerdotal city of Jutta, about seven miles south of Hebron, or finally in Ain-Karim, the traditional St. John-in-the Mountain, nearly four miles west of Jerusalem. [51] But the first three places possess no traditional memorial of the birth or life of St. John; besides, Machaerus was not situated in the mountains of Juda; Hebron and Jutta belonged after the Babylonian captivity to Idumea, while Ain-Karim lies in the "hill country" [52] mentioned in the inspired text of St. Luke.

After her journey of about thirty hours, Mary "entered into the house of Zachary, and saluted Elizabeth" (Luke 1:40). According to tradition, Elizabeth lived at the time of the visitation not in her city home, but in her villa, about ten minutes distant from the city; formerly this place was marked by an upper and lower church. In 1861 the present small Church of the Visitation was erected on the ancient foundations.

"And it came to pass that, when Elizabeth heard the salutation of Mary, the infant leaped in her womb." It was at this moment that God fulfilled the promise made by the angel to Zachary (Luke 1:15), "and he shall be filled with the Holy Ghost, even from his mother's womb"; in other words,

the infant in Elizabeth's womb was cleansed from the stain of original sin. The fullness of the Holy Ghost in the infant overflowed, as it were, into the soul of his mother: "and Elizabeth was filled with the Holy Ghost" (Luke 1:41). Thus both child and mother were sanctified by the presence of Mary and the Word Incarnate [53]; filled as she was with the Holy Ghost, Elizabeth "cried out with a loud voice, and said: Blessed art thou among women, and blessed is the fruit of thy womb. And whence is this to me, that the mother of my Lord should come to me? For behold, as soon as the voice of thy salutation sounded in my ears, the infant in my womb leaped for joy. And blessed art thou that hast believed, because those things shall be accomplished that were spoken to thee by the Lord" (Luke 1:42-45). Leaving to commentators the full explanation of the preceding passage, we draw attention only to two points:

- Elizabeth begins her greeting with the words with which the angel had finished his salutation, thus showing that both spoke in the same Holy Spirit;
- Elizabeth is the first to call Mary by her most honourable title "Mother of God".

Mary's answer is the canticle of praise commonly called "Magnificat" from the first word of its Latin text; the "Magnificat" has been treated in a separate article.

The Evangelist closes his account of the Visitation with the words: "And Mary abode with her about three months; and she returned to her own house" (Luke 1:56). Many see in this brief statement of the third gospel an implied hint that Mary remained in the house of Zachary till the birth of John the Baptist, while others deny such an implication. As the Feast of the Visitation was placed by the 43rd canon of the Council of Basle (A.D. 1441) on 2 July, the day following the Octave of the Feast of St. John Baptist, it has been inferred that Mary may have remained with Elizabeth until after the child's circumcision; but there is no further proof for this supposition. Though the visitation is so accurately described in the third Gospel, its feast does not appear to have been kept till the thirteenth century, when it was introduced through the influence of the Franciscans; in 1389 it was officially instituted by Urban VI.

Mary's pregnancy becomes known to Joseph

After her return from Elizabeth, Mary "was found with child, of the Holy Ghost" (Matthew 1:18). As among the Jews, betrothal was a real marriage, the use of marriage after the time of espousals presented nothing unusual among them. Hence Mary's pregnancy could not astonish anyone except St. Joseph. As he did not know the mystery of the Incarnation, the situation must have been extremely painful both to him and to Mary. The Evangelist says: "Whereupon Joseph her husband being a just man, and not willing publicly to expose her, was minded to put her away privately" (Matthew 1:19). Mary left the solution of the difficulty to God, and God informed the perplexed spouse in His own time of the true condition of Mary. While Joseph "thought on these things, behold the angel of the Lord appeared to him in his sleep, saying: Joseph, son of David, fear not to take unto thee Mary thy wife, for that which is conceived in her is of the Holy Ghost. And she shall bring forth a son, and thou shalt call his name Jesus. For He shall save His people from their sins" (Matthew 1:20-21).

Not long after this revelation, Joseph concluded the ritual marriage contract with Mary. The Gospel simply says: "Joseph rising up from sleep did as the angel of the Lord had commanded him,

and took unto him his wife" (Matthew 1:24). While it is certain that between the betrothal and the marriage at least three months must have elapsed, during which Mary stayed with Elizabeth, it is impossible to determine the exact length of time between the two ceremonies. We do not know how long after the betrothal the angel announced to Mary the mystery of the Incarnation, nor do we know how long the doubt of Joseph lasted, before he was enlightened by the visit of the angel. From the age at which Hebrew maidens became marriageable, it is possible that Mary gave birth to her Son when she was about thirteen or fourteen years of age. No historical document tells us how old she actually was at the time of the Nativity.

The journey to Bethlehem

St. Luke (2:1-5) explains how Joseph and Mary journeyed from Nazareth to Bethlehem in obedience to a decree of Caesar Augustus which prescribed a general enrolment. The questions connected with this decree have been considered in the article BIBLICAL CHRONOLOGY. There are various reasons why Mary should have accompanied Joseph on this journey; she may not wished to lose Joseph's protection during the critical time of her pregnancy, or she may have followed a special Divine inspiration impelling her to go in order to fulfil the prophecies concerning her Divine Son, or again she may have been compelled to go by the civil law either as an heiress or to settle the personal tax payable by women over twelve years of age. [54]

As the enrolment had brought a multitude of strangers to Bethlehem, Mary and Joseph found no room in the caravansary and had to take lodging in a grotto which served as a shelter for animals. [55]

Mary gives birth to Our Lord

"And it came to pass, that when they were there, her days were accomplished, that she should be delivered" (Luke 2:6); this language leaves it uncertain whether the birth of Our Lord took place immediately after Joseph and Mary had taken lodging in the grotto, or several days later. What is said about the shepherds "keeping the night watches over their flock" (Luke 2:8) shows that Christ was born in the night time.

After bringing forth her Son, Mary "wrapped Him up in swaddling clothes, and laid Him in a manger" (Luke 2:7), a sign that she did not suffer from the pain and weakness of childbirth. This inference agrees with the teaching of some of the principal Fathers and theologians: St. Ambrose [56], St. Gregory of Nyssa [57], St. John Damascene [58], the author of *Christus patiens* [59], St. Thomas [60], etc. It was not becoming that the mother of God should be subject to the punishment pronounced in Genesis 3:16, against Eve and her sinful daughters.

Shortly after the birth of the child, the shepherds, obedient to the angelic invitation, arrived in the grotto, "and they found Mary and Joseph, and the infant lying in the manger" (Luke 2:16). We may suppose that the shepherds spread the glad tidings they had received during the night among their friends in Bethlehem, and that the Holy Family was received by one of its pious inhabitants into more suitable lodgings.

The Circumcision of Our Lord

"And after eight days were accomplished, that the child should be circumcised, his name was called Jesus" (Luke 2:21). The rite of circumcision was performed either in the synagogue or in the home of the Child; it is impossible to determine where Our Lord's Circumcision took place. At any rate, His Blessed Mother must have been present at the ceremony.

The Presentation

According to the law of Leviticus 12:2-8, the Jewish mother of a male child had to present herself forty days after his birth for legal purification; according to Exodus 13:2, and Numbers 18:15, the first born son had to be presented on the same occasion. Whatever reasons Mary and the Infant might have for claiming an exemption, they complied with the law. But, instead of offering a lamb, they presented the sacrifice of the poor, consisting of a pair of turtle-doves or two young pigeons. In II Corinthians 8:9, St. Paul informs the Corinthians that Jesus Christ "being rich. . . became poor, for your sakes, that through his poverty you might be rich". Even more acceptable to God than Mary's poverty was the readiness with which she surrendered her Divine Son to the good pleasure of His Heavenly Father.

After the ceremonial rites had been complied with, holy Simeon took the Child in his arms, and thanked God for the fulfilment of his promises; he drew attention to the universality of the salvation that was to come through Messianic redemption "prepared before the face of all peoples: a light to the revelation of the Gentiles, and the glory of thy people Israel" (Luke 2:31 sq.). Mary and Joseph now began to know their Divine Child more fully; they "were wondering at those things which were spoken concerning him" (Luke 2:33). As if to prepare Our Blessed Mother for the mystery of the cross, holy Simeon said to her: "Behold this child is set for the fall, and for the resurrection of many in Israel, and for a sign which shall be contradicted. And thy own soul a sword shall pierce, that, out of many hearts, thoughts may be revealed" (Luke 2:34-35). Mary had suffered her first great sorrow at the time when Joseph was hesitating about taking her for his wife; she experienced her second great sorrow when she heard the words of holy Simeon.

Though the incident of the prophetess Anna had a more general bearing, for she "spoke of him (the Child) to all that looked for the redemption of Israel" (Luke 2:38), it must have added greatly to the wonder of Joseph and Mary. The Evangelist's concluding remark, "after they had performed all things according to the law of the Lord, they returned into Galilee, to their city Nazareth" (Luke 2:39), has been variously interpreted by commentators; as to the order of events, see the article CHRONOLOGY OF THE LIFE OF JESUS CHRIST.

The visit of the Magi

After the Presentation, the Holy Family either returned to Bethlehem directly, or went first to Nazareth, and then moved into the city of David. At any rate, after the "wise men from the east" had followed the Divine guidance to Bethlehem, "entering into the house, they found the child with Mary his mother, and falling down they adored him; and opening their treasures, they offered him gifts; gold, frankincense, and myrrh" (Matthew 2:11). The Evangelist does not mention Joseph; not that he was not present, but because Mary occupies the principal place near the Child. How

Mary and Joseph disposed of the presents offered by their wealthy visitors has not been told us by the Evangelists.

The flight to Egypt

Soon after the departure of the wise men Joseph received the message from the angel of the Lord to fly into Egypt with the Child and His mother on account of the evil designs of Herod; the holy man's ready obedience is briefly described by the Evangelist in the words: "who arose, and took the child and his mother by night, and retired into Egypt" (Matthew 2:14). Persecuted Jews had ever sought a refuge in Egypt (cf. III Kings 11:40; IV Kings 25:26); about the time of Christ Jewish colonists were especially numerous in the land of the Nile [61]; according to Philo [62] they numbered at least a million. In Leontopolis, in the district of Heliopolis, the Jews had a temple (160 B.C.-A.D. 73) which rivalled in splendour the temple in Jerusalem. [63] The Holy Family might therefore expect to find in Egypt a certain amount of help and protection.

On the other hand, it required a journey of at least ten days from Bethlehem to reach the nearest habitable districts of Egypt. We do not know by what road the Holy Family effected its flight; they may have followed the ordinary road through Hebron; or they may have gone by way of Eleutheropolis and Gaza, or again they may have passed west of Jerusalem towards the great military road of Joppe.

There is hardly any historical document which will assist us in determining where the Holy Family lived in Egypt, nor do we know how long the enforced exile lasted. [64]

When Joseph received from the angel the news of Herod's death and the command to return into the land of Israel, he "arose, and took the child and his mother, and came into the land of Israel" (Matthew 2:21). The news that Archelaus ruled in Judea prevented Joseph from settling in Bethlehem, as had been his intention; "warned in sleep [by the angel, he] retired into the quarters of Galilee. And coming he dwelt in a city called Nazareth" (Matthew 2:22-23). In all these details Mary simply followed the guidance of Joseph, who in his turn received the Divine manifestations as head of the Holy Family. There is no need to point out the intense sorrow which Mary suffered on account of the early persecution of the Child.

The Holy Family in Nazareth

The life of the Holy Family in Nazareth was that of the ordinary poor tradesman. According to Matthew 13:55, the townsfolk asked "Is not this the carpenter's son?"; the question, as expressed in the second Gospel (Mark 6:3), shows a slight variation, "Is not this the carpenter?" While Joseph gained the livelihood for the Holy Family by his daily work, Mary attended to the various duties of housekeeper. St. Luke (2:40) briefly says of Jesus: "And the child grew, and waxed strong, full of wisdom; and the grace of God was in him". The weekly Sabbath and the annual great feasts interrupted the daily routine of life in Nazareth.

The finding of Our Lord in the Temple

According to the law of Exodus 23:17, only the men were obliged to visit the Temple on the three solemn feasts of the year; but the women often joined the men to satisfy their devotion. St. Luke (2:41) informs us that "his [the child's] parents went every year to Jerusalem, at the solemn

day of the pasch". Probably the Child Jesus was left in the home of friends or relatives during the days of Mary's absence. According to the opinion of some writers, the Child did not give any sign of His Divinity during the years of His infancy, so as to increase the merits of Joseph's and Mary's faith based on what they had seen and heard at the time of the Incarnation and the birth of Jesus. Jewish Doctors of the Law maintained that a boy became a son of the law at the age of twelve years and one day; after that he was bound by the legal precepts.

The evangelist supplies us here with the information that, "when he was twelve years old, they going up into Jerusalem, according to the custom of the feast, and having fulfilled the days, when they returned, the child Jesus remained in Jerusalem, and his parents knew it not" (Luke 2:42-43). Probably it was after the second festal day that Joseph and Mary returned with the other Galilean pilgrims; the law did not require a longer sojourn in the Holy City. On the first day the caravan usually made a four hours' journey, and rested for the night in Beroth on the northern boundary of the former Kingdom of Juda. The crusaders built in this place a beautiful Gothic church to commemorate Our Lady's sorrow when she "sought him [her child] among their kinsfolks and acquaintance, and not finding him,. . .returned into Jerusalem, seeking him" (Luke 2:44-45). The Child was not found among the pilgrims who had come to Beroth on their first day's journey; nor was He found on the second day, when Joseph and Mary returned to Jerusalem; it was only on the third day that they "found him [Jesus] in the temple, sitting in the midst of the doctors, hearing them, and asking them questions. . .And seeing him, they wondered. And his mother said to him: Son, why hast thou done so to us? behold thy father and I have sought thee sorrowing" (Luke 2:40-48). Mary's faith did not allow her to fear a mere accident for her Divine Son; but she felt that His behaviour had changed entirely from His customary exhibition of docility and subjection. The feeling caused the question, why Jesus had treated His parents in such a way. Jesus simply answered: "How is it that you sought me? did you not know, that I must be about my father's business?" (Luke 2:49). Neither Joseph nor Mary understood these words as a rebuke; "they understood not the word that he spoke to them" (Luke 2:50). It has been suggested by a recent writer that the last clause may be understood as meaning, "they [i.e., the bystanders] understood not the word he spoke unto them [i.e., to Mary and Joseph]".

The remainder of Our Lord's youth

After this, Jesus "went down with them, and came to Nazareth" where He began a life of work and poverty, eighteen years of which are summed up by the Evangelist in the few words, and he "was subject to them, and. . .advanced in wisdom, and age, and grace with God and men" (Luke 2:51-52). The interior life of Mary is briefly indicated by the inspired writer in the expression, "and his mother kept all these words in her heart" (Luke 2:51). A similar expression had been used in 2:19, "Mary kept all these words, pondering them in her heart". Thus Mary observed the daily life of her Divine Son, and grew in His knowledge and love by meditating on what she saw and heard. It has been pointed out by certain writers that the Evangelist here indicates the last source from which he derived the material contained in his first two chapters.

Mary's perpetual virginity

In connection with the study of Mary during Our Lord's hidden life, we meet the questions of her perpetual virginity, of her Divine motherhood, and of her personal sanctity. Her spotless virginity has been sufficiently considered in the article on the Virgin Birth. The authorities there cited maintain that Mary remained a virgin when she conceived and gave birth to her Divine Son, as well as after the birth of Jesus. Mary's question (Luke 1:34), the angel's answer (Luke 1:35, 37), Joseph's way of behaving in his doubt (Matthew 1:19-25), Christ's words addressed to the Jews (John 8:19) show that Mary retained her virginity during the conception of her Divine Son. [65]

As to Mary's virginity after her childbirth, it is not denied by St. Matthew's expressions "before they came together" (1:18), "her firstborn son" (1:25), nor by the fact that the New Testament books repeatedly refer to the "brothers of Jesus". [66] The words "before they came together" mean probably, "before they lived in the same house", referring to the time when they were merely betrothed; but even if the words be understood of marital intercourse, they only state that the Incarnation took place before any such intercourse had intervened, without implying that it did occur after the Incarnation of the Son of God. [67]

The same must be said of the expression, "and he knew her not till she brought forth her firstborn son" (Matthew 1:25); the Evangelist tells us what did not happen before the birth of Jesus, without suggesting that it happened after his birth. [68] The name "firstborn" applies to Jesus whether his mother remained a virgin or gave birth to other children after Jesus; among the Jews it was a legal name [69], so that its occurrence in the Gospel cannot astonish us.

Finally, the "brothers of Jesus" are neither the sons of Mary, nor the brothers of Our Lord in the proper sense of the word, but they are His cousins or the more or less near relatives. [70] The Church insists that in His birth the Son of God did not lessen but consecrate the virginal integrity of His mother (Secret in Mass of Purification). The Fathers express themselves in similar language concerning this privilege of Mary. [71]

Mary's Divine motherhood

Mary's Divine motherhood is based on the teaching of the Gospels, on the writings of the Fathers, and on the express definition of the Church. St. Matthew (1:25) testifies that Mary "brought forth her first-born son" and that He was called Jesus. According to St. John (1:15) Jesus is the Word made flesh, the Word Who assumed human nature in the womb of Mary. As Mary was truly the mother of Jesus, and as Jesus was truly God from the first moment of His conception, Mary is truly the mother of God. Even the earliest Fathers did not hesitate to draw this conclusion as may be seen in the writings of St. Ignatius [72], St. Irenaeus [73], and Tertullian [74]. The contention of Nestorius denying to Mary the title "Mother of God" [75] was followed by the teaching of the Council of Ephesus proclaiming Mary to be *Theotokos* in the true sense of the word. [76]

Mary's perfect sanctity

Some few patristic writers expressed their doubts as to the presence of minor moral defects in Our Blessed Lady. [77] St. Basil, e.g., suggests that Mary yielded to doubt on hearing the words of holy Simeon and on witnessing the crucifixion. [78] St. John Chrysostom is of opinion that Mary would have felt fear and trouble, unless the angel had explained the mystery of the Incarnation to

her, and that she showed some vainglory at the marriage feast in Cana and on visiting her Son during His public life together with the brothers of the Lord. [79] St. Cyril of Alexandria [80] speaks of Mary's doubt and discouragement at the foot of the cross. But these Greek writers cannot be said to express an Apostolic tradition, when they express their private and singular opinions. Scripture and tradition agree in ascribing to Mary the greatest personal sanctity; She is conceived without the stain of original sin; she shows the greatest humility and patience in her daily life (Luke 1:38, 48); she exhibits an heroic patience under the most trying circumstances (Luke 2:7, 35, 48; John 19:25-27). When there is question of sin, Mary must always be excepted. [81] Mary's complete exemption from actual sin is confirmed by the Council of Trent (Session VI, Canon 23): "If any one say that man once justified can during his whole life avoid all sins, even venial ones, as the Church holds that the Blessed Virgin did by special privilege of God, let him be anathema." Theologians assert that Mary was impeccable, not by the essential perfection of her nature, but by a special Divine privilege. Moreover, the Fathers, at least since the fifth century, almost unanimously maintain that the Blessed Virgin never experienced the motions of concupiscence.

The miracle in Cana

The evangelists connect Mary's name with three different events in Our Lord's public life: with the miracle in Cana, with His preaching, and with His passion. The first of these incidents is related in John 2:1-10.

There was a marriage feast in Cana of Galilee. . .and the mother of Jesus was there. And Jesus also was invited, and his disciples, to the marriage. And the wine failing, the mother of Jesus saith to him: They have no wine. And Jesus saith to her: Woman, what is that to me and to thee? my hour is not yet come.

One naturally supposes that one of the contracting parties was related to Mary, and that Jesus had been invited on account of his mother's relationship. The couple must have been rather poor, since the wine was actually failing. Mary wishes to save her friends from the shame of not being able to provide properly for the guests, and has recourse to her Divine Son. She merely states their need, without adding any further petition. In addressing women, Jesus uniformly employs the word "woman" (Matthew 15:28; Luke 13:12; John 4:21; 8:10; 19:26; 20:15), an expression used by classical writers as a respectful and honorable address. [82] The above cited passages show that in the language of Jesus the address "woman" has a most respectful meaning. The clause "what is that to me and to thee" renders the Greek *ti emoi kai soi*, which in its turn corresponds to the Hebrew phrase *mah li walakh*. This latter occurs in Judges 11:12; II Kings 16:10; 19:23; III Kings 17:18; IV Kings 3:13; 9:18; II Paralipomenon 35:21. The New Testament shows equivalent expressions in Matthew 8:29; Mark 1:24; Luke 4:34; 8:28; Matthew 27:19. The meaning of the phrase varies according to the character of the speakers, ranging from a most pronounced opposition to a courteous compliance. Such a variable meaning makes it hard for the translator to find an equally variable equivalent. "What have I to do with thee", "this is neither your nor my business", "why art thou troublesome to me", "allow me to attend to this", are some of the renderings suggested. In general,

the words seem to refer to well or ill-meant importunity which they endeavour to remove. The last part of Our Lord's answer presents less difficulty to the interpreter: "my hour is not yet come", cannot refer to the precise moment at which the need of wine will require the miraculous intervention of Jesus; for in the language of St. John "my hour" or "the hour" denotes the time preordained for some important event (John 4:21, 23; 5:25, 28; 7:30; 8:29; 12:23; 13:1; 16:21; 17:1). Hence the meaning of Our Lord's answer is: "Why are you troubling me by asking me for such an intervention? The divinely appointed time for such a manifestation has not yet come"; or, "why are you worrying? has not the time of manifesting my power come?" The former of these meanings implies that on account of the intercession of Mary Jesus anticipated the time set for the manifestation of His miraculous power [83]; the second meaning is obtained by understanding the last part of Our Lord's words as a question, as was done by St. Gregory of Nyssa [84], and by the Arabic version of Tatian's "Diatessaron" (Rome, 1888). [85] Mary understood her Son's words in their proper sense; she merely warned the waiters, "Whatsoever he shall say to you, do ye" (John 2:5). There can be no question of explaining Jesus' answer in the sense of a refusal.

Mary during the apostolic life of Our Lord

During the apostolic life of Jesus, Mary effaced herself almost completely. Not being called to aid her Son directly in His ministry, she did not wish to interfere with His work by her untimely presence. In Nazareth she was regarded as a common Jewish mother; St. Matthew (3:55-56; cf. Mark 6:3) introduces the people of the town as saying: "Is not this the carpenter's son? Is not his mother called Mary, and his brethren James, and Joseph, and Simon, and Jude: and his sisters, are they not all with us?" Since the people wish to lower Our Lord's esteem by their language, we must infer that Mary belonged to the lower social order of townspeople. The parallel passage of St. Mark reads, "Is not this the carpenter?" instead of, "Is not this the carpenter's son?" Since both evangelists omit the name of St. Joseph, we may infer that he had died before this episode took place.

At first sight, it seems that Jesus Himself depreciated the dignity of His Blessed Mother. When He was told: "Behold thy mother and thy brethren stand without, seeking thee", He answered: "Who is my mother, and who are my brethren? And stretching forth his hand towards his disciples, he said: Behold my mother and my brethren. For whosoever shall do the will of my Father, that is in heaven, he is my brother, and my sister, and my mother" (Matthew 12:47-50; cf. Mark 3:31-35; Luke 8:19-21). On another occasion, "a certain woman from the crowd, lifting up her voice, said to him: Blessed is the womb that bore thee, and the paps that gave thee suck. But he said: Yea rather, blessed are they who hear the word of God, and keep it" (Luke 11:27-28).

In reality, Jesus in both these passages places the bond that unites the soul with God above the natural bond of parentage which unites the Mother of God with her Divine Son. The latter dignity is not belittled; as men naturally appreciate it more easily, it is employed by Our Lord as a means to make known the real value of holiness. Jesus, therefore, really, praises His mother in a most emphatic way; for she excelled the rest of men in holiness not less than in dignity. [86] Most probably, Mary was found also among the holy women who ministered to Jesus and His apostles during their ministry in Galilee (cf. Luke 8:2-3); the Evangelists do not mention any other public

appearance of Mary during the time of Jesus's journeys through Galilee or Judea. But we must remember that when the sun appears, even the brightest stars become invisible.

Mary during the Passion of Our Lord

Since the Passion of Jesus Christ occurred during the paschal week, we naturally expect to find Mary at Jerusalem. Simeon's prophecy found its fulfilment principally during the time of Our Lord's suffering. According to a tradition, His Blessed Mother met Jesus as He was carrying His cross to Golgotha. The Itinerarium of the Pilgrim of Bordeaux describes the memorable sites which the writer visited A.D. 333, but it does not mention any locality sacred to this meeting of Mary and her Divine Son. [87] The same silence prevails in the so-called Peregrinatio Silviae which used to be assigned to A.D. 385, but has lately been placed in A.D. 533-540. [88] But a plan of Jerusalem, dating from the year 1308, shows a Church of St. John the Baptist with the inscription "Pasm. Vgis.", Spasmus Virginis, the swoon of the Virgin. During the course of the fourteenth century Christians began to locate the spots consecrated by the Passion of Christ, and among these was the place where Mary is said to have fainted at the sight of her suffering Son. [89] Since the fifteenth century one finds always "Sancta Maria de Spasmo" among the Stations of the Way of the Cross, erected in various parts of Europe in imitation of the Via Dolorosa in Jerusalem. [90] That Our Blessed Lady should have fainted at the sight of her Son's sufferings, hardly agrees with her heroic behaviour under the cross; still, we may consider her woman and mother in her meeting with her Son on the way to Golgotha, while she is the Mother of God at the foot of the cross.

Mary's spiritual motherhood

While Jesus was hanging on the cross, "there stood by the cross of Jesus, his mother, and his mother's sister, Mary Cleophas, and Mary Magdalen. When Jesus therefore had seen his mother and the disciple standing whom he loved, he saith to his mother: Woman, behold thy son. After that, he saith to the disciple: Behold thy mother. And from that hour, the disciple took her to his own" (John 19:25-27). The darkening of the sun and the other extraordinary phenomena in nature must have frightened the enemies of Our Lord sufficiently so as not to interfere with His mother and His few friends standing at the foot of the cross. In the meantime, Jesus had prayed for His enemies, and had promised pardon to the penitent thief; now, He took compassion on His desolate mother, and provided for her future. If St. Joseph had been still alive, or if Mary had been the mother of those who are called Our Lord's brethren or sisters in the gospels, such a provision would not have been necessary. Jesus uses the same respectful title with which he had addressed his mother at the marriage feast in Cana. Then he commits Mary to John as his mother, and wishes Mary to consider John as her son.

Among the early writers, Origen is the only one who considers Mary's motherhood of all the faithful in this connection. According to him, Christ lives in his perfect followers, and as Mary is the Mother of Christ, so she is mother of him in whom Christ lives. Hence, according to Origen, man has an indirect right to claim Mary as his mother, in so far as he identifies himself with Jesus by the life of grace. [91] In the ninth century, George of Nicomedia [92] explains Our Lord's words on the cross in such a way as to entrust John to Mary, and in John all the disciples, making her the

mother and mistress of all John's companions. In the twelfth century Rupert of Deutz explained Our Lord's words as establishing Mary's spiritual motherhood of men, though St. Bernard, Rupert's illustrious contemporary, does not enumerate this privilege among Our Lady's numerous titles. [93] After this time Rupert's explanation of Our Lord's words on the cross became more and more common, so that in our day it has found its way into practically all books of piety. [94]

The doctrine of Mary's spiritual motherhood of men is contained in the fact that she is the antitype of Eve: Eve is our natural mother because she is the origin of our natural life; so Mary is our spiritual mother because she is the origin of our spiritual life. Again, Mary's spiritual motherhood rests on the fact that Christ is our brother, being "the firstborn among many brethren" (Romans 8:29). She became our mother at the moment she consent to the Incarnation of the Word, the Head of the mystical body whose members we are; and she sealed her motherhood by consenting to the bloody sacrifice on the cross which is the source of our supernatural life. Mary and the holy women (Matthew 17:56; Mark 15:40; Luke 23:49; John 19:25) assisted at the death of Jesus on the cross; she probably remained during the taking down of His sacred body and during His funeral. The following Sabbath was for her a time of grief and hope. The eleventh canon of a council held in Cologne, in 1423, instituted against the Hussites the feast of the Dolours of Our Blessed Lady, placing it on the Friday following the third Sunday after Easter. In 1725 Benedict XIV extended the feast to the whole Church, and placed it on the Friday in Passion Week. "And from that hour, the disciple took her to his own" (John 19:27). Whether they lived in the city of Jerusalem or elsewhere, cannot be determined from the Gospels.

Mary and Our Lord's Resurrection

The inspired record of the incidents connected with Christ's Resurrection do not mention Mary; but neither do they pretend to give a complete account of all that Jesus did or said. The Fathers too are silent as to Mary's share in the joys of her Son's triumph over death. Still, St. Ambrose [95] states expressly: "Mary therefore saw the Resurrection of the Lord; she was the first who saw it and believed. Mary Magdalen too saw it, though she still wavered". George of Nicomedia [96] infers from Mary's share in Our Lord's sufferings that before all others and more than all she must have shared in the triumph of her Son. In the twelfth century, an apparition of the risen Saviour to His Blessed Mother is admitted by Rupert of Deutz [97], and also by Eadmer [98] St. Bernardin of Siena [99], St. Ignatius of Loyola [100], Suarez [101], Maldon. [102], etc. [103] That the risen Christ should have appeared first to His Blessed Mother, agrees at least with our pious expectations.

Though the Gospels do not expressly tell us so, we may suppose that Mary was present when Jesus showed himself to a number of disciples in Galilee and at the time of His Ascension (cf. Matthew 28:7, 10, 16; Mark 16:7). Moreover, it is not improbable that Jesus visited His Blessed Mother repeatedly during the forty days after His Resurrection.

IV. MARY IN OTHER BOOKS OF THE NEW TESTAMENT

Acts 1:14-2:4

According to the Book of Acts (1:14), after Christ's Ascension into Heaven the apostles "went up into an upper room", and: "all these were persevering with one mind in prayer with the women, and Mary the mother of Jesus, and with his brethren". In spite of her exalted dignity it was not Mary, but Peter who acted as head of the assembly (1:15). Mary behaved in the upper room in Jerusalem as she had behaved in the grotto at Bethlehem; in Bethlehem she had carried for the Infant Jesus, in Jerusalem she nurtured the infant Church. The friends of Jesus remained in the upper room till "the days of the Pentecost", when with "a sound from heaven, as of a mighty wind coming. . .there appeared to them parted tongues as it were of fire, and it sat upon every one of them, and they were all filled with the Holy Ghost" (Acts 2:1-4). Though the Holy Ghost had descended upon Mary in a special way at the time of the Incarnation, He now communicated to her a new degree of grace. Perhaps, this Pentecostal grace gave to Mary the strength of properly fulfilling her duties to the nascent Church and to her spiritual children.

Galatians 4:4

As to the Epistles, the only direct reference to Mary is found in Galatians 4:4: "But when the fulness of time was come, God sent his Son, made of a woman, made under the law". Some Greek and Latin manuscripts, followed by several Fathers, read *gennomenon ek gynaiikos* instead of *genomenon ek gynaiikos*, "born of a woman" instead of "made of a woman". But this variant reading cannot be accepted. For

- *gennomenon* is the present participle, and must be rendered, "being born of a woman", so that it does not fit into the context. [104]
- though the Latin variant rendering "natum" is the perfect participle, and does not imply the inconveniences of its Greek original, St. Bede [105] rejects it, on account of its less appropriate sense.
- In Romans 1:3, which is to a certain extent a parallel of Galatians 4:4, St. Paul writes *genomenos ek spermatis David kata sarka*, i.e. "made of the seed of David, according to the flesh".
- Tertullian [106] points out that the word "made" implies more than the word "born"; for it calls to mind the "Word made flesh", and establishes the reality of the flesh made of the Virgin.

Furthermore, the Apostle employs the word "woman" in the phrase under consideration, because he wishes to indicate merely the sex, without any ulterior connotation. In reality, however, the idea of a man made of a woman alone, suggests the virginal conception of the Son of God. St. Paul seems to emphasize the true idea of the Incarnation of the Word; a true understanding of this mystery safeguards both the Divinity and the real humanity of Jesus Christ. [107]

The Apostle St. John never uses the name Mary when speaking of Our Blessed Lady; he always refers to her as Mother of Jesus (John 2:1, 3; 19:25-26). In his last hour, Jesus had established the relation of mother and son between Mary and John, and a child does not usually address his mother by her first name.

Apocalypse 12:1-6

In the Apocalypse (12:1-6) occurs a passage singularly applicable to Our Blessed Mother:

And a great sign appeared in heaven: A woman clothed with the sun, and the moon under her feet, and on her head a crown of twelve stars; and being with child, she cried travailling in birth, and was in pain to be delivered. And there was seen another sign in heaven: and behold a great red dragon, having seven heads, and ten horns, and on his heads seven diadems; and his tail drew the third part of the stars of heaven; and cast them to the earth; and the dragon stood before the woman who was ready to be delivered; that when she should be delivered, he might devour her son. And she brought forth a man child, who was to rule all nations with an iron rod; and her son was taken up to God, and to his throne. And the woman fled into the wilderness, where she had a place prepared by God, that there they should feed her a thousand two hundred sixty days.

The applicability of this passage to Mary is based on the following considerations:

- At least part of the verses refer to the mother whose son is to rule all the nations with a rod of iron; according to Psalm 2:9, this is the Son of God, Jesus Christ, Whose mother is Mary.
- It was Mary's son that "was taken up to God, and to his throne" at the time of His Ascension into heaven.
- The dragon, or the devil of the earthly paradise (cf. Apocalypse 12:9; 20:2), endeavoured to devour Mary's Son from the first moments of His birth, by stirring up the jealousy of Herod and, later on, the enmities of the Jews.
- Owing to her unspeakable privileges, Mary may well be described as "clothed with the sun, and the moon under her feet, and on her head a crown of twelve stars".
- It is true that commentators generally understand the whole passage as applying literally to the Church, and that part of the verses is better suited to the Church than to Mary. But it must be kept in mind that Mary is both a figure of the Church, and its most prominent member. What is said of the Church, is in its own way true of Mary. Hence the passage of the Apocalypse (12:5-6) does not refer to Mary merely by way of accommodation [108], but applies to her in a truly literal sense which appears to be partly limited to her, and partly extended to the whole Church. Mary's relation to the Church is well summed up in the expression "collum corporis mystici" applied to Our Lady by St. Bernardin of Siena. [109]

Cardinal Newman [110] considers two difficulties against the foregoing interpretation of the vision of the woman and child: first, it is said to be poorly supported by the Fathers; secondly, it is an anachronism to ascribe such a picture of the Madonna to the apostolic age. As to the first exception, the eminent writer says:

Christians have never gone to Scripture for proof of their doctrines, till there was actual need, from the pressure of controversy; if in those times the Blessed Virgin's dignity was unchallenged on all hands, as a matter of doctrine, Scripture, as far as its argumentative matter was concerned, was likely to remain a sealed book to them.

After developing this answer at length, the cardinal continues:

As to the second objection which I have supposed, so far from allowing it, I consider that it is built upon a mere imaginary fact, and that the truth of the matter lies in the very contrary direction. The Virgin and Child is not a mere modern idea; on the contrary, it is represented again and again, as every visitor to Rome is aware, in the paintings of the Catacombs. Mary is there drawn with the Divine Infant in her lap, she with hands extended in prayer, he with his hand in the attitude of blessing.

V. MARY IN THE EARLY CHRISTIAN DOCUMENTS

Thus far we have appealed to the writings or the remains of the early Christian era in as far as they explain or illustrate the teaching of the Old Testament or the New, concerning the Blessed Virgin. In the few following paragraphs we shall have to draw attention to the fact that these same sources, to a certain extent, supplement the Scriptural doctrine. In this respect they are the basis of tradition; whether the evidence they supply suffices, in any given case, to guarantee their contents as a genuine part of Divine revelation, must be determined according to the ordinary scientific criteria followed by theologians. Without entering on these purely theological questions, we shall present this traditional material, first, in as far as it throws light on the life of Mary after the day of Pentecost; secondly, in as far as it gives evidence of the early Christian attitude to the Mother of God.

VI. POST-PENTECOSTAL LIFE OF MARY

On the day of Pentecost, the Holy Ghost had descended on Mary as He came on the Apostles and Disciples gathered together in the upper room at Jerusalem. No doubt, the words of St. John (19:27), "and from that hour the disciple took her to his own", refer not merely to the time between Easter and Pentecost, but they extend to the whole of Mary's later life. Still, the care of Mary did not interfere with John's Apostolic ministry. Even the inspired records (Acts 8:14-17; Galatians 1:18-19; Acts 21:18) show that the apostle was absent from Jerusalem on several occasions, though he must have taken part in the Council of Jerusalem, A.D. 51 or 52. We may also suppose that in Mary especially were verified the words of Acts 2:42: "And they were persevering in the doctrine of the apostles, and in the communication of the breaking of bread, and in prayers". Thus Mary was an example and a source of encouragement to the early Christian community. At the same time, it must be confessed that we do not possess any authentic documents bearing directly on Mary's post-Pentecostal life.

Place of her life, death, and burial

As to tradition, there is some testimony for Mary's temporary residence in or near Ephesus, but the evidence for her permanent home in Jerusalem is much stronger.

Arguments for Ephesus

Mary's Ephesian residence rests on the following evidence:

(1) A passage in the synodal letter of the Council of Ephesus [111] reads: "Wherefore also Nestorius, the instigator of the impious heresy, when he had come to the city of the Ephesians, where John the Theologian and the Virgin Mother of God St. Mary, estranging himself of his own accord from the gathering of the holy Fathers and Bishops. . ." Since St. John had lived in Ephesus and had been buried there [112], it has been inferred that the ellipsis of the synodal letter means either, "where John. . .and the Virgin. . .Mary lived", or, "where John. . .and the Virgin. . .Mary lived and are buried".

(2) Bar-Hebraeus or Abulpharagius, a Jacobite bishop of the thirteenth century, relates that St. John took the Blessed Virgin with him to Patmos, then founded the Church of Ephesus, and buried Mary no one knows where. [113]

(3) Benedict XIV [114] states that Mary followed St. John to Ephesus and died there. He intended also to remove from the Breviary those lessons which mention Mary's death in Jerusalem, but died before carrying out his intention. [115]

(4) Mary's temporary residence and death in Ephesus are upheld by such writers as Tillemont [116], Calmet [117], etc.

(5) In Panaghia Kapoli, on a hill about nine or ten miles distant from Ephesus, was discovered a house, or rather its remains, in which Mary is supposed to have lived. The house was found, as it had been sought, according to the indications given by Catharine Emmerich in her life of the Blessed Virgin.

Arguments against Ephesus

On closer inspection these arguments for Mary's residence or burial in Ephesus are not unanswerable.

(1) The ellipsis in the synodal letter of the Council of Ephesus may be filled out in such a way as not to imply the assumption that Our Blessed Lady either lived or died in Ephesus. As there was in the city a double church dedicated to the Virgin Mary and to St. John, the incomplete clause of the synodal letter may be completed so as to read, "where John the Theologian and the Virgin. . .Mary have a sanctuary". This explanation of the ambiguous phrase is one of the two suggested in the margin in Labbe's *Collect. Concil.* (l.c.) [118]

(2) The words of Bar-Hebraeus contain two inaccurate statements; for St. John did not found the Church of Ephesus, nor did he take Mary with him to Patmos. St. Paul founded the Ephesian Church, and Mary was dead before John's exile in Patmos. It would not be surprising, therefore, if the writer were wrong in what he says about Mary's burial. Besides, Bar-Hebraeus belongs to the thirteenth century; the earlier writers had been most anxious about the sacred places in Ephesus; they mention the tomb of St. John and of a daughter of Philip [119], but they say nothing about Mary's burying place.

(3) As to Benedict XIV, this great pontiff is not so emphatic about Mary's death and burial in Ephesus, when he speaks about her Assumption in heaven.

(4) Neither Benedict XIV nor the other authorities who uphold the Ephesian claims, advance any argument that has not been found inconclusive by other scientific students of this question.

(5) The house found in Panaghia-Kapouli is of any weight only in so far as it is connected with the visions of Catherine Emmerich. Its distance from the city of Ephesus creates a presumption against its being the home of the Apostle St. John. The historical value of Catherine's visions is not universally admitted. Mgr. Timoni, Archbishop of Smyrna, writes concerning Panaghia-Kapouli: "Every one is entire free to keep his personal opinion". Finally the agreement of the condition of the ruined house in Panaghia-Kapouli with Catharine's description does not necessarily prove the truth of her statement as to the history of the building. [120]

Arguments against Jerusalem

Two considerations militate against a permanent residence of Our Lady in Jerusalem: first, it has already been pointed out that St. John did not permanently remain in the Holy City; secondly, the Jewish Christians are said to have left Jerusalem during the periods of Jewish persecution (cf. Acts 8:1; 12:1). But as St. John cannot be supposed to have taken Our Lady with him on his apostolic expeditions, we may suppose that he left her in the care of his friends or relatives during the periods of his absence. And there is little doubt that many of the Christians returned to Jerusalem, after the storms of persecution had abated.

Arguments for Jerusalem

Independently of these considerations, we may appeal to the following reasons in favour of Mary's death and burial in Jerusalem:

(1) In 451 Juvenal, Bishop of Jerusalem, testified to the presence of Mary's tomb in Jerusalem. It is strange that neither St. Jerome, nor the Pilgrim of Bordeaux, nor again pseudo-Silvia give any evidence of such a sacred place. But when the Emperor Marcion and the Empress Pulcheria asked Juvenal to send the sacred remains of the Virgin Mary from their tomb in Gethsemani to Constantinople, where they intended to dedicate a new church to Our Lady, the bishop cited an ancient tradition saying that the sacred body had been assumed into heaven, and sent to Constantinople only the coffin and the winding sheet. This narrative rests on the authority of a certain Euthymius whose report was inserted into a homily of St. John Damascene [121] now read in the second Nocturn of the fourth day within the octave of the Assumption. Scheeben [122] is of opinion that Euthymius's words are a later interpolation: they do not fit into the context; they contain an appeal to pseudo-Dionysius [123] which are not otherwise cited before the sixth century; and they are suspicious in their connection with the name of Bishop Juvenal, who was charged with forging documents by Pope St. Leo. [124] In his letter the pontiff reminds the bishop of the holy places which he has under his very eyes, but does not mention the tomb of Mary. [125] Allowing that this silence is purely incidental, the main question remains, how much historic truth underlies the Euthymian account of the words of Juvenal?

(2) Here must be mentioned too the apocryphal "Historia dormitionis et assumptionis B.M.V.", which claims St. John for its author. [126] Tischendorf believes that the substantial parts of the work go back to the fourth, perhaps even to the second, century. [127] Variations of the original text appeared in Arabic and Syriac, and in other languages; among these must be noted a work called "De transitu Mariae Virg.", which appeared under the name of St. Melito of Sardes. [128] Pope

Gelasius enumerates this work among the forbidden books. [129] The extraordinary incidents which these works connect with the death of Mary do not concern us here; but they place her last moments and her burial in or near Jerusalem.

(3) Another witness for the existence of a tradition placing the tomb of Mary in Gethsemani is the basilica erected above the sacred spot, about the end of the fourth or the beginning of the fifth century. The present church was built by the Latins in the same place in which the old edifice had stood. [130]

(4) In the early part of the seventh century, Modestus, Bishop of Jerusalem, located the passing of Our Lady on Mount Sion, in the house which contained the Cenacle and the upper room of Pentecost. [131] At that time, a single church covered the localities consecrated by these various mysteries. One must wonder at the late evidence for a tradition which became so general since the seventh century.

(5) Another tradition is preserved in the "Commemoratorium de Casis Dei" addressed to Charlemagne. [132] It places the death of Mary on Mt. Olivet where a church is said to commemorate this event. Perhaps the writer tried to connect Mary's passing with the Church of the Assumption as the sister tradition connected it with the cenacle. At any rate, we may conclude that about the beginning of the fifth century there existed a fairly general tradition that Mary had died in Jerusalem, and had been buried in Gethsemani. This tradition appears to rest on a more solid basis than the report that Our Lady died and was buried in or near Ephesus. As thus far historical documents are wanting, it would be hard to establish the connection of either tradition with apostolic times. [133]

Conclusion

It has been seen that we have no absolute certainty as to the place in which Mary lived after the day of Pentecost. Though it is more probable that she remained uninterruptedly in or near Jerusalem, she may have resided for a while in the vicinity of Ephesus, and this may have given rise to the tradition of her Ephesian death and burial. There is still less historical information concerning the particular incidents of her life. St. Epiphanius [134] doubts even the reality of Mary's death; but the universal belief of the Church does not agree with the private opinion of St. Epiphanius. Mary's death was not necessarily the effect of violence; it was undergone neither as an expiation or penalty, nor as the effect of disease from which, like her Divine Son, she was exempt. Since the Middle Ages the view prevails that she died of love, her great desire to be united to her Son either dissolving the ties of body and soul, or prevailing on God to dissolve them. Her passing away is a sacrifice of love completing the dolorous sacrifice of her life. It is the death in the kiss of the Lord (*in osculo Domini*), of which the just die. There is no certain tradition as to the year of Mary's death. Baronius in his Annals relies on a passage in the Chronicon of Eusebius for his assumption that Mary died A.D. 48. It is now believed that the passage of the Chronicon is a later interpolation. [135] Nirschl relies on a tradition found in Clement of Alexandria [136] and Apollonius [137] which refers to a command of Our Lord that the Apostles were to preach twelve years in Jerusalem and Palestine before going among the nations of the world; hence he too arrives at the conclusion that Mary died A.D. 48.

Her assumption into heaven

The Assumption of Our Lady into heaven has been treated in a special article. [138] The feast of the Assumption is most probably the oldest among all the feasts of Mary properly so called. [139] As to art, the assumption was a favourite subject of the school of Siena which generally represents Mary as being carried to heaven in a mandorla.

VII. EARLY CHRISTIAN ATTITUDE TO THE MOTHER OF GOD

Her image and her name

Depictions of her image

No picture has preserved for us the true likeness of Mary. The Byzantine representations, said to be painted by St. Luke, belong only to the sixth century, and reproduce a conventional type. There are twenty-seven copies in existence, ten of which are in Rome. [140] Even St. Augustine expresses the opinion that the real external appearance of Mary is unknown to us, and that in this regard we know and believe nothing. [141] The earliest picture of Mary is that found in the cemetery of Priscilla; it represents the Virgin as if about to nurse the Infant Jesus, and near her is the image of a prophet, Isaias or perhaps Micheas. The picture belongs to the beginning of the second century, and compares favourably with the works of art found in Pompeii. From the third century we possess pictures of Our Lady present at the adoration of the Magi; they are found in the cemeteries of Domitilla and Calixtus. Pictures belonging to the fourth century are found in the cemetery of Saints Peter and Marcellinus; in one of these she appears with her head uncovered, in another with her arms half extended as if in supplication, and with the Infant standing before her. On the graves of the early Christians, the saints figured as intercessors for their souls, and among these saints Mary always held the place of honour. Besides the paintings on the walls and on the sarcophagi, the Catacombs furnish also pictures of Mary painted on gilt glass disks and sealed up by means of another glass disk welded to the former. [142] Generally these pictures belong to the third or fourth century. Quite frequently the legend MARIA or MARA accompanies these pictures.

Use of her name

Towards the end of the fourth century, the name Mary becomes rather frequent among Christians; this serves as another sign of the veneration they had for the Mother of God. [143]

Conclusion

No one will suspect the early Christians of idolatry, as if they had paid supreme worship to Mary's pictures or name; but how are we to explain the phenomena enumerated, unless we suppose that the early Christians venerated Mary in a special way? [144]

Nor can this veneration be said to be a corruption introduced in later times. It has been seen that the earliest picture dates from the beginning of the second century, so that within the first fifty years after the death of St. John the veneration of Mary is proved to have flourished in the Church of Rome.

Early writings

For the attitude of the Churches of Asia Minor and of Lyons we may appeal to the words of St. Irenaeus, a pupil of St. John's disciple Polycarp [145]; he calls Mary our most eminent advocate. St. Ignatius of Antioch, part of whose life reached back into apostolic times, wrote to the Ephesians (c. 18-19) in such a way as to connect the mysteries of Our Lord's life more closely with those of the Virgin Mary. For instance, the virginity of Mary, and her childbirth, are enumerated with Christ's death, as forming three mysteries unknown to the devil. The sub-apostolic author of the Epistle to Diognetus, writing to a pagan inquirer concerning the Christian mysteries, describes Mary as the great antithesis of Eve, and this idea of Our Lady occurs repeatedly in other writers even before the Council of Ephesus. We have repeatedly appealed to the words of St. Justin and Tertullian, both of whom wrote before the end of the second century.

As it is admitted that the praises of Mary grow with the growth of the Christian community, we may conclude in brief that the veneration of and devotion to Mary began even in the time of the Apostles.

The works treating the various questions concerning the name, the birth, the life, and the death of Mary, have been cited in the corresponding parts of this article. We add here only a few names of writers, or of collectors of works of a more general character: BOURASSE, Summa aurea de laudibus B. Mariae Virginis, omnia complectens quae de gloriosa Virgine Deipara reperiuntur (13 vols., Paris, 1866); KURZ, Mariologie oder Lehre der katholischen Kirche über die allerseligste Jungfrau Maria (Ratisbon, 1881); MARACCI, Bibliotheca Mariana (Rome, 1648); IDEM, Polyanthea Mariana, republished in Summa Aurea, vols IX and X; LEHNER, Die Marienerehrung in den ersten Jahrhunderten (2nd ed., Stuttgart, 1886).

A.J. MAAS

Virtue

Virtue

The subject will be treated under the following heads:

- I. Definitions;
- II. Subjects;
- III. Divisions;
- IV. Causes;
- V. Properties.

I. DEFINITIONS

According to its etymology the word *virtue* (Latin *virtus*) signifies manliness or courage. "Appelata est enim a viro virtus: viri autem propria maxime est fortitudo" ("The term virtue is from the word that signifies man; a man's chief quality is fortitude"; Cicero, "Tuscul.", I, xi, 18). Taken in its widest sense virtue means the excellence of perfection of a thing, just as vice, its contrary, denotes a defect or absence of perfection due to a thing. In its strictest meaning, however, as used by moral philosophers and theologians, it signifies a habit superadded to a faculty of the soul, disposing it to elicit with readiness acts conformable to our rational nature. "Virtue", says Augustine, "is a good habit consonant with our nature." From Saint Thomas's entire Question on the essence of virtue may be gathered his brief but complete definition of virtue: "habitus operativus bonus",

an operative habit essentially good, as distinguished from vice, and operative habit essentially evil. Now a habit is a quality in itself difficult of change, disposing well or ill the subject in which it resides, either directly in itself or in relation to its operation. An operative habit is a quality residing in a power or faculty in itself indifferent to this or that line of action, but determined by the habit to this rather than to that kind of acts. (See HABIT.) Virtue then has this in common with vice, that it disposes a potency to a certain determined activity; but it differs specifically from it in that it disposes it to good acts, i.e. acts in consonance with right reason. Thus, temperance inclines the sensuous appetite to acts of moderation conformably to right reason just as intemperance impels the same appetite to acts of excess contrary to the dictates of our rational nature.

II. SUBJECTS OF VIRTUE

Before determining the subjects or potencies in which the different virtues reside, it will be necessary to distinguish two kind of virtues: those which are virtues absolutely (*simpliciter*) and those which are virtues only in a restricted sense (*secundum quid*). The later confer only a faculty for well-doing, and render the possessor good only in a restricted sense, e.g. a good logician. The former, in addition to the facility for well-doing, cause one to use the facility rightly, and render the possessor unqualifiedly good. Now the intellect may be the subject of those habits which are called virtues in a restricted sense, such as science and art. But the will only, or any other faculty only in so far as it is moved by the will, can be the subject of habits, which are called virtues in the absolute sense. For it is the proper function of the will to move to their respective acts all the other powers which are in any way rational. Thus the intellect and sensuous appetite as moved by the will are the subjects of prudence and temperance, while the will itself is the subject of justice, a virtue in the absolute sense.

III. DIVISIONS OF VIRTUE

Virtues may be divided into intellectual, moral, and theological.

A. Intellectual Virtues

Intellectual virtue may be defined as a habit perfecting the intellect to elicit with readiness acts that are good in reference to their proper object, namely, truth. As the intellect is called speculative or practical according as it confines itself to the sole contemplation of truth or considers truth in reference to action, the intellectual virtues may be classified according to this twofold function of the mental faculty. The speculative intellectual virtues are wisdom, science, and understanding. Wisdom is the knowledge of conclusions through their highest causes. Thus philosophy, and particularly metaphysics, is properly designated as wisdom, since it considers truth of the natural order according to its highest principles. Science is the knowledge of conclusions acquired by demonstration through causes or principles which are final in one class or other. Thus there are different sciences, mathematics, physics, etc., but only one wisdom, the supreme judge of all. Understanding is defined as the habit of first principles; as habit or virtue it is to be distinguished, at least logically, from the faculty of intelligence. It is also called intuition, as it has for its object

truths that are self-evident, the perception of which requires no discursive process. It is to be observed that these virtues differ from the gifts of the Holy Ghost, designated by the same name, inasmuch as they are qualities of the natural order, while the gifts are intrinsically supernatural. The practical intellectual virtues are two, namely, art and prudence.

Art

Art, according to the Schoolmen, signifies the right method with regard to external productions (*recta ratio factibilium*). Just as science perfects and directs the intellect to reason correctly with regard to its proper object in view of the attainment of truth, so also art perfects and directs the intellect in the application of certain rules in view of the production of external works, whether these be of a useful or aesthetic character. Hence the division into useful and fine arts. Art has this in common with the three speculative intellectual habits, that they are all virtues only in a restricted sense. Hence they constitute a man good only in a qualified sense, e.g. a good geometrician or a good sculptor. For the proper function of science as art, as such, is not to confer moral goodness, but to direct the intellect in its scientific or artistic processes.

Prudence

As art is the right method of production, so prudence, as defined by St. Thomas, is the right method of conduct (*recta ratio agibilium*). It differs from all the other intellectual virtues in this, that it is a virtue in the absolute sense, not only conferring a readiness for well-doing, but causing one to use that readiness rightly. Considered more specifically, it is that virtue which directs on in the choice of means most apt, under existing circumstances, for the attainment of a due end. It differs from the moral virtues as it resides not in the appetitive powers but in the intellect, its proper act being, not the choice of apt means, but the direction of that choice. But although prudence is essentially an intellectual virtue, nevertheless, under a certain respect (*materialiter*) it may be considered a moral virtue, since it has as its subject matter the acts of the moral virtues. For if the end be vicious, though a certain astuteness be manifested in the discernment of means, such astuteness is not real prudence, but the semblance of prudence. (See PRUDENCE.)

B. Moral Virtues

Moral virtues are those which perfect the appetitive faculties of the soul, namely, the will and the sensuous appetite. Moral virtue is so called from the word *mos*, which signifies a certain natural or quasi-natural inclination to do a thing. But the inclination to act is properly attributed to the appetitive faculty, whose function it is to move the other powers to action. Consequently that virtue is called moral which perfects the appetitive faculty. For as appetite and reason have distinct activities, it is necessary that not only reason be well disposed by the habit of intellectual virtue, but that the appetitive powers also be well disposed by the habit of moral virtue. From this necessity of the moral virtues we see the falsity of the theory of Socrates, who held that all virtue was knowledge, as he held that all vice was ignorance. Moreover, the moral virtues excel the intellectual, prudence excepted, in this, that they give not only the facility, but also the right use of the facility, for well-doing. Hence moral virtues are virtues absolutely; and when we say without qualification that a man is good, we mean morally good. As the proper function of the moral virtues is to rectify

the appetitive powers, i.e. to dispose them to act in accordance with right reason, there are principally three moral virtues: justice, which perfects the rational appetite or will; fortitude and temperance, which moderate the lower or sensuous appetite. Prudence, as we have observed, is called a moral virtue, not indeed essentially, but by reason of its subject matter, inasmuch as it is directive of the acts of the moral virtues.

Justice

Justice, an essentially moral virtue, regulates man in relations with his fellow-men. It disposes us to respect the rights of others, to give each man his due. (See JUSTICE.) Among the virtues annexed to justice are:

- religion, which regulates man in his relations to God, disposing him to pay due worship to his Creator;
- piety, which disposes to the fulfillment of duties which one owes to parents and country (patriotism);
- gratitude, which inclines one to recognition of benefits received;
- liberality, which restrains the immoderate affection for wealth from withholding seasonable gifts or expenses;
- affability, by which one is suitably adapted to his fellow-men in social intercourse so as to behave toward each appropriately.

All these moral virtues, as well as justice itself, regulate man in his dealings with others. But besides these there are moral virtues which regulate man with regard to his own inner passions. Now there are passions which impel man to desire that which reason impels him forward; hence there are principally two moral virtues, namely, temperance and fortitude, whose function it is to regulate those lower appetites.

Temperance

Temperance it is which restrains the undue impulse of concupiscence for sensible pleasure, while fortitude causes man to be brave when he would otherwise shrink, contrary to reason, from dangers or difficulties. Temperance, then, to consider it more particularly, is that moral virtue which moderates in accordance with reason the desires and pleasures of the sensuous appetite attendant on those acts by which human nature is preserved in the individual or propagated in the species.

The subordinate species of temperance are:

- abstinence, which disposes to moderation in the use of food;
- sobriety, which inclines to moderation in the use of spirituous liquors;
- chastity, which regulates the appetite in regard to sexual pleasures; to chastity may be reduced modesty, which is concerned with acts subordinate to the act of reproduction.

The virtues annexed to temperance are:

- continence, which according to the Scholastics, restrains the will from consenting to violent movements or concupiscence;
- humility, which restrains inordinate desires of one's own excellence;
- meekness, which checks inordinate movements of anger;
- modesty or decorum, which consists in duly ordering the external movements of anger; to the direction of reason.

To this virtue may be reduced to what Aristotle designated as *eutrapelia*, or good cheer, which disposes to moderation in sports, games, and jests, in accordance with the dictates of reason, taking into consideration the circumstance of person, season, and place.

Fortitude

As temperance and its annexed virtues remove from the will hindrances to rational good arising from sensuous pleasure, so fortitude removes from the will those obstacles arising from the difficulties of doing what reason requires. Hence fortitude, which implies a certain moral strength and courage, is the virtue by which one meets and sustains dangers and difficulties, even death itself, and in never through fear of these deterred from the pursuit of good which reason dictates.

(See FORTITUDE.) The virtues annexed to fortitude are:

- Patience, which disposes us to bear present evils with equanimity; for as the brave man is one who represses those fears which make him shrink from meeting dangers which reason dictates he should encounter, so also the patient man is one who endures present evils in such a way as not to be inordinately cast down by them.
- Munificence, which disposes one to incur great expenses for the suitable doing of a great work. It differs from mere liberality, as it has reference not to ordinary expenses and donations, but to those that are great. Hence the munificent man is one who gives with royal generosity, who does things not on a cheap but magnificent scale, always, however, in accordance with right reason.
- Magnanimity, which implies a reaching out of the soul to great things, is the virtue which regulates man with regard to honours. The magnanimous man aims at great works in every line of virtue, making it his purpose to do things worthy of great honour. Nor is magnanimity incompatible with true humility. "Magnanimity", says St. Thomas, "makes a man deem himself worthy of great honours in consideration of the Divine gifts he possesses; whilst humility makes him think little of himself in consideration of his own short-comings".
- Perseverance, the virtue which disposes to continuance in the accomplishment of good works in spite of the difficulties attendant upon them. As a moral virtue it is not to be taken precisely for what is designated as final perseverance, that special gift of the predestined by which one is found in the state of grace at the moment of death. It is used here to designate that virtue which disposes one to continuance in any virtuous work whatsoever.

(For a more detailed treatment of the four principal moral virtues, see CARDINAL VIRTUES.)

C. Theological Virtues

All virtues have as their final scope to dispose man to acts conducive to his true happiness. The happiness, however, of which man is capable is twofold, namely, natural, which is attainable by man's natural powers, and supernatural, which exceeds the capacity of unaided human nature. Since, therefore, merely natural principles of human action are inadequate to a supernatural end, it is necessary that man be endowed with supernatural powers to enable him to attain his final destiny. Now these supernatural principles are nothing else than the theological virtues. They are called theological

1. because they have God for their immediate and proper object;
2. because they are Divinely infused;
3. because they are known only through Divine Revelation.

The theological virtues are three, viz. faith, hope, and charity.

Faith

Faith is an infused virtue, by which the intellect is perfected by a supernatural light, in virtue of which, under a supernatural movement of the will, it assents firmly to the supernatural truths of Revelation, not on the ground of the infallible authority of God revealing. For as man is guided in the attainment of natural happiness by principles of knowledge known by the natural light of reason, so also in the attainment of his supernatural destiny his intellect must be illumined by certain supernatural principles, namely, Divinely revealed truths. (See FAITH.)

Hope

But not only man's intellect must be perfected with regard to his supernatural end, his will also must tend to that end, as a good possible of attainment. Now the virtue, by which the will is so perfected, is the theological virtue of hope. It is commonly defined as a Divinely infused virtue, by which we trust, with an unshaken confidence grounded on the Divine assistance, to attain life everlasting.

Charity

But the will must not only tend to God, its ultimate end, it must also be united to Him by a certain conformity. This spiritual union or conformity, by which the soul is united to God, the sovereign Good, is effected by charity. Charity, then, is that theological virtue, by which God, our ultimate end, known by supernatural light, is loved by reason of His own intrinsic goodness or amiability, and our neighbour loved on account of God. It differs from faith, as it regards God not under the aspect of truth but of good. It differs from hope inasmuch as it regards God not as our good precisely (*nobis bonum*), but as good in Himself (*in se bonum*). But this love of God as good in Himself does not, as the Quietists maintained, exclude the love of God as He is our good (see QUIETISM). With regard to the love of our neighbor, it falls within the theological virtue of charity in so far as its motive is the supernatural love of God, and it is thus distinguished from mere natural affection. Of the three theological virtues, charity is the most excellent. Faith and hope, involving as they do a certain imperfection, namely, obscurity of light and absence of possession, will cease with this life, but charity involving no essential defect will last forever. Moreover, while charity excludes all mortal sin, faith and hope are compatible with grievous sin; but as such they are only imperfect virtues; it is only when informed and vivified by charity that their acts are meritorious of eternal life (see LOVE, THEOLOGICAL VIRTUE OF).

IV. CAUSES OF VIRTUE

To the human intellect the first principles of knowledge, both speculative and moral, are connatural; to the human will the tendency to rational good is connatural. Now these naturally knowable principles and these natural tendencies to good constitute the seeds or germs whence the intellectual and moral virtues spring. Moreover by reason of individual natural temperament, resulting from physiological conditions, particular individuals are better disposed than others to particular virtues. Thus certain persons have a natural aptitude with regard to science, others to temperance, and others to fortitude. Hence nature itself may be assigned as the radical cause of the

intellectual and moral virtues, or the cause of those virtues viewed in their embryonic state. In their perfect and fully developed state, however, the aforesaid virtues are caused or acquired by frequently repeated acts. Thus by multiplied acts the moral virtues are generated in the appetitive faculties in so far as they are acted upon by reason, and the determination of first principles (see HABIT). The supernatural virtues are immediately caused or infused by God. But a virtue may be called infused in two ways: first, when by its very nature (*per se*) it can be effectively produced by God alone; secondly, accidentally (*per accidens*) when it may be acquired by our own acts, but by a Divine dispensation it is infused, as in the case of Adam and Christ. Now besides the theological virtues, according to the doctrine of St. Thomas, there are also moral and intellectual virtues of their very nature Divinely infused, as prudence, justice, fortitude, and temperance. These infused virtues differ from the acquired virtues

- as to their effective principle, being immediately caused by God, whilst the acquired virtues are caused by acts of a created vital power;
- by reason of their radical principle, for the infused virtues flow from sanctifying grace as their source, whereas the acquired virtues are not essentially connected with grace;
- by reason of the acts they elicit, those of the infused virtues being intrinsically supernatural, those of the acquired not exceeding the capacity of human nature;
- whilst one mortal sin destroys the infused virtues, with the acquired virtues acts of moral sin are not necessarily incompatible, as contrary acts are not directly opposed to the corresponding contrary habit.

V. PROPERTIES OF VIRTUES

A. Mean of Virtues

One of the properties of virtues is that they consist in the golden mean, that is to say, in what lies between excess and deficit. For as the perfection of things subject to rule consists in conformity with that rule, so also evil in those same things results from deviation from that rule either by excess or defect. Hence the perfection of the moral virtues consists in rendering the movements of the appetitive powers conformable to their proper rule, which is reason, neither going beyond nor falling short of it. Thus fortitude, which makes one brave to meet dangers, avoids on the one hand reckless daring and on the other undue timidity. This golden mean, which consists in conformity with right reason, sometimes coincides with the mean of the objective thing (*medium rei*), as in the case of the virtue of justice, which renders to every man his due, no more and no less. The golden mean, however, is sometimes taken in reference to ourselves, as in the case of the other moral virtues, viz. fortitude and temperance. For these virtues are concerned with the inner passions, in which the standard of right cannot be fixed invariably, as different individuals vary with regard to the passions. Thus what would be moderation in one would be excess in another. Here also it is to be observed that the mean and extremes in actions and passions must be determined according to circumstances, which may vary. Hence with regard to a certain virtue, what may be an extreme according to one circumstance may be a mean according to another. Thus perpetual chastity, which renounces all sexual pleasures, and voluntary poverty, which renounces all temporal possessions,

are true virtues, when exercised for the motive of more surely securing life everlasting. With regard to the intellectual virtues, their golden mean is truth or conformity to reality, whilst excess consists in false affirmation, and defect in false negation. Theological virtues do not absolutely (*per se*) consist in a mean, as their object is something infinite. Thus we can never love God excessively. Accidentally (*per accidens*), however, what is extreme or mean in theological virtues may be considered relatively to ourselves. Thus although we can never love God as much as He deserves, still we can love Him according to our powers.

B. Connection of Virtues

Another property of virtues is their connection with one another. This mutual connection exists between the moral virtues in their perfect state. "The virtues", says St. Gregory, "if separated, cannot be perfect in the nature of virtue; for that is no true prudence which is not just and temperate and brave". The reason of this connection is that no moral virtue can be had without prudence; because it is the function of moral virtue, being an elective habit, to make a right choice, which rectitude of choice must be directed by prudence. On the other hand prudence cannot exist without the moral virtues; because prudence, being a right method of conduct, has as principles whence it proceeds the ends of conduct, to which ends one becomes duly affected through the moral virtues. Imperfect moral virtues, however, that is to say, those inclinations to virtue resulting from natural temperament, are not necessarily connected with one another. Thus we see a man from natural temperament prompt to acts of liberality and not prompt to acts of chastity. Nor are the natural or acquired moral virtues necessarily connected with charity, though they may be so occasionally. But the supernatural moral virtues are infused simultaneously with charity. For charity is the principle of all good works referable to man's supernatural destiny. Hence it is necessary that there be infused at the same time with charity all the moral virtues by which one performs the different kinds of good works. Thus the infused moral virtues are not only connected on account of prudence, but also on account of charity. Hence he who loses charity by mortal sin loses all the infused but not the acquired moral virtues.

From the doctrine of nature and properties of virtues it is abundantly clear how important a role they play in man's true and real perfection. In the economy of Divine Providence all creatures by the exercise of their proper activity must tend to that end destined for them by the wisdom of an infinite intelligence. But as Divine Wisdom governs creatures conformably to their nature, man must tend to his destined end, not by blind instance, but by the exercise of reason and free will. But as these faculties, as well as the faculties subject to them, may be exercised for the faculties subject to them, may be exercised for good or evil, the proper functions of the virtues is to dispose these various psychical activities to acts conducive to man's true ultimate end, just as the part which vice plays in man's rational life is to make him swerve from his final destiny. If, then, the excellence of a thing is to be measured by the end for which it is destined, without doubt among man's highest principles of action which play so important a part in his rational, spiritual, supernatural life, and which in the truest sense of the word are justly called virtues.

AUGUSTINE WALDRON

Peter Vischer

Peter Vischer

Sculptor and metal founder, b. at Nuremberg about 1460; d. in 1529. His father Hermann, who had immigrated to Nuremberg, made a baptismal font at Wittenberg, and memorial brasses at Bamberg, Meissen, and Posen, which show evidence under the Gothic forms of the greater naturalness of a new era. His son carried this freedom of form further, still without essentially changing the Gothic style. However, later, he adopted more and more the ideas of the new period. This circumstance has raised the much disputed question of the share of these sons in the formal execution of the works, especially of those produced from 1505. The father often made castings as a bronze-founder from the designs of others, consequently it is often doubted whether what he did in various productions was original work. Nevertheless, the ideal figure of Peter Vischer maintains its position by the side of his great contemporaries Stoss and Krafft. The sepulchral monuments which he made, or which were produced by his workshop, range from simple, engraved memorial brasses or bronze plates cast in relief to richly ornamental sepulchral monuments. Among his earlier works, those made about 1490, are the three memorial tablets of the bishops of Bamberg. They were followed by the sepulchral tablets for the princely house in the cathedral at Meissen, and the episcopal tombs at Breslau and Magdeburg. these works contain some curious details; in one it is the carpet spread out back of the recumbent body with a perspective background and scrolls in the Renaissance style; in another the horizontal church-doorway in which the recumbent body, is, so to speak, placed upright under a baldachino.

From 1505 Vischer was at work on his masterpiece, the sepulchral monument to St. Sebaldus, which, according to an inscription, he finished with the aid of his sons in 1519. The structure as a whole has great dignity and a compact unity, although the fundamental Gothic form has some Romanesque additions, and a large number of small Renaissance figures surround the monument. The rectangular base has an ornamental candlestick at each corner; each of the longer sides of the base presents in relief two scenes from the life of St. Sebaldus, patron of Nuremberg; Sebaldus draws fire from an icicle, fills an empty jug with wine, gives sight to a blind man, and causes the earth to swallow a mocker. On one of the shorter sides stands an ideal figure of the saint, on the

other a figure after real life of Vischer himself wearing a leather apron, as when at work. The structure terminates above in Gothic arches and dome-like pyramids, the one in the centre supporting the Infant Jesus with the orb. Below the top, on a pedestal and clearly seen from all sides, is the silver shrine of the saint. In front of the columns of the structure rise candelabra, which bear figures of the Apostles. The tops of the main columns support figures from the Old Testament. For protection the spans of the arches are equipped with two columns, one standing above the other; the lower column rises as high as the socle, the upper, which rises much higher, has at its top a stately capital. The other similar parts of this chapel-like monument give proof of the richness of imagination of the master.

The fine statues of King Arthur and King Theodoric, which form a part of the monument to the Emperor Maximilian in the court church at Innsbruck, are also, according to the original documents, the work of Vischer's workshop and should be ascribed chiefly to Peter the elder (1513). In later works the part taken by the sons is more and more evident. The Madonna of Nuremberg is also held to be a production of Vischer's workshop.

G. GEITMANN

Claude de Visdelou

Claude de Visdelou

Born at the Château de Bienassis, Pléneuf, Brittany, 122 Aug., 1656; died at Pondicherry, 11 Nov., 1737. He entered the Society of Jesus, 5 Sept., 1673, and was one of the missionaries sent to China by Louis XIV in 1687 (see VERBIEST, FERDINAND). He acquired a wide knowledge of the Chinese language and literature. Other learned Jesuits considered that he gave too much credit to modern Chinese commentators, who being atheists and materialists read their own ideas into the ancient Chinese sages. When the papal legate Mgr. de Tournon came to China in 1705, chiefly to regulate the question of the Chinese Rites, Visdelou was the only Jesuit favourable to their prohibition. Tournon appointed him Vicar Apostolic of Kwei-chou with the title of Bishop of Claudiopolis, but his superiors opposed the nomination, since Visdelou had not received papal dispensation from his vow not to accept ecclesiastical dignity. With the missionaries who had submitted to the decree against the rites, Visdelou followed the legate to Macao, where he was secretly consecrated bishop, 2 Feb., 1709. He then set out for Pondicherry where he arrived, 25 June, 1709; he remained there in great retirement in the house of the French Capuchins until his death. Visdelou took with him over 500 volumes in Chinese and almost his sole occupation consisted in working on these. He sent to Rome several writings on the questions of the rites. The Sinologist, James Legge, says he "was in the habit of writing extravagantly about the Chinese and caricaturing

their sentiments" ("Notions of the Chinese concerning God and the spirit", Hong Kong, 1852, 10). His most trustworthy works deal with the history of the Tartars. He collected from Chinese historians unique documents on the peoples of Central and Eastern Asia, Huns, Tatars, Mongols, and Turks. His researches on this subject were first published as supplement to Herbelot's "Bibliothèque orientale" (1779). However, they must have assisted Deguignes in his history of the Huns, for the geographer Anville who had handled all Visdelou's valuable MSS. on the Tatars tells us that the author had sent them to the Academician Malet, who died in 1736 ("Memoire de M. d'Anville sur la Chine", 1776, 33).

JOSEPH BRUCKER

Visigoths

Visigoths

One of the two principal branches of the Goths. Until 375 their history is combined with that of the Ostrogoths. Ulfilas (Wulfila) laboured among the Visigoths, translated the Bible into their language, and preached Arianism with great success until prince Athanaric obliged him to withdraw (348). At the invasion of the Huns some of the Visigoths fled with Athanaric into the mountains of Transylvania, but the majority of the people turned to the Emperor Valens with the entreaty to be taken into the Roman Empire. In 376 a force of 200,000 Visigoths crossed the Danube, but oppression by the governors led to a revolt. They traversed the country plundering as they went, and, and defeated Valens in 378 near Adrianople. Valens was slain and his successor, Theodosius, made peace with the Visigoths in 382. His policy was to unite them with the empire by means of national commanders appointed by the emperor. Desirous of maintaining peace, he endeavoured to unite the Arians with those who held the Nicene faith. After the death of Theodosius (395) the Visigoths elected Alaric of the Baltha family as their king. Alaric sought to establish a Germanic kingdom on Roman soil by bringing his people into connection with Roman civilization. In 396 he invaded the Balkan peninsula as far as the Peloponnesus and was given the Province of Illyria. He now turned against the Western Empire, and in 401 entered Italy. He was victorious at Aquileia but after the battle of Pollentia (403) was forced to retreat. In 408 he demanded the cession of Noricum, Illyria Pannonia, and Venetia, in 410 he plundered Rome, and soon after died in southern Italy. His successor Athaulf (410-15) led the Visigoths into Gaul, where the following king Wallia (415-19) gained the land between the Garonne and the Loire. Under the succeeding rulers the kingdom was enlarged, and, during the reign of Euric (466) the Visigothic Kingdom of Toulouse, named after its capital Toulouse, included the southern part of Gaul and a large portion of Spain. The Arian kings found the Catholic Church firmly established in the country; and the Catholics enjoyed toleration until the reign of Euric. The conflicts which then arose have been described by

Gregory of Tours as bloody persecutions, but this is exaggerated. Euric was in general just towards his Catholic subjects but took steps against individual bishops and clerics who encouraged religious quarrels and were political opponents of the kingdom. Catholics who fled from Africa found an asylum among the Visigoths and Euric's minister, Leo, was a Catholic.

When King Clovis and his Frankish followers accepted Catholicism, Clovis undertook to drive the "heretics" out of Gaul. The Catholic clergy made common cause with the Franks and Alaric II (485-507) took severe measures against them, but was not otherwise a persecutor of the Church. In 507 Alaric was defeated and slain by Clovis. Almost all of Visigothic Gaul now fell to the Franks, the last remnant during the reign of Amalaric (526-31). The seat of government was transferred to Spain where Toledo became the capital.

The ensuing era was fairly peaceful. The Catholics received unlimited tolerance, so that the Church constantly increased in strength while the Visigothic nation and kingdom grew steadily weaker. The nobility enthroned and deposed kings at pleasure; of thirty-five kings, seventeen were murdered or deposed. Arianism, isolated after the destruction of the Ostrogothic and Vandalic kingdoms, constantly declined but was revived during the reign of Leovigild (568-86) His son Hermenigild revolted against him but was defeated and beheaded. Later narratives represent Hermenigild as a martyr for Catholicism, his wife, a Frankish princess, having converted him, but contemporary authorities say nothing of it. Leovigild made a vain effort to win the Catholics by a conciliatory confession of faith drawn up by an Arian synod at Toledo. His son Reccared (586-601) became a Catholic and the Visigoths soon followed his example. With this began the amalgamation of Roman and German elements in Spain. In law and politics the Romans became Gothic; the Goths in social life and religion became Roman. The Catholic Church was the national and established Church, while connection with Rome ceased almost entirely. The court of highest instance was the national council at Toledo. The king appointed the bishops and convoked the council. But the constant struggles of the royal house with the secular and spiritual aristocracy caused the downfall of the nation. From the middle of the seventh century the Arabs were masters of North Africa. In 711 they forced their way into Spain under Tarik. King Roderick was defeated at Jerez de la Frontera, and the Arabs acquired almost the whole of Spain. The Romans and Goths coalesced, forming the Spanish nation which succeeded later in driving the Arabs out of the peninsula.

KLEMENS LÖFFLER

Visions and Apparitions

Visions and Apparitions

This article will deal not with natural but with supernatural visions, that is, visions due to the direct intervention of a power superior to man. Cardinal Bona (*De discret. spir.*, xv, n. 2) distinguishes between visions and apparitions. There is an *apparition* when we do not know that the figure which we see relates to a real being, a *vision* when we connect it with a real being. With most mystics we shall consider these terms as synonymous.

THREE TYPES OF VISIONS

Since St. Augustine (*De gen. ad litt.*, 1. XII, vii, n. 16) mystical writers have agreed in dividing visions into corporeal, imaginative, and intellectual.

Corporeal vision. Corporeal vision is a supernatural manifestation of an object to the eyes of the body. It may take place in two ways: either a figure really present strikes the retina and there determines the physical phenomenon of the vision, or an agent superior to man directly modifies the visual organ and produces in the composite a sensation equivalent to that which an external object would produce. According to the authorities the first is the usual manner; it corresponds to the invincible belief of the seer, e.g. Bernadette at Lourdes; it implies a minimum of miraculous intervention if the vision is prolonged or if it is common to several persons. But the presence of an external figure may be understood in two ways. Sometimes the very substance of the being or the person will be presented; sometimes it will be merely an appearance consisting in a certain arrangement of luminous rays. The first may be true of living persons and even, it would seem, of the now glorious bodies of Christ and the Blessed Virgin, which by the eminently probable supernatural phenomenon of multilocation may become present to men without leaving the abode of glory. The second is realized in the corporeal apparition of the unresurrected dead or of pure spirits.

Imaginative vision. Imaginative vision is the sensible representation of an object by the act of imagination alone, without the aid of the visual organ. Sometimes the subject is aware that the object exists only in his imagination, that it is a purely reproduced or composite image. Sometimes he projects it invincibly without, which is the case in supernatural hallucination. In natural imaginative vision the imagination is stirred to action solely by a natural agent, the will of the subject, an internal or an external force, but in supernatural imaginative vision an agent superior to man acts directly either on the imagination itself or on certain forces calculated to stir the imagination. The sign that these images come from God lies, apart from their particular vividness, in the lights and graces of sincere sanctity which accompany them, and in the fact that the subject is powerless to define or fix the elements of the vision. Such efforts most frequently result in the cessation or the abridgement of the vision. Imaginative apparitions are ordinarily of short duration, either because the human organism is unable to endure for a long time the violence done to it, or imaginative visions soon give place to intellectual visions. This kind of vision occurs most frequently during sleep; such were the dreams of Pharaoh and Nebuchadnezzar (*Genesis 41; Daniel 2*). Cardinal Bona gives several reasons of expediency for this frequency: during sleep the soul is less divided by multiplicity of thoughts, it is more passive, more inclined to accept, and less inclined to dispute; in the silence of the senses the images make a more vivid impression.

It is often difficult to decide whether the vision is corporeal or imaginative. It is certainly corporeal (or extrinsic) if it produces external effects, such as the burnt marks left on an object by the passing of the Devil. It is imaginative if, for example, the image persists after one has closed one's eyes, or if there are no traces of the external effects which ought to have been produced, such

as when a ball of fire appears above a person's head without injuring it. The time most conducive to these visions is a state of ecstasy, when the exercise of the external senses is suspended. However, although the question has been discussed among mystics, it seems that they may also be produced outside of this state. This is the opinion of Alvarez de Paz (*De grad. contemp.*, 1., V, pt. III, cii, t. 6) and of Benedict XIV (*De servorum Dei beatif.*, 1. III, c. i, n. 1). Imaginative vision may be either representative or symbolic. It is representative when it presents an image of the very object to be made known: such may have been the apparition to Bl. Joan of Arc of St. Catherine and St. Margaret, if it was not (which is more probable) a luminous vision. It is symbolic when it indicates the object by means of a sign: such as the apparition of a ladder to Jacob, the apparition of the Sun, Moon, and stars to the patriarch Joseph, as were also numerous prophetic visions.

Intellectual visions. Intellectual visions perceive the object without a sensible image. Intellectual visions in the natural order may apparently be admitted. Even when we hold with the Scholastics that every idea is derived from some image, it does not follow that the image cannot at a given time abandon the idea to itself. The intellectual vision is of the supernatural order when the object known exceeds the natural range of the understanding, e.g. the essence of the soul, certain existence of the state of grace in the subject of another, the intimate nature of God and the Trinity; when it is prolonged for a considerable time (St. Teresa says that it may last for more than a year). The intervention of God will be recognized especially by its effects, persistent light, Divine love, peace of soul, inclination towards the things of God, the constant fruits of sanctity.

The intellectual vision takes place in the pure understanding, and not in the reasoning faculty. If the object perceived lies within the sphere of reason, intellectual vision of the supernatural order takes place, according to the Scholastics by means of species acquired by the intellect but applied by God himself or illuminated especially by God. If it is not within the range of reason it takes place by the miraculous infusion into the mind of new species. It is an open question whether in intellectual visions of a superior order the understanding does not perceive Divine things without the aid of species. In this kind of operation the object or fact is perceived as truth and reality, and this with an assurance and certainty far exceeding that which accompanies the most manifest corporeal vision. According to St. Teresa

"We see nothing, either interiorly or exteriorly. . . But without seeing anything the soul conceives the object and feels whence it is more clearly than if it saw it, save that nothing in particular is shown to it. It is like feeling someone near one in a dark place" (first letter to Father Rodrigo Alvarez).

This is the sense of the presence, to use the expression of modern writers. And again:

"I have rarely beheld the Devil in any form, but he has often appeared to me without one, as is the case in intellectual visions, when as I have said, the soul clearly perceives someone present, although it does not perceive it in any form" (Life, 31).

The vision is sometimes distinct, sometimes indistinct. The former attests the presence of the object without defining any element. "on the feast of the glorious St. Peter," writes St. Teresa, "being at prayer, I saw, or rather (for I saw nothing, either with the eyes of the body or with those of the soul) I felt my Savior near me and I saw that it was he who spoke to me" (Life, 27).

At a certain degree of height or depth, the vision becomes indescribable, inexpressible in human language. St. Paul, rapt to the third heaven, was instructed in mysteries which it is not in the power of the soul to relate (II Cor. 12:4). There is no occasion, however, to accuse the mystics of agnosticism. Their agnosticism, if we may so speak, is merely verbal. The inexpressible is not the incomprehensible. Since Pseudo-Dionysius Areopagita mystics have been in the habit of designating the profundity of Divine realities by negative terms. The avowal of the powerlessness of human speech does not prevent them from saying, as did St. Ignatius, for example, that what they have seen of the Trinity would be sufficient to establish their faith, even though the Gospels were to disappear. It is impossible to establish a parallel between the degree of spirituality of the vision and the degree of the mystic state or the sanctity of the subject. Imaginative or even corporeal visions may continue in the most advanced state of union, as seems to have been the case with St. Teresa. However, intellectual visions of the supernatural order, as of the mystery of the Trinity, point indisputably to a very high degree of mystical union.

VISIONS OF DEMONS

Since the day when, in the terrestrial paradise, the enemy of the human race took the form of a serpent in order to tempt our first parents, the Devil has often shown himself to men in a sensible form. The struggles of St. Anthony in the desert against the visible attacks of the enemy are well known (St. Athanasius, *Vita S. Antonii*) as also in more recent times are the Devil's visible attacks on the Curé of Ars, St. Jean-Baptiste-Marie Vianney. As St. Paul says (II Cor. 11:14) Satan often transforms himself into an angel of light in order to seduce souls. Sulpicius Severus has preserved the account of an attempt of this kind made against St. Martin. One day the saint beheld in his cell, surrounded by a dazzling light, a young man clad in a royal garment, his head encircled by a diadem. St. Martin was silent in surprise. "Recognize," said the apparition to St. Martin, "him whom thou seest. I am Christ about to descend upon earth but I wished first to show myself to you." St. Martin made no reply. "Martin," continued the apparition, "why dost thou hesitate to believe when thou seest? I am Christ." Then said Martin: "The Lord Jesus did not say that he would return in purple and with a crown. I will not recognize my Savior unless I see Him as He suffered, with the stigmata and the cross." Then the diabolic phantom vanished, leaving behind an intolerable odor (*De Vita Martini*). Newman has given an interpretation of this vision for his own period (Martin and Maximus, 206). The best way of judging of the origin of these manifestations is that given by St. Ignatius, namely, to examine the series of incidents; to question one's self concerning the beginning, the middle, and the end, will lead to a good result (*Spiritual Exercises: Rules for the Discernment of Spirits*, 5 a).

EVOCATION OF THE DEAD AND SPIRITISM

It is written (I Kings 28) that Saul, when defeated by the Philistines, went to the witch of Endor and asked her to bring before him the shade of Samuel, and the shade rose out of the earth and revealed to Saul that God was angry with him because he had spared Amalec. Numerous pagan cults practiced evocation of the dead; magicians practiced it in the Middle Ages, and in modern times medium or spiritists have taken upon themselves the task of communicating with the souls of the dead or with disembodied spirits (*see* SPIRITISM). The Catholic Church has on various occasions condemned the practice of magnetism and spiritism, inasmuch as this practice evokes the spirits of the dead and may call evil spirits into action. But it has never thereby declared that each operation puts us into real relation with the spirits of the dead or an evil spirit. The chief condemnations are those of the Holy Office, 4 August, 1856; 21 April, 1841; 30 March, 1898. [See also Acta Concil. Baltim., II (Col. Lac., III, 406).]

LUCIAN ROURE

Visit Ad Limina

Visit ad Limina

(*Sc. Apostolorum*)

The visit *ad limina* means, technically, the obligation incumbent on certain members of the hierarchy of visiting, at stated times, the "thresholds of the Apostles", Sts. Peter and Paul, and of presenting themselves before the pope to give an account of the state of their dioceses. The object of the visit is not merely to make a pilgrimage to the tombs of the apostles, but, above all, to show the proper reverence for the Successor of St. Peter, to acknowledge practically his universal jurisdiction by giving an account of the condition of particular churches, to receive his admonitions and counsels, and thus bind more closely the members of the Church to its Divinely appointed head.

I.

Although it was the custom of bishops from the most remote times to refer causes to the pope, and even to visit him personally when circumstances required it, yet we can find no trace in the earliest age of any obligation binding them to repair to Rome at stated times. The first vestiges of this duty are found in the ancient practice of celebrating twice a year provincial councils of the bishops of Italy who pertained to the province of the Roman Pontiff. In the fifth century, Pope Leo I insists on the custom of Sicily sending three bishops yearly to Rome to assist at a council. In the next century, Gregory I declared that although in his time the Sicilian bishops were obliged to visit Rome only once every three years, yet he extends the term to five years. A Roman council under Pope Zacharias (A.D. 743) decreed that bishops consecrated by the pope, who reside near Rome, should make the visit *ad limina* yearly in person, and those who are far away should fulfil the same

obligation by letter (can. IV). A custom gradually arose which, at least from the eleventh century, obliged metropolitans when asking for the pallium, and, soon after, all bishops to visit the thresholds of the apostles at stated times, either personally or by a substitute. That this visit was of strict obligation can be gathered from the expressions of Paschal II (cap. iv, x, De elect., I, 6), and especially of Innocent III in many decretals, while in the Decretals of Gregory IX, a form of oath is given (cap. iv, x, De jurejurand., II, 24), in which bishops are obliged before their consecration to promise that they will visit Rome annually, either personally or by deputy, unless the pope dispenses them.

II.

In 1585 Sixtus V issued the Constitution "Romanus Pontifex", which for over three hundred years formed the main rule and norm for visits *ad limina*. This document states in detail within what term of years, each bishop, from whatever part of the world, should visit Rome, and what heads of information he should consider in making his report to the pope. Benedict XIV (23 Nov. 1740) in the Constitution "Quod Sancta", extended the obligation to prelates *nullius* ruling over a separate territory. This pope also established a particular congregation *super statu ecclesiarum* to deal with the reports of Bishops when they made the prescribed visit.

III.

The present discipline concerning visits *ad limina* is found in the Decree of the Consistorial Congregation, issued by order of Pius X (31 Dec., 1909) for all bishops not subject to the jurisdiction of the Propaganda. This decree states that every bishop must render to the pope an account of the state of his diocese once every five years. The quinquennial periods are to begin in 1911. In the first year of that term, the report is to be sent in by the bishops of Italy and of the islands of Corsica, Sardinia, Sicily, and Malta; in the second year, by the bishops of Spain, Portugal, France, Belgium, Holland, England, Scotland, and Ireland; in the third year, by the bishops of the Austro-Hungarian and German Empires and of the remainder of Europe; in the fourth year, by the bishops of all America; in the fifth year, by the bishops of Africa, Asia, Australia, and the adjacent islands. In their first report, the bishops are directed to answer every question in a subjoined *elenchus*, but in subsequent relations they are merely to add anything new, if such there be, and state the result of the counsels and admonitions given by the Sacred Congregation in its reply to the report. Bishops, when they come to Rome in fulfilment of their obligation of *ad limina*, must visit the tombs of the apostles and present themselves before the pope. Ordinaries who reside outside of Europe are obliged to visit the Eternal City once every alternate five years, or only decennially. The bishop may satisfy this obligation, either personally or by his coadjutor or auxiliary bishop, or even, with permission of the Holy See, by a priest. Finally, the decree declares that this visit and diocesan report to the pope are not to take the place of the canonical visitation of the diocese, which must be made annually, or, in large dioceses, biennially.

IV.

To this decree of the Consistorial Congregation is added an *elenchus* containing the points of information to be supplied by the ordinaries in their relation to the Holy See. It may be briefly summarized as follows: The name, age, and fatherland of the ordinary; his religious order, if he belongs to one; when he began to rule his diocese; and if a bishop, when he was consecrated. A general statement concerning the religious and moral condition of his diocese and whether religion progressed or lost ground in it since the last quinquennium. The origin of the diocese, its hierarchical grade and principal privileges, and if archiepiscopal, the number and names of the suffragan sees, but if immediately subject to the Holy See, what metropolitan synod its bishops must attend; the extent of the diocese, its civil government, its climate, its language; the place of residence of the ordinary, with all directions necessary for safe epistolary correspondence; the number of inhabitants and the principal cities; how many Catholics there are, and if different rites prevail, how many Catholics belong to each; if there are non-Catholics, into what sects they are divided; the diocesan curia; the vicar-general, the synodial judges and examiners, the ecclesiastical court and its officials, the archives, the various chancery taxes; the number of secular priests and clerics, their dress, their mode of life and how they attend to their duties; whether there are any, and if so what, chapters of canons, and other aggregations of priests that form quasi-chapters; how many parishes there are and the number of faithful in the largest and smallest; into how many vicariates forane or rural deaneries parishes are grouped; how many non-parochial churches and public oratories there are; whether there is any celebrated sacred shrine and if so, what; concerning the administration of the sacraments, exhortations to frequent communion, special devotions, missions, sodalities, and social works; the diocesan seminary, its buildings, government, instruction in theology, philosophy, and liturgy, the admission and dismissal of seminarians; the inter-diocesan seminary, if there is one, and its condition; what institutes of religious men there are, with the number of houses and of religious, both priests and lay-brothers; what special work these religious dedicate themselves to and their relations to the ordinary; what are the institutes of religious women in the diocese, with the number of houses and persons; concerning the cloister of religious women, their work and the observance of canonical prescriptions; the instruction and education of youth; and the editing and reading of books and periodicals.

Liminum* (4th ed., Rome, 1899); MELCHERS, *De Campmoca Dioecesium Visitatione* (Cologne, 1883); TAUNTON, *The Law of the Church* (London, 1906), s. v., *Limina*; FERRARIS, *Bibliotheca Canonica*, V (Rome, 1889), s. v., *Limina*; WERNZ, *Jus Decretalium*, II (Rome, 1899).

WILLIAM H.W. FANNING
Canonical Visitation

Canonical Visitation

The act of an ecclesiastical superior who in the discharge of his office visits persons or places with a view of maintaining faith and discipline, and of correcting abuses by the application of proper remedies. Such visitation is incumbent on the shepherd who would properly feed and guard his flock. This practice, in vogue from early Christian times, had somewhat fallen into disuetude when re-established by the Council of Trent in these words: Patriarchs, primates, metropolitans and bishops shall not fail to visit their respective dioceses either personally, or if they be lawfully impeded, by their vicar-general or visitor; if unable on account of its extent to make the visitation of the whole diocese annually, they shall visit at least the greater part thereof, so that the whole shall be completed within two years, either by themselves or their visitors. Of the purpose of visitation the Council says: But the principal object of all the visitations shall be to lead men to sound and orthodox doctrine by banishing heresies, to maintain good morals, and to correct such as are evil; by admonition and exhortation to animate the people to religion, peace, and innocence, and to put in vogue whatever else may be dictated by the prudence of the visitors for the benefit of the faithful, as time, place and opportunity shall permit.

The right of visitation belongs to all prelates who have ordinary jurisdiction over persons in the external forum. The pope through his delegates may institute a visitation throughout the world, patriarchs, primates, metropolitans, bishops, vicars apostolic, and vicars capitular or administrators of vacant dioceses in their respective territories, religious superiors within their own jurisdiction. Prelates *nullius* enjoy this right in conjunction with the neighbouring bishop, whose precepts in case of disagreement will prevail. Visitation does not, however, fall within the province of a vicar-general unless he be specially commissioned by the bishop. A metropolitan is not permitted to visit the dioceses of his suffragan bishop save for reasons approved in a provincial synod and then only after the visitation of his own diocese has been completed.

The canonical visitation of a diocese is incumbent on the bishop personally unless lawfully hindered. A bishop may visit the various parts of his diocese as often as he chooses. According to the Council of Trent he must do so every year if possible, or at least every two years. Attention is drawn to this Decree by the Sacred Congregation of the Consistory (A remotissima, 31 Dec., 1909). The Third Plenary Council of Baltimore requires a bishop to visit every part of his diocese at least once every three years, not only that he may administer the Sacrament of Confirmation, but likewise that he may know his people. Associate visitors, men versed in ecclesiastical affairs, are recommended as useful in promoting the end in view. A secretary to do the clerical work is generally in attendance. It proves a saving of time and labour if the chancellor or secretary receives in advance answers in writing to the numerous questions compiled, since from the replies it may be seen what particular subjects require a personal investigation. The visitation comprises persons, places, and things. It is an examination into the conduct of persons, viz. clergy, nuns, and laity; into the condition of churches, cemeteries, seminaries, convents, hospitals, asylums, etc., with their furnishing and appurtenances, into the administration of church property, finances, records, state of religion: briefly, it is a complete investigation of the spiritual and temporal affairs of the diocese. The visitor hears complaints, investigates crimes, sees whether pastors and others properly discharge their

duties, and inquires into the private conduct or morals of clergy and laity. Regulars in matters pertaining to the cure of souls and Divine worship are subject to episcopal visitation and correction. As delegate of the Apostolic See a bishop may also visit exempt places, but may punish delinquents therein only when the regular superior, being duly notified, fails to do so. Religious communities of nuns are visited by the bishop either by virtue of his own right or as delegate of the Holy See.

The episcopal visitation should be a paternal investigation of diocesan matters. Formal trials and judicial penalties consequently will not be common: from such, should they be made use of, a suspensive appeal may be taken. Otherwise an appeal from decrees promulgated in visitation will beget merely a devolutive effect. The laws made should be enforced, and an authentic account of the entire visitation should be preserved in the diocesan archives as an official record, as well as to enable the bishop in his visit *ad limina* to render to the Holy See an accurate report of conditions in his diocese. This report to the pope is to be signed not only by the bishop, but likewise by one of the associate visitors. A bishop or other visitor, content with hospitality, will accept no offering for the visitation.

The Pontifical prescribes the ceremonies to be observed in a formal visitation of a parish. At the door of the church the bishop in *cappa magna* kisses the crucifix, receives holy water, and is incensed; then proceeding to the sanctuary he kneels till a prescribed prayer is sung. Ascending the altar the bishop gives his solemn episcopal blessing. A sermon follows in which the bishop refers to the purpose of the visitation. Later he imparts the indulgence that he is empowered to grant. Putting on a black cope and simple mitre, the bishop recites certain prayers for the deceased bishops of the diocese. The procession then proceeds to the cemetery if near by, otherwise to some convenient place in the church where a catafalque shall have been erected: there prayers are offered for all the faithful departed. The ceremony is terminated on returning to the sanctuary by still another prayer for the dead. White vestments being substituted for black, the bishop examines the tabernacle and contents (blessing the people with the ciborium), altars, baptismal font, sacred oils, confessionals, relics, sacristy, records, cemetery, edifices, etc. as above. Finally the Pontifical contains other prayers to be said privately before the departure of the bishop and his assistants.

Religious superiors also visit canonically institutions and persons subject to them, each observing the Constitution and customs of his own order. The efforts of female religious superiors in visiting their houses are directed chiefly to promoting zeal and discipline; their authority is confined to correcting minor breaches of rule, since they are devoid of canonical jurisdiction. Difficulties beyond their power to settle are reported to the bishop or other lawful superior.

ANDREW B. MEEHAN

Visitation of the Blessed Virgin Mary

Visitation of the Blessed Virgin Mary

I. THE EVENT

Assuming that the Annunciation and the Incarnation took place about the vernal equinox, Mary left Nazareth at the end of March and went over the mountains to Hebron, south of Jerusalem, to wait upon her cousin Elizabeth, because her presence and much more the presence of the Divine Child in her womb, according to the will of God, was to be the source of very great graces to the Blessed John, Christ's Forerunner. The event is related in Luke 1:39-57. Feeling the presence of his Divine Saviour, John, upon the arrival of Mary, leaped in the womb of his mother; he was then cleansed from original sin and filled with the grace of God. Our Lady now for the first time exercised the office which belonged to the Mother of God made man, that He might by her mediation sanctify and glorify us. St. Joseph probably accompanied Mary, returned to Nazareth, and when, after three months, he came again to Hebron to take his wife home, the apparition of the angel, mentioned in Matthew 1:19-25, may have taken place to end the tormenting doubts of Joseph regarding Mary's maternity. (Cf. also MAGNIFICAT.)

II. THE FEAST

The earliest evidence of the existence of the feast is its adoption by the Franciscan Chapter in 1263, upon the advice of St. Bonaventure. The list of feasts in the "Statuta Synodalia eccl. Cenomanensis" (1237, revised 1247; Mansi, *suppl.*, II, 1041), according to which this feast was kept 2 July at Le Mans in 1247, may not be genuine. With the Franciscan Breviary this feast spread to many churches, but was celebrated at various dates--at Prague and Ratisbon, 28 April; in Paris, 27 June, at Reims and Geneva, 8 July (cf. Grotefend, "Zeitrechnung", II, 2, 137). It was extended to the entire Church by Urban VI, 6 April, 1389 (Decree published by Boniface IX, 9 Nov., 1389), with the hope that Christ and His Mother would visit the Church and put an end to the Great Schism which rent the seamless garment of Christ. The feast, with a vigil and an octave, was assigned to 2 July, the day after the octave of St. John, about the time when Mary returned to Nazareth. The Office was drawn up by an Englishman, Adam Cardinal Easton, Benedictine monk and Bishop of Lincoln (Bridgett, "Our Lady's Dowry", 235). Dreves (*Analecta Hymnica*, xxiv, 89) has published this rhythmical office with nine other offices for the same feast, found in the Breviaries of the fourteenth and fifteenth centuries. Since, during the Schism, many bishops of the opposing obedience would not adopt the new feast, it was confirmed by the Council of Basle, in 1441. Pius V abolished the rhythmical office, the vigil, and the octave. The present office was compiled by order of Clement VIII by the Minorite Ruiz. Pius IX, on 13 May, 1850, raised the feast to the rank of a double of the second class. Many religious orders -- the Carmelites, Dominicans, Cistercians, Mercedarians, Servites, and others -- as well as Siena, Pisa, Loreto, Vercelli, Cologne, and other dioceses have retained the octave. In Bohemia the feast is kept on the first Sunday of July as a double of the first class with an octave.

HOLWECK, *Fasti Mariani* (Freiburg, 1892); GROTEFEND, *Zeitrechnung* (Leipzig, 1892). On the iconography of the event, see GUENEBRAULT, *Dictionnaire iconographique* (Paris, 1850), 645; COLERIDGE, *The Mother of the King* (London, 1890).

FREDERICK G. HOLWECK

Visitation Order

Visitation Order

The nuns of the Visitation of Mary, called also Filles de Sainte-Marie, Visitandines, and Salesian Sisters, were founded in 1610 at Annecy in the Duchy of Savoy by St. Francis de Sales, Bishop of Geneva, and by St. Jane de Chantal. Their aim was to secure the benefit of the religious life for persons who had neither the physical strength nor the attraction for the corporal austerities at that time general in religious orders. St. Francis wished especially to apply in souls of good will and in a permanent institution the spiritual method dear to him: to reach God chiefly through interior mortification and to endeavour to do in every action only the Divine Will with the greatest possible love. The Visitation is therefore the principal work of St. Francis de Sales, the perpetuation of his doctrine and spirit, the living commentary on the "Introduction à la vie dévote" and the "Traité de l'amour de Dieu".

At first the founder had not a religious order in mind; he wished to form a congregation without external vows, where the cloister should be observed only during the year of novitiate, after which the sisters should be free to go out by turns to visit the sick poor. This was why he called his institute the Visitation. The project was quite different from the idea realized later by St. Vincent de Paul in the Sisters of Charity, for what the bishop desired above all was the contemplative life; to this he added visitation of the sick, but merely by way of devotion. The undertaking was begun on Trinity Sunday, 6 June, 1610. The Baronne de Chantal, a widow, native of Burgundy, was destined to be the first superioress. Marie-Jacqueline Favre, daughter of the Savoyard juris-consult Antoine Favre, and Mlle Charlotte de Brechard, a Burgundian, accompanied the foundress as did also a servant, Anne-Jacqueline Coste, destined to be the first outdoor sister of the Visitation. After having received the bishop's blessing they assembled in the house of "la Galerie", still standing, in a suburb of Annecy. Trials, especially those arising from ridicule, were not wanting to the young congregation. People did not readily understand the mild and simple rule of the new institute. Superficial observers did not take into account that the bishop was in his conduct and direction really the most mortified of all the saints. Nevertheless the novices arrived, and the names of two, Peronne-Marie de Chatel and Marie-Ameé de Blonay, have remained noted in the history of the Visitation.

When the establishment was an accomplished fact (1615) Archbishop de Marquemont of Lyons undertook to persuade the founder to follow the common practice and erect his congregation into a religious order under the Rule of St. Augustine, with the cloister imposed by the Council of Trent. At first the saint resisted. It cost him much to abandon the sick poor and leave to his daughters only the apostolate of prayer and sacrifice, but he eventually yielded. He then (1616) undertook the

compilation of the "Constitutions pour les religieuses de la Visitation Sainte-Marie". The Church has thus characterized this work: "He had added to the rule of St. Augustine constitutions which are admirable for wisdom, discretion, and sweetness" (Brev. Rom., 29 Jan., sixth lesson). At once the founder opened the door of the monastery to all of good will. No severity, however great, could prevent the weak and infirm from coming "there to seek the perfection of Divine love". He expressly ordered the reception at the Visitation not only of virgins but also of widows, on condition that they were legitimately freed from the care of their children; the aged, provided they were of right mind; the crippled, provided they were sound in mind and heart; even the sick, except those who had contagious diseases.

Austerities of the cloister, like rising at night, sleeping on hard surfaces, were suppressed. Instead of chanting the canonical office in the middle of the night the sisters recited the Little Office of the Blessed Virgin at half-past eight in the evening. There was no perpetual abstinence nor prolonged fast. Besides the ordinary fast days of the Church, he retained only that on every Friday and certain vigils. Corporal mortifications properly so called were limited to the use of discipline every Friday. But the wise legislator was careful to give to interior mortification what he withdrew from exterior mortification. His first concern was for poverty, which is nowhere so strict as in the Visitation, where everything is absolutely in common. No sister may "have as property anything however little, or under any pretext whatever". Not only the rooms and the beds, but medals, crosses, rosary beads, even pictures, are changed every year in order that the sisters may never come to consider them as their own. Next comes obedience. Whether general or particular it extends to every moment of the day, and the superior is to be obeyed as a mother, "carefully, faithfully, promptly, simply, frankly, and cordially". The most trying mortification is perhaps that of the common life as understood by St. Francis de Sales. The day of the Visitandine is divided from 5 a. m. until 10 p. m. into a multitude of short exercises which keep her occupied every instant in duties determined by her rule. An hour of mental prayer in the morning and a half-hour in the evening, Mass, Office, spiritual readings, and examens of conscience succeed one another, and keep the religious in perpetual contemplation. Silence, recollection, modesty of demeanour prepare for and facilitate prayer. Two recreations of an hour each relax without dissipating the mind; the sisters should talk with cordiality and simplicity only of agreeable and piously cheerful topics.

A little book based on St. Francis de Sales and which St. Jane de Chantal added from the first to the Constitutions of the order, namely, the "Directoire spirituel pour les actions journalieres", gives the practical means of fulfilling the Constitutions in the spirit of the holy founder, the method of performing each of the daily actions under the eye of God, in dependence on Him, and in union with the Divine Model, Jesus Christ. It may be said that the "Directoire" is the mould of the Visitandines. The sisters wear a black habit. The gown is made a sac, rather full, and is confined by a girdle. On the head they wear a veil of black taminy. A black bandeau encircles the brow; a guimpe or barbette of white linen covers the neck, from which is suspended a silver cross; a large chaplet hangs at the belt. There are three grades among the sisters: the choir sisters who sing the Office; the associate sisters dispensed from the Office because of their health, but in other respects

the same as the first grade; and finally the lay sisters who wear a white veil and are engaged in domestic tasks; they have no voice in the chapter but they make the same vows and are as much religious as the others. The communities are cloistered. The outdoor sisters who make publicly only the vow of obedience are charged with the external service of the house. Each convent is governed by a superior whom all the sisters elect by secret ballot. She is chosen for three years at the end of which time she is eligible for election for three more years. When this time is ended she is ineligible for the subsequent term. A council of four other sisters assist her in the government of the house. An assistant replaces her when it is necessary. All the houses of the order are independent of one another. Circulars sent from time to time keep all acquainted with the events of each convent. There is no superior general, no visitor general, nor general chapter. In doubts regarding observance, recourse is had to the house of Annecy, the *sainte source*, which actually exercises no authority, but whose right to advise is recognized as that of an elder sister. The first superior of each convent is the bishop of the diocese and it is under his direct and immediate care. Two priests are charged by the bishop with the care of the convent, one with the title of superior, the other with that of confessor.

Such are the chief rules of the Visitation, their most striking characteristic being moderation and common sense. Made for generous souls, there is nothing about them which could weaken the body, while they overlook nothing which could mortify the spirit. For three centuries the Visitation has never stood in need of reform and each century has brought to the Church and the world its contingent of holy souls. The Order of the Visitation of Mary was canonically erected in 1618 by Paul V who granted it all the privileges enjoyed by the other orders. A Bull of Urban VIII solemnly approved it in 1626. At the first centenary of the institute in 1710 came renewed praise for its Constitutions "admirable for wisdom, discernment, and mildness, and which open up a certain easy and united path" to religious perfection. The Visitation developed rapidly. As early as the third year the house of "la Galerie" was too small; it was necessary to purchase an estate and build not far from the lake the convent which kept the name of the first convent of Annecy. The church still exists; the remainder of the building was destroyed during the French Revolution. Lyons (1615) was the first foundation with Mother Favre as superior; Moulins (1616) was the second with Mother de Brechard. Grenoble (1618), Bourges (1618), and Paris (1619) followed in close succession. When St. Francis de Sales died (1622) there were already 13 convents established. At the death of St. Jane de Chantal (1641) there were 86. The Bull of Clement XI at the first centenary of the foundation mentions 147. In the seventeenth century the order was confined to France and especially to Savoy; in the eighteenth century it extended to Italy, Germany, Spain, Switzerland, Poland, and the Low Countries. There were 167 houses in 1792 when the French Revolution dispersed and closed all the convents it reached. The foreign houses retained the traditions of the founders. The storm passed and as early as 1800 the convents of the Visitation began gradually to be restored in all parts of France. That of Annecy was not restored until 1824.

The convent of Georgetown was the first house of the Visitation founded in the United States (see sub-article below). The Visitation of Georgetown founded that of Mobile 1833 and in the same

year that of Kaskaskia, which was transferred to St. Louis in 1844. In 1837 it founded the Visitation of Baltimore, that of Frederick in 1846, and Philadelphia in 1848. These various convents founded others, and at present there are in the United States 21 houses of the Visitation in relation with Annecy. England has two convents, Westbury, now transferred to Harrow, London, and that of Roseland, Walmer, Kent, which is the ancient convent of Vilna, Poland. The last Visitation convent founded in an English-speaking country is that of Ottawa, Canada, founded by sisters from Annecy in 1910. At the third centenary of the order, 6 June, 1910, the Visitation numbered 170 convents: 56 in France and 12 other French houses which the religious persecution compelled to go into exile; 30 in Italy; 2 in Switzerland; 7 in Austria; 1 in Russian Poland; 4 in Belgium; 1 in Holland; 2 in England; 17 in Spain; 3 in Portugal (these convents were driven into exile by the Revolution in 1910); 21 in the United States; 1 in Canada; 11 in Latin America; and 2 in Syria.

The first Visitandines, emulating their foundress, had nearly all received extraordinary gifts of prayer. The process of beatification of Mother de Brechard was even begun but was abandoned to make way for that of Mother de Chantal. It was Blessed Margaret Mary Alacoque (q. v.), a Visitandine of Paray-le-Monial in Burgundy, to whom the Sacred Heart of Jesus was manifested, in order that the devotion to the Sacred Heart might be communicated to the Church. Another Visitandine, Venerable Anne-Madeleine Remusat of the second convent of Marseilles, was the propagator of devotion to the Sacred Heart at the time of the plague of Marseilles in 1722; her cause was introduced in 1891. The cause of Venerable Marie de Sales Chappuis, superioress of the Visitation convent of Troyes (d. in 1875), was introduced in 1879 and the process of her beatification is proceeding rapidly. A religious of exalted virtue, she encouraged a number of souls both within and without the cloister in that path of confidence, generosity, obedience to the Divine Will, of fidelity to the duty of the present moment, which was inculcated by St. Francis de Sales. In the course of the process of beatification her authentic writings have been carefully examined and approved by the Sacred Congregation of Rites (Decree of 21 Sept., 1892). The Visitandines are contemplatives, and in order that they might not be turned aside from the chief aim the founder often recurs in his letters to the necessity of not imposing external duties which would divert them from their first vocation. Nevertheless, even in the time of St. Francis de Sales the Visitation several times accepted temporarily the mission of reforming foreign communities or even houses of penitent women, and God has blessed their devotion. It was likewise the need of the times which at a certain period led many convents to open within their cloisters boarding-schools for young girls. These boarding-schools which still exist in certain communities have done great good to youth. The instruction given at the Visitation is generally solid and on a par with that of the most serious schools. But what especially characterizes the schools of the Visitation and the pupils themselves is the strong education of will and character. In a constantly serene and maternal atmosphere the child leans at an early age self-denial, a sense of duty, and of responsibility to God for every action. The mistress's methods of going to God become to a certain extent those of the children.

Visitors Apostolic

Visitors Apostolic

Officials whom canonists commonly class with papal legates. Visitors differ from other Apostolic delegates, principally in this, that their mission is only transient and of comparatively short duration. In ancient times, the popes generally exercised their right of inspecting the dioceses of various countries through their nuncios or delegates (c. 1, Extravag. Comm. de Consuet. I, 1; c. 17, X, de Cens. III, 39), though they occasionally, even in the primitive ages, sent special visitors. At the present time, the mission of papal nuncios is rather of a diplomatic than of a visitatorial character. Visitors are, at present, deputed by the pope for special emergencies and not at stated intervals. Their duty is to inspect the state of the Church in the country confided to them and then to draw up a report to the Holy See. At times, this visitation is made with the same attention to details as is an episcopal visitation. Visitors Apostolic are also appointed to visit the various provinces of a religious order, whenever, in the judgment of the pope, this becomes useful or necessary. In all cases of Apostolic visitation, the pope, through delegates, is putting into effect the supreme and immediate jurisdiction which is his for any and every part of the Church. The exact powers of a visitor can be known only from his brief of delegation. His office ceases as soon as he has submitted his report to the Holy See through the Consistorial Congregation. For the city of Rome itself there is a permanent Commission of the Apostolic Visitation. Established by Urban VIII as one of the Roman congregations under the presidency of the cardinal vicar, it was changed into a commission by Pius X through the Constitution "Sapienti Consilio" (29 June, 1908). These Apostolic visitors annually inspect the parishes and institutions of Rome and made report on their spiritual and financial condition. They pay special attention to the fulfilment of the obligations springing from pious foundations and legacies for Masses and chaplaincies.

WILLIAM H.W. FANNING

Visits To the Blessed Sacrament

Visits to the Blessed Sacrament

By this devotional practice, which is of comparatively modern development, the presence of Jesus Christ in the Blessed Eucharist is regarded in the same light and honoured with the same

ceremonial observance as would be paid to a sovereign who favoured any place in his dominions by taking up his abode there. The conception is that in the tabernacle Jesus Christ, as it were, holds His court, and is prepared to grant audience to all who draw near to Him, though other prefer to regard Him as a prisoner bound to this earth and to existence in a confined space, by the fetters of His love for mankind. In this latter case the visits paid to the Blessed Sacrament assumed the special character of a work of mercy intended to console the Sacred Heart of Jesus for the indifference and ingratitude shown Him by the majority of Christians, for whose sake He remains in the sacramental species. It must be plain that this devotional exercise of "visiting" the Blessed Sacrament is essentially dependent upon the practice of ceremonial reservation.

As has already been pointed out in this latter article, the attempts formerly made to demonstrate the existence of a custom in the early Church of showing special and external veneration to the Sacred Species when reserved for the sick break down upon closer investigation. To this day in the Greek Church no practice of genuflecting to the Blessed Sacrament is known and in fact it may be said that, though it is treated respectfully, as the Book of the Gospels or the sacred vessels would be treated respectfully, still no cultus is shown it outside of the Liturgy. During the first ten or twelve centuries after Christ the attitude of the Western Church seems to have been very similar. We may conjecture that the faithful concentrated their attention upon the two main purposes for which the Blessed Eucharist was instituted, viz. to be offered in sacrifice and to become the food of the soul in Holy Communion. It was only by degrees that men awoke to the lawfulness of honouring the abiding presence of Christ outside of the sacred mysteries, much as we may conceive that if a monarch chose to dress in mufti and to lay aside all marks of rank, people might doubt of showing him demonstrations of respect which he seemed purposely to exclude. In any case the fact is certain that we meet with no clear examples of a desire to honour the presence of Jesus in the Blessed Sacrament reserved upon the altar before the twelfth century.

Perhaps one of the earliest indications of a new feeling in this regard is revealed in a direction given to the anchoresses in the "Ancren Riwe": "When ye are quite dressed...think upon God's Flesh and on His Blood which is over the high altar and fall on your knees towards it with this salutation "Hail thou author of our Creation, etc.". So again, in one of his letters St. Thomas of Canterbury writes: "If you do not harken to me who have been wont to pray for you in an abundance of tears and with groanings not a few before the Majesty of the Body of Christ" (Materials, Rolls Series, V, 27). This example, perhaps, is not quite certain but we know from instances in the Holy Grail romances, that the idea of praying before the Blessed Sacrament was growing familiar about this period, i.e. the end of the twelfth century. The English mystic Richard Rolle of Hampole, at the beginning of the fourteenth century, explicitly exhorts Christians to visit the church in preference to praying in their own houses, for he says "In the church is most devotion to pray, for there is God upon the altar to hear those that pray to Him and to grant them what they ask and what is best for them" ("Works", ed. Horstman, I, 145). But in the course of the same century the practice of visiting the Blessed Sacrament became fairly common, as we see particularly in the case of Blessed Henry Suso and Blessed Mary de Malliaco (A.D. 1331-1414), who, we are told, "on solemn feasts kept

vigil before the most holy Sacrament". It was often at this period joined with an intense desire of looking upon the Blessed Sacrament exposed, a most striking example of which will be found in the "Septiliium" of Blessed Dorothea, a holy recluse of Pomerania who died in 1394. But the practice of compiling volumes of devotions for visits to the Blessed Sacrament, one of the best known of which is the "Visits" of St. Alphonsus Ligouri, was of still later date.

The information given by writers such as CORBLET, *Hist. de la sainte Eucharistic* (Paris, 1886) and RAIBLE, *Der Tabernakel einst und jetzt* (Freiburg, 1908), must be used with caution as the present writer has pointed out in *The Month* (April and December, 1907).

HERBERT THURSTON

The Visitation Convent (Georgetown)

The Visitation Convent, Georgetown

Located in the District of Columbia, United States of America. This convent was founded by Miss Alice Lalor, native of Kilkenny County, Ireland, who sailed for this country in 1794 with her sister, Mrs. Doran, the wife of an American merchant. On the voyage she formed an intimacy with Mrs. Sharpe and Mrs. McDermott and, united in their vocation, they bought a small house in Philadelphia and began their community life under the direction of the Rev. Leonard Neale, who had succeeded Rev. Lawrence Graessel and Rev. Francis Fleming, victims of the yellow fever epidemic of 1793. The return of the fever in 1797-8 broke up their house, and Father Neale having been made president of Georgetown College invited them to settle in that place. Miss Lalor bought a small cottage near that of three French noblewomen of the Order of Poor Clares, who had escaped the Terror and hoped to found a house in the land of their asylum. Father Neale put the Congregation of the Pious Ladies, as they were called, under the Rule of St. Francis de Sales, continued his directorship and encouraged and helped them in every way. His inspiration was to advance Catholic education and especially to secure it for the daughters of Catholic families in Maryland, where the proscriptive laws and penalties established by those who had seized the Government from the Lords Proprietary had reduced Catholic education to a low ebb (see Acts of Assembly, 1654; 1704; 1715; 1718; 1755).

The school was opened, 24 June, 1799. The first pupil was Anna Smith, the first novice Sister Aloysia Neale. Their ranks were immediately recruited, their pupils multiplied, and in 1802 the school was developed into an academy. In 1804 the Poor Clares returned to France; Bishop Neale and his brother Father Francis bought their property, furniture, and books, and it was among the last that the Rules of the Visitation were discovered in 1812, after being vainly sought for years by the bishop, for Annecy had been swept away in the Terror. No enclosure was observed at first and the ladies were called Mistress or Madam until 1816 when Archbishop Neale obtained from Pius VII the Brief dated 14 July, which raised the community to the rank of a monastery. Solemn vows were taken, 28 Dec., 1816, by 30 choir sisters, 4 lay sisters, and 1 out sister. Father Beschter,

formerly of the papal choir, instructed them in the chants of the office and the Visitandines of Chaillot sent them a model of the habit and silver crosses.

Six months later Archbishop Neale died, but he had appointed Father Cloriviere director of the community. He arrived, 13 Jan., 1818, and devoted his life to his new charge. He sold his estate in Bretagne and gave the proceeds as well as his French pension to building the chapel for the sisters. He asked and obtained from his friend Charles X an altar-piece, and by every means in his power helped the sisters in their poor school--the first free school in the District of Columbia. Mother Catharine Rigden broke ground for the chapel, the symbolic window of which was given by a lady in South Carolina. This was the first chapel of the Sacred Heart in the United States. In 1819 the first prospectus was issued over the signatures of Mrs. Henrietta Brent, Mrs. Jerusha Barber, and Father Cloriviere; in 1823 a new academy was built, and in 1829 three European sisters arrived. On 9 Sept., 1846, Mother Teresa Lalor died, having seen her daughters established at Kaskaskia, Mobile, St. Louis, Baltimore, and Brooklyn. In 1872-3 the present academy building was erected, and in 1899-1900, after a fire, this was enlarged. Where the cottage stood there is now a square of many-storied buildings and the small lot has grown to thirty-eight acres in extent. Archbishop Neale, Father Cloriviere, Mother Teresa, Sister Joanna, the daughter of the Mexican Emperor Iturbide, and the thirty original sisters are laid in the crypt of the chapel and buried in the walls of its foundations, while many distinguished names carried on the rolls of the academy make it one of the historic spots of the country. At Gen. Winfield Scott's request the academy was exempted from seizure for hospital purposes during the Civil War. His daughter Virginia (Sister May Emmanuel) who was a Visitation nun is buried in the cemetery.

ELLA LORAINÉ DORSEY

Vincenzo de Vit

Vincenzo de Vit

Latinist, b. at Mestrina, near Padua, 10 July, 1810; d. at Domo d'Ossola, 17 Aug., 1892. He made his studies at Padua, was ordained priest in 1836, in 1844 became librarian of the Academia dei Concordi at Rovigo and canon of the cathedral. He was thus advancing in the path of ecclesiastical honours, but under the influence of Rosmini he entered at Stresa the Institute of Charity. He began his revision of Forcellini's lexicon at Stresa. Compelled to have recourse to libraries, he went first to Florence in 1861, and in 1862 to Rome, where he took up his residence, returning to Northern Italy in the summer. De Vit's idea differed from that of Forcellini and Furlanetto, it being his intention to include in his book all the periods and all the varieties of Latin down to A.D. 568. He likewise gave an exact digest of the authors of the decadence and the Fathers of the Church, and accorded considerable space to inscriptions, which he also treated in special works. His work was a third larger than Furlanetto's edition, which extension compelled him to leave out proper names. The "Lexicon totius latinitatis" was completed in 1879. De Vit undertook the "Onomasticon", which he brought down to the beginning of the letter P. Unfortunately no one

has undertaken its completion. One of the great merits of the "Lexicon", apart from its extent, is that it allows the restoration of the exact history of each word according to writers and periods. Very rarely does a text important for meaning escape de Vit's gleaning. His work will always be useful because it gives all essential information in a comparatively brief form.

He also laboured on the history of his native place, and published his researches in eight volumes: "Il lago maggiore Stresa e le isole Borromeo" (Prato, 1875-78); "Memorie storiche di Borgomanero e del suo mandamento" (1859; 2nd ed., 1880); "Adria e le sue antiche epigrafi illustrate" (Prato, 1888); "La provincia romana dell' Ossola ossia delle Alpe Atreziane" (Prato 1892). All these works were collected in a series of "Opere varie" (11 vols., Prato, 1875-92), which also contains numerous memoirs of antiquity and lexicography, the most celebrated being "Della distinzione tra i Britanni o Brittonni dell' Isola e i Britanni o Brittonni del continente", (Modena, 1867-72). According to de Vit the name Brittany was given to the Armorican Peninsula because some *Britanni* had established themselves there in the time of Caesar, coming from the right bank of the Rhine. These must have been the Britons, while the inhabitants of the island must have been the Britanni. A confusion of names subsequently arose. This theory has not been admitted by scholars. Another dissertation (1873-74 and 1881), concerning the road of the invasion of the Cimri, and on the site of the battle of Marius, also aroused lively controversies.

FERRERO in Biographisches Jahrbuch für Altertumskunde (Leipzig, 1899), 26.

PAUL LEJAY

Pope St. Vitalian

Pope St. Vitalian

(Reigned 657-72).

Date of birth unknown; d. 27 January, 672. Nothing is known of Vitalian's life before he was raised to the Holy See. According to the "Liber Pontificalis" (ed. Duchesne, I, 343) he was a native of Segni in Campagna, and his father's name was Anastasius. After the death of Pope Eugene I, on 2 or 3 June, 657, Vitalian was elected his successor, and consecrated and enthroned on 30 July. Like his predecessor, Vitalian sought to restore the connection with Constantinople by friendly advances to the Eastern Emperor Constans II (641-668) and to prepare the way for the settlement of the Monothelite controversy. He sent letters (*synodica*) announcing his elevation by envoys both to the emperor and to Patriarch Peter of Constantinople, who was inclined to Monothelism. The emperor confirmed the privileges of the Roman Church and sent to St. Peter as a present a codex of the Gospels in a cover of gold richly ornamented with precious stones. The Patriarch Peter also sent an answer, though not a definite one, as to Monothelism, which he sought to defend. He made it appear that he was of the same opinion as the pope, who in writing to Peter had expounded the Catholic Faith. Thus ecclesiastical intercourse between Rome and Constantinople was restored on the basis of this mutual reserve over the dogmatic question, and Vitalian's name was entered on the diptychs of the Byzantine Church--the only name of a pope so entered between the reign of

Honorius I (d. 638) and the Sixth (Ecumenical Council of 680-81). Vitalian also showed the same friendliness to the Emperor Constans II, when the latter, in 663, came to Rome and spent twelve days there during the campaign against the Lombards. On 5 July the pope, accompanied by the Roman clergy, went as far as the sixth milestone to meet the emperor and accompanied him to St. Peter's, where the emperor offered gifts. On the following Sunday Constans went in state to St. Peter's, offered a pallium wrought with gold, and was present during the Mass celebrated by the pope. The emperor dined with the pope on the following Saturday, attended Mass again on Sunday at St. Peter's, and after Mass took leave of the pope. At his departure Constans carried off a large number of bronze works of art from Rome, taking even the bronze tiles from the roof of the Pantheon, which had been dedicated to Christian worship. Constans stopped in Sicily, where he cruelly oppressed the population, and was assassinated at Syracuse in 668. The pope supported his son Constantine IV Pogonatus against a usurper and thus aided him to attain the Byzantine throne. The new emperor had no intention of using force to maintain the Monothelite decree (*typus*) of his father, and Pope Vitalian probably made use of this inclination to take a more decided stand against Monothelitism and to win the emperor to orthodoxy. In this latter attempt, however, he was not able to succeed. The Monothelite patriarch Theodore of Constantinople (from 678) even removed Vitalian's name from the diptychs. It was not until the Sixth OEcumenical Council (681) that Monothelitism was suppressed, and Vitalian's name was replaced on the diptychs of the Byzantine Church.

Pope Vitalian was very successful in England, where disputes still divided the Anglo-Saxon and the British clergy, respecting various ecclesiastical customs. At the Synod of Streaneshalch (Whitby) King Oswy of Northumberland decided for the general acceptance of the Roman practices in regard to the keeping of Easter, and the shape of the tonsure. Together with King Egbert of Kent, he sent the priest Wighard to Rome, to be consecrated there after the death of Archbishop Deusdedit of Canterbury in 664, but Wighard died at Rome of the pestilence. The pope wrote a letter to King Oswy promising to send a suitable bishop to England as soon as possible. Hadrian, abbot of an abbey near Naples, was selected to go, but he considered himself unworthy to be consecrated bishop. At his recommendation a highly educated monk, Theodore of Tarsus, who understood both Latin and Greek and who was at Rome, was chosen as Archbishop of Canterbury and consecrated on 26 March, 668. Accompanied by Abbot Hadrian, Theodore went to England, where he was recognized as the head of the Church of England by all the clergy, Saxon and British. The pope confirmed to him all the privileges that Gregory the Great had formerly granted to Archbishop Augustine.

The archiepiscopal See of Ravenna was immediately subject to Rome. Archbishop Maurus of Ravenna (648-71) sought to rid himself of this dependence, and make his see autocephalous. When Pope Vitalian called upon him to justify his theological views, he refused to obey and declared himself independent of Rome. The pope excommunicated him, but Maurus did not submit, and even went so far as to excommunicate the pope. The Emperor Constans II sided with the archbishop, issued an edict removing the Archbishop of Ravenna from the patriarchal jurisdiction of Rome, and ordained that the former should receive the pallium from the emperor. The successor of Maurus,

Reparatus, was in fact consecrated, in 671, by three of his suffragan bishops and received the pallium from the emperor. It was not until the reign of Pope Leo II (682-83) that the independence of the See of Ravenna was suppressed: Emperor Constantine IV repealed the edict of Constans and confirmed the ancient rights of the Roman See over the See of Ravenna. Vitalian also had occasion to enforce his authority as supreme judge in the Eastern Church. Bishop John of Lappa in Crete, deposed by a synod under the presidency of the Metropolitan Paulus, appealed to the pope, and was imprisoned for so doing. He escaped, however, and went to Rome, where Vitalian held a synod in December, 667, to investigate the matter, basing its action on the records of the metropolitan Synod of Crete, and pronounced John guiltless. Vitalian wrote to the Metropolitan Paulus demanding the restoration of John to his diocese, and the return of the monasteries which had been unjustly taken from him. At the same time the pope directed the metropolitan to remove two deacons who had married after consecration. Vitalian also wrote respecting John to an imperial official and to Bishop George of Syracuse, who had supported the deposed bishop. Some of the letters attributed to this pope are spurious. He was buried at St. Peter's.

J.P. KIRSCH
Bonifazio Vitalini

Bonifazio Vitalini

(DE VITALINIS).

Jurist, b. at Mantua, Italy, about 1320; d. at Avignon after 1388. After completing his law studies at Padua he returned to his native city and took up the practice of criminal law. While thus engaged he wrote: "Super maleficis" (Milan, 1505; Venice, 1559, 1584; Lyons, 1558; Frankfort, 1600 and 1604). He suddenly gave up the law, entered the priesthood, and left Padua with the intention of never returning. In 1350, however, he came back as rector of the Church of San Martinio de' Tribesii and vicar of the bishop. Two years alter he went to Avignon, where he received a professorship. He was given the privilege of granting the doctorate, was made prothonotary Apostolic, advocate of the Consistory, fiscal of the Roman Curia, and finally auditor of the sacred palace. He is known to have been in various Italian cities, and at Avignon in 1388. He wrote a commentary on the "Clementines" entitled "Comentarii in CONstitutiones Clementis Papae V in alma Avenionensi universitate editi" (Lyons, 1522), and two treatises, "Solemnis ac perutilis tractatus de modo procedendi contra apostatas" (Venice, 1556), and "Tractatus, qui casus respirat speciale mandatum" (Zürich, 1584).

VON SCHULTE, *Gesch. der Quellen u. Literatur des canonisch. Rechts*, II (Stuttgart, 1877), 255 sq.; TIRABOSCHI, *Storia della letteratura italiana*, V (Florence, 1897); 2, 388.

PATRICIUS SCHLAGER

St. Vitalis

St. Vitalis

Martyr. His legend, which is of little historical value, relates that he was martyred by order of a judge named Paulinus for having encouraged St. Ursicinus, who was wavering at the prospect of death, and for having given burial to his remains. St. Vitalis was racked and then buried alive. He was the husband of St. Valeria who was martyred at Milan, and father of the more famous Sts. Gervasius and Protasius. The feast of St. Vitalis occurs on 28 April, but the date of his martyrdom is uncertain. The legend makes him a victim of the Neronian persecutions, but Baronius gives year 171 during the persecution of Marcus Aurelius. The question is discussed by Papebroch in the Bollandist "Acta" and by Tillemont in his "Memoires pour servir à l'histoire ecclésiastique". Papebroch cites churches dedicated in honour of St. Vitalis at Rome, Faenza, Rimi, Como, Ferrara, Venice, Verona, and at Jadera in Dalmatia, but the most famous church bearing his name is the octagonal San Vitale at Ravenna, the place of his martyrdom, built in the years 541-46 and dedicated as an inscription attests in 547. This church, which was originally constructed by Julius Argentarius and restored by Ricci in 1898- 1900, is one of the most magnificent works of Byzantine architecture and mosaic.

Acta SS. April, III, 562; Dict. Christ. Biog., IV, 463; SURIUS, Vitae SS., IV, 334; GUERIN, Petits Bollandistes, V, 62; SERRATRICE, Brevi Cenni sulla vita e sul culto di S. Vitale Martire (Mondovi, 1899).

RAYMUND WEBSTER

Sts. Vitalis and Agricola

Sts. Vitalis and Agricola

Martyred at Bologna about 304 during Diocletian's persecution. Agricola, who was beloved for his gentleness, converted his slave, Vitalis, to Christianity; they became deeply attached to each other. Vitalis was first to suffer martyrdom, being executed in the amphitheatre. By his tortues and by flattery the persecutors sought in vain to win over Agricola, whom they finally crucified. Both martyrs were buried in the Jewish graveyard. In 393 St. Ambrose and Bishop Eusebius of Bologna transferred the remains of the martyrs to a church. Ambrose took some of the blood, of the cross, and the nails to Florence, placing these relics in the church erected by the saintly widow Juliana. On this occasion he delivered an oration in praise of virginity, with special reference to the three virgin daughters of Juliana. His mention of the martyrs Agricola and Vitalis in the first part of the oration is the only authority for their lives ("De exhortatione virginitatis", cc. i-u, in P.L., XVI, 335). The feast of the two martyrs is observed on 4 November. In 396 other relics were sent to St. Victricus, Bishop of Rouen, and, about the same date, to St. Paulinus of Nola and others.

Acta SS., Nov., II, 233-53; RUINART, Acta martyrum (Ratisbon, 1869), 491-94.

GABRIEL MEIER
St. Vitalis of Savigny

St. Vitalis of Savigny

Founder of the monastery and Congregation of Savigny (1112), b. at Tierceville near Bayeaux about 1060-5; d. at Savigny, 16 Sept., 1122. His parents were named Rainfred and Rohais. We know nothing of his early years; after ordination he became chaplain to the Conqueror's brother, Robert of Mortain (d. 1100). Vitalis gained the respect and confidence of Robert, who bestowed upon him a canonry in the Church of Saint Evroult at Mortain, which he had founded in 1082. But Vitalis felt within him a desire for a more perfect state of life. He gave up his canonry in 1095, settled at Dompierre, 19 miles east of Mortain, and became one of the leaders of the hermit colony of the forest of Craon (see ROBERT OF ARBRISSEL). Here for seventeen years he lived an ascetical life. At the same time he concerned himself, like Robert of Arbrissel, with the salvation of the surrounding population, giving practical help to the outcasts who gathered round him. He was a great preacher, remarkable for zeal, insensible to fatigue, and fearlessly outspoken; he is said to have attempted to reconcile Henry I of England with his brother, Robert Curthose. He seems to have visited England and a considerable part of western France, but Normandy was the chief scene of his labours. Between 1105 and 1120 he founded a nunnery at Mortain, with his sister St. Adeline as abbess. (See SAVIGNY.)

RAYMUND WEBSTER
Muzio Vitelleschi

Muzio Vitelleschi

Born at Rome 2 Dec., 1563; died there 9 Feb., 1645. He belonged to a distinguished family but notwithstanding brilliant prospects he entered the Society of Jesus 15 August, 1583, and after completing his studies in the order was made a professor. In 1593 he was appointed rector of the English College which had been established in 1579 by Gregory XIII. At later dates he was made provincial of the society for Rome and Naples, assistant of the Jesuit general for Italy, and finally was elected General of the Society on 15 November, 1615, by the seventh general congregation. The society during his generalate attained a high degree of prosperity. The missions were extended to Thibet, Tonking, and to the Maranon, and the English mission was raised to an independent province. The only difficulties encountered by his administration were in France, where finally, on account of Richelieu, he forbade his subordinates to speak or write of the supremacy of the pope. In 1617 and 1619 he issued regulations concerning the doctrine of Probabilism in two general letters

addressed to the superiors of the society. Some of his letters and general epistles have been edited by de Prat, "Recherches historiques", V (Lyons, 1878), 360 sq.

PATRICIUS SCHLAGER

Lucius Vitellius

Lucius Vitellius

Proclaimed Roman Emperor by the soldiers at Cologne during the civil war of A.D. 69; d. at Rome, 21 Dec., 69. The Emperor Galba had placed Vitellius at the head of the army of the Lower Rhine, because he considered Vitellius, who lived only for the pleasures of the table, incapable of conspiring. After Galba's death, when Otho proved incapable of maintaining his position, the soldiers of Lower Germany proclaimed Vitellius as Caesar, while the adjoining provinces also acknowledged him. The two vigorous legates, Alienus Caecina and Fabius Valens, led the armies of the Upper and Lower Rhine towards Italy, the troops robbing and plundering the provinces through which they marched. Otho transferred to his generals the command of the imperial army then being collected in northern Italy. Otho's army was completely defeated and the greater part of his troops killed at the battle of Bedriacum (Cremona). Meanwhile Vitellius was advancing with the last of the army of the Rhine by way of Lugdunum (Lyons) in Gaul towards Italy. With an undisciplined force of 60,000 men he marched towards Rome. Here his generals ruled with unlimited sway. The news from the East constantly grew more ominous, for Vespasian was proclaimed emperor and received the homage of his soldiers at Berytus, while the legions in Egypt and the Danubian provinces swore loyalty to him. Vitellius saw himself forced to prepare for war against Vespasian and sent Caecina to northern Italy. Here the latter divided his forces and entered into negotiations with Vespasian's generals, opening the way for the defeat of the adherents of Vitellius in the battle of Cremona. Vitellius made a few attempts to check the victorious advance of his opponent, and even tried to collect a new army at Rome, but both officers and soldiers soon laid down their arms. When the emperor saw that all was lost he abdicated. A desperate struggle arose in Rome between the contending parties and the Capitoline temple and many palaces were destroyed by fire. Vespasian's adherents captured Rome and Vitellius was killed by his enemies. As the Emperor Vespasian and his army were still a long way from Rome, the government was carried on for a time by Vespasian's son, Titus Flavius Domitianus.

KARL HOEBER

Diocese of Viterbo and Toscanella

Diocese of Viterbo and Toscanella

(VITERBIENSIS ET TUSCANENSIS).

The city of Viterbo in the Province of Rome stands at the foot of Monte Cimino, in Central Italy, in an agricultural region. It has to a great degree preserved its medieval character, more particularly in its encircling walls, which are still in good preservation. The most ancient building in the city, the cathedral, dedicated to St. Lawrence, was altered in the twelfth and the sixteenth centuries. The capitals of the columns, the two monuments of John XXI, and some frescoes and framed pictures are worthy of note. On the cathedral square stands the episcopal palace, decorated with fine sculpture of the thirteenth century; here were held the conclaves of Gregory X (1271-73), John XXI (1276), and Martin IV (1282). The former Servite church of the Verita is now a museum in which is preserved a fresco of Lorenzo da Viterbo representing the "Espousals of the Blessed Virgin". The adjoining convent is occupied by the Technical Institute. In the Church of S. Francesco are a Madonna by Sebastiano del Piombo, and the tombs of Adrian V, by Vassalotto, and of Clement IV, by Pietro d'Oderiso. The Church of S. Sisto is remarkable for the great height of the sanctuary about the bulk of the nave; in this church Henry, son of Richard of Cornwall, was slain by Simon and Guy de Montfort in 1271. S. Maria della Salute is remarkable for its graceful doorway. The Madonna della Quercia, with its annexed Dominican convent, is of elegant Renaissance architecture; in the lunette of the doorways of the façade are examples of majolica by Luca and Agostino della Robbia. The richly gilded ceiling is by Antonio da Sangallo; the tabernacle by Andrea Bregno. In the Church of S. Rosa is preserved the mummified body of the saint; on her feast day (4 September) her statue, enshrined in a large *tempietto* decorated with lanterns, is borne aloft by sixteen men. S. Maria dei Gradi, of which the church still remains, was one of the earliest convents of the Dominicans and is even now a house of retreat. S. Juliana de Marescotti is buried in the Church of S. Maria della Pace.

Among illustrious Viterbans may be mentioned the Augustinian Blessed Giacomo of Viterbo (thirteenth century). Notable profane edifices are the Municipal Building, with its splendidly frescoed halls and important Etruscan, Roman, and medieval museum, the Rocca, and, among a number of private buildings, the arches of S. Pellegrino. The neighbourhood is rich in Etruscan and Roman remains. The public fountains are especially beautiful. Noteworthy are the burial-places of Cartel d'Asso, Norcia, and Musarna, which have yielded a large number of Etruscan sarcophagi and inscriptions. Ferento, on the other hand, is rich in Roman remains, among them the theatre and temple of Fortuna. Viterbo is famous for its numerous and copious mineral springs, the chief of which is the little sulphur lake of Bulicame; other sulphur springs are those of Bagnaccio, Torretta, and Cruciata. The water of the Grotta spring is sub-acid.

There is much dispute as to the origin of the city of Viterbo. It is certain that many relics of the Roman period are found in the district, and the baths of Bulicame (Aquae Caiae) and of Bacucco (Aquae Passeris) were unquestionably frequented both in the Roman and the Etruscan periods. It

is not improbable that the city of Sorrina Nova stood here; others think that this may have been the site of Forum Subertanum. The name of Viterbo occurs for the first time in the eighth century, under the pontificate of Zachary, when it was a village tributary to Toscanella, in Lombardic Tuscany (Tuscia Langobardorum) on the Via Cassia. Charlemagne gave the pope all this Tuscan territory in feudal tenure, the imperial authority over it being still represented by a sculdascio and later by a count. In the eleventh century the city had already grown very considerably, numbering thirteen churches, three of them with collegiate chapters. For its loyalty to him Henry IV granted it communal privileges. Paschal II was brought thither a prisoner in 1111. During the twelfth and thirteenth centuries the city several times afforded the popes an asylum. In 1155 Adrian IV here met Barbarossa, who, it is said, had to hold the pope's stirrup. When Rome became a republic it endeavoured to subdue Viterbo, which, supported by Barbarossa, attached itself to his party, and sheltered the antipopes Paschal III and Callistus III. But the populace were faithful to Alexander III, and only the nobility were Ghibelline, though after the peace between the pope and the emperor they rebelled against the latter also.

The dominions of the city increased after this, many towns and villages placing themselves under its protection, while others were subdued by force. The neighbouring town of Ferento was completely destroyed (1172) because it represented Christ crucified with the eyes opened instead of closed. These conquests resulted in renewed friction with the Romans, who overcame the Viterbans (1201). War broke out again when Viterbo purchased Centocello (1220). As a result the victory of Viterbo (1234), the cities of Tuscany were freed from allegiance to the Senate of Rome. In 1207 Innocent III there held a parliament to establish a form of government for this province, which was called the Patrimony (more properly, the *Patrimonium Tusciae*), and of which Viterbo was then the capital. In the discord between the popes and Frederick II the city was Ghibelline; it refused to receive Gregory IX in 1232; in 1237, while the same pope was at Viterbo, a Ghibelline revolt broke out; and in 1240 the city received Frederick II. In 1243 Raniero Capocci drove the Imperialists out of Viterbo. Frederick regained the city in 1247, after a siege lasting a year. On the death of Frederick II it submitted to the temporal authority of the pope, after Innocent IV had guaranteed its communal liberties.

At this period occurred the death of St. Rose of Viterbo, who, because she had preached against Frederick II, had been exiled, with all her family, a few days before the emperor's death was known, but had been permitted to return some months before her own death. Under Alexander IV her body was buried in the monastery of the Clarisses. In the subsequent period of tranquility the city extended its dominion over all the territory of the Papal States north of Lake Bracciano and on the right bank of the Tiber. After the death of Alexander IV at Viterbo (the exact whereabouts of his grave in the cathedral is unknown), the papal Court remained there for twenty years. Urban IV, Gregory X, John XXI, Nicholas III, and Martin IV were elected there. In the last election the Viterbans attacked the two Orsini cardinals and threw them into prison, on account of a dispute as to the possession of certain villages. The controversy between the Orsini and Viterbo was eventually settled by Boniface VIII. About 1300 the communal government was reorganized; the power was placed in

the hands of eight "reformers" and of a "defender of the people" without whose assent the assembly could not be convoked, nor any public matter discussed or expense incurred. This soon developed into despotism; after 1312 the office became hereditary in the Ghibelline family of Prefetti di Vico. From 1319 to 1329, however, Silvestro Gatti forcibly caused himself to be elected defender, and serious disorders ensued. In 1328 the city accorded a festive reception to Louis the Bavarian and received a schismatic bishop from him very soon, however, it repented and received the legate of John XXII with honour. In 1329 Faziolo di Vico slew Gatti and made himself defender. Faziolo was in turn slain by his brother Giovanni, who lorded it over the whole Patrimony during the absence of the popes, but was driven out by Lando Gatti, a former Cistercian monk. Wars followed with the governor of the Patrimony, when the Viterbans refused to pay certain imposts (1346-50), and with Cola di Rienzi (1347), to whom the city surrendered.

When Cardinal Albornozy came to effect the reconquest of the Papal States, Viterbo submitted and built a fortress (*Rocca*) for the governor of the Patrimony. In 1367, during the sojourn of Urban V at Viterbo, a quarrel between the populace and the retinue of one of the cardinals developed into a general uprising, which the Viterban Cardinal Marco quickly put down. In 1375 Francesco di Vico took possession of the city, which joined in the general revolt against papal rule, but quickly submitted. When the Schism arose, Vico's tyranny recommenced; he took the side of Clement VII and sustained a siege by Cardinal Orsini. The people rose against the tyrant and killed him (8 May, 1387), and Viterbo returned to the obedience of Urban VI. But in 1391 Gian Sciarra di Vico reentered the city and took possession of its government. In 1391 Cardinal Pileo, the legate of Clement VII, would have given the city over to Boniface IX, but his plan failed, and he with difficulty saved himself by flight: Vico came to an understanding with Boniface.

In the beginning of the fifteenth century Viterbo and the Patrimony were incessantly objects of attack, now of Ladislaus of Naples, now of Braccio da Montone, now of the Sforza, Two of these having died, Giovanni Gatti made himself lord of Viterbo, endeavouring at the same time to maintain good relations with the pope, who still kept a governor of the Patrimony there. His son Princivalle was killed at the instigation of the Mondaleschi (1454), and a like fate befell Guglielmo Gatti (1456). There followed a series of fights between the Gatteschi and Maganzesi factions, especially in 1496, leading to the extinction of the Gatti domination. Peace was not re-established until 1503, when certain devout youths, robed in white, went about the city repeating: "Pace, pace sia con noi! Pace, pace vuole e commanda Maria Vergine" (Peace be with us! The Virgin Mary wills and commands peace). The Bishop of Adria, governor of the city, joined in this movement, and he was followed by all the magistrates and nobles, who bound themselves by oath to observe perpetual peace. The government of Viterbo was subsequently confided to, instead of the governor of the Patrimony, a cardinal legate; after 1628 it was the residence of a simple governor. One of its cardinal legates was Reginald Pole, around whom there grew up at Viterbo a coterie of friends, Vittoria Colonna among them, who aroused suspicions of heterodoxy. In 1860 the Piedmontese had already advanced as far as Viterbo, when an order from France recalled them.

Toscanella, which had recently resumed its ancient name of Tuscania, is a small town in the Province of Rome, about twelve and a half miles from Viterbo, on the River Marta and the ancient Via Clodia. It still preserves its medieval encircling walls. The two most interesting and most ancient churches are outside the city, those of S. Maria Maggiore, the old cathedral, and of St. Pietro, situated on a hill, also at one time a cathedral. Both are notable for their Lombard architecture of the eleventh and twelfth centuries, their sculptures, and their frescoes. The churches themselves date back as early as the fifth century; that of St. Leonardo, now a hay loft, preserved its fifteenth-century façade. The little Church of S. Francesco, also turned to profane uses, is decorated with frescoes by Giovanni Desparapane and his son (1466). The present cathedral was enlarged by Cardinal Gambara (sixteenth century) and restored in 1706; the "St. James" on the high altar is a notable work of Salvagni, and in one of the chapels are six fifteenth century statuettes taken from the old Abbey of St. Giusto. S. Maria delle Rose (1484) is remarkable for its façade. S. Maria del Riposo (1495), formerly a Franciscan church, contains some good pictures. In the vicinity of Toscanella have been found Etruscan tombs, which, however, have mostly gone to enrich the various museums of Europe. The archivium of the commune contains most interesting papers.

Tuscania was anciently included in the territory of Tarquinia (Corneto). With the decay of the latter, the former grew, and became particularly important in the Lombard period, when it was a royal fief. Tuscania supported the Romans, to whom it was tributary, but after frequent conflicts with Viterbo finally yielded to it. From 1419 to 1421 it was under the lordship of Angelo Tartaglia, a soldier of fortune, the remains of whose palace are still extant, and to the tower of which access is gained by a subterranean passage. In 1495 Charles VIII, returning from the Neapolitan campaign, wished to enter Toscanella, but being denied admission sacked the city and destroyed a great part of it. On 12 September, 1870, it was annexed to the Kingdom of Italy. Toscanella was the native city of Cardinal Consalvi.

The episcopal See of Viterbo was transferred from Toscanella, which venerates the martyrs Sts. Secundianus, Verianus, and companions (who, however, were Romans). They suffered not far from the city, to which their relics were translated in the seventh century by Bishop Maurus, the first bishop known (649). Among the successors of Maurus may be mentioned Homobonus, to whom Leo IV (850) addressed a letter determining the boundaries of the diocese. In 876 Joannes, in the name of John VIII, carried the imperial insignia to Charles the Bald. During the tenth century Toscanella was for some time under the Bishop of Centumcellae. The succession of its bishops recommences with Joannes (1027); another Joannes distinguished himself in the reform of Benedict (1049) and brought back the clergy of Tuscania to the common life. Gilbert (1059) and Giselbert (1080) were also promoters of reform, while Richard (1086) adhered to the antipope Clement III, who united with Toscanella the sees of Centumcellae and Blera (Bieda). In 1192 Celestine III formed Viterbo into a diocese, combining it with that of Toscanella. Among other bishops to be noted is Ranieri (c. 1200), in whose episcopate the Paterini came to Viterbo, and this heresy had still to be combated in 1304. After him Cardinal Raniero Capocci was for a long time the administrator.

In the fourteenth century the clergy of Toscanella repeatedly refused to recognize the bishop elected by the chapter of Viterbo, so that Clement V (1312) reserved to the Holy See the right of appointment. Bishop Angelo Tignosi (1318) laboured for peace among his fellow citizens. Niccolo dei Vetuli (1351) was famous as a physician and man of letters, and held an important diocesan synod at Montalto. In 1435 the Diocese of Corneto was separated and joined with the then recently erected Diocese of Montefiascone. In 1467 was commenced the church of the image, or picture, of the Madonna della Quercia, a picture painted on a tile which had been hung by a peasant upon an oak tree (*quercia*). Other bishops were: Gian Pietro Gratti (1533), a distinguished writer; Sebastiano Gualtieri (1551), the author of a diary of the Council of Trent; Cardinal Francesco Gambara (1561), a munificent restorer of churches; Alessandro Sforza Cesarini (1636), who began the seminary of Viterbo, completed by Cardinal Francesco Brancacci (1638), a model of all the virtues; Michelangelo Conti (1712), afterward Pope Innocent XII; Cardinal Gabriele Severoli (1806), nuncio at Vienna. The present bishop, Mgr. Ant. M. Grasselli (1899), O.M.C., was formerly delegate Apostolic at Constantinople.

The canons of Viterbo received from Benedict XIII the privilege of the mitre, ring, and bugia. The seminary is interdiocesan for the dioceses of the Roman province north of Rome. Toscanella also has a seminary of its own for clerical studies. Of Blera (Bieda) seventeen bishops are known, the first of whom was Maximus (487). Other ancient dioceses are Barbarano (Martaranum) of which one bishop, Reparatus (647), is known, and Ferentum, the native place of the Emperor Otho, a famous bishop of which was St. Bonifacius (sixth century). Here is the Cemetery of S. Eutichio.

The diocese is immediately subject to the Holy See. It has 34 parishes, with 47,000 souls, 90 secular and 58 regular priests, 8 houses of religious men, 18 houses of Sisters, 2 schools for boys and 4 for girls.

U. BENIGNI

Vitoria

Vitoria

(VICTORIENSIS).

Diocese; suffragan of Burgos, in Spain, bounded on the north by the Bay of Biscay; on the east by Guipuzcoa and Navarre; on the south by Logrono; and on the west by Burgo. It comprises the Basque Provinces and the greater part of the Province of Alava.

The principal city, Vitoria, has more than 27,000 inhabitants. Prior to the tenth century the city was called *Gazteiz*, a Basque word meaning "the height of the fray", and belonged to the very ancient Federation of Arriaga, a federation of the towns of Alava. It occupied the upper portion of

the present city, which is called el Campillo, or Villa de Suso. The name Gazteiz is found in a document of the Conde Fernan Gonzalez, dated 934, preserved in the monastery of San Millan de Rioja. The Navarrese king D. Sancho the Wise took possession of this region in 1181, giving it the name of Victoria, which has been converted into Vitoria by the peculiarities of the local phonetics, and conferred upon it the privileges of a town. He built two castles, surrounded the town with walls, appointed Pedro Ramirez its military chief, and granted it the fuero, or charter, of Logrono. Alfonso VIII conquered it for Castile and conferred upon it still further fueros and privileges, which were confirmed by Ferdinand III and Alfonso X the Wise. John II conferred a city charter upon it on 20 November, 1431. Isabella the Catholic obtained from Pope Alexander VI the transfer of the collegiate Church of Armentia to the parochial Church of Santa Maria de Vitoria, the present cathedral, and in 1862 the Diocese of Vitoria was erected, in conformity with the Concordat of 1851, under the Bull of Pius IX, 5 October, 1861.

When Calahorra was conquered by the Moors, its episcopal see was established in the Church of Armentia, and the kings of Asturias then gave it the name of Diocese of Alava. Theodomir, Reccared, and Vivere (eighth and ninth centuries) signed as bishops of Calahorra, although they resided in Armentia. Bishop Fortunius was one of those who defended the use of the Mozarabic Rite before Alexander II, and at his death (1088) the Diocese of Alava was suppressed, the Church of San Andres de Armentia taking rank simply as a collegiate with canons and dignitaries, the Archdean of Alava being the principal. This was transferred to Vitoria in 1498. In the fifteenth century Vitoria was disturbed by the factions of the *Callejas* (Aristocrats) and the *Agalas* (Democrats); the former held their meetings in the Church of San Pedro, and the later in that of San Miguel. Ferdinand the Catholic made strenuous efforts to restore peace.

The three distinct periods of its existence can easily be traced in the city of Vitoria. The most ancient city, the *Campillo*, or *Villa de Suso*, surrounded by walls and ramparts, now for the most part in ruins; the old city, built at the foot of the Villa de Suso and now shut in by the modern Vitoria with its handsome edifices. The Cathedral of Santa Maria, the ancient collegiate church, which in 1181 was a fortress as well as a church, was situated in the old city. It disappeared when the fourteenth-century edifice was built. This is a Gothic structure of the second period; its beautiful open portico is surmounted by a clock tower; it has three naves and a transept; the main chapel (*capilla mayor*) has a beautiful tabernacle, the work of Olaguibel, and reredos by Valdivieso, both natives of Alava. In the sacristy is the "Immaculate Conception" by Juan de Carreno, a "Pieta" attributed to Van Dyck, and some small pictures by Zurbaran and Juan de Juanes. The processional cross is attributed to Benvenuto Cellini. The image of the Blessed Virgin, called *de la esclavitud*, because she holds an S and a nail (*clavo*) in her hand, is a precious relic of the twelfth century. A new cathedral, which will be larger than that of Burgos, is now (1912) being built through the zeal of the bishop, D. Jose Cadena y Eleta. The crypt was opened in 1911. Other notable churches of Vitoria are San Vicente and San Miguel, which were the churches of Gazteiz in the time of Sancho the Wise. The Church of San Miguel is built on the site of an ancient Roman temple and contains a statue of the Blessed Virgin called La Blanca, from the whiteness of the stone of which it is made.

The parish church of San Pedro contains some curious tombs. The convent of the Dominicans was founded by St. Dominic on the site of the house of Sancho the Strong of Navarre. It has since served for a barracks and a military hospital. The convent of San Francisco, founded in 1214, is also a barracks for infantry and cavalry. Adrian of Utrecht was living in the famous "Casa del Cordon" when he received the news of his elevation to the papacy.

The conciliar seminary was inaugurated in 1880 under the patronage of St. Prudentius and St. Ignatius. It was enlarged by Bishop Mariano de Miguel y Gomez. The seminary of Aguirre was founded in 1853. During the civil wars it was used for a military storehouse. The secondary school has a guild building surrounded by the gardens of La Florida. The hospital occupies the old seminary building of San Prudencio which was founded in the seventeenth century by Bishop Salvatierra of Segorbe and Ciudad-Rodrigo, a native of Vitoria. Onate is situated in this diocese. Its university dates from about the middle of the sixteenth century, having been founded by Rodrigo de Mercado y Zuazola, Bishop of Majorca and Avila. Paul III, in 1540, issued a Bull to establish a collegio mayor and university under the invocation of the Holy Spirit. During the first civil war this institution was transferred to Vitoria, and then suppressed. Some years later it was reopened as an independent institution, but was afterwards again closed. D. Carlos de Borbón gave his protection to the university when he was in power in the Basque Provinces during the last Carlist war. The Loyola House, which formerly belonged to the Diocese of Pamplona, now belongs to Vitoria.

RAMON RUIZ AMADO

Vittorino Da Feltre

Vittorino da Feltre

(VITTORINO DE' RAMBALDONI).

Humanist educator, b. at Feltre, 1397; d. at Mantua, 1446. He was the son of Bruto de' Rambaldoni, a notary, but is best known by the surname of Feltre. Vittorino entered the University of Padua in 1396, attended the courses of Gasparino da Barzizza and Giovanni da Ravenna in grammar and Latin letters, and studied philosophy and perhaps theology. As a student he supported himself by tutoring. After obtaining the doctorate he studied mathematics under Pelacani da Parma, serving meanwhile as a famulus in the professor's household. Soon his fame as a teacher of mathematics surpassed his master's. He spent eighteen months studying Greek under Guarino da Verona, his fellow-student at the University of Padua, and then the best Greek scholar in Italy. Afterwards Vittorino opened a private school at Padua, and in 1422, upon the resignation of Barzizza, obtained the chair of rhetoric in the university. After about a year, either being disgusted with the immorality of the city or unable to control his students, he resigned the chair and went to Venice, where he again organized a school. In that year, 1423, he was invited by Gian Francesco Gonzaga, Marquis of Mantua, to undertake the education of his children. Vittorino accepted the invitation

with the agreement that he could conduct a school at the Court and receive other students; and he established at Mantua the school with which his name is most familiarly associated.

A villa, formerly the recreation hall of the Gonzaghi, was transformed by him into an ideal schoolhouse. Because of its pleasant surroundings and the spirit that prevailed therein, it was called the "Casa Jocosa" or "Pleasant House". All the scholars were boarders and Vittorino endeavoured to make the school as pleasant and enjoyable as the ideal home. Children of the leading families of Mantua, sons of other humanists like Filelfo, Guarino, and Poggio, and poor children were admitted to the classes. The instruction given was of the new Humanistic type but Christian in character and spirit. It was not merely a literary training but embraced the physical and moral requirements of a liberal education. Letters (Latin and Greek), arithmetic, geometry, algebra, logic, dialectics, ethics, astronomy, history, music, and eloquence were all taught there, and frequently by special masters. The pupils were directed also in some form of physical exercise, chosen usually according to their needs, but, at times, according to their tastes. There were some general exercises which were obligatory in all kinds of weather. Vittorino taught here as elsewhere by example, and participated in the field games.

He was an exemplary Catholic layman and as a teacher strove to cultivate in his pupils all the virtues becoming the Catholic gentleman. Every day had its regular religious exercises at which, like morning prayer and Mass, all assisted. He was a frequent communicant, and desired his students to approach the Sacraments every month. He did not overlook the individual, but he attained his success in overcoming faults and building up character by private direction and exhortation. His punishments were intended as remedies and were not administered immediately upon the discovery of an offense. His great educational service was to adjust the new Humanistic studies to a system of teaching and to show how they could be taught without compromising the principles of Christianity. He insisted on pleasant surroundings, made study attractive, and, by attention to individuals, more profitable. He developed a novel method of physical training, respecting the needs of the various pupils. He eminently succeeded with the education of Cecilia Gonzaga, who became one of the most cultured women of her time and ended her life as a nun. Vittorino has left us no written accounts of his work, nor any educational treatises. For an account of the famous humanists and scholars, statesmen, and prelates whom he prepared for their career, see Rosmini, *op. cit.*, *infra*, IV.

PATRICK J. MCCORMICK

Sts. Vitus, Modestus, and Crescentia

Sts. Vitus, Modestus, and Crescentia

According to the legend, martyrs under Diocletian; feast, 15 June. The earliest testimony for their veneration is offered by the "Martyrologium Hieronymianum" (ed. De Rossi-Duchesne, 78: "In Sicilia, Viti, Modesti et Crescentiae"). The fact that the note is in the three most important manuscripts proves that it was also in the common exemplar of these, which appeared in the fifth century. The same Martyrologium has under the same day another Vitus at the head of a list of nine martyrs, with the statement of the place, "In Lucania", that is, in the Roman province of that name in Southern Italy between the Tuscan Sea and the Gulf of Taranto. It is easily possible that the same martyr Vitus in both cases, because only the name of a territory is given, not of a city, as the place where the martyr was venerated. This testimony to the public veneration of the three saints in the fifth century proves positively that they are historical martyrs. There are, nevertheless, no historical accounts of them, nor of the time or the details of their martyrdom. During the sixth and seventh centuries a purely legendary narrative of their martyrdom appeared which was based upon other legends, especially on the legend of Poitus, and ornamented with accounts of fantastic miracles. It still exists in various versions, but has no historical value.

According to this legend Vitus was a boy seven years of age (other versions make him twelve years old), the son of a pagan senator of Lucania. During the era of the Emperors Diocletian and Maximilian, his father sought in every way, including various forms of torture, to make him apostatize. But he remained steadfast, and God aided him in a wonderful manner. He fled with his tutor Modestus in a boat to Lucania. From Lucania he was taken to Rome to drive out a demon which had taken possession of a son of the Emperor Diocletian. This he did, and yet, because he remained steadfast in the Christian Faith, he was tortured together with his tutor Modestus and his nurse Crescentia. By a miracle an angel brought back the martyrs to Lucania, where they died from the tortures they had endured. Three days later Vitus appeared to a distinguished matron named Florentia, who then found the bodies and buried them in the spot where they were. It is evident that the author of the legend has connected in his invention three saints who apparently suffered death in Lucania, and were first venerated there. The veneration of the martyrs spread rapidly in Southern Italy and Sicily, as is shown by the note in the "Martyrologium Hieronymianum". Pope Gregory the Great mentions a monastery dedicated to Vitus in Sicily ("Epist.", I, xlvi, P.L., LXXXVII, 511). The veneration of Vitus, the chief saint of the group, also appeared very early at Rome. Pope Gelasius (492-496) mentions a shrine dedicated to him (Jaffé, "Reg. Rom. Pont.", 2nd ed., I, 679), and at Rome in the seventh century the chapel of a deaconry was dedicated to him ("Liber Pont.", ed. Duchesne, I, 470 sq.). In the eighth century it is said that relics of St. Vitus were brought to the monastery of St-Denis by Abbot Fulrad. They were later presented to Abbot Warin of Corvey in Germany, who solemnly transferred them to this abbey in 836. From Corvey the veneration of St. Vitus spread throughout Westphalia and in the districts of eastern and northern Germany. St. Vitus is appealed to, above all, against epilepsy, which is called St. Vitus's Dance, and he is one of the

Fourteen Martyrs who give aid in times of trouble. He is represented near a kettle of boiling oil, because according to the legend he was thrown into such a kettle, but escaped miraculously. The feast of the three saints was adopted in the historical Martyrologies of the early Middle Ages and is also recorded in the present Roman Martyrology on 15 June.

J.P. KIRSCH

Domenico Viva

Domenico Viva

Writer, b. at Lecce, 19 Oct., 1648; d. 5 July, 1726. He entered the Society of Jesus 12 May, 1663. He taught he humanities and Greek, nine years' philosophy, eight years moral theology, eight years' Scholastic theology, was two years prefect of studies, was rector of the College of Naples in 1711, and provincial of Naples. Works: (1) "Enchiridion", a work relating to the jubilee, especially that of the Holy Year, and in general concerning indulgences; (2) a course of theology for schools, compiled from his lectures at the college of Naples; (3) "Opuscula theologico-moralia", for students; (4) a course of moral theology. These works are held in high esteem and are quoted by St. Alphonsus Liguori, La Croix, etc.; (5) "Trutina theologica damnatarum thesium" (1708), his most famous work, in four parts and two volumes. In the first volume are enumerated the propositions condemned by three popes: 45 by Alexander VII, 65 by Innocent XI, 39 by Alexander VIII, and the 5 condemned propositions of the "Augustinus" of Jansenius. The second volume is devoted to the study and refutation of the 101 propositions of Quesnel, condemned by the Bull "Unigenitus" of Clement XI in 1713. The first volume had been published in 1708 and by 1757 had reached sixteen editions, and in the same period vol. II had gone through six editions. To some editions were added the valuable comments of Father Antonio Zaccharia, librarian of the House of Este, in which pontifical documents are cited and the author defended against Daniel Concina, Giovanni Vincenzo Patuzzi, and others. The third edition (Benevento, 1717) contains a treatise in which appeal to a future council is declared illegal when the pope has spoken and the Church, spread over the entire world, has accepted his judgment; which is demonstrated by the testimony of the oecumenical councils and by the assemblies of the French clergy.

RAMÓN RUIZ AMADO
Vivarini (Family of Painters)

Vivarini

A family of Italian painters.

Alvise Vivarini

Born in 1446 or 1447; died in 1502. He was the son of Antonio, and was educated by his uncle Bartolomeo. Of his early history very little is known. In 1488 he wrote to the Signoria in Venice, begging that he might be allowed to prove his skill side by side with that of the two Bellini in the decoration of one of the great rooms, that in which the Grand Council met. His petition was granted, but the pictures he executed have disappeared. In 1492, from the same body, he received the honorary title of Depentor in Gran Conscio and a stipend of five ducats a month. For some years he was by most critics connected with Giovanni Bellini, by some regarded as Bellini's pupil, or a foreman in his studio, and by others as a person of little interest, an unimportant Muranese painter, who imitated Bellini's methods and copied his ideas and technique. It is very largely owing to Bernhard Berenson's investigations when compiling his work on Lotto that Alvise has been given his rightful position as an eminent Venetian painter, who exercised great and lasting influences on his successors. He was an original workman, highly thought of in his own time, a great figure amongst the Venetian masters of the fifteenth century, by no means an unimportant member of the Vivarini family, and not a follower of Bellini, but eminent on his own account, and also because he was the master of Cima, Lotto, Montegna, and Bonsignori. His influence upon his pupils is considerable, and extends to others who were not specially known as his pupils, as Basaiti, Pordenone, and Antonello da Messina.

His first dated work is the polyptych of 1475, painted for Montefiorentino, and still to be seen in that Franciscan monastery. His Madonna of 1480 is in the Venice Academy. There is a picture dated 1483 at Barletta, one at Naples of 1485, a Madonna at Vienna, 1489, a head of the Saviour in Venice (1493), a Resurrection at Venice also of 1498. Then we come to the last great work, that of "St. Ambrose Enthroned", in the Frari Church at Venice, commenced in 1501, left incomplete at his death, and finished by Marco Basaiti. Many other works of his still exist, but are without date, and recent criticism has given back to Alvise a number of portraits which have hitherto passed under other names. There is but one signed portrait by him, that which formed part of the Salting Bequest; but, taking that as a starting-point, the pictures at Windsor Castle, in the Stuttgart Gallery, in the gallery at Padua, and in the possession of the Comtesse de Bearn, have been with considerable probability attributed to this painter. Many judges also attribute to him a portrait bequeathed to the National Gallery by the Misses Cohen as well as one belonging to Lord Wemyss, another in the possession of Lady Layard, and a fourth in the Signoria in Venice.

Antonio Vivarini

Born probably at Murano during the early part of the fifteenth century; died probably at Venice, after 1470. He may be regarded as the father of the famous Murano school of painting. Of his history we know very little. He gave security for his wife's dower on 4 February, 1446. Where he acquired his early teaching in painting is not known, but he was undoubtedly influenced by Gentile da Fabriano and by Pisanello. He worked in partnership with Giovanni da Murano; the earliest dated work bearing their united names is in the Academy at Venice, and is dated 1440, while another copy of it is in the Church of St. Pantaleone, and is dated 1444. The organ shutters of San Giorgio Maggiore executed by the two painters, are dated 1445, the "Virgin and Child Enthroned", in the Academy at Venice, bears the date of the following year. We know of the existence of a picture, dated 1447, which used to be in Padua, but which has disappeared; about that date Giovanni Murano probably died, because in 1450 Antonio entered into partnership with his brother Bartolomeo, and the Bologna Gallery possesses a very fine picture signed by the two brothers in 1450 and painted for the Certosa. A picture was painted for the Church of San Francesco at Padua in the following year; the partnership broke up in 1459, and the pictures following that time are signed by Antonio alone. The only really important one is now in the Lateran Gallery, and is dated 1467. Other places where the works of this painter may be studied are Brescia, Osimo, Pausula, Bergamo, Berlin, and Milan.

Bartolommeo Vivarini (Bartolommeo da Murano)

Born evidently at Murano, probably about 1425; died about 1499, certainly after 1490. He was a younger brother of Antonio, and must have been largely responsible for the artistic training of Alvise. His earliest dated work is the great group of the "Madonna and Child with Saints" (now in the gallery at Bologna), originally painted for the Certosa of that city, and regarded in northern Italy as one of the finest creations of its time. It bears a long inscription commemorating the faithful services of Cardinal Nicolo Albergati, the friend of Pope Nicolas V, who gave the commission for the picture. Another work signed by the brothers represents the "Glory of Saint Peter", painted for the Church of San Francesco at Padua, and now in the gallery of that city. Signed by Bartolommeo only, but with his full family name of Vivarini, is the panel of San Giovanni Capistrano (now in the Louvre), the earliest example bearing his signature alone. In 1464 the partnership appears to have relaxed, and then Bartolommeo stood as an independent painter, and a man of great originality and distinct personal qualities. In 1465 he painted his picture of the "Enthroned Virgin" (now in the Naples Museum) for a church at Bari. In 1473 he painted for the Church of Santa Maria Formosa (Venice) the "Virgin of Mercy", and in the same year his superb figure of Saint Augustine. To the following year belongs the Frari picture of the "Enthroned St. Mark". The picture of "St. Ambrose" at Vienna is dated 1477; the "Virgin and Child" at Venice, 1478; another "Virgin and Child" now at Turin, 1481; a smaller altarpiece now in the Frari church, 1482; and the "Saint Mary Magdalene" in the Academy at Venice is dated the same year. The last signed portrait is that of Saint Barbara in the Academy at Venice; it is dated 1490, but contemporary evidence seems to prove that Bartolommeo lived for several years after that date. In addition to the places mentioned, there are examples of his work at Fermo, Pausula, Boston, U.S.A., in the collection of Mr. Shaw, and in the

collection of Lord Wemyss at Gosford. There are of course many pictures by his which bear no dates.

ALVISE: For the only really satisfactory study of Vivarini and his works see BERENSON, Lorenzo Lotto (London, 1901). See also ZANETTI, Venetian Painters (Venice, 1771).

GEORGE CHARLES WILLIAMSON

Juan Luis Vives

Juan Luis Vives

Spanish humanist and philosopher, b. at Valencia, 6 March, 1492; d. at Bruges, 6 May, 1540. Through fear of the rigours of the Inquisition he left his country forever in 1509. He first studied at the University of Paris, and in 1512 settled at Bruges, which became his second fatherland, and which he left only for numerous journeys. He returned to Paris in 1514, 1519, and 1536. This city attracted him, but the commotion in the streets and the sarcastic humour of the inhabitants caused him to prefer Bruges. Nevertheless, he was several times unfaithful to it. In 1517 he became tutor to Guillaume de Croy, who at nineteen was cardinal and Archbishop of Toledo. Residing thenceforth at Louvain, he was appointed in 1519 professor at the university and attached to the college of the castle (*collegium castrense*). He lost his protector in 1521. After many comings and goings and vain efforts with Charles V, the duke of Alba, and the Cardinal of Utrecht, he was attached on 12 October, 1523, to Corpus Christi College, Oxford, a foundation of Wolsey. Henry VIII, Wolsey, and Queen Catherine of Aragon, to whom he had just dedicated his "De institutione feminae", treated him benevolently. Nevertheless, he often escaped from the Court and returned to Bruges. During one of these absences he married the daughter of a worthy of the city, Marguerite Valdaura (26 May, 1524). Henry VIII's passion for Anne Boleyn now complicated the situation. Vives was arrested and banished for writing in defence of the queen. On his return to Flanders, Vives refrained from further intervention and declined when Catherine of Aragon appealed to him. During his stay at Louvain, Vives was associated with Erasmus and followed almost the same line of conduct. On the advice of Erasmus he had published a commentary on St. Augustine's "City of God" (Basle, 1522). He displeased the theologians by his irreverence for the ancient commentators, and Erasmus by his prolixity. His attitude eventually made him an object of suspicion during the wars of religion. He attempted to resume his lectures at Louvain, but he spent nearly all the remainder of his life at Bruges, and died when he was undertaking a general apology for Christianity.

The works of Vives are very numerous and deal with piety, teaching and education, political economy, and philosophy. His books of devotion were very successful in their time; the "Introductio ad sapientiam" (1524) had fifty editions, and the "Ad animi exercitationem in Deum

commentatiumculae", eighteen. His chief work on teaching is the "Exercitatio linguae latinae" (1538) which passed through ninety nine editions. This success was deserved. The book was one of the first in which the elements of Latin were clearly and simply set forth and broke with the scholastic traditions of the grammarians of the Lower Empire and Middle Ages. In his rhetorical and literary works, especially in the "De disciplinis" (20 books, 1531), Vives formulated rules of style, insisting especially on philosophy and history. He advocated that history should embrace human activity in its entirety and not confine itself to accounts of wars. He condemned the uncritical tales of the "Golden Legend". In philosophy he mingled with original views ideas from Aristotle and even Aristotle as commented by medieval dialecticians. Nevertheless he challenged their methods in the treatise "In pseudo dialecticos" (1519). With regard to the world and matter he professed more than one interesting opinion, such as that of evolution. His theory of knowledge was in accord with the Aristotelean Sensism. But the philosophical ideas of Vives still call for deep study conducted by a specialist.

In education he put forth exact theories regarding regimen, establishment of the school, and the conduct of the masters. He devoted a special work to the education of women, "De institutione feminae Christianae" (1523), of which forty editions appeared. Somewhat severe in spirit, subordinating woman to man and regarding the mind of woman as inferior, Vives nevertheless demands that woman be not left in ignorance and gives as definition of marriage: the legitimate union of one man and one woman for the mutual ownership of the whole life. Finally, in various treatises and especially in the "De subventionem pauperum" (1526) Vives shows himself as an organizer of public relief. He proscribes mendicancy, expels poor strangers from the city, obliges the natives to work, recommends apprenticeship for those who have no trade, advocates asylums for the insane, schools for foundlings from the age of six, and provides for the administration of all this by voluntary gifts, the sale of the products of the labour of the poor the revenues of the hospitals, and taxes on rich ecclesiastical communities. Ypres put these ideas into practice in 1525, despite the protests of the Franciscans, which were rejected by the Parlement of Paris and by Charles V. Other cities followed this example. But Vives mingled some exaggeration with these doctrines. In the "De communione rerum" (1535) he does not seem sure of the legitimacy of private property. He had lights on many subjects, but never concentrated his efforts on a particular work.

Vives (Paris, 1887); THIBAUT, Quid de puellis instituendis senserit Vives (Paris, 1888); LECIGNE, Quid de rebus politicis senserit J. L. Vives (Rennes, 1898).

PAUL LEJAY

Viviers

Viviers

(VIVARIUM).

Diocese; includes the Department of Ardèche, France. It was suppressed by the Concordat of 1802, and united to the See of Mende. Re-established in 1822, the diocese then included almost all the ancient Diocese of Viviers, and some part of the ancient Diocese of Valence, Vienne, Le Puy, and Uzès (see NÎMES), and was suffragan of the Archdiocese of Avignon. St. Andéol, disciple of St. Polycarp, evangelized the Vivarais under Septimius Severus, and was martyred in 208. His body was buried by Blessed Tullie. The "Old Charter", drawn up in 950 by Bishop Thomas, is the most complete document we possess concerning the primitive Church of Viviers. It mentions five bishops, who lived at Alba Augusta (Aps): Saints Januarius, Septimus, Maspicianus, Melanius, and Avolus. The last was a victim of the invasion of the barbarian Chrocius (the exact date of which is unknown). In consequence of the ravages suffered by Alba Augusta, the new bishop, St. Auxonius, transferred the see to Viviers about 430. Promotus was probably the first Bishop of Viviers; the document also mentions later several canonized bishops: Saints Lucian and Valerius (fifth and sixth centuries); St. Venantius, disciple of St. Avitus, who was present at the councils held in 517 and 535; St. Melanius II (sixth century); St. Eucherius, St. Firminus, St. Aulus, St. Eumachius, St. Longinus (seventh century); St. Arcontius, martyr (date unknown, perhaps later than the ninth century).

It seems that the Diocese of Viviers was disputed, for a long time, by the metropolitan Sees of Vienne and Arles. From the eleventh century its dependence on Vienne was not contested. John II, cardinal and Bishop of Viviers (1073-95), had the abbatial church of Cruas consecrated by Urban II, and accompanied him to the Council of Clermont. Afterwards, it is said that Conrad III gave Lower Vivarais an independent suzerainty to Bishop William (1147). In the thirteenth century, under the reign of St. Louis, the Bishop of Viviers was obliged to recognize the jurisdiction of the Seneschal of Beaucaire. By the treaty of 10 July, 1305 Philip IV obliged the bishops of Viviers to admit the suzerainty of the kings of France over all their temporal domain. We may also mention as bishops: Peter of Mortemart (1322-25), counsellor of King Charles IV, and cardinal (1327); Peter of Sarcéas (1373-75), cardinal in (1375); John Fraczon, Cardinal de Brogny (1392-98), a swineherd during his childhood, cardinal in 1385, and later, vice-chancellor of the Roman Church; he took an important part in the Council of Constance; Alexander Farnese (1560-65), cardinal in 1534.

Under Bishop Bonnel (1836-1841), there occurred in the Diocese of Viviers the extraordinary movement of *allignolisme*. The brothers, Charles-Régis Allignol and Augustin Allignol, b. at La Rouvière, in the diocese, published in 1839 a work entitled "L'Etat actuel du clergé en France", in which they demanded the immovability of the *succursalistes*; installation of diocesan synods to assist the bishop in the administration of his diocese; the representation for the lower clergy at councils; suppression of fees, and the modification of studies at the seminaries. Boyer, director of the Seminary of St-Sulpice, refuted the writing of the brothers Allignol in a book which he wrote, and they were removed by Bishop Bonnel. The older of the two brothers hastened to Rome, where Gregory XVI and many cardinals received him kindly. The pope ordered that their book should be submitted to two doctors, but that no "note of infamy" was to be attached. Father Perrone, one of the doctors judged the book severely, and noticed in it propositions in it impregnated with

Presbyterianism. But the brothers, claiming that they were favoured by the pope and alleging in proof that they had been allowed to have a private chapel, continued to create disturbance in the Diocese of Viviers. Meanwhile (1841) Jean-Hippolyte Guibert, later Archbishop of Paris and cardinal, became Bishop of Viviers.

Thouez, the curé of Aubenas, who felt kindly to the brothers Alignol, although he recommended moderation to them, and reprimanded their errors, tried to shield them from the displeasure of the new bishop. The latter soon perceived that their efforts to democratize the Church were very dangerous; this tendency was supported by Savin, archpriest of the Cathedral of Viviers, and by Tailhant, curé of Vesseaux, who published two pamphlets in favour of restoring to the *succursalistes* their social position. On 31 Aug., 1844, the Allignolist party published in "Le Bien Social" a long diatribe against Bishop Guibert, and copies of this newspaper were distributed to all the priests of the diocese, then assembled for the retreat. The bishop was offended, forbade the Allignol brothers to use the private chapel, suspended the archpriest of Viviers, and published, 6 Jan., 1845, a pastoral letter "on dangerous tendencies of a party springing up in the Church of France against episcopal authority". This letter was approved by Cardinal Lambruschini, Secretary of State of Gregory XVI. After that Guibert, 2 June, 1845, published a new pastoral letter promulgating an answer from Pius IX to the Bishop of Liège on the subject of *succursalistes*. The Allignols submitted, and Gregory XVI, 26 Nov., 1845, sent to Bishop Guibert a congratulatory Brief on the happy end of the crisis, which might have resulted in an agitation against the Concordat itself.

Several saints are connected with the history of the diocese; the Spanish deacon and martyr, St. Vincent (end of third century), protector of the cathedral church and of the diocese; St. Just, Bishop of Lyons (end of the fourth century), belonging to the family of the Counts of Tournon; St. Montan, hermit (fifth century); St. Ostianus (sixth century), confessor, a relative of Sigismund, King of the Burgundians. St. Agrève, who (according to some legends) was Bishop of Le Puy, was martyred in Vivarais, on the present site of the city of St-Agrève (seventh century); the Blessed Amadeus, founder of the Benedictine Abbey of Mazan (d. 1140); St. Benezet, shepherd (1165-86), builder of the bridge of Avignon, b. in Vivarais; the Blessed Guigues I, fifth prior of the Grande Chartreuse, friend of St. Bernard, and writer of the "Statuta ordinis Carthusiensis" (twelfth century); St. Francis Regis.

The following were natives of the Diocese of Viviers: Cardinal de Tournon (1489-1502), an active diplomatist in the service of Francis I, and who presided at the Colloguy of Poisy, Archbishop of Bourges, Auch, and Lyons, and Abbé of St. Germain-des-Pres; Cardinal de Bernis (1715-94); Abbé Barruel, controversialist (1741-1820); the Joyeuse family, of which Ange de Joyeuse was a member, were natives of Vivarais.

Viviers was often troubled by religious conflicts: the war of the Albigenses in the thirteenth century; the revolt of the Calvinists against Louis XIII (1627-29), which ended in the capture of Privas by the royal army; the Dragonnades under Louis XIV after the revocation of the Edict of Nantes; the war of the Camisards. Viviers honours the memory of several Catholics, who died heroically during the conflict with the Calvinists; we must especially mention the martyrdom of

some priests assembled in synod at the church of Villeneuve de Berg (March, 1573); the martyrdom of the Jesuit Jean Salez, and of his companion Sautemouche at Aubenas (February, 1583); the martyrdom of Father Jerome, a Capuchin chaplain of the troops of Louis XIII, surprised by Huguenots at Privas (15 May, 1629). The chief pilgrimages of the diocese are: Notre-Dame de Châlons and Notre-Dame d'Ay, near Satillieu (both existing since the twelfth century); Notre-Dame de Montaigu at Tournon (dating from 1628); Notre-Dame de Bon Secours, at La Blachère (end of seventeenth century), Notre-Dame de la Délivrance, Chapais (in existence since the Reign of Terror), and especially the pilgrimage to the tomb of St. John Francis Regin (La Louvesc).

There were, in the Diocese of Viviers, before the application of the Associations law of 1901; Jesuits; Oblates of Mary Immaculate; Religious of St. Mary of the Assumption; Sulpicians; and several orders of teaching brothers. The Order of the Basilians had been founded in 1800 at Annonay by d'Aviau, Archbishop of Vienne, for the recruiting of priests. Cardinal Donnet, and several bishops of France, were pupils of the Basilians. After the Decree of 1881 regarding the congregations had been promulgated, the Basilians joined the secular clergy. Among the orders of women founded in the diocese mention may be made of: the Sisters of the Presentation of Mary, who teach and nurse the sick, founded in 1796 by Ven. Marie Rivier (1768-1838) with a mother-house at Bourg-St-Andéol; the Sisters of Providence, founded at Annonay by Mary and Thérèse Liond, for the care of orphan girls; the Sisters of St. Francis Regis, founded at the beginning of the nineteenth century by Abbé Therme (1791-1834) for the instruction of poor children, with a mother-house at Aubenas. At the end of the nineteenth century the Diocese of Viviers had 2 crèches; 30 infant schools; 1 school for deaf mutes; 2 orphan asylums for boys; 14 orphan asylums for girls; 2 houses of correction and reform; 2 refuges; 11 religious houses for nursing the sick at home; 1 home for convalescents; 1 asylum for the insane; 10 hospitals or alms-houses. The population of the Diocese of Viviers was in 1905 (the last year of the Concordat), 353,564; there were 37 first class parishes; 334 second class parishes, and 134 vicarages paid by the state.

(1865), nova, XVI, 539, 590; instr., 219-288; DUCHESNE, *Fastes épiscopaux*, (2 vols., Paris, 1900-2); ROUCHIER, *Histoire religieuse, civile et politique du Vivarais*, I (Paris, 1861); CONSTANT, *Apostolicité de l'Église de Viviers* (Nice, 1897); MAZON, *Quelques notes sur l'origine des Églises du Vivarais* (2 vols., Privas, 1891-93); IDEM, *Essai historique sur le Vivarais pendant la guerre de cent ans* (Tournon, 1890); ROCHE, *Armorial genealogique et biographique des évêques de Viviers* (2 vols., Lyons, 1891); MOLLIER, *Saints et pieux personnages du Vivarais* (Paris, 1895).

GEORGES GOYAU

Moral Aspect of Vivisection

Moral Aspect of Vivisection

Defined literally the word vivisection signifies the dissection of living creatures; ordinarily it means any scientific experiment on animals involving the use of the scalpel; incorrectly it is used

for any experimental observations of animals under abnormal conditions. The literal dissection of living animals is practised nowhere, as it is much more convenient to study the structure of man's body in the cadaver. According to Aulus Cornelius Celsus, who lived in the reign of Tiberius, and Tertullian (about 160-240) living criminals were dismembered at Alexandria in the reigns of Ptolemy II (285-247 B.C.) and Ptolemy III (247-221 B.C.). The same act was maliciously attributed to Jacobus Berengarius, Andreas Vesalius, and Gabriel Fallopius, celebrated anatomists of the sixteenth century. The history of scientific observation of and experimentation upon animals, both bloodless and bloody, began at the moment when it was perceived that the processes of nature could be discovered only by the exact observation of nature and not by philosophical methods. For physiological and pathological research experimentation with animals is an indispensable aid, while for medical science it is of much value. It gives a view of the working processes of the living organism, permits us to produce diseases artificially, and to investigate the organic changes produced by these diseases in each stage of their course.

Before William Harvey (1578-1657) could announce his discovery of the circulation of the blood he was obliged, as he confesses, to make for years innumerable vivisections of animals of all kinds, for he could investigate the mechanism of the circulation only in the living animal. He was thus able to reach the conclusion that the arteries which are empty in the corpse are filled with blood during life and not with air, as was believed until then. The Jesuit Jasper Schott (1608-66), professor of mathematics and physics at Würzburg, put animals into an enclosure where the air was rarefied and described the phenomena of death by suffocation on the basis of his experiments. He injected solutions of drugs into the veins of dogs, and proved that medicines administered in this manner produce effects more quickly than when taken into the stomach. Christopher Wren made similar experiments at Oxford in 1656. Thomas Willis (1622-75) propounded, after numerous experiments, the theory of the localization of the different faculties in the several parts of the brain, and all our knowledge as to the functions of the brain has been acquired almost entirely in the same way. Albrecht von Haller (1708-77), the founder of modern physiology, repeatedly emphasizes in his works the importance of experiments on animals. Observation and reflection led Alexander Walker to the conclusion that the nerves arising from the anterior spinal ganglion serve to convey sensation, and those from the posterior convey motor impulses. Charles Bell (1774-1842) proved the opposite to be the fact by simply cutting through the anterior roots. The experiments made on animals by Claude Bernard (1813-78) yielded information concerning the use of the pancreas in the digestion of fats, concerning the morbid process of forming glucose or sugar in the liver, the origin of diabetes, etc. Our knowledge concerning assimilation and digestion, the appearance of emboli or obstructions in blood-vessels, the effects of poisons, and of modern drugs is derived from similar sources. The treatment of hydrophobia and the whole of serum therapeutics rest on almost endless and laborious experiments on animals. It was proved by feeding animals with trichiniferous meat that parts of the body are first and preferably attacked by trichinae. The experiments led to the establishment of careful inspection of meat by which thousands of people have been preserved from the danger of trichinosis. Before the attempt could be made to excise a degenerated thyroid

gland the larynx, or a kidney in human beings, the operation had to be made on innumerable mammals and the processes of the cure observed. How can a surgeon make a practical test of a theoretically established new method of sewing up a wound if not on animals? There is no branch of medical science that cannot be essentially benefited by experiments on animals. In the last instance the results of the experiments do good to humanity. Consequently it appears inadmissible to declare vivisection a means morally forbidden and to characterize experiments on animals as the torture of animals.

About 1870 the societies for the protection of animals, especially those in England, began a violent agitation against vivisection, which led in 1876 to a bill entitled "Cruelty to Animals Act." In this way vivisection was essentially restricted. The agitation spread later to Germany and Austria and in 1885 led in both countries to legislation which permitted vivisection under conditions that did not prevent experiments for research. The opponents of vivisection claim that experiments on animals have no direct value for medical science, that it is an aimless torture, brutalizing the mind, and that distinguished scholars have denounced it. Compassion for the defenseless animal plays a large part in the opposition. It is just at this point, however, that an incongruity becomes evident between the feeling for the human being and for the animal, as the instances cited above show that experiments on animals are undertaken for the benefit of suffering humanity. Rudolf von Ihering remarks very appositely: "The sympathy with the animal that is shown in each attack is in reality disregard of man, a confusion of moral feeling that sacrifices the human being in order to protect the animal" ("Zweck im Recht", II, 141). Windthorst, the leader of the Centre party, said in the German Reichstag on 23 January, 1882: "There is absolutely no doubt that we should not try to prevent what is really necessary for science. I am certainly of the opinion that an animal can in no way be placed on an equality with man; it is created to serve him, and when necessary it must serve him in this manner." It is unjust to accuse vivisectionists of cruelty, for in operations causing blood every investigator, to avoid being disturbed while at his work, uses narcotics if possible. It has also been asserted that the customary curare, which is an arrow-poison, paralyzes only the motor nerves and not those of sensation. Besides curare, however, other poisons are used, as ether, chloroform, and morphine. Far more painful and morally impeachable are those operations on animals which spring from a perverted taste or fashion, as the castration of mammals and birds, the scaling of living fishes, the cooking of live crustacea, and the clipping of the tails and ears of pet dogs

There may be a few physicians among the opponents of vivisection, yet these are always men who have no interest in scientific investigation and who are often not able to comprehend an investigator's method of thinking. Even were there among the opponents of vivisection actual scientific investigators, the judgment of so small a number should not be taken into consideration in view of the numberless declarations made by all the medical faculties of Austria, Germany, and Switzerland, as well as by large numbers of medical societies throughout the civilized world, that experiments on animals are absolutely essential for investigation, and cannot be replaced by any other method. The celebrated anatomist of Vienna, Josef Hyrtl, was frequently called an opponent of vivisection. This error arose from quoting as proof sentences torn from their context. Hyrtl was

only an enemy of excesses, and made many experiments on animals himself. He wrote: "Every thoughtful physician will acknowledge that the science of medicine owes great and important discoveries to vivisection. But for it, what would we know of the lacteals, of the functions of the nervous system, of fecundation and embryological development?" The objection that experimentation on animals is inadmissible as a means of instruction, because the pupil ought to believe the teacher, is just as false as if it were asserted that physics could be taught without experiments. It is certain, however, that limitations are possible for the lecture room. A legislative body exceeds its authority when it wishes to prescribe to the investigator the methods and means to be used in investigation. But it may have the right to prescribe certain conditions. Thus, in the nineteenth century, Austria adopted the following rational regulations: Experiments on living animals can be made only in government institutions, only by the heads of the institutions or instructors, or under their supervision by other persons. They were also permitted in exceptional cases for purposes of instruction. When possible, the animals were to be thoroughly anaesthetized. Higher animals were to be used only when it is absolutely necessary. In England an Act relating to vivisection was passed in 1876. It placed various restrictions upon the practice of experiments on animals. A license was required, besides one or more certificates setting forth the conditions under which the experiment was to be made. The Home-Secretary was empowered by the Act to issue such additional regulations as he saw fit. (See also CRUELTY TO ANIMALS.)

LEOPOLD SENFELDEB

Diocese of Vizagapatam

Diocese of Vizagapatam

Located in the east of India, suffragan to Madras. It is bounded on the north by the River Mahanadi, on the south by the Godavery river, on the west by the Diocese of Nagpur, and on the east by the Bay of Bengal.

History

Although this district was included within the confines of the Portuguese Diocese of Mylapur from the year 1606, and since 1834 formed part of the Vicariate Apostolic of Madras, next to nothing of missionary work was done here until the year 1845, when it was erected into a vicariate. The first fathers arriving at Vizagapatam found there one old priest, a Theatine, the last survivor of what was known as the Golconda mission. There was only a scattering of Catholics in a few places, mostly either European troops or camp followers. In 1850 their number was estimated at about 4000 at a time when the vicariate included the whole of the Nagpur districts in addition to those of the present diocese. These Nagpur districts were divided off and made into a diocese in 1887, when Vizagapatam also became a diocese, both suffragan to Madras.

Succession of Prelates to 1910 (Vicars Apostolic)

1. Theophilus Sebastian Neyret, 1849-1862;
2. John M. Tissot, 1863-1890, became first bishop in 1887;
3. John Mary Clerc, installed 1891

ERNEST R. HULL

Vizeu

Vizeu

(VISENSIS).

Diocese in north central Portugal. The bishopric dates from the sixth century and including the doubtful prelates and those elected but not confirmed, it has had eighty- three bishops. The list begins with Remissol (572-585) who attended the Second Council of Braga, but was exiled by the Arian King Leovigild. Tunila succeeded him and abjured Arianism at the Third Council of Toledo; bishops of Vizeu were present at the fourth, sixth, eighth, twelfth, and thirteenth councils of Toledo. There was a vacancy of fifteen years from 665 to 680; Theofredo was bishop in 693. Then, owing to the invasion of the Saracens, Vizeu remained without a bishop for nearly two centuries. Theodomiro assisted at the consecration of the church of Santiago de Compostella in 876, and at the Council of Oviedo in 877 and was followed by Gundemiro in 905. In this century Vizeu was occupied by the Moors during seventy-six years and at first had no bishop, but afterwards its prelates, Gomes and Sisnando (1020-1064), resided in Oviedo. From 1110 to 1144 the diocese was governed by priors appointed by the bishops of Coimbra, in virtue of a Bull of Paschall II; among them was Saint Theotonio, afterwards patron of the city. The line of bishops began again with Odorio.

Nicolau (1193), a future canon regular, studied in Paris and there met the future Innocent III, who after his election to the papacy received him at Rome and recommended him to the queen for his learning and modesty. Martinho was appointed in 1230; after his death the see remained vacant until 1250, when Pedro Gonvalves was confirmed in it. Matheus I (1254) took part in the long conflicts between Crown and Church, which had begun in the reign of King Alfonso II, and in defence of ecclesiastical immunities went with other bishops to Rome, dying at Vitebo. After eight years, during which Portugal was under interdicts, Matheus II filled the see, and he was followed by Egas I (1259), an active reformer, and Martinho II (1313). This prelate carried out important work in the cathedral, which dates at least from 830, when King Ferdinand the Great recaptured the city from the Moors; it was almost reconstructed early in the twelfth century. Gonçalo de Figueiredo (1323), who had been married before entering the church, is remembered as the founder of many noble families; his successor Miguel Vivas (1330) served as chancellor to Alfonso IV.

After João III (1375), "of good memory", came two prelates, Pedro II and João IV, whose rule was brief on account of the Great Schism, the former being deposed by Urban VI. A fifth João followed in the see in 1392 and, being highly esteemed by the king, was chosen godfather of Prince Henry the Navigator, and received from the monarch the gift of a Roman tower for the cathedral bells. Luiz do Amaral, the only bishop native of the city, represented Portugal at the Council of Basel, and, embracing the cause of the antipope Felix V, was sent on various embassies; he returned however to the lawful obedience before his death. Luiz Coutinho II (1438) was promoted to Coimbra in 1446, being followed by João Vicente (founder of the Loyos, a congregation of secular canons

of St. John), who was known as "the holy bishop". He reformed the Order of Christ and gave it new statutes by order of Prince Henry, Duke of Vizeu, the grand-master. Cardinal d'Alpedrinha, the richest and most influential of Portuguese prelates, lived at Rome from 1479 and dying there in 1508 was buried in his splendid chapel in Santa Maria del Popolo. Diego Ortiz de Vilhegas (1507), a Castilian, was confessor of three kings and renowned as a theologian, orator, and astrologer. He took part in the *Junta* called by King Manuel to consider the offer Columbus had made to discover the Indies by sailing west and procured its rejection, which transferred from Portugal to Spain the glory of finding America. He built a new and splendid front to the cathedral and consecrated it in June, 1516. In 1520 Alfonso, sixth son of King Manuel, became Bishop of Vizeu at the age of eleven, and in his time books began to be kept for the registration of births, deaths, and marriages, a custom afterwards enjoined by the Council of Trent. He was followed, among others, by Cardinal Miguel da Silva (1527), and Cardinal Alexander Farnese (1547), who never came to the diocese, which he renounced in 1552. Gonçalo Pinheiro (1553), famous classical scholar, ambassador to France, and subsequently bishop, held a synod in 1555, and made notable additions to the cathedral. Jorge de Athaide (1568) assisted at the Council of Trent and in the reform of the Missal and Breviary and built the cathedral sacristy and part of the bishop's palace; of noble family and a pious prelate, he refused four archbishoprics and left his residuary estate to the poor.

Miguel de Castro (1579), also a noble, was Viceroy of Portugal under the Spanish domination, and renowned for almsdeeds. On his transfer to Lisbon, Nuno de Noronha, son of the Count of Odemira, became bishop (1585) and built the seminary, doing the same for Guarda to which he was promoted. He was a notable reformer of the clergy, and lived like the great *fidalgo* he was. The virtuous Dominican and Greek scholar Antonio de Sousa (1595) ruled only two years, being followed by João de Braganza, a model courtier and prelate, who gave his wealth to the poor. João Manuel (1610) son of the Count of Castanheira, after a personal visitation of the diocese in 1611, drew up constitutions which were approved at a synod in 1614 and he subsequently became Archbishop of Lisbon and viceroy. João de Portugal (1626), a Dominican of noble birth and saintly life, made a visitation of the diocese and finding most of his people ignorant of Christian doctrine, wrote and distributed a summary of it. It was remarked that he gave nothing to his relations, saying that the income of the diocese should be spent upon it and its children, the poor. Bernardino de Senna (1629), a Franciscan, had held important posts in his order in different parts of Portugal, whither he travelled on foot begging alms, and he had refused two mitres. Becoming general he lived at Madrid with free entry to the palace, although dressed in rags. Urban VIII named him minister general, and at the age of fifty-eight when he had visited and governed 6000 convents and 280,000 subjects, King Philip presented him to the See of Vizeu. Miguel de Castro IV (1633) never took possession, but Diniz de Mello e Castro (1636) in his two years' rule was diligent in his pastoral office, especially in visitations, and was a great benefactor of the Misericordias of the diocese. For the next thirty-two years the see remained vacant, owing to the war with Spain following on the proclamation of Portuguese independence. Through Spanish pressure, the popes refused to confirm the prelates named by King João IV and during eleven years Portugal and colonies had only one

bishop, the others, appointed under the Philips, having died. This energetic man, who lived until one hundred and nine, is said to have ordained 20,000 priests and confirmed a million persons. Finally peace was made with Spain and in 1671 Manuel de Saldanha became bishop but died three months later and in 1673 João de Mello, a noble and man of greatest austerity, succeeded. He rebuilt the chancel of the cathedral, convened a synod in 1681, added to the constitutions of the diocese, and employed the Oratorians in giving missions. Ricardo Russell, an Englishman, chaplain to Queen Catherine, wife of Charles II, was translated from Portalegre in 1685 and established that congregation in Vizeu. He left the reputation of being a man of zeal and illustration, and though a severe disciplinarian, of ready wit.

Jeronymo Soares (1694), a generous benefactor of the Misericordia, convoked a synod in 1699 and reformed the diocesan constitutions and those of many brotherhoods and confraternities. After his death the see remained vacant twenty years owing to differences between King João V and Rome. In 1740 Julio Francisco de Oliveira was appointed. José do Menino Jesus (1783), a Carmelite, was a lover of art, as he showed by the statues he presented to the cathedral. He made two visitations of the diocese and was succeeded by Francisco de Azevedo (1792), a prelate of great modesty and charity, who instituted five suburban parishes annexed to the cathedral and subsidized the rectors out of his own funds. He gave a new organ costing 20,000 *crusados* to the cathedral and laid the foundation-stone of the new hospital of the Misericordia. This rule was troubled by the Peninsular War and in 1810 British troops occupied his palace and other ecclesiastical buildings. Francisco Alexandre Lobo (1810), famous for his learning and writings, was minister under King Miguel and, when the Liberals triumphed in 1834, had to emigrate to France where he remained ten years. The new Government refused to recognize the vicar-general to whom he had confided the diocese, naming another, which gave rise to a schism and cruel persecution of the faithful. José Xavier da Cerveira e Sousa (1859) abandoned the diocese through his inability to secure obedience from his priests in the matter of clerical dress and was followed by Antonio Alves Martins (1862), a Franciscan who espoused the Liberal cause and fought in the civil war against King Miguel. A talented, energetic, and charitable man and a great orator, he gave his life to politics and was journalist, deputy, peer, and prime minister. He was a strong opponent of the Infallibility decree at the Vatican Council and his independence gained him the admiration of the Portuguese Liberals, who have recently erected a statue of him in Vizeu. He was followed by José Dias Correa de Carvalho (1883), translated from the See of Cabo Verde, where he was the first bishop to visit all the churches of the archipelago. The present prelate, Mgr. Antonio Alves-Ferreira dos Sontos, is his immediate successor.

EDGAR PRESTAGE

St. Vladimir the Great

St. Vladimir the Great

(VLADIMIR or VOLODOMIR).

Grand Duke of Kieff and All Russia, grandson of St. Olga, and the first Russian ruler to embrace Christianity, b. 956; d. at Berestova, 15 July, 1015. St. Olga could not convert her son and successor, Sviatoslav, for he lived and died a pagan and brought up his son Vladimir as a pagan chieftain. Sviatoslav had two legitimate sons, Yaropolk and Oleg, and a third son, Vladimir, borne him by his court favourite Olga Malusha. Shortly before his death (972) he bestowed the Grand Duchy of Kieff on Yaropolk and gave the land of the Drevlani (now Galicia) to Oleg. The ancient Russian capital of Novgorod threatened rebellion and, as both the princes refused to go thither, Sviatoslav bestowed its sovereignty upon the young Vladimir. Meanwhile war broke out between Yaropolk and Oleg, and the former conquered the Drevlanian territory and dethroned Oleg. When this news reached Vladimir he feared a like fate and fled to the Varangians (Variags) of Scandinavia for help, while Yaropolk conquered Novgorod and united all Russia under his sceptre. A few years later Vladimir returned with a large force and retook Novgorod. Becoming bolder he waged war against his brother towards the south, took the city of Polotzk, slew its prince, Ragvald, and married his daughter Ragnilda, the affianced bride of Yaropolk. Then he pressed on and besieged Kieff. Yaropolk fled to Rodno, but could not hold out there, and was finally slain upon his surrender to the victorious Vladimir; the latter thereupon made himself ruler of Kieff and all Russia in 980. As a heathen prince Vladimir had four wives besides Ragnilda, and by them had ten sons and two daughters. Since the days of St. Olga, Christianity, which was originally established among the eastern Slavs by Sts. Cyril and Methodius, had been making secret progress throughout the land of Russ (now eastern Austria and Russia) and had begun to considerably alter the heathen ideas. It was a period similar to the era of the conversion of Constantine.

Notwithstanding this undercurrent of Christian ideas, Vladimir erected in Kieff many statues and shrines (*trebishcha*) to the Slavic heathen gods, Perun, Dazhdbog, Simorgl, Mokosh, Stribog, and others. In 981 he subdued the Chervensk cities (now Galicia), in 983 he overcame the wild Yatviags on the shores of the Baltic Sea, in 985 he fought with the Bulgarians on the lower Volga, and in 987 he planned a campaign against the Greco-Roman Empire, in the course of which he became interested in Christianity. The Chronicle of Nestor relates that he sent envoys to the neighbouring countries for information concerning their religions. The envoys reported adversely regarding the Bulgarians who followed (Mohammedan), the Jews of Khazar, and the Germans with their plain missionary Latin churches, but they were delighted with the solemn Greek ritual of the Great Church (St. Sophia) of Constantinople, and reminded Vladimir that his grandmother Olga had embraced that Faith. The next year (988) he besieged Kherson in the Crimea, a city within the borders of the eastern Roman Empire, and finally took it by cutting off its water supply. He then sent envoys to Emperor Basil II at Constantinople to ask for his sister Anna in marriage, adding a threat to march on Constantinople in case of refusal. The emperor replied that a Christian might

not marry a heathen, but if Vladimir were a Christian prince he would sanction the alliance. To this Vladimir replied that he had already examined the doctrines of the Christians, was inclined towards them, and was ready to be baptized. Basil II sent this sister with a retinue of officials and clergy to Kherson, and there Vladimir was baptized, in the same year, by the Metropolitan Michael and took also the baptismal name of Basil. A current legend relates that Vladimir had been stricken with blindness before the arrival of Anna and her retinue and had recovered his sight upon being baptized. He then married Princess Anna, and thereafter put away his pagan wives. He surrendered the city of Kherson to the Greeks and returned to Kieff in state with his bride. The Russian historian Karamsin (Vol. I, p. 215) suggests that Vladimir could have been baptized long before at Kieff, since Christians and their priests were already there; but such an act would have humbled the proud chieftain in the eyes of his people, for he would have accepted in a lowly manner an inconspicuous rite at the hands of a secret and despised sect. Hence he preferred to have it come from the envoys of the Roman Emperor of Constantinople, as a means of impressing his people.

When Vladimir returned to Kieff he took upon himself the conversion of his subjects. He ordered the statues of the gods to be thrown down, chopped to pieces, and some of them burned; the chief god, Perun, was dragged through the mud and thrown into the River Dnieper. These acts impressed the people with the helplessness of their gods, and when they were told that they should follow Vladimir's example and become Christians they were willingly baptized, even wading into the river that they might the sooner be reached by the priest for baptism. Zubrycki thinks this readiness shows that the doctrines of Christianity had already been secretly spread in Kieff and that the people only waited for an opportunity to publicly acknowledge them. Vladimir urged all his subjects to become Christians, established churches and monasteries not only at Kieff, but at Pereyaslav, Chernigoff, Bielegorod, Vladimir in Volhynia, and many other cities. In 989 he erected the large Church of St. Mary ever Virgin (usually called *Desiatinny Sobor*, the Cathedral of the Tithes), and in 996 the Church of the Transfiguration, both in the city of Kieff. He gave up his warlike career and devoted himself principally to the government of his people; he established schools, introduced ecclesiastical courts, and became known for his mildness and for his zeal in spreading the Christian faith. His wife died in 1011, having borne him two sons, Boris and Glib (also known as Sts. Roman and David, from their baptismal names). After this his life became troubled by the conduct of his elder children. Following the custom of his ancestors, he had parcelled out his kingdom amongst his children, giving the city of Novgorod in fief to his eldest son Yaroslav; the latter rebelled against him and refused to render either service or tribute. In 1014 Vladimir prepared to march north to Novgorod and take it away from his disobedient son, while Yaroslav invoked the help of the Varangians against his father. Vladimir fell ill and died on the way. His feast is celebrated on 15 July in the Russian Orthodox and Ruthenian Greek Catholic calendars, and he has received the name of *Ravnoapostol* (equal to the Apostles) in the title of the feast and the troparion of the liturgy. The Russians have added in their service books words referring his conversion and intercession to the present Russian Empire (*rossiiskaya zemlya*), but the Ruthenians have never permitted these interpolations.

ANDREW J. SHIPMAN

Ecclesiastical and Religious Vocation

Ecclesiastical and Religious Vocation

An ecclesiastical or religious vocation is the special gift of those who, in the Church of God, follow with a pure intention the ecclesiastical profession of the evangelical counsels. The elements of this vocation are all the interior and exterior helps, the efficacious graces which have led to the taking of the resolution, and all the graces which produce meritorious perseverance.

Ordinarily this vocation is revealed as the result of deliberation according to the principles of reason and faith; in extraordinary cases, by supernatural light so abundantly shed upon the soul as to render deliberation unnecessary. There are two signs of vocation: the one negative, the absence of impediment; the other positive, a firm resolution by the help of God to serve Him in the ecclesiastical or religious state.

If God leaves a free choice to the person called, he leaves none to those whose duty it is to advise; those spiritual directors or confessors who treat lightly a matter of such importance, or do not answer according to the spirit of Christ and the Church, incur a grave responsibility. It is their duty also to discover the germ of a vocation, and develop it by forming the character and encouraging the generosity of the will.

These rules are sufficient for a decision to follow the evangelical counsels, as they may be practised even in the world. But the nature of the ecclesiastical state and the positive constitution of the religious state require some further remarks. Unlike the observance of the evangelical counsels, the ecclesiastical state exists primarily for the good of religious society; and the Church has given the religious state a corporate organization. Those who belong to a religious order not only follow the evangelical counsels for themselves, but are accepted by the Church, more or less officially, to represent in religious society the practice of the rules of perfection; and to offer it to God as a part of public worship. (See RELIGIOUS LIFE; VOWS.) From this it follows that the ecclesiastical profession is not as accessible to all as the religious state; that in order to enter the religious state at the present day, conditions of health, of character, and sometimes of education are required which are not demanded by the evangelical counsels taken in themselves; and that, both for the religious and for the ecclesiastical state, admission by lawful authority is necessary.

At the present day, it is necessary that two wills should concur before a person can enter the religious state; it has always been necessary that two wills should concur before one can enter the

ranks of the clergy. The Council of Trent pronounces an anathema on a person who represents as lawful ministers of the Gospel and the sacraments any who have not been regularly ordained and commissioned by ecclesiastical and canonical authority (Sess. XXIII, iii, iv, vii). A vocation which is by many persons called exterior thus comes to be added to the interior vocation; and this exterior vocation is defined as the admission of a candidate in due form by competent authority.

The question of vocation itself so far as the candidate is concerned may be put in these terms: Are you doing a thing which is pleasing to God in offering yourself to the seminary or the novitiate? And the answer depends on the preceding data: yes, if your intention is honest, and if your strength is sufficient for the work. A further question may be put to the candidate for the priesthood: if you do well in desiring to become a priest, would you perhaps do better by becoming a religious? It is to be remarked that the candidate for the priesthood ought already to have the virtues required by his state, while the hope of acquiring them is sufficient for the candidate for the religious life.

The question an ordinary of a diocese or superior of a religious community should meet is: Considering the general interest of the order or the diocese, is it right that I should accept this or that candidate? And although the candidate has done well in offering himself the answer may be in the negative. For God often suggests plans which He does not require or desire to be carried into effect, though He is preparing the reward which He will bestow on the intention and the trial.

The refusal of the ordinary or superior debar the candidate from entering the lists of the clergy or religious. Hence his approval may be said to complete the Divine vocation. Moreover, in this life a person often enters into indissoluble bonds which God desires to see respected after the fact. It remains therefore for the man who has laid himself under such an obligation to accommodate himself to the state in which God, Who will give him the help of His grace, now wishes him to persevere. This is the express teaching of St. Ignatius in his "Spiritual Exercises": With regard to this present will of God, it may be said, at least of priests who do not obtain a dispensation, that sacerdotal ordination confers a vocation upon them. This however does not imply that they have done well in offering themselves for ordination.

This appears to give us ground for the true solution of the recent controversies on the subject of vocation.

Two points have been made the subjects of controversy in the consideration of vocation to the ecclesiastical state: how does Divine Providence make its decrees known to men? How does that Providence reconcile its decrees with liberty of human action in the choice of a state of life? Cassian explains very clearly the different kinds of vocation to the monastic life, in his "Collatio, III: De tribus abrenuntiationibus", iii, iv, v (P.L., XLIX, 560-64). The Fathers of the fourth and fifth centuries inculcate very strongly the practice of virginity, and endeavour to answer the text, "He that can take, let him take it" (Matt., xix 12), which would seem to limit the application of the counsel. Saint Benedict admitted young children presented by their parents to his order; and the canonical axiom "Monachum aut paterna devotio aut propria professio facit" (c. 3, xx, q. 1), "A man becomes a monk either by parental consecration or by personal profession", an axiom that was received in the Western Church from the sixth to the eleventh century, shows to what extent

the religious life was considered open and to be recommended as a rule to all. A letter of St. Gregory the Great and another of St. Bernard insist on the dangers incurred by those who have decided to embrace the religious life and still remain in the world. The necessity of a special call for embracing the priesthood or the monastic life is not treated by St. Thomas, but the reality of a Divine call to higher states of life is clearly expressed in the sixteenth century, notably in the "Spiritual Exercises" of St. Ignatius. Suarez worked out a complete theory of vocation (*De religione*, tr. VII, I-V, viii). Independently of a natural progress which brings new matters into discussion, two causes combined to raise the controversy on this point, viz. the abuse of forced vocations, and a mysticism which is closely related to Jansenism. In former times it was the custom for noble families to place their younger sons in the seminary or some monastery without considering the tastes or qualifications of the candidates, and it is not difficult to see how disastrous this kind of recruiting was to the sacerdotal and religious life. A reaction set in against this abuse, and young men were expected, instead of following the choice of their parents, a choice often dictated by purely human considerations, to wait for a special call from God before entering the seminary or the cloister. At the same time, a semi-Quietism in France led people to believe that a man ought to defer his action until he was conscious of a special Divine impulse, a sort of Divine message revealing to him what he ought to do. If a person, in order to practice virtue, was bound to make an inward examination of himself at every moment, how much more necessary to listen for the voice of God before entering upon the sublime path of the priesthood or monastic life? God was supposed to speak by an attraction, which it was dangerous to anticipate: and thus arose the famous theory which identified vocation with Divine attraction; without attraction there was no vocation; with attraction, there was a vocation which was, so to speak, obligatory, as there was so much danger in disobedience. Though theoretically free, the choice of a state was practically necessary: "Those who are not called", says Scavini (*Theol. moral.*, 14th ed., I, i, n. 473), "cannot enter the religious state: those who are called must enter it; or what would be the use of the call?" Other writers, such as Gury (II, n. 148-50), after having stated that it is a grace fault to enter the religious state when conscious of not having been called, correct themselves in a remarkable manner by adding, "unless they have a firm resolution to fulfill the duties of their state".

For the general conduct of life, we know that God, while guiding man, leaves him free to act, that all good actions are graces of God, and at the same time free acts, that the happiness of heaven will be the reward of good life and still the effect of a gratuitous predestination. We are bound to serve God always, and we know that, besides the acts commanded by Him, there are acts which He blesses without making them obligatory, and that among good acts there are some which are better than others. We derive our knowledge of the will of God, that will which demands our obedience, which approves some of our acts, and esteems some more highly than others, from Holy Scripture and Tradition, by making use of the two-fold light which God has bestowed upon us, faith and reason. Following the general law, "do good and avoid evil", although we can avoid all that is evil, we cannot do all that is good. To accomplish the designs of God we are called upon to do all the good that we are capable and all that we have the opportunity of doing; and the greater

the good, the more special our capability, the more extraordinary the opportunity, so much the more clearly will reason enlightened by faith tell us that God wishes us to accomplish that good. In the general law of doing good, and in the facilities given us to do it, we read a general, or it may be even a special, invitation of God to do it, an invitation which is pressing in proportion to the excellence of the good, but which nevertheless we are not bound to accept unless we discover some duty of justice or charity. Often, too, we have to hesitate in our choice between two incompatible deeds or courses of action. It is a difficulty that arises even when our decision is to influence the rest of our lives as, for instance, should we have to decide whether to emigrate or to remain in our own country. God also may help our choice by interior movements, whether we are conscious of them or not, by inclinations leading us to this or that course of action, or by the counsels of a friend with whom we are providentially brought into contact; or He may even clearly reveal to us His will, or his preference. But this is an exceptional case; ordinarily the inward feeling keeps and confirms our decision, but it is only a secondary motive, and the principal part belongs to sound reason judging according to the teachings of faith. "They have Moses and the prophets", said Christ in the parable of the rich man and Lazarus (Luke, xvi, 29), and we have no need for any one to rise from the dead to teach us our duty. According to this simple exposition, it seems clear that each good action of ours pleases God, that moreover He specially desires to see us perform certain actions, but that negligences and omissions in either sphere do not generally cause a permanent divergence from our right path. This rule is true even in the case of acts whose results seem manifold and far-reaching. Otherwise, God would be bound to make known to us clearly both His own will and the consequences of our negligence. But the offers of Divine Providence are several or even many, though one may be more pressing than the other; and since every good action is performed by the help of a supernatural grace which precedes and accompanies it, and since with an efficacious grace we would have done the good we have failed to accomplish, we may say, of every good that we do, that we had the vocation to do it, and of every good that we omit, either that we had not the vocation to do it, or, if we were wrong in omitting to do it, that we paid no heed to the vocation. This is true of faith itself. We believe, because we have received an efficacious vocation to believe, which those who live without faith have not received or have rejected when their unbelief is their own fault.

Are these general views applicable to the choice of a state of life? or is that choice governed by special rules? The solution of this question involves that of the vocation itself. The special rules are to be found in Holy Scripture and Tradition. In Holy Scripture we read those general counsels of self-denial which all Christians are called upon to follow during their lives, while they are the object of a more complete application in a state which for that very reason may be called a state of perfection. Efficacious grace, notably that of perfect continence, is not given to all. "All men take not this word, but they to whom it is given. . . . He that can take, let him take it" (Matt., xix, 11, 12). Catholic interpreters, however, basing their conclusion on the Fathers of the Church, are at one in saying that God bestows this gift either on all that pray for it as they should, or at any rate on the generality of those who dispose themselves to receive it (see Beelen, Kanbenbauer, on this

passage). But the choice is left free. St. Paul, speaking of the same Christian, says "he that giveth his virgin in marriage, doth well; and he that giveth her not, doth better" (I Cor., vii, 38). On the other hand, he must be guided by sound reason: "But if they do not contain themselves, let them marry. For it is better to marry than to be burnt" (I Cor., vii, 9). Moreover, the Apostle gives this general advice to his disciple Timothy: "I will therefore that the younger [widows] should marry" (I Tim., v, 14). And yet, whatever his profession or condition, man is not abandoned by Providence: "As the Lord has distributed to every one, as God hath called every one, so let him walk" (I Cor., vii, 17). Holy Scripture therefore applies to the profession of every man the general principles laid down above. Nor is there any trace of an exception in the Fathers of the Church: they insist on the general application of the evangelical counsels, and on the importance of following them without delay; and on the other hand, they declare that the choice is free, without danger of incurring the loss of God's favour. They wish, however, that the choice should be prudently and reasonably exercised. See St. Basil, "On virginity", n. 55, 56; "Constit. monast.", xx; Ep. CLXXII; "Exhortation to renounce the world", n. 1 (P.G., XXX, 779-82; XXXI, 626, 1394; XXXII, 647-49); St. Gregory Nazianzen, "Against Julian", 1st discourse, n. 99; disc. 37, alias 31 on St. Matthew, XIX, xi (P.G., XXXV, 634; XXXVI, 298); St. John Chrysostom, "On virginity"; "On penitence", Hom. VI, n. 3: "On St. Matthew", XIX, xi, xxi (P.G., XLVIII, 533 sqq.; XLIX, 318; LVIII, 600, 605); St. Cyprian, "De habitu virginum", xxiii (P.L., IV, 463); St. Ambrose, "De viduis", xii, xiii (P.L., XVI, 256, 259); St. Jerome Ep. CXXIII alias XI to Ageruchia; "De monogamia"; "Against Jovinian", I; On St. Matthew, XIX, xi, xii (P.L., XXII, 1048; XXIII, 227, 228; XXVI, 135, 136); St. Augustine, "De bono coniugali", x; "De sancta virginitate", xxx (P.L., XL, 381, 412); St. Bernard, "De præcepto et dispensatione", i (P.L., CLXXXII, 862). These texts are examined in Vermeersch, "De vocatione religiosa et sacerdotali", taken from the second volume of the same author's "De religiosis institutis et personis" suppl. 3. In comparison with such numerous and distinct declarations, two or three insignificant passages [St. Gregory, Ep. LXV (P.L., LXXVII, 603; St. Bernard, Ep. CVII, CVIII (P.L., CLXXXII, 242 sqq., 249 sqq.)], of which the last two date only from the twelfth century, and are capable of another explanation, cannot be seriously quoted as representing vocation as practically obligatory. Neither St. Thomas, "Summa theologica", I-II, Q. cviii, art. 4; II-II, Q. clxxxix, opusc. 17 alias 3, nor Suarez "De religione", tr. VII, V, IV, n. i, 7, and viii; nor Bellarmine "De monachis", Controv. II; nor Passerini, "De hominum statibus" in Q. CLXXXIX, art. 10, thinks of placing the choice of a state of life in a category apart. And thus we arrive at conclusions which agree with those of Cornelius à Lapide in his commentary on the seventh chapter of I Corinthians, and which recommend themselves by their very simplicity. States of life are freely chosen and at the same time providentially given by God. The higher the state of life the more clearly do we find the positive action of Providence in the choice. In the case of most men, no Divine decree, logically anterior to the knowledge of their free actions, assigns to them this or that particular profession. The path of the evangelical counsels is in itself, open to all, and preferable for all, but without being directly or indirectly obligatory. In exceptional cases the obligation may exist as the consequence of a vow or of a Divine order, or of the improbability (which is very rare) of otherwise finding

salvation. More frequently reasons of prudence, arising from the character and habits of the persons concerned, make it unadvisable that he should choose what is in itself the best part, or duties of filial piety or justice may make it impossible. For the reasons given above we cannot accept the definition of Lessius; "Vocation is an affection, an inward force which makes a man feel impelled to enter the religious state, or some other state of life" (*De statu vitæ deligendo*, n. 56). This feeling is not necessary, and is not to be trusted without reserve, though it may help to decide the kind of order which would best suit us. Nor can we admit the principle adopted by St. Alphonsus: that God determines for every man his state of life (*On the choice of a state of life*). Cornelius à Lapide, on whose authority St. Alphonsus incorrectly grounds his argument, says, on the contrary, that God often refrains from indicating any preference but that which results from the unequal excellence on honourable conditions. And in the celebrated passage "every one hath his proper gift from God" (*I Cor.*, vii, 7) St. Paul does not intend to indicate any particular profession as a gift of God, but he makes use of a general expression to imply that the unequal dispensation of graces explains the diversity of objects offered for our choice like the diversity of virtues. We agree with Liguori when he declares that whoever, being free from impediment and actuated by a right intention, is received by the superior is called to the religious life. See also St. Francis of Sales, *Epistle 742* (Paris, ed. 1833). The rigourist influences to which St. Alphonsus was subjected in his youth explain the severity which led him to say that a person's eternal salvation chiefly depended on this choice of a state of life conformable to the Divine election. If this were the case, God, who is infinitely good, would make His will known to every man in a way which could not be misunderstood.

The opinion advocated in this article is corroborated by the favourable decision of the Commission of Cardinals (20 June, 1912), appointed to examine the work of Canon Joseph Lahitton, *La vocation sacerdotale* (Paris, 1909); the decision of the cardinals has been fully approved by the pope. SLATER, *Manual of Moral Theology* (New York, 1909); BERTHIER, a mission of La Salette, has laid down rule similar to the above in his book, *Des états de la vie chrétienne et de la vocation d'après les Docteurs de l'Eglise et les théologiens* (4th ed., Paris, 1897); Eng. tr. *Christian Life and Vocation* (New York, 1879); DAMANET, *Choice of a State of Life* (Dublin, 1880). As an instance of excessive severity see HABERT, *Theol. dogmat. et mor.: De sacramento ordinis*, Pt. 3, 1, sec. 2. Articles in favour of vocation by attraction have appeared in *Revue pratique et apologétique*, X; see *loc. cit.*, XII, 558, for list of publications in reply to LAHITTON.

A. VERMEERSCH

George Joseph Vogler

George Joseph Vogler

Theorist, composer and organist, b. at Würzburg, 15 June 1749, d. at Darmstadt, 6 May, 1814. He was the son of a violin maker, and was educated at the Jesuit schools of his native city and Bamberg. Of an ambitious and restless disposition, Vogler after six weeks abandoned the study of theory under Padre Martini at Bologna (1706-84) and sought the advice of Francesco Antonio

Vallotti in Padua (1697-1780); with Vallotti he spent six months. After these short periods of study he formulated a theoretical system of his own, much to the displeasure of his teachers. Having finished his theological studies in Rome he was ordained and, in 1775, returned to Mannheim where he became court chaplain and established a school. While at Mannheim he published treatises on singing, theory, and composition which aroused criticism on account of their iconoclastic tendencies. He invented a portable organ-orchestration, built on a simplified plan, and travelled with it all over Europe, everywhere creating interest on account of his virtuosity and sensational means of attracting attention. Vogler composed a large quantity of music, sacred as well as profane, practically all of which is now forgotten. In 1807 he settled down and became court conductor at Darmstadt, where he founded a school of music. His most lasting title to fame is the fact that C.M. von Weber and Giacomo Meyerbeer were his pupils.

JOSEPH OTTEN

Eugene-Melchior, Vicomte de Vogue

Eugène-Melchior, Vicomte de Vogüé

Critic, novelist, and historian, born at Nice, 25 February, 1848; died in Paris, 24 February, 1910. He was descended from an illustrious family of Vivarais province which gave many prominent men to the Church and the army in the Middle Ages. He made his Classical studies at Versailles and studied law at Grenoble. When the Franco Prussian war broke out, he enlisted as a private, and behaved so bravely that he was awarded the military medal. After the war, he entered the diplomatic career. He was successively sent as an attaché of embassy to Constantinople (1873), to Egypt (1875), and to St. Petersburg. In 1878 he married a Russian lady, Miss Annenkof. Four years later he resigned his official position and devoted his entire time to literature, except for a short period, from 1893 to 1896, when he represented the Department of Ardèche in the Chamber of Deputies. He was elected to the French Academy in 1888. He was a most versatile writer, contributing with the same ability articles on philosophical, historical, literary, religious, or artistic subjects. Current events interested him particularly and prompted him to write valuable essays, such as "Questions contemporaines" (1891), "Regards historiques et littéraires" (1892); "Heures d'histoire" (1893); "Devant le siècle" (1896); "Sous l'horizon" (1904). He achieved a great reputation by attracting the attention of the French public to the Russian novelists, who were hardly known in France at that time. His "Roman Russe" (1886) had a considerable influence on the evolution of the French novel by drawing attention to the sympathy for the poor people expressed by Dostoiewsky and Tolstoi. He also wrote a few novels. In all his writings he never failed to emphasize his attachment to his religious faith, the most conspicuous acknowledgment of which is his pamphlet on "Les Affaires de Rome" (1894). Among his other books must be mentioned: "Syrie Palestine, Mont Athos; Voyage au Pays du Pass=B4=B4"; (Paris, 1876); "Histoires orientales, chez les pharaons" (1879); "Les

portraits du siècle" (1883); "Le fils de Pierre le Grand"; "Mazeppa" (1884); "Histoire d'hiver" (1885) "Souvenirs et visions" (1887); "Portrait du Louvre., (1888); "Remarques sur l'exposition du centenaire" (1889); "Le manteau de Joseph Oléonine" (1890); " Jean d'Agrève " (1897); " Histoire et poésie " (1898); "Les morts qui parlent" (1899); "Le rappel des ombres" (1900); "Pages d'histoire" (1902); "Le maître de la mer" (1903).

Annales politiques et littéraires, 3 April, 1910 (articles by P. BOURGET, DOUMIC etc.), DE REGNIER, Discours de réception à l'Académie (Paris, 1912).

LOUIS N. DELAMARRE

Wilhelm Volk

Wilhelm Volk

(Pseudonym, LUDWIG CLARUS).

Born at Halberstadt 25 Jan., 1804; died at Erfurt 17 March, 1869. He came from a Lutheran family; his father was a lawyer. After going to school at Halberstadt and Magdeburg, he studied from 1823 law at the Universities of Gottingen and Berlin. In 1826 he became an auscultator at Magdeburg, and in 1829 a *referendar*. In 1832 he made the acquaintance at Berlin of the law-professor George Philips, who was later a convert to Catholicism. Volk kept up their friendship by repeated visits to Munich. In this city he also formed friendships with Clemens Brentano and Joseph Gorres, and was induced by them to devote himself to the study of mysticism and legend, which he continued to pursue during the rest of his life. In 1838 he was made a government councillor at Erfurt, and in 1858 he retired from active life. For a long time a son of the Catholic Church at heart, he entered it in 1855. He describes his inner change in the fascinating writing on his conversion, "Simeon, Wanderungen und Heimkehr eines christlichen Forschers" (3 vols., 1862-3). He also wrote a large number of pamphlets on religious, political and ecclesiastico-political questions of the time. Among the considerable number of large works should be mentioned: the biographies of St. Brigitta (4 vols., Ratisbon, 1856; 2nd ed., 1888), of St. Francis de Sales (Schaffhausen, 1860); 2nd ed., 1887), of St. Matilda (Quedlinburg, 1867); translations from Augustine, Petrarch, St. Theresa of Jesus, etc.; the historical compendium of Italian literature (1832-34), the account of Spanish literature in the Middle Ages (1846). He also wrote a number of original poems and translations from the Spanish, Italian, and Swedish.

KEHREIN, Biographisch-litterarisches Lexikon der katholischen deutschen Dichter des XIX. Jahrhunderts, II (Wurzburg, 1868-71), 225-28; Denkmal auf Volks Grab (Erfurt, 1869); ROSENTHAL, Convertitenbilder aus dem XIX. Jahrhundert, I (Schaffhausen, 1865), 854-94.

KLEMENS LOFFLER

Volkverein

Volkverein

(PEOPLE'S UNION) FOR CATHOLIC GERMANY.

A large and important organization of German Catholics for the purpose of opposing heresies and revolutionary tendencies in the social world, and for the defence of Christian order in society.

HISTORY

This association was the last one established by Ludwig Windthorst. After the close of the *Kulturkampf* new problems confronted the Catholic population of Germany. Owing to the political union of Germany and its protective commercial policy from 1879, German economic life was greatly strengthened, and trade and manufactures received an unheard-of development. The increase of manufacturing on a large scale, the partial change of many country towns into manufacturing centres, the crowding together of human beings in the manufacturing districts, all these changes made questions of social needs of increasing importance. Catholics felt strongly the necessity of protection against the revolutionary Social Democracy which was based upon undisguised materialism. The Social Democrats, in anticipation of the overthrow of the laws against Socialism, were making preparations for the establishment of a well-organized association throughout Germany, even among the Catholic population. Windthorst, the leader of the German Catholics, saw clearly that it was not sufficient for the Centre party, the representative of German Catholics, to be the only champion of legislation in favour of the workingman; the public also must be won over to the support of social reform. At this time the Catholic people were especially inclined to listen to such proposals. The decree of the young Emperor William (February, 1890), the pope's letter to the Archbishop of Cologne (April, 1890), and the pastoral letter of the Prussian bishops issued at their meeting at Fulda had all been received with joy by the Catholics of Germany. For these reasons Windthorst thought a Catholic social organization should be founded which was to include the whole of Germany. During the deliberations of the committee of organization Windthorst demanded with all the force of his personal influence an organization that should oppose above all the Social Democrats; moreover, the end to be sought in questions of social economics should be the encouragement and exercise of right principles.

The draft of a constitution, which Windthorst wrote while ill, was adopted at the meeting held on 24 Oct., 1890, for the establishment of the union at the Hotel Ernst in Cologne. Notwithstanding his illness, Windthorst attended this meeting; on the evening of the same day, the name having been agreed upon, the Volksverein for Catholic Germany was founded. From the outset Windthorst had München-Gladbach in view as the chief centre of the organization. The working-men's benefit society, of which the manufacturer Franz Brandts was president and Franz Hitze, member of the Reichstag, was general secretary, had existed in this town for ten years. At Windthorst's suggestion Brandts was chosen president, and Karl Trimborn, lawyer, of Cologne, vice-president. Dr. Joseph Drammer, of Cologne, was made secretary. Windthorst himself accepted the honorary presidency offered him, and up to his death in 1891 followed with great interest all that concerned the new society. Whenever necessary he interposed with advice and action, so that the People's Union is justly called Windthorst's legacy to the German Catholics.

The newly elected managing committee began work with energy. On 22 Nov., 1890, appeared the first appeal "To the Catholic People", which set forth the aims of the society and invited to membership. On 20 Dec. the second appeal was issued, which called upon all supporters of the Catholic cause to work for the increase of the membership. A like appeal was sent in a circular letter to a large number of prominent Catholics of the empire. The German bishops were also requested to give their blessing and their influential aid to the union, a request which all most readily agreed to. A number of bishops officially called upon their diocesans to join the union. On 23 Dec. the pope sent an Apostolic blessing in a gracious letter to the managing committee of the union. Owing to these measures the appeals of the association found a hearty welcome throughout Germany, and large numbers joined it. On 14 Feb., 1891, the union held its first public mass meeting at Cologne; at this session Archbishop Kremenetz of Cologne made the closing address. Other assemblies were held in other sections of the country. Thus Windthorst could be told shortly before his death that the society had secured its first hundred thousand members. Since then the People's Union has been established in all parts of Germany, though it is not equally strong everywhere. In the early years the eastern provinces of Prussia and Baden and Bavaria stood somewhat aloof from the movement. In 1891 it had 190,899 members; in 1901, 185,364; in 1911, 700,727; on 1 April, 1912, 729,800.

ORGANIZATION AND WORK

According to paragraph 1 of its by-laws the object of the Volksverein is the opposition of heresy and revolutionary tendencies in the social-economic world as well as the defence of the Christian order in society. This object is to be attained by the personal work of the members, by instructive lectures, and by the circulation of good printed matter. Every grown German Catholic who pays one mark (25 cents) annually to the society is a member of the union and entitled to a vote. The Union is governed by a board of directors of at least seven members, who are elected for one year by the general assembly; the president and vice-president are also, according to the by-laws, elected by the general assembly; the president and vice-president are also, according to the by-laws, elected by the general assembly. The board of directors selects from its members the secretary and treasurer. The Volksverein is not merely a general organization of German Catholics; it is also intended to form a local Catholic organization in the various districts. The directors of the local organizations, some 50,000 men, who form the main strength of these local bodies, are the persons responsible for the distribution of the publications of the Union, the acquisition of new members, etc. In the individual communes the leading director is the manager; there is a district or departmental manager for every large number of connected communes. This latter manager is generally commissioned directly by the central organization or by the diocesan or provincial representatives of the central organization. In all business matters the local directors or local managers employ the services of this district or departmental manager. The larger cities have generally a manager of their own, who ranks with the manager of a district or department. There are 15 diocesan or provincial representatives over the managers of the departments, through whom all business matters with the central organization are arranged. The head of the entire union is the central bureau at München-Gladbach,

which acts for the board of directors, and which forms the chief court of appeal for the diocesan or provincial representatives. Where there are no such representatives it is the court of appeal for the managers of the departments or of the larger cities. All the members of the organization are closely united in their activity. The representatives of the board of directors meet several times a year to discuss the most pressing affairs of the union, while the central bureau sees to the execution of its decisions. In addition there is a general meeting of the board of directors annually during the session of the Catholic Congress of Germany; the most important questions are kept for the decision of this annual meeting. This annual meeting of the board of directors is supplemented by a meeting, held at the same time, of delegates of the Volksverein from all parts of Germany. The meetings of managers for the communes, government departments, and provinces are responsible in their turn for the putting into practical effect of the new proposals and advice of the higher governing body.

Formerly the legal domicile of the Volksverein was Mainz; since 1908 it has been München-Gladbach. There are at the central bureau 3 directors and 15 literary assistants. Since 1905 the legal organ of the union has been the "Volksvereinverlag, Gesellschaft mit beschränkter Haftung" (People's Union Publishing Company, Limited), which employs about 50 salesmen and 70 workmen for the organization, the book-trade, and the printing establishment. The work of the central bureau, which is chiefly literary, is many-sided. The most important questions of the day are treated in the "Sozialkorrespondenz", which is sent without charge every Saturday to about 300 Catholic newspapers, in order to aid the Catholic Press in its struggle against socio-economic heresies and in the promotion of social reforms. By means of the periodical "Der Volksverein", which appears eight times annually, the members of the union are instructed especially concerning the most important apologetic and social-economic questions of the times, and as to the immediate practical problems of the various provincial diets. The central bureau issues explanatory and instructive fly-sheets and appeals in special cases and on suitable occasions; these are circulated throughout Germany to the number of many millions. In addition the central bureau publishes series of works on home economics and work for the young. It has three collections of pamphlets, at five *Pfennige* a copy, on social, apologetic, and public questions; the *Pfennig* papers "Soziale Tagesfragen", "Apologetische Tagesfragen", pamphlets and six periodicals, namely: since 1901, the "Präsidenskonferenz", for ecclesiastics who are leaders of the union; since 1907, the "Kranz", for girls; since 1908, the "Jung Land", for boys; "Efeuranken", for young people with an advanced education; since 1910, "Frauenwirtschaft", for the training of women in home and industrial economics; "Soziale Kultur", a popular periodical for the educated, since 1905 combined with the union's "Arbeiterwohl". A further branch of the work of the central bureau is the bureau of social-economic information connected with it, which gives all desired information in reference to suitable writings on various questions of social economics and social institutions, on working-men's benevolent institutions, advice as to practical work in social economics, refutation of socio-political attacks, etc.

The same object is kept in view by the sociological library of the union, containing some 35,000 volumes, which can be used without charge by any member. There is also the people's bureaus,

thirty of which have been established with the aid of the People's Union; for a very small sum or without charge, these give information in questions as to working-men's insurance, rent, taxes, and similar matters, and draw up any necessary legal documents. In addition economic studies are promoted by the course lasting two months annually, established at the central organization of the union for the training of officials of professional associations, and of associations for the different social classes; the courses, one each, for farmers, mechanics, merchants, clerks, teachers; a general vacation course in sociology for priests and laity, as well as courses lasting several days in the various provinces. To this work must be added the numerous meetings held by the local organizations, some 600 meetings annually, and at election times even more. With each year the People's Union labours with much success in new fields of social-economic work, and thus devotes its efforts equally to all classes of the nation. Its greatest achievement is its success in arousing large sections of the Catholic population from indifference in regard to the socio-economic questions of the times, in training Catholics to social-political work in the field of legislation and to associational independence, and in making the Catholic population a bulwark against the revolutionary Social Democracy which is hostile to religion. The Volksverein, therefore, has not only gained the enthusiastic love of the Catholic people, but it has also received the recognition of the national and ecclesiastical authorities, and has been imitated in other countries.

Handbuch für die Freunde und Förderer des Volksvereins für das katholische Deutschland (München-Gladbach, 1901); Material für Reden in Versammlungen des Volksvereins für das katholische Deutschland (München-Gladbach, 1901); Der Volksverein (München-Gladbach, 1890), various articles in periodicals.

JOSEPH LINS

Alessandro Volta

Alessandro Volta

Physicist, b. at Como, 18 Feb., 1745; d. there, 5 March, 1827. As his parents were not in affluent circumstances his education was looked after by ecclesiastical relatives. At the age of seventeen he finished his humanities, and at nineteen disclosed the scientific bent of his mind in a correspondence with Abbé Nollet (q.v.). In 1769 Volta published his first paper, "De vi attractiva ignis electrici", which attracted attention and helped to secure for him his first public appointment, professor of physics in the Liceo of Como (1774), a position which he held until 1779, when he was elected to the chair of natural philosophy in the University of Pavia. In 1782 he visited the principal seats of learning in France, Holland, Germany, and England, and met many of the representative men of the day. The twitching of frog's legs under electrical stimulus, discovered by Swammerdam in 1658 and re-discovered and described by Galvani in 1786, occasioned a memorable controversy as to the cause of the convulsive movements; after years of discussion the "animal electricity" of Galvani was superseded by the "contact theory" of Volta.

Volta's work was characterized throughout by forethought; there was no empiricism, nothing due to mere chance. In his endeavour to test his theory, he invented the "condensing electroscope" by which he established the fundamental fact that when two dissimilar conductors, e.g. zinc and copper, are brought together in air and then separated, the zinc is found to have a small positive, and the copper an equal negative charge, a result which has been confirmed by subsequent investigators working with more delicate instruments, notably by Lord Kelvin. Anterior to this, in 1775, Volta devised his electrophorus by means of which, given a small initial electrification, mechanical work may be transformed at will into energy of electrostatic charge. Though the principle involved was known to Canton of London in 1753, and though Wilcke of Sweden described an electrophorus in 1762, Volta's was the first practical machine of the kind and, therefore, the prototype of the rotary influence machines of the present day, such as the Holtz, the Voss, and the Wimshurst. In 1777 he proposed a system of electric telegraphy in which signals were to be transmitted by means of his electrophorus over a line extending from Como to Milan. The first use of static electricity for telegraphic purposes was, however, suggested in the "Scots Magazine" for 1753 and carried out on a small scale in 1774 by Lesage of Geneva.

In seeking further experimental evidence in favour of his contact theory, Volta was led to the greatest of his inventions, the voltaic "pile", which he described in a communication of 20 March, 1800, to Sir Joseph Banks, President of the Royal Society of London. Consisting as it did of a number of discs of zinc and copper separated by pieces of wet cloth and arranged in a vertical column, it was appropriately called a "pile"; a more efficient arrangement was, however soon found by Volta in the "crown of cups". The voltaic battery of 1800 marks an epoch in physical theory as well as in the application of science to the welfare of mankind. Though Volta lived twenty-seven years after the crowning invention of his life, it is a significant fact that he added nothing of note to his great work, leaving to Carlisle and Nicholson in 1800 to use the current furnished by a "pile" to decompose water; to Sir Humphry Davy in 1807 to separate sodium and potassium from their alkalis by the same means; and to Oersted of Copenhagen the cardinal discovery in 1820 of the magnetic effect of the electrical current.

Honours were showered on Volta by the academies and learned societies of Europe. Napoleon invited him to Paris in 1801 and made him an associate member of the Institut de France and later a senator of the Kingdom of Italy. In 1815 the Emperor of Austria appointed him director of the philosophical faculty of the University of Padua, a dignity which he resigned four years later in order to retire into private life. In the summer of 1899, the centenary of the invention of the voltaic battery, an exposition was held in Como of electrical apparatus constructed and used by Volta in his investigations, but unfortunately a fire broke out and many of these heirlooms of science were destroyed. Three practical units have been named after Catholic electrical pioneers; the volt, the unit of electrical pressure, in honour of Volta; the coulomb, the unit of electrical quantity, in honour of Charles Augustin de Coulomb; and the ampere, the unit of current, in honour of André-Marie Ampère.

BROTHER POTAMIAN

Daniele Da Volterra

Daniele da Volterra

(RICCIARELLI).

Italian painter, b. at Volterra, 1509; d. in Rome, 1566. Ricciarelli was called Volterra from the place of his birth. As a boy, he entered the studios of Bazzi (Il Sodoma) and of Baldassare Peruzzi at Siena, but he was not well received and left for Rome, where he found his earliest employment. He formed a friendship with Michelangelo, who assisted him with commissions, and with ideas and suggestions, especially for his series of paintings in one of the chapels of the Trinita dei Monti. By an excess of praise, his greatest picture, the "Descent from the Cross", was at one time grouped with the "Transfiguration" of Raphael and the "Last Communion" of Domenichino, as the most famous pictures in Rome. His principal work was the "Murder of the Innocents", which he painted for the Church of St. Peter at Volterra now in the Uffizi Gallery, Florence. Volterra was commissioned by Paul III to complete the decoration of the Sala Regia. On the death of the pope (1549) he lost his position as superintendent of the works of the Vatican and the pension to which it entitled him. He then devoted himself chiefly to sculpture. Commissioned by Paul IV to supply draperies to some of the nude figures in the magnificent "Last Judgment" by Michelangelo, he thus obtained the opprobrious nickname "Breeches Maker" or "Il Bragghetone". His "Victory of David over Goliath" now in the Louvre, is so good that for years it was attributed to Michelangelo. His work is distinguished by beauty of colouring, clearness, excellent composition, vigorous truth, and curiously strange oppositions of light and shade. Where he approaches closely to Michelangelo, he is an artist of great importance; where he partakes of the sweetness of Sodoma, he becomes full of mannerisms, and possesses a certain exaggerated prettiness. A recent author has wisely said: "He exaggerates Michelangelo's peculiarities, treads on the dangerous heights of sublimity, and, not possessing his master's calm manner, is apt to slip down." His position in present-day criticism is very different to what was given to him a generation ago, and more nearly approaches to a truthful view of his art.

VASARI, *Vite dei pittori*; BRYAN, *Dict. of Painters and Engravers* (London, 1904), s.v. Ricciarelli.

GEORGE CHARLES WILLIAMSON

Volterra

Volterra

(VOLTARRANENSIS).

Diocese in Tuscany. The city stands on a rocky mountain 1770 feet above the sea level, between the rivers Bra and Cecina, and is surrounded by strong walls. The cathedral, consecrated by Callistus II in 1120, was enlarged by Andrea Pisano in 1254, and again in 1576. The high altar is adorned with sculpture by Mino da Fiesole; among the pictures is an "Annunciation" by Luca Signorelli, and there are pictures by Benvenuto di Giovanni, Leonardo da Pistoia, and others. In the baptistery (1283) are a font by Sansovino and a ciborium by Mino da Fiesole. Other churches are those of S. Lino (1480) and S. Francesco. In the Palazzo Publico (1217) are the archives of the city. The Palazzo Tagani contains an important museum of Etruscan and Roman antiquities. In the middle of the city rises the citadel, built in 1343 by the Duke of Athens and enlarged by the Florentines. Remains of the ancient surrounding walls (the Portadell' Arco) may be seen in the neighbourhood, as also of baths, of an aqueduct, an amphitheatre, and, above all, of several Etruscan burial places. The district is rich in alabaster, the working of which is the chief industry of the city, and in mineral waters, such as those of S. Felice and the Moie, or salt springs. Still more important are the Soffoni of Larderello, from which is obtained boric acid (exported for the most part to England), the sulphur lake of Monterotondo, the copper springs of Caporciano, and the baths of Montecatini.

In the Etruscan epoch Volterra, called Felathri by the Etruscans and Volaterrae by the Romans, was one of the most important cities in the Etruscan Confederation. From the period of the kings it was at war with Rome. In 298 B.C., when he became consul, Scipio gained a victory here over the Etruscan armies. In the Punic Wars, however, the city was allied with Rome. In 80 B.C. it was taken by Sulla, after a siege of two years. In the succeeding centuries it was of some importance in the Gothic War. In the Carolingian period it belonged to the Marquisate of Tuscany; with the approval of Henry, son of Barbarossa, the government of it afterwards passed into the hands of the bishop, until his temporal authority was suspended by the commune. In the wars or factions of the thirteenth century, Volterra, being Ghibelline, was continually embroiled with the Florentines, who captured it in 1254, but obtained definitive possession of it only in 1361. In 1472 it attempted a rebellion against Florence but without success, and was then deprived of many of its rights. It was the native city of the poet Persius Flaccus, of the humanists Tommaso Inghirami and Raffaele Maffei, of the painters and sculptors Baldassare Perugini and Daniele Ricciarelli. According to the "Liber Pontificalis", Volterra was the birthplace of St. Linus, the immediate successor of St. Peter. Nothing is known as to its Christian origins; Eucharistus, the first bishop of Volterra of whom there is any record (495), was deposed by the pope, and Helpidius (496) was put in his place. Justus (560) was at first involved in the Schism of the Three Chapters. Other bishops were: Gunfridus (1014), whose metrical epitaph is to be seen in the cathedral; Herimannus (1066), a Camaldolese monk and reformer of the clergy; Galgano, killed by the people in 1172, for some unknown reason; St. Ugo dei Conti del Castel d'Agnato (1173-84), a defender of the rights of his church, and founder of a college for the education of clerics; Pagao dell'Ardenghesca (1213), who vainly endeavoured to retain the temporal government of the city. The conflict on this score was continued under Pagano's successors, particularly under Raineri Belforti (1301). Roberto degli Adimari was deposed for taking part in the Council of Basle. Joseph du Mesnil (1748) died a prisoner in Castel Sant'

Angelo. Giuseppe Incontri (1806) distinguished himself by his beneficence. Pius IX made his first studies in the Piarist College at Volterra.

Volterra was immediately subject to the Holy See until 1856, when it became a suffragan of Pisa. The diocese contains 111 parishes with 99,900 souls; 206 priests, secular and regula; 6 houses of male religious and 12 of Sisters; one school for boys, and 2 colleges for girls.

U. BENIGNI

Voluntarism

Voluntarism

Voluntarism (Lat. *voluntas*, will) in the modern metaphysical sense is a theory which explains the universe as emanating ultimately from some form of will. In a broader psychological sense, the term is applied to any theory which gives prominence to will (in opposition to intellect). In this latter sense, but not in the former, the philosophy of Augustine, Anselm, William of Occam, and Scotus may be styled Voluntarism. Philosophy is defined by Augustine as "*Amor sapientiæ*" ("*De ordine*", I, 11, n. 32; PL 32:993; "*De civitate Dei*", VIII, ii; PL 51:225). It is wisdom, but it must be sought *pie, caste, et diligenter* ("*De quant. an.*", PL 32:1049); with the whole soul, not with the intellect only. Yet nowhere does Augustine subordinate intellect to will. The neo-Platonism which underlies the whole of his philosophic speculation makes such an attitude impossible. Augustine's doctrine of grace and of providence supposes a definite and characteristic psychology of will. But in the metaphysical order God is ever conceived as essentially intelligence. He is the "Father of Truth". On this is based a proof of God's existence, which occurs several times in his works and is peculiarly Augustinian in tone ("*De div.*", Q. 83, 14; PL 40:38; "*De lib. arb.*", II, nn. 7-33; PL 32:1243-63; "*Confess.*". VII, c. 10, n. 16; PL 32:742; "*Soliloq.*", I, i, n. 2; PL 32:870; cf. "*De civ. Dei*", VIII, iv; PL 41:228, 229). In God Augustine places "the intelligible world" of the Platonists, and the Divine *concursum* is a special way required by human thought. God is "the sun of the soul" ("*Gen. ad lit.*" XII, xxxi, n. 59; PL 34:479; "*De pecc. mer.*", I, 25, n. 38; PL 44:130; cf. "*Soliloq.*", I, 8; PL 32:877), Himself performing the functions which Scholastics ascribe to the *intellectus agens*. Faith, too, with Augustine as with Anselm, involves intelligence. For the principle *intelligo ut credam* is no less true than the principle *credo ut intelligam*. ("*In Ps. cxviii*", serm. xviii, n. 3; PL 37:1552; serm. xliii, c. vii, n. 9; PL 38:258.)

The philosophy of Scotus is more distinctly voluntaristic. On the freedom of the will he is particularly clear and emphatic. He insists that the will itself, and nothing but the will, is the total cause of its volitions. It is not determined by another, but determines itself *contingenter*, not

inevitabiliter, to one of the alternatives that are before it (II Sent., dist. xxv; see also "ult comm." *ibid*). This is freedom, an attribute which is essential to all higher forms of will, and consequently is not suspended or annulled in the beatific vision (IV Sent., dist. xlix, Q. 4). Because the will holds sway over all other faculties and again because to it pertains the charity which is the greatest of the virtues, will is a more noble attribute of man than is intelligence. Will supposes intelligence, is *posterior generatione*, and therefore more perfect (IV Sent., dist. xlix, 4 "quæstio lateralis").

Kant's "practical reason", in that it passes beyond the phenomenal world to which "pure reason" is confined, is superior to the latter. Practical reason, however, is not will: rather it is an intelligence which is moved by will; and in any case it is a human faculty, not a faculty of the absolute. Fichte is the first to conceive will or deed-action (*Thathandlung*) as the ultimate and incomprehensible source of all being. He is followed by Schelling, who says that will is *Ursein*: there is no other being than it, and of it alone are predicable the attributes usually predicated of God. Schopenhauer holds will to be prior to intelligence both in the metaphysical and the physical order. It appears in nature first as a vague self-consciousness mingled with sympathy. Ideas come later, as differences are emphasized and organization developed. But throughout the will holds sway, and in its repose Schopenhauer places his ideal. Nietzsche transforms "the will to live" into "the will to power". His philosophy breathes at once tyranny and revolt: tyranny against the weak in body and in mind; revolt against the supremacy of the State, of the Church, and of convention.

Pragmatism (q. v.) is an extreme form of psychological Voluntarism; and with it is closely connected Humanism--a wider theory, in which the function of the will in the "making of truth" is extended to the making of reality. The Voluntarism of Absolutists, such as Fichte, Schelling and Schopenhauer, confuses the abstract concept of being, as activity in general, with the more determinate, psychological concept of will, as rational self-determination. The pragmatist identifies intelligence and will with action.

LESLIE J. WALKER

Voluntary

Voluntary

Wilful, proceeding from the will. It is requisite that the thing be an effect of the will consequent upon actual knowledge, either formal or virtual, in the rational agent. It is not quite the same as free; for a free act supposes self-determination proceeding from an agent capable, at the time, of determining himself or not at his choice. However, as every specific voluntary act in this life is also free (except those rare will-impulses, when man is swept to sudden action without time to perceive in non-action the element of good requisite for determination not to act) the moralist commonly uses the terms voluntary and free interchangeably. A thing may be voluntary in itself, as when in its own proper concept it falls under the efficacious determination of the agent, or voluntary in something else, as in its cause. Voluntary in cause requires foreknowledge of the effect, at least virtual, viz. under a general concept of effects to follow; and production thereof by virtue

of the will's efficiency exercised in the willing of its cause. For the verification of the latter requisite the moralist distinguishes two classes of effects which commonly follow from the same cause, those namely to produce which the cause is destined by its nature, and those to which it is not so destined. Of the former the cause is sole and adequate cause, the effect natural and primary. The human will cannot without self-contradiction put a cause into existence without efficaciously willing this natural effect also. In the case of the other class of effects the cause placed by the will is not the sole and adequate cause, but the effect results from the coincident efficiency of other causes, whether contingent, as upon the exercise of other free wills or upon the accidental coincidence of necessary causes beyond the knowledge and control of the agent, or whether necessarily resulting from the coincident efficiency of natural causes ready to act when occasion is thus given. An effect of this class does not come into existence by the efficiency of the will placing the occasioning cause. The utmost result of the will's efficiency, when it places a cause and wills its natural effect, is to make that secondary class of effects possible. Sometimes the agent is so bound to prevent the existence of a secondary effect as to be beholden not to make it possible, and so is bound to withhold the occasioning cause. In case of failure in this duty his fault is specified by the character of the effect to be prevented, and so this effect is then said to be morally involved in his voluntary act, whereas in strict analysis the will only caused its possibility.

Vincible ignorance as a reason of an effect does not rob it of its voluntariness, as the ignorance is voluntary and its effect immediate and natural. Invincible ignorance, however, removes its effect from the domain of the voluntary, in itself because unknown, in its cause, for the ignorance is involuntary. Passion pursuant of its sensible object, when voluntarily induced, does not deprive its act of voluntariness, as the passion is the natural cause and is voluntary. Passion spontaneously arising does not ordinarily mean the loss of voluntariness, as in ordinary course it leaves a man both the necessary knowledge and power of self-determination, as we know by experience. In the extraordinary case of such an excess of passion as paralyzes the use of reason obviously the act cannot be voluntary. Even fear and the cognate passions that turn a man from sensible harm do not destroy the simple voluntariness of their act, as this (excepting again such excess as holds up the reasoning faculty) proceeds with such knowledge and efficacious self-determination consequent thereon as fulfil the requisites for voluntary action. Of course there will commonly remain an inefficacious reluctance of the will to such action. Physical force can coerce only the external act: our experience shows that the internal act of the will is still our own.

CHARLES MACKSEY

Voluspa

Völuspá

"The wisdom of the prophetess", the most famous mythological poem of the "Elder Edda", relates in the form of a vision the beginning and end of all things and tells of the gods and their doom. The vision is attributed to a *Völva*, or wise woman, to whom is assigned a role similar to

that of the Sibyl in early Christian literature. Odhin himself is made to summon the prophetess from her grave that she may give him answer; her prophecy is addressed to all men. She is of the race of giants and her memory goes back to the days when there was neither earth nor heaven, but only *ginnunga gap*, "the yawning chasm". Odhin and his brothers created the world, the dwarfs, and finally men. There was a golden age for the gods which is ended when they kill the maid Gullveig and those provoke war with her kin, the giants, who are victorious. A compact is made, but broken by the gods, who thereby incur guilt and invite their doom. This destruction of the gods, the *ragnarök*, is depicted with graphic power. Dire portents forbode the catastrophe; Balder, the innocent god, is treacherously slain through the machinations of the wicked Loki, civil war and crime reign supreme, the powers of ruin, the giants, the wolf Fenrir, the Midgard-serpent, the sons of Muspel, and the fire-giant Surtr gather for the final onslaught. Odhin, Thor, and Freyr are killed. The sun and the stars fall from heaven, fire destroys the earth which slips into the sea. But a rejuvenated world emerges from the ruins and a new golden age is at hand. Balder returns and in the golden hall Gimle the people dwell in unending happiness. From above comes the all-powerful god of judgment, while Nidhogg, the evil dragon, comes from below and bears away the corpses.

The elliptic and disjointed manner in which the events are narrated makes it difficult to interpret accurately some of the most important points in connection with this poem, which is one of our chief sources of knowledge concerning the ancient Germanic cosmogony. There has been much difference of opinion among scholars, particularly as regards the question of foreign and Christian influence. It is now conceded that the poem cannot be dated farther back than the middle of the tenth century and that it probably originated in Iceland. If so, Christian influence is not only possible, but certain; for such influence was bound to come in through contact of Icelanders with the Celts and Anglo-Saxons. To assume that the poem presents us the cosmogonic beliefs of the Icelandic people of the tenth century is a grave error. The anonymous author handled the ancient myths with considerable freedom and independence. While the subject-matter is prevaingly pagan, the point of view has assumed a Christian colouring and there are undoubted Christian reminiscences. Such seem to be the portents announcing *ragnarök* and the rejuvenation of the world. The coming of the great un-named god reflects the victorious advance of the new religion, Christianity, which in the poet's time was displacing the old beliefs. The figure of Balder and the importance attached to his death, show the influence of the suffering Christ, the guiltless victim. The "Völuspá" does not present to us Teutonic mythology in its ancient or purely pagan form, but a cosmogony which, while fundamentally pagan, has been subject to much foreign influence. Only the extent of this influence is still a matter of dispute.

ARTHUR F.J. REMY

Joost van Den Vondel

Joost van Den Vondel

Netherland poet and convert, b. at Cologne, 17 Nov., 1587, of parents whose residence was originally at Antwerp; d. 5 Feb., 1679. Of his early youth nothing is known. In his eighth or ninth year, he went with his father Joost, and his mother, Sara Kranen, to Amsterdam, where his father engaged in the stocking trade. His first known poem dates from 1605, when he was seventeen years old. This and some other poems of his youth exhibit the qualities of the older rhetorical style of poetry. On 20 Nov., 1610, Vondel married Mayken de Wolff. He then began to devote himself to classical studies, as is shown by his poem "Jeruzalem verwoest" (Jerusalem Destroyed), which appeared in 160. Even at this date Vondel had won the friendship of men like Pers, Roemer Virscher, Hooft, the Baccks, Laurens Reael, Plemp, Mostaert, C. Huygens, and Seriverins. This gave Vondel a new worldview and a wider horizon. It was probably between 1620 and 1630 that he dedicated his celebrated poem "De Kruisbergh" (Calvary) to his young wife. His "Palamedes" and "De Amsteldamsche Hecuba" date from the year 1625. Immediately after this, in 1626, appeared "De Roskam" and, in 1631, "Jaergitijde van wijlen Heer Joan van Oldenbaerneveld" and the "Decretum horribile". During this same period Vondel made the acquaintance of Hugo de Groot, to whom he dedicated his "Wellekomst". Between 1631 and 1640 his fame constantly increased. During that time he worked steadily on his "Constantijn". In 1635 appeared "Joseph in't Hof", and shortly after "Gijsbrecht van Aemstel" in 1639 "De Maeghden". At this time his tragedies follow one another with astonishing rapidity: in November, 1639, "De Gebroeders"; January, 1640, "Joseph in Egypten"; 4 March, 1640, "Joseph in Dothan".

The years 1640-1 were not very fruitful in poems. Vondel was pondering on higher things. Previous to this time the Protestant preachers thought they perceived in him papal tendencies. In 1641 he openly joined the Catholic Church, and thereafter devoted his talents and pen to her service. The "Litterae annuae" of the Jesuits (1641) prove Vondel to have been converted by the Fathers of Krijtberg, and it is reasonably sure that it was Father Petrus Laurentius who brought about his conversion. His daughter Anna had preceded him into the Church and his nephew Peter Vondel followed in 1643. He remained grateful to the Society of Jesus and sang its praises in many beautiful poems. His conversion brought him many new friends and caused him to lose none of his old ones. The first fruit from the pen of the Catholic Vondel was the drama "Peter en Pauwels", which has for its subject-matter the founding of the Church (1641). In 1642 he wrote a no less Catholic poem, "De Brieven der Heilige Maeghden, Martelaressen", with an "Opdracht aan de II. Maeght" (Dedication to the Blessed Virgin). In 1645 appeared the "Altaargeheimenissen" (Mysteries of the Altar), in 1646, "Maria Stuart of Gemartelde Majesteit" (Mary Stuart, or Martyred Majesty). Vondel's art reached its highest development during the years 1647-54. Before 1648 he had completed "Leeuwendalers", which has been designated as "the most perfect drama which our poet has left

us". It is a glorification of the Peace of Munster. A number of magnificent poems and remarkable works in prose followed. In 1654 appeared Vondel's masterpiece, "Lucifer". In this he reaches his greatest height not only as a dramatic but as a lyric poet (Leendertz). The piece was interdicted by the Protestant preachers, and consequently ran through four editions in the same year (1654). For the stages which were forbidden to produce "Lucifer", Vondel at once wrote his "Salmonens".

About this time his son, Joost, died, and Vondel had to journey to Denmark to collect what was due there to his son. But this not being sufficient to pay the latter's debts, he had, as his son's security, to give up his whole fortune. He then accepted the position as porter in the Bank van Leening (a pawnshop) with a salary of 650 *gulden* yearly. Vondel thus lost much of his independence and his time. Shortly afterwards he dedicated his "Jeptha" to Anna van Hoorn, wife of the burgomaster who had secured for him his new position. He then published among other works "Samson", after 1660, "De Heerlijkheit der Kerche" (The Glory of the Church) in 1663, and "Faeton" in 1664, "Adam in ballingschap" (Adam in Exile) in 1667, "Noack of Ondergang der eerste Waerelt" (Noah, or the Destruction of the First World), his last original drama. In 1675 the aged poet lost his daughter Anna, and four years later he himself passed away at the age of ninety-one. He is the greatest poet the Netherlands have produced, one who is distinguished in every form and who occupies a place among the best poets of all time.

P. ALBERS

Freiherr Max von Gagern

Freiherr Max Von Gagern

Born at Weilburg (in Nassau), Germany, 25 March, 1810; died at Vienna, 17 October, 1889. He was the son of Hans Christoph von Gagern, minister of state in Nassau; he attended the gymnasiums at Kreuznach, Mannheim, and Weilburg, and studied law from 1826 at Heidelberg, Utrecht, and Göttingen. After a stay at Paris he received in 1829 a position in the cabinet of William I, King of the Netherlands. At the outbreak of the Belgian revolution (1830) he joined the Dutch army as a volunteer and took part in the war against Belgium. In 1833 he retired from the service of Holland, married Franzina Lambert, of The Hague, and took up historical studies in order to fit himself for the position of *Privatdozent* at Bonn University. He was at Bonn during the years 1837-40. In 1837, although still a Protestant, he sided with the imprisoned Archbishop of Cologne (see DROSTE-VISCHERING), and thus lost the favour of the Prussian Government. In 1840 he was appointed ministerial successor with the title of *Legationsrat* by the Duke of Nassau. On 28 August, 1843, he joined the Catholic Church. Although naturally very religious he had grown indifferent to religion during his student life and his residence in Holland. The more he realized

the seriousness of life the stronger grew his religious needs. Acquaintance with Catholics and with the historian George Frederick Böhmer, who was friendly to Catholicism, awakened in him respect and veneration for the Church. The chief sources of his Catholic knowledge were, as he himself says, the "Imitation of Christ" by Thomas à Kempis, the study of Möhler's "Symbolik", and the New Testament. His conversion did not affect the favour of the Duke of Nassau who appointed him in 1844 extraordinary envoy to the Courts of the Netherlands and Belgium.

Von Gagern's labours during the revolutionary year of 1848 extended far beyond his native state. He was the centre of the efforts that aimed to mediate between the Government and the people and to reorganize the German Confederation as a nation. According to the schemes Prussia was to have the supreme direction of German affairs. With this end in view Von Gagern negotiated with the Governments of Southern Germany and with Prussia. he then took part in the debates of the preliminary parliament at Frankfort, and at the same time was one of the seventeen confidential agents of the Governments who were to aid the parliament of the Confederation in revising the constitution. He was chosen president of this committee of seventeen, but was not as prominent at the Parliament of Frankfort as his brother Heinrich whom he supported. He joined the Catholic Club. On 5 August, 1848, he was made under-secretary for foreign affairs in the imperial ministry which Archduke John, as administrator of the empire, had temporarily formed. In the question as to the constitution of Germany he worked with his brother for "little Germany" (exclusion of Austria from Germany, union of Germany under a Prussian empire). When the King of Prussia declined the imperial crown offered to him and the Parliament of Frankfort approached dissolution, Von Gagern and his party withdrew from the assembly.

In 1850 Von Gagern was again in the service of the State of Nassau, being employed as an upper ministerial clerk. He had, however, lost the confidence of the duke by his "Little Germany" policy, and influential circles looked upon the Catholic Church unfavourably. In 1854, after having been conspicuously slighted, he retired from the state service. His efforts to obtain a historical professorship at Bonn failed owing to the dislike of Protestants for converts to Catholicism. During the years 1855-73 he was in the service of Austria, first as head clerk in a ministerial department, then as departmental head in the mercantile political division of the ministry of foreign affairs. From 1860 he had also charge of the department of the press for foreign affairs, a position which gave him a deep insight into Austrian policy without, however, leading to an independent position. In 1881, eight years after his retirement on a pension, Emperor Francis Joseph made him a life member of the upper house of the imperial Austrian Parliament. His rich intellectual gifts, his honourable character, unselfish nature, and kindness were recognized even by his political opponents. He was in addition genuinely religious, and loyally supported Catholic interests whenever possible.

VON PASTOR, *Leben des Freiherrn Max von Gagern* (Kempton and Munich, 1912). This work is drawn mainly from unprinted materials, placed at the biographer's disposal by the family, and oral communications, and is a valuable contribution to the political and religious history of the nineteenth century.

KLEMENS LÖFFLER

Votive Mass

Votive Mass

(*Missa votiva*)

A Mass offered for a *votum*, a special intention. So we frequently find in prayers the expression, *votiva dona* (e.g., in the Leonine Sacramentary, ed. Feltoe, p. 103), meaning "gifts offered with desire [of receiving grace in return]". The Mass does not correspond to the Divine Office for the day on which it is celebrated. Every day in the year has appointed to it a series of canonical hours and (except Good Friday) a Mass corresponding, containing, for instance, the same Collect and the same Gospel. So Mass and Office together make up one whole. Normally the Mass corresponds to the Office. But there are occasions on which a Mass may be said which does not so correspond. These are votive Masses.

The principle of the votive Mass is older than its name. Almost at the very origin of the Western liturgies (with their principle of change according to the Calendar) Mass was occasionally offered, apparently with special prayers and lessons, for some particular intention, irrespective of the normal Office of the day. Among the miracles quoted by St. Augustine in "De civ. Dei", XXII, 8, is the story of one Hesperius cured of an evil spirit by a private Mass said in his house with special prayers for him -- a votive Mass for his cure. The first Sacramentaries contain many examples of what we should call votive Masses. So the Leonine book has Masses "in natale episcoporum" (ed. Feltoe, pp. 123-26), "de siccitate temporis" (ibid., 142), "contra impetitores" (ibid., 27), and so on throughout. Indeed the Masses for ordination and for the dead, which occur in this book and throughout the Roman and Gallican Rites, are really examples of votive Masses for all kinds of occasions, for ordinations (ed. Wilson, pp. 22-30, etc.), for those about to be baptized (ibid., 34), anniversaries of ordinations (153-54), nuns (156), for the sick (282), for marriages (265), kings (276), travellers (283), the dead (301 sq.), and a large collection of Masses of general character to be said on any Sunday (224-44). In this book the name first occurs, "Missa votiva in sanctorum commemoratione" (p. 367; Rheinau and S. Gallen MSS.). The Gregorian Sacramentary, too, has a large collection of such Masses and the name "Missa votiva" (e.g., P.L., LXXVIII, 256).

So all through the Middle Ages the votive Mass was a regular institution. The principle came to be that, whereas one official (capitular) high Mass was said corresponding to the Office, a priest who said a private Mass for a special intention said a votive Mass corresponding to his intention. The great number of forms provided in medieval Missals furnished one for any possible intention. Indeed it seems that at one time a priest normally said a votive Mass whenever he celebrated. John Beleth in the thirteenth century describes a series of votive Masses once said (*fuit quoddam tempus*) each day in the week: on Sunday, of the Holy Trinity; Monday, for charity; Tuesday, for wisdom; Wednesday, of the Holy Ghost; Thursday, of the Angels; Friday, of the Cross; Saturday, of the Blessed Virgin (Explic. div. offic., 51). This completely ignores the ecclesiastical year. But there

was a general sentiment that, at least on the chief feasts, even private Masses should conform to the Office of the day. It is well known, for instance, that our feast of the Holy Trinity began as a votive Mass to be said on any Sunday after Pentecost, when there was no feast. This idea of allowing votive Masses to be said only when no special feast occurs finally produced the rules contained in our present missal (1570). According to these we distinguish between votive Masses strictly so called and votive Masses in a wider sense. The first are those commanded to be said on certain days; the second kind, those which a priest may say or not, at his discretion.

Strict votive Masses are, first, those ordered by the rubrics of the Missal, namely a Mass of the Blessed Virgin on every Saturday in the year not occupied by a double, semi-double, octave, vigil, feria of Lent, or ember-day, or the transferred Sunday Office (Rubr. Gen., IV, 1). This is the "Missa de S. Maria" in five forms for various seasons, among the votive Masses at the end of the Missal. To this we must add votive Masses ordered by the pope or the ordinary for certain grave occasions (*pro re gravi*). Such are for the election of a pope or bishop, in time of war, plague, persecution, and so on. Such votive Masses may be ordered by the ordinary on all days except doubles of the first or second class, Ash Wednesday, and the ferias of Holy Week, the eves of Christmas and Pentecost; except also days on which the office is said for the same intention or event as would be prescribed by the votive Mass. In this case the Mass should conform to the office as usual. A third kind of strictly votive Mass is that said during the devotion of the so-called "Forty Hours". On this occasion the Mass on the first and third days is of the Blessed Sacrament; on the second day it is for peace. But on doubles of the first and second class, Sundays of the first and second class, on Ash Wednesday, in Holy Week, during the octaves of Epiphany, Easter, Pentecost, on the eves of Christmas and Pentecost, the Mass of the day must be said, with the collect of the Blessed Sacrament added to that of the day under one conclusion.

The other kind of votive Mass (*late sumpta*) may be said by any priest on a semidouble, simple or feria, at his discretion, except on Sunday, Ash Wednesday, the eves of Christmas, Epiphany, Pentecost, during the octaves of Epiphany, Easter, Pentecost, Corpus Christi, Holy Week, and on All Souls' Day. Nor may a votive Mass be said on a day whose Office is already that of the same occasion; but in this case the corresponding Mass of the day must be said, according to the usual rubrics. A votive Mass may be taken from any of those at the end of the missal, or of the common of Saints, or of their propers, if the text does not imply that it is their feast. A Sunday or ferial Mass may not be used as a votive Mass. Nor may it be said of a *Beatus*, unless this is allowed by special indult.

The Gloria is to be said in votive Masses *pro re gravi* unless the colour be violet; also in votive Masses of the Blessed Virgin on Saturday, of angels, whenever said, in those of saints, when said on a day on which they are named in the Martyrology or during their octaves. The Creed is said in solemn votive Masses *pro re gravi*. The first and third Masses of the Forty Hours have the Gloria and the Creed, not the Mass for Peace (but if said on a Sunday it has the Creed). Solemn votive Masses have only one collect; others are treated as semidoubles, with commemorations of the day, etc., according to the usual rule. The colour used for a votive Mass is the one which corresponds

to the event celebrated; except that red is used for Holy Innocents. It is red for the election of a pope, white for the anniversary of a bishop's election or consecration, violet in the general case of asking for some special grace and for the Passion. The particular case of votive Masses for each day of the week, corresponding to votive Offices ordered by Leo XIII, is now abolished by the Decree "Divino afflatu" of 1 Nov., 1911. Requiems and Masses for marriages are really particular cases of a votive Mass, which are considered in their place (see REQUIEM, MASSES OF; MASS, NUPTIAL).

The unchangeable character of the Eastern liturgies excludes anything really corresponding to our votive Mass. But they have a custom of singing certain troparia, sometimes of reading special lessons on certain anniversaries and occasions, which is virtually what is done in the Latin votive Masses.

Votive Offerings

Votive Offerings

Votive Offerings is the general name given to those things vowed or dedicated to God, or a saint, and in consequence looked upon as set apart by this act of consecration. The idea is very old (Dhorme, "Choix des textes religieux assyro-babyloniens", XXXVII, Paris, 1907; Aristotle, "Politics", VII, xii), for it springs from man's instinctive attitude towards the higher powers. He looks upon them as controlling by Providence the working of the world, and therefore addresses prayers to them. In order to make his appeal the more acceptable he offers some gift, whether on behalf of the living or the dead, to the offended deity. Hence undoubtedly springs (though with it is coupled the vague notion of the passage to the next life as a long journey) the custom of surrounding the buried dead with their most valued possessions and favourite wives (Fraser, "Pausania", II, 173; Lyall, "Asiatic Studies", II, 301). But it has also happened that the practice, based on the true theological concept of religion as a part of justice (*do ut des*), comes of adorning shrines with various objects of gratitude (Cicero, "De deorum natura", III, xxxvii). In this more ordinary sense of the word votive offerings can be divided into:

- (a) things vowed to God or the saints in some trouble or crisis of life;
- (b) things presented in gratitude for a recovery or deliverance without having been previously promised.

Naturally these votive offerings constitute an extremely varied list. The most common are those which represent the person to whom the favour has been accorded, or the thing that has benefited under the miracle, or some representation of the actual Divine interposition. Thus, for example, on the day of his marriage, Henry III of England had a golden statue of his queen made and placed on the shrine of St. Edward at Westminster (Wall, "Shrines of British Saints", 228) and a full-length

figure of Duke Alessandro de' Medici was moulded in wax for the Church of the Annunziata at Florence by Benvenuto Cellini (King, "Sketches and Studies", 259). Again, the offering of a falcon in wax at the shrine of St. Wulstan by Edward I, when, by the intercession of that saint, his favourite bird had been cured (Wall, 141), and of the tail of a peacock at Evesham by an old lady whose pet had recovered through the invocation of Simon de Montfort (King, 259), are instances of the same custom. At Boulogne and elsewhere can be seen the model ships offered as ex-votos after deliverance from shipwreck, such as we read of Edward III leaving at the tomb of his father, or such as the Navicella at Rome, a copy made under Leo X of a pagan votive offering to Jupiter Redux (Hare, "Walks in Rome", I, London, 1900, 231). So, too, sometimes a wax taper of the height of the sufferer, or even of his dimensions was brought or sent to be burnt where the cure or favour was implored. Of the pictures of miracles as votive offerings there seems no end ("Archæologia", XLIX, London, 1886, 243-300); their number became at times an inconvenience (Acta SS., XIV, May, I, 354), like the numerous crutches, etc., in the grotto at Lourdes or S. Nicolà at Verona, or SS. Giovanni e Paolo at Venice. There is, moreover, the parallel of the golden boils and blains placed by Divine command within the Ark (I Kings, vi, 11).

We also read of money and valuables being offered, as the famous *régale* of France, which, described indifferently as a diamond and a ruby, adorned the tomb of St. Thomas Becket at Canterbury. Often also a trophy of victory (King, 256-7), the banner of a defeated foe ("Itinerarium Regis Ricardi", in "Rolls Series", I, London, 1864, 446), or his sword (I Kings, xxi, 9), or even that of the victor (as Roland's at Rocamadour, or Athelstan's after Brunanburgh at the shrine of St. John of Beverley, or as the sacred Stone of Destiny offered by Edward I at the tomb of his namesake the Confessor, after his defeat of the Scotch), or some symbol of office and dignity, as the crowns presented by King Canute at Bury St. Edmunds and elsewhere, or lastly some masterpiece of literature or art, as Erasmus hung up Greek verses at the shrine of Our Lady at Walsingham ("Colloquies", II, London, 1878, 19).

TOMASINO, *De donariis ac tabellis votivis* (Padua, 1654); BRAND, *Popular Antiquities*, II (London, 1849), 374-5; KING, *Sketches and Studies* (London, 1874); ERASMUS, *Religious Pilgrimage, Colloquies*, II (London, 1878); ZIEMAN, *De anathematibus græcis* (Königsberg, 1885); REISCH, *Griechische Weihgeschenke*, VIII (Vienna, 1890); ROUSE, *Italian Votive Offerings in Folklore*, V, 11; IDEM, *Greek Votive Offerings* (Cambridge, 1902); WALL, *Shrines of British Saints* (London, 1905).

BEDE JARRETT

Votive Offices

Votive Offices

A votive office is one not entered in the general calendar, but adopted with a view to satisfying a special devotion. By the Apostolic Constitution "Divino Afflatu" (1 Nov., 1911) Pius X abolished all votive offices. Before this action of the Holy See a votive office might be celebrated, in

accordance with the rules summarized below, either in virtue of a privilege or in virtue of a custom antedating the Bull of St. Pius V. Such offices were called votive because their recitation remained optional in principle, because it was the object of a privilege; and even when, after the privilege had been obtained, they became accidentally obligatory (Decree of the Sacred Congregation of Rites, 14 June, 1845), it was none the less true that they originated in an optional devotion and that particular churches or communities might not request the privilege of reciting them. They were distinct from offices *ad libitum* properly so called because they had their place in the private or general calendar under rubric *ad libitum*; among the rules to which these were subject was this: If the day does not prevent, the compiler of the Ordo may indicate at will the office *ad libitum*, either a transferred office or even a votive office. Hence a votive office was not an office *ad libitum* and, moreover, was never so designated.

There were two classes of votive offices: (1) Votive offices granted to petitioners, but obligatory after the concession, e.g. the Office of the Blessed Sacrament, for Thursday, and that of the Immaculate Conception for Saturday, which are found nearly everywhere. Others occurred in orders or congregations, such as that of St. Benedict, for Tuesday, in the Benedictine Order. (2) Votive offices granted to the universal Church by Leo XIII and published by the Sacred Congregation of Rites, 5 July 1883. There were six of these offices, one for each day of the week, and they were celebrated under the semidouble rite. They were: the Office of the Holy Angels for Monday; of the Holy Apostles for Tuesday; of St. Joseph, for Wednesday; of the Blessed Sacrament, for Thursday; of the Passion for Friday; of the Immaculate Conception, for Saturday. This concession was the result of a Decree modifying the rubrics of translation.

RULES

(1) For the first class reference must be made, first, to the terms of the indulgences, which granted these offices once weekly or monthly on the condition that the day did not prevent, and reserved all the ferias of Advent and Lent; next to the answers of the Sacred Congregation of Rites. (2) For the second class the forbidden days were much fewer than for the old votive offices; thus reservation was made only of the last eight days before Christmas and of the last two weeks of Lent beginning from Passion Sunday. The other indulgences granted for votive offices always had the same value; thus the old concessions of votive offices of the Blessed Sacrament and the Immaculate Conception continue obligatory. Individuals might make use of the concession or not. If chapters or communities had decided, with the consent of the ordinary, that votive offices should be recited in choir (after all the members had been called upon to vote), they might not alter their decision: they were not permitted sometimes to profit by the indulgence and sometimes not to profit by it. Explanatory decrees concerning the details have been given in recent years by the Congregation of Rites, and to them recourse must be had for the solution of doubts in practice.

BERNARD, *Cours de litiurie*; IDEM, *Lecons elementaires de liturgie* (Paris, 1904). For ancient votive offices see also CAVALIERI, *Commentaria in authentica Sacrae rituum congregationis decreta*, II (5 vols., fol., Bassano, 1775), 69-75.

F. CABROL

Vows

Vows

I. GENERAL VIEW

A vow is defined as a promise made to God. The promise is binding, and so differs from a simple resolution which is a present purpose to do or omit certain things in the future.

As between man and man, a promise pledges the faith of the man who makes it; he promises, wishing some other person to trust him, and depend upon him. By his fidelity he shows himself worthy of trust; if he breaks his word, he loses credit, by causing the other a disappointment which is destructive of mutual confidence -- and, like faith, mutual confidence is important to society, for the natural law condemns all conduct which shakes this confidence. These statements do not apply to a promise made to God; it is impossible for me to deceive God as to my present intention, and He knows whether I shall be constant in the future: God, then, is protected against that disappointment on account of which the failure to fulfil a promise to a fellow-man is considered disgraceful. But, just as one can offer to God an existing thing, or a present action, so also one can offer Him a future action, and perseverance in the purpose of fulfilling it. That offering of perseverance is characteristic of a vow. A subsequent change in one's purpose is a want of respect to God: it is like taking away something that has been dedicated to Him, and committing sacrilege in the widest sense of the word. Unlike the simple breach of a promise made to a man, a failure to give to God what has been promised Him is a matter of importance, a very serious offence.

This explanation shows us also how a vow is an act of religion, just as any offering made to God. It is a profession that to God is due the dedication of our actions, and an acknowledgment of the order which makes Him our last end. By adding to our obligations, we declare that God deserves more than He demands. Lastly we see why a vow is always made to God -- for, as all our actions ought to be ultimately directed to Him, we cannot make a final promise of those actions to anyone but God. Promises made to the saints cannot be lightly neglected without detracting from the honour we owe them; but a failure in this respect, though grave in itself, is vastly less serious than breaking a vow, to which it bears some resemblance. These promises occasionally imply a vow. God is well pleased with the honour paid to His saints, and they rejoice at the glory given to God. We may then confirm by a vow the promise made to a saint, and likewise we may honour a saint by a vow made to God, as for instance, to erect in memory of some saint a temple for Divine worship.

The vow, moreover, is approved by God, because it is useful to man; it strengthens his will to do what is right. The Protestants of the sixteenth century, following Wyclif, declared themselves opposed to vows; but Luther and Calvin condemned only vows relating to acts which were not of obligation, the latter because he considered all good actions as obligatory, the former because the vow of a free action was contradictory to the spirit of the new law. Both denied that the vow was

an act of religion and justified it by the simple human reason of strengthening the will. Certain recent tendencies have minimized the importance at least of vows made by members of religious communities. Errors of this kind are due to overemphasis of the fact that vows, and especially the perpetual vow of chastity, of religious life, or of missionary labour, do not imply any special instability in the person who makes them, but only the fickleness natural to the human will; and that instead of denoting the grudging service of a slave, they imply rather the enthusiasm of a generous will, eager to give and sacrifice beyond what is necessary, and at the same time so sincere in self-knowledge as to imitate warriors who burned their ships to cut off the possibility and even the temptation to flight. In the case of a will incapable of change, a vow would have no meaning; it were useless to offer a perseverance that could never be found wanting; for this reason it is not suitable to Christ, or the angels, or to the blessed in heaven.

II. MORAL AND THEOLOGICAL CONSIDERATIONS

A vow, even in an unimportant matter, presupposes the full consent of the will; it is an act of generosity towards God. One does not give unless one knows fully what one is doing. Every substantial error, or indeed every error which is really the cause of making a vow, renders the vow null and void. This condition must be properly understood; to judge of the effect of the error, it is necessary to know the will of the person making the vow at the moment of making it. One who can say sincerely, "if I had known this or that, I would not have made the vow", is not bound by the vow. If, however, one who is aware of some ignorance on the matter of a vow, but, in spite of that, generously decides to make it, knowing its general import and that it is in itself proper and commendable, such as the vow of chastity, for instance, is bound by it, as it is entirely valid. Lastly, the vows which accompany the entrance into a state, such as the vows of religion, can only be rendered void by some really substantial error. The good of the community requires this stability. For every vow whatsoever such knowledge and liberty are required as render a person capable of committing serious sin; though it does not follow that at the age when one is capable of committing mortal sin, one is capable of understanding the importance of a perpetual engagement. The object of a vow, according to the classical formula, must be not merely something good, but something better; whence it follows that no vow must be made to God of any unlawful or indifferent matter. The reason is simple: God is all holy and cannot accept the offering of anything which is bad or less good in its nature. Again, the object of the vow must be something that is humanly possible, for no one can be bound to do what is impossible. No man can make a vow to avoid all manner of sin, even the slightest, because this is morally impossible. The vow to avoid deliberate sin is valid, at least in persons who have made some progress in virtue. A vow may apply to a duty already existing or to acts which are not commanded by any law. A vow, being a personal act, binds only the person who makes it; but a superior, who makes a vow in the name of his community, may, within the limits of his authority, command the fulfilment of the vow. (As to the obligation of heirs, see section III of this article.) A vow binds according to the intention of the person who makes it; and this intention must be reasonable: in an unimportant matter, one cannot bind oneself under pain

of grievous sin. In order to estimate the gravity of the matter, we distinguish between vows which affect isolated acts, and vows which relate to a series of acts. To an isolated act the well-known rule applies: The matter is grave if, in the hypothesis of an ecclesiastical command, it would oblige under mortal sin; but if the vow relates to a series of acts, then we must see what is truly important in regard to the end pursued. Thus every grave offence against the virtue of chastity, as it should be observed outside the married state, is a serious matter for the vow of chastity. The omission of one or two Masses or one or two Rosaries is not a grave matter in the case of a vow to be present at Mass or to say the Rosary every day. Every mortal sin is a grave offence against a vow to do what is most perfect; it is not the same with venial sin, even when deliberate; there must be a habit of committing acts which are certainly imperfect, in order to constitute a grave sin against this vow.

A vow is fulfilled by doing what has been promised, even without a positive intention of fulfilling the vow. One should personally fulfil the vow of some act or omission, promised as such as, for instance, the vow of a pilgrimage, but may fulfil through another such a vow as that of almsgiving, or donation or restitution of property. All obligation ceases when the fulfilment of the vow becomes impossible or harmful, or if the reason for the vow ceases to exist. (As to dispensation from vows, see section III.) A vow is a good action, but should be made with prudence and discretion; in the Christian life, love is better than bonds. We should avoid vows which are embarrassing, either because they are too numerous or because we may be unable to fulfil them (for failure to fulfil a vow is sure to be followed by sorrow which may endure for a long time); besides such vows as are not helpful to sanctification or charity. The more important the obligation the more careful reflection and preparation it requires. No objection can be made to reasonable vows made in order to increase the efficacy of prayer; but the vows to be commended above all are those which give us strength against some weakness, help us to cure some fault, or, best of all, contain the germ of some great spiritual fruit. Such are the vows of religion or missionary work.

III. CANONICAL ASPECT

A. Division of Vows

The vow properly so called is made to God alone, but promises made to the saints have a certain resemblance to vows and are often accompanied by a vow, as we have already seen. A vow may be the act of a private person, or the act of a superior representing a community. In the latter case the community is only indirectly bound by the vow. The sentiment which leads a person to take a vow marks the distinction between absolute and conditional vows. The condition may be suspensive, that is to say, it may make the commencement of the obligation depend on the happening or the not happening of some future uncertain event; for instance, the words, "If I recover my health", make the obligation commence upon the recovery; or it may be resolutive, that is, it may have the effect of rescinding the vow, as if the person adds to the vow the words, "Unless I lose my fortune", in which case the vow ceases to bind if the fortune is lost. The same sentiment distinguishes between simple, or pure, vows, by which a person promises simply to do an act which is pleasing to God, and vows having some special end in view, such as another's conversion.

According to their object, vows may be personal, as a promise to do a certain act; or real, as a promise of a certain thing; or mixed, as a promise to nurse a sick person with one's own hands. They may also have reference to a single definite object, or leave the choice among two or three objects (disjunctive vows). According to the manner of their utterances, there are vows interior and exterior; vows express, and vows tacit or implied (as for instance, that of the subdeacon at his ordination); vows secret, and vows made in public. According to their juridical form, they may be private or made with the Church's recognition; and these last are divided into simple and solemn vows. Lastly, from the point of view of the dispensation required, vows are either reserved to the Holy See or not reserved. In itself the vow is a promise, and does not imply any surrender or transfer of rights; certain vows, however, according to ecclesiastical law, modify the rights of persons; such are the vows taken in religious orders.

B. Simple and Solemn Vows

Under RELIGIOUS LIFE we have seen how the distinction arose historically between simple and solemn vows, the names of which appear in the twelfth and thirteenth centuries. Various opinions have been expressed as to the matter of this distinction, and the question has not yet been decided. Some persons make the essential solemnity consist in the surrender of oneself which accompanies certain vows; this is the opinion of Gregory of Valentia (*Comment. theol.*, III, D. 6, Q. vi, punct. 5) and many recent Thomists. But the surrender is found in vows which are not solemn, such as the vows of scholastics of the Society of Jesus, who would not be religious properly so-called, if their surrender differed essentially from that of the professed fathers. Moreover, the surrender really accompanies only a vow of obedience accepted in a religious order, while other vows are solemn, even without any question of obedience, such as the vow of chastity made by subdeacons.

In the opinion of Lehmkuhl (*Theol. mor.*, I, nn. 64750) the solemnity of the vow consists in a spiritual consecration, the effect of which is that, after such a vow, a person is irrevocably set apart and appointed by the Church to serve God by the offering of that vow. This opinion has its attractive side, but does it agree with history? The vow of pilgrimage to the Holy Land was temporary and solemn. Or does it agree with the definition of law? Boniface VIII declares those vows to be solemn which are accompanied either by a consecration or by a religious profession. And lastly, does not the consecration logically follow the solemnity, rather than precede or cause it?

In spite of its complication and the forced explanations to which recourse is had, in order to escape from the difficulty, the opinion of Suarez (*De religione tr.* VII, c.ii, c.x, n.1; c.xii, nn.7-9; c.xiii, nn.3, 8-13; c.xiv, n. 10) still finds distinguished defenders, especially Wernz (*Jus Decretalium*, III, n. 572). This opinion places the essence of the solemnity in the absolute surrender of himself by the religious, and the acceptance of that surrender by the religious order, which is accomplished by solemn profession, and also in the incapacity of a person who is bound by solemn vows to perform validly acts that are contrary to those vows; such as the incapacity to possess property, or to contract marriage. But historically this incapacity was not and is not always attached to solemn vows; the solemn vow of obedience does not as such involve any particular incapacity; and often

solemn vows do not produce this effect. Will they be called solemn as being attached to the vow of obedience, and solemnized by the surrender of oneself?

But, apart from the arbitrary nature of these explanations, the vow of the Crusader was solemn without being attached to any more general vow of obedience; and we have seen that the surrender does not constitute the solemnity. For this reason we prefer a simple opinion, which, in accord with Vasquez (In I-II, Q. xcvi, d. clxv, especially n. 83) and Sanchez (In decalogum, 1, 5, c. 1, n. 11-13), places the material solemnity of vows of religion in the surrender followed by irrevocable acceptance; and with Laymann (De statu religioso, c. i, n. 4), Pellizarius (Manuale regularium, tr. IV, c. i. nn. 10-18). Medina (De sacrorum hominum continentia, l. 4, contr. 7, c. xxxviii), V. De Buck (De solemnitate votorum epistola), Nilles (De juridica votorum solemnitate), and Palmieri (Opus theol., II, pp. 445, 446) respects the ordinary juridical signification of the solemn act. The juridical solemnities are formalities to be observed in order to give to the act either its legal value or at least the more or less valuable guarantee of perfect authenticity. This very simple explanation accounts for the historical changes, both those which have reference to the number and conditions of vows, and those which concern their effects. It is natural that there should be greater difficulty in obtaining a dispensation from a solemn vow, and also that the Church should attach certain disabilities to such a vow. But these effects of solemn vows cannot constitute the essence of such vows. However this may be, canon law at the present day does not recognize any vow as solemn except the vow of chastity, solemnized by religious profession in an order strictly so called. The vows taken in religious congregations, like the simple vows which in religious orders precede the solemn profession, and also the complementary simple vows which follow the profession in some institutes, and lastly the final simple vows taken in certain religious orders in place of solemn profession, are, strictly speaking, private; but they derive a certain authenticity from the approval of the Church and the circumstances in which they are taken.

C. Obligation of the Heir

In itself the vow creates a personal obligation, which does not arise from the virtue of justice and which would seem to cease at the death of the person taking the vow. It is admitted, nevertheless, that heirs are bound to fulfil the vows called real, because they imply a promise to make over certain property or money; the origin of this obligation is the Roman law "De pollicitationibus", accepted as canon law. As to its nature, it is an obligation of religion, if the person making the vow has not made a bequest of the property by will. In this supposition the obligation would be of justice; but in the other cases, seeing that the law mentions no specific title, but simply declares that the obligation of the vow devolves on the heirs, we infer it devolves *talis qualis*, that is as a religious obligation.

The obligation of the vow is cancelled not only by the performance of the work promised, but also by the effective substitution of a better work, and by any circumstance which would have prevented the obligation from arising; as, for instance, if the work became useless, or unnecessary, or impossible. The obligation of the vow may also be annulled by lawful authority. We shall first sum up the generally accepted doctrine, and then endeavour to explain it briefly.

We must distinguish between the power to annul a vow and the power to dispense from the obligation to fulfil it. A vow may be annulled directly or indirectly. No vow can be made to the prejudice of an obligation already existing. If a person entitled to benefit under a previous obligation asserts a claim which is incompatible with the fulfilment of a vow, the fulfilment is prevented, and the obligation is *ipso facto* at least temporarily removed. Thus, a master may require the performance of services promised by the contract of hiring, without reference to any vow subsequently made; a husband may also require his wife to fulfil a conjugal duty. This is indirect annulment, which presents no difficulty. But besides this, certain persons, in virtue of a general power over the acts of others, may directly and finally annul all vows made by their subjects, or may prevent them generally from taking vows in the future. This power belongs to the father or guardian in the case of a minor, to the regular prelate, and even to the superior of religious congregations, in the case of professed religious; and, according to many authorities, to the husband, in the case of the married woman; and the person exercising this power of annulment is not required to prove the existence of just cause.

The power of dispensing, on the contrary, requires a just cause, less, however, than that which would suffice by itself to exempt from a vow. A still less reason is enough to commute the vow into another good work, especially if the latter is almost equivalent to the work promised. According to canon law, all vows made before solemn profession cease to bind by the fact of that profession, due regard being shown to the rights of third persons; and it is always permissible for a person to commute vows previously made into those of his or her religious profession, even when this is not solemn. When a vow is commuted by ecclesiastical authority, although the person who has taken the vow may always fulfil his obligation by doing the work originally promised, he is not in any case bound to do so, even if the substituted work becomes impossible. The power of dispensing and commuting belongs to those who have ordinary jurisdiction (besides the pope, the bishop and the regular prelate) over all vows not reserved to the pope and vows the dispensation from which does not prejudice the rights of third persons. Without the consent of the latter these rights cannot be prejudiced by a dispensation from the vow, except by the exercise of a supreme power over those rights, such as is possessed by the pope over the rights of religious congregations. Moreover, the power of dispensation may be delegated either in special cases or even generally: thus the confessors of the regular orders may grant dispensation from vows to their penitents—that is to persons whose confessions they are authorized to receive.

Dispensation from a vow is ordinarily justified by great difficulty in its fulfilment or by the fact that it was taken without due deliberation, or by the probability of some greater good either to the person taking it or to others, as, for instance, to a family, the State, or the Church. In dispensing from vows, the ecclesiastical superior does not dispense from any Divine law, but he exercises the power of the keys, the power of binding and loosing, in order to remit the debt contracted to God: and this power appears so useful to society, that, even if it had not been formally conferred by Christ, we might contend that it would always have belonged to the authority responsible for the public interests of religion. (See Suarez, "De religione", VI, Q. xviii.) The direct annulment of vows

is more difficult of explanation; for no one can have a power extending so far as to interfere with the interior acts of another person. A son not yet arrived at the age of puberty may, even without the consent of his parents, make a promise of marriage; why does he appear to be unable, by reason of his tender age, to bind himself by any vow to God? We may observe that the distinction between direct and indirect annulment is not found in St. Thomas, or in Cajetan, but dates from a later period. With Lehmkuhl, we cannot explain this power without the intervention of ecclesiastical authority: in our opinion, the Church, in consideration of the weakness of minors and the condition of religious and married women, gives them a general conditional dispensation that is to say a dispensation at the discretion of the father, the superior, or the husband. The power to commute vows does not give the power to dispense from them; but the power over vows may, according to a probable opinion, extend also to oaths, and even to vows confirmed by oaths.

D. Reserved Vows

No person may, in virtue of ordinary powers, dispense from vows which the sovereign pontiff has reserved to himself. These vows are, first, all such as form part of a religious profession, at least in an institute approved by Rome, and this reservation applies also to vows taken by women belonging to orders, entitled to make solemn VOWS, but who in some countries take only simple VOWS. Besides these, five vows are reserved to the Holy See: the vow of perpetual chastity, the vow to enter the religious state (that is in an institution with solemn vows), a vow of a pilgrimage to the tombs of the Apostles, to St. James of Compostela, or to the Holy Land. However, these vows are only reserved if they are made under grave obligation, with full liberty and unconditionally, and if they include the whole object of the vow. The reservation does not extend to accidental circumstances, for instance, to enter one order in preference to another, or to make a pilgrimage in this or that manner. In urgent cases, when there would be great peril in delay, the ordinaries may, if necessary, dispense even from reserved vows.

IV. THE VOW OF CHASTITY

The vow of chastity forbids all voluntary sexual pleasure, whether interior or exterior: thus its object is identical with the obligations which the virtue of chastity imposes outside the marriage state. Strictly speaking, it differs (though in ordinary language the expressions may be synonymous) from the vow of celibacy (or abstinence from marriage), the vow of virginity (which becomes impossible of fulfilment after complete transgression), or the vow not to use the rights of marriage. The violation of the vow of chastity is always a sin against religion; it constitutes also a sacrilege in a person who has received Holy orders, or in a religious, because each of these persons has been consecrated to God by his vow: his vow forms part of the public worship of the Church. Some authors consider that this sacrilege is committed by the violation of even a private vow of chastity. Although a sin against the virtue of chastity is committed, there is no violation of the vow when a person without experiencing any sexual pleasure personally becomes an accomplice (as for instance by counsel) in the sin of another person not bound by a vow. Unless the person concerned is able honestly to abstain from all use of the rights of marriage, every simple vow of chastity constitutes

a prohibitive impediment to marriage; sometimes, as is the case in the Society of Jesus, it becomes by privilege a diriment impediment; when joined to religious solemn profession, it has the effect even of annulling a previous marriage not consummated. Some theologians have expressed the opinion that the religious profession produced this effect by Divine law; but it is more usual at the present day, and it seems to us more correct, to see in this a point of ecclesiastical discipline. A person who, in defiance of his solemn vow, attempts to contract marriage, incurs the excommunication reserved to the bishop by the Constitution "Apostolicae Sedis". Marriage following after the simple vow of perpetual chastity has the effect of making the perfect fulfilment of the vow impossible, as long as the married state continues -- therefore the observance of the vow is suspended, and the bishop or the regular confessor may give permission for the use of marriage. If the marriage is dissolved, the vow recovers its full force. We have already seen that the vow of the wife, taken at marriage, can be directly annulled by the husband, and that of the husband indirectly by the wife.

The Sovereign Pontiff may dispense from the vow, even the solemn vow, of chastity. History contains well-known examples of such dispensations; thus, Julius III permitted Cardinal Pole to dispense even priests who, at the time of the Anglican schism, had contracted marriage; Pius VII dispensed priests who were civilly married under the French Revolution. But such dispensations are only granted for exceptionally grave reasons; and even when a case is one of a simple vow of perpetual chastity freely and deliberately taken, the Holy See ordinarily grants a dispensation only in view of marriage, and imposes a perpetual commutation, such as the condition of approaching the sacraments once a month.

V. HISTORICAL VIEWS

Historically there are frequent instances of special vows in the Old Testament, generally under the form of offerings conditionally made to God -- offerings of things, of animals, even of persons, which might, however, be redeemed; offerings of worship, of abstinence, of personal sacrifices. See for example the vow of Jacob (Gen., xxvii, 20-22), of Jephthah (Judges, xi, 30, 31), of Anna the mother of Samuel (I Kings, i, 11), in which we find an example of Nazaritism, and the imprecatory vow of Saul (I Kings, xiv, 24). In Deuteronomy, xxiii, 21-23, it is laid down that there is no sin in not making a promise to God, but that there is sin in delaying to pay the vow. The New Testament contains no express commendation of vows; but two instances of special vows are specially recorded in the Acts of the Apostles (xviii, 18, and xxi, 23). In both these passages, the vows are of the same nature as those of the Nazarenes. These particular vows were not unknown to the Fathers of the Church, especially to St. Ambrose, "De officiis ministrorum", III, xii (P. L., XVI, 168); St. Jerome, Epistle 130 (PL 22:1118 and St. Augustine, Sermon 148 (P. L., XXXVIII, 799). But the Church especially recognized the promise to devote one's life to the service of God; baptism itself is accompanied by promises which were formerly considered as genuine vows, and which contain in reality a consecration of oneself to Jesus Christ by the renunciation of the devil and paganism. At a very early period continence was professed by virgins and widows -- and though this profession

appears rather under the form of the choice of a state of life than a formal promise, in the fifth century it was considered strictly irrevocable.

A. VERMEERSCH

Philibert Vrau

Philibert Vrau

"The holy man of Lille", organizer of numerous Catholic activities; b. at Lille, 19 Nov., 1829; d. there, 16 May, 1905. His father was a manufacturer of sewing thread; his mother, Sophie Aubineau, was a Parisian of refinement and intelligence. He attended the municipal college of Lille. His teacher, a pupil of Victor Cousin, inspired him with such enthusiasm for philosophical problems that after receiving his degree he devoted what leisure he had to them with a few young men he grouped around him. Influenced by unsound philosophy, he gave up the practice of his religion for four years, yet during this time he was active in a purely philanthropic society for the aged poor. After his conversion in 1854 he turned this into a religious society. His mother's prayers for him had been constant. Whole-souled always, he now desired to enter the religious life, but his parents' need of their only son restrained him. The failure of a banking scheme, through imprudent partners, plunged them heavily in debt; and as Philibert had now to retrieve the losses of the firm, none but the lay apostolate was open to him. After his conversion his ambition was to make Lille a truly Catholic city; in this aim he was seconded by his brother-in-law, Dr. Camille Féron-Vrau (1831-1908), who had been his most intimate friend from childhood. Féron-Vrau had not shared the philosophical aberrations of Philibert, but had studied medicine in Paris and was established at Lille, the friend of the poor and a skilful practitioner. When a new partner was needed in the Vrau firm in 1871 he abandoned his professional career. He established religious and beneficial societies for the working people, planned model dwellings for them, and also organized a society of employers and employees to close the gulf infidelity was making between capital and labour. He insisted on the right of the labourer to a living wage. In all this Philibert Vrau co-operated. Féron-Vrau was arrested in 1892 for allowing a religious element in the association of employers and employees of which he was president, and it was dissolved by law, but was soon revived under another name. Nocturnal adoration of the Blessed Sacrament was introduced into Lille by Philibert Vrau in 1857. He was largely instrumental in establishing Eucharistic Congresses. Urged by Mlle Tamisier, Mgr de Segur had appealed to Philibert Vrau, and the first congress was held at Lille. Catholic education from the primary school to the University of Lille owed much to him and to Féron-Vrau (see LILLE). Both greatly promoted the efficiency of the Conference of St. Vincent de Paul and multiplied its numbers. Féron-Vrau did much to Catholicize the medical profession, notably through the Society of St. Luke. After the death of his mother in 1888, Philibert Vrau devoted his time almost exclusively to prayer and numerous good works. He travelled much in these interests but in the humblest way. At the Vatican he was a familiar figure. The power of the press for good had not been overlooked by him, but to his nephew, Paul Féron-Vrau, the systematized apostolate of "The

Good Press" is due. Philibert Vrau was sentenced to a month's imprisonment and a fine for allowing some Sisters of Providence, though now in secular dress, to continue their superintendence of the women in his factory, a charge which they had begun in 1876. An appeal was made and the case was called up again two days after his death. In the crypt of the Church of Our Lady of Trielle, built by their efforts, are the busts of the two men who had worked so hard to supernaturalize all the activities of life.

B. RANDOLPH

Theodoric Vrie

Theodoric Vrie

Historian of the Council of Constance. He describes himself as a brother of the Order of Hermits of St. Augustine, and a lector in sacred theology in the Province of Saxony. From his description of facts it appears that Vrie must have been an eye-witness to the events he records. The history is brought down to the election and consecration of Martin V, 21 Nov., 1417. Vrie was still living in the summer of 1425, when a general chapter of his order at Rome authorized the republication of his work. Vrie's work is modelled on the "De consolatione philosophiæ" of Boetius; this also is its original title. It presents a vivid picture of the facts and disorders of the time, pointing out their source, and the remedy of the evils under the form of a series of dialogues in prose and metre between Christ and the Church Militant. The "De consolatione" of Vrie was printed in Cologne in 1484 with the works of Gerson (fourth volume), but was not repeated in the Strasburg edition of Gerson in 1494. It was printed again with a short life of the author in von der-Hardt (see below).

Von der Hardt, *Magni (Ecumenici Concilii Constantiensis Historia* (6 vols., Frankfort and Leipzig, 1697), I, introd., 1-228; Lanteri, *Postrema saecula sex* (Tolentino, 1858); Alzog, *Manual of Church History* (Cincinnati, 1903), II, 858.

FRANCIS E. TOURSCHER

Revision of Vulgate

Revision of Vulgate

In the spring of 1907 the public press announced that Pius X had determined to begin preparations for a critical revision of the Latin Bible. The need for such a revision had long been recognized and in fact it formed one item in the programme of the Biblical Commission established by Pope Leo XIII. In spite of the care which during forty years had been bestowed upon the text of the present authentic edition issued by Clement VIII, in 1592, it had been recognized from the first that the text would have to be revised some day, and that in some ways this Clementine revision

was inferior to the Sixtine version of 1590, which it had hastily superseded. Many generations have passed away without the realization of this expected revision. The last few decades have been pre-eminently a period for the critical examination of texts, classical and other, and it has of late been frequently urged upon the ecclesiastical authorities that the time had come when the well-established principles of textual criticism should be applied to determine the most correct Latin text of the Holy Scriptures. Private individuals, like the learned Barnabite Fr. Vercellone, had done something to prepare the way for such a work by the collection of manuscript variants, etc., and such works had received the thanks and other marks of approval from the authorities of the time, but no official action had been taken until Pope Pius X announced his intention of preparing for the revision.

In May, 1907, the abbots president of the various Benedictine congregations assembled in Rome received a communication from Cardinal Rampolla, asking the order in the pope's name to undertake the first stages in the process of revision of the Vulgate texts. Although the fathers fully recognized that such a work must necessarily be arduous, lengthy, and costly, they unanimously voted acceptance of the honourable task thus confided to them. In the autumn of the same year the present writer was appointed the head of a small commission of Benedictines to organize the work, to consider the best means of carrying out the wishes of the pope, and to determine the principles upon which the work of revisions should proceed.

As considered doubt has been expressed as to the exact scope of the present commission, it may be useful here to state clearly that its end is not to produce a Latin Bible, to be proposed as an official text for the approbation of the Church, but to take merely a preliminary step towards that official version. The object is clearly set forth in the charge given by the pope to the commission. It is to determine as accurately as possible the text of St. Jerome's Latin translation, made in the fourth century. This text is admitted on all hands to be an absolute necessity as a basis of any more extended and critical revision.

The Latin text of the Sacred Scriptures had existed from the earliest times of Christianity. The translator or translators were unknown to St. Augustine and St. Jerome; but the former says that the old Latin version had certainly come "from the first days of the Faith", and the latter that it "had helped to strengthen the faith of the infant Church." Made and copied without any official supervision these western texts soon became corrupt or doubtful and by the time of St. Jerome varied so much that that doctor could declare that there were almost "as many readings as codices." It was this that as Richard Bentley, writing to Archbishop Wade, declares, "obliged Damasus, then Bishop of Rome, to employ St. Jerome to regulate the last revised translation of each part of the New Testament to the original Greek and to set out a new edition so castigated and corrected." This St. Jerome did, as he declares in his preface "ad Graecam Veritatem, ad exemplaria Graeca sed Vetera."

At the present day scholars are practically agreed as to the competence of St. Jerome for the work given him by Pope St. Damasus. He, moreover, had access to Greek and other MSS., even at that time considered ancient, which are not now known to exist; he could compare dozens of important texts, and he had Origen's "Hexapla" and other means of determining the value of his

material, which we do not possess. It is obvious that the pure text of St. Jerome must form the basis of any critical version of the Latin Bible, and, what is more, that it must be taken into account in any critical edition of the Septuagint Greek version of the Old Testament and the various Greek texts of the New Testament, no manuscript copies of which are older than St. Jerome's Latin translation made on then ancient copies. Richard Bentley, the great scholar, as long ago as 1716, saw the importance of St. Jerome's translation. "'Twas plain to me," he writes, "that when that copy came first from that great Father's hand, it must agree exactly with the most authentic Greek exemplars; and if now it could be retrieved, it would be the best text and voucher for the true reading out of several pretended ones." Substantially, no doubt, the present authentic Clementine text represents that which St. Jerome produced in the fourth century, but no less certainly it, the printed text, stands in need of close examination and much correction to make it agree with the translation of St. Jerome. No copy of the actual text is known to exist; and the corruptions introduced by scribes, etc., in the centuries posterior to St. Jerome, and even the well intentioned work of the various correctors, have rendered the labours of trying to recover the exact text from existing MSS. both difficult and delicate. This, however, is the work which must be done as the first step in the revision of the Vulgate. It is consequently the aim of the present commission to determine with all possible exactitude the Latin text of St. Jerome and not to produce any new version of the Latin Scriptures. Of course it is altogether another matter to determine how far St. Jerome was correct in his translation: to settle this will no doubt be the work of some future commission.

In the autumn of 1907 the present writer reached Rome to make preparation for beginning the work thus entrusted to the Benedictine Order. From the first Pius X manifested his personal interest in the work, and discussed various points of detail. He made it clear that he desired the work of revision to be conducted upon the most approved scientific methods of modern times and that no expense was to be spared in securing thorough and accurate work in the collation and comparison of MSS. On 3 December, 1907, he addressed a letter to the Commission in order to make clear in as public a manner as possible his own personal interest in the work. He expressed his desire that an exhaustive examination of the libraries of Europe, public and private, should be made to bring to light any MSS. hitherto unknown and to furnish reliable copies and collations of the most important early texts. He urged all who in any way could assist in furthering this work to do so, either by personal service or by helping to meet the expenses by their alms, and upon all such he bestowed his Apostolic blessing.

Before the beginning of the year 1908 the small Commission had begun their sittings in Rome, which were chiefly occupied for some months in considering how best to start the work. For the purpose of bringing together the collations of the various MSS., it was determined to print an edition of the Clementine text for the use of those engaged in the work. Three courses seemed open: the variants could be entered on slips of paper with reference to some text already printed: or a chosen text might be mounted on paper and used for bringing together the various readings: or thereby the received text might be printed for their special work in such a way that the variations of MSS. could be entered upon the sheets as prepared. This last method was chosen by the pope himself, who

desired that the best system should be adopted in spite of the great expense entailed by printing the entire Bible.

The printing of this bible occupied considerable time, and it was not until the autumn of 1908 that it was ready for distribution. The edition is printed in such a way that the print occupies about a third of each page, the rest being left blank; there are no capital letters and no stops; and no word is divided between two lines. In this way the printed text is most easily corrected according to any MS. with which it is compared. If there is a capital letter in the MSS. two strokes under the letter in the print shows this; if a word or letter, etc., is different in the MSS., it is corrected in the printed sheet in the same way that it is usual to correct a proof sheet. Additions of words or sentences or their absence in the MS. are shown in the usual way. The result, when the printed sheets have been fully collated, is that the corrected copy of the bible, or any book of the Bible represents, or should, if properly collated, represent, the manuscript exactly. To secure accurate work the rule was laid down that no collation of any MS. should be accepted as final unless the collation made by one worker should be gone over by another person.

The Bible printed in this way extended to nearly 5000 pages, the Old Testament occupying roughly 4000. The Psalms took up some 299 pages and St. Paul's Epistles 278. The version over, St. Jerome found that the corrections he had made were not adequate, and he made a second recension with further corrections from the Greek, which subsequently was taken up in France, and was the version most in use in Gaul, etc., and became known as the "Gallicana." Gradually this recension superseded the "Romana version", which, however, remained in use in Rome for a considerable time, and at the present day is still used in the Divine Office chanted at St. Peter's. The "Romana version" was that which St. Augustine of Canterbury, coming as he did from Rome, brought with him to England, and it apparently remained the common version in that country until the Norman conquest.

The two versions thus made by St. Jerome by corrections of the old Latin in view of the Greek naturally contain much that is the same. To show this at a glance the common part has been printed in the centre of the text and the variants on either side, on the one the readings of the "Romana", on the other those of the "Gallicana." by the help of this print it is possible to see at once what version is to be collated, and the vacant space on the page serves for the collation of either version. The third version made by St. Jerome at a later period of his life was translated directly from the Hebrew. Although St. Jerome considered that this version really represented the true sense of the Psalmist, it was never accepted by the Church for practical use. It is to be found in some Bibles, especially of Spanish origin, either as an addition to the usual "Gallicana version," or in place of it. For the purpose of collating this Psalter of St. Jerome from the Hebrew it was necessary to print the best text of it separately.

The printing of this Bible occupied almost twelve months, and the preparation of the text and the corrections of the proof sheets alone were no light task. One hundred copies were printed on the best handmade paper to be used in the collation of the most important manuscripts, two hundred on ordinary book paper for the less important, and one hundred upon thin paper for taking about

to various libraries with greater ease than would have been the case with Bibles printed upon the heavier papers.

These sheets for collation have been in use since the early part of 1909, and already the collated copies, which have been returned to St. Anselm's, Rome, form a considerable collection of some sixty-five volumes. When the finished sheets have been received they are strongly bound into volumes containing portions of the Bible occupying perhaps six or seven volumes. Thus, when the full collation of the manuscript already begun is finished, there will be over a hundred bound volumes on the shelves of the working room in Rome.

For determining the importance of any text it is obviously of value to be able to settle the place or country from which the manuscript originally came. This is sometimes very difficult; and any help in settling this question is of considerable use, as it frequently shows the influence to which the manuscript was subject in the process of making. It is now understood that "capitula" or "breves", or, as we might call them, "tables of contents", which in most ancient Bibles are to found before each Book of Sacred Scripture, are of great value in determining the place or country of origin. As these "capitula" were no part of the sacred text, they frequently varied in number and in form of expression, according to the desire of the authority engaged upon copying a manuscript. The ordinary scribe would, no doubt, copy exactly what was before him, even the "capitula" of the particular volume. But any specially learned man, or one interested in the sacred text for some reason, or other, would not hesitate to make his own divisions and express the contents in his own way. These probably would be copied subsequently by local scribes, and the variations would now very possible determine the locality where the manuscript was made. For the purpose of collecting and arranging the various versions of these "capitula", tables were drawn up, in which the changes can easily be noted. Already the collection of these extra-biblical portions of the older manuscripts is so considerable that it has become possible to arrange them provisionally in a volume which is being printed to assist searchers in the various libraries to classify, at least in the first instance, the manuscripts that pass under their hands.

Another work that it has been found necessary to undertake immediately, in order to assist the worker in the libraries of Europe, is a provisional hand list of Latin Biblical manuscripts, entire Bibles, portions of Bibles or fragments. In this it is hoped to give indications of where, if at all, these MSS. have been noted or published, and gradually that the Commission will be able to collect and publish a corpus of all early Latin Biblical MSS. and fragments. The preparation of this hand-list is no well advanced.

In the course of researches for MSS. of the Vulgate many fragments of the older Latin version and other important documents were likely to come to light. As, moreover, it was necessary, in order to determine the text of St. Jerome, to know the versions of Scripture which he had to work upon, the commission determined to publish from time to time the most important of these under the general title of "Collectanea Biblica Latina." In this collection will appear two old Cassinese Psalters, edited by Abbot Amalle; fragments of the old Latin Bible, from the margin of the Leon Bible; and a MS. found by Dom Donatien de Bruyne in Spain; the Tours Pentateuch, edited by

Dom Henre Quentin, etc. It soon became apparent to the Commission that it was necessary to use photography in the work of collating. The utility of a great collection of photographic representations of biblical manuscripts is obvious. No one is absolutely exact in collating, and when the various collations are being compared, doubt as to the correct reading must sometimes arise. If the collation is one that has been made of a transcript in some far distant library, it is impossible at the moment and without great difficulty and the expenditure of much time and trouble to resolve the doubt. The possession of a photographic copy of the MS. allows the reading to be verified in a few minutes.

Moreover, photographic copies assist the process of collation very considerably. If the photograph is really good it is easier work to deal with it than with a manuscript, and the worker is not bound to the hours and days of the library in which it is preserved. Moreover, photographs can be sent to people willing and able to do the work, who are unable to go to the place where the manuscript is.

It was resolved to procure the best possible apparatus, and Dom Henri Quentin charged himself with watching over the department for the commission. M^r Graffin, who had long experience with the black-and-white process in the copying of Oriental MSS., placed his knowledge at the commission's disposal, and the results achieved have been even better than was anticipated. The machine used is capable of producing copies in any size that may be desired, and there are now bound volumes of photographs from folio size to small octavo. Copies of many of the most important Biblical MSS. have already been taken in Paris, London, Rome, and elsewhere, and an entire photograph reproduction of the Codex Amiatinus, with its many hundred folios, has lately been added to the commission's evergrowing collection. The list made in November, 1911, gives some hundred bound volumes of photographs. Many of these have already been collated, and others are waiting to be dispatched to collaborators to undergo the process.

Owing to the defects in the manuscripts themselves, and sometimes of course in the photographs, it has been found necessary to collate the copy with the original text. Where there is any defect or place of doubt as to the reading of the photograph, the reading is entered in the margin of the mounted photograph. When this has been done the result is that the copy is as perfect a reproduction of the original text as it is possible to obtain, and the collections of photo-copies and MSS. collated with printed texts of the commission's prepared Bible, form as good a mass of material for working purposes as it is possible to procure.

Besides the material for the revision of the present text, the Commission has been endeavouring during the past two years to amass a collection of all the Biblical texts already in print. This has been a difficult and costly process, but considerable progress has been made with this branch of the work, and the collection at the present moment upon the shelves of the working-room in Rome has already shown how useful and indeed necessary it is to have all these texts at hand for reference.

The process of gathering the variants of the different MSS. for the purpose of comparison will be commenced almost immediately. A trial volume of one book of the Old Testament, with columns for some thirty manuscript readings was prepared at the beginning of 1911, and by large registers have been made to continue and extend the process. The experience gained by the trial volume

shows that by this method it will be possible to divide the colated manuscripts into families, and otherwise to determine the best readings.

The work of exploring the various libraries of Europe was commenced almost at once. the contents of most of them were already arranged and catalogued, but for the most part the various Latin Biblical MSS. had not been sufficiently studied or collated to allow the Commission to dispense with a fuller examination and a thorough collation. this was set on foot in various places at once. The finest collection of such MSS. is probably in the Bibliotheque Nationale at Paris. For the past three years two, and sometimes three, Benedictines have been at work o this precious collection of Biblical treasure. The authorities have given the workers every facility for photographing and collating any manuscript desired. In this way the Commission now possesses complete photographs of several of the most important codices, and collations of all these are either already finished, or are in the process of being done by the collaborators. In London too the authorities of the British Musuem readily permitted the Commission to do what was desired to secure copies and collations. Last summer Dom Henri Quentin travelled with the photographing machine in Italy. At Florence he secured a large-sized copy of the celebrated "Biblia Amiatina", now in the Laurentian Library in that city. It may be useful to say a word about the almost romantic history of this manuscript, especially as it may very possibly be found to be among the most important MSS. for the Vulgate text.

The "Codex Amiatinus", so-called because it at one time belonged to the monastery of Amiata, was much used by the revisers of the sixteenth century who produced the Sixtine version of 1590. It was then considered to be a very excellent Italian MS., and it was so considered until quite recent times. We now know that the volume was actually copied in the north of England about the year 700. On the second page of the codex there is an inscription saying that the volume was given to the monastery of Saint Saviour's Amiata by a certain abbot, Peter the Lombard. Some few years ago the celebrated De Rossi, examining these lines, pointed out that they were not the original lines, and that in particular the Abbot Peter's name had been written over an erasure and that the original name was a name like "Ceolfridas." This conjecture was confirmed by the Cambridge scholar, Dr. Hort, who pointed out that these very lines with changes in those places where changes had been made in the original were given in the ancient lives of the abbots of Wearmouth and Jarrow as having been in the copy of the Bible taken from England as a present to the pope in A.D. 715.

The history of this precious volume is w clear. St. Benet Biscop, the founder of the twin monasteries of Wearmouth and Jarrow, went many times to Rome in the seventh century and brought back many MSS. St. Bede, who wrote about the abbots of his monastery, tells us that on one occasion Bishop returned with a great Bible "of the new translation" (i.e. St. Jerome's Vulgate). Of this St. Benet Biscop's successor, Ceolfrid, had three copies made at Wearmouth: one for each of the monasteries and the third destined as a present to the pope. Abbot Ceolfrid resigned his abbey in 715, and determined to pay a visit to Rome in order to carry with him the great Bible he had prepared for the pope. St. Bede describes his setting forth on his journey with one of his monks bearing the large volume. St. Ceolfrid died upon the journey, and it is doubtful whether the Bible

ever found its way to Rome: at any rate all trace of it was lost until it was recognized in the "Codex Amiatinus", through the joint scholarship of De Rossi and Dr. Hort.

The book itself is of great size, each page being nineteen and one-half by thirteen and one-half inches. it is written in the most regular uncial hand in two columns to the page. Not even a fragment of the other two copies mentioned by St. Bede was known to exist, until quite recently. Two years ago the present writer received, through the kindness of Mr. Cuthbert Turner of Oxford, two large photographs of a page of a Bible, which is undoubtedly a fragment of one of these two MSS. Canon Greenwell of Durham had some years before obtained the leaf from the binding of an old account book which had been bound at New Castle in the year 1798. It would seem, therefore, that at that time some portions of these precious codices were in existence. It is possible of course that other portions may yet be found in other bindings. The leaf found by Canon Greenwell has now been acquired by the British Museum.

For the Gospels another celebrated MS., known as the "Lindisfarne Gospels", also written in the north of England about the same time (A.D. 700), may be noted here as furnishing a pretty page in the history of the sacred text. This wonderful MS., which is to be seen among the treasures of the British Museum was written by Bishop Eadfrith of Lindisfarne (A.D. 698-721) and illuminated by his contemporary, Ethelwald. The illuminations, which manifest the characteristics of Irish art, are of exceptional beauty, and in some ways are not surpassed by any other contemporary MS. The history of the volume deserves a brief notice. it was at Lindisfarne until the invasion of the Danes in 875 forced the monks to carry it away, together with the shrine of Cuthbert. Tradition says that whilst flying from the Danes the monks on reaching the western coast of the mainland conceived the intention of carrying their treasures over to Ireland. On making the attempt they were compelled to return, but not before the volume of the Gospels they were carrying had fallen overboard into the sea. it was recovered in a wonderful manner, which is related in the twelfth century by Simeon of Durham. Strange to say, some of the blank leaves at the end seem to show marks of water stains.

The great interest of the volume, apart from its artistic merits, lies in its pictures of the Evangelists, etc. Whilst the borders of these pictures are characteristic of the exquisite interlaced pattern work of the Irish scribes, the figures themselves are quite different and are suggestive at once of Byzantine models. it had long been a puzzle to archaeologists to account for the existence of such models in the north of England in the early part of the eighth century. it is seldom that so satisfactory an answer can be given to a problem of this nature. The text of the Gospels was copied from a volume brought into England by the Roman missionaries, and thus coming from the south of Italy would probably have had illuminations made after the Byzantine style of art. This knowledge we owe to the researches of Mr. Edmund Bishop, which were first published by Dom Morin in the "Revue Bénédictine." The Gospel "capitula" (the indications of portions of the Gospels to be read in the churches) follow the Neapolitan use, and the calendar of the volume enabled Mr. Bishop to give the exact place as the island of Nisita, in the Bay of Naples. To fill up the story is easy: The Abbot Hadrian, who accompanied St. Theodore the Greek to England when he was sent over as Archbishop of Canterbury, was abbot of Nisita. St. Benet Biscop, who acted as their guide to

England, welcomed them to his monasteries in the north; and there can be little doubt that Abbot Hadrian brought thither the volume with Byzantine models, made in South Italy, which were copied by the Irish scribes as we see them today in the Lindisfarne Gospel Book.

In Rome a partial collation and an entire photographic copy have been made of the important Bible at St. Paul's-without-the-Walls. This is a fine copy of the Alcuin Bible, with many beautiful illuminated letters and pages. Probably the best exemplar of this Bible is the large codex at Zurich, a photographic copy of which has also been secured together with a collation of the Octateuch made for the Commission by the under-librarian, Dr. Werner. A third copy is the best known of the three, that at the Vallicelliana Library in Rome. A collation of the Pentateuch of the last has been made for the Commission by Father Bellasis of the Oratory; but it has not yet been photographed, owing to difficulties made by the custodians. The Commission came to the conclusion that the collation of these three manuscripts would be sufficient to determine the type of the corrections made by Alcuin. These should be of interest to Englishmen since for the purpose of his revision Alcuin sent over to the libraries of England to obtain the best MS. evidence. The copy of the Alcuin Bible at St. Paul's in Rome has a special interest since in the thirteenth century Bishop Gradisson of Exeter ordered all the copies of the Sacred Scriptures in his diocese to be corrected according to a copy of the text of that Bible.

Whilst in Italy Dom Quentin went to the monastery of La Cara and photographed the interesting Bible of Spanish origin, which has long been in the possession of the monastery there. Most of the text has now also been collated on the MS. by Dom Cottureau, who has spent many months at the monastery for that purpose.

It was supposed that a good deal of important material was likely to be found in the cathedral and other libraries of Spain; and in the spring of 1909 Dom de Bruyne undertook to make a *voyage littéraire* for the Commission in that country. His object was to examine the Biblical MSS. known to exist and to see if others could be found. In his report to the Commission he says: "I had an excellent guide in the 'Handschriftenschätz Spaniens' of R. Beer. The two most important *lacunae* in it relate to the manuscripts of Roda and Urgel. It might well be thought that these two important collections had disappeared or been lost. I, however, found them intact or nearly so, the first in the Cathedral of Lerida, kept in a special book-case; the second at Urgel itself. In most of the libraries of Spain manuscript catalogues sufficiently good are to be found." It may be of interest to give a list of the libraries of Spain which were examined by Dom de Bruyne in the course of his journey. Barcelona (Archivo de la Corona de Aragon and the cathedral); Vich; Tarragona (Bibl. Provincial and the Seminario); Saragossa (Séno, N.D. del Pilar, and the university); Sigüenza; Madrid (Bib. Nacional, Academia de la Historia, Museo archeologico, Archivo historico nacional, university and Bib. Real); Escorial; Toledo; Leon (cathedral library and that of St. Isidoro); burgos (cathedral, seminary, and Bib. provincial). Urgel, Gerona, and Pampeluna.

Dom de Bruyne thus sums up the results of his journey in Spain: "I have descriptions of all the Bibles, more or less at length, according to their age and importance. Some of the volumes have been collated, either wholly or in part. All the leaves of two Biblical palimpsests (Escorial, R. II,

18, and Leon, cathedral archives, 15) have been identified; the text of Baruch, up to this time only known by the Codex Gothicus Legionensis, which had been published by Hoberg from a copy in the Vatican made in the sixteenth century, has been collated upon the MS. at Leon and compared with other independent copies I discovered. At Siguenza I found a fragment in Arabo-Latin of St. Paul, which has been published in the 'Revue Biblique' in 1910. The interesting marginal notes of the same Leon Bible, published in part by Vercellone from the Vatican sixteenth-century copy, were reviewed and completed upon the original MS.; and I found another independent MS. text of these notes at Madrid, so that it will now be possible to give a critical edition of these important fragments." This edition of fragments of the old Latin text is being prepared by Dom de Bruyne, and will in due course be published in the proposed series of texts and studies, called the "Collectanea Biblica Latina", projected by the commission.

The Commission had during the past year been able to add to its collection of collations those of two MSS. possessed by Mr. Pierpont Morgan. He kindly permitted Mr. Hoskier to examine and collate these manuscripts for the Commission. The first is the precious codex known as the "Golden Gospels." Samuel Berger has said of this volume: "In the important and ancient group of MSS. written in golden letters the oldest is beyond doubt the famous Hamilton MS., 251." At the sale of the Hamilton collection in 1890 this volume was purchased for an American gentleman named Thomas Irwin of Oswego. On his death it was purchased by Mr. Pierpont Morgan and added to his collection. The collation made for the Commission by Mr. Hoskier has recently been published in a magnificent folio volume with several facsimiles in colour and gold. Mr. Hoskier prefaced it by an ample introduction both palaeographical and critical. In this same volume is the collation of a fragment of the Gospels, also in the possession of Mr. Pierpont Morgan. This fragment of seventeen leaves is written in a remarkably fine uncial hand, and the rest of the MS. is to be found in the "Musée Germanique" of Nuremberg. A collation of this part was made in 1881, and printed by Dombart in the "Zeitschrift für Wissenschaftliche Theologie" (De Codice Cremifanensi Millenario, Pars. I).

The work of collation is necessarily long and tedious. It requires great care and minute observation since nothing is too small to be passed over for the most insignificant thing may be found to throw light on a problem or help to identify a manuscript. A few tags of torn-out leaves in a manuscript of St. Paul at Monza have helped to clear up a disputed point of importance. The addition by the hand of a corrector of the Irish symbol for *autem* (but) in a very old Heptateuch in the Vatican Library is the sole certain indication in the volume that it had passed at one time under Celtic influences, and this has immediately connected it with St. Columban's colony at Bobbio. In the fragments of the old itala version written on the margins of the Codex Toletanus and in another MS. at Madrid, appears the word *mulecula*. It is in no dictionary, but it appears in one of the inscriptions at Pompeii: *mula docet muleculam*. De Rossi conjectured that it was a barbarous Latin word for "fly", and this explanation was accepted until the present time, when, from the Greek of the passage of the old Itala, it evidently means "young mule." Thus the sentence at Pompeii becomes clear.

From time to time the Commission has come across fragments of Bibles in the course of researches in libraries, which show how precious MSS. have been destroyed. When other and newer texts had been made for the use of some church or monastery there appears to have been little hesitation in using the older copies for binding purposes or, for the sake of the parchment, obliteration of the original writing and putting some other text upon it. Thus in the bindings of the books at Durham and at Worcester some precious fragments of very old Bibles have been found. At Worcester the fragments recovered in this way may not impossible be leaves of a Bible presented to Worcester by King Etheldred in the tenth century. Perhaps the most curious fragment of a Gospel Book that has come to the Commission's notice is a portion of a fine Spanish MS. of large size. This, which contained the whole of the Gospel of St. John, had been torn out of a volume in such a way that several fragments of the Gospel of St. Luke had been left on torn leaves of fine parchment. The Commission has endeavoured in vain to locate the rest of the text from which this excellent Visigothic fragment had been so ruthlessly torn away.

The Commission has frequently been asked how the large expenses of its work are provided. It is obvious that the cost of printing the text of the Clementine Bible, as well as for gathering the collations, was not inconsiderable, especially as a part of the print was upon the best hand-made paper, to provide against the chance of loss through perishability of a paper of inferior quality. The photographic apparatus was also a great initial expense, and although the photographs are taken at the smallest possible cost, the production of entire Bibles comes to a very large sum. Besides this there is the cost of mounting and binding the photographs in volumes, besides the binding of the volumes of completed collations. This may be called the mechanical side of the work. The work of research and collation is of course done gratuitously, but the journeys necessary for making proper researches in the libraries of Europe and the support of the scholars engaged in the work must be paid for.

To meet these expenses Pius X charged the present writer to make an appeal to the generosity of Catholics and others throughout the world. He thought that the need of some such revisions of the Latin text of the Holy Scriptures was so obvious that the funds would be provided by the generously disposed. From the first the Pope declared that he would be responsible in the last resort; but so far the generosity of the faithful, particularly in America, has enabled the writer to find the money requisite to keep the work going after the pope had met the initial expense of printing the text for the collations.

FRANCIS A. GASQUET

Wilhelm Heinrich Waagen

Wilhelm Heinrich Waagen

Geologist, and palaeontologist, born at Munich, 23 June, 1841; died at Vienna, 24 March, 1900. He completed a brilliant course at the University of Munich with the degree of Doctor of Philosophy and the publication of an elaborate work on geology, which was crowned by the university. In 1866 he became an instructor in palaeontology at the University of Munich and at the same time taught Princess Theresa and Prince Arnulf of Bavaria. Although an excellent teacher, and especially competent in practical work, Waagen, who was a most loyal Catholic, had little prospect of obtaining a professorship at the University of Munich. Consequently, in 1870, he accepted the offer of a position as assistant in the geological survey of India. The severity, however, of the Indian climate obliged him to return permanently to Europe in 1875. In 1877 he became instructor at the University of Vienna, and lectured with great success on the geology of India. In 1879 Waagen went to the German Polytechnic of Prague as professor of geology and mineralogy; in 1890 he was professor of palaeontology at the University of Vienna; in 1886 he had declined a call to the school of mines at Berlin. He was named councillor of the board of mines (*Oberbergart*), and in 1893 was made a corresponding member of the Academy of Sciences. Waagen's writings before his trip to India treat especially the German Jura and its fossils. He did work of permanent value in the geological investigation of India (the Salt Range) by the scientific presentation of rich palaeontological material. In 1869, after an exhaustive study of ammonites, Waagen advocated the theory of evolution or mutation for certain series of fossils. As a young man he had taken an active part in the Catholic life of Munich, and two years before his death he wrote a treatise on the first chapter of Genesis which shows both the learned geologist and the devout Christian.

Waagen was one of the editors of the periodical "Geognostische-paläontologische Beiträge" (Munich), and during the years 1894-1900 editor of the "Beiträge zur Paläontologie Oesterreich-Ungarns und des Orients" (Vienna); after the death of Barrande (1883) he edited several volumes of Barrande's work "Système silurien". Waagen's most important works were: "Der Jura in Franken, Schwaben und der Schweiz" (Munich, 1864); "Klassifikation der Schichten des obern Jura" (Munich, 1865); "Die Formenreihe des Ammonites subradiatus" (Munich, 1869); "Ueber die geologische Verteilung der Organismen in Indien" (Vienna, 1878); "Das Schöpfungsproblem" in "Natur und Offenbarung" (Munster, 1898; as a separate publication, 1899); "Gliederung der pelagischen Sedimente des Triassystems" (Vienna, 1895). He wrote in English: "Jurassic Fauna of Kutch" (1873-6); "Productus Limestone" (1879-91); "Fossils from the Ceratite Formation" (1892).

UHLIG in Centralblatt für Mineralogie, Geologie und Paläontologie (Stuttgart, 1900).

JOSEPH H. ROMPEL

Robert Wace

Robert Wace

Poet, born at Jersey, about 1100; died at Bayeux, 1174. His maternal grandfather, Toustein, was a chamberlain to Duke Robert, and his family belonged to the nobility. When very young, as he was destined to the Church, he was sent to Caen to make his studies, and afterwards to Paris. Between 1130 and 1135 he returned to Caen, where he was appointed *clerc lisant* (reader) to King Henry I. Being in straitened circumstances, he began to write to increase his resources. The first one of his works that have come down to us are; "The Life of St. Nicholas"; "The Life of St. Margaret"; and the "Brut", better known under the title of "Geste des Bretons". The latter poem, presumably finished in 1155, was presented to Alienor, Queen of England; the two other works had been written for wealthy lords who had books translated from Latin for their personal instruction. In 1160 he began his "Roman du Rou", or "Geste des Normanz", dedicated to King Henry II. In 1162 he accompanied the king at Fecamp, when the remains of Richard I and Richard II were removed. He was appointed canon of Bayeux not between 1155 and 1160, but between 1160 and 1170, according to his own authority. At the beginning of his poem, he says positively that when he began to write the Rou's history, in 1160, he was "a clerk of Caen", while in the second part (certainly composed after 1170) he states that he was granted a prebend in the church of Bayeux by King Henry.

PARIS in Romania, IX; MEYER in Romania, XVII (Paris).

LOUIS N. DELAMARRE

Eberhard Wachter

Eberhard Wachter

Painter, born at Stuttgart, 29 February, 1762; died at Stuttgart, 14 August, 1852. He studied painting at Paris under Regnault, David, and Gros, and later went to Rome, where he improved his French classical style of painting by the study of Italian art. He appreciated Carsten's freer style with its sterling merit, and adopted the ideas of the Romantic school. While at Rome he became a Catholic. He gained great influence over his contemporaries by his fine perception of the depths of feeling that could be evoked from the subjects he used. To this period of his best work belong a "Child Jesus on the Lamb", "Belisarius at the Porta Pinciana at Rome", and "Job and His Friends". In 1798 the French drove him from Rome, and he went to Vienna, as he found no place in his native town of Stuttgart, on account of his conversion. At Vienna he illustrated books and made drawings, many of which were etched or engraved by Rahl and Leybold. While there he also painted a "Mater dolorosa", a "Caritas", and "Criton visiting Socrates in Prison". Wachter was the real founder of the Brotherhood of St. Luke, a society of those painters who soon after established at Rome a more natural and thoughtful school of painting, known as the Nazarenes. Wachter finally went to Stuttgart, where he painted "Cimon in Prison", "Ulysses and the Sirens", the "Boat of Life", "Andromache

standing at the Urn with Hector's Ashes", the "Greek Muse mourning over the Ruins of Athens", a "Virgin with St. John Sorrowing at the Grave of Christ", etc. He excelled in treating lyrical and elegaic subjects.

WINTTERLIN, *Wurtembergische Kunstler in Lebensbildern* (Stuttgart, 1895); RIEGEL, *Gesch. Der neueren deutschen Kunst*, I (Hanover, 1876); REBER, *Gesch. Der neueren deutschen Kunst*, I (Stuttgart, 1884).

G. GIETMANN

Luke Wadding

Luke Wadding

Historian and theologian, born at Waterford, Ireland, 16 October, 1588; died at St. Isidore's College, Rome, 18 November, 1657.

I. BIRTH AND EDUCATION

He was the son of Walter Wadding, a citizen of eminence, and Anastasia Lombard, a near relation of Peter Lombard, Archbishop of Armagh. He was the eleventh of fourteen children and was baptized on the feast of St. Luke. Many members of his family distinguished themselves in their various careers. His brother Ambrose, the Jesuit, taught philosophy with applause at Dillingen, Bavaria, where he died in the flower of his age. His cousins Richard Wadding, the Augustinian, and Peter and Michael Wadding, Jesuits, shed lustre on their respective orders. He was brought up piously by his excellent parents, who, Harold tells us, required all their children, boys and girls, when able to read, to recite daily the Little Office of the Blessed Virgin, and, at stated times, the Penitential psalms with the litanies and orations, the Office of the Dead, and other prayers contained in the so-called minor breviary of Pius V, then much in use among Catholics in Ireland. At the age of thirteen he had already acquired a good knowledge of the Classics, and had learned to write Latin, prose and verse, with facility. The excellence of his early classic training shows out through all his writings. He lost both parents at the age of fourteen, but his brother Matthew took charge of his education and put him to study philosophy. He read logic and part of physics in Ireland, and then entered the Irish seminary at Lisbon, prosecuting his studies under the Jesuits. After six months he left the seminary to enter the novitiate of the Friars Minor in the Convent of the Immaculate Conception at Matozinhos, near Oporto. Having made solemn profession and received minor orders in 1605, his superiors sent him to Leyria, the house of studies, to specialize in Scotistic philosophy for two years. Richard Synott, of Wexford, companion of Wadding's novitiate and studies, and afterwards Guardian of S. Isidore's, Rome, died a martyr in Ireland at the hands of the soldiers of Cromwell. Wadding read theology at Lisbon, and then for three years at Coimbra, hearing in this latter place Didacus Limadensis, O.F.M., at the College of S. Bonaventure, and Suarez and Ægidius a Praesentatione, O.S.A., at the university. The Benedictine monk Leo a S. Thoma bears witness to the great talents he displayed (see Harold, "Vita", c.v.). Ordained priest in 1613 and commissioned

to preach, he showed himself a perfect master not only of rhetorical art but of the Portuguese and Castilian languages. He commenced in 1613 to draw up a *sy/va* or commonplace-book of quotations from the Scripture, the Fathers, the lives of the saints, etc., which is still preserved in two large volumes of manuscript in the archives in the order at Merchant's Quay, Dublin. After a brilliant academic display at Lisbon during a provincial chapter, Antony a Trejo, the vicar-general of the order, sent him to Salamanca for fuller opportunities. Here he mastered Hebrew, composed his work on the origin and excellence of that tongue, and was assigned the chair of theology in the College of St. Francis.

II. EMBASSY TO ROME

He filled the office of professor till 1618, when, though only in his thirtieth year, he was chosen by Philip III for the office of theologian in the embassy which Philip was then sending to Paul V to promote the doctrine of the Immaculate Conception. Antony a Trejo, Bishop of Cartagena, who, as vicar-general of the order, had been Wadding's patron and admirer, was the legate-extraordinary appointed for the purpose. Leaving the Court of the Catholic King on 1 October, 1618, the embassy reached Rome on 17 Dec. In search of materials for the work entrusted to him, as well as for his other studies. Wadding spent whole days in the libraries of Rome, visiting also those of Naples, Assisi, Perugia, and other cities. The composition of the more important *vota* of the legate, the preparation of the pleadings before the pope, and the solution of the theological difficulties devolved in great measure on him. He has given us the history of the embassy in his "Acta legationis", a succinct and objective statement of the proceedings and of the theological issues demanding solution. At this time we find him in close correspondence with the exiled Archbishop of Tuam, Florence Conry, to whom he sent a manuscript copy of his "Acta" to Louvain. In May, 1620, the legate returned to his diocese in Spain, but Wadding was ordered to remain in Rome to assist the new chargé d'affaires. While the commission lasted he was its accredited theological adviser. Philip IV, in a gracious letter, thanked him profusely for his services in this connection. The three *opuscula* on the redemption, baptism, and death of the Blessed Virgin (1655 and 1656), were written as contributions to the question before the commission.

III. LITERARY ACTIVITY

But Wadding's activity was not confined to the work of the embassy. His predominating idea for a long time had been to vindicate the name of his order by rescuing from oblivion the memory of the men who had rendered it illustrious in every age. The publication of their writings and the recording of their deeds he considered the best answer to those who charged the order and its founder with being professionally opposed to learning. He found an ardent and effective supporter in the general for the time being, Benignus a Genoa, who in 1619 by encyclical letters to the whole order ordained that suitable men should be told off in each province to transcribe and forward to Rome all documents bearing on the history of the order. The materials thus accumulated were handed over to Wadding. The most distinguished of the collaborators referred to were Bartholomew

Cimareli and Jacobus Polius, the former working in the archives and libraries of northern and central Italy, the latter in those of Germany.

As a first instalment Wadding published in 1623 at Antwerp a complete and annotated edition of the "Writings of St. Francis" was in course of preparation, Marius a Calasio, a learned Franciscan, died in Rome, leaving unpublished four large tomes of a Hebrew concordance, besides a Hebrew grammar and dictionary. Wadding undertook the publication, being able, through the munificence of Paul V, to establish for the purpose a printing-press with Hebrew type at the Convent of Ara Coeli. To this work, which was considered at the time a valuable contribution to Biblical knowledge, he prefixed his own essay "De hebraicae linguae origine, praestantia et utilitate ad ss. litterarum interpretes", which he had composed at Salamanca. About the same time he undertook the publication of the works of Angelo del Paz, a friar of great learning who died in the odour of sanctity some twenty years before in the convent of Montorio. The first tome appeared in 1623, being Angelo's commentaries on the Gospel of St. Mark; the commentaries on the Gospel of St. Luke followed in 1625 and 1628, with the promise of two other volumes which, however, never saw the light. In 1624 he issued in one volume the "Concordance of St. Antony of Padua" and the "Promptuarium morale" of an anonymous Irish Franciscan, probably Thomas Hibernicus, adding ample marginal notes of his own. In this same year (1624) there appeared at Vienna, but under another name, Wadding's account of the martyrdom at Prague of fourteen Friars Minor, put to death for the Faith by the Bohemian heretics. Hieronymus Strasser, to whom the author sent his manuscript with a view to certain corrections, published the whole under his own name: Wadding himself, who gives Strasser a place among the "Scriptores", gives us at the same time the true genesis of the German friar's work. It was also in this year (1624) that he published his "Legatio Philippi III et IV".

In 1625 he issued at Madrid his "Apologeticum de praetenso monachatu augustiniano S. Francisi", in refutation of the theory that the founder of the Friars Minor had been an Augustinian. The third edition (Lyons, 1641) contains the author's response to Thomas Herera, a learned Augustinian. The singular theory has not since been broached. At the desire of Urban VIII, Wadding undertook in 1630 to correct and edit, in collaboration with Victoreli and Ughelli, the "Lives of the Popes and Cardinals" by Alphonsus Ciacconius. Other minor publications were: a "Life of Bl. Peter Thomas, Patriarch of Constantinople" (Lyons, 1637); a corrected and annotated edition of the metrical "Life of St. James della Marchia" by John Petrucci, Archbishop of Tarentum (Lyons, 1641); an edition of the "Oculus moralis" of Joannes Guallensis, O.F.M. (which had hitherto attributed to Raymundus Jordanus, Canon Regular of St. Augustine); an edition of the "Collection of saying and deeds of celebrated Philosophers" and of the treatise "De Sapientia sanctorum", by the same writer (Rome, 1655); a "Life of St. Anselm", Bishop of Lucca, from materials which the author had come across in his studies on the pontificate of Gregory VII (Rome, 1657); an edition, on a new plan, of the "Summa casuum" of Emanuel Rodericus, brought out at Salamanca when the editor had just completed his theological studies (1616); "Epigrammata pia", a collection of Latin verses and inscriptions composed by Wadding when professor at Salamanca, and published by Francis a Susa, ex-general of the order, in his "Sanctorale seraphicum" (Salamanca, 1623). Marraccio

(ap. Joan, a S. Antonio) refers to the publication by Wadding of a tractate, "De scandalis in controversia Immaculatae Conceptionis", and Sbaralea (Supp.) mentions a posthumous work on the Jansenists, published in 1696. Finally, the author himself in his "Scriptores" mentions among his published writings "Officia plurima, praesertim lectiones II Noct., Sanctorum Ecclesiarum tum in Hispania, Germanica, Bohemia, Hungaria", etc.- liturgical officer written in his capacity of consultant to the S. Congregation of Rites.

But Wadding's fame as a writer and a critic rests chiefly on his monumental edition of Scotus, on the "Scriptores", and, above all, on the "Annales ord. minorum". In 1639 he published at Lyons a complete edition of the writings of the Subtle Doctor, in 16 volumes, having devoted four years to the proximate preparation. He corrected the text throughout according to the best manuscripts and earliest impressions, inserted everywhere critical notes and learned *scholia*, and enriched the edition with the commentaries of MacCaughwell, Hickey, Lychetus, Ponce, and others. It was a colossal undertaking, and would alone have immortalized his name. His life of John Duns Scotus, which is prefixed to the first volume, appeared separately in 1644. The "Scriptores ord. minorum" he published in 1650 in one folio volume. It is an alphabetical list of the writers of the Seraphic Order with a syllabus of their works. It still holds its place, along with the "Supplementum" of Sbaralca, as the standard work on the subject. A new edition by Dr. Nardecchia of Rome is now nearing completion. But Wadding's greatest literary achievement was the "Annales ord. minorum", a history of the Franciscan Order from its foundation. Eight volumes appeared between 1625 and 1654, bringing the work down to 1540. Two other volumes were to appear, but death intervened. He closed the eighth tome with the words: "suspense calamo illud unum agam quod potissimum necessarium est: animae scilicet procurandae totus incumbam". This great work, which critics, worthy of the name, have never ceased to extol, has placed its author in the foremost rank of ecclesiastical historians. To say that the work is free from defects would be to demand for it more than is given to man to accomplish. Considering the magnitude of the undertaking and that the author's work was, largely, the work of a pioneer, it must be acknowledged to be a compilation of exceptional accuracy. The strictures of those critics who find "serious chronological errors" and a "want of accuracy and scientific method" in the Annals are hardly borne out by a close study of the work itself. "Only those who have consulted the Annals hundreds and thousands of times", writes Holzapfel (*Geschichte des Franziskanerordens*, 582), "can appreciate its true worth." Wadding has had several official continuators of the "Annales", but all of them vastly inferior to himself, the author of Volume XIX being perhaps an exception.

Besides the works he had succeeded in publishing, Wadding had projected various others, for which he left a considerable amount of material. Among them were the following: history of Popes Clement VIII, Leo XI, Paul V, Gregory XV, and Urban VIII, and of the cardinals created by them; an edition of the rarer works of Franciscan writers; the Annals of the Kingdom of Ireland (from which project he withdrew owing to the impossibility at that time of obtaining necessary documents from Ireland); a volume of his own letters; the Acts of all the Chapters General of the order (in which work he was anticipated by Michael Angelo of Naples, who began the publication of the

"Chronologia historicolegalis" in 1650); a history of all the bishoprics of the Universal Church; and an exposition of the Rule of St. Francis. Our admiration at the activity displayed in so many works increases as we recall the circumstances under which he wrote. His daily occupations, says his biographer, were so numerous that most of his literary work was done in the quiet hours between sundown and midnight. He himself, in his preface to Vol. VI of the "Annales", writes: "In solo noctis decursu licuit opus compingere, die universo per molestas curas distracto." Moreover, though his energy was prodigious, his physical constitution often proved unequal to the strain. From the age of twenty-two he suffered from headaches of the most violent kind, once and often twice in each month.

IV. WORK FOR IRELAND

When he arrived at Rome in 1618 he found the name of Ireland partly ignominiously ignored, partly (owing to the wiles of her traditional enemies) disparaged and reviled. But he lost no opportunity of rectifying matters, and soon succeeded in making Ireland known and respected. Two flourishing institutions founded by him now spoke in her favour—the Irish Franciscan College of St. Isidore and the Ludovisian College for Irish secular priests. St. Isidore's he founded in 1625, being authorized thereto by letters patent of the general (13 June) and a special Bull of Urban VIII (20 Oct.). Such men as Antony Hickey, Patrick Fleming, John Ponce, and Martin Walsh were the first professors. Wadding proceeded to extend the existing buildings (a suppressed Spanish convent), which the generosity of his friends enabled him to purchase. The college, as it stands to-day, is practically his exclusive creation. He procured for the library 5000 select works, besides a precious collection of manuscripts bound in 800 volumes. During the first thirty years of its existence this college educated 200 students, 70 of which number filled chairs of philosophy and theology in various corners of Europe. Others, returning to Ireland, worked in the ministry, and many of them were called to lay down their lives for the Faith. Each year Wadding kept the Feast of St. Patrick with great solemnity at St. Isidore's; and it is due to his influence, as member of the commission for the reform of the Breviary, that the festival of Ireland's Apostle was inserted on 17 March in the calendar of the Universal Church. A few years after the foundation of the College for Irish Franciscans, Wadding prevailed on Cardinal Ludovisi, protector of Ireland, to signalize his protectorate by the endowment of a similar institution for the Irish secular clergy. The cardinal consented, and, Wadding having drawn up a code of constitutions, the college was opened on 1 January, 1628. The students attended lectures in the halls of St. Isidore's until 1635, when Wadding and his brethren surrendered the administration of the college to the Jesuits. By a Rescript of Alexander VII given at Castel Gandolfo in 1656, Wadding founded another house at Capranica, a town some thirty miles north of Rome, to serve as a novitiate to St. Isidore's.

Wadding was not only the official representative and indefatigable agent in the Roman Curia of the archbishops and bishops of Ireland, but the Holy See took no measure of importance concerning that country without consulting him. The Supreme Council of the Confederates, by letters patent of 6 December, 1642, nominated their agent and procurator in Rome and the whole

of Italy. It was at his suggestion that Father Scarampi, the Oratorian, was sent in 1643 as papal envoy to Ireland, with supplies of arms, and ammunition, and money. Wadding had sent similar supplies in the preceding year, as well as Irish officers trained in the armies of France and the Netherlands. He procured letters from the Holy See to the Catholic powers of Europe to enlist their sympathies and secure their aid in favour of the Irish war. In 1645 he prevailed on the new pope, Innocent X, to send another envoy to Ireland, with the powers and dignity of an Apostolic nuncio, Archbishop Rinuccini being sent. On his departure from Rome the nuncio received from Wadding the sum of 26,000 *scudi* towards the Irish cause. Wadding sent him a similar sum the year after through Dean Massari, to mention only some of his contributions. Great was the interest now evinced in Irish affairs at the Roman Court. The tidings of O'Neill's victory at Benburb (5 June, 1646) caused much rejoicing; a solemn Te Deum was sung in the Basilica of St. Mary Major, and the standards taken in the battle, being sent out by the nuncio, were hung as trophies in the cupola of St. Peter's. Innocent X, through Wadding, sent his blessing to Owen Roe O'Neill and with it the sword of the great Earl of Tyrone. But jealousy and disunion among the Confederate chiefs ruined all, and no one felt the blow so much as Wadding.

V. OFFICIAL CAREER

Luke Wadding was a *lector jubilatus* of sacred theology and "chronologist of the whole Order of Friars Minor". He was guardian, for four terms, of St. Isidore's, and *praeses* of the Irish College. He was appointed procurator of the order in 1630, but did not take office; reappointed in 1632, he retained the position to 1634. In his capacity of procurator he was Lenten preacher to the papal Court. Being nominated vice-commissary of the order in the Roman Curia in 1645, he insisted on being dispensed; but he was obliged to assume the duties of commissary in 1648. Paul V nominated him qualificator of the Holy Office, and Gregory XV consultor of the Index. He was made consultor of the Rites and of the Propaganda by Urban VIII, and named member of the commission for the reform of the Roman Breviary and the other liturgical books by the same pontiff. He was, besides, the trusted adviser of successive popes, many cardinals, and the superiors of his order. Were it not for his humility, he might have attained to the highest honours in the Church. He was postulated for many episcopal and metropolitan sees, but constantly refused the dignity. He was invited by prominent members of the cismontane section of the order to join their family, with a view to qualifying for the election to the generalate (which they promised in that event), but he declined. The Supreme Council of the Confederation sent letters to Urban VIII on 14 June, 1644, and to Innocent X on 23 November of the same year, to raise Wadding to the cardinalate. But he himself succeeded in suppressing the documents at Rome, and it was only after his death that they were discovered among his papers. Writing to the Supreme Council, Wadding excuses himself for this act of humility, alleging that he thought he could serve his country more effectively in a position less prominent than that of cardinal. It is stated of Wadding by contemporary writers that he received votes to be pope. If this statement be true, it must have reference to the conclaves of 1644 or 1645. Wadding's piety was equal to his learning, and his death was that of a saint.

GREGORY CLEARY

Michael Wadding

Michael Wadding

(GODINEZ).

Mystical theologian, born at Waterford, Ireland, in 1591; died in Mexico, Dec. 1644. At an early age he lost his father, Thomas Wadding, and his mother, Marie Valois. For two years he studied at the Irish seminary of Salamanca, entering the Society of Jesus, 15 April, 1609. After years at the novitiate of Villagarcia he obtained permission to go to the missions of Mexico, where he took the name of Godinez, by which he is best known. He made his profession, 26 Aug., 1626. He devoted several years to the rough mission of Sinaloa, and in 1620 he was among the Mayos and the Tephanes; he also took charge of the Comicarís, and, at the cost of much labour, won over the Basiroas, whom he joined to Christian tribes. He relates in his "Teologia mistica" (I, 3, VIII), as one who endured them himself, the privations and sufferings undergone by the missionaries. He taught for several years in various colleges in Mexico. Father Alegre remarks that according to the archives of his province he died on 18 Dec., and not 12, as is generally stated in agreement with Father La Reguera. Michael Wadding was distinguished by his profound knowledge of the supernatural states and by rare prudence in the direction of souls. His "Practica de la teologia mistica", the fruit of long personal experience rather than of study, was published nearly 40 years after his death (1681), and has gone through 10 editions; but outside of Spanish it is chiefly known by the voluminous commentary of Father Manuel La Reguera (2 vols. in fol., Rome, 1740-45). In his notice of the author La Reguera also ascribes to him a "Life of Sister Mary of Jesus". Godinez certainly left notes on this Servant of God whom he had directed, but it does not seem that they were ever published.

ERNEST M. RIVIERE

Venerable Waire

Venerable Waire

English friar and martyr, hanged, drawn, and quartered at St. Thomas Waterings in Camberwell (a brook at the second milestone on the Old Kent Road), 8 July, 1539. All authorities agree that there were four martyrs at this time and place, and all agree that one of them was the Vicar of Wandsworth, Surrey. It is certain that the name of the last was John Griffith, generally known as Ven. John Griffith Clarke, and that he was chaplain to Henry Courtenay, Marquis of Exeter, who was executed, 9 December, 1538, or 9 January, 1538-39, and that he was also Rector of Dolton, Devon. Stow is the only person to mention "Friar Waire". Sander speaks of "a monk whose name was Mayer"; but he wrote in Latin and his work was printed abroad. It is clear that Waire was a friar, for both Wriothsley and Lord Lisle's servant, John Husee, speak of two friars as having suffered with Griffith. Of the two unnamed martyrs we know that one was a priest and Griffith's curate or chaplain at Wandsworth. The other was either a friar, as Wriothsley and Husee say, or one of Griffith's servants, as is asserted by Stow and Sander. It is possible that Friar Waire is to be identified with Thomas Wyre, one of the signatories to the surrender of the Franciscan friary of Dorchester, 30 September, 1538. However, it is uncertain to what order he belonged. If he was a Franciscan it is remarkable that his death is not recorded in the "Grey Friars' Chronicle", and that no mention is made of him in such English Franciscan martyrologists as Bouchier or Angelus a S. Francisco.

JOHN B. WAINEWRIGHT

Diocese of Waitzen

Diocese of Waitzen

(VÄCZ or VACIENSIS).

Located in Hungary; suffragan of Gran; probably founded by King St. Stephen. Nothing is definitely known about the year of foundation or the first bishops, whose names were Clement, Lazarus, and Aaron. It is said that Lazarus was bishop from 1075-77. In 1102 lived Bishop Stephen, and beginning with Marcellus (1105-19) the series of bishops is uninterrupted. Among the bishops

of Waitzen in earlier times are particularly notable: Johannes de Surdis (1363-73), ambassador of King Louis I to Italy in 1369, later on Archbishop of Gran; Vincent Szilassy (1450-73), a member of the embassy which brought the newly-elected King Matthias Corvinus from Prague to Waitzen; Wladislaw Szalkai (1514-23), chancellor of King Louis II and afterwards Archbishop of Gran; Martinus Pethe (1582-86), transferred to Kalocsa. Among the late bishops are mentioned: Sigismund Kolonits (1709-16), transferred to Vienna, and first Archbishop of Vienna; Count Michael Althann (1718-34), sent as viceroy to Sicily by Emperor Charles VI, and afterwards cardinal; Count Christopher Migazzi, cardinal and Archbishop of Vienna, twice Bishop of Waitzen (1756-57); 1762-82); Augustinus Roskoványi (1851-59), an eminent theological writer, transferred to Neutra in 1859. He was succeeded by Anthony Peitler, 1859-85, who founded the library at Waitzen. Since 1900 Count Charles Csaky is bishop. In 1514, when the Turks conquered Waitzen, the chapter ceased to exist, but was re-established in 1700. The diocese includes parts of the counties of Nograd, Pesth, Csongrád, and Jász-Nagykun-Szolnok, and is divided into three archdeaconries and nineteen vice-archdeaconries. Within the diocese are five titular abbeys, four provostships, and six titular provostships. The chapter has twelve canons and six titular canons. The number of parishes is 123; that of the clergy, 266. The right of patronage is exercised by 44 patrons. The diocese includes 7 monasteries and 12 nunneries, with altogether 232 inmates. The Catholic population is 757,827.

A. ALDÁSY

Wakash Indians

Wakash Indians

A linguistic family inhabiting the western coast of British Columbia from 50° 30' to Garden Channel, and the west and northwest of Vancouver Island, as well as a small region around Cape Flattery, Washington. They comprise several tribes, speaking separate dialects, of which the three most important are the Hailtuk, Kwakiutl, and Nootka. The Indian name Wakesh (Waukash, good) was given by one of the early explorers who believed it to be the tribal appellation. In culture the Wakash closely resemble their neighbours the Salishan on the south and the Tsimshian on the north; physically and linguistically they are akin to the former. Juan de Fuca was probably the first white man to meet the tribe, and Juan Perez visited the Nootka in 1774. After 1786 English mariners frequently sailed to Nootka Sound; in 1803 the crew of the American ship "Boston" were almost all killed by these Indians. In 1843 the Hudson's Bay Company established a trading post at Victoria, and since then there has been constant communication with the natives, but with the usual result that the immorality of the whites, in conjunction with the ravages of smallpox, has brought about a gradual decrease in the Indian population. In 1903 they numbered about 5200, of whom 2600 were in the West Coast Agency, 1300 in the Kwakewith Agency, 900 in the North West Coast

Agency, and 410 at Neah Bay Company, Cape Flattery. In 1909 they numbered 4584, including 2070 Kwakiutl and 2494 Nootka. The latter have embraced Catholicism; though the missions have been successful among the northern Kwakiutl, the southern branch cling to their Shamanistic practices.

The Wakashan were excellent mariners, and went out on the ocean to hunt for whales. Their diet was mainly fish, varied with berries and roots. They were good wood-carvers, though not so skilful as the Haida and Thingit. Their dwellings were large cedarwood structures, erected near the shore, each accommodating several families. The Kwakiutl, who lived on both sides of Queen Charlotte Island, consisted of twenty tribes, the Kwakiutl proper dwelling near Fort Rupert. They are conservative, and are respected by the neighbouring Indians as the guardians of the priestly rites. The Heiltruk Kwakiutl reckon descent by the female line. Head-flattening was common on Vancouver Island. Secret societies flourished among the tribes, initiation being accompanied by feasting, torture, vigils, and making presents to all who attended the ceremony. The highest society, the *hamatsa* or cannibal society, was composed solely of those who had passed eight years in a lower organization. The Nootka, consisting of twenty-three tribes, dwell on the shores between Cape Cook on the north and Port San Juan on the south, and include the Makah Indians at Cape Flattery. The latter call themselves *Kive-net-che-chat*, or Cape people; they are of medium stature, and well proportioned. Formerly they lived in villages consisting merely of seven or eight cedarwood houses, and excelled only in fishing. Marriage was a very slender bond, but was not allowed within the fourth degree. Both sexes had their noses pierced, and generally had shells suspended therefrom. They adored a chief deity, "chabatta- Hatartstl", the great-chief-who-lives-above, and believed in spirits and the transmigration of souls. They held frequent representations, called *tamanwas*, depicting their mythological legends. The Makah women were clever basket-makers. The tribe still shows traces of an admixture of European blood, accounted for by the shipwreck of a Russian boat many years ago.

SWANTON in Handbook of American Indians, II (Washington, 1910).

A.A. MACERLEAN

Walafrid

Walafrid

(Walahfrid; surnamed Strabo -- "the Squinter").

German poet and theologian of the ninth century, born in Swabia or poor parents; died at Tatto, Erlebold, and Wettin, and later at Fulda under the famous Rabanus Maurus. In 829 he became preceptor of the young Prince Charles (the Bald) at the Court of Louis the Pious. In 838 he succeeded Erlebold as abbot of Reichenau; but, as he sided with Lothair in the war between the sons of Louis, he was driven from Reichenau and fled to Speyer. He was soon reconciled with Louis the German, and reinstated in his dignity, which he held until his death. Walafrid's works, written in a fluent, elegant Latin, consist of poems and of theological treatises in prose. The "Visio Wettini" is his

most remarkable poem. It describes a journey through the other world in the form of a vision vouchsafed to the monk Wettin a few days before he died (824), and is the earliest example of that type of literature which culminated in Dante's "Divine Comedy." The "Versus de imagine Tetrici," in the form of a dialogue between the poet and his genius, were inspired by the equestrian statue of Theodoric which Charlemagne had brought from Ravenna and place before the palace at Aachen. While the Gothic king is denounced as a heretic and tyrant, occasion is found for paying homage to Louis the Pious and the Empress Judith. In the "Hortulus" the poet lovingly describes the plants and flowers of his cloister-garden. Walafrid also wrote hymns and epistles in verse, but of these only a portion is preserved. Of his prose-works the most famous is the "Glossa ordinaria," a commentary on the Scriptures, compiled from various sources. The work enjoyed the highest repute throughout the Middle Ages. The "Liber de exordiis et incrementis quarundam in observationibus ecclesiasticis rerum" is valuable as a history of the cult of the Church. Walafrid also wrote in prose the lives of St. Gall and St. Othmar, and in verse the lives of St. Blaitmaicus, abbot of Iona, and of St. Mammias, the martyr. His works are edited in P. L., CXIII, XIV; the poems also separately by Dümmler, "Poetæ latini ævi Carolini," in "Mon. Germ. Hist.," II (Berlin, 1884), 259-473.

ARTHUR F.J. REMY

St. Walburga

St. Walburga

(WALTPURDE, WALPURGIS; at Perche GAUBURGE; in other parts of France VAUBOURG, FALBOURG).

Born in Devonshire, about 710; died at Heidenheim, 25 Feb., 777. She is the patroness of Eichstadt, Oudenarde, Furnes, Antwerp, Gronigen, Weilburg, and Zutphen, and is invoked as special patroness against hydrophobia, and in storms, and also by sailors. She was the daughter of St. Richard, one of the under-kings of the West Saxons, and of Winna, sister of St. Boniface, Apostle of Germany, and had two brothers, St. Willibald and St. Winibald. St. Richard, when starting with his two sons on a pilgrimage to the Holy Land, entrusted Walburga, then eleven years old, to the abbess of Wimborne. In the claustral school and as a member of the community, she spent twenty-six years preparing for the great work she was to accomplish in Germany. The monastery was famous for holiness and austere discipline. There was a high standard at Wimborne, and the child was trained in solid learning, and in accomplishments suitable to her rank. Thanks to this she was later able to write St. Winibald's Life and an account in Latin of St. Willibald's travels in Palestine. She is thus looked upon by many as the first female author of England and Germany. Scarcely a year after her arrival, Walburga received tidings of her father's death at Lucca. During this period St. Boniface was laying the foundations of the Church in Germany. He saw that for the most part scattered efforts would be futile, or would exert but a passing influence. He, therefore, determined to bring the whole country under an organized system. As he advanced in his spiritual conquests

he established monasteries which, like fortresses, should hold the conquered regions, and from whose watch-towers the light of faith and learning should radiate far and near.

Boniface was the first missionary to call women to his aid. In 748, in response to his appeal, Abbess Tetta sent over to Germany St. Lioba and St. Walburga, with many other nuns. They sailed with fair weather, but before long a terrible storm arose. Hereupon Walburga prayed, kneeling on the deck, and at once the sea became calm. On landing, the sailors proclaimed the miracle they had witnessed, so that Walburga was everywhere received with joy and veneration. There is a tradition in the Church of Antwerp that, on her way to Germany, Walburga made some stay there; and in that city's most ancient church, which now bears the title of St. Walburga, there is pointed out a grotto in which she was wont to pray. This same church, before adopting the Roman Office, was accustomed to celebrate the feast of St. Walburga four times a year. At Mainz she was welcomed by her uncle, St. Boniface, and by her brother, St. Willibald. After living some time under the rule of St. Lioba at Bischofsheim, she was appointed abbess of Heidenheim, and was thus placed near her favourite brother, St. Winibald, who governed an abbey there. After his death she ruled over the monks' monastery as well as her own. Her virtue, sweetness, and prudence, added to the gifts of grace and nature with which she was endowed, as well as the many miracles she wrought, endeared her to all. It was of these nuns that Ozanam wrote: "Silence and humility have veiled the labours of the nuns from the eyes of the world, but history has assigned them their place at the very beginning of German civilization: Providence has placed women at ever cradleside." On 23 Sept., 776, she assisted at the translation of her brother St. Winibald's body by St. Willibald, when it was found that time had left no trace upon the sacred remains. Shortly after this she fell ill, and, having been assisted in her last moments by St. Willibald, she expired.

St. Willibald laid her to rest beside St. Winibald, and many wonders were wrought at both tombs. St. Willibald survived till 786, and after his death devotion to St. Walburga gradually declined, and her tomb was neglected. About 870, Otkar, then Bishop of Eichstadt, determined to restore the church and monastery of Heidenheim, which were falling to ruin. The workmen having desecrated St. Walburga's grave, she one night appeared to the bishop, reproaching and threatening him. This led to the solemn translation of the remains to Eichstadt on 21 Sept. of the same year. They were placed in the Church of Holy Cross, now called St. Walburga's. In 893 Bishop Erchanbold, Otkar's successor, opened the shrine to take out a portion of the relics for Liubula, Abbess of Monheim, and it was then that the body was first discovered to be immersed in a precious oil or dew, which from that day to this (save during a period when Eichstadt was laid under interdict, and when blood was shed in the church by robbers who seriously wounded the bell-ringer) has continued to flow from the sacred remains, especially the breast. This fact has caused St. Walburga to be reckoned among the *Elaephor*i, or oil-yielding saints (see OIL OF SAINTS). Portions of St. Walburga's relics have been taken to Cologne, Antwerp, Furnes, and elsewhere, whilst her oil has been carried to all quarters of the globe.

The various translations of St. Walburga's relics have led to a diversity of feasts in her honour. In the Roman Martyrology she is commemorated on 1 May, her name being linked with St. Asaph's,

on which day her chief festival is celebrated in Belgium and Bavaria. In the Benedictine Breviary her feast is assigned to 25 (in leap year 26) Feb. She is represented in the Benedictine habit with a little phial or bottle; as an abbess with a crozier, a crown at her feet, denoting her royal birth; sometimes she is represented in a group with St. Philip and St. James the Less, and St. Sigismund, King of Burgundy, because she is said to have been canonized by Pope Adrian II on 1 May, the festival of these saints. If, however, as some maintain, she was canonized during the episcopate of Erchanbold, not in Otkar's, then it could not have been during the pontificate of Adrian II. The Benedictine community of Eichstadt is flourishing, and the nuns have care of the saint's shrine; that of Heidenheim was ruthlessly expelled in 1538, but the church is now in Catholic hands.

GERTRUDE CASANOVA

Principality of Waldeck-Pyrmont

Principality of Waldeck

(Or WALDECK-PYRMONT).

A former state of the German Empire, with an area of 433 square miles; in 1910 it had 61,723 inhabitants; in 1905, 59,127. The principality consisted of two parts:

- the southern principality, called Waldeck, surrounded by the Prussian Provinces of Hesse-Nassau and Westphalia, and having an area of 407 square miles, with a population, in 1905, of 49,965;
- the northern principality, called Pyrmont, surrounded by the Principality of Lippe, the Duchy of Brunswick, and the Prussian Province of Hanover, with an area of 26 square miles and a population, in 1905, of 9162.

The entire principality contained, in 1905: 56,341 Protestants; 1890, or 2 per cent, Catholics; and 629 Jews. The country is named from the fortified castle of Waldeck situated on the Eider, a western branch of the Fulda. About 1150 Widukind V of Schwalenberg took the castle and called himself Count of Waldeck. From 1438 Waldeck was a fief of Hesse, a relation virtually dissolved by the Confederation of the Rhine in 1806, and finally in 1846 by a decision of the Diet of the German Confederation. In 1631, when the Countship of Gleichen became extinct, the Countship of Pyrmont fell to Waldeck. In the war of 1866, between Prussia and Austria, Waldeck supported Prussia and entered the North German Confederation. The administration was transferred to Prussia by the Treaty of Accession of 1867. In 1877 this treaty was renewed for ten years, and in 1887 for an indefinite period, subject to two years' notice of abrogation. Prince Friedrich (b. 1865) became the ruler in 1893.

Before the great religious schism of the sixteenth century Waldeck belonged in ecclesiastical matters partly to the Archdiocese of Cologne, partly to the Diocese of Paderborn, while scattered parishes also belonged to the Archdiocese of Mainz. The new doctrine was introduced into the country in 1527-43 by Count Philip III. The Catholic Faith was maintained longest in the town of Korbach (until 1543). A portion of the Countship of Dürdinghausen, consisting of the parish of Ebbe with the townships of Hillershausen and Niederschleiden, was annexed by an agreement with its feudal lord, the Archbishop of Cologne. Thus Waldeck once more had a Catholic parish. Even now,

the townships of Ebbe and Hillershausen are almost entirely, while Niederschleidern is still half, Catholic. The ecclesiastical jurisdiction over the parish of Ebbe was retained by the Archbishop of Cologne, but in 1821 the Bull "De salute animarum" transferred it to the Bishop of Paderborn. Waldeck received another Catholic parish in 1900, that of Arolsen, a settlement established by Prince Friedrich Anton Ulrich. A third parish, Korbach, was formed in 1911.

The Principality of Pymont was in the Middle Ages a fief of the bishops of Paderborn. It became entirely Protestant. Towards the end of the eighteenth century Franciscans from Lüdge held missions there during the season of the year when it was frequented as a watering-place. In 1853 the State permitted regular Sunday services, and in 1861 the parish of Pymont was formed. Before appointing a parish priest the bishop had to present the name of one candidate to the Government of Waldeck, or, in the case of Arolsen, the names of two candidates. The Government had the right of objecting to each appointment. The candidate had to swear to observe the Constitution of Waldeck. The stipends of the priests were paid out of the revenue of the church fund, the church taxes, and allowances made by the Government and the prince.

The houses of female orders are:

- at Arolsen an institution for preparing communicants called the St. Marienstift, conducted by Sisters of St. Vincent from Paderborn;
- at Bad Wildungen, a lodging-house and sanitarium, called St. Liboriushaus, conducted by Franciscan Nuns;
- in Pymont, St. Georgstift conducted by Franciscan Nuns.

There are no male orders, nor are there any state laws as to the admission of orders. The Catholic community is increased in summer by the numerous Polish agricultural labourers and in Pymont and Bad Wildungen by a large number of visitors for the cures. Historically, the public primary schools were Lutheran. In places where there was a Catholic minority, the Catholics could demand the opening of a Catholic public school at the public expense, if for the previous ten years there had been on an average at least fifty Catholic children of school-age. There have been three Catholic primary schools since the middle of the seventeenth century: at Ebbe, in 1910, at Hillershausen, and at Niederschleidern. In 1911 there was added to these three the Catholic school at Arolsen, which was founded in 1845 and had been until 1911 a private school. The Catholic parish in Pymont opened a school in 1882. A Catholic primary school opened in Korbach in 1911.

HERMANN SACHER

Waldenses

Waldenses

An heretical sect which appeared in the second half of the twelfth century and, in a considerably modified form, has survived to the present day.

NAME AND ORIGIN

The name was derived from Waldes their founder and occurs also in the variations of *Valdesii*, *Vallenses*. Numerous other designations were applied to them; to their profession of extreme poverty they owed the name of "the Poor"; from their place of origin, Lyons, they were called "Leonistae"; and frequently the two ideas were combined in the title "Poor Men of Lyons". Their practice of wearing sandals or wooden shoes (sabots) caused them to be named "Sandaliati", "Insabbatati", "Sabbatati", Sabotiers". Anxious to surround their own history and doctrine with the halo of antiquity, some Waldenses claimed for their churches an Apostolic origin. The first Waldensian congregations, it was maintained, were established by St. Paul who, on his journey to Spain, visited the valleys of Piedmont. The history of these foundations was identified with that of primitive Christendom as long as the Church remained lowly and poor. But in the beginning of the fourth century Pope Sylvester was raised by Constantine, whom he had cured of leprosy, to a position of power and wealth, and the Papacy became unfaithful to its mission. Some Christians, however, remained true to the Faith and practice of the early days, and in the twelfth century a certain Peter appeared who, from the valleys of the Alps, was called "Waldes". He was not the founder of a new sect, but a missionary among these faithful observers of the genuine Christian law, and he gained numerous adherents. This account was, indeed, far from being universally accredited among the Waldenses; many of them, however, for a considerable period accepted as founded on fact the assertion that they originated in the time of Constantine. Others among them considered Claudius of Turin (died 840), Berengarius of Tours (died 1088), or other such men who had preceded Waldes, the first representatives of the sect. The claim of its Constantinian origin was for a long time credulously accepted as valid by Protestant historians. In the nineteenth century, however, it became evident to critics that the Waldensian documents had been tampered with. As a result the pretentious claims of the Waldenses to high antiquity were relegated to the realm of fable.

The real founder of the sect was a wealthy merchant of Lyons who in the early documents is called Waldes (Waldo). To this name is added from 1368 the designation of Peter, assumed by him at his "conversion", or more likely, attributed to him by his followers. Few details concerning his personal history are known; there are extant, however, two important accounts of the complete change in his religious life; one written about 1220 by a Premonstratensian monk, usually designated as the "anonymous chronicler of Laon"; the other by a Dominican Friar and Inquisitor Stephen of Bourbon (died about 1262), and dates back to about the middle of the thirteenth century. The former writer assigns a prominent place to the influence exercised on Waldes by the history of St. Alexius, while the latter makes no mention of it but speaks of his acquaintance with the contents of the Bible through translations. The history of Waldes's conversion may perhaps be reconstructed in the following manner. Desirous of acquiring a knowledge of biblical teaching, Waldes requested two priests to translate for him the four Gospels. In a similar manner he subsequently obtained translations of other Biblical books and of some writings of the Fathers. Through the reading of these works he was attracted to the practice of Christian perfection; his fervour increased when one day he heard from an itinerant singer (*ioculator*) the history of St. Alexius. He now consulted a master of theology on the best and surest way to salvation. In answer the words of Christ to the rich young man were

cited to him: "If thou wilt be perfect, go sell what thou hast, and give to the poor." (Matt., xix, 21). Waldes immediately put into effect the counsel of the Divine Master. He made over part of his wealth to his wife, part to those from whom he had acquired it, left some to the nuns of Fontevrault in whose monastery he placed his two little daughters, and distributed the greatest part to the poor. On the feast of the Assumption, 1176, he disposed of the last of his earthly possessions and shortly after took the vow of poverty. His example created a great stir in Lyons and soon found imitators, particularly among the lower and uneducated classes. A special confraternity was established for the practice of apostolic poverty. Its members almost immediately began to preach in the streets and public places and gained more adherents. Their preaching, however, was not unmixed with doctrinal error and was consequently prohibited, according to Stephen of Bourbon, by the Archbishop of Lyons, according to Walter Map, present at the assembly, by the Third General Lateran Council (1179). The Waldenses, instead of heeding the prohibition, continued to preach on the plea that obedience is due rather to God than to man. Pope Lucius III consequently included them among the heretics against whom he issued a Bull of excommunication at Verona in 1184.

DOCTRINE

The organization of the Waldenses was a reaction against the great splendour and outward display existing in the medieval Church; it was a practical protest against the worldly lives of some contemporary churchmen. Amid such ecclesiastical conditions the Waldenses made the profession of extreme poverty a prominent feature in their own lives, and emphasized by their practice the need for the much neglected task of preaching. As they were mainly recruited among circles not only devoid of theological training, but also lacking generally in education, it was inevitable that error should mar their teaching, and just as inevitable that, in consequence, ecclesiastical authorities should put a stop to their evangelistic work. Among the doctrinal errors which they propagated was the denial of purgatory, and of indulgences and prayers for the dead. They denounced all lying as a grievous sin, refused to take oaths and considered the shedding of human blood unlawful. They consequently condemned war and the infliction of the death penalty. Some points in this teaching so strikingly resemble the Cathari that the borrowing of the Waldenses from them may be looked upon as a certainty. Both sects also had a similar organization, being divided into two classes, the Perfect (*perfecti*) and the Friends or Believers (*amici* or *credentes*). (See CATHARI and ALBIGENSES.)

Among the Waldenses the perfect, bound by the vow of poverty, wandered about from place to place preaching. Such an itinerant life was ill-suited for the married state, and to the profession of poverty they added the vow of chastity. Married persons who desired to join them were permitted to dissolve their union without the consent of their consort. Orderly government was secured by the additional vow of obedience to superiors. The perfect were not allowed to perform manual labour, but were to depend for their subsistence on the members of the sect known as the friends. These continued to live in the world, married, owned property, and engaged in secular pursuits. Their generosity and alms were to provide for the material needs of the perfect. The friends remained

in union with the Catholic Church and continued to receive its sacraments with the exception of penance, for which they sought out, whenever possible, one of their own ministers. The name Waldenses was at first exclusively reserved to the perfect; but in the course of the thirteenth century the friends were also included in the designation. The perfect were divided into the three classes of bishops, priests, and deacons. The bishop, called "major" or "majoralis", preached and administered the sacraments of penance, Eucharist, and order. The celebration of the Eucharist, frequent perhaps in the early period, soon took place only on Holy Thursday. The priest preached and enjoyed limited faculties for the hearing of confessions. The deacon, named "junior" or "minor", acted as assistant to the higher orders and by the collection of alms relieved them of all material care. The bishop was elected by a joint meeting of priests and deacons. In his consecration, as well as in the ordination of the other members of the clergy, the laying-on of hands was the principal element; but the recitation of the Our Father, so important in the Waldensian liturgy, was also a prominent feature. The power of jurisdiction seems to have been exercised exclusively by one bishop, known as the "rector", who was the highest executive officer. Supreme legislative power was vested in the general convention or general chapter, which met once or twice a year, and was originally composed of the perfect but at a later date only of the senior members among them. It considered the general situation of the sect, examined the religious condition of the individual districts, admitted to the episcopate, priesthood, or diaconate, and pronounced upon the admission of new members and the expulsion of unworthy ones.

The Lombard communities were in several respects more radical than the French. Holding that the validity of the sacraments depends on the worthiness of the minister and viewing the Catholic Church as the community of Satan, they rejected its entire organization in so far as it was not based on the Scriptures. In regard to the reception of the sacraments, their practice was less radical than their theory. Although they looked upon the Catholic priests as unworthy ministers, they not infrequently received communion at their hands and justified this course on the grounds that God nullifies the defect of the minister and directly grants his grace to the worthy recipient. The present Waldensian Church may be regarded as a Protestant sect of the Calvinistic type. It recognizes as its doctrinal standard the confession of faith published in 1655 and based on the Reformed confession of 1559. It admits only two sacraments, baptism and the Lord's Supper. Supreme authority in the body is exercised by an annual synod, and the affairs of the individual congregations are administered by a consistory under the presidency of the pastor.

HISTORY

The Waldenses in France and Spain

The preaching of Waldes and his disciples obtained immediate success not only in France, but also in Italy and Spain. The Italian adherents at a very early date constituted themselves independently. In France the movement gained ground particularly in the South, whence it spread to Northern Spain. The Church sought to avert by persuasion the danger of numerous defections. As early as 1191 a religious conference was held between Catholics and Waldenses at a place which

has not been recorded; it was followed by a second held at Pamiers in 1207. The latter meeting brought about a return to the Church of Duran of Huesca and several other Waldenses. With the authorization of Innocent III they organized themselves into the special religious order of the Poor Catholics for the conversion of Waldenses. This purpose was attained only in a very small degree; but force soon checked the heretical movement. In 1192 Bishop Otto of Toul ordered all Waldenses to be put in chains and delivered up to the episcopal tribunal. Two years later King Alphonso II of Aragon banished them from his dominions and forbade anyone to furnish them with shelter or food. These provisions were renewed by Pedro II at the Council of Gerona (1197), and death by burning was decreed against the heretics.

The French authorities seem to have proceeded with less severity for a time. The Albigensian wars, however, also reacted on the policy towards the Waldenses, and in 1214 seven of these suffered the death penalty at Maurillac. But it was only toward the middle of the thirteenth century that the heresy lost ground in Provence and Languedoc. It did not disappear in these provinces until it was merged in the Protestant Reformation movement, while Spain and Lorraine were freed from it in the course of the thirteenth century. The most conspicuous centre of Waldensian activity in France during the later middle ages was Dauphiné and the western slope of the Cottian Alps. The sect seems to have been introduced in to this territory from Lombardy. From Dauphiné and the valleys of the Alps it carried on missionary work in all Southern France to the Atlantic seaboard. In 1403 a determined effort was made to win back the Waldenses of the valleys of Louise, Argentière, and Freissinières; but the apostolic labours of even a St. Vincent Ferrer were powerless. The Inquisition was equally unsuccessful, as were also the stern measures of the local civil authorities. The policy of repression was temporarily abandoned under King Louis XI, who, believing them to be orthodox, extended to the Waldenses of the above-mentioned valleys his royal protection in an ordinance of 1478.

This period of peace was followed in 1488 by a crusade summoned by Innocent VIII against the Waldenses. The war did not succeed in stamping them out. But, soon after, the Reformation profoundly modified the sect's history and doctrinal development. A deputation composed of G. Morel and P. Masson was sent in 1530 to Switzerland for information concerning the new religious ideas. On their return journey Masson was arrested at Dijon and executed; Morel alone safely accomplished his mission. The report of this journey led to the assembling of a general convention to which Farel and other Swiss Reformers were invited. The meeting was held at Chanforans in the valley of Angrogne and the Reformed teaching substantially adopted (1532). A minority opposed this course and vainly sought to stem the tide of radicalism by an appeal for assistance to the Bohemian Brethren. A new convention held in the valley of St. Martin in 1533 confirmed the decisions of Chanforans. The open adoption of Protestantism soon led to the persecution in which Waldensianism disappeared from Provence (1545). The history of the communities in other districts became henceforth identified with that of Protestantism in France.

The Waldenses in Italy and Other Countries

Italy became a more permanent home of Waldensianism and more active in missionary work than France. During the very first years of Waldes's preaching, converts to his views are mentioned in Lombardy. They increased rapidly in number and were joined by some members of the Order of Humiliati. But dissensions soon arose between the Waldensians in France and in Lombardy. The latter organized guilds of craftsmen, desired leaders of their own, and refused admission among the perfect to married persons without the consent of their consort. On Waldes's refusal to sanction these points, his followers in Italy seceded during the first decade of the thirteenth century. After his death a vain attempt at reunion was made at Bergamo in 1218. The Italian branch after some time not only prospered in the valleys of western Piedmont, but also established important colonies in Calabria and Apulia. In the fifteenth century communities hardly less important are mentioned in the Papal States and other parts of Central Italy.

The appearance of the Waldenses in the Diocese of Strasburg is recorded in 1211 and the years 1231-1233 were marked in Germany by resolute efforts to stamp out their errors. But soon, adherents of the sect were found in Bavaria, Austria, and other sections. They spread in the north to the shores of the Baltic Sea, and in the east to Bohemia, Poland and Hungary. With the appearance of new heresies they at times partly lost their distinctive character. In Bohemia they amalgamated with the Hussites and the Bohemian Brethren without losing all their peculiarities.

Protestantism was still more readily accepted. Not only were its teachings universally adopted, but numerous Waldensian communities were merged in the Protestant churches, the Italian congregations alone retaining an independent existence and the original name. Those in the Piedmont valleys enjoyed religious peace from 1536-1559, owing to the political dependence of the districts upon France. A contrary policy was pursued by the Dukes of Savoy; but the Waldenses at the very outset successfully resisted, and in 1561 were granted in certain districts the free exercise of their religion. In 1655 violence was again fruitlessly resorted to. Later in the same century (1686, 1699) some of them, under stress of renewed persecution, emigrated to Switzerland and Germany. In Piedmont, civil equality was granted them in 1799 when the French occupied the country. They enjoyed this peace until the downfall of Napoleon I, but again lost it at the return of the house of Savoy. From 1816 onward, however, gradual concessions were made to the Waldenses, and in 1848 Charles Albert granted them complete and permanent liberty. Renewed activity has since marked their history. They founded in 1855 a school of theology at Torre Pellice and transferred it to Florence in 1860. Through emigration they have spread to several cities of Southern France, and also to North and South America. There are five congregations in Uruguay and two in Argentina. Three colonies have settled in the United States: at Wolfe Ridge, Texas; Valdese, North Carolina; and Monett, Missouri. The communities which in the seventeenth century settled in Germany have since severed their connection with the church and abandoned their original language. In Hesse-Darmstadt they were prohibited the use of French in 1820-21; in Württemberg they joined the Lutheran State Church in 1823. Later on, they began receiving financial support from the "American Waldensian Aid Society" founded in 1906, and from a similar organization in Great Britain.

N. A. WEBER
Abbey of Waldsassen

Abbey of Waldsassen

("Settlement in the woods").

Located on the River Wondreb, Upper Palatinate, near the border of Bohemia, in the Diocese of Ratisbon. This celebrated Cistercian monastery was founded by Gerwich von Wolmundstein, a Benedictine monk of the Abbey of Sigeberg, with the permission of his former Abbot Kuno, then Bishop of Ratisbon. Gerwich built the monastery (1128-32). The original community was sent to Waldsassen from Volkenrod, in Thuringia, of the line of the Abbey of Morimond. The first abbot was elected in 1133. Soon the monastery became one of the most renowned and powerful of the times. As the number of monks increased, several important foundations were made: Sedlitz and Ossegg in Bohemia; Walderbach, near Ratisbon; etc. Several of its thirty-seven abbots up to the Reformation were illustrious for sanctity and learning; of them Herman the seventh, and John the seventeenth, as well as Gerwich, its founder, and Wigand, the first prior, are commemorated in the menology.

From the middle of the fourteenth century Waldsassen alternated with periods of prosperity and decadence; wars, famines, excessive taxation, and persecution from the Hussites made it suffer much. During the Bavarian War (1504) the monastery, church, and farm-buildings were burned, but immediately afterwards rebuilt, and the new church consecrated in 1517. A few years later part of the buildings were again destroyed during war, and beautifully restored by George III (1531-37), who was the last of the first series of abbots. From 1537 to 1560 administrators were appointed by civil authorities. Frederick III, Elector Palatine, named his brother Richard, for this office. The monks were then forced to apostatize or flee, or were put to death. For about a hundred years it remained in this condition, during which time it was almost totally burned in the Swedish war. After the Peace of Westphalia the Catholic religion was restored in Bavaria. In 1669 Waldsassen was restored to the Cistercians, and in 1690 Albrecht, first of the second series of abbots (six in number), was elected. The buildings were sumptuously rebuilt, and the number of religious again became considerable. It became especially renowned for its hospitality, particularly during the famines of 1702-03 and 1772-73, and during the French Revolution. Under Abbot Athanasius (1793-1803) science and learning were highly cultivated. When the monastery fell under the laws of suppression in 1803 it numbered over eighty members, who were dispersed after having been granted a pension by the Crown, which confiscated all their possessions. In 1863 the remnants of the old abbey were bought by the Cistercian Nuns of Seligenthal; the following year they took possession, established monastic enclosure, and opened an institute for the education of girls. Finally it was erected into a regular monastery, with novitiate, to which many candidates have been admitted; today the monastery numbers over a hundred nuns.

EDMOND M. OBRECHT

Martin Waldseemüller

Martin Waldseemüller

(Graecized ILACOMILUS).

Learned Humanist and celebrated cartographer, born at Wolfenweiler near Fribourg, or in Fribourg itself, about 1475; died as a canon of St-Dié in Lorraine, probably at the beginning of 1522. The first authentic information concerning Waldseemüller is to be found in the matriculation register of the University of Fribourg, where his name is entered on 7 December, 1490, as "Martinus Walzenmüller de Friburgo Constantiensis Diocesis." His father moved about 1475 from Wolfenweiler to Fribourg; his mother seems to have been a native of Radolfzell on Lake Constance. There is no documentary evidence as to Martin's course of study at the university; it is plain, however, that he studied theology, for in 1514 he applied as a cleric of the Diocese of Constance for a canonry at St-Dié, and got it. That he began early to devote himself to geographical and cartographical studies is also clear from his great map-making which established his fame as early as 1507: the great map of the world and wall-map containing the name America; the small globe that also gives the name America, and the text to accompany the map and the globe, the much prized *Cosmographiae introductio*, which among other things gives the reason for the use of the name America in the map and the globe, and contains, as an appendix, a Latin translation of the four journeys of Amerigo Vespucci. The title of this remarkable work, one of so much importance especially for America, is: "*Cosmographiae introductio cum quibusdam geometriae ac astronomiae principiis ad eam rem necessariis. Insuper quatuor Americi Vespuccii navigationes. Universalis Cosmographiae descriptio tam in solido quam plano, eis etiam insertis, quae Ptholomaeo ignota a nuperis reperta sunt.*" The map of the world in 1507, entitled "*Universalis cosmographia secundum Ptholomaei traditionem et Americi Vespuccii aliorumque lustrationes*", attracted the same attention upon its rediscovery by the writer of the present article as it did when first published. As Waldseemüller himself states, only a thousand copies of the map were issued. Of these only a single copy seems to have been

preserved, and this was found in the library of Prince von Waldburg-Wolfegg-Waldsee in the Castle of Wolfegg in Württemberg. The map consists of twelve sections engraved on wood, and is arranged in three zones, each of which contains four sections; each section measuring to its edge 18 x 24.5 inches. The map, thus covering a space of about 36 square feet, represents the earth's form in a modified Ptolemaic coniform projection with curved meridians. It produced a profound and lasting impression on cartography, being of a wholly new type and representing the earth with a grandeur never before attempted. The preservation of the single copy of the map is due to the fact that the noted cartographer, Johannes Schöner, bound the different sheets together in a cover.

After completing the great publication of 1507, Waldseemüller and his friend Matthias Ringmann (Philesius) devoted themselves to completing the new Latin edition of the geography of Ptolemy. While Ringmann corrected the texts of the editions of Ptolemy issued at Rome and Ulm by means of a manuscript Greek text borrowed from Italy that is now known as the "Cod. Vatic. Graec. 191", Waldseemüller went over the accompanying maps and supplemented them by the addition of twenty modern ones, "which may be regarded as the first modern atlas of the world" (Nordenskiöld, "Facsimile-Atlas"). In these cartographical labours Waldseemüller was aided by the secretary of Duke Rene of Lorraine, Canon Gauthier Lud, who provided the necessary materials for the maps and the expenses of the printing. Waldseemüller sought in 1511 to interest Rene's son and successor, Duke Antoine, in his cartographical labours by dedicating to him the first printed wall map of Central Europe, the "Carta itineraria Europae", which has also been preserved in one copy found by Professor Dr. von Wieser. It does not appear, however, that Waldseemüller succeeded in this effort, for the publication of the edition of Ptolemy was not, as intended, at the expense of Lud Oessler and Uebelin, citizens of Strasburg. Waldseemüller's name is not mentioned in this celebrated edition of Ptolemy of 1513, although he seems to have taken part in the production of the work as printer; he calls himself explicitly in a letter written at this date in Strasburg: "clerc du diocese de Constance, imprimeur, demeurant a Strassburg" (cleric of the Diocese of Constance, printer, living at Strasburg).

After the completion of the Strasburg edition of Ptolemy and after he had obtained the canonry at St-Dié, to which Duke Antoine had the right of presentation, Waldseemüller zealously continued his cartographical labours in the little city of the Vosges Mountains. In addition to the map of the world in the "Margarita Philosophica nova" (Strasburg, 1515), issued by Gregorius Reisch, another result of his exhaustive research is the "Carta marina navigatoria" of 1516, which fairly competes in size and value with the great map of the world of 1507. It is markedly superior to the map of 1507 in its artistic ornamentation, and there are many important changes from the former map. It was so favourably received that the celebrated printer of Strasburg, J. Grieniger, applied to Waldseemüller to prepare German inscriptions for the map and to supply it with a fully illustrated German text so as to make it accessible to a greater number of persons. Waldseemüller began at once to make the preliminary preparations for this task, but death prevented him from completing it, as it also prevented his finishing a new edition of Ptolemy which was to be of a more convenient size and was to have an explanatory text and a large number of illustrations. Both these undertakings

were completed by the physician Laurentius Fries; unfortunately, what he produced did not equal the work of his predecessor. Much credit, however, is due the modesty with which Fries, in the Strasburg edition of Ptolemy of 1525, deprecated being praised for simply having reduced in form the work of another to whom the praise is due. Waldseemüller's maps and explanations are retained almost without change in the editions of Ptolemy of the years 1525, 1535, and 1541, while important emendations were made in the text of Ptolemy. Waldseemüller undoubtedly was one of the most distinguished cartographers of his time, and his work made a marked impression upon the development of cartography.

JOS. FISCHER

Adrian and Peter von Walenburch

Adrian and Peter von Walenburch

Auxiliary bishops of Cologne and celebrated controversial theologians, born at Rotterdam at the beginning of the seventeenth century, exact dates of birth unknown; Adrian died at Mainz, or Wiesbaden, 11 or 14 September, 1669; Peter died at Cologne, 21 December, 1675. The early accounts of the brothers do not agree as to whether they were Protestants or Catholics in their youth. The brothers studied law in France and received the doctorate in civil and canon law. After returning to Rotterdam they studied Catholic theology. On account of the religious turmoil in Holland they went to Germany, living at the Court of the Duke of Pfalz-Neuburg at Dusseldorf till 1646, when they went to Cologne. There in 1647 the Archbishop and Elector of Cologne, Maximilian Heinrich of Bavaria, appointed Adrian Auxiliary Bishop and Vicar- General of Cologne and consecrated him titular Bishop of Adrianople on 30 Nov., 1661. The younger brother, Peter, became a canon of the collegiate Churches of St. Peter and St. Victor at Mainz; in 1658 he was made titular Bishop of Mysia and auxiliary bishop to the Archbishop and Elector Johann Philip von Schonborn. The last years of his stay at Mainz coincide with the first years of Leibniz's residence at the Court of Mainz. Peter aided Leibniz in his theological studies in connection with his scheme of ecclesiastical reunion. After Adrian's death Peter was appointed in 1669 Auxiliary Bishop of Cologne. The brothers were noted for their theological learning; they were also voluminous writers in theological controversy with Protestants. Peter was the chief author of their joint works. They also engaged in

literary controversy with many learned Protestant theologians, as Coccejus, Crocius, Hulsemann, Dannhauer, and Drelincourt. Their works are distinguished by clear and thorough reasoning, and a moderate charitable tone. The most noted of the conversions effected by the brothers is that of the Landgrave Ernst of Hesse-Rheinfels, at Cologne in 1652. Their collected works were issued in two volumes folio (Cologne, 1669-71). The first volume contains mainly the exposition of principles, partly in treatises which lay the fundamental basis, partly in further discussions with Protestant opponents. The last treatise is a satire on Oliver Cromwell as the protector of Protestantism. The second volume "Tractatus speciales de controversiis fidei" (Cologne, 1671) contains seventeen treatises on special subjects.

FOPPENS, *Bibl. Belgica*, II (Brussels, 1739), 1018-9, with portraits; HARTZHEIM, *Bibl. coloniensis* (Cologne, 1747), 8-9, 285-86; 397-443, on pp. 405-43 is given the first paragraph of the reason of Landgrave Ernst of Hesse for returning to the Church; HURTER, *Nomenclator literarius*, IV (3rd ed., Innsbruck, 1910), 79-82; WERNER, *Gesch. der apolog. und polem. Literatur*, IV (Schaffhausen, 1865), 586-7.

FRIEDRICH LAUCHERT

Wales

Wales

Wales is that western portion of Great Britain which lies between the Irish Sea and the River Dee on the north, the counties (or portions of counties) of Chester, Salop, Hereford, and Gloucester on the east, the estuary of the Severn on the southeast, the Bristol Channel on the south, and St. George's Channel on the west.

NAME

The name Wales has been given to this country not by its inhabitants but by the Teutonic occupiers of England, and means "the territory of the alien race". "Welsh" (German *Wälsch*) implies a people of either Latin or Celtic origin living in a land near or adjoining that of the Teutons; thus *Wälschland* is an obsolescent, poetical German term for Italy. After an invasion lasting 330 years, the Anglican, Saxon, and Jutish "comelings" having driven the earlier "homelings" into the hill-country of the west by steady encroachments and spasmodic conquests, the names Wales and Welsh were applied to the ancient people and the land they retained. Wales is in French, *Pays de Galles*, from Latin *Gallus*, Low Latin *Wallia*. In the Middle Ages the Welsh coined in their own tongue a name of similar origin for their country, when, in poetry only, they termed it *Gwalia*. The Welsh language, however, has no cognate word for the people themselves; they have, ever since the days of the Saxon Heptarchy, styled themselves by no other title than *Cymry*. The etymology of this word has been a much debated question, but in the opinion of Sir John Rhys (a prime authority) it is compounded of the British *con bro* and means "compatriots"--the federated tribes

of ancient Britain who together contested the soil of their native land with the Germanic invader. In Welsh *Cymru* means Wales, *Cymro* a Welshman, *Cymracs* a Welshwoman, and *Cymry* Welshmen.

ETHNOLOGY

The early Welsh were an association of tribes united in a common cause against a common foe; and whilst they were designated by that foe "the aliens", they called themselves "the federated patriots". In the main the Welsh were Britons. The reason why they did not continue to style themselves Britons was that they were not wholly British, nor even wholly Celtic. Some of their tribes were Celts of the Brythonic, or British, stock, others belonged to the earlier Goidelic, or Gaelic, division of the Celtic race, whom the Britons, a later Celtic immigration, had subdued and partially absorbed. The Goidels, moreover, were in great part made up of yet older, non-Aryan, peoples whom they and their predecessors had successively conquered. The Welsh, therefore, racially represent an unknown series of the earliest settlers in Britain; they are not merely Ancient Britons, but the heirs of all the aborigines of the island, from the cave-men downwards. Though the Cymry knew enough of their racial history to call themselves a federation, they cared nothing about the origins of their Teutonic foes. The invaders came from various countries of northern Europe, and it was the Angles or English who eventually gave their name to the new nation. It was, however, the West Saxons who formed the advanced guard of the Germanic invasion, and *Saeson* (Singular *Sais*) was the term applied by the Welsh to the unwelcome visitors.

DEFINITION

When we come to define the precise bounds and limits of Wales, we at face a difficulty which has hardly yet been satisfactorily met by geographers. The most perplexing disagreement prevails among writers as to what exactly Wales is; and the question is variously answered, according to the views of each individual on points of nationality -- views usually influenced by his racial and political prejudices. One opinion is that Wales consists of twelve particular counties, and that its eastern boundary is identical with that of the eastern-most of those twelve counties. This is the popular, English, school-manual view. According to another view, Wales has thirteen counties, Monmouthshire being the thirteenth, in addition to the above twelve. The English and anglicized inhabitants of the thirteenth county vehemently deny the correctness of its inclusion. They point to the fact that, although Henry VIII had declared the thirteen counties to constitute the Principality of Wales, a statute of Charles II so far detached Monmouthshire from the others as to annex it to the Oxford Assize Circuit. To this the nationalists reply that a council sitting around a table in London could no more unmake Wales than they could transform England into Scotland, or Derbyshire into a part of Ireland.

Any declaration by a government as to what territory shall or shall not be considered as Wales is obviously a political arrangement and cannot affect the concrete facts of the case. Although no Act of Parliament applying to Wales affects Monmouthshire unless that county is expressly mentioned, Monmouthshire is as Welsh as Merionethshire. It has, indeed, historical associations

which might entitle it to be considered the premier county of Wales. On the grounds of history, ethnology, and language, it is necessary to include likewise certain western parishes in Shropshire, Herefordshire, and Gloucestershire as forming part of the real Wales, that is to say, of Wales as we are about to define the term. It would seem, in fact, that the only true and comprehensive definition of Wales is as follows: Wales is that territory north of the Bristol Channel which, since the subjection of South Britain by the English, has continuously been peopled by the descendants of its original pre-Germanic inhabitants. This includes the thirteen whole counties, with certain parishes in the shires of Salop, Hereford, and Gloucester; and in some places the boundary passes east of Offa's Dyke, the limit made by the victorious King of the Mercians in 779.

COUNTIES

The following are the names of the historic counties of Wales, with their Welsh equivalents:

North Wales (Y Gogledd):

- Flintshire (Flint);
- Denbigshire (Dinbych);
- Carnarvonshire (Caernarfon);
- Anglesea (Môn);
- Merionethshire (Meirionydd);
- Montgomeryshire (Trefaldwyn).

South Wales (Y Deheudir):

- Cardiganshire (Aberteifi);
- Radnorshire (Maesyfed);
- Pembrokeshire (Penfro);
- Carmarthenshire (Caerfyrddin);
- Brecknockshire (Brycheiniog);
- Glamorgan (Morganwg);
- Monmouthshire (Mynwy).

The County of Glamorgan is not rightly styled a shire; "Glamorganshire", though the term is often used, is a misnomer. This rule has been authoritatively settled within the last few years and is observed in State documents. In Shropshire the hundreds of Oswestry and Clun, and in Herefordshire those of Ewyas Lacy, Webtree and Wormelow, are the portions adjoining English counties which must be included in a logical and complete survey of Wales. Even in Gloucestershire, the westernmost parishes north of the Severn and east of the Wye -- notably Newland, Saint Briavel's, and Llancaut -- are at least as much Welsh as English by their history. It will thus be seen that the eastern boundary of the true Wales is widely different from that traced by the hand of custom and convention.

PHYSICAL FEATURES

That the Celts and pre-Aryans of South Britain were able to preserve themselves as a federation of non-Germanic peoples in the western parts of the island was doubtless due to the physical character of the country, which the Romans named "Britannis Secunda", and the English called

Wales. "Hen Gymru fynyddig, paradwys y bardd" (Mountainous old Wales, paradise of the bard); this is true only in a rough and rather poetical sense. Such mountains as Snowden (Welsh *Eryri*) in North Wales, Plinlimmon (*Pumillyman*) in central Wales, and Sugarloaf (*Pen-y-fan*) in South Wales can justly claim the title of mountain; but for the most part, the altitudes in Wales are rather to be regarded as big hills than as little mountains, and are oftener round or hummock-shaped than peaked and precipitous. There are, moreover, many wide areas of plain and fen, especially long the Severn estuary and the southern coast. On the whole, the surface of the country is beautifully diversified, hills, valleys, rivers, and sea combining to produce scenery of worldwide renown. In North Wales the views are generally grander than in the south, where the coastline is tamer and the country more pastoral than wild and awe-inspiring. In both halves of the principality there is abundance of woods and heath, while pasture predominates over arable land, especially since the decline of agriculture which marked the close of the nineteenth century.

AGRICULTURE

Farming is carried on in every county, though greatly restricted by the mines and factories of the coal and iron districts. Grain has never been largely produced in Wales, save in such purely agricultural localities as West Herefordshire and the Vale of Glamorgan. On the other hand, milk, butter, eggs, poultry, and butcher's meat have always been a staple product. The close grass of the hills produces the famous small "Welsh mutton" whose flavour is so peculiarly sweet. The ancient Welsh breed of cattle was small and black. It is now extinct or nearly so, but from it are descended the large black cattle of Carmarthenshire, which are themselves giving place to the fine brown-and-white "Herefordshires". The immemorial use of oxen for ploughing died out at the middle of the nineteenth century.

MINES

The mines and ironworks of Wales, though some are to be found in the north, are principally in Glamorgan and West Monmouthshire. The Romans worked seams of coal which lay near the surface, on the sides of some hills in South Wales, and this primitive mode of obtaining the mineral from levels or adits was continued down to modern times by the farmers, for obtaining domestic supplies of fuel. Towards the close of the eighteenth century, however, with the use of steam and machinery for pumping and winding, the practice of deep sinking, and other improved methods gradually produced the highly complex type of coal mine of today. Mining and the attendant industries, while augmenting the material prosperity of Wales, have ruined much of her loveliest scenery. It is commonly remarked that (owing to some natural laws as yet undiscovered) it is always the most beautiful valleys which are found to contain coal in commercially requisite conditions and quantity. Limpid stream, bird-haunted grove, and flowery glade then give place to a labyrinth of mechanism, a black desert of coaldust and mine refuse, and leagues of mean and depressing streets.

POPULATION

The populations of the counties of Wales vary according to the industrialism of each. The inhabitants in the coal districts outnumber those of all the rest of the principality. Glamorgan is by far the most populous county. The original population has been to some extent replaced by immigrants from England, but only to a small degree in the country parts. Gloucestershire, Somersetshire, and the south of Ireland are the districts which have most largely recruited the population of South Wales, chiefly by settlement in the big towns. Mid-Wales receives its foreign influx principally from the Midlands of England. North Wales is indebted to Manchester, Liverpool, and Chester for its fresh blood, but there is also some immigration from Ireland to the most populous centres.

The Welsh, though mainly a Celtic nation, are a composite folk made up of Celts and of many pre-Aryan peoples--a *mélange* of all the aborigines of the Isle of Britain. Remains of paleolithic man have been found in the limestone caves of the Wye Valley, along with bones of the cave-bear, hyena, etc. How far this early human race has influenced the Welshman of the present age, it is impossible to say; but there is no doubt that the racial type known as the "small dark Welsh", prevalent in certain districts (and, curiously, indigenous in the coal valleys of the south), is that of the latest pre-Aryan folk with whom the first Celtic immigrants came in contact. That race has been identified with the Basques of the Pyrenees and the Berbers of North Africa. Though there are no linguistic evidences to support either identification, there are reasons for believing that the "small dark" Welshmen are of the same race as the original Iberians of Spain and Portugal. It is, in any case, certain that they are the Silurians of the period of the Roman invasion under Claudius (A.D.43). We are on equally sure ground in saying that the Celts of the first immigration, the Gael (akin to the Irish, Highland Scots, and Manx), have preserved their racial identity more or less completely in certain parts of both North and South Wales. The largest section of the Welsh nation, however, are Celts of the British stock, a pure tribe of which stretches in a wide band across Central Wales. Many of the ogham and Latin inscriptions on rude stone monuments of the Romano-British period in Wales were evidently made not by British but by Gaelic Celts. It is, however, as yet uncertain what proportion (if any) of these stones commemorate invaders from Ireland.

HISTORY AND LANGUAGE

After an occupation lasting 360 years, the Romans left a Britain which was thoroughly permeated by the civilization of the Empire. In this Wales largely participated, though it is chiefly in South-east Wales that the traces of Imperial Rome must be sought. Recent excavation has exposed vast remains of the power and luxury of the conquering race, at Caerwent in Monmouthshire (once a seaport); and at Caerleon, in the same county, classical antiquity competes with Arthurian romance for the visitor's attention. Many Welsh pedigrees assign existing families a Roman ancestor in the person of some official who lived in the period between the departure of the legions and the Saxon conquest.

It is, however, chiefly in the domains of language and religion that Rome has left an abiding imprint on Wales.

Welsh, as a branch of the Celtic family of languages, has close affinities with Latin; but, besides, has borrowed much from her Italic sister. An enormous proportion of Welsh words are direct importations from Latin, modified by generations of Welsh-speakers. Particularly is this the case with words expressive of religious, theological, and ecclesiastical ideas. Very few of these are of other than Roman origin. This fact is, of course, owing to the circumstances which attended the introduction of Christianity into Britain. The first Christians in this island were persons who had come in with the Roman army, and in due course these foreign Christians were sufficiently numerous to form congregations in the principal *coloniae* of Britain. There was a Roman bishop at Caerleon, where a large garrison was permanently quartered. Lucius, the "King of Britain" whom the "Liber Pontificalis" represents as sending a letter to Pope Saint Eleutherius asking to be made a Christian "by his mandate", would seem to have been a native *regulus* of Gwent, the region in which Caerleon is situated. It was inevitable that the Britons, deriving all their knowledge of Christianity from Rome and the Romans, should adopt Latin words for their new Christian terminology. So it comes that the Welsh for such words (to cite a few typical instances) as holiness, faith, charity, grace, hell, purgatory, sacrament, mass, vespers, pope, church, hospital, altar, chasuble, cross, parish, saint, martyr, anchorite, cell, gospel, consecration, baptism, Christmas, the Epiphany, Lent, Easter, and a thousand others, is in each case the Latin word, modified by the laws of Welsh phonology. "Sacramentum" has become *sacrafen*; "episcopus", *esgob*; "ecclesia", *eglwys*; "altar", *allor*; "Caresima", *Carawys*; and so on.

Welsh holds a position between Munster Irish on the side of Gaelic, and Cornish on the side of the British division of Celtic -- but much nearer the latter. It is not as soft as Irish and Cornish, yet very musical. Its gutturals and aspirate lls sound rough to foreign ears, and an English writer has picturesquely described Welsh as "a language half blown away by the wind"; but there can be no question as to its richness in pure vowel-sounds or its masculine force. During the past century English has unceasingly encroached upon the ancient tongue, driving the linguistic boundary ever further west. Industries, railways, and public elementary schools have been the chief enemies of Welsh, and the extinction of this venerable speech must be looked for in the next generation or two. The language, nevertheless, shows marvelous vitality in the face of odds, and a widespread literary revival has brightened its declining years.

After the departure of the Romans from Britain, the native inhabitants retained a semblance of Roman institutions. Considerable vestiges of these remained among the Welsh in the time of the Saxon Heptarchy. The clan system and other Celtic customs, however, continued in force long after imperial forms were forgotten. Only for a brief period were the Welsh united under one sovereign, in the successive reigns of Rhydderch Mawr (Roderick the Great) and his son Howel Dda, or the Good, both of whom were strong rulers and wise legislators. The laws of Howel Dda are yet extant. They commence with a declaration that the king had obtained their sanction by the Pope of Rome, and their tenor is one of reverence for the Christian Faith and Church. It was only by slow degrees

that the native laws and customs were ousted by Anglo-Norman usages and the machinery of feudalism. The feudal system, indeed, hardly penetrated beyond the borderland (called the Marches) where, in their castles and walled towns, dwelled the Palatine lords who held those lands by right of conquest. By Henry VIII the laws of the principality, native and feudal, were assimilated to those of England -- though certain peculiar legal institutions, such as the courts of great session, remained till the reign of William IV. At the same time Wales was divided into counties or shires, some of which were based on and named after the ancient lordships. Though possessing many old boroughs, Wales had no capital town until a few years ago. In 1905 King Edward VII by royal charter conferred on the county of Cardiff the rank of a city, and gave to its chief magistrate the title of lord mayor. This action afforded great satisfaction to the Welsh people, inasmuch as Cardiff is superior to any other town in Wales both in commercial importance and in antiquity. Its history goes back to the Roman occupation, and the place is linked with Llandaff, the oldest episcopal see. These considerations have earned for Cardiff universal recognition as the capital of Wales.

RELIGION

The religion of the pre-Aryan inhabitants of Britain was a nature-worship which included certain animals among its divinities. The Celtic religious system was likewise a nature-cult, but resembled that of the Greeks, Latins, and other Aryans in deifying abstract ideas rather than material objects. Hence the gods of the Britons were equations of those of their Roman conquerors -- Nudd or Nodens, being the Celtic equivalent of Neptune; Pwyll (Pen Annwn, "the head of Hades") the Welsh counterpart of Pluto, and so of the rest. The primitive totemism of the earlier inhabitants, however, made a deep impression on the religious ideas of the Celts, and has even left permanent traces in Welsh nomenclature. Such names as Mael-sêr (servant of the stars), Gwr-ci and Gwr-con (man of a dog, or dogs), and Gwr-march (man of a horse) are examples.

By the end of the Roman occupation, the Britons of Wales had for the most part become Christians, paganism lingering only in a few remote districts, and chiefly among the Gaelic tribes. At first the discipline of the Celtic Church followed closely that of Rome, whence (if we may trust Welsh and Roman traditions alike) the first missionaries had come to Britain. According to the "Annales Cambriae", the Britons complied with Rome's reforms of the Easter cycle in the year 453. There was frequent communication between the British Christians and the pope, and British bishops took part in the Council of Arles, at which the papal representatives assisted. When St. Augustine came to evangelize the Anglo-Saxons, his first step was to invite the cooperation of the Welsh clergy--a fact which proves that these latter were in full communion with Rome and the Catholic Church at large. By that time, however, the British and Welsh Christians had already long been practically cut off from personal communication with the rest of Christendom by the Germanic invasion, and thus had to some extent lost touch with the Roamn See. The result was becoming gradually apparent. Peculiar usages in ritual and discipline, known as "Celtic customs", had been evolved from principles orthodox enough, and in some saces actually Roman in origin, but which had petrified into abuses. Rome would gladly have abolished these, but the Welsh cherished them

in her despite, as symbols of nationality. They condemned Saint Augustine as the apostle of their Saxon foe, and, deeming the latter more worthy of eternal reprobation than of the joys of heaven, refused to have a hand in their conversion. This attitude of the native bishops, no doubt, brought the Welsh Church into a situation perilously near schism; but the period of tension was of relatively brief duration. In the ninth century Wales renounced all such national customs as were held unorthodox by Rome, and even accepted (with a bad grace, perhaps) the metropolitan jurisdiction of Canterbury. Thereafter it was the boast of Welshmen that their countrymen had never swerved from the true profession of the Catholic and Roman Faith.

The Reformation came to Wales as a foreign importation, imposed upon the nation by the sheer weight of English officialdom. Of this there is abundant evidence from contemporary records. Protestantism was against all the sentiment of Welsh nationality, all the traditions and associations dearest to the people. Barlow, the first Protestant Bishop of Saint David's, proposed the see should be removed from Carmarthen, to avoid the Catholic memories and atmosphere which hung around the shrine of Cambria's patron saint. The bards denounced the Reformation with invective, satire, and pathos. Sion Brwynog, of Anglesey, who flourished in the reign of Edward VI, composed a poem entitled "Cywydd y Ddwy Ffydd" (Ode to the Two Faiths), portions of which may be baldly translated as follows:

...Some men are resolute in the new way, and some are firm in the old faith.
 People are found quarrelling like dogs; there is a different opinion in each head...The Apostles are called pillars; poor were they while they lived (a thing not easy to the generation of today). Away from wives and children, to Jesus they turned. With us, on the contrary, a priest (of all persons) leaves Jesus and His Father, and to his wife freely he goes. His malice and his choler is to be angry about his tithes...At the table, with all the power of his lungs, he preaches a rigmarole...not a word about Mass on Sunday, nor confession, any more than a horse. Cold, in our time, as the grey ice are our churches. Was it not sad, in a day or two, to throw down the altars! In the church choir there will be no wax at all, nor salutary candle, for a moment. The church and her perfumes [sacraments] graciously healed us. There was formerly a sign to be had, oil anointing the soul. Woe to us laymen all, for that we are all without prayer. There is no agreement in anything betwixt the son and his father. The daughter is against the mother, unless she turn in mischance...Let us confess, let us approach the sign [of the cross, in absolution]; God will hear and the Trinity...Let us go to his protection, praying; let us fast, let us do penance. ...The world, for some time past, does not trust the shepherds. It behooves a man to trust the God of Heaven. I believe the word of God the Son.

In the Cardiff Free Library is a Welsh prose manuscript of the age of Elizabeth, by an unknown author. It is a defence of the old religion against the doctrines of the Protestants, whom it terms "the New Men". The book has leaves missing at both ends, but was divided into twelve chapters,

each dealing with a leading point of controversy, as the Real Presence; communion in one kind; purgatory, and prayer for the dead; prayer to, and the intercession of, the saints, and the veneration of relics; pilgrimages, images, and the sign of the cross. The composition is excellent, and the matter for those fierce times, moderate in tone. A good deal of national feeling is apparent. Referring to the recent translation of the New Testament into Welsh by the state Bishop of Saint David's, and especially to the preface, he says that, it is only the misbelief of which the ancient heretics boasted. In another chapter the author compares Naaman's Jewish maiden to a Welsh girl recommending her master to try the virtues of Saint Winifred's Well, in Flintshire; and he rebukes the "New Men" for mocking the Catholics when these go to Holywell on pilgrimage and bring home water, moss, or stones from it. The heretics seek a natural reason for the virtues of that well, which cures all manner of sick folk. Great, he says, are the miracles wrought at Saint Winifred's Well, even in these evil days, since the false new faith came from England. Ignorance has increased in Wales, adds the writer, since the churches were cleared of pictures and images, which were books of instruction to the unlettered. The glory of Britain departed when the crucifix was broken down. The legend of the cross of Oswestry is referred to, as also the miraculous appearance of the figure of the cross in a split tree-trunk (at Saint Donat's) in Glamorgan. This last event had occurred a very few years previously, and made so remarkable an impression on the people that the authorities prohibited any reference to the marvel.

For a hundred years after the Reformation manuscript books containing Welsh poetry and prose of the most distinctly "Popish" character continued to be cherished in mansions and farmhouses, and passed from hand to hand until they were worn out. Many still survive, tattered and soiled, but eloquent witnesses of the Catholicism which died so hard in Wales. The bards' favourite subjects were the Blessed Virgin, the national saints, the rosary, the roods (calvaries) in the churches, the Mass, the abbeys, and the shrines of the city of Rome. From such a manuscript as is described above, the following poem may be noticed, almost at random. It is entitled "Cywydd y paderau prennau" (Ode to the Wooden Beads) and commences thus:

There is one jewel for my poor soul, in a life which desires not sin; it is the beads, in four rows. A son of learning [a cleric] gave them to an old man. Holy Mary, for that he gave it from his keeping, grant thy grace to Master Richard. The Canon sent ten fine beads [decades], that may hang down to one's knee. I obtained ten of God's apples [the large beads], and I carry them at my side -- ten were obtained from Yale with great difficulty. Those ten in memory of you. Ten words of religious law, ten beads follow after them...The man to the cleric of the glen gave beads on a string; Mary's ornament, in tiny fragments, placed upon silk...Wood is the good material -- wood from Cyprus in Europe... Suitable are these for a gift -- bits of the tree of Him Who redeemed us...

The bard was Gitto'r Glyn, who flourished about 1450; the transcript was made about the year 1600.

Writing soon after the Reformation, the bard Thomas ap Ivan ap Rhys begs his lord not to stay in England. He is sure to encounter treachery. The Mass is cut up as a furrier does his material; Matins and Vespers are a thing detested. Nobody attends to the seven petitions of the Pater Noster. People eat meat on Wednesdays and Saturdays -- even on Fridays, on which day it used to be thought poison. It is no wonder that streams, orchards, and ploughed fields no longer yield their increase. Every man of them is no better than a beast, for they never bless themselves with God's word -- while others have their heads cut off as traitors and are punished more and more (*Creawdwr Nef arno y crier*).

The "Carols" of Richard Gwyn *alias* White, who was cruelly martyred in Elizabeth's reign, had (though never printed) a great popularity, and must have borne a large share in the work of the Counter-Reformation in Wales. White was a schoolmaster at Wrexham, and a man of considerable attainments. His attachment to Catholicism was that of the scholar and the martyr combined, and the influence of his controversial rhymes was widespread and profound. In form and style he is evidently the model of Vicar Prichard's "Canwyll y Cymry" (Welshman's Candle), written in the reign of Charles I. This Protestant work, though, unlike the verses of Richard White, it was not only printed but also circulated with the support of the state Church, is by no means the equal of its prototype either in the purity of its Welsh or in the force and picturesqueness of its diction. White describes the Catholic Church as "a priceless institution conspicuous as the sun, though smoke mounts from Satan's pit, between the blind man and the sky". He gives nine reasons why men should refuse to attend heretical worship: "Thou art of the Catholic Faith; from their church keep thyself wisely away lest thou walk into a pitfall. [This is his main argument.] The English Bible is topsy-turvy, full of crooked conceits. In the parish church there is now, for preacher, a slip of a tailor demolishing the saints; or any pedlar, feeble of degree, who can attack the pope. Instead of altar, a sorry trestle; instead of Christ, mere bread. Instead of holy things, a miserable tinker making a boast of knavery. Instead of images, empty niches. They who conform to the new religion will lose the seven virtues of the Church of God, the communion of all saints, and the privilege of authority given by Jesus Christ Himself to pardon sin." White's scornful description of the heretical ministers is founded on the fact that the difficulty of finding educated men to fill the places of the ejected clergy had necessitated the appointment of handicraftsmen of various kinds, and even grooms, to act as teachers of the Reformed religion.

The sacking of a secret Jesuit college in the Mennow Valley, South Wales, in 1680, led to the discovery of a store of "contraband Catholic" printed books and manuscripts, some in English and some in Welsh. Many of these are now in the library of the cathedral of Hereford. At that date there was living in Monmouthshire a learned Benedictine, Dom William Pugh. He had led a chequered life. Born of an ancient Catholic family in Carnarvonshire, he became a doctor of medicine. On the outbreak of the Civil War he joined the Royalist army as a captain, and was one of the garrison besieged by Fairfax in Raglan Castle. Afterwards he became a monk and a priest, and wrote a large manuscript collection of prayers and hymns in Welsh, many of which are his own composition, others translations and transcripts. To him we are indebted for the preservation of White's "Carols".

In 1648 Captain Pugh composed a Welsh poem in which loyalty to his temporal sovereign is combined with devotion to the Catholic Church. He begins by saying that the political evils afflicting Britain are God's punishment for the country's abandonment of the true religion. People were far happier, he proceeds, when the Old Faith prevailed. But a better time is coming. The English Roundheads will be made square by a crushing defeat, and the king will return "under a golden veil"; Mass shall be sung once more, and a bishop shall elevate the Host. Here we have evidently a mystical allusion to the King of Kings on His throne in the tabernacle, and this is the theme underlying the whole poem.

It would be easy to quote similar examples from the Welsh literature of any period previous to the Civil Wars--after which time Catholicism rapidly lost its hold on Wales. As a consequence of that political and social upheaval, an entrance into the country was effected by the Puritanism which was destined, in the course of little more than a century and a half, to transform the Welsh people spiritually, morally, and mentally -- and, as many people judge, not for the better in either respect. This loss of the Church's ground was, humanly considered, entirely owing to the failure in the supply of a native clergy, brought about by racial jealousies between the Welsh and the English seminarists in the English College, Rome, at the beginning of the seventeenth century. Within a hundred years, this circumstance led to a dearth of Welsh priests able to minister in the native tongue. After the Titus Oates persecution (1679-80) the Welsh-speaking clergy were either executed or exiled, and the chill mists of Calvinism settled on Cambria's hills and vales. Thenceforward, Welsh Catholics were a genus represented by a few rare specimens. Mostyn of Talacre, Jones of Llanarth, Vaughan of Courtfield are almost the only ancient families of Catholic gentry left to Wales at the present day; and the only Old Welsh missions still containing a proportion of native hereditary Catholics are Holywell in the north, and Brecon and Monmouth in the south.

The eighteenth century saw but a very small output of Welsh Catholic literature, either printed or manuscript. Almost all there is to show for that period is a version of the "Imitation of Christ", and "Catechism Byrr o'r Athrawiaeth Ghristnogol" (London, 1764), a short catechism of Christian doctrine. It is in excellent Welsh by Dewi Nantbrân, a Franciscan. The number of Catholic books for Welshmen increased rapidly in the course of the nineteenth century. In 1825 appeared "Drych Crefyddol". Its full title translated is "A religious mirror, shewing the beginning of the Protestant religion, together with a history of the Reformation in England and Wales". Of this small work, by William Owen, only two copies are known to exist--one being in the possession of the present writer. It is embellished with a few rude woodcuts, and comprises an account of the Welsh martyrs. A catechism in Welsh called "Grounds of the Catholic doctrine contained in the profession of faith published by Pope Pius IV" (Llanrwst, 1839) is now very rare. Since then many such publications have appeared.

Wales possesses an extensive vernacular Press, whereof by far the largest portion is controlled by the Nonconformist and Radical party. All the Dissenting denominations have their literary organs, and the Established Church is similarly represented. As a general rule, the Welsh Press deals with Catholicism only in a hostile manner; but in quite recent years a more moderate tone

has been adopted in a few of the less puritanical newspapers and magazines. The largest denomination in Wales is that of the Calvinistic Methodists (now often styled the Presbyterian Church of Wales). The Baptists, Congregationalists, Wesleyan Methodists and Unitarians are also strong in the principality -- the latter particularly in Cardiganshire. Mormonism has made large numbers of recruits in the chief centres of population. Puritanism is slowly but steadily ceding ground to Agnosticism and Anglicanism.

The Catholic Church is strong only in the large towns of Wales, the Catholics of the rural districts having participated in the exodus consequent on the decay of the old country life. The hierarchy includes two bishops, deriving their titles from Menevia (Saint David's) and Newport. The former see comprises the greater part of Wales; the latter includes Glamorgan, Monmouthshire, and Herefordshire. The present cathedral of the Menevian diocese is at Wrexham in North Wales, that of Newport (a Benedictine see) is the priory church of Belmont, near Hereford. The Church's progress among the Welsh people is incredibly difficult, and very slow; but it is perceptible. Advance would be easier and more rapid if greater use could be made of the Welsh language in the material.

Out of a total population of 3 million (1995), the Catholics number about 150,000 (5 percent). Of religious, there are Benedictines at Hereford, Cardiff, Merthyr Tydfil, Swansea, and Cardigan; Jesuits at St. Asaph, Rhyl, and Holywell; Capuchin Franciscans at Pantasaph and Penmaenmawr; Passionists at Carmarthen; Oblates of Mary Immaculate at Llanrwst, Pwllheli, Holyhead, and Colwyn Bay; Fathers of the Institute of Charity at Cardiff and Newport; and many convents of nuns of various congregations, including some communities of Daughters of the Holy Ghost (*Soeurs Blanches*), exiled from Brittany.

JOHN HOLSON MATTHEWS

Walkenried

Walkenried

Formerly one of the most celebrated Cistercian abbeys of Germany, situated in the Duchy of Brunswick between Lauterberg and Nordhausen. Founded in 1127 by Countess Adelheid of Klettenberg, it was confirmed in 1137 by Innocent II. The first monks came from the monastery of Altfeld or Camp in the Archdiocese of Cologne. In the time of the first abbot, Henry I (1127-28), two branch monasteries were founded: Pforta (in 1132) and Slichem, or Sittichenbach (in 1141) in the Countship of Mansfeld. Walkenried grew rich and owned lands as far as the Rhine and Pomerania. The monks gave much attention to mining, smelting, and fishing. In the fifteenth century the abbey began to decay, and the Peasants' War brought it to the verge of destruction. About Easter, 1525, a mob of 800 peasants of the southern Harz region marched against Walkenried. Abbot Paulus (1520-36) and the monks fled, carrying off the archives. The abbey was plundered and the tower of the church torn down. The next abbot, John VIII (1530-59), was very worldly and extravagant; in 1546 he and his monks became Lutherans. Thereupon Count Ernst of Honstein, as patron of the abbey, laid a complaint before Charles V. In 1548 the emperor ordered that everything in the abbey

should be restored to its former condition, but his command was unheeded. After the count's death the entire Countship of Honstein became Lutheran, and in 1557 a Protestant school was opened at Walkenried. Up to 1578 four Protestant abbots had directed the abbey. The Court of Honstein now made his son administrator, and after the son's death Walkenried fell to the Duchy of Brunswick. During the Thirty Years War the abbey for a short time (1629-31) was restored to the Cistercians. The Peace of Westphalia put an end to the shadowy existence of the Protestant monastery and the abbey was secularized. In 1668 the school was closed. Since then Walkenried has been state property of Brunswick. The Gothic church, built during the years 1210-1290, was greatly damaged by the destruction of the tower by the peasants in 1525; to-day only a few picturesque remains are still in existence. The monastery was somewhat later in date than the church; its cloister is well preserved. The chapter hall has served since 1570 as a Lutheran church. The library was destroyed by the peasants, but the archives are preserved at Wolfenhüttel.

Die Urkunden des Klosters Walkenried, I, II (Hanover, 1852-55); LEUCKFELD, *Antiq. Walckenredenses* (Leipzig, 1706); GIRSCHNER, *Die vormalige Reichsabtei Walkenried* (Nordhausen, 1870); LEMCKE, *Gesch. von Walkenried* (2nd. ed., Leipzig, 1909).

KLEMENS LOFFLER

Ven. John Wall

Venerable John Wall

Martyr, born in Lancashire, 1620; suffered near Worcester, 22 August, 1679; known at Douay and Rome as John Marsh, and when on the Mission under the *aliases* of Francis Johnson, Webb, and Dormore. The son of wealthy and staunch Lancashire Catholics, he was sent when very young to Douai College. He entered the Roman College, 5 November, 1641, was made priest, 3 December, 1645, and sent to the Mission, 12 May, 1648. On 1 Jan., 1651, he received the habit of St. Francis at St. Bonaventure's Friary, Douai, and a year later was professed, taking the name of Joachim of St. Anne. He filled the offices of vicar and novice master at Douai until 1656, when he returned to the Mission, and for twenty years laboured zealously in Worcestershire. He was apprehended, December, 1678, at Rushock Court near Bromsgrove, where the sheriff's man came to seek a debtor; his priestly character transpiring, he was tendered the Oath of Supremacy, and was committed to Worcester Gaol for refusing it. He was brought to trial at the Assizes, 25 April, on the charges of receiving and exercising his priesthood, and of refusing the oaths. A man whose vices he had reproved bore testimony to his priesthood, and he received sentence. He was then sent to London, and four times examined by Oates, Bedloe, and others in the hope of implicating him in the pretended plot; but was declared innocent of all plotting and offered his life if he would abjure his religion. Brought back to Worcester, he was executed at Redhill. On the day previous, William Levison was enabled to confess and communicate him, and at the moment of execution the same priest gave him the last absolution. His quartered body was given to his friends, and was buried in St. Oswald's churchyard. Mr. Levison, however, secured the martyr's head, and it was treasured by the friars at

Douai until the dissolution of that house in the French Revolution. The Franciscan nuns at Taunton possess a tooth and a bone of the martyr. The long speech he composed for his execution was circulated among the Catholics after his death; and the authorities issued as a broadsheet the public account of his execution containing "a true copy of the speech...with animadversions upon the same". In 1879 a rood was erected in his memory in the churchyard at Harvington, whose hall was the usual home of the martyr.

J.L. WHITFIELD

Walla-Walla Indians

Walla-Walla Indians

A Shahaptian tribe dwelling on the Walla-Walla (i.e. rushing water) River and the Columbia in Washington and Oregon, from Snake River to the Umatilla. Their language is akin to that of the Nez Percés but forms a distinct dialect. By the treaty of 1855 they were placed on the Umatilla reservation in Oregon, where they still remain. They number only 461, and are mixed with Nez Percés and Cayuse. Their family organization was loose, and the clan system not observed. The scantiness of their food supply, necessitating frequent migrations, prevented any continued development of the village system. Their food consisted mainly of roots, berries, and salmon. At present most of the tribe are farmers and stock breeders. The Walla-Walla were visited by Lewis and Clarke in 1804, and were evangelized by the Jesuit pioneers of the Northwest about forty years later.

A.A. MACERLEAN

Albrecht von Wallenstein

Albrecht von Wallenstein

(WALDSTEIN).

Born at Hermanic, Bohemia, 24 September, 1583; died at Eger, Bohemia, 24 February, 1634. He belonged to a Czech noble family of Bohemia who were members of the Bohemian Brethren. He studied at the Lutheran university at Altdorf, travelled in France and Italy, became a Catholic apparently at the Jesuit college at Olmutz, and married an elderly widow, whose large fortune he inherited in 1614. He had a strong liking for military life. In 1617 he aided Ferdinand of Styria, who became emperor in 1619, against Venice, and in 1618 against the revolting Bohemians. In 1621 he received for the first time an independent command and fought against the prince of Transylvania, Bethlen Gabor, who had invaded Moravia. In return for large advances of money to Ferdinand he received after the battle of the White Mountain so many of the confiscated estates of the Bohemian insurgents that his possessions in northern Bohemia formed the territory of Friedland, which Ferdinand in 1624 raised to a principality. His relations with the Jesuits were most friendly. Determined to become the champion of the Habsburgs and of the Church in the empire, he offered

to raise an army of 20,000 men, upon which Ferdinand appointed him, 7 April, 1625, "Captain over all the imperial forces in the Holy Roman Empire and the Netherlands", and in June raised him to the rank of a duke. Wallenstein was very successful in collecting his army and late in the autumn appeared at the scene of war in the circle of Lower Saxony. He occupied at once the Dioceses of Magdeburg and Halberstadt, the richest and most important territories strategically, and secretly sought to secure the election of a son of the emperor as their future bishop. On 25 April, 1626, he was attacked at the bridge of Dessau over the Elbe by the enemy he most feared, Ernst von Mansfeld. Mansfeld, completely defeated but not pursued, gathered new troops and marched through Silesia to join forces with the prince of Transylvania. Fear of losing the territories on the Elbe kept Wallenstein from action for a long time, and when he finally attacked Mansfeld he was unsuccessful and lost large numbers of his men. He was able, though, to justify himself before the emperor in November, 1626, by proving that a much larger army was necessary. In 1627, therefore, he raised an army which finally numbered almost 150,000 men, which he supported by assigning definite territories of the empire to its different divisions, including those both of Catholic princes and of Protestant rulers who were friendly to the emperor. There was but little discipline and the greed of the generals and colonels was great. In a short time consequently angry accusations were made against Wallenstein.

In the mean time during 1627 he drove Mansfeld's troops out of Silesia, united with Tilly for a campaign against Holstein, in which he advanced as far as Jutland and also occupied Mecklenburg. In January, 1628, the emperor granted him the Duchy of Mecklenburg in fief for life and in June, 1629, as a hereditary possession. Thus he became one of the most prominent princes of the empire. The other princes holding this rank hated him, fearing that he would overthrow their freedom and subject them once more to the supremacy of the emperor. He had now reached the highest point of his successes. He made the vain boast that in three years he would conquer Constantinople, and sought unsuccessfully to form an alliance between the emperor and Gustavus Adolphus; he also endeavoured to persuade the Hanseatic towns to form a union with the empire. He even planned a canal uniting the German Ocean and the Baltic Sea. But he was unable to collect a fleet, or to occupy and close the whole of the German coast along the Baltic. He failed in the siege of Stralsund in the summer of 1628, and to take Gluckstadt, without which his position in Holstein was insecure. He accused others for his lack of success, and objected in particular to the Edict of Restitution of March, 1629, and the war carried on by the Habsburgs in Upper Italy to maintain their power over Mantua. At his insistence the emperor now made a treaty of peace with Denmark (4 June, 1629), by which the Danes received back all the territory taken from them, but rejected Wallenstein's proposal of an alliance with the emperor, promising, however, not to interfere with the execution of the Edict of Restitution in northern Germany.

Wallenstein had always been opposed to giving imperial aid to the Spaniards in their war against the Netherlands, but when he himself deemed it necessary to send troops the aid came too late. The same fate attended the despatch of troops to Poland against Gustavus Adolphus. Wallenstein felt the ground shaking under his feet, and sought at least to secure in northern Germany the most

important point of passage over the Elbe, the city of Magdeburg, by blockading it, before the Swedes entered the empire. At the same time he exerted himself to come to an agreement with the head of the princes of the empire, Maximilian of Bavaria, but was not able to carry out these plans. In June, 1630, he went to southern Germany in order to advance, if necessary, into Italy. In August the princes of the empire were able to secure his dismissal; Wallenstein accepted his removal without resistance.

After this his life was mainly a series of intrigues. His character, which had never been noble, now gave way completely. He was perhaps more embittered over the loss of Mecklenburg than over the loss of the rank of commanding general. As early as the spring of 1631 he negotiated through Bohemian refugees with Gustavus Adolphus; which side began the negotiations is a disputed point. When, after the battle of Breitenfeld, Gustavus Adolphus continued his campaign and the emperor in October appealed again to Wallenstein, the latter was willing to listen to him but did not come to terms until April, 1632. The conditions of the agreement were such as to inevitably lead to new disputes. Wallenstein received the right to fill all positions in the army, to negotiate with foreign governments, and troops not under his command were not to be permitted in the empire by the imperial party. From the first his aim was, in co-operation with the emperor, to draw away Saxony from alliance with the Swedes, but he did not obtain his object. On 25 May, 1632, he again took Prague, then opposed his army to that of Gustavus Adolphus before Nuremberg; in September the Swedish king attacked him but was driven back. In order to force Gustavus to retreat Wallenstein advanced toward Saxony. On reaching the boundary of Bavaria, Maximilian of Bavaria and his troops turned back, a loss which weakened Wallenstein's strength. On 16 November a battle was fought with the Swedes at Lutzen in Germany. Wallenstein was not defeated, but neither was he the victor; and he suffered such heavy losses that he ceased operations. He continued the war by means of diplomacy, and made one truce after another with Saxony. He only consented at the last moment that Spanish troops should be permitted to enter the empire to rescue Breisach, which protected the Upper Rhine from the enemy, and permitted Ratisbon, a most important point, to fall into the hands of Bernard of Weimar in November, 1633.

During this entire period he fought but one battle himself, that at Steinau in Silesia, where in October he defeated the Swedish troops. He grew more and more involved in negotiations which finally led him into treason against the emperor. Sometimes he was engaged in negotiations with the Swedes, sometimes with Saxony against Sweden and the Habsburgs, and finally even with France. At one time he desired, by combining with the estates of the empire, to establish peace. Probably the impelling force was largely the desire for revenge. His inactivity and double dealing brought the emperor into a position which might easily have become dangerous. In addition the Spanish ambassador at Vienna urged his removal. During these later years the Jesuits were opposed to him, and the army fell away from him. Prague and Pilsen deserted him and went over without a struggle to the emperor as soon as the latter took the first measures against Wallenstein. His fate was soon decided. He was murdered at Eger by two Protestant Scotch officers and one Catholic Irish officer, all belonging to his own army.

Wallenstein's importance as a general is a matter of dispute. He was boastful, fond of display, and haughty; his bearing was striking. His preference was for great undertakings planned on a large scale, and he had an extraordinary power of attraction both for officers and for common soldiers. He was undoubtedly a skillful strategist, and when he ventured a battle he was cool and vigorous. On the other hand, he carried on war very slowly, was often wrong in his estimate of his opponents, and frequently made fatal mistakes. He lacked almost entirely the most important quality of great commanders, the will to undertake decisive battles. He was greatly influenced in his conduct by astrology. He proved himself an excellent ruler of the states which he had formed, especially in Friedland and the Silesian Duchy of Sagan. Like most great conquerors he took much pleasure in affairs of state, was a very skillful political economist, and did much to improve the civilization of his territories. In his plans for civilization he worked with the Jesuits, of whom he was a large benefactor. Measured by the standards of his era he was indifferent in religion. To carry out politics and war for religious ends was distasteful to him. He intentionally gave many important positions in his army to Protestants. He showed much skill in diplomatic negotiations but finally by their means brought about his own fall.

At present the Bibliography of Wallenstein embraces some 2000 titles. Lists of them may be found in the *Mitteilungen des Vereins für Geschichte der Deutschen in Böhmen*, beginning with XVII (1879). A very copious biography has been lately written by HALLWICH, *Geschichte Wallensteins* (1910), III reaches the year 1625.

M. SPAHN

Henri-Alexandre Wallon

Henri-Alexandre Wallon

Historian and statesman, born at Valenciennes (Nord), in 1812; died at Paris, in 1904. Fellow of history and professor at the Lycée Louis le Grand, he was appointed (1840) master of conferences at the Ecole Normale, and, in 1846, Guizot's assistant at the Sorbonne. His work, "L'esclavage dans les colonies" (1847), caused him to enter public life; he became assistant deputy for Guadeloupe at the Constituent Assembly and representative for the Department of the Nord at the Legislative Assembly (1849). But he resigned in 1850 when the law restricting suffrage was passed. Professor of history at the Sorbonne, a member of the Academy of Inscriptions (1850), prior to becoming its permanent secretary, he was in 1871 deputy from the Nord to the National Assembly, where he sat on the Right Centre. On 24 May, 1873, he voted against Thiers and the Broglie ministry. The attempted restoration of the monarchy having failed, Wallon allied himself with his friends on the Left Centre and to him was due the amendment which brought about the passage of the constitutional laws; hence he was jesting called the "Father of the Republic". As minister of public instruction in Buffet's cabinet (March, 1875- March, 1876) he favoured the vote which secured liberty of higher education (26 July, 1875). Appointed senator for life at the end of the same year he henceforth defended Catholic interests in the Senate on the various occasions when they were under discussion.

He was dean of the Paris Faculty of Letters for eleven years (1876- 87). Of his works the following may be mentioned: "Du monotheisme chez les races semitique" (1859); "Jeanne d'Arc" (1860); "La vie de Jésus et son nouvel historien" (1864), a critical examination of Renan's works; "Vie de Notre Seigneur Jésus Christ" (1805); "La Terreur" (1873); "Saint Louis et son temps" (1875); "les représentants du peuple en mission et la justice revolutionnaire en Pan II" (1889-90), wherein he exposes the violence and arbitrariness of the Jacobin tribunals.

GEORGES BERTRIN

Charles Walmesley

Charles Walmesley

Bishop of Rama, Vicar Apostolic of the Western District, England, b. 13 Jan., 1722; d. at Bath, England, 25 Nov., 1797. He was the fifth son of John Walmesley of Westwood House, Wigan, Lancashire; was educated at the English Benedictine College of St. Gregory at Douai (now Downside Abbey, Bath); and made his profession as a Benedictine monk at the English Monastery of St. Edmund, Paris, in 1739. Later he took the degree of D.D. at the Sorbonne. His scientific attainments soon brought him into notice as an astronomer and mathematician. He was consulted by the British Government on the reform of the calendar and introduction of the "New Style", and was elected a Fellow of the Royal Society of London, and the kindred societies of Paris, Berlin, and Bologna. From 1749 to 1753 he was Prior of St. Edmund's, Paris and in 1754 was sent to Rome as procurator general of the English Benedictine Congregation. Two years later he was selected by Propaganda as coadjutor, with right of succession, to Bishop York, Vicar Apostolic of the Western District; and was consecrated Bishop of Rama on 21 Dec., 1756. He administered the vicariate after the retirement of Bishop York in 1763, and succeeded that prelate on his death in 1770. His energy and ability attracted to him an amount of attention seldom given to Catholic bishops in England in the eighteenth century. So much was this the case that during the "No Popery" riots of June, 1780, a post-chaise conveying four of the rioters, and bearing the insignia of the mob, drove the whole way from London to Bath, where Walmesley then resided. These men worked upon the people of Bath so much that the newly built Catholic chapel in St. James's Parade was burned to the ground, as well as the presbytery in Bell-Tree Lane; all the registers and diocesan archives, with Walmesley's private library and manuscripts, being destroyed.

In 1789 when the action of the "Catholic Committee" threatened seriously to compromise the English Catholics, Walmesley called a synod of his colleagues, and a decree was issued that the bishops of England "unanimously condemned the new form of oath intended for the Catholics, and declared it unlawful to be taken". On 15 August, 1790, Walmesley consecrated Dr. John Carroll, the first Bishop of the United State of America, at Lulworth Castle, Dorsetshire. Walmesley was buried at St. Joseph's Chapel, Trenchard Street, Bristol. In 1906 the bodies there interred were removed, and the bishop's remains were translated to Downside Abbey and placed in a vault beneath the choir of the abbey church, so that, more than a century after his death, his body came into the

charge of that community by whom he was educated nearly two hundred years ago. The suggestion was put forward that the bishops of the two hierarchies of America and England, of whom the large majority trace their spiritual descent to Bishop Walmesley, should erect a fitting monument over his grave. The proposal met with generous support, and a beautiful altar tomb with recumbent effigy in alabaster from the designs of F.A. Walters, F.S.A., has now been erected on the Gospel side of the sanctuary. Walmesley's published works consist chiefly of treatises on astronomy and mathematics, but his "General History of the Christian Church . . . chiefly deduced from the Apocalypse of St. John the Apostle, by Signor Patorini" (a pseudonym), went through nine or ten editions in Great Britain and five more were produced in America. Translations of the work also appeared in Latin, French, German, and Italian, and were several times reprinted. A number of his letters are in the archives of the Diocese of Clifton. Portraits exist at Downside, Clifton, and Lulworth.

BRADY, *Episcopal Succession*, III (Rome, 1877); LE GLAY, *Notice sur C. Walmesley* (Lille, 1858); OLIVER, *Collections* (London, 1857), 429, 527; BUTLER, *Historical Memoirs of English . . . Catholics* (4 vols., London, 1822)); BURTON, *Life and Times of Bishop Challoner* (2 vols., London, 1909); WARD, *Dawn of the Catholic Revival* (2 vols., London, 1909); *The Rambler*, VII.

G. ROGER HUDLESTON

Ven. Henry Walpole

Ven. Henry Walpole

English Jesuit martyr, born at Docking, Norfolk, 1558; martyred at York, 7 April, 1595. He was the eldest son of Christopher Walpole, by Margery, heiress of Richard Beckham of Narford, and was educated at Norwich School, Peterhouse, Cambridge, and Gray's Inn. Converted by the death of Blessed Edward Campion, he went by way of Rouen and Paris, to Reims, where he arrived, 7 July, 1582. On 28 April, 1583, he was admitted into the English College, Rome, and in October received minor orders. On 2 February, 1584, he became a probationer of the Society, and soon after went to France, where he continued his studies, chiefly at Pont-à-Mousson. He was ordained subdeacon and deacon at Metz, and priest at Paris, 17 Dec., 1588. After acting as chaplain to the Spanish forces in the Netherlands, suffering imprisonment by the English at Flushing in 1589, and being moved about to Brussels, Tournai, Bruges, and Spain, he was at last sent on the mission in 1590. He was arrested landing at Flamborough, and imprisoned at York. The following February he was sent to the Tower, where he was frequently and severely racked. He remained there until, in the spring of 1595, he was sent back to York for trial. With him suffered Alexander Rawlins, of the Diocese of Gloucester. After being twice imprisoned at Newgate for religion in 1586, Rawlins arrived at Reims, 23 Dec., 1589; he was ordained subdeacon at Laon, 23 September, 1589, deacon and priest at Soissons, 17 and 18 March, 1590, was sent on the mission the following 9 April, and landed at Whitby.

JOHN B. WAINEWRIGHT

Edward Walsh

Edward Walsh

Irish poet, born at Derry in 1805; died at Cork, 6 August, 1850. When little more than a boy he showed great intellectual gifts, and in 1830 was private tutor in County Cork. He was for a time teacher of a school at Millstreet, whence, in 1837, he removed to Tourin, County Waterford, having been appointed to a school under the Commissioners of Education. Many of his songs and poems appeared between the years 1832-39, and he contributed to the "Nation". Worried with the surroundings of an uncongenial occupation, and pestered by officials, whose visits were ill-received by the super-sensitive poet, he went to reside in Dublin in 1843, and was befriended by Gavan Duffy, who got him appointed sub-editor of the "Monitor". His "Irish Jacobite Poetry" (1844) and his "Irish Popular Songs" (1847) gave unmistakable evidence of a genuine poet. Yet he was forced to fight against poverty, and, in 1848, he accepted the post of schoolmaster to the junior convicts of Spike Island, where he was visited by John Mitchell, on his way to penal servitude, who vividly describes in his "Jail Journal" his meeting with Walsh. Not long afterwards, he secured the schoolmastership of Cork work-house, but died within twelve months. A fine monument, with an epitaph in Irish and English, was erected to his memory in the Father Mathew Cemetery at Cork. Among his lyrics "Mo Chragibhin Cno", "Brighidin ban mo stor", and "O'Donovan's Daughters" are in most Irish anthologies, while his translations from the Irish are both faithful and musical.

W.H. GRATTAN-FLOOD

Peter Walsh

Peter Walsh

Irish Franciscan, born at Mooretown, County Kildare, about 1608; died in London, 15 March, 1688. Educated and ordained in the celebrated Irish College of St. Anthony at Louvain, he was later appointed to the convent of his order at Kilkenny, where he warmly supported the Ormondist party in the confederation then assembled in that city. He was made guardian by the triumphant Ormondists in 1648; took a leading part in the agitation against the validity of the censures fulminated by the nuncio, Rinuccini; acted as chaplain to the Munster army till its final defeat by the

Parliamentary forces; led a precarious existence in England and on the Continent till 1660 when the Restoration saw him back in London and high in the favour of the evil genius of the Confederates, the all-powerful Ormonde. He was appointed their accredited London agent by the few surviving Irish bishops in 1661. He introduced and tried to have accepted by the Irish clergy and people the famous "Remonstrance" which distracted the country for the next half-dozen years; took a prominent part in a meeting of the bishops and clergy which, with Ormonde's consent, he had assembled in Dublin in June, 1666, to discuss the Remonstrance; but despite all his efforts he was unable to induce or force the meeting to sign a document which the great majority regarded as disrespectful to the Holy See, if not actually in conflict with Catholic teaching on the supremacy of the pope. Breaking definitively with the ecclesiastical authorities, he put himself at the head of a party consisting of a few of the clergy and several laymen, who were known as the Valesians and Valesian heretics, and who were a source of considerable anxiety to the bishops for some time; but the fall of Ormonde in 1669 deprived them of their mainstay, and they declined so rapidly that Oliver Plunket, writing to Propaganda in 1671, was able to report that hardly a Valesian remained. Walsh, however, for whom Ormonde's influence had secured the seneschalship of Winchester (worth about £100 a year) from the bishop of that see, held out almost to the end. Though the General Chapter of his order held at Valladolid in 1670 pronounced sentence of major excommunication against him, he disregarded the penalty, and it was only a few days before his death that he was induced to make his peace with the Church.

He left many writings behind him. Of these, with the exception of a worthless history of Ireland down to the English invasion, entitled "A Prospect of the State of Ireland", nearly all are concerned with the question of the Remonstrance, and comprise his "More Ample Account" (1662); "Irish Colours Folded" (1662); "Controversial Letters" (1673); "Letter to Catholics" (1674); "History of the Irish Remonstrance" (1674); and a long defence of his attitude addressed to the general of his order in a Latin publication entitled "Causa Valesiana" (1684), all of which were published in London. His "History of the Remonstrance" is valuable for the light it throws on the events of that distracted time.

Though Walsh's life has never been written, it is not for want of abundant material. In addition to his own writings much information concerning him may be found in the following works: TALBOT, *The Friar Disciplined* (Paris, 1674); CARTE, *Life of Ormonde* (London, 1736); GILBERT, *Contemporary History* (Dublin, 1879); IDEM, *Hist. of Irish Confederation* (Dublin, 1890); NICHOLAS FRENCH, *The Unkinde Deserter* (Dublin, 1646); AIAZZI, *Nunziata in Irlanda* (Florence, 1844); CURRY, *Historical Memoirs* (London, 1758); IDEM, *Civil Wars* (Dublin, 1895); IDEM, *Spicilegium Ossoriense* (Dublin, 1874); O'CONNOR, *Historical Address* (Buckingham, 1810); PLOWDEN, *Historical Letter* (London, 1812); BRENNAN, *Ecclesiastical Hist. of Ireland* (Dublin, 1814); BURGHCLERE, *Life of James, first Duke of Ormonde* (London, 1912).

J. HAGAN

Robert Walsh

Robert Walsh

Publicist, diplomat, born at Baltimore, MD., 1785; died at Paris, 7 Feb., 1859. He was one of the first students entered at Georgetown College, graduated in 1801 and began his law course. During a two years' tour of Europe he contributed several articles on the institutions and laws of the United States to the Paris and London papers. Returning to the United States in 1808 he was admitted to the Bar, and in 1811 established at Philadelphia the "American Review of History and Politics", the first American quarterly review. Thereafter he devoted himself entirely to literature. His "Appeal from the Judgment of Great Britain respecting the United States" (1819), an important contribution to the political literature of the era, obtained for him the thanks of the Pennsylvania legislature. He founded (1821) and until 1836 edited the Philadelphia "National Gazette", a paper devoted to politics, science, letters, and the fine arts. His knowledge and taste gave American journalism a lofty impulse. Lord Jeffrey said of his "Letters on the Genius and Disposition of the French Government": "We must learn to love the Americans when they send us such books as this" ("Edinburgh Review", 1853, 799). He published two volumes of essays, entitled "Didactics", in 1836, and from 1837 to 1844 he was Consul General of the United States in Paris, where he remained until his death. His house was the popular rendezvous of the learned and distinguished men of France. His vivacity of mind, intellectual zeal, interest in politics, literature, science, and cultivated society never flagged. At his death a writer declared him to be "the literary and intrinsic link between Jefferson, Madison and Hamilton and the men of the present day" (1859).

Robert Moylan Walsh, his son (b. at Philadelphia, 27 April, 1818; died at Camden, N.J., March, 1872), filled a number of diplomatic posts at London, Naples, Florence, and Leghorn, translated several French books and assisted his father in editing the "Gazette".

THOMAS F. MEEHAN

Thomas Walsh

Thomas Walsh

Born in London, October, 1777; d. there, 18 February, 1849. His father, an Irish merchant, having died during his infancy, Thomas was sent by his Protestant mother to the grammar school at St. Albans. Through his uncle, a priest of the London District, who obtained his admission to the college of St. Omer, his faith was saved. He shared in the imprisonment at Dourlens, and then continued his studies at Old Hall Green, where he was confirmed on 19 December, 1795. When Dr. Stapleton was made Vicar Apostolic of the Midland District, he took Walsh, then deacon, as secretary (1801). Walsh continued with Bishop Milner as chaplain and missionary at Longbirch until

October, 1804, when he was sent to Sedgley Park School as spiritual father. In 1808 he went to Oscott as vice-president and spiritual father and later he became president (1818-26). On 1 May, 1825, he was consecrated titular Bishop of Cambysopolis, as coadjutor to Bishop Milner, whom he succeeded as vicar Apostolic on 19 April, 1826. His rule of the district was marked by great progress, both spiritual and material. The College of St. Mary, Oscott, the two cathedrals of Birmingham and Nottingham, besides numerous churches and religious foundations, bear witness to the greatness of his ideals and his unwavering faith. From July, 1840, his jurisdiction was over the newly-constituted Central District; and on 28 July, 1848, he was translated to the London District, against his own desire. But he was too old and infirm to take any active part in its affairs, and he left its administration in the hands of his coadjutor, Bishop Wiseman. Cardinal Barnabo reported the resolve of Propaganda that Walsh should be the first metropolitan of the new hierarchy, in the words "Whether living or dying he shall be the first Archbishop", but death prevented the fulfilment. He is buried in St. Chad's Cathedral, Birmingham.

J.L. WHITFIELD

William Walsh

William Walsh

Bishop of Meath, Ireland (1554-77); b. at Dunboyne, Co. Meath, about 1512; d. at Alcala de Henares, 4 Jan., 1577. He joined the Cistercians at Bective, Co. Meath, and being sent to study at Oxford took a doctor's degree in divinity either there or elsewhere. The suppression of religious houses must have driven him from Oxford in 1536, and the confiscation of Bective in 1537 left him homeless. Going abroad, he became chaplain to Cardinal Pole at Rome. It was now probably that by papal dispensation he exchanged into the Canons Regular of St. Augustine, and was made prior of their suppressed monasteries of Dulchek and Colpe. Walsh returned when Pole came as legate to England, for in 1554 he was in the Irish commission for depriving married clergy. Staples, Bishop of Meath, being thus deprived, Walsh, already nominated by the Crown, was appointed by the legate, 18 Oct., 1554, subject to seeking papal confirmation within twelve months. He assumed his charge immediately, retaining, as the see was impoverished, the rectory of Loughsewdy and his priories. Henceforward he was busied in ecclesiastical and civil affairs, and the Government employed him in many commissions until the second year of Queen Elizabeth. But when she introduced a Protestant liturgy into Ireland, Walsh resisted strenuously in Convocatio, and preached at Trim against the Book of Common Prayer. On 4 Feb., 1560, he refused the oath of supremacy, was deprived of his temporalities, and by the Queen's order committed to custody. Divested of royal favour and withdrawn from secular affairs, he recalled the condition of his appointment, and when released, some eighteen months later, he submitted his case at Rome. In consistory held 6

Sept., 1564, the legate's provision was declared void, and the pope, in the circumstances, reappointed Dr. Walsh. About the time when this would have been known in Ireland, Walsh was cited before the Ecclesiastical Commission, and on refusing the oath of supremacy or to answer interrogatories, was committed to Dublin Castle, 143 July, 1565.

Loftus, the Protestant primate, advised his removal to England that the learned bishops there might win him to conformity; he was, he said, of great credit among his countrymen, who depended wholly on him in religious concerns. Nevertheless he was left in Dublin, and lay fettered in a dark and filthy cell in Christmas, 1572, when his friends contrived his escape to Nantes in Brittany. After six months of destitution he was aided by the nuncio in France to proceed to Spain. He reached Alcala almost moribund through privations, fatigues, and festering wounds from his fetters, and was first received in the house of a pious lady, who herself dressed his sores and nursed him with tender solicitude. Afterwards he removed to the Cistercian convent and expired among his former brethren, esteemed a martyr to the Faith. He was buried in the Church of St. Secundinus and the Bishop of Grenada erected a monument to his memory.

CHARLES MCNEILL

Thomas Walsingham

Thomas Walsingham

Benedictine historian, died about 1422. He is supposed to have been a native of Walsingham, Norfolk, England; he was educated at St. Albans Abbey, and having become a monk there was made precentor and placed in charge of the scriptorium. Little is known of his life beyond his historical work and the fact that in 1394 he was made superior of the dependent priory of Wymondham, where he remained until 1409, when he returned to St. Albans.

Six chronicles have been assigned to him: (1) "*Chronica Majora*", now lost, but which was written before 1388 and was well known at that date as a work of reference. (2) "*Chronicon Angliae*", covering the years 1328 to 1388. In this work the actions and character of John of Gaunt, the father of Henry IV, are somewhat severely criticised. It was published in the *Rolls Series* in 1874 (ed. Thompson). (3) The "*Gesta Abbatum*" of St. Albans Abbey, compiled between 1390 and 1394. The earlier portions of this record were taken largely from Matthew Paris. Also published in the *Rolls Series*, 1867-69. (4) A chronicle of St. Albans, compiled about 1393, the original manuscript of which is in the British Museum. This covers the years 1272 to 1393, and incorporates the previous chronicles of Matthew of Westminster and others. Up to the year 1369 its text agrees with the "*Chronicon Angliae*" (no. 2 above), but after that date it varies considerably, chiefly in the way of toning down the aspersions on the character of John of Gaunt. It is supposed that on the accession of Henry IV the monks suppressed the earlier chronicle, being afraid of the consequences of the

attacks contained in it on the king's father, and that this work was written to take its place. (5) "Historia Anglicana", also called "Historia Brevis" by earlier writers. It covers the years 1272 to 1422. Some authorities are of opinion that only the portion extending from 1377 to 1392 was Walsingham's own work, basing their view on the fact that one manuscript of the history terminates at the latter year, and also because after that date, in the other manuscripts, the narrative is not so full and satisfactory as the earlier portions. Professor Gairdner controverts this theory, holding that the defects of the later portions are sufficiently explained by the author's removal to Wymondham in 1394. The style of the writer, he maintains, is the same throughout the entire work. Printed in the Rolls Series in 1863, ed. Riley. (6) "Ypodigma Neustriæ", a compilation intended to provide Henry V with a summary of the history of his predecessors, the dukes of Normandy, and partly borrowed from the "Historia Normannorum" of William of Jumièges. Published in the Rolls Series in 1876, ed. Riley.

As to the quality of Walsingham's work, he was a collector of facts rather than an historian in the modern sense, painstaking and trustworthy, and to him we are indebted for the knowledge of many historical incidents not mentioned by other writers. He is, for instance, our chief authority for the reigns of Richard II, Henry IV, and Henry V, for the particulars of Wat Tyler's insurrection of 1381, and for much that is known about Wyclif and the Lollards.

G. CYPRIAN ALSTON

Walsingham Priory

Walsingham Priory

Walsingham Priory stood a few miles from the sea in the northern part of Norfolk, England. Founded in the time of Edward the Confessor, the chapel of Our Lady of Walsingham was confirmed to the Augustinian Canons a century later and enclosed within the priory. From the first this shrine of Our Lady was a famous place of pilgrimage. Hither came the faithful from all parts of England and from the continent until the destruction of the priory by Henry VIII in 1538. To this day the main road of the pilgrims through Newmarket, Brandon, and Fakenham is still called the Palmers' Way. Many were the gifts of lands, rents, and churches to the canons of Walsingham, and many the miracles wrought at Our Lady's shrine. Henry III came on a pilgrimage to Walsingham in 1241, Edward I in 1280 and 1296, Edward II in 1315, Henry VI in 1455, Henry VII in 1487, and Henry VIII in 1513. Erasmus in fulfilment of a vow made a pilgrimage from Cambridge in 1511, and left as his offering a set of Greek verses expressive of his piety. Thirteen years later he wrote his colloquy on pilgrimages, wherein the wealth and magnificence of Walsingham are set forth, and some of the reputed miracles rationalized. In 1537 while the last prior, Richard Vowell, was paying obsequious respect to Cromwell, the sub-prior Nicholas Milcham was charged with conspiring to rebel against the suppression of the lesser monasteries, and on flimsy evidence was convicted of

high treason and hanged outside the priory walls. In July, 1538, Prior Vowell assented to the destruction of Walsingham Priory and assisted the king's commissioners in the removal of the figure of Our Lady, of many of the gold and silver ornaments and in the general spoliation of the shrine. For his ready compliance the prior received a pension of 100 pounds a year, a large sum in those days, while fifteen of the canons received pensions varying from 4 pounds to 6 pounds. The shrine dismantled, and the priory destroyed, its site was sold by order of Henry VIII to one Thomas Sidney for 90 pounds, and a private mansion was subsequently erected on the spot. The Elizabethan ballad, "A Lament for Walsingham," expresses something of what the Norfolk people felt at the loss of their glorious shrine of Our Lady of Walsingham.
