Tournely to Zwirner

New York: ROBERT APPLETON COMPANY

Imprimatur

JOHN M. FARLEY

ARCHBISHOP OF NEW YORK

Charles-Thomas Maillard de Tournon

Charles-Thomas Maillard De Tournon

Papal legate to India and China, cardinal, born of a noble Savoyard family at Turin, 21 December, 1668; died in confinement at Macao, 8 June, 1710. After graduating in canon and civil law he went to Rome where he gained the esteem of Clement XI, who on 5 December, 1701, appointed him legate *a latere* to India and China. The purpose of this legation was: to establish harmony among the missionaries there; to provide for the needs of these extensive missions; to report to the Holy See on the general state of the missions, and the labours of the missionaries; and, finally, to enforce the decision of the Holy Office against the further toleration of the so-called Chinese rites among the native Christians. These rites consisted chiefly in offering sacrifices to Confucius and the ancestors, and in using the Chinese names *tien* (heaven) and *xang ti* (supreme emperor) for the God of the Christians. On 27 December, 1701, the pope consecrated Tournon bishop in the Vatican Basilica, with the title of Patriarch of Antioch.

The legate left Europe on the royal French vessel *Murepas*, 9 February, 1703, arriving at Pondicherry in India on 6 November, 1703. It was with greater zeal than prudence that he issued a decree at this place, dated 23 June, 1704, summarily forbidding the missionaries under severe censures to permit the further practice of the Malabar rites. On 11 July, 1704, he set sail for China by way of the Philippine Islands, arriving at Macao in China, 2 April, and at Peking on 4 December, 1705. Emperor Kang hi received him kindly at first, but upon hearing that he came to abolish the Chinese rites among the native Christians, he demanded from all missionaries on pain of immediate expulsion a promise to retain these rites. At Rome the Holy Office had meanwhile decided against the rites on 20 November, 1704, and, being acquainted with this decision, the legate issued a decree at Nanking on 25 January, 1707, obliging the missionaries under pain of excommunication *latae sententiae* to abolish these rites. Hereupon, the emperor ordered Tournon to be imprisoned at Macao and sent some Jesuit missionaries to Rome to protest against the decree. Tournon died in his prison, shortly after being informed that he had been created cardinal on 1 August, 1707. Upon the announcement of his death at Rome, Clement XI highly praised him for his courage and loyalty to the Holy See and ordered the Holy Office to issue a Decree (25 September, 1710) approving the acts of the legate. Tournon's remains were brought to Rome by his successor, Mezzabarba, and buried in the church of the Propaganda, 27 September, 1723.

Memorie stor. dell' Em. Mgr. card. di Tournon esposte con monumenti rari ed autentici non piu dati alla luce (8 vols., Venice 1761-2), anti-jesuitical; (VILLERMAULES), *Anec. sur l'etat de la religion dans la Chine* (7 vols., Paris, 1733-42), Jansenistic and extremely biased against the Jesuits; PRAY, *Hist. controvers. de ritibus sinicis* (Pest, 1789), German tr. with numerous additions (Augsburg, 1791). Concerning his alleged murder by the Jesuits see DUHR, *Jesuiten-Fabeln* (4 ed. Freiburg, 1904), 776, 786.

MICHAEL OTT

Antoine Touron

Antoine Touron

Dominican biographer and historian, born at Graulhet, Tarn, France, on 5 September, 1686; died at Paris, 2 September, 1775. Of this author but little has been written, though the number and merit of his works have caused his name to become illustrious, particularly in his order. He was the son of a merchant, and seems to have joined the Dominicans at an early age. After the completion of his studies he taught philosophy and theology to the students of his province (Toulouse); but the later years of his life were devoted to biography, history, and apologetics. From his pen we have twenty-nine volumes, dealing largely with the history of the Dominican order and the biographical sketches of its notable men. His writings are valuable contributions to Dominican literature, and essential to students of Dominican history. Père Mortier, in his "Histoire des maîtres généraux de l'ordre des frères prêcheurs", now in course of publication, has made generous use of his "Histoire des hommes illustres...". Touron's writings include his "Vie de saint Thomas d'Aquin" (considered his best work); "Vie de saint Dominique avec une hist. abrégée des ses premiers disciples"; "Hist. des hommes illustres de l'ordre de saint Dominique"; "De la providence, traité hist., dogmat. et mor."; "La main de Dieu sur les incrédules, ou hist. abrégée des Israélites", a work in which he shows that as often as the Chosen People proved false to their Divine vocation, they were punished by God; "Parallèle de l'incrédule et du vrai fidèle"; "La vie et l'esprit de saint Charles Borromée"; "La vérité vengée en faveur de saint Thomas"; and "Hist. générale de l'Amérique depuis sa découverte", which is really an ecclesiastical history of the New World.

Mortier, *Hist. des maîtres gén. de l'ordre des frères prêcheurs* (5 vols., Paris, 1903-11), passim; Hurter, *Nomenclator literarius*, III (Innsbruck, 1895), 164-5.

VICTOR F. O'DANIEL

Archdiocese of Tours

Archdiocese of Tours

(TURONENSIS.)

Comprises the Department of Indre-et-Loire, and was re-established by the Concordat of 1801 with the Dioceses of Angers, Nantes, Le Mans, Rennes, Vannes, St-Brieuc, and Quimper as suffragans. The elevation to metropolitan rank of the Diocese of Rennes in 1859, with the last three dioceses as suffragans, dismembered the Province of Tours. The Diocese of Laval, created in 1855, is a suffragan of Tours. For the early ecclesiastical history of Tours we have an excellent document, the concluding chapter "De episcopis Turonicis" in Gregory of Tours's "History of the Franks", though Mgr Duchesne has shown that it requires some chronological corrections. The founder of the see was St. Gatianus; according to Gregory of Tours he was one of the seven apostles sent from Rome to Gaul in the middle of the third century. Two grottos cut in the hill above the Loire, opposite

Tours, are held to have been the first sanctuaries where St. Gatianus celebrated the Liturgy. According to Mgr Duchesne the tradition of Tours furnished Gregory with only the name of Gatianus, accompanied perhaps by the length, fifty years, of his episcopate; it was by comparison with the "Passio S. Saturnini" of Toulouse that Gregory arrived at the date 250. Mgr Duchesne considers this date rather doubtful, but admits that the Church of Tours was founded in the time of Constantine.

After St. Gatianus, according to Mgr Duchesne's chronology, came: St. Litorius, or Lidoire (337-71); the illustrious St. Martin (4 July, 372-8 Nov., 397); St. Brice (397-444), who was accused to Celestine I of immorality and absolved by the pope, but who remained absent seventeen years from the episcopal city, which was governed by the intruded Bishop Armentius; St. Eustochius (444-61); St. Perpetuus (461-91); St. Volusianus (491-98), deprived of his see by the Visigoths, exiled to Toulouse, and perhaps martyred; Verus (498-509), also deprived of his see at the command of Alaric; St. Baud (546-52), chancellor of Clotaire I; St. Euphronius (55-73), who made at Poitiers the solemn transfer of the relic of the True Cross to the monastery founded by St. Radegunde; the historian Gregory (573-94). After St. Gregory the history of the diocese for two centuries and a half is obscure and confused, but the study of various episcopal catalogues has made it possible for Mgr Duchesne to some-what clear up this period. Landramnus, bishop under Louis the Pious, was by this prince appointed *missus dominicus*, or royal commissary, in 825.

Among subsequent bishops were: Raoul II (1086-1117), who despite the prohibition of Hugues, legate of the Holy See, had dealings with the excommunicated Philip I, and under whose episcopate Paschal II came to Tours (1107); Hildebert de Lavardin (1125-34); Etienne de Bourgueil (1323-35), who founded the College of Tours at Paris; the juriconsult Pierre Frétau (1335-57); Jacques Gélou (1415-27), later Bishop of Embrun (see DIOCESE OF GAP); Philippe de Coetquis (1427-41), who, commissioned by Charles VII in 1429 to interrogate Joan of Arc, recognized her perfect sincerity, and who was made a cardinal by antipope Felix V. Hélie de Bourdeilles (1468-84), cardinal in 1483; Robert de Lenoncourt (1484-1501), afterwards Archbishop of Reims; Dominic Carette, Cardinal de Final (1509-14); Alessandro Farnese (1553-54), cardinal in 1534; De Maillé de Brézé (1554-97), who assisted the Cardinal de Lorraine at the Council of Trent and translated the homilies of St. Basil; Victor le Bouthiller (1641-70), who played an important part in the religious renaissance of the seventeenth century; Boisgelin de Cicé (1802-4), who under the old regime had been Archbishop of Aix and in 1802 was created cardinal; De Barral (1804-15); Francois Morlot (1843-57), cardinal in 1853, Archbishop of Paris at the time of his death; Joseph-Hippolyte Guibert (1857-71), cardinal in 1873, later he came Archbishop of Paris; Guillaume-René Meignan (1884-96), cardinal in 1893, known by his exegetical works.

Tours was the capital of the Third Lionize province. The ecclesiastical province of Tours must have been established under the episcopate of St. Martin. Fifty years later it was in regular operation, as is proved by, among other documents, the synodal epistles of the Councils of Angers and Vannes in 453 and 461. (Concerning the prolonged efforts of the Breton Churches to emancipate themselves from the metropolis of Tours and the assistance given to this metropolis by royalty see ARCHDIOCESE OF RENNES.) About 480 the Visigoths were masters of Tours and it was in the

Island of Amboise in 504 that the interview took place as a result of which the Frank Clovis and the Visigoth Alaric shared Gaul between them. But the Arising of the Visigoths eventually roused the Catholics of Tours and when in 507 Clovis and his army entered the Visigothic kingdom Tours opened its gate to him, and he received in that city the consular insignia sent by Emperor Anastasius. The Saracens threatened Tours when Charles Martel defeated them in 732. From 853 to 903 the Northmen made frequent inroads, terminated by the victory of St. Martin le Beau. Henry II of England became Count of Touraine in the middle of the twelfth century and the English dominion was maintained at Tours until John Lackland renounced it in 1214.

In the Middle Ages Tours was composed of two cities, the Roman Caesarodunum and the Merovingian Martinopolis. The name of Tours was strictly reserved to the ancient Caesarodunum, and the territory of Tours depended on the archbishops. Martinopolis, which rose around the monastery of St-Martin, took, in the tenth century, the name of Chateaufort and for five centuries was an independent community. Under Louis XI the two agglomerations were united in one which retained the name of Tours. The cathedral of Tours, dedicated to St. Gatianus, dates from the thirteenth, fourteenth, and fifteenth centuries. The windows, which belong to the thirteenth, are among the most beautiful in France. The towers belong to the fifteenth and sixteenth centuries. The chapter of Tours is the oldest in France. It is said that it was established by St. Baud, who gave the canons property quite distinct from that of the arch-diocese. Simon de Brion, pope from 1281 to 1285 under the name of Martin IV, was canon and treasurer of the church of St. Martin of Tours.

The prestige of the Church of Tours was very great during the Middle Ages. In a letter to Charles the Bald Adrian II designates it as the second in France. Philip Augustus in a letter to Lucius III says that he considers it one of the most beautiful jewels of his crown and that whosoever attacks this church attacks his own person. Kings John II, Charles VII, Charles VIII, and Henry III would never consent when they gave Touraine in fief that this church should be separated from the crown. It owed this prestige chiefly to the Basilica of St. Martin. This was first built by St. Perpetuus and dedicated in 472. It was there that Clovis was clothed with the purple robe and the chlamys sent him with the title of consul by the Emperor Anastasius. As early as the sixth century St. Martin's was a real religious centre. Queen Clotilde died in 545 in the vicinity of the basilica, and in the same neighbourhood St. Radegunde founded a small monastery, near which St. Gregory of Tours built the Church of the Holy Cross. Ingeltrude, daughter of Clotaire I, founded the monastery of Notre-Dame-de-l'Ecrignole, St. Monegunde that of St-Pierre-le-Puellier. When Charlemagne, before setting out to receive the imperial crown at Rome, assembled at Tours (800) the lords of his empire and divided his estates among his sons, his wife Luitgarde died there, and was buried at St-Martin. He gave the Church vast possessions in France and Normandy. Abbot Ithier, his chancellor, founded with some monks from St-Martin the monastery of Cormery. Alcuin, who succeeded Ithier in 796 and was buried in the basilica in 804, founded there a school of calligraphy to which is due the preservation of many ancient works. At this school, directed after Alcuin by Fredegisus (804-34), Adelard (834-45), and Count Vivian (845-54), were copied and illustrated the celebrated Bible of Charles the Bald and the Gospels of Lothaire preserved at the Bibliothèque Nationale of Paris, the

Virgil in the library of Berne, the Arithmetic of Boetius in the library of Bamberg, and the superb Gospels preserved in the library of Tours, written throughout in gold letters on white vellum, and on which the kings of France took the oath as abbots of St-Martin. The beautiful artistic labours of the canons were disturbed by the Norman invasions.

The body of St. Martin was transported by the canons to Auxerre in 853 to safeguard it against the invasions of the Northmen. Count Ingelger had to march with 6000 men against Auxerre in 884, before the body was restored. From 845 the abbots of St-Martin were laymen, namely the dukes of France, ancestors of Hugh Capet. When, in 987, Hugh Capet became King of France he joined the dignity of Abbot of St-Martin with the Crown of France in perpetuity. The Abbey of St-Martin had as honorary canons the Dukes of Burgundy, Anjou, Brittany, Vendôme, and Nevers, the Counts of Flanders, Dunois, the Earl of Douglas in Scotland, the Lords of Preuilly and Parthenay. From Clovis, doubtless until Philip Augustus, it enjoyed the right of coinage. Blessed Hervé, treasurer of the basilica, caused it to be rebuilt about 1000. It was in the abbey rebuilt by Hervé that Philip I, King of France, in 1092 arranged to meet Bertrade de Montfort, wife of Foulques le Réchin, and carried her off to the great scandal of the kingdom. Urban II, who came to Tours in 1096, refused to remove the excommunication inflicted on Philip and Bertrade. Paschal II in 1107, Callistus 11 in 1119, Innocent II in 1130, and Alexander III in 1163 came thither to venerate the tomb of St. Martin. Richard Coeur de Lion in 1190 and John of Brienne in 1223 took there the pilgrim's staff prior to setting out on the crusade. Louis XI had great devotion to St. Martin. The day on which he learned in the basilica itself of the death of Charles the Bold he vowed to surround the tomb of the saint with a silver grating, the cost of which would today equal 2,148,000 francs. In 1522 Francis I seized this grating, despite the chapter and the people of Tours. The devastations of the Reformation and the Revolution destroyed the Basilica of St. Martin. There now remain only two large towers, but at the end of the nineteenth century Cardinal Meignan caused a new basilica to be erected on the site of the old one.

According to the legend, the Abbey of St. Julian arose around a church the building of which was ordered by Clovis after his victory of Vouille over the Visigoths. It is historically certain that there were monks from Auvergne there in the sixth century, on whom Gregory of Tours imposed the Rule of St. Benedict and to whom he gave the relics of St. Julian of Brioude. The Northmen destroyed this first monastery; it was rebuilt about 937 by St. Odo, Abbot of Cluny, and Archbishop Theoton. The present Church of St. Julian is a beautiful monument of the thirteenth century.

The monastery of Marmoutier dates from St. Martin. Near the grottos where St. Gatianus celebrated Mass he established some cells. The cell of St. Brice is still to be seen. Another grotto, known as the grotto of the Seven Sleepers, was inhabited by seven brothers, cousins of St. Martin, who all died on the same day after a lethargy. In the ninth century the Abbey of Marmoutier was ravaged by the Northmen, and out of 140 religious only 20 escaped massacre and were sheltered by the canons of St-Martin. Marmoutier was subsequently inhabited by a small colony of canons, and in 982 the abbey, which had fallen into some disorders, was restored by St. Mayeul, Abbot of Cluny, at the instance of Eudes I, Count of Blois and of Tours, who died a monk at Marmoutier.

Urban II came to Marmoutier in 1096 and dedicated the newly-built basilica. Hubaud, canon of St-Martin and brother of the heresiarch Berenger, gave to Marmoutier superb pieces of religious gold work in order to secure prayers for Berenger, who died at the priory of St-Côme, which was dependent on Marmoutier. The fortune of the abbey was considerable, a popular saying runs:

"De quelque cote que le vent vente,
Marmoutier a cens et rente."

In the eleventh century 101 priories were founded dependent on Marmoutier, ten of them in England. Hugh I, Abbot of Marmoutier from 1210 to 1226, organized the estates of Meslay and Louroux, which were models of agricultural exploitation, and began the reconstruction of the basilica. The latter undertaking was hindered by the violent attacks made by the counts of Blois on the monks of Marmoutier. In 1253 St. Louis took the abbey under his protection. In 1562 it was pillaged by the Protestants and the Revolution destroyed it almost entirely. The crosier gateway (*Portail de la Crosse*) which remains standing dates from the thirteenth century. The origin of the town of Loches was the monastery founded by St. Ours about the beginning of the sixth century. He installed in the bed of the Indre a hand-mill which became a place of pilgrimage. Geoffroy Grisegonelle, Count of Anjou, founded at Loches a Byzantine collegiate church to which he gave a girdle of the Blessed Virgin. Repaired in the twelfth century by the prior, Thomas Pactius, this church still exists. In the dungeon of Loches, founded about 1000 by Foulques Nerra, were imprisoned Cardinal la Balue and the historian Comines. The monastery founded by St. Mexme, disciple of St. Martin (d. shortly after 463), was the origin of a gathering of people which formed the town of Chinon.

Cardinal de Richelieu was born in 1585 at the castle of Richelieu in the diocese. He transformed it into an imposing château, built around it an entire city, which took the name of Richelieu, and joined to his ducal peerage the town of Champigny. The Sainte Chapelle of Champigny was built in 1508 by the princely house of Bourbon-Montpensier to receive a thorn of the crown of Christ and one of the thirty pieces of silver paid to Judas. Urban VIII, who prior to his pontificate had said Mass there, later prevented its demolition; hence the preservation of this fine monument of the Renaissance is due to him. The church of Cande, built between 1175 and 1215 on the site where St. Martin died, is remarkable as a monument not only of religious but also of military architecture. At Tours in 1163 Alexander III excommunicated the antipope Victor and Frederick Barbarossa. It was at the Château of Chinon in 1429 that Joan of Arc first saw Charles VII and gave him confidence in her mission, and in the same year she sent to St-Catherine-de-Fierbois in the diocese to seek in the tomb of an ancient knight the sword of Charles Martel. In the fifteenth century Tours had a brilliant school of painting; unfortunately nothing remains of the paintings executed at Notre-Dame-la-Riche by Jehan Fouquet. The studio of the sculptor Michel Colomb was at Tours; his master production was the tomb of Francis II of Brittany in the cathedral of Nantes. The tomb of the children of Charles VIII in the cathedral of Tours was the collective work of Colomb and his pupils and of some Italian decorators.

There are in Touraine a great many châteaux rich in historic memories, such as Plessis-les-Tours, the residence of Louis XI, Amboise, where was hatched the plot against the Guises under King Francis II; Chenonceaux, built by Francis I, the residence of Diana of Poitiers and later of Catherine de' Medici; Langeais, where Charles VIII wedded Anne of Brittany. Of the château of Chanteloup near Amboise, where the Duc de Choiseul went into exile, there remains only the pagoda. A number of saints are honoured in a special manner or are connected with the religious history of the diocese: Sts. Maura and Brigitta, virgins (end of fourth century); St. Flodovaeus (Flavier), martyr (fifth century); St. Ursus (Ours), founder of the Abbey of Sennevieres, patron of the town of Loches, d. about 508; St. Leubatus (Leubais), Abbot of Sennevières (sixth century); St. Senoch, solitary and abbot, d. in 579; St. Leobardus (Libert), hermit of the grottos of Marmoutier, d. in 593; St. Odo, first Abbot of Cluny, d. at Tours in 942; St. Avertinus, deacon, companion in exile of St. Thomas Becket, d. in Touraine about 1189; Bl. Jeanne-Marie de Maillé, d. in 1414 after having spent her widowhood in the practice of a rigorously ascetic life near the Basilica of St. Martin. Among the natives of the diocese were: the great prose writer Rabelais (1495-1553), b. at Chinon; the philosopher Descartes (1596-1650), b. at La Haye-Descartes; the Abbé de Marolles (1600-81), b. at Genillé, celebrated for his translations, and whose collection of prints formed the basis of that of the Bibliothèque Nationale in Paris; Saint-Martin, called the unknown philosopher (1743-1803), b. at Amboise; the poet Alfred de Vigny (1797-1863), b. at Loches; Balzac (1790-1850), b. at Tours.

The chief places of pilgrimage in the diocese besides the grottos of Marmoutier, are: Notre-Dame-la-Riche, a sanctuary erected on the site of a church dating from the third century, and where the founder St. Gatianus is venerated; Notre-Dame-de-Loches; St. Christopher and St. Giles at St-Christophe, a pilgrimage dating from the ninth century; the pilgrimage to the Holy Face, established by M. Dupont, "the Holy Man of Tours", who founded the Priests of the Holy Face canonically erected on 8 December, 1876, to administer the chapel. Before the application of the law of 1901 there were in the diocese Jesuits, Lazarists, and various orders of teaching brothers. Several orders of women had their origin in the diocese the chief being: The Sisters of the Presentation of the Blessed Virgin, teaching and nursing, founded in 1684 at Sainville, in the Diocese of Chartres by Mother Marie Poussepin, and in 1813 transported to La Breteche near Tours; the Sisters of the Sacred Hearts of Jesus and Mary, teaching, founded in 1805 by the Abbe Guepin, rector of Notre-Dame-la-Riche, with mother-house at Tours; the Sisters of the Third Order of Carmel, since 1824 called the Sisters of St-Martin, teaching, with its mother-house at Bourgeuil. The religious congregations were directing in the diocese at the end of the nineteenth century 5 founding asylums, 36 infant schools, 3 special houses for sick children, 5 orphanages for boys, 7 for girls, 1 house of retreat, 1 house of refuge, 18 hospitals or hospices, 2 dispensaries, 3 houses of religious for the care of the sick in their homes, 1 home for convalescents, 5 private hospitals and retreats. In the year 1911 the Archdiocese of Tours numbered 337,916 inhabitants, 23 deaneries, 37 first class parishes, and 254 succursal parishes.

GEORGES GOYAU

Charles-Francois Toustain

Charles-François Toustain

French Benedictine, and member of the Congregation of St-Maur, born at Repas in the Diocese of Séez, France, 13 October 1700, died at St-Denis, 1 July, 1754. He belonged to a family of note. On 20 July, 1718, he made the vows of the order at Jumièges. After finishing the philosophical and theological course at the Abbey of Fécamp he was sent to the monastery of Bonne-Nouvelle at Rouen to learn Hebrew and Greek. At the same time he studied Italian, English, German, and Dutch, in order to be able to understand the writers in these languages. He was not ordained priest until 1729 and then only at the express command of his superior. He always said Mass with much trepidation and only after long preparation. In 1730 he entered the Abbey of St-Ouen at Rouen, went later to St-Germain-des-Prés and Blancs-Manteaux, and died while taking his milk-cure at St-Denis. He had worn out his body by fasts and ascetic practices. His theological opinions were not entirely correct, as he inclined to Jansenism. As a scholar he made himself an honoured name. He worked for twenty years with a fellow-member of the order, Tassin, on an edition of the works of St. Theodore of Studium which was never printed, for a publisher could not be found. Another common undertaking of the two is the "Nouveau traité de diplomatique" (6 vols., 1750-65) in which they treated more fully and thoroughly the subjects taken up in Mabillon's great work "De re diplomatice". The publication of Toustain and Tassin is of permanent value. The last four volumes were edited by Tassin alone after Toustain's death. Of general interest among Toustain's personal writings are: "La vérité persécutée par l'erreur" (2 vols., 1733), a collection of the writings of the Fathers on the persecutions of the first eight centuries; and "L'autorité de miracles dans l'église" (no date), in which he expounds the opinion of St. Augustine. Tassin testifies that he was zealous in his duties, modest, and sincerely religious.

TASSIN, *Eloge de Toustain* in *Nouveau traité de diplomatique*, II, IDEM, *Hist. littéraire de la congrégation de St-Maur*, II (Brussels, 1770); DE LAMA, *Bibliothèque des écrivains de la congrégation de St-Maur* (2nd ed., Munich-Paris, 1882), 174 sq.

KLEMENS LÖFFLER

Antoine-Augustin Touttee

Antoine-Augustin Touttée

A French Benedictine of the Maurist Congregation, b. at Riom, Department of Puy-de-Dôme, 13 Dec., 1677; d. at the Abbey of St. Germain-des-Prés, 25 Dec., 1718. He studied the humanities with the Oratorians at Riom, made vows at the Abbey of Vendôme, 29 Oct., 1698, and was ordained priest in December, 1702. He taught philosophy at Vendôme from 1702 to 1704 and theology at St-Benoît-sur-Loire from 1704-1708 and at St-Denis from 1708 to 1712. He then withdrew to St-Germain-des-Prés to prepare a new Greek edition and Latin translation of the works of St. Cyril of Jerusalem. This was issued after his death by Prudent Maran under the title: "S. Cyrilli Hiersolymit. opera quae extant omnia et ejus nomine circumferunter; ad mss. codd. castigata" (Paris, 1720; also in P.G., XXXIII). It is preceded by three learned dissertations on the life, writings, and doctrine of St. Cyril, and was at the time the standard edition.

MICHAEL OTT

Tower of Babel

Tower of Babel

The "Tower of Babel" is the name of the building mentioned in Genesis 11:1-9.

History of the Tower

The descendants of Noe had migrated from the "east" (Armenia) first southward, along the course of the Tigris, then westward across the Tigris into "a plain in the land of Sennar". As their growing number forced them to live in localities more and more distant from their patriarchal homes, "they said: Come, let us make a city and a tower, the top whereof may reach to heaven; and let us make our name famous before we be scattered abroad into all lands." The work was soon fairly under way; "and they had brick instead of stones, and slime (asphalt) instead of mortar." But God confounded their tongue, so that they did not understand one another's speech, and thus scattered them from that place into all lands, and they ceased to build the city.

This is the Biblical account of the Tower of Babel. Thus far no Babylonian document has been discovered which refers clearly to the subject. Authorities like George Smith, Chad Boscawen, and Sayce believed they had discovered a reference to the Tower of Babel; but Frd. Delitzsch pointed out that the translation of the precise words which determine the meaning of the text is most uncertain (Smith-Delitzsch. "Chaldaische Genesis", 1876, 120-124; Anmerk., p. 310).

Oppert finds an allusion to the Tower of Babel in a text of Nabuchodonosor; but this opinion is hardly more than a theory (cf. "The Cuneiform Inscriptions of Western Asia", I, pl. 38, col. 2,

line 62; pl. 41, col. 1, I. 27, col. 2, l. 15; Nikel, "Genesis und Keilschriftforschung", 188 sqq.; Bezold, "Ninive und Babylon", 128; Jeremias, "Das alte Testament im Lichte des alten Orients", 2nd ed., Leipzig, 1906, 286; Kaulen, "Assyrien und Babylonien", 89).

A more probable reference to the Tower of Babel we find in the "History" of Berosus as it is handed down to us in two variations by Abydenus and Alexander Polyhistor respectively ("Histor. Graec. Fragm.", ed. Didot, II, 512; IV, 282; Euseb., "Chron.", I, 18, in P.G., XIX, 123; "Praep. Evang.", IX, 14, in P.G., XXI, 705). Special interest attaches to this reference, since Berosus is now supposed to have drawn his material from Babylonian sources.

Site of the Tower of Babel

Both the inspired writer of Genesis and Berosus place the Tower of Babel somewhere in Babylon. But there are three principal opinions as to its precise position in the city.

(1) Pietro della Valle ("Viaggi descritti", Rome, 1650) located the tower in the north of the city, on the left bank of the Euphrates, where now lie the ruins called Babil. Schrader inclines to the same opinion in Riehm's "Handwörterbuch des biblischen Altertums" (I, 138), while in "The Cuneiform Inscriptions" (I, 108) he leaves to his reader the choice between Babil and the temple of Borsippa. The position of Babil within the limits of the ancient Babylon agrees with the Biblical location of the tower; the name Babil itself may be regarded as a traditional relic of the name Babel interpreted by the inspired writer as referring to the confusion of tongues.

(2) Rawlinson (Smith-Sayce, "Chaldean account of the Genesis", 1880, pp. 74, 171) places the tower on the ruins of Tell-Amram, regarded by Oppert as the remnants of the hanging gardens. These ruins are situated on the same side of the Euphrates as those of the Babil, and also within the ancient city limits. The excavations of the German Orientgesellschaft have laid bare on this spot the ancient national sanctuary Esagila, sacred to Marduk-Bel, with the documentary testimony that the top of the building had been made to reach Heaven. This agrees with the description of the Tower of Babel as found in Genesis 11:4: "The top whereof may reach to heaven". To this locality belongs also the tower Etemenanki, or house of the foundation of Heaven and earth, which is composed of six gigantic steps.

(3) Sayce (Lectures on the Religion of the Ancient Babylonians, p. 112-3, 405-7), Oppert ("Expédition en Mésopotamie", I, 200-16; "Études assyriennes", pp. 91-132), and others follow the more common opinion which identifies the tower of Babel with the ruins of the Birs-Nimrud, in Borsippa, situated on the right side of the Euphrates, some seven or eight miles from the ruins of the city proper. They are the ruins of the temple Ezida, sacred to Nebo, which according to the above-cited inscription of Nabuchodonosor, was repaired and completed by that king; for it had been left incomplete by a former ruler in far distant days. These data are too vague to form the basis of an apodictic argument. The Babylonian Talmud (Buxtorf, "Lexicon talmudicum", col. 313) connects Borsippa with the confusion of tongues; but a long period elapsed from the time of the composition of Genesis 11 to the time of the Babylonian Talmud. Besides, the Biblical account seems to imply that the tower was within the city limits, while it is hardly probably that the city

limits extended to Borsippa in very ancient times. The historical character of the tower is not impaired by our inability to point out its location with certainty.

Form of the Tower of Babel

The form of the tower must have resembled the constructions which today exist only in a ruined condition in Babylonia; the most ancient pyramids of Egypt present a vestige of the same form. Cubic blocks of masonry, decreasing in size, are piled one on top of the other, thus forming separate stories; an inclined plane or stairway leads from one story to the other. The towers of Ur and Arach contained only two or three stories, but that of Birs-Nimrud numbered seven, not counting the high platform on which the building was erected. Each story was painted in its own peculiar colour according to the planet to which it was dedicated. Generally the corners of these towers faced the four points of the compass, while in Egypt this position was held by the sides of the pyramids. On top of these constructions there was a sanctuary, so that they served both as temples and observatories. Their interior consisted of sun-dried clay, but the outer walls were coated with fire-baker brick. The asphalt peculiar to the Babylonian neighbourhood served as mortar; all these details are in keeping with the report of Genesis. Though some writers maintain that every Babylonian city possessed such a tower, or *zikkurat* (meaning "pointed" according to Schrader, "raised on high" according to Haupt, "memorial" according to Vigouroux), no complete specimen has been preserved to us. The Tower of Khorsabad is perhaps the best preserved, but Assyrian sculpture supplements our knowledge of even this construction. The only indication of the time at which the Tower of Babel was erected, we find in the name of Phaleg (Genesis 11:10-17), the grandnephew of Heber; this places the date somewhere between 101 and 870 years after the Flood. The limits are so unsatisfactory, because the Greek Version differs in its numbers from the Massoretic text.

Besides the works indicted in the course of the articles, see RAWLINSON, *The Five Great Monarchies*, II (London, 1862-7, 1878), 534-5; SCHRADER-WHITEHOUSE, *The Cuneiform Inscriptions and the Old Testament*, I (London, 1885-8), 106-14; HOBERG, *Genesis*, 2nd ed. (Freiburg, 1899), 129. For critical view, see SKINNER, *Genesis* (New York, 1910, 228 sqq.

A.J. MAAS

Alexandre de Prouville, Marquis de Tracy

Alexandre De Prouville, Marquis de Tracy

Viceroy of New France, born in France, 1603, of noble parents; died there in 1670. A soldier from his youth, he had proved his valour in many battles and won the rank of lieutenant-general of the king's armies. He was no less prudent and wise as a negotiator and organizer. Entrusted by Louis XIV with a most extensive mission and jurisdiction over all the French possessions in the New World, he first redeemed Cayenne from the Dutch, restored order to the Antilles, and reached Quebec in 1665. He had been preceded by the Carignan regiment which had distinguished itself against the Turks in Hungary (1664) and was entitled to bear the royal colours. With the concurrence

of Courcelles, the newly-appointed governor, and Talon, the famous intendant, he inaugurated a glorious period in the history of New France. To secure peace for the colony war was decided against the Agniers, and in spite of his advanced age, Tracy commanded the invading army. The year previous he had ordered the construction of three forts on the Richelieu River, including those of Sorel and Chambly. The enemies had fled from their villages, which were destroyed, and Tracy returned with nearly all his men. The humiliated Agniers sued for peace and asked for missionaries to instruct them in the Faith. Tracy with his two associates then devoted himself to the organization of the courts of justice and to the promotion of agriculture and industry. During his administration were imported the first horses seen in Canada. Tracy's noble and conciliatory conduct endeared him to the colonists and won the respect both of the aborigines and of the authorities of New York. His administration was marked by two chief events full of promise for the prosperity of the colony: the abolition of the monopoly of the West India company, which had replaced that of New France, and the conclusion of a peace with the Iroquois which lasted eighteen years and facilitated several brilliant discoveries in the interior of the continent.

LIONEL LINDSAY

Tradition and Living Magisterium

Tradition and Living Magisterium

The word tradition (Greek *paradosis* in the ecclesiastical sense; which is the only one in which it is used here; refers sometimes to the thing (doctrine, account, or custom) transmitted from one generation to another sometimes to the organ or mode of the transmission (*kerigma ekklisiastikon, predicatio ecclesiastica*). In the first sense it is an old tradition that Jesus Christ was born on 25 December, in the second sense tradition relates that on the road to Calvary a pious woman wiped the face of Jesus. In theological language, which in many circumstances has become current, there is still greater precision and this in countless directions. At first there was question only of traditions claiming a Divine origin, but subsequently there arose questions of oral as distinct from written tradition, in the sense that a given doctrine or institution is not directly dependent on Holy Scripture as its source but only on the oral teaching of Christ or the Apostles. Finally with regard to the organ of tradition it must be an official organ, a *magisterium*, or teaching authority.

Now in this respect there are several points of controversy between Catholics and every body of Protestants. Is all revealed truth consigned to Holy Scripture? or can it, must it, be admitted that Christ gave to His Apostles to be transmitted to His Church, that the Apostles received either from the very lips of Jesus or from inspiration or Revelation, Divine instructions which they transmitted to the Church and which were not committed to the inspired writings? Must it be admitted that Christ instituted His Church as the official and authentic organ to transmit and explain in virtue of Divine authority the Revelation made to men? The Protestant principle is: The Bible and nothing but the Bible; the Bible, according to them, is the sole theological source; there are no revealed truths save the truths contained in the Bible; according to them the Bible is the sole rule of faith:

by it and by it alone should all dogmatic questions be solved; it is the only binding authority. Catholics, on the other hand, hold that there may be, that there is in fact, and that there must of necessity be certain revealed truths apart from those contained in the Bible; they hold furthermore that Jesus Christ has established in fact, and that to adapt the means to the end He should have established, a living organ as much to transmit Scripture and written Revelation as to place revealed truth within reach of everyone always and everywhere. Such are in this respect the two main points of controversy between Catholics and so-called orthodox Protestants (as distinguished from liberal Protestants, who admit neither supernatural Revelation nor the authority of the Bible). The other differences are connected with these or follow from them, as also the differences between different Protestant sects--according as they are more or less faithful to the Protestant principle, they recede from or approach the Catholic position.

Between Catholics and the Christian sects of the East there are not the same fundamental differences, since both sides admit the Divine institution and Divine authority of the Church with the more or less living and explicit sense of its infallibility and indefectibility and its other teaching prerogatives, but there are contentions concerning the bearers of the authority, the organic unity of the teaching body, the infallibility of the pope, and the existence and nature of dogmatic development in the transmission of revealed truth. Nevertheless the theology of tradition does not consist altogether in controversy and discussions with adversaries. Many questions arise in this respect for every Catholic who wishes to give an exact account of his belief and the principles he professes: What is the precise relation between oral tradition and the revealed truths in the Bible and that between the living magisterium and the inspired Scriptures? May new truths enter the current of tradition, and what is the part of the magisterium with regard to revelations which God may yet make? How is this official magisterium organized, and how is it to recognize a Divine tradition or revealed truth? What is its proper rôle with regard to tradition? Where and how are revealed truths preserved and transmitted? What befalls the deposit of tradition in its transmission through the ages? These and similar questions are treated elsewhere in the CATHOLIC ENCYCLOPEDIA, but here we must separate and group all that has reference to tradition and to the living magisterium inasmuch as it is the organ of preservation and transmission of traditional and revealed truth.

The following are the points to be treated:

- I. The existence of Divine traditions not contained in Holy Scripture, and the Divine institution of the living magisterium to defend and transmit revealed truth and the prerogative of this magisterium;
- II. The relation of Scripture to the living magisterium, and of the living magisterium to Scripture;
- III. The proper mode of existence of revealed truth in the mind of the Church and the way to recognize this truth;
- IV. The organization and exercise of the living magisterium; its precise rôle in the defence and transmission of revealed truth; its limits, and modes of action;
- V. The identity of revealed truth in the varieties of formulas, systematization, and dogmatic development; the identity of faith in the Church and through the variations of theology.

A full treatment of these questions would require a lengthy development; here only a brief outline can be given, the reader being referred to special works for a fuller explanation.

I. Divine Traditions not contained in Holy Scripture; institution of the living magisterium; its prerogatives.

Luther's attacks on the Church were at first directed only against doctrinal details, but the very authority of the Church was involved in the dispute, and this soon became evident to both sides. However the controversy continued for many years to turn on particular points of traditional teaching rather than on the teaching authority and the chief weapons were Biblical texts. The Council of Trent, even while implying in its decisions and anathemas the authority of the living magisterium (which the Protestants themselves dared not explicitly deny), while appealing to ecclesiastical tradition and the sense of the Church either for the determination of the canon or for the interpretation of some passages of Holy Scripture, even while making a rule of interpretation in Biblical matters, did not pronounce explicitly concerning the teaching authority, contenting itself with saying that revealed truth is found in the sacred books and in the unwritten traditions coming from God through the Apostles; these were the sources from which it would draw. The Council, as is evident, held that there are Divine traditions not contained in Holy Scripture, revelations made to the Apostles either orally by Jesus Christ or by the inspiration of the Holy Ghost and transmitted by the Apostles to the Church.

Holy Scripture is therefore not the only theological source of the Revelation made by God to His Church. Side by side with Scripture there is tradition, side by side with the written revelation there is the oral revelation. This granted, it is impossible to be satisfied with the Bible alone for the solution of all dogmatic questions. Such was the first field of controversy between Catholic theologians and the Reformers. The designation of unwritten Divine traditions was not always given all the clearness desirable especially in early times; however Catholic controversialists soon proved to the Protestants that to be logical and consistent they must admit unwritten traditions as revealed. Otherwise by what right did they rest on Sunday and not on Saturday? How could they regard infant baptism as valid, or baptism by infusion? How could they permit the taking of an oath, since Christ had commanded that we swear not at all? The Quakers were more logical in refusing all oaths, the Anabaptists in re-baptizing adults, the Sabbatarians in resting on Saturday. But none were so consistent as not to be open to criticism on some point. Where is it indicated in the Bible that the Bible is the sole source of faith? Going further, the Catholic controversialists showed their opponents that of this very Bible, to which alone they wished to refer, they could not have the authentic canon nor even a sufficient guarantee without an authority other than that of the Bible. Calvin parried the blow by having recourse to a certain taste to which the Divine word would manifest itself as such in the same way that honey is recognized by the palate. And this in fact was the only loophole, for Calvin recognized that no human authority was acceptable in this matter. But this was a very subjective criterion and one calling for caution. The Protestants dared not adhere to it. They came eventually, after rejecting the Divine tradition received from the Apostles by the infallible Church, to rest their faith in the Bible only as a human authority, which moreover was

especially insufficient under the circumstances, since it opened up all manner of doubts and prepared the way for Biblical rationalism. There is not, in fact, any sufficient guarantee for the canon of the Scriptures, for the total inspiration or inerrancy of the Bible, save in a Divine testimony which, not being contained in the Holy Books with sufficient clearness and amplitude, nor being sufficiently recognizable to the scrutiny of a scholar who is only a scholar, does not reach us with the necessary warrant it would bear if brought by a Divinely assisted authority, as is, according to Catholics, the authority of the living magisterium of the Church. Such is the way in which Catholics demonstrate to Protestants that there should be and that there are in fact Divine traditions not contained in Holy Writ.

In a similar way they show that they cannot dispense with a teaching authority, a Divinely authorized living magistracy for the solution of controversies arising among themselves and of which the Bible itself was often the occasion. Indeed experience proved that each man found in the Bible his own ideas, as was said by one of the earliest reforming sectarians: "Hic liber est in quo quaerit sua dogmata quisque, invenit et pariter dogmata quisque sua." One man found the Real Presence, another a purely symbolic presence, another some sort of efficacious presence. The exercise of free inquiry with regard to Biblical texts led to endless disputes, to doctrinal anarchy, and eventually to the denial of all dogma. These disputes, anarchy, and denial could not be according to the Divine intention. Hence the necessity of a competent authority to solve controversies and interpret the Bible. To say that the Bible was perfectly clear and sufficient to all was obviously a retort born of desperation, a defiance of experience and common sense. Catholics refuted it without difficulty, and their position was amply justified when the Protestants began compromising themselves with the civil power, rejecting the doctrinal authority of the ecclesiastical magisterium only to fall under that of princes.

Moreover it was enough to look at the Bible, to read it without prejudice to see that the economy of the Christian preaching was above all one of oral teaching. Christ preached, He did not write. In His preaching He appealed to the Bible, but He was not satisfied with the mere reading of it, He explained and interpreted it, He made use of it in His teaching, but He did not substitute it for His teaching. There is the example of the mysterious traveller who explained to the disciples of Emmaus what had reference to Him in the Scriptures to convince them that Christ had to suffer and thus enter into His glory. And as He preached Himself so He sent His Apostles to preach; He did not commission them to write but to teach, and it was by oral teaching and preaching that they instructed the nations and brought them to the Faith. If some of them wrote and did so under Divine inspiration it is manifest that this was as it were incidentally. They did not write for the sake of writing, but to supplement their oral teaching when they could not go themselves to recall or explain it, to solve practical questions, etc. St. Paul, who of all the Apostles wrote the most, did not dream of writing everything nor of replacing his oral teaching by his writings. Finally, the same texts which show us Christ instituting His Church and the Apostles founding Churches and spreading Christ's doctrine throughout the world show us at the same time the Church instituted as a teaching authority; the Apostles claimed for themselves this authority, sending others as they had been sent by Christ and

as Christ had been sent by God, always with power to teach and to impose doctrine as well as to govern the Church and to baptize. Whoever believed them would be saved; whoever refused to believe them would be condemned. It is the living Church and not Scripture that St. Paul indicates as the pillar and the unshakable ground of truth. And the inference of texts and facts is only what is exacted by the nature of things. A book although Divine and inspired is not intended to support itself. If it is obscure (and what unprejudiced person will deny that there are obscurities in the Bible?) it must be interpreted. And even if it is clear it does not carry with it the guarantee of its Divinity, its authenticity, or its value. Someone must bring it within reach and no matter what be done the believer cannot believe in the Bible nor find in it the object of his faith until he has previously made an act of faith in the intermediary authorities between the word of God and his reading. Now, authority for authority, is it not better to have recourse to that of the Church than to that of the first comer? Liberal Protestants, such as M. Auguste Sabatier, have been the first to recognize that, if there must be a religion of authority, the Catholic system with the splendid organization of its living magisterium is far superior to the Protestant system, which rests everything on the authority of a book.

The prerogatives of this teaching authority are made sufficiently clear by the texts and they are to a certain extent implied in the very institution. The Church, according to St. Paul's Epistle to Timothy, is the pillar and ground of truth; the Apostles and consequently their successors have the right to impose their doctrine; whosoever refuses to believe them shall be condemned, whosoever rejects anything is shipwrecked in the Faith. This authority is therefore infallible. And this infallibility is guaranteed implicitly but directly by the promise of the Saviour: "Behold I am with you all days even to the consummation of the world." Briefly the Church continues Christ in its mission to teach as in its mission to sanctify; its power is the same as that which He received from His Father and, as He came full of truth no less than of grace, the Church is likewise an institution of truth as it is an institution of grace. This doctrine was intended to be spread throughout the world despite so many obstacles of every kind, and the accomplishment of the task required miracles. So did Christ give to his Apostles the miraculous power which guaranteed their teaching. As He Himself confirmed His words by His works He wished that they also should present with their doctrine unexceptionable motives for credibility. Their miracles were the Divine seals of their mission and their Apostolate. The Divine seal has always been stamped on the teaching authority. It is not necessary that every missionary should work miracles, the Church herself is an ever-living miracle, bearing always on her brow the unexceptionable witness that God is with her.

II. The relation of Scripture to the living magisterium, and of the living magisterium to Scripture.

This relation is the same as that between the Gospel and the Apostolic preaching. Christ made use of the Bible, He appealed to it as to an irrefragable authority, He explained and interpreted it and furnished the key to it, with it he shed light on His own doctrine and mission. The Apostles did in like manner when they spoke to the Jews. Both sides had access to the Scriptures in a text admitted by all, both recognized in them a Divine authority, as in the very word of God. This was

also the way of the faithful in their studies and discussions; but with pagans and unbelievers it was necessary to begin with presenting the Bible and guaranteeing its authority -- the Christian doctrine concerning the Bible had to be explained to the faithful themselves, and the guarantee of this doctrine demonstrated. The Bible had been committed to the care of the living magisterium. It was the Church's part to guard the Bible, to present it to the faithful in authorized editions or accurate translations, it was for her to make known the nature and value of the Divine Book by declaring what she knew regarding its inspiration and inerrancy, it was for her to supply the key by explaining why and how it had been inspired, how it contained Revelation, how the proper object of that Revelation was not purely human instruction but a religious and moral doctrine with a view to our supernatural destiny and the means to attain it, how, the Old Testament being a preparation and annunciation of the Messiah and the new dispensation, there might be found beneath the husk of the letter typical meanings, figures, and prophecies. It was for the Church in consequence to determine the authentic canon, to specify the special rules and conditions for interpretation, to pronounce in case of doubt as to the exact sense of a given book or text, and even when necessary to safeguard the historical, prophetic, or apologetic value of a given text or passage, to pronounce in certain questions of authenticity, chronology, exegesis, or translation, either to reject an opinion compromising the authority of the book or the veracity of its doctrine or to maintain a given body of revealed truth contained in a given text. It was above all for the Church to circulate the Divine Book by minting its doctrine, adapting and explaining it, by offering it and drawing from it nourishment wherewith to nourish souls, briefly by supplementing the book, making use of it, and assisting others to make use of it. This is the debt of Scripture to the living magisterium.

On the other hand the living magisterium owes much to Scripture. There it finds the word of God, new-blown so to speak, as it was expressed under Divine agency by the inspired author; while oral tradition, although faithfully transmitting revealed truth with the Divine assistance, nevertheless transmits it only in human formulas. Scripture gives us beyond doubt to a certain extent a human expression of the truth which it presents, since this truth is developed in and by a human brain acting in a human manner, but also to a certain extent Divine, since this human development takes place wholly under the action of God. So also with due proportion it may be said of the inspired word what Christ said of His: It is spirit and life. In a sense differing from the Protestant sense which sometimes goes so far as to deify the Bible, but, in a true sense, we admit that God speaks to us in the Bible more directly than in oral teaching. The latter, moreover, ever faithful to the recommendations which St. Paul made to his disciple Timothy, does not fail to have recourse to Biblical sources for its instruction and to draw thence the heavenly doctrine, to take thence with the doctrine a sure, ever-young, and ever-living expression of this doctrine, one more adequate than any other despite the inevitable inadaptability of human formulas to divine realities. In the hands of masters Scripture may become a sharp defensive and offensive weapon against error and heresy. When a controversy arises recourse is had first to the Bible. Frequently when decisive texts are found masters wield them skilfully and in such a way as to demonstrate their irresistible force. If none are found of the necessary clearness the assistance of Scripture is not thereby abandoned.

Guided by the clear sense of the living and luminous truth, which it bears within itself, by its likeness to faith defended at need against error by the Divine assistance, the living magisterium strives, explains, argues, and occasionally subtilizes in order to bring forward texts which, if they lack an independent and absolute value, have an *ad hominem* force, or value, through the authority of the authentic interpreter, whose very thought, if it is not, or is not clearly, in Scripture, nevertheless stands forth with a distinctness or new clearness in this manipulation of Scripture, by this contact with it.

Manifestly there is no question here of a meaning which is not in Scripture and which the magisterium reads into it by imposing it as the Biblical meaning. This individual writers may do and have sometimes done, for they are not infallible as individuals, but not the authentic magisterium. There is question only of the advantage which the living magisterium draws from Scripture whether to attain a clearer consciousness of its own thought, to formulate it in hieratic terms, or to triumphantly reject an opinion favourable to error or heresy. As regards Biblical interpretation properly so called the Church is infallible in the sense that, whether by authentic decision of pope or council, or by its current teaching that a given passage of Scripture has a certain meaning, this meaning must be regarded as the true sense of the passage in question. It claims this power of infallible interpretation only in matters of faith and morals, that is where religious or moral truth is in danger, directly, if the text or passage belongs to the moral and religious order; indirectly, if in assigning a meaning to a text or book the veracity of the Bible, its moral value, or the dogma of its inspiration or inerrancy is imperilled. Without going further into the manifold services which the Bible renders to the living magisterium mention must nevertheless be made as particularly important of its services in the apologetic order. In fact Scripture by its historic value, which is indisputable and undisputed on many points, furnishes the apologist with irrefragable arguments in support of supernatural religion. It contains for example miracles whose reality is impressed on the historian with the same certainty as the most acknowledged facts. This is true and perhaps more strikingly so of the argument from the prophecies, for the Scriptures, the Old as well as the New Testament, contain manifest prophecies, the fulfilment of which we behold either in Christ and His Apostles or in the later development of the Christian religion.

In view of all this it will be readily understood that since the time of St. Paul the Church has urgently recommended to her ministers the study of Holy Scripture, that she has watched with a jealous authority over its integral transmission, its exact translation, and its faithful interpretation. If occasionally she has seemed to restrict its use or its diffusion this too was through an easily comprehensible love and a particular esteem for the Bible, that the sacred Book might not like a profane book be made a ground for curiosity, endless discussions, and abuses of every kind. In short, since the Church at last proves to be the best safeguard for human reason against the excesses of an unbridled reason, so by the very avowal of sincere Protestants does she show herself at the present day the best defender of the Bible against an unrestrained Biblicism or an unchecked criticism.

III. The proper mode of existence of revealed truth in the mind of the Church and the way to recognize this truth.

There is a formula current in Christian teaching (and the formula is borrowed from St. Paul himself) that traditional truth was confided to the Church as a deposit which it would guard and faithfully transmit as it had received it without adding to it or taking anything away. This formula expresses very well one of the aspects of tradition and one of the principal rôles of the living magisterium. But this idea of a deposit should not make us lose sight of the true manner in which traditional truth lives and is transmitted in the Church. This deposit in fact is not an inanimate thing passed from hand to hand; it is not, properly speaking, an assemblage of doctrines and institutions consigned to books or other monuments. Books and monuments of every kind are a means, an organ of transmission, they are not, properly speaking, the tradition itself. To better understand the latter it must be represented as a current of life and truth coming from God through Christ and through the Apostles to the last of the faithful who repeats his creed and learns his catechism. This conception of tradition is not always clear to all at the first glance. It must be reached, however, if we wish to form a clear and exact idea. We can endeavour to explain it to ourselves in the following manner: We are all conscious of an assemblage of ideas or opinions living in our mind and forming part of the very life of our mind, sometimes they find their clear expression, again we find ourselves without the exact formula wherewith to express them to ourselves or to others an idea is in search as it were of its expression, sometimes it even acts in us and leads us to actions without our having as yet the reflective consciousness of it. Something similar may be said of the ideas or opinions which live, as it were, and stir the social sentiment of a people, a family, or any other well-characterized group to form what is called the spirit of the day, the spirit of a family, or the spirit of a people.

This common sentiment is in a sense nothing else than the sum of individual sentiments, and yet we feel clearly that it is quite another thing than the individual taken individually. It is a fact of experience that there is a common sentiment, as if there were such a thing as a common spirit, and as if this common spirit were the abode of certain ideas and opinions which are doubtless the ideas and opinions of each man, but which take on a peculiar aspect in each man inasmuch as they are the ideas and opinions of all. The existence of tradition in the Church must be regarded as living in the spirit and the heart, thence translating itself into acts, and expressing itself in words or writings; but here we must not have in mind individual sentiment, but the common sentiment of the Church, the sense or sentiment of the faithful, that is, of all who live by its life and are in communion of thought among themselves and with her. The living idea is the idea of all, it is the idea of individuals, not merely inasmuch as they are individuals, but inasmuch as they form part of the same social body. This sentiment of the Church is peculiar in this, that it is itself under the influence of grace. Hence it follows that it is not subject, like that of other human groups to error and thoughtless or culpable tendencies. The Spirit of God always living in His Church upholds the sense of revealed truth ever living therein.

Documents of all kinds (writings, monuments, etc.) are in the hands of masters, as of the faithful, a means of finding or recognizing the revealed truth confided to the Church under the direction of her pastors. There is between written documents and the living magisterium of the Church a relation similar, proportionately speaking, to that already outlined between Scripture and the living magisterium. In them is found the traditional thought expressed according to varieties of environments and circumstances, no longer in an inspired language, as is the case with Scripture, but in a purely human language, consequently subject to the imperfections and shortcomings of human thought. Nevertheless the more the documents are the exact expression of the living thought of the Church the more they thereby possess the value and authority which belong to that thought because they are so much the better expression of tradition. Often formulas of the past have themselves entered the traditional current and become the official formulas of the Church. Hence it will be understood that the living magisterium searches in the past, now for authorities in favour of its present thought in order to defend it against attacks or dangers of mutilation, now for light to walk the right road without straying. The thought of the Church is essentially a traditional thought and the living magisterium by taking cognizance of ancient formulas of this thought thereby recruits its strength and prepares to give to immutable truth a new expression which shall be in harmony with the circumstances of the day and within reach of contemporary minds. Revealed truth has sometimes found definitive formulas from the earliest times; then the living magisterium has only had to preserve and explain them and put them in circulation. Sometimes attempts have been made to express this truth, without success. It even happens that, in attempting to express revealed truth in the terms of some philosophy or to fuse it with some current of human thought, it has been distorted so as to be scarcely recognizable, so closely mingled with error that it becomes difficult to separate them. When the Church studies the ancient monuments of her faith she casts over the past the reflection of her living and present thought and by some sympathy of the truth of to-day with that of yesterday she succeeds in recognizing through the obscurities and inaccuracies of ancient formulas the portions of traditional truth, even when they are mixed with error. The Church is also (as regards religious and moral doctrines) the best interpreter of truly traditional documents; she recognizes as by instinct what belongs to the current of her living thought and distinguishes it from the foreign elements which may have become mixed with it in the course of centuries.

The living magisterium, therefore, makes extensive use of documents of the past, but it does so while judging and interpreting, gladly finding in them its present thought, but likewise, when needful, distinguishing its present thought from what is traditional only in appearance. It is revealed truth always living in the mind of the Church, or, if it is preferred, the present thought of the Church in continuity with her traditional thought, which is for it the final criterion, according to which the living magisterium adopts as true or rejects as false the often obscure and confused formulas which occur in the monuments of the past. Thus are explained both her respect for the writings of the Fathers of the Church and her supreme independence towards those writings--she judges them more than she is judged by them. Harnack has said that the Church is accustomed to conceal her evolution and to efface as well as she can the differences between her present and her former thought by

condemning as heretical the most faithful witnesses of what was formerly orthodoxy. Not understanding what tradition is, the ever-living thought of the Church, he believes that she abjured her past when she merely distinguished between what was traditional truth in the past and what was only human alloy mixed with that truth, the personal opinion of an author substituting itself for the general thought of the Christian community. With regard to official documents, the expression of the infallible magisterium of the Church embodied in the decision of councils, or the solemn judgments of the popes, the Church never gainsays what she has once decided. She is then linked with her past because in this past her entire self is concerned and not any fallible organ of her thought. Hence she still finds her doctrine and rule of faith in these venerable monuments; the formulas may have grown old, but the truth which they express is always her present thought.

IV. The organization and exercise of the living magisterium; its precise rôle in the defence and transmission of revealed truth--its limits and modes of action.

Closer study of the living magisterium will enable us to better understand the splendid organism created by God and gradually developed that it might preserve, transmit, and bring within the reach of all revealed truth, ever the same, but adapted to every variety of time, circumstances, and environment. Properly speaking, this magisterium is a teaching authority; it not only presents the truth, but it has the right to impose it, since its power is the very power given by God to Christ and by Christ to His Church. This authority is called the teaching Church. The teaching Church is essentially composed of the episcopal body, which continues here below the work and mission of the Apostolic College. It was indeed in the form of a college or social body that Christ grouped His Apostles and it is likewise as a social body that the episcopate exercises its mission to teach. Doctrinal infallibility has been guaranteed to the episcopal body and to the head of that body as it was guaranteed to the Apostles, with this difference, however, between the Apostles and the bishops that each Apostle was personally infallible (in virtue of his extraordinary mission as founder and the plenitude of the Holy Ghost received on Pentecost by the Twelve and later communicated to St. Paul as to the Twelve), whereas only the body of bishops is infallible and each bishop is not so, save in proportion as he teaches in communion and concert with the entire episcopal body.

At the head of this episcopal body is the supreme authority of the Roman pontiff, the successor of St. Peter in his primacy as he is his successor in his see. As supreme authority in the teaching body, which is infallible, he himself is infallible. The episcopal body is infallible also, but only in union with its head, from whom moreover it may not separate, since to do so would be to separate from the foundation on which the Church is built. The authority of the pope may be exercised without the co-operation of the bishops, and this even in infallible decisions which both bishops and faithful are bound to receive with the same submission. The authority of the bishops may be exercised in two ways; now each bishop teaches the flock confided to him, again the bishops assemble in council to draw up together and pass doctrinal or disciplinary decrees. When all the bishops of the Catholic world (this totality is to be understood as morally speaking; it suffices for the whole Church to be represented) are thus assembled in council the council is called oecumenical. The doctrinal decrees of an oecumenical council, once they are approved by the pope, are infallible

as are the *ex cathedra* definitions of the sovereign pontiff. Although the bishops, taken individually, are not infallible their teaching participates in the infallibility of the Church according as they teach in concert and in union with the episcopal body, that is according as they express not their personal ideas, but the very thought of the Church.

Beside the sovereign pontiff are the Roman Congregations, many of which are especially concerned with doctrinal questions. Some of them, such as the Congregation of the Index, are not so concerned save from a disciplinary standpoint, by prohibiting the reading of certain books, regarded as dangerous to faith or morals, if not by the very doctrine which they contain, at least by their way of expressing it or by their unseasonableness. Other congregations, that of the Inquisition, for example, have a more directly doctrinal authority. This authority is never infallible; it is nevertheless binding and exacts a religious submission, interior as well as exterior. Nevertheless this interior submission does not necessarily bear on the absolute truth or falsity of the doctrine concerned in the decree, it may only bear on the safety or danger of a certain teaching or opinion, the decree itself usually having in view only the moral qualification of the doctrine. To assist them in their doctrinal task the bishops have all those who teach by their authority or under their surveillance; pastors and curates, professors in ecclesiastical establishments, in a word, all who teach or explain Christian doctrine.

Theological teaching in all its forms (in seminaries, universities, etc.) gives valuable assistance as a whole to the teaching authority and to all who teach under that authority. In the study of theology the masters themselves have acquired the knowledge which usually assists them to discern truth or falsehood in doctrinal matters, they have drawn thence what they themselves are to provide. Theologians as such do not form a part of the teaching Church, but as professional expounders of revealed truth they study it scientifically, they collect and systematize it, they illumine it with all the lights of philosophy, history, etc. They are, as it were, the natural consultors of the teaching authority, to furnish it with the necessary information and data; they thereby prepare and sometimes in an even more direct manner by their reports, their written consultations, their projects or *schemata*, and their preparatory redactions the official documents which the teaching authority completely develops and publishes authoritatively. On the other hand, their scientific works are useful for the instruction of those who should spread and popularize the doctrine, put it in circulation, and adapt it to all by speech or writings of every kind. It is evident what marvellous unity is attained on this point alone in ecclesiastical teaching and how the same truth, descended from above, distributed through a thousand different channels, finally comes pure and undefiled to the most lowly and the most ignorant.

This multifarious work, of scientific exposition as well as of popularization and propaganda, is likewise assisted by the countless written forms of religious teaching, among which catechisms have a special character of doctrinal security, approved as they are by the teaching authority and claiming only to set forth with clearness and precision the teaching common in the Church. Thus the child who learns his catechism may, provided he is informed of it, take cognizance that the doctrine presented to him is not the personal opinion of the volunteer catechist or of the priest who

communicates it to him. The catechism is the same in all the parishes of a diocese, apart from a few differences of detail which have no bearing on doctrine all the catechisms of a country are alike; the differences between those of one country and another are scarcely perceptible. It is truly the mind of the Church received from God or Christ and transmitted by the Apostles to the Christian society which thus reaches even little children by the voice of the catechist, or the savage by that of the missionary. This diffusion of the same truth throughout the world and this unity of the same faith among the most diverse peoples is a marvel which by itself forces the recognition that God is with His Church. St. Irenaeus in his time was in admiration of it and he expressed his admiration in language of such brilliancy and poetry as is seldom to be met with in the venerable Bishop of Lyons. The outer and visible cause of its diffusion and unity is the splendid organization of the living magisterium. This magisterium was not instituted to receive new truths, but to guard, transmit, propagate, and preserve revealed truth from every admixture of error, and to cause it to prevail. Moreover the magisterium should not be considered as external to the community of the faithful. Those who teach cannot and should not teach save what they have learned themselves, those who have the office of teachers have been chosen from among the faithful and they first of all are obliged to believe what they propose to the faith of others. Moreover they usually propose to the belief of the faithful only the truths of which the latter have already made more or less explicit profession. Sometimes it is even by sounding as it were the common sentiment of the Church, still more by scrutinizing the monuments of the past, that masters and theologians discover that such and such a doctrine, perhaps in dispute, belongs nevertheless to the traditional deposit. More than one among the faithful may be unconscious of personal belief in it, but if he is in union of thought with the Church he believes implicitly that which perhaps he declines to recognize explicitly as an object of his faith. It was thus with regard to the dogma of the Immaculate Conception before it was inserted in the explicit faith of the Church.

Hence there is between the teaching Church and the faithful an intimate union of thought and heart. The teaching authority loses nothing of its rights; these are limited only from above by the very conditions of the command which they have received. But the exercise of this authority is by so much more certain and easy as the faithful, generally, so to speak, confirm by their adhesion the decisions of this authority: a dogmatic definition scarcely does more than sanction the faith already existing in the Christian community. The better to understand, adapt, and preserve revealed truth against attacks or errors the masters in the Church and the professors of theology naturally appeal to all the resources offered by human science. Among these sciences philosophy, history, languages, philology in all its forms necessarily have an important place in the arsenal of the teaching magisterium. With regard to theological systematization in particular, philosophy necessarily intervenes to assist theology better to comprehend revealed truth, the better to synthesize traditional data, and the better to explain the dogmatic idea. In the Middle Ages a fruitful alliance was formed between Scholastic philosophy and theology. It may happen that philosophy and the other human sciences are at variance with theology, the science of revealed truth. The conflict is never insoluble, for the true can never be opposed to the true, nor the human truth of philosophy and human

knowledge to the supernatural truth of theology. But the fact remains that scientific hypothesis, science which seeks itself, and philosophy which develops itself sometimes seem in opposition to revealed truth. In this case the teaching Church has the right, in order to preserve traditional truth, to condemn the assertions, opinions, and hypotheses which, although not direct denials, nevertheless endanger it or rather expose some souls to the loss of it. Authority has need to be prudent in these condemnations and it is well known that the cases are very rare when it may be asserted with any appearance of justification that it has not been sufficiently so, but its right to interfere is indisputable for anyone who admits the Divine institution of the magisterium.

There are then between purely profane facts and opinions and revealed truths mixed facts and opinions which by their nature belong to the human order, but which are in intimate contact and close connexion with supernatural truth. These facts are called dogmatic facts and these opinions theological opinions. In very virtue of its mission the teaching authority has jurisdiction over these facts and opinions; it is even a positive truth, if not a revealed truth, that dogmatic facts and theological opinions may also like dogmatic truths themselves be the object of an infallible decision. The Church is no less infallible in maintaining that the five famous propositions are in Jansenism than in condemning these propositions as heretical. A distinction must be made between dogmatic traditions or revealed truths, pious traditions, liturgical customs, and the accounts of supernatural manifestations or revelations which circulate in the world of Christian piety. When the Church intervenes in order to pronounce in these matters it is never to canonize them, if we may so speak, nor to give them an authority of faith; in such cases it claims only to preserve them against temerarious attacks, to pronounce that they contain nothing contrary to faith or morals, and to recognize in them a human value sufficient for piety to nourish itself therewith freely and without danger.

V. The identity of revealed truth in the varieties of formulas, systematization, and dogmatic development, the identity of faith in the Church and through the variations of theology.

The saying of Sully Prud'homme is well known, "How is it that this which is so complicated (the 'Summa' of St. Thomas) has proceeded from what was so simple (the Gospel)?" In fact when we read a theological treatise or the profession of faith and anti-Modernist oath imposed by Pius X they seem at first glance very different from the Holy Scripture or the Apostles' Creed. On closer study we become aware that the differences are not irreconcilable; despite appearances the "Summa" and the anti-Modernist oath are naturally linked with the Scripture and the faith of the first Christians. To grasp thoroughly the identity of revealed truth such as was believed in the early centuries with the dogmas which we now profess, it is necessary to study thoroughly the process of dogmatic expression in the complete history of dogma and theology. It is sufficient here to indicate its general outlines and characteristics. That which was shown in Scripture or the Evangelic Revelation as a living reality (the Divine Person of Jesus Christ) has been formulated in abstract terms (one person, two natures) or in concrete formulas (my Father and I are one); men passed constantly from the implicit seen or received to the explicit reasoned and reflected upon; they analyzed the complex data, compared the separate elements, built up a system of the scattered truths; they cleared up by

analogies of faith and the light of reason points which were still obscure and fused them into a whole, in whose parts the data of Divine Revelation and those of human knowledge were sometimes difficult to distinguish. Briefly all this led to a work of transposition, analysis, and synthesis, of deduction and induction, of the elaboration of the revealed matter by theology. In the course of this work the formulas have changed, the Divine realities have become tinged with the colours of human thought, revealed truths have been mingled with those of science and philosophy, but the heavenly doctrine has remained the same throughout the varieties of formulas, systematization, and dogmatic expression. It is seen at different angles and to a certain extent with other eyes, but it is the same truth which was presented to the first Christians and which is presented to us to-day.

To this identity of revealed truth corresponds the identity of faith. What the first Christians believed we still believe; what we believe to-day they believed more or less explicitly, in a more or less conscious way. Since the deposit of Revelation has remained the same, the same also, in substance, has remained the taking possession of the deposit by the living faith. Each of the faithful has not at all times nor has he always explicit consciousness of all that he believes, but his implicit belief always contains what he one day makes explicit in the profession of faith. Certain truths, which may be called fundamental, have always been explicitly professed in the Church either by word or action; others which may be called secondary may have long remained implicit, enveloped, as regards their precise detail, in a more general truth where faith did not discern them at the first glance. In the first case at a given time uncertainties may have existed, controversies have arisen, heresies cropped up. But the mind of the Church, the Catholic sense, has not hesitated as to what was essential, there has never been in the Christian world that darkening of the truth with which heretics have reproached it; these might have seen and they who had eyes to see did see. On these points disputes have never arisen among the faithful; there have sometimes been very sharp disputes, but they had to do with misunderstandings or bore only on details of expression.

As regards truths such as the dogma of the Immaculate Conception, there have been uncertainties and controversies over the very substance of the subjects involved. The revealed truth was indeed in the deposit of truth in the Church, but it was not formulated in explicit terms nor even in clearly equivalent terms; it was enveloped in a more general truth (that e. g. of the all-holiness of Mary), the formula of which might be understood in a more or less absolute sense (exemption from all actual sin, exemption even from original sin). On the other hand, this truth (the exemption of Mary from original sin) may seem in at least apparent conflict with other certain truths (universality of original sin, redemption of all by Christ). It will be readily understood that in some circumstances, when the question is put explicitly for the first time, the faithful have hesitated. It is even natural that the theologians should show more hesitation than the other faithful. More aware of the apparent opposition between the new opinion and the ancient truth, they may legitimately resist, while awaiting fuller light, what may seem to them unreflecting haste or unenlightened piety. Thus did St. Anselm, St. Thomas, and St. Bonaventure in the case of the Immaculate Conception. But the living idea of Mary in the mind of the Church implied absolute exemption from all sin without exception, even from original sin; the faithful whom theological preoccupations did not prevent

from beholding this idea in its purity, with that intuition of the heart often more prompt and more enlightened than reasoning and reflected thought, shrank from all restriction and could not suffer, according to the expression of St. Augustine, that there should be question of any sin whatsoever in connexion with Mary. Little by little the feeling of the faithful won the day. Not, as has been said, because the theologians, powerless to struggle against a blind sentiment, had themselves to follow the movement, but because their perceptions, quickened by the faithful and by their own instinct of faith, grew more considerate of the sentiment of the faithful and eventually examined the new opinion more closely in order to make sure that, far from contradicting any dogma, it harmonized wonderfully with other revealed truths and corresponded as a whole to the analogy of faith and rational fitness. Finally scrutinizing with fresh care the deposit of revelation, they there discovered the pious opinion, hitherto concealed, as far as they were concerned in the more general formula, and, not satisfied to hold it as true, they declared it revealed. Thus to implicit faith in a revealed truth succeeded, after long discussions, explicit faith in the same truth thenceforth shining in the sight of all. There have been no new data, but there has been under the impulse of grace and sentiment and the effort of theology a more distinct and clear insight into what the ancient data contained. When the Church defined the Immaculate Conception it defined what was actually in the explicit faith of the faithful what had always been implicitly in that faith. The same is true of all similar cases, save for accidental differences of circumstances. In recognizing a new truth the Church thereby recognizes that it already possessed that truth.

There is, therefore in the Church progress of dogma, progress of theology, progress to a certain extent of faith itself, but this progress does not consist in the addition of fresh information nor the change of ideas. What is believed has always been believed, but in time it is more commonly and thoroughly understood and explicitly expressed. Thus, thanks to the living magisterium and ecclesiastical preaching, thanks to the living sense of truth in the Church, to the action of the Holy Ghost simultaneously directing master and faithful, traditional truth lives and develops in the Church, always the same, at once ancient and new--ancient, for the first Christians already beheld it to a certain extent, new, because we see it with our own eyes and in harmony with our present ideas. Such is the notion of tradition in the double meaning of the word; it is Divine truth coming down to us in the mind of the Church and it is the guardianship and transmission of this Divine truth by the organ of the living magisterium, by ecclesiastical preaching, by the profession of it made by all in the Christian life.

JEAN BAINVEL

Traditionalism

Traditionalism

A philosophical system which makes tradition the supreme criterion and rule of certitude.

Exposition

According to traditionalism, human reason is of itself radically unable to know with certainty any truth or, at least, the fundamental truths of the metaphysical, moral, and religious order. Hence our first act of knowledge must be an act of faith, based on the authority of revelation. This revelation is transmitted to us through society, and its truth is guaranteed by tradition or the general consent of mankind. Such is the philosophical system maintained chiefly, in its absolute form, by the Vicomte de Bonald and F. de Lamennais in their respective works and, with some mitigation, by Bautain, Bonetty, Ventura, Ubaghs, and the school of Louvain.

According to de Bonald, man is essentially a social being. His development comes through society; and the continuity and progress of society have their principle in tradition. Now language is the instrument of sociability, and speech is as natural to man as is his social nature itself. Language could not have been discovered by man, for "man needs signs or words in order to think as well as in order to speak"; that is "man thinks his verbal expression before he verbally expresses his thought"; but originally language, in its fundamental elements together with the thoughts which it expresses, was given him by God His Creator (cf. *Législation primitive*, I, ii). These fundamental truths, absolutely necessary to the intellectual, moral, and religious life of man, must be first accepted by faith. They are communicated through society and education, and warranted by tradition or universal reason of mankind. There is no other basis for certitude and there remains nothing, besides tradition, but human opinions, contradiction, and uncertainty (cf. *Recherches philosophiques*, i, ix).

The system presented by Lamennais is almost identical with that of de Bonald. Our instruments of knowledge, namely sense, feeling, and reason, he says, are fallible. The rule of certitude therefore can only be external to man and it can consist only in the control of the individual senses, feelings, and reasoning by the testimony of the senses, feelings, and reason of all other men; their universal agreement is the rule of certitude. Hence, to avoid scepticism, we must begin with an act of faith preceding all reflection, since reflection pre-supposes the knowledge of some truth. This act of faith must have its criterion and rule in the common consent or agreement of all, in the general reason (*la raison générale*). "Such is", Lamennais concludes, "the law of human nature", outside of which "there is no certitude, no language no society, no life" (cf. *Défense de l'Essai sur l'Indifférence*, xi).

The Mitigated Traditionalists make a distinction between the order of acquisition (*ordo acquisitionis*) and the order of demonstration (*ordo demonstrationis*). The knowledge of metaphysical truths, they say, is absolutely necessary to man in order to act reasonably. It must then be acquired by the child through teaching or tradition before he can use his reason. And this tradition can have its source only in a primitive revelation. Hence, in the order of acquisition, faith precedes science. With these truths, however, received by faith, human reason is able, through reflection, to demonstrate the reasonableness of this act of faith, and thus, in the order of demonstration, science precedes faith. When replaced in its historical surroundings, Traditionalism clearly appears as a reaction and a protest against the rationalism of the philosophers of the eighteenth century and the anarchic individualism of the French Revolution. Against these errors it pointed out and emphasized the weakness and insufficiency of human reason, the influence of society, education, and tradition

on the development of human life and institutions. The reaction was extreme, and landed in the opposite error.

Criticism

Since Traditionalism, in its fundamental principles, is a kind of Fideism, it falls under the condemnation pronounced by the Church and under the refutation furnished by reason and philosophy against Fideism. We may, however, advance certain criticisms touching the characteristic elements of Traditionalism. It is evident, first of all, that authority, whatever be the way or agency in which it is presented to us, cannot of itself be the supreme criterion or rule of certitude. For, in order to be a rule of certitude, it must first be known as valid, competent, and legitimate, and reason must have ascertained this before it is entitled to our assent (cf. St. Thomas, I-II:2:1). Without entering upon the psychological problem of the relations between thought and expression, and even admitting with de Bonald that the primitive elements of thought and language were originally given directly by God to man, we are not forced to conclude logically with him that our first act is an act of faith. Our first act should rather be an act of reason, acknowledging, by natural reflection, the credibility of the truths revealed by God. Lamennais's criterion of universal reason or consent is open to the same objections. First, how could universal consent or general reason, which is nothing more than the collection of individual judgments or of individual reasons, give certitude, when each of these individual judgments is only matter of opinion or each of these individual reasons is declared to be fallible? Again, how could we in practice apply such a criterion, that is, how could we ascertain the universality of such a judgment in the whole human race, even if only moral universality were required? Moreover, what would be, in this system, the criterion of truth, concerning matters in which the human mind is not generally interested, or in the scientific problems of which it is generally incompetent? But above all, in order to give a firm and unhesitating assent to the teaching of universal consent, we must first have ascertained the reasonableness and legitimacy of its claims to our assent; that is, reason must ultimately precede faith, otherwise our assent would not be reasonable.

Mitigated or Semi-Traditionalism, in spite of its apparent differences, is substantially identical with pure Traditionalism, and falls under the same criticism, since religious and moral truths are declared to be given to man directly by Revelation and accepted by him antecedently to any act of his reason. Moreover, there is no real foundation for the essential distinction between the orders of invention and demonstration, which is supposed to distinguish Semi-Traditionalism from pure Traditionalism. The difference between these two orders is only accidental. It consists in the fact that it is easier to demonstrate a truth already known than to discover it for the first time; but the faculties and process used in both operations are essentially the same, since to demonstrate a truth already known is simply to reproduce, under the guidance of this knowledge, the operation performed and to take again the path followed in its first discovery (cf. St. Thomas, "De Veritate", Q. xi, a. 1). Semi-Traditionalism and absolute Traditionalism, then, rest upon the same fundamental error, namely, that ultimately faith precedes reason. Let us point out, however, the partial truth contained in Traditionalism. Against Individualism and Rationalism, it rightly insisted upon the social character

of man, and rightly maintained that authority and education play a large part in the intellectual, moral, and religious development of man. Rightly also it recalled to the human mind the necessity of respect for tradition, for the experience and teaching it contains, to secure a true and solid progress. Universal consent may indeed be, in certain conditions; a criterion of truth. In many circumstances, it may furnish suggestion for the discovery of truth or afford confirmation of the truth already discovered, but it can never be the supreme criterion and rule of truth. Unless we admit that our reason is of itself capable of knowing with certainty some fundamental truths, we logically end in scepticism—the ruin of both human knowledge and faith. The true doctrine, as taught by the Catholic Church and confirmed by psychology and history, is that man is physically and practically able to know with certainty some fundamental truths of the natural, moral, and religious order, but that, although he has the physical power, he remains in the conditions of the present life, morally and practically incapable of knowing sufficiently all the truths of the moral and religious order, without the help of Divine Revelation (cf. Vatican Council, Sess. III, cap. ii).

GEORGE M. SAUVAGE

Traducianism

Traducianism

Traducianism (*tradux*, a shoot or sprout, and more specifically a vine branch made to take root so as to propagate the vine), in general the doctrine that, in the process of generation, the human spiritual soul is transmitted to the offspring by the parents. When a distinction is made between the terms Traducianism and Generationism, the former denotes the materialistic doctrine of the transmission of the soul by the organic process of generation, while the latter applies to the doctrine according to which the soul of the offspring originates from the parental soul in some mysterious way analogous to that in which the organism originates from the parent's organism. Traducianism is opposed to Creationism or the doctrine that every soul is created by God. Both, however, against Emanationism and Evolutionism (q.v.) admit that the first human soul originated by creation. They differ only as to the mode of origin of subsequent souls.

In the early centuries of the Christian Church, the Fathers who touch upon this question defend the immediate creation of the soul. Tertullian, Apollinaris, and a few other heretics advocate Traducianism, but the testimony of Saint Jerome (Epist. cxxvi, 1) that "the majority of Oriental writers think that, as the body is born of the body, so the soul is born of the soul" seems exaggerated, as no other writer of prominence is found to advocate Generationism as certain. Saint Gregory of Nyssa, Macarius, Rufinus, Nemesius, although their views on this point are not always clear, seem to prefer Generationism. After the rise of Pelagianism, some Fathers hesitate between Generationism and Creationism, thinking that the former offers a better, if not the only, explanation of the transmission of original sin. Among them Saint Augustine is the most important. Creationism is held as certain by the Scholastics, with the exception of Hugh of Saint Victor and Alexander of Hales, who propose it merely as more probable. In recent times Generationism has been rejected

by all Catholic theologians. Exceptions are Froschammer who defends Generationism and gives to the generation of the soul from the parents the name of secondary creation; Klee and Ubaghs who leave the question undecided; Hermes who favours Generationism; Gravina who advocates it- and Rosmini who asserts that the sensitive soul is generated by the parents, and becomes spiritual when God illuminates it and manifests to it the idea of being which is the foundation of the whole intellectual life.

From the philosophical point of view, the reasons alleged in favour of Generationism have little or no value. The parents are really generators of their offspring even if the soul comes from God, for the generative process is the condition of the union of body and soul which constitutes the human being. A murderer really kills a man, although he does not destroy his soul. Nor is man inferior to animals because they generate complete living organisms, since the difference between man and animals comes from the superiority of the human soul and from its spiritual nature which requires that it should be created by God. On the other hand the reasons against Generationism are cogent. The organic process of generation cannot give rise to a spiritual substance, and to say that the soul is transmitted in the corporeal semen is to make it intrinsically dependent on matter. The process of spiritual generation is impossible. since the soul is immaterial and indivisible, no spiritual germ can be detached from the Parental soul (cf. St. Thomas, "Contra gent." II, c 86; "Sum. theol." I:90:2, I:98:2, etc.). As to the power of creation, it is the prerogative of God alone (see CREATION, VI).

Theologically, corporeal Traducianism is heretical because it goes directly against the spirituality of the soul. As to Generationism, it is certainly opposed to the general attitude of the Church. Froschammer's book, "Ueber den Ursprung der menschlichen Seelen", was condemned in 1857, and Ubaghs's opinion expressed in his "Anthropologiae philosophicae elementa" was reproved in a letter of Cardinal Patrizi written by authority of Pius IX to the Archbishop of Mechlin (2 March, 1866). Moreover, Anastasius II in a letter to the bishops of Gaul (498) condemns Generationism (Thiel, "Epistolae Romanorum Pontificum", 634 sqq.). In the Symbol to be subscribed to by Bishop Peter of Antioch (1053), Leo IX declares the soul to be "not a part of God, but created from nothing" (Denzinger, 348). Among the errors which the Armenians must reject, Benedict XII mentions the doctrine that the soul originates from the soul of the father (Denzinger, 533). Hence, although there are no strict definitions condemning Generationism as heretical, it is certainly opposed to the doctrine of the Church, and could not be held without temerity.

C. A. DUBRAY

Trajan

Trajan

Emperor of Rome (A.D. 98-117), b. at Italica Spain, 18 September, 53; d. 7 August, 117.

He was descended from an old Roman family, and was adopted in 97 by the Emperor Nerva. Trajan was one of the ablest of the Roman emperors; he was stately and majestic in appearance,

had a powerful will, and showed admirable consideration and a chivalrous kindness. He gained a large amount of territory for the empire and laid the foundations of civilization all over the provinces by the founding of municipal communities. He established order on the borders of the Rhine, built the larger part of the boundary wall (*limes*) between Roman and Germanic territory from the Danube to the Rhine, and with great determination led two campaigns (101-2 and 105-7) against the Dacian king, Decebalus, whose country he converted into a new province of the empire. Two other provinces were conquered, although neither proved of importance subsequently. The Governor of Syria conquered Arabia Petraea and Trajan himself entered Armenia during the Parthian War (114-7).

In his internal administration Trajan was incessantly occupied in encouraging commerce and industries. The harbour of Ancona was enlarged and new harbours and roads were constructed. Numerous stately ruins in and around Rome give proof of this emperor's zeal in erecting buildings for public purposes. The chief of these is the immense Forum Trajanum, which in size and splendour casts the forums of the other emperors into the shade. In the middle of the great open space was the colossal equestrian statue of Trajan; the free area itself was surrounded by rows of columns and niches surmounted by high arches. At the end of the structure was the Bibliotheca Ulpia, in the court of which stood the celebrated Trajan's Column with its reliefs representing scenes in the Dacian wars. Later Hadrian built a temple to the deified Trajan at the end of the Forum towards the Campus Martius.

Art and learning flourished during Trajan's reign. Among his literary contemporaries were Tacitus, Juvenal, and the younger Pliny with whom the emperor carried on an animated correspondence. This correspondence belonging to the years 111-3 throws light on the persecution of Christians during this reign. Pliny was legate of the double Province of Bithynia and Pontus. In this territory he found many Christians and requested instructions from Trajan (Ep. 96). In his reply (Ep. 97) Trajan considers the confession of Christianity as a crime worthy of death, but forbades a search for Christians and the acceptance of anonymous denunciations. Whoever shows by sacrificing to the gods that he is not a Christian is to be released. Where the adherence to Christianity is proved the punishment of death is to follow. The action he prescribed rests on the coercive power of the police, the right of repression of the magistracy, which required no settled form of procedure. In pursuance of these orders measures were taken against Christians in other places also. The most distinguished martyrs under Trajan were Ignatius, Bishop of Antioch, and Simeon, Bishop of Jerusalem. Legend names many others, but there was no actual persecution on a large scale and the position of the Christians was in general satisfactory.

KLEMENS LOFFLER

Trajanopolis

Trajanopolis

Titular metropolitan see of Rhodope. The city owes its foundation or restoration to Trajan. Le Quien (*Oriens Christ.*, I, 1193-96) mentions a great many of its bishops: Theodulus, persecuted by the Arians in the fourth century; Syncletius, the friend of St. John Chrysostom; Peter, present at the Council of Ephesus in 431; Basilius at that of Chalcedon in 451; Abundantius in 521; Eleusius in 553; Cudumenes about 1270; Germanus in 1352. In 1564 Gabriel is called Metropolitan of Trajanopolis, that is of Maronia, which proves that Trajanopolis was then destroyed and that the title of metropolitan had passed to the neighbouring city of Maronia. About 640 Trajanopolis had two suffragan sees (Gelzer, "Ungedruckte. . . Texte der Notitiae episcopatum", 542); at the beginning of the tenth century, seven (Gelzer, *op. cit.*, 558). St. Glyceria, a martyr of the second century, venerated on 13 May, was born there. The town is mentioned by Villchardouin (ed. Wailly, 382, 568); it was captured and pillaged in 1206 by Joannitza, King of the Bulgarians (George Acropolita, "Hist.", XIII). It is still mentioned in Nicephoras (*Anecdota of Boissonade*, V, 279), in John Cantacuzenus (*Hist.*, I, 38; II, 13; III, 67), in George Pachymeres (*ad ann.* 1276, V, 6), etc. The site of Trajanopolis was discovered by Viquesnel and Dumont on the right bank near the mouth of the Maritza, not far from Ouroundjik.

S. VAILHÉ

Trajanopolis

Trajanopolis

A titular see of Phrygia Pacatiana, suffragan of Laodicea. The only geographer who speaks of Trajanopolis is Ptolemy (v, 2, 14, 15), who wrongly places this city in Greater Mysia. It was founded about 109 by the Grimenothyritae, who obtained permission from Hadrian to give the place the name of his predecessor. It had its own coins. Hierocles (*Synecedemus*, 668, 150) calls it Tranopolis, and this abridged form is found, with one exception, in the "Notitiae episcopatum", which speak of the see up to the thirteenth century among the suffragans of Laodicea. Le Quien (*Oriens Christianus*, I, 803) names seven bishops of Trajanopolis: John, present at the Council of Constantinople under the Patriarch Gennadius, 459; John, at the Council of Constantinople under Menas, 536; Asignius, at the Council of Constantinople, 553; Tiberius, at the Council in Trullo, 692; Philip, at Nice, 787; Eustathius, at Constantinople, 879. Another, doubtless more ancient than the preceding, Demetrius, is known from one inscription (C. I. G., 9265). Trajanopolis has been variously identified; the latest identification is Radet ("*En Phrygie*", Paris, 1895), who locates it at

Tcharik Keui, about three miles from Ghiaour Euren towards the south-east, on the road from Oushak to Sousouz Keui, vilayet of Brusa, a village abounding in sculptures, marbles, and fountains, and where the name of the city may be read on the inscriptions. However, Ramsay (*Asia Minor*, 149; *Cities and Bishopries of Phrygia*, 595) continues to identify Trajanopolis with Ghiasour Euren.

S. PÉTRIDÈS

Tralles

Tralles

A titular see, suffragan of Ephesus in Asia Minor. It was founded, it is said, by the Argians and Thracians, and is situated on one of the slopes of Mount Messogis in the valley of the Meander; it was one of the most populous and richest cities of Lydia. King Attalus had a splendid palace there. The local god was Zeus Larasios, but Apollo Pythius and other divinities were also worshipped.

Tralles was destroyed by an earthquake but was rebuilt by Augustus and took the name of Caesarea. Christianity was introduced at a very early date. In his famous letter to the Church at Tralles, St. Ignatius of Antioch says that their bishop, Polybius, visited him at Smyrna, and he puts them on their guard against Docetism (q. v.). We see by this letter that the Church there was already well organized. Among its bishops were: Heracleon, in 431; Maximus, in 451; Uranius, in 553; Myron, in 692; Theophylactus, in 787; Theophanes and Theopistus, in the ninth century; John, in 1230 (*Revue des études grecques*, VII, 80). In 640 ("Ecthesis Pseudo-Epiphaniï"; Gelzer, "Ungedruckte. . . Texte der notitiæ episcopatum", 537). Tralles appears as suffragan of Sardes in Lydia, and we know, despite Le Quien (*Oriens christ.*, I, 697), that it was such in 553. Towards 1270 Andronicus, son of Michael VIII Palaeologus, rebuilt and repopled the city; it then numbered 36,000 inhabitants, but it was not long before it was retaken and demolished by the Turks (Pachymeres, "De Michaele Palaeologo", VI, 20 and 21, in P.G., CXLIII, 929-34). The emir Aïdin then gave it the name which it still bears, Aïdin Guzel-Hissar; it is a sanjak of the vilayet of Symrna, numbering 40,000 inhabitants, of whom 28,000 are Mussulmans, 10,000 Greek Schismatics, and the remainder Jews or Armenians. There are 120 Catholics. The Mechitarists of Vienna and the Sisters of St. Vincent de Paul have two schools there. Tralles was the birthplace of Anthemius, the architect of St. Sophia of Constantinople.

LE QUIEN, *Oriens christianus*, I (1740), 695-8; TEXIER, *Asie Mineure* (Paris, 1862), 279-81; RAYET, *Milet et le golfe latimique* (Paris, 1877), 33-116; LEBAS-WADDINGTON, *Asie Mineure*, 597-616, 1651; CHAPOT, *La province romaine proconsulaire d'Asie* (Paris, 1904), passim; CUINET, *La Turquie d'Asie*, III (Paris, 1892), 591-9; PAPPACONSTANTINOÛ, *Tralles* (Athens, 1895), in Greek.

S. VAILHÉ

Trani and Barletta

Trani and Barletta

(TRANEN, et Barolen.)

Diocese in Italy. The city of Trani is situated on the Adriatic in a fertile plain, producing cereals, wine, and oil, which are exported in great quantities. For a long time, however, the port has lost the importance it had in the time of the Norman and Angevins who fortified it. The fishing industry is extensive. The cathedral, in Byzantine style, was built by Canon Nicola di Trani in 1143; its bronze gates by Barisano date from that period. Outside the city, on a peninsula, stand the old Benedictine Abbey of S. Maria de Colonna, containing a mineral spring, the 'acqua di Cristo'. Trani is built on the site of the ancient Turenum. It grew in importance under the Byzantines and was taken several times by the dukes of Benevento. In 840 and 1009 it fell into the hands of the Saracens. In the tenth and eleventh centuries it was a republic recognizing the nominal sovereignty of Byzantium. The 'Ordinamenta et consuetudo maris', published in 1063 by the consuls of Trani is, after the "Tavole di Amalfi", the oldest maritime commercial code of the Middle Ages. Trani resisted the Norman invaders energetically, but in 1073 it had to open its gates to Pierre d'Hauteville, who assumed the title of Count of Trani. In the twelfth century, in league with Bari, Troia, and Melfi, it attempted to regain its ancient freedom; and in the battle of Bigano (1137) defeated Roger of Sicily, but two years later it had to capitulate. Frederick II constructed a fortress there and made it one of the royal residences. In the Neapolitan wars Trani became a place of the greatest importance, especially during the struggle between the Aragonese and the Angevins. From 1497 to 1509 it was held by Venice. Charles V established a school of jurisprudence there. In 1647 the populace rebelled against the nobles; in 1799 the people opposed the republic, and the city in consequence was sacked by the revolutionaries and the French. The legend of St. Magnus relates that there was at Trani about the middle of the third century a bishop, Redemptus, who was succeeded by St. Magnus. The first bishop whose date is known with certainty is Eusebius who was present at the dedication of the Basilica of Monte Gargano in 493. A few other names have been preserved like Suthinius (761) and Rodostanus (983). Till then Trani had certainly followed the Latin Rite and Bishop Bernardo opposed the decree of the Patriarch Polyeuctus (968) introducing the Greek Rite; it is uncertain whether Joannes, who embraced the schism of Michael Caerularius and in consequence was deposed by Nicholas II (1059), belonged to the Greek Rite. His successor was Delius, and thenceforward Trani continued in the Latin Rite. In 1098 St. Nicholas Pellegrino, a Byzantine bishop, died there; under another Byzantine the new cathedral was dedicated to that saint. Grammaro was imprisoned in Germany by Henry VI for supporting King William; Bartolommeo Braccacci (1328) distinguished himself on several embassies and was chancellor of the Kingdom of Naples. Mention may be made likewise of Cardinal Latino Orsini (1438), Cosimo Migliorati (1479), Giovanni Castelar (1493), Giambernardo Scotti, a Theatine (1555), who introduced the Tridentine reform, Cesare Lambertini, the canonist (1503); Diego Alvarez, O. P. (1607), the famous adversary of Molina; Tommaso de Sarria, O. P. (1656), who enlarged the seminary; Giuseppe Antonio Davanzati

(1717), who abolished many abuses. With the See of Trani is united the ancient Diocese of Salpe (Salapia of the Greeks), its known bishops comprising Palladius (465) and 23 successors before the definitive union in 1547. Another united see is that of Carnia, which had bishops before the time of St. Gregory, who entrusted it to the care of the Bishop of Reggio; in 649 it had a new ordinary, but later the city fell into decay. The Archbishop of Trani has also the title of Bishop of Nazareth, because when Palestine was lost in 1190 the title of that see was transferred to Barletta (the ancient Barduli), a seaport on the Adriatic, a little south of Trani, to which diocese it then belonged. At Nazareth between 1100 and 1190 there were eight Latin bishops; the names of the bishops resident at Barletta before 1265 are unknown. We may mention the following Bishops: Blessed Agostino Favorini (1431), General of the Augustinians, a learned writer, and Maffeo Barberini (1604), later Urban VIII. In 1455 the Diocese of Cannae, a city celebrated as the scene of Hannibal's victory (216 B.C.), was united with that of Nazareth. It was destroyed in 1083 by Robert Guiscard, with the exception of the cathedral and the episcopal residence. At Cannae St. Liberalis suffered martyrdom. It had bishops in the sixth century, for St. Gregory entrusted the see to the care of the bishop of Siponto; its bishops are again mentioned after the tenth century. In 1534 Cannae was separated from Nazareth and united to Monteverde, but in 1552 the united dioceses were incorporated with Nazareth. In 1860 the See of Nazareth (Barletta) was united with Trani, the archbishop of which had been appointed in 1818 perpetual administrator of the ancient See of Bisceglie, the scene of the glorious martyrdom of Saints Pantelemon and Sergius, whose bodies repose in the cathedral. The names of fifty bishops of Bisceglie are known. Trani has been an archdiocese since the twelfth century. The united dioceses contain 19 parishes; 98,000 inhabitants; 110 priests; 1 house of religious (men); 15 convents of nuns; 2 schools for girls.

U. BENIGNI

Transcendentalism

Transcendentalism

The terms *transcendent* and *transcendental* are used in various senses, all of which, as a rule, have antithetical reference in some way to experience or the empirical order.

(1) For the Scholastics, the categories are the highest classes of "things that are and are spoken of". The transcendentals are notions, such as unity, truth, goodness, being, which are wider than the categories, and, going beyond them, are said to transcend them. In a metaphysical sense transcendent is opposed by the Scholastics and others to immanent; thus, the doctrine of Divine Transcendence is opposed to the doctrine of Divine Immanence in the Pantheistic sense., Here, however, there is no reference to experience. (See IMMANENCE.)

(2) In the loosest sense of the word any philosophy or theology which lays stress on the intuitive, the mystical, the ultra-empirical, is said to be transcendentalism. Thus, it is common to refer to the New England School of Transcendentalism, of which mention is made further on.

(3) In a stricter sense transcendentalism refers to a celebrated distinction made by Kant. Though he is not consistent in the use of the terms transcendent and transcendental, Kant understands by transcendent what lies beyond the limits of experience, and by transcendental he understands the non-empirical or a priori elements in our knowledge, which do not come from experience but are nevertheless, legitimately applied to the data or contents of knowledge furnished by experience. The distinction is somewhat subtle, Yet, it may be made clear by an example. Within the limits of experience we learn the uniform sequence of acorn and oak, heat and expansion, cold and contraction, etc., and we give the antecedent as the cause of the consequent. If, now, we go beyond the total of our experience and give God as the cause of all things, we are using the category "cause in a transcendent sense, and that use is not legitimate. If, however, to the data of sequence furnished by experience we apply the a priori form causation, we are introducing a transcendental element which elevates our knowledge to the rank of universal and necessary truth: "Every effect has its cause." Kant, as has been said, does not always adhere to this distinction. We may, then, understand transcendent and transcendental to refer to those elements or factors in our knowledge which do not come from experience, but are known a priori. Empirical philosophy is, therefore, a philosophy based on experience alone and adhering to the realm of experience in obedience to Hume's maxim, " 'Tis impossible to go beyond experience." Transcendental philosophy, on the contrary, goes beyond experience, and considers that philosophical speculation is concerned chiefly, if not solely, with those things which lie beyond experience.

(4) Kant himself was convinced that, for the theoretical reason, the transcendental reality, the thing-in-itself, is unknown and unknowable. Therefore, he defined the task of philosophy to consist in the examination of knowledge for the purpose of determining the a priori elements, in the systematic enumeration of those elements, for forms, and the determination of the rules for their legitimate application to the data of experience. Ultra-empirical reality, he taught, is to be known only by the practical reason. Thus, his philosophy is *critical transcendentalism*. Thus, too he left to his successors the task of bridging over the chasm between the theoretical and the practical reason. This task they accomplished in various ways, eliminating, transforming, or adapting the transcendent reality outside us. the thing-in-itself, and establishing in this way different transcendentalisms in place of the critical transcendentalism of Kant.

(5) Fichte introduced *Egoistic Transcendentalism*. The subject, he taught, or the Ego, has a practical as well as a theoretical side. to develop its practical side along the line of duty, obligation, and right, it is obliged to posit the non-Ego. In this way, the thing-in-itself as opposed to the subject, is eliminated, because it is a creation of the Ego, and, therefore all transcendental reality is contained in self. I am I, the original identity of self with itself, is the expression of the highest metaphysical truth.

(6) Schelling, addressing himself to the same task, developed *Transcendental Absolutism*. He brought to the problems of philosophy a highly spiritual imaginativeness and a scientific insight into nature which were lacking in Kant, the critic of knowledge, and Fichte, the exponent of romantic personalism. He taught that the transcendental reality is neither subject or object, but an Absolute which is so indeterminate that it may be said to be neither nature nor spirit. Yet the Absolute is, in a sense, potentially both the one and the other. For, from it, by gravity, light and organization, is derived spirit, which slumbers in nature, but reaches consciousness of self in the highest natural organization, man. There is here a hint of development which was brought out explicitly by Hegel.

(7) Hegel introduced *Idealistic Transcendentalism*. He taught that reality is not an unknowable thing in itself, nor the subject merely, nor an absolute of indifference, but an absolute Idea, Spirit, or Concept (*Begriff*), whose essence is development (*das Werden*), and which becomes in succession object and subject, nature and spirit, being and essence, the soul, law, the state, art, science, religion, and philosophy.

In all these various meanings there is preserved a generic resemblance to the original signification of the term transcendentalism. The transcendentalists one and all, dwell in the regions beyond experience, and, if they do not condemn experience as untrustworthy, at least they value experience only in so far as it is elevated, sublimated, and transformed by the application to it of transcendental principles. The fundamental epistemological error of Kant, that whatever is universal and necessary cannot come from experience, runs all through the transcendentalist philosophy, and it is on epistemological grounds that the transcendentalists are to be met. This was the stand taken in Catholic circles, and there, with few exceptions, the doctrines of the transcendentalists met with a hostile reception. The exceptions were Franz Baader (1765-1841), Johann Frohschammer (1821-1893), and Anton Günther (1785-1863), who in their attempt to "reconcile" Catholic dogma with modern philosophical opinion, were influenced by the transcendentalists and overstepped the boundaries of orthodoxy. It may without unfairness be laid to the charge of the German transcendentalists that their disregard for experience and common sense is largely accountable for the discredit into which metaphysics has fallen in recent years.

New England transcendentalism, sometimes called the Concord School of Philosophy, looks to William Ellery Channing (1780-1842) as its founder. Its principal representatives are Amos Bronson Alcott (1799-1888), Ralph Waldo Emerson (1803-1882), Theodore Parker (1810-1860), Frederick Henry Hedge (1805-890), George Ripley (1802-1880), and Margaret Fuller (1810-1850). It had its inception in the foundation of the Transcendental Club in 1836. The chief influences discernible in its literary output are German philosophy, French sociology, and the reaction against the formalism of its sociological and economic theories were tested in the famous Brook Farm (1841), with which the names just mentioned and those of several other distinguished Americans were associated.

For the history of German transcendentalism see Ueberweg, *Hist. of Philosophy*, tr. Morris (New York, 1892); Falckenberg, *Hist. of Modern Philosophy*, tr. Armstrong (New York, 1893); Turner, *Hist. of Philosophy* (Boston, 1903); St=F6ckl, *Gesch. der Phil.* (Mainz, 1888). For New

England transcendentalism see Frothingham, *Transcendentalism in New England* (New York, 1876); Codman, *Brook Farm* (Boston, 1894).

WILLIAM TURNER

Transept

Transept

A rectangular space inserted between the apse and nave in the early Christian basilica. It sprang from the need of procuring sufficient space for the increased number of clergy and for the proper celebration of the service. The length of the rectangle either equals the entire breadth of the nave, as in Santa Maria Maggiore and Santa Croce at Rome, or it exceeds this breadth more or less, so that the transept extends beyond the walls of the nave. The transept, though, is not peculiar to the Roman basilica, as was for a long time believed; it is also to be found in the churches of Asia Minor, as at Sagalassos. Beside this first form, in which the apse was directly united with the transept, there were to be found in Asia Minor and Sicily, even in the early era, a number of churches of a second form. These were formerly considered to belong to the medieval period, because they were not fully developed until the Middle Ages. This is the cross-shaped or cruciform church, over the origin of which a violent literary controversy raged for a long time. In the cruciform design the transept is organically developed from the structure. It contains three squares which in height and breadth correspond to that of the main nave. Beyond the central square, called the bay, and connected with it is a fourth square, the choir, and beyond, and connected with the choir, is the apse; in this way the cruciform shape of the church is produced. The transept generally terminates towards the north and south in a straight line. Still there are a number of churches, especially in Germany, that end in a semicircular or triple conch shape. Strzygowski thinks he has found the model of this style of structure in the Roman imperial palace; this form of transept is found in as early a church as that of the Virgin at Bethlehem erected by Constantine. A favourite method in the Romanesque style was to construct small apses opening into the transept to the right and left of the choir. In the churches of the Cistercians and of the mendicant orders these small apses were transformed at a later date into numerous chapels, as at Santa Croce at Florence. the prototype of this design can also be proved to have existed in the East and the districts under its influence. The doubling of the transept, however, seems to have been peculiar to Western architecture; this type of transept appeared both in the Romanesque and in the Gothic periods, although the manner of producing it varied greatly. Many Romanesque churches are constructed at the west end the same as at the east, that is, the west end also contains a transept and choir. The earliest known church with this double transept is the eighth-century church of St-Riquier at Centula in France. The style was also adopted in the church of St. Pantaleon at Cologne (981), and almost at the same time by Mittelzell on the island of Reichenau in Lake Constance, and in many other churches. The west transept disappeared in Gothic architecture, excepting that in England some of the great cathedrals have a second, short transept added to the east choir, as at Salisbury. Gothic architecture also emphasized the choir by

giving it in the large cathedrals three aisles; in this way very beautiful vistas are produced. In the effort to gain large, well-lighted spaces the architecture of the Renaissance and the Baroque periods enlarged the transept and covered the bay with a cupola which caused the transept to dominate the entire structure.

BEDA KLEINSCHMIDT

Transfiguration

Transfiguration

The Transfiguration of Christ is the culminating point of His public life, as His Baptism is its starting point, and His Ascension its end. Moreover, this glorious event has been related in detail by St. Matthew (17:1-6), St. Mark (9:1-8), and St. Luke (9:28-36), while St. Peter (II Peter 1:16-18) and St. John (1:14), two of the privileged witnesses, make allusion to it.

About a week after His sojourn in Cæsarea Philippi, Jesus took with him Peter and James and John and led them to a high mountain apart, where He was transfigured before their ravished eyes. St. Matthew and St. Mark express this phenomenon by the word *metemorphothe*, which the Vulgate renders *transfiguratus est*. The Synoptics explain the true meaning of the word by adding "his face did shine as the sun: and his garments became white as snow," according to the Vulgate, or "as light," according to the Greek text.

This dazzling brightness which emanated from His whole Body was produced by an interior shining of His Divinity. False Judaism had rejected the Messiah, and now true Judaism, represented by Moses and Elias, the Law and the Prophets, recognized and adored Him, while for the second time God the Father proclaimed Him His only-begotten and well-loved Son. By this glorious manifestation the Divine Master, who had just foretold His Passion to the Apostles (Matthew 16:21), and who spoke with Moses and Elias of the trials which awaited Him at Jerusalem, strengthened the faith of his three friends and prepared them for the terrible struggle of which they were to be witnesses in Gethsemani, by giving them a foretaste of the glory and heavenly delights to which we attain by suffering.

LOCATION OF THE TRANSFIGURATION

Already in Apostolic times the mount of the Transfiguration had become the "holy mount" (II Peter 1:18). It seems to have been known by the faithful of the country, and tradition identified it with Mount Tabor. Origen said (A.D. 231-54) "Tabor is the mountain of Galilee on which Christ was transfigured" (Comm. in Ps. lxxxviii, 13). In the next century St. Cyril of Jerusalem (Catech., II, 16) and St. Jerome (Ep. xlvi, ad Marcel.; Ep. viii, ad Paulin.; Ep. cviii, ad Eust.) likewise declare it categorically. Later St. Proculus, Patriarch of Constantinople (d. 447; Orat. viii, in Transfig.), Agathangelus (Hist. of Armenia, II, xvii), and Arnobius the Younger (d. 460; Comm. in Ps. lxxxviii, 13) say the same thing. The testimonies increase from century to century without a single dissentient

note, and in 553 the Fifth Council of Constantinople erected a see at Mount Thabor (Notitif. Antioch. . . . patriarch.).

Some modern writers claim that the Transfiguration could not have taken place on Mount Thabor, which, according to Josephus, was then surmounted by a city. This is incorrect; the Jewish historian speaks neither of a city nor a village; he simply fortified, as he repeats three times, "the mount called Itabyrion" ("Bell. Jud.", II, xx, 6; IV, i, 8; Vita, 37). The town of Atabyrion of Polybius, the Thabor or Celeseth Thabor, the "flank of Thabor" of the Bible, is situated at the foot of Mount Thabor. In any case the presence of houses on a wooded height would not have made it impossible to find a place apart.

It is again objected that Our Lord was transfigured on Mount Hermon, since He was at that time in its vicinity. But the Synoptics are all explicit concerning the lapse of time, six days, or about eight days including those of departure and arrival, between the discourse in Cæsarea and the Transfiguration, which would infer a somewhat lengthy journey. Moreover the summits of Hermon are covered with snow as late as June, and even the lesser peaks of 4000 or 5000 feet are likewise snow-covered in February and March, the period of the Transfiguration. Finally, the ancients judged of the height of mountains by their appearance, and Thabor especially was considered a "high mountain", if not by David and Jeremias, at least by Origen and St. Jerome and the pilgrims who made the ascent.

BARNABAS MEISTERMANN

Feast of the Transfiguration of Christ

Feast of the Transfiguration of Christ

Observed on August 6 to commemorate the manifestation of the Divine glory recorded by St. Matthew (Chapter 17).

Origin. The Armenian bishop Gregory Arsharuni (about 690) ascribes the origin of this feast to St. Gregory the Illuminator (d. 337?), who, he says, substituted it for a pagan feast of Aphrodite called *Vartavarh* (roseflame), retaining the old appellation of the feast, because Christ opened His glory like a rose on Mount Thabor. It is not found however in the two ancient Armenian calendars printed by Conybeare (*Armenian Ritual*, 527 sq.). It probably originated, in the fourth or fifth century, in place of some pagan nature-feast, somewhere in the highlands of Asia.

Propagation. The Armenians at present keep it for three days as one of the five great feasts of the year (seventh Sunday after Pentecost); it is preceded by a fast of six days. Also in the Syriac Church it is a feast of the first class. In the Greek Church it has a vigil and an octave. The Latin Church was slow in adopting this feast; it is not mentioned before 850 (*Martyrology of Wandelbert*, Gavanti, "Thesaurus Liturg.", II, August); it was adopted in the liturgy about the tenth century in many dioceses, and was celebrated mostly on 6 August; in Gaul and England, 27 July; at Meissen, 17 March; at Halberstadt, 3 September, etc. In 1456 Callixtus III extended the feast to the Universal Church in memory of the victory gained by Hunyady at Belgrade over the Turks, 6 August, 1456.

Callixtus himself composed the Office. It is the titular feast of the Lateran Basilica at Rome; as such it was raised to a double second class for the Universal Church, 1 Nov., 1911.

Customs. On this day the pope at Mass uses new wine or presses a bunch of ripe grapes into the chalice; raisins are also blessed at Rome. The Greeks and Russians bless grapes and other fruit.

F.G. HOLWECK

Transvaal

Transvaal

Vicariate apostolic; lies between 23° 3' and 27° 30' S. lat., and 25° and 32° E. long. The total population is approximately estimated at 960,000, consisting of about 320,000 whites and 640,000 natives. The agricultural and pastoral resources of this portion of south Africa are great, the vast rolling plains being capable of raising almost unlimited quantities of cereals. Stock-raising can also be pursued to great advantage. The discovery of gold in the Transvaal has brought about a large influx of British immigrants, who have developed the mineral resources of the country. Since the time of the "Great Trek" (1835-38) of the emigrant Dutch farmers from Cape Colony, several wars have been waged between the Boers, natives, and British. But streams of Boer immigrants succeeded in repelling the natives, and in gradually securing their own independence. In 1850 the British were engaged in a lengthy and costly war with the Kafirs, during which the Boers took advantage of the situation to demand the recognition of their independence; this was granted to them by the Sand River Convention, 17 Jan., 1852, and Great Britain gave up the Orange River Sovereignty in 1834, which they had proclaimed in 1848 after the battle of Boomplaats. In 1876 the Boers were defeated by the Kafirs, and Great Britain, afraid of a general rising of the natives throughout south Africa, deemed it expedient to annex the country, which was done, 12 April, 1877. A new war, however, broke out between British and Boers, in which the former were defeated, 27 Feb., 1881, and the Boers recovered their independence, which they enjoyed until the outbreak of the war in Oct., 1899, which resulted in their defeat and the final annexation of the country to the British Empire.

The Transvaal formed a portion of the Vicariate of Natal until 1886. From time to time the few Catholics residing in this part of South Africa were visited by a priest from Natal, till 1877, when the first mission was founded in Pretoria by the Right Rev., Dr. Jolivet, O. M. I. The first church in the Transvaal was not, however, completed until the first Sunday of October, 1887, when it was dedicated by Bishop Jolivet. At that time the number of Catholics at Pretoria was about 100. In the other localities of the Transvaal the Catholic population was insignificant. Johannesburg, which has at the present day a population of about 130,000, including about 80,000 Europeans and 50,000 natives and Asiatics, was then hardly in existence. The Catholic population is about 9500, Europeans, natives, and Syrians included.

The Transvaal was detached from Natal in 1886 by Leo XIII. It remained an independent prefecture Apostolic till 29 Jan., 1902. The first prefect Apostolic was the Very Rev. Father Monigoux, O. M. I., who was succeeded by Very Rev. Father Schock, O. M. I., who died on his

way to the chapter of his order held in Paris in 1898. Until Jan., 1902, father Jean de Laey, O. M. I., acted as prefect Apostolic. Then the Right Rev. Dr. Matthew Gaughran, O. M. I., was elected Vicar Apostolic of Kimberley, and administrator of the Transvaal prefecture. On 20 Nov., 1904, the prefecture Apostolic of the Transvaal became a vicariate, and the Right Rev. Dr. William Miller, O. M. I., was consecrated Bishop of Eumenia, and Vicar Apostolic of the Transvaal. He resides at Johannesburg. (See KAFIRS.)

On 13 Jan., 1911, the northern portion of the Vicariate of the Transvaal, including the two districts of Zoutpansberg and Waterberg, lying between 24° and 23° S. lat., and between 28° and 32° E. long. was erected into a prefecture Apostolic, under the title of Prefecture Apostolic of the Northern Transvaal, and entrusted to the care of the Benedictines, with the Very Rev. Father Lanslots, O. S. B., as prefect Apostolic. The missionaries number at the present 6 fathers and 3 lay brothers, all of whom are natives of Belgium. Through the erection of the new prefecture Apostolic, the boundaries of the Vicariate of the Transvaal have been altered. They are at present delimited by 25° and 32° E. long., and 27° S. lat. (north of the Orange River Colony) and 28° S. lat. (west of the same Colony).

There are at present (1911) in the Vicariate of the Transvaal: 27 priests (13 of whom are Oblates, 12 secular, 2 military chaplains); and 1 Oblate lay brother and 20 Marist Brothers, who conduct a very prosperous school at Johannesburg; also other schools, a sanatorium, a refuge, a hospital, and a home for children and aged, are under the management of various religious congregations, viz., the Sisters of the Holy Family; Sisters of Nazareth House; Dominican Sisters; Sisters of the Good Shepherd; Sisters of Mercy; Ursuline Sisters; and Sisters of Loreto; making a total number of 147 Sisters for the whole vicariate.

Missiones catholicae (Rome, 1907), 444-45; The Catholic directory of British South Africa (Cape Town, 1910).

A. LANGOUET

Transylvania

Transylvania

(Also TRANSYLVANIENSIS or ERDELY).

Diocese in Hungary, suffragan of Kalocsa Bács. The foundation of the see is attributed to King St. Stephen, but it was probably established by King St. Ladislaus, patron of Transylvania; Simon (1103-13) was the first bishop. The episcopal residence is at Gyula-Fehérvár (Alba Julia) in Alsó-Fehér.

The original limits of the diocese varied somewhat from the present boundaries, as they included the County of Máramaros, while the provostship of Szeben was exempt and some parts of the Szekler country were subject to the Bishop of Milkovia in Rumania. The bishops received rich donations from King Béla IV, Charles Robert, Louis I, and Sigismund. The diocese suffered greatly during the reign of Béla IV from the Tatar invasion, and during the civil disturbances under his successors,

but recovered very quickly in the fourteenth century. The see was again imperilled by the advance of the Turks, but its decay did not set in until the sixteenth century, and was caused by the progress of Lutheranism, in consequence of which the exempt provostship of Szeben ceased to exist, and by internal disturbance in Transylvania. It flourished again under Cardinal Martinuzzi, but after his assassination in 1551 it decayed rapidly. The advance of Protestantism led, in 1556, to the secularization of the see, which was, however, re-established by Prince Stephen Báthory. After the coming of the Jesuits the Catholic Faith flourished again, but only while the house of Báthory continued to rule. Bishop Demetrius Náprágyi was forced to leave the see, and in 1601 the cathedral of Gyula-Fehérvár, which had been founded in the thirteenth century, was taken and held by the Protestants until the eighteenth century, the Catholics not regaining possession of it until the reign of Charles III.

When the Principality of Transylvania lost its independence, the decrees against the Catholic Church were withdrawn, but the bishopric and chapter were not re-established until 1713. The succession to the see had been kept up regularly till 1713, but the bishops resided abroad. The exempt provostship of Szeben was incorporated in the bishopric, which was completely restored under Maria Theresa in 1771. Of the bishops, who filled the see after 1713, the following may be mentioned: Ignatius Count Batthyany (1780-98), who founded the library at Gyula-Fehérvár, which is named after him; Alexander Rudnay (1816-19), later Archbishop of Gran; Louis Haynald (1852-64), afterwards Archbishop of Kalocsa. Count Gustavus Majláth has occupied the episcopal see since 1897. The diocese contains: 16 archdeaconries; 10 titular abbeys; 2 titular provostships; 229 parishes; 398 secular priests; 226 regular clergy; 30 monasteries of men and 17 convents of nuns; the Catholics number 354,145. There are 103 patrons. The chapter consists of 10 active members and of 6 titular canons. Catholics are to a certain extent autonomous, i.e., certain church and school matters are managed by mixed boards, partly clerical, partly lay. This autonomy dates back to the time of the Reformation; it ceased in 1767 with the establishment of the *Commissio catholica* by Maria Theresa, and was re-established as late as 1873. The control is exercised by the general assembly of the Catholic estates and a managing committee.

A. ALDASY

Trapani

Trapani

(TREPANENSIS).

Diocese in Sicily, suffragan of Palermo. The city is the capital of a Sicilian province situated on a tongue of land at the most western part of the island, shaped like a reaping-hook, hence the ancient name *Drepanon* (reaping-hook). It has a good harbour with exports of wine, acid fruits,

fish (especially tunny-fish), salt, and ornaments of coral, alabaster, and mother-of-pearl, which are extensively manufactured. The cathedral, exteriorly resembling a fortress, contains paintings by Careca and Vandyke (Crucifixion), and statue of the Dead Christ in alabaster by Tartaglia. Other churches are: San Michele, with wooden statuary, and the sanctuary of the Annunziata outside the city, with a colossal statue of the Madonna, attributed to Nicolò Pisano. In the Jesuit church, called "Nazionale", are precious pictures by Morrealese, Spagnoletto, and Marabiti. The ancient college, now a lyceum, contains the Fardelliona Gallery, with valuable paintings by Reni, Luca Giordano, Caravaggio, Salvator Rosa, Guercino, etc. Trapani is the birthplace of Carrera and Errante the painters, Ximenes the mathematician, Scarlatti the musician, and the Carmelite St. Alberto degli Abbati. Excavations have proved that the shore about Trapani was inhabited during the Stone Age. Drepanon must have been founded by the Greeks, but fell under the sway of the Carthaginians. Hamilcar fortified the port against the Romans, who in 250 suffered a severe defeat near by, at the hands of Adherbal. In the vicinity is Mons Eryx (now San Giuliano), with a magnificent temple of Venus and many votive offerings. Under the Romans the temple fell into decay, but was restored by Tiberius. Trapani was sacked by the Moors in 1077. In 1282 Pedro III of Aragon landed there to begin the capture of the island. In 1314 it was besieged by Robert, King of Naples. Charles V fortified it. The city boasts of having received the Gospel from St. Paul; it is not known to have had any bishop before the Arab conquest of Sicily; certainly it was subject to the See of Mazzara from the Norman Conquest till 1844. Its first bishop was the Redemptorist Vincenzo M. Marolda.

CAPPELLETTI, *Le chiese d'Italia*, XXI, 556.

U. BENIGNI

Trapezopolis

Trapezopolis

A titular see in Phrygia Pacatiana, suffragan to Laodicea. Trapezopolis was a town of Caria according to Ptolemy (V, 2, 18) and Pliny (V, 109); according to Socrates (*Hist. eccl.*, VII, xxxvi), Hierocles (*Synecdeus*, 665, 5), and the "Notitiae episcopatum" it was a town of Phrygia Pacatiana and among the suffragans of Laodicea until the thirteenth century. Nothing is known of its history. Its coins testify to close intercourse with Attouda, now Assar, and its site must be sought near this town, most probably at Kadi Keui, capital of a nahie in the sandjak of Denizli and the vilayet of Smyrna. Le Quien (*Oriens christ.*, I, 809) names six bishops of Trapezopolis: Hierophilus, prior to 400; Asclepiades, present at the Council of Ephesus (431); John, at Chalcedon (451); Eugenius, at Constantinople (692); Zacharias, at Nicaea (787); Leo, at Constantinople (879).

SMITH, *Dict. of Greek and Rom. Geogr.*, s.v.; RAMSAY, *Cities and Bishopries of Phrygia*, 171 and passim; MULLER, notes on Ptolemy, ed. DIDOT, I, 822.

S. PÉTRIDÈS

Trappists

Trappists

The common name by which the Cistercians who follow the reform inaugurated by the Abbot de Rancé (b. 1626; d. 1700) in the Abbey of La Trappe, were known; and often now applied to the entire Order of Reformed Cistercians. Thus it cannot be said that there is an Order of Trappists; though if one were to speak of Trappist monks, he would be understood to refer to monks of the Order of Reformed Cistercians, as distinguished from the Order of Cistercians of the common Observance (see Cistercians and La Trappe). The primitive austerities of the cistercians had fallen into desuetude in practically the entire order principally through the introduction of commendatory abbots, political disturbances, and human inconstancy; and though many and very praiseworthy attempts at their restoration had been made in France, Spain, Germany, Italy, Portugal, etc., yet these were but local or at most national in extent. That of de Rancé, however, was destined by Divine Providence to be more enduring and of wider scope than any other. Although the Abbey of La Trappe flourished exceedingly, even after the death of its venerated reformer, as evidenced by more than 300 professions between the years 1714 and 1790, yet the spirit of materialism and sensualism rampant in the seventeenth and eighteenth centuries, did not permit the rapid extension of the reform outside its walls; it did not even allow the entire severity of ancient Cîteaux to be introduced at La Trappe, though this reform was the most thorough and perfect of the many attempts that had then been made. Consequently it founded but a small number of monasteries; these were: Buon-Solazzo, near Florence (1705), and St. Vito at Rome (1709); Casamari, in the Papal States, was obliged to adopt the Constitutions of de Rancé (1717), but for nearly a century there was no further expansion. It was from the time of these earliest foundations that they who embraced de Rancé's reform were called Trappists. Too much credit cannot be given to these noble bands of monks, who by their lives demonstrated to a corrupt world that man could have a higher ambition than the gratification of the mere natural instincts of this ephemeral life.

At the time of the Revolution, when the monastery of La Trappe, in common with all others, was ordered to be confiscated by the Government, the people of the neighbourhood petitioned that an exception be made in their favour, and the Trappists themselves, encouraged by this, addressed a memorial to the National Assembly and the king considered the matter for nearly a year, but finally decided that they should be despoiled like the others. com augustine de Lestrange (b. 1754; d. 1827, see Lestrange), vicar-general of the Archdiocese of Vienna, had entered La Trappe (1780) in order to escape the burden of the episcopate. He it was whom God had raised up to preserve the Trappists when so direly threatened with extinction; he resolved, therefore, to expatriate himself for the welfare of his order. Having been elected superior of those who were of the same mind, and with the permission of his higher superiors, he left La Trappe 26 april, 1791, with twenty-four religious, and established a monastery at Val-Sainte, Canton of Fribourg, Switzerland. Here they had much to suffer besides the rigour of their rule, for their monastery (which had formerly belonged

to the Carthusians) was an unroofed ruin; they were in want of the very necessities of life, not even having the meagre requirements they were accustomed to.

In France the Revolution was taking its course. On 3 June, 1792, the commissioners of the Government arrived at La Trappe, took the sacred vessels and vestments, as well as everything moveable, and obliged the eighty-nine religious yet remaining to abandon their abbey and find a home as best they could; some in other monasteries, and others in charitable families of the neighbourhood. At Val-Sainte, whilst celebrating the feast of St. Stephen, the religious resolved to put into practice the exact and literal observance of the Rule of St. Benedict, and three days afterwards, 19 July, they began the new reform; establishing the order of exercises prescribed by the holy patriarch, as well as all the primitive fasts, together with the first usages of Cîteaux; even making their rule still more severe in many points. They entered upon their new mode of life with a fervour that exceeded discretion and had soon to be moderated. Even in their exile many subjects were attracted to them, so that they were enabled to send religious to found several new monasteries: one in Spain (1793), a second in England at Lulworth the same year, a third at Westmalle, Belgium (1794), and a fourth at Mont-Brac, in Piedmont (1794). On 31 July, 1794, Pius VI encouraged these religious by a special Brief, and authorized the erection of Val-Sainte into an abbey and mother-house of the congregation of Trappists. Dom Augustine was elected abbot, 27 Nov. of this year, and given supreme authority over the abbey and congregation. This state of quiet and prosperity lasted but six years. When the French invaded Switzerland (1798) they compelled the Trappists to find a refuge elsewhere; thus they were obliged to roam from country to country, even Russia and America being visited by the indomitable abbot and some of his companions, with the hope of finding a permanent home, until after almost incredible sufferings the fall of Napoleon permitted them to return to France. The monasteries of La Trappe and Aiguebelle came into the possession of Dom Augustine, who divided the community of Val-Sainte between them. Other monasteries were re-established from time to time, as the number of religious increased and as they were able to purchase the buildings.

From 1813 N.-D. de l'Eternite, near Darfeld, Westphalia (founded 16 Oct., 1795, from the Abbey of Val-Sainte), which had been exempted some years previous from the authority of Dom Augustine, followed the Regulations of de Rancé, which differed from those of Dom Augustine principally in the hour for dinner, and the length of time devoted to manual labour; their order of exercises was naturally followed by the houses founded by them, thus instituting a new observance and the nucleus of a congregation. In 1834 the Holy See erected all the monasteries of France into the "Congregation of the Cistercian Monks of Notre-Dame de la Trappe". The Abbot of La Trappe was by right the vicar-general of the congregation as soon as his election was confirmed by the president-general of the Order of Cîteaux. They were to hold a general chapter each year; were to follow the Rule of St. Benedict and the Constitutions of de Rancé, except for a few points, and retain the liturgical books of the Cistercian Order. Divergences of opinion on several matters concerning regular observance induced the abbots of the various monasteries to believe that this union could not be productive of that peace so much desired, and so at their solicitation the Holy

See issued a new Decree, deciding that "All the monasteries of Trappists in France shall form two congregations, of which the former will be termed 'the Ancient Reform of Our Lady of La Trappe', and the second the 'New Reform of Our Lady of La Trappe'. Each shall be a congregation of the Cistercian Monks. The Ancient Reform is to follow the Constitutions of de Rancé, whilst the New Reform is not to follow the Constitutions of the Abbot de Lestrange, which it abandoned in 1834, but the Rule of St. Benedict, with the ancient Constitution of Cîteaux, as approved by the Holy See excepting the prescriptions contained in this Decree. The Moderator General of the Cistercian Order shall be at the head of both congregations and will confirm the election of all abbots. In France each congregation shall have its vicar-general with full authority for its administration" (Apostolic Decree, 25 Feb., 1847).

After this the congregations began to flourish. The Ancient Reform made fourteen foundations, some of them in China and Natal; the New Reform was even more fruitful, establishing twenty monasteries as far as the United States, Canada, Syria, etc. The Belgian congregation of Westmalle also prospered, forming five new filiations. As the combined strength of the three congregations thus became greater than the Old Cistercian Order, the earnest desire soon developed amongst all to establish a permanent bond of union between them, with one head and a uniform observance; this was effected in 1892. Dom Sebastian Wyart (b. 1839; d. 1904), Abbot of Sept-Fons and Vicar-General of the Ancient Reform, was elected first abbot-general. After twelve years of zealous labour, the most worthy monument of which was the purchase of the cradle of the Order, Cîteaux, and making it again the mother-house, he passed to his reward, and was succeeded as abbot-general by Mgr Augustin Marre, then Abbot of Igny (a monastery which he had governed since 1881), titular Bishop of Constance and auxiliary to Cardinal Langénieux of Reims; he is still ruling the order (1911), with the greatest zeal and prudence.

The name under which the order was reorganized is "Order of Reformed Cistercians" and while its members no longer bear the name of "Trappists", yet they are heirs to the old traditions, and even the name will continue to be connected with them in the popular mind. The present Constitutions (approved 13 Aug. 1894) under which the order is governed and upon which all the usages and regulations are based, is derived from the Rule of St. Benedict, the "Charta Charitatis" and ancient usages and definitions of the general chapters of Cîteaux, and the Apostolic Letters and Constitutions. It is divided into three parts. The first part regards the government of the order; the supreme power residing in the general chapter, which is composed of all the abbots (actually in office), titular priors and superiors of houses, and meets each year under the presidency of the abbot-general, who is elected by themselves for life. During the time the general chapter is not in session the order is directed, in urgent cases, by the abbot-general with the assistance of a council composed of five definitors, also elected by the general chapter, but for a term of five years. The abbot-general is titular Abbot of Cîteaux, and must reside at Rome. The order is not divided into provinces, nor is there an officer similar to a provincial. Each monastery is autonomous and maintains its own novitiate; its abbot or titular prior appointing all local subordinate superiors, and having full administration in both spiritual and temporal affairs. Nevertheless each monastery has the duty

of visiting all the houses it has founded, either once each year, or once every two years, according to distance, and then rendering a report of its material and spiritual well-being to the next subsequent general-chapter. The abbot of such a monastery is called the father-immediate, and the houses thus subject are termed "daughter-houses" or filiations. It is especially prescribed that all houses be dedicated to the Blessed Virgin.

The second part is concerned with monastic observances; which must be uniform in all the monasteries of the order. The Divine Office must be sung or recited in choir according to the directions of the Breviary, Missal, Ritual and Martyrology, no matter how few may be the number of religious in a particular house; the canonical Office is always preceded (except at Compline, when it is followed) by the Office of the Blessed Virgin; and on all ferial days throughout the year Vespers and Lauds are followed by the Office of the Dead. Mass and the day Offices are always sung with the Gregorian Chant; Matins and Lauds also are sung on Sundays and the more solemn feasts. Mental prayer, one half-hour in the morning, and fifteen minutes in the evening, is of obligation, but of counsel much more frequently. Confession must be made once each week, and daily Holy Communion is strongly commended. Out of the time of Divine Office, before which nothing is to be preferred, and when not engaged in manual labour, the monks devote themselves to prayer, study, or pious reading, for there is never any time granted for recreation; these exercises always take place in common, never in private rooms. The hour for rising is at 2 a.m. on weekdays, 1:30 on Sundays, and 1 on the more solemn feasts; whilst the hour for retiring is at 7 p.m. in winter, and 8 in summer; in this latter season there is a *siesta* given after dinner, so that the religious have seven hours' sleeping the course of the day; about seven hours also are devoted to the Divine Office and Mass, one hour to meals, four hours to study and private prayers and five hours to manual labour; in winter there are only about four hours devoted to manual labour, the extra hour thus deducted being given to study.

The monks are obliged to live by the labour of their hands, so the task appointed for manual labour is seriously undertaken, and is of such a nature as to render them self-supporting; such as cultivation of the land, cattle-raising, etc. Dinner is partaken of at 11 a.m. in summer, at 11:30 in winter, and at 12 on fast days, with supper or collation in the evening. Food consists of bread, vegetables, and fruits; milk and cheese may also be given except in Advent, Lent, and all Fridays out of Paschal time. flesh-meat, fish, and eggs are forbidden at all times, except to the sick. All sleep in a common dormitory, the beds being divided from each other only by a partition and curtain, the bed to consist of mattress and pillow stuffed with straw, and sufficient covering. The monks are obliged to sleep in their regular clothing; which consists of ordinary underwear, a habit of white, and a scapular of black wool, with a leathern cincture; the cowl, of the same material as the habit, is worn over all. Enclosure, according to canon law, is perpetual in all houses. It is never allowed for the religious to speak amongst themselves, though the one in charge of a work or employment may give necessary directions; and all have the right of conversing with the superiors at any time except during the night hours, called the "great silence".

Studies

Before ordination to the priesthood (and all choir religious are destined for that) the monk must pass a satisfactory examination before the abbot, in the curriculum prescribed by the order and the Decrees of the Holy See; and afterwards all are obliged to participate in conferences on theology and Sacred Scriptures at least once each month. Students preparing for ordination are granted extra time, during the hours of work, for the prosecution of their studies.

The third part deals with the reception of subjects. The greatest care is insisted on to see that the postulants are of good character, honest birth, and without encumbrances of any kind; also that they have pursued the course of studies prescribed by the Holy See; they must have attained at least their fifteenth year. The novitiate is of two years' duration, during which time the novice is formed to the religious life, but he can leave, or the superior may send him away, if he is unable or unwilling to conform to the spirit of his vocation. The time of probation completed, the subject is voted for, and if accepted, makes simple, but perpetual vows; these are followed by solemn vows at the end of three, or in special cases, five years. Besides choir religious there are lay brothers. These must be at least seventeen years of age when received; they are then postulants for two years, novices for two more, after which they may be admitted to simple, though perpetual vows, then after six years more they may make solemn vows. They do not recite the Divine Office, but have special prayers appointed to be said at the same hours throughout the day. They are not obliged to follow special studies, but are engaged in manual labour for a somewhat longer time than the choir religious; their habit is nearly the same as that of those in the choir, but brown in colour. They are religious in the full sense of the word, and participate in all the graces and privileges of the order, except that they have neither active nor passive voice in the management of the affairs of the order.

It may be well to deny a few customs that have been attributed, by ignorance, to the order. The monks do not salute one another by the "memento mori", nor do they dig a part of their grave each day; in meeting each other they salute by an inclination of the head, and graves are dug only after a brother is ready to be placed in it. (For statistics see Cistercians.)

EDMOND M. OBRECHT

Sts. Trasilla and Emiliana

Sts. Trasilla and Emiliana

Aunts of St. Gregory the Great, virgins in the sixth century, given in the Roman Martyrology, the former on 24 December, the latter on 5 January. St. Gregory (Hom. XXXVIII, 15, on the Gospel of St. Matthew, and Lib. Dial., IV, 16) relates that his father, the Senator Gordian, had three sisters who vowed themselves to God and led a life of virginity, fasting, and prayer in their own home on the Clivus Scauri in Rome. They were Trasilla (Tarsilla, Tharsilla, Thrasilla), Emiliana, and Gordiana. Gordiana, led on at first by the words and example of her sisters, did not persevere but returned to the vanities of the world. After many years in the service of God, St. Felix III, an ancestor, appeared to Trasilla and bade her enter her abode of glory. On the eve of Christmas she died, seeing Jesus beckoning. A few days later she appeared to Emiliana, who had followed well in her footsteps, and invited her to the celebration of Epiphany in heaven. Tradition says that their relics and those of their mother, St. Silvia, are in the Oratory of St. Andrew on the Celian Hill.

FRANCES MERSHMAN

Accusations of Treason

Accusations of Treason

A common misrepresentation concerning the Elizabethan persecution of English and Irish Catholics from 1570 onwards is the statement that the victims devoted to imprisonment, torture, and death suffered not for their religious belief but for treason against the queen and her government. This view, officially promulgated by Elizabeth's lord high treasurer, William Cecil, Lord Burghley, in 1583, was constantly reiterated by the judges in the courts, by Protestant writers in their controversial works, and has thence made its way into popular manuals of history. At the present day it frequently reappears as one of the stock accusations brought against the Church by Anglican controversialists of various types.

The simple fact that in very many instances those condemned to death ostensibly for treason were offered their lives and liberty if they would attend Anglican worship, shows conclusively that the martyrs did in fact suffer for religion; but at this epoch religion and politics were so inextricably confused that this explanation, though valid in the case of individual martyrs, does not suffice to meet the general accusation. As a recent Anglican historian writes: "The vexed question whether the Romanists died for treason or for their faith implies an antithesis which had little meaning in that age of mingled politics and religion" (A.F. Pollard, "Political History of England", VI, 377). Everything centres round the excommunication of Elizabeth by St. Pius V, 25 February, 1570. This act created a situation full of perplexity for English Catholics. It even underlies the history of the rising of the northern earls in 1569, for when they rose they had reason to believe that the excommunication had already taken place. Harassed as they were, the Catholics would take no

steps in defence of their rights till the pope declared that Elizabeth's misgovernment had so infringed the spiritual liberty of her subjects as to absolve them from their allegiance. Once this declaration was made a number of Catholics acted on it, and there was a certain section who under the influence of Mendoza and others were implicated in plots against Elizabeth which were undoubtedly treasonable from the Government's point of view. But they might well have urged that in so assailing the royal power they were doing no more against Elizabeth than Bolingbroke had done against Richard II, or Richmond against Richard III. Yet neither Henry IV nor Henry VII are usually branded as "traitors".

The subsequent cases of Pym and Hampden, not to mention the successful revolutionaries of 1688, show that success or failure is often made the real test between treason and rebellion. That a certain party of English Catholics was in rebellion against Elizabeth is not disputed, but justified rebellion ceases to be treason and may be the noblest patriotism. Thus Allen with many of the exiles of Douai and Louvain, and Persons with many of the Jesuits, saw in the rule of Elizabeth a greater danger to the highest interests of England than had previously been threatened in cases where history had justified the deposition of kings. And the supreme authority had sanctioned this view. Moreover, such exercise of papal prerogative was one of the recognized principles of the Middle Ages throughout which it had served to protect the rights of the people. This became evident later, when, after the decline of papal power, the autocratic power of the European sovereigns was greatly increased and always at the expense of the people. Nevertheless, it remains true that in the eyes of Elizabeth and her ministers such opposition was nothing less than high treason. But a large number of English Catholics refused to go so far as rebellion. The historian already quoted admits that the opposition which relied on avowedly treasonable methods was "limited to extremists" (*ibid.*, 297). Elsewhere he says of the rank and file of English Catholics: "They tried to ignore their painful dilemma between two forms of allegiance, for both of which they had deep respect" (p. 370). As Lingard writes: "among the English Catholics (the bull) served only to breed doubts, dissensions, and dismay. Many contended that it had been issued by an incompetent authority; others that it could not bind the natives till it should be carried into actual execution by some foreign power; all agreed that it was in their regard an imprudent and cruel expedient, which rendered them liable to the suspicion of disloyalty, and afforded their enemies a presence to brand them with the name of traitors" (*ibid.*, 225).

The terrible strain of this dilemma was relieved by the next pope, Gregory XIII, who on 14 April 1580, issued a declaration that though Elizabeth and her abettors remained subject to the excommunication, it was not to bind Catholics to their detriment. The large majority of English Catholics were relieved in conscience by this dispensation, and never gave the Government the least ground for suspecting their loyalty, but they persisted in the practice of their religion, which was made possible only by the coming of the seminary priests. With regard to these priests, who entered England at the risk of their lives to preserve the Catholic religion and to give facilities for Mass and the sacraments there could be no presumption of treason by the ancient laws of England. But in the panic which followed the Northern Rising, Parliament had passed a statute (13 Eliz. c.

2) declaring it to be high treason to put into effect any papal Bull of absolution to absolve or reconcile any person to the Catholic Church, to be absolved or reconciled, or to procure or publish any papal Bull or writing whatsoever. Thus for the first time purely religious acts were declared by Parliament to be treasonable, a position which no Catholic could admit. It is clear that persons suffering under such a law as this suffered for religion and not for treason. Elizabeth's Government, however, for its own purposes refused to make any distinction between Catholics who had been engaged in open opposition to the queen and those who were forced by conscience to ignore the provisions of this statute of 1571. These two classes, really distinct, were purposely identified by the Government and treated as one for controversial purposes. For when the reports of so many bloody executions for religion began to horrify Europe, the queen's ministers adopted the defence that their severity was not exercised against Catholics as such, but as traitors guilty of treason against their sovereign.

This view was put forward officially in a pamphlet by Lord Burghley, which was not only published in English but translated into Latin and other languages for foreign circulation. The very title of this work indicates its scope: "The Execution of Justice in England for maintenance of public and Christian peace, against certain stirrers of sedition and adherents to the traitors and enemies of the realm without any persecution of them for questions of religion, as is falsely reported, and published by the fautors and fosterers of their treasons." This pamphlet, which was issued on 17 December, 1583, may briefly be summarized. Attention is first drawn to late rebellions in England and Ireland which had been suppressed by the queen's power. Whereupon some of the defeated rebels had fled into foreign countries and there alleged that they were suffering for religion. Great stress is laid upon the Bull of excommunication; and all Catholics living abroad are represented as engaged in seditious practices with a view to carrying the Bull into effect. The seminaries are exhibited merely as foundations established to assist in this disloyal object. They have been "erected to nurse seditious fugitives". The priests who came forth at the risk of their lives are not given credit for any religious purpose, but "the seminary fugitives come secretly into the realm to induce the people to obey the Pope's bull". This view is important as it shows the pretext put forth by the Government to defend the Act of 1585 by which it became high treason for any seminary priest simply to come to England. The pamphlet proceeds to declare that some of these "sowers of sedition" have been taken, convicted, and executed "not being dealt withal upon questions of religion, but justly condemned as traitors". They were so condemned "by the ancient realm made 200 years past". Moreover, if they retracted their treasonable opinions their lives were spared. As "the foreign traitors continue sending of persons to move sedition in the realm" who cloak their real object of enforcing the Bulls under the pretext of religion and who "labour to bring the realm into a war external and domestical", it becomes the duty of the queen and her ministers to repel such rebellious practices. Burghley insists that before the excommunication no one had been charged with capital crimes on the ground of religion, and brings everything back to the question of the Bull. "And if then it be inquired for what cause these others have of late suffered death it is truly to be answered as afore is often remembered that none at all are impeached for treason to the danger of their life but such as do obstinately maintain the contents of the Pope's Bull aforementioned, which do import

that her Majesty is not the lawful Queen of England, the first and highest point of treason, and that all her subjects are discharged of their oaths and obedience, another high point of treason. and all warranted to disobey her and her laws, a third and very large point of treason."

A fourth point is taken from the refusal of the Catholics to disavow the pope's proceedings in Ireland. After many other points some of an historical nature addressed to foreign princes the writer anticipates the objection that many sufferers had been simple priests and unarmed scholars. He says "Many are traitors though they have no armour nor weapon." Such people are like spies, "necessary accessaries and adherents proper to further and continue all rebellions and wars. . . . The very causes final of these rebellions and wars have been to depose her Majesty from her crown: the causes instrumental are these kind of seminaries and seedmen of sedition. The pamphlet ends by proposing six questions or tests by which traitors might be distinguished from simple scholars. These interrogatories, known later as "the bloody questions", were ingeniously framed to entangle the victim into admissions with regard to the pope's action in excommunicating Elizabeth, which might be construed as treason. This is the government case and it was promptly answered by Allen in his "Answer to the Libel of English Justice", published in 1584, in which he joins issue on all points, showing "that many priests and other Catholics in England have been persecuted, condemned and executed for mere matter of religion and for transgression only of new statutes which make cases of conscience to be treason without all pretence or surmise of any old treasons or statutes for the same". He defends Campion and the other martyrs from the imputation of treason, points to the oppression of the Government and the prudent attitude of the Catholics with regard to the Bull; he explains the doctrine of the excommunication and deprivation of princes, the advantages of having a supreme authority to decide between princes and people in causes involving questions of deprivation; defends the pope's action in Ireland and concludes by showing "that the separation of the prince and realm from the unity of the Church and See Apostolic and fall from Catholic religion is the only cause of all the present fears and dangers that the State seemeth to stand in. And that they unjustly attribute the same to the Pope's Holiness or Catholics and untruly call them the enemies of the Realm".

In the following year, 1585, the Government took another step forward in their policy of drawing religious and indifferent acts into the political net. This was the statute 27 Eliz. c. 2, by which it was made high treason for any Jesuit or any seminary priest even to be in England, and felony for anyone to harbour or relieve them. Even so biased an historian as David Hume realized the injustice of this measure of which he says: "In the subsequent part of the queen's reign the law was sometimes executed by the capital punishment of priests; and though the partisans of that princess asserted that they were punished for their treason, not their religion, the apology must only be understood in this sense, that the law was enacted on account of the treasonable views and attempts of the sect, not that every individual who suffered the penalty of the law was convicted of treason" (Hist. of Eng., sub an 1584). The martyrs themselves constantly protested against this accusation of treason, and prayed for the queen on the scaffold. In very many instances they were offered a free pardon if they would attend the Protestant church, and some priests unfortunately yielded to the temptation.

But the fact of the offer being made sufficiently shows that religion, not treason, was the ground of their offence. This is notably the case with regard to Blessed Thomas Percy who had himself been the leader of the Northern Rising and who yet was offered his liberty at the price of conformity. There are three beatified martyrs directly connected with the excommunication, Felton, Storey, and Woodhouse, who for that reason stand in a class apart from the other martyrs; their cases have received special treatment by Father Pollen, S.J. (Camm's "Lives of the English Martyrs", II, xvii-xxii). It may not be amiss to state that so careful is the Holy See in such questions that the cause of beatification of James Laborne has been postponed for more careful consideration simply because of certain words he uttered about the queen. With regard to all the other martyrs there is no difficulty in showing that they died for their religion, and that the accusation of treason in their regard is false and unfounded.

EDWIN BURTON
Diocese of Trebizond

Trebizond

(TRAPEZUNTINA).

An Armenian Catholic diocese. The city owes its ancient name to the fact that it was built on the shores of the Black Sea in the form of a trapeze. It was a Greek colony from Sinopus, established in the eighth century, B.C., and not a colony from Trapezus, in Arcadia, as Xenophon relates, who was received here with enthusiasm during the retreat of the Ten Thousand. After having formed a part of the Kingdom of Armenia, and then of that of Pontus, it fell into the hands of the Romans, and was declared a free city by Pompey. The Emperor Hadrian adorned it and endowed it with great commercial importance by creating its artificial harbor. Under Valerian the Goths took and pillaged it; its inhabitants were slain or sent as slaves to the Cimmerian Bosphorus. Justinian raised it from its ruins and thenceforth it became rich in monuments, especially churches and monasteries. In 1204 when Constantinople fell into the power of the Latins, a prince of the family of the Comneni, who in 1185 sought safety in Iberia, proclaimed himself Emperor of Trebizond under the name of Alexis, and founded a Greek empire, the rival of that of Nicaea. The new state comprised nearly all of the ancient Pontus Polemoniacus and stretched eastward as far as the River Phasis. It was in perpetual conflict with the Seljuk Turks and later with the Osmanli Turks, as well as with the Greeks of Nicaea and Constantinople, the Italian republics, and especially the Genoese. During the two centuries and a half in which it succeeded in subsisting the Empire of Trebizond contributed greatly to the development of Christian civilization and Greek literature in those distant parts, until then somewhat backward. In 1462 Trebizond was taken by assault by the troops of Mohammed II, and its last emperor, David, was exiled to the vicinity of Serrae in Macedonia. He was soon obliged to choose between embracing Islam or forfeiting his life; he kept the faith and was executed together with six of his children. The seventh fled to the Peloponnesus where he founded the Comneni of Morea. From 1204 to 1462 Trebizond had, in all, twenty emperors.

At present Trebizond is the capital of the vilayet of the same name, bounded by those of Sivas and Erzeroum, the Black Sea, and Asiatic Russia, which after the war of 1877 absorbed a part of its territory. The vilayet measures about 270 miles from west to east by 65 miles at its extreme length; its area is 11,275 sq. miles. Its total population may be estimated at 900,000. The city itself has 50,000 inhabitants, among whom are 12,000 Greeks, 10,000 Armenians, some Jews, and a few hundred Catholics. The remainder are Turkish Mussulmans, Lazis, Circassians, and Afghazis. Trebizond has a citadel, at least 40 mosques, 10 Greek churches, some of which have preserved ancient paintings, several Armenian churches, etc.; it carries on an active trade with Persia, Russia, and European countries by way of the black Sea. Close to the city are several Greek monasteries still inhabited, and which played a certain part in Byzantine history.

The first traces of Christianity at Trebizond are found under Diocletian when St. Eugenius, still the patron of the city, St. Canoeists, and their companions were martyred. Among the saints of whom mention is still made were the Bishop St. Basil, tenth century (feast, 20 October), and St. Theodore Gabras, martyred about 1098 (feast, 2 October). At first merely a suffragan of Neocaesarea in Pontus Polemoniacus Trebizond became the metropolitan see of Lazica when the ancient metropolis, Phasis, was lost by the Byzantine Empire. At the end of the ninth century it had seven suffragans, which number continued to increase. The emperors of Trebizond profited by their political situation to secure privileges for the bishop of their capital. By an official act of 1 January, 1260, the Greek Patriarch of Nicaea, at the request of Michael VIII Paleologus, recognized a semi-independence of the Metropolitan of Trebizond. Thenceforth the titulars of this city went neither to Nicaea nor Constantinople to receive episcopal consecration from the patriarch; it was given them in their own church in the presence of a delegate from the patriarch who assisted at, or, if he were a bishop, presided at the ceremony. But the patriarch reserved to himself as formerly the ordinations of the other metropolitans or the autocephalous archbishops of the empire. Of course after the suppression of the Empire of Trebizond in 1462 the metropolitans of this city lost these privileges and were made like all the other metropolitans, in which condition they are at present. Le Quien (*Oriens christ.*, I, 509-14) gives a list of eighteen Greek bishops of Trebizond, to which other names might be added. Among them Domnus, the oldest known, who assisted at the Council of Nicaea in 325; Atarbius, at Chalcedon in 451; Anthimus, the future Monophysite Patriarch of Constantinople, who deposed Pope St. Agapitus in 536; Dorotheus, who assisted at the Council of Florence (1439), and signed its decree of union; Cyril, who in 1653 was in Paris with the Dominican Pere Goar, and made a profession of Catholic faith at Rome. To these may be added the Bishop Ouranios who, according to an inscription (*C.I.G.*, 8636), restored buildings in the year 542. In the Middle Ages, because of the Venetian and Genoese merchants and also because of the missionaries who went to evangelize the Khazars, Comans, and Tatars, a Latin see was established at Trebizond. The oldest-known titular was a Franciscan, Andronicus Comnenus, mentioned in 1289. In Le Quien (*op. cit.*, III, 1097-1100) and in Eubel (*Hierarchia catholica medii aevi*, I, 520) will be found the names of several other bishops from 1344 to 1437. The Latin diocese must have lasted until the capture of the city by Mohammed II.

The Armenian Catholic diocese erected in 1850 by Pius IX, is of vast extent; it has 4300 faithful, 4 churches, 7 stations, 4 primary schools, 9 secular priests, and 4 Mechitarists. There are also Jesuits at Marsivan and Amasia, engaged exclusively with the Armenians; the Oblates of the Assumption are at Amasia for the same object. The Capuchins are established for the Latins at Trebizond, Samsun, and Ineboli, and are dependent on the delegate Apostolic at Constantinople; the Sisters of St. Joseph of the Apparition have a boarding-school at Trebizond.

S. VAILHÉ

Trebnitz

Trebnitz

A former abbey of Cistercian nuns, situated north of Breslau in Silesia. It was founded in 1203 by Duke Henry the Bearded of Silesia and his wife St. Hedwig. The story of its foundation relates that one Duke Henry when out hunting fell into a swamp from which he could not extricate himself. In return for the rescue from this perilous position he vowed to build the abbey. With St. Hedwig's consent, Bishop Ekbert of Bamberg, her brother, chose the first nuns that occupied the convent. The first abbess was Petrusa; she was followed by Gertrude, the daughter of St. Hedwig. Up to 1515 the abbesses were first princesses of the Piast House and afterwards members of the nobility. The abbey was richly endowed with lands by Duke Henry. When Hedwig became a widow she went to live at Trebnitz and was buried there. It is said that towards the end of the thirteenth century the nuns numbered 120. In 1672 there were 32 nuns and 6 lay sisters, in 1805 there were 23 nuns and 6 lay sisters. The abbey suffered from all kinds of misfortunes both in the Middle Ages and in modern times: from famine in 1315, 1338, 1434, and 1617, from disastrous fires in 1413, 1432, 1464, 1486, 1505, 1595, and 1782. At the Reformation most of the nuns were Poles, as were the majority until during the eighteenth century. The Abbey of Trebnitz suffered so greatly during the Thirty Years War that the nuns fled to Poland, as they did again in 1663 when the Turks threatened Silesia. The last abbess, Dominica von Giller, died on 17 August, 1810, and on 11 November, 1810, the abbey was suppressed and secularized. The building, which was very extensive, was sold later and turned into a cloth factory. It is now used as the mother-house of the Trebnitz Sisters of St.

Charles Borromeo and as a hospital conducted by the sisters. The church, a basilica with pillars in the late Romanesque style, to which Baroque additions were made, is now the parish church. The grave of St. Hedwig is in the chapel of St. Hedwig to the right of the high altar. The grave of Duke Henry I, her husband, is in front of the altar.

KLEMENS LÖFFLER

Lettice Mary Tredway

Lettice Mary Tredway

(Called "Lady" Tredway)

Born 1595; died Oct., 1677; daughter of Sir Walter Tredway, of Buckley Park, Northamptonshire; her mother was Elizabeth Weyman. In July, 1616, Lady Tredway entered the novitiate of the Canonesses Regular of the Lateran of Notre-Dame-de-Beaulieu at Sin, near Douai (where she was probably educated), and in Oct., 1617, made her solemn profession. In 1631 she and Miles Pinkney, better known as Father Carre, a priest of the English College at Douai, conceived the project of opening a house for canonesses for English subjects only at Douai. The idea was approved by the authorities at home and abroad, and in 1634 it was decided to open this English convent at Paris. Dr. Smith, Bishop of Chalcedon, then in exile in Paris, helped them so generously that he may be counted a co-founder. He blessed Lady Tredway as abbess, and the Convent of Notre-Dame-de-Sion was permanently established in the Rue des Fosses in 1639. Father Carre and Lady Tredway were also practically the founders of the Seminary of St. Gregory for training priests for the English Mission. A pension for English ladies and a school were attached to the new convent, of which Lady Tredway held the office of abbess till 1675, when her infirmities compelled her to resign. Since her death the superiors have held the title of prioress. For forty-one years this noble woman laboured bravely for her convent. The community has been obliged to leave France, and is established in England at Ealing (1912).

FRANCESCA M. STEELE

Francis Tregian

Francis Tregian

Confessor, b. in Cornwall, 1548; d. at Lisbon, 25 Sept., 1608. He was son of Thomas Tregian of Wolveden, Cornwall, and Catherine Arundell; and inherited property worth three thousand pounds a year, the whole of which was confiscated by Elizabeth because he had harboured Blessed

Cuthbert Mayne (q.v.). Previously he had resided at Court in order to help the persecuted Catholics, and he is said by his biographer to have incurred the queen's displeasure by refusing her improper advances. After suffering imprisonment at Windsor and in various London prisons for twenty-eight years, he was liberated by James I, who banished him. Having visited Douai he retired to Madrid, where the King of Spain assigned him a pension. Seventeen years after death his body was found incorrupt, and miracles are stated to have been wrought by his intercession. He married Mary, daughter of Charles, seventh Lord Stourton, by whom he had eighteen children.

EDWIN BURTON

Tremithus

Tremithus

Titular see, suffragan of Salamis in Cyprus. The city is mentioned by Ptolemy (*Geog.*, V, xiii, 6), Hierocles (ed. Buckhardt, 708, 7), George of Cyprus (ed. Gelzer, 1109), and other geographers. Among its bishops were: St. Spyridon, a shepherd and married, present at the council of Nicaea in 325, and whose cult is popular in the East (*Anal. bolland.*, XXVI, 239); St. Arcadius and St. Nestor, venerated 14 Feb. or 7 March; Theopompus, at the Second Ecumenical Council in 381; Theodore, at the Sixth Ecumenical Council in 681, and who wrote a biography of St. John Chrysostom (*P.G.*, XLVII; 51-88); George, at the Second Council of Nicaea in 787; Spyridon in 1081, when the see was temporarily restored. The usurper Isaac Comnenus was defeated here in 1191 by Richard Coeur de Lion who afterwards took possession of Cyprus. The city was then destroyed and survives only in the Greek village of Trimethusia in the district of Chrysocho.

S. VAILHÉ

Council of Trent

Council of Trent

The nineteenth ecumenical council opened at Trent on 13 December, 1545, and closed there on 4 December, 1563. Its main object was the definitive determination of the doctrines of the Church

in answer to the heresies of the Protestants; a further object was the execution of a thorough reform of the inner life of the Church by removing the numerous abuses that had developed in it.

I. CONVOCATION AND OPENING

On 28 November, 1518, Luther had appealed from the pope to a general council because he was convinced that he would be condemned at Rome for his heretical doctrines. The Diet held at Nuremberg in 1523 demanded a "free Christian council" on German soil, and at the Diet held in the same city in 1524 a demand was made for a German national council to regulate temporarily the questions in dispute, and for a general council to settle definitely the accusations against Rome, and the religious disputes. Owing to the feeling prevalent in Germany the demand was very dangerous. Rome positively rejected the German national council, but did not absolutely object to holding a general council. Emperor Charles V forbade the national council, but notified Clement VII through his ambassadors that he considered the calling of a general council expedient and proposed the city of Trent as the place of assembly. In the years directly succeeding this, the unfortunate dispute between emperor and pope prevented any further negotiations concerning a council. Nothing was done until 1529 when the papal ambassador, Pico della Mirandola, declared at the Diet of Speyer that the pope was ready to aid the Germans in the struggle against the Turks, to urge the restoration of peace among Christian rulers, and to convoke a general council to meet the following summer. Charles and Clement VII met at Bologna in 1530, and the pope agreed to call a council, if necessary. The cardinal legate, Lorenzo Campeggio, opposed a council, convinced that the Protestants were not honest in demanding it. Still the Catholic princes of Germany, especially the dukes of Bavaria, favoured a council as the best means of overcoming the evils from which the Church was suffering; Charles never wavered in his determination to have the council held as soon as there was a period of general peace in Christendom.

The matter was also discussed at the Diet of Augsburg in 1530, when Campeggio again opposed a council, while the emperor declared himself in favour of one provided the Protestants were willing to restore earlier conditions until the decision of the council. Charles's proposition met the approval of the Catholic princes, who, however, wished the assembly to meet in Germany. The emperor's letters to his ambassadors at Rome on the subject led to the discussion of the matter twice in the congregation of cardinals appointed especially for German affairs. Although opinions differed, the pope wrote to the emperor that Charles could promise the convoking of a council with his consent, provided the Protestants returned to the obedience of the Church. He proposed an Italian city, preferably Rome, as the place of assembly. The emperor, however, distrusted the pope, believing that Clement did not really desire a council. Meantime, the Protestant princes did not agree to abandon their doctrines. Clement constantly raised difficulties in regard to a council, although Charles, in accord with most of the cardinals, especially Farnese, del Monte, and Canisio, repeatedly urged upon him the calling of one as the sole means of composing the religious disputes. Meanwhile the Protestant princes refused to withdraw from the position they had taken up. Francis I, of France, sought to frustrate the convoking of the council by making impossible conditions. It was mainly

his fault that the council was not held during the reign of Clement VII, for on 28 Nov., 1531, it had been unanimously agreed in a consistory that a council should be called. At Bologna in 1532, the emperor and the pope discussed the question of a council again and decided that it should meet as soon as the approval of all Christian princes had been obtained for the plan. Suitable Briefs addressed to the rulers were drawn up and legates were commissioned to go to Germany, France, and England. The answer of the French king was unsatisfactory. Both he and Henry VIII of England avoided a definitive reply, and the German Protestants rejected the conditions proposed by the pope.

The next pope, Paul III (1534-49), as Cardinal Alessandro Farnese, had always strongly favoured the convening of a council, and had, during the conclave, urged the calling of one. When, after his election, he first met the Cardinals, 17 October, 1534, he spoke of the necessity of a general council, and repeated this opinion at the first consistory (13 November). He summoned distinguished prelates to Rome to discuss the matter with them. Representatives of Charles V and Ferdinand I also laboured to hasten the council. The majority of the cardinals, however, opposed the immediate calling of a council, and it was resolved to notify the princes of the papal decision to hold a church assembly. Nuncios were sent for this purpose to France, Spain, and the German king, Ferdinand. Vergerio, nuncio to Ferdinand, was also to apprise the German electors and the most distinguished of the remaining ruling princes personally of the impending proclamation of the council. He executed his commission with zeal, although he frequently met with reserve and distrust. The selection of the place of meeting was a source of much difficulty, as Rome insisted that the council should meet in an Italian city. The Protestant rulers, meeting at Smalkald in December, 1535, rejected the proposed council. In this they were supported by Kings Henry VIII and Francis I. At the same time the latter sent assurances to Rome that he considered the council as very serviceable for the extermination of heresy, carrying on, as regards the holding of a council, the double intrigue he always pursued in reference to German Protestantism. The visit of Charles V to Rome in 1536 led to a complete agreement between him and the pope concerning the council. On 2 June, Paul III published the Bull calling all patriarchs, archbishops, bishops, and abbots to assemble at Mantua on 23 May, 1537, for a general council. Cardinal legates were sent with an invitation to the council to the emperor, the King of the Romans, the King of France, while a number of other nuncios carried the invitation to the other Christian countries. The Netherlander Peter van der Vorst was sent to Germany to persuade the German ruling princes to take part. The Protestant rulers received the ambassador most ungraciously; at Smalkald they refused the invitation curtly, although in 1530 they had demanded a council. Francis I took advantage of the war that had broken out between himself and Charles in 1536 to declare the journey of the French bishops to the council impossible.

Meanwhile preparations were carried on with zeal at Rome. The commission of reform, appointed in July, 1536, drew up a report as the basis for the correction of the abuses in ecclesiastical life; the pope began preparations for the journey to Mantua. The Duke of Mantua now raised objections against the holding of the assembly in his city and made conditions which it was not possible to accept at Rome. The opening of the council, therefore, was put off to 1 November; later it was decided to open it at Vicenza on 1 May, 1538. The course of affairs, however, was continually

obstructed by Francis I. Nevertheless the legates who were to preside at the council went to Vicenza. Only six bishops were present. The French king and the pope met at Nice, and it was decided to prorogue until Easter, 1539. Soon after this the emperor also desired to postpone the council, as he hoped to restore religious unity in Germany by conferences with the Protestants. After further unsuccessful negotiations both with Charles V and Francis I the council was indefinitely prorogued at the consistory of 21 May, 1539, to reassemble at the pope's discretion. When Paul III and Charles V met at Lucca in September, 1541, the former again raised the question of the council. The emperor now consented that it should meet at Vicenza, but Venice would not agree, whereupon the emperor proposed Trent, and later Cardinal Contarini suggested Mantua, but nothing was decided. The emperor and Francis I were invited later to send the cardinals of their countries to Rome, so that the question of the council could be discussed by the college of cardinals. Morone worked in Germany as legate for the council, and the pope agreed to hold it at Trent. After further consultations at Rome, Paul III convoked on 22 May, 1542, an ecumenical council to meet at Trent on 1 Nov. of the same year. The Protestants made violent attacks on the council, and Francis I opposed it energetically, not even permitting the Bull of convocation to be published in his kingdom.

The German Catholic princes and King Sigismund of Poland consented to the convocation. Charles V, enraged at the neutral position of the pope in the war that was threatening between himself and Francis I, as well as with the wording of the Bull, wrote a reproachful letter to Paul III. Nevertheless, preparations were made for the council at Trent, by special papal commissioners, and three cardinals were appointed later as conciliary legates. The conduct, however, of Francis I and of the emperor again prevented the opening of the council. A few Italian and German bishops appeared at Trent. The pope went to Bologna in March 1543, and to a conference with Charles V at Busseto in June, yet matters were not advanced. The strained relations which appeared anew between pope and emperor, and the war between Charles V and Francis I, led to another prorogation (6 July, 1543). After the Peace of Crespy (17 Sept., 1544) a reconciliation was effected between Paul III and Charles V. Francis I had abandoned his opposition and declared himself in favour of Trent as the place of meeting, as did the emperor. On 19 Nov., 1544, the Bull "Laetare Hierusalem" was issued, by which the council was again convoked to meet at Trent on 15 March, 1545. Cardinals Giovanni del Monte, Marcello Cervini, and Reginald Pole were appointed in February, 1545, as the papal legates to preside at the council. As in March only a few bishops had come to Trent, the date of opening had to be deferred again. The emperor, however, desired a speedy opening, consequently 13 December, 1545, was appointed as the date of the first formal session. This was held in the choir of the cathedral of Trent after the first president of the council, Cardinal del Monte, had celebrated the Mass of the Holy Ghost. When the Bull of convocation and the Bull appointing the conciliary legates were read, Cardinal del Monte declared the ecumenical council opened, and appointed 7 January as the date of the second session. Besides the three presiding legates there were present: Cardinal Madruzzo, Bishop of Trent, four archbishops, twenty-one bishops, five generals of orders. The council was attended, in addition, by the legates of the King of Germany, Ferdinand, and by forty-two theologians, and nine canonists, who had been summoned as consultants.

II. ORDER OF BUSINESS

In the work of accomplishing its great task the council had to contend with many difficulties. The first weeks were occupied mainly with settling the order of business of the assembly. After long discussion it was agreed that the matters to be taken into consideration by the members of the council were to be proposed by the cardinal legates; after they had been drawn up by a commission of consultors (*congregatio theologorum minorum*) they were to be discussed thoroughly in preparatory sessions of special congregations of prelates for dogmatic questions, and similar congregations for legal questions (*congregatio proelatorum theologorum* and *congregatio proelatorum canonistarum*). Originally the fathers of the council were divided into three congregations for discussion of subjects, but this was soon done away with as too cumbersome. After all the preliminary discussions the matter thus made ready was debated in detail in the general congregation (*congregatio generalis*) and the final form of the decrees was settled on. These general congregations were composed of all bishops, generals of orders, and abbots who were entitled to a vote, the proxies of absent members entitled to a vote, and the representatives (*oratores*) of the secular rulers. The decrees resulting from such exhaustive debates were then brought forward in the formal sessions and votes were taken upon them. On 18 December the legates laid seventeen articles before the general congregations as regards the order of procedure in the subjects to be discussed. This led to a number of difficulties. The main one was whether dogmatic questions or the reform of church life should be discussed first. It was finally decided that both subjects should be debated simultaneously. Thus after the promulgation in the sessions of the decrees concerning the dogmas of the Church followed a similar promulgation of those on discipline and Church reform. The question was also raised whether the generals of orders and abbots were members of the council entitled to a vote. Opinions varied greatly on this point. Still, after long discussion the decision was reached that one vote for the entire order belonged to each general of an order, and that the three Benedictine abbots sent by the pope to represent the entire order were entitled to only one vote.

Violent differences of opinion appeared during the preparatory discussion of the decree to be laid before the second session determining the title to be given the council; the question was whether there should be added to the title "Holy Council of Trent" (*Sacrosancta tridentina synodus*) the words "representing the Church universal" (*universalem ecclesiam reproesentans*). According to the Bishop of Fiesole, Braccio Martello, a number of the members of the council desired the latter form. However, such a title, although justified in itself, appeared dangerous to the legates and other members of the council on account of its bearing on the Councils of Constance and Basle, as it might be taken to express the superiority of the ecumenical council over the pope. Therefore instead of this formula the additional phrase "*oecumenica et generalis*" was proposed and accepted by nearly all the bishops. Only three bishops who raised the question unsuccessfully several times later persisted in wanting the formula "*universalem ecclesiam reproesentans*". A further point was in reference to the proxies of absent bishops, namely, whether these were entitled to a vote or not. Originally the proxies were not allowed a vote; Paul III granted to those German bishops who could

not leave their dioceses on account of religious troubles, and to them alone, representation by proxies. In 1562, when the council met again, Pius IV withdrew this permission. Other regulations were also passed, in regard to the right of the members to draw the revenues of their dioceses during the session of the council, and concerning the mode of life of the members. At a later date, during the third period of the council, various modifications were made in these decisions. Thus the theologians of the council, who had grown in the meantime into a large body, were divided into six classes, each of which received a number of drafts of decrees for discussion. Special deputations also were often appointed for special questions. The entire regulation of the debates was a very prudent one, and offered every guarantee for an absolutely objective and exhaustive discussion in all their bearings of the questions brought up for debate. A regular courier service was maintained between Rome and Trent, so that the pope was kept fully informed in regard to the debates of the council.

III. THE WORK AND SESSIONS

A. First Period at Trent

Among the fathers of the council and the theologians who had been summoned to Trent were a number of important men. The legates who presided at the council were equal to their difficult task; Paceco of Jaen, Campeggio of Feltre, and the Bishop of Fiesole already mentioned were especially conspicuous among the bishops who were present at the early sessions. Girolamo Seripando, General of the Augustinian Hermits, was the most prominent of the heads of the orders; of the theologians, the two learned Dominicans, Ambrogio Catarino and Domenico Soto, should be mentioned. After the formal opening session (13 December, 1545), the various questions pertaining to the order of business were debated; neither in the second session (7 January, 1546) nor in the third (4 February, 1546) were any matters touching faith or discipline brought forward. It was only after the third session, when the preliminary questions and the order of business had been essentially settled, that the real work of the council began. The emperor's representative, Francisco de Toledo, did not reach Trent until 15 March, and a further personal representative, Mendoza, arrived on 25 May. The first subject of discussion which was laid before the general congregation by the legates on 8 February was the Scriptures as the source of Divine revelation. After exhaustive preliminary discussions in the various congregations, two decrees were ready for debate at the fourth session (8 April, 1546), and were adopted by the fathers. In treating the canon of Scripture they declare at the same time that in matters of faith and morals the tradition of the Church is, together with the Bible, the standard of supernatural revelation; then taking up the text and the use of the sacred Books they declare the Vulgate to be the authentic text for sermons and disputations, although this did not exclude textual emendations. It was also determined that the Bible should be interpreted according to the unanimous testimony of the Fathers and never misused for superstitious purposes. Nothing was decided in regard to the translation of the Bible in the vernaculars.

In the meantime earnest discussions concerning the question of church reform had been carried on between the pope and the legates, and a number of items had been suggested by the latter. These had special reference to the Roman Curia and its administration, to the bishops, the ecclesiastical benefices and tithes, the orders, and the training of the clergy. Charles V wished the discussion of the dogmatic questions to be postponed, but the council and the pope could not agree to that, and the council debated dogmas simultaneously with decrees concerning discipline. On 24 May the general congregation took up the discussion of original sin, its nature, consequences, and cancellation by baptism. At the same time the question of the Immaculate Conception of the Virgin was brought forward, but the majority of the members finally decided not to give any definite dogmatic decision on this point. The reforms debated concerned the establishment of theological professorships, preaching, and episcopal obligation of residence. In reference to the latter the Spanish bishop, Paceco, raised the point whether this obligation was of Divine origin, or whether it was merely an ecclesiastical ordinance of human origin, a question which led later to long and violent discussions. In the fifth session (17 June, 1546) the decree on the dogma of original sin was promulgated with five canons (anathemas) against the corresponding erroneous doctrines; and the first decree on reform (*de reformatione*) was also promulgated. This treats (in two chapters) of professorships of the Scriptures, and of secular learning (*artes liberales*), of those who preach the Divine word, and of the collectors of alms.

For the following session, which was originally set for 29 July, the matters proposed for general debate were the dogma of justification as the dogmatic question and the obligation of residence as regards bishops as the disciplinary decree; the treatment of these questions was proposed to the general congregation by the legates on 21 June. The dogma of justification brought up for debate one of the fundamental questions which had to be discussed with reference to the heretics of the sixteenth century, and which in itself presented great difficulties. The imperial party sought to block the discussion of the entire matter, some of the fathers were anxious on account of the approaching war of Charles V against the Protestant princes, and there was fresh dissension between the emperor and the pope. However, the debates on the question were prosecuted with the greatest zeal; animated, at times even stormy, discussions took place; the debate of the next general session had to be postponed. No less than sixty-one general congregations and forty-four other congregations were held for the debate of the important subjects of justification and the obligation of residence, before the matters were ready for the final decision. At the sixth regular session on 13 January, 1547, was promulgated the masterly decree on justification (*de justificatione*), which consisted of a prooemium or preface and sixteen chapters with thirty-three canons in condemnation of the opposing heresies. The decree on reform of this session was one in five chapters respecting the obligation of residence of bishops and of the occupants of ecclesiastical benefices or offices. These decrees make the sixth session one of the most important and decisive of the entire council.

The legates proposed to the general congregation as the subject-matter for the following session, the doctrine of the Church as to the sacraments, and for the disciplinary question a series of ordinances respecting both the appointment and official activities of bishops, and on ecclesiastical

benefices. When the questions had been debated, in the seventh session (3 March, 1547), a dogmatic decree with suitable canons was promulgated on the sacraments in general (thirteen canons), on baptism (fourteen canons), and on confirmation (three canons); a decree on reform (in fifteen chapters) was also enacted in regard to bishops and ecclesiastical benefices, in particular as to pluralities, visitations, and exemptions, concerning the founding of infirmaries, and as to the legal affairs of the clergy. Before this session was held the question of the prorogation of the council or its transfer to another city had been discussed. The relations between pope and emperor had grown even more strained; the Smalkaldic War had begun in Germany; and now an infectious disease broke out in Trent, carrying off the general of the Franciscans and others. The cardinal legates, therefore, in the eighth session (11 March, 1547) proposed the transfer of the council to another city, supporting themselves in this action by a Brief which had been given them by the pope some time before. The majority of the fathers voted to transfer the council to Bologna, and on the following day (12 March) the legates went there. By the ninth session the number of participants had risen to four cardinals, nine archbishops, forty-nine bishops, two proxies, two abbots, three generals of orders, and fifty theologians.

B. Period at Bologna

The majority of the fathers of the council went with the cardinal legates from Trent to Bologna; but fourteen bishops who belonged to the party of Charles V remained at Trent and would not recognize the transfer. The sudden change of place without any special consultation beforehand with the pope did not please Paul III, who probably foresaw that this would lead to further severe difficulties between himself and the emperor. As a matter of fact Charles V was very indignant at the change, and through his ambassador Vaga protested against it, vigorously urging a return to Trent. The emperor's defeat of the Smalkaldic League increased his power. Influential cardinals sought to mediate between the emperor and the pope, but the negotiations failed. The emperor protested formally against the transfer to Bologna, and, refusing to permit the Spanish bishops who had remained at Trent to leave that city, began negotiations again with the German Protestants on his own responsibility. Consequently at the ninth session of the council held at Bologna on 21 April, 1547, the only decree issued was one proroguing the session. The same action was all that was taken in the tenth session on 2 June, 1547, although there had been exhaustive debates on various subjects in congregations. The tension between the emperor and the pope had increased despite the efforts of Cardinals Sfondrato and Madruzzo. All negotiations were fruitless. The bishops who had remained at Trent had held no sessions, but when the pope called to Rome four of the bishops at Bologna and four of those at Trent, the latter said in excuse that they could not obey the call. Paul III had now to expect extreme opposition from the emperor. Therefore, on 13 September, he proclaimed the suspension of the council and commanded the cardinal legate del Monte to dismiss the members of the council assembled at Bologna; this was done on 17 September. The bishops were called to Rome, where they were to prepare decrees for disciplinary reforms. This closed the first period of the council. On 10 Nov., 1549, the pope died.

C. Second Period at Trent

The successor of Paul III was Julius III (1550-55), Giovanni del Monte, first cardinal legate of the council. He at once began negotiations with the emperor to reopen the council. On 14 Nov., 1550, he issued the Bull "Quum ad tollenda," in which the reassembling at Trent was arranged. As presidents he appointed Cardinal Marcellus Crescentius, Archbishop Sebastian Pighinus of Siponto, and Bishop Aloysius Lipomanni of Verona. The cardinal legate reached Trent on 29 April, 1551, where, besides the bishop of the city, fourteen bishops from the countries ruled by the emperor were in attendance; several bishops came from Rome, where they had been staying, and on 1 May, 1551, the eleventh session was held. In this the resumption of the council was decreed, and 1 September was appointed as the date of the next session. The Sacrament of the Eucharist and drafts of further disciplinary decrees were discussed in the congregations of the theologians and also in several general congregations. Among the theologians were Lainez and Salmeron, who had been sent by the pope, and Johannes Arza, who represented the emperor. Ambassadors of the emperor, King Ferdinand, and Henry II of France were present. The King of France, however, was unwilling to allow any French bishop to go to the council. In the twelfth session (1 Sept., 1551) the only decision was the prorogation until 11 October. This was due to the expectation of the arrival of other German bishops, besides the Archbishops of Mainz and Trier who were already in attendance. The thirteenth session was held on 11 Oct., 1551; it promulgated a comprehensive decree on the Sacrament of the Eucharist (in eight chapters and eleven canons) and also a decree on reform (in eight chapters) in regard to the supervision to be exercised by bishops, and on episcopal jurisdiction. Another decree deferred until the next session the discussion of four articles concerning the Eucharist, namely, Communion under the two species of bread and wine and the Communion of children; a safe-conduct was also issued for Protestants who desired to come to the council. An ambassador of Joachim II of Brandenburg had already reached Trent.

The presidents laid before the general congregation of 15 October drafts of definitions of the Sacraments of Penance and Extreme Unction for discussion. These subjects occupied the congregations of theologians, among whom Gropper, Nausea, Tapper, and Hessels were especially prominent, and also the general congregations during the months of October and November. At the fourteenth session, held on 25 November, the dogmatic decree promulgated contained nine chapters on the dogma of the Church respecting the Sacrament of Penance and three chapters on extreme unction. To the chapters on penance were added fifteen canons condemning heretical teachings on this point, and four canons condemning heresies to the chapters on unction. The decree on reform treated the discipline of the clergy and various matters respecting ecclesiastical benefices. In the meantime, ambassadors from several Protestant princes and cities reached Trent. They made various demands, as: that the earlier decisions which were contrary to the Augsburg Confession should be recalled; that debates on questions in dispute between Catholics and Protestants should be deferred; that the subordination of the pope to an ecumenical council should be defined; and other propositions which the council could not accept. Since the close of the last session both the theologians and the general congregations had been occupied in numerous assemblies with the dogma of the Holy Sacrifice of the Mass and of the ordination of priests, as well as with plans for

new reformatory decrees. At the fifteenth session (25 January, 1552), in order to make some advances to the ambassadors of the Protestants, the decisions in regard to the subjects under consideration were postponed and a new safe-conduct, such as they had desired, was drawn up for them. Besides the three papal legates and Cardinal Madruzzo, there were present at Trent ten archbishops and fifty-four bishops, most of them from the countries ruled by the emperor. On account of the treacherous attack made by Maurice of Saxony on Charles V, the city of Trent and the members of the council were placed in danger; consequently, at the sixteenth session (23 April, 1552) a decree suspending the council for two years was promulgated. However, a considerably longer period of time elapsed before it could resume its sessions.

D. Third Period at Trent

Julius III did not live to call the council together again. He was followed by Marcellus II (1555), a former cardinal legate at Trent, Marcello Cervino; Marcellus died twenty-two days after his election. His successor, the austere Paul IV (1555-9), energetically carried out internal reforms both in Rome and in the other parts of the Church; but he did not seriously consider reconvening the council. Pius IV (1559-65) announced to the cardinals shortly after his election his intention of reopening the council. Indeed, he had found the right man, his nephew, the Cardinal Archbishop of Milan, Charles Borromeo, to complete the important work and to bring its decisions into customary usage in the Church. Great difficulties were raised once more on various sides. The Emperor Ferdinand desired the council, but wished it to be held in some German city, and not at Trent; moreover he desired it to meet not as a continuation of the earlier assembly but as a new council. The King of France also desired the assembling of a new council, but he did not wish it at Trent. The Protestants of Germany worked in every way against the assembling of the Council. After long negotiations Ferdinand, the Kings of Spain and Portugal, Catholic Switzerland, and Venice left the matter to the pope. On 29 Nov., 1560, the Bull "Ad ecclesiae regimen," by which the council was ordered to meet again at Trent at Easter, 1561, was published. Notwithstanding all the efforts of the papal nuncios, Delfino and Commendone, the German Protestants persisted in their opposition. Cardinal Ercole Gonzaga was appointed president of the council; he was to be assisted by the cardinal legates Stanislaus Hosius, Jacobus Puteus (du Puy), Hieronymus Seripando, Luigi Simonetta, and Marcus Siticus of Altemps. As the bishops made their appearance very slowly, the opening of the council was delayed. Finally on 18 Jan., 1562, the seventeenth session was held; it proclaimed the revocation of the suspension of the council and appointed the date for the next session. There were present, besides the four cardinal legates, one cardinal, three patriarchs, eleven archbishops, forty bishops, four abbots, and four generals of orders; in addition thirty-four theologians were in attendance. The ambassadors of the princes were a source of much trouble to the presidents of the council and made demands which were in part impossible. The Protestants continued to calumniate the assembly. Emperor Ferdinand wished to have the discussion of dogmatic questions deferred.

At the eighteenth session (25 Feb., 1562) the only matters decided were the publication of a decree concerning the drawing up of a list of forbidden books and an agreement as to a safe-conduct for Protestants. At the next two sessions, the nineteenth on 14 May, and the twentieth on 4 June,

1562, only decrees proroguing the council were issued. The number of members had, it is true, increased, and various ambassadors of Catholic rulers had arrived at Trent, but some princes continued to raise obstacles both as to the character of the council and the place of meeting. Emperor Ferdinand sent an exhaustive plan of church reform which contained many articles impossible to accept. The legates, however, continued the work of the assembly, and presented the draft of the decree on Holy Communion, which treated especially the question of Communion under both species, as well as drafts of several disciplinary decrees. These questions were subjected to the usual discussions. At the twenty-first session (16 July, 1562) the decree on Communion under both species and on the Communion of children was promulgated in four chapters and four canons. A decree upon reformation in nine chapters was also promulgated; it treated ordination to the priesthood, the revenues of canons, the founding of new parishes, and the collectors of alms. Articles on the Sacrifice of the Mass were now laid before the congregations for discussion; in the following months there were long and animated debates over the dogma. At the twenty-second session, which was not held until 17 Sept., 1562, four decrees were promulgated: the first contained the dogma of the Church on the Sacrifice of the Mass (in nine chapters and nine canons); the second directed the suppression of abuses in the offering of the Holy Sacrifice; a third (in eleven chapters) treated reform, especially in regard to the morals of the clergy, the requirements necessary before ecclesiastical offices could be assumed, wills, the administration of religious foundations; the fourth treated the granting of the cup to the laity at Communion, which was left to the discretion of the pope.

The council had hardly ever been in as difficult a position as that in which it now found itself. The secular rulers made contradictory and, in part, impossible demands. At the same time warm debates were held by the fathers on the questions of the duty of residence and the relations of the bishops to the pope. The French bishops who arrived on 13 November made several dubious propositions. Cardinals Gonzaga and Seripando, who were of the number of cardinal legates, died. The two new legates and presidents, Morone and Navagero, gradually mastered the difficulties. The various points of the dogma concerning the ordination of priests were discussed both in the congregations of the eighty-four theologians, among whom Salmeron, Soto, and Lainez were the most prominent, and in the general congregations. Finally, on 15 July, 1563, the twenty-third session was held. It promulgated the decree on the Sacrament of Orders and on the ecclesiastical hierarchy (in four chapters and eight canons), and a decree on reform (in eighteen chapters). This disciplinary decree treated the obligation of residence, the conferring of the different grades of ordination, and the education of young clerics (seminarists). The decrees which were proclaimed to the Church at this session were the result of long and arduous debates, in which 235 members entitled to a vote took part. Disputes now arose once more as to whether the council should be speedily terminated or should be carried on longer. In the meantime the congregations debated the draft of the decree on the Sacrament of Matrimony, and at the twenty-fourth session (11 Nov., 1563) there were promulgated a dogmatic decree (with twelve canons) on marriage as a sacrament and a reformatory decree (in ten chapters), which treated the various conditions requisite for contracting of a valid

marriage. A general decree on reform (in twenty-one chapters) was also published which treated the various questions connected with the administration of ecclesiastical offices.

The desire for the closing of the council grew stronger among all connected with it, and it was decided to close it as speedily as possible. A number of questions had been discussed preliminarily and were now ready for final definition. Consequently in the twenty-fifth and final session, which occupied two days (3-4 December, 1563), the following decrees were approved and promulgated: on 3 December a dogmatic decree on the veneration and invocation of the saints, and on the relics and images of the same; a decree on reform (in twenty-two chapters) concerning monks and nuns; a decree on reform, treating of the mode of life of cardinals and bishops, certificates of fitness for ecclesiastics, legacies for Masses, the administration of ecclesiastical benefices, the suppression of concubinage among the clergy, and the life of the clergy in general. On 4 December the following were promulgated: a dogmatic decree on indulgences; a decree on fasts and feast days; a further decree on the preparation by the pope of editions of the Missal, the Breviary, and a catechism, and of a list of forbidden books. It was also declared that no secular power had been placed at a disadvantage by the rank accorded to its ambassadors, and the secular rulers were called upon to accept the decisions of the council and to execute them. Finally, the decrees passed by the council during the pontificates of Paul III and Julius III were read and proclaimed to be binding. After the fathers had agreed to lay the decisions before the pope for confirmation, the president, Cardinal Morone, declared the council to be closed. The decrees were subscribed by two hundred and fifteen fathers of the council, consisting of four cardinal legates, two cardinals, three patriarchs, twenty-five archbishops, one hundred and sixty-seven bishops, seven abbots, seven generals of orders, and also by nineteen proxies for thirty-three absent prelates. The decrees were confirmed on 26 Jan., 1564, by Pius IV in the Bull "Benedictus Deus," and were accepted by Catholic countries, by some with reservations.

The Ecumenical Council of Trent has proved to be of the greatest importance for the development of the inner life of the Church. No council has ever had to accomplish its task under more serious difficulties, none has had so many questions of the greatest importance to decide. The assembly proved to the world that notwithstanding repeated apostasy in church life there still existed in it an abundance of religious force and of loyal championship of the unchanging principles of Christianity. Although unfortunately the council, through no fault of the fathers assembled, was not able to heal the religious differences of western Europe, yet the infallible Divine truth was clearly proclaimed in opposition to the false doctrines of the day, and in this way a firm foundation was laid for the overthrow of heresy and the carrying out of genuine internal reform in the Church.

J.P. KIRSCH

Trent

Trent

(TRIDENTUM; TRIDENTINA).

Diocese; suffragan of Salzburg. Trent became universally known through the famous general council held there from 1545 to 1563. At an earlier date, however, it had a certain historical importance. In 15 B.C. its territory became subject to the Romans. As early as 381 there appeared at the Council of Aquileia Abundantius, Bishop of Trent. While Arianism and the barbarian invasions elsewhere smothered the seed of the gospel, it grew in Trent under the care and protection of St. Vigilius. Bishop Valerian of Aquileia had consecrated the youthful Vigilius, while the great Ambrose of Milan had instructed him as to his duties in lengthy, fatherly, epistles. Vigilius came to his end prematurely; he was stoned to death when barely forty years of age.

In the sixth century during the Three Chapters controversy, the Provinces of Milan and Aquileia continued in schism even after Popes Vigilius and Pelagius I had recognized the decrees of the Council of Constantinople; through the Patriarch of Aquileia the bishops of Trent also persisted in the schism. Placed between Germany and Italy, Trent was exposed to the influences of both. Ecclesiastically it remained subject to Aquileia until 1751, but in political affairs it could not withstand the power of the Salic and Saxon kings and emperors. Under the first Franconian king, Bishop Ulrich II became an independent prince of the empire, with the powers and privileges of a duke. In consideration of imperial favour the bishops of Trent sided with Henry IV and Frederick I during the great struggle between the Church and the Empire, but in such a skilful manner so as to avoid a rupture with the pope. Bishop Adelbert is even revered as a saint, although he sided with the antipope Victor IV, who had been chosen by the emperor; in those times of confusion it was often difficult to find the right path. He died a martyr in defence of the rights of his see (1177). Under Innocent III, Friedrich von Wanga raised Trent to the height of its power and influence. He was a great temporal and ecclesiastical ruler. He used every means to kindle and strengthen the religious spirit, and began the building of the splendid Romanesque cathedral. He died at Acre in 1218 during the Fourth Crusade.

The untimely death of Meinhard III, son of Margaret of Tyrol, brought Trent under the rule of Austria in 1363. In 1369 Rudolph IV concluded a treaty with Bishop Albrecht II of Ortenburg, by virtue of which Rudolph became the real sovereign of the diocese. The bishop promised in his own name and in that of his successors to acknowledge the duke and his heirs as lords, and to render assistance to them against their enemies. Thereafter Trent ceased to be an independent principality, and became a part of the Tyrol. Ortenburg's successor was George I of Liechtenstein, who endeavoured to regain its independence for the see. His efforts involved him in several wars, terminated only by his death in 1419. More than once during these wars he was taken prisoner, while the duke was excommunicated and the see interdicted.

The much discussed story of the death of St. Simon of Trent belongs to the reign of Prince-Bishop Johannes IV Hinderbach. On Holy Thursday of the year 1475, the little child, then about 20 months old, son of a gardener, was missed by its parents. On the evening of Easter Sunday the body was found in a ditch. Several Jews, who were accused of the murder, were cruelly tortured.

The sixteenth century was a time of trouble and worry for the Church in the Tyrol. In the towns the Lutherans, in the villages and among the peasants the Anabaptists, multiplied. After many

ineffectual efforts, the sovereign, bishops and several monastic orders combined their authority, and a new order set in, which reached its climax in the Council of Trent. At the time of the council Cardinal Christoph von Madruz was prince-bishop. He was succeeded by three members of his house, with the last of whom the house of Madruz died out. The decrees of the council were executed but slowly. In 1593 Cardinal Ludwig von Madruz founded the seminary, which later was conducted by the Somaschi. The Jesuits came to Trent in 1622.

Peter Vigil, Count of Thun, governed the see during the Josephite reforms, with which he was in sympathy. He abolished some of the monasteries in his territory, interfered with the constitutions of the various orders, and closed some churches. When the patriarchate of Aquileia ceased to exist in 1751, Trent became exempt. During the administration of his successor, Emmanuel Maria Count of Thun, it ceased to be an independent ecclesiastical principality (1803). The Bavarian Government insisted on the following: (1) priests were to be ordained only after an examination at the university; (2) the bishops were to order their clergy to obey all orders of the Government in connection with the ecclesiastical police; (3) when filling benefices a list of three names was to be presented by the bishop to the Government or by the Government to the bishop; (4) recourse to Rome or combination with other bishops was forbidden. Bishop Emmanuel replied that he would remain true to his oath to support and defend the privileges of the Church, and that he would rather suffer all the consequences which might arise from his refusal rather than act against his conscience. He was expelled in 1807 and crossed the frontier into Salzburg at Reichenhall. He could only return after the Tyrolese had freed themselves of the Bavarian yoke. After the Peace of Viena negotiation were begun relative to the circumscription of the dioceses of the Tyrol, and were concluded in 1825. Trent was made a suffragan of Salzburg, and the bishops, instead of being chosen by the chapter, were appointed by the emperor. The 115th Bishop of Trent was Johann Nepomuk Tschiderer. He died on 12 March, 1860, and his canonization is already under way. The diocese numbers 602,000 Catholics, 1072 priests, 817 male religious, and 1527 nuns.

C. WOLFSGRUBER

Trenton

Trenton

(TRENTONENSIS).

Diocese created 15 July, 1881, suffragan of New York, comprises Atlantic, Burlington, Camden, Cape May, Cumberland, Gloucester, Hunterdon, Mercer, Middlesex, Monmouth, Ocean, Salem,

Somerset, and Warren counties in the State of New Jersey, U.S.A., an area of about 5,756 square miles. From 1808 to 1853 the territory now occupied by the Diocese of Trenton covered the lower sections of what was then known as East and West Jersey, the former belonging to the jurisdiction of New York and the latter to Philadelphia. In 1853 the Diocese of Newark was formed, and the entire State of New Jersey was placed under Bishop James Roosevelt Bayley, afterwards Archbishop of Baltimore. The Diocese of Trenton lies between New York and Philadelphia and has within its confines all the sea coast from Sandy Hook to Cape May Point, whereon thirty churches have been built to accommodate the summer visitors to the Jersey coast. The first Mass said within its territory was celebrated at Woodbridge, about 1672, and the city of Trenton, in 1814, witnessed the formation of the first congregation and the erection of the first church.

The first bishop was the Right Rev. Michael Joseph O'Farrell (b. at Limerick, Ireland, 2 December, 1832; d. 2 April, 1894). Bishop O'Farrell completed his classics and philosophy at All Hallows College, Dublin, and went to St-Sulpice, Paris, where he made his theology course. He became a Sulpician and was ordained in his native city by the Most Rev. Dr. Ryan, 18 Aug., 1855. His superiors sent him to Montreal, Canada, where he taught dogmatic theology at the Grand Seminary. He left the Congregation of St-Sulpice and was made rector of St. Peter's Church, New York City. He took up the work of organizing the new diocese of Trenton with fifty-one priests, sixty-nine churches, and a Catholic population of about forty thousand. Soon new parishes and missions were formed, an orphan asylum was opened at New Brunswick, and a home for the aged at Beverly. At the Third Council of Baltimore Bishop O'Farrell was considered one of the most eloquent speakers in the American hierarchy. He wrote pastoral letters on Christian marriage and Christian education. His remains were at first interred in the cathedral cemetery, Trenton, but in 1905 were transferred to a vault in the chapel of St. Michael's Orphan Asylum, Hopewell, New Jersey.

Bishop O'Farrell was succeeded by his chancellor and vicar-general, the Right Rev. James Augustine McFaul (b. near Larne, Co. Antrim, Ireland, 6 June, 1850), the second and present Bishop of Trenton. The latter went with his parents to America when a few months old. The family dwelt for several years in New York City and then moved to Bound Brook, New Jersey. Bishop McFaul made his collegiate course at St. Vincent's, Beatty, Pennsylvania, and at St. Francis Xavier's, New York City, his theological studies being made at Seton Hall, South Orange, New Jersey. He was ordained on 26 May, 1877, and, when the See of Trenton was erected, was appointed an assistant priest at St. Mary's church, Trenton, which Bishop O'Farrell selected as his cathedral. Hence he early became a friend of his predecessor, by whom he was held in great confidence and by whom he was appointed pastor of the Church of St. Mary, Star of the Sea, Long Branch. In October, 1890, he returned to the cathedral to be its rector and to assist the bishop. He was made secretary and chancellor, and on 1 November, 1892, was appointed vicar-general. On the death of Bishop O'Farrell he acted as administrator of the diocese and on 20 July, of the same year, was raised to the episcopate, being consecrated in St. Mary's Cathedral (18 Oct., 1894) by Archbishop Corrigan, from whom, when Bishop of Newark, he received all his other orders. Being familiar with the diocese he soon

placed it on a splendid financial basis, and erected many churches, schools, and institutions, among which are: the orphan asylum, at Hopewell; the home for the aged, at Lawrenceville; and Mount St. Mary's College for young ladies, at Plainfield. Bishop McFaul is organizer of the American Federation of Catholic Societies, which has a membership of about two million.

Among the most widely known of Bishop McFaul's works are his pastoral letters, "The Christian Home", "The Christian School", and "Some Modern Problems", as well as a timely and valuable brochure on tuberculosis. His address on "The American Universities", delivered in New York City, June, 1909, revealed to the American people the fact that the professors of several of these institutions were advancing ideas in conflict with morality and the established standards of right and wrong. In May, 1911, he delivered an address on the Press before several thousand newspaper men, in St. Patrick's Cathedral, New York City.

In the Diocese of Trenton there are many nationalities, and the Gospel is preached in the following languages: English, German, Italian, Polish, Hungarian, Slovak, Lithuanian, and Rumanian.

The religious communities in the diocese are: men — Franciscans (Minor Conventuals), Augustinians, Fathers of the Pious Society of Missions, Dominicans, Brothers of the Sacred Heart, and Brothers of the Christian Schools (summer only); women — Sisters of Mercy, Sisters of Charity, Sisters of the Third Order of St. Francis, Sisters of St. Francis, Mission Helpers of the Sacred Heart, Dominican Sisters of the Perpetual Rosary, Sisters of St. Dominic, Gray Nuns, Poor Clares, Felician Sisters, School Sisters of Notre-Dame, Franciscan Sisters of Christian Charity, Pious Teachers (*Pii Filippini*), Sisters of the Precious Blood.

General statistics (1911): bishop, 1; secular priests, 167; regular, 23; churches with resident priests, 124; missions with churches, 30; stations, 84; chapels, 13; religious women (including novices and postulants), 372; college (Franciscan) 1, students, 90; academies for young ladies, 5, pupils, 350; college for young ladies, 1, students, 87; parishes with parochial schools, 44, pupils, 12,263; Sunday-schools, 153; teachers, 900, pupils, 20,364; orphan asylums, 2, orphans, 313; total number of young people under Catholic care, 13,103; hospitals, 3, patients treated during 1910, about 7,000; day-nurseries 2, children, 125; homes for aged, 2, inmates, 100; Catholic population, about 130,000.

JAMES J. POWERS

Sir Thomas Tresham

Sir Thomas Tresham

Knight Bachelor (in or before 1524), Grand Prior of England in the Order of Knights Hospitallers of St. John of Jerusalem (1557); date of birth unknown; d. 8 March, 1558-9. The eldest son of John Tresham of Rushton, Northamptonshire, and Elizabeth, daughter of Sir James Harrington, of Hornby,

Lancashire, he married (1) Anne, daughter of William, Lord Parr, of Horton, by whom he had two sons, and (2) Lettice, relict of Sir Robert Lee, who predeceased him without issue. He was chosen sheriff of Northamptonshire in 1524, 1539, 1545, and 1555, and returned as member for the county in 1541 and twice in 1554. He constantly served on commissions of the peace, of gaol delivery, of oyer and terminer, of sewers, and the like, and was appointed special commissioner in 1527 to search for grain, in 1530 to inquire into Wolsey's possessions, and in 1537 to inquire into the Lincolnshire rebellion. In 1539 he was one of the knights appointed to receive Anne of Cleves at Calais. In 1540 he had licence to impark the Lyveden estate in Aldwinkle St. Peter's parish, where the "New Bield" erected by his grandson still stands. In this year, though his main estates were in Northamptonshire, he had a house with twenty-nine household servants in Wolfeton, Dorsetshire. In 1544 he supplied men for the king's army in France, and a little later was one of the commissioners to collect the "benevolence" for the defence of the realm. In 1546 he was appointed assessor to the "Contribution Commission" and was summoned to Court to meet the French ambassador. In 1549 he assisted in suppressing the Norfolk rising and received £272, 19.6 for his services. He proclaimed Queen Mary at Northampton on 18 July, 1553, and accompanied her on her entry into London. He was one of those appointed on 3 August, 1553, "to stave the assemblies in Royston and other places of Cambridgeshire". In April, 1554, he conveyed a prisoner from Peterborough to be examined by the Privy Council in London. In May, 1554, he was one of the custodians of the Earl of Devonshire.

Although by Royal Charter dated 2 April, 1557, he was named grand prior, it was not till 30 November that the order was re-established in England with four knights under him, and he was solemnly invested. In the meantime Sir Richard Shelley had been made turcopolier at Malta. The order was endowed by the queen with lands to the yearly value of £1436. He sat in the House of Lords in January, 1557-8, and sent his proxy to the first parliament of Queen Elizabeth. He was buried at Rushton with great pomp on 16 March, 1558-9.

JOHN B. WAINEWRIGHT

Treviso

Treviso

(TARVISINA).

Diocese in Venetia (Northern Italy). The capital is surrounded by the River Sile; its environs are the favourite summer resort of the Venetian nobility.

The cathedral, erected in 1141, was transformed in 1485 by Tullio and Pietro Lombardo, and modernized in 1758 with five cupolas; the entrance portal dates from 1835. It contains sculptures by the brothers Bregno and by Antonio Lombardo; paintings by Paris Bourdone, Titian, and Francesco di Dominicis; frescoes by Seitz, Pordenone, etc.; and the tombs of Canon Malchiostro and the Bishop Zanetti. The Church of S. Nicolò, designed in Gothic style by Fra Nicolo da Smola, was erected by Benedict XI, who presented it to the Dominicans. It now belongs to the seminary which occupies the ancient convent of Santa Maria Maddalena; it has paintings by Paolo Veronese.

Among the civil buildings is the Palazzo dei Trecento (1184) containing the Galleria Comunale with pictures by Lotto, Tintoretto, Bordone, Bellini. Natives of Treviso were: the painters Paris Bordone, Pier Maria and Girolamo Pennacchi; the historian Odirigo Rinaldi (Raynaldus), continuator of Baronius; the jurist Bartolommeo Zuccati; the Carmelite Francesco Turchi, mathematician and architect; and the poet Venantius Fortunatus.

Tarvisium was an ancient city of the Veneti, which became Roman in 183 B.C. and was a stronghold of the Goths in the Gothic war. Through the intercession of Bishop Felix the city was spared during the Lombard invasion (569) and became the seat of a duchy. Charlemagne made it a marquisate, extending from Belluno to Ceneda, and from the Adige to the Tagliamento. In 922 Treviso, which was under episcopal jurisdiction, was sacked by the Hungarians. In 1014 it was organized as a commune ruled by consuls, with a council of three hundred citizens. A member of the Lombard league, it later made peace with Barbarossa, who respected its constitution, but appointed as podesta (1173) Ezzellino il Monaco. He was expelled, and thereafter the Ezzelini and Da Canino took turns in the office. Notwithstanding a war with Padua, Belluno, and Feltre, the city flourished through its riches, commerce, and the spirit of its inhabitants. Released from the tyranny of Ezzelino IV (1231-50), Treviso was an independent commune until Emperor Henry VII in 1309 made Riccardo da Canino imperial vicar. He was treacherously slain and succeeded by his son Guecello, against whom a conspiracy was formed. In 1314-18 Can Grande della Scala of Verona annexed Treviso to his state, but the inhabitants revolted to Frederick the Fair of Austria, and afterwards to Louis the Bavarian. Meanwhile, Guecello Tempesta was proclaimed ruler and liberator of the city (1328), but after four years he induced the citizens to recognize the supremacy of Can Grande. Becoming involved in war with Venice, Treviso was ceded to that city (1338), captured by Leopold of Austria (1383), sold to the Carrar, lords of Padua, taken by Gian Galeazzo Visconti, Duke of Milan (1404), and finally returned to Venice. In 1848 the papal troops at Treviso, commanded by Ferrari, sustained a siege by the Austrians. The university, established at Treviso in 1317 by Frederick the Fair, did not flourish. The republic of Venice maintained the school until the conquest of Padua (1405), with its great university, resulted in closing the one at Treviso.

Treviso probably received the Gospel from Aquileia. The first bishop of certain date was Jucundus, who in 421 took part in the consecration of the church of the Rialto in Venice. The bishops of Treviso who participated in the schism of the Three Chapters were: Felix (see above); Rusticus, present at the Council of Murano (588); and Felix II, who signed the petition to the Emperor Maurice. In 905 Bishop Adelbert received from King Berengar the temporal jurisdiction of the city, which extended to Rozo (969-1001) and Rolando who adhered to the schism of Clement III. Bishop Tiso (1212-45) suffered from the tyranny of Ezzelino, and Alberto Ricco, O. M. (1255), was imprisoned for preaching against him. Successive bishops were: Loto Gambacurta (1394), exiled by the Florentines from his archbishopric of Pisa; Giovanni Benedetti, O. P. (1418), who reformed many convents of his order and concubinary priests; Ludovico Barbo (1437), Abbot of S. Giustina of Padua, and reformer of the Benedictine order; Ermolao Barbaro (1443), a learned and zealous prelate; Cardinal Pietro Riario, O. M. (1471); Fra Giovanni Dacri (1478), formerly

general of the Franciscans, who restored the cathedral and reorganized the revenues of the bishopric, leaving many pious foundations; Nicolò Franco (1486), papal nuncio in various countries; Francesco Cornaro (1577), who founded a seminary, introduced the reforms of the Council of Trent, resigned his see, and was created cardinal; Gian Antonio Lupo (1646), who conflicted with his canons; Giambattista Saniedo (1684), zealous and beneficent pastor; Fortunato Morosini (1710), who enlarged the Seminary; Bernardino Marini (1788-1817), a canon of the Lateran, present at the Council of Paris, 1811, who united the abbey *nullius* of Novisa with the See of Treviso; and Giuseppe Giapelli, appointed by the Austrian Government, but not recognized by the Holy See, so that the diocese remained in turmoil until the death of the candidate.

In 1818 Treviso passed from the metropolitan jurisdiction of Aquileia (Udine) to that of Venice. Bishop Giuseppe Grasser (1822) healed the evils caused by the interregnum, Bishop Antonio Farina (1890) conferred sacred orders on Giuseppe Sarto, now Pius X. United with Treviso is the ancient Diocese of Asolo, the bishops of which are unknown from 587 (Agnellus) until 1049 (Ugo), and that of Heraclea (Città Nova), a city founded in the times of the Byzantine emperor Heraclius, as a refuge for the inhabitants of Opitergium (Oderzo), who with their bishop (Magnus) had been exiled by the Lombards. Twenty-six bishops are known, from 814 until the union of the see with Treviso, 1440. The Diocese of Treviso has 215 parishes with 386 secular and 30 regular clergy, 5 monasteries, 27 convents, 2 educational institutions for boys, five for girls, and 414,330 souls.

U. BENIGNI

Jewish Tribe

Jewish Tribe

(*Phyle, tribus.*)

The earlier Hebrew term rendered in our English versions by the word "tribe" is *shebet*, while the term *matteh*, prevails in the post-exilic writings. The two terms are nearly synonymous, signifying "branch", "rod", "staff", "sceptre", and in the sense of "tribe" are used figuratively with probable reference to the derivation of the tribe as a branch of the family of Jacob (*stirps*), or perhaps signifying originally a company led by a chief with a staff or sceptre.

Arrangement by clans represents a form of social and political organization natural to Semitic nomads, as may be observed among the Bedouins of today, and the division of the Jewish people into twelve tribes is a prominent feature of the Old Testament records, while frequent allusion to the same is found in the New Testament writings. There is a difference of opinion among scholars as to the origin and nature of this most famous of all known tribal organizations. If the Biblical

account of the patriarchs be accepted as personal (not tribal) history, each of the twelve tribes owed its origin to direct lineal descent from one of the sons or grandsons of Jacob. The sons of Jacob by Lia were Ruben, Simeon, Levi, Juda, Issachar, and Zabulon; and by Lia's handmaid Zelpha, Gad and Aser, who were legally reputed according to the custom of the time as children of Lia. Jacob's sons by Rachel were Joseph and Benjamin, and by Rachel's handmaid Bala, Dan and Nephtali. The names of all of these, with the exception of Joseph, were given to their respective groups of descendants in the tribal organization, but instead of the tribe of Joseph we find in most of the lists and in the final traditional classification two tribes named after his two sons, Ephraim and Manasses.

Thus, in reality, there were thirteen tribes in all but they are habitually referred to as twelve, doubtless because in the distribution of the land after the conquest of Palestine only twelve tribal territories were assigned, the tribe of Levi being distributed among the others because of its priestly functions and Divine inheritance. To this may be added the fact that the sons of Jacob or Israel were twelve, to say nothing of the probable artificial influence of this mystic number. According to this traditional view the origin of the tribes was due to the fact that the descendants of each of these thirteen fathers or eponyms kept together, forming as many social groups which were to some extent augmented by the inclusion of foreign slaves and wives. Another theory, which has prevailed to a considerable extent among modern scholars, interprets as tribal history and tradition much of what is told of the patriarchal eponyms in personal form. The tribes, according to this view, were not constituted by a subdivision of Israel, but rather the nation was formed originally by the aggregation of some of the earlier tribes which had themselves grown out of the union of pre-existing groups of families and clans. Little is historically known of the tribal system during the nomadic period, but it is assumed on general grounds that the organization was much similar to that of the nomadic Arabs among whom the unifying forces are chiefly the blood bond and the tribal or family cult. At the time of the invasion of Palestine the nation was still in the stage of loose tribal confederation and the war was waged by tribes and subdivisions of tribes, sometimes acting separately, sometimes in combination with others (Judges, i, 3, iv, v). The process of consolidation went on after the conquest; the kindred families and clans naturally settled in the same neighbourhood, and finally the complete tribal organization was evolved with territorial boundaries and independent historical traditions.

It would seem that prior to the monarchy the tribal districts varied in number and extent, as may be gathered from the discrepancies that occur in the Biblical descriptions of their respective boundaries, nor do they appear to have had any fixed or continuous political organization. Aggression by a foreign enemy would unite the clans of a tribe or even several distinct tribes under a common leader as in the case of Gideon and others of the judges; but there is no intimation that in times of peace the tribe was governed by any single chief, though mention is occasionally made of "ancients" and "princes" (Judges, x, 18; xi, 5; 1 Kings, iv, 3; xi, 3; 11 Kings, xix, 11; etc.). These were probably the heads of the clans and families of which the tribes were composed. After the establishment of the monarchy the autonomy and importance of the tribe as a political unit gradually waned, and at length the tribal names came to be little more than geographical expressions. On the other hand,

veneration for the ancient tribes as social organizations with their religious and family traditions seems to have increased as time went on, and not only after the exile but also in the New Testament times we find much care displayed in recording the particular tribe or even family to which various persons are said to belong. The descendants of kings and other noted Old-Testament personages could, of course, name their tribe, but in the case of more obscure individuals it is likely that the tribal indication is inferred from the fact of family residence in a particular district of Palestine.

JAMES F. DRISCOLL

Diocese of Tricarico

Diocese of Tricarico

(TRICARICENSIS.)

Located in the Province of Potenza in the Basilicata (Southern Italy), near the River Perrola. In 1694 it was almost destroyed by earthquake. The cathedral was erected in 968 by Polyeuctos, Patriarch of Constantinople. The names of the bishops, then of the Greek Rite, are not known. Of the Latin bishops after the Norman conquest the first was Arnolfo (1068); others were: the theologians Palmerio di Gallusio (1253) and Fra Nicolo; Cardinal Pier Luigi Caraffa (1624), who restored the cathedral and founded the seminary. From 1805 to 1819 the see remained vacant. The diocese is suffragan of the metropolitan See of Acerenza and Matera; it has 25 parishes, 80,540 souls, 180 secular and regular clergy, one educational institution for boys and one for girls.

Cappelletti, *Le Chiese d'Italia*, XX, 481.

U. BENIGNI

Charles Joseph Tricassin

Charles Joseph Tricassin

One of the greatest theologians of the Capuchin Order, b. at Troyes; d. in 1681. There is but little positive information about his life. By continued study he acquired a profound knowledge of the writings of Augustine, and explained and defended with success his doctrine of grace against the Jansenists. Tricassin's writings were violently attacked; they treat exhaustively both the Augustinian doctrine of grace and that of St. Bonaventure. They comprise in the main: "De praedestinatione hominum ad gloriam" (Paris, 1669 and 1673), to which was added "Supplementum Augustinianum" (1673), the work being intended to prove predestination for foreknown merits; "De indifferenti lapsi hominis arbitrio sub gratia et concupiscentia" (Paris, 1673), a thorough explanation of many Augustinian tenets; "De necessaria ad salutem gratia omnibus et singulis data" (Paris, 1673), proof of the sufficient grace for every individual, with special emphasis upon difficult passages in Augustine's writings on which a full understanding of his doctrine depends; "De natura peccati originalis" (Paris, 1677); "De causa bonorum operum" (Paris, 1679), a proof of the virtue of the hope of eternal life and of the fear of hell; a "Supplementum" (Paris, 1679) shows that attrition

in connection with the Sacrament of Penance is sufficient according to Augustine and the Council of Trent. Tricassin also published a commentary to several of Augustine's works to prove that Augustine calls the Pelagians heretical teachers, because they do not concede any necessity of grace for the will. Tricassin published at Paris in 1678 a French translation with explanations and applications of Augustine's books, "De gratia et libero arbitrio", "De correptione et gratia" and also a treatise to prove that the Cartesian philosophy was contrary to faith. The importance of the author and his writings is best shown by the fact that the Jansenists bought up his books and burned them because they could not answer them.

FATHER ODORICK

Tricca

Tricca

Titular see, suffragan of Larissa in Thessaly. It was an ancient city of Thessaly, near the River Peneius and on the River Lethaeus which devastated it in 1907. It is mentioned in Homer (Iliad, II, 729; IV, 202) as the Kingdom of Machaon and Podaleirius, sons of AEsculapius and physicians of the Greek army. It possessed the oldest known temple of AEsculapius, which was discovered in 1902, with a hospital for pilgrims. Tricca is mentioned by other writers, but not in connection with important events. It was a suffragan of Larissa at an early date and remained so until 1882 when this portion of Thessaly was annexed to the Kingdom of Greece, Since then the see, which bears the names of Triccala and Stagoi, is dependent on the Holy Synod of Athena. Socrates (V 22), Sozomenes (V 12), and Nicephorus Callistus (XII, 34) say that Heliodorus, probably the same as the author of the romance of the Ethiopian women or of Theagenes and Charicles (third century), became Bishop of Tricca. Another bishop, to whom have been wrongly attributed commentaries on the Acts of the Apostles, the Epistle of St. Paul and the Catholic Epistles (for the works published in his name are not his), lived at the end of the sixth century. He was an Origenist and Monophysite who wrote a commentary on the Apocalypse (Petrides "OEcumenius de Tricca, ses oeuvres et son culte" in "Echos d'Orient", VI, 307-10; Le Quien, "Oriens christ.", I, 117-20). Some Latin titular bishops in the fifteenth and sixteenth centuries are also known (Eubel, "Hierarchia catholica medii aevi," II, 280; III, 338). Tricca, now Triccala, is the capital of the nome of the same name and has 28,000 inhabitants: Greeks, Turks, and Jews.

S. VAILHÉ

Diocese of Trichinopoly

Diocese of Trichinopoly

(TRICHINOPOLITAN.)

Located in India, suffragan of Bombay, comprises the south east portion of the peninsula as far as the Western Ghauts by which it is separated from the dioceses of Verapoly and Quilon; bounded

on the north by the Dioceses of Kumbakonam and Coimbatore, on the north-east by a portion of the Diocese of Saint Thomas of Mylapur on the east and south by the sea. In order to facilitate administration the diocese is divided into three districts, northern, central, and southern, each under a superior having his residence at Trichinopoly, Madura, and Palamcottah respectively; and these districts are again subdivided into pangus or sections, of which there are in all fifty-two. The Catholic population, according to the census of 1907, is 245,255, who are served by 60 priests of the Toulouse province of the Society of Jesus (41 European and 19 native) and 19 native secular priests, helped by 156 catechists. Besides these, 53 other priests, European and native, are engaged chiefly in educational work at Trichinopoly, Shembaganur, Palamcottah, etc. A novitiate, juniorate, and scholasticate of the Society is established at Shembaganur. There is a congregation of Brothers of the Sacred Heart (native lay brothers) engaged in catechetical work and teaching at Palamcottah, Madura, Panchampetti, and Trichinopoly, and also the following orders of nuns: Daughters of the Cross of Annecy at Trichinopoly and Tuticorin; Sisters of St. Joseph of Lyons at Madura; native nuns of Our Lady of Seven Dolours and native nuns of St. Anna, both with their novitiate at Trichinopoly; finally the Oblates -- native women devoted to the baptism of pagan children and the instruction of village girls. The places of worship in the diocese amount to 282 churches and 811 chapels. There are also fifteen churches and some chapels scattered over the diocese which (by exemption) belong to the padroado jurisdiction of the Diocese of Saint Thomas of Mylapur.

HISTORY

The present diocese comprises a large portion of the ancient Madura mission, so that down to the year 1836 its history will be found under MANDURA MISSION. In that year the district was once entrusted to the Society of Jesus, and its first vicar Apostolic was appointed in 1845. In 1886, on the establishment of the hierarchy, the vicariate became a diocese suffragan of Pondicherry; but in 1893 it was made suffragan of Bombay, as it still remains. Succession of prelates: Alexis Canoz, S.J., vicar Apostolic 1847, became first bishop in 1887, in 1888; John Mary Barthe, S.J., in 1890, resigned on account of failing sight in 1909; A. Faisandier, S.J., coadjutor bishop from 1909. Educational institutions for boys: St. Joseph's College, Trichinopoly, first opened at Negapatam in 1846, transferred to Trichinopoly in 1883, with about 1800 pupils, prepares students for the degree of M. A. in Madras University; boarding-house for native Catholic boys; ecclesiastical seminary to prepare boys for one at Kandy; lower secondary school for Europeans and Eurasians and seven primary schools for natives, with total of 600 pupils, all at Trichinopoly; St. Xavier's High School, Palamcottah, with boarding-house and St. Anthony's primary school; St. Xavier's High School, Tuticorin; St. Mary's High School, Madura; lower secondary schools at Palamcottah, Dindigul, Uttamplayama; industrial schools at Trichonopoly, Irudaiyakulam, and Adaikalaburam; training schools for teachers at the same places; primary schools in the diocese number 260, with 11,027 pupils. For girls: St. Joseph's High School and lower secondary school, Trichinopoly, for European and Eurasian girls, both under Daughters of the Cross; three secondary schools for native girls (Trichonopoly) under Sisters of Our Lady of Seven Dolours, also training schools for mistresses;

lower secondary schools at Palamcottah, Madura, Tuticorin, Vadakangulam, Manapad, Satankulam primary schools at Dindigul, Sarakanai and several other villages; industrial school (Tuticorin) under Daughters of the Cross. Various institutions: orphanages for children born of pagan parents at Trichinopoly, Madura, and Adaikalaburam, and one for girls at Pallamcottah; dispensaries in five places; asylums for native widows at Trichinopoly, Sarakanai, Adaikalaburam, and for Brahmin widows at Trichinopoly; St. Mary's Tope, a settlement in Trichinopoly for Brahmin converts, opened in 1893, has (1912) 45 residents; catechumenates for men and women in three places, besides associations of voluntary catechists who give their leisure time to teaching on Sundays and feasts; St. Joseph's College Press, which publishes the "Tamil Messenger of the S. Heart", the "Morning Star", devotional books, etc. There are over 100 sodalities in the diocese.

ERNEST R. HULL

Trichur

Trichur

(TRICHURENSIS.)

Vicariate Apostolic in India, one of the three vicariates of the Syro-Malabar Rite, bounded on the north by the diocese of Mangalore, east by the diocese of Coimbatore, south by the Vicariate of Ernakulam, and on the west by the Indian Ocean. According to the census of 1900 the Catholics of the, Syrian Rite in the vicariate numbered 91,998, having 63 churches and 23 chapels served by 66 native secular priests. There are also three monasteries of Tertiary Carmelite monks at Elthuruth, Ampalacad, and Paratti, containing about 20 professed and 11 lay brothers, besides a number of novices; also four convents for Carmelite nuns with 31 professed besides novices, postulants and lay sisters. There are in the vicariate 2 high schools, 2 lower secondary schools, and 184 elementary schools, the number of children under training being 19,093. A seminary at Trichur prepares candidates for Puthenpally or Kandy. The vicar Apostolic (John Menacherry, appointed 1896) resides at Trichur. For the ancient history of the Christians of the Syro-Malabar Rite see THOMAS CHRISTIANS. They remained under the jurisdiction partly of Cranganore, till 1887, when on the establishment of the hierarchy, the churches of the Syrian Rite were separated from those of the Latin Rite and placed under two vicars Apostolic with their centres at Trichur and Kottayam respectively. Later on, in 1896, a new division was made and three vicariates established, viz. of Trichur, Ernakulam, and Changanacherry. These three vicariates cover the same ground as the Archdiocese of Verapoly, the Archbishop of Verapoly exercising territorial jurisdiction over all Christians of the Latin Rite, while the vicars Apostolic hold personal and quasi-territorial jurisdiction over all of the Syrian Rite. The vicariates are nominally classed as belonging to the province of Verapoly, but without the usual ecclesiastical connection.

(See CHANGANACHERRY, VICARIATE APOSTOLIC OF; VERAPOLY, ARCHDIOCESE OF; DAMAO, DIOCESE OF; EASTERN CHURCHES; THOMAS CHRISTIANS.)

Madras Catholic Directory, 1910.

ERNEST R. HULL

Tricomia

Tricomia

Titular see, suffragan of Caesarea in Palaestina Prima. It is mentioned in George of Cyprus (*Descriptio orbis romani*, ed. Gelzer, 1024) and, according to the other cities preceding or following its name, would seem to have been situated in southern Palestine. Malalas (*Chronographia*, V, in P.G., XCVII, 236) relates an ancient legend regarding Tricomia, which he calls Nyssa and confounds with Scythopolis. According to his account it was the site of a famous temple of Artemis. It was never a Greek see, and Le Quien (*Oriens Christ.*, III, 677) is at fault in his complaint of being unable to find any bishops. The Roman Curia, taking the "*Descriptio orbis romani*" of George of Cyprus, a civil document, for a "*Notitia episcopatum*", has made Tricomia a titular see. It is now a Mussulman village called Terkoumieh on a high hill between Hebron and Bet-Djibrin. It must not be confused with another Tricomia in Arabia which was the camping place of the *equites promoti Illyriciani*.

S. VAILHÉ

Triduum

Triduum

(Three days).

A time frequently chosen for prayer or for other devout practices, whether by individuals in private, or in public by congregations or special organizations in parishes, in religious communities, seminaries, or schools. The form of prayer or devotion depends upon the occasion or purpose of the triduum. The three days usually precede some feast, and the feast then determines the choice of the pious exercises. In liturgical usage there is a triduum of ceremonies and prayers in Holy Week; the Rogation Days (q.v.); the three days of litanies prior to the feast of the Ascension, and the feasts of Easter and Pentecost, with the first two days of their octaves. There is ecclesiastical authorization for a triduum in honour of the Holy Trinity, of the Holy Eucharist, and of St. Joseph. The first of these, instituted Pius IX, 8 August, 1847, may be made at any time of the year in public or private, and partial or plenary indulgences are attached to it on the usual conditions. The second, also indulgenced, was instituted by Pius X, 10 April, 1907, for the purpose of promoting frequent Communion. The time for it is Friday, Saturday, and Sunday after the feast of Corpus Christi, though the bishops may designate any other more convenient time of the year. Each day there should be a sermon on the Holy Eucharist and Benediction of the Blessed Sacrament, and on Sunday, there should be besides a sermon on the Gospel and on the Holy Eucharist, at the parochial Mass. This triduum is specially for cathedral churches, though the bishops may also require other churches to have it. The prayer, "O Most Sweet Jesus" (*Dulcissime Jesu*), as given in the "Raccolta", is

appointed for reading during Benediction. The triduum in honor of St. Joseph, prior to his feast on 19 March, was recommended by Leo XIII in the Encyclical "Quamprimum pluribus" (15 August, 1889), with the prayer, "To thee, O blessed Joseph." The most frequent occasions for a triduum are: when children are in preparation for their first Communion; among pupils in school at the beginning of the scholastic year; among seminarians at the same time; and in religious communities for those who are to renew their vows yearly or every six months. The exercises of these tridua are mainly meditations or instructions disposing the hearers to a devout reception of the sacraments of penance and of Holy Communion and to betterment of life.

ST. JOHN, *The Raccolta* (6th ed., London, 1912); BERINGER, *Die Ablassse, ihr Wesen u. Gebrauch* (Paderborn, 1900, tr., Fr., Paris, 1905).

JOHN J. WYNNE

Diocese of Trier

Trier

(TREVIRENSIS)

Diocese; suffragan of Cologne; includes in the Prussian province of the Rhine the governmental department of Trier, with the exception of two districts administered by mayors, and the governmental department of Coblenz with the exception of ten such districts that belong to the Archdiocese of Cologne; it also includes the Principality of Birkenfeld belonging to the Grand Duchy of Oldenburg (see map to article GERMANY). The diocese is divided into 46 deaneries, each administered by a dean and a definator. In 1911 it comprised 750 parishes, 28 parishes administered by vicars, 200 chaplaincies and similar offices, 70 administrative and school offices. In 1912 there were 711 parish priests, 28 parish vicars, 210 chaplains and curates, 122 ecclesiastics in other positions (administration and schools), 65 priests either retired or on leave of absence, 105 clergy belonging to the orders, 1,249,700 Catholics, and 450,000 persons of other faiths. In most of the country districts the population is nearly entirely Catholic; in the mining and manufacturing districts on the Saar, as well as on the Hunsrück and in the valley of the Nahe River, the Catholic faith is not so predominant. The cathedral chapter has the right to elect the bishop; besides the bishop there is also an auxiliary bishop. The chapter consists of a provost, a dean (the auxiliary bishop), 8 cathedral canons, 4 honorary canons; 6 curates are also attached to the cathedral. The educational institutions of the diocese for the clergy are the episcopal seminar for priests at Trier, which has a regent, 7 clerical professors, and 220 students, and the gymnasial seminaries for boys at Trier and Pr m.

Since the close of the *Kulturkampf* the religious orders have prospered greatly, and in 1911 there were in the diocese: a Benedictine Abbey at Maria-Laach containing 26 fathers, 80 brothers; a Franciscan monastery on the Apollinarisberg at Reimagen, 9 fathers, 8 brothers; 2 houses of the Capuchins, 18 fathers, 12 brothers; 1 house of the Oblates, 5 fathers, 21 brothers; 2 houses of the Pallotines, 9 fathers, 24 brothers; 1 house of the Redemptorists, 9 fathers, 8 brothers; 1 house of

the White Fathers, 5 fathers, 5 brothers; 1 house of the Fathers of the Divine Word, 21 fathers, 50 brothers; 126 Brothers of Charity in 4 houses, and 144 Brothers of St. Francis in 7 houses. The female orders and congregations in the diocese in 1911 were: Benedictine Nuns of the Perpetual Adoration, 1 house with 37 sisters; Sisters of St. Charles Borromeo, 71 houses with 500 sisters; Servants of the Sacred Heart of Jesus, 4 houses, 41 sisters; Serving-Maids of Christ, 30 houses, 193 sisters; Dominican Nuns, 2 houses, 69 sisters; Sisters of St. Francis from the mother-houses at Aachen, Heithuizen, Olpe, and Waldbreitbach, 94 houses, 476 sisters; Capuchin Nuns, 1 house, 10 sisters; Sisters of St. Clement, 1 house, 6 sisters; Nuns of the Visitation, 1 house, 50 sisters; Sisters of the Holy Spirit, 47 houses, 300 sisters; Sisters of the Love of the Good Shepherd, 2 houses, 125 sisters; Sisters of the Poor Child Jesus, 1 house, 9 sisters; Sisters of St. Joseph, 1 house, 20 sisters; Ursuline Nuns, 5 houses, 220 Sisters; Sisters of St. Vincent de Paul, 7 houses; 30 sisters. The most important church of the diocese is the cathedral, the oldest church of a Christian bishop on German soil. The oldest section of the building goes back to the Roman era and was a church as early as the fourth century. In the course of time other parts were added which belong to all forms of architecture, although the Romanesque style preponderates. The cathedral contains the remains of twenty-five archbishops and electors as well as those of the last four bishops of Trier. The most precious of its numerous treasures is the Holy Coat of Christ, which, according to legend, was given to the Church of Trier by St. Helena. Two exhibitions of this venerable relic are worthy of special note: that of 1844, connected with the rise of the sect of German Catholics, and the one held in 1891, which attracted over two million pilgrims. Other noted churches in Trier are: the Church of Our Lady, one of the most beautiful ecclesiastical monuments of Gothic architecture, built 1227-43; the Church of St. Paulinus or of the Martyrs, the burial place of Bishop Paulinus, erected in 1734 in Rococo style to replace the old church destroyed by the French in 1674; the thirteenth-century Romanesque church of the former Benedictine Abbey of St. Matthias, containing the grave of St. Matthias, the only grave of an Apostle in Germany; it is much visited by pilgrims. Other noted churches of the diocese are: the churches of St. Castor and Our Lady at Coblenz, the abbey church of Maria-Laach, the old monastery churches of Pr m, M nstermaifeld, and Merzig; the Church of St. Maria at Oberwesel, the Gothic churches of Andernach, Boppard, Remagen, Sinzig, and of other places on the Rhine and the Moselle.

HISTORY

The beginnings of the see of Trier are obscure. From the time of Diocletian reorganization of the divisions of the empire, Trier was the capital of Belgica Prima, the chief city of Gaul, and frequently the residence of the emperors. There were Christians among its population as early as the second century, and there was probably as early as the third century a bishop at Trier, which is the oldest episcopal see in Germany. The first clearly authenticated bishop is Agricinus who took part in the Council of Arles in 314. His immediate successors were St. Maximinus who sheltered the excommunicated St. Athanasius at Trier, and St. Paulinus, who was exiled to Phrygia on account of his opposition to Arianism. Little is known of the later bishops up to the reign of Charlemagne;

during this intervening period the most important ones were St. Nicetius (527-66) and Magnericus (d. 596), the confidant of the Merovingian king, Childebert II. The bishops during the reign of Charlemagne were: Wiomad (757-91), who accompanied the emperor on his campaign against the Avars; Richbod (792-804), one of Alcuin's pupils; and Amalarius Fortunatus (809-14), sent by Charlemagne as ambassador to Constantinople, and the author of liturgical writings. Charlemagne's will proves that Trier at this era was an archdiocese; Metz, Toul, and Verdun are mentioned as its suffragans. In 772 Charlemagne granted Wiomad complete immunity from the jurisdiction of the ruling count for all the churches, monasteries, villages, and castles belonging to the Church of St. Peter at Trier. In 816 Louis the Pious confirmed to Archbishop Hetti (814-47) the privileges of protection and immunity granted by his father. At the partition of the Frankish empire at Verdun in 843, Trier fell to Lothair's empire; at the partition of Lothair's empire at Mersen in 870, it fell to the East-Frankish kingdom which later became the German Empire. However, after the death of Louis the Child, the lords of Lorraine separated from the East-Frankish Kingdom and became vassals of the West-Frankish ruler King Charles the Simple, until Henry I conquered the country for Germany again. Archbishop Ratbod (883-915) received in 898 complete immunity from all state taxes for the entire episcopal territory from the King of Lorraine and Burgundy, Swentibold, son of Emperor Arnulf. He obtained from Louis the Child the district and city of Trier, the right to have a mint and to impose customs-duties; from Charles the Simple he gained the right of a free election of the Bishop of Trier. In this way the secular possessions of the bishops of Trier, which had sprung from the valuable donations of the Merovingian and Carolingian rulers, were raised to a secular principality. Archbishop Ratbert (931-56), brother-in-law of King Henry I, was confirmed by Otto I in all the temporal rights gained by his predecessors.

Archbishop Poppo (1016-47), son of Margrave Leopold of Austria, did much to enlarge the territory owned by the church of Trier. During the strife over Investiture, Engelbert of Ortenburg (1078-1101) and Bruno of Laufen (1102-24) belonged to the imperial party. Albero of Montreuil (1131-52) had, as Archdeacon of Metz, opposed lay Investiture; during his administration the cathedral school of Trier reached its highest fame. From about 1100 the Archbishop of Trier was the Arch-Chancellor of Gaul, for the German emperor, and thus became the possessor of an imperial office and an Elector of the German king and emperor. As the archbishops of Trier were among the leading spiritual princes of the empire, they became involved in all the struggles between pope and emperor. While Hillin (1152-69) was a partisan of Frederick Barbarossa, Arnold I (1169-83) made successful efforts to bring about a reconciliation between the emperor and pope (1177). John I (1190-1212) was excommunicated by Innocent III on account of his adherence to King Philip of Swabia; Bishop John increased the possessions of the archdiocese by gaining several countships and castles. Theodorik II of Wied (1212-42) belonged to the party of Frederick II, while Arnold II of Isenburg (1242-59) opposed the emperor. Henry II of Vinstingen (1260-86) was the first Archbishop of Trier who took part in the election of a German emperor as one of the seven Electors; the electoral dignity, together with the right to the first vote, was confirmed by the Golden Bull in 1356. As in other German dioceses, so also in Trier, the rising cities, especially Trier and Coblenz,

sought to rid themselves of the suzerainty of the bishop. Such attempts were crowned with considerable success during the rule of Archbishop Diether of Nassau (1300-07), brother of King Adolph of Nassau. On the other hand, Baldwin of Luxembourg (1308-54), the most noted of the medieval archbishops of Trier, was able to restore and raise the importance of the See of Trier by his wide-reaching activity both in secular and spiritual affairs. He brought the cities of Coblenz and Trier under his suzerainty again, and was the actual organizer of his possessions as an electoral state. Werner of Falkenstein (1388-1418), one of Baldwin's successors, acquired Limburg on the Lahn; during the great Western Schism he held loyally to Gregory XII. After the death of Otto of Ziegenhain (1418-30), who laboured zealously for the reform of the Church, there was a double election; upon this Pope Martin V appointed a third person archbishop. During the struggle of the candidates to secure the diocese it suffered severely. James of Sierck (1439-56) sought to restore order in the confused finances of the diocese. He was deposed by Eugenius IV as an adherent of the Council of Basle and of the Antipope Felix V, who was elected there. However, the deposition had no effect as the German Electors opposed it. John II, Margrave of Baden (1456-1503), promoted the reform of the Church. He left the diocese heavily in debt, and these debts were increased by his great-nephew and successor, James II of Baden (1503-11).

The Reformation limited the spiritual jurisdiction of the Archdiocese of Trier. Although the energetic Richard von Greiffenklau (1511-31) vigorously opposed the Reformation, still he could not prevent the new doctrine from gaining a foothold in the district of the Hunsrück, and in that on the right bank of the Rhine. He defeated the attacks of Franz von Sickingen upon the city of Trier, as well as the efforts of that city to become independent of the bishop. In 1512 he exhibited the Holy Coat for the first time and spent the donations of the pilgrims on the cathedral. John II von Metzenhausen (1531-40) attempted reforms which were frustrated by his death. John II von Hagen (1541-47) sent a representative to the Council of Trent and began earnest measures of reform. John V von Isenburg (1547-56) attended the council himself, but was recalled home by the incursion of Margrave Albrecht of Brandenburg-Ansbach into the archdiocese, which the margrave devastated horribly. John VI von der Leyen (1556-67) was able to regain Trier, but could not prevent the French from taking possession of his three suffragan dioceses, Metz, Toul, and Verdun. He checked the further spread of the new doctrines by calling the Jesuits into his diocese (1561). James III von Eltz (1567-81) and John VII von Schönenberg (1581-99) carried out in their possessions the reformatory decrees of the Council of Trent. The former secured the administration of the Abbey of Prüm, whereby the secular possessions of the archdiocese reached their final extent; the latter established two seminaries at Coblenz and Trier. Lothair von Metternich (1599-1623) joined the Catholic League in order to secure the stability of the Catholic Church in Germany. In this way his see became involved in the Thirty Years War. His successor, Philip Christopher von Stern (1623-52), withdrew from the League, formed an alliance with France, and permitted the French to garrison the fortress of Ehrenbreitstein. When he made advances to the Swedes he was captured by the Spanish troops in 1635 under suspicion of heresy, and was kept a prisoner at Vienna until 1645. In the struggle between the imperial troops and the French the archdiocese was often devastated.

Charles Caspar von der Leyen (1652-76) had scarcely repaired the damage done by the Thirty Years War by an excellent administration, when the marauding wars of Louis XIV of France brought fresh misery upon the country. John Hugo von Orsbeck (1676-1711) refused to recognize the seizure of some of his territories and their incorporation into France by Louis XIV through what was called the "reunions", neither would take the oath of loyalty to Louis. Consequently, during the years 1684-97 large parts of the see were garrisoned by French troops.

During the long period of peace in the eighteenth century the archdiocese had excellent rulers. Francis Louis von Pfalz-Neuburg (1716-29) gave particular attention to the organization of the administration of justice, and raised the decaying university by establishing new professorships. Francis George von Sch nborn (1729-56) encouraged learned studies and founded a university library and building. The short administration of John Philip von Walderdorf (1756-68) was followed by the reign of the last Elector of Trier, Clement Wenceslaus, Duke of Saxony (1768-1812), who was also Bishop of Augsburg. He gained a reputation by improving the schools and reforming the monasteries, but, on the other hand, influenced by the ideas of the "Enlightenment", he supported Febronianism, shared in the labours of the Congress of Ems (q.v.), and also was involved in the dispute about the nunciatures (see NUNCIO). After the outbreak of the French Revolution the territories of Trier, especially Coblenz, became the gathering place of the French *émigrés*. In 1794 Trier and Coblenz were besieged by the French. In 1797, by the Peace of Campo-Formio, the part of the archdiocese on the left bank of the Rhine was ceded to France; in 1797 the university was suppressed. In 1801 the Peace of Lunéville gave to France, in addition, the fortress of Ehrenbreitstein. When the German Church was secularized in 1803, the section of the archdiocese on the right bank of the Rhine was also secularized and the greater part of it was incorporated into Nassau. Clemens Wenceslaus renounced his rights in return for an annual pension of 100,000 gulden and withdrew to the Diocese of Augsburg. An ecclesiastical administration, which lasted until 1824, was established in Ehrenbreitstein for the part of the former archdiocese on the right bank of the Rhine. The French Diocese of Trier was established in 1801 for the section of the former archdiocese which had been ceded to France. It embraced hardly a third of the old diocese and was made suffragan to Mechlin. Its first and only bishop was Charles Mannay (1802-16). The Congress of Vienna gave the territory included in this diocese once more to Germany, largely to Prussia and the Grand Duchy of Oldenburg. In 1816 Bishop Charles Mannay resigned his office and retired to France, where he died in 1824 as Bishop of Rennes. For six years the see remained vacant, the administration being conducted in the interim by Hubert Anthony Corden as vicar-general, from 1818 as vicar Apostolic. On the reorganization of the Catholic Church in Prussia in 1821, Trier was revived as a simple diocese by the Bull "De salute animarum", made suffragan to Cologne, and received about its present territory. In 1824 it contained 531 parishes with 580,000 Catholics.

The first bishop of the new diocese was Joseph von Hommer (1824-36). The election of his successor, William Arnoldi (1842-64) which took place in 1839 and was renewed in 1842, was not recognized by the Government until Frederick William IV ascended the throne. Arnoldi did a great deal for the reawakening of Catholic consciousness in Germany. The exhibition of the Holy Coat,

which he brought about in 1844, led to the forming of the sect called German Catholics. He was succeeded by Leopold Pellgram (1865-67), formerly chaplain general of the Prussian army, who was followed by Matthias Eberhard (1867-76), who enjoys the honours of a Confessor of the Faith. Eberhard was one of the first to suffer by the Kulturkampf which broke out in Prussia. After being repeatedly condemned to pay heavy fines he was sentenced on 6 March, 1876, to ten months imprisonment. Trier was one of the dioceses that suffered the most during the Kulturkampf. The number of its parishes robbed of their parish priests amount to 197, while nearly 294,000 Catholics lacked regular spiritual care. After the death of the bishop on 30 May, 1876, the see was vacant for five years and had to be secretly administered by an Apostolic Delegate. Finally in 1881, through the personal efforts of Leo XIII, an agreement was made with the Prussian Government, and Michel Felix Korum (cathedral canon and parish priest of the minster at Strasburg) was appointed Bishop of Trier by the pope, consecrated at Rome on 19 August, and enthroned on 25 September. Up to the present day the bishop has sought to repair the damage inflicted upon his diocese by the Kulturkampf, through the confessional, the pulpit, and religious associational life. He has founded religious institutions for education, and promoted the establishment of numerous houses of the orders. The exhibition of the Holy Coat in 1891 which he carried out was the occasion for impressive demonstrations of Catholic faith and life in Germany (cf. Korum, "Wunder und Gnadenerweise, die sich bei der Ausstellung 1891 zugetragen haben", Trier, 1894).

A complete bibliography is to be found in MARX, *Trevirensia. Literaturkunde zur Gesch. der Trierer Lande* (Trier, 1909). Most important works are: BROUWER AND MASENIUS, *Antiquitatum et annalium Trevirensium libri XXV* (Lige, 1670-71); HONTHEIM, *Hist. Trevirensis diplomatica et pragmatica* (Augsburg and Würzburg, 1750); IDEM, *Prodromus Hist. Trevirensis* (1757); *Gesta Trevirorum*, ed. and its supplementary numbers (Trier, 1901----); *Westdeutsche Zeitschrift f r Gesch. u. Kunst* (Trier, 1882----), with supplementary numbers.

JOSEPH LINS

Francis a Paula Triesnecker

Francis a Paula Triesnecker

Astronomer, b. at Kirchberg on the Wagram, in Lower Austria, 2 April, 1745; d. at Vienna 29 January, 1817. At the age of sixteen he entered the Society of Jesus, and, after several years' study of philosophy (Vienna) and mathematics (Tyrnau), he taught at various Jesuit colleges. After the suppression of the Society he went to Gras, where he completed his theological studies and was ordained shortly afterwards. He soon attained a reputation as a mathematician and astronomer and was appointed assistant to the director of the Vienna Observatory, Father Max Hell, whom he succeeded in 1792. He occupied this post during the remainder of his life. Triesnecker was thoroughly grounded in the science of mathematics and its applications to astronomy; and the accuracy of his observations, which in spite of ill-health he pursued till an advanced age, was universally recognized. His numerous treatises mainly deal with geography and astronomy. A considerable portion of his time was taken up by the "Ephemerides" of Vienna, the editorship of which, after Father Hell's death, he shared with the ingenious computer Burg. In this periodical he published, between the years 1787-1806, his "Tabulae Mercurii, Martis, Veneris, Solares", and the greater part of his micrometrical observations of the sun, moon, planets, and positions of stars. His "Novae motuum lunarium tabulae" were published separately in 1802. Other astronomical investigations may be found in "Zach's monatliche Correspondenz", in the "Commentarii soc. leg. Götting.", and in Bode's "Astron. Jahrbuch". In geography he determined or corrected the longitude and latitude of various places from the best available data. The results of this labour are embodied in the periodicals referred to above, the "Transactions of the Royal Soc. of Bohemia", and Zach's "Allgemeine geographische Ephemeriden". He completed Father Metzburg's triangulation of lower Austria, using it as a basis for the production of a new map of that country, and assisted him with the triangulation of Galicia. The erection of the "New Observatory" of Vienna (which afterwards gave place to the new structure on the "Turkenschanze") was Triesnecker's work. He was a member of the scientific associations of Breslau, Göttingen, Munich, St. Petersburg, and Prague.

Triest-Capo d'Istria

(TERGESTINA ET JUSTINOPOLITANA.)

Suffragan diocese of Görz-Gradiska; exists as a triple see since 1821, when Cittanova (*Æmonia*) and Capodistria (*Ægida*, Capris, Justinopolis) were united to Triest, and its present name was assigned to the see.

St. Frugifer, consecrated in 524, was the first Bishop of Triest; since then it exhibits a long line of eighty-seven bishops. Despite their high character and great abilities, however, these bishops only in rare instances attained to eminence, owing to the small size of their diocese, which was subject to Aquileia, and to the rivalry between Aquileia and Venice. Foremost among the bishops is Enea Silvio de' Piccolomini, later Pope Pius II. Petrus Bonomo, a secretary of Frederick IV and Maximilian I, became Bishop of Triest in 1502, and was known as *pater concilii* in the fifth Lateran Council (1512). Giovanni Bogarino, teacher of Archduke Charles of Styria, was bishop from 1591. Joseph II abolished the Diocese of Triest in 1788, transferring the see to Gradiska. His brother, Leopold II, divided Gradiska into the Dioceses of Gorz and Triest, re-establishing Triest in 1791 and appointing as its bishop, Sigismund Anton, Count of Hohenwart and tutor of his children. Other attempts were made to suppress the see, but the emperor decreed its preservation, and von Buset was appointed bishop. After his death (1803) the see remained vacant eighteen years, owing to the disorders caused by Napoleon. Emperor Franz finally appointed Leonardi as Bishop of Triest. At the Synod of Vienna in 1849, Bartholomew Legat was present; he defended, with considerable fervour, the views of the minority in the Vatican Council. In 1909 Bishop Franz X. Nagi was appointed coadjutor *cum jure successionis* to the ninety-year-old Cardinal Prince-Archbishop Anton Gruscha of Vienna. The see numbers 409,800 Catholics with 291 priests, 81 male religious and 174 nuns.

CÖLESTIN WOLFSGRUBER

Trincomalee

Trincomalee

(TRINCOMALIENSIS.)

Located in Ceylon, suffragan of Colombo, was created in 1893 by a division of the diocese of Jaffna. The diocese comprises the whole of the eastern province as well as the district of Tamankuduwa. Out of a total population of 186,251 the Catholics number 8773, with 28 churches and chapels served by 13 fathers and two lay brothers of the Belgian province of the Society of Jesus, with two missionaries Apostolic. Candidates for the priesthood are sent to Kandy seminary. There are fifty-five schools with 2523 pupils, and one convent of the Sisters of St. Joseph of Cluny with five inmates who conduct an orphanage attached to the convent. The bishop is Charles Lavigne, S.J. (consecrated 1887), who resides at Trincomalee.

Madras Catholic Directory, 1910.

ERNEST R. HULL

Abbey of Trinita di Cava Dei Tirreni

Abbey of Trinità di Cava dei Tirreni

Located in the Province of Salerno. It stands in a gorge of the Finestre Hills near Cava dei Tirreni, and was founded in 980 by Alferio Pappacarbona, a noble of Salerno who became a Cluniac monk. Urban II endowed this monastery with many privileges, making it immediately subject to the Holy See, with jurisdiction over the surrounding territory. In 1394 Boniface IX made it a diocese, but in 1513 Leo X erected the Diocese of Cava, detaching that city from the abbot's jurisdiction. About the same time the Cluniacs were replaced by Cassinese monks. This monastery, an abbey *nullius*, possesses a very rich store of public and private documents, which date back to the eighth century, and is now the seat of a national educational establishment, under the care of the Benedictines. The church is famous for its organ. In 1893 the cultus of the first four abbots (Alferius, Leo, Petrus, and Constabilis) was sanctioned. There are 18 parishes with 68 priests, regular and secular, and 28,000 faithful, subject to the abbacy.

U. BENIGNI

Order of Trinitarians

Order of Trinitarians

The redemption of captives has always been regarded in the Church as a work of mercy, as is abundantly testified by many lives of saints who devoted themselves to this task. The period of the Crusades, when so many Christians were in danger of falling into the hands of infidels, witnessed the rise of religious orders vowed exclusively to this pious work. In the thirteenth century there is mention of an order of Montjoie, founded for this purpose in Spain, but its existence was brief, as it was established in 1180 and united in 1221 with the Order of Calatrava. Another Spanish order prospered better; this was founded in the thirteenth century by St Peter Nolasco under the title of Our Lady of Mercy (*de la Merced*), whence the name Mercedarians. It soon spread widely from Aragon, and has still several houses at Rome, in Italy, Spain, and the old Spanish colonies. Finally, the Order of Trinitarians, which exists to the present day, had at first no other object, as is recalled by the primitive title: "Ordo S. Trinitatis et de redemptione captivorum". its founder, St. John of Math, a native of Provence and a doctor of the University of Paris, conceived the project under the pious inspiration of a pious solitary, St Felix of Valois, in a hermitage called Cerfroid, which subsequently became the chief house of the order. Innocent III, though little in favor of new orders, granted his approbation to this enterprise in a Bull of 17 December, 1198.

The primitive rule, which has been in turns mitigated or restored, enacted that each house should comprise seven brothers, one of whom should be superior; the revenues of the house should be divided into three parts, one for the monks, one for the support of the poor, and one for the ransom of captives; finally it forbade the monks when journeying to use a horse, either through humility,

or because horses were forbidden to Christians in the Mussulman countries, whither the friars had to go; hence their popular name of "Friars of the Ass".

In France the Trinitarians were as much favoured by the kings as by the popes. St. Louis installed a house of their order in his château of Fontainebleu. He chose Trinitarians as his chaplains, and was accompanied by them on his crusades. Their convent in Paris is dedicated to St. Mathurin; hence they are also known in France as Mathurins. Founded in 1228, the Paris house soon eclipsed Cerfroid, the cradle of the Trinitarians, and eventually became the residence of the general, also called grand minister, of the order. Towards the end of the twelfth century the order had 250 houses throughout Christendom, where its benevolent work was manifested by the return of liberated captives. This won for it many alms in lands and revenues, a third of which was used for ransoms. But the chief source was collections; and to make these fruitful it was not considered enough to attach indulgences to the almsdeed, recourse was had to theatrical demonstrations to touch hearts and open purses. The misfortunes of the unhappy captives in the Mussulman countries were the readiest subjects for descriptions, sermons, and even *tableaux*. In Spain these alms-quests were made solemnly: the religious on their mules were preceded by trumpeters and cymbal-players, and a herald proclaimed the redemption by inviting families to make known their kinsfolk in captivity and the alms destined for their ransom.

From the fourteenth century the Trinitarians had lay assistants, i.e., charitable collectors, authorised by letters patent to solicit alms for the order in their respective towns; these were called *marguilliers*. There were also confraternities of the Holy Trinity, chiefly in the towns where the order had no convent; these consisted of lay tertiaries who wore the scapular of the order, were associated with its spiritual favours, and devoted a portion of their income to its work. In fact the Trinitarians had considerable resources to meet the needs of their work. The funds being collected, the ransomers to the number of three or four set sail from Provence or Spain with objects to alleviate the lot of the captives or coax their jailers. Their destination was usually the Barbary States, especially in the sixteenth century when the corsairs of Tunis, Algiers, and Morocco infested the Mediterranean and made plunder their chief means of existence. The Mercedarians went chiefly to Morocco, while the Trinitarians went preferably to Tunis or Algiers. There began their trials. They had to confront the dangers of the journey, the endemic diseases of the African coast, exposed to the outrages of the natives, sometimes to burst of Mussulman fanaticism, which cost several lives. The most delicate part of the task lay in the choice of captives amid the solicitations with which the monks were besieged and the negotiations for settling the ransom-price between the corsairs and the Trinitarians, between the exactions of the former and the limited resources of the latter. When the sum was not sufficient, the Trinitarians were held as hostages in the place of the captives until the arrival of fresh funds. The choice of captives was made according to the funds; ransom was first paid for the natives of the regions which had contributed to the redemption. Sometimes certain captives were previously indicated by their family who paid the ransom. When the captives returned to Europe, the Trinitarians had them go in procession from town to town amid scenery intended to impress the imagination in justification of the use of the alms and to inspire fresh almsdeeds. The number

of those ransomed during the three centuries is estimated at 90,000. The most famous of these was Cervantes (ransomed in 1580), who at his death was buried among the trinitarians at Madrid in a habit of a Trinitarian tertiary.

Despite the large sums of money which passed through their hands, the Trinitarians had to struggle constantly with poverty. They had to defray the expenses of numerous hospitals, as well as to administer parochial charges. They suffered greatly in France during the English invasion of the fifteenth century and the wars of religion of the sixteenth. Moreover, there were conflicts between the Mercedarians, who had spread from Spain to France, and the Trinitarians, who had spread from France to Spain. They contested each other's right to collect and receive legacies: attempts at fusion failed, and their rivalry gave rise to numerous suits in both countries and to a whole controversial literature. Their poverty resulted in a relaxation of the rules which had often to be revised, and in divisions in the order. While one party followed the mitigated rule, there was a reform party which aimed at a return to the primitive observance. Thus arose the first schism in 1578 at Pontoise, which in 1633 succeeded in entering the mother-house at Cerfroid.

About the same time the Trinitarians of Spain formed a schism by separating from the Trinitarians of France under Father Juan Bautista of the Immaculate Conception; the latter added fresh austerity to their rule by founding the Congregation of "Discalced Trinitarians of Spain". This rule spread to Italy and Austria (1690), where the ransom of captives was much esteemed during the constant wars with the Turks. Hence the three congregations, which gave rise to regrettable dissensions. The Discalced also went to France, where they were suppressed by a Papal Bull in 1771. The division between those observing the mitigated and the reformed rule was terminated by uniting without fusing them under a common general. At this time also they began to lay claim in France to the title by which they have since been known: Canons Regular of the Holy Trinity. The Revolution of 1789 suppressed them in all the territories to which they had spread. Joseph II had already suppressed them in 1784 in Austria and the Low Countries. They have retained a few houses in Italy, Spain, and the Spanish colonies. At Rome, where the convent of St. Thomas was united with the chapter of St. Peter in 1387, the Trinitarians protested many times unsuccessfully against this spoliation, when on the occasion of the seventh centenary of the foundation of the order in 1898, the chapter of St. Peter's voluntarily restored it. But their chief house is the Basilica of St. John Chrysostomus which was given to them by Pius IX in 1856.

There have always been nuns attached to the hospitals of the order, but they do not seem to have formed an integral part of it. The true Trinitarian Sisters were founded in Spain by Maria de Romero in 1612 and they still have convents at Madrid and in other cities. They form part of the discalced congregation.

The Trinitarians wear a white habit, with a cross of which the upright is red and the cross bar blue.

CH. MOELLER
The Blessed Trinity

The Blessed Trinity

This article is divided as follows:

- I. Dogma of the Trinity;
- II. Proof of the Doctrine from Scripture;
- III. Proof of the Doctrine from Tradition;
- IV. The Trinity as a Mystery;
- V. The Doctrine as Interpreted in Greek Theology;
- VI. The Doctrine as Interpreted in Latin Theology.

I. THE DOGMA OF THE TRINITY

The Trinity is the term employed to signify the central doctrine of the Christian religion -- the truth that in the unity of the Godhead there are Three Persons, the Father, the Son, and the Holy Spirit, these Three Persons being truly distinct one from another. Thus, in the words of the Athanasian Creed: "the Father is God, the Son is God, and the Holy Spirit is God, and yet there are not three Gods but one God." In this Trinity of Persons the Son is begotten of the Father by an eternal generation, and the Holy Spirit proceeds by an eternal procession from the Father and the Son. Yet, notwithstanding this difference as to origin, the Persons are co-eternal and co-equal: all alike are uncreated and omnipotent. This, the Church teaches, is the revelation regarding God's nature which Jesus Christ, the Son of God, came upon earth to deliver to the world: and which she proposes to man as the foundation of her whole dogmatic system.

In Scripture there is as yet no single term by which the Three Divine Persons are denoted together. The word *trias* (of which the Latin *trinitas* is a translation) is first found in Theophilus of Antioch about A.D. 180. He speaks of "the Trinity of God [the Father], His Word and His Wisdom ("Ad. Autol.", II, 15). The term may, of course, have been in use before his time. Afterwards it appears in its Latin form of *trinitas* in Tertullian ("De pud." c. xxi). In the next century the word is in general use. It is found in many passages of Origen ("In Ps. xvii", 15). The first creed in which it appears is that of Origen's pupil, Gregory Thaumaturgus. In his *Ekthesis tes pisteos* composed between 260 and 270, he writes:

There is therefore nothing created, nothing subject to another in the Trinity: nor is there anything that has been added as though it once had not existed, but had entered afterwards: therefore the Father has never been without the Son, nor the Son without the Spirit: and this same Trinity is immutable and unalterable forever (P. G., X, 986).

It is manifest that a dogma so mysterious presupposes a Divine revelation. When the fact of revelation, understood in its full sense as the speech of God to man, is no longer admitted, the rejection of the doctrine follows as a necessary consequence. For this reason it has no place in the Liberal Protestantism of today. The writers of this school contend that the doctrine of the Trinity, as professed by the Church, is not contained in the New Testament, but that it was first formulated in the second century and received final approbation in the fourth, as the result of the Arian and Macedonian controversies. In view of this assertion it is necessary to consider in some detail the evidence afforded by Holy Scripture. Attempts have been made recently to apply the more extreme theories of comparative religion to the doctrine of the Trinity, and to account for it by an imaginary law of nature compelling men to group the objects of their worship in threes. It seems needless to give more than a reference to these extravagant views, which serious thinkers of every school reject as destitute of foundation.

II. PROOF OF DOCTRINE FROM SCRIPTURE

A. New Testament

The evidence from the Gospels culminates in the baptismal commission of Matthew 28:20. It is manifest from the narratives of the Evangelists that Christ only made the great truth known to the Twelve step by step. First He taught them to recognize in Himself the Eternal Son of God. When His ministry was drawing to a close, He promised that the Father would send another Divine Person, the Holy Spirit, in His place. Finally after His resurrection, He revealed the doctrine in explicit terms, bidding them "go and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost" (Matthew 28:18). The force of this passage is decisive. That "the Father" and "the Son" are distinct Persons follows from the terms themselves, which are mutually exclusive. The mention of the Holy Spirit in the same series, the names being connected one with the other by the conjunctions "and . . . and" is evidence that we have here a Third Person co-ordinate with the Father and the Son, and excludes altogether the supposition that the Apostles understood the Holy Spirit not as a distinct Person, but as God viewed in His action on creatures.

The phrase "in the name" (*eis to onoma*) affirms alike the Godhead of the Persons and their unity of nature. Among the Jews and in the Apostolic Church the Divine name was representative of God. He who had a right to use it was invested with vast authority: for he wielded the supernatural powers of Him whose name he employed. It is incredible that the phrase "in the name" should be here employed, were not all the Persons mentioned equally Divine. Moreover, the use of the singular, "name," and not the plural, shows that these Three Persons are that One Omnipotent God in whom the Apostles believed. Indeed the unity of God is so fundamental a tenet alike of the Hebrew and of the Christian religion, and is affirmed in such countless passages of the Old and New Testaments, that any explanation inconsistent with this doctrine would be altogether inadmissible.

The supernatural appearance at the baptism of Christ is often cited as an explicit revelation of Trinitarian doctrine, given at the very commencement of the Ministry. This, it seems to us, is a mistake. The Evangelists, it is true, see in it a manifestation of the Three Divine Persons. Yet, apart

from Christ's subsequent teaching, the dogmatic meaning of the scene would hardly have been understood. Moreover, the Gospel narratives appear to signify that none but Christ and the Baptist were privileged to see the Mystic Dove, and hear the words attesting the Divine sonship of the Messiah.

Besides these passages there are many others in the Gospels which refer to one or other of the Three Persons in particular and clearly express the separate personality and Divinity of each. In regard to the First Person it will not be necessary to give special citations: those which declare that Jesus Christ is God the Son, affirm thereby also the separate personality of the Father. The Divinity of Christ is amply attested not merely by St. John, but by the Synoptists. As this point is treated elsewhere (see JESUS CHRIST), it will be sufficient here to enumerate a few of the more important messages from the Synoptists, in which Christ bears witness to His Divine Nature.

- He declares that He will come to be the judge of all men (Matthew 25:31). In Jewish theology the judgment of the world was a distinctively Divine, and not a Messianic, prerogative.
- In the parable of the wicked husbandmen, He describes Himself as the son of the householder, while the Prophets, one and all, are represented as the servants (Matthew 21:33 sqq.).
- He is the Lord of Angels, who execute His command (Matthew 24:31).
- He approves the confession of Peter when he recognizes Him, not as Messiah -- a step long since taken by all the Apostles -- but explicitly as the Son of God: and He declares the knowledge due to a special revelation from the Father (Matthew 16:16-17).
- Finally, before Caiphas He not merely declares Himself to be the Messiah, but in reply to a second and distinct question affirms His claim to be the Son of God. He is instantly declared by the high priest to be guilty of blasphemy, an offense which could not have been attached to the claim to be simply the Messiah (Luke 22:66-71).

St. John's testimony is yet more explicit than that of the Synoptists. He expressly asserts that the very purpose of his Gospel is to establish the Divinity of Jesus Christ (John 20:31). In the prologue he identifies Him with the Word, the only-begotten of the Father, Who from all eternity exists with God, Who is God (John 1:1-18). The immanence of the Son in the Father and of the Father in the Son is declared in Christ's words to St. Philip: "Do you not believe, that I am in the Father, and the Father in Me?" (14:10), and in other passages no less explicit (14:7; 16:15; 17:21). The oneness of Their power and Their action is affirmed: "Whatever he [the Father] does, the Son also does in like manner" (5:19, cf. 10:38); and to the Son no less than to the Father belongs the Divine attribute of conferring life on whom He will (5:21). In 10:29, Christ expressly teaches His unity of essence with the Father: "That which my Father hath given me, is greater than all . . . I and the Father are one." The words, "That which my Father hath given me," can, having regard to the context, have no other meaning than the Divine Name, possessed in its fullness by the Son as by the Father.

Rationalist critics lay great stress upon the text: "The Father is greater than I" (14:28). They argue that this suffices to establish that the author of the Gospel held subordinationist views, and they expound in this sense certain texts in which the Son declares His dependence on the Father (5:19; 8:28). In point of fact the doctrine of the Incarnation involves that, in regard of His Human Nature, the Son should be less than the Father. No argument against Catholic doctrine can, therefore,

be drawn from this text. So too, the passages referring to the dependence of the Son upon the Father do but express what is essential to Trinitarian dogma, namely, that the Father is the supreme source from Whom the Divine Nature and perfections flow to the Son. (On the essential difference between St. John's doctrine as to the Person of Christ and the Logos doctrine of the Alexandrine Philo, to which many Rationalists have attempted to trace it, see LOGOS.)

In regard to the Third Person of the Blessed Trinity, the passages which can be cited from the Synoptists as attesting His distinct personality are few. The words of Gabriel (Luke 1:35), having regard to the use of the term, "the Spirit," in the Old Testament, to signify God as operative in His creatures, can hardly be said to contain a definite revelation of the doctrine. For the same reason it is dubious whether Christ's warning to the Pharisees as regards blasphemy against the Holy Spirit (Matthew 12:31) can be brought forward as proof. But in Luke 12:12, "The Holy Ghost shall teach you in the same hour what you must say" (Matthew 10:20, and Luke 24:49), His personality is clearly implied. These passages, taken in connection with Matthew 28:19, postulate the existence of such teaching as we find in the discourses in the Cenacle reported by St. John (14-16). We have in these chapters the necessary preparation for the baptismal commission. In them the Apostles are instructed not only as to the personality of the Spirit, but as to His office towards the Church. His work is to teach whatsoever He shall hear (16:13) to bring back their minds the teaching of Christ (14:26), to convince the world of sin (16:8). It is evident that, were the Spirit not a Person, Christ could not have spoken of His presence with the Apostles as comparable to His own presence with them (14:16). Again, were He not a Divine Person it could not have been expedient for the Apostles that Christ should leave them, and the Paraclete take His place (16:7). Moreover, notwithstanding the neuter form of the word (*pneuma*), the pronoun used in His regard is the masculine *ekeinos*. The distinction of the Holy Spirit from the Father and from the Son is involved in the express statements that He proceeds from the Father and is sent by the Son (15:26; cf. 14:16, 26). Nevertheless, He is one with Them: His presence with the Disciples is at the same time the presence of the Son (14:17, 18), while the presence of the Son is the presence of the Father (14:23).

In the remaining New Testament writings numerous passages attest how clear and definite was the belief of the Apostolic Church in the three Divine Persons. In certain texts the coordination of Father, Son, and Spirit leaves no possible doubt as to the meaning of the writer. Thus in II Corinthians 13:13, St. Paul writes: "The grace of our Lord Jesus Christ, and the charity of God, and the communication of the Holy Ghost be with you all." Here the construction shows that the Apostle is speaking of three distinct Persons. Moreover, since the names *God* and *Holy Ghost* are alike Divine names, it follows that Jesus Christ is also regarded as a Divine Person. So also, in I Corinthians 12:4-11: "There are diversities of graces, but the same Spirit; and there are diversities of ministries, but the same Lord: and there are diversities of operations, but the same God, who worketh all [of them] in all [persons]." (Cf. also Ephesians 4:4-6; I Peter 1:2-3.)

But apart from passages such as these, where there is express mention of the Three Persons, the teaching of the New Testament regarding Christ and the Holy Spirit is free from all ambiguity. In regard to Christ, the Apostles employ modes of speech which, to men brought up in the Hebrew

faith, necessarily signified belief in His Divinity. Such, for instance, is the use of the Doxology in reference to Him. The Doxology, "To Him be glory for ever and ever" (cf. I Chronicles 16:38; 29:11; Psalm 103:31; 28:2), is an expression of praise offered to God alone. In the New Testament we find it addressed not alone to God the Father, but to Jesus Christ (II Timothy 4:18; II Peter 3:18; Revelations 1:6; Hebrews 13:20-21), and to God the Father and Christ in conjunction (Revelations 5:13, 7:10). Not less convincing is the use of the title *Lord* (*Kyrios*). This term represents the Hebrew *Adonai*, just as *God* (*Theos*) represents *Elohim*. The two are equally Divine names (cf. I Corinthians 8:4). In the Apostolic writings *Theos* may almost be said to be treated as a proper name of God the Father, and *Kyrios* of the Son (see, for example, I Corinthians 12:5-6); in only a few passages do we find *Kyrios* used of the Father (I Corinthians 3:5; 7:17) or *Theos* of Christ. The Apostles from time to time apply to Christ passages of the Old Testament in which *Kyrios* is used, for example, I Corinthians 10:9 (Numbers 21:7), Hebrews 1:10-12 (Psalm 101:26-28); and they use such expressions as "the fear of the Lord" (Acts 9:31; II Corinthians 5:11; Ephesians 5:21), "call upon the name of the Lord," indifferently of God the Father and of Christ (Acts 2:21; 9:14; Romans 10:13). The profession that "Jesus is the Lord" (*Kyriou Iesou*, Romans 10:9; *Kyrios Iesous*, I Corinthians 12:3) is the acknowledgment of Jesus as Jahweh. The texts in which St. Paul affirms that in Christ dwells the plenitude of the Godhead (Colossians 2:9), that before His Incarnation He possessed the essential nature of God (Philemon 2:6), that He "is over all things, God blessed for ever" (Romans 9:5) tell us nothing that is not implied in many other passages of his Epistles.

The doctrine as to the Holy Spirit is equally clear. That His distinct personality was fully recognized is shown by many passages. Thus He reveals His commands to the Church's ministers: "As they were ministering to the Lord and fasting, the Holy Ghost said to them: Separate me Saul and Barnabas . . ." (Acts 13:2). He directs the missionary journey of the Apostles: "They attempted to go into Bithynia, and the Spirit of Jesus suffered them not" (Acts 16:7; cf. Acts 5:3; 15:28; Romans 15:30). Divine attributes are affirmed of Him.

- He possesses omniscience and reveals to the Church mysteries known only to God (I Corinthians 2:10);
- it is He who distributes charismata (I Cor., 12:11);
- He is the giver of supernatural life (II Cor., 3:8);
- He dwells in the Church and in the souls of individual men, as in His temple (Romans 8:9-11; I Corinthians 3:16, 6:19).
- The work of justification and sanctification is attributed to Him (I Cor., 6:11; Rom., 15:16), just as in other passages the same operations are attributed to Christ (I Cor., 1:2; Gal., 2:17).

To sum up: the various elements of the Trinitarian doctrine are all expressly taught in the New Testament. The Divinity of the Three Persons is asserted or implied in passages too numerous to count. The unity of essence is not merely postulated by the strict monotheism of men nurtured in the religion of Israel, to whom "subordinate deities" would have been unthinkable; but it is, as we have seen, involved in the baptismal commission of Matthew 28:19, and, in regard to the Father and the Son, expressly asserted in John 10:38. That the Persons are co-eternal and coequal is a mere corollary from this. In regard to the Divine processions, the doctrine of the first procession is

contained in the very terms *Father* and *Son*: the procession of the Holy Spirit from the Father and Son is taught in the discourse of the Lord reported by St. John (14-17) (see HOLY GHOST).

B. Old Testament

The early Fathers were persuaded that indications of the doctrine of the Trinity must exist in the Old Testament and they found such indications in not a few passages. Many of them not merely believed that the Prophets had testified of it, they held that it had been made known even to the Patriarchs. They regarded it as certain that the Divine messenger of Genesis 16:7, 18, 21:17, 31:11; Exodus 3:2, was God the Son; for reasons to be mentioned below (III. B.) they considered it evident that God the Father could not have thus manifested Himself (cf. Justin, "Dial.", 60; Irenaeus, "Adv. haer.", IV, xx, 7-11; Tertullian, "Adv. Prax.", 15-16; Theoph., "Ad Autol.", ii, 22; Novat., "De Trin.", 18, 25, etc.). They held that, when the inspired writers speak of "the Spirit of the Lord", the reference was to the Third Person of the Trinity: and one or two (Irenaeus, "Adv. haer.", II, xxx, 9; Theophilus, "Ad. Aut.", II, 15; Hippolytus, "Con. Noet.", 10) interpret the hypostatic Wisdom of the Sapiential books, not, with St. Paul, of the Son (Hebrews 1:3; cf. Wisdom, vii, 25, 26), but of the Holy Spirit. But in others of the Fathers is found what would appear to be the sounder view, that no distinct intimation of the doctrine was given under the Old Covenant. (Cf. Gregory Nazianzen, "Or. theol.", v, 26; Epiphanius, "Ancor." 73, "Haer.", 74; Basil, "Adv. Eunom.", II, 22; Cyril Alex., "In Joan.", xii, 20.)

Some of these, however, admitted that a knowledge of the mystery was granted to the Prophets and saints of the Old Dispensation (Epiph., "Haer.", viii, 5; Cyril Alex., "Con. Julian.," I). It may be readily conceded that the way is prepared for the revelation in some of the prophecies. The names *Emmanuel* (Isaias 7:14) and *God the Mighty* (Isaias 9:6) affirmed of the Messiah make mention of the Divine Nature of the promised deliverer. Yet it seems that the Gospel revelation was needed to render the full meaning of the passages clear. Even these exalted titles did not lead the Jews to recognize that the Saviour to come was to be none other than God Himself. The Septuagint translators do not even venture to render the words *God the Mighty* literally, but give us, in their place, "the angel of great counsel." A still higher stage of preparation is found in the doctrine of the Sapiential books regarding the Divine Wisdom. In Proverbs 8, Wisdom appears personified, and in a manner which suggests that the sacred author was not employing a mere metaphor, but had before his mind a real person (cf. verses 22, 23). Similar teaching occurs in Eccles., 24, in a discourse which Wisdom is declared to utter in "the assembly of the Most High", i. e. in the presence of the angels. This phrase certainly supposes Wisdom to be conceived as person. The nature of the personality is left obscure; but we are told that the whole earth is Wisdom's Kingdom, that she finds her delight in all the works of God, but that Israel is in a special manner her portion and her inheritance (Eccles., 24:8-13).

In the Book of the Wisdom of Solomon we find a still further advance. Here Wisdom is clearly distinguished from Jehovah: "She is. . . a certain pure emanation of the glory of the almighty God. . . the brightness of eternal light, and the unspotted mirror of God's majesty, and the image of his goodness" (Wisdom 7:25-26. Cf. Hebrews 1:3). She is, moreover, described as "the worker of all

things" (*panton technitis*, 7:21), an expression indicating that the creation is in some manner attributable to her. Yet in later Judaism this exalted doctrine suffered eclipse, and seems to have passed into oblivion. Nor indeed can it be said that the passage, even though it manifests some knowledge of a second personality in the Godhead, constitutes a revelation of the Trinity. For nowhere in the Old Testament do we find any clear indication of a Third Person. Mention is often made of the Spirit of the Lord, but there is nothing to show that the Spirit was viewed as distinct from Jahweh Himself. The term is always employed to signify God considered in His working, whether in the universe or in the soul of man. The matter seems to be correctly summed up by Epiphanius, when he says: "The One Godhead is above all declared by Moses, and the twofold personality (of Father and Son) is strenuously asserted by the Prophets. The Trinity is made known by the Gospel" ("Haer.", Ixxiv).

III. PROOF OF THE DOCTRINE FROM TRADITION

A. The Church Fathers

In this section we shall show that the doctrine of the Blessed Trinity has from the earliest times been taught by the Catholic Church and professed by her members. As none deny this for any period subsequent to the Arian and Macedonian controversies, it will be sufficient if we here consider the faith of the first four centuries only. An argument of very great weight is provided in the liturgical forms of the Church. The highest probative force must necessarily attach to these, since they express not the private opinion of a single individual, but the public belief of the whole body of the faithful. Nor can it be objected that the notions of Christians on the subject were vague and confused, and that their liturgical forms reflect this frame of mind. On such a point vagueness was impossible. Any Christian might be called on to seal with his blood his belief that there is but One God. The answer of Saint Maximus (c. A.D. 250) to the command of the proconsul that he should sacrifice to the gods, "I offer no sacrifice save to the One True God," is typical of many such replies in the Acts of the martyrs. It is out of the question to suppose that men who were prepared to give their lives on behalf of this fundamental truth were in point of fact in so great confusion in regard to it that they were unaware whether their creed was monotheistic, ditheistic, or tritheistic. Moreover, we know that their instruction regarding the doctrines of their religion was solid. The writers of that age bear witness that even the unlettered were thoroughly familiar with the truths of faith (cf. Justin, "Apol.", I, 60; Irenaeus, "Adv. haer.", III, iv, n. 2).

(1) *Baptismal formulas*

We may notice first the baptismal formula, which all acknowledge to be primitive. It has already been shown that the words as prescribed by Christ (Matthew 28:19) clearly express the Godhead of the Three Persons as well as their distinction, but another consideration may here be added. Baptism, with its formal renunciation of Satan and his works, was understood to be the rejection of the idolatry of paganism and the solemn consecration of the baptised to the one true God (Tert., "De spect.", iv; Justin, "Apol.", I, iv). The act of consecration was the invocation over them of the Father, Son, and Holy Spirit. The supposition that they regarded the Second and Third Persons as

created beings, and were in fact consecrating themselves to the service of creatures, is manifestly absurd. St. Hippolytus has expressed the faith of the Church in the clearest terms: "He who descends into this laver of regeneration with faith forsakes the Evil One and engages himself to Christ, renounces the enemy and confesses that Christ is God . . . he returns from the font a son of God and a coheir of Christ. To Whom with the all holy, the good and lifegiving Spirit be glory now and always, forever and ever. Amen" ("Serm. in Theoph.", n. 10).

The doxologies

(2) The witness of the doxologies is no less striking. The form now universal, "Glory be to the Father, and to the Son, and to the Holy Ghost," so clearly expresses the Trinitarian dogma that the Arians found it necessary to deny that it had been in use previous to the time of Flavian of Antioch (Philostorgius, "Hist. eccl.", III, xiii). It is true that up to the period of the Arian controversy another form, "Glory to the Father, through the Son, in the Holy Spirit," had been more common (cf. I Clement, 58, 59; Justin, "Apol.", I, 67). This latter form is indeed perfectly consistent with Trinitarian belief: it, however, expresses not the coequality of the Three Persons, but their operation in regard to man. We live in the Spirit, and through Him we are made partakers in Christ (Galatians 5:25; Romans 8:9); and it is through Christ, as His members, that we are worthy to offer praise to God (Heb. 13:15). But there are many passages in the ante-Nicene Fathers which show that the form, "Glory be to the Father and to the Son, and to [with] the Holy Spirit," was also in use.

- In the narrative of St. Polycarp's martyrdom we read: "With Whom to Thee and the Holy Spirit be glory now and for the ages to come" (Mart. S. Polyc., n.14; cf. n. 22).
- Clement of Alexandria bids men "give thanks and praise to the only Father and Son, to the Son and Father with the Holy Spirit" (Paed., III, xii).
- St. Hippolytus closes his work against Noetus with the words: "To Him be glory and power with the Father and the Holy Spirit in Holy Church now and always for ever and ever. Amen" (Contra Noet., n. 18).
- Denis of Alexandria uses almost the same words: "To God the Father and to His Son Jesus Christ with the Holy Spirit be honour and glory forever and ever, Amen" (in St. Basil, "De Spiritu Sancto", xxix, n. 72).
- St. Basil further tells us that it was an immemorial custom among Christians when they lit the evening lamp to give thanks to God with prayer: *Ainoumen Patera kai Gion kai Hagion Pneuma Theou* ("We praise the Father, and the Son, and the Holy Spirit of God").

(3) Other patristic writings

The doctrine of the Trinity is formally taught in every class of ecclesiastical writing. From among the apologists we may note Justin, "Apol." I, vi; Athenagoras, "Legat: pro Christ.", n. 12. The latter tells us that Christians "are conducted to the future life by this one thing alone, that they know God and His Logos, what is the oneness of the Son with the Father, what the communion of the Father with the Son, what is the Spirit, what is the unity of these three, the Spirit, the Son, and the Father, and their distinction in unity." It would be impossible to be more explicit. And we may be sure that an apologist, writing for pagans, would weigh well the words in which he dealt with this doctrine. Amongst polemical writers we may refer to Irenaeus, "Adv. haer.", I, xxii, IV, xx, 1-6. In these passages he rejects the Gnostic figment that the world was created by aeons who had

emanated from God, but were not consubstantial with Him, and teaches the consubstantiality of the Word and the Spirit by Whom God created all things. Clement of Alexandria professes the doctrine in "Paedag." I, vi, and somewhat later Gregory Thaumaturgus, as we have already seen, lays it down in the most express terms in his creed (P.G., X, 986).

(4) *As contrasted with heretical teachings*

Yet further evidence regarding the Church's doctrine is furnished by a comparison of her teaching with that of heretical sects. The controversy with the Sabellians in the third century proves conclusively that she would tolerate no deviation from Trinitarian doctrine. Noetus of Smyrna, the originator of the error, was condemned by a local synod, about A.D. 200. Sabellius, who propagated the same heresy at Rome c. A.D. 220, was excommunicated by St. Callistus. It is notorious that the sect made no appeal to tradition: it found Trinitarianism in possession wherever it appeared -- at Smyrna, at Rome, in Africa, in Egypt. On the other hand, St. Hippolytus, who combats it in the "Contra Noetum," claims Apostolic tradition for the doctrine of the Catholic Church: "Let us believe, beloved brethren, in accordance with the tradition of the Apostles, that God the Word came down from heaven to the holy Virgin Mary to save man." Somewhat later (c. A.D. 260) Denis of Alexandria found that the error was widespread in the Libyan Pentapolis, and he addressed a dogmatic letter against it to two bishops, Euphranor and Ammonius. In this, in order to emphasize the distinction between the Persons, he termed the Son *poiema tou Theou* and used other expressions capable of suggesting that the Son is to be reckoned among creatures. He was accused of heterodoxy to St. Dionysius of Rome, who held a council and addressed to him a letter dealing with the true Catholic doctrine on the point in question. The Bishop of Alexandria replied with a defense of his orthodoxy entitled "*Elegchos kai apologia*," in which he corrected whatever had been erroneous. He expressly professes his belief in the consubstantiality of the Son, using the very term, *homoousios*, which afterwards became the touchstone of orthodoxy at Nicaea (P. G., XXV, 505). The story of the controversy is conclusive as to the doctrinal standard of the Church. It shows us that she was firm in rejecting on the one hand any confusion of the Persons and on the other hand any denial of their consubstantiality.

The information we possess regarding another heresy -- that of Montanus -- supplies us with further proof that the doctrine of the Trinity was the Church's teaching in A.D. 150. Tertullian affirms in the clearest terms that what he held as to the Trinity when a Catholic he still holds as a Montanist ("Adv. Prax.", II, 156); and in the same work he explicitly teaches the Divinity of the Three Persons, their distinction, the eternity of God the Son (op. cit., xxvii). Epiphanius in the same way asserts the orthodoxy of the Montanists on this subject (Haer., lxxviii). Now it is not to be supposed that the Montanists had accepted any novel teaching from the Catholic Church since their secession in the middle of the second century. Hence, inasmuch as there was full agreement between the two bodies in regard to the Trinity, we have here again a clear proof that Trinitarianism was an article of faith at a time when the Apostolic tradition was far too recent for any error to have arisen on a point so vital.

B. Later Controversy

Notwithstanding the force of the arguments we have just summarised, a vigorous controversy has been carried on from the end of the seventeenth century to the present day regarding the Trinitarian doctrine of the ante-Nicene Fathers. The Socinian writers of the seventeenth century (e. g. Sand, "Nucleus historiae ecclesiastic", Amsterdam, 1668) asserted that the language of the early Fathers in many passages of their works shows that they agreed not with Athanasius, but with Arius. Petavius, who was at that period engaged on his great theological work, was convinced by their arguments, and allowed that at least some of these Fathers had fallen into grave errors. On the other hand, their orthodoxy was vigorously defended by the Anglican divine Dr. George Bull ("Defensio Fidei Nicaean", Oxford, 1685) and subsequently by Bossuet, Thomassinus, and other Catholic theologians. Those who take the less favourable view assert that they teach the following points inconsistent with the post-Nicene belief of the Church:

- That the Son even as regards His Divine Nature is inferior and not equal to the Father;
- that the Son alone appeared in the theophanies of the Old Testament, inasmuch as the Father is essentially invisible, the Son, however, not so;
- that the Son is a created being;
- that the generation of the Son is not eternal, but took place in time.

We shall examine these four points in order.

(1) In proof of the assertion that many of the Fathers deny the equality of the Son with the Father, passages are cited from Justin (Apol., I, xiii, xxxii), Irenaeus (Adv. haer., III, viii, n. 3), Clem. Alex. ("Strom." VII, ii), Hippolytus (Con. Noet., n. 14), Origen (Con. Cels., VIII, xv). Thus Irenaeus (loc. cit.) says: "He commanded, and they were created . . . Whom did He command? His Word, by whom, says the Scripture, the heavens were established. And Origen, loc. cit., says: "We declare that the Son is not mightier than the Father, but inferior to Him. And this belief we ground on the saying of Jesus Himself: "The Father who sent me is greater than I." Now in regard to these passages it must be borne in mind that there are two ways of considering the Trinity. We may view the Three Persons insofar as they are equally possessed of the Divine Nature or we may consider the Son and the Spirit as deriving from the Father, Who is the sole source of Godhead, and from Whom They receive all They have and are. The former mode of considering them has been the more common since the Arian heresy. The latter, however, was more frequent previously to that period. Under this aspect, the Father, as being: the sole source of all, may be termed greater than the Son. Thus Athanasius, Basil, Gregory Nazianzen, Gregory of Nyssa, and the Fathers of the Council of Sardica, in their synodical letter, all treat our Lord's words, teaches "The Father is greater than I" as having reference to His Godhead (cf. Petavius, "De Trin.", II, ii, 7, vi, 11). From this point of view it may be said that in the creation of the world the Father commanded, the Son obeyed. The expression is not one which would have been employed by Latin writers who insist that creation and all God's works proceed from Him as One and not from the Persons as distinct from each other. But this truth was unfamiliar to the early Fathers.

(2) Justin (Dial., n. 60) Irenaeus (Adv. haer., IV, xx, nn. 7, 11), Tertullian ("C. Marc.", II, 27; "Adv. Prax.", 15, 16), Novatian (De Trin., xviii, 25), Theophilus (Ad Autol., II, xxii), are accused of teaching that the theophanies were incompatible with the essential nature of the Father, yet not

incompatible with that of the Son. In this case also the difficulty is largely removed if it be remembered that these writers regarded all the Divine operations as proceeding from the Three Persons as such, and not from the Godhead viewed as one. Now Revelation teaches us that in the work of the creation and redemption of the world the Father effects His purpose through the Son. Through Him He made the world; through Him He redeemed it; through Him He will judge it. Hence it was believed by these writers that, having regard to the present disposition of Providence, the theophanies could only have been the work of the Son. Moreover, in Colossians 1:15, the Son is expressly termed "the image of the invisible God" (*eikon tou Theou rou aoratou*). This expression they seem to have taken with strict literalness. The function of an *eikon* is to manifest what is itself hidden (cf. St. John Damascene, "De imagin.", III, n. 17). Hence they held that the work of revealing the Father belongs by nature to the Second Person of the Trinity, and concluded that the theophanies were His work.

(3) Expressions which appear to contain the statement that the Son was created are found in Clement of Alexandria (Strom., V, xiv; VI, vii), Tatian (Orat., v), Tertullian ("Adv. Prax." vi; "Adv. Hermong.", xviii, xx), Origen (In Joan., I, n. 22). Clement speaks of Wisdom as "created before all things" (*protoktistos*), and Tatian terms the Word the "first-begotten work of (*ergon protokon*) Of the Father. Yet the meaning of these authors is clear. In Colossians 1:16, St. Paul says that all things were created in the Son. This was understood to signify that creation took place according to exemplar ideas predetermined by God and existing in the Word. In view of this, it might be said that the Father created the Word, this term being used in place of the more accurate generated, inasmuch as the exemplar ideas of creation were communicated by the Father to the Son. Or, again, the actual Creation of the world might be termed the creation of the Word, since it takes place according to the ideas which exist in the Word. The context invariably shows that the passage is to be understood in one or another of these senses. The expression is undoubtedly very harsh, and it certainly would never have been employed but for the verse, Proverbs 8:22, which is rendered in the Septuagint and the old Latin versions, "The Lord created (*ektise*) me, who am the beginning of His ways." As the passage was understood as having reference to the Son, it gave rise to the question how it could be said that Wisdom was created (Origen, "Princ.", I, ii, n. 3). It is further to be remembered that accurate terminology in regard to the relations between the Three Persons was the fruit of the controversies which sprang up in the fourth century. The writers of an earlier period were not concerned with Arianism, and employed expressions which in the light of subsequent errors are seen to be not merely inaccurate, but dangerous. (4) Greater difficulty is perhaps presented by a series of passages which appear to assert that prior to the Creation of the world the Word was not a distinct hypostasis from the Father. These are found in Justin (C. Tryphon., lxi), Tatian (Con. Graecos, v), Athenagoras (Legat., x), Theophilus (Ad Autol., II, x, 22); Hippolytus (Con. Noet., x); Tertullian ("Adv. Prax.", v-vii; "Adv. Hermogenem" xviii). Thus Theophilus writes (op. cit., n. 22): "What else is this voice [heard in Paradise] but the Word of God Who is also His Son? . . . For before anything came into being, He had Him as a counsellor, being His own mind and thought [i.e. as the *logos endiathetos*, c. x]). But when God wished to make all that He had

determined on, then did He beget Him as the uttered Word [*logos prophorikos*], the firstborn of all creation, not, however, Himself being left without Reason (*logos*), but having begotten Reason, and ever holding converse with Reason." Expressions such as these are undoubtedly due to the influence of the Stoic philosophy: the *logos endiathetos* and *logos prophorikos* were current conceptions of that school. It is evident that these apologists were seeking to explain the Christian Faith to their pagan readers in terms with which the latter were familiar. Some Catholic writers have indeed thought that the influence of their previous training did lead some of them into Subordinationism, although the Church herself was never involved in the error (see LOGOS). Yet it does not seem necessary to adopt this conclusion. If the point of view of the writers be borne in mind, the expressions, strange as they are, will be seen not to be incompatible with orthodox belief. The early Fathers, as we have said, regarded Proverbs 8:22, and Colossians 1:15, as distinctly teaching that there is a sense in which the Word, begotten before all worlds, may rightly be said to have been begotten also in time. This temporal generation they conceived to be none other than the act of creation. They viewed this as the complement of the eternal generation, inasmuch as it is the external manifestation of those creative ideas which from all eternity the Father has communicated to the Eternal Word. Since, in the very same works which contain these perplexing expressions, other passages are found teaching explicitly the eternity of the Son, it appears most natural to interpret them in this sense. It should further be remembered that throughout this period theologians, when treating of the relation of the Divine Persons to each other, invariably regard them in connection with the cosmogony. Only later, in the Nicene epoch, did they learn to prescind from the question of creation and deal with the threefold Personality exclusively from the point of view of the Divine life of the Godhead. When that stage was reached expressions such as these became impossible.

IV. THE TRINITY AS A MYSTERY

The Vatican Council has explained the meaning to be attributed to the term *mystery* in theology. It lays down that a mystery is a truth which we are not merely incapable of discovering apart from Divine Revelation, but which, even when revealed, remains "hidden by the veil of faith and enveloped, so to speak, by a kind of darkness" (Const., "De fide. cath.", iv). In other words, our understanding of it remains only partial, even after we have accepted it as part of the Divine message. Through analogies and types we can form a representative concept expressive of what is revealed, but we cannot attain that fuller knowledge which supposes that the various elements of the concept are clearly grasped and their reciprocal compatibility manifest. As regards the vindication of a mystery, the office of the natural reason is solely to show that it contains no intrinsic impossibility, that any objection urged against it on Reason. "Expressions such as these are undoubtedly the score that it violates the laws of thought is invalid. More than this it cannot do.

The Vatican Council further defined that the Christian Faith contains mysteries strictly so called (can. 4). All theologians admit that the doctrine of the Trinity is of the number of these. Indeed, of all revealed truths this is the most impenetrable to reason. Hence, to declare this to be no mystery

would be a virtual denial of the canon in question. Moreover, our Lord's words, Matthew 9:27, "No one knoweth the Son, but the Father," seem to declare expressly that the plurality of Persons in the Godhead is a truth entirely beyond the scope of any created intellect. The Fathers supply many passages in which the incomprehensibility of the Divine Nature is affirmed. St. Jerome says, in a well-known phrase: "The true profession of the mystery of the Trinity is to own that we do not comprehend it" (*De mysterio Trinitatus recta confessio est ignoratio scientiae* -- "Proem ad 1. xviii in Isai."). The controversy with the Eunomians, who declared that the Divine Essence was fully expressed in the absolutely simple notion of "the Innascible" (*agennetos*), and that this was fully comprehensible by the human mind, led many of the Greek Fathers to insist on the incomprehensibility of the Divine Nature, more especially in regard to the internal processions. St. Basil. "In Eunom.", I, n. 14; St. Cyril of Jerusdem, "Cat.", VI; St. John Damascene, "Fid. Orth.", I, ii, etc., etc.).

At a later date, however, some famous names are to be found defending a contrary opinion Anselm ("Monol.", 64), Abelard ("In Ep. ad Rom."), Hugo of St. Victor ("De sacram." III, xi), and Richard of St. Victor ("De Trin.", III, v) all declare that it is possible to assign peremptory reasons why God should be both One and Three. In explanation of this it should be noted that at that period the relation of philosophy to revealed doctrine was but obscurely understood. Only after the Aristotelean system had obtained recognition from theologians was this question thoroughly treated. In the intellectual ferment of the time Abelard initiated a Rationalistic tendency: not merely did he claim a knowledge of the Trinity for the pagan philosophers, but his own Trinitarian doctrine was practically Sabellian. Anselm's error was due not to Rationalism, but to too wide an application of the Augustinian principle "Crede ut intelligas". Hugh and Richard of St. Victor were, however, certainly influenced by Abelard's teaching. Raymond Lully's (1235-1315) errors in this regard were even more extreme. They were expressly condemned by Gregory XI in 1376. In the nineteenth century the influence of the prevailing Rationalism manifested itself in several Catholic writers. Frohschammer and Günther both asserted that the dogma of the Trinity was capable of proof. Pius IX reprobated their opinions on more than one occasion (Denzinger, 1655 sq., 1666 sq., 1709 sq.), and it was to guard against this tendency that the Vatican Council issued the decrees to which reference has been made. A somewhat similar, though less aggravated, error on the part of Rosmini was condemned, 14 December, 1887 (Denz., 1915).

V. THE DOCTRINE AS INTERPRETED IN GREEK THEOLOGY

A. Nature and Personality

The Greek Fathers approached the problem of Trinitarian doctrine in a way which differs in an important particular from that which, since the days of St. Augustine, has become traditional in Latin theology. In Latin theology thought fixed first on the Nature and only subsequently on the Persons. Personality is viewed as being, so to speak, the final complement of the Nature: the Nature is regarded as logically prior to the Personality. Hence, because God's Nature is one, He is known to us as One God before He can be known as Three Persons. And when theologians speak of God

without special mention of a Person, conceive Him under this aspect. This is entirely different from the Greek point of view. Greek thought fixed primarily on the Three distinct Persons: the Father, to Whom, as the source and origin of all, the name of God (*Theos*) more especially belongs; the Son, proceeding from the Father by an eternal generation, and therefore rightly termed God also; and the Divine Spirit, proceeding from the Father through the Son. The Personality is treated as logically prior to the Nature. Just as human nature is something which the individual men possesses, and which can only be conceived as belonging to and dependent on the individual, so the Divine Nature is something which belongs to the Persons and cannot be conceived independently of Them.

The contrast appears strikingly in regard to the question of creation. All Western theologians teach that creation, like all God's external works, proceeds from Him as One: the separate Personalities do not enter into consideration. The Greeks invariably speak as though, in all the Divine works, each Person exercises a separate office. Irenaeus replies to the Gnostics, who held that the world was created by a demiurge other than the supreme God, by affirming that God is the one Creator, and that He made all things by His Word and His Wisdom, the Son and the Spirit (Adv. haer., I, xxii; II, iv, 4, 5, xxx, 9; IV, xx, 1). A formula often found among the Greek Fathers is that all things are from the Father and are effected by the Son in the Spirit (Athanasius, "Ad Serap.", I, xxxi; Basil, "De Spiritu Sancto", n. 38; Cyril of Alexandria, "De Trin. dial.", VI). Thus, too, Hippolytus (Con Noet., x) says that God has fashioned all things by His Word and His Wisdom creating them by His Word, adorning them by His Wisdom (*gar ta genomena dia Logou kai Sophias technazetai, Logo men ktizon Sophia de kosmon*). The Nicene Creed still preserves for us this point of view. In it we still profess our belief "in one God the Father Almighty, Creator of heaven and earth . . . and in one Lord Jesus Christ . . . by Whom all things were made . . . and in the Holy Ghost."

B. The Divine Unity

The Greek Fathers did not neglect to safeguard the doctrine of the Divine Unity, though manifestly their standpoint requires a different treatment from that employed in the West. The consubstantiality of the Persons is asserted by St. Irenaeus when he tells us that God created the world by His Son and His Spirit, "His two hands" (Adv. haer., IV, xx, 1). The purport of the phrase is evidently to indicate that the Second and Third Persons are not substantially distinct from the First. A more philosophical description is the doctrine of the Recapitulation (*sygkephalaiosis*). This seems to be first found in the correspondence between St. Denis of Alexandria and St. Dionysius of Rome. The former writes: "We thus [i.e., by the twofold procession] extend the Monad [the First Person] to the Trinity, without causing any division, and were capitulate the Trinity in the Monad without causing diminution" (*outo men emeis eis te ten Triada ten Monada, platynomen adiaireton, kai ten Triada palin ameioton eis ten Monada sygkephalaiousmetha* -- P.G., XXV, 504). Here the consubstantiality is affirmed on the ground that the Son and Spirit, proceeding from the Father, are nevertheless not separated from Him; while they again, with all their perfections, can be regarded as contained within Him.

This doctrine supposes a point of view very different from that with which we are now familiar. The Greek Fathers regarded the Son as the Wisdom and power of the Father (I Cor., 1:24) in a formal sense, and in like manner, the Spirit as His Sanctity. Apart from the Son the Father would be without His Wisdom; apart from the Spirit He would be without His Sanctity. Thus the Son and the Spirit are termed "Powers" (*Dynameis*) of the Father. But while in creatures the powers and faculties are mere accidental perfections, in the Godhead they are subsistent hypostases. Denis of Alexandria regarding the Second and Third Persons as the Father's "Powers", speaks of the First Person as being "extended" to them, and not divided from them. And, since whatever they have and are flows from Him, this writer asserts that if we fix our thoughts on the sole source of Deity alone, we find in Him undiminished all that is contained in them.

The Arian controversy led to insistence on the Homoüsia. But with the Greeks this is not a starting point, but a conclusion, the result of reflective analysis. The sonship of the Second Person implies that He has received the Divine Nature in its fullness, for all generation implies the origination of one who is like in nature to the originating principle. But here, mere specific unity is out of the question. The Divine Essence is not capable of numerical multiplication; it is therefore, they reasoned, identically the same nature which both possess. A similar line of argument establishes that the Divine Nature as communicated to the Holy Spirit is not specifically, but numerically, one with that of the Father and the Son. Unity of nature was understood by the Greek Fathers as involving unity of will and unity of action (*energeia*). This they declared the Three Persons to possess (Athanasius, "Adv. Sabell.", xii, 13; Basil, "Ep. clxxxix," n. 7; Gregory of Nyssa, "De orat. dom.," John Damascene, "De fide orth.," III, xiv). Here we see an important advance in the theology of the Godhead. For, as we have noted, the earlier Fathers invariably conceive the Three Persons as each exercising a distinct and separate function.

Finally we have the doctrine of Circuminsession (*perichoresis*). By this is signified the reciprocal inexistence and compenetration of the Three Persons. The term *perichoresis* is first used by St. John Damascene. Yet the doctrine is found much earlier. Thus St. Cyril of Alexandria says that the Son is called the Word and Wisdom of the Father "because of the reciprocal inherence of these and the mind" (*dia ten eis allela . . . , hos an eipoi tis, antembolen*). St. John Damascene assigns a twofold basis for this inexistence of the Persons. In some passages he explains it by the doctrine already mentioned, that the Son and the Spirit are *dynameis* of the Father (cf. "De recta sententia"). Thus understood, the Circuminsession is a corollary of the doctrine of Recapitulation. He also understands it as signifying the identity of essence, will, and action in the Persons. Wherever these are peculiar to the individual, as is the case in all creatures, there, he tells us, we have separate existence (*kechorismenos einai*). In the Godhead the essence, will, and action are but one. Hence we have not separate existence, but Circuminsession (*perichoresis*) (Fid. orth., I, viii). Here, then, the Circuminsession has its basis in the Homoüsia.

It is easy to see that the Greek system was less well adapted to meet the cavils of the Arian and Macedonian heretics than was that subsequently developed by St. Augustine. Indeed the controversies of the fourth century brought some of the Greek Fathers notably nearer to the positions of Latin

theology. We have seen that they were led to affirm the action of the Three Persons to be but one. Didymus even employs expressions which seem to show that he, like the Latins, conceived the Nature as logically antecedent to the Persons. He understands the term *God* as signifying the whole Trinity, and not, as do the other Greeks, the Father alone: "When we pray, whether we say 'Kyrie eleison', or 'O God aid us', we do not miss our mark: for we include the whole of the Blessed Trinity in one Godhead" (De Trin., II, xix).

C. Mediate and Immediate Procession

The doctrine that the Spirit is the image of the Son, as the Son is the image of the Father, is characteristic of Greek theology. It is asserted by St. Gregory Thaumaturgus in his Creed. It is assumed by St. Athanasius as an indisputable premise in his controversy with the Macedonians (Ad Serap., I, xx, xxi, xxiv; II, i, iv). It is implied in the comparisons employed both by him (Ad Serap. I, xix) and by St. Gregory Nazianzen (Orat. xxxi, 31, 32), of the Three Divine Persons to the sun, the ray, the light; and to the source, the spring, and the stream. We find it also in St. Cyril of Alexandria ("Thesaurus assert.", 33), St. John Damascene ("Fid.orth." I, 13), etc. This supposes that the procession of the Son from the Father is immediate; that of the Spirit from the Father is mediate. He proceeds from the Father through the Son. Bessarion rightly observes that the Fathers who used these expressions conceived the Divine Procession as taking place, so to speak, along a straight line (P. G., CLXI, 224). On the other hand, in Western theology the symbolic diagram of the Trinity has ever been the triangle, the relations of the Three Persons one to another being precisely similar. The point is worth noting, for this diversity of symbolic representation leads inevitably to very different expressions of the same dogmatic truth. It is plain that these Fathers would have rejected no less firmly than the Latins the later Photian heresy that the Holy Spirit proceeds from the Father alone. (For this question the reader is referred to HOLY GHOST.)

D. The Son

The Greek theology of the Divine Generation differs in certain particulars from the Latin. Most Western theologians base their theory on the name, *Logos*, given by St. John to the Second Person. This they understand in the sense of "concept" (*verbum mentale*), and hold that the Divine Generation is analogous to the act by which the created intellect produces its concept. Among Greek writers this explanation is unknown. They declare the manner of the Divine Generation to be altogether beyond our comprehension. We know by revelation that God has a Son; and various other terms besides *Son* employed regarding Him in Scripture, such as *Word*, *Brightness of His glory*, etc., show us that His sonship must be conceived as free from any relation. More we know not (cf. Gregory Nazianzen, "Orat. xxix", p. 8, Cyril of Jerusalem, "Cat.", xi, 19; John Damascene, "Fid. orth.", I, viii). One explanation only can be given, namely, that the perfection we call fecundity must needs be found in God the Absolutely Perfect (St. John Damascene, "Fid.orth.", I, viii). Indeed it would seem that the great majority of the Greek Fathers understood *logos* not of the mental thought; but of the uttered word ("Dion. Alex."; Athanasius, *ibid.*; Cyril of Alexandria, "De Trin.", II). They did not see in the term a revelation that the Son is begotten by way of intellectual procession, but viewed it as a metaphor intended to exclude the material associations of human

sonship (Gregory of Nyssa, "C. Eunom.", IV; Gregory Nazianzen, "Orat. xxx", p. 20; Basil, "Hom. xvi"; Cyril of Alexandria, "Thesaurus assert.", vi).

We have already adverted to the view that the Son is the Wisdom and Power of the Father in the full and formal sense. This teaching constantly recurs from the time of Origen to that of St. John Damascene (Origen *apud* Athan., "De decr. Nic.", p. 27; Athanasius, "Con. Arianos", I, p. 19; Cyril of Alexandria, "Thesaurus"; John Damascene, "Fid.orth.", I, xii). It is based on the Platonic philosophy accepted by the Alexandrine School. This differs in a fundamental point from the Aristoteleanism of the Scholastic theologians. In Aristotelean philosophy perfection is always conceived statically. No action, transient or immanent, can proceed from any agent unless that agent, as statically conceived, possesses whatever perfection is contained in the action. The Alexandrine standpoint was other than this. To them perfection must be sought in dynamic activity. God, as the supreme perfection, is from all eternity self-moving, ever adorning Himself with His own attributes: they issue from Him and, being Divine, are not accidents, but subsistent realities. To these thinkers, therefore, there was no impossibility in the supposition that God is wise with the Wisdom which is the result of His own immanent action, powerful with the Power which proceeds from Him. The arguments of the Greek Fathers frequently presuppose this philosophy as their basis; and unless it be clearly grasped, reasoning which on their premises is conclusive will appear to us invalid and fallacious. Thus it is sometimes urged as a reason for rejecting Arianism that, if there were a time when the Son was not, it follows that God must then have been devoid of Wisdom and of Power -- a conclusion from which even Arians would shrink.

E. The Holy Spirit

A point which in Western theology gives occasion for some discussion is the question as to why the Third Person of the Blessed Trinity is termed the Holy Spirit. St. Augustine suggests that it is because He proceeds from both the Father and the Son, and hence He rightly receives a name applicable to both (De Trin., xv, n. 37). To the Greek Fathers, who developed the theology of the Spirit in the light of the philosophical principles which we have just noticed, the question presented no difficulty. His name, they held, reveals to us His distinctive character as the Third Person, just as the names *Father* and *Son* manifest the distinctive characters of the First and Second Persons (cf. Gregory Thaumaturgus, "Ecth. fid."; Basil, "Ep. ccxiv", 4; Gregory Nazianzen, "Or. xxv", 16). He is *autoagiotos*, the hypostatic holiness of God, the holiness by which God is holy. Just as the Son is the Wisdom and Power by which God is wise and powerful, so the Spirit is the Holiness by which He is holy. Had there ever been a time, as the Macedonians dared to say, when the Holy Spirit was not, then at that time God would have not been holy (St. Gregory Nazianzen, "Orat. xxxi", 4).

On the other hand, *pneuma* was often understood in the light of John 10:22 where Christ, appearing to the Apostles, breathed on them and conferred on them the Holy Spirit. He is the breath of Christ (John Damascene, "Fid. orth.", 1, viii), breathed by Him into us, and dwelling in us as the breath of life by which we enjoy the supernatural life of God's children (Cyril of Alexandria, "Thesaurus"; cf. Petav., "De Trin", V, viii). The office of the Holy Spirit is thus elevating us to the

supernatural order is, however, conceived in a manner somewhat different from that of Western theologians. According to Western doctrine, God bestows on man sanctifying grace, and consequent on that gift the Three Persons come to his soul. In Greek theology the order is reversed: the Holy Spirit does not come to us because we have received sanctifying grace; but it is through His presence we receive the gift. He is the seal, Himself impressing on us the Divine image. That Divine image is indeed realized in us, but the seal must be present to secure the continued existence of the impression. Apart from Him it is not found (Origen, "In Joan. ii", vi; Didymus, "De Spiritu Sancto", x, 11; Athanasius, "Ep. ad. Serap.", III, iii). This Union with the Holy Spirit constitutes our deification (*theopoiesis*). Inasmuch as He is the image of Christ, He imprints the likeness of Christ upon us; since Christ is the image of the Father, we too receive the true character of God's children (Athanasius, loc.cit.; Gregory Nazianzen, "Orat. xxxi", 4). It is in reference to this work in our regard that in the Nicaeno-Constantinopolitan Creed the Holy Spirit is termed the Giver of life (*zoopoios*). In the West we more naturally speak of grace as the life of the soul. But to the Greeks it was the Spirit through whose personal presence we live. Just as God gave natural life to Adam by breathing into his inanimate frame the breath of life, so did Christ give spiritual life to us when He bestowed on us the gift of the Holy Ghost.

VI. THE DOCTRINE AS INTERPRETED IN LATIN THEOLOGY

The transition to the Latin theology of the Trinity was the work of St. Augustine. Western theologians have never departed from the main lines which he laid down, although in the Golden Age of Scholasticism his system was developed, its details completed, and its terminology perfected. It received its final and classical form from St. Thomas Aquinas. But it is necessary first to indicate in what consisted the transition effected by St. Augustine. This may be summed up in three points:

- He views the Divine Nature as prior to the Personalities. *Deus* is for him not God the Father, but the Trinity. This was a step of the first importance, safeguarding as it did alike the unity of God and the equality of the Persons in a manner which the Greek system could never do. As we have seen, one at least of the Greeks, Didymus, had adopted this standpoint and it is possible that Augustine may have derived this method of viewing the mystery from him. But to make it the basis for the whole treatment of the doctrine was the work of Augustine's genius.
- He insists that every external operation God is due to the whole Trinity, and cannot be attributed to one Person alone, save by appropriation (see HOLY GHOST). The Greek Fathers had, as we have seen, been led to affirm that the action (*energeia*) of the Three Persons was one, and one alone. But the doctrine of appropriation was unknown to them, and thus the value of this conclusion was obscured by a traditional theology implying the distinct activities of Father, Son, and Holy Spirit.
- By indicating the analogy between the two processions within the Godhead and the internal acts of thought and will in the human mind (De Trin., IX, iii, 3; X, xi, 17), he became the founder of the psychological theory of the Trinity, which, with a very few exceptions, was accepted by every subsequent Latin writer.

In the following exposition of the Latin doctrines, we shall follow St. Thomas Aquinas, whose treatment of the doctrine is now universally accepted by Catholic theologians. It should be observed, however, that this is not the only form in which the psychological theory has been proposed. Thus

Richard of St. Victor, Alexander of Hales, and St. Bonaventure, while adhering in the main to Western tradition, were more influenced by Greek thought, and give us a system differing somewhat from that of St. Thomas.

A. The Son

Among the terms employed in Scripture to designate the Second Person of the Blessed Trinity is the Word (John 1:1). This is understood by St. Thomas of the *Verbum mentale*, or intellectual concept. As applied to the Son, the name, he holds, signifies that He proceeds from the Father as the term of an intellectual procession, in a manner analogous to that in which a concept is generated by the human mind in all acts of natural knowledge. It is, indeed, of faith that the Son proceeds from the Father by a veritable generation. He is, says the Nicaeno-Constantinopolitan Creed, begotten before all worlds". But the Procession of a Divine Person as the term of the act by which God knows His own nature is rightly called *generation*. This may be readily shown. As an act of intellectual conception, it necessarily produces the likeness of the object known. And further, being Divine action, it is not an accidental act resulting in a term, itself a mere accident, but the act is the very substance of the Divinity, and the term is likewise substantial. A process tending necessarily to the production of a substantial term like in nature to the Person from Whom it proceeds is a process of generation. In regard to this view as to the procession of the Son, a difficulty was felt by St. Anselm (Monol., lxiv) on the score that it would seem to involve that each of the Three Persons must needs generate a subsistent Word. Since all the Powers possess the same mind, does it not follow, he asked, that in each case thought produces a similar term? This difficulty St. Thomas succeeds in removing. According to his psychology the formation of a concept is not essential to thought as such, though absolutely requisite to all natural human knowledge. There is, therefore, no ground in reason, apart from revelation, for holding that the Divine intellect produces a *Verbum mentale*. It is the testimony of Scripture alone which tells us that the Father has from all eternity begotten His consubstantial Word. But neither reason nor revelation suggests it in the case of the Second and Third Persons (I:34:1, ad 3).

Not a few writers of great weight hold that there is sufficient consensus among the Fathers and Scholastic theologians as to the meaning of the names *Word* and *Wisdom* (Proverbs 8), applied to the Son, for us to regard the intellectual procession of the Second Person as at least theologically certain, if not a revealed truth (cf. Suarez, "De Trin.", I, v, p. 4; Petav., VI, i, 7; Franzelin, "De Trin.", Thesis xxvi). This, however, seems to be an exaggeration. The immense majority of the Greek Fathers, as we have already noticed, interpret *logos* of the spoken word, and consider the significance of the name to lie not in any teaching as to intellectual procession, but in the fact that it implies a mode of generation devoid of all passion. Nor is the tradition as to the interpretation of Proverbs 8, in any sense unanimous. In view of these facts the opinion of those theologians seems the sounder who regard this explanation of the procession simply as a theological opinion of great probability and harmonizing well with revealed truth.

B. The Holy Spirit

Just as the Son proceeds as the term of the immanent act of the intellect, so does the Holy Spirit proceed as the term of the act of the Divine will. In human love, as St. Thomas teaches (I:27:3), even though the object be external to us, yet the immanent act of love arouses in the soul a state of ardour which is, as it were, an impression of the thing loved. In virtue of this the object of love is present to our affections, much as, by means of the concept, the object of thought is present to our intellect. This experience is the term of the internal act. The Holy Spirit, it is contended, proceeds from the Father and the Son as the term of the love by which God loves Himself. He is not the love of God in the sense of being Himself formally the love by which God loves; but in loving Himself God breathes forth this subsistent term. He is Hypostatic Love. Here, however, it is necessary to safeguard a point of revealed doctrine. It is of faith that the procession of the Holy Spirit is not generation. The Son is "the only begotten of the Father" (John 1:14). And the Athanasian Creed expressly lays it down that the Holy Ghost is "from the Father and the Son, neither made, nor created, nor begotten, but proceeding." If the immanent act of the intellect is rightly termed generation, on what grounds can that name be denied to the act of the will? The answers given in reply to this difficulty by St. Thomas, Richard of St. Victor, and Alexander of Hales are very different. It will be sufficient here to note St. Thomas's solution. Intellectual procession, he says, is of its very nature the production of a term in the likeness of the thing conceived. This is not so in regard to the act of the will. Here the primary result is simply to attract the subject to the object of his love. This difference in the acts explains why the name *generation* is applicable only to the act of the intellect. Generation is essentially the production of like by like. And no process which is not essentially of that character can claim the name.

The doctrine of the procession of the Holy Spirit by means of the act of the Divine will is due entirely to Augustine. It is nowhere found among the Greeks, who simply declare the procession of the Spirit to be beyond our comprehension, nor is it found in the Latins before his time. He mentions the opinion with favour in the "De fide et symbolo" (A.D. 393); and in the "De Trinitate" (A.D. 415) develops it at length. His teaching was accepted by the West. The Scholastics seek for Scriptural support for it in the name *Holy Spirit*. This must, they argue, be, like the names *Father* and *Son*, a name expressive of a relation within the Godhead proper to the Person who bears it. Now the attribute *holy*, as applied to person or thing, signifies that the being of which it is affirmed is devoted to God. It follows therefore that, when applied to a Divine Person as designating the relation uniting Him to the other Persons, it must signify that the procession determining His origin is one which of its nature involves devotion to God. But that by which any person is devoted to God is love. The argument is ingenious, but hardly convincing; and the same may be said of a somewhat similar piece of reasoning regarding the name *Spirit* (I:36:1). The Latin theory is a noble effort of the human reason to penetrate the verities which revelation has left veiled in mystery. It harmonizes, as we have said, with all the truths of faith. It is admirably adapted to assist us to a fuller comprehension of the fundamental doctrine of the Christian religion. But more than this must not be claimed. It does not possess the sanction of revelation.

C. The Divine Relations

The existence of relations in the Godhead may be immediately inferred from the doctrine of processions, and as such is a truth of Revelation. Where there is a real procession the principle and the term are really related. Hence, both the generation of the Son and the procession of the Holy Spirit must involve the existence of real and objective relations. This part of Trinitarian doctrine was familiar to the Greek Fathers. In answer to the Eunomian objection, that consubstantiality rendered any distinction between the Persons impossible, Gregory of Nyssa replies: "Though we hold that the nature [in the Three Persons] is not different, we do not deny the difference arising in regard of the source and that which proceeds from the source [*ten katato aition kai to aitiaton diaphoran*]; but in this alone do we admit that one Person differs from another" ("Quod non sunt tres dii"; cf. Gregory Nazianzen, "Or. theol.", V, ix; John Damascene, "F.O.", I, viii). Augustine insists that of the ten Aristotelean categories two, stance and relation, are found in God ("De Trin.", V, v). But it was at the hands the Scholastic theologians that the question received its full development. The results to which they led, though not to be reckoned as part of the dogma, were found to throw great light upon the mystery, and to be of vast service in the objections urged against it.

From the fact that there are two processions in Godhead, each involving both a principle and term, it follows that there must be four relations, two origination (*paternitas* and *spiratio*) and two of procession (*filiatio* and *processio*). These relations are what constitute the distinction between the Persons. They cannot be distinguished by any absolute attribute, for every absolute attribute must belong to the infinite Divine Nature and this is common to the Three Persons. Whatever distinction there is must be in the relations alone. This conclusion is held as absolutely certain by all theologians. Equivalently contained in the words of St. Gregory of Nyssa, it was clearly enunciated by St. Anselm ("De process. Sp. S.", ii) and received ecclesiastical sanction in the "Decretum pro Jacobitis" in the form: "[In divinis] omnia sunt unum ubi non obviat relationis oppositio." Since this is so, it is manifest that the four relations suppose but Three Persons. For there is no relative opposition between spiration on the one hand and either paternity or filiation on the other. Hence the attribute of spiration is found in conjunction with each of these, and in virtue of it they are each distinguished from procession. As they share one and the same Divine Nature, so they possess the same *virtus spirationis*, and thus constitute a single originating principle of the Holy Spirit.

Inasmuch as the relations, and they alone, are distinct realities in the Godhead, it follows that the Divine Persons are none other than these relations. The Father is the Divine Paternity, the Son the Divine Filiation, the Holy Spirit the Divine Procession. Here it must be borne in mind that the relations are not mere accidental determinations as these abstract terms might suggest. Whatever is in God must needs be subsistent. He is the Supreme Substance, transcending the divisions of the Aristotelean categories. Hence, at one and the same time He is both substance and relation. (How it is that there should be in God real relations, though it is altogether impossible that quantity or quality should be found in Him, is a question involving a discussion regarding the metaphysics of relations, which would be out of place in an article such as the present.)

It will be seen that the doctrine of the Divine relations provides an answer to the objection that the dogma of the Trinity involves the falsity of the axiom that things which are identical with the same thing are identical one with another. We reply that the axiom is perfectly true in regard to absolute entities, to which alone it refers. But in the dogma of the Trinity when we affirm that the Father and Son are alike identical with the Divine Essence, we are affirming that the Supreme Infinite Substance is identical not with two absolute entities, but with each of two relations. These relations, in virtue of their nature as correlatives, are necessarily opposed the one to the other and therefore different. Again it is said that if there are Three Persons in the Godhead none can be infinite, for each must lack something which the others possess. We reply that a relation, viewed precisely as such, is not, like quantity or quality, an intrinsic perfection. When we affirm again it is relation of anything, we affirm that it regards something other than itself. The whole perfection of the Godhead is contained in the one infinite Divine Essence. The Father is that Essence as it eternally regards the Son and the Spirit; the Son is that Essence as it eternally regards the Father and the Spirit; the Holy Spirit is that Essence as it eternally regards the Father and the Son. But the eternal regard by which each of the Three Persons is constituted is not an addition to the infinite perfection of the Godhead.

The theory of relations also indicates the solution to the difficulty now most frequently proposed by anti-Trinitarians. It is urged that since there are Three Persons there must be three self-consciousnesses: but the Divine mind *ex hypothesi* is one, and therefore can possess but one self-consciousness; in other words, the dogma contains an irreconcilable contradiction. This whole objection rests on a *petitio principii*: for it takes for granted the identification of person and of mind with self-consciousness. This identification is rejected by Catholic philosophers as altogether misleading. Neither person nor mind is self-consciousness; though a person must needs possess self-consciousness, and consciousness attests the existence of mind (see PERSONALITY). Granted that in the infinite mind, in which the categories are transcended, there are three relations which are subsistent realities, distinguished one from another in virtue of their relative opposition then it will follow that the same mind will have a three-fold consciousness, knowing itself in three ways in accordance with its three modes of existence. It is impossible to establish that, in regard of the infinite mind, such a supposition involves a contradiction.

The question was raised by the Scholastics: In what sense are we to understand the Divine act of generation? As we conceive things, the relations of paternity and filiation are due to an act by which the Father generates the Son; the relations of spiration and procession, to an act by which Father and Son breathe forth the Holy Spirit. St. Thomas replies that the acts are identical with the relations of generation and spiration; only the mode of expression on our part is different (I:41:3, ad 2). This is due to the fact that the forms alike of our thought and our language are moulded upon the material world in which we live. In this world origination is in every case due to the effecting of a change. We call the effecting of the change *action*, and its reception *passion*. Thus, action and passion are different from the permanent relations consequent on them. But in the Godhead origination is eternal: it is not the result of change. Hence the term signifying action denotes not

the production of the relation, but purely the relation of the Originator to the Originated. The terminology is unavoidable because the limitations of our experience force us to represent this relation as due to an act. Indeed throughout this whole subject we are hampered by the imperfection of human language as an instrument wherewith to express verities higher than the facts of the world. When, for instance, we say that the Son possesses filiation and spiration the terms seem to suggest that these are forms inherent in Him as in a subject. We know, indeed, that in the Divine Persons there can be no composition: they are absolutely simple. Yet we are forced to speak thus: for the one Personality, notwithstanding its simplicity, is related to both the others, and by different relations. We cannot express this save by attributing to Him filiation and spiration (I:32:2).

D. Divine Mission

It has been seen that every action of God in regard of the created world proceeds from the Three Persons indifferently. In what sense, then, are we to understand such texts as "God sent . . . his Son into the world" (John 3:17), and "the Paraclete cometh, whom I will send you from the Father" (John 15:26)? What is meant by the mission of the Son and of the Holy Spirit? To this it is answered that mission supposes two conditions:

- That the person sent should in some way proceed from the sender and
- that the person sent should come to be at the place indicated.

The procession, however, may take place in various ways -- by command, or counsel, or even origination. Thus we say that a king sends a messenger, and that a tree sends forth buds. The second condition, too, is satisfied either if the person sent comes to be somewhere where previously he was not, or if, although he was already there, he comes to be there in a new manner. Though God the Son was already present in the world by reason of His Godhead, His Incarnation made Him present there in a new way. In virtue of this new presence and of His procession from the Father, He is rightly said to have been sent into the world. So, too, in regard to the mission of the Holy Spirit. The gift of grace renders the Blessed Trinity present to the soul in a new manner: that is, as the object of direct, though inchoative, knowledge and as the object of experimental love. By reason of this new mode of presence common to the whole Trinity, the Second and the Third Persons, inasmuch as each receives the Divine Nature by means of a procession, may be said to be sent into the soul. (See also HOLY GHOST; LOGOS; MONOTHEISTS; UNITARIANS.)

Among the numerous patristic works on this subject, the following call for special mention: ST. ATHANASIUS, *Orationes quatuor contra Arianos*; IDEM, *Liber de Trinitate et Spiritu Sancto*; ST. GREGORY NAZIANZEN, *Orationes V de theologia*; DIDYMUS ALEX., *Libri III de Trinitate*; IDEM, *Liber de Spir. Sancto*; ST. HILARY OF POITIERS, *Libri XII de Trinitate*; ST. AUGUSTINE, *Libri XV de Trinitate*; ST. JOHN DAMASCENE, *Liber de Trinitate*; IDEM, *De fide orthodoxa*, I. Among the medieval theologians: ST. ANSELM, *Lib. I. de fide Trinitatis*; RICHARD OF ST. VICTOR, *Libri VI de Trinitate*; ST. THOMAS, *Summa*, I, xxvii-xliii; BESSARION, *Liber de Spiritu Sancto contra Marcum Ephesinum*.

Among more recent writers: PETAVIUS, *De Trinitate*; NEWMAN, *Causes of the Rise and Success of Arianism in Theol. Tracts*. (London, 1864).

G. H. JOYCE
Trinity College

Trinity College

An institution for the higher education of Catholic women, located at Washington, D.C., and empowered under the terms of its charter (1897) to confer degrees. The college originated in the desire of the Sisters of Notre Dame de Namur, who had been thirty-five years established in the city of Washington, to open a select day-school in the suburb of Brookland. Before requesting the necessary ecclesiastical sanction, it was proposed to them by the authorities of the Catholic University to make the new school a college equal in efficiency to the women's colleges already established in the United States. Cardinal Gibbons, chancellor of the university, heartily endorse this project, "persuaded", he wrote, "that such an institution, working in union with, though entirely independent of, the Catholic University, will do incalculable good in the cause of higher education" (5 April 1897). Sister Julia, then provincial superior of the Sisters of Notre Dame, secured a tract of thirty-three acres lying between Michigan and Lincoln Avenues, Brookland. The corner-stone was laid on 8 December, 1899; the South Hall of the building was dedicated by Cardinal Gibbons, on 22 November 1900, and the structure was completed in 1910. It contains residence halls for two hundred students, lecture rooms, laboratories, a museum, a library of 12,000 volumes, and a temporary chapel. The O'Connor Art Gallery and Auditorium, a hall provided by the generosity of Judge and Mrs. M.P. O'Connor of San Jose, California, houses a large and valuable collection of paintings, water colours, mosaics, photographs, and statuary, which was opened to visitors on 31 May, 1904, in the presence of the donors. The Holahan Social Hall contains some rare old paintings, a bequest to the college in 1907 by Miss Amanda Holahan of Philadelphia. The administration of the college is in the hands of an advisory board, of which Cardinal Gibbons is president, and the members comprise the rector, and vice-rector of the Catholic University, the provincial superior of the Sisters of Notre Dame, the president of the college, who is also the superior of the community, and the president of the auxiliary board of regents. The auxiliary board of regents and its associate boards draw their members from all parts of the United States, being composed of Catholic ladies who can help the cause of higher education by their influence and example. The college has no endowment. By the liberality of friends, seventeen scholarships have been established. The faculty of Trinity College is composed of six professors from the Catholic University in the departments of philosophy, education, apologetics, economics, and sociology, and seventeen Sisters of Notre Dame in the departments of religion, Sacred Scripture, ancient and modern languages, English, history, logic, mathematics, the physical sciences, music, and art. The college opened its courses on 7 November 1900, with twenty-two students in the Freshman class and has grown only by promotion and admission. For 1911-1912, 160 were registered. Admission is by examination according to the requirements of the College Entrance Examination Board; no specialists are

received; and there is no preparatory department. The number of degrees conferred (1904-1912) is 160, viz.: master of arts, 8; bachelor of arts, 130; bachelor of letters, 20; bachelor of science, 2.

Annals of Trinity College (Washington, D.C.); SISTER OF NOTRE DAME, The Life of Sister Julia, Provincial Superior of the Sisters of Notre Dame (Washington, D.C., 1911); MCDEVITT, Trinity College and the Higher Education in The Catholic World (June, 1904); HOWE, Trinity College in Donahoe's Magazine (October, 1900).

SISTER OF NOTRE DAME

Trinity Sunday

Trinity Sunday

The first Sunday after Pentecost, instituted to honour the Most Holy Trinity. In the early Church no special Office or day was assigned for the Holy Trinity. When the Arian heresy was spreading the Fathers prepared an Office with canticles, responses, a Preface, and hymns, to be recited on Sundays. In the Sacramentary of St. Gregory the Great (P.L., LXXVIII, 116) there are prayers and the Preface of the Trinity. The Micrologies (P.L., CLI, 1020), written during the pontificate of Gregory VII (Nilles, II, 460), call the Sunday after Pentecost a *Dominica vacans*, with no special Office, but add that in some places they recited the Office of the Holy Trinity composed by Bishop Stephen or Liège (903-20) By other the Office was said on the Sunday before Advent. Alexander II (1061-1073), not III (Nilles, 1. c.), refused a petition for a special feast on the plea, that such a feast was not customary in the Roman Church which daily honoured the Holy Trinity by the Gloria, Patri, etc., but he did not forbid the celebration where it already existed. John XXII (1316-1334) ordered the feast for the entire Church on the first Sunday after Pentecost. A new Office had been made by the Franciscan John Peckham, Canon of Lyons, later Archbishop of Canterbury (d. 1292). The feast ranked as a double of the second class but was raised to the dignity of a primary of the first class, 24 July 1911, by Pius X (Acta Ap. Sedis, III, 351). The Greeks have no special feast. Since it was after the first great Pentecost that the doctrine of the Trinity was proclaimed to the world, the feast becomingly follows that of Pentecost.

FRANCIS MERSHMAN

Triple-Candlestick

Triple-Candlestick

A name given along with several others (e.g. reed, *tricereo*, *arundo*, *triangulum*, *lumen Christi*) to a church ornament used only in the office of Holy Saturday. The three candles of which it is composed are successively lighted, as the sacred ministers proceed up the church, from the fire consecrated in the porch, and at each lighting the deacon sings the acclamation "Lumen Christi",

the assistants genuflecting and answering "Deo gratias". As this ceremony is fully discussed under the heading *LUMEN CHRISTI* (and cf. *LITURGICAL USE OF FIRE*) it will be sufficient to say a word here about the material instrument used for the purpose. Both the rubrics of the Missal and the "Caeremoniale Episcoporum" seem to assume that the so-called triple candlestick is not a permanent piece of furniture, but merely an arrangement of three candles temporarily attached to a reed or wand, such a reed for example as is used by the acolytes to light the candles with. "Praeparetur arundo cum tribus candelis in summitate positis" (Caer. Epis., II, xxvii, I). In practice, however, we often find a brass candlestick constructed for the purpose with a long handle. Barbier de Montault (*Traité pratique*, etc., II, 311) infers from the wording of the Missal rubric (arundo cum tribus candelis in summitate illius triangulo distinctis) that one of the three candles should stand higher than the other, so that the three flames may form a triangle in the vertical plane. A triple and double candlestick are used by bishops of the Greek Church to bless the people with, and an elaborate symbolism is attached to this rite.

THURSTON, *Lent and Holy Week* (London, 1904).

HERBERT THURSTON

Tripolis

Tripolis

(TRIPOLITANA).

A Maronite and Melchite diocese, in Syria. The primitive name of the town is not known; Dhorme (*Revue biblique*, 1908, 508 sqq.) suggests that it is identical with Shi-ga-ta mentioned in the El-Amarna letters between 1385 and 1368 B.C. The name Tripolis is derived from the fact that the city formed three districts separated from each other by walls, inhabited by colonists from Aradus, Tyre, and Sidon, and governed by a common senate. Almost nothing is known of its ancient history. Christianity was introduced there at an early date; mention may be made of a much frequented sanctuary there which was dedicated to the martyr St. Leontius, whose feast is observed on 18 June (*Analecta bollandiana*, XIX, 9-12). The see, which was in the Province of Tyre and the Patriarchate of Antioch, had a bishop, Helladicus, in 325; other bishops were: the Arian Theodosius; Commodus, who was present at the Council of Ephesus in 431; and Theodorus, at that of Chalcedon in 451 (*Le Quien*, "Oriens christ.", II, 821-24). After an earthquake Tripolis was restored by Emperor Marcianus about the middle of the fifth century, to be captured by the Arabs in 638, when it became a powerful centre of the Shiite religion, resisting all attacks by the Byzantines. It then had a university and a library of more than 100,000 volumes; the latter was burned on the arrival of the Crusaders. As early as 1103 Raymond, Count of Saint-Gilles, being unable to capture the city, built on a neighbouring hill the stronghold which still exists and compelled the inhabitants to pay him tribute. In 1109 the city was captured, made a countship, and given to Bertrand, Raymond's son, and to his descendants. The latter owned it until 1289, when it was taken from them by Sultan Qalaoun, who massacred the entire Christian population. Du Cange (*Les familles d'outre-mer*, 811-13) and Eubel

(*Hierarchia catholica medii ævi*, I, 526; II, 281; III, 339) give the list of its Latin residential and titular bishops. In 1517 the Turks finally captured Tripoli and still retain possession of it. In 1697 the Maronite prince Younès was martyred there for the Faith, and in 1711 the Sheikh Canaan-Daher-Shhedid.

Tripolis is now a sanjak of the vilayet of Beirut, and contains two towns linked by a tramway: El-Mina, or maritime Tripolis, on the site of the ancient city, and Taraboulos, built since 1289, at the foot of Raymond's fortress. The two cities together contain 37,000 inhabitants, of whom 110 are Latins, 2200 Oriental Catholics of various rites, and 4000 schismatic Melchites; the remainder are Mussulmans. The Maronite bishop, Mgr. Antoine Arida, consecrated on 18 June, 1908, resides at Karrusadde. The Melchite bishop, Mgr. Joseph Doumani, was consecrated on 21 March, 1897. The Franciscans have the Latin parish and two establishments. In this parish are also established the Lazarists, the Carmelites, the Brothers of the Christian Schools, and the Sisters of Charity. The sanctuary of the Blessed Virgin is called *Saïdyat el-Harah*, Our Lady of the Quarter. The Maronite diocese has 48,000 faithful, 350 priests, and 70 churches. The Melchite diocese, created in 1897, has 1225 faithful, 14 priests, 10 churches or chapels, and 6 schools. The schismatic Melchite diocese has 50,000 members.

DU CANGE, *Les familles d'outre-mer* (Paris, 1869), 477-95; RENAN, *Mission de Phénicie* (Paris, 1864), 120-30; GUÉRIN, *Description de la Palestine: Galilee*, II, 23-30; GOUDARD, *La Sainte Vierge au Liban*, 269-77; *Missiones catholicæ* (Rome, 1907), 783, 819; CHARON in *Annuaire pont. cath.* (Paris, 1911), 430.

S. VAILHÉ

Giangiorgio Trissino

Giangiorgio Trissino

Italian poet and scholar, b. of a patrician family at Vicenza in 1478; d. at Rome, 8 December, 1550. He had the advantages of a good humanistic training, studying Greek under the noted Demetrius Chalcondylas at Milan and philosophy under Nicolò Leonicensi at Ferrara. His culture recommended him to the humanist Leo X, who in 1515 sent him to Germany as his nuncio; later on Clement VII showed him especial favour, and employed him as ambassador. In 1532 the Emperor Charles V made him a count palatine. In spite of the banishment from Vicenza pronounced upon him in 1509 because his family had favoured the plans of Maximilian, he was held in honour throughout Italy. Wherever he abode his home was a centre for gatherings of scholars, *littérateurs*, and the most cultured men of the time. His family life was far from happy, apparently through little fault of his own. In the history of modern European literature Trissino occupies a prominent place because of his tragedy "Sofonisba" (1515; recent ed., Bologna, 1884), the first tragedy in Italian to show deference to the classic rules. Constantly a partisan of Aristotelean regularity, he disapproved of the genial freedom of the chivalrous epic as written by Ariosto. In his own composition the "Italia liberata dai Goti" (1547-8), dealing with the campaigns of Belisarius in Italy, he sought to

show that it was possible to write in the vernacular an epic in accordance with the classic precepts. The result is a cold and colourless composition.

He was one of the many who engaged in the discussion as to what is true literary Italian. Following the lead of Dante, he espoused in his "Castellano" (1529) the indefensible theory that the language is a courtly one made up of contributions from the refined centres in Italy, instead of being, as it is, fundamentally of Tuscan origin. For clearness he proposed that in writing Italian certain new characters (derived from the Greek alphabet) were adopted to show the difference between open and close *e* and *o* and voiced and voiceless *s* and *z*. This wise proposition was ignored. "I Simillimi" (1548) which is a version of the "Menæchmi" of Plautus, "I Ritratti" (1524) which is a composite portrait of feminine beauty, and the "Poetica", which contains his summing up of the Aristotelean principles of literary composition, made up the rest of his important writings. An edition of his collected works was published by Maffei at Verona in 1729.

MORSOLIN, Giangiorgio Trissino (Florence, 1894); FLAMINI, Il Cinquecento 132 sqq.; CIAMPOLINI, La prima tragedia regolare della lett. ital. (Florence, 1896); ERMINI, L'Italia lib. di G.T. (Rome, 1893).

J.D.M. FORD

Tritheists

Tritheists

(TRITHEITES).

Heretics who divide the Substance of the Blessed Trinity.

(1) Those who are usually meant by the name were a section of the Monophysites, who had great influence in the second half of the sixth century, but have left no traces save a few scanty notices in John of Ephesus, Photus, Leontius, etc. Their founder is said to be a certain John Ascunages, head of a Sophist school at Antioch. But the principal writer was John Philoponus, the great Aristotelean commentator. The leaders were two bishops, Conon of Tarsus and Eugenius of Seleucia in Isauria, who were deposed by their comprovincials and took refuge at Constantinople. There they found a powerful convert and protector in Athanasius the Monk, a grandson of the Empress Theodora. Philoponus dedicated to him a book on the Trinity. The old philosopher pleaded his infirmities when he was summoned by Justinian to the Court to give an account of his teaching. But Conon and Eugenius had to dispute in the reign of Justin II (565-78) in the presence of the Catholic patriarch, John Scholasticus (565-77), with two champions of the moderate Monophysite party, Stephen and Paul, the latter afterwards Patriarch of Antioch. The Tritheist bishops refused to anathematize Philoponus, and brought proofs that he agreed with Severus and Theodosius. They were banished to Palestine, and Philoponus wrote a book against John Scholasticus, who had given his verdict in favour of his adversaries. But he developed a theory of his own as to the Resurrection (see EUTYCHIANISM) on account of which Conon and Eugenius wrote a treatise against him in collaboration with Themistus, the founder of the Agnoctæ, in which they declared his views to be

altogether unchristian. The two bishops together with a deprived bishop named Theonas proceeded to consecrate bishops for their sect, which they established in Corinth and Athens, in Rome and Africa, and in the Western Patriarchate, while their agents travelled through Syria and Cilicia, Isauria and Cappadocia, converting whole districts, and ordaining priests and deacons in cities, villages, and monasteries. Eugenius died in Pamphylia; Conon returned to Constantinople. We are assured by Leontius that it was the Aristoteleanism of Philoponus which made him teach that there are in the Holy Trinity three partial substances (*merikai ousiai, ikikai theotetes, idiai physeis*) and one common. The genesis of the heresy has been explained (for the first time) under MONOPHYSITES, where an account of Philoponus's writings and those of Stephen Gobarus, another member of the sect, will be found.

(2) In the Middle Ages Roscellin of Compiègne, the founder of Nominalism, argued, just like Philoponus, that unless the Three Persons are tres res, then the whole Trinity must have been incarnate. He was refuted by St. Anselm.

(3) Among Catholic writers, Pierre Faydit, who was expelled from the Oratory at Paris in 1671 for disobedience and died in 1709, fell into the error of Tritheism in his "Eclaircissements sur la doctrine et l'histoire ecclésiastiques des deux premiers siècles" (Paris, 1696), in which he tried to make out that the earliest Fathers were Tritheists. He was replied to by the Premonstratensian Abbot Louis-Charles Hugo ("Apologie du système des Saints Pères sur la Trinité," Luxemburg, 1699). A canon of Trèves named Oembs, who was infected with the doctrines of the "Enlightenment", similarly attributed to the Fathers his own view of three similar natures in the Trinity, calling the numerical unity of God an invention of the Scholastics. His book, "Opuscula de Deo Uno et Trino" (Mainz, 1789), was condemned by Pius VII in a Brief of 14 July, 1804. Gunther is also accused of Tritheism.

(4) Among Protestants, Heinrich Nicolai (d. 1660), a professor at Dantzic and at Elbing (not to be confounded with the founder of the Familisten), is cited. The best known is William Sherlock, Dean of St. Paul's, whose "Vindication of the Doctrine of the Trinity" (London, 1690) against the Socinians was attacked by Robert South in "Animadversions on Dr. Sherlock's Vindication" (1693). Sherlock's work is said to have made William Manning a Socinian and Thomas Emlyn an Arian, and the dispute was ridiculed in a skit entitled "The Battle Royal", attributed to William Pittis (1694?), which was translated into Latin at Cambridge. Joseph Bingham, author of the "Antiquities", preached at Oxford in 1695 a sermon which was considered to represent the Fathers as Tritheists, and it was condemned by the Hebdomadal Council as *falsa, impia et haeretica*, the scholar being driven from Oxford.

For bibliography see MONOPHYSITES.

JOHN CHAPMAN

John Trithemius

John Trithemius

A famous scholar and Benedictine abbot, b. at Tritenheim on the Moselle, 1 February, 1462; d. at Würzburg, 13 December, 1516. The abbot himself, in his "Nepiachus", gives an account of his youth, which was a time of hard suffering owing to the harsh treatment of his selfish stepfather, who allowed the talented boy to grow up in complete ignorance till the age of fifteen, when he learned reading and writing as well as the rudiments of Latin in a remarkably short time. But as his persecution at home did not cease, he ran away, and after a painful journey succeeded in reaching Würzburg, where the well-known humanist, Jacob Wimpheling, was teaching; here the ambitious youth pursued his classical studies till 1482. In order to revisit his home he determined to make an excursion to the neighbourhood of Trèves accompanied by a comrade; it was January and the young men travelled afoot. A short visit to the monastery of Sponheim was to prove of decisive importance for the young Trithemius; hardly had the travellers taken leave of the monks when a snowstorm obliged them to return to the monastery. At the invitation of the prior, Henry of Holzhausen, who had quickly discerned the talents of his young guest, Trithemius remained in Sponheim; eight days later he received the habit of the order and made his vows in the same year, 8 December. His life in the monastery was exemplary; he commanded the respect of his brethren, and the love of his superiors. The proof of the respect in which he was held by all was the fact that although he was the youngest member of the community, and had not yet been ordained, he was elected abbot at the age of twenty-two, during the second year of his life in the order. His election was a great blessing for Sponheim. With youthful vigour and a firm hand he undertook the direction of the much-neglected monastery. He first turned his attention to the material needs of his community, then set himself to the much more difficult task of restoring its discipline. Above all, his own example, not only in the conscientious observance of the rules of the order, but also in the tireless pursuit of scientific studies, brought about the happiest results.

In order to promote effectively scientific research, he procured a rich collection of books which comprised the most important works in all branches of human knowledge; in this way he built up the world-renowned library of Sponheim for the enriching of which he laboured unceasingly for twenty-three years till the collection numbered about 2000 volumes. This library, unique in those days, made Sponheim known throughout the entire world of learning. The attractive personality of the abbot also helped to spread the fame of the monastery. Among his friends he numbered, not only the most learned men of his time, such as Celtes, Reuchlin, and John of Dalberg, but also many princes -- including the Emperor Maximilian, who held him in great esteem. But the farther his reputation extended in the world the greater became the number of malcontents in the monastery who opposed the abbot's discipline. Finally he resigned as head of his beloved abbey, which he had ruled for twenty-three years, and which he had brought to a most flourishing condition; after his departure the monastery sank into its former insignificance. The Emperor Maximilian desired to bring the famous scholar to his Court, and to make him the historiographer of the Imperial House with a life-long pension; he was also promised rich abbeys. But Trithemius sought the quiet and peace of a more retired life, and this he found as abbot of the Scottish monastery of St. Jacob, at Würzburg (1506). Here he found only three monks, so he had ample opportunity to display the

same activity he had shown at Sponheim. He spent the last ten years of his life in the production of many important writings. Only once did he leave his monastery (1508) for a short stay at the imperial Court. He died at fifty-five years of age and was buried in the Scottish church at Würzburg.

The Order of St. Benedict was indebted to this energetic abbot for his zealous promotion of the Bursfeld Congregation, for his encouragement of learning in the order, and for his earnest furtherance of monastic discipline. "The great abbot", says one of his biographers, "was equally worthy of respect as a man, as a religious, and as a writer." Of his more than eighty works only part have appeared in print. The greater number of these are ascetical writings which treat of the religious life and were published by John Busaeus, S.J., under the title "Joannis Trithemii opera pia et spiritualia" (Mainz, 1604); they are among the best works of devotional literature produced at the time. Marquard Freher published a part of his historical works as "Joannis Trithemii opera historica" (Frankfort, 1601). This collection, however, did not include the two famous folio volumes, published in 1690 under the title of "Annales Hirsaugiensis". Trithemius also wrote interesting contributions on points of natural science, then much debated, and on classical literature. The question whether he, by citing two otherwise unknown authorities (Megiahard and Kunibald), was guilty of intentional forgery, is still under debate by some critics. Surely the inscription on his tomb testifies to the truth:

Hanc meruit statuam Germanae gloria gentis Abbas Trithemius, quem tegit ista domus

(The Abbot Trithemius, the glory of the German race, whom this house covers, merited this statue).

[*Note:* A portrait of John Trithemius was printed in Thevet's *Livre des Vrais Pourtraits*, Paris, 1584.]

NICHOLAS SCHEID

Trivento

Trivento

(Triventensis)

Diocese in southern Italy. The earliest bishop was St. Castus of an uncertain epoch, the local legend assigning him to the fourth century. Other bishops were: the monk Leo, intruded and deposed by Agapetus I (946); Alferius (1109); the Franciscan Luca (1226), exiled by King Manfred; Pietro dell' Aquila (1348), noted for his learning; Giulio Cesare Moriconda (1582), who restored the cathedral, rearranged the archives, and erected a seminary; Alfonso Moriconda (1717), O.S.B., a learned prelate who restored the cathedral and the episcopal residence. The diocese is suffragan of Beneventum; it has 58 parishes with 130,000 souls, 160 secular priests, and three religious houses.

CAPPELLETTI, *Le chiese d'Italia*, XXI (Venice, 1844), 469.

U. BENIGNI

Nicholas Trivet

Nicholas Trivet

(Or "Trevet" as he himself wrote it)

B. about 1258; d. 1328. He was the son of Thomas Trevet, a judge who came of a Norfolk or Somerset family. He became a Dominican in London, and studied first at Oxford, then at Paris, where he first took an interest in English and French chronicles. Little is known of his life except that at one time he was prior of his order in London, and at another he was teaching at Oxford. He was the author of a large number of theological and historical works and commentaries on the classics, more especially the works of Seneca. A large number of these exist in MS. in various libraries, but only two appear to have been printed, one being the work by which he is chiefly remembered, the chronicle of the Angevin kings of England, the other was the last twelve books of his commentary on St. Augustine's treatise "De civitate dei". The full title of the former work is "Annales sex regum Angliae qui a comitibus Andegavensibus originem traxerunt", an important historical source for the period 1136-1307, containing a specially valuable account of the reign of Edward I. Trivet also wrote a chronicle in French, parts of which were printed by Spelman, and from which Chaucer is believed to have derived the "Man of Law's Tale". His theological works include commentaries on parts of the Scripture, a treatise on the Mass and some writings on Scholastic theology.

HOG, preface to Trivet's Chronicle, Eng. Hist. Soc. (London, 1845); TRIVET, *Annales sex Regum Angliae* (Oxford, 1719); HARDY, *Descriptive Catalogue* (London, 1871); KINGSFORD in *Dict. Nat. Biog.*, with exhaustive list of MSS.; CHEVALIER, *Repertoire des sources historiques du moyen age* (Paris, 1905), gives a list of earlier references.

EDWIN BURTON

Troas

Troas

A suffragan of Cyzicus in the Hellespont. The city was first called Sigia; it was enlarged and embellished by Antigonus, who peopled it with inhabitants drawn from other cities, and surnamed it Antigonía Troas (Strabo, 604, 607); it was finally enlarged by Lysimachus, who called it Alexandria Troas (Strabo, 593; Pliny, V, 124). The name Troas is the one most used. For having remained faithful to the Romans during their war against Antiochus, Troas was favoured by them (Titus Livius, XXXV, 42; XXXVII, 35); it became afterwards Colonia Alexandria Augusta Troas. Augustus, Hadrian and the rich grammarian Herodes Atticus contributed greatly to its embellishment; the aqueduct still preserved is due to the latter. Julius Caesar and Constantine the Great thought of

making Troas the capital of the Roman Empire. St. Luke came to Troas to join St. Paul and accompany him to Europe (Acts, xvi, 8-11); there also many of St. Paul's friends joined him at another time and remained a week with him (Acts, xx, 4-12). A Christian community existed there and it was at that place that Eutychus was resuscitated by the Apostle. He mentions his sojourn there (II Cor., ii, 12), and he asks Timotheus to bring him his cloak and his books which he had left with Carpus (II Tim., iv, 13). St. Ignatius of Antioch stopped at Troas before going to Rome (Ad Philad., XI, 2; Ad Smyrn., XII, 1). Several of its bishops are known: Marinus in 325, Niconius in 344, Sylvanus at the beginning of the fifth century; Pionius in 451, Leo in 787, Peter, friend of the patriarch Ignatius, and Michael, his adversary, in the ninth century. In the tenth century Troas is given as a suffragan of Cyzicus and distinct from the famous Ilium (Gelzer, "Ungedruckte . . . Texte der Notitiae episcopatum", 552; Idem, "Georgii Cyprii descriptio orbis romani", 64); it is not known when the city was destroyed and the diocese disappeared. To-day Troas is Eski- Stambul in the sanjak of Bigha.

S. VAILHÉ

Trocmades

Trocmades

(Trocmada)

Titular see of Galatia Secunda, suffragan of Pessinus. No geographer or historian mentions a city of this name; Hierocles (Synecemus, 698, 1) gives "regio Trocnades", instead of *Regetnoknada*, referring, doubtless, to the Galatian name of some tribe on the left bank of the Sangarius; its principal centre was probably in the present village of Kaimez, about twenty-four miles east of Eski Shehir, a vilayet of Broussa. All the "Notitiae episcopatum" up to the thirteenth century mention the see *Trokmadon* among the suffragans of Pessinus; the two most recent (thirteenth century) call it *Lotinou*; perhaps it should be Plotinou, from St. Plotinus, venerated there. The official lists of the Roman Curia give Trocmadae. Le Quien (Oriens christianus, I, 493), gives Trocmada. From these erroneous forms arises a confusion of the name with the Galatian tribe of Trocmi. The last named author gives a list of the known bishops: Cyriacus, who represented his metropolitan at the Robber Synod of Ephesus (449), and was represented by a priest at the Council of Chalcedon (451); Theodore, present at the Council of Constantinople (681); Leo, at Nicaea (787); Constantine at the Photian Council of Constantinople (879). Cyriacus, said to have assisted at the Council of Nicaea (325), is not mentioned in the authentic lists of bishops present at that council.

S. PÉTRIDÈS

John de Trokelowe

John de Trokelowe

(THROWLOW, or THORLOW)

A monastic chronicler still living in 1330, but the dates of whose birth and death are unknown. He was a Benedictine monk of St. Albans who in 1294 was living in the dependent priory of Tynemouth, Northumberland. The prior and monks endeavoured to sever connection with St. Albans and to obtain independence by presenting the advowson to the king; but abbot John of Berkamsted resisted this arrangement, visited Tynemouth, and sent Trokelow with other monks as prisoners back to St. Alban's. There Trokelowe wrote his "Annales" including the period 1259 to 1296 and a useful account of the reign of Edward II, from 1307 to 1323, after which date his chronicle was continued by Henry de Blanford. A reference made by Trokelowe to the execution of Mortimer shows that he was writing after 1330.

RILEY, *Johannis de Trokelowe et Henrici de Blanforde chronica et annales* in *Rolls Series* (London, 1866). See also RILEY, Introduction to RISHANGER, *Chronicle in the Chronica monastica S. Albani* in the same series. HARDY, *Descriptive Catalogue* (London, 1871); HUNT in *Dict. Nat. Biog.*

EDWIN BURTON

Ancient See of Trondhjem

Ancient See of Trondhjem

(NIDAROS).

In Norway it was the kings who introduced Christianity, which first became known to the people during their martial expeditions (Hergenröther, "Kirchengeschichte", 1879, II, 721). The work of Christianization begun by Haakon the Good (d: 981) (Maurer, "Die Bekehrung des norwegischen Stammes", Munich, 1855, I, ii, 168) was carried on by Olaf Trygvesson (d. 1002) and Olaf Haraldsson (St. Olaf, d. 1030). Both were converted vikings, the former having been baptized at Andover, England, by Bishop Aelfeah of Winchester, and the latter at Rouen by Archbishop Robert (Bang, "Den norske Kirkes Historie under Katholicismen", Christiania, 1887, 44, 50). In 997 Olaf Trygvesson founded at the mouth of the River Nid the city of Nidaros, afterwards called Trondhjem, where he built a royal palace and a church; he laboured to spread the truths of Christianity in Norway, the Orkney and Shetland Islands, the Faroe Islands, Iceland, and Greenland (Maurer, *op. cit.*, I, iii, 462). King Olaf Haraldsson created an episcopal see at Nidaros, installing the monk Grimkill as bishop. Moreover, many English and German bishops and priests laboured in Norway, and by degrees Christianity softened the rough instincts of the people. The Norwegian bishops were at first dependent on the Archbishop of Hamburg-Bremen, and afterwards on the Archbishop of Lund, Primate of Scandinavia. As the Norwegians nevertheless wanted an archbishop of their own, Eugene III, resolving to create a metropolitan see at Trondhjem, sent thither as legate (1151) Cardinal

Nicholas of Albano (Nicholas Breakspeare), afterwards Adrian IV. The legate installed Jon Birgeron, previously Bishop of Stavanger, as Archbishop of Trondhjem. The bishops of Oslo (bishop 1073), Bergen (about 1060), Stavanger (1130), Hamar (1151), the Orkneys (1070), Iceland (Skalholt, 1056; Holar, 1105), and Greenland became suffragans.

Archbishop Birgeron was succeeded by Eystein (Beatus Augustinus, 1158-88), previously royal secretary and treasurer, a man of brilliant intellect, strong will, and deep piety (Daae, "Norges Helgener", Christiania, 1879, 170-6). Such a man was then needed to defend the liberty of the Church against the encroachments of King Sverre, who wished to make the Church a mere tool of the temporal power. The archbishop was compelled to flee from Norway to England. It is true that he was able to return and that a sort of reconciliation took place later between him and the king, but on Eystein's death Sverre renewed his attacks, and Archbishop Eric had to leave the country and take refuge with Archbishop Absalon of Lund. At last, when Sverre attacked the papal legate, Innocent III laid the king and his partisans under interdict (Baluze, "Epp. Innocentii III", Paris, 1682, I, i, 226, 227). King Haakon (1202), son and successor of Sverre, hastened to make peace with the Church, whose liberty had been preserved by the unflinching attitude of the pope and his archbishops. What would have happened, asks the Protestant ecclesiastical historian of Norway, Dr. A. Chr. Bang, "if the Church, deprived of all liberty, had become the submissive slave of absolute royalty? What influence would it have exercised at a time when its chief mission was to act as the educator of the people and as the necessary counterpoise to defend the liberty of the people against the brutal whims of the secular lords? And what would have happened when a century later royalty left the country? After that time the Church was in reality the sole centre about which was grouped the whole national life of our country" (op. cit., 109). To regulate ecclesiastical affairs, which had suffered during the struggles with Sverre, Innocent IV in 1247 sent Cardinal William of Sabina as legate to Norway. He intervened against certain encroachments on the part of the bishops, reformed various abuses, and abolished the ordeal by hot iron. Owing in great measure to the papal legates, Norway became more closely linked with the supreme head of Christendom at Rome. Secular priests, Benedictines, Cistercians, Augustinians, Dominicans, and Franciscans worked together for the prosperity of the Church. Archbishops Eilif Kortin (d. 1332), Paul Baardson (d. 1346), and Arne Vade (d. 1349) showed specially remarkable zeal. Provincial councils were held, at which serious efforts were made to eliminate abuses and to encourage Christian education and morality (Bang, op. cit., 297).

Nidaros (Trondhjem), the metropolis of the ecclesiastical province, was also the capital of Norway. The residence of the kings until 1217, it remained until the troubles of the Reformation the heart and centre of the spiritual life of the country. There was situated the tomb of St. Olaf, and around the patron of Norway, "Rex perpetuus Norvegiae", the national and ecclesiastical life of the country was centred. Pilgrims flocked from all quarters to the tomb. The feast of St. Olaf on 29 July was a day of reunion for "all the nations of the Northern seas, Norwegians, Swedes, Goths, Cimbrians, Danes, and Slavs", to quote an old chronicler ("Adami gesta pontificum Hammaburgensium", Hanover, 1876, II, 82), in the cathedral of Nidaros, where the reliquary of

St. Olaf rested near the altar. Built in Roman style by King Olaf Kyrre (d. 1093), the dome had been enlarged by Archbishop Eystein in Ogival style. It was finished only in 1248 by Archbishop Sigurd Sim. Although several times destroyed by fire, the ancient dome was restored each time until the storms of the Reformation. Then Archbishop Eric Walkendorf was exiled (1521), and his successor, Olaf Engelbertsen, who had been the instrument of the royal will in the introduction of Lutheranism, had also, as a partisan of Christian II, to fly from Christian III (1537). The valuable reliquaries of St. Olaf and St. Augustine (Eystein) were taken away, sent to Copenhagen, and melted. The bones of St. Olaf were buried in the cathedral, and the place forgotten. But when Norway regained its liberty and resumed it placed among independent nations (1814), the memory of the glory of its ancestors awoke. It was resolved to rebuild the ancient dome, and the cathedral stands once more renewed, although not in possession of the religion which created it. But new churches have arisen in the city of St. Olaf, bearing witness that the Catholic Faith still lives in Scandinavia in spite of all its trials.

GUSTAF ARMFELT

Trope

Trope

Definition and Description

Trope, in the liturgico-hymnological sense, is a collective name which, since about the close of the Middle Ages or a little later, has been applied to texts of great variety (in both poetry and prose) written for the purpose of amplifying and embellishing an independently complete liturgical text (e.g. the Introit, the Kyrie, Gloria, Gradual, or other parts of the Mass or of the Office sung by the choir). These additions are closely attached to the official liturgical text, but in no way do they change the essential character of it; they are entwined in it, augmenting and elucidating it; they are, as it were, a more or less poetical commentary that is woven into the liturgical text, forming with it a complete unit. Thus in France and England, instead of the liturgical text "Sanctus, Sanctus, Sanctus, Dominus Deus Sabaoth" the lines sung were:

1. *Sanctus ex quo sunt omnia;*
2. *Sanctus, per quem sunt omnia;*
3. *Sanctus, in quo sunt omnia; Dominus Deus Sabaoth, tibi gloria sit in saecula.*

The most accurate definition, applicable to all the different kinds of Tropes, might be the following: A Trope is an interpolation in a liturgical text, or the embellishment brought about by interpolation (i.e. by introductions, insertions, or additions). Herein lies the difference between the Trope and the closely-related Sequence or Prose. The Sequence also is an embellishment of the liturgy, an insertion between liturgical chants (the Gradual and the Gospel), originating about the eighth century; the Sequence is thus an interpolation in the liturgy, but it is not an interpolation in

a liturgical text. The Sequence is an independent unit, complete in itself; the Trope, however, forms a unit only in connection with a liturgical text, and when separated from the latter is often devoid of any meaning. Accordingly the several Tropes are named after that liturgical text to which they belong, viz. Trope of the Kyrie, Trope of the Gloria, Trope of the Agnus Dei, etc.

Originally there existed no uniform name for that which is now combined under the idea and name of *Tropus*. Only the interpolations of the Introit, the Offertory, and the Communion were called *Tropi* (*trophî, tropos, trophos*), and even that not exclusively but only predominantly; for the Introit Trope was frequently called "Versus in psalmis", the Offertory Trope also "Prosa [or prosula] ad [or ante] Offerenda". To all the other interpolations a great variety of names was applied, as "Prosae de Kyrieleison", or "Versus ad Kyrieleison", = Kyrie Tropes; "Laudes" (*Lauda, laus*), "Gloria cum laudes", "Laudes cum tropis", or simply "Ad Gloria", = Gloria Tropes; "Laudes ad Sanctus", "Versus super Sanctus", = Sanctus Tropes; "Laudes de Agnus Dei", "Prosa ad Agnus Dei", = Agnus Tropes; "Epistola cum Versibus", "Versus super epistolam", = Epistle Trope (*Epître farcie*); "Verba", or "Verbata", or "Prosella", = Breviary Trope. How and when the general name of *Tropus* sprang up, has not yet been exactly ascertained. And just as little has the priority been established of the different kinds of interpolations, whether that in the Introit is the oldest, or that in the Gloria, or the Kyrie, or in any other part of the Mass; for that very reason it is not known yet which of the various designations (Versus, Prosae, Tropi, or Laudes) is the oldest and most original.

One thing is certain: the Latin Tropus is a word borrowed from the Greek *tropos*. The latter was a musical term, and denoted a melody (*tropos lydios, phrygios* = Lydian, Phrygian, Doric melody), or in general a musical change, like the Latin *modus* or *modulus*, similar to the international "modulation". It is quite conceivable that the name of the melody was transferred to the text which had been composed to it, as is the case with the word *Sequentia*. In reasoning thus, one would have to presuppose that over one syllable of a liturgical text, e.g. over the *e* of the Kyrie, a longer melisma was sung, which bore the name of *tropus*; furthermore, that to such a melisma a text was composed later on, and that this text was also called "Tropus". And it is an actual fact that from early times such melismata existed over a vowel of the Kyrie, the Gloria, the Sanctus, etc.; likewise there were many texts which were produced for these melismata, consequently they were interpolations. But the date when these melismata of the Kyrie, Gloria, Sanctus, etc., were first called "Tropi" is still a matter of research; what we know is that the texts under that kind of melisma which has just been described were not called "Tropi" from the earliest times. On the contrary, by the name of "Tropi" were originally designated the interpolations of precisely those parts of the Mass which do not exhibit any long melismata, as the Introit and Offertory. To give an example, an interpolation of the Christmas Introit written in prose, reads: Ecce, adest de quo prophetae cecinerunt dicentes;

Puer natus est nobis,

Quem virgo Maria genuit,

Et filius datus est nobis, etc.

The first introductory phrase of this and similar interpolations, particularly when it comprises an entire stanza, as, e.g.,

Laudemus omnes Dominum,
 Qui virginis per uterum
 Parvus in mundum venerat
 Mundum regens, quem fecerat,
Puer natus est nobis, etc.

cannot possibly be considered as text to an already existing melisma which was called "Tropus", and which then gave its name to the text that was put to it. And yet, just such interpolations of the Introit and the Offertory were called "Tropi". In this article it must suffice to allude to these difficulties, on the solution of which will depend the theory of the origin and the early development of the "Tropi". As yet no definite theory can be advanced, although several writers on liturgy, music, and hymnology have been so confident as to make assertions for which there is absolutely no ground.

Division

On the basis of the two choir books for the Mass and the Breviary, namely the Gradual and the Antiphonal, Tropes are divided into two large classes: "Tropi Graduales" and "Tropi Antiphonales," i.e. Tropes of such parts of the Mass and of the Breviary as are chanted. The latter are of slightly later date, are chiefly limited to interpolations of the Responsory after the Lessons, and are almost exclusively insertions into one of the concluding words of such Responsory. Their entire structure resembles so much the structure of the Sequences of the first epoch, upon which they were undoubtedly modelled, that later on they were often used as independent Sequences. Such is the case with the oldest Breviary Trope of the Blessed Virgin, which is built upon the penultimate word, *inviolata*, of the Responsory of the Assumption: "Gaude Maria virgo . . . et post partum inviolata permansisti." The syllable *la* of *inviolata* was the bearer of a long melisma; to this melisma towards the close of the tenth century in France the following text was composed:

1a. Invio-lata integra et casta es, Maria, 1b. Quae es effecta fulgida regis porta.
 2a. O mater alma Christi carissima, 2b. Suscipe pia laudum precamina 3a. Nostra
 ut pura pectora sint et corpora. 3b. Quae nunc flagitant devota corda et ora, 4a. Tu
 da per precata dulcisona, 4b. Nobis perpetua frui vita, 5. O benigna, quae sola
inviolata permansisti.

Of a similar structure are all the Breviary Tropes or "Verbata", and they are dovetailed, as shown above, more or less ingeniously, between the penultimate and last word of their Responsory.

The "Tropi Graduales" in their turn are divided into two classes, namely into "Tropi ad Ordinarium Missae" or to the unchangeable text of the Mass, i.e. to the Kyrie, Gloria, Credo, Sanctus, Agnus Dei, and *Ite missa est*, and into "Tropi ad Proprium Missarum" or to those parts of the text which change according to the respective feast, i.e. to the Introit, Lesson, Gradual, Offertory, and Communion. This latter class frequently differs from the former also in the external structure of its Tropes; and at first it was the most widespread; it might perhaps even claim to be the oldest and most original; but it disappeared at a relatively early date, whereas the "Tropi ad Ordinarium Missae" still kept their place in liturgy for a considerable time.

History and Significance

The origin of the Tropes, that is to say of the Gradual Tropes (since the Antiphonal Tropes are evidently of a later date), must almost coincide with that of the Proses or Sequences which are most closely related to them; this would mean that their history begins somewhere in the eighth century. Whether the Trope or the Sequence was the older form is all the more difficult to decide, since the Sequence itself is to a certain degree a kind of Trope. The St. Martial Troper, the oldest one known, of the middle of the tenth century (Cod. Parisin., 1240), abounds in Tropes to the Introit, Gradual, Offertory, and Communion; in other words it has a great many "Tropi ad Proprium Missarum". In addition it contains thirteen Gloria Tropes, but only two of the Sanctus, and not one of the Kyrie. Comparatively poor in Tropes are the St. Gall Tropes, and this fact alone makes it extremely doubtful whether Tutilo of St. Gall was the inventor of the Tropes. It appears that the Trope, like the Sequence, originated in France, where from the tenth century onward it enjoyed great popularity and was most eagerly cultivated. From there it soon made its way to England and to Northern Italy, later to Central and Southern Italy, and became widespread in all these countries, less so, however, in Germany. It was known there as early as in the ninth century, since Tutilo of St. Gall can rightly be considered a composer of Tropes. It remains a curious fact that in spite of the great number of Tropes no poet can be named who gained distinction as a composer of Tropes. In the thirteenth century this once important branch of literature began to decline and survived almost exclusively in Kyrie Tropes, particularly in France until the fifteenth and sixteenth centuries.

Regarding the poetical contents, the Tropes, with few exceptions, are of no great value. But this peculiar poetical production is all the more interesting for the student of liturgy, and especially great is its significance in the development of music and poetry. It is worthy of note that, instead of short insertions into the liturgical text, as time went on several verses, entire stanzas, even a number of stanzas, were fitted in. The non-essential part developed into the main work; the liturgical text withdrew entirely into the background, and was scarcely even considered as the starting-point. In this manner the Tropes grew to be independent cantions, motets, or religious folk-songs. Also the dramatic character, which was quite peculiar to many Introit Tropes at Christmas and Easter, developed more and more luxuriantly until it reached its highest perfection in larger dramatic scenes, mystery plays, and plays of a purely religious character. Tropes finally left the liturgical and religious ground altogether, and wandered away from the spiritual to the profane field of songs of love, gambling, and drinking. And for that reason many specimens of religious as well as secular poetry

of later date can be fully understood only when they are traced back to their source, the Tropes. The importance from a musical standpoint of both the Tropes and the Sequences has been most suitably characterized by Rev. Walter Howard Frere in his introduction to "The Winchester Troper" where he says: "For the musician the whole story is full of interest, for the Tropers practically represent the sum total of musical advance between the ninth and the twelfth century. . . . All new developments in musical composition, failing to gain admission into the privileged circle of the recognised Gregorian service-books, were thrown together so as to form an independent musical collection supplementary to the official books; and that is exactly what a Troper is" (op. cit., p. vi).

Hymn.*, XLIX (Leipzig, 1906).

CLEMENS BLUME

Scriptural Tropology

Scriptural Tropology

The theory and practice of interpreting the figurative meaning of Holy Writ. The literal meaning, or God-intended meaning of the words of the Bible, may be either figurative or non-figurative; for instance, in Canticles, the inspired meaning is always figurative. The typical meaning is the inspired meaning of words referring to persons, things, and actions of the Old Testament which are inspired types of persons, things, and actions of the New (cf. EXEGESIS).

WALTER DRUM

John Thomas Troy

John Thomas Troy

Archbishop of Dublin; b. in the parish of Blanchardstown, near Dublin, 10 May, 1739; d. at Dublin, 11 May, 1823. He belonged to an Anglo-Norman stock, and received his early education at Liffey Street, Dublin, after which, in 1777 [This is probably a typo for 1757 or 1767 — *Ed.*], he joined the Dominican Order and proceeded to their house of St. Clement, at Rome. Amenable to discipline, diligent in his studies, and gifted with much ability, he made rapid progress, and while yet a student was selected to give lectures in philosophy. Subsequently he professed theology and canon law, and finally became prior of the convent in 1772. When the Bishop of Ossory died, in 1776, the priests of the diocese recommended one of their number, Father Molloy, to Rome for the vacant see, and the recommendation was endorsed by many of the Irish bishops. But Dr. Troy, who was held in high esteem at Rome, had already been appointed Bishop of Ossory. He arrived at Kilkenny in August, and for the next nine years he laboured hard for the spiritual interests of his

diocese. They were troubled times. Maddened by excessive rents and tithes, and harried by grinding tithe-proctors, the farmers had banded themselves together in a secret society called the "Whiteboys". Going forth at night, they attacked landlords, bailiffs, agents, and tithe-proctors, and often committed fearful outrages. Bishop Troy grappled with them and frequently and sternly denounced them. It was not that he had any sympathy with oppression, but he had lived so long in Rome and had left Ireland at such an early age, that he did not quite understand the condition of things at home, and did not fully appreciate the extent of misery and oppression in which the poor Catholic masses lived.

The bent of his mind was to support authority, and he was therefore ready to condemn all violent efforts for reform, and had no hesitation in denouncing not only all secret societies in Ireland, but also "our American fellow-subjects, seduced by specious notions of liberty". This made him unpopular with the masses, but there could be no doubt that he was zealous in correcting abuses in his diocese and in promoting education. So well was this recognized at Rome that in 1781, in consequence of some serious troubles which had arisen between the primate and his clergy, Dr. Troy was appointed Administrator of Armagh. This office he held till 1782. In 1786 he was appointed Archbishop of Dublin. At Dublin, as at Ossory, he showed his zeal for religion, his sympathy with authority, and his distrust of popular movements, especially when violent means were employed; in 1798 he issued a sentence of excommunication against all those of his flock who would join the rebellion. He was also one of the most determined supporters of the Union. In 1799 he agreed to accept the veto of government on the appointment of Irish bishops; and even when the other bishops, finding that they had been tricked by Pitt and Castlereagh, repudiated the veto, Dr. Troy continued to favour it. The last years of his life were uneventful.

E.A. D'ALTON

Troyes

Troyes

(TRECENSIS).

Diocese comprising the Department of Aube. Re-established in 1802 as a suffragan of Paris, it then comprised the Departments of Aube and Yonne, and its bishop had the titles of Troyes, Auxerre, and Châlons-sur-Marne. In 1822 the See of Châlons was created and the Bishop of Troyes lost that title. When Sens was made an archdiocese the title of Auxerre went to it and Troyes lost also the Department of Yonne, which became the Archdiocese of Sens. The Diocese of Troyes at present covers, besides the ancient diocesan limits, 116 parishes of the ancient Diocese of Langres, and 20 belonging to the ancient Diocese of Sens. Since 1822 Troyes is a suffragan of Sens

The catalogue of bishops of Troyes, known since the ninth century, is in the opinion of Duchesne, worthy of confidence. The first bishop, St. Amator, seems to have preceded by a few years Bishop Optatianus who probably ruled the diocese about 344. Among his successors are: St. Melanias (Melain) (390-400); St. Ursus (Ours) (426); St. Lupus (Loup) (426-478), b. in 383, who accompanied St. Germanus of Auxerre to England, forced the Huns to spare Troyes, was led away as a hostage by Attila and only returned to his diocese after many years of exile; St. Camelianus (479-536); St. Vincent (536-46); St. Leuconius (Leucon) (651-56); St. Bobinus (Bobin) (750-66), previously Abbot of Monstier la Celle; St. Prudentius (845-61), who wrote against Gottschalk and Johannes Scotus; Blessed Manasses (985-93); Jacques BÈnigne Bossuet (1716-42, nephew of the great Bossuet; Etienne-Antoine de Boulogne (1809-25); Pierre-Louis Cœur, the preacher (1849-60).

Louis the Stammerer in 878 received at Troyes the imperial crown from the hands of Pope John VIII. At the end of the ninth century the counts of Champagne chose Troyes as their capital. In 1285, when Philip the Fair united Champagne to the royal domain, the town kept a number of privileges. John the Fearless, Duke of Burgundy and ally of the English, aimed in 1417 at making Troyes the capital of France, and he came to an understanding with Isabeau of Bavaria, wife of Charles VI of France, that a court, council, and parliament with comptroller's offices should be established at Troyes. It was at Troyes, then in the hands of the Burgundians, that on 21 May, 1420, the treaty was signed by which Henry VI of England was betrothed to Catherine, daughter of Charles VI, and was to succeed him to the detriment of the dauphin. The dauphin, afterwards Charles VII, and Blessed Joan of Arc recovered the town of Troyes in 1429.

The cathedral of Troyes is a fine Gothic structure begun in the twelfth, and completed in the fifteenth, century; the ancient collegiate Church of St. Urban is a Gothic building whose lightness of treatment reminds one of La Sainte Chapelle at Paris. It was built by Urban IV at the close of the thirteenth century. He was a native of Troyes and on one of the stained-glass windows he caused his father to be depicted, working at his trade of tailor. The Abbey of Nesle la Riposte was founded before 545 near Villenauxe, perhaps by Queen Clotilde. In the sixteenth century the monks caused to be rebuilt at Villenauxe, with the actual stones which they brought from Nesle, the original doorway of Nesle Abbey, an interesting monument of French history. The Benedictine Mabillon undertook to interpret its carvings, among which might be seen the statue of a *reine pÈdauque* (i.e. a web-footed queen) supposed to be St. Clotilde. The Abbey of Notre Dame aux Nonnains, founded by St. Leucon, was an important abbey for women. Alcuin and St Bernard corresponded with its abbesses. At his installation the bishop went to the abbey on the previous evening; the bed he slept on became his property, but the mule on which he rode became the property of the abbess. The abbess led the bishop by the hand into the chapter hall; she put on his mitre, offered him his crozier, and in return the bishop promised to respect the rights of the abbey. The Jansenists in the eighteenth century made a great noise over the pretended cure by the deacon Paris of Marie Madeleine de MÈgrigny, a nun of Notre Dame aux Nonnains. The part of the Diocese of Troyes which formerly belonged to the Diocese of Langres contained the famous Abbey of Clairvaux (q. v.). Concerning the Abbey of the Paraclete, founded by Abelard and in which the Abbess Heloise died in 1163, and

where her body and that of Abelard were buried until 1792, see ABELARD. On 20 June, 1353, Geoffroy de Charny, Lord of Savoisy and Lirey, founded at Lirey in honour of the Annunciation a collegiate church with six canonries, and in this church he exposed for veneration the Holy Winding Sheet. Opposition arose on the part of the Bishop of Troyes, who declared after due inquiry that the relic was nothing but a painting, and opposed its exposition. Clement VI by four Bulls, 6 Jan., 1390, approved the exposition as lawful. In 1418 during the civil wars, the canons entrusted the Winding Sheet to Humbert, Count de La Roche, Lord of Lirey. Margaret, widow of Humbert, never returned it but gave it in 1452 to the Duke of Savoy. The requests of the canons of Lirey were unavailing, and the Lirey Winding Sheet is the same that is now exposed and honoured at Turin (see TURIN).

Among the many saints specially honoured or connected with the diocese are: St. Mathia, virgin, period uncertain; her relics were found in Troyes in 980; St. Helena, virgin, whose life and century are unknown, and whose body was transferred to Troyes in 1209; these two are patronesses of the town and diocese; St. Oulph, martyr (second or third century); St. Savinianus, Apostle of Troyes; St. Patroclus (Parre), St. Julius, St. Claudius, and St. Venerandus, martyrs under Aurelian; St. Savina, martyred under Diocletian; St. Syra, the wonder-worker (end of third century); St. Ursion, pastor of Isle Aumont (c. 375); St. Exuperantia, a religious of Isle Aumont (c. 380); St. Balsemius (Baussange), deacon, apostle of Arcis-sur-Aube, martyred by the Vandals in 407; St. Mesmin and his companions and Saints Germana and Honoria, martyred (451) under Attila; St. Aper (Evre), Bishop of Toul, and his sister Evronia, natives of the diocese (towards the close of the fifth century); St. Aventinus, disciple of St. Loup (d. c. 537); St. Romanus, Archbishop of Reims, founder of the Monastery of SS. Gervasus and Protasius at Chantenay in the Diocese of Troyes (d. c. 537); St. Maurelius, priest at Isle Aumont (d. C. 545); St. Lyæus (LyÈ), second Abbot of Mantenay (d. c. 545); St. Phal, Abbot at Isle Aumont (d. c. 549); St. Bouin, priest and solitary (d. c. 570); St. Potamius (Pouange), solitary (close of sixth century); St. Vinebaud, Abbot of St. Loup of Troyes (d. 623); St. Flavitus, solitary (563-630); St. Tancha, virgin and martyr (d. 637); St. Victor, solitary (d. 640); St. Frobert, founder and first Abbot of Montier le Celle (d. 688); St. Maura, virgin (827-850); St. Adalricus (slain by the Normans about 925); St. Aderaldus, canon and archdeacon of Troyes, who died in 1004 on returning from the Crusade, and who founded the Benedictine monastery of the Holy Sepulchre in the diocese; St. Simon, Count de Bar-sur-Aube, solitary, acted as mediator between Gregory VII and Robert Guiscard, and died in 1082; St. Robert founder of Molesme and Cîteaux, a native of the diocese (1024-1108); St. Elizabeth of Chelles, foundress of the monastery of Rosoy (d. c. 1130); St. Hombelina, first Abbess of Jully-sur-Sarce, and sister of St. Bernard (1092-1135); Blessed Peter, an Englishman, prior of Jully-sur-Sarce (d. 1139); St. Malachy (q. v.), archbishop, Primate of Ireland, died at Clairvaux (1098-1148); St. Bernard (q. v.), first Abbot of Clairvaux (1091-1153); St. Belina, virgin, slain about 1153 in defence of her chastity; Blessed Menard and Blessed Herbert, abbots of the monastery at Mores founded by St. Bernard (end of the twelfth century); Blessed Jeanne, the recluse (d. 1246); Blessed Urban IV (1185-1264); Blessed John of Ghent, hermit and prophet, who died at Troyes in 1439; Ven. Margaret Bourgeois

(1620-1700), foundress of the Congregation of Notre Dame at Montreal, a native of the diocese; Ven. Marie de Sales Chappuis, superioress of the Visitation Convent at Troyes (d. 1875). Cardinal Pierre de BÈrulle (1575-1629) was brought up on the BÈrulle estate in the diocese. He preached at Troyes before founding the Oratorians. An Oratory was opened at Troyes in 1617. Charles-Louis de Lantage, b. at Troyes in 1616, d. in 1694, was one of the chief helpers of M. Olier, founder of the Sulpicians. Among natives of the diocese may be mentioned: the Calvinist juriconsult Pierre Pithou (1539-1596), one of the editors of the "Satire MÈnippÈe", a native of Troyes; the painter Mignard (1610-95), born at Troyes; the revolutionary leader, Danton (1759-1794), b. at Arcis-sur-Aube.

The chief pilgrimages of the diocese are: Notre Dame du Chêne, near Bar-sur-Seine, dates from 1667; Notre Dame de la Sainte EspÈrance, at Mesnil-Saint-Loup; Notre Dame de Valsuzenay. Before the application of the Associations Law (1901) there were, in the Diocese of Troyes, Benedictines, Jesuits, Lazarists, Oblates of St. Francis of Sales, and Brothers of the Christian Schools. Many female congregations arose in the diocese, among others the Ursulines of Christian Teaching, founded at Moissy l'Evêque in the eighteenth century by Montmorin, Bishop of Langres; the Sisters of Christian Instruction, founded in 1819, with mother-house at Troyes; the Oblate Sisters of St. Francis of Sales, a teaching order, founded in 1870, with mother-house at Troyes; Sisters of Notre Dame de Bon Secours, a nursing community with mother-house at Troyes. In the diocese the religious congregations at the close of the nineteenth century had charge of one foundling hospital, 20 nurseries, 2 orphanages for boys, 17 orphanages for girls, 2 houses of mercy, 11 hospitals or hospices, 9 houses of district nursing sister, 1 epileptic home. In 1905 (at the breach of the Concordat) the diocese numbered 246,163 inhabitants, 40 parish priest, 383 chapels of ease, and 7 curacies supported by the State. In 1910 there were 239,299 inhabitants, and 344 priests.

GEORGES GOYAU

Truce of God

Truce of God

The Truce of God is a temporary suspension of hostilities, as distinct from the Peace of God which is perpetual. The jurisdiction of the Peace of God is narrower than that of the Truce. Under the Peace of God are included only:

- consecrated persons -- clerics, monks, virgins, and cloistered widows;
- consecrated places -- churches, monasteries, and cemeteries, with their dependencies;
- consecrated times -- Sundays, and ferial days, all under the special protection of the Church, which punishes transgressors with excommunication.

At an early date the councils extended the Peace of God to the Church's protégés, the poor, pilgrims, crusaders, and even merchants on a journey. The peace of the sanctuary gave rise to the right of asylum. Finally it was the sanctification of Sunday which gave rise to the Truce of God, for it had always been agreed not to do battle on that day and to suspend disputes in the law-courts.

The Truce of God dates only from the eleventh century. It arose amid the anarchy of feudalism as a remedy for the powerlessness of lay authorities to enforce respect for the public peace. There was then an epidemic of private wars, which made Europe a battlefield bristling with fortified castles and overrun by armed bands who respected nothing, not even sanctuaries, clergy, or consecrated days. A Council of Elne in 1027, in a canon concerning the sanctification of Sunday, forbade hostilities from Saturday night until Monday morning. Here may be seen the germ of the Truce of God. This prohibition was subsequently extended to the days of the week consecrated by the great mysteries of Christianity, viz., Thursday, in memory of the Ascension, Friday, the day of the Passion, and Saturday, the day of the Resurrection (council 1041). Still another step included Advent and Lent in the Truce. Efforts were made in this way to limit the scourge of private war without suppressing it outright. The penalty was excommunication. The Truce soon spread from France to Italy and Germany; the oecumenical council of 1179 extended the institution to the whole Church by Canon xxi, "De treugis servandis", which was inserted in the collection of canon law (Decretal of Gregory IX, I, tit., "De treuga et pace"). The problem of the public peace which was the great desideratum of the Middle Ages was not solved at one stroke, but at least the impetus was given. Gradually the public authorities, royalty, the leagues between nobles (Landfrieden), and the communes followed the impulse and finally restricted war to international conflicts.

CH. MOELLER

Otto Truchsess von Waldburg

Otto Truchsess von Waldburg

Cardinal-Bishop of Augsburg (1543-73), b. at Castle Scheer in Swabia, 26 Feb., 1514; d. at Rome, 2 April, 1573. He studied at the Universities of Tübingen, Padua, Pavia, and Bologna, and received his degree of Doctor of Theology at Bologna. At an early age he received canonries at Trent, Spire, and Augsburg. In 1541 he became an imperial councillor and when on an embassy to Rome was made a papal chamberlain. On 10 May, 1543, he was elected Bishop of Augsburg; in 1544 he was appointed cardinal-priest of the Title of St. Balbina by Paul III for settling a long-continued dispute between the emperor and the pope. The condition of his diocese was mournful: the clergy were ignorant and depraved, and Protestantism was widespread. He sought to mend matters by visitations, edicts, synods, and the improvement of instruction. He founded the University of Dillingen, now a lyceum, and the ecclesiastical seminary at Dillingen (1549-55). In 1564 he transferred the management of these institutions to the Jesuits. In 1549-50 and again in

1555 he took part in the papal elections at Rome. In 1552 his diocese was devastated by the troops of Maurice of Saxony. He went once more to Rome in 1559 and was there made the head of the Inquisition and, in 1562, Cardinal-Bishop of Albang. In 1567 he held a diocesan synod at Dillingen. From 1568 he lived altogether at Rome. He was a moral, religious man, of much force of character, to whom half measures and shiftiness were foreign. He incurred the hatred of the Protestants for his protest against the Religious Peace of Augsburg (1555).

KLEMENS LÖFFLER

St. Trudo

St. Trudo

(TRON, TROND, TRUDON, TRUTJEN, TRUYEN).

Apostle of Hasbein in Brabant; d. 698 (693). Feast 23 November. He was the son of Blessed Adela of the family of the dukes of Austrasia. Devoted from his earliest youth to the service of God, Trudo came to St. Remaclus, Bishop of Liège (*Acta SS.*, I Sept., 678) and was sent by him to Chlordulph, Bishop of Metz. Here he received his education at the Church of St. Stephen, to which he always showed a strong affection and donated his later foundation. After his ordination he returned to his native district, preached the Gospel, and built a church at Sarchinium, on the River Cylindria. It was blessed about 656 by St. Theodard, Bishop of Liège, in honour of Sts. Quintinus and Remigius. Disciples gathered about him and in course of time the abbey arose. The convent for women, established by him at Odeghem near Bruges, later also bore his name ("*Gallia Christiana*", Paris, 1887, V, 281). After death he was buried in the church erected by himself. A translation of his relics, together with those of St. Eucharius, Bishop of Orleans, who had died there in exile in 743, was made in 880 by Bishop France of Liège. On account of the threatened inroads of the Normans the relics were later hidden in a subterranean crypt. After the great conflagration of 1085 they were lost, but again discovered in 1169, and on 11 Aug. of that year an official recognition and translation was made by Bishop Rudolph III. On account of these translations the dates 5 and 12 Aug. and 1 and 2 Sept. are noted in the martyrologies. The "*Analecta Bollandiana*" (V, 305) give an old office of the saint in verse. The life was written by Donatus, a deacon of Metz, at the order of his bishop, Angibram (769-91). It was rewritten by Theodoric, Abbot of St-Trond (d. 1107).

FRANCIS MERSHMAN

St. Trudpert

St. Trudpert

Missionary in Germany in the seventh century. He is generally called a Celtic monk from Ireland, but some consider him a German. According to legend, he went first to Rome in order to receive from the pope authority for his mission. Returning from Italy he travelled along the Rhine to the country of the Alamanni in the Breisgau. A person of rank named Otbert gave him land for his mission about fifteen miles south of Freiburg in Baden. Trudpert cleared off the trees and built a cell and a little church which Bishop Martinus of Constance dedicated to Sts. Peter and Paul. Here Trudpert led an ascetic and laborious life. One day when he was asleep he was murdered by one of the serfs whom Otbert had given him, in revenge for severe tasks imposed. Otbert gave Trudpert an honourable burial. The Benedictine Abbey of St. Trudpert was built in the next century on the spot where Trudpert was buried. The story of his life is so full of legendary details that no correct judgment can be formed of Trudpert's era, the kind of work he did, or of its success. The period when he lived in the Breisgau was formerly given as 640-643; Baur gives 607 as the year of his death. The day of his death is 26 April. In 815 his bones were translated and the first biography of him was written; this biography was revised in the tenth and thirteenth centuries.

Acta SS., April, III, 424-40; Bibliotheca hagiogr. lat. (Brussels, 1898-1900), 1205-6; BAUR, Der Todestag es hl. Trudpert in Freiburger Dioesanar chiv, XI (Freiburg, 1877), 247-52.

KLEMENS LOFFLER

Antonio de Trueba

Antonio de Trueba

Spanish poet and folklorist, b. at Montellana, Biscay, in 1821; d. at Bilbao, 10 March, 1889. In 1836 he went to Madrid, hoping to make a livelihood by literary pursuits. To earn his daily bread he discharged the duties of a clerk in a small commercial house, but all the while he beguiled his leisure and his moments of regret by writing little poems and tales redolent of the yearnings and sympathies of a Basque transplanted to the busy cosmopolitan centre. Won over to him by the charm of his writings, Queen Isabella II made him historiographer of the Biscayan district, and he held this post until her flight in 1868. His popularity was fixed by the appearance of his first collection of lyrics, the "Libro de los cantares" (Madrid, 1852). Various collections of his tales, especially charming when they deal with his native region and its people, appeared in 1859, 1860, and 1866. In his more ambitious attempts at writing a novel, as in his work dealing with the Cid of history and legend, he failed signally; he was too conscientiously a recorder of the past and left his

imagination no free play. He remains an amiable writer of second rank, but no one can read without sympathy and appreciation his pretty little songs fragrant with love for the landscape of his northern Spanish home. He deserves serious notice among the earlier writers who helped to develop the novel of manners in the Spain of the nineteenth century.

Trujillo

Trujillo

Diocese comprising the Departments of Lambayeque, Libertad, Pinra, and the Province of Tumbes, in North-west Peru, formed by Gregory XIII, 13 April, 1577, as suffragan of Lima, an arrangement confirmed by Paul V in 1611, when he appointed Alfonso de Guzman first bishop. The city of Trujillo (8000 inhabitants), formerly very flourishing, was founded in 1535 on the Río Muchi in the Valley of Chimu by Gonzalo Pizarro, who named it after his native place. It is the capital of the Department of Libertad, so named because Trujillo was the first Peruvian city to proclaim its independence from Spain. Most of the houses are but one story high, on account of frequent earthquakes, the severest of which occurred in 1619, 1759, and 1816. Its university was erected in 1831, a college having been founded there earlier in 1621. Near the city lie the ruins of the Gran Chimu, known originally as ChanChan — Chimu being the title of the Indian sovereign — one of the most stupendous extant monuments of a departed civilization. They extend over twelve miles north and south, and six miles east and west, and recall a highly civilized race — the Muchoen — which fell before the Incas. One may still see the ruined palace and factories, a necropolis, walls nine metres high, and a labyrinth of houses and pyramidal sepulchres (*huacas*), the most remarkable of which are the Toledo, Esperanza, and Obispo, the latter being 500 feet square and 150 high. From these ruins, over £5,500,000 in gold were recovered by the Spaniards. The Muchoen had reached a high degree of perfection in metal-work and in the art of decorating pottery, many specimens of the latter being unsurpassed since the days of early Greece. An account of the ancient religion has been preserved by Antonio de la Calancha, Augustinian prior of Trujillo in 1619; the chief deity was the moon (*Si*), her temple (*Si-an*) situated near the Río Muchi having had an area of about 42,000 square yards. A grammar of the native language — Mochica — now dead, was compiled by Padre Fernando de la Carrera (Lima, 1644). Diocesan statistics: 102 parishes; 350 churches and chapels; 160 priests; 2 boys' colleges; 3 girls' high schools; there are communities of Franciscans (2), Conceptionists, Carmelites, Poor Clares, Dominican Tertiaries, and Lazarists, the latter having charge of the seminary. The Catholic population numbers about 581,000. The bishop is Mgr. Carlos García Irigoyen, b. at Lima, 6 November, 1857, edited the "Revista católica", founded "El amigo del clero", succeeded Mgr. Manuel Jaime Medina, 21 March, 1910.

A.A. MACERLEAN

Feast of Trumpets

Feast of Trumpets

The first day of Tishri (October), the seventh month of the Hebrew year. Two trumpets are mentioned in the Bible, the *shophar* and *hacocerah*. The latter was a long, straight, slender, silver clarion, liturgically a priestly instrument. The *shophar* was made of horn, as we see from its now and then being called *qeren*, "horn" (cf. Jos., vi, 5); in fact, in the foregoing passage, it is designated a "ram's horn", *qeren yobel*. The Mishna (Rosh hasshanah, iii, 2) allows the horn of any clean animal save the cow, and suggests the straight horn of the ibex. The Feast of Trumpets is ordained in the words: "The seventh month, on the first day of the month, you shall keep a sabbath, a memorial, with the sound of trumpets" (Lev., xxiii, 24). The Hebrew text has: "a memorial of the blast". The Septuagint adds "of trumpets" (*salpiggon*), a word which together with *keratine* (made of horn) always designates in the Septuagint, *shophar* and never the *hacocerah*. We find the feast also ordained in Numbers, xxix, 1: *The first day also of the seventh month. . . is the day of the sounding of the trumpets*. This text gives us no more light in the original, where we read only "the day of blast let it be unto you". Here, too, the Septuagint *hemera semasias*, "day of signaling", affords no light. The feast is called by Philo *salpigges*, "Trumpets". It would seem, then, that the *shophar* and not the *hacocerah* was in Biblical times used on the feast of the new moon of Tishri. In Rabbinical ritual the festival has come to be known as New Year's Day (*rosh hasshanah*), Day of Memorial (*yom hazzikkaron*), and Day of Judgment (*yom haddin*). The *shophar* gives the signal call to solitude and prayer. In preparation for the great feast, the *shophar* is sounded morning and evening excepting Sabbaths, throughout the entire preceding month of Elul. According to the Mosaic Law, the special offerings of the Feast of Trumpets were a bullock, a ram and seven lambs for a burnt offering; a buck goat for sin offering (Num., xxix, 2, 5; Lev., xxii, 24, 25).

WALTER DRUM

Saint Trumwin

St. Trumwin

(TRIUMWINI, TRUMUINI).

Died at Whitby, Yorkshire, England, after 686. He was consecrated by St. Theodore, Archbishop of Canterbury, as a missionary bishop among the Picts, and was consequently regarded later as the first Bishop of Whithorn, in Galloway. When the Picts reasserted their independence he retired with a few of his followers to the monastery of Streaneshalch, now Whitby. In 684 he was present at the synod recorded by Bede (IV, 28), known as the Synod on the Alne, possibly the same as the

Synod of Twyford; and he accompanied King Ecgrith to Lindisfarne to persuade St. Cuthbert to accept the bishopric. The one charter attributed to him is "a clear forgery" (Haddan and Stubbs, III, 166). St. Bede adds that he spent many years of useful labour at Whitby before he died and was buried in St. Peter's Church there.

Acta SS., Feb., II; BEDE, *Hist. Ecc. Gent. Ang.*, IV, cc. 12, 26, and 28; RAINE in *Dict. Christ. Biog.*, s. v.; BIRCH, *Cartularium Saxonicum*, I (London, 1885); KEMBLE, *Codex Diplomaticus* (London, 1839-48); HADDAN AND STUBBS, *Councils and Documents* (Oxford, 1869-78); SEARLE, *Anglo-Saxon Bishops, Kings, and Nobles* (Cambridge, 1899).

EDWIN BURTON

Trustee System

Trustee System

I. In the exercise of her inherent right of administering property, the Church often appoints deputies who are responsible to herself. Technically, such administrators, whether cleric or lay, are called the "fabric" of the Church. In very early times ecclesiastical goods were divided into three or four portions, and that part set aside for the upkeep of the Church began to take on the character of a juridical person. The Eleventh Council of Carthage (can. ii) in 407 requested the civil power to appoint five executors for ecclesiastical property, and in the course of time laymen were called on to take their share in this administration, with the understanding, however, that everything was to be done in the name and with the approbation of the Church. A number of early and medieval synods have dealt with the administration of curators of ecclesiastical property, e.g. can. vii, Conc. Bracar. (563); can. xxxviii, Conc. Mogunt. (813); can. x, Conc. Mogunt. (847); can. xxxv, Conc. Nation. Wirceburg. (1287). The employment of laymen in concert with clerics as trustees became common all over Christendom. In England such officials were called churchwardens. They were generally two in number, one being chosen by the parish priest, the other by the parishioners, and with them were associated others called sidesmen. The churchwardens administered the temporalities of the parish under the supervision of the bishop, to whom they were responsible. An annual report on the administration of church property was made obligatory in all countries by the Council of Trent (Sess. XXII, can. ix, "De Ref."): "The administrators, whether ecclesiastical or lay, of the fabric of any church whatsoever, even though it be a cathedral, as also of any hospital, confraternity, charitable institution called *mont de piÈtÈ*, and of any pious places whatsoever, shall be bound to give in once a year an account of their administration to the Ordinary."

II. At the present time, the Church nowhere absolutely forbids the employment of laymen in the administration of ecclesiastical property, but endeavours, generally by means of concordats, to have her own laws and principles carried out on this subject when laymen are among the trustees. According to the present discipline, the fabric of the church is distinct from the foundation of the benefice, and sometimes the fabric, in addition to the goods destined for the upkeep of divine worship, possesses also schools and eleemosynary institutions (S.C.C., 27 Apr., 1895, in caus.

Bergom.). All lay trustees must be approved by the bishop, and he retains the right of removing them and of overseeing the details of their administration. In countries in which the church organization was entirely swept away in the troubles of the Reformation period, as in the British Isles, laymen are not generally employed as trustees at the present day. For the trustee system, as far as it can be called such, in use in the Catholic Church in England and Ireland see Taunton, "The Law of the Church", pp. 15, 316. In Holland, laymen were admitted to a share in the administration of church temporalities by a decree of the Propaganda (21 July, 1856). The bishop is to nominate the members of the board, over which the parish priest is to preside. Trustees hold office for four years and may be reappointed at the expiration of that term. When a vacancy occurs the board presents two names to the bishop, from which he selects one. In necessary cases the bishop may dismiss any member and even dissolve the entire board of trustees. In this instance, as in all others where laymen are in question, the Holy See is careful to guard the prescriptions of the sacred canons as to the management and ownership of church goods [see ADMINISTRATOR (OF ECCLESIASTICAL PROPERTY)].

III. In the United States the employment of lay trustees was customary in some parts of the country from a very early period. Dissensions sometimes arose with the ecclesiastical authorities, and the Holy See has intervened to restore peace (see CONWELL, HENRY; PHILADELPHIA, ARCHDIOCESE OF; NEW YORK, ARCHDIOCESE OF). Pius VII vindicated (24 Aug., 1822) the rights of the Church as against the pretensions of the trustees, and Gregory XVI declared (12 Aug., 1841): "We wish all to know that the office of trustees is entirely dependent upon the authority of the bishop, and that consequently the trustees can undertake nothing except with the approval of the ordinary." The Third Plenary Council of Baltimore (Tit. IX, no.287) laid down certain regulations concerning trustees: It belongs to the bishop to judge of the necessity of constituting them, their number and manner of appointment; their names are to be proposed to the bishop by the parish rector; the appointment is to be made in writing and is revocable at the will of the bishop; the trustees selected should be men who have made their Easter duty, who contribute to the support of the Church, who send their children to Catholic schools, and who are not members of prohibited societies; nothing can be done at a board meeting except by the consent of the rector who presides; in case of disagreement between the trustees and the rector, the judgment of the bishop must be accepted. A decree of the Congregation of the Council (29 July, 1911) declares that the vesting of the title to church property in a board of trustees is a preferable legal form, and that in constituting such boards in the United States, the best method is that in use in New York, by which the Ordinary, his vicar-general, the parish priest, and two laymen approved by the bishop form the corporation (see PROPERTY, ECCLESIASTICAL, IN THE U.S.).

IV. The legal standing of church trustees according to British law is treated by Taunton, "The Law of the Church", pp.15, 315. In the United States the legal rights of trustees vary slightly in different States, but the following prescriptions (selected from Scanlan, "The Law of Church and Grave") hold almost everywhere: When the statute provides that two lay members of the corporation shall be appointed annually by the committee of the congregation, the members of the congregation

have no right to elect said two members, and those appointed in the proper manner are lawful officers. When the election of new trustees is invalid, the old trustees hold over until there shall have been a valid election of their successors. The president and secretary of a church corporation have no authority to make a promissory note unless authorized by the board of trustees. When the laws of the organization give control of matters to the board of trustees, the majority of the members of the church cannot control the action of the trustees contrary to the uses and regulations of the church. A court has no authority to control the exercise of the judgment or discretion of the officers of a church in the management of its funds so long as they do not violate its constitutions or by-laws. Excommunication does not always remove an officer of a church corporation. The legal rights of a bishop in regard to the temporalities of a church, where they are not prescribed by the civil law, must rest, if at all, upon the ecclesiastical law, which must be determined by evidence. When property is conveyed to a church having well-known doctrine, faith, and practice, a majority of the members has not the authority or power, by reason of a change of religious views, to carry the property thus designated to a new and different doctrine. The title to church property is in that part of the congregation which acts in harmony with the law of the denomination; and the ecclesiastical laws and principles which were accepted before the dispute began are the standard for determining which party is right.

TAUNTON, *The Law of the Church* (London, 1906), s. vv. *Fabric; Administration; Ecclesiastical Property*; SCANLAN, *The Law Of Church and Grave* (New York, 1909); SMITH, *Notes on II Council of Baltimore* (New York, 1874), x; *Concilium Plenarium III Baltimoreense* (Baltimore, 1886); WERNZ, *Jus Decretalium, III* (Rome, 1901).

WILLIAM H.W. FANNING

Trusts and Bequests

Trusts and Bequests

A trust has been defined, in its technical sense, as the right enforceable solely in equity to the beneficial enjoyment of property of which the legal title is in another (Bispham, "Equity", p. 68), and as a right of property, real or personal, held by one party for the benefit of another. (Bouvier, "Law Dict.", s. v. *Trusts*.) It implies two interests, one in equity and one in law — an individual to hold the legal title, who is known as the trustee, and another as beneficiary, known as the *cestui que trust*. The term "trust" is applied sometimes to the equitable title, the obligation of the trustee, or the right which is held in trust. For the creation of a valid trust there are three essentials: a definite subject matter within the disposal of the settlor; a lawful definite object to which the subject matter is to be devoted; clear and unequivocal words or acts devoting the subject matter to the object of the trust (28 Am. and Eng. Ency. of Law, 866, title "Trusts and Trustees"). No specific words are required in the creation of a trust, but they must be sufficient to express the present intent to place a beneficial interest in a specific property in the hands of a trustee beyond the control of the person

or persons who are to enjoy the benefit thereof. Any property, real, personal, or equitable, may be the subject of a trust, except in a few cases where statutes have provided to the contrary.

The English Statute of Frauds, which has been enacted in most of the United States in some of its provisions, provides that all trusts of land should be proved and manifested by writing. But trusts of personal property are not within the statute; therefore a valid trust of such property may be created verbally, but transfers of existing trusts must be in writing. Under the Roman Law trusts were created for the purpose of empowering certain individuals to inherit property. These trusts were known as *fidei commissa* and for their benefit a separate equitable jurisdiction was established. There has been some controversy as to whether the English trust is an outcome of the Roman institution or not. The difference between the two is that the latter is a means of carrying out substitutions, while the former separates the ownership and enjoyment of the benefits of an estate, the fundamental idea at the root of both being much the same. This system seems to have appeared in England under the reign of Edward III, for the purpose of avoiding the Statutes of Mortmain, which had been passed to check the growth of landed estates in the hands of religious houses. These trusts were abolished, except as to certain gifts or grants, by the passage of the Statute of Uses, known as the 27th Henry VIII, which held that any person entitled to the use of an estate should have the title to it. This statute has either been recognized as part of the common law in most of the United States through judicial interpretation or been enacted by legislation.

Trusts are either executed or executory, express or implied. In an executed trust the instrument must be interpreted according to the rules of law, even though the intention may be defeated. A court of equity will take jurisdiction for the purpose of carrying out executory trusts and seeing that the instrument which purports to fulfil the intention of the settlor really does so, and will reform conveyances where the intentions of the settlor have not been clearly set out. An express trust is one which is created by the direct words of the settlor. Implied trusts are those which arise when the terms or circumstances do not specifically express but simply imply a trust. Where the entire intention of the trust cannot be carried out without violating some rule of law or public policy, equity will carry it out as nearly as possible. Constructive trusts arise by a construction put by a court of equity on the conduct of the parties. The Statute of Frauds 29th Charles II requires that declarations of trust of lands should be proved by writing.

WHO MAY BE A TRUSTEE

Any person worthy of confidence and possessed of the power to hold real or personal property may be a trustee, the sovereign in England, any of the states of the United States, and perhaps the Federal Government, a public officer in his private capacity or the settlor himself; even the beneficiary or *cestui que trust* may act as trustee providing there are other beneficiaries besides himself; so too a corporation may act in this capacity if not precluded by the terms of its charter. Municipal corporations have been trustees but the general trend of authority is to the contrary. Married women may be trustees and, acting under the direction of the court, an infant, alien, or lunatic. In cases where no trustee has been named, or for some reason the office has become vacant,

the court will supply the deficiency rather than allow the trust to fall, it being inherent in a court of equity to exercise this power, while in many jurisdictions it has been specifically granted by statute. As a general rule, the trustee is appointed by the settlor and provision made for his successors. The settlor may designate whomsoever he wishes and vest in that person the power to appoint succeeding trustees, though sometimes the power is placed with the *cestui que trust* and sometimes with the settlor. The number of trustees is governed by the provisions of the instrument of the trust, but as a general thing the courts look unfavourably upon single trustees, particularly in the cases of large estates or those for infants or lunatics.

There is no particular method by which a trustee accepts a trust. His actions in the matter are usually equivalent to acceptance, although sometimes he joins in the instrument if it is a conveyance. There are, however, but three ways by which he may be relieved: first, the consent of all parties in interest; second, by virtue of the provisions of the instrument of trust; and third, with the consent of the court. The old rule in England forbade a trustee retiring on his own motion, but the modern rule is different except where it is impossible to provide a substitute. The conduct sufficient for the removal of a trustee from his office must be such as to endanger the trust funds, and the courts will not look favourably upon light or frivolous whims and disagreements among the parties. The powers of trustees are general and special — those which arise by construction of law incident to the office, and those provided by the settlor. Any person who has capacity to hold property may be a *cestui que trust*, although some jurisdictions restrict the rule to minors or other incompetents. He must be definitely ascertained either in person or as a class, but need not be actually in being at the date of the settlement. A sovereign, any of the states of the United States, or the Federal Government may be a beneficiary, or a corporation so far as personal property is concerned, and also as to real estate within the limits of its charter privilege or unless prohibited by statute. An unincorporated society, however, cannot be a *cestui que trust* except in the case of a charitable or religious society. The beneficiary has a right to alienate or encumber his estate unless the terms of the trust expressly or impliedly forbid or there is a statute which interferes; so too he may assign his interest or even alienate the income before it becomes due.

The *cestui que trust* or beneficiary has three remedies in the event of a breach of trust on the part of his trustee. He may follow the specific estate into the hands of a stranger to whom it has been wrongfully conveyed; he has the right of attaching the property into which the estate may have been converted; and the further right of action against the trustee personally for reimbursement. As between him and the trustee there is no time limit when an action may be brought. It is the rule that purchasers must see to the application of the purchase money in the cases of trust estates, such as where it is provided that the funds be for the payment of specific legacies or annuities or debts. In some jurisdictions this rule has been abrogated by statute. Technical terms are not necessary in a devise to create a trust but if used will be interpreted in their legal and technical sense. General expressions, however, will not establish a trust unless there appears a positive intention that they should do so. Bequests in trust for accumulation must be confined within the limits established against perpetuities. A settlor can only extend the trust for the life or lives in being and twenty-one

years, and any attempt to extend the trust beyond this period vitiates it *in toto*. By statute, accumulations are forbidden in some jurisdictions excepting during the minority of the beneficiary or for other fixed periods (Bouvier, "Law Dict.", s. v. *Perpetuity*).

As a rule, the interest of a beneficiary is liable for the payment of his debts, but this does not prevail in a majority of the United States. Spendthrift trusts, as they are called, being for the protection of the beneficiary against his own improvidence, are sustained in these jurisdictions. Since the Statute of Wills equitable interests are devisable only in writing. How far a devisee of a trust estate can execute the trust depends on the intention of the settlor expressed in the instrument. General words will not pass a trust estate unless there is a positive intention that it should so pass. In order to create a valid trust by will, the instrument must be legally executed and admitted to probate. There is this distinction between wills and declarations of trusts. The former, being ambulatory, take effect only on the death of the testator, the latter at the time of execution. Formerly under the common law an executor had title to all personal property of the decedent, and was entitled to take the surplus after the payment of debts and legacies; now, by statute he is *prima facie* a trustee for the next of kin. Although a trustee is, in theory, allowed nothing for his trouble, his commissions are, in point of fact, generally fixed by statute and he is allowed his legitimate expenses. See CHARITABLE BEQUESTS; LEGACIES.

WALTER GEORGE SMITH

Truth

Truth

Truth (Anglo-Saxon *tréow*, *tryw*, truth, preservation of a compact, from a Teutonic base *Trau*, to believe) is a relation which holds (1) between the knower and the known -- Logical Truth; (2) between the knower and the outward expression which he gives to his knowledge -- Moral Truth; and (3) between the thing itself, as it exists, and the idea of it, as conceived by God -- Ontological Truth. In each case this relation is, according to the Scholastic theory, one of correspondence, conformity, or agreement (*adœquatio*) (St. Thomas, *Summa* I:21:2).

I. ONTOLOGICAL TRUTH

Every existing thing is true, in that it is the expression of an idea which exists in the mind of God, and is, as it were, the exemplar according to which the thing has been created or fashioned. Just as human creations -- a cathedral, a painting, or an epic -- conform to and embody the ideas of architect, artist, or poet, so, only in a more perfect way, God's creatures conform to and embody the ideas of Him who gives them being. (Q. D., *De verit.*, a. 4; *Summa* 1:16:1.) Things that exist, moreover, are active as well as passive. They tend not only to develop, and so to realize more and

more perfectly the idea which they are created to express, but they tend also to reproduce themselves. Reproduction obtains wherever there is interaction between different things, for an effect, in so far as it proceeds from a given cause, must resemble that cause. Now the cause of knowledge in man is -- ultimately, at any rate -- the thing that is known. By its activities it causes in man an idea that is like to the idea embodied in the thing itself. Hence, things may also be said to be ontologically true in that they are at once the object and the cause of human knowledge. (Cf. IDEALISM; and Summa, I:16:7 and I:16:8; m 1. periherm., 1. III; Q.D., I, De veritate, a. 4.)

II. LOGICAL TRUTH

A. The Scholastic Theory

To judge that things are what they are is to judge truly. Every judgment comprises certain ideas which are referred to, or denied of, reality. But it is not these ideas that are the objects of our judgment. They are merely the instruments by means of which we judge. The object about which we judge is reality itself -- either concrete existing things, their attributes, and their relations, or else entities the existence of which is merely conceptual or imaginary, as in drama, poetry, or fiction, but in any case entities which are real in the sense that their being is other than our present thought about them. Reality, therefore, is one thing, and the ideas and judgments by means of which we think about reality, another; the one objective, and the other subjective. Yet, diverse as they are, reality is somehow present to, if not present in consciousness when we think, and somehow by means of thought the nature of reality is revealed. This being the case, the only term adequate to describe the relation that exists between thought and reality, when our judgments about the latter are true judgments, would seem to be conformity or correspondence. "Veritas logica est adaequatio intellectus et rei" (Summa, I:21:2). Whenever truth is predicable of a judgment, that judgment corresponds to, or resembles, the reality, the nature or attributes of which it reveals. Every judgment is, however, as we have said, made up of ideas, and may be logically analyzed into a subject and a predicate, which are either united by the copula *is*, or disjoined by the expression *is not*. If the judgment be true, therefore, these ideas must also be true, i.e. must correspond with the realities which they signify. As, however, this objective reference or significance of ideas is not recognized or asserted except in the judgment, ideas as such are said to be only "materially" true. It is the judgment alone that is formally true, since in the judgment alone is a reference to reality formally made, and truth as such recognized or claimed.

The negative judgment seems at first sight to form an exception to the general law that truth is correspondence; but this is not really the case. In the affirmative judgment both subject and predicate and the union between them, of whatever kind it may be, are referred to reality; but in the negative judgment subject and predicate are disjoined, not conjoined. In other words, in the negative judgment we deny that the predicate has reality in the particular case to which the subject refers. On the other hand, all such predicates presumably have reality somewhere, otherwise we should not talk about them. Either they are real qualities or real things, or at any rate somebody has conceived them as real. Consequently the negative judgment, if true, may also be said to correspond with reality, since

both subject and predicate will be real somewhere, either as existents or as conceptions. What we deny, in fact, in the negative judgment is not the reality of the predicate, but the reality of the conjunction by which subject and predicate are united in the assertion which we implicitly challenge and negate. Subject and predicate may both be real, but if our judgment be true, they will be disjoined, not united in reality.

But what precisely is this reality with which true judgments and true ideas are said to correspond? It is easy enough to understand how ideas can correspond with realities that are themselves conceptual or ideal, but most of the realities that we know are not of this kind. How, then, can ideas and their conjunctions or disjunctions, which are psychical in character, correspond with realities which for the most part are not psychical but material? To solve this problem we must go back to ontological truth which, as we saw, implies the creation of the universe by One Who, in creating it, has expressed therein His own ideas very much as an architect or an author expresses his ideas in the things that he creates except that creation in the latter case supposes already existent material. Our theory of truth supposes that the universe is built according to definite and rational plan, and that everything within the universe expresses or embodies an essential and integral part of that plan. Whence it follows that just as in a building or in a piece of sculpture we see the plan or design that is realized therein, so, in our experience of concrete things, by means of the same intellectual power, we apprehend the ideas which they embody or express. The correspondence therefore, in which truth consists is not a correspondence between ideas and anything material as such, but between ideas as they exist in our mind and function in our acts of cognition, and the idea that reality expresses and embodies -- ideas which have their origin and prototype in the mind of God.

With regard to judgments of a more abstract or general type, the working of this view is quite simple. The realities to which abstract concepts refer have no material existence as such. There is no such thing, for instance, as action or reaction in general; nor are there any twos or fours. What we mean when we say that "action and reaction are equal and opposite", or that "two and two make four", is that these laws, which in their own proper nature are ideal, are realized or actualized in the material universe in which we live; or, in other words, that the material things we see about us behave in accordance with these laws, and through their activities manifest them to our minds.

Perceptual judgments, i.e. the judgments which usually accompany and give expression to acts of perception, differ from the above in that they refer to objects which are immediately present to our senses. The realities in this case, therefore, are concrete existing things. It is, however, rather with the appearance of such things that our judgment is now concerned than with their essential nature or inner constitution. Thus, when we predicate colours, sounds, odours, flavours, hardness or softness, heat or cold of this or that object, we make no statement about the nature of such qualities, still less about the nature of the thing that possesses them. What we assert is

- that such and such a thing exists, and
- that it has a certain objective quality, which we call green, or loud, or sweet, or hard, or hot, to distinguish it from other qualities -- red, or soft, or bitter, or cold -- with which it is not identical; while

•our statement further implies that the same quality will similarly appear to any normally constituted man, i.e. will affect his senses in the same way that it affects our own.

Accordingly, if in the real world such a condition of things obtains -- if, that is to say, the thing in question does exist and has in fact some peculiar and distinctive property whereby it affects my senses in a certain peculiar and distinctive way -- my judgment is true.

The truth of perceptual judgments by no means implies an exact correspondence between what is perceived and the images, or sensation -- complexes, whereby we perceive; nor does the Scholastic theory necessitate any such view. It is not the image, or sensation-complex, but the idea, that in judgment is referred to reality, and that gives us knowledge of reality. Colour and other qualities of objective things are doubtless perceived by means of sensation of peculiar and distinctive quality or tone, but no one imagines that this presupposes similar sensation in the object perceived. It is by means of the idea of colour and its specific differences that colours are predicated of objects, not by means of sensations. Such an idea could not arise, indeed, were it not for the sensations which in perception accompany and condition it; but the idea itself is not a sensation, nor is it of a sensation. Ideas have their origin in sensible experience and are undefinable, so far as immediate experience goes, except by reference to such experience and by differentiation from experiences in which other and different properties of objects are presented. Granted, therefore, that differences in what is technically known as the "quality" of sensation correspond to differences in the objective properties of things, the truth of perceptual judgments is assured. No further correspondence is required; for the correspondence which truth postulates is between idea and thing, not between sensation and thing. Sensation conditions knowledge, but as such it is not knowledge. It is, as it were, a connecting link between the idea and the thing. Differences of sensation are determined by the causal activity of things; and from the sensation-complex, or image the idea is derived by an instinctive and quasi-intuitive act of the mind which we call abstraction. Thus the idea which the thing unconsciously expresses finds conscious expression in the act of the knower, and the vast scheme of relations and laws which are *de facto* embodied in the material universe reproduce themselves in the consciousness of man.

Correspondence between thought and reality, idea and thing, or knower and known, therefore, turns out in all cases to be of the very essence of the truth relation. Whence, say the opponents of our theory, in order to know whether our judgments are true or not, we must compare them with the realities that are known -- a comparison that is obviously impossible, since reality can only be known through the instrumentality of the judgment. This objection, which is to be found in almost every non-Scholastic book dealing with the subject, rests upon a grave misapprehension of the real meaning of the Scholastic doctrine. Neither St. Thomas nor any other of the great Scholastics ever asserted that correspondence is the scholastic criterion of truth. To inquire what truth is, is one question; to ask how we know that we have judged truly, quite another. Indeed, the possibility of answering the second is supposed by the mere fact that the first is put. To be able to define truth, we must first possess it and know that we possess it, i.e. must be able to distinguish it from error. We cannot define that which we cannot distinguish and to some extent isolate. The Scholastic theory supposes, therefore, that truth has already been distinguished from error, and proceeds to

examine truth with a view to discovering in what precisely it consists. This standpoint is epistemological, not criteriological. When he says that truth is correspondence, he is stating what truth is, not by what sign or mark it can be distinguished from error. By the old Scholastics the question of the criteria of truth was scarcely touched. They discussed the criteria of valid reasoning in their treatises on logic, but for the rest they left the discussion of particular criteria to the methodology of particular sciences. And rightly so, for there is really no criterion of universal application. The distinction of truth and error is at bottom intuitional. We cannot go on making criteria *ad infinitum*. Somewhere we must come to what is ultimate, either first principles or facts.

This is precisely what the Scholastic theory of truth affirms. In deference to the modern demand for an infallible and universal criterion of truth, not a few Scholastic writers of late have suggested objective evidence. Objective evidence, however, is nothing more than the manifestation of the object itself, directly or indirectly, to the mind, and hence is not strictly a criterion of truth, but its foundation. As Père Geny puts it in his pamphlet discussing "Une nouvelle théorie de la connaissance", to state that evidence is the ultimate criterion of truth is equivalent to stating that knowledge properly so called has no need of a criterion, since it is absurd to suppose a knowledge which does not know what it knows. Once grant, as all must grant who wish to avoid absolute scepticism, that knowledge is possible, and it follows that, properly used, our faculties must be capable of giving us truth. Doubtless, coherence and harmony with facts are *pro tanto* signs of truth's presence in our minds; but what we need for the most part are not signs of truth, but signs or criteria of error -- not tests whereby to discover when our faculties have gone right, but tests whereby to discover when they have gone wrong. Our judgments will be true, i.e. thought will correspond with its object, provided that object itself, and not any other cause, subjective or objective, determines the content of our thought. What we have to do, therefore, is to take care that our assent is determined by the evidence with which we are confronted, and by this alone. With regard to the senses this means that we must look to it that they are in good condition and that the circumstances under which we are exercising them are normal; with regard to the intellect that we must not allow irrelevant considerations to weigh with us, that we must avoid haste, and, as far as possible, get rid of bias, prejudice, and an over-anxious will to believe. If this be done, granted there is sufficient evidence, true judgments will naturally and necessarily result. The purpose of argument and discussion, as of all other processes that lead to knowledge, is precisely that the object under discussion may manifest itself in its various relations, either directly or indirectly, to the mind. And the object as thus manifesting itself is what the Scholastic calls evidence. It is the object, therefore, which in his view is the determining cause of truth. All kinds of processes, both mental and physical, may be necessary to prepare the way for an act of cognition, but in the last resort such an act must be determined as to its content by the causal activity of the object, which makes itself evident by producing in the mind an idea that is like to the idea of which its own existence is the realization.

B. The Hegelian Theory.

In the Idealism of Hegel and the Absolutism of the Oxford School (of which Mr. Bradley and Mr. Joachim are the leading representatives) both reality and truth are essentially one, essentially

an organic whole. Truth, in fact, is but reality *qua* thought. It is an intelligent act in which the universe is thought as a whole of infinite parts or differences, all organically inter-related and somehow brought to unity. And because truth is thus organic, each element within it, each partial truth, is so modified by the others through and through that apart from them, and again apart from the whole, it is but a distorted fragment, a mutilated abstraction which in reality is not truth at all. Consequently, since human truth is always partial and fragmentary, there is in strictness no such thing as human truth. For us *the* truth is ideal, and from it our truths are so far removed that, to convert them into *the* truth, they would have to undergo a change of which we know neither the measure nor the extent.

The flagrantly sceptical character of this theory is sufficiently obvious, nor is there any attempt on the part of its exponents to deny it. Starting with the assumption that to conceive is "to hold many elements together in a connexion necessitated by their several contents", and that to be conceivable is to be "a significant whole", i.e. a whole, "such that all its constituent elements reciprocally determine one another's being as contributory features in a single concrete meaning", Dr. Joachim boldly identifies the true with the conceivable (*Nature of Truth*, 66). And since no human intellect can conceive in this full and magnificent sense, he frankly admits that no human truth can be more than approximate, and that to the margin of error which this approximation involves no limits can be assigned. Human truth draws from absolute or ideal truth "whatever being and conservability" it possesses (Green, "Prolegom.", article 77); but it is not, and never can be, identical with absolute truth, nor yet with any part of it, for these parts essentially and intrinsically modify one another. For his definition of human truth, therefore, the Absolutist is forced back upon the Scholastic doctrine of correspondence. Human truth represents or corresponds with absolute truth in proportion as it presents us with this truth as affected by more or less derangement, or in proportion as it would take more or less to convert the one into the other (Bradley, "Appearance and Reality", 363). While, therefore, both theories assign correspondence as the essential characteristic of human truth, there is this fundamental difference between them: For the Scholastic this correspondence, so far as it goes, must be exact; but for the Absolutist it is necessarily imperfect, so imperfect, indeed, that "the ultimate truth" of any given proposition "may quite transform its original meaning" (*Appearance and Reality*, 364).

To admit that human truth is essentially representative is really to admit that conception is something more than the mere "holding together of many elements in a connexion necessitated by their several contents". But the fallacy of the "coherence theory" does not lie so much in this, nor yet in the identification of the true and the conceivable, as in its assumption that reality, and therefore truth, is organically one. The universe is undoubtedly one, in that its parts are inter-related and inter-dependent; and from this it follows that we cannot know any part completely unless we know the whole; but it does not follow that we cannot know any part at all unless we know the whole. If each part has some sort of being of its own, then it can be known for what it is, whether we know its relations to other parts or not; and similarly some of its relations to other parts can be known

without our knowing them all. Nor is the individuality of the parts of the universe destroyed by their inter-dependence; rather it is thereby sustained.

The sole ground which the Hegelian and the Absolutist have for denying these facts is that they will not square with their theory that the universe is organically one. Since, therefore, it is confessedly impossible to explain the nature of this unity or to show how in it the multitudinous differences of the universe are "reconciled", and since, further, this theory is acknowledged to be hopelessly sceptical, it is surely irrational any longer to maintain it.

C. The Pragmatic Theory

Life for the Pragmatist is essentially practical. All human activity is purposive, and its purpose is the control of human experience with a view to its improvement, both in the individual and in the race. Truth is but a means to this end. Ideas, hypotheses, and theories are but instruments which man has "made" in order to better both himself and his environment; and, though specific in type, like all other forms of human activity they exist solely for this end, and are "true" in so far as they fulfil it. Truth is thus a form of value: it is something that works satisfactorily; something that "ministers to human interests, purposes and objects of desire" (*Studies in Humanism*, 362). There are no axioms or self-evident truths. Until an idea or a judgment has proved itself of value in the manipulation of concrete experience, it is but a postulate or claim to truth. Nor are there any absolute or irreversible truths. A proposition is true so long as it proves itself useful, and no longer. In regard to the essential features of this theory of truth W. James, John Dewey, and A.W. Moore in America, F.C.S. Schiller in England, G. Simmel in Germany, Papini in Italy, and Henri Bergson, Le Roy, and Abel Rey in France are all substantially in agreement. It is, they say, the only theory which takes account of the psychological processes by which truth is made, and the only theory which affords a satisfactory answer to the arguments of the sceptic.

In regard to the first of these claims there can be no doubt that Pragmatism is based upon a study of truth "in the making". But the question at issue is not whether interest, purpose, emotion, and volition do as a matter of fact play a part in the process of cognition. That is not disputed. The question is whether, in judging of the validity of a claim to truth, such considerations ought to have weight. If the aim of all cognitive acts is to know reality as it is, then clearly judgments are true only in so far as they satisfy this demand. But this does not help us in deciding what judgments are true and what are not, for the truth of a judgment must already be known before this demand can be satisfied. Similarly with regard to particular interests and purposes; for though such interests and purposes may prompt us to seek for knowledge, they will not be satisfied until we know truly, or at any rate think we know truly. The satisfaction of our needs, in other words, is posterior to, and already supposes, the possession of true knowledge about whatever we wish to use as a means to the satisfaction of those needs. To act efficiently, we must know what it is we are acting upon and what will be the effects of the action contemplated. The truth of our judgments is verified by their consequences only in those cases where we know that such consequences should ensue if our judgment be true, and then act in order to discover whether in reality they will ensue.

Theoretically, and upon Scholastic principles, since whatever is true is also good, true judgments ought to result in good consequences. But, apart from the fact that the truth of our judgment must in many cases be known before we can act upon them with success, the Pragmatic criterion is too vague and too variable to be of any practical use. "Good consequences", "successful operations on reality", "beneficial interaction with sensible particulars" denote experiences which it is not easy to recognize or to distinguish from other experiences less good, less successful, and less beneficial. If we take personal valuations as our test, these are proverbially unstable; while, if social valuations alone are admissible, where are they to be found, and upon what grounds accepted by the individual? Moreover, when a valuation has been made, how are we to know that it is accurate? For this, it would seem, further valuations will be required, and so on *ad infinitum*. Distinctively pragmatic criteria of truth are both impractical and unreliable, especially the criterion of felt satisfaction, which seems to be the favourite, for in determining this not only the personal factor, but the mood of the moment and even physical conditions play a considerable part. Consequently upon the second head the claim of the Pragmatist can by no means be allowed. The Pragmatist theory is not a whit less sceptical than the theory of the Absolutist, which it seeks to displace. If truth is relative to purposes and interests, and if these purposes and interests are, as they are admitted to be, one and all tinged by personal idiosyncrasy, then what is true for one man will not be true for another, and what is true now will not be true when a change takes place either in the interest that has engendered it or in the circumstances by which it has been verified.

All this the Pragmatist grants, but replies that such truth is all that man needs and all that he can get. True judgments do not correspond with reality, nor in true judgments do we know reality as it is. The function of cognition, in short, is not to know reality, but to control it. For this reason truth is identified with its consequences -- theoretical, if the truth be merely virtual, but in the end practical, particular, concrete. "Truth *means* successful operations on reality" (Studies in Hum., 118). The truth-relation " *consists* of intervening parts of the universe which can in every particular case be assigned and catalogued" (Meaning of Truth, 234). "The chain of workings which an opinion sets up *is* the opinion's truth" (Ibid., 235). Thus, in order to refute the Sceptic, the Pragmatist changes the nature of truth, redefining it as the definitely experienceable success which attends the working of certain ideas and judgments; and in so doing he grants precisely what the Sceptic seeks to prove, namely, that our cognitive faculties are incapable of knowing reality as it is. (See PRAGMATISM.)

D. The "New" Realist's Theory

As it is a first principle with both Absolutist and Pragmatist that reality is changed by the very act in which we know it, so the negation of this thesis is the root principle of "New" Realism. In this the "New" Realist is at one with the Scholastic. Reality does not depend upon experience, nor is it modified by experience as such. The "New" Realist, however, has not as yet adopted the correspondence theory of truth. He regards both knowledge and truth as unique relations which hold immediately between knower and known, and which are as to their nature indefinable. "The difference between subject and object of consciousness is not a difference of quality or substance, but a difference of office or place in a configuration" (Journal of Phil. Psychol. and Scientific Meth.,

VII, 396). Reality is made up of terms and their relations, and truth is just one of these relations, *sui generis*, and therefore recognizable only by intuition. This account of truth is undoubtedly simple, but there is at any rate one point which it seems altogether to ignore, viz., the existence of judgments and ideas of which, and not of the mind as such, the truth-relation is predicable. We have not on the one hand objects and on the other bare mind; but on the one hand objects and on the other a mind that by means of the judgment refers its own ideas to objects -- ideas which as such, both in regard to their existence and their content, belong to the mind which judges. What then is the relation that holds between these ideas and their objects when our judgments are true, and again when they are false? Surely both logic and criteriology imply that we know something more about such judgments than merely that they are different.

Bertrand Russell, who has given in his adhesion to "The Program and First Platform of Six Realists", drawn up and signed by six American professors in July, 1910, modifies somewhat the *naïveté* of their theory of truth. "Every judgment", he says (Philos. Essays, 181), "is a relation of a mind to several objects, one of which is a relation. Thus, the judgment, 'Charles I died on the scaffold', denotes several objects or 'objectives' which are related in a certain definite way, and the relation is as real in this case as are the other objectives. The judgment 'Charles I died in his bed', on the other hand, denotes the objects, Charles I, death, and bed, and a certain relation between them, which in this case does not relate the objects as it is supposed to relate them. A judgment therefore, is true, when the relation which is one of the objects relates the other objects, otherwise it is false" (loc. cit.). In this statement of the nature of truth: correspondene between the mind judging and the objects about which we judge is distinctly implied, and it is precisely this correspondene which is set down as the distinguishing mark of true judgments. Russell however, unfortunately seems to be at variance with other members of the New Realist school on this point. G.E. Moore expressly rejects the correspondence theory of truth ("Mind", N. S., VIII, 179 sq.), and Prichard, another English Realist, explicitly states that in knowledge there is nothing between the object and ourselves (Kant's Theory of Knowledge, 21). Nevertheless, it is matter for rejoicing that in regard to the main points at issue -- the non-alteration of reality by acts of cognition, the possibility of knowing it in some respects without its being known in all, the growth of knowledge by "accretion", the non-spiritual character of some of the objects of experience, and the necessity of ascertaining empirically and not by *a priori* methods, the degree of unity which obtains between the various parts of the universe -the "New" Realist and the Scholastic Realist are substantially in agreement.

III. MORAL TRUTH, OR VERACITY

Veracity is the correspondence of the outward expression given to thought with the thought itself. It must not be confused with verbal truth (*veritas locutionis*), which is the correspondence of the outward or verbal expression with the thing that it is intended to express. The latter supposes on the part of the speaker not only the intention of speaking truly, but also the power so to do, i.e. it supposes (1) true knowledge and (2) a right use of words. Moral truth, on the other hand, exists

whenever the speaker expresses what is in his mind even if *de facto* he be mistaken, provided only that he says what he thinks to be true. This latter condition however, is necessary. Hence a better definition of moral truth would be "the correspondence of the outward expression of thought with the thing as conceived by the speaker". Moral truth, therefore, does not imply true knowledge. But, though a deviation from moral truth would be only materially a lie, and hence not blameworthy, unless the use of words or signs were intentionally incorrect, moral truth does imply a correct use of words or other signs. A lie therefore, is an intentional deviation from moral truth, and is defined as a *locutio contra mentem*; i.e. it is the outward expression of a thought which is intentionally diverse from the thing as conceived by the speaker. It is important to observe, however, that the expression of the thought, whether by word or by sign, must in all cases be taken in its context; for both in regard to words and to signs, custom and circumstances make a considerable difference with respect to their interpretation. Veracity, or the habit of speaking the truth, is a virtue; and the obligation of practising it arises from a twofold source. First, "since man is a social animal, naturally one man owes to another that without which human society could not go on. But men could not live together if they did not believe one another to be speaking the truth. Hence the virtue of veracity comes to some extent under the head of justice [*rationem debiti*]" (St. Thomas, Summa, II-II:109:3). The second source of the obligation to veracity arises from the fact that speech is clearly of its very nature intended for the communication of knowledge by one to another. It should be used, therefore, for the purpose for which it is naturally intended, and lies should be avoided. For lies are not merely a misuse, but an abuse, of the gift of speech, since, by destroying man's instinctive belief in the veracity of his neighbour, they tend to destroy the efficacy of that gift.

For Scholasticism see: scholastic treatises on major logic, s.v. *Veritas*; *Etudes sur la Vérité* (Paris, 1909); GENY, *Une nouvelle théorie de la connaissance* (Tournai, 1909); MIVART, *On Truth* (London, 1889); JOHN RICKABY, *First Principles of Knowledge*; ROUSSELOT, *L'Intellectualisme de St. Thomas* (Paris, 1909); TONQUEDEC, *La notion de la vérité dans la philosophie nouvelle* in *Etudes* (1907), CX, 721; CXI, 433; CXII, 68, 335; WALKER, *Theories of Knowledge* (2d ed., London, 1911); HOBHOUSE, *The Theory of Knowledge* (London, 1906). Absolutism: BRADLEY, *Appearance and Reality* (London, 1899); IDEM, Articles in *Mind*, N.S., LT, LXXI, LXXII (1904, 1909, 1910); JOACHIM, *The Nature of Truth* (Oxford, 1906); TAYLOR, *Elements of Metaphysics* (London, 1903); Articles in *Mind*, N.S., LVII (1906), and *Philos. Rev.*, XIV, 3.

Pragmatism: BERGSON, *L'Evolution Créatrice* (7th ed., Paris, 1911); DEWEY, *Studies in Logical Theory* (Chicago, 1903); JAMES, *Pragmatism* (London, 1907); IDEM, *The Meaning of Truth* (London, 1909); IDEM, *Some Problems of Philosophy* (London 1911); MOORE, *Pragmatism and Its Critics* (Chicago, 1910); ABEL REY, *La théorie de la physique* (Paris, 1907); SCHILLER, *Axioms as Postulates in Personal Idealism* (London, 1902); IDEM *Humanism* (London, 1902); IDEM, *Studies in Humanism* (London 1907); SIMMEL, *Die Philosophie des Geldes* (Leipsig, 1900), iii.

New Realism: Articles in *Journal of Philosophy, Psychology, and Scientific Methods* (1910, 1911), especially VII, 15 (July 1910); MOORE, *The Nature of Judgment in Mind*, VIII; PRICHARD, *Kant's Theory of Knowledge* (Oxford, 1910); RUSSELL, *Philosophical Essays* (London, 1910); IDEM, Articles in *Mind N.S.*, LX (1906), and in *Proceedings of the Aristotelian Society* VII.

Catholic Truth Societies

Catholic Truth Societies

This article will treat of Catholic Truth Societies in the chronological order of their establishment in various countries.

IN ENGLAND

The Catholic Truth Society has had two periods of existence. It was initiated by Dr. (afterwards Cardinal) Vaughan when he was Rector of St. Joseph's Missionary College, and, in the two or three years of its existence, issued a number of leaflets and penny books, some of which are still on sale; but when he became Bishop of Salford, in 1872, the society fell into abeyance and soon practically ceased to exist. Meanwhile, and quite independently, the need of cheap, good literature impressed itself upon some priests and laymen, who raised the sum of twelve pounds, which was expended in printing some little cards of prayers for daily use, and for confession and Communion. The scheme was brought before Dr. Vaughan, who suggested that the new body should take the name and place of the defunct Catholic Truth Society. Under that name it was formally established, 5 November, 1884, and the second period of its existence began under the presidency of Dr. Vaughan, the Rev. W.H. (now Monsignor) Cologan and Mr. James Britten being appointed honorary secretaries. At the death of Cardinal Vaughan, the present Archbishop of Westminster, Cardinal Bourne, became president. The aims of the society are: To spread among Catholics small devotional works; to assist the uneducated poor to a better knowledge of their religion; to spread among Protestants information regarding Catholic faith and practice; and to promote the circulation of good and cheap Catholic literature. These objects have been steadily kept in view throughout the society's existence, although its scope has from time to time been enlarged as necessity has dictated. From them it will be seen that the aim of the society is not controversial, as is sometimes supposed. The position of Catholics in England is such that controversy is unavoidable, and a certain proportion of the society's publications have been devoted to the consideration of the Anglican claims and to the exposure of the fictions assiduously promoted by the less intelligent and bigoted class of Protestants. But the chief aim of the society has been the instruction of Catholics by placing in their hands, at nominal prices, educational and devotional works. The sale of some of these has been phenomenal: the "Simple Prayer-book", for example, has reached a circulation of 1,380,000; the little penny books of daily meditation have reached 114,000; and nearly 200,000 penny copies of the Gospels have been sold. An account of the literary output of the society can be ascertained from

the list of publications, to be obtained from the depot, 69 Southwark Bridge Road, London, S.E. Almost every subject of importance to Catholics is taken up in one or other of the society's works; and the number is increasing every month. Already there is an extensive list of books and pamphlets directed to meet and answer rationalist objections; among them may be mentioned a series of penny lives of Catholic men of science, and thirty-nine papers dealing with "The History of Religions"; of these last an aggregate of about 200,000 copies have been issued. For younger Catholics a large number of tales, dealing with the sacraments and other religious subjects, has been provided at the lowest possible price.

The society is mainly supported by subscriptions, ten shillings per annum entitling to membership, while ten pounds is a life subscription. Without these the work could not be carried on, as, although the officers have always taken their part gratuitously, the necessary expenses of rent, printing, and storing could not be defrayed out of the often infinitesimal profits accruing from the sale of publications. From the first there has been the heartiest co-operation between clergy and laity in every branch of the society's work; and the difficulties often arising from political differences have never in any way interfered with the work of the society. The society has the cordial approval and support of the highest ecclesiastical authorities, and is indulged by the Holy See. The movement has spread to Ireland, Scotland, the United States, and Australia. In addition to its literary work, for seventeen years the society held an annual Catholic conference, which formed an important event in English Catholic life. These gatherings, always largely attended by representative clergy and laity, were the occasion of important pronouncements by the archbishop or by other bishops, and afforded an opportunity for the elucidation and discussion of matters affecting the work and welfare of the Church in England. Their success paved the way for a development by which, from 1910, the society's conference has been merged in the National Catholic Congress. The important work of providing reading for blind Catholics has been taken up by the society, which has established a circulating library of books of instruction, devotion, and fiction, printed in Braille type. It has also provided a number of lectures on matters connected with history and art, illustrated by suitable lantern slides. A special committee was formed in 1891 to work for the spiritual welfare of Catholic seamen of all classes, through the instrumentality of which Catholic seamen's clubs and homes were opened. The society has also been the starting-point for other organizations which now have an independent existence — e.g. the Catholic Guardians' Association, which has become a centre of usefulness throughout the country, is the ultimate development of a local branch of the society, which made the distribution of literature to the inmates of workhouses and hospitals part of its work; the Catholic Social Guild took its rise in connection with one of the society's conferences; and the Catholic Needlework Guild was initiated by one of its secretaries. The realization of its importance is already growing, and the society is doing effective work for the Catholic Church in England.

IN IRELAND

The Catholic Truth Society of Ireland was organized at the meeting of the Maynooth-Union in 1899, with the stated purpose of diffusing "by means of cheap publications sound Catholic literature in popular form so as to give instruction and edification in a manner most likely to interest and attract the general reader", and which would "create a taste for a pure and wholesome literature, and will also serve as an antidote against the poison of dangerous or immoral writings". The society has received the earnest and practical support of the hierarchy and laity of Ireland, and has devoted its publications to sound national, historical, and biographical, as well as religious subjects in order to offset the demoralization of the output of the sensational press. In the first ten years of its existence 424 penny publications, with a circulation of over five million copies, were issued. It has also printed a prayer-book and other works in Gaelic. The annual conferences have brought together distinguished gatherings, and the addresses made and papers read at these meetings, printed in "The Catholic Truth Annual", make a valuable compilation in the interest of the object for which the society was started. The society has its main office in Dublin and has over 800 members.

IN AUSTRALIA

The Australian Catholic Truth Society was started in 1904, and has its headquarters in Melbourne. Its officers have been active in the dissemination of sound Catholic literature and in the spreading of publications that were an antidote to works subversive of faith and morals. On 1 Nov., 1910 the society had 423 annual and 164 life members distributed over the Commonwealth and New Zealand and had published 679,375 pamphlets. Of its prayer-book 42,016 copies were sold. In 1910 it sent the Rev. Dr. Cleary on a mission around the world to establish a chain of agents for an international news service.

IN THE UNITED STATES

The International Catholic Truth Society was incorporated in New York on 24 April, 1900, the particular objects for which it was formed being: to answer inquiries of persons seeking information concerning the doctrines of the Catholic Church; to supply Catholic literature gratis to Catholics and non-Catholics who make request for the same; to correct erroneous and misleading statements in reference to Catholic doctrine and morals; to refute calumnies against the Catholic religion; to secure the publication of articles promoting a knowledge of Catholic affairs; to stimulate a desire for higher education among the Catholic laity, by printing and distributing lists of Catholic books, and otherwise to encourage the circulation and reading of standard Catholic literature; to generally assist in the dissemination of Catholic truth; and to perform other educational and missionary work. The territory in which its operations are principally conducted is in the United States of America and in Canada. The office of the society is in Brooklyn, the bishop of which diocese is its honorary president, and the Rev. W. N. McGinnis, S.T.D., its president.

According to the annual report for the year from March, 1910, to March, 1911, the society had 1005 members, 618 subscribers, and 118 affiliated societies. It had distributed during the year 199,188 pamphlets. A part of its work found to be of special benefit is the remailing of Catholic

papers and magazines to people in out of the way sections. During the year 11,579 such families were supplied with 475,000 copies of Catholic weekly papers and magazines. Catholic items are supplied twice a month to 31 daily papers in various parts of the United States. In affiliation with this society, and acting as distributing centres, 94 Councils of the Knights of Columbus and 24 other organizations in various localities have been of material assistance in refuting calumnies against the Catholic religion, in publishing in the daily press articles that tend to promote a knowledge of Catholic affairs; in securing the removal of objectionable textbooks from the public schools, or the expurgation from the textbooks of false and unjust statements concerning the Church; and generally assisting in the dissemination of Catholic truth. The society has established connections with agencies in fifteen foreign countries.

JAMES BRITTEN THOMAS F. MEEHAN

Tryphon, Respicius, and Nympha

Tryphon, Respicius, and Nympha

Martyrs whose feast is observed in the Latin Church on 10 November. Tryphon is said to have been born at Kampsade in Phrygia and as a boy took care of geese. During the Decian persecution he was taken to Nicfa about the year 250 and put to death in a horrible manner after he had converted the heathen prefect Licius. Fabulous stories are interwoven with his legend. He is greatly venerated in the Greek Church which observes his feast on 1 February. In this Church he is also the patron saint of gardeners. Many churches were dedicated to him, and the Eastern Emperor, Leo VI, the Philosopher (d. 912), delivered a eulogy upon Tryphon. About the year 1005 the monk Theodoric of Fleury wrote an account of him based upon earlier written legends; in Theodoric's story Respicius appears as Tryphon's companion. The relics of both were preserved together with those of a holy virgin named Nympha, at the Hospital of the Holy Ghost in Sassia. Nympha was a virgin from Palermo who was put to death for the Faith at the beginning of the fourth century. According to other versions of the legend, when the Goths invaded Sicily she fled from Palermo to the Italian mainland and died in the sixth century at Savona. The feast of her translation is observed at Palermo on 19 August. Some believe that there were two saints of this name. The church of the Hospital of the Holy Ghost at Rome was a cardinal's title which, together with the relics of these saints, was transferred in 1566 by Pope Pius V to the Church of St. Augustine. A Greek text of the life of St. Tryphon was discovered by Father Franchi de Cavallieri, *Hagio-graphica* (Rome, 1908), in the series *Studi e Texti*, XIX. The Latin Acts are to be found in Ruinart, *Acta Martyrum . Analecta Bollandiana*, XXVII, 7-10, 15; XXVIII, 217.

GABRIEL MEIER

Tschiderer Zu Gleifheim

Johann Nepomuk von Tschiderer zu Gleifheim

Bishop of Trent, b. at Bozen, 15 Feb., 1777; d. at Trent, 3 Dec., 1860. He sprang from a family that had emigrated from the Grisons to the Tyrol in 1529 and to which the Emperor Ferdinand III had given a patent of nobility in 1620. Johann Nepomuk was ordained priest, 27 July, 1800, by Emmanuel Count von Thun, Bishop of Trent. After spending two years as an assistant priest, he went for further training to Rome, where he was appointed notary Apostolic. After his return he took up pastoral work again in the German part of the Diocese of Trent, and was later professor of moral and pastoral theology at the episcopal seminary at Trent. In 1810 he became parish priest at Sarnthal, and in 1819 at Meran. Wherever he went he gained a lasting reputation by his zeal and charitableness. In 1826 Prince-Bishop Luschin appointed him cathedral canon and pro-vicar at Trent; in 1832 Prince-Bishop Galura of Brixen selected him as Bishop of Heliopolis and Vicar-General for Vorarlberg. In 1834 the Emperor Francis I nominated him Prince-Bishop of Trent and on 5 May, 1835, he entered upon his office. During the twenty-five years of his administration he was distinguished for the exercise of virtue and charity, and for intense zeal in the fulfilment of the duties of his episcopal office. He was exceedingly simple and abstinent in his personal habits. On the other hand he loved splendour when it concerned the decoration of his cathedral, the procuring of ecclesiastical vestments, and the ornamentation of the churches. He devoted a considerable part of his revenues to the building of churches, and to the purchase of good books for the parsonages and chaplains' houses. His charity to the poor and sick was carried so far that he was often left without a penny, because he had given away everything he had. Twice the cholera raged in his diocese and on these occasions he set his clergy a shining example of Christian courage. He left his property to the institution for the deaf and dumb at Trent and to the seminary for students that he had founded, and that was named after him the Joanneum. Directly after his death he was honoured as a saint; the process for his beatification is now in progress.

Mitteilungen über das Leben des . . . J. N. Tschiderer (Bozen, 1876); TAIT, *Leben des ehrwürdigen Dieners Gottes Johann Nepomuk von Tschiderer. Nach den Prozessakten und beglaubigten Urkunden* (2 vols., Venice, 1904), Ger. tr. SCHLEGEL (Trent, 1908).

JOSEPH LINS

John Nepomuk Tschupick

John Nepomuk Tschupick

A celebrated preacher, b. at Vienna, 7 or 12 April, 1729; d. there, 20 July, 1784. He entered the Jesuit novitiate on 14 October, 1744, and, shortly after, was appointed professor of grammar and rhetoric. In 1763 he became preacher at the cathedral of Vienna, a position which he filled during the remaining twenty-two years of his life with exceptional conscientiousness, prudence, and ability. His preaching was very successful and highly appreciated by Francis I (d. 1765), Maria Theresa (d. 1780), Joseph II (d. 1790), and the imperial Court. His sermons were remarkable for clearness and logical thought, strength and precision of expression, copiousness and skillful application of Patristic and Biblical texts. The first edition of his collected sermons was published in ten small

volumes with an index volume (Vienna, 1785-7). This edition was supplemented by "Neue, bisher ungedruckte, Kanzelreden auf alle Sonn-und Festtage, wie auch für die heilige Fastenzeit" (Vienna, 1798-1803). A new edition of all his sermons was prepared recently by Johann Hertkens (5 vols., Paderborn, 1898-1903). An Italian translation was made by Giuseppe Teglio (4 vols., 4th ed., Milan, 1856).

SOMMERVOGEL, *Bibl. de la Compagnie de JÈsus*, VIII (Brussels, 1898), 261-3.

MICHAEL OTT

Tuam

Tuam

(TUAMENSIS).

The Archdiocese of Tuam, the metropolitan see of Connacht, extends, roughly speaking, from the Shannon westwards to the sea, and comprises half of County Galway, and nearly half of Mayo, with a small portion of south Roscommon. It is territorially the largest diocese in Ireland, including in itself about one-fourteenth of the entire area of the country. At the census of 1901 the Catholic population was 193,768; the entire non-Catholic population was 4,194. There are several parishes in which all the inhabitants are Catholics. The mainland portion of the archdiocese is divided by a chain of lakes extending from the city of Galway to the Pontoon, near Foxford, Mayo. The largest of these lakes — Corrib, Mask, and Carra — form a magnificent and continuous watercourse, but are not connected by navigable rivers or canals. The country east of these lakes is a great undulating plain, mostly of arable land, interspersed here and there with bogs and smaller lakes. The country west of the great lakes is of entirely different character. It is nearly all rugged and heathery, with ranges of hills rising steeply from the lakes, especially from the shores of Lough Mask on one side, and from the shores of the Atlantic Ocean on the other, forming many lofty peaks with long-drawn valleys where the streams rushing down widen into deep and fishful lakes, which, especially in Connemara, attract fishermen from all parts of the United Kingdom. The population of this rugged lakeland is sparse and poor, but the scenery very picturesque, especially towards the west, where the bays of the ocean penetrate far in between the mountains, as at the beautiful Killary Bay. This western coast is bordered by many wind-swept islands, affording a precarious sustenance to the inhabitants. Of these the chief are the Isles of Aran in Galway Bay, and farther off, on the north-western coast, Inishark, Inisboffin, and Inisturk, Clare Island and Achill Island — all of which are inhabited and have schools and churches. There are three priests on the Aran Islands, one on Inisboffin, one on Clare Island, and three on Achill, which has a population of about 6000 souls.

The archdiocese comprises seven rural deaneries — Tuam, Dunmore, Claremorris, Ballinrobe, Castlebar, Westport, and Clifden. There are three vicars-general who preside over three divisions of the archdiocese which from time immemorial have been historically distinct, that is Galway east of the Corrib; West Galway, or the Kingdom of Connemara, and the Mayo portion. There are 143 secular priests, of whom eight are usually employed in the seminary. There are only two regulars,

properly so called, who reside in the Augustinian monastery of Ballyhaunis; two priests of the order of St. Camillus have charge of the hospice for infirm clergy, Moyne Park, Ballyglunin, Galway, and four secular clergy of a preparatory college for the African Missions in the Co. Mayo, generously given for the purpose by Count Blake of Cloughballymore. There are four houses of the Christian Brothers, and one of the Brothers of the Christian schools. There are eleven monasteries of the Third Order Regular of St. Francis, who were formed by Archbishop MacHale to counteract the efforts of proselytizing institutions and to teach agriculture to their pupils. Of these schools the most successful has been the Agriculture College of Mount Bellew, which is working under the Agricultural Department. There are three Presentation convents, and ten convents of the Sisters of Mercy with schools. St. Jarlath's Diocesan Seminary has more than a hundred resident students.

St. Patrick in Tuam St. Patrick came into the Diocese of Tuam from Airtech in north-west Roscommon most likely in A.D. 440, and thence travelled almost due west from Aghamore, where he founded his first church, on the summit of Croaghpatrick. We have the names of some twelve churches which he established in this district; it is expressly stated that he placed bishops over several of these churches — at Cella Senes near Ballyhaunis; at Kilbenin, where he placed St. Benignus; at Donaghpatrick, which he gave to Bishop Felartus; at Aghagower, where he placed St. Senach, whom he called Agnus Dei on account of his meekness. His sojourn for forty days on ynod of Kells (1152), and the controversy was carried to Rome and finally decided in their favour. The primates, however, were allowed the rents of certain church lands in Tuam, but these claims they afterwards remitted in exchange for lands in the north of Ireland.

The Archdiocese of Tuam now comprises the territories of five of those ancient dioceses which at different periods were united to the original Diocese of Tuam. This original diocese, which may be taken as corresponding roughly with the modern deanery of Tuam, comprised the ancient territory known as the Conmaicne of Dunmore, and also the Ciarraigi of Loch nan-Airneadh, as well as a portion of Corcamogha and the Sodan territory. When the O'Conor kings of the twelfth century came to be the chief rulers of Connacht, and for a time of all Ireland, they resided mostly at Tuam and sought to control the spiritual as they did the temporal rulers of their principality. There can be no doubt that it was the influence of Turlough Mor, then King of Ireland, which induced the prelates and papal legate at Kells in 1152 to make his own Diocese of Tuam the archiepiscopal and metropolitan see of the province. This original See of Tuam was founded about A.D. 520 by St. Jarlath, son of Loga, the disciple of St. Benin of Kilbannon, and the preceptor for a time at Cloonfush near Tuam of St. Brendan the Navigator. The original cathedral known as Tempull Jarlath stood on the site of the present Protestant cathedral. After Jarlath's death his remains were enshrined and preserved in a church built for the purpose and called Tempull na Scrine, close to the spot on which the Catholic cathedral now stands. Around this cathedral, which was begun by Dr. Oliver Kelly in 1826, are grouped in a circle all the other ecclesiastical buildings — the college, the Presentation convent and schools, the Mercy convent and schools of the Sisters of Mercy, the Christian Brothers' House and schools, and the recently-erected archiepiscopal residence.

The ancient *See of Annaghdown* grew out of the monastery founded by St. Brendan for his sister St. Briga. Its jurisdiction extended over O'Flaherty's country around Lough Corrib and comprised in all some seventeen parishes. The see was independent down to the death of Thomas O'Mellaigh in 1250, when Archbishop MacFlionn seized and held it with the consent of the king. For the next 250 years a prolonged and unseemly conflict was carried on between the archbishops and abbots, the former declaring that Annaghdown had been reduced by the pope and the king to the rank of a parish church, whilst the abbots stoutly maintained their independence. In 1484 the wardenship of Galway was established, and all the parishes on the south and west around the lake were placed under the warden's quasi-episcopal jurisdiction, Tuam still retaining eight parishes to the east of the lake. In 1830 the wardenship was abolished, and the See of Galway established as a regular episcopal see, suffragan to Tuam.

The *Diocese of Cong* included all the parishes subject to the Abbey of Cong, which was founded by St. Fechin in 626. The abbots seem to have exercised quasi-episcopal jurisdiction over nineteen parishes in the Baronies of Ballynahinch, Ross, and Kilmaine, which for the most part were served by the monks as vicars under the abbot. In the Synod of Rath Breasail Cong was counted as one of the five dioceses of Connacht, but there is no mention of it at the Synod of Kells in 1152. King Rory O'Conor retired to the abbey for several years and died there.

The *Diocese of Mayo* like that of Cong had its origin in Mayo Abbey, founded by St. Colman about 667 for Saxon monks who had followed him from Lindisfarne. In 1152 it was recognized by the Synod of Kells as one of the Connacht sees, and mention is made of the death of Gilla Isu O'Mailin, Bishop of Mayo, in 1184, but on the death of Bishop Cele O'Duffy in 1209 no successor was appointed and the see was merged in that of Tuam, probably through the influence of King Cathal O'Conor and his relative Archbishop Felix O'Ruadan of Tuam. But bishops of Mayo reappear from time to time in the annals down to 1579 when Bishop Patrick O'Healy coming home to take possession of his See of Mayo was seized with his companion Friar O'Rourke and hanged at Kilmallock by Drury, the English President of Munster. At one time Mayo had no fewer than twenty-eight parishes under its jurisdiction, which extended from the Dalgin River at Kilvine to Achill Head. At present this is a small rural parish, and the "City of Mayo" comprises not more than half a dozen houses.

Of the *Diocese of Aghagower* we need say little. It was founded in 441 by St. Patrick who placed over it Bishop Senach; the "Book of Armagh" tells us that bishops dwelt there in the time of the writer (early part of the ninth century). The jurisdiction of Aghagower extended over the "Owles", the territory around Clew Bay, comprising the modern deanery of Westport. But at an early date these churches were absorbed first into the Diocese of Mayo and afterwards into that of Tuam.

Monasteries

Besides the great monasteries of Annaghdown, Cong, and Mayo, there were others in the archdiocese that deserve mention. The monastery of St. Enda at Killeany in Aran became famous in the first quarter of the sixth century. Near it was the oratory Tempull Benain, which Benan, or

Benignus, of Kilbannon, the disciple of St. Patrick, had built. It is very small but strikingly beautiful, and its cyclopean walls have not lost a stone for the last fourteen hundred years. There are in addition to the Aran Island many other holy islands around this wild western coast, as Island Mac Dara, which all the fishermen salute by dipping their sails, Cruach of St. Caelainn, Ardilaun of St. Fechin, St. Colman's Inisboffin, Caher of St. Patrick. The Cistercian Abbey of Knockmoy (*de Colle Victoriae*), six miles from Tuam, founded in 1189 by King Crovedearg, was one of the largest and the wealthiest in the West of Ireland. Mention, too, is made of a Bishop of Knockmoy. The ruins are full of interest, for some of its walls were frescoed and the sculptured tomb of King Felim O'Connor is well preserved. At its suppression in 1542 it was found to be in the possession of the rectories of several churches, and large estates in Galway, Roscommon, and Mayo. The same King Cathal of the Red Hand founded in 1215 the Abbey of Ballintubber close to St. Patrick's holy well. It was admirably built and has been partly restored as the parochial church of the district. It contains the tomb and monument of the first Viscount Mayo, the son of Sir Richard Burke and Grania Uaile, Queen of Clew Bay. The Dominican Abbey of Athenry was established in 1241 by Meyler De Bermingham who endowed it with ample possessions. It usually contained thirty friars. The "main" building was erected by Meyler; King Felim O'Connor built the refectory; Flann O'Flynn built the "Scholar House", for the friars kept a noted school; Owen O'Heyne built the dormitory; Con O'Kelly built the "chapter house", and so on with the guest chamber and the infirmary. In Queen Mary's reign this convent was selected to be a university college for Connacht, but the project was never realized. Buried there are many of the early Burkes of Clanrichard, who in life were benefactors and protectors of the convent.

The Benedictine Nuns had a convent at Kilereevanty, situated on the Dalgin River, four miles from Tuam. It was founded in 1200 by the same King Cathal O'Connor for the royal ladies of his family, and of other high chieftains by whom it was richly endowed. It held estates not only in Galway but also in Roscommon, Mayo, Sligo, and Westmeath, and the rectories of score of different parishes. Its inmates at one time secured at Rome a curtailment of the archbishop's rights of visitations and procurations, but after a short experience, the pope found it necessary to restore his full rights to the archbishop. It was however the greatest and wealthiest convent in the West. There were many smaller religious houses in the archdiocese. The Augustinians had ten; the Dominicans three; the Franciscans three or four; the Cistericians two; the Templars one, and there were also three or four nunneries.

Archbishops

In the long list of the Archbishops of Tuam there are many illustrious names which can be referred to here only briefly.

- Hugh O'Hession was present at the Synod of Kells in 1152, where he received the pallium from the papal legate, and so became the first Archbishop of Tuam.
- He died in 1161 and was succeeded by Cathal or Catholicus, O'Duffy, who reigned for forty years. In 1172 he was present with his suffragans at the Concil of Cashel, which gave formal recognition to the claims of Henry II. Later, in 1175, he was deputed to sign the Treaty of Windsor on behalf of King Rory O'Connor, by which Rory consented to hold his Kingdom of Connacht in subjection

to the English monarch. O'Duffy was also present at the Lateran Council in 1179, and in 1201 held a provincial synod at Tuam under the presidency of the Roman cardinal. He then retired to the Abbey of Cong where he died the following summer.

- His successor, Felix O'Ruadain, who previously had been a Cistercian, probably at Knockmoy, filled the sea for thirty-six years. He was a near relative of Rory O'Connor, which strengthened his great influence in the province. Next year he convoked a great synod of the province at Tuam in which it was decreed to unite the termon lands of the monasteries to their respective bishoprics. Tuam thereby acquired vast estates in Galway, Mayo, and even Roscommon. The archbishop also complained that Armagh claimed jurisdiction over the Diocese of Kilmore and Ardagh, which rightfully belonged to his province, and also over several parishes in the Archdiocese of Tuam, to which the primate had no claim. A composition was effected later, in 1211.
- In 1258 died Walter De Salerno, an Englishman, who was appointed by the pope but never got possession of his see.
- In 1286 Stephen de Fulnurn, who had been justiciary, was appointed to the See of Tuam, but he resided mostly at Athlone. There is extant an inventory of his effects which goes to show that he lived in much state and splendour.
- William de Bermingham, son of Meyler de Bermingham, Lord of Carbery, Dunmore, and Athenry, appointed in 1289. He was a powerful high-handed prelate, but the monks of Athenry and Annaghdown resisted him successfully.
- Maurice O'Fihely, called in his own time "Flos Mundi" on account of his prodigious learning, was consecrated Archbishop of Tuam by Julius II in 1506, but like Florence Conry in later times, he never beheld his see.
- In 1537 Christopher Bodkin, then bishop of Kilmaedugh, was appointed archbishop of Tuam by Henry VIII, and it is said took the Oath of Supremacy. He managed to hold his ground in Tuam for thirty-five years under Henry VIII, Edward, Mary, and Elizabeth. Bodkin, thought a temporizing prelate, was always a Catholic and zealous in the service of his flock. In 1558 he held a visitation of his diocese, the account of which has been preserved and gives invaluable information regarding the state of the archdiocese at that time.
- Malachy O'Queely was one of the greatest Irish prelates of the seventeenth century — a patriot, a reformer, and a scholar; but he was not a general, and unwisely undertook to command the Confederate troops in Connacht during the wars of 1642-45. His forces were attacked unexpectedly during the night by Sir F. Hamilton near Sligo and the archbishop was slain on the field.
- Mention must be made too, of Florence Conry, though he never took possession of his see. He rendered signal service to Ireland by the foundation of St. Anthony's Convent of Louvain, whose scholars — Michael O'Clery, Ward, Fleming, Colgan, and many others — did so much for the preservation of the literature and the language and the history of Ireland both sacred and profane.
- John MacHale has a special article in this ENCYCLOPEDIA.
- His immediate successor, John MacEvilly, was an indefatigable and zealous prelate; he found time to write commentaries in English on practically the whole of the New Testament. He was born in 1818, died in 1902, and lies buried before the high altar of Tuam cathedral beside John MacHale.

Moral and Social Condition

The moral state of the archdiocese is very good. Temperance is making rapid strides amongst all classes of the population. Grave public crimes of every kind have almost disappeared. Primary education is now universally diffused even in the remotest mountain valleys. The Christian Brothers' schools are remarkably efficient, St. Jarlath's College, Tuam, now holds a premier place amongst the diocesan colleges of Ireland. The social condition of the people also has been greatly improved mainly through the efforts of the Congested Districts Board. They are better housed and better fed; the land is better tilled, and much more is derived from the harvest of the seas around the coast. No part of Ireland suffered more during the famine years from starvation and proselytism than Connemara and the Island of Achill. The starving people were bribed during these years by food and money to go to the Protestant churches and send their children to the proselytizing schools. If they went they got food and money. "Silver Monday", as they called it, was the day fixed for these doles. If they refused to go to the church and to the school they got nothing; and to their honour it must be said, that most of them, but not all, preferred starvation to apostasy. The proselytizers have now completely disappeared, and have quite enough to do to take care of themselves.

The present archbishop, Most Rev. John Healy, a native of the Diocese of Elphin, was born in 14 Nov., 1841 at Ballinafad, Co. Sligo. His early education was received at an excellent classical school in the town of Sligo whence, at about fifteen years of age, he proceeded to the diocesan college, in those days situated at Summerhill near Athlone. On 26 August, 1860, he entered the class of rhetoric at Maynooth, and just before the completion of his course was called out by his bishop to be a professor in the college at Summerhill. Here he was ordained in Sept., 1867, and continued to teach for over two years. His missionary experiences were gained in the parish of Ballygar, near Roscommon, where he was curate for two years, and then at Grange, Co. Sligo, where he spent seven years. He was then for one year in charge of a deanery school in the town of Elphin. In 1879, he competed simultaneously for two vacant chairs — one of theology and the other of classics — in the national college of Maynooth, and had the unique honour conferred on him of being appointed to both and allowed to make his own choice between them. He naturally selected the chair of theology, which he filled till 1883, when he succeeded Dr. Murray, as prefect of the Dunboyne Establishment. During his tenure of this office, Dr. Healy acted as editor of the "Irish ecclesiastical Record", but this was only for a single year, for in 1884 he was appointed titular Bishop of Maera and Coadjutor Bishop of Clonfert. Here it may be interesting to note that no less than five members of Dr. Healy's class in Maynooth wear the episcopal purple in Irish sees. In 1896, on the death of the saintly Dr. Duggan, he succeeded to the see of Clonfert. Seven years after, by papal Brief, dated 13 Feb., 1903, he became Archbishop of Tuam, and on the following St. Patrick's Day took possession of his ancient see. On 31 August, 1909, he celebrated the silver jubilee of his episcopate.

The archbishop is a member of many Irish public bodies notably of the Agricultural Board, the Senate of the National University, the Board of Governors of University College, Galway. He is president of the Catholic Truth society of Ireland, and a Commissioner for the publication of the Brehon Laws. He acted on the Royal Commission of 1901 to inquire into and report on condition

of University Education in Ireland. His principal published works are: "Ireland's Ancient Schools and Scholars", which has reached a fifth edition; "The Centenary History of Maynooth College"; "The Record of the Maynooth Centenary Celebrations"; "The Life and Writings of St. Patrick"; "Irish Essays: Literary and Historical"; "Papers and Addresses", a jubilee collection of fugitive periodical articles and reviews.

JOHN HEALY

School of Tuam

School of Tuam

(Irish, *Tuaim da Ghualann*, or the "Mound of the two Shoulders").

The School of Tuam was founded by St. Jarlath, and even during his life (d. c. 540) became a renowned school of piety and sacred learning, while in the eleventh century it rivalled Clonmacnoise as a centre of Celtic art. St. Jarlath was trained for his work by St. Benignus, the successor and coadjutor of St. Patrick, and under this gentle saint's guidance he founded his first monastery at Cluainfois, now Cloonfush, about two miles west from Tuam, and a still shorter distance across the fertile fields from Benignus's own foundation at Kilbannon. Here at Cluainfois, according to a widespread tradition, Saints Benignus and Jarlath and Caillin, another disciple of Benignus, frequently met together to discuss weighty questions in theology and Scripture. The fame of this holy retreat brought scholars from all parts of Ireland, amongst whom were St. Brendan, the great navigator, who came from Kerry, and St. Colman, the son of Lenin, who came from Cloyne. One day Brendan in prophetic spirit told his master that he was to leave Cluainfois and go eastward, and where the wheel of his chariot should break on the journey "there you shall build your oratory, for God wills that there shall be the place of your resurrection, and many shall arise in glory in the same place along with you". Jarlath did not long delay in obeying this inspired instruction. He departed from Cluainfois, and at the place now called Tuam his chariot broke down, and there on the site of the present Protestant, but formerly Catholic, cathedral he built his church and monastic school. And he bade good-bye to Brendan saying, "O holy youth, it is you should be master and I pupil, but go now with God's blessing elsewhere", whereupon Brendan returned to his native Kerry. After the death of St. Jarlath there is little in the national annals about the School of Tuam. There is reference in the "Four Masters", under date 776 (*recte* 781), to the death of an Abbot of Tuam called Nuada O'Bolcan; and under the same date in the "Annals of Ulster" to the death of one "Ferdomnach of Tuaim da Ghualann", to whom no title is given. At the year 969 is set down the death of Eoghan O Cleirigh, "Bishop of Connacht", but more distinct reference to a Tuam prelate

is found in 1085, when the death of Aedh O Hoisin is recorded. The "Four Masters" call him Comarb of Jarlath and High Bishop (*Ard-epscoip*) of Tuam.

COLGAN, *Acta sanctorum Hiberniæ* (Louvain, 1645); HEALY, *Ireland's Ancient Schools and Scholars* (Dublin, 1908); *Martyrology of Donegal*; *Annals of Ulster*; *Annals of the Four Masters*.

JOHN HEALY

University of Tubingen

University of Tübingen

Located in Würtemberg; founded by Count Eberhard im Bart on 3 July, 1477, after Pope Sixtus IV had first undertaken by the Bull of 13 Nov., 1476 to endow the university from the property of the Church. The imperial confirmation followed on 20 Feb., 1484. The university had four faculties: theology, law, medicine, and philosophy, and altogether fourteen professorships. Among the distinguished professors at the beginning were the theologians Gabriel Biel, Johannes Heynlin von Stein (a Lapide), Conrad Summenhart, and the jurist Johannes Vergenhans (Nauclerus). A distinguished physician was Johannes Widmann. In the philosophical faculty should be mentioned the mathematicians Paul Scriptoris and Johannes Stöffler, and the Humanists Johannes Reuchlin, Heinrich Bebel, and Melanchthon. Duke Ulrich of Würtemberg was deposed in 1519 on account of his misgovernment of the country, but in 1534 was restored to power by the Lutheran Landgrave Philip of Hesse. In 1535 Ulrich introduced the Reformation into the country and university, notwithstanding the stubborn opposition manifested at the university, especially by its chancellor Ambrosius Widmann. The most prominent of the new professors were the theologians Johannes Brenz, Erhard Schnepf, Jakob Andreae, Jakob Heerbrand, Andreas and Luke Osiander. Among the other professors were the jurists Johannes Sichard, Karl Molinæus (Du Moulin), and Christopher Besold, the physician Leonhard Fuchs, the philologists Joachim, Camerarius and Martin Crusius, the cartographer Philip Apian, and the mathematician and astronomer Michael Mästlin. To secure capable preachers Duke Ulrich established the Lutheran seminary, and Duke Christopher founded the *collegium illustre* for the training of state officials.

The university, like the country, recovered only slowly from the injuries inflicted by the Thirty Years' War. At first the old rigid orthodoxy still prevailed in the theological faculty; but in the eighteenth century a greater independence of thought gradually gained ground, especially through the efforts of the chancellor, Christopher Matthäus Pfaff, the founder of what is called the collegiate system. Pietism also was represented in the theological faculty. Towards the end of the eighteenth century Christian Gottlieb Storr exerted a profound influence as a Biblical theologian and the founder of the early Tübingen School in opposition to the "Enlightenment" and the theories of Kant. Among his pupils were, in particular, Friedrich Gottlieb Süsskind, Johann Friedrich Flatt, and Karl Christian Flatt.

Prominent in the faculty of law were Wolfgang Adam Lauterbach, Ferdinand Christopher Harpprecht, and Karl Christopher Hofacker, and in the faculty of medicine, Johann Georg Gmelin,

Karl Friedrich Kielmeyer, and Johann Heinrich Ferdinand Autenrieth. During this era, marked by the spread of the Wolffian and Kantian doctrines, the faculty of philosophy had few distinguished members. The chancellor Lebret, however, ranked high as a historian, and Bohnenberger as a mathematician. Towards the close of the eighteenth century the university was in danger of having the faculties of law and medicine transferred to the school established at Stuttgart by Duke Charles Eugene, after whom the new school was named. This loss was averted, however, by the suppression of the new seat of learning in 1794.

Two causes led to a great development of the university in the nineteenth century. First, the Catholic university for Württemberg, which at the beginning of the century had been established at Ellwangen, was transferred in 1817 to Tübingen as a Catholic theological faculty, and a Catholic house of study called Wilhelmsstift was founded to counterbalance the Lutheran seminary; second, a faculty of political economy was organized in 1817 (called the faculty of political science since 1822), and a faculty of natural sciences in 1863. These changes led to the erection of new university buildings: the anatomical building (1832-35); the new aula, intended to replace the old one dating from 1547 and 1777, and the botanical and chemical institute (1842-45); the clinical hospital for surgical cases (1846); the physiological institute (1867); the institute for pathological anatomy (1873); ophthalmic hospital (1875); medical hospital (1878-79); the physico-chemical institute (1883-85); the institute for physics (1888); the new hospital for women (1888-91), in place of the old one built in 1803; the hospital for mental diseases (1892-94); the mineralogico-geological and zoological institute (1902); the institute for chemistry (1903-07); the new ophthalmological clinic (1907-09). A new building for the library, housed till now in the castle, is in course of construction; the library contains 4145 manuscripts and 513,313 volumes. The regular professors numbered 56 in the summer term of 1911; honorary and adjunct professors, *Dozents*, 71; matriculated students, 2118, and non-matriculated persons permitted to attend the lectures, 145, making a total of 2263. Since the reign of King Frederick I the university has become more and more a state institution; its income for 1911 was 439,499 marks (\$104,382), while the grant from the State for the year was 1,366,847 marks (\$324,626).

In the Protestant theological faculty the critical view of theological history held by Ferdinand Christian Baur led to the founding of the later Tübingen School, to which belong, besides the founder, Albert Schweigler, Karl Christian Planck, Albert Ritschl, Julius Köstlin, Karl Christian Johannes Holsten, Adolf Hilgenfeld, Karl Weizsäcker and Edward Zeller. Other distinguished theologians, who were somewhat more positive in their views, were Johann Tobias Beck, and Christian David Frederick Palmer. David Frederick Strauss, a follower of Hegel, wrote his "Life of Jesus" while a tutor at Tübingen. The distinguished teachers and scholars of the Catholic theological faculty are often called the Catholic Tübingen School. The characteristic of this school is positive and historical rather than speculative or philosophical. Above all should be mentioned the great Catholic theologian of the nineteenth century, Johann Adam Möhler; further: Johann Sebastian Drey, Johann Baptist Hirscher, Benedict Welte, Johann Evangelist Kuhn, Karl Joseph Hefe, Moritz Aberle, Felix Himpel, Franz Quirin Kober, Franz Xaver Linsenmann, Franz Xaver

Funk, Paul Schanz, and Paul Vetter. Distinguished professors of law were: Karl Georg Wächter, Karl Friedrich Wilhelm Gerber, Alois Brins, Gustav Mandry, and Hugo Meyer. Among the noted members of the faculty of political science were: Robert Mohl, Albert Eberhard Friedrich Schöffle, Gustav Rümelin, Gustav Friedrich Schönberg, and Friedrich Julius Neumann. Among the noted members of the medical faculty were: Victor Bruns, Felix Niemeyer, Karl Liebermeister, and Johannes Säxinger. In natural science should be mentioned: Hugo Mohl, Theodore Eimer, and Lothar Meyer. Of the philosophical faculty should be mentioned Friedrich Theodor Vischer, writer on æsthetics; the philosopher Christopher Sigwart; the classical philologists Christian Wals and Wilhelm Sigismund Teuffel; the Orientalists Julius Mohl, Georg Heinrich Ewald, and Walter Rudolf Roth; the Germanists Ludwig Uhland and Heinrich Adalbert Keller; the historians Julius Weizsäcker and Hermann Alfred Gutschmid; and the geologist Friedrich August Quenstedt.

JOHANNES BAPTIST SÄGMÜLLER

Tubunae

Tubunae

A titular see in Mauretania Caesariensis, according to the "Gerachia cattolica", or in Numidia according to Battandier, "Annuaire pontifical catholique" (Paris, 1910), 345. The official list of the Roman Curia does not mention it. The confusion is explained by the fact that it was located at the boundary of the two provinces. Bocking, in his notes to the "Notitia dignitatum" (Bonn, 1839); 523, and Toulotte ("Greg. de l'Afrique chret., Mauretanie", Montreuil, 1894, p. 171), speak of two distinct cities, while Muller ("Notes to Ptolemy", IV, 12, ed. Didot, I, 611) admits only one, and his opinion seems the more plausible. It was a *municipium* and also an important frontier post in command of a *praepositus limitis Tubuniensis*. St. Augustine and St. Alypius sojourned there as guests of Count Boniface (Ep. ccxx). In 479 Huneric exiled thither a large number of Catholics. Its ruins, known as Tobna, are in the Department of Constantine, Algeria, at the gates of the Sahara, west of the Chott el-Hodna, the "Salinae Tubunenses" of the Romans. They are very extensive, for three successive towns occupied different sites, under the Romans, the Byzantines, and the Arabs.

Besides the remains of the fortress, the most remarkable monument is a church now used as a mosque.

Three bishops of Tubunae are known. St. Nemesianus assisted at the Council of Carthage in 256. St. Cyprian often speaks of him in his letters, and we have a letter which he wrote to St. Cyprian in his own name and in the name of those who were condemned with him to the mines. An inscription testifies to his cult at Tixter in 360, and the Roman Martyrology mentions him on 10 September. Another bishop was Cresconius, who usurped the see after quitting the Bulla Regia, and assisted at the Council of Carthage in 411, where his rival was the Donatist Protasius. A third, Reparatus, was exiled by Huneric in 484.

TOULOTTE, Geog. de l'Afrique chret., Numidie (Paris, 1894), 318-21; DIEHL, L'Afrique byzantine (Paris, 1896), passim.

S. PÉTRIDÈS

Tucson

Tucson

(TUCSONENSIS).

Suffragan of the Archdiocese of Santa Fe. It comprises the State of Arizona and the southernmost counties of New Mexico, an extent of 131,212 sq. miles, most of which is desert land. The Catholic population is approximately 48,500, mostly Mexicans. There are 43 priests, 27 parishes, 43 missions, 100 stations, 7 academies, 10 parochial schools, 3 Indian schools, 1 orphanage, 5 hospitals.

Up to 1853, date of the Gadsden purchase, Arizona was part of the Mexican Diocese of Durango. In 1859 it was annexed by the Holy See to the Diocese of Santa Fe, made a vicariate Apostolic in 1868, and erected a diocese by Leo XIII in 1897. The first vicar Apostolic was the most Rev. J. B. Salpointe, followed by the Most Rev. P. Bourgade, who both died archbishops of Santa Fe, the former in 1898, the latter in 1908. They were succeeded by Bishop Henry Granjon, born in 1863, consecrated in the cathedral of Baltimore, 17 June, 1900. The mission founded by French missionaries has remained in charge of priests mostly of the same nationality, assisted by Franciscan Fathers of the St. Louis and Cincinnati provinces, who attend principally to the Indian missions, and by the Sisters of St. Joseph, of Mercy, of Loretto, of the Blessed Sacrament, of St. Dominic, and of the Precious Blood. The full-blood Indians in the diocese number 40,000: Apache, Chimehuivi, Hualpai, Maricopa, Mohave, Moqui, Navajo, Pápago Pima, Yava Supai. About 4000 are Catholics. They were visited by the Spanish missionaries as early as 1539 (Fray Marcos de Niza), and evangelized in the seventeenth and eighteenth centuries by the Franciscans and the Jesuits. Of the churches then built two remain: Tumacacuri (now partly in ruins), and San Xavier del Bac, nine miles south of Tucson, founded by Father Kino, S.J., in 1699, and kept in a perfect state of preservation by the constant attention and liberal care of the clergy of Tucson. It is considered the best example of the Spanish Renaissance mission style north of Mexico, and the best preserved of all the old mission churches in America. The buildings have been completely restored (1906-10)

by the Bishop of Tucson. The Pápago Indians, in whose midst stands the San Xavier mission, have received uninterrupted care from the clergy of Tucson. In 1866 the Rev. J.B. Salpointe founded there a school, which has since been maintained, with the Sisters of St. Joseph in charge, by the clergy of Tucson, at the expense of the parish. That school was the first established in Arizona for the Indians.

HENRY GRANJON

Tucuman

Tucumán

(TUCUMANENSIS).

Suffragan to Buenos Aires, erected from the Diocese of Salta on 15 February, 1897, comprises the Province of Tucumán (area 8926 sq. miles; population 325,000), in the north-west of the Argentine Republic. The first and present bishop, Mgr. Pablo Padilla y Bárana (b. at Jujuy, 25 Jan., 1848), was consecrated titular Bishop of Pentacomia (17 Dec., 1891), transferred to Salta, (19 Jan., 1893), and to Tucumán (16 Jan., 1898). The episcopal city, Tucumán, or San Miguel de Tucumán (population 80,000), is situated on the Rio Dulce, 780 miles north-west of Buenos Aires, and was founded in 1565 by Diego de Villaruel; a Jesuit college was opened there in 1586. In 1680 Tucumán replaced Santiago del Estero as capital of the province. The Spanish forces were utterly defeated at Tucumán in 1812 by the Argentinos under Belgrano, whose statue has been erected in the city to commemorate the victory. One of the most interesting monuments in Tucumán is Independence Hall, where the Argentine delegates proclaimed (9 July, 1816) the Río de la Plata provinces free from Spanish domination. Of the twenty-seven members forming this National Congress fifteen were priests (as were two other delegates who were unavoidably absent, and the secretary of the assembly, JosÈ Agustín Molina, later Bishop of Camaco *in partibus* and Vicar Apostolic of Salta); two of the fifteen were afterwards raised to episcopal rank — JosÈ Colombres (Salta) and Justo Santa María de Oro (Cuyo). It is to be noted that the See of Córdoba, founded in 1570, was generally referred to in the seventeenth century as that of Tucumán (Córdoba de Tucumán).

On 21 January, 1910, the Province of Catamarca (area 47,531 sq. miles; population 107,000), which till then had been a vicariate forane of Tucumán, was erected into a separate see under Mgr. BernabÈ Piedrabuena (b. at Tucumán, 10 Nov., 1863; consecrated titular Bishop of Cestrus and coadjutor to Mgr. Padillo, 31 May, 1908; transferred to Catamarca, 8 Nov., 1910). Before the separation, Tucumán had 15 parishes, 67 churches and chapels, and Catamarca 15 parishes, 96

churches and chapels; there were 60 secular priests, assisted by Dominicans, Franciscans, and Fathers of Our Lady of Lourdes; there was a conciliar seminary with 3 students of philosophy and 60 rhetoricians; 7 theological students were studying at Buenos Aires and the Collegio Pio-Latino, Rome; in addition there were two Catholic colleges at Tucumán and one at Catamarca; there were communities of the Hermanas Esclavas, Dominican, Franciscan, Good Shepherd, and Josephine Sisters. A Catholic daily paper is published at Tucumán and two Catholic weeklies at Catamarca. A large number of the parishes have the usual Catholic sodalities and con-fraternities. Workingmen's circles are established in the two episcopal cities. Catamarca (San Fernando de Catamarca), lying 230 miles north-north-west of Córdoba, contains 8000 inhabitants. It was founded in 1680 by Fernando de Mendoza. The National College, which has a chair of mineralogy, is located in the old Merced Convent. Most of the inhabitants of the Province of Catamarca are mestizos, descendants of the Quilene, Cilian, Andagala, and Guafare Indians. Cholla (a suburb of Catamarca) is inhabited by Calchaqui Indians, but Spanish is now the only language spoken.

USSHER, *Guía eclesiástica de la República Argentina* (Buenos Aires, 1910).

A.A. MACERLEAN

Tudela

Tudela

(TUTELÆ, TUTELENSIS).

Diocese in Spain. The episcopal city has a population of 9213. Tudela was taken from the Moors by Alfonso el Batallador (the Fighter) in March, 1115, and in 1117 he obtained the Fuero de Sobrarbe. In 1121 the king gave the mosque and the tithes of several towns to the prior and ecclesiastical chapter of Tudela and built the Church of Santa María, where a community of Canons Regular of St. Augustine was established, the ecclesiastical authority of Tudela being vested in its abbot and prior. In 1238 the priory was raised to the dignity of a deanery, the first dean being D. Pedro Jiménez and the second D. Lope Arce de Alcoz. The latter obtained from Alexander IV in 1258 the ring and mitre. In the sixteenth century the deans of Tudela obtained the use of "pontificalia", a favour granted by Julius II to the dean D. Pedro Villalón de Calcena who had been his chamberlain and who held the deanship for twenty-seven years. The rivalry between the deans of Tudela and the bishops of Tarazona and the dissatisfaction of the kings owing to the fact that until 1749 the appointment of the dean was not subject to the royal patronage, a fact finally accomplished in 1749, induced the Council and the Royal Chamber to petition for the erection of Tudela into a diocese, which was done by Pius VI in the Bull of 27 March, 1783. The first bishop was D. Francisco Ramón de Larumbe (1784). He was succeeded (1797) by D. Simón de Casaviella López del Castillo, who during the war of independence saved Tudela from severe measures of retaliation ordered by the French general Lefèvre. The third bishop was D. Juan Ramon Santos de Larumbe y Larrayoz (1817), and the fourth and last D. Ramón María Azpetitia Saenz de Santa María (1819), who founded the Seminary of Santa Ana in a former house of the Jesuits. The seminary

was re-established in 1846 in a former Carmelite convent. The last bishop died at Viana on 30 June, 1844.

The Concordat of 1851 suppressed this diocese, since which time it has been administered by the bishops of Tarazona on whom the title of Administrator Apostolic of Tudela has been conferred. The cathedral dedicated to Nuestra Señora de la Blanca dates from the end of the twelfth and the beginning of the thirteenth century. It has a very notable facade. There are in Tudela a college of the Jesuits, charitable institutions conducted by the Sisters of Charity: the hospital of Nuestra Señora de Gracia, founded in the sixteenth century by D. Miguel de Eza; the Real Casa de Misericordia founded by Doña María Hugarte in 1771 and the "Hospitalillo" for orphan children founded in 1596 by D. Pedro Ortiz.

RAMÓN RUIZ AMADÓ

Tuguegarao

Tuguegarao

(TUGUEGARAONENSIS).

Diocese in the Philippines; situated in the north-eastern section of the Island of Luzon, and embraces the three civil Provinces of Cagayan, Isabela, and Nueva Viscaya, and the two groups of the Batanes and Babuyan Islands. It was erected on 10 April, 1910, being separated from the ancient Diocese of Nueva Segovia, erected in 1595. For two hundred years the seat of the Diocese of Nueva Segovia was located at Lalloc on the Cagayan River, a city which lies within the present limits of the new Diocese of Tuguegarao. The history of the Catholic Church in the Cagayan Valley for the three hundred years preceding the Spanish-American War is practically the history of the Spanish Dominican Fathers in this territory. The diocese counts (1912) 23 native secular priests, two Spanish seculars, 17 Spanish Dominicans and 7 Belgian missionaries. There is a boys' college in charge of the Dominican Fathers, and a girls' academy under the direction of the Sisters of St. Paul of Chartres. The population, which is entirely native, numbers about 200,000. With the exception of a few thousand Aglipayans they are all Catholics. The first bishop, the Rt. Rev. Maurice Patrick Foley, was appointed on 10 September, 1910.

MAURICE FOLEY

Tulancingo

Tulancingo

(DE TULANCINGO).

Diocese in the Mexican Republic, suffragan of Mexico. Its area is about 8000 square miles, that is to say, almost that of the State of Hidalgo, in which the diocese is situated. It comprises the

greater part of the State of Hidalgo, with the exception of a few parishes situated in the western part, and which belong to the Archbishopric of Mexico; but in return it has a few parishes in the State of Vera Cruz. Its population is 641,895 (1910). The bishop lives in the town of Tulancingo (population, 8000), although the capital of the state is the important mining town of Pachuca, situated 7962 feet above the level of the sea, with a population of about 38,620 inhabitants (1910). The Gospel was first preached in this territory in the first half of the sixteenth century by the Franciscan Fathers shortly after their arrival in Mexico; they then founded a convent at Tulancingo, whose first guardian was the venerable Father Juan Padilla, who died from the results of an assault made by the unfaithful Indians of New Mexico. The Augustinian Fathers also worked in this region.

On 16 March, 1863, Pius IX made this see suffragan of the Archbishopric of Mexico. When created, many asked that the episcopal see be in the city of Huejutla; preference was given, however, to the city of Tulancingo. This new see was formed from thirty-eight parishes of the Archbishopric of Mexico, and from sixteen taken from the Bishopric of Puebla. It has 1 seminary with 40 students; 39 parochial schools; 5 Catholic colleges, and about 2352 students; there are 6 Protestant colleges with 255 students, and 6 Protestant churches. The town of Tulancingo existed long before the conquest; it is said to have been founded by the Toltecas in A.D. 697 and bore the name of Tollantzinco. Its most noted building is the cathedral, built in the beginning of the nineteenth century.

VERA, *Catecismo geográfico histórico estadístico de la igl. mÈx.* (Amecameca, 1881).

CAMILLUS CRIVELLI

Louis-Rene Tulasne

Louis-René Tulasne

A noted botanist, b. at Azay-le-Rideau, Dept of Indre-et-Loire, France, 12 Sept., 1815; d. at Hyères in southern France 22 Dec., 1885. He studied law at Poitiers, but later turned his attention to botany and worked until 1842 in company with Auguste de Saint-Hilaire on the flora of Brazil. He was an assistant naturalist at the Museum of Natural History at Paris 1842-72; after this he retired from active work. In 1845 he was elected a member of the Academy to succeed Adrian de Jussieu. Tulasne was a very industrious, skilful, and successful investigator. He published at Paris numerous botanical works, the first appearing in 1845; he first wrote on the phanerogamia, as for instance, on the leguminosæ of South America, then on the cryptogamia, and especially on the fungi. He gained a world-wide reputation by his microscopic study of fungi (the science of mycology), especially by his investigation of the small parasitic fungi, researches which threw much light on the obscure and complicated history of their evolution. In this science he worked in collaboration with his brother Charles (b. 5 Sept., 1816; from 1843 a physician at Paris; d. at Hyères, 21 Aug., 1885). The chief publications issued by the two brothers are: "Fungi hypogæi" (fol., Paris, 1851), and "Selecta fungorum carpologia" (3 vols. fol., Paris, 1861-65), a work of the greatest importance for mycology, particularly on account of the splendid illustrations in the sixty-one

plates. Tulasne wrote numerous mycological treatises for various periodicals such as the "Annales des sciences nat."; "Archives du muséum"; "Comptes rendus"; "Botanische Zeitung". He left his botanical library to the Catholic Institute of Paris. Tulasne openly acknowledged his desire to glorify God by his scientific labours. Several genres of fungi, as well as several species, are named after Tulasne, as *Tulasneinia*, *Tulasnella*.

J. S. ROMPEL

Tulle

Tulle

(TUTELENSIS).

Diocese comprising the Department of Corrèze. It was suppressed by the Concordat of 1802, which joined it to the See of Limoges, but was theoretically re-established by the Concordat of 1817, and *de facto* re-erected by Bulls dated 6 and 31 October, 1822. It is suffragan of Bourges. According to legends which grew up in later years around the St. Martial cycle, that saint, who had been sent by St. Peter to preach, is said to have restored to life at Tulle the son of the governor, Nerva, and to have covered the neighbouring country with churches. By some of the legends St. Martin of Tours is made founder of the Abbey of Tulle; by others, St. Calmin, Count of Auvergne (seventh century). Robbed of its possessions by a powerful family, it recovered them in 930 through the efforts of a member of the same family, Viscount Adhemar, who left a reputation for sanctity. St. Odo, Abbot of Cluny, reformed it in the tenth century. John XXII by a Bull dated 13 August, 1317, raised it to episcopal rank; but the chapter remained subject to monastic rule and was not secularized until 1514. Among the bishops of Tulle were: Hugues Roger, known as Cardinal de Tulle (1342-43), who was never consecrated, and lived with his brother Clement VI; Jean Fabri (1370-71), who became cardinal in 1371; Jules Mascaron, the preacher (1671-79), who was afterwards Bishop of Agen; LÉonard Berteaud, preacher and theologian (1842-78). St. Rodolphe of Turenne, Archbishop of Bourges, who died in 866 founded, about 855, the Abbey of Beaulieu in the Diocese of Tulle. The Charterhouse of Glandier dates from 1219; the Benedictine Abbey of Uzerche was founded between 958 and 991; Meymac Priory, which became an abbey in 1146, was founded by Archambaud III, Viscount de Conborn.

Urban II on his way to Limoges from Clermont (1095) passed near Tulle. St. Anthony of Padua dwelt for a time at Brive, towards the end of October, 1226; and the pilgrimage to the Grotto of Brive is the only existing one in France in honour of that saint. Pierre Roger, who became pope under the name of Clement VI, was a native of Maumont in the diocese. In 1352 the tiara was disputed between Jean Birel, general of the Carthusians, who had been prior of Glandier, and Etienne Aubert, who became pope under the name Innocent VI, and was a native of Château-des-Monts in the Diocese of Tulle. In 1362 Hugues Roger, Cardinal of Tulle, brother of

Clement VI, refused the tiara; in 1370 Pierre Roger, his nephew, became pope under the name of Gregory XI. At Tulle and in Bas (Lower) Limousin, every year, on the vigil of St. John the Baptist, a feast is kept which is known as *le tour de la lunade* (the change of the moon); it is a curious example of the manner in which the Church was able to sanctify and Christianize many pagan customs. Legend places the institution of this feast in 1346 or 1348, about the time of the Black Death. It would seem to have been the result of a vow made in honour of St. John the Baptist. M. Maximin Deloche has shown that this legend is baseless; that the worship of the sun existed in Gaul down to the seventh century, according to the testimony of St. Eligius, and that the feast of St. John's Nativity, 24 June, was substituted for the pagan festival of the summer solstice, so that the *tour de la lunade* was an old pagan custom, sanctified by the Church, which changed it to an act of homage to St. John the Baptist.

Among the saints specially honoured in, or connected with the diocese, besides those already mentioned, are: St. Fereola, martyr (date uncertain); St. Martin of Brive, disciple of St. Martin of Tours, and martyr (fifth century); St. Duminus, hermit (early sixth century); at Argentat, St. Sacerdos, who was Bishop of Limoges when he retired into solitude (sixth century); St. Vincentianus (Viance), hermit (seventh century); St. Liberalis, Bishop of Embrun, died in 940 at Brive, his native place; St. Reynier, provost of Beaulieu, died at the beginning of the tenth century; St. Stephen of Obazine, b. about 1085, founder of the monastery for men at Obazine, and that for women at Coyroux; St. Berthold of Malefayde, first general of the Carmelites, and whose brother Aymeric was Patriarch of Antioch (twelfth century). Etienne Baluze, the learned historian (1638-1718), was a native of Tulle, and the missionary Dumoulin Borie (1808-38), who was martyred in Tonquin, was born in the diocese. The chief pilgrimages of the diocese are: Notre-Dame-de-Belpeuch, at Camps, dating from the ninth or tenth century; Notre-Dame-de-Chastre at Bar, dating from the seventeenth century; Notre-Dame-du-Pont-du-Salut, which goes back to the seventeenth century; Notre-Dame-du-Roc at Servières, dating from 1691; Notre-Dame-d'Eygurande, dating from 1720; Notre-Dame-de-La-Buissière-Lestard, which was a place of pilgrimage before the seventeenth century; Notre-Dame-de-La-Chabanne at Ussel, dates from 1140; Notre-Dame-de-Pennacorn at Neuvic, dating from the end of the fifteenth century.

Before the application of the Law of 1901, the Diocese of Tulle contained Carthusians, Franciscans, Sulpicians, Assumptionists, Fathers of the Third Order of St. Francis of Assisi, and many teaching congregations of Brothers. The teaching Sisters of the Sacred Heart of Mary had their mother-house at Triegnac. The religious congregations were in charge of 6 nurseries, 2 orphanages for boys, 5 orphanages for girls, 1 Good Shepherd Home, 1 home for the poor, 15 hospitals or hospices, 10 district nursing institutions, and 1 lunatic asylum. At the time of the breach of the Concordat in 1905 the diocese had 318,422 inhabitants, 34 first-class parishes, 255 succursal parishes, and 71 curacies supported by the State.

GEORGES GOYAU

Tunic

Tunic

By tunic is understood in general a vestment shaped like a sack, which has in the closed upper part only a slit for putting the garment over the head, and, on the sides, either sleeves or mere slits through which the arms can be passed. The expressions under-tunic or over-tunic are used accordingly as the tunic is employed as an outer vestment or under another. A tunic that reaches to the feet is called a gown tunic (*tunica talaris*, Gr. *poderes*); a tunic without sleeves or with short sleeves is called *colobium*; one which leaves the right shoulder free, *exomis*. By tunic (*tunicella*) is understood in liturgical language that sacerdotal upper vestment of the subdeacon which corresponds to the dalmatic of the deacon. According to present usage the dalmatic and tunic are alike both as regards form and ornamentation. They also agree in the manner of use as well as in the fact that the tunic, like the dalmatic, is one of the essential vestments worn at the pontifical Mass by the bishop. It is unnecessary here to go into full details, but it will suffice in regard to form, ornamentation, and use to refer to what is said under dalmatic. As regards the form, according to the directions of the "Cæremoniale Episcoporum", the tunic should be distinguished from the dalmatic by narrower sleeves, but this is hardly observed even in the pontifical tunic, which is worn under the dalmatic. The bishop himself puts the tunic on the newly-ordained subdeacon with the words: "May the Lord clothe thee with the tunic of joy and the garment of rejoicing. In the name", etc.

History

According to a letter of Pope Saint Gregory the Great to Bishop John of Syracuse, the subdiaconal tunic was, for a time, customary at Rome as early as the sixth century. Gregory however suppressed it and returned to the older usage. From this time on, therefore, the Roman subdeacon once more wore the *planeta* (chasuble) as the outer garment until, in the ninth century, the tunic again came into use among them as the outer vestment. As early as the sixth century subdiaconal tunic was worn in Spain, which according to the ninth canon of the synod of Braga, was hardly or not at all distinguishable from the diaconal tunic, the so-called alb. No notice of a tunic worn by subdeacons has been preserved from the pre-Carolingian era in Gaul, yet such a vestment was undoubtedly in use in France as in Spain. There is certain proof of its use in the Frankish kingdom at the beginning of the ninth century, both from the testimony of Amalar of Metz and from various inventories.

About the close of the year one thousand the tunic was so universally worn by subdeacons as a liturgical upper vestment that it was briefly called *vestis subdiaconalis* or *subdiaconale*. As early as the first Roman Ordo the tunic is found as one of the papal pontifical vestments under the name of *dalmatica minor*, *dalmatica linea*. The Roman deacons also wore it under the dalmatic, while only the tunic and not the dalmatic was part of the liturgical dress of the Roman cardinal-priests and hebdomadal bishops. Outside of Rome also the pontifical vestments frequently included only the tunic, not tunic and dalmatic together, or, as was more often the case, the dalmatic without the tunic. Not until the twelfth century did it become general for the bishop to wear both vestments at the same time, that is, the tunic as well as the dalmatic. The granting to abbots of the privilege of wearing the tunic as well as the dalmatic, is very seldom mentioned, and even then not until the second half of the twelfth century. Before this era abbots never received more than the privilege of wearing the dalmatic. The acolytes at Rome wore the tunic as early as the ninth century; in the Frankish kingdom it was probably customary in some places in the tenth century for acolytes to wear the tunic; it was worn by acolytes at Farfa towards the close of the tenth century. In the late Middle Ages the wearing of the tunic by acolytes was a widespread custom. In the medieval period the tunic was called by various names. Besides *tunica*, it also bore the name of *tunicella*; *dalmatica minor*; *dalmatica linea*, or simply *linea*; *tunica stricta*, or merely *stricta*; *subdiaconale*; *roccus*; *alba*; and, especially in Germany *subtile*.

As to the original form of the vestment, it was at first a tunic in the shape of a gown with narrow sleeves and without the vertical ornamental strips (*clavi*). The material of which it was made was linen for ordinary occasions, but as early as the ninth-century inventories silk tunics are mentioned. The development that the vestment has undergone from the Carolingian period up to the present time has been in all points similar to that of the dalmatic; during the course of this development the distinction between the dalmatic and the tunic steadily decreased. Silk gradually became the material from which the tunic was regularly made; It grew continually shorter, and slits were made in the sides which, by the end of the Middle Ages, went the length of entire side up to the sleeve. Finally, outside of Italy, the sleeves were also slit, just as in the dalmatic which, already in the later Middle Ages, was hardly to be distinguished from the tunic, especially as in the meantime the red *clavi* of the dalmatic had been replaced by another form of ornamentation, which was also adopted for the tunic. When in the course of the twelfth century a canon was developed respecting the liturgical colours, the canon was naturally authoritative for the tunic as well as for the chasuble and dalmatic.

In the Middle Ages the use of the tunic at Mass corresponded throughout to that of the dalmatic consequently discussion of it here is unnecessary. The ceremony in which the bishop, after the ordination places the tunic upon the newly-ordained subdeacon had its origin in the twelfth century, but even in the thirteenth century it was only customary in isolated cases. It was not until the fourteenth and fifteenth centuries that the usage was universally adopted in the rite of ordination of subdeacons. As to the origin of the subdiaconal tunic it was, without doubt a copy of the dalmatic, in which the vertical trimming of the dalmatic was omitted, and the sleeves were made narrower.

The tunic (*stickaphion*) worn by the subdeacon in the Oriental Rites does not correspond to the subdiaconal tunic of Western Europe, which from the beginning had the fixed character of an outer tunic, but resembled the alb, even though, according to present custom, it is no longer exclusively white, but often coloured.

JOSEPH BRAUN

Tunis

Tunis

French protectorate on the northern coast of Africa. About the twelfth century before Christ Phoenicians settled on the coast of what is now Tunis and founded colonies there, which soon attained great economic importance. Among them were: Hippo Zarytus, Utica, Carthage, Hadrumetum, and Tunes. Ultimately all these cities were obliged to acknowledge the suzerainty of Carthage, which ruled a territory almost as extensive as the present Tunis. The fall of Carthage, B.C. 146, made the Romans masters of the country, which as the Province of Africa became one of the granaries of Italy. Numerous ruins of palaces, temples, Christian churches, amphitheatres, aqueducts, etc., which are still to be found, give proof of the high civilization existing under Roman sway. Christianity also flourished at an early era. In 439 the country was conquered by the Vandals, and in 533 Belisarius retook it and made it a part of the Eastern Empire. The supremacy of Constantinople was not of long duration. First the Patrician Gregorius, Governor of North Africa for the Emperor Heraclius, proclaimed his independence. However, on the incursion of the Arabs from the East, Gregorius was overthrown in 648 by the Arabian commander Abdallah, who returned to Egypt with enormous booty. In 670 the Arabs again entered the country, conquered Biserta, and founded the City of Kairwán in the region beyond Susa. In 697 they also took the City of Carthage, up to then successfully defended by the Eastern Empire, and reduced it to a heap of ruins. Tunis, a town formerly of small importance, now took the place of Carthage in commerce and traffic. When the Ommayyad dynasty was overthrown by the Abbassids, almost all Africa regained independence, and it was not until 772 that the caliphs again acquired control over it. Caliph Haroun al Raschid made the vigorous Ibrahim ibn el Aghlab Governor of Africa, but in 800 Ibrahim threw off the supremacy of the caliphate. Kairwán remained the capital of the Aghlabite Kingdom, which embraced Tripoli, Algiers, the greater part of Tunis, and also the Arabic possessions in Sicily and Sardinia. The last of the Aghlabite dynasty made Tunis the capital of the country, and gave the name of the city to the entire country. In 908 the Aghlabite dynasty was overthrown by Obeid Allah, founder of the dynasty of the Fátimites, which in the course of the tenth century conquered the whole of North Africa. After the conquest of Egypt the Fátimites transferred the seat of their power to Cairo and gave the regions in Western Africa in fief to the Zíríte family in 972.

From the middle of the twelfth century Tunis was ruled by the Almohade dynasty, which, weakened by its struggles with the Christian kingdoms of Spain, was driven out of Tunis in 1206 by a Berber, Abù Hafs, who founded the dynasty of the Hafsites that ruled until 1574. In 1240 Eastern Algeria was united to Tunis. Thus in the course of time the great centralized Arabic Empire was replaced in North Africa by several independent states, such as Morocco, Algiers, and Tunis. In this way the strength of Islam, as contrasted with that of Christian Western Europe, was weakened, and the Christian countries were now able to prepare to attack the Mohammedan power. Thus, King St. Louis of France undertook a crusade against Tunis in 1270 which was unsuccessful; Louis himself died the same year during the siege of the City of Tunis. During the last centuries of the medieval era Tunis was the most flourishing of the North African countries; the cities of Tunis and Kairwán were centres of Eastern civilization and learning.

The rule of the Arabic Emirs in Tunis was overthrown by the Turks. Turkish corsairs led by the Greek renegade Horuk Barbarossa appeared in the western part of the Mediterranean about 1510. By gifts they won over the ruler of Tunis, Mulei Mohammed, who permitted them to make the City of Tunis the base for their piratical expeditions. In a short time Horuk Barbarossa gathered a large fleet manned chiefly by Turks, and became master of the City of Algiers and several towns along the African coast. His brother, Khair al-Dín Barbarossa, increased these possessions on the coast and sought to give his conquests permanence by placing them under the suzerainty of the Porte. When disputes over the succession to the throne arose in the Hafsite dynasty, Barbarossa skilfully used the opportunity to overthrow Mulei Hassan and to make himself the ruler of Tunis. Mulei Hassan appealed to the Emperor Charles V, who responded by landing near Carthage with a fleet, capturing Tunis and Goletta in July, 1535, and liberating nearly 20,000 Christian slaves. Mulei Hassan was restored to power in Tunis as a Spanish vassal, but was obliged to promise to suppress Christian slavery in his domain, to grant religious liberty, and to close his ports to the pirates. As a pledge Spain retained the citadels of Tunis and Goletta, which it garrisoned. On the way home the Spanish fleet completed the destruction of Carthage, but failed in an attack on Algiers. Mulei Hassan, who was hated by his people, was overthrown in 1542 by his own son Mulei Hamid. When in 1570 the Turks entered Tunis from Algiers Mulei Hamid appealed to Spain for aid, and as a result Tunis was captured by Don Juan of Austria in 1573. Jealous of his half-brother, however, King Philip recalled him and offered no resistance when the Turks conquered the entire country in 1574. Thus the military supremacy of the Turks was established in Tunis. The real masters of the country were the Turkish garrisons, beside whom the dey, appointed by the Sultan as the possessor of the highest authority, was a mere shadow. As early as the administration of the third dey, the bey, Murad, originally an officer to collect the tribute, gained the chief authority for himself and made it hereditary in his family.

Like Algiers and Morocco, Tunis developed in this period into a much dreaded pirate state. The Tunisian galleys sailed along all the coasts of the Mediterranean, devastating and plundering. They stopped foreign ships on the open sea and dragged them as prizes to Tunis, where the cargo would be discharged and the crew and passengers sold as slaves. For a long time Christian Western

Europe did nothing to put an end to this impudent piracy. Although the English Admiral Blake in 1665 burned nine large Tunisian pirate ships in the harbour of Porto Farina, yet, as the struggle against the pirates was not continued, no permanent improvement of conditions was attained. At a later date treaties were made between Tunis and the powers interested in commerce in the Mediterranean. Venice, Spain, Portugal, England, Holland, Denmark, and even the United States paid an annual tribute to Tunis. In return Tunis bound itself not to attack the ships that sailed under the flag of the treaty-making powers. For two hundred years Europe endured this nest of pirates. For Tunis it was a brilliant period in which enormous treasures accumulated in the country, and during which the supremacy of the Porte was almost nominal.

The nineteenth century completely altered the situation. Sharp resolutions against piracy in the Mediterranean were passed by the Congress of Vienna and England was authorized by the powers to enforce these resolutions by sending a fleet against the piratical countries. In 1816 Lord Exmouth, by the bombardment and partial destruction of the City of Algiers, forced the ruler of Algiers to put an end to Christian slavery. The terrified Bey of Tunis also promised to do the same, yet, in spite of this, Christian ships were repeatedly attacked by Tunisian vessels. When in 1830 the French began the conquest of Algiers, Tunis at first aided the Algerian leader Abd el Kader, but in retaliation the French forced Tunis to suppress piracy completely, to yield an island on the coast, and to pay a sum of money. Alarmed at the danger from France, the Porte now sought to form closer relations with Tunis and to make the country an immediate Turkish province. These efforts, which were successful at that date in Tripoli, failed in Tunis on account of the opposition of French diplomacy. In order to be better able to maintain his position in regard to the Porte, the Bey Sidi Ahmed (1837-55) entered into closer relations with France, and even tried to introduce western reforms; in 1842 he abolished slavery, and in 1846 the slave-trade. Under French and English influence his cousin Sidi Mohammed (1855-59) introduced liberal legislation and reorganized the administration. His brother Mohammed es-Sadok (1859-82) even gave the country a liberal constitution in 1861, but had to withdraw it owing to the opposition of the Arabs and Moors. His extravagant tastes forced the bey to borrow money, thus bringing him into financial dependence on France, which showed more and more undisguisedly its desire to control Tunis. However, the Franco-German War (1870-71) forced France to restrain its hand.

In 1871 the sultan granted the hereditary right to rule according to primogeniture to the family of the bey and abandoned all claim to tribute, in return for which the bey promised not to go to war without the permission of the Porte, and to enter into no diplomatic negotiations with foreign powers. France protested against this and would not recognize the suzerainty of the Porte over Tunis, but could not enforce its protests. In the years succeeding the foreign element in Tunis constantly gained in importance, and the Italian Government, especially, sought to acquire a strong economic position in the country. France began to fear that she might be outwitted by Italy in Tunis, so in 1881 she used the disturbances on the boundary of Algiers and Tunis as a pretext for military interference. In April, 1881, in spite of the protests of the bey and the Porte, an army of 30,000 French soldiers advanced from Algiers into Tunis, and readily overcame the resistance of the tribes.

A French fleet appeared before the capital, and a squadron landed at Biserta a brigade which advanced against the City of Tunis from the land side. Unable to oppose this force, the bey was obliged to sign on 12 May the Treaty of Kasr el-Said, also called the Bardo Treaty, which transformed Tunis into a French protectorate. The revolt of the native tribes against the French was crushed in the years 1881-82. Although at the beginning of the expedition France had declared that the occupation would only be a temporary one, yet ever since then the French have remained in the country. Economically the control by an European power has proved advantageous to the country. Mohammed es-Sadok was succeeded by his brother Sidi Ali Pasha (1882-1902), who was followed by his son Sidi Mohammed.

The regency of Tunis has an area of 45,779 sq. miles and contained, in 1911, 1,923,217 inhabitants, of whom 1,706,830 were natives, 49,245 Jews, 42,410 French, 107,905 Italians, 12,258 English and Maltese, 1307 Spanish. Politically, Tunis forms a French protectorate; France represents the country in foreign relations, makes all the treaties with foreign powers, decides as to peace and war. In return it protects the bey against any threatened attack upon his land and guarantees the state debt. In internal affairs the bey has nominally the legislative power, but decrees and laws are not valid until they have received the signature of the resident-general representing the French Government. The budget is not submitted to the bey for his approval until it has been discussed by the ministerial council and examined by the French Government. The resident-general is the representative of the French Government at Tunis, and is subordinate to the French minister of foreign affairs. He unites in his person all the authority of the French Government, is the official intermediary between the Tunisian Government and the representatives of foreign powers, is the presiding officer of the ministerial council, and of all the higher administration of Tunis. He can veto the actions of the bey, and in case the bey fails to act he can order the necessary regulations or open the way for them. The ministerial council consists of the resident-general, two native ministers, and seven French ministers; the council settles the most important matters and especially determines the budget. The two native ministers direct internal affairs, the administration of justice for the natives, and the supervision of the landed property of the natives. The other branches of the administration are directed by the French ministers. The administration of justice is a double one: all legal disputes in which Europeans are concerned are settled by French law; the natives are under Mohammedan law. As regards the Catholic Church Tunis forms the Archdiocese of Carthage; cf. also the article LAVIGERIE.

JOSEPH LINS

Tunja

Tunja

(TUNQUENENSIS).

Diocese established in 1880 as a suffragan of Bogotá, in the Republic of Colombia, South America. Its jurisdiction comprises the territory of the Department of Boyacá, with a Catholic population in 1911 of 400,000 souls; 145 priests; 153 parishes, and 159 churches and chapels. The capital of the department and see of the bishop is the City of Tunja, which before the arrival of the Spaniards was, under the name of Hunza, the residence of the zaque, the sovereign of the Muisca Indians. It was founded on 6 Aug., 1538, by Captain Gonzalo Suárez Rondón, by order of the conqueror Quesada. Emperor Charles V granted it the title of city in 1681. The wealth and luxury of its ancient founders can still be recognized in the coats-of-arms carved over the stone entrances of its beautiful mansions. Prominent among its public buildings are: the palace of the bishop, the cathedral, and the various churches; the monastery of the Dominicans, and the convent of the Santa Clara nuns. Public instruction in the Department of Boyacá is under the supervision of the governor of the department, assisted by a director of public instruction. There are in the department over 200 primary schools, with about 15,000 pupils of both sexes. Secondary instruction in Tunja is given at various colleges supported by the department, like the College of Boyacá and the normal school for women; and at several Catholic institutions such as the Christian Brothers' College, the Academy of Tertiary Sisters, and the College of the Presentation; for the education of the clergy there is the diocesan seminary. There are also several Catholic schools in other cities of the department, among them the College of Jesus, Mary, and Joseph, under the Christian Brothers; the College of the Presentation, in charge of the Sisters of Charity; the College of Santa Rosa de Lima; and the College of St. Louis Gonzaga, in Chiquinquirá.

(See COLOMBIA.)

JULIAN MORENO-LACALLE

Tunkers

Tunkers

(German *tunken*, to dip)

A Protestant sect thus named from its distinctive baptismal rite. They are also called "Dunkards", "Dunkers", "Brethren", and "German Baptists". This last appellation designates both their national origin and doctrinal relationship. In addition to their admission of the teaching of the Baptists, they hold the following distinctive beliefs and practices. In the administration of baptism the candidate is required to kneel in the water and is dipped forward three times, in recognition of the three Persons of the Trinity. Communion after the manner of the primitive church is administered in the evening; it is preceded by the love-feast or agape, and followed by the kiss of charity. On certain occasions they also perform the rite of foot-washing. Their dress is characterized by unusual simplicity. They refuse to take oaths, to bear arms, and, in so far as possible, to engage in lawsuits. Their foundation was due to a desire of restoring primitive Christianity, and dates back to 1708. In that year their founder Alexander Mack (1679-1735) received believers' baptism with seven companions at Schwarzenau, in Westphalia. The little company rapidly made converts, and congregations were established in Germany, Holland, and Switzerland. As they were subjected to persecution, they all emigrated to America between the years 1719 and 1729.

The first families settled at Germantown, Pennsylvania, where a church was organized in 1723. Shortly after some members, led by Conrad Beissel who contended that the seventh day ought to be observed as the Sabbath, seceded and formed the "Seventh Day Baptists" (German; membership in 1911, 250). The Tunkers, nevertheless, prospered and, in spite of set-backs caused by the Revolutionary and Civil Wars, spread from Pennsylvania to many other states of the Union, and to Canada. Foreign missionary work and the foundation of educational institutions were inaugurated in the decade 1870-1880. About the same time the demands for the adoption of a more progressive and liberal church policy became more and more insistent, and in 1881-82 led to division. Two extreme parties, "the Progressives" and the "Old Order Brethren", separated from the main body, which henceforth was known as the "Conservative Tunkers". These obey the annual conference as the central authority, and have a ministry composed of bishops or elders, ministers, and deacons. They maintain schools in various states, own a printing plant at Elgin, Illinois, and publish the "Gospel Messenger" as their official organ. (Membership, 3006 ministers, 880 churches, 100,000 communicants.) The Progressives hold that the decisions of the annual conference do not bind the individual conscience, that its regulations concerning plain attire need not be observed, and that each congregation shall independently administer its own affairs. (Statistics, 186 ministers, 219 churches, 18,607 communicants.) The Old Order Brethren are unalterably attached to the old practices; they are opposed to high schools, Sunday schools, and missionary activity; they have still, according to the long prevalent custom of the sect, an unsalaried ministry and are extremely plain in dress. (228 ministers; 75 churches; 4000 communicants.)

The statistics throughout are those of CARROLL in *Christian Advocate* (New York, 26 Jan., 1911). Beside the minutes of the Annual Meeting, consult on the doctrine: MACK, *A Plain View of the Rites and Ordinances of the House of God* (Mt. Morris, 1888), and MILLER, *Doctrine of the Brethren Defended* (Indianapolis, 1876); BRUMBAUGH, *History of the German Baptist*

Brethren in Europe and America (Elgin, 1899); FALKENSTEIN, History of the German Baptist Brethren Church (Lancaster, 1901); HOLSINGER, History of the Tunkers and the Brethren Churches (Oakland, 1901); GILLEN, The Dunkers (New York, 1906).

N.A. WEBER

Cuthbert Tunstall

Cuthbert Tunstall

Bishop of London, later of Durham, b. at Hackforth, Yorkshire, in 1474; d. at Lambeth Palace, 18 Nov., 1559. He studied both at Oxford and Cambridge, finally graduating LL.D. at Padua. Being an accomplished scholar both in theology and law, as well as in Greek and Hebrew, he soon won the friendship of Archbishop Warham, who on 25 Aug., 1511, made him his chancellor, and shortly after rector of Harrow-on-the-Hill. He became successively a canon of Lincoln (1514) and archdeacon of Chester (1515). He began his diplomatic career as ambassador at Brussels, in conjunction with Sir Thomas More, and there he lodged with Erasmus, becoming the intimate friend of both of them. Further preferments and embassies fell to his lot, till in 1522 he was appointed Bishop of London by papal provision. On 25 May, 1523, he became keeper of the privy seal; but neither the work this entailed nor fresh embassies prevented him from making a visitation of his diocese. A visit to Worms (1520-1) had opened his eyes to the dangers of the Lutheran movement and the evils arising from heretical literature. In the divorce question Tunstall acted as one of Queen Katherine's counsel, but he endeavoured to dissuade her from appealing to Rome. On 21 Feb., 1529-30, he was translated by the pope from the Diocese of London to the more important See of Durham, a step which involved the assumption of quasi-regal power and authority within the bishopric (see DURHAM, ANCIENT CATHOLIC DIOCESE OF). During the troubled years that followed, Tunstall was far from imitating the constancy of [St. John] Fisher and [St. Thomas] More, yet he ever held to Catholic doctrine and practices. He adopted a policy of passive obedience and acquiescence in many matters with which he could have had no sympathy. With regard to the suppression of the monasteries, the king's ministers so feared his influence that they prevented his attendance at Parliament.

In 1537 Tunstall was given the onerous position of President of the Council of the North, and Scottish affairs occupied much of his attention. Towards the end of Henry's reign he twice was sent on diplomatic business to France. Under the protectorate of Somerset his religious position became very difficult, but he yielded so far in compliance to the new changes that Gardiner protested. But the lengths to which the reformers went opened his eyes to the real significance of the royal supremacy; a change came over his attitude, and he staunchly maintained the Catholic side, steadily opposing the abolition of chantries, the Act of Uniformity, and the law permitting priests to marry. He seems to have hoped that Warwick might be induced to reverse the anti-Catholic policy of Somerset, but this hope soon failed, and in 1551 he was summoned to London and confined to his house there. During this captivity he composed his treatise, "De Veritate Corporis et Sanguinis

Domini nostri Jesu Christi in Eucharistia", published at Paris in 1554. At the end of 1551 he was removed to the Tower, and a bill for his deprivation was introduced. When this failed, he was tried by a commission (4-5 Oct., 1552) and deprived of his bishopric. On Mary's accession he was liberated, and his bishopric, which had been dissolved by Act of Parliament in March, 1553, was re-established by a further Act in April, 1554. Through Mary's reign he, being now an octogenarian, ruled his diocese in peace, taking little part either in public affairs or in the persecution of heretics; but on the accession of Elizabeth his firmness in resisting the fresh innovations marked him out for the royal displeasure. He declined to take the oath of supremacy, was summoned to London, and when ordered to consecrate Parker refused to do so. Shortly afterwards he was deprived of his see (28 Sept., 1559) and committed to Parker's care as a prisoner at Lambeth Palace, where within a few weeks he died. He thus became one of the eleven confessor-bishops who died prisoners for the Faith.

His works, exclusive of published letters and sermons, are: "*De Arte Supputandi Libri IV*" (London, 1522); "*Confutatio cavillationum quibus SS. Eucharistiae Sacramentum ab impiis Caphernaitis impeti solet*" (Paris, 1552); "*De veritate Corporis et Sanguinis Domini in Eucharistia Libri II*" (Paris, 1554); "*Compendium in decem libros ethicorum Aristotelis*" (Paris, 1554); "*Certaine godly and devout prayers made in Latin by C. Tunstall and translated into Englishe by Thomas Paynelle, Clerke*" (London, 1558). Much of his political correspondence is preserved in the British Museum. Despite his weakness under Henry VIII, we may endorse the verdict of the Anglican historian, Pollard, who writes (*op. cit. inf.*): "Tunstall's long career of eighty-five years, for thirty-seven of which he was a bishop, is one of the most consistent and honourable in the sixteenth century. The extent of the religious revolution under Edward VI caused him to reverse his views on the royal supremacy and he refused to change them again under Elizabeth."

The State Papers, domestic and foreign, for the reigns of Henry VIII, Edward VI, and Mary, and the usual sources of information for those reigns, too numerous for citation here, must be referred to. No independent biography exists but among recent writers the following should be consulted: BRADY, *Episcopal Succession* (Rome, 1877); BRIDGETT-KNOX, *Queen Elizabeth and the Catholic Hierarchy* (London, 1889); POLLARD in *Dict. Nat. Biog.*, s. v.; PHILLIPS, *The Extinction of the Ancient Hierarchy* (London, 1905); BIRT, *The Elizabethan Religious Settlement* (London, 1907).

EDWIN BURTON

Ven. Thomas Tunstall

Ven. Thomas Tunstall

Martyred at Norwich, 13 July, 1616. He was descended from the Tunstalls of Thurland, an ancient Lancashire family who afterwards settled in Yorkshire. In the Douay Diaries he is called by the alias of Helmes and is described as *Carleolensis*, that is, born within the ancient Diocese of Carlisle. He took the College oath at Douay on 24 May, 1607; received minor orders at Arras, 13

June, 1609, and the subdiaconate at Douay on 24 June following. The diary does not record his ordination to the diaconate or priesthood, but he left the college as a priest on 17 August, 1610. On reaching England he was almost immediately apprehended and spent four or five years in various prisons till he succeeded in escaping from Wisbech Castle. He made his way to a friend's house near Lynn, where he was recaptured and committed to Norwich Gaol. At the next assizes he was tried and condemned (12 July, 1616). The saintliness of his demeanor on the scaffold produced a profound impression on the people. There is a contemporary portrait of the martyr at Stonyhurst, showing him as a man still young with abundant black hair and dark moustache.

CHALLONER, *Memoirs of Missionary Priests*, II (London, 1742); *Third Douay Diary*, X, XI (Catholic Record Society, London, 1911); FOLEY, *Records Eng. Prov. S.J.*, XII (London, 1879).

EDWIN BURTON

Simon Tunsted

Simon Tunsted

English Minorite, b. at Norwich, year unknown; d. at Bruisyard, Suffolk, 1369. Having joined the Greyfriars at Norwich he distinguished himself for learning and piety and was made a doctor of theology. He filled several important ecclesiastical charges, being at different times warden of the Franciscan convent at Norwich, regent master of the Minorities at Oxford (1351), and twenty-ninth provincial superior of his order in England (1360). He wrote a commentary on the "Meteora" of Aristotle, improved the "Albeon" of Richard of Wallingford; and is the reputed author of another work, the "Quatuor Principalia Musicae", a clear, practical, and very valuable medieval treatise on music. Davey gives a thorough discussion of the authorship of this work, which has been ascribed by different writers on the history of music to Tunsted, to John Hanboys, and to Thomas of Tewkesbury; but the arguments brought forward by Davey show that it is certainly not the work of either Hanboys or Thomas of Tewkesbury, whilst his conclusion with regard to the first-named writer is that "the grounds for ascribing it to Tunsted are admittedly insufficient; and internal evidence point to the author being a foreigner either by birth or education".

DAVEY in *Dict. Nat. Biog.*, s. v.; IDEM, *Hist. of English Music*.

EDWARD C. PHILLIPS

Anne-Robert-Jacques Turgot

Anne-Robert-Jacques Turgot

Baron de L'Aulne, French minister, born at Parish, 10 May, 1727; died there, 20 March, 1781. In his youth he was destined for the Church; he composed a treatise on the existence of God, of which fragments remain, and one on the love of God, which is lost. The year 1750, during which he was prior of the Sorbonne, marks the transition between the two periods of his life: on the one hand, he delivered a discourse on the advantages accruing to the human race from the Christian

religion, which showed him as still an ecclesiastic; on the other, he delivered a discourse on the successive progress of the human mind, in which the true and false ideas of the philosophers were mingled confusedly. In this discourse he foretold the separation from England of the North American colonies. Early in 1751 the influence of "philosophy" prevailed over Turgot's mind and he decided not to receive Holy orders. In 1752 he entered the magistracy, was master of *rêquetes* in 1753, spending his leisure time in the acquirement of further knowledge, and in 1761 became intendant at Limoges. In the Limousin government Turgot inaugurated certain attempts in conformity with the new ideas of the economists and philosophers: free trade in corn and the suppression of the taxes known as *corvées*.

When, after a short term in the ministry of marine, he was appointed by Louis XVI (24 Aug., 1774) controller-general of finances, he profited by the office which he held for twenty months to apply in his general policy the principles of economic Liberalism. This caused popular discontent, due especially to the rise in the price of corn, but Turgot flattered himself that he could quell all opposition. The edict, by which he substituted for the *corvée* a territorial tax bearing on landed property, displeased the privileged classes; that by which he suppressed the *maîtrises* and *jurandes*, an act which the philosophers regarded as an advance, destroyed the professional organization which in the Middle Ages, under the auspices of the Church, regulated economic activity and which at present the syndicalist movement in all countries is endeavouring to re-establish. By depriving the Hôtel Dieu of Paris of its privilege of selling meat on Friday to the exclusion of the butchers, by dispensing the owners of public vehicles from the obligation they were under of allowing their drivers time on Sunday to hear Mass, and by attempting to change the coronation oath which he found too favourable to the Catholics, Turgot displeased the clergy who accused him of indifference for the disciplinary precepts of the Church. He was disgraced by Louis XVI, 12 May, 1776. In his retirement he wrote for Price, "Réflexions sur la situation des Américains des Etats Unis", and for Franklin a treatise, "Des vrais principes de l'imposition". His works were edited by Dussard and Daire (2 vols., Paris, 1844).

DUPONT DE NEMOURS, *Memoires sur la vie et les ouvrages de Turgot* (2 vols., Paris, 1782); FONCIN, *Essai sur le ministere de Turgot* (Paris, 1877); SAY, *Turgot* (Paris, 1877; tr., London, 1888); SHEPHERD, *Turgot and the Six Edicts* (New York, 1903); DE SEGUR, *Au couchant de la monarchie. Louis X VI et Turgot* (Paris, 1910); STEPHENS, *Life and Writings of Turgot* (London, 1895).

GEORGES GOYAU

Turin

Turin

(Turino; Taurinensis)

The City of Turin is the chief town of a civil province in Piedmont and was formerly the capital of the Duchy of Savoy and of the Kingdom of Sardinia. It is situated on the left bank of the Po and

on right of the Dora Riparia, which flows into the Po not far off. The surrounding flat country is fertile in grain, pasturage, hemp, and herbs available for use in the industries, while on the hills a delicious fungus, a species of truffle is found. The district is also rich in minerals (a species of gneiss and granite), and there are five mineral springs. The population is 270,000.

Besides the numerous elementary and intermediate schools, public and private, there are a university (see below), a musical lyceum, commercial and industrial schools. The Accademia Albertina (1652), for the fine arts, possesses the precious Mossi Gallery (Raphael, Dolci, Caravaggio, Rubens, Van Dyck, Giotto Andrea del Sarto, Correggio, Luca Giordano, Guercino, and others, with cartoons of Leonardo da Vinci and others). There is a royal academy of the sciences (1757) and a royal commission on studies in Italian history. The documents of the general archives go back as far as the year 934. Other institutions of sciences and arts are the military academy, the Scuola di Guerra, the practical school for the artillery and engineers, and eight public libraries, among them the National (1714). The last-named contains the precious Bobbio manuscripts and many Greek and Egyptian papyri; in 1904 it was ravaged by a fire in which valuable manuscripts perished, among them some which had not yet been thoroughly studied. The Museum of Antiquities is of great importance, containing a number of marbles collected throughout Piedmont besides one of the most complete Egyptian collections in existence, that made by Bernardino Drovetti, a French consul in Egypt. Worthy of note also are the Royal Gallery (Pinacoteca) and the zoölogical, mineralogical, geological, anatomical, and the rich numismatical museum (the king's medallion). Benevolent institutions are the Opera Pia di S. Paolo, which includes the Pious Institute (*ufficio pio*) of Alms for the poor and dowries for young girls, and the Monte di Pietà. The hospitals are those of S. Giovanni (fourteenth century), of the Order of Sts. Maurice and Lazarus, the Opera Pia di S. Luigi (1792), the Ophthalmic Hospital, the Cottolengo (Piccola Casa della Divina Provvidenza, founded in 1827 for every kind of human misery, in which about 7000 sick, aged, and infirm persons have found shelter), the Royal General Charity Hospice, the asylum of the Infanzia Abbandonata, the Reale Albergo di Virtù (1580). The Opera Pia Barolo has under its direction various charitable and educational institutions. For the Rifugio and Oratory of St. Francis de Sales, see Bosco.

CHURCHES

The cathedral, dedicated to St. John the Baptist, stands on the site of three ancient churches, and was built (1492-98) by Meo del Caprino, with an octagonal dome. Attached to the cathedral is the chapel of the Santissimo Sudario, built by Guarini (1694), where is preserved in a casket a cloth believed to be the shroud in which the Body of Christ was wrapped when it was taken down from the Cross. The Church of Corpus Domini records a miracle which took place during the sack of the city in 1453, when a soldier was carrying off an ostensorium containing the Blessed Sacrament: the ostensorium fell to the ground, while the Host remained suspended in air. The present splendid church, erected in 1610 to replace the original chapel which stood on the spot, is the work of Ascanio Vittozzi. The Consolata, a sanctuary much frequented by pilgrims, stands on the site of the tenth-century monastery of S. Andrea, and is the work of Guarini. It was sumptuously restored in

1903. Outside the city, are: S. Maria Ausiliatrice, erected by Don Bosco; the Gran Madre di Dio, erected in 1818 on occasion of the return of King Victor Emanuel I; S. Maria del Monte (1583) on the Monte dei Cappucini; the Basilica of Superga, with a dome 244 feet high, the work of Juvara, built by Amedeo II *ex voto* for the deliverance of Turin (1706), and which has served since 1772 as a royal mausoleum.

PROFANE EDIFICES

The Royal Palace (1646-58) contains various splendidly decorated halls and an extremely rich collection of arms of all periods and all peoples, as well as the king's library. Under the palace the remains of a Roman theatre were discovered. The Palazzo Madama stands on the site of the old decuman gate, which became a castle in the Middle Ages and was repeatedly enlarged until, in 1718, it was finally prepared by Juvara for Madama Reale, as she was called, the widow of Charles Emanuel II. It is now occupied by the state archives and the observatory. The Palazzo Carignano (1680), a work of Guarini, is the residence of the younger branch of Savoy-Carignano, now the reigning house. This palace was occupied by the Parliament from 1848 to 1864, and now shelters the Museum of Natural History. The Academy of the Sciences, formerly a Jesuit College (1679), houses the Museum of Antiquities and the Pinacoteca. The Palazzo di Città or City Hall (1669), the work of Lanfranchi, contains the Biblioteca Civica. There is also a Museo Civico di Belle Arti; and the Mole Antenelliana, 580 feet high, contains the Museo di Risorgimento (1863). The city itself is laid out on a very regular plan.

HISTORY

Before the Roman conquest of the Graian and Cottian Alps, Taurasia was already an important city of the Taurini, a Ligurian people. In 218 B.C. Hannibal destroyed it. Under Augustus the conquest was completed, and the city was named Augusta Taurinorum; it probably continued, however, to form part of the dominions of Cottius, King of Secusio (the modern Susa). In the war between Otho and Vitellius, it was almost entirely burned down. None of the Roman monuments have survived except the Porta Palatina, commonly known as the Towers, near which are the remains of a monument erected early in the second century in honour of Attilius Agricola. In the fifth and sixth centuries the city suffered from the invasions of the Burgundians and of Odoacer, and in the Gothic War. After the Lombard invasion it became the capital of a duchy, and four of its dukes — Agilulfus (589), Arioaldus (590), Garibaldus (661), Ragimbertus (701) — became kings of the Lombards. When the Lombard kingdom fell, Turin became a residence of Frankish counts until, in 892, it passed to the marquesses of Ivrea, from whom, through the marriage of Adelaide with Odo of Savoy (1046), it passed into the possession of the latter house. In 1130 the city was constituted a commune, still remaining, however, under the influence now of the counts of Savoy, now of the marquesses of Saluzzo or of Monferrato, with whom, as also with the emperors, they were frequently at war. From 1280 on, it was almost constantly under the power of the House of Savoy, more particularly the Acaia branch (1295-1418). After 1459 it was the capital of the Duchy of Savoy. In

1536 it fell into the power of Francis I of France, who established a parliament there; in 1562 Emanuel Philibert reconquered it. In 1638, during the quarrel of the regency, the city was besieged by the French and defended by Prince Thomas of Savoy. Still more memorable the siege of Turin in 1706, again at the hands of the French, from which it was relieved by Prince Eugene and by the sacrifice of Pietro Micca. During the French occupation it was the capital of the Department of the Po (1798-1814), though it was in the hands of the Austro-Russian forces from May, 1799 until June 1800. In 1821 the revolution against Charles Emanuel broke out, and a provisional government was set up, the king abdicating in favor of his brother Charles Felix. After that, Turin was the centre of all Italian movements for the union of the Peninsula, whether monarchical or republican. The transfer of the capital of the Kingdom of Italy from Turin to Florence, in 1864, caused another, though not important, revolution (21, 22 September).

The most ancient traditions of Christianity at Turin are connected with the martyrdom of Sts. Adventor, Solutor, and Candida, who were much venerated in the fifth century, and were in later times included in the Theban Legion. As to the episcopal see, it is certain that in the earlier half of the fourth century Turin was subject to Vercelli. Perhaps, however, St. Eusebius, Bishop of Vercelli, on his return from exile, provided the city with a pastor of its own. In any case St. Maximus can hardly be considered the first Bishop of Turin, even though no other bishop is known before him. This saint, many of whose homilies are extant, died between 408 and 423. It was another Maximus who lived in 451 and 465. In 494 Victor went with St. Epiphanius to France for the ransom of prisoners of war. St. Ursicinus (569-609) suffered much from the depredations of the French. It was then that the Diocese of Moriana (Maurienne) was detached from that of Turin. Other bishops were Rusticus (d. 691); Claudius (818-27), a copious, though not original, writer, famous for his opposition to the veneration of images; Regimirus (of uncertain date, in the ninth century), who established a rule of common life among his canons; Amolone (880-98), who incurred the ill-will of the Turinese and was driven out by them; Gezone (1000), who founded the monastery of the holy martyrs Solutor, Adventor, and Candida; Landolfo (1037), who founded the Abbey of Cavour and repaired the losses inflicted on his Church by the Saracen incursions; Cuniberto (1046-81), to whom St. Peter Damian wrote a letter exhorting him to repress energetically the laxity of his clergy; Ugucione (1231-43), who abdicated the bishopric and became a Cistercian; Guido Canale enlarged the cathedral; Thomas of Savoy (1328). Under Gianfrancesco della Rovere (1510), Turin was detached from the metropolitan obedience of Milan and became an archiepiscopal see with Mondovi and Ivrea for suffragans, other sees being added later on. In the time of Cesare Cibo the diocese was infested with the Calvinistic heresy, and his successors were also called upon to combat it. Cardinal Gerolamo della Rovere, in 1564, brought to Turin the Holy Shroud and the body of St. Maurice, the martyr.

From 1713 to 1727, owing to difficulties with the Holy See, the See of Turin remained vacant. After 1848 Cardinal Luigi Fransoni (1832-62) distinguished himself by his courageous opposition to the encroachments of the Piedmontese Government upon the rights of the Church, and in consequence was obliged to live in exile. Notable among his successors are Cardinal Alimonda

(1883-91), a polished writer, and Cardinal Richelmy (1897), the present incumbent of the see. The dioceses suffragan to Turin are Acqui, Alba, Aosta, Asti, Cuneo, Fossano, Ivrea, Mondovi, Pinerolo, Saluzzo, and Susa. The archdiocese comprises 276 parishes with 680,600 souls, 1405 secular and 280 regular priests, 35 communities of male and 51 of female religious, 15 educational establishments for boys and 27 for girls. There are two Catholic daily newspapers, "Momento" and "Italia Reale", two weeklies, and many other instructive and edifying periodicals.

CAPPELLETTI, *Chiese d'Italia*, XIV; SAVIO, *Gli antichi vescovi Piemonte* (Turin, 1899), 281; CIBRARIO, *Storia di Torino* (Turin, 1846); ISAIA, *Torino e dintorni* (Turin, 1909); SEMERIA, *Storia della chiesa di Torino* (Turin, 1840); *Guido Commerciale ed amministrativa di Torino* (Turin, 1911); *Cenni storico-statistici delle istituzioni pubbliche e private di beneficenza e di assistenza del Comune di Torino* (Turin' 1906); RONDOLINO, *I Visconti di Torino*, in *Bollettino Storico Subalpino* (Pinerolo, 1901-02).

The University of Turin

The University of Turin

The University of Turin was founded in 1404, when the lectures at Piacenza and Pavia were interrupted by the wars of Lombardy. Some of the professors of theology, medicine, and arts at Piacenza obtained permission from Louis of Savoy-Acaia to continue their courses at Turin. This prince had obtained from the antipope Benedict XIII, in 1405, the pontifical privilege for a *studium generale*, and in 1412 the permission of the emperor was likewise granted. In the following year John XXIII confirmed the concessions of Benedict XIII rendered necessary by the wars which had disturbed the *studium* of Turin. The *studium* then comprised three faculties: theology, law (canon and civil), medicine (with arts and philosophy). The Archbishop of Turin was always chancellor of the university. As at Bologna, the rector continued for a long time to be chosen from their own body by the students, who in 1679 represented thirteen nations. The professors' salaries were paid by the communes of Savoy; but from 1420 the clergy also contributed, and at a later period the dukes. In the seventeenth century the university levied a tax on the Jews. Under Duke Amedo VIII, the State began to restrict the autonomy of the *studium* by means of *riformatori* and subjected the professors and students in criminal matters to ordinary jurisdiction. From 1427 to 1436 the seat of the university was temporarily transferred to Chieri and Savignano (1434). The number of salaried professors in the years 1456 and 1533 was twenty-five (only two of theology), but the number of lecturers was much greater; e.g., in the statutes of the theological faculty (1427-36) nineteen masters — eleven Franciscans and eight Dominicans — are named. Among the distinguished Professors of that age were the jurisconsult Claudio Beisello, a noted translator of many Greek classics, Pietro Carol Cristoforo Castiglione e Grassi, the physician Guainiero, and the theologian Francesco della Rovere, afterwards Sixtus IV.

In 1536 the university was closed, owing to the Franco-Spanish war in Piedmont; in 1560 it was re-established at Mondovi by Duke Emanuele Filiberto back to Turin, with laws permitting

increasing state interference in the affairs of the university. It acquired a great reputation, which, however declined under Charles Emmanuel I (1580-1630), who, owing to the expenses of the wars, had to suspend his financial contributions to the Studium. In the seventeenth century the officials of the respective nations granted the students the right to interrupt the professors' lectures. Studies naturally languished. In 1687 there were 3 professors of theology, 13 of law, 10 of medicine, 6 of arts. The art course did not then include the belles-lettres, which were taught in the Jesuit college. Victor Amedeo II granted a new constitution to the university (1720-29), which thence forward was a purely state institution; he also had the present building erected after the design of Gio. Antonio Ricca. A royal official was appointed to supervise the observance of the Statutes and to act as a censor of books. From 1729 the rector was chosen from among the professors. At the same time the Collegio delle Provincie was established for students not natives of Turin. The statutes contained a regulation strictly obliging the students to be present in the oratory of the university on holy days of obligation. On the other hand, the king ordered the professors of theology to observe neutrality concerning Gallicanism.

At the beginning of the French Revolution the university declined rapidly; the school of anatomy, for instance became a political club. Under Napoleon (1800-14) the studies were reorganized according to French methods; several new chairs were established, and the revival in this sense was continued by Prospero Balbo. In 1821 the students, under the impulse of the constitutional movement, rebelled, and severe measures were adopted. Lectures were continued outside of the university. In the third decade of the nineteenth century there were notable agitations in the theological faculty in favour of papal infallibility, and agitations brought about by the moralist Dettorri, who was afterwards exiled. During the Revolution of July 1830, the university was closed, and the schools dispersed among different cities. In 1845 the curriculum was re-organized. In the theological faculty chairs of ecclesiastical history, oratory, and Biblical exegesis were established. In 1860 this faculty was, here as elsewhere, abolished.

Among the distinguished professors of Turin since the sixteenth century the jurist Gian Francesco Balbo and the physician Giovanni Nevizzano are worthy of mention; after the restoration of the university, the jurists Cuiacius and Pancirolus, the physicians Blessed Giovenale Ancina (afterwards Bishop of Saluzzo) and Lucille Filalteo; the Greek scholar Teodoro Rendio, was called to the Collegio Greco by Gregory XIII. Distinguished in the eighteenth century were Vincenzo Gravina and Luigi Fantoni the jurisconsults, the Augustinian Giulio Accetta in mathematics, the Piarist Giambattista Beccaria, in physics, the Barnabite Sigismondo Gerdil, in ethics, Giambattista Carburri and Vitaliano Donati in medicine, the historian Carlo Denino, and Francesco Antonio Chionio, the professor of canon law whose work "De regimine ecclesiae" caused scandal by reducing all religion to internal worship, and leaving the control of the Church to the civil power; in the nineteenth century: Father Peyron, professor of Oriental languages a celebrated Egyptologist, the philologists Vallauri and Fabretti, the mathematician and physicist Galileo Ferrari, the historian Balbo, the physiologist Cesare Lombroso. The university has 22 chairs of jurisprudence with 18 professors and 20 docents; 24 chairs of physical and mathematical sciences with 17 professors and 17 docents;

28 chairs of medicine with 25 professors and 89 docents; 22 chairs of philosophy and literature with 19 professors and 21 docents. In connection with the medical faculty are a school of pharmacy, various clinics, laboratories, etc., as well as the laboratories, cabinets, and astronomical observatory of the other scientific faculties. In 1910-11 there were 2204 students enrolled.

Annuario della Università di Torino (1876); VALLAURI, *Storia delle Università degli Studi in Piemonte* (Turin, 1875); BONA, *Delle costituzioni dell' Università di Torino* (Turin, 1852).

U. BENIGNI

Turkestan

Turkestan

I. CHINESE TURKESTAN

When Jenghiz Khan died (1227) his second son, Dzagatai, had the greater part of Central Asia for his share of the inheritance: his empire included not only Mávará-un-Nahr, between the Syr Daria and the Amu Daria, but also Ferghana, Badakhshan, Chinese Turkestan, as well as Khorasan at the beginning of his reign; his capital was Almaliq, in the Ili Valley, near the site of the present Kulja; in the fourteenth century the empire was divided into two parts: Mávará-un-Nahr or Transoxiana, and Moghulistan or Jabah, the eastern division. In 1759 the Emperor K'ien Lung subjugated the country north and south of the T'ien-shan and divided the new territory into T'ien-shan Peh-lu and T'ien-shan Nan-lu; in 1762 a military governor was appointed and a new fortified town, Hwei-yuan-ching, was erected (1764) near the site of Kulja: a number of Manchus, from Peking and the Amu, and Mongols were drawn to the new place and later on there came a migration of Chinese from the Kan-su and Shen-si Provinces. The local Mohammedan chieftains are known as Pe-k'e (*Beg*); they are classed in five degrees of rank from the third to the seventh degree of the Chinese hierarchy: the most important titles are Akim Beg (local governor), Ishkhan Beg (assistant governor), Shang Beg (collector of revenue), Hatsze Beg (judge), Mirabu Beg (superintendent of agriculture).

The bad administration of the Chinese governors was the cause of numerous rebellions; a great rising took place against the Governor of Ili, Pi Tsing; at the head was Jihanghir, son of Saddet Ali Sarimsak and grandson of one of the Khaja, Burhan ed-Din; unfortunate at first, Jihanghir was victorious in October, 1825, and captured the four great towns of T'ien-shan Nan-lu: Kashgar, Yangi-hissar, Yarkand, and Khotan. The Chinese Emperor Tao Kwang sent General Chang Ling to fight the rebels. Jihanghir was defeated and made a prisoner at Kartiekai (1828) and sent to Peking where he was put to death in a cruel manner. On the other hand, the establishment of Orenburg by the Russians, the exploration of the Syr Daria by Batiakov, the foundation of Kazalinsk (1848) near the mouth of this river, the exertions of Perovsky, the attacks of the Cossacks against the Khanate of Khokand, had for result the arrival of the Russians in the valley of the Ili River. On 25 July, 1851, Col. Kovalevski signed with the Chinese on behalf of the Russians at Kashgar a

treaty regulating the trade at Ili (Kulja) and at Tarbagatai (Chugutchak). In the meantime new rebellions broke out after the death of Jihanghir: in 1846 one of the Khoja, Katti Torah, with the help of his brothers took Kashgar, but was soon defeated by the Chinese; in 1857 Wali Khan captured Kashgar, Artosh, and Yangi-hissar; and at last, the son of Jihanghir, Burzuk Khan, with the help of Mohammed Yakub, son of Ismet Ulla, born about 1820 at Pskent in the Khanate of Khokand, taking advantage of the Mohammedan rebellion of Kan-su, began a new struggle against the Chinese. Yakub, having taken Burzuk's place, subjugated Kashgar, Khotan, Aksu, and the other towns south of the T'ien-shan, thus creating a new empire; his capital was Yarkand, and there he received embassies from England in 1870 and 1873 (Sir Douglas T. Forsyth) and from Russian in 1872 (Col. Baron Kaulbars).

To check the advance of Yakub to the west, the Russians who had captured Tashkent (27 June, 1865) took possession of Ili, i.e. the north of the T'ien-shan, on 4 July, 1871. When the Chinese had quelled the Yun-nan rebellion after the surrender of Ta-li, they turned their armies against the Mohammedans of the north-west; the celebrated Tso Tsung-tang, Viceroy of Kan-su and Shen-si, had been appointed commander-in-chief; he captured Su-chau (Oct., 1873), Urumtsi, Tih-hwa, and Manas (16 Nov., 1876) when a wholesale massacre of the inhabitants took place; the Russian Governor of Turkestan, General Kauffman, wrote a protest against these cruelties. The task of the Chinese was rendered easy by the death of Yakub (29 May, 1877); Aksu (19 Oct., 1877), Yar-kand (21 Dec.), Kashgar (26 Dec.), and at last Kohtan (14 Jan., 1878) fell into their hands. The Chinese then turned to the Russians to have Ili, occupied temporarily, restored to them. Ch'ung-hou, sent as an ambassador to St. Petersburg, signed at Livadia in Oct., 1879, a treaty ceding to the Russians a large portion of the contested territory including the Muz-Art Pass, giving them the privilege of selling their goods not only at T'ien-tsin and Han-kou but also at Kalgan, Kia-yu, Tang-shan, Si-ngan, and Hanchung; permission was also granted to the Russians not only at Ili, Tarbagatai, Kashgar, and K'urun, but also at Kiayü-kwan, Kobdo, Uliasut'ai, Hami, Turfan, Urumtsi, and Kushteng. The treaty was strongly attacked by the censor, Chang Chi-tung, and Ch'ung-hou, tried by a high court, was sentenced to death. War between Russia and China very nearly broke out, but, thanks to the good offices of foreign powers, a new embassy sent to Russia with the Marquis Tseng arranged matters. A new treaty was signed at St. Petersburg, 12 (24) Feb., 1881, and Russia kept but the western part of the contested territory, restoring the pass of Muz-Art and giving up some of the commercial privileges granted by the Livadia Treaty.

After the Mohammedan rebellion had been crushed, the territory was organized in 1878 and was called Sin-Kiang or New Dominion, the names Eastern Turkestan and Chinese Turkestan being also used; it is bounded on the north by Siberia, on the west by Russian Turkestan and India, on the south by Tibet, and on the east by Mongolia and the Chinese Province of Kan-su. Its area is 550,579 square miles, with a population of 1,200,000 inhabitants scattered over this immense desert varying in altitude from 3000 to 4000 feet above the level of the sea and surrounded by mountains: in the south the Kwen-lun and its two branches, the Nan-shan and the Altyn-Tagh; in the west, the Karakoram, the Pamirs and the Trans-Altai; in the north by the T'ien-shan, north of which chain

the country is called T'ien-shan Peh-lu or Sungaria, and south of it T'ien-shan Nanlu or Kashgaria. The chief river of Chinese Turkestan is the Tarim or Tali- mu-ho, about 1250 miles in length, resulting from the junction of the rivers or *darias*, watering Yarkand, Khotan etc.; finally the Tarim empties its waters into the Lob-Nor, now more of a marsh but a lake in ancient times. The principal passes to enter Sin-Kiang are the following: the Tash-Davan (Kwen-lun range), south of Lob-Nor; the Karakoram Pass, road leading from Yarkand to Leh in Ladak; the Shishiklik Pass, in the Pamirs; the Kyzil Art Pass, in the Trans-Alai; the Muz-Art, road from Kulija to Aksu; the Terek-Davan, in the Western T'ien-shan, the Urumtsi Pass, in the Eastern T'ien-shan; the Talki Pass, to the north of the Ili Valley.

Sin-Kiang includes the following regions: Hami or Qomujl or Pa Shan; the great Gobi Desert or Shamo, the largest portion of Turkestan, the south-west part of it is the Takla-makan Desert; the region of oases (Khotan, Yarkand, Kashgar, Aksu, Uch-Turfan, Yangi-hissar); the Turfan region (Turfan, Karashar); Sungaria (Urumtsi, Kuch'êng); the Ili region (Kulja). Sin-Kiang is crossed by three main roads: (1) from Kan-su to Turfan, by Ngansi and Hami; (2) north from Urumtsi to Kulja, via Manas; (3) south from Turfan to Kashgar, via Karashar, Kurla, Kucha, Aksu, Maralbashi; there is also a route from Kashgar to Lob-Nor, via Khotan, Kiria, Charchan, Lob-Nor, thence to Sha Chou; this is Marco Polo's itinerary. The New Dominion is divided into four Tao or Intendancies: Chen Ti Tao (Tih-hwa Fu), in 1908 Jung Pei was Tao-t'ai and judge; Aksu Tao (Yenk'i Fu), Tao-t'ai vacant in 1908; Kashgar Tao (Sulofu), in 1910 Yuan Hung-yu was Tao-t'ai; and I T'a Tao (Ning yuan hien), in 1908 K'inghiu was Tao-t'ai. It includes six Fu or Prefectures: Tih-hwa or Urumtsi, Yenki or Karashar, Su lo or Kashgar, Soch'ê or Yarkand, Wensuh or Aksu, and Ili; two Chou, K'uch'ê or Kucha, and Hwotien or Khotan; and eight T'ing: Yingkihshaeul or Yangi-hissar, Wushih or Uch-Turfan, K'ueulk'ohlah Wusu or Kurkara-usu, Chensi or Barkul, Hami or Qomul, T'ulufan or Turfan, Tsingho, and T'ahch'êng or Tarbagatai.

The administration of Sin-Kiang has at its head a Fu-t'ai (in 1908, Lien K'uei), who resides at Urumtsi and is deputed by the Shen-Kan Tsung-tu (Viceroy of Kan-su and Shen-si) whose seat is at Lan-chou, Kan-su; the treasurer, Fan-t'ai (in 1908, Wang Shu-nan), who resides at Urumtsi (Tih-hwa); as well as the judge, Nieh-t'ai, who is also the Tao-t'ai of the circuit. The four Tao-t'ai have been mentioned. There are three Tsung Ping (brigade generals) at Aksu (Yênk'i), Palik'un (Barkul), and Ili. The Banner Organization includes: at Ili, a Tsiangkukn (Tatar general), a Futut'ung (deputy military lieut. governor), a Ts'an Tsan Ta Ch'ên (military assistant governor), and the Ling Tui Ta Ch'ên (commandants of forces) of Solun, Oalot, Chahar, Sibe; at Tarbagatai, a Futut'ung, and Ts'an Tsan Ta Chien; at Uliasut'ai, a Tsiang Kün and two Ts'an Tsan Ta Ch'ên; at Urga, a Panshi Ta Ch'ên (commissioner) and a Pangpan Ta Ch'ên (assistant commissioner); at Kobdo, a Ts'an Tsan Ta Ch'ên and a Panshi Ta Ch'ên; and at Si Ning, a Panshi Ta Ch'ên.

Mission

The Ili country is a part of the second ecclesiastical region of China; it was constituted as a distinct mission (Ili or Sin-Kiang mission) at the expense of the Vicariate apostolic of Kan-su by a decree of 1 October, 1888; it is placed under the care of the Belgian missionaries (Cong. Imm.

Cord. B.M.V. de Scheutveld) with Jean-Baptiste Steeneman as their superior. The mission includes five European priests and 300 Christians.

II. RUSSIAN TURKESTAN

Russian Central Asia includes the two khanates under Russian protection, Bokhara and Khiva, and the Turkestan region with its five provinces: Syr Daria, Samarkand, Ferghana, Semirechensk, and Transcaspian; it extends from the Caspian Sea to China, and from Siberia to Persia and Afghanistan, with an area of 721,277 square miles for Turkestan and 63,012 square miles for the Khanates. To the east, towards China, the country is mountainous and contains numerous lakes, Balkash, Issyk-kul, etc.; to the west, it is a large plain with desiccated lakes, watered by the two large rivers, Amu Daria and Syr Daria which run into the Aral Sea. The conquest of this region began in 1867 with the annexation of the country south of Lake Balkash, and occupation of the valley of the Syr Daria, forming the provinces of Semirechensk and Syr Daria; in 1878 the Zarafshan district was added and became subsequently the Samarkand Province. Later on, in 1873, part of the Khanate of Khiva, on the right bank of the Amu Daria, was occupied and was incorporated with the Syr Daria Province. In 1875 and 1876 the Khanate of Khokand being annexed became the Province of Ferghana. The population is but 6,243,422 inhabitants including, on the one hand, Russians, Poles, Germans, etc.; on the other, the natives: Aryans, Sarts, Tajiks, Tzigans, Hindus, with Mongols: Kirghizs, Ubeks, Torbors, etc., and emigrated Jews and Arabs representative of the Semitic Race. The chief products are corn, barley, rice, jugara, cotton. Cattle-breeding is the main source of commerce. The trade of Turkestan amounts to about 320 millions and a half of rubles, of which 140 millions and a half are exportation and 180 millions are importation. The chief trading province is Ferghana with 120 millions. Tashkent, the chief city of the Syr Daria Province, is also the centre of the administration of Russian Turkestan with a population of 191,500 inhabitants, of which 150,622 are natives, for the most part (140,000) Sarts. The two main rivers of Russian Turkestan which flow into the Aral Sea are the Syr Daria, Sihun, or Jaxartes, and the Amu Daria, Tihun, or Oxus.

HENRI CORDIER

Turkish Empire

Turkish Empire

Created in the fourteenth and fifteenth centuries on the ruins of the Byzantine Empire, from the caliphate of Baghdad and independent Turkish principalities. It occupies a territory of 1,114,502 sq. miles, with a population estimated at 25,000,000 inhabitants, and extends over parts of Asia, Africa, and Europe between the Eastern Mediterranean, the Black Sea, the Indian Ocean, and the Red Sea. The Turkish Empire thus possesses some of the most important highways by land and sea, between these three continents.

I. GEOGRAPHY

A. The Balkan Peninsula (European Turkey)

The Balkan Peninsula (European Turkey), divided into eight provinces or vilayets, comprises the plateaux and terraces which extend to the south-east of the uplands of the Alps between the Adriatic, the Archipelago, and the Black Sea. Turkey still possesses Albania and Epirus, a vast plateau covered with towering mountain ranges (Techar-Dagh, 10,000 ft.) and with uplands stretching from the north-west to the south-east which reach as far as the Pindus; the coastal plains of the Adriatic and the small inland levels (Scutari Lake, Lake Ochrida, plains of Monastir d'Uskuf and of Yanina) are separated by very high ridges; Macedonia, a plain richly cultivated with vines, cereals, and tobacco, includes within the mountains of Macedonia to the west, Rhodope (9842 feet) to the north, Olympus to the south-west, the sharp and rocky peninsula of Chalcidice to the southeast; its only outlet, the port of Salonica (144,000 inhabitants), situated at the opening of an historical trade highway which ascends to the valley of the Vardar as far as Uskub, and over a hill of 1640 feet leads to the valley of the Bulgarian Morava and as far as the Danube (railway route from Belgrade to Salonica): the plain of Thrace, bordering on the Archipelago and the Sea of Marmora, forming the lower level of the valley of the Maritza, of which Eastern Rumelia represents the upper. Cultivation is broken by the great stretch of sterile plateaux; the only important city in the interior is Adrianople (125,000 inhabitants), but at the extremity of the peninsula situated between the Black Sea, the Archipelago, and the Sea of Marmora, stands Constantinople, which occupies, on the Bosphorus, one of the finest strategetical positions of the old continent. This metropolis of 1,500,000 inhabitants is at the cross-roads formed by the great waterway which connects the Black Sea with the Mediterranean, and by the overland route (followed by a railway) which reaches the valley of the Danube by way of Adrianople, Philippopoli, Sofia, and Belgrade. It is composed of the Turkish city of Stamboul, of the European districts of Galata and Pera separated by the natural roadstead of the Golden Horn, and of the suburbs of Scutari, Haïdar-Pacha, and Kadi Keui. These settlements are on both sides of the Bosphorus, in Europe and Asia. On account of its military and commercial importance and its population composed of all the races of the earth, Constantinople is a typical cosmopolitan city.

The Peninsula of Asia Minor, or Plateau of Anatolia

Important for the richness of its coastal plains and its geographical situation; the construction of the railway from Constantinople to Baghdad (in 1912, 781 miles of track open for traffic from Constantinople to Boulgourlou by Eski-Chehir and Konieh) will result in a rebirth of this ancient country; a German company is at present fertilizing the plain of Konieh, diverting for this purpose the waters of a lake.

C. Syria

A narrow strip of land, 500 miles long by 93 wide, lies between Asia Minor; Egypt, the Mediterranean, and the Desert. It is traversed by the two parallel ridges of Libanus (ranging from three or four thousand to nine thousand feet) and Anti-Libanus, separated by a deep depression,

the *Gôr* bounded on the north by the valley of the Orontes, on the south by that of the Jordan, which abuts on the gorge of the Dead Sea, 1200 feet below the sea level. The most important centres are the ports of Beirut (185,000 inhabitants), St. Jean d'Acre, and Jaffa (55,000 inhabitants), whence starts the railway to Jerusalem (115,000 inhabitants). The largest city is Damascus (350,000 inhabitants) in the middle of an oasis of luxuriant vegetation, one of the chief industrial centres of the Orient.

D. Mesopotamia and Turkish Armenia, or Kurdistan

Separated from Syria by the Great Desert, extends on the north to Anatolia and Armenia by the vast mountain ranges of Kurdistan, 13,000 feet, intercepted from the plains in the interior by Lake Van, whence flow the Tigris and the Euphrates, whose alluvial valleys are marvelously fertile; corn, wheat, barley, grain, one might say, originated here. Cotton may be also found in abundance, rice and plantations of date palms, and fruit-trees of every kind. The leading centres of Armenia are Erzerum, Van, and Ourfa. In Mesopotamia Mossoul (69,000 inhabitants), Baghdad (125,000 inhabitants), and Bassorah give but a feeble idea of the once great cities of Ninive, Babylon, and Seleucia-Ctesiphon.

E. The Peninsula of Arabia

The Peninsula of Arabia is a spacious desert plateau, bounded by immense mountain ranges, which rise over 9000 feet above the Red Sea. Scarcely a seventh of this vast territory (over 1,000,000 sq. miles) is dependent on the sultan, and that more nominally than in reality. The volcanic plateau of the centre (Nedjed or Arabia Petraea) is almost a desert. The population has flocked to the coast districts (Hedjaz and Yemen, or Arabia Felix). The only important centres are the sacred cities of the Mussulmans: Mecca (60,000 inhabitants) with its port Djeddah, where the Caaba, which preserves the "black stone" of Abraham, draws each year numerous pilgrims from all points of the Moslem world, and Medina (50,000 inhabitants), where Mohammed resided and died. The possession of these cities lends great political importance to the Turkish Government. A railway, intended to unite Damascus to Mecca, was laid to Medina in 1908.

F. Tripolitana

Tripolitana, occupied largely at present (1912) by the Italians, is in reality the Saharan coast of the Mediterranean. It is composed of plains of sand and rocky plateaux, to the east the plateau of Barka (ancient Cyrenaica whose coasts in antiquity were very fertile), the oasis and city of Tripoli (30,000 inhabitants), and the inland the oasis of Ghadames. On this territory of 462,767 sq. miles there are scarcely one million inhabitants. The principal resources and in the oases date palms.

II. HISTORY

The countries which form this immense territory represent what remains of the conquests of the Ottomans, a Turkish tribe originally from Khorassan, which emigrated into Asia Minor about 1224, at the time of the cataclysm produced in Central Asia by the Mongolian invasion of Jenghiz-Khan. The chiefs of the tribe of the Kei-Kankali became the mercenaries of the Seljuk emirs of Asia Minor. One of them, Othman, proclaimed himself independent at the end of the

thirteenth century, and took the title of sultan, or padishah. Under Orkhan was organized with some Christian captives the permanent militia of the Janissaries; and then began incessant war between the Ottomans and the Byzantine Empire. In 1359 Suleiman entered Europe by the occupation of Gallipoli. Murad established himself at Adrianople (1360) and attacked the Slavonic peoples of the Balkans. The battle of Kossovo (1389) gave him Servia. The struggle continued until the taking of Constantinople by Mahomet II, who put an end to the Byzantine Empire (1453) and conquered the Peloponnesus (1462), Negropont (1467), Trebizond (1470), Bosnia, and Wallachia. He died in 1481, after failing to take Belgrade and Rhodes, but achieving the conquest of Anatolia as far as the Euphrates, and the peninsula of the Balkans as far as the Danube. To these conquests Selim I added Azerbaidjan, Syria, and Egypt (1517), Diarbekir and Mesopotamia (1518); he received from Mecca the banner of the prophet, and took the title of caliph, which assures to the Sultan of Constantinople the spiritual authority over all the Mussulmans of the world.

Soliman I took Rhodes from the Knights of St. John (1522) and conquered Hungary while Khaireddin Barbarossa subjected the Barbary States (1522). Selim II took possession of the Island of Cyprus (1570), but the Turkish domination had reached the limits of its extension. Soliman had been unable to take either Vienna (1526) or Malta (1562), and in 1571 the great victory of the Christian fleet at Lepanto weakened the naval power of the Turks in the Mediterranean. At the end of the sixteenth century The Turkish Empire had attained the zenith of its power on land. The siege of Vienna of 1683, which failed thanks to the intervention of the King of Poland, John Sobieski, marks the last aggressive attempt of the Turks on the West. Henceforth the western powers encroach on the Turkish Empire and begin its dismemberment. In 1699 by the treaty of Karlovitz the Sultan ceded Hungary and Transylvania to Austria. It is true that in 1739 the Turks succeeded in retaking Belgrade, but this was their last military success. The powerful militia of the Janissaries was of no further use; the administration was corrupt and venal. Moreover, the Turks were unable to impede the progress of Russia; in 1774 by the treaty of Kainardji the Turks ceded to Russia the Crimea and the coasts of the Black Sea, and to Austria Rumanian Bukowina. The French Revolution of 1789 saved Turkey from the project of division planned by Catherine II; the Peace of Jassy (1792) restored only a part of Bessarabia of the Dniester. Egypt, occupied in 1789, surrendered to Turkey in 1800, but in the most precarious condition. After the nineteenth century began the forward movement of the Christian nationalities which had submitted up to that time to Turkish domination; public opinion in Europe upheld this movement, and the governments themselves were won over. Meanwhile the rival ambitions of the powers prevented the "Eastern Question" from being regulated in a definitive manner. In 1821 the insurrection of the Greeks, supported by Europe, ended in the creation of the Kingdom of Greece (Treaty of Adrianople, 1829; and Conference of London, 1831).

The Servians formed an autonomous principality as early as 1830, and in 1832 the Pasha of Egypt, Mehemet-Ali, revolted; his independence was conceded to him in 1841, on condition that he would recognize the suzerainty of the sultan. In vain the Turks tried to reform; after the massacre and the dissolution of the Janissaries (1826) Mahmoud organized an army resembling the European, established military schools and a newspaper, and imposed the European costume on his subjects.

In 1839 Abdul-Medjid organized the *Tanzimât* (new regime) and accorded to his subjects a real charter, liberty, religious toleration and promises of a liberal government. In 1854 the Tsar Nicholas of Russia strove to take up again the project of Catherine II, and to do away with "the sick man". Protected by France and England, Turkey kept, at the Congress of Paris (1856), all of its territory save Moldavia and Wallachia, which were declared autonomous. The Hatti-Humayoun of 16 Feb., 1856, proclaimed the admission of Christians to all employments and equality with other subjects before the law, but after the Liberal government of Fuad Pasha they resumed their former ways. On all sides the provinces revolted, and about 1875 formed the party of Young Turkey, desirous of reforming the empire on the European model.

Two sultans, Abdul-Aziz and Murad, were successively deposed. A new sultan, Abdul-Hamid, proclaimed on 23 Dec., 1876, a constitution resembling the European with a parliament and responsible ministers; but the reforming grand vizier Midhat Pasha was strangled, and the opening of parliament was no more than a comedy. Europe decided to act, and in 1877 Russia took the lead and sent an army across the Balkans, after the difficult siege of Plevna and would have entered Constantinople had it not been for the intervention of an English fleet. The treaty of San Stefano (March, 1878) established a Grand Principality of Bulgaria, and cut Turkey in Europe into many sections. Bismarck, alarmed by the progress of Russia, had this treaty revised at the Congress of Berlin (1878); the independent Bulgarian principality was reduced to Moesia to the north of the Balkans; Eastern Rumelia alone was autonomous, and Macedonia remained Turkish. The independence of Servia, Montenegro, and Rumania was sanctioned. Greece received Thessaly; Austria occupied Bosnia and Herzegovina; England established herself in the Island of Cyprus. This treaty, ratified by all the powers, was followed by new dismemberments. In 1855 Eastern Rumelia was annexed to Bulgaria. In 1897 Crete revolted, and tried to reunite Greece. After the victorious campaign of his army in Thessaly the sultan kept the sovereignty of Crete, but with an autonomous Christian governor, a son of the King of Greece.

In contrast to his predecessors, who had sought to restore their country by reforming it, the Sultan Abdul-Hamid established a regime of ferocious repression against the Young Turks, who were partisans of the reforms. A formidable police pursued all those who were suspected of Liberal ideas, and an un pitying censorship undertook the impossible task of depriving Turkey of European publications; the introduction of the most inoffensive books, such as Baedeker's guides, was prohibited. Emissaries everywhere revived Mussulman fanaticism; to the claims of the Armenian revolutionaries the Sultan responded by frightful massacres of the Armenians of Constantinople (Sept., 1895), followed soon by the slaughter which in 1896 drenched Kurdistan with blood; everywhere Armenians were tracked, and isolated massacres of Christians became also the normal order of events in Macedonia

Educated in Western ideas, the Young Turks, especially the refugees at Paris, united as early as 1895, and succeeded in spite of prohibitions in circulating in Turkey their journal the "Mechveret". A Committee of Union and Progress was even formed at Constantinople, and by constant propaganda succeeded in gaining to its cause the greater number of the officials. The uprising, the preparation

of which deceived the Hamidian police, began 23 July, 1908, at Salonica; an ultimatum was sent to the sultan, who, abandoned even by his Albanians, proclaimed the re-establishment of the constitution (24 July, 1908) in the midst of indescribable enthusiasm, and called a parliament (4 Dec., 1908).

In three months 300 journals were started. Abroad, the counterstroke to this revolution was the definitive annexation, proclaimed by the Emperor of Austria, of Bosnia and Herzegovina (3 Oct., 1908). At the same time the Prince of Bulgaria took the title of Tsar of the Bulgarians (6 Oct., 1908), and repudiated the vassalage which still connected him with the sultan.

This exterior check weakened the Young Turk party, and on 13 April, 1909, a counter-revolution of *Softas* and soldiers of the guard broke out in Constantinople. The Young Turks had to flee the capital, but immediately the troops of Salonica, Monastir, and Adrianople consolidated and marched against Constantinople and laid siege to it (17 April, 1909). Negotiations continued for six days; finally at the moment when the massacre of the Christians seemed imminent, the Salonican troops entered Constantinople, and after a short battle became masters of the place. On 27 April Abdul-Hamid was forced to sign his abdication, and banished to Salonica. A son of Abdul-Medjid was made sultan under the name of Mohammed V, and a new constitution was proclaimed, 5 Aug., 1909, the Committee of Union and Progress superintending its execution with dictatorial powers. To-day Turkey is on the road, to reform and political reorganization.

III. RACES, NATIONALITIES, AND RELIGIONS

According to a tradition which dates back to the earliest antiquity, Oriental nationalities did not commonly form compact groups settled within well-defined boundaries. As a result of violent transmigrations of peoples owing to hurricane-like invasions, or even by the simple chance of migrations due to economic causes, all the races of the Orient are mingled in an inextricable manner, and there is not a single city of the Ottoman Empire which does not contain specimens of all races, languages, and religions. The population has therefore an entirely heterogeneous character; the Turks have never made any effort to assimilate their subjects; they do not appear even to have attempted to propagate Islamism widely. Until the constitution of 1876, and in fact as late as the revolution of 1908, they have jealously striven to safeguard their privileges as conquerors. Up to the present time the population of the empire may be said to be divided into three classes:

- *The Mussulmans* (Turks, Arabs, Servians, Albanians), enjoying alone the right of holding office, the only landowners, but subject to military service.
- *The Raias* (flocks), or infidels, conquered peoples who have obtained the right of preserving their religion, but barred from all office and subjected to heavy tax. It was upon them that the despotism of the pashas was exercised. They are still, following the creed to which they belong, divided into "nations" governed by religious authorities, Christian bishops, Jewish rabbis, responsible to the sultan, but provided with certain jurisdiction over their faithful.
- European subjects, established in Turkey for religious or commercial reasons, and under the official protection and jurisdiction of the ambassadors of the Powers. Many of the *raïas* of class have, however, succeeded in obtaining this privilege.

In 1535 the first "capitulation" was signed between the King of France, Francis I, and the Sultan Soliman. It accorded to France the protectorate over all the Christians. This agreement was often renewed, in 1604, 1672, 1740, and 1802. At the treaty of Kainardji Russia obtained a similar right of protection over the Orthodox Christians. The rights of France to the protection of Catholics of all nationalities have been recognized repeatedly by the Holy See, and particularly by the Encyclical of Leo XIII "Aspera rerum conditio" (22 May, 1886). The treaty of Berlin left to each state the care of protecting its subjects, but in practice France preserves the protectorate over Catholics, and even the diplomatic rupture between France and the Holy See has not impaired these civil rights. Each of the Great Powers has therefore considerable interests in the Turkish Empire: each one its own postal autonomy, courts, schools, and organizations for propaganda, teaching, and charity.

The Young Turk party, in power to-day, dreams of overthrowing this arrangement. The new constitution granted by the Sultan Mohammed V, 5 Aug., 1909, proclaims the equality of all subjects in the matter of taxes, military service, and political rights. For the first time Christians are admitted into the army, and the parliament, which meets at Constantinople, is chosen indiscriminately by all the races. The effect of this new regime appears to be, in the view of the Young Turks, the establishment of a common law for all subjects, the suppression of all privileges and capitulations. But the religious communities, or *millets*, hold to the ancient statutes which have safe-guarded their race and religion; the three oldest, those of the Greeks, the Armenians, and Jews, date back to the day following the taking of Constantinople by Mohammed II.

The rest of the European powers have in the Turkish Empire, political, economic, and religious interests of considerable importance; a certain number of public services, such as that of the public debt, or institutions like the Ottoman Bank, have an international character. The same holds good of most of the companies which are formed to execute public works, docks, railways, etc. . . The trade in exports and imports involves large sums of money, as one may judge by the following table:

FOREIGN COMMERCE FROM 1 MARCH, 1908, TO 28 FEBRUARY, 1909 (IN PIASTRES)

Country	Imports	Exports
England	941,274	513,723
France	337,057	363,361
Germany	193,567	114,998
Austro-Hungary	407,519	247,774
Russia	249,417	57,489
Egypt	116,275	165,673
United States	116,275	70,332

A veritable economic war is going on between the Powers, desirous of exploiting the riches of the Orient; to the secular ambitions which menace the existence of the "sick man" have been added new forms of greed. Neither the Russians nor the Greeks have ceased to consider Constantinople

as the historic goal of their efforts, and Bulgaria, deprived of Macedonia is claimed by the treaty of Berlin, also finds in its traditions claims on the same heritage. Macedonia is claimed by the Greeks, Bulgarians, Servians, and the Kutzo-Vlachs or Rumanians; Salonica has become a commercial centre for Austrian exportation; and the annexation of Bosnia and Herzegovina has by one and the same stroke reinforced Austro-Hungarian and German influence in the Balkan Peninsula. Italy has some clients in Albania, and is seeking at the present moment to take possession of Tripoli.

Finally, France, England, and Germany are fighting to establish their moral and economic influence. France has maintained an important position because of the protection that it has always exercised over Catholics; French in the Orient has become a kind of second vernacular; while the influence of Germany has increased in the last few years for political reasons, by which the development of German commerce has profited. The European Powers, anxious for the defence of their own interests, are not, however, ready to abandon their capitulations. The Turkish Empire has moreover entered into a period of transformation, the end of which no one can foresee, and what delays still more the task of the new power is the infinite diversity of races and religions which make up the empire.

Although the statistical documents are very incomplete, the total population of the empire, including Egypt and the dependencies (Crete, governed by Prince George under the control of the Powers; Samos, governed since 1832 by a Greek prince appointed by the sultan), can be estimated at 36,000,000. Under the direct government of the sultan there are only 25,926,000 subjects, who belong to the following races: (1) Turks, or Osmanlis, estimated at 10,000,000, are settled throughout Asia Minor, the cities of Europe and Syria, and some cantons of Macedonia; most of them are Mussulmans. (2) Arabs (7,000,000), in Arabia, Syria, Mesopotamia, and Tripoli, forming several sects of Mussulmans. (3) Jews, scattered almost everywhere (Jews of Spanish origin form half of the population of Salonica); compact Jerusalem and its outskirts, at Baghdad, Mossoul, and Beirut. *Samaritans* inhabit the sanjak of Naplouse. (4) Gipsies, a mysterious race, are scattered throughout the empire. (5) Armenians, who have swarmed outside of their country and form powerful colonies in Asia Minor, Mesopotamia, Constantinople, and Turkey in Europe. From a religious standpoint they are Catholics, Gregorians, or Protestants. (6) Caucasian races: *Lazes* of Trebizond, Mussulmans or Orthodox Greeks; *Kurds*, fanatical Mussulmans scattered around Erzerum, Angora, Mossoul, Sivas; *Circassians*, spread throughout Asia Minor, Mussulmans. (7) Syrians, The descendants of Aramaean peoples, divided into a multitude of communities of different language and religion; *Chaldeans*, in Baghdad, Mossoul, Aleppo, Beirut, or *Nestorians*, speaking partly Syrian and partly Arabic. The *Melchites* speak Arabic, but belong to the Greek Church. The *Jacobites*, or Monophysies, speak Arabic and Syriac. The *Marionites* of the Lebanon and of Beirut speak Arabic and are Catholics. The *Druses* of the Lebanon form an heretical Mussulman sect. (8) The *Greeks* have remained in their historic country; as in antiquity they are a maritime people; they form powerful groups at Constantinople, Adrianople, Salonica, in Macedonia, Asia Minor, in the isles, in Syria, and in Crete. They belong to the Orthodox or to the Greek Uniat Church. They are of considerable importance in the empire. (9) The Albanians appear to be the remnant of a very ancient race. They

form in the west of the Balkan Peninsula (Albania) a compact group and still lead a semi-patriarchal life. A large part (1,000,000) is Mussulman, the others, (30,000) Catholic: among them may be found the Powerful tribe of the Mirdites. In 1911 the new government was obliged to direct an expedition against them to effect their disarmament. (10) The Slav peoples, Bulgarians and Servians, are scattered over Macedonia and Old Servia, where they oppose Greek influence; they are divided between Islamism, Orthodox Christianity, and Catholicism. (11) The Kutzo-Vlachs or Rumanians, Orthodox or Catholics, inhabit Macedonia, where they are mostly shepherds. (12) Finally, in all Turkish cities may be found a great number of families of European origin, settled in the country for a long period and who have lost their ethnical characters and their languages. Such are the Levantines, who seek to obtain from the ambassadors foreign naturalization for the sake of its privileges.

From a religious standpoint the Mussulmans may be estimated at 50 per cent of the population, the Orthodox Church 46 per cent, Catholics 3 per cent, other communities, Jews, Druses etc., at 1 per cent. In Turkey in Europe, on the contrary, there are 66 percent of Christians to 33 percent Mussulmans.

(1) Mussulmans

The Mussulman religion has remained the religion of the state. The sultan is always the caliph, the spiritual head of the Mussulmans of the whole world. The Mussulmans comprise the majority of Turks, Arabs, and a portion of the Albanians, Bulgarians, Greeks etc. Polygamy is always legal; four legitimate wives and an unlimited number of concubines are permitted to the believers. Under the influence of Western ideas and Christianity, monogamy tends to establish itself. Divorce exists, and the divorced woman can remarry. The sexes are always separated in the family home, which comprises the *selamlık* (male apartments) and the *harem* (female apartments). It is the same in the tramways, railways, ships etc. The women cannot go out except veiled, but circulate freely in the streets of the cities unaccompanied. Slavery is always active, but it has kept a patriarchal character. The master must endow his slave when the latter marries, and the Koran obliges him to provide for the needs of his slaves. Education is progressing. In principle it is obligatory. Primary education is free, a secondary school exists at the capital of each vilayet, as well as one free professional school. Instruction of women is developing at Constantinople; the Lyceum of Galata-Serai, organized by French professors, has 1100 pupils. Higher instruction is represented by the University of Constantinople and special schools. An Imperial museum of archaeology has been created at Tchilini-Kiosk.

As in all Mussulman countries the spiritual and temporal duties are blended, and civil relations are regulated by religious law which consists in the Koran and the *Cheriat*, collection of customs. The interpreters of this law are the *ulemas*, who form a powerful clergy whose head, the *Sheikh-ul-islam*, has the rank of vizier, and access to the council of ministers, or *divan*. At twelve years of age the future *ulemas* leaves the primary school and enters a *medresse* (seminary attached to the mosque) as a *softa* (student) where he learns grammar, ethics, and theology. He finally receives from the *Sheikh-ul-islam* the diploma of candidate (*mulasim*) and can be elevated to the

rank of the *ulemas*; he may become *cadi* (judge). To advance further he must study for seven years, when he may become *imam* of a mosque. The *ulemas* wear a white turban, the *hadjis*, who have been at Mecca, have the green turban. The *mesjids* are simple places of prayer. In a large mosque or *djami* maybe found *sheikhs* in charge of the preaching; *kiatibs*, who direct the Friday prayer; *imams*, charged with the ordinary service of the mosque (daily prayer, marriages, burials); *muezzins*, who ascend four times a day to the minaret to call the faithful to prayer; *kaims*, a kind of sacristan. Several orders of dervishes form the regular clergy and devote themselves to special practices of which some are noted for their extravagance (howling and whirling); they are distinguished by a conical felt hat. The principal religious obligations, which the faithful perform with zeal are: prayer four times daily, the weekly Friday service, the observance of *Ramadan* (abstinence from eating, drinking, and smoking from the rising to the setting of the sun). Islam is going through a crisis by contact with the Western world, and under the influence of Christianity many of the enlightened Turks dream of reforming its morals. On the other hand there has always been a certain opposition between the Arabs, who pretend to represent the pure Mussulman tradition, and the Turks. The pan-Islamic policy of Abdul-Hamid had weakened this opposition, and he had availed himself of his title of caliph to form relations with Mussulmans of the entire world.

To-day the pan-Islamist movement, of which the University of El-Azhar at Cairo is one of the principal centres, and which has numerous journals at its command, seems to be unfavourable to the Turkish Caliphate. The society "*Al Da' wat wal Irchad*" is about to create in Egypt a new university destined to form Mussulman missionaries.

(2) Greek Orthodox Church

The principal indigenous Christian community is the Greek Church, which is the survival of the religious organization of the Byzantine Empire. Its head, the "OEcumenical Patriarch of the Romans" (such is his official title), resides at Constantinople, in the Phanar quarter. He presides over a Holy Synod formed of twelve metropolitans and a "mixed council", composed of four metropolitans and eight laymen. Two million souls obey him. The oecumenical territory is divided into 100 eparchies or dioceses (83 metropolitans and 17 bishops). Since the schisms of Photius (867) and of Michael Caerularius (1054), the Greek Church has been separated from Rome by a succession of ritual and disciplinary observances rather than by dogmatic differences. The tendency of the Greek Church to autonomy has brought about the crumbling of patriarchal authority and the forming of autocephalous churches; outside of the Ottoman Empire may be found the Russian Church, the Church of the Kingdom of Greece, the Servian Church, the Church of Cyprus: in the empire, even since the firman of Abdul-Aziz (11 March, 1870), the Bulgarians have organized an independent church under the name of "Exarchate". The Bulgarian Exarch resides at Orta-Keui on the Bosphorus and governs 3,000,000 souls; Thrace and Macedonia are divided into 21 Bulgarian eparchies, but a Holy Synod resides at Sofia. The Arabic speaking Syrians, or Melchites who are attached to the Orthodox Church, are under the authority of the Patriarch of Antioch, who resides at Damascus, of the Patriarchs of Jerusalem and of Alexandria, and of the Archbishop of Sinai, all independent of Constantinople.

The Greek Church has two divisions of clergy, one consisting of the *popes* or *papas*, who marry before they take orders and cannot become bishops; the other, called the upper clergy, chosen from among the monks. The monasteries are quite numerous. Those of Mount Athos form a veritable independent Republic composed of twenty convents governed by the Council of the Holy *Epistasia*; its head, the *protepistates*, is chosen in turn from the monasteries of the great Laura, Iviron, Vatopedi, Khilandariou, and Dyonisiou. The Greek Church has no organized missions, but the Hellenic propaganda is maintained at least in the schools throughout Macedonia, where there is antagonism between the Greeks and Bulgarians: the latter have had often to defend their religions and national independence against the former.

(3) Dissenting Churches

A certain number of religious communities represent the early and schismatical heretical sects who have remained separate from the Greek Church: a portion of these Christians have, however, returned to the Catholic Church. The Gregorian Armenians (who connect themselves with St. Gregory the Illuminator) have been separated since the Council of Chalcedon (451). They have many heads, the Catholicos of Etschmiadzin in Russian territory, the Catholicos of Sis (200,000 faithful in Cilicia and Syria), and the Armenian Patriarch of Constantinople, who is assisted by a national assembly of 400 members and two councils, civil and ecclesiastical (800,000 faithful, divided among 51 dioceses); finally, the Armenian Patriarch of Jerusalem, in communion with Constantinople. On the Turco-Persian frontier may be found about 100,000 Nestorians, whose patriarch resides at Kotchanes; his dignity is hereditary from uncle to nephew; many have been reunited to the Roman Church. The Monophysites, or Jacobites, to the number of 80,000 in Syria, Mesopotamia, and Kurdistan, represent the remnants of a church that was once powerful; its head, who calls himself Patriarch of Antioch, resides at the Monastery of Dar-uz-Zafaran, between Diarbekir and Mardin.

(4) The Catholic Church in the Turkish Empire

The Catholic Church in the Turkish Empire comprises two classes of faithful: those of the Latin Rite, and those who preserve their traditional rites, and are united to the Holy See, whence the name Greek-Uniats, Armenian-Uniats, etc. Turkey, a missionary country, depends directly on the Congregation of the Propaganda which has as representatives three apostolic delegates, at Constantinople, Beirut, and Bagdad; assisting them are vicars and prefects Apostolic, heads of the mission and provided with episcopal powers (except the power of conferring major orders). The Latin Catholics are scattered over the entire empire, although 148,000 Albanians form an important group under the Archbishops of Durazzo, Uskub, Scutari, and the Abbot of St. Alexander of Orochi for the Mirdites.

The Uniats comprise many distinct groups: (a) the Greeks, whose union was proclaimed by the Council of Florence in 1438, live in Italy and Corsica (Albanian colony of Cargese). In the Turkish Empire there are only some hundred or so placed under the authority of the Apostolic delegate of Constantinople. Among the popes who have striven most to bring about a union with the Greeks Benedict XIV must be remembered, and Leo XIII (Encyclical "*Orientalium dignitas*", 30 Nov.,

1894). (b) The Melchite Greeks (110,000), in Syria, Palestine, Egypt; their patriarch resides at Damascus, and has under his jurisdiction three vicariates (Tarsus, Damietta, and Palmyra) and eleven bishops. (c) The Bulgarian-Uniats, converted about 1860 to escape from the Phanariot despotism. There remain 13,000 directed by the vicars Apostolic of Adrianople and Salonica. (d) The Armenian-Uniats, organized since 1724 under the Patriarch of Cilicia and Little Armenia, who reside at Zmar in the Lebanon. In 1857 Pius IX conferred this title on the Armenian Archbishop of Constantinople (70,000 faithful, 2 archbishops, of Aleppo and Sivas, 12 bishops, the most of whom are in Persia and Egypt). (e) The Syrian-Uniats, converted by Latin missionaries in 1665; a firman of 1830 has recognized its autonomy (40,000 faithful, a patriarch residing at Beirut, and 12 dioceses). (f) The Chaldean-Uniats, Nestorians converted to Catholicism in 1552. Their Patriarch of Babylon resides at Mossoul (80,000 faithful). (g) The Maronites of the ancient Lebanon, a Monothelite community which abjured its heresy entirely in 1182. Its head, Patriarch of Antioch, resides at Bekerkey, near Beirut; he has 7 archbishops under his jurisdiction. The 300,000 faithful have remained particularly attached to Catholicism.

V. CATHOLIC AND PROTESTANT MISSIONS

The Christian propaganda has been carried on in the Turkish Empire by means of the missions, the oldest of which date back to the time of the Crusades. As early as 1229 Franciscan and Dominican missions were established in Palestine and as far as Damascus. In 1328 the Franciscans received the "custody" of the Holy Places, and constructed their convents of the Mount of Sion, of the Holy Sepulchre, and of Bethlehem. To-day the Franciscan custody of the Holy Land numbers 338 religious. The missionaries have, however, encountered great obstacles in their work, and they have been unable even to consider a direct propaganda in regard to the Mussulmans. Nevertheless, their moral influence is considerable; it manifests itself by social works due to their initiative (schools, hospitals, dispensaries, etc.) which are very prosperous, and are maintained by numerous organizations founded in Europe: the Society of Foreign Missions of Paris, founded in 1658; the Propagation of the Faith, founded at Lyons in 1822; the Society of St. Francis Xavier, founded at Aachen in the year 1832; the Leopoldverein, founded in Austria in 1839; the Society of the Holy Childhood, etc.

Among the religious orders represented in the Turkish Empire must be mentioned: the Jesuits, who have established the University of St Joseph of Beirut, whose faculty of letters numbers distinguished Orientalists and epigraphists, and whose school of medicine, placed under the control of the University of France, forms a nursery for native physicians; it has a library and a printing-press supplied with Latin and Arabic characters; it publishes a journal and an Arabic review, *El-Bachir*, and *ElMachriq*; the Assumptionists, at Constantinople; many of whom devote themselves successfully to the study of archaeology and Byzantine antiquities; the Brothers of the Christian Schools, who had, in 1908, 3449 pupils (8 colleges at Constantinople, 8 at Smyrna, others at Salonica, Angora etc.); the Capuchins, established in Armenia, Asia Minor, Syria etc.; the Lazarists, at Beirut; the Carmelites, at Bagdad, Tripoli, etc.; the Salesians, in Palestine; the Sisters of St.

Vincent de Paul, who have opened in almost every district schools, hospitals, and workshops, and who are respected by the Mussulmans for their self-sacrifice; the Sisters of Notre Dame of Sion, with schools in Constantinople; the Dominicans, established at Mossoul and Jerusalem, with a Biblical school. In 1910 a normal school was established at Rhodes to educate members of religious congregations to act as teachers in the East.

All these missions are officially placed under the protectorate of France. For the most part the missionaries are French, but there are also a large number of Germans, Italians, and English. Besides these Catholic missionaries, rival societies display immense activity. First of all, the Jewish Alliance, which has founded schools in most of the large cities; the Zionist movement has for its object the re-peopling of Palestine by Jews; a few colonists have been attracted thither from Russia. There are throughout the empire Protestant missions from England, Germany, and America. In 1842 an Anglican bishopric was established at Jerusalem, whose titular is alternately English and German. All the large societies of Protestant missions are represented in the Orient (American Board of Foreign Missions, American U.P. Mission, Church Missionary Society, Deutsche Orientmission, German Pioneer Mission, Evangelical Missionary Society of Basle, etc.). All seek to establish their influence by the same propaganda: distribution of Bibles and Gospels translated into the native languages, hospitals, dispensaries, schools etc. At Beirut there is an American University, and more than 30 schools, comprising 3000 pupils. At Constantinople there is the American Robert College.

LOUIS BRÉHIER

Adrian Turnebus

Adrian Turnebus

Philologist, b. at Andely in Normandy in 1512; d. in Paris, 12 June, 1565. The accounts of the life of the great scholar are scanty and in part even contradictory. Neither is it easy to interpret the name *Turnebus*, in French *Turnèbe*. It is said that his father was a Scottish gentleman named Turnbull, who settled in Normandy and gave his name the French form of *Tournebœuf*. From this it became Tournebu, then Turnèbe, in Latin Turnebus. Whatever may have been the derivation of his name, Turnebus came from a noble though poor family. When eleven years old he was sent to Paris to study. Here his ability and industry enabled him not only to surpass his fellow-pupils but even also his teachers. In 1532 he received the degree of Master of Arts at the University of Paris, and one year later he became professor of humanities at Toulouse. Having held this position for fourteen years, he next became professor of Greek at Paris, and in 1561 exchanged this professorship for that of Greek philosophy. For a time (1552-55) he and his friend William Morel supervised the royal printing press for Greek works. It is said, and can easily be believed of so distinguished a scholar, that important professorships in other places were declined by him while he taught at Paris. As an illustration of his remarkable industry a well-authenticated story is told, that he devoted several hours to study even on his wedding-day. Over-study, however, wore out his strength prematurely, and he died at the age of fifty-three. In accordance with his own testamentary directions, his body was placed in the ground without any religious ceremony on the very evening of his death. This curious proceeding, as well as various utterances and a severe poem on the Jesuits, raised the much controverted question, whether Turnebus remained a Catholic or became an adherent of the new heresy. It seems at least probable that he inclined to Protestant views, even though he did not break completely with the Church, as his Catholic friends steadily maintained. In other respects his character was blameless. His reputation rests not only on his lectures, but also in equal measure on his writings. His numerous works, including commentaries on the ancient classics, short treatises, and poems, were collected and published (2 vols., Strasburg, 1600) with the co-operation of his three sons.

N. SCHEID

Turpin

Turpin

Archbishop of Reims, date of birth uncertain; d. 2 Sept., 800. He was a monk of St. Denis when, about 753, he was called to the See of Reims. With eleven other bishops of France he attended the Council of Rome in which Pope Stephen III condemned the antipope Constantine to perpetual confinement. He enriched the library of his cathedral by having numerous works copied, and obtained from Charlemagne several privileges for his diocese. Legends grew up around his life, so that by degrees he becomes an epic character who figures in numerous *chansons de geste*, especially in the "Chanson de Roland". Furthermore, a chronicle known as the "Historia Karoli Magni et Rotholandi" has been attributed to him; but that he was not the author is proved by the use in the chronicle of the word "Lotharingia" which did not exist prior to 855, the mention of the musical chant written on four lines, a custom which does not date back further than 1022, and finally the silence of all the writers of the ninth and tenth centuries regarding this so-called book of Turpin's. The first to mention him is Raoul de Tortaine, a monk of Fleury, who wrote from 1096 to 1145. At the same time Calistus II regarded the book as authentic, and its diffusion revived the fervour of the pilgrimages to St. James of Compostella. In it is related an apparition of St. James to Charlemagne; the saint orders the emperor to follow with his army the direction of the Milky Way, which was thenceforth called the "Path of St. James". Gaston Paris considers that the first five chapters of the chronicle attributed to Turpin were written about the middle of the eleventh century by a monk of Compostella, and that the remainder were written between 1109 and 1119 by a monk of St. Andr  de Vienne. This second part has a real literary importance, for the monk who wrote it derived his inspiration from the *chansons de geste* and the epic traditions; hence there may be seen in this compilation a very ancient form of these traditions. The chronicle was translated into Latin and French as early as 1206 by the cleric Jehan, in the service of Renaud de Dammartin, Count of Boulogne. Editions according to various MSS. have been issued at Paris by Castets (1880) and at Lund by Wulff (1881).

GEORGES GOYAU

Tuscany

Tuscany

Tuscany, a division of central Italy, includes the provinces of Arezzo, Florence, Grosseto, Livorno, Massa and Carrara, Pisa, and Siena; area, 9304 sq. miles; population in 1911, 2,900,000.

Ecclesiastically it is divided into the provinces of Florence, with 6 suffragan dioceses; Pisa, with 4 suffragans; Siena, with 5 suffragans, the Archdiocese of Lucca; and the immediate Dioceses of Arezzo, Cortona, Montalcino, Montepulciano, and Pienza. The territory is essentially the same as that of ancient Etruria. In the sixth and fifth centuries B.C. the Etruscans were the dominant power in northern and central Italy, and brought Latium and Rome under their supremacy. Towards the end of the sixth century B.C. Rome regained its independence, and from the second half of the fifth century it began a struggle for supremacy. There were many changes of fortune during the long war, but it ended about 280 B.C. with the overthrow of Etruria. During the Empire Etruria formed the seventh region of Italy. After the fall of the Western Empire, Tuscany was ruled successively by the Germans under Odoacer, by the Ostrogoths, by the Eastern Empire through Narses, and by the Lombards. Tuscany, or Tuscia as it was called in the Middle Ages, became a part of the Frankish Empire. during the reign of Charlemagne and was formed a margravate, the margrave of which was also made the ruler several times of the Duchy of Spoleto and Camerino. In 1030 the margravate fell to Boniface, of the Canossa family. Boniface was also Duke of Spoleto, Count of Modena, Mantua, and Ferrara, and was the most powerful prince of the empire in Italy. He was followed by his wife Beatrice, first as regent for their minor son who died in 1055, then as regent for their daughter Matilda; in 1076 Beatrice died. Both she and her daughter were enthusiastic adherents of Gregory VII in his contest with the empire, After Matilda's death in 1115 her hereditary possessions were for a long time an object of strife between the papacy and the emperors.

During the years 1139-45 Tuscany was ruled by Margrave Hulderich, who was appointed by the Emperor Conrad III. Hulderich was followed by Guelf, brother of Henry the Lion. In 1195 the Emperor Henry VI gave the margravate in fief to his brother Philip. In 1209 Otto IV renounced in favour of the papacy all claim to Matilda's lands, as did also the Emperor Frederick II in the Golden Bull of Eger of 1213, but both firmly maintained the rights of the empire in the Tuscan cities. During the struggle between the popes and the emperors' and in the period following the fall of the Hohenstaufens when the throne was vacant, Florence, Siena, Pisa, Lucca, Arezzo, and other Tuscan cities attained constantly increasing independence and autonomy. They acquired control also of Matilda's patrimony, so far as it was situated in Tuscany. In the fourteenth and fifteenth centuries all Tuscany, except Siena and Lucca, came under the suzerainty of Florence and the Medici. In 1523 the Emperor Charles V made Alessandro Medici hereditary Duke of Florence. The last Tuscan towns that still enjoyed independence were acquired by Alessandro's successor Cosimo I (1537-74) partly by cunning and bribery, partly with Spanish aid by force of arms. In 1557 Philip II, who required Cosimo's aid against the pope, granted him Siena which in 1555 had surrendered to the emperor. Only a small part of Sieneese territory remained Spanish as the *Stato degli presidi*. Thus the Medici acquired the whole of Tuscany, and in 1569 the pope made Cosimo Grand Duke of Tuscany. Although at the beginning of Cosimo's reign there were several conspiracies, especially by the exiled families, the *Fuorisciti*, the Florentines gradually became accustomed to the absolute government of the ruler. Cosimo had created a well-ordered state out of the chaos existing previously, and had established this state on the foundation of justice, equality of all citizens, good financial

administration, and sufficient military strength. Art, literature, and learning also enjoyed a new era of prosperity during his reign. After long negotiations his son Francesco I (1574-87) received in 1576 from the Emperor Maximilian the confirmation of the grand ducal title which had been refused his father. In his foreign policy Francesco was dependent on the Habsburg dynasty. During his weak reign the power was in the hands of women and favourites, and the corruption of the nobility and officials gained ground again, while the discontent of the common people was increased by heavy taxes. After the death of his first wife the grand duke married his mistress, the Venetian Bianca Capello. As he had only daughters, one of whom was the French queen, Maria de Medici, and the attempt to substitute an illegitimate son failed, he was followed by his brother Cardinal Ferdinand (1587-1605, who has been accused without any historical proof of poisoning his brother and sister-in-law.

In foreign policy Ferdinand made himself independent of the emperor and Spain and as an opponent of the preponderance of the Habsburgs supported the French King Henry IV. Henry's return to the Catholic Church was largely due to Ferdinand's influence. Ferdinand benefited his duchy by an excellent administration and large public works, e.g. the draining of the Mianatales and the Maremma of Siena, the construction of the port of Leghorn, etc. He re-established public safety by repressing brigandage. In 1589 he resigned the cardinalate with the consent of Sixtus V, and married Christine, daughter of Henry III of France. His relations with the papacy were almost always of the best; he promoted the reform of the Tuscan monasteries and the execution of the decrees of the Council of Trent. His son Cosimo II (1609-21) married Margareta, sister of the Emperor Ferdinand II. Cosimo II ruled in the same spirit as his father and raised the prosperity of the country to a height never before attained. He was succeeded by a minor son of eleven years, Ferdinand II (1621-70), the regent being the boy's mother. Margareta's weakness led to the loss of Tuscany's right to the Duchy of Urbino, which fell vacant, and which Pope Urban VII took as an unoccupied fief of the Church. From 1628 Ferdinand ruled independently; to the disadvantage of his country he formed a close union with the Habsburg dynasty which involved him in a number of Italian wars. These wars, together with pestilence, were most disastrous to the country. Cosimo III (1670-1723) brought the country to the brink of ruin by his unlucky policy and his extravagance. His autocratic methods, inconsistency, and preposterous measures in internal affairs place upon him the greater part of the responsibility for the extreme arbitrariness that developed among the state officials, especially among those of the judiciary. Although he sought to increase the importance of the Church, yet he damaged it by using the clergy for police purposes, proceeded against heretics with undue severity, and sought to aid the conversion of non-Catholics and Jews by all means, even, very material ones. During the War of the Spanish Succession the grand duke desired to remain neutral, although he had accepted Siena in fief once more from Philip V. In this era the land was ravaged by pestilence, and the war-taxes and forced contributions levied on it by the imperial generals completely destroyed its prosperity. Neither of Cosimo's two sons had male heirs, and finally he obstinately pursued the plan, although without success, to transfer the succession to his daughter. Before this, however, the powers had settled in the Peace of Utrecht that when the Medici

were extinct the succession to Tuscany was to fall to the Spanish Bourbons. Cosimo III was followed by his second son Giovan Gastone (1723-37), who permitted the country to be governed by his unscrupulous chamberlain, Giuliano Dami. When he died the Medici dynasty ended.

In accordance with the Treaty of Vienna of 1735 Francis, Duke of Lorraine, who had married Maria Theresa in 1736, became grand duke (1737-65) instead of the Spanish Bourbons. Francis Joseph garrisoned the country with Austrian troops and transferred its administration to imperial councillors. As Tuscany now became an Austrian territory, belonging as inheritance to the second son, Tuscany was more or less dependent upon Vienna. However, the country once more greatly advanced in economic prosperity, especially during the reign of Leopold I (1765-90), who, like his brother the Emperor Joseph I, was full of zeal for reform, but who went about it more slowly and cautiously. In 1782 Leopold suppressed the Inquisition, reduced the possessions of the Church, suppressed numerous monasteries, and interfered in purely internal ecclesiastical matters for the benefit of the Jansenists. After his election as emperor he was succeeded in 1790 by his second son, Ferdinand III, who ruled as his father had done. During the French Revolution Ferdinand lost his duchy in 1789 and 1800; it was given to Duke Louis of Parma on 1 October, under the name of the Kingdom of Etruria. In 1807 Tuscany was united directly with the French Empire, and Napoleon made his sister Eliza Baccocchi its administrator with the title of grand duchess. After Napoleon's overthrow the Congress of Vienna gave Tuscany again to Ferdinand and added to it Elba, Piombino, and the *Stato degli presidi*. A number of the monasteries suppressed by the French were re-established by the Concordat of 1815 but otherwise the government was influenced by the principles of Josephinism in its relations with the Catholic Church. When the efforts of the Italian secret societies for the formation of a united national state spread to Tuscany, Ferdinand formed a closer union with Austria, and the Tuscan troops were placed under Austrian officers as preparation for the breaking-out of war. The administration of his son Leopold II (1824-60) was long considered the most liberal in Italy, although he reigned as an absolute sovereign. The Concordat of 1850 also gave the Church greater liberty. Notwithstanding the economic and intellectual growth which the land enjoyed, the intrigues of the secret societies found the country fruitful soil, for the rulers were always regarded as foreigners, and the connection they formed with Austria made them unpopular.

In 1847 a state council was established; on 15 Feb., 1848, a constitution was issued, and on 26 June was opened. Notwithstanding this, the sedition against the dynasty increased, and in August there were street fights at Leghorn in which the troops proved untrustworthy. Although Leopold had called a democratic ministry in October, with Guerrazzi and Montanelli at its head, and had taken part in the Piedmontese war against Austria, yet the Republicans forced him to flee from the country and go to Gaeta in Feb., 1849. A provisional republican government was established at Florence; this before long was forced to give way to an opposing movement of moderated Liberalism. After this by the aid of Austria Leopold was able in July, 1849, to return. In 1852 he suppressed the constitution issued in 1848 and governed as an absolute ruler, although with caution and moderation. However, the suppression of the constitution and the fact that up to 1855 an Austrian army of occupation remained in the country made him greatly disliked. When in 1859 war was

begun between Sardinia-Piedmont and Austria, and Leopold became the confederate of Austria, a fresh revolution broke out which forced him to leave. For the period of the war Victor Emmanuel occupied the country. After the Peace of Villa Franca had restored Tuscany to Leopold, the latter abdicated in favour of his son Ferdinand IV. On 16 Aug., 1859, a national assembly declared the deposition of the dynasty, and a second assembly (12 March, 1860) voted for annexation to Piedmont, officially proclaimed on 22 March. Since then Tuscany has been a part of the Kingdom of Italy, whose capital was Florence from 1865 to 1871.

JOSEPH LINS

Tuy

Tuy

(Tudensis.)

Suffragan diocese of the Archdiocese of Santiago, comprises the civil provinces of Orense and Pontevedra, is bounded on the north by Pontevedra, on the east by Orense, on the south by Portugal, and on the west by the Atlantic Ocean. The city has a population of 3000, and is of very ancient origin. Ptolemy calls it Toudai and attributes its foundation to Diomedes, son of Tydeus (just as the foundation of Lisbon is attributed to Ulysses). During the Roman period it belonged to the *conventus juridicus* or judicial district of Braga. The city seems to have been at first situated on the top of Mount Alhoya whence it was moved to its base, where it was in the time of the Goths. When King Egica shared the government with his son Wittiza he made him live at Tuy, probably at the site known as *Pazos de Reyes* (palaces of the kings). The See of Tuy is very ancient; one of the four bishops of Galicia at the first Council of Braga (561) was Bishop of Tuy. The first historically known bishop was Anila who attended the second Council of Braga (572); he signed as suffragan of Lugo. Neuphilius lived under the Arian King Leovigild, by whom he was exiled and the Arian Gardingus put in his place. Gardingus abjured his heresy at the third Council of Toledo. Anastasius was present at the fourth and sixth Councils of Toledo; Adimirus at the seventh; and Beatus sent

the cleric Victorinus to represent him at the eighth. Genetivus was present at the third Council of Braga (675) as a suffragan of Braga, and also at the twelfth Council of Toledo. Oppa was present at the thirteenth, and Adelphius at the fifteenth.

Tuy fell into the hands of the Mahommedans, but was not entirely destroyed as it is numbered among the cities reconquered by Alfonso I, but not recolonized until the time of Ordono I. The exiled Bishop of Tuy took refuge in Iria (Compostella), and a parish was assigned to him for his support. The first known Bishop of Tuy after the Saracen invasion is Diego (890-901), present at the consecration of the Church of St. James the Apostle (899), also at the Council of Oviedo in which this see was raised to the rank of a metropolitan (900). Hermoigius founded the monastery of San Cristóbal of Labrugia, resided in Tuy, and in 915 began the reconstruction of the cathedral. At the battle of Valdejunquera he was made prisoner by the Arabs and taken to Cordova where he was forced to leave as a hostage his nephew, St. Pelagius, a child of thirteen. The latter suffered martyrdom in defence of his chastity; his relics were transferred to Oviedo and he was declared the patron of Tuy. Naustianus (926) retired to the monastery of Labrugia to avoid the assaults of the Norsemen who had come up as far as Tuy along the River Miño. His successor, Vimaranus (937-42), retired to the monastery Rivas de Sil, as did the next bishop, Viliulfus (952-70). The Norsemen led by Olaf were encamped at different times at Tuy and ravaged it cruelly (1014), on which account Alfonso V placed it under the jurisdiction of the Bishop of Compostella. Bishop Alfonso I and his priests had been made captive, and thereafter, until the time of Doña Urraca, a sister of Alfonso VI, a period of forty-seven years, the See of Tuy was vacant. Doña Urraca re-established it and made Jorge (Georgius) bishop. He took up his residence in the monastery of San Bartolomé, whose monks were canons of the cathedral. The decree of the restoration of the see is dated 13 Jan., 1071. Bishop Adericus (1072-95) succeeded Jorge. The bishops, by concession of Raymond of Burgundy and Alfonso VII, were lords of the city, and Bishop Alfonso II began building the new cathedral, which was finished a hundred years later by Esteban Egea (1218-39). In the time of Bishop Pelayo Meléndez (1131-55) the canons adopted the Rule of St. Augustine. Among the bishops who deserve special mention are: Lucas de Tuy, called "El Tudense", annalist of Doña Berenguela, to whom we owe the compilation known as the "Cronicón de España"; Juan Fernandez de Sotomayor, councillor of Queen Doña Mariá de Molina, who was present at the Council of Vienna (1312); and Prudencio de Sandoval, a Benedictine, celebrated annalist of Charles V.

The Western Schism caused a division in the ranks of the clergy of Tuy, the bishop giving allegiance to the Avignon pope, others to the pope at Rome, whom Portugal also obeyed. Martin V commanded the latter to recognize the legitimate bishop, and when some resisted this order their churches were allowed to be governed by vicars residing in Portugal (1441). The cathedral of the diocese, which is dedicated to the Blessed Virgin, resembles a medieval fortress, as it is built on the crown of the ancient castle fort (*Castellum Tude*). It belongs to the early Gothic period and, on account of its height, the importance of its side naves, its clerestory (now walled up, but preserving its ancient arches and columns), the interior is well worthy of note. The ground plan is that of a Latin cross (the four arms being extremely short) with four naves, those on the side terminating in

the apse. The chapel of San Telmo (San Pedro Gonzalez), built by Bishop Diego de Torquemada (1564-82) who transferred to it the relics of the saint, is worthy of note. Between the altar of the Visitation and that of the Seven Dolours is the unique sepulchre of Lope de Sarmiento (d. 1607). To the cathedral is attached a handsome Gothic cloister. The churches of the old Dominican and Franciscan convents have been converted into parish churches, the convent of Santo Domingo being used for a barracks and that of San Francisco for primary and secondary schools. Tuy has a fine hospital (built by Bishop Rodríguez Castañón) and a home for the aged in charge of the Little Sisters of the Poor. The seminary, which is dedicated to St. Francis of Assisi and the Immaculate Conception, was founded in 1850 by Bishop Francisco Garcia Casarrubios y Melgar. Among the illustrious men of the diocese may be mentioned St. Teutonium, the humanist Alvaro Cadaval y Sotomayor, and Francisco Avila y La Creva, author of a history of the diocese.

RAMÓN RUIZ AMADO

St. John Twenge

St. John Twenge

Last English saint canonized, canon regular, Prior of St. Mary's, Bridlington, b. near the town, 1319; d. at Bridlington, 1379. He was of the Yorkshire family Twenge, which family in Reformation days supplied two priest-martyrs and was also instrumental in establishing the Institute of the Blessed Virgin Mary (q. v.) at Bar Convent, York. John completed his studies at Oxford and then entered the Priory of Bridlington. Charged successively with various offices in the community, he was finally despite his reluctance elected prior, which office he held until his death. Even in his lifetime he enjoyed a reputation for great holiness and for miraculous powers. On one occasion he changed water into wine. On another, five seamen from Hartlepool in danger of shipwreck called upon God in the name of His servant, John of Bridlington, whereupon the prior himself appeared to them in his canonical habit and brought them safely to shore. After his death the fame of the miracles wrought by his intercession spread rapidly through the land. Archbishop Neville charged his suffragans and others to take evidence with a view to his canonization, 26 July, 1386; and the same prelate assisted by the Bishops of Durham and Carlisle officiated at a solemn translation of his body, 11 March, 1404, *de mandato Domini Papae*. This pope, Boniface IX, shortly afterwards canonized him. The fact has been doubted and disputed; but the original Bull was recently unearthed in the Vatican archives by Mr. T.A. Twemlow, who was engaged in research work there for the British Government. St. John was especially invoked by women in cases of difficult confinement. At the Reformation the people besought the royal plunderer to spare the magnificent shrine of the saint, but in vain; it was destroyed in 1537. The splendid nave of the church, restored in 1857, is all that now remains of Bridlington Priory. The saint's feast is observed by the canons regular on 9 October.

VINCENT SCULLY

Twiketal of Croyland

Twiketal of Croyland

(THURCYTEL, TURKETUL).

Died July, 975. He was a cleric of royal descent, who is said to have acted as chancellor to Kings Athelstan (d. 940), Edmund (d. 946), and Edred (d. 955), but as this statement rests on the authority of the pseudo-Ingulf, it must be received with caution. Leaving the world in 946 he became a monk of Croyland Abbey, which had been devastated by the Danes and lay in a ruinous and destitute state. He endowed it with six of his own manors, and, being elected abbot, restored the house to a flourishing condition. He was a friend both of St. Dunstan and St. Ethelwold of Winchester, and like them a reformer. The real authority for his life is Ordericus Vitalis; for no reliance can be placed on the long and fictitious account in the fourteenth-century forgery which is published under the name of Ingulf of Croyland (q.v.).

EDWIN BURTON

Tyana

Tyana

A titular metropolitan see of Cappadocia Prima. The city must first have been called Thoana, because Thoas, a Thracian king, was its founder (Arrianus, "Periplus Ponti Euxini", vi); it was in Cappadocia, but at the foot of Taurus and near the Cilician Gates (Strabo, XII, 537; XIII, 587). The surrounding plain received the name of Tyanitis. There in the first century A.D. was born the celebrated magician Apollonius. Under Caracalla the city became the "Antoniana colonia Tyana". After having taken sides with Queen Zenobia of Palmyra it was captured by Aurelian in 272, who would not allow his soldiers to pillage it (Homo, "Essai sur le règne de l'Empereur Aurélien", 90-92). In 371 Valens created a second province of Cappadocia, of which Tyana became the metropolis, which aroused a violent controversy between Anthimus, Bishop of Tyana, and St. Basil, Bishop of Caesarea, each of whom wished to have as many suffragan sees as possible. About 640 Tyana had three, and it was the same in the tenth century (Gelzer, "Ungedruckte . . . Texte der Notitiae episcopatum", 538, 554). Le Quien (*Oriens christ.*, I, 395- 402) mentions 28 bishops of Tyana, among whom were Euty chius, at Nice in 325; Anthimus, the rival of St. Basil; Aetherius, at Constantinople in 381; Theodore, the friend of St. John Chrysostom; Eutherius, the partisan of Nestorius, deposed and exiled in 431; Cyriacus, a Severian Monophysite. In May, 1359, Tyana still

had a metropolitan (Mikelosich and Müller, "Acta patriarchatus Constantinopolitani", I, 505); in 1360 the metropolitan of Caesarea secured the administration of it (op. cit., 537). Thenceforth the see was titular. The ruins of Tyana are at Kilisse-Hissar, three miles south of Nigde in the vilayet of Koniah; there are remains of a Roman aqueduct and of sepulchral grottoes.

S. VAILHÉ

St. Tychicus

St. Tychicus

A disciple of St. Paul and his constant companion. He was a native of the Roman province of Asia (Acts, xx, 4), born, probably, at Ephesus. About his conversion nothing is known. He appears as a companion of St. Paul in his third missionary journey from Corinth through Macedonia and Asia Minor to Jerusalem. He shared the Apostle's first Roman captivity and was sent to Asia as the bearer of letters to the Colossians and Ephesians (Eph., vi, 21; Col, iv, 7, 8). According to Tit., iii, 12, Paul intended to send Tychicus or Artemas to Crete to supply the place of Titus. It seems, however, that Artemas was sent, for during the second captivity of St. Paul at Rome Tychicus was sent thence to Ephesus (II Tim., iv, 12). Of the subsequent career of Tychicus nothing certain is known. Several cities claim him as their bishop. The Menology of Basil Porphyrogenitus, which commemorates him on 9 April, makes him Bishop of Colophon and successor to Sosthenes. He is also said to have been appointed Bishop of Chalcedon by St. Andrew the Apostle (Lipsius, "Apokryphe Apostelgesch.", Brunswick, 1883, 579). He is also called bishop of Neapolis in Cyprus (Le Quien, "Oriens christ.", Paris, 1740, I, 125; II, 1061). Some martyrologies make him a deacon, while the Roman Martyrology places his commemoration at Paphos in Cyprus. His feast is kept on 29 April.

FRANCIS MERSHMAN

Tynemouth Priory

Tynemouth Priory

Tynemouth Priory, on the east coast of Northumberland, England, occupied the site of an earlier Saxon church built first in wood, then in stone, in the seventh century, and famous as the burial-place of St. Oswin, king and martyr. Plundered and burnt several times by the Danes, and frequently rebuilt, it was granted in 1074 to the Benedictine monks of Yarrow, and, with them, annexed to Durham Abbey. In the reign of William Rufus, Robert de Mowbray, Earl of Northumberland, re-peopled Tynemouth with monks from St. Albans, and it became a cell of that abbey, remaining so until the Dissolution. The Norman Church of Sts. Mary and Oswin was built by Earl Robert about 1100, and 120 years later was greatly enlarged, a choir 135 feet long with aisles being added beyond the Norman apse, while the nave was also lengthened. East of the choir and chancel was added about 1320 an exquisite Lady-chapel, probably built by the Percy family, which had lately

acquired the great Northumberland estates of the de Vescis. The first prior of the re-founded monastery was Remigius, and the last was Robert Blakeney, who on 12 Jan., 1539, surrendered the priory to Henry VIII, he himself, with fifteen monks and four novices, signing the deed of surrender, which is still extant, with the beautiful seal of the monastery appended to it. A pension of £80 was granted to Blakeney, and small pittances to the monks; and the priory site and buildings were bestowed first on Sir Thomas Hilton, and later, under Edward VI, on the Duke of Northumberland. Colonel Villars, governor of Tynemouth Castle under William III and Anne, had a lease of the priory, and did irreparable damage to the remaining buildings. Practically nothing is now left except the roofless chancel, one of the most beautiful fragments of thirteenth-century architecture in England.

D.O. HUNTER-BLAIR

Types in Scripture

Types in Scripture

Types, though denoted by the Greek word *typoi*, are not coextensive with the meaning of this word. It signifies in John 20:25, the "print" of the nails in the risen Lord's hands; in Romans 6:17, the "form" of the Christian doctrine; in Acts 7:43, "figures" formed by a blow or impression, "images" of idols made for adoration; in Acts 7:44, and Hebrews 8:5, the "form", or "pattern", according to which something is to be made; in Philippians 3:17, I Timothy 4:12, etc., the "model" or "example" of conduct. It is to be noted that, in all instances in which the word *typos* indicates the similarity between something future and something past in either the physical or the moral order, this similarity is intended, and not a matter of chance resemblance. It is, therefore, antecedently probable that in another series of texts, e.g. Romans 5:14, in which a type is a person or thing prefiguring a future person or thing, the connection between the two terms is intended by him who foresees and arranges the course of history. The types in the Bible are limited to types understood in this sense of the word. But while they do not extend to all the various meanings of the word *typos*, they are not restricted to its actual occurrence. In Galatians 4:24, for instance, the type and its antitype are represented as *allegoroumena*, "said by an allegory"; in Colossians 2:17, the type is said to be *skia ton mellonton* "a shadow of things to come"; in Hebrews 9:9, it is called *parabole*, a "parable" of its antitype. But the definition of the type is verified in all these cases: a person, a thing, or an action, having its own independent and absolute existence, but at the same time intended by God to prefigure a future person, thing, or action.

I. NATURAL BASIS OF TYPES

It has been pointed out that in the various degrees of nature the higher forms repeat the laws of the lower forms in a clearer and more perfect way. In history, too, the past and present often resemble each other to such an extent that some writers regard it as an axiom that history repeats itself. They point to Nabuchodonosor and Napoleon, to the fleet of Xerxes and the armada of Philip. After

Plutarch has informed his reader (*De fortuna Alexandri*, x) that among all the expressions of Homer the words "both a good king, and an excellent fighter in war" pleased Alexander most, he adds that in this verse Homer seems not merely to celebrate the greatness of Agamemnon but also to prophesy that of Alexander. What is true of nature and history in general is especially applicable to the economy of salvation; the state of nature was superseded and surpassed in perfection by the Mosaic Law, and the Mosaic Law yielded similarly to the Christian dispensation.

II. FIGURISTS

In the two earlier periods of Revelation there is no lack of men, things, and actions resembling those of the Christian economy; besides, the New Testament expressly declares that some of them typify their respective resemblances in the new dispensation. Hence the question arises whether one is justified in affirming to be a type anything which is not affirmed to be so in Revelation, either by direct statement or manifest implication. Witsius Cocceius (d. 1669) were of opinion that the types actually indicated in Revelation were to be considered rather as examples for our guidance in the interpretation of others than as supplying us with an entire list of all that were designed for this purpose. Cocceius and his followers contended that every event in Old Testament history which had any formal resemblance to something in the New was to be regarded as typical. This view opened the door to frivolous and absurd interpretation by the followers of the Cocceian and Witsian school. Cramer, for instance, in his "*De ara exteriori*" (xii, 1) considers the altar of holocausts as a type of Christ, and then asks the question, "*quadratus quomodo Christus fuerit*"; van Till (*De tabernaculo Mosis*, xxv) presents the snuffers of the sacred candlestick as a type of sanctified reason which destroys our daily occurring errors. Hulsius, d'Outrein, Deusing, and Vitringa (d. 1722) belong to the same school.

III. PIETISTS

In the Würtemberg school of pietism the types of the Old Testament were no longer considered an isolated phenomena, intended to instruct and confirm in the faith, but were regarded as members of an organic development of the salvific economy in which each earlier stage prefigures the subsequent. Bengel points out (*Gnomon*, preface, 13) that as there is symmetry in God's works down to the tiniest blade of grass, so there is a connection in God's works, even in the most insignificant ones. In his "*Ordo temporum*" (ix, 13) the same writer insists on the unity of design, which makes one work out of all the books of Scripture, the source of all times, and has measured the past and the future alike. One of Bengel's disciples, P. M. Hahn, compares (*Theologische Schriften*, ii, 9) the development of revelation to the growth of a flower. The formative power hidden in the seed manifests itself more and more by the addition of each pair of leaves. This view was followed also by Ph. Hiller in his work ("*Neues System aller Vorbilder Christi im Alten Testament*" (1758), and by Crusius in his treatise "*Hypomnemata theol. propheticae*" (1764-78). The last-named writer is of the opinion that the figurative development of God's kingdom changes

into an historical growth at the time of David; he considers the Kingdom of David as the embryo of the Kingdom of Christ.

IV. MODERATE USE OF TYPES

Owing to their lack of a clear distinction between type and allegory, Martin Luther and Melancthon did not esteem the typical sense of Scripture at its true value. Andreas Rivetus attempted to draw a line of distinction between type and allegory (Praef. ad ps., 45), and Gerhard (Loci, II, 67) closely adhered to his definition. But practically types were used for parenetic rather than theological purposes by Baldwin (Passio Christi typica; Adventus Christi typicus), Bacmeister (Explicatio tyorum V. T. Christum explicantium), and other writers of this school. They would have had more confidence in the typical sense of Scripture had they followed the view of Bishops von Mildert and Marsh. For these writers did not leave the typical sense to the imagination of the individual expositor, but rigidly required competent evidence of the Divine intention that a person or an event was to prefigure another person or event. Even in the Bible they distinguish between examples that are used for the sake of illustration only and those when there is a manifest typical relationship and connection. It is true that Calovius (Sytem. theol., I, 663) and Aug. Pfeifer (Thes. herm., iii, can. 10) insist on admitting only one sense, the literal, in Scripture; but as the literal sense clearly indicates several types, writers like Buddeus, Rambach, and Pfaff point out that such an insistence on the literal sense differs only in words from the admission of a limited typical sense. Rambach goes further than this; in order to increase the parenetic force of Scripture, he attributes to each word as wide a meaning and as much importance as the nature of the subject matter allows (Instit. herm., 319). The "Mysterium Christi et christianismi in fasciis typicis antiquitatum V.T." by Joachim Lange, "Jüdische Heiligthümer" by Lundius, and "Der Messias im A.T." by Schöttegen are other works in which the element of edification is chiefly kept in view.

V. SOCINIAN INFLUENCE

While in Cocceian and Lutheran circles typology flourished either unrestrictedly or within certain bounds, it began to be considered as a mere accommodation or as a subjective work of parallelizing a number of Scripture passages by the Socinians and by all those who failed to see the unity of God's work in our history of Revelation. Clericus, writing on Galatians 4:22, refers typology to a Jewish manner of interpreting Scripture. The derivation of the Mosaic worship from Egyptian and Oriental cults, as explained by Spencer, rendered void the typical sense advocated in the Epistle to the Hebrews. Hence, Henke considers typology as an exploded system; Semler (Versuch einer freieren theologischen Lehrart, 1777, p. 104), does not wish that types should be considered any longer as belonging to the true religion; Döderlein (Institutiones, 1779, n. 229) requires in a type not a mere resemblance, but also that it should have been expressly represented in the Old Testament as a figure of the future; moreover, he believes that at the time of Moses no one would have understood such figures. But how explain the fact that the Apostles and Christ Himself employed the typical sense of the Old Testament? They adapted themselves, we are told,

in their use of the Old Testament to the condition of the Jewish people, and to the hermeneutical principles prevalent in the Jewish schools. It followed, therefore, that the use of the typical sense in the New Testament is nothing but Rabbinic trifling. This point of view is followed in Döpke's "Hermeneutik der neutestamentlichen Schriftsteller" (Part I, 1829), and also in the exegetical works of Ammon, Fritzsche, Meyer, Rückert, and others.

VI. REACTION AGAINST THE SOCINIAN VIEW

On the other hand, there was no lack of defenders of the typical sense of Scripture. Michaelis (*Entwurf der typischen Gottesgelährtheit*, 1752) points out that, even if we follow Spencer's view of the origin of the Mosaic worship, borrowed rites too may have a symbolic meaning; but the writer's blindness to the distinction between type and symbol is the vulnerable side of his treatise. Blasche shows himself a stout adherent of typology in his "Commentary on the Epistle to the Hebrews" (1782). Herder in his thirty-ninth letter on the study of theology (1780) believes that, though each stone of a building does not see either itself or the whole building, it would be narrow-mindedness on our part to pretend that we do not see more than any given part can see; it is only in the light of historic development that we can appreciate the analogy of the whole to each of its parts. Rau (*Freimüthige Untersuchung über die Typologie*, 1784) reverts to a study of Spencer's derivation of the Mosaic worship; and grants that the Jewish rites may be symbols of the New Testament, but denies that they are types in the stricter sense of the word.

VII. REVIVAL OF SYMBOLISM AND PIETISM

At the beginning of the nineteenth century there was a revival of taste for symbolism, and of an appreciation of Bengel's typicism. Starting from symbolism, de Wette ("Beitrag zur Characteristic des Hebraismus" in "Studien von Daub und Creuzer", 1807, III, 244) concludes that the whole of the Old Testament is one great prophecy, one great type of what was to come, and what has come to pass. F. von Meyer and Stier wrote in the same strain, but they are men of less note. Influenced by Bengel's view, Menken explained in a typical sense Daniel 2 (1802-1809), the brazen serpent (1812), Hebrews 8-10 (1821); from the same point of view, Beck wrote his "Bemerkungen über messianische Weissagungen" (*Tübinger Zeitschrift für Theologie*, 1831, part 3), and also explained Romans 9 (*Christliche Lehrwissenschaft*, I, 1833, p. 360). The same principle underlies the view of Biblical history as presented by Hofmann, Franz Delitzsch, Kurtz, and Auberlen. Ed. Böhmer in his treatise "Zur biblischen Typik" (1855) adopts a similar point of view: One idea prevails through the whole of creation; in nature the lower grades are types of the higher; the material order is a type of the spiritual; and man is the antitype of universal nature. The same law prevails in history; for the earlier age is always the type of the subsequent. Thus the Kingdom of God, which is the climax of Creation, has its types in nature and its types in history.

VIII. RATIONALISTIC CONTENTION AND CATHOLIC DOCTRINE

Needless to say rationalistic writers repudiate the typical sense of Sacred Scripture. The Catholic doctrine as to the nature of the typical sense, its existence, its extent, its theological value, has been stated in EXEGESIS. -- (2).

A.J. MAAS

Tyrannicide

Tyrannicide

Tyrannicide literally is the killing of a tyrant, and usually is taken to mean the killing of a tyrant by a private person for the common good. There are two classes of tyrants whose circumstances are widely apart -- tyrants by usurpation and tyrants by oppression. A tyrant by usurpation (*tyrannus in titula*) is one who unjustly displaces or attempts to displace the legitimate supreme ruler, and he can be considered in the act of usurpation or in subsequent peaceful possession of the supreme power. A tyrant by oppression (*tyrannus in regimine*) is a supreme ruler who uses his power arbitrarily and oppressively.

I. TYRANT BY USURPATION

While actually attacking the powers that be, a tyrant by usurpation is a traitor acting against the common weal, and, like any other criminal, may be put to death by legitimate authority. If possible, the legitimate authority must use the ordinary forms of law in condemning the tyrant to death, but if this is not possible, it can proceed informally and grant individuals a mandate to inflict the capital punishment. St. Thomas (In II Sent., d. XLIV, Q. ii, a. 2), Suarez (Def. fidei, VI, iv, 7), and the majority of authorized theologians say that private individuals have a tacit mandate from legitimate authority to kill the usurper when no other means of ridding the community of the tyrant are available. Some, however, e.g. Crolley (De justitia, III, 207), hold that an express mandate is needed before a private person can take on himself the office of executioner of the usurping tyrant. All authorities hold that a private individual as such, without an express or tacit mandate from authority, may not lawfully kill an usurper unless he is actually his unjust aggressor. Moreover, it sometimes happens that an usurper is accorded the rights of a belligerent, and then a private individual, who is a non-combatant, is excluded by international law from the category of those to whom authority is given to kill the tyrant (Crolley, loc. cit.).

If an usurper has already established his rule and peacefully reigns, until the prescriptive period has run its course the legitimate ruler can lawfully expel him by force if he is able to do so, and can punish him with death for his offence. If, however, it is out of the legitimate ruler's power to re-establish his own authority, there is nothing for it but to acquiesce in the actual state of affairs and to refrain from merging the community in the miseries of useless warfare. In these circumstances, subjects are bound to obey the just laws of the realm, and can lawfully take an oath of obedience to the *de facto* ruler, if the oath is not of such a nature as to acknowledge the legitimacy of the usurper's authority (cf. Brief of Pius VIII, 29 Sept., 1830). This teaching is altogether different from

the view of those who put forward the doctrine of accomplished facts, as it has come to be called, and who maintain that the actual peaceful possessor of the ruling authority is also legitimate ruler. This is nothing more or less than the glorification of successful robbery.

II. TYRANT BY OPPRESSION

Looking on a tyrant by oppression as a public enemy, many authorities claimed for his subjects the right of putting him to death in defence of the common good. Amongst these were John of Salisbury in the twelfth century (*Polycraticus* III, 15; IV, 1; VIII, 17), and John Parvus (*Jehan Petit*) in the fifteenth century. The Council of Constance (1415) condemned as contrary to faith and morals the following proposition:

"Any vassal or subject can lawfully and meritoriously kill, and ought to kill, any tyrant. He may even, for this purpose, avail himself of ambushes, and wily expressions of affection or of adulation, notwithstanding any oath or pact imposed upon him by the tyrant, and without waiting for the sentence or order of any judge."
(Session XV)

Subsequently a few Catholics defended, with many limitations and safeguards, the right of subjects to kill a tyrannical ruler. Foremost amongst these was the Spanish Jesuit Mariana. In his book, "*De rege et regis institutione*" (Toledo, 1599), he held that people ought to bear with a tyrant as long as possible, and to take action only when his oppression surpassed all bounds. They ought to come together and give him a warning; this being of no avail they ought to declare him a public enemy and put him to death. If no public judgment could be given, and if the people were unanimous, any subject might, if possible, kill him by open, but not by secret means. The book was dedicated to Philip III of Spain and was written at the request of his tutor Garcias de Loaysa, who afterwards became Bishop of Toledo. It was published at Toledo in the printing-office of Pedro Rodrigo, printer to the king, with the approbation of Pedro de Oñ, Provincial of the Mercedarians of Madrid, and with the permission of Stephen Hojeda, visitor of the Society of Jesus in the Province of Toledo (*see* JUAN MARIANA). Most unfairly the Jesuit Order has been blamed for the teaching of Mariana. As a matter of fact, Mariana stated that his teaching on tyrannicide was his personal opinion, and immediately on the publication of the book the Jesuit General Aquaviva ordered that it be corrected. He also on 6 July, 1610, forbade any member of the order to teach publicly or privately that it is lawful to attempt the life of a tyrant.

Though Catholic doctrine condemns tyrannicide as opposed to the natural law, formerly great theologians of the Church like St. Thomas (II-II, Q. xlii, a.2), Suarez (*Def. fidei*, VI, iv, 15), and Bañez, O.P. (*De justitia et jure*, Q. lxiv, a. 3), permitted rebellion against oppressive rulers when the tyranny had become extreme and when no other means of safety were available. This merely carried to its logical conclusion the doctrine of the Middle Ages that the supreme ruling authority comes from God through the people for the public good. As the people immediately give sovereignty to the ruler, so the people can deprive him of his sovereignty when he has used his power

oppressively. Many authorities, e.g. Suarez (Def. fidei, VI, iv, 18), held that the State, but not private persons, could, if necessary, condemn the tyrant to death. In recent times Catholic authors, for the most part, deny that subjects have the right to rebel against and depose an unjust ruler, except in the case when the ruler was appointed under the condition that he would lose his power if he abused it. In proof of this teaching they appeal to the Syllabus of Pius IX, in which this proposition is condemned: "It is lawful to refuse obedience to legitimate princes, and even to rebel" (prop. 63). While denying the right of rebellion in the strict sense whose direct object is the deposition of the tyrannical ruler, many Catholic writers, such as Croll, Cathrein, de Bie, Zigliara, admit the right of subjects not only to adopt an attitude of passive resistance against unjust laws, but also in extreme cases to assume a state of active defensive resistance against the actual aggression of a legitimate, but oppressive ruler.

Many of the Reformers were more or less in favour of tyrannicide. Luther held that the whole community could condemn the tyrant to death (*Sämmtliche Werke*, LXII, Frankfurt-on-the-Main and Erlangen, 1854, 201, 206). Melancthon said that the killing of a tyrant is the most agreeable offering that man can make to God (Corp. Ref., III, Halle, 1836, 1076). The Calvinist writer styled Junius Brutus held that individual subjects have no right to kill a legitimate tyrant, but that resistance must be authorized by a representative council of the people (*Vindiciae contra Tyrannos*, p. 45). John Knox affirmed that it was the duty of the nobility, judges, rulers, and people of England to condemn Queen Mary to death (Appellation).

J.M. HARTY

Tyre

Tyre

(TYRUS.)

Melchite archdiocese and Maronite diocese. The city is called in Hebrew, *Zor*, and in Arabic, *Sour*, from two words meaning rock. It is very ancient. If we are to believe priests of Melkart quoted by Herodotus (II, 44) it was founded in the twenty-eighth century B.C. Isaias himself (xxiii, 7) says that its origin was ancient. According to the authors cited by Josephus (*Ant. jud.*, VIII, iii, 1) and according to Justin (*Hist.*, xviii, 3) its foundation dates from the thirteenth century B.C., but this is manifestly erroneous, for Tyre is mentioned under the name of *Sour-ri* in the tablets of El-Amarna, between 1385 and 1368 B.C. (*Revue Biblique*, 1908, 511). King Abimelech was then reigning there independently, though his capital was much coveted by the Egyptians, who forced the Tyrians to ally themselves with their neighbours, especially the Philistines (see *Ecclus.*, xlvi, 21). Ancient writers, particularly Isaias (xxiii, 12), call Tyre "daughter of Sidon", that is, they make it a colony of the latter city. Despite objections which have been made to this, the statement is correct, and on its coins Sidon claims to be the mother of Hippo Regius, in Africa, of Tyre etc. It is true that in a short time the colony overshadowed the mother, but the inhabitants continued to call themselves Sidonians. On the other hand, it is impossible to state which of the two cities, Palaetyrus, on the

sea-coast, or Tyrus, built on a rocky island 1968 feet above the sea, existed first. It is generally held, however, that the continental preceded the insular city. The reference in Josue (xix, 29) is not exactly identified, but in the El-Amarna Letters the island is referred to, unless the Egyptians who occupied all the seaboard cities had not subjected it also to their dominion.

Tyre seems always to have had kings, like the other Chanaanite cities. It was its sovereigns who made it the "queen of the sea", as it loved to call itself, and its merchants nobles of the earth, as Isaias says (xxiii, 3-8). The city was very proud of its wealth and ships, which plied along the whole of the Mediterranean coast, in Africa as well as in Europe, and the pride of Tyre became almost as proverbial among the prophets of Israel as that of Moab. King Hiram was one of its greatest sovereigns. He sent to David the stone-cutters and carpenters to build his palace (II Kings, v, 11), and to Solomon Lebanon cedar and cypress wood for the construction of the Temple (III Kings, ix, 11; II Par., ii, 3 sq.). The architect and his master workmen were Tyrians. In return Solomon gave Hiram the district of Cabul (Chabul) in Galilee, which included twenty small cities, but the gift seems not to have been to the taste of the King of Tyre (III Kings, ix, 11-14). Nevertheless, the two kings were allies and their combined fleets left the ports of the Red Sea for Ophir and Tharsis to obtain gold (III Kings, ix, 26-28; x, 11 sq.; II Par., ix, 10, 21). Hiram accomplished great works in his capital. He united the two parts of the island hitherto separated by a canal which to a certain extent made them two cities, and besides he built a great aqueduct which brought the waters of Ras-el-Ain to the land.

Shortly afterwards court intrigues disturbed the city and gave rise to a bloody revolution. Phalia, an intruder, usurped the power; he was dethroned in turn by his brother Ithobael or Ethbael, high priest of Astarte, a goddess who, with the god Melkart, was much venerated in Tyre. It was Ethbael's daughter, Jezabel, who married Achab, King of Israel. Jezabel was undoubtedly a Tyrian princess; Menander in Josephus ("Ant. jud.", VIII, xiii, 2; "Contra Appionem", I, 18; also III Kings, xvi, 31) calls her father "King of the Sidonians", another allusion to the Sidonian origin of Tyre. In 814 B.C. a group of Tyrians went to the coast of Africa and founded Carthage, the most famous colony of Tyre. The very amicable relations of Tyrians and Jews did not last always; they waned especially when Tyre sold as slaves the Israelitish prisoners of war (Joel, iii, 4-8; Amos, I, 9). On the other hand, the luxury and corrupt morals which prevailed in the Phoenician city could not but have a baneful influence on the Jews of the tribe of Aser and other Israelites; so that the Prophets, such as Isaias (xxiii), Ezechiel (xxvi-xxix), Joel (iii, 4-8), and Amos (I, 9), never ceased to thunder against it and predict its ruin. Salmanasar, King of Assur, and Sargon besieged it in vain for five years after the fall of Samaria; although they cut the aqueduct of Hiram and compelled the people of Sidon and Palaetyrus to place their fleets at their service, that of the Tyrians completely vanquished them (Josephus, "Ant. Jud.", IX, xiv, 2). Sennacherib likewise attempted the siege in vain. Although paying him a light tribute, Tyre remained a powerful state with its own kings (Jer., xxv, 22; Ezech., xxvii and xxviii), and was enabled to develop its mercantile proclivities and attain the great prosperity spoken of by the prophets and all ancient writers. On his return from his expedition against Egypt, Asarhaddon, like his predecessors, blockaded Tyre, but the Tyrians, isolated on their rock, with

their powerful fleet and valiant mercenaries, laughed at all his efforts. After having received tribute from King Bael, Asarhaddon was compelled to retire. The same was true of Nabuchodonosor after a severe blockade lasting thirteen years. According to custom the Tyrians offered him a light tribute, and the honour of the proud sovereign was declared satisfied. Nevertheless, this long isolation greatly injured the Tyrians, for during this interval a portion of the commerce passed to Sidon and other Phoenician and Carthaginian peoples. Furthermore, the Tyrian colonies, which for thirteen years had broken all links of subjection to the mother country, were in no wise eager to resume the yoke. Finally, as King Ithobael had died during the siege, regents had assumed the authority (Josephus, "Contra App." I, 21) and caused many trouble, as did also the *dikastai*, or Suffetes, elected for seven years. The monarchy was subsequently restored.

As the domination had passed from the Chaldeans to the Persians, Tyre, a vassal or rather an ally of the former, readily assumed the same relations with the latter and continued to prosper. The Tyrians with their numerous ships assisted Xerxes against the Greeks, who moreover were their commercial rivals, and Darius against Alexander the Great. The King of Tyre himself fought in the Persian fleet. Tyre refused submission to the Macedonian hero, as well as authorization to sacrifice to the god Melkart, whose temple was on the island; Alexander, taking offence, determined to capture the island at any cost. The siege lasted seven months. While the fleets of the submissive Cypriots and Phoenicians blockaded the two ports at north and south, Alexander, with materials from Palaetyrus, which he had just destroyed, built an enormous causeway 1968 feet long by about 197 feet wide which connected the island with the continent. He then laid siege to the ramparts of the city which on one side reached a height of 150 feet. Tyre was captured in 332; 6000 of its defenders were beheaded, 2000 crucified, more than 30,000 women, children, and servants sold as slaves. Although Alexander razed the walls, the city was restored very quickly, since seventeen years later it held out for fourteen months against Antigonus, father of Demetrius Poliorcetes. From the power of Egypt, Tyre in 287 passed under the dominion of the Seleucids in 198 B.C., obtaining self-government from them in 126 B. c. This year begins the era special to Tyre. Augustus was the first to rob it of its liberty (Dion Cassius, LIV, 7), for by his command its coins ceased to bear the inscription "autonomous". Various monuments were erected during the Roman period. Herod the Great built a temple and adorned the public places. A colony under Septimius Severus, Tyre subsequently became the capital of Phoenicia; at the time of St. Jerome it was regarded as the richest and greatest commercial city of the province (Comment. in Ezech., xxvi, 6; xxvii, 1). Its factory of purple cloth was foremost in the empire. It was a curious fact that under one of the predecessors of Diocletian, Dorotheus, a learned priest of Antioch, the master of Eusebius of Caesarea, was appointed director without having to renounce his religion (Eusebius, "H. E.", VII, 32).

In A.D. 613 the Jews of Tyre formed a vast conspiracy against the Greek Empire, and subsequently ransomed from the troops of Chosroes numerous captive Christians in order to sacrifice them. In 638 the city fell into the hands of the Arabs. Baldwin I, King of Jerusalem, besieged it in vain from 29 Nov., 1111, till April, 1112. Baldwin II captured it, 27 June, 1124, after five months' siege and made it the seat of a countship. When the crusaders lost the Kingdom of Jerusalem in

1187 by the defeat of Tiberias, Tyre remained in the hands of the Franks and became one of their chief fortresses. There in 1210 John of Brienne was crowned king, and in 1225 his daughter Isabella was crowned queen. Tyre was captured in May, 1291, after the fall of Saint-Jean- d'Acre, by the Mussulmans, who completely destroyed it, and it was never wholly restored afterwards. Occupied by the Turks in 1516 it has always belonged to them, save for a brief appearance of the French in 1799. It is now a *caza* of the vilayet of Beirut. The city has 6500 inhabitants, of whom 4000 are Mussulmans of various races, 200 Latin Catholics, 350 Maronites, 1750 Melchite Catholics, 25 Protestants, and about 100 Jews. The Franciscans, established since 1866, have a parochial church and a school for boys, the Sisters of St. Joseph a school for girls; two other Catholic schools for boys are kept by a Melchite priest and the religious of Saint-Sauveur; the Russians have a school and the American Protestants have one for boys and one for girls. Sour is no longer an island, but a peninsula; Alexander's causeway had grown larger as a result of sand formations, and is now an isthmus, one mile and a quarter wide. There are still to be seen the medieval city wall and a portion of the church of the Crusaders, built by the Venetians and measuring 213 feet by 82 feet. It is generally regarded as containing the tomb of Conrad de Montferrat, slain in the street by two members of the sect of the Assassins (1192), and the tomb of the Emperor Frederick Barbarossa (d. 1190). However, a German deputation sent by Bismarck in 1874 to conduct excavations discovered nothing.

Among the glories of Tyre were: Ulpianus, the celebrated jurisconsult, slain at Rome by the praetorians in 228; the neo-Platonic philosopher, Porphyry, whose true name was Malchus (b. 233; d. 304), the determined enemy of the Christians, against whom he wrote a work in fifteen books; some hold that he was born not at Tyre, but at Balanaia; Origen, who was not born at Tyre, but who died there in 253 in consequence of the tortures which he underwent under Decius, and was buried in the church destroyed under Diocletian; St. Methodius, spoken of by St. Jerome as a martyr and Bishop of Tyre under Decius, was in reality Bishop of Olympus in Lycia, and died about 311; as for Dorotheus, a martyr and the author of a work on the Apostles and the seventy disciples, he never existed, and the work is a forgery compiled in the eighth century by a cleric of Byzantium.

Although the corruption of Tyre had become proverbial in the time of Christ (Matt., xi, 21 sq.; Luke, x, 13 sq.), there were Tyrians eager to hear the preaching of Jesus and who came as far as the vicinity of Tiberias to listen to Him. (Mark, iii, 8; Luke, vi, 17). This is perhaps why Jesus went to the neighbourhood of Tyre to cure the sick and convert sinners (Matt., xv, 21-29; Mark, vii, 24-31). A Christian community was formed there at an early date, which St. Paul and St. Luke visited and where they remained seven days (Acts, xxi, 3-7). About 190 the Church in this city was directed by Bishop Cassius, who with the bishops of Ptolemais, Caesarea, and Aelia assisted at the council held in Palestine to deal with the Paschal controversy (Eusebius, "H. E.", V, 25). About 250 we know of the Bishop Marinus mentioned in a letter of Dionysius of Alexandria (Euseb., op. cit., VII, 5). About 250 we know of the Bishop Marinus mentioned in a letter of Dionysius of Alexandria (Euseb., op. cit., VII, 5). The community suffered greatly during the last persecution. After the edict of Diocletian the church was burnt and was only rebuilt after religious peace had

been obtained. It was Eusebius of Caesarea who pronounced the discourse at the dedication of the new basilica and who describes the oldest basilica known to us (op. cit., X, 4). Tyrannius, Bishop of Tyre, was captured and drowned at Antioch (op. cit., VIII, 13). Eusebius himself assisted in the amphitheatre of this city at the execution of five Christians of Egyptian origin (op. cit., VIII, 7). In 306 St. Ulpianus was shut up with a dog and an asp in a calfskin and thrown into the sea (Euseb., "De Martyr. Paleaestinae" V, 2). At Caesarea Maritima one of the first victims was St. Theodosia, a young Tyrian girl of eighteen, who was horribly tortured and then thrown into the sea on Easter Sunday, 2 April, 307 (Euseb., "H. E.", VII, I). In 311 a municipal decree forbidding Christians to stay in the city was posted up in Tyre, together with a message of congratulations from the Emperor Maximin (Eusebius, "H. E.", IX, vii). This did not prevent the Church of Tyre from subsisting and developing after peace was granted to the disciples of Christ.

Shortly afterwards Tyre furnished Ethiopia with its first and greatest missionary, St. Frumentius, who went to Africa with a philosopher who was his master and was consecrated by St. Athanasius the first bishop of that country. Three councils were held at Tyre. The first, convened by Constantine (335), which had about 310 members, judged the cause of St. Athanasius, who was in Tyre with 48 Egyptian bishops, and after a series of injustices it deposed him. Eusebius of Caesarea presided over the assembly (Hefele-Leclercq, "Hist. des conciles", I, 656-66). Another council was held in February, 449, to examine the cause of Ibas, Bishop of Edessa, who was accused by the clerics of his church and absolved by this council. This sentence had serious consequences at Chalcedon and especially at the Council of the Three Chapters in 553 (Hefele-Leclercq, op. cit., II, 493-98). Finally, in 514 or 515 was held a council under the presidency of Severus, Patriarch of Antioch, and of Philoxens, metropolitan of Hierapolis, and which assembled the bishops of the provinces of Antioch, Apamea, Augusta Euphratensis, Osrhoene, Mesopotamia, Arabia, and Phoenicia Libanensis. It rejected the Council of Chalcedon, and the Henoticon of the Emperor Zeno was explained in a sense clearly opposed to the latter council (Lebon, "Le monophysisme sévérien", Louvain, 1909, 62-4).

Le Quien (*Oriens christ.*, II, 801-12) mentions 20 bishops of this see, some of whom have no right to figure in the list. Besides those already mentioned were: Paulinus, friend of Eusebius of Caesarea, mentioned by Arius in a letter as being one of his partisans (Theodoret, "H.E.", I, v) and who subsequently became Patriarch of Antioch; Irenaeus, previously a count, a partisan of Nestorius exiled in 449 to Petra, and who compiled a collection of very valuable documents which have reached us under the title of "Tragaedia Irenaei"; Photius, very active in the religious quarrels of his time, and who assisted at the Councils of Tyre and Chalcedon, as well as at the Robber Council of Ephesus; John Codonatus, a Monophysite and friend of Peter Fullo, Patriarch of Antioch; Thomas, who at the Eighth Ecumenical Council represented the Patriarch of Antioch.

Included at first in the Province of Syria, the Diocese of Tyre formed part of Phoenicia, at the creation of that province by Septimius Severus shortly before 198, when it became the religious as well as the civil metropolis; its bishop, Marinus, had the title of metropolitan as early as 250 (Euseb., "H. E.", VII, v). When between 381 and 425 Phoenicia was subdivided into two provinces, Phoenicia

Maritima and Phoenicia Libanensis, Tyre remained the metropolis of the former. At the Council of Chalcedon in 451 Photius had to defend his rights as metropolitan against the Bishop of Berytus, formerly his suffragan, who divided Phoenicia Prima into two parts and assumed authority over all the bishoprics of the north. The council recognized the rights of Photius and gave him jurisdiction over all the dioceses with the exception of Berytus, which remained an autocephalous metropolis. Some years later Tyre became the chief see of the Patriarchate of Antioch, i. e. it attained first rank among the metropolitan sees. The reason for this was that, about 480, John Codnatus, Patriarch of Antioch, having resigned in favour of Calandion, the latter appointed him Metropolitan of Tyre, with the right for himself and his successors of thenceforth sitting immediately after the patriarch (Theophanes, "Chronographia"). In the "Notitia episcopatum" of Antioch in the sixth century Tyre had 13 suffragan sees (Echos d'Orient, X, 145). In the tenth century the western boundaries of the archdiocese went from the great spring of Zip (Az-Zib) to Nahr-Laitani, the ancient Leontes (Echos d'Orient, X, 97). The Greek archdiocese was retained even during the Latin occupation, but the titular resided at Constantinople.

Odo, the first Latin archbishop, was appointed in 1122 and died two years later when the Franks were besieging the city; his successor, William, was of English origin. In disregard of the ancient canon law, the new metropolitan was subjected to the Latin Patriarch of Jerusalem, which aroused protest on the part of the See of Antioch. The dispute which followed was referred to the tribunal of Pope Innocent II, who decided in favour of the Patriarch of Jerusalem in virtue of a Decree of his predecessor, Paschal II, who granted to King Baldwin the right to subject to Jerusalem all the episcopal sees he should succeed in conquering from the Mussulmans. Hence two letters of Innocent II obliged the Archbishop of Tyre to submit to the jurisdiction of Jerusalem together with his six suffragans, the Bishops of Tripoli, Tortosa (or Antaradus), Byblos, Berytus, Sidon, and Ptolemais. Later, when the cities of Tripoli, Tortosa, and Byblos came into the power of the Prince of Antioch, their bishops also became dependent on the Latin Patriarch of Antioch. For long lists of Latin archbishops see Le Quien (*Oriens christ*, III, 1309-20) and Eubel (*Hierarchia catholica medii aevi*, I, 534; II, 284; III, 342). The most famous was William II, the historian of the crusades. The Latins evacuated Tyre in 1291 and the archbishop, by the pope's command, having left the city, 8 Oct., 1294, there were thenceforth only titular archbishops.

The Melchite Archdiocese of Tyre is bounded on the north by Nahr el-Laitani, on the east by a line of wooded hills separating the District of Beharre from that of Merdjaioun, on the south by the Diocese of St.-Jean d'Acre, and on the west by the sea. It has 14 churches and chapels, 13 stations with or without residential priests, 16 priests, of whom 6 are seculars and 10 religious of Saint-Sauveur, 16 primary schools for boys and girls, half of which are in charge of Latin missionaries and European sisters. The number of faithful is 5300. Besides their mission at Tyre, the American Protestants have two schools in the Diocese at Almat and Cana. The Maronite diocese, founded in 1906 to the detriment of that of Saida, is bounded on the west by the sea, on the north by the River Zaharani, on the east by the Jordan, and on the south by the Sinaitic peninsula. It has

10,000 faithful, 20 priests, and 20 churches; the number of schools is unknown. The schismatic Graeco-Arabic Archdiocese of Tyre and Sidon has about 9000 faithful.

James Tyrie

James Tyrie

Theologian, b. at Drumkilbo, Perthshire, Scotland, 1543; d. at Rome, 27 May, 1597. Educated first at St. Andrews, he joined Edmund Hay (q. v.) at the time of de Gouda's mission in 1526. In his company he then went to Rome, was there admitted into the Society of Jesus, and was eventually sent to Clermont College, Paris, in June, 1567, where Hay had become rector; and remained there in various posts, e.g. professor, head of the Scottish Jesuit Mission (1585), till 1590. During this period he was once engaged in a controversy with Knox, against whom he wrote "The Refutation of ane Answer made be Schir Johne Knox to ane letter be James Tyrie" (Paris, 1573). Next year he discussed several points of religion with Andrew Melville privately in Paris. In 1585 he was summoned to Rome as the representative of France on the Committee of Six, who eventually drew up Father Acquaviva's first edition of the "Ratio Studiorum", printed in 1586. He was rector of Clermont College during the great siege of Paris (May to September, 1590). His anxieties and difficulties must then have been great, as he had over a hundred scholars as well as a large community to feed, and at a time when men were perishing with hunger in the streets. After the Duke of Parma had revictualled the town (September), Tyrie was again sent to Rome, as French deputy for the congregation, which finally supported the government of Father Acquaviva.

On his return in December, Tyrie was sent to the University of Pont-à-Mousson, as professor of Scripture and head of the Scots College, and two years later, on the successive deaths of Fathers Edmund Hay and Paul Hoffaeus, he was again called to Rome (22 May, 1592), where he became Assistant for France and Germany, and played his part in the important Sixth General Congregation of the Society of Jesus (1593). He also supported at Rome the vain endeavours in Scotland of the three Catholic Earls of Huntly, Erroll, and Angus to maintain themselves, with King James's connivance, by force of arms against the Kirk (1594). The earls asked and obtained a subsidy from Clement VIII; and Father Tyrie's advice and opinion were constantly taken by both the papal and the Scottish negotiators. He also took steps to restore the Scottish hospital at Rome, which eventually (1600) became the Scots College there. Rare as it was to keep on good terms with adversaries in those days, Tyrie won praise from such men as David Buchanan, both for his ability and for his courtesy. Part of his *cursus* is preserved in manuscript at the Bibliothèque Nationale, Paris.

J.H. POLLEN

Casimir Ubaghs

Casimir Ubaghs

Born at Bergélez-Fauquemont, 26 November, 1800; died at Louvain, 15 February, 1875, was for a quarter of a century the chief protagonist of the Ontologico-Traditionalist School of Louvain. In 1830, while professor of philosophy at the lower seminary of Rolduc, he was called to Louvain, which under his influence became a centre of Ontologism. In 1846 he undertook the editorship of the "Revue catholique", the official organ of Ontologism, in conjunction with Arnold Tits, who had taught with him at Rolduc and joined him at Louvain in 1840, and Lonay, professor at Rolduc. La Forêt, Claessens, the Abbé Bouquillon, Père Bernard Van Loo, and others followed the doctrines of Ubaghs. But opponents soon appeared. The "Journal historique et littéraire", founded by Kersten, kept up an incessant controversy with the "Revue catholique". Kersten was joined by Gilson, dean of Bouillon, Lupus, and others. From 1858 to 1861 the controversy raged. It was at its height when a decision of the Roman Congregation (21 Sept., 1864) censured in Ubaghs's works, after a long and prudent deliberation, a series of propositions relating to Ontologism. Already in 1843 the Congregation of the Index had taken note of five propositions and ordered M. Ubaghs to correct them and expunge them from his teaching, but he misunderstood the import of this first decision. When his career was ended in 1864 he had the mortification of witnessing the ruin of a teaching to which he had devoted forty years of his life. From 1864 until his death he lived in retirement.

The theories of Ubaghs are contained in a vast collection of treatises on which he expended the best years of his life. Editions followed one another as the range of his teaching widened. The fundamental thesis of Traditionalism is clearly affirmed by Ubaghs, the acquisition of metaphysical and moral truths is inexplicable without a primitive Divine teaching and its oral transmission. Social teaching is a natural law, a condition so necessary that without a miracle man could not save through it attain the explicit knowledge of truths of a metaphysical and a moral order. Teaching and language are not merely a psychological medium which favours the acquisition of these truths; its action is determinant. Hence the primordial act of man is an act of faith; the authority of others becomes the basis of certitude. The question arises: Is our adhesion to the fundamental truths of the speculative and moral order blind; and, is the existence of God, which is one of them, impossible of rational demonstration? Ubaghs did not go as far as this; his Traditionalism was mitigated, a semi-Traditionalism; once teaching has awakened ideas in us and transmitted the maxims (*ordo acquisitionis*) reason is able and apt to comprehend them. Though powerless to discover them it is regarded as being capable of demonstrating them once they have been made known to it. One of his favourite comparisons admirably states the problem: "As the word 'view' chiefly expresses four things, the faculty of seeing, the act of seeing, the object seen, e.g. a landscape, and the drawing an artist makes of this object, so we give the name idea, which is derived from the former, chiefly to four different things: the faculty of knowing rationally, the act of rational knowledge, the object of this knowledge, the intellectual copy or formula which we make of this object in conceiving it"

(Psychologie, 5th ed., 1857, 41-42). Now, the objective idea, or object-idea (third acceptance), in other words, the intelligible which we contemplate, and contact with which produces within us the intellectual formula (notion), is "something Divine" or rather it is God himself. This is the core of Ontologism. The intelligence contemplates God directly and beholds in Him the truths or "objective ideas" of which our knowledge is a weak reflection. Assuredly, if Ubaghs is right, skepticism is definitively overcome. Likewise if teaching plays in the physical life the part he assigns to it, the same is true of every doctrine which asserts the original independence of reason and which Ubaghs calls Rationalism. But this so-called triumph was purchased at the cost of many errors. It is, to say the least, strange that on the one hand Ontologistic Traditionalism is based on a distrust of reason and on the other hand it endows reason with unjustifiable prerogatives. Surely it is an incredible audacity to set man face to face with the Divine essence and to attribute to his weak mind the immediate perception of the eternal and immutable verities.

Ubaghs's principal works are:

- "Logicae seu philosophiae rationalis elementa" (6 editions, 1834-60);
- "Ontologiae sive metaph. generalis specimen" (5 editions, 1835-63);
- "Theodicae seu theologiae naturalis" (4 editions);
- "Anthropologicae philosoph. elementa" (1848);
- "Précis de logique élémentaire" (5 editions);
- "Précis d'anthropol. psychologique" (5 editions);
- "Du réalisme en théologie et en philosophie" (1856);
- "Essai d'idéologie ontologique" (1860);
- numerous articles in the Louvain "Revue catholique".

M. DE WULF

St. Ubaldu

St. Ubaldu

Confessor, Bishop of Gubbio, born of noble parents at Gubbio, Umbria, Italy, towards the beginning of the twelfth century; died there, Whitsuntide, 1168. Whilst still very young, having lost his father, he was educated by the prior of the cathedral church of his native city, where he also became a canon regular. Wishing to serve God with more regularity he passed to the Monastery of St. Secondo in the same city, where he remained for some years. Recalled by his bishop, he returned to the cathedral monastery, where he was made prior. Having heard that Vienna Blessed Peter de Honestis some years before had established a very fervent community of canons regular, to whom he had given special statutes which had been approved by Paschall II, Ubaldu went there, remaining with his brother canons for three months, to learn the details and the practice of their rules, wishing to introduce them among his own canons of Gubbio. This he did at his return. Serving God in great regularity, poverty (for all his rich patrimony he had given to the poor and to the restoration of monasteries), humility, mortification, meekness, and fervour, the fame of his holiness spread in the country, and several bishoprics were offered to him, but he refused them all. However, the episcopal

See of Gubbio becoming vacant, he was sent, with some clerics, by the population to ask for a new bishop from Honorius II who, having consecrated him, sent him back to Gubbio. To his people he became a perfect pattern of all Christian virtues, and a powerful protector in all their spiritual and temporal needs. He died full of merits, after a long and painful illness of two years. Numerous miracles were wrought by him in life and after death. At the solicitation of Bishop Bentivoglio Pope Celestine III canonized him in 1192. His power, as we read in the Office for his feast, is chiefly manifested over the evil spirits, and the faithful are instructed to have recourse to him "contra omnes diabolicas nequitas".

The life of the saint was written by Blessed Theobaldus, his immediate successor in the episcopal see, and from this source is derived all the information given by his numerous biographers. The body of the holy man, which had at first been buried in the cathedral church by the Bishops of Perugia and Cagli, at the time of his canonization was found flexible and incorrupt, and was then placed in a small oratory on the top of the hill overlooking the city, where in 1508, at the wish of the Duke of Urbino, the canons regular built a beautiful church, frequented to this day by numerous pilgrims, who come to visit the relics of their heavenly protector from near and far. The devotion to the saint is very popular throughout Umbria, but especially at Gubbio, where in every family at least one member is called Ubaldus. The feast of their patron saint is celebrated by the inhabitants of the country round with great solemnity, there being religious and civil processions which call to mind the famous festivities of the Middle Ages in Italy.

A. ALLARIA

Prefecture Apostolic of Belgian Ubanghi

Prefecture Apostolic of Belgian Ubanghi

In Belgian Congo, separated on 7 April, 1911, from the Vicariate of the Belgian Congo and entrusted to the Capuchins. Its boundaries are: west and north, the river Ubanghi from 1° 30' N. lat. to the meeting of the Mbomu and the Uelle at Yakoma; east, a line drawn from that point towards the junction of the Itimbri (Rubi) and the Congo, as far as the southern limits of the village of Abumombasi; south, the parallel passing through Abumombasi, then the watersheds of the Ubanghi and the Congo, and of the Ubanghi and the Ngiri to 1° 30' N. Lat., and thence to the Ubanghi. R.P. Fulgence de Gérard-Montes was appointed first prefect Apostolic 11 July 1911.

A.A. MACERLEAN

Ubanghi

Ubanghi

(UPPER FRENCH CONGO.)

Vicariate Apostolic; formerly part of the Vicariate of French Congo, erected on 14 Oct., 1890. It has an area of about 386,000 sq. miles, and is bounded south and east by the Congo and the

Ubanghi; north by the Prefecture Apostolic of Ubanghi-Chari; west by the Vicariates of Loanga, Gabon, and Camerun; the mission of Linzolo lying south-west of Brazzaville was transferred from Loanga to Ubanghi on 14 Feb., 1911. The principal tribes in the vicariate are the Batekes, Bavanzis, and Bondjos, the last two being cannibals. The French representatives, especially M. de Chavannes and M. Dolisie, have greatly aided in the establishment and development of the mission. The first attempt to gain a foothold in the territory of the vicariate was made by Father (now Bishop) Augouard in 1883 at Brazzaville, but it failed owing to the unhappy experiences of the natives at the hands of Stanley; in July, 1887, however, Mgr. Carrie succeeded, owing to the help of M. de Chavannes. The Sisters of St. Joseph of Cluny arrived at Brazzaville on 21 August, 1892, and have a convent, chapel, and school there on a site presented by the French Government. Brazzaville, the centre of French interests in the Congo and in which the bishop resides, is situated on a plateau 120 ft. high at the place where the Congo leaves Stanley Pool. Its cathedral, 37 metres long, 12 broad, and 9 high, surmounted by a steeple and cross rising 20 metres, was dedicated on 3 May, 1894. In 1895 the first two Christian marriages in Ubanghi were solemnized before the vicar apostolic. The mission spread to the surrounding villages and later to the Alima, 300 kilometres up the Congo; still higher up are the stations at Liranga (at the junction of the Congo and the Ubanghi), founded by Fathers Paris and Allaire on 3 April, 1889; at Bangui (1125 miles from the coast), established among the cannibal Bondjos and Buzerus and pastoral Ndris, by Fathers Sallaz and Rémy, in January, 1894; and at Sainte-Famille among the Banziris, in 1895, by Father Moreau, -- this is now the headquarters of the Prefecture of Ubanghi Chari. Near these stations have been established "free villages" where natives escaping from the clutches of the cannibal or slave owners can reside in safety. Bishop Augouard was awarded a prize of \$3000 in April, 1912, by the French Academy of Moral and Political Sciences in appreciation of his work during thirty-four years in French Congo. Mission statistics: The vicariate, of which Bishop Philippe-Prosper Augouard, titular Bishop of Sinidos (b. 16 Sept., 1852; joined the Congregation of the Holy Ghost, to whom the mission is entrusted; and was consecrated, 23 November, 1890), is in charge, has 12 priests; 25 lay brothers; 12 Sisters of St. Joseph of Cluny; 8 churches; 4 stations; 23 chapels; 23 schools with 1534 children; 7 orphanages with 902 orphans; 8 hospitals; 5 workshops; Catholic population, 3500; 2500 catechumens; and 5,000,000 pagans. The hot damp climate is very severe, and in one year (1897-8) 14 of the 31 missionaries died.

A.A. MACERLEAN

Ubanghi-Chari

Ubanghi-Chari

Prefecture Apostolic in Equatorial Africa, lies west of the Bahr-el-Ghazal territory and south of the Tchad district, and extends from 4°30' to 10° N. lat., and from 12° to 26°30' E. longitude. This region was formerly part of the Vicariate Apostolic of Ubanghi or Upper French Congo; its first mission post was established at Sainte-Famille on the Upper Ubanghi, about 1375 miles from

the western coast by river, by R. P. Moreau, C.S.Sp., in 1895, among the Banzus or Banziris, in an almost unknown country. At the request of Mgr. Philippe-Prosper Augouard, C.S.Sp., titular Bishop of Sinide and Vicar Apostolic of Ubanghi, Ubanghi- Chari was withdrawn from his jurisdiction in May, 1909, and formed into a new prefecture Apostolic under the care of the Fathers of the Holy Ghost, R. P. Pierre Catel, C.S.Sp., being appointed prefect Apostolic. He resides at Sainte-Famille. The mission contains: 23 priests; 14 lay brothers; 11 nuns; 18 catechists; 15 stations; 17 churches and chapels; 22 schools, with 1756 pupils and 902 orphans; 3500 Catholics; and 2500 catechumens. Boundaries: north and east, the Vicariate of the Sudan; south, the Prefectures of Uelle and Belgian Ubanghi, the Vicariate of Upper French Congo; west, the Vicariate of Camerun and the Prefecture of Northern Nigeria.

A.A. MACERLEAN

Uberaba

Uberaba

(DE UBERABA.)

Suffragan diocese of Marianna, in Brazil, created by the Consistorial Decree of 29 September, 1907, separating it from the Diocese of Goyaz, and placing under its jurisdiction the part of Minas Geraes known as Triangulo Mineiro and the following parishes which formerly belonged to the Diocese of Diamantina: Uruçua or Burity, Capim Branco or Rio Preto, Paracatú, Alegres, Santa Rita de Patos, Capã Redondo, and São Romão. The diocese is bounded: on the north by the Uruçua River; east, the São Francisco River; south, the Marcella and Canastra mountain ranges and the Rio Grande; west, the Paranahyba and Jacaré rivers, and the Geral mountain range. The Catholic population numbered 200,000 souls in 1911. Rt. Rev. Eduardo Duarte Silva, the first and present bishop, was born at Florianopolis, 27 Jan., 1852; studied in the Pio-Latino College of Rome; was ordained priest, 19 Dec., 1874; chaplain of the Florianopolis hospital and canon of the imperial chapel; elected Bishop of Goyaz, 23 Jan., 1891, and consecrated on 8 Feb., 1891; preconized Bishop of Uberaba, 19 Dec., 1908. The following religious orders are in the diocese: Dominicans, Recollects, Lazarists, Dominican nuns, Franciscan Missionary nuns of Egypt. There are 45 churches. The Catholic educational institutions are: the Gymnasio Diocesano, a school of secondary instruction with the privileges of a federal college, directed by the Marist Brothers; and the Collegio de Nossa Senhora das Dôres, for girls, under the Dominican nuns. The principal Catholic charitable associations are: the Sociedade de S. Vicente de Paula; the Irmandade da Santa Casa de Misericordia; and the Associação das Damas de Caridade. The official organ of the diocese is the "Correio Catholico" (Uberaba).

JULIAN MORENO-LACALLE

Ubertino of Casale

Ubertino of Casale

Leader of the Spirituals, born at Casale of Vercelli, 1259; died about 1330.

He assumed the Franciscan habit in a convent of the province of Genoa in 1273, and was sent to Paris to continue his studies, where he remained nine years, after which he returned to Italy. In 1285 he visited the sanctuaries of Rome, and thence proceeded to Greccio, near Rieti, to see the Blessed John of Parma, who was considered as the patriarch of the Spiritual Friars. Afterwards he settled in Tuscany and in 1287, at Florence, was the companion and disciple of Brother Pierre-Jean Olivi. He held a lectorship at Santa Croce, Florence, but abandoned it after a few years to dedicate himself to preaching, especially at Florence. Being a man of genius, but of an eccentric and restless character, he soon became the leader of the famous Spirituals in Tuscany, professed strange ideas regarding evangelical and Franciscan poverty, and attacked the government of the order, although some of these ideas had been reproved by Olivi in his letter of Sept., 1295, to Blessed Conrado da Offida, a moderate *Zelante* of Franciscan poverty. The Spirituals of Tuscany were so fanatical as publicly to blame Gregory IX and Nicholas III, and even to condemn them as heretics, for having interpreted the Rule of St. Francis as regards poverty according to justice and moderation; they also condemned Innocent III, who had strongly disapproved of the teaching of Joachim of Flora, whom they regarded as an oracle of the Holy Ghost, and whose theories were the cause of the discord in the Franciscan Order in the first half of the fourteenth century.

On account of his excessive and satirical criticism, Ubertino was summoned before Benedict XI and forbidden to preach at Perugia, and was banished to the Convent of La Verna, where in 1305 he conceived and wrote, in only three months and seven days (if he can be believed on this point), his chief work, "*Arbor vitae crucifixae Jesu Christi*". This work is a collection of allegorical, theological, and political theories regarding civil society and the Church of those days, and expounds also his ideal of the near future. In this work he criticises everything and everyone, the popes and the Church, especially for pretended abuses of riches in the ecclesiastical and civil states, and finally the Franciscan Order for not practising the extremest poverty. In the same work, (book I, chap. iv) is the first mention of the legend of the resurrection of St. Francis, as he affirms to have heard from Blessed Conrado da Offida, and the latter from Blessed Brother Leo, that Christ had raised up St. Francis with a glorious body to console his poor friars, who, according to Ubertino, were of course the Spirituals only. Notwithstanding the Utopian theories of Ubertino, he had many protectors and admirers, and in 1307, after having written the "*Arbor vitae*", he was chosen chaplain and familiar to Cardinal Napoleone Orsini, nephew of Nicholas III, who had been created by Celestine V protector of the Spirituals of the Marches of Ancona, but which protectorate soon ceased by the election of Boniface VIII in Dec., 1294. Orsini, who in 1306-08 had been pontifical legate in central Italy, deputed Ubertino on 10 Sept., 1307, to absolve the inhabitants of Siena, who had incurred ecclesiastical censure. When Orsini went to Germany in 1308, Ubertino did not accompany him, being then called to France. In the years 1309-12, which witnessed the greatest struggle in the

Franciscan Order, Ubertino was called to Avignon with other chiefs of the Spirituals to discuss before the pope the questions at issue between the two parties in the order.

Four points were discussed:

1. the relations of the order with the sect of the so-called Followers of the Free Spirit;
2. the condemnation and doctrine of Olivi;
3. the poverty and discipline in the Order of Friars Minor; and
4. the supposed persecutions of the Spirituals of the order.

During the discussions Ubertino behaved in a very boisterous and insolent manner against the whole body of the order, accusing it of many false and unjust things; however, he was forced to acknowledge that regular discipline substantially existed in the order; but as regards poverty he attacked openly the pontifical declarations as contrary to the rule and as a cause of ruin to the order. He pretended that the Friars Minor should be compelled to observe *ad litteram* St. Francis's Testament and Rule, and even all the evangelical counsels taught by Christ. And because all this was not possible to obtain from the majority of the order, he exacted that convents and provinces should be erected for the reform party. But this was absolutely denied, whilst on the other hand the question of practical observance of poverty was settled by the famous Bull, "Exivi de paradiso", 6 May, 1312, partly called forth by the polemical writings of Ubertino.

Ubertino thereon retired to Avignon in 1313, and stayed with Cardinal Giacomo Colonna till he had obtained from John XXII (1 Oct., 1317) permission to leave the order and to enter the Benedictine Abbey of Gembloux, Diocese of Liège. Some have doubted whether the Benedictines would have received in their community a person of such a restless character, but we are assured of it by Clarenò and a notary of King James II of Aragon in the year 1318. Notwithstanding this, Ubertino did not desist from mixing himself up in the question that troubled the Franciscan Order till he was excommunicated by John XXII. While still a favourite of this pope and a familiar of Cardinal Orsini, he was invited by the sovereign pontiff to give his opinion regarding the other famous question discussed between the Dominicans and Franciscans, that is, concerning the poverty of Jesus Christ and that of the Apostles. This latter question, far more than the one concerning the Spirituals, caused the disastrous schism in the order headed by Michael of Cesena, general of the order, and seconded by the rebellious Louis IV of Bavaria. Ubertino was at Avignon in 1322; on the request of the Pope he wrote his answer to the question then in controversy, asserting that Christ and the Apostles have to be considered in a two-fold condition: as private persons they had repudiated all property, but as ministers of religion they made use of goods and money for necessaries and alms. John XXII was satisfied with the answer, but Ubertino returned again to the service of Cardinal Orsini, and continued his writings to concern himself in the question, which meanwhile had been settled, 1322-23. However this may be, it is certain that in 1325 he was accused of heresy, especially of having obstinately sustained some errors of Olivi.

Ubertino, foreseeing the condemnation that hung over him, fled from Avignon, and the pope in a letter dated 16 Sept., 1325, commanded the general of the Franciscans to have him arrested as a heretic; but Ubertino probably went to Germany under the protection of Louis the Bavarian, whom he is said to have accompanied on his way to Rome in 1328. From this time Ubertino

disappeared from history, so that nothing more is known of him. Some suppose that he left the Benedictines in 1332 to join the Carthusians, but this is not certain. The Fraticelli of the fifteenth century, who venerated him as a saintly man, spread the news that he had been killed. The end of this famous leader of the Spirituals, remembered by even Dante in the twelfth canto of the "Paradise", will probably remain an obscure point in history.

Besides the "Arbor vitae", his principal work, printed once only at Venice in 1485, and of which scarcely thirteen manuscripts are known in the principal libraries of Europe, Ubertino also wrote other works of a polemical kind:

- the "Responsio" to the questions of Clement V (1310);
- the "Rotulus" (1311);
- the "Declaratio" against the Franciscan Order (1311);
- the apology of Olivi "Sanctitati Apostolicae", and
- the treatise "Super tribus sceleribus" on poverty, compiled also in 1311.

HIERON. GOLUBOVICH

Ubiquitarians

Ubiquitarians

Also called *Ubiquists*, a Protestant sect started at the Lutheran synod of Stuttgart, 19 December, 1559, by John Brenz, a Swabian (1499-1570). Its profession, made under the name of Duke Christopher of Würtemberg, and entitled the "Würtemberg Confession," was sent to the Council of Trent, in 1552, but had not been formally accepted as the Ubiquitarian creed until the synod at Stuttgart. Luther had upset the peace of Germany by his disputes. In the effort to reconcile and unite the contending forces against the Turks, Charles V demanded of the Lutherans a written statement of their doctrines. This -- the "Augsburg Confession" -- was composed by Melancthon, and read at a meeting at Augsburg in 1530. Its tenth article concerned the Real Presence of Christ in the Blessed Sacrament, a burning question among the Protestants. In 1540, Melancthon published another version of the "Augsburg Confession", in which the article on the Real Presence differed essentially from what had been expressed in 1530. The wording was as follows:

- Edition of 1530*: "Concerning the Lord's Supper, they teach that the body and blood of Christ are truly present, and are distributed (communicated) to those that eat in the Lord's Supper; and they disapprove of those that teach otherwise."
- Edition of 1540*: "Concerning the Lord's Supper, they teach that with bread and wine are truly exhibited the body and blood of Christ to those that eat in the Lord's Supper."

Johann Eck was the first to call attention to the change, in a conference at Worms, 1541. Debates followed, and the Ubiquitarian controversy arose, the question being: Is the body of Christ in the Eucharist, and if so, why? The Confession of 1540 was known as the Reformed doctrine. To this Melancthon, with his adherents, subscribed, and maintained that Christ's body was not in the Eucharist. For, the Eucharist was everywhere, and it was impossible, they contended, for a body to be in many places simultaneously. Adopting Luther's false interpretation of the *communicatio*

idiomatum, Brenz argued that the attributes of the Divine Nature had been communicated to the humanity of Christ which thus was deified. If deified, it was everywhere, ubiquitous, just as His divinity, and therefore really present in the Eucharist. Brenz was in harmony with Catholic Faith as to the fact, but not as to the explanation. His assertion that Christ's human nature had been deified, and that His body was in the Eucharist as it was elsewhere, was heretical. Christ, as God, is everywhere, but His body and blood, soul and divinity, are in the Eucharist in a different, special manner (*sacramentally*). In 1583, Chemnitz, who had unconsciously been defending the Catholic doctrine, calmed the discussion by his adhesion to absolute Ubiquitarianism. In 1616 the heresy arose again as Kenoticism and Crypticism, but sank into oblivion in the troubles of the Thirty Years War.

JOSEPH HUGHES

Ucayali

Ucayali

(SAN FRANCISCO DE UCAYALI.)

Prefecture Apostolic in Peru.

At the request of the Peruvian Government, desirous of civilizing and converting the Indian tribes inhabiting a large and secluded mountainous region in the east of Peru, known as La Montaña, in which a few Franciscan missionaries had been labouring, the Holy See on 5 February, 1900, erected the district in to three prefectures Apostolic, depending directly on Propaganda. The central prefecture, San Francisco de Ucayali, remained under the control of the Franciscans, who were placed under the immediate jurisdiction of their master-general. The prefecture comprises (a) Chauchamayo, the district drained by the Perené and Pachitea, together with the Gran Pajonal to its eastern valleys, and as far as the Tambo and the upper Ucayali; (b) Apurimac, the territory drained by the Ené, Mantaro, and Tambo, as far as the confluence of the latter and the Urubamba; (c) Ucayali, the region drained by the Ucayali to the meeting of the Tambo and Urubamba. The Indians belong to the Amuescho, Chipivi, and Cunivi tribes, 5140 being Catholics. The mission contains 12 priests, 10 lay brothers, 6 chief stations, 24 churches and chapels, 6 having resident pastors; 11 schools. The first prefect Apostolic, R.P. Augustin Alemany (14 February, 1905), was succeeded by R. P. Bernardo Irastorza (September, 1905). To prevent disputes concerning the jurisdictional limits of the neighbouring prelates, Propaganda decreed that the mission was confined strictly to the forest districts.

A.A. MACERLEAN

Uccello

Uccello

Painter, born at Florence, 1397; died there, 1475. His real name was Paolo di Dono, but from his love of painting birds he received the nickname of *Uccello*, and has been most frequently called by that name ever since. He was apprenticed to Ghiberti, and was one of the assistants engaged in preparing the first pair of bronze gates made for the baptistery in Florence. Vasari tells us that his special love was for geometry and perspective. Manetti taught him geometry, but where he learned painting we do not know, nor are we acquainted with the reasons which led him to leave the *botega* of Ghiberti and set up for himself. Vasari scoffs at Uccello's study of perspective, regarding it as waste of time, and saying that the artist became "more needy than famous". His skill in foreshortening and proportion, and in some of the complex difficulties of perspective, was quite remarkable, and his pictures for this reason alone are well worth careful study, for they display an extraordinary knowledge of geometric perspective. His most important work is the colossal equestrian figure of Sir John Hawkwood, a chiaroscuro in *terraverde*, intended to imitate a stone statue, seen aloft, standing out from the wall of the cathedral. One of the most precious possessions of the National Gallery, London, is a battle-picture by this artist. For a long time this was wrongly entitled the "Battle of Sant' Egidio of 1416", but it really represents the rout of San Romano of 1432. Instead of Malatesta, the picture gives us a representation of Nicolò da Tolentino. Mr. Herbert Horne gave considerable attention to the history of this picture some twelve years ago, and was able to arrive at a very accurate determination regarding it. There are very few paintings by Uccello in existence, although he must have painted a considerable number. There is a panel by him in the Louvre, containing his own portrait, associated with those of Giotto, Donatello, Brunelleschi, and Manetti, representing perspective associated with painting, sculpture, architecture, and geometry. Many of the frescoes he executed for Santa Maria Novella have been destroyed. The only other picture of his that need be mentioned here is a predella in a church near Urbino, relating to the theft of a pax, which is attributed to him by many critics. He is said to have studied the works of Pisanello with great advantage, and it is probable that it was from Pisanello that he first learned painting, but he may be practically regarded as one of the founders of the art of linear perspective. There are very few dates known in his history beyond those of his birth and death. But we know that in 1425 he was at work at Venice, in 1436 painting his portrait of Sir John Hawkwood, and in 1468 residing at Urbino.

GEORGE CHARLES WILLIAMSON

Archdiocese of Udine

Archdiocese of Udine

(UTINENSIS)

The city of Udine, the capital of a province and archdiocese in Friuli, northern Italy, is situated in a region mainly agricultural. its cathedral, built in 1236 by the Patriarch Bertoldo, was altered several times, most recently, in 1706, through the munificence of the Manin family, whose tombs adorn the choir. It contains paintings by Pordenone, Tiepolo (chapel of the Blessed Sacrament),

Matteo da Verona, etc.; statutes by Torretto (St. Bertrand), Linardi (Pius IX), Minisini (Archbishop Bricato). In the baptistery is a font by Giovanni da Zuglio (1480) and paintings by Tiepolo. The oldest church at Udine is that of S. Maria di Castello, transformed in the sixteenth century. S. Antonio Abbate contains the tombs of the patriarchs Francesco and Ermolao Barbaro; SS. Filippo e Giacomo, statutes by Contieri; S. Peitro Martire and the Zitelle e S. Chiara contain noteworthy pictures; the Madonna delle Grazie preserves a much venerated Byzantine Madonna and is rich in sculpture and paintings. Among the profane edifices, the Castelo, which acquired its present form in 1517, was the residence of the patriarchs of Aquileia, then of the Venetian governor, and is now a barrack; it contains a great parliament chamber painted by Amalteo, Tiepolo, and others. The city hall (1457), the work of Nicolo Lionello, in a sober and graceful Gothic style, is rich in paintings by the most celebrated Venetian masters, as is also the archiepiscopal palace, built by the Patriarch Francesco Barbaro, especially remarkable for the *salon* of Giovanni da Udine. The city hospital was built in 1782 by Archbishop Gradenigo. Many of the private residences also are rich in works of art.

Where the city of Udine now stands there existed, in the Roman period, a fortified camp, probably for the defence of the Via Julia Augusta leading from Aquileia to the Carnic Alps. Narses also made use of this fort after the Gothic War. No mention, however, is found of Utinum until 983, when Otho II granted its stronghold to Radoalso, Patriarch of Aquileia, Prince of Friuli and Istria. A centre of population went on forming here from that time, and successive patriarchs provided it with water-supply and other institutions. The population was notably increased by the arrival of Tuscan exiles in the thirteenth and fourteenth centuries. In the thirteenth century the patriarch was represented by a *gastaldo*, while twelve nobles and twelve commons represented the people in the government. The privileges of the citizens were augmented by the Patriarchs Ramondo della Torre (1291) and Bertrando di Saint Genais (1340) on account of the loyalty displayed by the Udinese in the wars against the Visconti of Milan and against the small feudatories. As early as the thirteenth century Udine was the ordinary residence of the patriarchs, and in 1348, when Aquileia was destroyed by an earthquake, the see was definitively transferred to Udine. In 1381 the city opposed Cardinal Philip of Alencon, who had been given the See of Aquileia *in commendam*; they wished to have an effective prince and patriarch, and the consequent war ended only with the cardinal's renunciation (1387). There was also a popular rising against Giovanni, Margrave of Moravia, who wished to revise the Constitution. In 1420 Udine, after a long siege, surrendered to the Venetians, and thenceforward it belonged to the republic, being the capital of Friuli. However, it retained in substance its ancient form of government. Udine was the birthplace of the military leaders Savorgnano and Colloredo and the painters Giovanni da Udine, Pellegrino da S. Daniele, Giovanni di Martino, and Odorico Politi.

In 1752 the Patriarchate of Aquileia was suppressed, and the two Archbishoprics of Udina and Gorizia were formed, the former embracing that part of the patriarchate which was subject to the Republic of Venice. The first archbishop was Daniele Dolfin (1752- 62), who retained the title of patriarch. In 1818 Udine became a bishopric, subject to the metropolitan See of Venice; Pius IX,

however, in 1846, re-established the Archbishopric of Udine, though without suffragans. The archdiocese contains 201 parishes, with 438,000 souls; 703 priests, 3 houses of male and 6 of female religious; 2 educational establishments for boys, and 6 for girls.

CAPPELLETTI, *Le chiese d'Italia*, VIII; CICONI, *Udine e sua provincia* (Udine, 1862).

U. BENIGNI

Diocese of Ugento

Diocese of Ugento

(UXENTIN)

The city of Ugento, with its small harbour, is situated in the Province of Lecce, in Apulia, on the Gulf of Tarentum. It is the ancient *Uxentum*, and claims to have been founded by Uxens, who is mentioned in the Eighth Book of the *Æneid*. In ancient times it was an important city. In 1537 it was destroyed by the Turks. Under the Byzantine domination it had Greek bishops. Of the Latin bishops the first known was the Benedictine Simeon, of unknown date.

Others worthy of mention are: St. Charles Borromeo (1530-37); Antonio Sebastiano Minturno, poet (1559); the Carmelite Desiderio Mazzapica (1566), who was distinguished at the Council of Trent; and the great canonist Agostino Barbosa (1649). In 1818 the diocese of Alessano (the ancient Leuca) was united to that of Ugento. The Greek rite flourished in many places in this diocese until 1591, when it was abolished by Bishop Ercole Iancina. The diocese is suffragan of Otranto, and contains 30 parishes, 60,000 souls, 129 priests, secular and regular, 1 house of male religious, 4 houses of female religious, and 3 schools for girls.

CAPPELLETTI, *Le Chiese d'Italia*, XXI.

U. BENIGNI

Ferdinando Ughelli

Ferdinando Ughelli

Historian, born at Florence, 21 March, 1595; died 19 May, 1670. Having entered the Cistercian Order in his native city, he was sent to the Gregorian University, Rome, where he studied under the Jesuits, Francesco Piccolomini and John de Lugo. He filled many important posts in his order, being Abbot of Settimo (Florence), and from 1638 Abbot of Tre Fontane, Rome. He was skilled in ecclesiastical history. To encourage him in this work and to defray the expense of the journeys it entailed Alexander VII granted him an annual pension of 500 *scudi*. He was a consultor of the Index and theologian to Cardinal Carlo de' Medici, and was frequently offered the episcopal dignity, which he refused to accept. He was buried in his abbatial church. His chief work is "Italia sacra sive de episcopis Italae" (9 vols., Rome, 1643-62), abridged by Ambrogio Lucenti (Rome, 1704); re-edited with corrections and additions by Nicola Coleti (Venice, 1717-22), with a tenth volume. In compiling this work, he frequently had to deal with matters not previously treated by historians;

as a result, the "Italia sacra", owing to the imperfections of historical science in Ughelli's day, especially from the point of view of criticism and diplomatics, contains serious errors, particularly as the author was more intent on collecting than on weighing documents. Nevertheless his work with all its imperfections was necessary to facilitate the labours of critical historians of a later day, and is consulted even now. Among his other writings are:

- "Cardinalium elogia ex sacro ordine cisterciensi" (Florence, 1624), on the writers and saints of his order and the papal privileges granted to it;
- "Columnensis familiae cardinalium imagines" (Rome, 1650), and genealogical works on the "Counts of Marsciano" and the "Capizucchi" (Rome, 1667, 1653);
- "Aggiunte" to the "Vitae pontificum" of Ciaconius.

In the last volume of the "Italia sacra" he published various historical sources until then unedited.

U. BENIGNI

Uhtred

Uhtred

(Also spelled: *Uhtred* or *Owtred*), an English Benedictine theologian and writer, born at Boldon, North Durham, about 1315; died at Finchale Abbey, 24 Jan., 1396. He joined the Benedictines of Durham Abbey about 1332 and was sent to London in 1337. Three years later he entered Durham College, a house which the Durham Benedictines had established at Oxford for those of their members who pursued their studies at the University of Oxford. He was graduated there as licentiate in 1352 and as doctor in 1357. During the succeeding ten years, and even previously, he took part in numerous disputations at Oxford University, many of which were directed against members of the mendicant orders. It is on this account that Bale (loc. cit. below) wrongly designates him as a supporter of Wyclif. In 1367 he became prior of Finchale Abbey, a position to which he was appointed three other times, in 1379, 1386, and 1392. In 1368 and in 1381 he was subprior at Durham Abbey. Along with Wyclif he was one of the delegates sent by Edward III to the papal representatives at Bruges in 1374, with the purpose of reaching an agreement concerning the vexed question of canonical provision in England. In the same year he represented Durham Abbey at a council held by Edward, Prince of Wales, for the purpose of determining whether the king was obliged to recognize the papal suzerainty which had been granted to Innocent III by King John. On this occasion Uhtred defended the pope's right of overlordship, but, when on the following day the assembly cast its vote contrarily, he followed their example. Among his literary works, none of which have as yet been printed, are worthy of mention: "De substantialibus regulae monachalis", preserved in the Durham Cathedral Library; "Contra querelas Fratrum", written about 1390, extant in the British Museum; and a Latin translation of the "Ecclesiastical History" of Eusebius, which is also preserved in the British Museum.

MICHAEL OTT

Cornelius Ujejski

Cornelius Ujejski

Polish poet, born at Beremiany, Galicia, 1823; died at Cholojewie, 1897. His father was a prosperous landowner, member of an ancient noble family. Cornelius completed his studies at Lemberg, and while still a student at the university there wrote "Maraton" (1843), a patriotic lyric poem of excellent form. In 1846, at the instigation of the Austrian Government, the Galician peasants massacred several thousand of the nobility. Ujejski then gave utterance to the universal feeling of indignation in his powerful poem "Choral", which has become the national hymn of Poland. At Paris, 1847, he published a volume of poems entitled "Skargi Jeremiego" (Lamentations of Jeremias). He made the acquaintance of the most distinguished men in the Polish colony at Paris, among them Mickiewicz, and devoted himself with youthful ardor to the poet Julius Slowacki. In 1848 he returned home, and won great popularity. He was regarded and beloved by the people as their national poet. Ujejski wrote a number of other poems of fine sentiment and perfect poetical form, among them "Kwiaty bez woni" (Flowers without perfume), 1848, and "Zwiedle liscie" (Faded leaves) in 1849. In 1852 he published a second volume of poems entitled "Melodye Biblijne" (Biblical Melodies). Ujejski never achieved anything finer than his youthful works, though his later poems are distinguished by strong patriotic feeling, elegance of form, and fine poetic taste.

S. TARNOWSKI

Kaspar Ulenberg

Kaspar Ulenberg

Convert, theological writer and translator of the Bible, born at Lippstadt on the Lippe, Westphalia, in 1549; died at Cologne, 16 Feb., 1617. He was the son of Lutheran parents and was intended for the Lutheran ministry. He received his grammar-school education in Lippstadt, Soest, and Brunswick, and from 1569 studied theology at Wittenberg. While studying Luther's writings there his first doubts as to the truth of the Lutheran doctrines were awakened, and were then increased by hearing the disputes between the Protestant theologians and by the appearance of Calvinism in Saxony. After completing his studies he taught for a short time in the Latin school at Lunden in Dithmarschen; he was then sent by his family to Cologne to bring back to Protestantism a kinsman who had become Catholic. After accomplishing this task he remained in Cologne, where, through his friendship with Johann Nopelius and Gerwin Calenius (Catholic countrymen of his), he had an opportunity of becoming acquainted with Catholic life and teaching. In 1572 he became a Catholic, and soon afterwards, upon obtaining degrees in philosophy at the University of Cologne, became professor at the Gymnasium Laurentianum at Cologne. In 1575 he was ordained priest and became parish priest at Kaiserswerth. In 1583 he was made parish priest of St. Cunibert's in Cologne, where he laboured zealously by preaching and catechetical exercises, and made many conversions. In 1593 he became regent of the Laurentian gymnasium, retaining this position for twenty-two years.

From 1600 to 1606 he directed the education of princes Wilhelm and Hermann of Baden, sons of Margrave Edward Fortunatus of Baden-Baden. In 1605 he became parish priest of St. Columba's in Cologne, and from 1610 to 1612 was also rector of the university.

Ulenberg began his literary career at Kaiserwerth with the work, "Die Psalmen David's in allerlei deutsche Gesangreime gebracht" (Cologne, 1582), an excellent hymn book for the common people, which was widely circulated and often reprinted; the last and revised edition was by M. Kaufmann (Augsburg, 1835). To the first edition was appended a "Katechismus oder kurzer Bericht der ganzen christl. kathol. Religion sammt Warnung wider allerlei unserer Zeit Irrthumb". He completed at Cologne (1589) his chief theological work, "Erhebliche und wichtige Ursachen, warumb die altgläubige Catholische Christen bei dem alten wahren Christenthumb bis in ihren Tod beständiglich verharren", of which he also issued a Latin edition entitled: "Causae graves et justae, cur Catholicis in communione veteris ejusque veri Christianismi constanter usque ad finem vitae permanendum, cur item omnibus, qui se Evangelicos vocant, relictis erroribus ad ejusdem Christianismi consortium vel postliminio redeundum sit". This is one of the best controversial treatises of the sixteenth century and is still instructive reading. A new and revised edition was prepared by M.W. Kerp entitled: "Zweiundzwanzig Beweggründe. Ein buch für Katholische und Evangelische" (Mainz, 1827, 1833, and 1840). Other works worthy of mention are:

- "Trostbuch für die Kranken und Sterbenden" (Cologne, 1590), often reprinted;
- "Historia de vita, moribus, rebus gestis, studiis ac denique morte Praedicatorum Lutheranorum, D. Martini Lutheri, Philippi Melanchthonis, Matthiae Flacii Illyrici, Georgii Maioris, et Andraea Osiandri", which was edited after Ulenberg's death by Arnold Meshovius (1622), a German edition being issued at Mainz (2 vols., 1836-37).
- Ulenberg also wrote various shorter polemical and ascetical treatises. His last and most important literary work (Sacra Biblia, das ist, die gantze Heilige Schrift, Alten und Neuen Testaments, nach der letzten Römisch Sixtiner Edition mit fleiss übergesetxt), the German translation of the Bible, he began (1614) at the request of the Archbishop and Elector of Cologne, Ferdinand Duke of Bavaria, and finished shortly before his death. The first edition appeared at Cologne in 1630; eleven other editions were published at Cologne up to 1747, and eleven more at Nuremberg, Bamberg, Frankfort, and Vienna.
- The German Bible which was published (Mainz, 1662) at the command of the Archbishop and Elector of Mainz, Johann Philip Count of Schönborn, was a revision of Ulenberg's translation. This revision, entitled "Die catholische Mainzer Bibel", is still frequently printed and until Allioli's translation appeared was the most popular German translation of the Bible.

FRIEDRICH LAUCHERT

Ulfilas

Ulfilas

(Also: *Ulphilas*), apostle of the Goths, missionary, translator of the Bible, and inventor of an alphabet, born probably in 311; died at Constantinople in 380 or 381. Though Ulfilas in speech and sympathies was thoroughly Gothic, he was descended not from Teutonic ancestors, but from

Cappadocians captured, in the reigns of Valerian and Gallienus, during the raids in Asia Minor made by the Goths from the north of the Danube. There seems to be no valid reason for thinking Ulfilas was not born a Christian (Hodgkin places his conversion during his residence at Constantinople). As a young man he was sent to that city either as a hostage or an ambassador, and, after occupying for some time the position of lector in the church, he was consecrated bishop in his thirtieth year by the celebrated Arian bishop of Nicomedia, Eusebius. Shortly after his consecration he returned to Dacia and during the remaining forty years of his life he laboured among his fellow-countrymen as a missionary. The first eight or ten years of his missionary life were spent in Dacia, after which because of the persecution of his pagan countrymen he was compelled with many of his Christian converts to seek refuge in Moesia. It was at this period in his life that he conceived the idea of translating the Bible into the language of the Goths, a task demanding as a preliminary that he should invent a special alphabet. His familiarity with Greek made the task comparatively simple, only a few letters being borrowed from other sources, Runic or Latin. Despite his many other activities Ulfilas translated "all the books of Scripture with the exception of the Books of Kings, which he omitted because they are a mere narrative of military exploits, and the Gothic tribes were especially fond of war, and were in more need of restraints to check their military passions than of spurs to urge them on to deeds of war" (Philostorgius, "Hist. eccl.", II, 5). The Books of the Old Testament were translated from the Septuagint; those of the New Testament from the original Greek. Ulfilas was at the Synod of Constantinople in 360 when the sect of Acacius triumphed and issued its compromise creed as a substitute for the formularies of the Orthodox as well as the Arian parties. It is unfortunate that the career of Ulfilas was marred by his adherence to the Arian heresy. It may be said in extenuation of this fault that he was a victim of circumstances in coming under none but Arian and semi-Arian influences during his residence at Constantinople; but he persisted in the error until the end of his life. The lack of orthodoxy deprived the work of Ulfilas of permanent influence and wrought havoc among some of his Teutonic converts. His labours were impressed not only on the Goths, but on other Teutonic peoples, and because of the heretical views they entertained they were unable to maintain themselves in the kingdoms which they established. Only a few chapters of Ulfilas's translation of the Old Testament are in existence. Of the New Testament we have the greater portion of the Gospels in the beautiful Silver Codex (a purple parchment with silver and gold letters) now at Upsala, and dating from the fifth century perhaps; nearly all of St. Paul's Epistles in a Milanese Codex edited by Cardinal Mai, and a large fragment of the Epistles to the Romans on a Wofenbüttel palimpsest.

PATRICK J. HEALY

William Bernard Ullathorne

William Bernard Ullathorne

English Benedictine monk and bishop, b. at Pocklington, Yorkshire, 7 May, 1806; d. at Oscott, Warwickshire, 21 March, 1889. His father was a lineal descendant from [Saint] Thomas More, but

had fallen in life and was then the chief tradesman of the village. His mother, a distant connection of Sir John Franklin, the Arctic explorer, was a convert. When he was ten years old, the whole family removed to Scarborough, where young Ullathorne made his first acquaintance with the sea. His lively imagination and adventurous spirit led him to desire to be on the ocean and to see the world; and for three and a half years his wish was gratified, during which time he made several voyages in the Mediterranean and the Baltic Sea and elsewhere. It was on one of these voyages that a chance opportunity of attending Mass at Memel, a port in the Baltic, proved the turning-point of his life, for he then and there made up his mind to devote his life to the service of God. On his return to England, therefore, he entered as a novice of the well-known Benedictine community at Downside, near Bath, in February, 1823. He received the habit in March, 1824, and was professed a year later, taking the name of Bernard. Later on he spent a year as prefect at Ampleforth College, near York, and was ordained priest at Ushaw College in 1831. Soon after his return to Downside, in response to an invitation from Dr. Morris, O.S.B., Vicar Apostolic of the Mauritius, Ullathorne offered himself as a volunteer for the Australian mission, which then formed part of that vicariate. His offer was accepted, and in view of the difficulty there had always been of governing the colony from such a distance, Dr. Morris gave him full powers as his vicar-general there.

Ullathorne landed in Australia in February, 1833, and his connection with the colony lasted eight years. During the first part of that time he devoted himself to organizing the beginnings of the mission there. When he first landed there were only three priests, Father Therry and Father McEncroe at Sydney, and Father Connolly in Van Diemen's Land (Tasmania). At both places they were working independently and without any kind of supervision. There were internal dissensions among the Catholics, as well as difficulties with the colonial authorities, both due to the want of proper ecclesiastical government. Ullathorne, by his tact and strength of character, soon succeeded in adjusting these, both at Sydney and in Tasmania. He likewise visited the convict settlement on Norfolk Island, which he describes as "the most beautiful spot in the universe", and his ministrations to those who were condemned to death, as well as to the others, had most consoling results. In 1835 Bishop Polding, O.S.B., arrived as Vicar Apostolic of Australia, accompanied by three priests and four ecclesiastical students. Ullathorne, being thus set free, set out soon afterwards to visit England and Ireland, to obtain further help for the mission. During his stay he was called upon to give evidence before the Parliamentary Commission on the evils of transportation, and, at the request of the Government, he wrote a tract on the subject. He was also summoned to Rome, at the instance of Cardinal Weld, to report on the state of the Australian mission.

In 1838 he once more set sail for Sydney, with several priests and nuns who had offered themselves for the work. On his landing, he found himself the centre of obloquy, on account of his evidence on the convict question, for it was supposed to be detrimental to the colony, which thrived on the free labour of the convicts. Nevertheless, his views in the end prevailed, and transportation was abolished. In 1840 Ullathorne left Australia, as it turned out, for good, travelling to England in company with Bishop Polding. He had already drawn out a scheme for a regular hierarchy, rendered possible by the remarkable and rapid increase in numbers and organization, and when Dr. Polding

went to Rome he obtained its substantial adoption. Dr. Polding himself became Archbishop of Sydney; but though Ullathorne was more than once pressed to accept a bishopric there, he remained staunch in his refusal, and retired to the mission of Coventry. Here he used his energy in building a handsome new church; but after a stay of three years he had once more to move, being appointed Vicar Apostolic of the Western District of England, with the title of Bishop of Hetalona. Two years later, however, he was transferred to the Central District, in which he was destined to spend the remaining forty-one years of his life. He soon acquired influence among his brother bishops, and in 1848 he went to Rome as their delegate, to negotiate the restoration of the English hierarchy—a task for which he was specially qualified, in view of the part he had taken in the similar scheme already carried out in Australia.

His negotiations were successful, and after a delay of two years, due to the Revolution in Rome, the new English hierarchy was proclaimed by Pius IX on 29 September, 1850. Cardinal Wiseman became the first Archbishop of Westminster, Dr. Ullathorne being appointed Bishop of Birmingham. He ruled that diocese for thirty-seven years. On the death of Cardinal Wiseman, he was chosen by Propaganda to succeed him; but Pius IX overruled their choice and appointed Cardinal Manning, and Dr. Ullathorne remained at Birmingham. He took part in all the four provincial synods of Westminster, and in 1870 he attended the Vatican Council; but for the most part his episcopate was free from incident beyond the steady growth and administration of his diocese. When he first took up his residence in the Midlands, he found the finances in a deplorable condition: he lived to see his diocese thoroughly organized, and many new missions established, as well as new communities of men, the most famous of which was [Ven. John Henry] Newman's Congregation of Oratorians at Edgbaston. Oscott was at that time a mixed college, and in 1873 Bishop Ullathorne established a regular diocesan seminary—St. Bernard's, Olton. He also devoted himself in a special manner to the convents of his diocese, in all of which he took a personal interest. One of his chief assistants was the well-known Mother Margaret Hallahan, who founded a convent of the Dominican Order at Stone, from which there were several branch houses. In 1888 Dr. Ullathorne obtained leave from the Holy See to resign his diocese, being given the title of Archbishop of Cabasa. He retired to Oscott College, where he died the following year on the feast of St. Benedict, and was buried in St. Dominic's Convent, Stone.

His chief works, written during his last years, are: "Endowments of Man" (London, 1880); "Groundwork of Christian Virtues" (1882); "Christian Patience" (1886). He also published "Reply to Judge Burton on Religion in Australia" (Sydney, 1835); "La Salette" (1854); "The Immaculate Conception" (1855); "History of Restoration of English Hierarchy" (1871); "The Dollingerites" (1874); "Answer to Gladstone's 'Vatican Decrees'" (1875); and a large number of sermons, pastorals, pamphlets, etc.

For the first half of his life (to 1850), see his Autobiography, edited after his death by THEODOSIA DRANE, of Stone Convent (1891); for the second half, see his Letters, edited by the same (1892).

Cath., s. v., with fuller enumeration of Ullathorne's works; MAZIERE BRADY, Catholic Hierarchy; Bishop Ullathorne Number of The Oscotian (London, 1886); GLANCEY, Characteristics from the Writings of Archbishop Ullathorne (London, 1889); KENNY, Hist. of Catholicity in Australia (1886); PURCELL, Life of Manning (London, 1896); WARD, Life of Wiseman (London, 1897); BIRT, Benedictine Pioneers in Australia (London, 1911); WARD, Life of Newman (London, 1912).

BERNARD WARD

Richard Ullerston

Richard Ullerston

B. in the Duchy of Lancaster, England; d. in August or September, 1423. Having been ordained priest in December, 1383, he became fellow of Queen's College, Oxford (1391-1403), holding office in the college, and proceeding doctor of divinity in 1394. In 1408 he became chancellor of the university and in the same year wrote at the request of the Bishop of Salisbury a sketch of proposed ecclesiastical reforms: "Petitiones pro ecclesiae militantis reformatione". He also wrote a commentary on the Creed (1409), one on the Psalms (1415), another on the Canticle of Canticles (1415), and "Defensorium donationis ecclesiasticae", a work in defence of the donation of Constantine. At the request of Archbishop Courtenay he wrote a treatise, "De officio militari", addressed to Henry, Prince of Wales. From 1403 he held the prebend of Oxford in Salisbury cathedral, and from 1407 the rectory of Beeford in Yorkshire.

EDWIN BURTON

Antoine de Ulloa

Antonio de Ulloa

Naval officer and scientist, born at Seville, Spain, 12 Jan., 1716; died near Cadiz, Spain, 5 July, 1795. He entered the navy in 1733. In 1735 he was appointed with Jorge Juan, another young Spaniard, a member of a scientific expedition which the French Academy of Sciences was sending to Peru to measure a degree of the meridian at the equator. They remained there for nearly ten years. In 1745, having finished their scientific labours, he and Jorge Juan prepared to return to Spain, agreeing to travel on different ships in order to minimize the danger of losing the important fruits of their labours. The ship upon which Ulloa was travelling was captured by the British, and he was taken as a prisoner to England. In that country, through his scientific attainments, he gained the friendship of the men of science, and was made a Fellow of the Royal Society of London. In a short time, through the influence of the president of this society, he was released ! and was able to return to Spain. He became prominent as a scientist and was appointed to serve on various important

scientific commissions. In 1766 he was sent as Governor to "La Florida Occidental" (Louisiana), where he remained two years, and in 1779 he became lieutenant-general of the naval forces. He is to be credited with the establishment of the first museum of natural history, the first metallurgical laboratory in Spain, and the observatory of Cadiz. As a result of his scientific work in Peru, he published (Madrid, 1784) "Relación histórica del viaje á la América Meridional", which contains a full, accurate, and clear description of the greater part of South America geographically, and of its inhabitants and natural history. In collaboration with the Jorge Juan mentioned above, he also wrote "Noticias secretas de América", giving valuable information regarding the early religious orders in Spanish America. This work was published by David Barry in London, 1826.

VENTURA FUENTES

Francisco de Ulloa

Francisco de Ulloa

Died 1540. It is not known when he came to Mexico nor if he accompanied Hernan Cortés in his first expedition to California. Authorities are divided upon these questions. Diaz del Castillo relates that during the absence of Cortés, his wife, Doña Juana de Zuñiga (Juñeja), sent letters to him by Ulloa, begging him to return. Ulloa, in charge of two ships loaded with provisions, reached Cortés when he was sorely straitened, and he returned to Mexico in 1537. Ulloa soon followed. Eager for new discoveries, Cortés undertook an expedition at his own expense in 1538, dispatching a fleet of three boats under the command of Francisco de Ulloa. According to Clavigero, Ulloa sailed along the coasts of the California peninsula until he was obliged by the scarcity of provisions to return to New Spains, where, in 1540, according to Diaz del Castillo, he was stabbed by a soldier and killed. Other historians relate, however, that of the three boats which sailed from the port of Acapulco the "S. Tomás" was soon lost; the "S. Agueda" was obliged to seek port in Manzanillo to repair damages, was afterwards driven by a tempest to the shores of Culiacan, where it joined the "Trinidad," returning shortly with the discontented members of the expedition, and the ship "Trinidad," under command of Ulloa, was lost, no trace having been found of her.

CAMILLUS CRIVELLI

St. Ulrich

St. Ulrich

Bishop of Augsburg, born at Kyburg, Zurich, Switzerland, in 890; died at Augsburg, 4 July, 973. He was the son of Count Hucpald and Thetbirga, and was connected with the dukes of Alamannia and the imperial family of the Ottos. As a child he was sickly; when old enough to learn he was sent to the monastic school of St. Gall, where he proved to be an excellent scholar. He resolved to enter the priesthood, but was in doubt whether to enter the Benedictine Abbey of St. Gall or to become a secular priest. He was sent before April, 910, for his further training to Adalbero,

Bishop of Augsburg, who made him a chamberlain. On Adalbero's death (28 April, 910) Ulrich returned home, where he remained until the death of Bishop Hiltine (28 November, 923). Through the influence of his uncle, Duke Burchard of Alamannia, and other relatives, Ulrich was appointed Bishop of Augsburg by King Henry, and was consecrated on 28 Dec., 923. He proved himself to be a ruler who united severity with gentleness. He sought to improve the low moral and social condition of the clergy, and to enforce a rigid adherence to the laws of the Church. Ulrich hoped to gain this end by periodical visitations, and by building as many churches as possible, to make the blessings of religion more accessible to the common people. His success was largely due to the good example he set his clergy and diocese. For the purpose of obtaining relics he went on two journeys to Rome, in 910, and in 952 or 953.

Ulrich demanded a high moral standard of himself and others. A hundred years after his death, a letter apparently written by him, which opposed celibacy, and supported the marriage of priests, suddenly appeared. The forger of the letter counted on the opinion of the common people, who would regard celibacy as unjust if St. Ulrich, known for the rigidity of his morals, upheld the marriage of priests (cf. "Analecta Boll.", XXVII, 1908, 474). Ulrich was also steadfastly loyal, as a prince of the empire, to the emperor. He was one of the most important props of the Ottonian policy, which rested mainly upon the ecclesiastical princes. He constantly attended the judicial courts held by the king and in the diets. He even took part in the Diet held on 20 September, 972, when he defended himself against the charge of nepotism in regard to his nephew Adalbero, whom he had appointed his coadjutor on account of his own illness and desire to retire to a Benedictine abbey. During the struggle between Otto I and his son Duke Ludolf of Swabia, Ulrich had much to suffer from Ludolf and his partisans. When in the summer of 954 father and son were ready to attack each other at Illertissen in Swabia, at the last moment Ulrich and Bishop Hartbert of Chur were able to mediate between Otto and Ludolf. Ulrich succeeded in persuading Ludolf and Konrad, Otto's son-in-law, to ask the king's pardon on 17 December, 954. Before long the Magyars entered Germany, plundering and burning as they went, and advanced as far as Augsburg, which they besieged with the fury of barbarians. It was due to Ulrich's ability and courage that Augsburg was able to hold out against the besiegers until the Emperor Otto arrived. On 10 August, 955, a battle was fought in the Lechfeld, and the invaders were finally defeated. The later assertion that Ulrich himself took part in the battle is incorrect, as Ulrich could not have broken through the ranks of the Magyars, who were south of him, although north of the emperor.

As morning dawned on 4 July, 973, Ulrich had ashes strewn on the ground in the shape of a cross; the cross sprinkled with holy water, and he was placed upon it. His nephew Richwin came with a message and greeting from the Emperor Otto II as the sun rose, and immediately upon this, while the clergy sang the Litany, St. Ulrich passed away. His body was placed in the Church of St. Afra, which had been rebuilt by him. The burial was performed by Bishop Wolfgang of Ratisbon. Many miracles were wrought at his grave; and in 993, he was canonized by John XV. As early as the tenth century, there is a very beautiful miniature, in a manuscript now in the library of Einsiedeln

(no. 261, fol. 140). Other miniatures are at the Royal Library of Munich, in manuscripts of 1454 (Cgm., 94, fo. 26v, and Cgm., no. 751).

ULRICH SCHMID

Ulrich of Bamberg

Ulrich of Bamberg

(Udalricus Babenbergensis), a cleric of the cathedral church of Bamberg, of whom nothing more is known than that he lived about 1100 at Bamberg. He is probably identical with the priest of Bamberg of the same name (d. 7 July, 1127), who is often mentioned in official documents and who bestowed large benefits on the monastery of Michelsberg. Ulrich's work is called "Codex epistolaris, continens variorum pontificum et imperatorum Romanorum, ut et S.R.E. cardinalium et S.R.I. principum ecclesiasticorum seculariumque epistolas". This collection of documents was completed in 1125 and dedicated to Bishop Gebhard of Würzburg. It contains letters from the year 900 on and was undoubtedly intended for the training of chancellors and statesmen, giving examples as models for the form of letters and public documents. Numerous important letters and charters of that period, which are preserved in it, offer rich material for the history of the relations between the emperors and popes; in particular the letters exchanged by Emperor Lothair, Henry the Proud, and Innocent I give an animated and instructive picture of conditions at that time. These letters also show how the statesmen at the episcopal courts and probably also the bishops were trained. After the collection had been closed by Ulrich several supplements were added that extend to 1134; these additional documents are generally addressed to Bishop Otto of Bamberg.

PATRICIUS SCHLAGER

Ulrich of Richenthal

Ulrich of Richenthal

Chronicler of the Council of Constance, date of birth unknown; died about 1438. Ulrich was a citizen of Constance, well educated and a good latinist. He was a landowner and a layman, perhaps a son of the town clerk of Constance, Johannes Richenthal, who lived in the second half of the fourteenth century. During the session of the Ecumenical Council of Constance Ulrich frequently came into connection with the fathers assembled. He met the papal delegates who had to provide quarters for the members of the council. He was employed in business matters by princes who were present in the city during the council, and a bishop lived in his house. Ulrich followed the council, the great events that took place in it, the festivities, and all the celebrations of which his native town was the theatre. He wrote in the German dialect of Constance an exact and careful account of all, introducing much statistical matter. This chronicle is preserved in several manuscripts, of which one at St. Petersburg is in Latin. The Manuscripts contain coats-of-arms and other illustrations valuable for the history of civilization.

J. P. KIRSCH
St. Ulrich of Zell

St. Ulrich of Zell

(Wulderic; called also of Cluny, and of Ratisbon), born at Ratisbon, at the beginning of 1029; died at Zell, probably on 10 July, 1093. Feast, 14 July (10). Two lives of him are extant: the first, written anonymously c. 1109 by a monk of Zell at the request of Adalbert, a recluse near Ratisbon; the other, also anonymous, written between 1109 and 1130. Particulars of his life are also contained in his writings. His parents, pious and rich, were Bernhold and Bucca, niece of Bishop Gebhard II. Ulrich probably received his education at St. Emmeram, but in 1044 he was called to the court of his godfather, Henry IV, and acted as page to the Empress Agnes. Ordained deacon by his uncle Nidger, Bishop of Freising, he was made archdeacon of the cathedral. On his return from a journey to Rome he distributed his possessions to the poor, made a pilgrimage to the Holy Land, and, after another short visit to Rome, entered the Abbey of Cluny in 1061, during the reign of St. Hugo. Here he soon excelled in piety and diligence, made his profession, was ordained priest and appointed confessor to the convent at Mareigny in the Diocese of Autun, and prior of the community of men in the same place. Here he lost an eye and was obliged to return to Cluny.

He was then named prior at Peterlingen (Payerne) in the Diocese of Lausanne, but on account of troubles caused by Bishop Burchard von Oltingen, a partisan of Henry IV, Ulrich again went to Cluny, where he acted as adviser to his abbot. A nobleman had donated to Cluny some property at Grüningen near Breisach, and Ulrich was sent to inspect the place and eventually to lay the foundation of a monastery. Not finding the locality suitable, he with his monks in 1087 retired to Zell (Sell, Sella, Villmarszelle) in the Black Forest, where the report of his virtues soon brought him many disciples. He enjoyed the esteem of Blessed Gebhard III, Bishop of Basle, who frequently visited him. In 1090 he established a convent for nuns at Bolesweiler (now Bollschweil), about a mile from Zell. God granted him the gift of miracles. The last two years of his life he was blind. He was buried in the cloister, but three years later his body was brought into the church. His feast was celebrated for the first time 14 July, 1139.

His life of Hermann von Zähringen, Margrave of Baden, later a monk of Cluny, is also lost. His "Consuetudines cluniacenses" (in P.L., CXLIX, 657) were composed at the request of William, Abbot of Hirschau, in three books. The first two, written between 1079 and 1082, treat of liturgy and the education of novices; the third, written not later than 1087, speaks of the government of monasteries.

FRANCIS MERSHMAN
St. Ultan of Ardraccan

St. Ultan of Ardraccan

St. Ultan of Ardraccan, Ireland, was the maternal uncle of St. Brigid, and collected a life of that great Irish saint for his pupil, St. Brogan Cloen of Rostuirc, on Ossory. There seems to be some difficulty in his chronology inasmuch as the assumption of his relation to St. Brigid must involve an extraordinary longevity, namely 180 years, because his death is not chronicled till 657. Windisch, however, explains away the seeming inconsistency. The Irish Annals describe St. Ultan as of the royal race of O'Connor, and he succeeded St. Breccan as Abbot-Bishop of Ardraccan about the year 570. From O'Clery's "Irish Calendar" we learn that he educated and fed thousands of poor students from all parts of Ireland. Of his literary powers there are several specimens, among others, lives of St. Patrick and St. Brigid. His exquisite Latin hymn of the latter saint, commencing "Christus in nostra insula", is incorporated in the Solesmes Chant books. The exact year of his death is uncertain, the various annalists giving 653, 656, 657, and 662, but probably we are safe in following the "Annals of Ulster", wherein his obit is recorded under the year 657. He died on 4 September, on which day his feast has always been celebrated. St. Ultan's Well is still at Ardraccan.

W. H. GRATTAN-FLOOD

Ultramontanism

Ultramontanism

A term used to denote integral and active Catholicism, because it recognizes as its spiritual head the pope, who, for the greater part of Europe, is a dweller beyond the mountains (*ultra montes*), that is, beyond the Alps. The term "ultramontane", indeed, is relative: from the Roman, or Italian, point of view, the French, the Germans, and all the other peoples north of the Alps are ultramontanes, and technical ecclesiastical language actually applies the word in precisely this sense. In the Middle Ages, when a non-Italian pope was elected he was said to be a *papa ultramontano*. In this sense the word occurs very frequently in documents of the thirteenth century; after the migration to Avignon, however, it dropped out of the language of the Curia.

In a very different sense, the word once more came into use after the Protestant Reformation, which was, among other things, a triumph of that ecclesiastical particularism, based on political principles, which was formulated in the maxim: *Cujus regio, ejus religio*. Among the Catholic governments and peoples there gradually developed an analogous tendency to regard the papacy as a foreign power; Gallicanism and all forms of French and German regalism affected to look upon the Holy See as an alien power because it was beyond the Alpine boundaries of both the French kingdom and the German empire. This name of Ultramontane the Gallicans applied to the supporters of the Roman doctrines--whether that of the monarchical character of the pope in the government of the Church or of the infallible pontifical *magisterium*--inasmuch as the latter were supposed to renounce "Gallican liberties" in favour of the head of the Church who resided *ultra montes*. This use of the word was not altogether novel; as early as the time of Gregory VII the opponents of Henry IV in Germany had been called Ultramontanes (*ultramontani*). In both cases

the term was intended to be opprobrious, or at least to convey the imputation of a failing in attachment to the Ultramontane's own prince, or his country, or his national Church.

In the eighteenth century the word passed from France back to Germany, where it was adopted by the Febronians, Josephinists, and Rationalists, who called themselves Catholics, to designate the theologians and the faithful who were attached to the Holy See. Thus it acquired a much wider signification, being applicable to all Roman Catholics worthy of the name. The Revolution adopted this polemical term from the old regime: the "Divine State", formerly personified in the prince, now found its personification in the people, becoming more "Divine" than ever as the State became more and more laic and irreligious, and, both in principle and in fact, denied any other God but itself. In presence of this new form of the old state-worship, the "Ultramontane" is the antagonist of the atheists as much as the non-Catholic believers, if not more--witness the Bismarckian *Kulturkampf*, of which the National Liberals rather than the orthodox Protestants were the soul. Thus the word came to be applied more especially in Germany from the earliest decades of the nineteenth century. In the frequent conflicts between Church and State the supporters of the Church's liberty and independence as against the State are called Ultramontanes. The Vatican Council naturally called forth numerous written attacks upon Ultramontanism. When the Centre was formed as a political party it was called by preference the Ultramontane party. In a few years the "Anti-Ultramontane Reichsverband" came into existence to combat the Centre and, at the same time, Catholicism as a whole.

As our present purpose is to state what Ultramontanism is, it is beside our scope to expound the Catholic doctrine on the power of the Church and, in particular, of the pope, whether in spiritual or temporal matters, these subjects being treated elsewhere under their respective titles. It is sufficient here to indicate what our adversaries mean by Ultramontanism. For Catholics it would be superfluous to ask whether Ultramontanism and Catholicism are the same thing: assuredly, those who combat Ultramontanis are in fact combating Catholicism, even when they disclaim the desire to oppose it. One of the recent adversaries of Ultramontanism among Catholics was a priest, Professor Franz Xaver Kraus, who says ("Spektatorbrief", II, quoted in the article *Ultramontanismus* in "Realencycl. für prot. Theol. u. Kirche", ed. 1908): "1. An Ultramontane is one who sets the idea of the Church above that of religion; 2. ...who substitutes the pope for the Church; 3. ...who believes that the kingdom of God is of this world and that, as medieval curialism asserted, the power of the keys, given to Peter, included temporal jurisdiction also; 4. ...who believes that religious conviction can be imposed or broken with material force; 5. ...who is ever ready to sacrifice to an extraneous authority the plain teaching of his own conscience." According to the definition given in Leichtenberger, "Encycl. des sciences religieuses" (ed. 1882): "The character of Ultramontanism is manifested chiefly in the ardour with which it combats every movement of independence in the national Churches, the condemnation which it visits upon works written to defend that independence, its denial of the rights of the State in matters of government, of ecclesiastical administration and ecclesiastical control, the tenacity with which it has prosecuted the declaration of the dogma of the

pope's infallibility and with which it incessantly advocates the restoration of his temporal power as a necessary guarantee of his spiritual sovereignty."

The war against Ultramontanism is accounted for not merely by its adversaries' denial of the genuine Catholic doctrine of the Church's power and that of her supreme ruler, but also, and even more, by the consequences of that doctrine. It is altogether false to attribute to the Church either political aims of temporal dominion among the nations or the pretence that the pope can at his own pleasure depose sovereigns that the Catholic must, even in purely civil matters, subordinate his obedience towards his own sovereign to that which he owes to the pope, that the true fatherland of the Catholic is Rome, and so forth. These are either pure inventions or malicious travesties. It is neither scientific nor honest to attribute to "Ultramontanism" the particular teaching of some theologian or some school of times past; or to invoke certain facts in medieval history, which may be explained by the peculiar conditions, or by the rights which the popes possessed in the Middle Ages (for example, their rights in conferring the imperial crown). For the rest, it is sufficient to follow attentively, one by one, the struggle kept up in their journals and books to be convinced that this warfare by the Rationalist-Protestant-Modernist coalition against "Clericalism" or "Ultramontanism" is, fundamentally, directed against integral Catholicism--that is, against papal, anti-Liberal, and counter-Revolutionary Catholicism. (See also STATE AND CHURCH; FEBRONIANISM; SYLLABUS.)

U. BENIGNI

Unam Sanctam

Unam Sanctam

(Latin *the One Holy*, i.e. Church), the Bull on papal supremacy issued 18 November, 1302, by Boniface VIII during the dispute with Philip the Fair, King of France. It is named from its opening words (*see* BONIFACE VIII). The Bull was promulgated in connection with the Roman Council of October, 1302, at which it had probably been discussed. It is not impossible that Boniface VIII himself revised the Bull; still it also appears that Aegidius Colonna, Archbishop of Bourges, who had come to the council at Rome notwithstanding the royal prohibition, influenced the text. The original of the Bull is no longer in existence; the oldest text is to be found in the registers of Boniface VIII in the Vatican archives ["Reg. Vatic.", L, fol. 387]. It was also incorporated in the "Corpus juris canonici" ("Extravag. Comm.", I, vii, 1; ed. Friedberg, II, 1245). The genuineness of the Bull is absolutely established by the entry of it in the official registers of the papal Briefs, and its incorporation in the canon law. The objections to its genuineness raised by such scholars as Damberger, Mury, and Verlaque are fully removed by this external testimony. At a later date Mury withdrew his opinion.

The Bull lays down dogmatic propositions on the unity of the Church, the necessity of belonging to it for eternal salvation, the position of the pope as supreme head of the Church, and the duty thence arising of submission to the pope in order to belong to the Church and thus to attain salvation.

The pope further emphasizes the higher position of the spiritual in comparison with the secular order. From these premises he then draws conclusions concerning the relation between the spiritual power of the Church and secular authority. The main propositions of the Bull are the following: First, the unity of the Church and its necessity for salvation are declared and established by various passages from the Bible and by reference to the one Ark of the Flood, and to the seamless garment of Christ. The pope then affirms that, as the unity of the body of the Church so is the unity of its head established in Peter and his successors. Consequently, all who wish to belong to the fold of Christ are placed under the dominion of Peter and his successors. When, therefore, the Greeks and others say they are not subject to the authority of Peter and his successors, they thus acknowledge that they do not belong to Christ's sheep.

Then follow some principles and conclusions concerning the spiritual and the secular power:

- Under the control of the Church are two swords, that is two powers, the expression referring to the medieval theory of the two swords, the spiritual and the secular. This is substantiated by the customary reference to the swords of the Apostles at the arrest of Christ (Luke, xxii, 38; Matt., xxvi, 52).
- Both swords are in the power of the Church; the spiritual is wielded in the Church by the hand of the clergy; the secular is to be employed for the Church by the hand of the civil authority, but under the direction of the spiritual power.
- The one sword must be subordinate to the other: the earthly power must submit to the spiritual authority, as this has precedence of the secular on account of its greatness and sublimity; for the spiritual power has the right to establish and guide the secular power, and also to judge it when it does not act rightly. When, however, the earthly power goes astray, it is judged by the spiritual power; a lower spiritual power is judged by a higher, the highest spiritual power is judged by God.
- This authority, although granted to man, and exercised by man, is not a human authority, but rather a Divine one, granted to Peter by Divine commission and confirmed in him and his successors. Consequently, whoever opposes this power ordained of God opposes the law of God and seems, like a Manichæan, to accept two principles.

"Now, therefore, we declare, say, determine and pronounce that for every human creature it is necessary for salvation to be subject to the authority of the Roman pontiff" (*Porro subesse Romano Pontifici omni humanae creaturae declaramus, dicimus, definimus, et pronuntiamus omnino esse de necessitate salutis*).

The Bull is universal in character. As its content shows, a careful distinction is made between the fundamental principles concerning the Roman primacy and the declarations as to the application of these to the secular power and its representatives. In the registers, on the margin of the text of the record, the last sentence is noted as its real definition: "*Declaratio quod subesse Romano Pontifici est omni humanae creaturae de necessitate salutis*" (It is here stated that for salvation it is necessary that every human creature be subject to the authority of the Roman pontiff). This definition, the meaning and importance of which are clearly evident from the connection with the first part on the necessity of the one Church for salvation, and on the pope as the one supreme head of the Church, expresses the necessity for everyone who wishes to attain salvation of belonging to the Church, and therefore of being subject to the authority of the pope in all religious matters. This has been

the constant teaching of the Church, and it was declared in the same sense by the Fifth Ecumenical Council of the Lateran, in 1516: "De necessitate esse salutis omnes Christi fideles Romano Pontifici subesse" (That it is of the necessity of salvation for all Christ's faithful to be subject to the Roman pontiff). The translation by Berchtold of the expression *humanae creaturae* by "temporal authorities" is absolutely wrong. The Bull also proclaims the subjection of the secular power to the spiritual as the one higher in rank, and draws from it the conclusion that the representatives of the spiritual power can install the possessors of secular authority and exercise judgment over their administration, should it be contrary to Christian law.

This is a fundamental principle which had grown out of the entire development in the early Middle Ages of the central position of the papacy in the Christian national family of Western Europe. It had been expressed from the eleventh century by theologians like Bernard of Clairvaux and John of Salisbury, and by popes like Nicholas II and Leo IX. Boniface VIII gave it precise expression in opposing the procedure of the French king. The main propositions are drawn from the writings of St. Bernard, Hugh of St. Victor, St. Thomas Aquinas, and letters of Innocent III. Both from these authorities and from declarations made by Boniface VIII himself, it is also evident that the jurisdiction of the spiritual power over the secular has for its basis the concept of the Church as guardian of the Christian law of morals, hence her jurisdiction extends as far as this law is concerned. Consequently, when King Philip protested, Clement V was able, in his Brief "Meruit", of 1 February, 1306, to declare that the French king and France were to suffer no disadvantage on account of the Bull "Unam Sanctam", and that the issuing of this Bull had not made them subject to the authority of the Roman Church in any other manner than formerly. In this way, Clement V was able to give France and its ruler a guarantee of security from the ecclesiastico-political results of the opinions elaborated in the Bull, while its dogmatic decision suffered no detriment of any kind. In the struggles of the Gallican party against the authority of the Roman See, and also in the writings of non-Catholic authors against the definition of Papal Infallibility, the Bull "Unam Sanctam" was used against Boniface VIII as well as against the papal primacy in a manner not justified by its content. The statements concerning the relations between the spiritual and the secular power are of a purely historical character, so far as they do not refer to the nature of the spiritual power, and are based on the actual conditions of medieval Western Europe.

J. P. KIRSCH

Ungava

Ungava

A Canadian territory lying north of the Province of Quebec, detached (1876) from the Great Labrador peninsula. Ungava, whose area (354,961 sq. m.) surpasses that of Quebec (351,873 sq. m.), was annexed to the latter province (1912) by the Federal Government. It is bounded on the west by Hudson's Straits, comprising Ungava Bay, on the north-east and east by Labrador proper, on the south by the Province of Quebec, on the west by Hudson and James' Bays. This land was

visited by the Basques, by Cabot (1493), Weymouth (1602), Hudson (1610), and by the Jesuits Dablon (1661) and Albanel (1672), on their journey by land to Hudson Bay. During the last century the Oblates of Mary Immaculate, Babel (1866 and 1870) and Lacasse (1875), evangelized the Indians of the interior. The Moravian Brothers began proselytizing the Esquimaux in 1770. Ungava now depends spiritually on the Vicariate Apostolic of the Gulf of St. Lawrence. Its immense forest and mineral resources, fertile soil, and unparalleled hydraulic power reveal a bright prospect for colonization and industry. Railway lines are in preparation between Quebec and Western Canada and Hudson Bay. The census of 1901 gave a population of 5113 souls, comprising the aborigines (Esquimaux on the coast, Montagnais and Nascaupis in the interior) and whites.

LIONEL LINDSAY

Uniformity Acts

Uniformity Acts

These statutes, passed at different times, were vain efforts to secure uniformity in public worship throughout England. But as the principle of unity had been lost when communion with the See of Peter was broken off, all such attempts were foredoomed to failure. They were resisted by Catholics on the one hand and the Nonconformists on the other. The first of these Acts (2 and 3 Edward VI, c. 1) was called "An Act for Uniformity of Service and Administration of the Sacraments throughout the Realm". After a long preamble setting forth the reasons which had led to the drawing up of "The Book of the Common Prayer and Administration of the Sacraments, and other rites and ceremonies of the Church after the use of the Church of England", and the desirability of having one uniform rite and order in use in all churches through England and Wales, the statute enacts that after Pentecost, 1549, all ministers shall be bound to follow the same in all public services. Then follow penalties against such of the clergy as shall substitute any other form of service, or shall not use the "Book of Common Prayer", or who shall preach or speak against it. Further penalties are decreed against all who in plays or songs shall mock said book. Private persons were allowed to use the forms for Matins and Evensong in Latin, Greek, or Hebrew in their own private devotions, and liberty was reserved to the universities to have the service in their college chapels conducted in any of these tongues. There is nothing in this Act to enforce attendance at public worship, but the provisions of the Act apply to every kind of public worship or "open prayer", as it was called, which might take place. The Act itself defines "open prayer" as "that prayer which is for others to come unto or near, either in common churches or private chapels or oratories, commonly called the service of the Church". This Act was confirmed by 5 and 6 Edw. VI, c. 1, repealed by I Mary, sess. 2, c. 2, revived by 1 Eliz., c. 2, and 1 James I, c. 25, and made perpetual so far as it relates to the Established Church of England by 5 Anne, c. 5 (c. 8 according to some computations).

The next of these Acts (3 and 4 Edward VI, c. 10) was passed in 1549 under the title "An Act for the abolishing and putting away of diverse books and images". The preamble of the Act recites that the king had of late set forth and established by authority of Parliament an order for common

prayer in a book entitled, "The Book of Common Prayer and Administration of the Sacraments, and other rites and ceremonies of the Church, after the Church of England". The first section then suppresses and forbids all books or writings in Latin or English used for church services other than such as are appointed by the king's majesty. And all such books are to be collected by the mayor and other civil authorities and delivered to the bishop to be destroyed.

But as the "First Prayer-book" of Edward VI did not satisfy the reformers, it was soon supplanted by the "Second Prayer-book", issued in 1552 and also sanctioned by Act of Parliament. This Act of Uniformity is the first to be expressly called by that name, being entitled "An Act for the Uniformity of Service and Administration of Sacraments throughout the realm" (5 and 6 Edw. VI, c. 1). It goes much further than the previous Act, for it enforces church attendance on Sundays and holy days. After the preamble declaring the desirability of uniformity, the second section enacts that after 1 November, 1552, all persons shall attend their parish church on Sundays and holy days and shall be present at the common prayer, preaching, or other service, under pain of punishment by the censures of the Church. The archbishops and bishops are charged with the task of enforcing the Act (sect. 3); and they are to inflict the censures of the Church on offenders (sect. 4). The fifth section refers to the new "Book of Common Prayer", to which had been added a "Form and Manner of making and consecrating archbishops, bishops, priests, and deacons", and declares that all the provisions of the previous Act shall apply to it. By the sixth and last section any person convicted of being present at any other form of common prayer or administration of the sacraments shall be imprisoned for six months for the first offence, one year for the second, and shall suffer imprisonment for life for the third. The Act was to be read in church four times during the following year and once a year afterwards. It was repealed by 1 Mary, sess. 2, c. 2, but revived with certain alterations by 1 Eliz., c. 2, and confirmed by 1 James I, c. 25. It was made perpetual so far as it relates to the Established Church of England by 5 Anne, c. 5 (or c. 8 according to the chronological table of statutes).

Queen Mary contented herself with repealing these statutes of Edward and thus restoring the ancient liberty. No fresh Uniformity Act appeared on the statute book till Protestantism returned under Elizabeth. Then the well known "Act for the Uniformity of Common Prayer and Service in the Church and Administration of the Sacraments" (1 Eliz., c. 2) was passed. The first effect of this statute was to repeal the Act of Mary as and from 24 June, 1559, and to restore the "Book of Common Prayer" from that date. The "Second Prayer-book" of Edward VI with certain additions and alterations was thenceforth to be used, and any clergyman neglecting to use it or substituting any other form of open prayer or preaching against it, was on conviction to suffer penalties which increased with offence till on the third conviction they amounted to deprivation from all spiritual preferment and imprisonment for life. Similarly severe penalties culminating in the forfeiture of all goods and chattels and imprisonment for life were decreed against all persons who spoke in derision of the "Book of Common Prayer". Attendance at church service on Sunday at the parish church was rendered compulsory, and any person absent without reasonable cause was to pay a fine of twelve pence, which would be equivalent to ten shillings in modern English money, or two

dollars and a half. Long and extensive provisions for enforcing the Act are included, and one section provides for uniformity in the ornaments of the Church and ministers. This enacts that the same ornaments shall be retained "as was in this Church of England, by authority of Parliament, in the second year of King Edward VI".

This Act proved a powerful weapon against the Catholics, who could not conscientiously obey it, and it was used consistently as a means to harass and impoverish them. So effective was it that it needed no amending, and a century elapsed before the next Uniformity Act was passed. This was the celebrated Act of Charles II (13 and 14 Chas. II, c. 4: according to some computations it is quoted as 15 Chas. II, c. 4). It was followed by a short Act of Relief (15 Chas. II, c. 6). This Act is of little or no special interest to Catholics, for it was primarily designed to regulate the worship of the Church of England, and so far as Catholics were concerned it added nothing to the provisions of the Edwardine and Elizabethan Acts.

Relief from the Acts of Uniformity was granted to Catholics by the Second Catholic Relief Act (31 Geo. III, c. 32), though the benefits of the Act were limited to those who made the declaration and took the oath under the Act. So much of this statute as related to the declaration and oath was repealed in 1871 by the Promissory Oaths Act (34 and 35 Vict., c. 48). There were certain restrictions and conditions as to Catholic places of worship, but these were changed in 1832 by the Act 2 and 3 Wm. IV, c. 115, by which Catholics were placed on the same footing as Protestant dissenters in this and some other respects. Incidentally this statute made it compulsory to certify Catholic chapels to the Anglican bishop and archdeacon and the quarter sessions. But this restriction was abolished in 1855 by 18 and 19 Vict., c. 81, which provided that such buildings could be notified to the registrar-general instead. Even this provision has long fallen into disuse and it is not customary to register Catholic churches except for the solemnization of marriage. Thus for Catholics, as for Nonconformists, the provisions of the Uniformity Acts have been gradually repealed and now they apply only to the Established Church of England; but to that extent they are still on the statute-books and as late as 1872 a statute entitled "An Act for the Amendment of the Act of Uniformity" was passed (35 and 36 Vic., c. 35). As long as the Church of England is the established religion its worship will be regulated by statute, so that Acts of Uniformity in one shape or another will remain part of the English code of law unless, and until, disestablishment takes place.

EDWIN BURTON

Unigenitus

Unigenitus

A celebrated Apostolic Constitution of Clement XI, condemning 101 propositions of Pasquier Quesnel. In 1671 Quesnel had published a book entitled "Abrégé de la morale de l'Évangile". It contained the Four Gospels in French, with short notes explanatory of the text, at the same time serving as aids for meditation. The work was approved by Bishop Vialart of Châlons. An enlarged edition, containing an annotated French text of the New Testament, appeared in three small volumes

in 1678, and a later edition in four volumes appeared under the title "Le nouveau testament en francais avec dees reflexions morales sur chaque verse, pour en rendre la lecture plus utile et la méditation plus aisée" (Paris, 1693-94). This last edition was highly recommended by Noailles, who had succeeded Vialart as Bishop of Châlons. While the first edition of the work contained only a few Jansenistic errors, its Jansenistic tendency became more apparent in the second edition, and in its complete form, as it appeared in 1693, it was pervaded with practically all the errors of Jansenism. Several bishops forbade its reading in their dioceses, and Clement XI condemned it in his Brief, "Universi Dominici Gregis", dated 13 July, 1708. The papal Brief was, however, not accepted in France because its wording and its manner of publication were not in harmoy with the "Gallican Liberties". Noailles, who had become Archbishop of Paris and cardinal, was too proud to withdraw the approbation which he had inadvertently given to the book while Bishop of Châlons, and Jansenism again raised its head. To put an end to this situation several bishops, and especially Louis XIV, asked the pope to issue a Bull in place of the Brief which the French Government did not accept. The Bull was to avoid every expression contrary to the "Gallican Liberties" and to be submitted to the French Government before publication. To avoid further scandal, the pope yielded to these humiliating conditions, and in Feb., 1712, appointed a special congregation of cardinals and theologians to cull from the work of Quesnel such propositions as were deserving of ecclesiastical censure. The most influential member of this congregation was Cardinal Fabroni.

It took the congregation eighteen months to perform its task, the result of which was the publication of the famous Bull "Unigenitus Dei Filius" at Rome, 8 Sept., 1713. The Bull begins with the warning of Christ against false prophets, especially such as "secretly spread evil doctrines under the guise of piety and introduce ruinous sects under the image of sanctity"; then it proceeds to the condemnation of 101 propositions which are taken verbatim from the last edition of Quesnel's work. The propositions are condemned respectively as "False, captious, ill-sounding, offensive to pious ears, scandalous, pernicious, rash, injurious to the Church and its practices, contumelious to Church and State, seditious, impious, blasphemous, suspected and savouring of heresy, favouring heretics, heresy, and schism, erroneous, bordering on heresy, often condemned, heretical, and reviving various heresies, especially those contained in the famous propositions of Jansenius". The first forty-three propositions repeat the errors of Baius and Jansenius on grace and predestination, such as: grace works with omnipotence and is irresistible; without grace man can only commit sin; Christ died for the elect only. The succeeding twenty-eight propositions (44-71) concern faith, hope, and charity: every love that is not supernatural is evil; without supernatural love there can be no hope in God, no obedience to His law, no good work, no prayer, no merit, no religion; the prayer of the sinner and his other good acts performed out of fear of punishment are only new sins. The last thirty propositions (72-101) deal with the Church, its discipline, and the sacraments: the Church comprises only the just and the elect; the reading of the Bible is binding on all; sacramental absolution should be postponed till after satisfaction; the chief pastors can exercise the Church's power of excommunication only with the consent, at least presumed, of the whole body of the Church; unjust excommunication does not exclude the excommunicated from union with the Church.

Besides condemning these 101 propositions, the Bull states that it finds fault with many other statements in the book of Quesnel, without, however, specifying them, and, in particular, with the translation of the New Testament, which, as the Bull reads, has been censurably altered (*damnabiliter vitiatum*) and is in many ways similar to the previously condemned French version of Mons.

Louis XIV received the Bull at Fontainebleau on 24 Sept., 1713, and sent a copy to Cardinal Noailles, who, probably before receiving it, had revoked, on 28 Sept., his approbation of the "Moral Reflections" given in 1695. The king also ordered the assembly of the French clergy to convene at Paris on 16 Oct., and designated the acceptance of the Bull as the purpose of the meeting. At the first session, on 16 Oct., Noailles appointed a committee presided over by Cardinal Rohan of Strasburg to decide upon the most suitable manner of accepting the Bull. Noailles, who took part in a few sessions of the committee, attempted to prevent an unconditional acceptance of the Bull by the committee, and when his efforts proved fruitless he would have withdrawn from the assembly if the king had not ordered him to remain. The report of the committee was for an unqualified acceptance of the Bull, and at the session of the assembly on 22 Jan., 1714, the report was accepted by a vote of forty against nine. By order of the king, the bull was registered by the Parliament on 15 Feb. and by the Sorbonne on 5 March. A pastoral instruction of Noailles, forbidding his priests under pain of suspension to accept the Bull without his authorization, was condemned by Rome. Of the bishops not present at the assembly, seven joined the opposition, while the remaining seventy-two accepted the Bull unconditionally. The opposition, with the exception of Bishop de la Brou of Mirepoix, also condemned the book of Quesnel. As a pretext of their non-acceptance of the Bull, they gave out that it was obscure. Ostensibly they postponed their acceptance only until the pope would explain its obscurity by special declarations. It is manifest that the pope could not yield to these demands without imperilling the authority of the Apostolic See.

It was the intention of Clement XI to summon Noailles before the Curia and, if needs be, despoil him of the purple. But the king and his councillors, seeing in this mode of procedure a trespass upon the "Gallican Liberties", proposed the convocation of a national council which should judge and pass sentence upon Noailles and his faction. The pope did not relish the idea of convoking a national council which might unnecessarily protract the quarrel and endanger the papal authority. He, however, drew up two Briefs, the one demanding the unconditional acceptance of the Bull by Noailles within fifteen days, on pain of losing the purple and incurring canonical punishment, the other paternally pointing out the gravity of the cardinal's offence and exhorting him to go hand in hand with the Apostolic See in opposing the enemies of the Church. Both Briefs were put in the hand of the king, with the request to deliver the less severe in case there was well-founded hope of the cardinal's speedy submission, but the more severe if he continued in his obstinacy. On the one hand, Noailles gave no hope of submission, while, on the other, the more severe of the Briefs was rejected by the king as subversive of the "Gallican Liberties". Louis XIV, therefore, again pressed the convocation of a national council but died (1 Sept., 1715) before it could be convened. He was succeeded as regent by Duke Philip of Orleans, who favoured the opponents of the Bull. The Sorbonne passed a resolution, 4 Jan., 1716, annulling its previous registration of the Bull, and

twenty-two Sorbonnists who protested were removed from the faculty on 5 Feb. The Universities of Nantes and Reims now also rejected the Bull, the former on 2 Jan., the latter on 26 June. In consequence Clement XI withdrew from the Sorbonne all the papal privileges which it possessed and deprived it of the power of conferring academic degrees on 18 Nov. He had sent two Briefs to France on 1 May. One, addressed to the regent, severely reproved him for favouring the opponents of the Bull; the other, addressed to the opposition, threatened to deprive Noailles of the purple, and to proceed canonically against all that would not accept the Bull within two months. These Briefs were not accepted by the regent because their text had not been previously submitted to his ministers. But he sent to Rome, Chevalier, the Jansenist Vicar-General of Meaux whom the pope did not, however, admit to his presence, when it became known that his sole purpose was to wrest the admission from Clement XI that the Bull was obscure and required an explanation. In a consistory held on 27 June, 1716, the pope delivered a passionate allocution, lasting three hours, in which he informed the cardinals of the treatment which the Bull had received in France, and expressed his purpose of divesting Noailles of the cardinalate. The following November he sent two new Briefs to France, one to the regent, whose co-operation he asked in suppressing the opposition to the Bull; the other to the acceptants, whom he warned against the intrigues of the recalcitrants, and requested to exhort their erring brethren to give up their resistance.

On 1 March, 1717, four bishops (Soanen of Senez, Colbert of Montpellier, Delangle of Boulogne, and de La Broue of Mirepoix) drew up an appeal from the Bull to a general council, thus founding the party hereafter known as the "appellants". They were joined by the faculties of the Sorbonne on 5 March, of Reims on 8 March, and of Nantes on 10 March; likewise by the Bishops of Verdun on 22 March, of Pamiers on 12 April, of Châlons, Condom, Agen, and St. Malo on 21 April, of Auxerre on 14 May, and more than a year later by the Bishop of Laon, also by the Bishops of Bayonne and Angouleme. Though a personal letter of the pope, dated 25 March, and a joint letter of the cardinals at Rome urgently begged Noailles to submit, he also drew up an appeal on 3 April, "from the pope manifestly mistaken, and from the Constitution Unigenitus, in virtue of the decrees of the Councils of Constance and Basle, to the pope better informed and to a general council to be held without constraint and in a safe place". He did not, however, publish his appeal for the present, but deposited it in the archives of the *officialité* of Paris. On 6 May he wrote a long letter to the pope, in which he endeavours to justify his position and that of his adherents. A few months later his appeal from the Bull was published. The appellants were soon joined by many priests and religious, especially from the Dioceses of Paris and Reims. To swell the list of appellants the names of laymen and even women were accepted. The number of appellants is said to have reached 1800 to 2000, pitifully small, if we consider that about 1,500,000 livres (\$300,000) were spent by them as bribes.

On 8 March, 1718, appeared a Decree of the Inquisition, approved by Clement XI, which condemned the appeal of the four bishops as schismatic and heretical, and that of Noailles as schismatic and approaching to heresy. Since they did not withdraw their appeal within a reasonable time, the pope issued the Bull "Pastoralis officii" on 28 Aug., 1718, excommunicating all that

refused to accept the Bull "Unigenitus". But they appealed also from this second Bull. Noailles finally made an ambiguous submission on 13 March, 1720, by signing an explanation of the Bull "Unigenitus", drawn up by order of the French secretary of State, Abbe Dubois, and, later, approved by ninety-five bishops. After much pressure from the king and the bishops he made public this ambiguous acceptance of the Bull in his pastoral instruction of 18 Nov., 1720. But this did not satisfy Clement XI, who required an unconditional acceptance. After the death of Clement XI, 19 March, 1721, the appellants continued in their obstinancy during the pontificates of Innocent XIII (1721-24) and Benedict XIII (1724-30). Noailles, the soul of the opposition, finally made a sincere and unconditional submission on 11 Oct., 1728, and died soon after (2 May, 1729). The Apostolic See, in concerted action with the new Archbishop Vintimille of Paris and the French Government, gradually brought about the submission of most of the appellants. MICHAEL OTT

Union of Brest

Union of Brest

Brest -- in Russian, Brest-Litovski; in Polish, Brzesc; in the old chronicles, called Brestii, or Brestov.

Brest is a city in Lithuania, with some 50,000 inhabitants, famous in the history of the Catholic Church and the Orthodox Church of Russia for the union of the Ruthenians with Catholicism.

After the annexation of Red Ruthenia, or the Ukraine, to Poland, in 1569, the Ruthenians, who had become politically subject to Poland, began to compare the lamentable condition of their Church with the development and vitality of Catholicism and to turn their eyes towards Rome. The Ruthenian clergy were steeped in immorality and ignorance; the bishops made no scruple of setting their flocks

an evil example, living in open concubinage, and practising the most brazen simony. Russian documents of the sixteenth century bear witness to this melancholy decay of the Orthodox Church in the Polish provinces and to the impossibility of applying any remedy. Face to face with this spiritual ruin, the Catholic Church, reinvigorated by the accession of Jesuit missionaries, was showing her immense religious and moral superiority. Some loyal and honourable members of the Orthodox clergy and laity gradually became convinced that only a return to the Roman obedience could secure for their Church anything like sound conditions.

The Jesuits, who had been established at Vilna in 1569, at Yaroslaff in 1574, and successively at Polotsk, Grodno, and other cities of Southern Russia, soon set about to conciliate the friends of union among the Orthodox and to second their efforts. They began publishing works of religious controversy, emphasizing the spiritual, moral, and political advantages which must accrue to the so-called Orthodox Church from union with Rome. Eminent in this labour of preparing opinion for return to the Roman Church were Father Peter Skarga (1536-1612), one of the greatest apostles, and a literary and political genius, of Poland, and Father Benedict Herbest (1531-93). The former published, at Vilna, in 1577, his famous work on "The Unity of God's Church under One Only Pastor" (*O jednosci kosciola bozego pod jednym pasterzem*), and it filled the Orthodox with confusion; they burned numerous copies of it, so that a new edition had to be published in 1590. Father Herbest then published, also in Polish, his "Exposition of the Faith of the Roman Church, and History of the Greek Servitude" (Cracow, 1586). These two works helped greatly to dispel the doubts of the Orthodox friends of union and bring them still nearer to Rome; a result that was greatly furthered by the writings and labours of Antonius Possevinus. However, the Orthodox remained still undecided. Jeremias II, Patriarch of Constantinople, visited Moscow in 1588 and in 1599 arrived at Vilna, where he convoked a synod to find remedies for the most serious evils of the Ruthenian Church. Received by Sigismund III, King of Poland (1587-1632), with honour and costly gifts, he consecrated Michael Rahosa, Metropolitan of Kieff and Halicz (1588-99). Finding that some of the Orthodox Ruthenians did not conceal their desire for reconciliation with Rome, Jeremias II, to bind them more closely to his own authority and the Orthodox Church, by a decree of 6 August, 1589, appointed Cyril Terlecki, Bishop of Lutzk, his exarch for the metropolitan jurisdiction of Kieff. The patriarch also imposed a precept that a synod of bishops must be held every year to remedy the disorders of the Ruthenian Church.

In 1590 the metropolitan, Rahosa, convoked a synod at Brest for 24 June. A few days before the Ruthenian bishops assembled, Terlecki had a conference at Bels with the Bishops of Lemberg (Balaban), Pinsk (Pelczycki), and Chelm (Zbiruiski), and they jointly drew up a document undertaking to "submit their will and their intelligence to the Pope of Rome", and begging that their rites and their ecclesiastical privileges should be preserved. This document was presented to the Synod of Brest, at which the metropolitan and the Bishop of Vladimir assisted; it was accepted and approved, but kept secret, for reasons of prudence. Terlecki was charged to present it to Sigismund III and obtain the royal sanction for it, but a year and more passed before he fulfilled his charge. Sigismund III, having at last received the document, replied to it on 18 March, 1592, expressing

his joy at the decision of the Ruthenian episcopate, promising them his assistance against possible persecutions by the Orthodox, and assuring them that the national rite should be respected and safeguarded. Nevertheless, the proposal of union, though warmly approved by Terlecki, did not attain realization. Terlecki was soon supported by Adam Pocij, who was consecrated Bishop of Vladimir in 1593, in succession to Meletius Chrebtowicz, deceased. Pocij was a sincerely convinced advocate of the union, though he well understood the obstacles to its accomplishment. Another synod of Ruthenian bishops met at Brest on 24 June, 1593, but avoided the question of union, and confined itself to depriving Gideon Balaban of the administration of his diocese. Balaban refused to recognize the privilege granted to the Orthodox patriarchal community of Lemberg by Jeremias II.

On 24 June, 1594, the Ruthenian bishops again assembled at Brest, but their meeting had no synodal character, as Sigismund III was in Sweden, and no synod could be held in the absence of the sovereign. A few days later, Bishops Terlecki, Balaban, Zbirujski, and Kopystenski met at Sokal and reaffirmed their adhesion to the act of union drawn up at Bels and approved at Brest, in 1590. Terlecki had full powers to treat of the union with the Court of Poland and the Holy See. They composed a "Decree on receiving back and entering into the communion of the Holy Roman Church" (*Decretum de recipienda et suscipienda communione sanctae Romanae Ecclesiae*), in which, after deploring the evils resulting from the schism, they begged to submit themselves to the jurisdiction of the visible pastor of God's Church, on condition that the sacred rites and liturgical customs of the Eastern Church were preserved, saving such points as might be judged contrary to the union and prejudicial to the unity of faith. Terlecki began to solicit the adhesion of the Ruthenian bishops to this document, which was dated 2 December, 1594. It was subscribed by the metropolitan, Rahosa, Pocij, Terlecki, Zbirujski, Pelczyski, Gregory of Polotsk, and Jonas Hohol of Pinsk.

On 12 June, 1595, Rahosa, the metropolitan, and the Bishops of Vladimir, Lutzk, and Pinsk met at Brest and drew up two petitions, one to Clement VIII and the other to Sigismund III. The former protested that they desired to renew the union concluded at the Council of Florence, saving always the Eastern customs and rites; in the latter the same desires were expressed, and it was added that the Ruthenian Church adopted the Gregorian Calendar. Pocij and Terlecki betook themselves to Cracow to confer with the king's delegates and the Apostolic nuncio as to the basis and conditions of the union. These conditions were accepted. On 2 Aug., 1595, Sigismund III declared that the Ruthenian clergy enjoyed the same privileges and rights as the Latin, that they were free of the excommunications and censures inflicted by the Patriarch of Constantinople, that Ruthenian sees should be entrusted only to Ruthenian prelates, that the Ruthenian Church should retain the free possession of its property, that Ruthenian churches and monasteries could not be latinized, and that the Eastern prelates were thenceforward to have no jurisdiction over the Ruthenian clergy. The Apostolic nuncio agreed to the concession of these privileges, and Sigismund III required that delegates of the Ruthenian episcopate should go to Rome for the definitive sanction of the act of union. But its conclusion was already known, and the Bishops of Lutzk, Chelm, Przemyśl, and Lemberg announced it to their flocks in pastoral letters dated 27 August. Unfortunately, the

metropolitan, Rahosa, did not act loyally: after signing the decree of union, he endeavoured secretly to hinder its execution, and instigated Constantine, Prince of Ostrog, to assemble the Ruthenian bishops and dissuade them from submitting to the Holy See. But Rahosa's intrigues were to no purpose, and, on 25 November, 1595, Pociiej and Terlecki arrived at Rome with the decree of union of 2 December, 1594.

The arrival of the Ruthenian bishops overwhelmed Clement VIII and the Roman Court with joy. The delegates were received with great honour; the pope and the cardinals discussed the conditions of reunion proposed by the Ruthenian episcopate, and ungrudgingly conceded that the integrity of the Ruthenian Rite should be maintained; it was also agreed that the "Filioque" should not be inserted in the Nicene Creed, although the Ruthenian clergy professed and taught the procession of the Holy Spirit from the Son. The bishops asked to be dispensed from the obligation of introducing the Gregorian Calendar, so as to avoid popular discontent and dissensions, and insisted that the king should grant them, as of right, the dignity of senators. To all these requests Clement VIII acceded.

All obstacles having been removed, the union of the Ruthenians with the Roman Church was solemnly and publicly proclaimed in the Hall of Constantine in the Vatican. Canon Wollowicz, of Vilna, read in Ruthenian and Latin the letter of the Ruthenian episcopate to the pope, dated 12 June, 1595. Cardinal Silvio Antoniani thanked the Ruthenian episcopate in the name of the pope, and expressed his joy at the happy event. Then Pociiej, in his own name and that of the Ruthenian episcopate, read in Latin the formula of abjuration of the Greek Schism, Terlecki read it in Ruthenian, and they affixed their signatures. Clement VIII then addressed to them an allocution, expressing his joy and promising the Ruthenians his support. A medal was struck to commemorate the event, with the inscription: "Ruthenis receptis". On the same day the Bull "Magnus Dominus et laudabilis" was published, announcing to the Catholic world the return of the Ruthenians to the unity of the Roman Church. The Bull recites the events which led to the union, the arrival of Pociiej and Terlecki at Rome, their abjuration, and the concession to the Ruthenians that they should retain their own rite, saving such customs as were opposed to the purity of Catholic doctrine and incompatible with the communion of the Roman Church. On 7 Feb., 1596, Clement VIII addressed to the Ruthenian episcopate the Brief "Benedictus sit Pastor ille bonus", enjoining the convocation of a synod in which the Ruthenian bishops were to recite the profession of the Catholic Faith. Various letters were also sent to the Polish king, princes, and magnates exhorting them to receive the Ruthenians under their protection. Another Bull, "Decet romanum pontificem", dated 23 Feb., 1596, defined the rights of the Ruthenian episcopate and their relations in subjection to the Holy See.

About the beginning of February, 1596, Terlecki and Pociiej returned to their own country, arriving at Lutzk in March and celebrating a solemn "Te Deum" for the success of their mission. But the enemies of the union, their religious fanaticism aroused, redoubled their activity. At the Diet of Warsaw, which opened in May, 1596, the Ruthenian deputies, led by the Prince of Ostrog, protested against the bishops who had signed the decree of union and declared that they would not accept it. The Orthodox communities of Vilna and Lemberg stirred up the people against the unionist

bishops. To cut this religious agitation short, Sigismund III ordered the Ruthenian episcopate to be convoked in a synod at Brest, 8 October, 1596, and the union to be solemnly proclaimed. About 6 October the metropolitan, Rahosa, the Ruthenian Bishops of Vladimir, Lutzk, Polotsk, Pinsk, Chelm, the Latin Bishops of Lemberg, Lutzk, Chelm, Father Skarga, and other prelates met at Brest. The Orthodox had sent many of their lay representatives, various archimandrites, Nicephorus, the protosyncellus of the Patriarch of Constantinople, and Cyril Lucaris, representing the Patriarch of Alexandria. The Orthodox, under the Prince of Ostrog, petitioned for the deposition of the bishops who had withdrawn from the obedience of the Patriarch of Constantinople, for the maintenance of the Old Calendar, and for the abrogation of the act of union. They moreover held a conciliabulum to concert measures of opposition. In vain did the king's commissioners labour to allay their hostility and induce them to accept the union; they would not yield, and they refused to recognize Rahosa as their metropolitan.

All attempts failing to win over this opposition to the union, the Ruthenian bishops, on 9 October, wearing their pontifical vestments, went in procession to the Church of St. Nicholas and celebrated the Liturgy, at the conclusion of which Hermogenes, Archbishop of Polotsk, mounted the pulpit and read the declaration of the Ruthenian episcopate accepting the union with Rome. When this had been read, the Latin and Ruthenian bishops embraced each other and then repaired to the Latin Church of the Most Blessed Virgin to sing the "Te Deum" again. Next day another solemn ceremony was celebrated in the Church of St. Nicholas, and Father Skarga preached on the unity of God's Church. Bishops Gideon Balaban, of Lemberg, and Michael Kopystenski, of Przemysl, having declared themselves opposed to the union, were deposed and excommunicated. Their dioceses remained in schism until 1720. The enemies of the union published, on 9 October, a protest against the Ruthenian episcopate. The Prince of Ostrog became the soul of the opposition, and the struggle was maintained, particularly in the field of theology. But Sigismund III efficaciously undertook the defence of the union; in an edict of 5 December, 1596, he ordered the Ruthenians to recognize as bishops only those who had accepted the act of union.

Thus came to pass one of the most auspicious events in the history of Catholicism among the Slavic peoples. The Union of Brest would have produced most abundant fruit, and would have contributed greatly to the triumph of Catholicism in Russia if the statesmen and the Latin clergy of Poland had realized its political and religious utility, and had used all their efforts to favour it, and if, after the partition of Poland, Russia had not destroyed it in the conquered provinces by methods of the most brutal violence.

L'union de l'eglise grecque ruthene en Pologne avec l'eg. rom., conclue a Brest, en Lithuanie, en 1596 (Paris); MALINOWSKI, Die Kirchen-und Staats-Satzungen bezuglich des griechisch-kathol. Ritus der Ruthenen in Galizien (Lemberg, 1861); BARTOSZEWICZ, Szkic dziejow kosciola ruskiego w Polsce (Hist. Sketch of the Ruthenian Church in Poland) (Cracow, 1880); PELESZ, Gesch. des Union der ruthen. Kirche mit Rom, I (Wurzburg, 1881), 498-556.

The chief works by Russian Orthodox writers on the Union of Brest are: KAMENSKIJ, Izvestie vzniksei v Pol' sie unii (Notes on the Union concluded in Poland) (Moscow, 1805); FLEROV, O xpravoslavnyh cerkovnyh bratswah protivoborstvovavshih unii (Orthodox Eccl. Confraternities which Opposed the Union of Brest) (St. Petersburg, 1857); KOJALOVIC, Litovskaya cervoknaja unija (Lithuanian Eccl. Union) (St. Petersburg, 1861). The principal Russian works, Catholic and non-Catholic, are given in PALMIERI, Theologia dogm. ortho., I (Florence, 1911), 748-51, 783-98.

A. PALMIERI

Union of Christendom

Union of Christendom

The Catholic Church is by far the largest, the most widespread, and the most ancient of Christian communions in the world, and is moreover the mighty trunk from which the other communions claiming to be Christian have broken off at one time or another. If, then, we limit the application of the term *Christendom* to this, its most authentic expression, the unity of Christendom is not a lost ideal to be recovered, but a stupendous reality which has always been in stable possession. For not only has this Catholic Church ever taught that unity is an essential note of the true Church of Christ, but throughout her long history she has been, to the amazement of the world, distinguished by the most conspicuous unity of faith and government, and this notwithstanding that she has at all times embraced within her fold nationalities of the most different temperaments, and has had to contend with incessant oscillations of mental speculation and political power. Still, in another and broader sense of the term, which is also the more usual and is followed in the present article, Christendom includes not merely the Catholic Church, but, together with it, the many other religious communions which have either directly or indirectly, separated from it, and yet, although in conflict both with it and among themselves as to various points of doctrine and practice agree with it in this: that they look up to our Lord Jesus Christ as the Founder of their Faith, and claim to make His teaching the rule of their lives. As these separated communities when massed together, indeed in some cases even of themselves, count a vast number of souls, among whom many are conspicuous

for their religious earnestness, this extension of the term *Christendom* to include them all has its solid justification. On the other hand, if it is accepted, it becomes no longer possible to speak of the unity of Christendom but rather of a Christendom torn by divisions and offering the saddest spectacle to the eyes. And then the question arises: Is this scandal always to continue? The Holy See has never tired of appealing in season and out of season for its removal but without meeting with much response from a world which had learnt to live contentedly within its sectarian enclosures. Happily a new spirit has lately come over these dissentient Christians, numbers of whom are becoming keenly sensitive to the paralyzing effects of division and an active reunion movement has arisen which, if far from being as widespread and solid as one could wish, is at least cherished on all sides by devout minds.

In summarizing in this article the various matters that bear upon this question of the unity of Christendom, its present default, and the hopes for its restoration, the following points will be considered:

- I. The Principles of the Church's Unity
- II. Unity in the Early Church and its Causes
- III. The Divisions of Christendom and their Causes
- IV. Reunion Movements in the Past
- V. Reunion Movements in the Present
- VI. Conditions of Reunion
- VII. Prospects of Reunion

I. PRINCIPLES OF THE CHURCH'S UNITY

A. As Determined by Christ

It is to the Gospels we must go in the first place if we desire to know what in the intentions of its Founder were to be the fundamental elements in the constitution of the Church, nor do the instructions He gave to His Apostles leave us in doubt on the subject. His last words, as reported by St. Matthew, are: "All power is given to Me in heaven and on earth. Going therefore make disciples (*matheteusate*) of all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost, teaching them to observe all things whatsoever I have commanded you, and, lo, I am with you all days until the consummation of the world" (xxviii, 19, 20). St. Mark's account is to the same effect, but adds important details: "Going into all the world, proclaim the Gospel to every creature. He that believeth and is baptized shall be saved, he that disbelieveth (*ho de apistedaz*) shall be condemned. And these signs shall follow those that believe: in my name they shall cast out devils, speak with new tongues, and take up serpents, and if they shall drink any deadly drink it shall not hurt them; and they shall lay their hands on the sick and they shall be healed. . . . And they going forth preached everywhere, the Lord co-operating with them, and confirming their words by the signs that accompanied them" (xvi, 15-20). St. Luke, in Acts, i, 8, preserves words of Christ which fit in with these two accounts: "You shall receive the power of the Holy Ghost that will come down upon you, and you shall be My witnesses in Jerusalem, and in all Judæa and Samaria, and to the ends of the earth"; whilst in his Gospel this Evangelist has

recorded how Jesus Christ in His post-Resurrection discourses to His disciples enumerated as among the primary doctrinal facts to be thus attested by the Apostles and preached throughout the world, the fulfilment in Jesus of the Old-Testament prophecies, and the remission of sins through His name: "These are the words which I have spoken to you whilst I am still with you, for it is necessary that all things which are written of Me in Moses and the Prophets and the Psalms be fulfilled; and He said to them: For thus it is written that the Christ must suffer and rise again from the dead on the third day, and repentance be preached in His name for the remission of sins to all nations, beginning from Jerusalem. And you shall be witnesses to these things. And I will send down upon you that [gift] which has been promised to you by My Father. Remain therefore in this city until you be endued with power from on high" (xxiv, 44-49).

Further, to go back to St. Matthew, this Evangelist tells us, in a most impressive passage intimately connected with the plan of his Gospel, that Christ made provision for unity of action among His Apostles by appointing one of them to be the leader of his brethren, and assigning to him a unique relation to the spiritual building He was raising. "And I say to thee that thou art Peter [i.e. the Rock], and upon this Rock I will build my Church, and the gates of hell shall not prevail against it; and I will give thee the keys of the kingdom of heaven, and whatsoever thou shalt bind on earth shall be bound in heaven, and whatsoever thou shalt loose on earth shall be loosed in heaven" (xvi, 18, 19). St. Luke (xxii, 31, 32) has words spoken in the supper-room which imply this previous appointment of St. Peter, by describing in other terms the same firm support which it would be his to communicate to the faith of the Church. "Simon, Simon, Satan hath desired to have you that he may sift *you* as wheat, but I have prayed for *thee* that thy faith may not fail, and do thou when thou art converted" (or it may mean, "do thou in thy turn") "confirm thy brethren." St. John, whose Gospel follows a different course from the Synoptics, and seems to select for narration previously unrecorded deeds and words of Christ which cast a fuller light on what the others had given, tells of Jesus Christ's final reiteration of the commission to St. Peter rendered necessary perhaps to reassure him after his fall and deep repentance, and entrusting him anew with the supreme pastoral charge of the entire flock. "Simon, Son of John, lovest thou me more than these . . . feed My lambs . . . be the shepherd of my sheep" (xxi, 15-17). To St. John, too, we are indebted for our knowledge of a fact which accords well with the words, "Lo, I am with you always", reported by St. Matthew; for he testifies that on the occasion of the Last Supper Jesus Christ promised to send the Spirit of Truth, who proceeds from the Father, and "will bear testimony of me" (xv, 26) and "will lead you into all truth" (xvi, 13); also that on the same occasion He prayed an effectual prayer for His disciples and "those who through their word should come to believe in him, that they all may be one, even as Thou, Father, art one in me, and I am one in Thee, so that they may be one in us, and thus the world may believe that thou hast sent me" (xvii, 20-23).

Were we arguing with the Rationalistic critics we should have to meet their refusal to grant the authenticity of much that is in these passages, but the question of reunion is practical only for those who accept fully and in all respects the authority of the canonical Scriptures. If, then, we take these passages together as utterances of the same Divine voice, reaching us through these different

channels, the conclusion is irresistible that the Church was founded by Christ on the principle of a revelation to which, as attested by the word of God, unquestioning assent is due from all to whom it is addressed; on the principle of an authority communicated by Christ to chosen representatives whom He set as teachers of the world, and to whom He requires that the world should render the obedience of faith; and on the principle of a single religious communion, under the rule of these teachers and their duly appointed successors, admission to which is through the gate of baptism and adherence to which is imposed on all under the most solemn sanctions. For:

- the duty assigned to the hearers is simply to believe what the Apostles impart to them as teaching derived from Jesus Christ, no liberty being allowed for disbelief on the ground that the Apostolic teaching does not commend itself to the judgment of the disciple; and this duty is declared to be so imperative that the fulfilment of it places a man in the way of salvation, but disregard of it in the way of Divine condemnation -- the implication being that, as this teaching comes ultimately from Christ, that fact in itself should be held to give the disciple a better guarantee of truth than any reasoning of his own could give.
- The Apostles are sent by Christ in like manner as He was sent by His Father, and to the chief of them are given the keys of the kingdom of heaven with a far-reaching power to make binding laws, which must mean that He sends them forth to continue the work He had begun, to make disciples as He had done, and to rule them in the spirit of the Good Shepherd as He had done; consequently, that He delegates to these Apostles such share of the authority given to Himself as He deemed necessary for the discharge of their world-wide commission.
- The community thus formed out of the Apostolic teachers and their disciples was necessarily one by a twofold bond of union, inasmuch as the teaching, being from God, was necessarily one, and the faith with which it had to be received was correspondingly one, inasmuch too, as the visible society into which all were baptized was essentially one, being under the rule of a body of pastors united under the presidency of a single visible head.
- The words, "I am with you always until the consummation of the world", prove, what indeed was presumable from the nature of the case, that Christ was then instituting a system not intended for the Apostolic generation only, but for all the generations to come, and hence that He was addressing His Apostles, not as eleven individual men only, but as men who, with their legitimate successors, formed a moral personality destined to last through the ages.
- We may further gather from the texts above cited that the revelation thus brought down from heaven and imparted to the world to be the means of its salvation was not confined to a few ethical maxims, lit up by the splendour of a surpassing example and of such simplicity that all men in all ages could without difficulty reconcile them on intrinsic grounds with the dictates of their personal reason. On the contrary, it is expressed in terms of unlimited range -- "teaching them *all* that I have commanded" -- and is explicitly declared to contain first and foremost in its doctrinal whole the mystery which surpasses all others in baffling human speculation, namely, the mystery of the Holy Trinity -- "baptizing them in the name of the Father, and of the Son, and of the Holy Ghost" -- in other words, for this is the meaning, dedicating them by baptism to the worship of (*eis to honoma*), and therefore to belief in the Trinity in Unity.
- At the same time, that the human mind, in thus giving its assent to doctrines so difficult for it to conceive may do no violence to its own rational nature, the above passages tell us of the promise of the Spirit to abide for ever in the Church, to guide at all times the mind of the teaching body,

organized under its visible head, so that it may always be kept from corrupting the sacred doctrine, and presenting it for acceptance in a form foreign to its original purity.

•Lastly, that we may understand the vital importance of this unity of communion, of this unity of truth, for the due carrying out of the Church's work, we have the prayer of Christ to His Father to teach us that the spectacle of it was intended by Him to furnish the world with the most signal and convincing proof of the divinity of the Christian religion: "That even as the Father is in Me, and I in Him, so they may be one in Us, that the world may believe that Thou hast sent Me." We can appreciate the character of this motive, we who live in an age when the divisions of Christendom are cast in our faces as evidence of the uncertainty on which the Christian pretensions rest. We can see how it would facilitate Christian work at home and in the mission field, if we could still say, as in the time of the Apostles, "The universality of those that believe are of one heart and one soul." We can understand how discerning observers, weighing the natural tendency of human minds to differ, would, in the presence of such a world-wide unity, be fain to exclaim, "This is something that surpasses the power of nature; the hand of God is here."

B. As understood by the Apostles and their Disciples

In the Acts and the Epistles we have a record of the way in which the Apostles understood their commission, and it is obvious that the two things correspond. After receiving the promised gift of the Spirit, the Apostles go forth confidently and commence their preaching. Peter is their leader and, in those early days, so far their spokesman as for the moment to throw his fellow-Apostles almost entirely into the shade. Even St. John, great as he was, and, as we may gather from a comparison of the writings of the two, greatly St. Peter's intellectual superior, accompanies him as a silent companion, thus illustrating the completeness of the union that bound together the Apostolic band. In his preaching St. Peter follows an easily recognizable plan. First he seeks to accredit himself and his colleagues by appealing to the character of their Master, Whose life had been led before the eyes of the people of Jerusalem. He was Jesus of Nazareth, "a man approved by God among you by miracles and wonders and signs which God wrought through him in the midst of you" (Acts, ii, 22), One, therefore, to Whose teaching the people were bound to attend and Whose representatives they were bound to receive. It was true that He who had thus been approved by God among them had afterwards fallen into the hands of wicked men who had taken and slain Him, thereby appearing to show signs of weakness hard to reconcile with such stupendous claims. But the Twelve, who were now addressing the people, were also known to them as having each and all been the companions of the Lord Jesus all the time He went in and out from the Baptism of John (Acts, i, 21, 22); and these could testify from their own immediate experience that what had befallen their Master, so far from being a real sign of weakness, had been ordained for His glorification "by the determinate counsel and foreknowledge of God", Who, after thus permitting His Son's death for our sakes, had "raised him up" from the dead, whereof they, the Apostles, were the witnesses (Acts, ii, 33), as they were also of His subsequent Ascension.

Having thus declared and authenticated their commission, and having received a further confirmation of it by the miracles wrought through their intercession (Acts, iv, 10, 29, 30; v, 12, 16), which made a deep impression on the people, they take up a position of the utmost authority (Acts, v, 32), proclaim their Master's teaching, and, on the faith of their sole word, demand credence

for it and obedience to its requirements. "Therefore let the House of Israel know that God hath made this same Jesus whom you crucified both Lord and Christ. Repent and be baptized every one of you in the name of Jesus Christ for the remission of sins, and you shall receive the gift of the Holy Ghost" (Acts, ii, 36, 38). Thus did they teach and claim to be believed, and thus did they call upon their hearers to enter the nascent Church by Baptism and to place themselves as disciples under the Apostolic instruction and rule. And this is what the hearers did in large numbers. On the day of Pentecost itself there were added to the Church, we are told, three thousand souls (ibid., 11, 41), a number which a few days later, after another discourse from St. Peter, swelled into five thousand, and from thence the multitude steadily grew, not only in Jerusalem but in Judæa, and Samaria, and unto the ends of the earth (iv, 4). In strict conformity with the words of Christ (make disciples of all nations. . . . He that believeth and is baptized shall he saved), those who thus join themselves to the Apostles are described invariably as "believers" (*pistoi*, Acts, x, 45), or again as "disciples" (*mathetai*, Acts, ix, 1; xi, 26; xvi, 1), or in other places as "those who are being saved" (*sozomenoi*, Acts, ii, 47; I Cor., i, 18). On these principles the Church was founded, and from these principles unity of faith and communion resulted. "They continued", we read, "steadfastly in the Apostles' teaching and communion, and in the breaking of bread and in prayer" (Acts, 11, 42); and again "the multitude of them that believed were of one heart and one soul" (iv, 32). Later indeed disputes arose and led to critical situations. That was to be expected, for human minds necessarily approach subjects that challenge their attention from the standpoint of their own antecedents, which means that their judgments are apt to be one-sided and to differ. But the point to note is that in those times the authority of the Apostles was universally recognized as competent to decide such controversies and to require obedience to its decrees. Accordingly, they were controversies which led to no breach of communion, but rather to a strengthening of the bonds of communion by eliciting clearer statements of the truths to which all believers were committed by their faith. One instance of a controversy thus happily terminated we have in the fifteenth chapter of the Acts. It is a valuable illustration of what has been said, for it was settled by the authority of the Apostles, who met together to consider it, and ended by affirming the equality of Jews and Gentiles in the Christian Church, together with the non-necessity of circumcision as a condition of participating in its full benefits; and by recommending to the Gentile converts a certain (apparently temporary) concession to Jewish feelings which might soften the difficulties of their mutual intercourse. "It has seemed good to the Holy Ghost and to us" (xv, 28) was the ground on which those Apostles claimed obedience to their decree, thereby setting a type of procedure and language which subsequent rulers of the Church have consistently followed.

From the second part of the Acts and from the remaining books of the New Testament we have the means of ascertaining how St. Paul and the other Apostles conceived of their mission and authority. It is clear that they, too, regarded themselves as clothed by Jesus Christ with authority both to teach and to rule, that they, too, expected and received in every place a like assent to their teaching and a like obedience to their commands from their disciples, who just by this means were held together in the unity of the one undivided and indivisible Church which the Apostles had

founded. The following texts may be consulted on this point, but it is not necessary for our present purpose to do more than refer to them: Acts, xv, 28; Rom., i, 5; xv, 18, 19; xvi, 19, 26; I Cor., iv, 17-21; v, 1-5; xv, 11; II Cor., iii, 5, 9; x, 5, 8; xiii, 2, 10; Eph., ii, 20; iv, 4-6, 11, 12; I Thess., ii, 13; iv, 1, 2, 3, 8; II Tim., ii, 2; Tit., ii, 15; Heb., xiii, 7-9; I John, iv, 6; III John, 10; Jude, 17, 20. We must not, however, pass over St. Paul's jubilant description of this unity in his Epistle to the Ephesians, standing out so conspicuously as it does in the New-Testament writings, to convince us of its deep significance, its all-penetrating character, and the firm foundations on which it was set: "One body, one Spirit, one Hope, one Lord, one Faith, one Baptism, one God and Father of us all, Who is over all and through us all, and in us all." Such was the spectacle of Christian unity born of the Apostolic preaching which presented itself to the eyes of the enraptured Apostle some thirty years from the time when St. Peter preached his first sermon on the day of Pentecost.

C. As Resisted by the Earliest Heretics

To claim this wonderful unity as distinctive of the followers of Jesus Christ in the Apostolic days is not to forget that there were sad exceptions to the general rule. There were indeed no rival communions then which, whilst claiming to be Christian, were maintained in formal opposition to the Church of the Apostles. It is expressly stated by Tertullian (*Adv. Marcion.*, IV, v) that the Marcionites, in the middle of the second century, were the first who, when expelled from the Church Catholic, created an opposition Church for the expression of their peculiar views. Before that time the dissentients contented themselves with forming parties and schools of thought, and of this mode of separation, which sufficed to put men outside the Church, we find clear traces in the New-Testament writings together with predictions that the evil thus originating would become more pronounced in after times. Men of what would nowadays be called independent temperament were dissatisfied with the Apostles' teaching in some particulars, and refused to accept it without further warrant than the mere "word of an Apostle." Thus we may gather from the Epistle to the Galatians that, in spite of the decision of the Council of Jerusalem, there continued to be a party which insisted that the observance of the Jewish Law was obligatory on Gentile Christians, and from the Epistle to the Colossians that there was likewise a Jewish party, probably of Hellenistic origin, which mingled insistence on Jewish legalities with a superstitious worship of the angels (*Col.*, ii, 18). At Ephesus we may detect the adepts of an incipient Gnosticism in St. Paul's warnings against giving heed to "fables and endless genealogies" (*I Tim.*, i, 4) and against "profane and vain babblings and oppositions of 'gnosis' falsely so-called" (*I Tim.*, vi, 20). Hymenæus and Alexander are mentioned by name as denying the resurrection of the flesh at the last day (*II Tim.*, ii, 18. Cf. *I Cor.*, xv, 12). St. John, in the Apocalypse (ii, 6, 15), tells us of the Nicolaites who seem to have fallen into some kind of Oriental admixture of immorality with worship, and in his second Epistle (verse 7. Cf. *I John*, iv, 2) he warns his readers that many "deceivers are entered into the world" who confess not that Jesus Christ has come in the flesh, which the church historians refer to the Docetism of Cerinthus.

Our modern admirers of comprehensive Churches would regard the coexistence side by side of these beliefs with those of the Apostles as a healthy sign of mental activity in those early Christian

communities, and it is instructive to compare such modern judgments with those of the Apostles, because the comparison enables us to realize better how strong was the feeling of the latter as to the essential importance of basing unity of communion on adherence to the Apostles' doctrine, and as to the exceeding sinfulness of dissenting from it. Thus St. Paul calls these alien doctrines "old wives' fables" (I Tim., iv, 7), "doctrines of devils" (ibid., 2), and "profanities the preaching of which will spread and devour like gangrene" (II Tim., ii, 17). St. Peter calls them "fables skillfully made up" (II Peter, i, 16), and, in a passage where the word *heresy* under Christian influences has already acquired its traditional meaning, "damnable heresies", or "heresies leading to damnation" (ibid., ii, 1). The preachers of these heresies St. Paul calls "men of corrupt minds" (I Tim., vi, 5), who "speak falsehood in their hypocrisy, and have consciences seared with a red-hot iron" (I Tim., iv, 2). St. Peter calls them "false teachers who deny the Lord that bought them and bring upon themselves speedy damnation" (II Peter, ii, 1), and St. John calls them "antichrists" (II John, 7; I John, ii, 18; iv, 3). Moreover, so far from wishing to tolerate such persons in the Church, St. Paul warns the faithful to avoid them (Rom., xvi, 17), calls upon those who are set over Churches to cast out the recalcitrant heretic, as one who is "subverted and self-condemned" (Tit., iii, 10, 11), and, in a particular instance, tells St. Timothy that he has "delivered" two such heretics "to Satan" -- that is, cast them out of the Church -- "that they may learn not to blaspheme" (I Tim., i, 20). Finally, St. John is most severe towards the Christians of Pergamos for neglecting to expel from their midst the two classes of heretics whom he describes (Apoc., 11, 14, 15).

Summary

In short, according to the teaching and record of the Scriptures, the Church is one everywhere with a oneness which is desired by Christ on its own account as befitting the obedient children of one God, one Lord, and one Spirit, and likewise as the necessary outcome of faithful adherence on the part of its members to the concordant teaching of those whom He appointed to be its rulers, and whom the Holy Spirit preserves in all truth. Still, inasmuch as each is left free to accept or reject this one teaching, this wholesome doctrine, there were, side by side with the general body of the true believers, some apparently small groups who held alien doctrines, for which they had been rejected from the communion of the one Church and these were regarded as having placed themselves outside the pale of salvation. There is not a trace, however, of any third class, separated from the communion of their brethren, but still regarded as members of the true Church.

II. UNITY IN THE EARLY CHURCH

In the writings of the early Fathers, which contain their testimony to the nature of the Church as it existed in their days, we find the same formative principles which moulded its origins continuing to determine the character of its structure and the distinctive spirit of its members. The Church is now widely spread through the known regions of the world, but it is still, as in the days of St. Paul, everywhere one and the same, all its members in whatever place being united in the profession of the same faith, in the participation of the same sacraments, and in obedience to pastors who themselves form one corporate body and are united by the bond of an intimate solidarity. We learn,

too, from these contemporary witnesses that the principle of this remarkable unity is still that of a strict adherence to the Apostles' doctrine, but here a new element from the nature of the case comes in. The Apostles no longer live to proclaim their doctrine; It can be obtained, however, with perfect security from the Apostolic tradition. In other words, it has been handed down uncorrupted by oral transmission through the lines of bishops who are the duly appointed successors of the Apostles, and who, like them, are guarded in their teaching by the assistance of the Holy Ghost. Thus the word *tradition* now comes into prominence, and, just as St. Paul said to Timothy, "keep the deposit" (I Tim., vi, 20), that is the sacred doctrine committed to him by the Apostle as a sacred trust, so the Fathers of the Church say "keep the tradition." This is ever their first and most decisive test of sound doctrine, not what recommends itself to the reason of the individual or his party, but what is sanctioned by the Apostolic tradition; and for the ascertaining of this tradition the Fathers of the second and third centuries refer the searcher to the Churches founded immediately by the Apostles, and before all others to the Church of Rome. We learn, moreover, from these early witnesses, that this Church of Rome, in proportion as the ecclesiastical system passed out of the state of embryo to that of full formation, became more and more explicitly recognized as the see which had inherited the prerogatives of Blessed Peter, and was, therefore, the authority which in all cases of controversy must ultimately decide what was in accordance with the tradition, and in all questions of jurisdiction and discipline was the visible head, communion with which was communion with the one and indivisible Church. As these points of ecclesiastical history are discussed elsewhere, we need not demonstrate them by bringing forward the copious Patristic testimonies which may be found in any good treatise on the Church. We may, however, usefully quote, not so much in proof as in illustration of what is said, a passage or two from St. Irenæus's treatise "Adversus hæreses", he being the earliest of the Fathers from whom we have extant a treatise of any fullness, and this particular treatise dealing with just the points with which we are concerned.

"The Church which is now planted throughout the whole inhabited globe, indeed even to the ends of the earth, has received from the Apostles and their disciples that faith which is in one God, the Father omnipotent who made Heaven and earth and the sea and all that is in it; and in one Lord Jesus Christ, the Son of God, Who was incarnate for our salvation, and in the Holy Ghost. . . . Having received this preaching, and this faith, as we have said, the Church, though spread throughout the whole world, preserves it with the utmost care and diligence, just as if she dwelt in one house, and believes these truths just as if she had but one and the same soul and heart, and preaches them and teaches them and hands them down [*tradit*] just as if she had but one mouth. For, although the languages of the world are diverse, the force and meaning of the tradition is everywhere the same. Nor do the Churches which are in Germany believe differently or pass down a different tradition, as neither again do the Churches in Spain or Gaul or in the East, or in Egypt or Africa, or those situated in the middle of the earth [that is the Churches of Palestine]. But as the sun, which is God's creature, is one and the same throughout the whole world, so too does the preaching of the truth shine everywhere and illuminate all men who desire to come to the knowledge of the truth. And

neither do those of the Church's rulers who are powerful in speech add to this tradition -- for no one is above the [great] teacher -- nor do those who are infirm in speech subtract from it. For since the Faith is one and the same, neither does he who can say more add to it, nor he who can say less diminish it" (*Adv. hæret.*, I, x, n. 2).

This striking passage shows not merely how complete was the unity of faith throughout the world in those days, but how this unity of faith was the response to the unity of the doctrine everywhere preached, to the unity of the tradition everywhere handed down. Elsewhere St. Irenæus testifies to the source of this uniform tradition, and what was understood to be the safeguard of its purity. In the first three chapters of his third book he is criticizing the heretics of his time and the inconsistency of their methods; and in so doing sets forth by way of contrast the method of the Church. "When you refute them out of Scripture", he says "they accuse the Scriptures themselves of errors, of lack of authority, of contradictory statements, and deny that the truth can be gathered from them save by those who know the tradition." By "tradition", however, they mean a fictitious esoteric tradition which they claim to have received, "sometimes from Valentinus, sometimes from Marcion, sometimes from Basilides, or anyone else who is in opposition." "When in your turn you appeal to the tradition that has come down from the Apostles through the succession of the presbyters in the Churches, they reply that they are wiser than the presbyters and even than the Apostles themselves, and know the uncorrupted truth." To this Irenæus observes that "it is difficult to bring to repentance a soul captured by error, but that it is not altogether impossible to escape error by setting truth by the side of it." He then proceeds to state where the true tradition can be found: "The tradition of the Apostles has been made manifest throughout the world, and can be found in every Church by those who wish to know the truth. We can number, too, the bishops who were appointed by the Apostles in the Churches and their successors down to our own day, none of whom knew of or taught the doctrines which these men madly teach. Yet, if the Apostles had known of these secret mysteries and used to teach them secretly, without the knowledge of others, to the perfect, they would have taught them to those chiefly to whom they confided the Churches themselves. For they desired that those whom they left behind them as successors, by delivering over to them their own office of teaching, should be most perfect and blameless, inasmuch as, if they acted rightly, much good, but if they fell away the gravest calamity, would ensue."

To exemplify this method of referring to the tradition of the Churches, he applies it to three of the Churches: Rome, Smyrna, and Ephesus, setting that of Rome in the first place, as having a tradition with which those of the other Churches are necessarily in accord. The passage is well known, but for its intimate hearing on our present subject we may transcribe it. "But as it would take too long in a volume like the present to enumerate the successions of all the Churches, we confound all those who, in any way, whether through self-will, or vain glory, or blindness, or evil-mindedness, invent false doctrines, by directing them to the greatest and most ancient Church well known to all, which was founded and established at Rome by the two glorious Apostles, Peter and Paul, and to the tradition it has received from the Apostles and the faith it has announced to men, both of which have come down to us through the succession of the Bishops. For to this Church,

on account of its greater authority", -- the Greek text being defective here, it is impossible to say exactly what Greek word lies behind the Latin *principalitas*, but the context indicates "authority" as giving the intended sense -- "it is necessary that every Church -- that is, the faithful from all parts -- should have recourse as to that in which the Apostolic tradition is ever preserved by those" -- if we follow Dom Morin's highly probable correction of an apparently defective reading -- "who are set over it."

One more quotation from St. Irenæus we must permit ourselves, as it evidences so clearly the feeling of this Father and his contemporaries as to the relative conditions of those who were in the one Church or without it: "For in the Church God has set Apostles, prophets, and doctors, together with all the other operations of the Spirit, in which those have no share who do not fly to the Church, but deprive themselves of life by their evil opinions and evil deeds. For where the Church is there is the Spirit of God, and where the Spirit of God is there is the Church and all grace, but the Spirit is truth. Wherefore those who have no part in it neither receive the life-giving nutriment from the breasts of their mother, nor drink of the most pure spring that flows from the Body of Christ; but such people dig for themselves broken cisterns out of earthly trenches, and drink out of the filth putrid water, flying from the faith of the Church lest they should be converted, rejecting the Spirit that they may not be instructed. Being alienated from the truth by just consequence, they are rolled and tossed about by every error, holding at one time one opinion, at another another in regard to the same subject, never having any fixed and stable judgments, caring more to cavil about words than to be disciples of the truth. For they are not built upon one rock, but upon the stone-strewn sand; and hence invent many gods, and plead ever in excuse that they are seeking, but, being blind, never succeed in finding" (ibid., III, xxiv).

A modern reader of St. Irenæus's "Adversus hæreses" might be inclined to object that the heretics of those days held doctrines so preposterous that his severe language about them is intelligible without our having to suppose that he would have judged with similar severity doctrines opposed to the tradition which could claim to rest upon a more rational basis. But his principle of the authority of the tradition is manifestly intended to have universal application, and may be safely taken as supplying the test by which this typical Father of the second century would, were he living now, judge of the modern systems in conflict with the Church's tradition.

III. DIVISIONS OF CHRISTENDOM AND THEIR CAUSES

A. Extinct Schisms

The notable heresies that originated in the first four Christian centuries have long since expired. Gnosticism in its various forms occasioned serious trouble to the Apologists of the second century, but scarcely survived into the third. Montanism and Novatianism are not much heard of after the third century, and Donatism, which arose in Africa in 311, perished in the general ruin of African Christianity caused by the Vandal invasion in 429. Manichæism came forward in the third century, but is not much heard of after the sixth, and Pelagianism, which arose at the very end of the fourth century, though for the time it provoked an acute crisis, received a crushing blow at the Council of

Ephesus (431) and disappeared altogether after the Council of Orange in 529. Arianism arose at the beginning of the fourth century and, in spite of its condemnation at Nicæa, in 325, was kept alive both in its pure form and in its diluted form of Semi-Arianism by the active support of two emperors. From the time of the First Council of Constantinople (381) it disappeared from the territories of the Empire, but received a new lease of life among the northern tribes, the Goths, Lombards, Burgundians, Vandals, etc. This was due to the preaching of Ulfilas, a bishop of Arian views, who was sent from Constantinople in 341 to evangelize the Visigoths. From the Visigoths it spread to the kindred tribes and became their national religion, until 586, when, with the conversion of Reccared, their king, and of the Spanish Visigoths, the last remnants of this particular heresy perished.

As these ancient heresies no longer exist, they do not concern the practical problem of reunion which is before us in the present age. But it is instructive to note that the principles they embodied are the very same which, taking other forms, have invariably motived the long series of revolts against the authority of the Catholic Church. Thus regarded, we may divide them into five classes. First there are certain intellectual difficulties which have always puzzled the human mind. The difficulty of explaining the derivation of the finite from the infinite, and the difficulty of explaining the coexistence of evil with good in the physical and moral universe, motived the strange speculations of the Gnostics and the simpler but not less inconsistent theory of the Manichæans. The difficulty of harmonizing the mystery of the Trinity, and that of the Incarnation, with the conceptions of natural reason motived the heresies of the Patripassians, the Sabellians, the Macedonians, and the Arians, and again the difficulty of conceiving the supernatural or justifying the idea of inherited sin motived the Pelagian denial of these doctrines. A second source of heresies has been the outburst of strong religious emotions, usually based on fancied visions to which, as being direct communications from on high, it was claimed that the traditional teaching of the Church must give way. Montanism, that earliest example of what are now glorified as "religions of the Spirit", was the most striking example of this class. Thirdly, the chafing under the rule of authority, with the desire to pursue personal ambitions, is discernible in the origins of Novatianism and Donatism, whose founders, although they alleged on the flimsiest grounds that the rulers they wished to displace had been irregularly appointed, must be held to have acted primarily from the desire to exalt themselves, even at the risk of dividing the Christian community. In the fourth place comes the principle of nationalism, that is of nationalistic exclusivism, in those who ally themselves with a separatist movement not from any conviction personally formed of the justice of the arguments on its behalf, but because its leaders have contrived to present it to them as a means of emphasizing their national feeling. This has always proved a potent instrument in the hands of heretical leaders, and we have early examples of it in the way in which Donatism presented itself as the religion of the Africans, and Arianism as the religion of the Goths. A last class of motives which has often worked for separation is to be sought in the disposition of temporal rulers to intrude into the administration of the ecclesiastical province and mould ecclesiastical arrangements into forms that may assist their own political schemes. We have an example of this evil in the conduct of the

Emperors Constantius and Valens, who so disastrously fostered the Arian heresy. To all these false principles the orthodox Fathers opposed, in the first place, the authority of the tradition that had come down from the Apostles, though not refusing to meet the heresiarchs on their own ground also, and refute them by argument, as many beautiful treatises testify.

B. Nestorianism

Besides these notable heresies of the early centuries, which fixed the type, as it were, for all future divisions, Monothelism in the seventh century, Iconoclasm in the eighth, together with the heresies of the Waldensians, Albigensians, Wycliffites, and Hussites of the medieval period, introduced strife and division into Christendom for periods shorter or longer. As, however, they too are extinct, it is enough just to refer to their existence, and we may pass on to the still-enduring separatist Churches of the East of which the most ancient is the Nestorian. The distinctive doctrine of the Nestorians is that which, as held by Nestorius, was condemned in the Council of Ephesus, in 431. It is the doctrine that in Christ there are not only two natures but also two persons, the Divine person, Who is the Second Person of the Blessed Trinity, and the human person, Who was born of the Virgin Mary; and that the union between these two persons is not physical but moral, the Divine person having chosen the human person to be in a unique manner His dwelling-place and instrument. As Nestorius, after his condemnation, was first imprisoned in his former monastery at Antioch and then banished to the Greater Oasis in Upper Egypt, his personal influence over his disciples ceased. But his doctrine was undoubtedly derived from his former master, Theodore of Mopsuestia, and, as Theodore's memory was cherished as that of the greatest theological light of Syria, the condemned doctrine found many friends in the Eastern Patriarchate, and was taken up with special zeal at Edessa. From thence it spread to the neighbouring kingdom of Persia, where it was welcomed and protected by the Persian king as tending to emancipate his Christian subjects from Byzantine influence. Shortly afterwards the prevailing sentiment at Antioch became Monophysite, and the Nestorians of the patriarchate had to take refuge in Persia, with the result that the subsequent development of the heresy had its centre of propagation in the Persian town of Seleucia-Ctesiphon, on the Tigris, where was its metropolitan see. These Nestorians had a fine missionary spirit, and evangelized many countries in the Far East, some even reaching China, and others founding those Christian communities on the Malabar Coast of India called the Thomas Christians, or Christians of St. Thomas. This Nestorian Church reached its highest pitch of prosperity in the eleventh century, but the Mongol invasion in the thirteenth and fourteenth centuries involved its adherents in ruin and the great mass of their posterity became absorbed in the general Mohammedan population. They are now represented by a small body, who dwell on the borders of Lake Urumiyah in Kurdistan and in the neighbouring highlands. They are not a very civilized race and probably know little of the doctrine which was the original cause of their secession, or know it only as the patriotic watchword of their race. A still smaller body of Catholics of the same spiritual ancestry and the same liturgical rite are called Chaldees and live in the Euphrates and Tigris valley. In 1870 their catholicos seceded on a purely personal matter, and induced his people to refuse acceptance of the

Vatican decrees. They returned to unity seven years later, but the episode seems to show that their faith is not very firm.

C. Monophysitism

The Monophysite schism had still more serious consequences. Its distinctive doctrine is associated with the name of Eutyches, former archimandrite of a monastery near Constantinople, and Dioscorus, the nephew of St. Cyril and his successor in the patriarchal See of Alexandria. This doctrine, which was condemned at the Council of Chalcedon in 451, contrasted with Nestorianism by running to the opposite extreme. It maintained that in Christ there is not only a single personality, but also only a single nature. "Of two natures but not in two natures" was its phrase; for the Monophysites were zealous upholders of the decrees of Ephesus, and affirmed that Mary was the Theotokos, from whom her Son received a perfect human nature; but they maintained that the effect of the union was that the Divine nature absorbed the human so that there were no longer two natures, but one only; anything short of that seemed to them to dissolve the essential unity of Christ's person. At Ephesus the two theologians mentioned had stood by the side of St. Cyril and had fought hard for the condemnation of Nestorianism just on this ground, that it amounted to a denial of the unity of Christ; and now it seemed to them that his doctrine, which had triumphed so splendidly at Ephesus, had been condemned at Chalcedon. Nor can it be denied that some unguarded expressions used by St. Cyril, though not so intended by him, were susceptible of a Monophysite interpretation. Besides Eutyches and Dioscorus, some of those who had signed the decrees of the new council felt that St. Cyril's expressions were affected by its decisions, and they returned home dissatisfied.

But here, too, it was chiefly racial feeling which, by intensifying the crisis, precipitated a far-reaching schism. Although hellenized on the surface by their incorporation first in the Macedonian Empire and then in the Roman the populations of Egypt and Syria were racially distinct from the Byzantines who governed them and the Greek colonists who had settled among them. Hence their attitude towards the dominant race was one of dislike and resentment, and they welcomed the opportunity which enabled them to assert in some measure their national distinctness. Accordingly, when the Egyptians were assured that their great hero St. Cyril had been outraged by a condemnation of his doctrine, they rallied round Timothy Ælurus, the usurping successor of Dioscorus, and embraced his doctrine. The Greek colonists of course took the orthodox side, or rather took the side of the Court, just as it happened to be at the time, whether orthodox or Monothelite, according to the personal policy of the successive emperors; but from the time of Chalcedon the great mass of the Christian population of Egypt became Monophysite and was lost to the unity of the Church. Two centuries later the Mohammedan invasion came both to emphasize and to enfeeble this extensive schism. During the interval, though the people were set against orthodoxy, the imperial power could do much to enforce it, but when the Mohammedans came the whole influence of the caliphs was used to confirm the schism -- that is, in those whom they could not succeed in gaining over to the religion of Islam. In the Patriarchate of Antioch and the smaller Patriarchate of Jerusalem events pursued a corresponding course. The Christians of Syrian race were predisposed to take up with Monophysitism just because their Byzantine rulers were on the side of orthodoxy, and so fell away

into a schism which, although from time to time checked or modified by the action of the Court as long as Byzantium retained its sovereignty over those parts, settled down into a permanent separation, when the Mohammedans had obtained possession of the country, besides losing vast numbers of its adherents by perversions to Mohammedanism.

The Christians of the present day who represent the former populations of the three splendid Patriarchates of Antioch, Alexandria, and Jerusalem are few in number, and fall into five classes.

- First there are the schismatic Copts in Egypt, descendants of the native Egyptians, whose numbers are estimated at about 150,000.
- Secondly the Abyssinians. These were in early days converted from Alexandria, and so in due course passed into schism along with it. They form the great mass of the inhabitants of Abyssinia, about three million and a half, and have kept their faith well, but are very ignorant of its teaching and duties.
- Thirdly, the Jacobites of Syria, who bear the same relation to the ancient Syrians as the Copts to the ancient Egyptians, and are called Jacobites after Jacob Barradai (Baradæus), who preserved the episcopal succession when it was threatened by Justinian. The Jacobites are to be found mostly in Mesopotamia, Syria, and Kurdistan, and are estimated as numbering some 80,000.
- Fourthly, the Thomas Christians on the Malabar Coast, who may number about 70,000. These were originally Nestorians, having been first evangelized, as we have seen, by the early Nestorians; the Portuguese sought to catholicize them by very harsh means, and succeeded only in attracting their dislike. When the Dutch succeeded the Portuguese in India, and began to persecute the Catholics, these Malabar communities returned to schism, but, not being able to find a Nestorian bishop, procured a Jacobite bishop from Jerusalem, to renew their episcopal succession, and thus ended in becoming Monophysites.
- Fifthly, the Armenians, if we include with those who dwell in Armenia Proper those of the same race and religion who are settled in Asia Minor, European Turkey, Galicia, Armenia, and elsewhere, may perhaps amount to some three millions and a half, though trustworthy statistics are difficult to obtain.

As in the case of the Nestorians, by the side of each of these sections of Monophysites is a corresponding body of Eastern-Rite Catholics who, once Monophysites, have at one date or another in the past renounced their heresy and been reconciled to the Catholic Church, which has cordially sanctioned the retention of their native rites. Of these the Melchites, Coptic and Syrian included, amount to about 35,000, the Catholics of St. Thomas to about 90,000, and the Catholic Armenians to about 60,000 or 70,000. Of Abyssinian Catholics there are practically none.

D. Photianism

The next great schism which divided Christendom was that which is known as the Photian schism, and led to the separatist existence of that vast body of Christians which has come to be called "the orthodox Church". We shall employ both these names as names which have become current designations, though without accepting the implications that attach to them. Certainly Photianism is a name which well expresses the character of a separation motived, at all events in the first instance, not by any doctrinal reasons, but by one man's endeavour to realize his personal ambitions, that one man being Photius, the usurping Patriarch of Constantinople in 857. It is true

that the schism initiated by Photius did not long survive his death, but he was a man as remarkable for his learning and ability as for his unscrupulousness, and so was able to create -- doubtless out of pre-existing materials -- and to equip with an effective controversial armoury an ecclesiastical party animated by his own separatist ambitions and anti-Latin animosities.

The history and vicissitudes of this most lamentable of all schisms have been sufficiently told in other articles (IGNATIUS OF CONSTANTINOPLE, SAINT; PHOTIUS OF CONSTANTINOPLE; MICHAEL CÆRULARIUS; GREEK CHURCH), but we must note here how entirely unprovoked it was, both in the time of Photius and in that of Michael Cærularius, by any harsh or inconsiderate action on the part of the popes. When Bardas, the uncle or the Emperor Michael III, presented himself to the Patriarch Ignatius to receive Communion while living in incest with his daughter-in-law -- when the empress mother and her daughter were brought to the patriarch against their will to receive the veil of religion -- what else could a conscientious prelate do save refuse what was so improperly sought? Yet it was just for this that the Patriarch Ignatius, on refusing to resign his see, was banished to the island of Terebinthus, and under just these circumstances that Photius mounted the still occupied patriarchal throne and sought confirmation of his appointment from Pope St. Nicholas I. The letter which he addressed to St. Nicholas ("Opera", in P.G., CII, 586-618) misrepresented the facts, and besides bore on its face such signs of unreality as could not but arouse the suspicions of the pope, who, when at last he found out what the true facts were, did the only thing that a conscientious pope could do, pronounced the election of Photius null and void, and laid Photius under excommunication. Later, when Photius saw that Rome could not be induced to sanction his usurpation, he threw off his disguise and, professing to have discovered that certain usages of the West were scandalous and even heretical, addressed an encyclical to the other Oriental prelates inviting them to meet in a general council at Constantinople and pass judgment on St. Nicholas.

Though the pope's real offence, in the eyes of Photius, was that, as successor of St. Peter, he exercised an authority which stood in the way of Byzantine ambitions, the schismatic felt that, if he would recommend his cause to the religious world, he must provide it with a dogmatic basis, and accordingly he formulated the following charges, only one of which raised an issue which had even the appearance of being dogmatic. The Westerns, he said, fast on Saturdays, use *lacticinia* during the first week in Lent, impose the yoke of celibacy on their clergy, reconfirm those who have been confirmed by simple priests, and have added the "Filoque" to the creed. To these five points he added four others, in a subsequent letter to the Bulgarians, namely, that they sacrifice a lamb along with the Holy Eucharist on Easter Sunday, oblige their priests to shave their beards, make their chrism of running water, and consecrate deacons *per saltum* to the episcopate. Nothing could be more trivial than these charges on the ground of which this man was prepared to break up the unity of Christendom; but for the time the schism thus caused was only transitory. Photius himself was quickly displaced by a fresh court intrigue, and though, on the death of Ignatius, he attained to a more legitimate possession of the patriarchate, he died in 867, after which there was a reconciliation with the Holy See which lasted for the next two centuries.

Then came the Patriarch Michael Cærularius, who in 1053 -- that is at a time when not only was there no tension between the emperor and the pope, but the Norman invasion of Sicily just then occurring made it peculiarly desirable that they should unite to oppose the common enemy -- caused letters to be written and brought to the notice of the pope, in which he renewed the old condemnation of the Latins for fasting on Saturdays, consecrating the Holy Eucharist in unleavened bread, and requiring clerical celibacy. Also at Constantinople, he invaded the churches built for the use of the Westerns, where the Latin Rite was used, and ignominiously handled the Blessed Sacrament there reserved, on the plea that, being consecrated in unleavened bread, it was not truly consecrated. Again there was a saint on the throne of St. Peter, and St. Leo IX in a temperate letter contrasted the violence offered by Michael to the Latin Church at Constantinople with the pope's cordial approval of the many monasteries of the Greek Rite in Rome and its neighbourhood. Further, at the request of the Emperor Constantine Monomachus, who by no means shared the patriarch's bitter spirit, St. Leo sent two legates to Constantinople to arrange matters. There was nothing, however, to be done, as the emperor was weak, and the patriarch was allowed to carry all before him. So the legates returned home, having first left on the altar of St. Sophia a letter in the pope's name by which Michael Cærularius and one or two of his agents were deposed and excommunicated. Of course the excommunication touched only the persons named in the document, and not the whole Byzantine Church; indeed the excommunication of a whole Church is an unknown and unintelligible process. If the whole Church or patriarchate from that time fell away from unity, and has remained out of it ever since, it was because, and in so far as, its members of their own initiative adhered to Michael and his successors in breaking off relations with Rome.

This fact, however, must remind us of the mistake we should make were we to regard the vagaries of a patriarch like Michael Cærularius as the adequate cause of so persistent and far-reaching an effect. Undoubtedly, he had with him in his secession, if not the whole population of his patriarchate, at all events a party strong and influential enough to compel the submission of the rest. This party was the one to which we have referred as formed and consolidated by Photius. In a less pronounced form it is traceable back to the secular struggle between the Greek and Latin races for universal dominion; and since the time of Photius its antipathies had been further stimulated by the growth of Western kingdoms hostile to the empire and by the amicable relations in which their rulers stood to the Roman bishops. This then was the main cause of the separation which has endured so long, and still endures, but to estimate it at its full strength we must take into account the accompanying negative cause. For, though Photius in one of his letters claimed for his see that it was "the centre and support of the truth", and though his followers would have us seek our standard of doctrinal purity exclusively in the prescriptions of the first seven oecumenical councils, St. Leo IX, in his letter to Cærularius enumerated nineteen of the latter's predecessors as having fallen under the condemnation of these seven councils, while Duchesne (*Eglises séparés*, p. 164) calculates that in the interval of 464 years which separates the accession of Constantine the Great from the celebration of the Seventh Council (787), Constantinople and its ecclesiastical dependencies had been in schism for 203 years. This means that the sense of unity, so strong in the West, had in the

East, owing to the perversity of emperors and patriarchs, no fair chance of striking deep roots among the people, and so could seldom offer effectual resistance to the forces making for schism.

Unlike the Nestorians and the Monophysites (whom the Orthodox regard as heretics just as much as do the Catholics), the Photian schism commenced nearly nine centuries ago by Michael Cærularius is now represented not by a few scattered groups which taken altogether number not more than six or seven millions, but by vast populations which, in the aggregate, number not far short of a hundred millions. This is chiefly, though not solely, because, the Russians having been converted by missionaries from Constantinople about a century before the time of Cærularius, their direct religious intercourse was with Constantinople and not with distant Rome; and accordingly they drifted gradually first into unconscious, and later into conscious, acceptance of its separatist attitude. The upshot is that out of the 95,000,000, at which the Orthodox Christians are estimated by statisticians, some 70,000,000 are Russian subjects, the remaining 25,000,000 being divided among the pure Greeks of the Turkish Empire and the Kingdom of Greece, the Rumanians, Servians, and Bulgarians of the Balkan Peninsula, the Cypriotes, and the comparatively small number, mostly Syrians, who reside in the former territories of the Alexandrian and two Eastern Patriarchates. (For particulars see GREEK CHURCH.) As against these must be set a group of Catholics who, since the disruption, have been converted from their schism and are now in communion with the Holy See, though keeping religiously to their ancient Byzantine Rite, whether in its Greek, Slav, or other vernacular form. These are estimated by the author of the article just cited as numbering in all about 5,000,000, of whom the greater part are Ruthenians and Rumanians in the Austrian dominions.

Probably, when the Photian schism was first effected it seemed to the Byzantine leaders that, though by an unfortunate chance the see from which they were separating was the one which could claim the inheritance of the promise made to Blessed Peter, it was with themselves rather than with the Westerns that the main portion, the very substance, of Christendom was and would always be found. Certainly the centre of the world's culture and civilization, religious as well as civil, was then on the Hellespont, and it may be that even in actual numbers the subjects of this one patriarchate surpassed the hordes of half-converted barbarians (as they would have called them) who formed the populations of the new Western kingdoms. Regarded under this aspect, however, it cannot be said that the comparison still tells in their favour or that the schism has profited them. Impressive as is the Orthodox Church numerically, it is far surpassed in that respect by the 260,000,000 or more who represent the old Patriarchate of the West, nor could anyone now compare, to the advantage of the former, the religious culture and activity of the East with that of the west. Indeed, until a quite recent date, stagnation and ignorance is the judgment passed on the Orthodox clergy and laity by observers of all sorts; and if during the last century there has been a distinct improvement in the leaders among priests and people, it has derived much of its inspiration from Protestant sources, chiefly from German universities, and has not been obtained without some sacrifice of the integrity of their ancient tradition and without some admixture of the modern Protestant spirit.

In another very serious respect the Orthodox Christians have lost by their separation from Catholic unity, for they have succumbed to progressive disintegration -- the fate of all communities

that are without an effectual centre of unity. The Patriarch of Constantinople's original claim to be exalted to the second, if not to the first, place in Christendom was (though never formulated distinctly) that Old Rome had been chosen for the seat of primacy because it was the imperial city, and hence, with the transference of the empire, this primacy had passed to New Rome. Such a claim quite lost its significance when the Byzantine Empire was overthrown in the fifteenth century, and the sultans sat in the seat of the former sovereigns of the East. For the time, indeed, the new order of things brought with it even an accession of power to the patriarchs. The sultan saw the advantage of keeping alive a separation which alienated his Christian subjects from their brethren in the West. Accordingly he made the patriarchs, whom he could appoint, keep, or change at his pleasure, to be, under himself the civil as well as the ecclesiastical governors of the Christians of whatever race, within his dominions. Still, the condition of patriarchs thus bound hand and foot, to the chief enemy of Christendom was but a gilded servitude for which it was difficult to feel respect; and, as racial consciousness developed among the many nationalities of the patriarchate, it became more and more realized that the New Rome theory could now be given a fresh application.

Russia was the first to revolt, and in 1589 the Tsar Ivan IV insisted that the Patriarch Jeremias should recognize the Metropolitan of Moscow as the head of an autonomous patriarchate. Why should he not, when Moscow was fast becoming what Constantinople had formerly been, the metropolis of the great Christian Empire of the East? Later, to bring the ecclesiastical government more effectually under the thumb of the Crown and convert it into an instrument of political government, the whole constitution of the Russian Church was changed by Peter the Great, who in contempt of every canonical principle, suspended the patriarchal jurisdiction of Moscow, and put the whole Church under a synod consisting of the three metropolitans, who sat *ex officio*, and some prelates and others personally appointed by the tsar, with a layman as chief procurator to dominate their entire action. Till the last century this was the only diminution of the Patriarch of Constantinople's jurisdiction; but, with the weakening of the sultan's power, the various nationalities over which he formerly reigned supreme have succeeded one after another in gaining their independence or autonomy, and have concurrently established the autonomy of their national Churches. Though adhering to the same liturgy and to the same doctrine as the other Orthodox Churches, they have followed the example set by Russia and, casting off all subjection to the patriarch, have instituted holy synods of their own to govern them ecclesiastically under the supreme control of the civil power. Greece began in 1833, and since then the Rumanians, the Servians, and the Bulgarians, with their respective subdivisions, have followed suit; so that at present we must no longer talk of the Orthodox Church, but of the Orthodox Churches, seventeen in number, in no sense governmentally connected, torn with internecine quarrels, and offering no guarantee, especially in view of the infiltration of Protestant tendencies now going on, that their doctrinal agreement will continue.

Summary

In these three Eastern schisms, which broke up so disastrously the ancient union of Christendom, two things are specially observable from the point of view of this article. One is that, apart from

the separation from the centre of unity which constituted the schism, they have retained almost in its entirety the ancient system of Church organization and method. They have retained the threefold hierarchy endowed with valid orders the sacrificial worship of the Mass, a spirituality based on the use of the seven sacraments, the Catholic doctrine of grace, the exaltation of the Virgin Mother, and the invocation of the saints. Above all they have retained the appeal to tradition as the sure test of sound doctrine and the principle of submission to a teaching authority. The other thing observable in these three schisms accords with what has already been noticed in the early schisms. Doctrinal considerations based on the exercise of private judgment may have influenced their founders to an extent greater or less, but reasons of quite a different order determined the allegiance of their followers. Nationalism exploited by their leaders, or more often exploited by civil rulers for political purposes, is the true formula which explains their origin and long endurance. The nationalism of Syria and Egypt in its antipathy to Byzantine rule, further exploited by Persian and Mohammedan sovereigns, is what explains the facts of Nestorian and Monophysite history; the nationalism of Byzantine hellenism in its antipathy to the Latins, as exploited by the Eastern emperors and their prelates, is what explains the separation of the Orthodox Churches from the Holy See; the nationalism of Greeks, Slavs of different races, and Byzantines, which is the source of their mutual antipathies, is what explains their separation from Constantinople and their erection into so many autonomous Churches.

E. Protestantism

The fourth great breach in the union of Christendom was that caused by the Protestant Reformation of the sixteenth century. Of this movement it can by no means be said that it left the organization and methods of the Catholic Church largely untouched among the populations which it carried with it. On the contrary, it effected the most revolutionary changes of system where it prevailed, substituting church organizations constituted on a radically different principle and having codes of religious opinions unknown to previous ages. Luther, in the first instance, had no thought of breaking with the church authority; at all events he did not inscribe that object on his original programme. Out of his own disordered spiritual experiences he elaborated a theory of sin and salvation founded on his peculiar doctrine of justification by faith. Only when the Holy See rejected this travesty of St. Paul's teaching, together with the conclusions which Luther had deduced from it -- only when it thus became necessary, if he would persist in his errors, that he should elsewhere for a principle on which to base them -- did he fall back on the principle of the Bible privately interpreted as the sole and sufficient rule of Christian belief. He had, it must be acknowledged, fore-runners in this course; for the Church herself has always preached the infallibility of Holy Scripture, and previous heresiarchs had been wont to justify their revolts against her doctrinal decisions by claiming that, as regards the particular doctrines in which they were interested, Holy Scripture stood for them and not for her.

What was special and novel in Luther and his colleagues was that they erected the principle of an appeal to the Bible not only into an exclusive standard of sound doctrines, but even into one which the individual could always apply for himself without dependence on the authoritative

interpretations of any Church whatever. Luther himself and his fellow-reformers did not even understand their new rule of faith in the Rationalistic sense that the individual inquirer can, by applying the recognized principles of exegesis, be sure of extracting from the Scripture text the intended meaning of its Divine author. Their idea was that the earnest Protestant who goes direct to the Bible for his beliefs is brought into immediate contact with the Holy Spirit, and can take the ideas that his reading conveys to him personally as the direct teaching of the Spirit to himself. But, however much the Reformers might thus formulate their principle, they could not in practice avoid resorting to the principles of exegesis, applied well or ill, according to each man's capacity, for the discovery of the sense ascribed to the Holy Spirit. Thus their new doctrinal standard lapsed even in their own days, though they perceived it not, and still more in later days, into the more intelligible but less pietistic method of Rationalism.

Now, if the Bible were drawn up, as it is not, in the form of a clear, simple, systematic, and comprehensive statement of doctrine and rule of conduct, it might not, perhaps, seem antecedently impossible that God should have wished this to be the way by which his people should attain to the knowledge of the true religion. Still, even then the validity of the method would need to be tested by the character of the results, and only if these exhibited a profound and far-reaching agreement among those who followed it would it be safe to conclude that it was the method God had really sanctioned. This, however, was far from the experience of the Reformers. Luther had strangely assumed that those who followed him into revolt would use their right of private judgment only to affirm their entire agreement with his own opinions, for which he claimed the sanction of an inspiration received from God that equaled him with the Prophets of old. But he was soon to learn that his followers attached as high a value to their own interpretations of the Bible as he did to his, and were quite prepared to act upon their own conclusions instead of upon his. The result was that as early as the beginning of 1525 -- only eight years after he first propounded his heresies -- we find him acknowledging, in his "Letter to the Christians of Antwerp" (de Wette, III, 61), that "there are as many sects and creeds in Germany as heads. One will have no baptism; another denies the sacrament, another asserts that there is another world between this and the last day, some teach that Christ is not God, some say this, some say that. No lout is so boorish but, if a fancy enters his head, he must think that the Holy Ghost has entered into him, and that he is to be a prophet". Moreover, besides these multiplying manifestations of pure individualism, two main lines of party distinction, each with a fatal tendency to further subdivision, had begun almost from the first to divide the reform leaders among themselves. The Swiss Reformer, Zwingli, had commenced his revolt almost simultaneously with Luther, and, though in their fundamental doctrines of the Bible privately interpreted and of justification by faith, they were on the same lines, in regard to the important doctrines of predestination and the nature of the Holy Eucharist they took opposite views, and attached to them such importance that they became irreconcilable foes and leaders of antagonistic parties.

On such a foundation, if consistently held to, it was impossible to build up a Church which should stand out in the world like the old Church they were striving to destroy, for if in the last

resort the judgment of the individual be for him the supreme authority in matters of religion, it is impossible that any external authority can be entitled to demand his submission to its judgments when contrary to his own. The early Reformers probably realized this but they felt the necessity of building up some sort of a Church which could bind together its members into a corporate body professing unity of belief and worship, and which, in contrast with the pope's Church, which they called apostate, could be called the true Church of God. And so, regardless of the contradictions in which they were involving themselves, they set to work to excogitate a theory of church-constitution to suit their purposes. This theory is exhibited in the seventh article of the Augsburg Confession of 1530, to which type the other Protestant Confessions, both Lutheran and Reformed (that is, Calvinistic), of the next few decades conformed. "The Church of Christ", says the Augsburg Confession, "is, in its proper meaning, the congregation of the members of Christ, that is of the Saints, who truly believe and obey Christ; although in this life many evil men and hypocrites are intermixed with this congregation until the day of judgment. This Church, properly so termed, has, moreover, its signs, namely, the pure and sound teaching of the Gospel and the right use of the sacraments. And for the true unity of the Church it is enough to agree as to the teaching of the Gospel and the administration of the sacraments."

This idea of the Church has some surface resemblance to the Catholic idea, but is in reality its exact converse. The Catholic, too, would say that his Church is the home of true teaching and true sacraments, but there the resemblance ends. The Catholic first asks himself which is the true Church that Christ has set to be the guardian of His Revelation, the teacher and ruler of his people. Then, having identified it by the marks set upon its face -- by its continuity with the past, which, in virtue of its indefectibility, it must necessarily possess, its unity, catholicity, and sanctity -- he submits himself to its authority, accepts its teaching, and receives its sacraments, in the full assurance that just because they are sanctioned by its authority its teaching is the true teaching and its sacraments are the true sacraments. The Protestant, on the other hand, if he follows the course marked out for him by these Protestant confessions, begins by asking himself, and decides by the application of a wholly distinct and independent test, what are the true doctrines and true sacraments. Then he looks out for a Church which professes such doctrines and uses such sacraments; and having found one, regards it as the true Church and joins it. The fatal tendency to disunion inherent in this latter method appears when we ask what is that distinct and independent test by which the Protestant decides as to the truth of his doctrines and sacraments, for it is, as the whole history of the Reformation movement declares, that very rule of the Bible given over to the private interpretation of the individual which is inconsistent with any real submission to an external authority. Important however, and fundamental as this point is, the Augsburg Confession passes it over without the slightest mention. So, too, do most of the other Protestant Confessions, and none of them dare to go to the root of the difficulty.

The Scottish Confession of 1560 (of which the Westminster Confession drawn up in England during the Commonwealth is an amplification) is the most explicit in this respect. After claiming that the Presbyterian Church recently established by John Knox and his friends holds the true

doctrine and right sacraments, it gives as its reason for so affirming that "the doctrine which we use in our Churches is contained in the written Word of God . . . in which we affirm that all things that must be believed by men for their salvation are sufficiently expressed". It then goes on to declare that "the interpretation of Scripture belongs neither to any private or public person, or to any Church . . . but this right and authority of interpretation belongs solely to the Spirit of God by whom the Scriptures were committed to writing". This, no doubt, is what the other Reformers in Germany, Switzerland and elsewhere would also have said, but they prudently passed the point over in their confessions, half conscious that to claim the right of interpretation for the Spirit of God was but a misleading way of claiming it for each individual who might conceive himself to have caught the mind of the Spirit; foreseeing, too, that, if no Church could claim the right to interpret with authority, no Church, Protestant any more than Catholic, could claim the right to impose its doctrines or worship on others.

However, the Reformation leaders knew what they were about. They meant to have a Protestant Church, or at all events Protestant Churches, to oppose to the pope's Church, and they intended that these new Churches should profess a very definite creed, and enforce its acceptance, together with submission to its disciplinary arrangements, on all whom they could reach by the exercise of a very effective and coercive jurisdiction. Accordingly, these Protestant confessions of faith, which were the formal expression of their doctrinal creeds, contained and prescribed, quite after the manner of Catholic professions of faith or decrees of councils, lists of very definite articles, often with added anathemas directed against those who should venture to deny them. The ministers were to be "called" before they could exercise their functions, those entitled to call them being governing bodies consisting of clergy and laity in fixed proportions, and formed hierarchically into local, regional, and national consistories. To these governing bodies appertained also the right of administration, of deciding controversies, and of excommunicating. The difficulty was to equip them with coercive power, but for this the German Reformers had recourse to the secular power. The secular power was, they assured their princes, bound to use its sword for the defence of right and the suppression of evil; and it appertained to this department of its functions that in times of religious crisis it should take upon itself to further the cause of the Gospel -- that is, of the new doctrines -- and root out the old errors.

The German princes had hitherto stood off from the new evangelists, whose democratic tendencies they suspected, but this appeal for their intervention was baited with the suggestion that they should take away from the Catholics their rich endowments, and apply them to more becoming uses. The bait took, and within a few years, one after another, the princes of Northern Germany -- no very edifying class -- declared themselves to be on the side of the Gospel and ready to take over the responsibility for its administration. Then, from 1525 onwards, following the lead of Philip, Landgrave of Hesse, one of the most immoral men of the age, they seized the abbeys and bishoprics within their dominions, the revenues of which they mostly applied to the increase of their own, and proceeded to found national Churches based on the principles shortly afterwards accepted by the Augsburg Confession, which should be autonomous for each dominion under the supreme spiritual

as well as temporal rule of its secular sovereign. For these national Churches they drew up codes of doctrine, schemes of worship, and orders of ministers, observance of which they enjoined on all their subjects under penalty of exile, a penalty which was at once inflicted on those of the Catholic clergy who remained faithful to the religion of their ancestors, as well as on multitudes of Catholic laymen.

This system of national Churches did not necessarily involve the imposition of Protestant creeds differing among themselves, for it was within the power ascribed to the princes that they should agree together as to what they would enforce, and no doubt to a certain extent this was what happened, and by happening caused Lutheranism to be the prevailing form of religion in Protestant Germany. Still the system did involve that the prince had the power, if he judged fit, to introduce a creed differing from that of the neighbouring dominions, and eventually this was what occurred when the Lutheran and Reformed parties settled down within the limits of the Empire into formal opposition among themselves. Some principalities -- and it was the same with the free cities which went over to Protestantism -- enforced one of the forms of Lutheran confession, others one of the forms of Reformed confession, and there were even oscillations in the same principality as one sovereign succeeded another on the throne. The signal instance of this was in the Palatinate, the inhabitants of which were required to change backwards and forwards between Lutheranism and Calvinism four times within the years 1563 and 1623. This pretension of the German princes to dictate a religion to their subjects came to be known as the *jus reformandi*, and gave rise to the maxim, *Cujus regio ejus religio*. By the Peace of Augsburg, 1555, this pretension was reluctantly conceded as a temporary expedient to the Protestant princes, and by the Treaty of Westphalia (1648) it received a more formal kind of imperial sanction, against which an ineffectual protest was made on behalf of Pope Innocent X by his nuncio, Chigi.

In Switzerland there were no princes to put themselves at the head of the new national Churches, but their place was taken by the cantonal governments, wherever these had been captured by the Protestant faction. Thus Zwingli, who began his fiery preachings against the Catholic Church in 1518, and in a few years' time had gathered round himself a band of fanatical followers with their aid and by holding out the confiscation of the church property as an inducement, was able by 1525 to draw over to his side the majority of the members of the State Council of Zurich. By this majority the Catholic members of the council were overpowered and extruded, which done, at the instigation of Zwingli; the Catholic religion, though it had been the religion of their ancestors for many centuries and was still the religion of the quiet people in the land, was summarily proscribed, even the celebration of the Mass being forbidden under the severest penalties; while, to make its restoration forever impossible, fierce crowds led by Zwingli in person were sent to visit the various churches and strip them of their statues and ornaments on the plea that the Bible commanded them to put down idolatry. The ground being thus cleared, the state Council by its own authority set up a national Church conformed to the German type. Berne, Basle, Schaffhausen, St. Gall, and Appenzell followed quickly in the footsteps of Zurich, the same methods of violence being employed in each case. The desires of the people themselves counted for nothing. The opinions of yesterday adopted by the

fanatical leaders were at once exalted into dogmas for which was claimed an authority over the consciences of all far exceeding that which had been exercised by the venerable Church of the ages.

Nor were these Protestant cantons satisfied with imposing their new doctrines on their own subjects. Having combined with certain cities of the Empire to form a "Christian League" in its name they summoned the Catholic cantons, Schwytz, Uri, Unterwalden, Zug, and Lucerne, to follow their example in supplanting the old Faith by the new. The latter, however, were resolute in their refusal and, although their military strength was inferior to that of their antagonists, they eventually inflicted on them a severe defeat at Kappell (31 Oct., 1531), a defeat in which Zwingli himself and several other preachers were slain on the field. It was a crushing blow to Zwinglianism, which, as such, never recovered, and it saved the Catholic cantons from the danger of perversion, while opening the way for the Catholic restoration that was to ensue. But, if Zwinglianism in Switzerland was now practically dead, this meant not that Protestantism had become extinct there, but that it was about to pass throughout Switzerland into Calvinism. John Calvin, a native of Picardy, after imbibing in Paris the Lutheran views which later on he recast, in his "Institutes", into the form ever since associated with his name, settled down at Geneva in 1536. The desire of the citizens to cast off the yoke of Savoy by allying themselves with the Swiss Confederation gave him the opportunity of acquiring a power over them through the exercise of which he was enabled to force upon the city that all penetrating theocratic despotism which stands out in history as the supreme example of spiritual tyranny.

From Germany and Switzerland, the sources respectively of Lutheranism and Calvinism, Protestantism was propagated into other lands, but in this respect Calvinism showed itself more successful than Lutheranism. Lutheranism spread into Denmark and the Scandinavian Peninsula, in each case owing its beginnings and consolidation to the compulsion and persecution practised on an unwilling people by unworthy sovereigns; but, except that in Poland also it made some headway, this was the extent of its conquests. Calvinism, on the other hand, in Germany itself supplanted Lutheranism and became the dominant religion in some parts, especially in the Palatinate, besides gaining over a sufficient number of adherents in the predominantly Lutheran districts to make it an enduring rival to Lutheranism on German soil. Moreover, in Transylvania and Hungary, and still more in the Netherlands, where its domination was destined to be lasting, it superseded the Lutheran apostolate which had been first in the field. In France, though from the time of the Revocation of the Edict of Nantes (1687) its adherents became a steadily decreasing number, for a whole century and a half it was so powerful that at times it seemed destined to absorb the country; yet there also it owed its progress chiefly to the military violence of its leaders. In Scotland it was tyrannically forced on the people by a corrupt and lawless nobility which, covetous of the church property, lent its support to the fiery energy of John Knox, a pupil of Calvin and a fervent admirer of his theocratic system.

England was a case apart. Henry VIII coquetted with Lutheranism, which was of service to him in his campaign against the pope, but he disliked Protestantism, whether in its Lutheran or its Calvinist form, and devised his Six Articles to aid him in suppressing it. Under Edward VI Calvinism

was favoured by the two regents and the more influential bishops, and their legislation was directed towards the establishment of this system in the country, with the sole difference that episcopacy, in name at least, was to be retained. The short-lived reaction under Mary left Elizabeth a free soil on which to build, and she preferred an episcopal system with a considerable toning down of the asperities of Continental Protestantism, as more in harmony with a monarchical and aristocratic regime and better adapted to gain over a population which was at heart Catholic. Still she had to employ the *personnel* at her disposal, a section of which was of the same mind as herself, while another section had strong Calvinistic leanings. The result was that a double tendency developed in her newly-formed Church, one which, though hating Catholicism as a system, clung to some of the characteristic features of Catholic worship and organization, the other which strove perseveringly for a root-and-branch subversion of the Elizabethan settlement and the substitution of one conformed to the Genevan model. During the Commonwealth the latter party obtained for the time the upper hand, but with the Restoration it was extruded altogether and became the parent of those Nonconformist sects whose progressive divisions and subdivisions have always been the gravest scandal of English religious life. The other party meanwhile, with some oscillations to the right or to the left (under the names of the High and Low Church parties), maintained itself with approximate consistency as exhibiting the distinctive spirit of the Established Church of the country.

Towards the middle of the nineteenth century, however, two quite novel tendencies asserted themselves in that communion (and these have since become so influential that before long they are likely to divide between themselves the race of Anglican Churchmen), one based on a far-reaching appreciation (but with some reservations) of the Catholic system, delighting to call itself Catholic, and striving to assimilate the national worship to the Catholic pattern, the other, which calls itself Liberal and, pushing to its bitter end the application of the Protestant principle of private judgment, has by its rationalistic criticism diffused a widespread scepticism as to the authenticity of the Christian records and the truth of the most fundamental articles of the Christian creed. This theological Liberalism has likewise exercised a disastrous influence on the English Nonconformist bodies, and one more deadly still on Continental Protestantism, Germany being the primary source from which it has sprung. Of Germany, in fact, it must now be said that, as in the sixteenth century it gave birth to what is called orthodox Protestantism, so in the present age it is engaged in throttling its offspring in the tight grasp of its criticism. Of the forms which Protestantism has assumed in the United States, Canada and other countries colonized from Europe, it is sufficient to say that the immigrants have taken their beliefs and forms of worship with them to their new homes, and, the world of ideas being now one, this many-headed hydra has displayed in the new countries the same diversities as in the old.

Except for its Puritan variety, which depended for its propagation chiefly on the powers of physical coercion its leaders could dispose of, Protestantism was an easy-going religion which had abolished many of the ascetic observances and restrictions on liberty and license that held in the old Church. It was to be expected, therefore, that it should spread rapidly in an age when manners were alarmingly corrupt, nor must we be surprised that, with such a start, it was enabled soon to

present the appearance of a group of Churches peopled by very many thousands of adherents. Since those early days, however, it cannot be said to have extended its conquests much, and the millions to which it has now grown are due not much to conversions, but rather to the natural increase of populations. In the present day the total number of Protestants is estimated at about 166,000,000, an enormous number, no doubt, but one which, unlike the 260,000,000 Catholics who all stand together, is only an aggregate made up of a multitude of separate communions, under separate governing bodies, which not only differ among themselves as to important points of doctrine, but -- such is the increasing individualism among their members -- are fast approaching a goal in which each member will have become a Church and a creed to himself.

Summary

It will be useful, as in the cases of the primitive and the great Eastern divisions, to fix attention on the forces making for disintegration which have brought these Protestant divisions into being. If the effect of such a summary is to show the essential similarity of the forces at work in all these cases, that will be advantageous, for it will reveal to us how few are these disintegrating forces, and how elemental is their character; how, in fact, they spring from the very heart of human nature, which can only hope to counteract the divisions towards which they tend if sustained and elevated by some other forces of a different order altogether. In two respects, then, these separatist bodies to which Protestantism has given birth need to be considered in their separations from the parent communions and in their cohesion among themselves, as corporate bodies enduring for a certain time and in a certain degree. The principle of private judgment has been the undoubted cause of their separations and incessant subdivisions for the principle of private judgment is essentially disintegrating. The cause of such cohesion as they have exhibited has been as their history shows, of the following nature. First, under the influence of private judgment, one or more strong-willed men have conceived a doctrinal system antagonistic to that of the religious communions to which they originally belonged, have gathered a party of others like-minded around them, and have undertaken on behalf of their system a propaganda which has attained a certain success. Next, wishing to establish a Church which shall be an embodiment of their system, but finding themselves unable by pure persuasion to hold the multitude to their views, they have had recourse to the civil power, or some dominant faction of nobles or democrats; and have induced it, in view of the temporal advantages to be gained, to impose their system on the people and sustain it by physical force. Or, *ex converso*, resistance to the ruling power or its established Church, when it has been able to maintain itself with comparative success, has caused the separatists to realize that they must unite together under definite rule and government if they are to make their resistance effectual -- as has been the case with the English Nonconformist bodies. Thirdly, realizing that no system imposed by violence can hope to be lasting unless the mass of its people can be brought round to voluntary acceptance of it, they have exploited the passions and prejudices of the people, particularly its race and class exclusivisms, and sought to foment these by campaigns of bitter controversy and calumny. Fourthly, where this policy has succeeded in the earlier stages of a schism, a more internal and durable principle of cohesion has eventually been generated under the influence of custom and

heredity, of antagonisms and misconceptions hardened by long-continued isolations and estrangements, of affections deepened by long continued intimacies, cherished memories, experiences, and associations, and of the good faith and even high spirituality nourished by the detached truths retained in such false creeds, which can prevail under these later conditions.

Such, speaking generally, has been the chain of causes which has welded into churches and congregations with definite creeds and organizations the bodies of men that have preferred the principle of private judgment as a rule of faith to that of submission to the authority of the Catholic Church. But the species of unity thus attained is always in its outer relations separative, in its inner relations precarious; for the very motives that cause the members of such a body to cohere among themselves are those that separate them from other similar bodies, whilst within it, eating away its structure, there is always the latent consciousness among its members that their ruling body and its doctrinal formulæ have no valid title to enforce submission, and it only needs a crisis, or that spirit of radical inquiry which is now so common, to arouse this consciousness to activity. (*See* PROTESTANTISM; LUTHERANISM; CALVINISM; ANGLICANISM; NONCONFORMISTS; RITUALISTS; RATIONALISM.)

F. Divisions within The Catholic Church

We ought not, perhaps, to conclude this survey of the history of religious divisions without touching on what some might consider to be such within the bosom of the Roman communion itself. There are and always have been opposite parties in this communion, whose adherents disagree on points of doctrine the importance of which may be estimated by the bitterness of their controversies. Thus there have been Jansenists and Molinists, Gallicans and Ultramontanes, Liberals and Infallibilists, Modernists and Anti-Modernists. It is true that, a time has come for some of these parties when their peculiar tenets have been condemned, and a portion of their adherents have passed from the Church into schism. But this has not happened in all cases of party divisions; and even where it has happened, those ejected had for a long time previously been tolerated in the Church, holding their distinctive views, and yet not being denied the sacraments and other privileges of communion. Again, there have been, many times over, rival popes each gathering round himself a following and denouncing that of his rival; and during one notorious period of forty years' duration the Church was rent by these rivalries into two, and even into three, parts, to the grave scandal of Christendom. Do not these divisions show that the Catholic Church is as unable as the separated communions to claim unity of faith and government as her perpetual note? In two respects, however, there is an essential difference between the sort of dissensions that may arise in the Catholic Church and those which constitute heresy and schism in the separated communions.

- First, in the Catholic Church the points in dispute round which these dissensions gather are not the Church's accepted doctrines, but further points which the course of study within or without the Church has forced into prominence, and which one party thinks to be compatible with the accepted Catholic doctrine and to make for its vindication, but another thinks to be incompatible with it and dangerous.

•Secondly, on both sides the combatants embrace the formal principle of Church unity, the *magisterium* of the Holy See, and, should the Holy See think fit to intervene, they are prepared to submit to its determination of their controversy.

So far there is nothing to justify the imputation of schism but only an illustration of the error of those who imagine that inside the Church thought and speculation must be stagnant. For these domestic controversies, though sometimes rendered harmful by the defective spirit of those engaged in them, have their useful side, as conducing to the fuller, deeper, and more precise comprehension of the meaning and limits of the accepted doctrines. It may happen, however, that when the course of a controversy has made clear what is involved in the new opinions advanced, the supreme authority in the Church will feel the necessity of intervening by some decree. In that case a crucial moment often arises for the side whose tenets are now condemned. If they have the true Catholic spirit, falling back on their formal principle of unity, they will, submit to the voice of authority, abandon their former opinions, and in so doing act with the truest consistency. If, on the other hand, they attach themselves so stubbornly to the condemned opinions as to prefer rather than abandon them, to abandon their formal principle of unity, there is no longer a place for them in the Church, and they become schismatics in the ordinary sense.

A similar distinction applies to the case of schisms in the papacy. It is true that many antipopes have sprung up and caused division in their time. They were mostly the creatures of some despot who had set them up by his own will, in defiance of the lawful method of appointment, and it is, and invariably was, easy to tell which was the true pope, which the antipope. The one exception to this general statement is that referred to in the objection, the case of the schism which lasted from 1378 to 1417. (For the fuller history of this distressing episode see WESTERN SCHISM; URBAN VI; BONIFACE IX; GREGORY XII; ROBERT OF GENEVA; PEDRO DE LUNA.)

What concerns us here is that the conclave of 1378 was disturbed by the Roman mob, which, anxious lest the popes should go back to Avignon, demanded the election of a Roman or an Italian, that is to say, not a Frenchman. Urban VI, till then Archbishop of Bari, was elected and enthroned, and for some weeks was recognized by all. Then the main body of the cardinals dissatisfied with the administration of Urban, who certainly behaved in an extraordinarily tactless manner, retired to Anagni, declared that, owing to the pressure of the mob upon the conclave, Urban's election had been invalid, and elected Robert of Geneva, who called himself Clement VII. This latter was soon compelled by circumstances to withdraw to Avignon, and so the schism resolved itself into a papacy at Rome and another at Avignon. Of the Roman line there were four popes before the schism was finally healed, Urban VI, Boniface IX, Innocent VII, and Gregory XII; of the Avignon line there were two, Clement VII and Benedict XIII. The effects were terrible and world-wide, some countries, through their sovereigns, ranging themselves on the side of Rome, others on the side of Avignon, politics in some degree determining their choice. But earnest efforts were made from the first to repair the evil, the kings appointing commissions to ascertain the facts, and the canonists writing learned treatises to expound the questions of law involved. Proposals were also made from the first, recommending alternative plans for solving the difficulty, namely that both popes should simultaneously resign and another be then elected, that both should agree to go by the decision of

arbitrators, or that a general council should be called which both popes should combine to authorize, and that the decision should be left to this. All these plans failed for the time, because neither pope would trust the other, and this prevented their meeting and arranging. Hence, in 1408, the cardinals of both obediences abandoned their chiefs and meeting together convoked a council to be held the following year at Pisa and end the schism. When it met it declared both Gregory XII and Benedict XIII to have forfeited their claims by their conduct, which, it was suggested, was unintelligible save on the supposition that they had an heretical disbelief in the unity of the Church. It then elected Peter Philargi, who took the name of Alexander V. But this only made matters worse, for the Council of Pisa, not having been convoked by a pope, had no standing. Thus the sole effect of its action was to increase the confusion by starting a third line of popes. The end of the schism did not come till 1417. By that time John XXIII, the successor of Alexander V, had been deposed by the Council of Constance, a council of the same irregular kind as that of Pisa; and had also resigned. Benedict XIII had lost his following almost entirely, which was taken as a sign that he could not be the true pope, and Gregory XII, whose title is now generally held to have been the best founded, resigned after first legalizing the Council of Constance by a formal act of convocation, and authorizing it to elect a new pope. Then the council elected Martin V, who was forthwith universally acknowledged.

These are the leading facts of the history. It is of course difficult to exaggerate the injury done to the Church by this unfortunate schism, for, apart from the harm it wrought in its own age, it provided a dangerous precedent for future disturbers of the Church to cite, and, by diminishing the reverence in which the papacy had hitherto been held, it went far towards creating the tone of mind which rendered the outbreak of Protestantism in the next century possible. Still, when we compare this schism with schisms like those of the Orthodox and the Protestants an essential difference between them appears. In the other cases the division was over some question of principle; here it was over a question of fact only. On both sides of the dividing line there was exactly the same creed and exactly the same recognition of the essential place of the papacy in the constitution of the Church, of the method by which popes should be elected, of the right to the obedience of the whole Church which attaches to their office. The only matter in doubt was: Had this person or that fulfilled the conditions of a valid election? Was the election of Urban VI due to the terrorism applied by the mob to the electors, and therefore invalid; or had it been unaffected by this terrorism and was therefore valid? If Urban's election was valid, so too were those of his successors of the Roman line; if his election was invalid, Clement VII's and Benedict XIII's were valid. But the verification of facts is through the testimony of those who have taken part in them, and in this case the witnesses were at variance. To decide between them belongs to the special articles on that schism. In this article what concerns us is to appreciate the difference between a schism of this sort over a question of fact and a schism over a question of principle like the others that have been instanced. We may help ourselves by an analogy; for we may compare this difference with that between a sword-stroke which has dissevered a limb from the body and one which has caused a deep wound in the body itself. In the former case the life of the organism ceases at once to flow into the dissevered part, and it begins to disintegrate; in the latter, all the powers and processes of the organism are at once

set in motion for the repair of the injured part. It may be that the injury wrought is too serious for recovery and death must be expected, but the life is still there in the organism, and oftentimes it is able to achieve a complete restoration. To apply this to the history, whereas in schisms properly so called a depreciation of the value of unity is wont to mark their commencement, in this schism it was most remarkable how strong was the sense of unity which expressed itself on every side, so soon as the news of the rival lines set up became known, and how steadily, earnestly, discerningly, and unanimously the different parts of the Church laboured, with ultimate success, to ascertain which was the true pope, or to obtain the election of one.

IV. REUNION MOVEMENTS IN THE PAST

A. In the East

As Constantinople had so often been in schism for a season, the popes took some time to realize that the schism accomplished by the Patriarch Cæcarius was destined to continue. Even when they were at last disillusioned, they never ceased to regard the Eastern Christians as a choice portion of Christ's flock, or to work for the restoration of that portion to unity according to their opportunities. Thus it was not merely for the recovery of the Holy Places and the protection of the pilgrims that Urban II and his successors originated and sustained the Crusades, but for the far more comprehensive object of bringing the concentrated strength of the Western Powers to the aid of their Eastern brethren, now threatened by a Turkish invasion which bade fair to overwhelm them. It is true that the intermingling of human passions and the clash of animosities, for which Easterns and Westerns were both to blame, not only brought to naught the realization of this splendid ideal, but actually enlarged the chasm which separated the two sides by intensifying the antipathy of the Easterns for their aggressive allies. Nor can it be denied that the Western populations often showed a very unsatisfactory spirit in their dealings with the East and their feelings towards them; for the Westerns, too, were dominated by the unbrotherly passions that spring from excessive nationalism, and it was just this that increased so seriously for the popes the difficulty of bringing the two sides together for the defence of Eastern Christendom.

But the important thing to observe is that the popes themselves, with wonderful unanimity, stood outside all these racial animosities, and, whatever were their personal affinities, never lost hold of the pure Christian ideal or thought to subordinate it to worldly politics. Thus a succession of popes from Gregory VII down to our own days (conspicuous among whom were Urban II, Blessed Eugenius III, Innocent III, Blessed Gregory X, Nicholas IV, Eugenius IV, Pius II, Calixtus III, St. Pius V, Clement VIII, Urban VIII, and Clement XIV) have manifested their strong desires and have striven most pathetically for the healing of this saddest of schisms, never losing heart even when the outlook was darkest, welcoming each gleam of sunshine as an occasion for repeating their assurances of a truly brotherly feeling, and a readiness to concede in the terms of union all that was not essential to the Church's faith and constitution. On the Oriental side there has not been much response to this pathetic call of the popes; but two of the Eastern emperors made overtures which led on to the solemn acts of reunion in the Council of Lyons (1274) and the Council of

Florence (1439). Unfortunately, these negotiations were prompted, on the Oriental side, by the instinct of self-preservation in face of the Turkish danger more than by any adequate appreciation of the necessity of religious unity, and were, besides, undertaken by sovereigns the mass of whose subjects were not prepared to follow them in a course that ran counter to their traditional resentments. Still, the second of these councils had its solid results; for it won over the last two emperors of the East, the last three patriarchs under the old empire, the two distinguished prelates Bessarion of Nicæa, and Isidore of Kiev, besides originating the Catholic Eastern Rites. Though adverse circumstances have sometimes disturbed their allegiance, and have prevented their numbers from attaining to any high figures, these Eastern-Rite Catholics have done good service to the cause of reunion by their standing testimony to the mode of reunion which is all that the popes ask for, namely, acceptance of the entire deposit of faith including the Divine institution of the Roman primacy, but beyond that a full-hearted adherence to those venerable rites and usages which are dear to Eastern hearts as an inheritance bequeathed to them by the highest Christian antiquity.

Although, since the Council of Florence, no more proposals for healing the schism have come from the main body of the Orthodox and their rulers, one must include among the reunion movements of the past the one which, initiated by some Ruthenian bishops, led to the union accomplished at Brest in Lithuania in 1596 (see UNION OF BREST). By this Union a considerable portion of the Ruthenians, the race that had formed the original nucleus of the Russian Empire, was officially reunited with the Holy See, but it was not for some time, and after the fiercest opposition, that the main body of that people were gained over to the union. Having, however, at length accepted it, they remained firmly attached to it until the partition of Poland. Then one-half of these Eastern-Rite Catholics came under Austrian rule, the other under Russian rule. The former, meeting with toleration from their rulers, still remain constant, the latter have been the victims of a succession of the cruelest persecutions undertaken to drive them back into schism.

B. In the West

In the first outburst of Protestantism neither its leaders nor their followers had any scruples about their separation from the communion of the ancient Church. They regarded it as an apostate Church from which it was a blessing to be separated, and they anticipated the speedy advent of the time when, its members converted by the Protestant preachers, it would dissolve away, and their own purified Churches take its place everywhere. But, as new generations grew up which were not responsible for the schism, devout minds were inevitably led to contrast the sectarianism they had inherited with the beautiful ideal of religious unity praised by St. Paul and realized in their own lands in days previous to the Reformation. That there were many such minds is evidenced by the stream of converts to the Catholic Church, which from the days of the Reformers onward has never ceased to flow -- of converts who invariably ascribe their first discontent with their previous Protestantism to the scandal of its divisions. The same deep sense of scandal motivated the attempts to bring about reunion, whether among the Protestant sects themselves, or between these and the Catholic Church, which were made at various times during the succeeding centuries. All of these attempts failed because set on a false foundation, but some of them were certainly inspired by a

genuine spirit of concord. We cannot indeed regard as so inspired the group of German Lutherans, represented by James Andreae and Martin Crusius, who, in the last quarter of the sixteenth century, proposed to the Patriarch Jeremias II of Constantinople a plan for the union of the Lutherans with the Greeks on the basis of the Lutheran Creed, a plan promptly rejected by the patriarch; nor the Dutch Calvinists and Anglican divines who, a generation later, negotiated for a similar union with the semi-Calvinist Patriarch Cyril Lucaris, but were finally repulsed by the Synod of Jerusalem (1672), which condemned their doctrines together with the memory of the patriarch who had coquetted with them; nor again the Gallican priest, Ellies du Pin, and the Anglican archbishop, Wake, who in the first quarter of the eighteenth century negotiated a reunion between the Anglican and Gallican Churches. In each of these cases the predominant motive was not to heal division, but to aid the cause of separation by strengthening the opposition to the Holy See.

Very different, however, and in every way commendable, was the spirit in which the party led by George Callixtus in the second quarter of the seventeenth century, and that in which Molanus and Leibniz in their negotiations with Bishop Spinola of Neustadt and the great Bossuet, half a century later, worked for the elaboration of a reunion scheme which the Catholic Church and the Protestant bodies might both be able to accept. The last-mentioned episode, of which a full account may be read in M. Reaumes' "Histoire de Bossuet", is of peculiar interest, supported as it was by the Court of Hanover, with the approbation of many Protestant princes, and watched with sympathy by Clement IX and Innocent XI. But, though political reasons were the immediate cause of the discontinuance of these negotiations, they were doomed to failure for theological reasons also. Of attempts to unite the Lutherans and Calvinists who formed the two main varieties of Protestantism several were made in Germany from the time of Melancthon downwards; but all failed until the occurrence of the tercentenary of the Reformation in 1817, when the scheme recommended by Frederick William III of Prussia achieved a partial success which still endures. By this scheme the two sides were to retain each its own doctrine, but they were to coalesce into one "Evangelical Church" and worship together according to a common liturgy, or *agenda*, which was drawn up on lines sufficiently vague to leave untouched the points as to which they were at variance among themselves. Even this *modus vivendi*, external and superficial as it was, would not have been able to establish itself had it not been for the pressure applied by royal authority, which in some districts had to resort to physical force; nor has it been able to embrace all the Lutherans in its fold, tending as it did to favour their side less than that of their traditional adversaries.

V. REUNION MOVEMENTS IN THE PRESENT AGE

In the present age the divisions of Christendom not only furnish its assailants with their most effective taunt, but constitute the most serious hindrance in the way of Christian work. Hence, among those who have inherited the condition of separation, the value of Christian unity has come to be much more deeply appreciated than ever before, and many active movements have been set on foot, and schemes devised, for its restoration.

A. In the East

So far as the Orthodox Churches are concerned it does not appear that the solicitude for reunion is very marked, at least among the rulers and the great mass of the populations. During the last half-century some members of the High Church section of the Anglican party, and likewise some members of the Old Catholic party in Germany and Switzerland have approached the adherents of Russian and Greek Orthodoxy, in hopes of inducing them to promote intercommunion between their respective Churches; but these negotiations, though they have led to occasional interchanges of ecclesiastical courtesies and concessions, such as the more rigidly consistent Roman Church would deem to be compromising, have not yet attained, and are not likely to attain, their object; for the simple reason that the Orthodox Churches have no intention of uniting with Churches which permit the most fundamental heresies to be held and taught by prelates and men of standing in their communions, and yet they are perfectly aware that this is the case in the Anglican Church, and are likewise aware that the old Catholics, since they broke away from the Holy See in 1870, have come under Protestant influence and have lost their hold on much Catholic doctrine. As for negotiations with the Holy See or even an interchange of ideas with it, the rulers of these Eastern Churches are as ill-disposed as ever, and when invited to do so by recent popes -- as by Pius IX, on his accession and when convoking the Vatican Council, and by Leo XIII on his accession and in his "Præclara Gratulationis" of 1894 -- they have always opposed either scornful silence or words of studied offensiveness to the affectionate language of the popes.

A pleasant exception to this rule is the present (1912) Patriarch of Constantinople, Joachim III, who, contrary to the prevailing custom, has been left in office since 1902 -- an unusually long time. It is known that he is personally inclined towards reunion, but he is only one and when, in 1902, shortly after his accession, he addressed a letter to the heads of the autocephalous Churches of his patriarchate, proposing to them that they should all agree to enter into negotiations both with the Protestant bodies and also with the Churches in union with the Holy See, they were unanimous in refusing even to discuss the idea, so far as Rome was concerned ("Reunion Magazine", Sept., 1910, p. 375, and Feb., 1911, p. 281). The only basis, they declared on which the Orthodox Churches could entertain the thought of reunion with the Holy See was that of an acceptance of themselves as, by reason of their fidelity to the teaching of the seven oecumenical councils, "alone composing the one Holy Catholic and Apostolic Church"; and hence of a renunciation by the pope of all his innovations on this doctrinal standard, particularly of that worst innovation of all, the papal despotism. As there was no present likelihood of the pope's assenting to that basis, what room was there for negotiations?

Such was the answer to this important invitation returned so recently by the highest authorities of these Eastern Churches, and, if it represents their real mind we must agree with them that negotiations would be useless; for one thing is quite certain, the Holy See can never accept conditions which would involve the renunciation of an office it knows to be of Divine appointment and vital for the maintenance of the Church's unity. Nor is this all, for these Orthodox prelates, if they will reflect, must needs see that their conditions are such as cannot possibly form a durable basis for reunion. They claim that their position and theirs only is sanctioned by what they call "the Seven

General Councils" -- that is, the Councils of Nicæa (325), Constantinople I (381), Ephesus (431), Chalcedon (451), Constantinople II (553), Third Constantinople (680), Second Nicæa (787). But this is just what Catholic historians deny; and, as it would appear, with a heavy balance of evidence on their side. Who, then, is to decide between the two contentions? In other words, is this Oriental claim more than a disguised appeal to the Protestant principle of private judgment, the very principle which, as the experience of four centuries of Protestantism has demonstrated, is essentially the principle of division, and not of unity? It will be replied that the authority to decide is with the next general council. But if it were at all conceivable that general councils could take the place of a living centre of unity in the government of the Church, at least they would require to be held at short intervals, and then the question arises: Why, if our Eastern brethren appreciate the importance of unity, have they not during all these centuries taken the initiative in working for the holding of such a general council and invited the Catholic representatives to take a friendly part in it? Why, when the popes have taken that initiative and have invited the Easterns in the most cordial terms to join in such a council, or at least to join with them in some friendly conference to discuss the possibilities of a reconciliation, have they always so sternly refused? There are those who think that, as in the times of Photius and Cæularius, the chief deterring causes that stand in the way of the reunion of the Orthodox with the Catholics are political, and to some extent that may be the case. But the tsars, who, if they were to put themselves at the head of a vast reunion movement, could probably carry the rest of the Easterns (Monophysites and Nestorians included) with them, cannot be unconscious of the splendid rôle which would become theirs as the leading Christian sovereigns and protectors of a united Christendom of such vastly increased dimensions.

Evidently, then, the primary cause why the East will not approach the West for the healing of the schism is still to be sought in that indefinable spirit of antipathy which the Easterns have inherited from past ages, when to some extent it was reciprocated in the West, and which makes them suspect every overture that comes from the West of being dictated by some malign ulterior purpose -- such as to suppress their ancient rites, or transform their religious habits, or crush out their reasonable liberties by extravagant exercises of ecclesiastical power. To us in the West it seems unintelligible that such groundless suspicions should be entertained. It may be that in some districts, where the East and West touch each other closely, and the blending of religious with political animosities causes tension, material for that sort of suspicion exists, but certainly there is no corresponding aversion to Easterns or their religious habits in the general area of Western Catholicism, and above all, as has already been observed, there is absolutely no ground for suspecting the integrity of the motives that have consistently animated the long line of popes. The Greeks who took refuge in Southern Italy under pressure of the Turkish invasion have never to this day found difficulty, but on the contrary much encouragement, from the popes, in their adherence to their Eastern customs, the marriage of their clergy included; and since the time of the Council of Florence it has been a fixed principle of papal government that Orientals passing into communion with the Holy See should be required to remain in their own rites and customs where no doctrinal error was involved, Leo XXII enforcing adherence to this principle by new sanctions in his "*Orientalium ecclesiarum*

dignitas" (1893). Moreover, why should the popes or their adherents in the West cherish dislike for rites and customs so intimately associated with the memories of those venerable Fathers and doctors whom East and West agree in venerating and claiming as their own? Could the Easterns, then, only be induced to lay aside these suspicions, if but provisionally, and meet the pope or his representatives in friendly conference, the problem of reunion would already be half solved. For then explanations could be exchanged, and false impressions removed, particularly the false impression that it is lust of domination, and not fidelity to a Divine trust, that constrains the popes to insist on the recognition of their primacy. After that it might be necessary to discuss doctrinal points on which the two sides are at variance; but the discussion would turn on the application of ancient principles recognized on both sides. Seeing how shadowy are some of the points of disagreement, some of them would surely be cleared up completely by such discussions, and if others stood out, and thereby made any immediate act of reunion impossible, at least the better understanding arrived at might be hoped to impart to any further studies and discussions a convergent tendency and so lead on to intercommunion at no remote date.

Is such a consummation impossible? For the present it would seem to be so, if we are to judge by the attitude of the rulers, civil and ecclesiastical, of the Orthodox Churches. But it is at least symptomatic that Joachim III, the present Patriarch of Constantinople, the same who in 1902 proposed conferences on reunion to the other autocephalous churches, has recently (Bessarione, January-March, 1911) expressed his desire for reunion and for preparatory efforts to come to an understanding with the Westerns. The career, too, of such a man as the late Vladimir Soloviev -- who, starting from the ordinary Orthodox conceptions, set himself to study the whole question of reunion in the light of the patristic writings, and was led to enroll himself among the Eastern-Rite Catholics -- may fairly be taken, seeing what influence he exercised, and his memory still exercises, over many of his fellow-countrymen, as a sign that there are others of like mind in that sealed empire, as indeed is known to be the case. Moreover, the imperial edicts of toleration published in Russia in 1905, though they were quickly to all intents and purposes revoked, sufficed to lift the veil and make manifest the true sentiments of the many Ruthenian Catholics who had been given out as willing deserters to the camp of schism. So, too, did the memorandum of the thirty-two Orthodox priests on the necessity of changing the organization of the Russian Church (published at St. Petersburg in 1905), together with the subsequent discussions and proceedings for the determination of this question in a national council (Palmieri, "Chiesa russa", i), manifest the grave dissatisfaction of many of the Orthodox clergy with the suppression by the civil power of the spontaneous life and thought of their national Church.

Nor do we lack the direct testimony of witnesses familiar with Eastern lands to the existence there of many ardent aspirants after reunion. Thus Nicolà Franco, a Catholic priest of the Greek Rite, in his instructive study of the question under all its aspects, testifies that "the reunion movement has manifested itself in the provinces of European Turkey among Greeks, Albanians, and Bulgarians, and in Asia among the Greeks and Melchites, not to speak of the Armenians, Syrians, and Chaldeans, and, which is more significant still, among the Russians, in whose midst Catholic groups of the

Greek-Slav Rite keep on establishing themselves, and give promise of a wider extension of the apostolate for reunion" (*Difesa del Cristianesimo*, p. 199). It is perhaps the spectacle which can now be seen in many places in the East, of Catholics of the Greek and Latin Rite working side by side in cordial co-operation, while on terms of friendly intercourse with the Orthodox of the same neighbourhood, which is chiefly helpful in removing prejudice by the object lesson it offers of what reunion would bring to pass in all parts of the world in these days, when Easterns as well as Westerns are spreading and mingling in many lands. Especially impressive in this way seems to have been the object-lesson of the Eucharistic Congress held at Jerusalem in 1893 in which the Catholic clergy and laity of both rites took part under the eyes of numerous adherents of the separated communions. The solemn Eucharistic Liturgies, according to the rite of St. John Chrysostom celebrated at St. Peter's in the presence of the pope on 14 Feb., 1908, and that celebrated later in the same year at Westminster Cathedral in the presence of his legate, were examples of similar import. Moreover, if Leo XIII's letter of 20 June, 1894, addressed to "the Princes and Peoples", received a rude answer from the patriarch Anthimus VII and his Synod (*Duchesne*, "Egluses séparées"), there were not lacking devout minds in the East who contrasted the patriarch's brutal language with the exquisitely tender and conciliatory language of the pope. Padre Franco reports the accession of over a hundred thousand persons to the Eastern Catholic Churches as the harvest gathered from this episode during the years that followed.

B. In the West

In the West the English-speaking countries must be distinguished from the others, which, like them, have inherited the state of religious isolation. In the latter no general sense of the evils of division appears to have been as yet awakened, and even in the former as much must be said of the great mass of the population, even of that section of it which is in earnest about its spiritual condition. Still, in England and the United States there are numerous groups of religious-minded persons who do take very much to heart the scandal of religious division which is brought home to them in diverse ways through their experience of the hindrances that block the path of Christian progress. Their sense of this scandal and the consequent desire for reunion goes back to the second quarter of the last century. It began with the Tractarians and sprang naturally out of the fuller realization, to which their Patristic studies had led them, of the nature and authority of the visible Church. This school is still the home of the most solid and fervent aspiration after reunion, but the aspiration has spread during the last few decades from this to other parties in the national Church, and even to the Nonconformists, who have grown ashamed of the multiplicity of their sects and are now anxious to find some basis on which they may coalesce among themselves. These latter, however, have no conception of unity in the Catholic sense of the term, and contemplate only a federation on the basis of sinking differences. The Free Church Council founded in England in 1894, and chiefly notorious for its political campaigns against the Anglican Church, is their principal achievement so far. The Presbyterians of Scotland have also felt the influence of the reunion ideal, but they too, except for some individuals, have not looked beyond the healing of their own intestine divisions.

The Anglicans (under which designation are included, as members of the same communion, the Episcopalians in America and elsewhere) have a wider vision, and have even fancied that to their Church, as holding a central position between the ancient Churches and the modern Protestant sects, is assigned the providential mission of bringing these two extremes together, and serving the cause of reunion by enabling them to understand each other. During the last half-century, under the spreading influence of the High Church movement, this sense of vocation has been specially cherished, and has found frequent expression in the pulpit and religious literature. It has also given birth to some well-meant undertakings. Thus the A.P.U.C., or Association for Promoting the Unity of Christendom -- by which is meant the union of the Roman, Eastern, and Anglican "branches", others not excluded -- is a league of prayer, founded in 1857, which is said to have by now many thousand members, drawn from various religious communions, though, as being under non-Catholic management, Catholics are not allowed to join it; the Eastern Church Association (E.C.A.) and the recently founded Anglican and Eastern Orthodox Church Union (A.E.O.C.U.) both work for the union of the Anglicans with the Easterns, the latter, "while in no way antagonistic to efforts for reunion in other directions", confining itself to those of the Eastern Churches which are in communion with the Patriarch of Constantinople. This A.E.O.C.U. is particularly active in the United States, where the existence side by side of Westerns and Easterns offers special facilities for mutual intercourse. It is due mainly to its instances that the Orthodox Bishop Raphael of Brooklyn recently sanctioned an interchange of ministrations with the Episcopalians in places where members of one or the other communion are without clergy of their own -- a practice which, as coming from the Orthodox side, seemed strange, but was presumably justified by the "principle of economy" which some Orthodox theologians unaccountably advocate (see *Reunion Magazine*, September, 1910). This concordat did not, however, last very long: Bishop Raphael seems not to have understood, at first, the motley character of the Episcopalian communion, but having come to realize it, quickly revoked his concession (*Russian Orthodox American Messenger*, 28 Feb., 1912).

Other societies of kindred aim are the Christian Unity Foundation, established in the United States in 1910; the Home Reunion Society, established in England in 1875, of which the object is to reunite the various English religious bodies with the National Church; the Evangelical Alliance for banding together the Evangelical Protestants of all nations, which was founded in 1846, and is thoroughly Protestant in its principles and aims, the Christian Unity Association of Edinburgh which is under Presbyterian management. Apart from these, as being the only Anglican, or Protestant, Association which directly contemplates the union of the Anglican with the Catholic Church, is the Society of St. Thomas of Canterbury, founded in 1904, and undertaking as its special work to clear the way for this species of reunion by studying and making known the real doctrines of the Catholic Church held by its own members, as opposed to the erroneous or coloured accounts of the same doctrines which prevail so widely. This society being thus based on sound principles, though at present in its infancy, is capable of doing valuable work for the cause.

The annual Church Congresses in England are wont to give a place in their discussions to the reunion question, and even the decennial Pan-Anglican Conferences, in which the bishops of that

communion come together from all lands, are increasingly affected by the movement; though, as consisting of prelates with very diverse views, they are always chary about committing themselves to definite statements. Their committees are allowed to be slightly more courageous, and in the Conference of 1888 the committee on Church Unity formulated four conditions as constituting the necessary and sufficient basis for all who might desire to enter into communion with themselves:

1. The Holy Scriptures as the rule of faith
2. The Apostles' and the Nicene Creeds, as the statement of the Faith
3. The two Sacraments ordained by Christ Himself
4. The historic episcopate locally adapted in the methods of its administration to varying needs

This offer, which has come to be known as "the Lambeth Quadrilateral", has been renewed by the subsequent Pan-Anglican conferences and has been frequently discussed, but so far has not attracted any of those for whom it was intended. The same Committee of 1888 looked wistfully towards the separated communions of the East, but did not venture to do more than repudiate the idea of wishing to proselytize among them, and recommend that a statement of the Anglican position should be drawn up for their benefit. Subsequent Conferences have gone a little farther in this direction, and the Conference of 1908 went so far as to recommend in one of its resolutions that there should be an interchange of ministrations offered and accepted between members of the Orthodox and of the Anglican communion, in places where none of their own clergy were within reach -- a recommendation which, as already mentioned, was for the moment reciprocated not indeed by the official representatives of the Orthodox Churches, but by two of their prelates in America. In the earlier Pan-Anglican Conferences the attitude taken up towards the Churches in union with the Holy See was hostile rather than friendly, warm sympathy being extended to those who had recently abandoned its communion. In the Conference of 1897 there was a slight improvement in this respect, and in the most recent of these Conferences, held in 1908, whilst recognizing, as they could not but do, that it would be useless to propose any terms of intercommunion to the Holy See, as they could offer none which it would accept, the Committee of Reunion and Intercommunion recorded their "conviction that no projects of union can ever be regarded as satisfactory which deliberately leave out the Churches of the great Latin Communion" and then went on to urge the importance of cultivating friendly relations with the ecclesiastical authorities of that communion abroad, an excellent recommendation which will be cordially reciprocated by the authorities in question, whether abroad or at home.

Of individual workers in the cause of reunion four names should certainly be mentioned. Father Ignatius (George) Spencer (1799-1864) was reconciled to the Catholic Church in 1829; in due course he was ordained priest, and in 1849 joined the Passionists. During the last twenty-six years of his life, both in England and on the Continent, he laboured with the utmost zeal to arouse men's minds to a sense of the importance of reunion and to engage them in systematic prayer for that object. Mr. Ambrose Phillips de Lisle (1809-77) was another convert from Anglicanism and an intimate friend of Father Ignatius Spencer. He took up the same crusade and formed the most sanguine expectations of a consoling result. In 1877, in co-operation with the Anglican, Dr. Frederick George Lee, he founded the Association for Promoting the Union of Christendom, to which reference

has already been made. Mr. de Lisle failed to see the theological impropriety of Catholics joining an association of this kind under Protestant management, but the sincerity of his faith and the single-mindedness of his zeal were beyond all question. Newman's appreciation of these qualities in him caused him to say to de Lisle in 1857: "If England is converted, it will be as much due, under God, to you as to any one." It might seem strange to count Dr. Pusey among prominent reunionists in view of his "Eirenicon", of which the first part was published in 1864. But this book, as its name intimates, was written to promote reunion by raising a friendly discussion on certain points of Catholic practice which to Anglicans of the writer's party caused difficulty. Inadvertently he used language in describing these Catholic practices which gave offence, and brought down upon him from the Catholic side a torrent of reproaches that was rather excessive. This, however, should not blind us to the underlying fact that Dr. Pusey came forward with the best intentions, as a pacificator, not an assailant, and was prepared to use his powerful influence on behalf of a reconciliation. Viscount Halifax has identified himself with a method of reunion which can never be practical, because it overlooks the essential character of the Catholic system. It was this that frustrated his well-meant overtures to Leo XIII in 1894-6, and stamps with hopelessness the movement connected with his name. None the less he stands out as the man who has done more than any other to set the attractive ideal of Catholic unity before the eyes of the present generation. "Public opinion", he said, in his famous Bristol speech of 1895, "will never be influenced if we hold our tongues. It is influenced by those who, without any concealment, have the courage of their opinions. It is the interest of the whole Church of Christ, it is the interest of political order, it is the interest of the human race that these estrangements in the Christian family should cease. The cause is good, we have no need to be ashamed of it. Let us frankly avow it to be our own." These words may be regarded as the text of his untiring public action. And so far as they go, nothing could be more encouraging.

VI. CONDITIONS OF REUNION

The longing for the restoration of unity to Christendom, which is active in these and other ways, must be regarded by Catholics as one of the most precious features of the present age, and should enlist all their sympathy. Even if these reunionists be working on lines that are in themselves hopeless, at least their desire is for a high object, and desires fondly cherished and energetically pursued tend to the acquirement of solid experience, and so eventually to the discovery of the true course for the attainment of their object. Nevertheless their schemes cannot have been worked out with much insight, for the principles on which they are based are such as could not possibly sustain a fabric of Christian unity -- are in fact, the self-same principles which we have seen to be the cause of disunion in the past. What they contemplate is corporate reunion, that is to say, the reunion of whole Churches as such, each of which is to come into the union with its organization intact, its clergy remaining in their respective ranks, and the general body of its laity in theirs. It is from this standpoint that we need to consider the possibility of their projects. We ask, then, what kind of corporate reunion do they hope for and consider likely to prove satisfactory? The idea of reunion

on a purely undenominational basis has been generally rejected by Anglican reunionists and rightly. For, if it means anything, it must mean that the reuniting communions are to coalesce into a huge undogmatic Church in which the utmost license of religious opinion will be allowed, as long as it does not claim to be more than opinion; and in which, on that understanding, the sacraments will be accessible to all who seek them. Still, it is not out of place to reflect on this system, inasmuch as it is the system which, though not in any way sanctioned by its formularies, practically prevails in the modern Anglican Church, those of its members who hold the most subversive doctrines being not only allowed to approach its sacraments unchecked when they desire to do so, but often promoted to its posts of trust and authority. An individualism equally subversive has invaded the ranks of some of the Nonconformist bodies. Obviously, this scandal will need to be suppressed by a drastic discipline before the Churches affected by it can be in a position to propose a scheme of unity to other Churches. It is of little use for a group of Churches to pledge themselves to definite doctrines as long as their individual members are free to hold or reject these doctrines, or even condemn them, without forfeiting their right to its membership.

"Comprehension not compromise" is a phrase often employed to express what is considered fitting and possible. The reuniting Churches are not to be asked to renounce any of the beliefs and practices to which from long usage they have become attached. They are to come in just as they are -- all, that is; who are agreed as to a substratum of fundamental doctrines and institutions -- and on this basis they are to be in recognized sacramental communion with one another everywhere. This system seems to its advocates not only to remove the chief difficulties in the way of reunion, but, to have positive advantages. Instead of a dull and deadening uniformity extending throughout, it will give unity in variety, a "synthesis of distinctions", in which each reuniting Church will contribute to the general harmony some special gift which, under the Providence of God, it has cultivated with peculiar care and success. Under a slightly changed form we have here the self-same scheme, based on the distinction between essentials and nonessentials, which in the past has been put forward so often, and always so unsuccessfully. Is it likely to succeed any better now? First; what are to be deemed essentials? Is this a point on which agreement is likely to be reached? We have seen what four conditions the Pananglican Conferences have laid down as in their estimation essential, and we may be inclined to wonder at the liberality of the concessions involved in it. This "Quadrilateral" had in view, so it was understood, the Nonconformist Churches in England and perhaps the Presbyterians in Scotland and elsewhere. But general and indefinite as it is, it does not seem to have found favour with any of these; it does not go far enough for them.

But it will be found to go much too far for the Easterns, leaving it open, as it does, to anyone to believe that the sacraments are efficacious channels of grace or only nude symbols of the same, to believe that in the Holy Eucharist the Body and Blood of Christ are truly present or really absent, to believe that besides the two sacraments explicitly included there are or are not five others equally instituted by Christ and equally partaking of the true nature of sacraments, to believe that the historic episcopate does or does not involve the transmission of a mystic power over the sacraments such as is wont to be called the grace of Holy orders. Secondly, what guarantee is there that the assignment

of essentials agreed to at the moment of union will continue to satisfy the contracting parties? What makes this question so pertinent is that in the "Quadrilateral", for instance, the stipulation is only that the reuniting Churches shall in fact be agreed on these four points; there is no stipulation for any formal principle of unity. It will be said, perhaps, that the first-named condition, that Holy Scripture is to be accepted as containing all things necessary to salvation and hence is the sufficient rule of faith, is this formal principle. But does this mean, as it appears to mean, that the individual is to be the judge of what Holy Scripture contains? If so, surely it is a bold thing, after these four centuries of disastrous experience to put forward this rule as calculated to ensure an all-pervading and durable doctrinal agreement. Or does it mean that the governing authorities of the reuniting Churches are to decide what is contained in Scripture, and are to be qualified to enforce their decisions? If so, another crop of difficulties springs up. Why is this further condition, supremely important as it is, not included in the first article of the "Quadrilateral"? And what is to be the nature of these governing authorities, and of their relation to one another? Are they to be each and all autonomous, and, if so, what guarantee is there that they will all agree -- for instance, that the Easterns will not insist that the Bible shall be interpreted according to the decrees of the seven oecumenical councils, and the Anglicans that at least the decrees of the Seventh, which sanctions the veneration of images, shall be deemed inadmissible? Or are these governing authorities of the reuniting Churches to be subjected to one supreme authority, and, if so, what is to be its nature (the papacy being, of course, out of the question)? Also, is the submission of the individual to the decisions of the heads of his own Church, or the submission of the reuniting Churches to the supreme authority they have recognized as over them, to be treated as imposed under pain of sin by some Divine sanction, and, if so, what is that sanction, and why is it not explicitly stated in the "Quadrilateral"? Thirdly, if we grant the impossible, and assume that the system will be found to work on the lines indicated, could the result be claimed as a becoming realization of Christian unity? Although the essentials are to be firmly fixed and accepted by all, each reuniting Church is to be free to retain the further beliefs and methods it has built on this foundation; in fact, it is just through this superstructure of its own that it is to make its own contribution to that "synthesis of distinctions", from which unity in variety is expected to result. But is it this that will result? If the Easterns, for instance, are to insist as they now do on the Eucharistic Sacrifice and the necessity of confession, on the invocation of saints and veneration of their icons; and the Anglicans, or at all events the Nonconformists whom we must suppose to have joined in likewise, are to teach that confession is soul-destroying; the Mass and invocation of saints idolatrous -- will that be a synthesis of distinctions, and not rather a synthesis of contradictions? In short, if this system of "comprehension not compromise" were to obtain the general acceptance desired for it, in what respect would it differ from the present system of divisions, which is felt to be so scandalous, except that it would add the further element of scandal that those who preached these conflicting doctrines would come up together to the altar-rails, as if to show what light value they attached to the points about which they none the less contend so stubbornly?

Evidently, "comprehension not compromise" cannot be a guiding principle for those who wish to restore to Christendom such unity as our Lord prayed for, and the world will be constrained to recognize as an evidence of Divine handiwork. Neither can compromise help us, for truth does not admit of compromise, and what it is desired to restore throughout the world is unity in truth. What we do require is neither comprehension nor compromise, but conviction; for unity in truth must mean that all whom the system embraces profess one and the same creed in all its parts, that they are honestly convinced that in professing it they are adhering to the simple truth, and that in reality they are professing only the truth. How can a unity of that kind, a unity of conviction which is also a unity in truth, be brought about in such wise as to include the many separated Churches of Christendom and their members? That is the problem on which serious reunionists should concentrate their attention. They may begin by observing that in societies of all kinds -- in kingdoms, armies, trade-unions, clubs, and even Churches -- the principle of unity which holds them together is the authority of their chief rulers. If they submit to these -- be they kings or presidents, bishops or moderators, parliaments, or committees, or conferences -- they become one with them in their action, and (if the rulers have a recognized right to impose opinions) in their opinions also; and by way of consequence become one among themselves. On the other hand, in proportion as the members refuse submission to this ruling authority they become disunited and, if the insubordination continues, break up into parties, or drift away, or set up opposition societies. Almost any Protestant Church among the many around us will supply an illustration of this. At one time its ruling authority is recognized by all the members to be the authentic interpreter of its formularies, and all are prepared to submit to it. It is then a united Church in itself. Later comes a time when a number of its members grow dissatisfied with these formularies, and refuse to accept them at the hands of their church authority. Then disunion sets in; either dissent from the letter of the formularies is tolerated, and intestine divisions arise, or some split off and set up for themselves opposition Churches elsewhere.

If this is the law of all human societies, is it not to be anticipated that the Christian community is also subject to that law, in other words that its unity is to be secured by the submission of its members and component Churches to the one ruling authority which is duly set over them all? It will be objected that this principle of authority, if allowed to prevail, may suffice to secure unity in Christendom, but not unity in truth. As soon as the time comes when it is the conviction of individual members or groups of members that their ruling authority is departing from the truth, they cannot but give the preference to truth over unity, which in fact is what has happened in the history of Christendom, and has caused the present disunion. The answer to this difficulty is that the human mind is indeed bound to truth, and acts irrationally if it does not pursue it at all costs; but none the less it is rational for the individual mind to subordinate its personal judgments to those of a mind which can give it a securer guarantee of truth than it can derive from its own reasonings; it is, therefore, supremely rational for it to submit to the mind of Christ, whensoever this can be securely ascertained. If Christ communicated His own mind to His Apostles as to the doctrines and laws He desired His Church to receive and obey; if His Apostles transmitted these Divine communications by tradition to future generations; if a living authority duly set over His people

has watched over the safe transmission of this tradition; and, if the Holy Spirit was sent by Him to abide in His Church and secure this living authority in the faithful discharge of its trust -- then, so far as we can see, the duty to truth and the duty to unity are fully harmonized, and a way opened for the reunion of Christendom without any outrage being done to the nature of the human mind. This, it may be said, is only an inference based on the law of human societies and the nature of the human mind. Can it be safe to take it as sufficing to determine a question of fact, such as is the question whether our Lord really did make this particular provision for the safeguarding of His revelation? But if it were only that, at least it proves that this principle of a Divinely guarded *magisterium* is not irrational, but on the contrary is, so far as we can see, the only principle capable of harmonizing the two certain facts, that our minds are by nature bound to truth at all costs and that our Lord prayed and therefore provided that we might all be one in faith. A principle, however, of this value must be regarded as resting on a much firmer basis than mere inference, especially when it is associated with the massive historical fact that the oldest and greatest of all the Churches -- which is also the only one that has known how to secure unity among its children without injury done to their sense of truth -- has all along been ruled by this very principle in the sure belief that it rests on the express words of Christ. Should not this send us back to a study of the words as they came from Christ's lips, and as they were understood by His Apostles, to see if those words do not correspond with this belief of the later Church?

And here we join on to the historical survey with which this article commenced, for in that survey has been epitomized the evidence from the New Testament and the early Christian writings, which shows that if we are to credit these records, our Lord did establish and impose this very system; that the Apostles whom He sent forth to lay the foundations of the Church, did so understand Him; that the Church of the second century, as represented by St. Irenæus, likewise so understood Him.

VII. PROSPECTS OF REUNION

If corporate reunion were a practical ideal, capable of being realized at no distant date, it would have enormous advantages, for it would greatly facilitate the task of those who feel the sadness of their present isolation. But, the conditions of this mode of reunion being such as we have seen, it is unfortunately impossible to regard the prospect of its realization as other than discouraging. Why is it that those who tell us with transparent sincerity that they long for the time when Christendom will be united once more, so persistently resist the rule of tradition and submission to the Holy See, though as capable as ourselves of appreciating the reasoning of the last section, and admiring the results which that rule can produce in the communion of the Apostolic See? Why is it that they continue, in the face of all their past disappointments, to stand out for their principle of comprehension, and to ask for reunion on the basis of mutual concession and contract? Obviously it is because they are still dominated by those self-same principles of religious division which we discerned in the earlier part of this article, when we were tracing to their ultimate causes the schisms that troubled the first four Christian centuries. We counted five such causes: "I cannot belong to a

Church in whose doctrines I find insoluble intellectual difficulties", or "which cannot find a place in its system for religious experiences I take to be the direct voice of God to me", or "which claims to put fetters on my mental liberty", or "which runs counter to my national attachments and antipathies", or "which involves me in opposition to my temporal rulers" These principles, we said then, all or some of them, would be found likewise at the root of all subsequent schisms, and have not the summaries above given proved the truth of this? In the Oriental schisms, though private judgment on doctrinal subtleties had its part, the chief agencies at work were national antipathies and subservience to temporal rulers. In the sixteenth-century revolt all the five influences were fiercely active. Many Catholic doctrines -- as, for instance, those of transubstantiation, the sacramental principle, the merit of good works -- were condemned as offensive to the private judgment of the Reformers. The doctrine (Lutheran) of justification by faith was an egregious example of putting absolute trust in the assumptions of emotionalism, indeed was the first step towards transferring the basis of faith from the preaching of the word to the so-called testimony of experience. How repugnant to these Reformers was the idea of submission to any teaching authority save their own, is evidenced by their denunciations of popes and priests: how much they were possessed by the principles of Nationalism and Erastianism, is evidenced by the way in which they allowed their rulers to split them up into national Churches and gain their favour for these by stirring up their national animosities. At the present time, among the Churches of England and America which are asking for reunion -- or rather, some of whose members are asking for reunion -- these same sentiments still prevail, with some modification as regards their particular application. Is not this sufficiently attested by the tone of the criticisms which come so readily to their lips? "I cannot bring my mind to believe in a Trinity in Unity, in a Godman, in a sinless man, in an atonement, in transubstantiation, in original sin, in the power of a little water to wash away sin, in a power of absolution entrusted to sinful men, in a gift of immunity from religious error vested in a succession of under-educated Pontiffs." And again, "I know from my spiritual experience that I am saved, that the sacraments I have received are valid whatever reasons may be urged against them, that my particular form of religion is the true one though it contradicts the religion of others who can cite similar experiences on their behalf." Or again, "I am not going to hand over the keeping of my conscience to any priest or Church, I am not going to surrender the open-mindedness which is the essential quality of a truth-seeker." Or again, "I want a religion to suit my national temperament as an Englishman or an American; I am not going to submit to a foreign priest or listen to an Italian mission." How is it possible that men saturated with principles so antagonistic to the obedience of faith should be induced to seek reunion in the only form in which, as we have seen, it can be solid and lasting, that is, by submission to the teaching of the Apostolic See? Indeed, how can one imagine that they would accept even a system of comprehension unless, like their own present systems, it should be one prepared to tolerate every variety of individualism? But the fact is, these Anglican reunionists strangely overlook the mentality of their fellow-churchmen, and persuade themselves that the comparatively small section which forms the moderately High Church party can be taken as duly representing their Church; and then, realizing that neither this small section, nor even they

themselves, have the true Catholic disposition of submission to a teaching authority, they have taken refuge in a project of comprehension that would just include themselves.

But it will not do to take this over-hopeful view of the situation. The possibilities of an approaching corporate reunion must be judged by the mentality of the whole body, and what chance is there, humanly speaking, that -- to say nothing of the Presbyterians and Nonconformists -- the general body of Anglicans, which is every year becoming more and more radical in its tone will be brought within a generation or two to such a degree of doctrinal unity and Catholic spirit among themselves as to make it likely that, as an organized body of bishops, clergy, and laity, they will approach the Holy See in the full spirit of submission, and ask to be received into its communion? Moreover, if we can imagine these internal difficulties overcome, and whole Churches approaching the Holy See in this manner, we must not overlook the probability that the difficulty from state interference, dormant for the present, would quickly revive. The statesmen would be sure to take alarm, and work against the project with all their might as a danger to their own selfish schemes; and this all the more because aggressive Anticlericalism has captured so many of the governments of powerful countries, and would strive, by appealing to racial prejudices and fostering campaigns of misrepresentation and oppression, to stamp out a movement calculated, if successful, to add so greatly to the forces of Christianity. It must be repeated that individuals might hold out against this persecution, but the masses of men whom we are supposing to form the membership of Churches anxious to reunite would in all probability be shattered by it, and break up. We must not, indeed forget that we are all in the hands of God, and God may at any time intervene by some signal providence to clear away the obstacles from the path of corporate reunion. But we have no right to count on interventions of this kind. Reunionists whose inquiries have convinced them that the way to unity is through submission to the Holy See will be imprudent indeed if they delay their personal submission in expectation of a corporate act on the part of their respective Churches which, in the absence of any such Divine intervention, is, in view of the difficulties indicated, most unlikely to come till long after the present generation of men has passed away. Nor is it to the purpose to ask here if by this method of individual conversions there is any prospect of an eventual restoration of Christendom to the unity which once held it together. Possibly there is not; but why should there be? We may indeed look to a continuance, and perhaps to an expansion, of the process now going on whereby appreciable numbers are added to the Church through individual submissions, but it does not seem likely that, in this age of individualism, whole nations will be brought in by this method, nor is there any Divine promise that they will be. Another age may bring forth better things, but whether it will we know not. Still, though the prospects of corporate reunion appear discouraging, Catholics may well show themselves appreciative and sympathetic towards the efforts of those of other communions who are captivated by the splendid ideal and think that under one form or another it is capable of realization. We may safely leave to the Providence of God to determine what course the present reunion movement shall ultimately take, and meanwhile we may emphasize the substantial point that Catholics and other reunionists have in common: their mutual desire to see the barriers that separate them removed. They can co-operate, too, in working for the good cause in useful ways

without any surrender of their own principles. For they can cultivate friendly personal relations, to the formation of which it will greatly contribute if they can work together for objects, social or otherwise, as to the value of which they are agreed. There is a special value in the personal friendships thus formed, for they tend to dissolve the obstacles which come from sheer misunderstandings and the animosities that these engender. And they can further co-operate for the removal of these same obstacles by positive efforts to understand one another correctly, particularly by the others seeking and the Catholics, if they are competent, showing a readiness to give simple explanations of the true character of their beliefs and practices.

The latter cannot indeed be too careful to avoid bitter controversies, for these, as experience has proved, serve more to harden estrangements than to cement reconciliations. But their explanations will be often welcomed, if it be known that they will be marked by candour, cordiality, and patience, for nowadays there is a growing number who have come to suspect that Catholicism is not as black as it has been painted for them, and are anxious to hear about it from those whom they can trust, and who have intimate knowledge of it from the inside. It would be rash, however, for Catholics to expect that their non-Catholic friends will be readily convinced by the explanations they give. Convictions are of slow growth; besides it is not for the human agent to intrude on the office which the Holy Spirit reserves to Himself. Lastly, there can be co-operation in efforts to promote reunion by earnest and assiduous prayer. Catholics cannot join an association for prayer like the A.P.U.C., which is under non-Catholic management, but they have the highest sanction for joining similar associations under Catholic management, such as the Confraternity of Compassion, which Leo XIII himself established in 1897, and entrusted to the administration of the Sulpician Fathers.

SYDNEY F. SMITH

Unions of Prayer

Unions of Prayer

A tendency to form unions of prayer among the faithful has recently manifested itself in the establishment of organizations like the following:

(1) The Association of Prayer and Penitence in honour of the Heart of Jesus, founded at Dijon in 1879, transferred to Montmartre, and made an archconfraternity by Leo XIII, 10 April, 1894. Its purposes are: to offer reparation, by prayer and penitence, for sin, and for outrages against the Church and the pope; to obtain the welfare of the Church, the freedom of the pope, and the salvation of the world.

(2) The Archconfraternity of Our Lady of Compassion for the Return of England to the Catholic Faith, founded at Saint-Sulpice, Paris, by Brief of Leo XIII "Comperum est" (22 Aug., 1897). Jean-Jacques Olier had always been zealous for the conversion of England; and the ministry of his congregation was favourable to the spreading of this confraternity. The Brief exhorts the faithful everywhere to join this confraternity, and authorizes its directors to unite with all other similar confraternities, and communicate to them its indulgences. The "Statutes" were published, 30 Aug., 1897, by Decree of the Congregation of Bishops and Regulars. The solemn inauguration took place, 17 Oct., 1897, by the Cardinal Archbishop of Paris, in the presence of the Cardinal Archbishop of Westminster. About 1000 confraternities, in France, England, Italy, Belgium, Australia, and elsewhere, have become united with the archconfraternity. By Apostolic Letter of 2 Feb., 1911, Pius X extended the scope of the prayers of the archconfraternity from Great Britain to the whole of the English-speaking world.

(3) Pious Union of Prayer to Our Lady of Compassion for the Conversion of Heretics, founded at Rome, 7 Nov., 1896, in St. Marcellus. Similar unions may be formed in any church where there is an altar and a statue of Our Lady of Compassion. The director general is the Father-General of the Servites, who names a general secretary from his order.

(4) Archconfraternity of Prayers and Good Works for the Reunion of the Eastern Schismatics with the Church under the patronage of Our Lady of the Assumption, founded at the Church of the Anastasis at Constantinople. Organized by Emmanuel d'Alzon, the founder of the Assumptionists, it was developed under his successor François Picard to such a degree that even some Eastern

schismatics were induced to pray for the same intentions. Leo XIII in the Brief "Cum divini Pastoris" (25 May, 1898) made it an archconfraternity *prima-primaria*. It is established at the church of the Assumptionists under the title of Anastasis of Constantinople. Affiliated confraternities may be formed wherever there is an Assumptionist church and house, with the same privileges as the archconfraternity. The "Statutes" were approved 24 May, 1898, by Decree of the Congregation of Bishops and Regulars. (See also APOSTLESHIP OF PRAYER; PARIS, *Famous Pilgrimages*; (2) Notre-Dame-des-Victoires.)

C.F. WEMYSS BROWN

Unitarians

Unitarians

A Liberal Protestant sect which holds as its distinctive tenet the belief in a uni-personal instead of a tri-personal God.

I. NAME AND DOCTRINE

In its general sense the name designates all disbelievers in the Trinity, whether Christian or non-Christian; in its present specific use it is applied to that organized form of Christianity which lays emphasis on the unity of the personality of God. The term seems to have originated about 1570, was used in a decree of the Diet held in 1600 at Leicsfalva in Transylvania, and received official ecclesiastic sanction in 1638. It supplanted the various designations of anti-Trinitarians, Arians, Racovians, and Socinians. In England the name first appears in 1682. It became frequent in the United States from 1815, although it was received unfavourably by some anti-Trinitarians, and omitted in their official titles by some congregations whose religious position it defined. The explanation of this opposition is to be found in the reluctance of the parties concerned to lay stress on any doctrinal affirmation. Historical associations account for the name Presbyterians, frequently applied to Unitarians in the British Isles, and Unitarian Congregationalists, used in the United States. No definite standard of belief is recognized in the denomination and no doctrinal tests are laid down as a condition of fellowship. The co-operation of all persons desirous of advancing the interests of "pure" (i.e. undogmatic, practical) Christianity is welcomed in the Unitarian body.

In granting this co-operation each member enjoys complete freedom in his individual religious opinions, and no set of doctrinal propositions could be framed on which all Unitarians would agree. The bond of union between them consists more in their anti-dogmatic tendency than in uniformity of belief. The authority of the Bible is in some degree retained; but its contents are either admitted or repudiated according as they find favor before the supreme, and in this case, exacting tribunal of individual reason. Jesus Christ is considered subordinate to the Father and, although the epithet *Divine* is in a loose sense not infrequently applied to Him, He is in the estimation of many an extraordinarily endowed and powerful but still a human religious leader. He is a teacher to be

followed, not a God to be worshipped. His Passion and Death are an inspiration and an example to His disciples, not an effective and vicarious atonement for the sins of men. He is the great exemplar which we ought to copy in order to perfect our union with God gradually. This teaching concerning the mission of Jesus Christ is but the logical complement of the Unitarian denial of the Fall of Man and with similar consistency leads to the suppression of the sacraments. Two of these (baptism and Eucharist) are indeed retained, but their grace-conferring power is denied and their reception declared unnecessary. Baptism is administered to children (rarely to adults) more for sentimental reasons and purposes for edification than from the persuasion of the spiritual results produced in the soul of the recipient. The Eucharist, far from being considered as sacrificial, is looked upon as a merely memorial service. The fond hope of universal salvation is entertained by the majority of the denomination.

In short, present-day Unitarianism is hardly more than natural religion, and exhibits in some of its members a pronounced tendency towards Pantheistic speculation. The Church polity in England and America is strictly congregational; each individual congregation manages, without superior control, all its affairs, calls and discharges its minister, and is the final judge of the religious views expressed in its pulpit. In Transylvania the Church government is exercised by a bishop who resides at Kolozsvár (Klausenburg) and is assisted by a consistory. The episcopal title which he bears does not imply special consecration but merely designates the office of an ecclesiastical supervisor.

II. HISTORY

A. In Europe

The first church holding Unitarian tenets was founded in Poland during the reign of Sigismund II (1548-72). The year 1568 saw the establishment and official recognition of such congregations in Transylvania. While in the former country Unitarianism was completely suppressed in 1660, in the latter it has, despite temporary persecution, maintained itself. The Transylvanian Church is of Socinian origin but has suppressed the worship of Jesus Christ, thus casting off what chiefly differentiated it from strict Unitarianism. Its present name is the Hungarian Unitarian Church, although comparatively few of its members reside in Hungary proper.

In England the organization of Unitarianism was effected at a much later date. The first attempt at establishing a congregation was made by John Biddle (1615-62), but the organization did not last its author. More permanency attended the efforts of Theophilus Lindsey (1723-1808). In 1773 he seceded from the Anglican Communion, organized the following year a Unitarian congregation in London, and in 1778 built the Essex Street chapel. About the same time anti-Trinitarian views were spread by the scientist Joseph Priestly, pastor of a congregation at Leeds (1768-80) and later at Birmingham. His work in the latter place was cut short by a popular uprising in 1791, and three years later he emigrated to America. Others, among them Thomas Belsham (1750-1829) and Lant Carpenter (1780-1840), continued to propagate Unitarianism in England. Legal restrictions were still in vigour, however, against persons denying the doctrine of the Trinity and hampered their

work. But in 1813 most of these disabilities were removed, and in 1844 complete liberty was obtained, despite opposition, by the Dissenters' Chapels Act, sometimes called the Unitarian Charter. As early as 1825 English Unitarians had concluded a union with their co-religionists abroad under the name of British and Foreign Unitarian Association. This society disseminated religious literature and promoted the interests of the sect. The prospects of this activity were brightened by the appearance of a capable exponent of Unitarian views, Dr. James Martineau (1805-1900). After a successful resistance to early opposition, his personality dominated English Unitarianism for an extended period. His writings exercised a potent influence far beyond England, and still continue to advance the cause of Liberal Christianity. His disciples have taken up his work and outstripped their master in his radical views.

Scotland never proved a fruitful soil for Unitarian propaganda. A congregation was organized in 1776 in Edinburgh and the Scottish Unitarian Association was formed in 1813; but progress in that country has been insignificant and there are very few congregations there. In Ireland Unitarianism is held chiefly in the North where it has found adherents among the Presbyterians. It may not inappropriately be considered a self-governing branch of the Presbyterian body. Some Unitarian congregations are to be found also in the British colonies, notably Australia and Canada, and among the French Protestants a comparatively large number are Unitarian in view, though not in name.

B. America

About the middle of the eighteenth century Unitarian opinions gained favor among New England Congregationalists. They were propagated by Jonathan Mayhew (1720-1766), for nineteen years pastor of the West Church at Boston, and Charles Chauncey (1705-87), in the same city. The first organized church was King's Chapel, Boston, when the congregation, until then Episcopal, removed in 1785 all references to the Trinity from the Book of Common Prayer and in 1787 assumed an independent existence. Congregations were also organized at Portland and Saco (Maine) in 1792, and in 1794 Joseph Priestly began his propaganda in Pennsylvania. It was particularly in New England, however, that the movement gained ground. The appointment in 1805 of the Rev. Henry Ware to the Hollis chair of divinity at Harvard College and the nomination within the next two years of four other Liberal candidates to important professorships in the same institution, brought that seat of learning under considerable Unitarian influence. Its school of divinity was endowed and organized by the denomination in 1817 and remained under its control until 1878, when it became nondenominational. While the diffusion of Unitarian ideas was comparatively rapid the organization of churches was retarded by the reluctance of many to separate from the Congregationalist communities of which they were members. Before the separation was effected a heated controversy was waged between the liberal and conservative wings of Congregationalism. Matters came to a head in 1819 when the Rev. William Ellery Channing, in a sermon preached at Baltimore at the installation of the Rev. Jared Sparks, advocated the public acknowledgement by the liberal members and congregations of their Unitarian beliefs. This discourse proved decisive, and the parties concerned immediately proceeded to organize themselves independently. From this

date until his death in 1842, Channing was the acknowledged leader of the denomination. Under his auspices the American Unitarian Association was founded at Boston in 1825 for the promotion of Unitarian interests.

After his death the radical element became predominant under the direction of Theodore Parker (1810-60), who succeeded him in influence. The authority of the Bible acknowledged by the old school was, under Parker, largely sacrificed to the principles of destructive criticism, and Unitarianism drifted rapidly into Rationalistic speculation. The activity of Channing and Parker was supplemented by the more general and far-reaching influence of the Unitarian poet-philosopher, Ralph Waldo Emerson (1803-82). Although he resigned his charge of the Second Congregational Church at Boston after a short period (1829-32), he continued to preach for many years and his popularity as a writer and lecturer could not but lend additional prestige to the advanced religious views which he defended. The interests of the Unitarian propaganda were also served by the foundation of the Western Conference of Unitarians in 1852 and that of the National Unitarian Conference in 1865. Of a more universal character was the International Council of Unitarians and other Liberal Religious Thinkers and Workers, which was organized at Boston in 1900. It held sessions in London (1901), Amsterdam (1903), Geneva (1905), Boston (1907), and Berlin (1910). At the last-mentioned convention the official title was changed to International Congress of Free Christians and Other Religious Liberals. The purpose remains the same, namely: "to open communication with those in all lands who are striving to unite pure religion and perfect liberty and to increase fellowship and co-operation among them."

III. PROPAGANDA; EDUCATIONAL INSTITUTIONS; STATISTICS

The Unitarian body sent a missionary to India in 1855, and since 1887 has carried on an active propaganda in Japan; however, its missionary efforts in foreign lands, viewed in the aggregate, have not been considerable. In accordance with its general indifferent attitude toward dogma, its endeavours to advance the cause of Christianity without emphasizing its own specific tenets, and its members have in the past contributed to the missionary funds of other denominations. Their efforts, moreover, are more concerned with the dissemination of literature among civilized nations than with the sending of missionaries to non-Christian lands. This method of gaining adherents has proved successful, partly owing to the Liberal, Rationalistic, and excessively individualistic tendency of the present age, but largely also to the number of eminent men and capable writers who have adhered to or defended Unitarian doctrines. Financial resources for propagandist purposes were provided for by the rich Jamaica planter, Robert Hibbert (1770-1849), through the creation of the fund which bears his name. Out of it grew the well-known Hibbert Lectures, and the more recent "Hibbert Journal". An organization unique in its character is the Post Office Mission which, by means of correspondence and the distribution of books and periodicals, seeks to bring courage to the despondent and joy to the suffering.

The Church has made no determined effort to organize benevolent institutions of its own. A considerable number of the Unitarian ministry (to which women are admitted) receive their training

in the educational institutions of other sects. The Church, however, founded the following special schools for this purpose: in Hungary, the Unitarian College at Kolozsvár; in England and Wales, the Unitarian Home Missionary College at Manchester; the Manchester College at Oxford; the Presbyterian College at Carmarthen; in America, the Harvard Divinity School at Cambridge, Massachusetts; the Meadville Theological School at Meadville, Pennsylvania; and the Pacific Unitarian School (later renamed the Starr King School for the Ministry) at Berkeley, California. In the United States the denomination maintains, besides these training-schools for the ministry, seven academies situated, but one exception, in the New England States. The number of persons holding Unitarian views cannot be determined, even approximately; for many undoubtedly reject the doctrine of the Three Divine Persons and retain the belief in a uni-personal Godhead without ever affiliating with the Church. Among these must be reckoned not only a large number of Liberal theologians and advanced critics, but also some religious denominations which, either in their entirety, as the Hicksite Friends, or at least in many of their members, as the Unitarian-Universalists, are distinctly anti-Trinitarian.

On doctrine consult MARTINEAU, CHANNING and the other Unitarian writers mentioned above; HEDGE, *Reason in Religion* (Boston, 1865); CLARKE *Essentials and Non-Essentials in Religion*; IDEM; *Manuel of Unitarian Belief* (Boston, 1884); ALLEN, *Our Liberal Movement in Theology* (Boston, 1882); BONET-MAURY, tr. HALL, *Early Sources of English Unitarian Christianity* (London, 1884); For a Catholic point of view, see KOHLMANN, *Unitarianism, theologically and philosophically considered* (Washington, 1821).

N.A. WEBER

The United States of America

The United States of America

BOUNDARIES AND AREA

On the east the boundary is formed by the St. Croix River and an arbitrary line to the St. John, and on the north by the Aroostook Highlands, the 45th parallel of N. lat., the St. Lawrence, and the Great Lakes. West of Lake Superior, the Rainy River, Rainy Lake, and the Lake of the Woods form the boundary; thence to Puget Sound the 49th parallel. Thereafter it drops down to the Strait of Juan de Fuca, leaving Vancouver Island to the Dominion of Canada. The Atlantic Ocean washes the entire eastern shore. On the south the Gulf of Mexico serves as the boundary to the mouth of the Rio Grande del Norte. That river separates the United States from the Republic of Mexico until at the city of El Paso it turns northward; from that point to the Colorado River an arbitrary line marks the boundary of the two republics. The Pacific Ocean forms the western boundary.

The total area is 3,026,789 sq. miles. The United States is divided into two unequal parts by the Mississippi River, which flows almost directly south from its source in a lake below the 49th parallel. The portion east of that great river is subdivided into two parts by the Ohio and the Potomac

Rivers. The section west of the Mississippi is divided into two very unequal parts by the Missouri River.

In a physiographic view, however, the area of the United States may be divided into the Appalachian belt, the Cordilleras, and the central plains. The first of these divisions includes the middle Appalachian region, or that between the Hudson and the James Rivers; the north-eastern Appalachian region, which overlaps New England at many points; the south-western Appalachian, which includes the country from Maryland to the Carolinas. In North Carolina the mountain belt reaches its greatest altitude, falling away in Georgia and Alabama. Much of the early history of the United States is concerned with the Atlantic coastal plain. In New England the mountains almost front the sea, and harbour and hill are within sight of each other. From New York, however, the interval which separates them gradually widens toward the southward, until in the State of Georgia it extends into the interior about 120 miles, after which it unites with the Gulf coastal plain. In New York is the rugged Adirondack region, which was very late in being settled. The characteristics of the region of the Great Lakes, which is a projection of the Laurentian Highlands in eastern Canada, are well known. Of almost inexhaustible fertility and of immense area is the region included by the Prairie States. Roughly speaking, it may be bounded by the Ohio and the Missouri Rivers on the south, and by the Great Lakes on the north. The Prairies are the gift of the glacial period. The Gulf coastal plain has been alluded to. Authorities on physical geography also distinguish a Texas coastal plain. Passing by the great valley of the Mississippi, the next division is the region known as the Great Plains, which extends from the 97th meridian of W. longitude to the base of the Rocky Mountains. To the elevated section between the Great Plains and the Pacific is given the name Cordilleras. This includes the Rocky Mountains, the Basin range, the plateau province, and the Pacific ranges (Cascade and Sierra Nevada). Around desirable harbours and in situations favourable for defence the first European settlements were made in what is now the United States. In this connexion are suggested the names: Boston, Salem, Plymouth, Providence, New York, Philadelphia, Charleston. For a long time the waterways not only influenced the social and political life of the people, but determined the direction of their movements when they went to new regions. Thus were the early westward movements of population conditioned by the river systems. This, too, explains the irregular character of the frontier line until railways became numerous, when it moved regularly toward the west.

GEOLOGY

The Laurentian uplift, seen in the Adirondacks and the region of the Great Lakes, was clearly in the earliest geological periods. The rock structure and the character of the deposits tend to support this opinion. The Cordilleras, on the contrary, are of comparatively recent formation, and exhibit evidences of late volcanic action. The volcanoes of Mexico and of Alaska, indeed, are not yet extinct. Many of the valleys in the Cordilleras are vast lava beds. The entire region, including New England, New York to the Ohio River, and westward to the prairies and the great plains, exhibits evidences that a great glacial sheet had in practically recent times spread over it. In its retreat were

left fertile prairie in the United States and unnumbered lakes and water-courses as well in that country as in Canada. In 1902 the United States produced about one third of the entire coal supply of the world. In the east it is generally distributed, except the anthracite variety, which is found in only a limited field. It is also found in many sections of the west. Still more valuable than the production of coal is that of iron, which in the year mentioned amounted to \$367,000,000. Approximately the value of the gold produced yearly in the United States is \$80,000,000; copper comes next with an estimated value of \$77,000,000. Silver amounts to \$29,000,000, lead to \$22,000,000, and zinc to \$14,000,000. Aluminium and quicksilver are less important. Montana and the Lake Superior region lead in the output of copper; gold is found in many of the western states, and silver is widely distributed. The zinc deposits in northern New Jersey are among the richest in the world. The non-metallic mineral products are also of great value, e.g. petroleum, clay, gypsum, salt, and natural gas. Of the tin, antimony, sulphur, and platinum consumed in the United States, much is imported.

COLONIZATION

In April, 1606, King James I created a company with two branches, viz, the London and the Plymouth. The former was given permission to make settlements between 34 and 41 N. lat., and was to receive grants of land extending fifty miles north and south from its first settlement,—a coast front of 100 miles and the same distance inland. The Plymouth merchants were permitted to make their first settlement between 38 and 45 N. lat., and were also given a block 100 miles square. To prevent disputes, the branch making the second settlement should locate at least 100 miles from the colony first established. Each branch was very careful to fix its first settlement on territory to which the other had no right whatever. The two branches are always mentioned as two companies. King James's patent of 10 April, 1606, is a document of interest. It provides that English colonists and their posterity "shall have and enjoy all liberties, franchises, and immunities within any of Our other dominions, to all intents and purposes as if they had been abiding and born within this Our realm of England or any other of Our said dominions". A similar provision was found in the earlier patent granted to Raleigh, and even in that obtained by Gilbert. On the other hand, the colonists of France, Spain, and other nations were regarded as persons outside the laws, privileges, and immunities enjoyed by those who continued to dwell in the mother land. It will thus appear that English settlers carried with them as much of the common law of their country as was applicable to their new situation. In colonization this principle marked an epoch.

The London Company was composed of merchants and gentlemen in the vicinity of London, and the Plymouth company of persons dwelling in the west of England. In some respects the British government had no more enlightened a conception of colonization than did contemporary governments. England was "to monopolize the consumption of the colonies and the carriage of their produce". This led to the enactment of the celebrated Navigation Laws. Commercial legislation affecting colonial trade falls under two heads: acts controlling exportation and importation, and those controlling production. By a law of 1660 certain enumerated commodities, being all the chief

products of the colonies, could be landed only in British ports. Two later acts further extended this restriction. Under the Navigation Act of 1660, European goods could not be imported into the colonies except in ships of Britain or of British colonies, sailing from British ports. We are not now concerned with the Act of 1733. If strictly enforced this would have oppressed the New England colonies, but, fortunately for them, the revenue officers winked at their frequent infractions of the law.

The London Company was the first to establish a settlement, viz, that at Jamestown in 1607. The vicissitudes of that colony and the general outline of English colonial development will be found in the articles on the thirteen original states, viz. Delaware, Pennsylvania, New Jersey, Georgia Connecticut, Massachusetts, Maryland, South Carolina, New Hampshire, Virginia, New York, North Carolina, and Rhode Island. This summary can touch upon them but briefly. On 6 May, 1607, the first Virginia settlers, 120 in number, entered Chesapeake Bay, and sailed about thirty miles up the James River, so named after the king. Toward evening they landed, and were attacked by the Indians. In a few months Captain Newport, who had brought out the first settlers, returned to England, collected supplies and recruits, and in January, 1608, was again at James Fort, as the settlement was then called. Fever, hunger, and Indian arrows had swept off more than half of those he had first brought over, among them some members of the council. Wingfield, the first president, was under arrest, and John Smith, an influential man in the colony was awaiting execution.

At the end of three months, when Newport again sailed for England, one-half of those who were alive in January had died. Edward Maria Wingfield, the first president of the local council, was the only person among the patentees who came with the colonists. With suffering came dissension. Ratcliffe, Martin, and Smith removed Wingfield not only from the presidency but from the council. In the circumstances his overthrow was easy. It was charged that he was a Catholic, some authorities say an atheist, that he brought no Bible with him, and also that he had conspired with the Spaniards to destroy Virginia. In April, 1608, Wingfield left Jamestown, and later in England made to the authorities an interesting statement in his own defence. For considerably more than two hundred years Captain John Smith was universally regarded as the ablest and the most useful of the first Jamestown settlers. Indeed, he was believed to have been the founder and the preserver of the colony. As a matter of fact, he was a mere adventurer, responsible for much of the dissension among the first settlers. His "General History" is an absurd eulogy of himself and an unfair criticism of his fellows. Perhaps it was no misfortune to Virginia when the accidental explosion of a bag of gunpowder compelled him to return to England for medical treatment. Smith was never afterward employed by the Virginia Company. The five hundred new settlers sent to Jamestown in 1609 were "a worthless set picked up in the streets of London or taken from the jails, and utterly unfit to become the founders of a state in the New World". This, however, while true of a particular band of immigrants, will not serve for a description of those who came later. During the seventeenth century there arrived numerous knights, and numbers of the nobility of every rank, representatives of the best families and the best intellect in England.

In the beginning the population of Virginia was almost exclusively English; indeed, Virginia was very much like an English shire. As early as 1619 the company had sent out a few Frenchmen to test the soil for its capacity to produce a superior variety of grapes. Other French immigrants continued to arrive in the colony throughout the seventeenth century. After the English took New Amsterdam, in 1664, many Dutchmen went from New Netherland to Virginia. Germans and Italians were never numerous in that province. During the era of Cromwellian ascendancy many Irish were sent to Virginia. Again in 1690 and afterwards there arrived many Irishmen who were captured at the Boyne and on other battlefields. These non-English elements in the population do not appear, however, to have exerted much social or other influence. They soon melted into the population around them. The name of Edward Maria Wingfield has been mentioned as that of the only patentee who came over with the colonists. If there is any doubt as to the Catholicism of the first president of the council there is none concerning the religious belief of the Earl of Southampton. That nobleman had a keen interest in English colonization.

While England was engaged in developing the Province of Virginia, four other European powers, Spain, France, Holland, and Sweden, were establishing themselves on parts of the Atlantic coast of North America. In 1655 the Dutch conquered New Sweden, and nine years later New Netherland was acquired by the English. The latter conquest was facilitated by the former, because New Netherland had reduced itself to a condition of bankruptcy in order to send its warlike armament into Delaware Bay. After the failures of Ribaut and Laudonnière the French made no attempt to settle the south Atlantic coast. That nation, however, did not abandon American colonization. From the founding of Quebec, in 1608, great activity was manifested in Canada and later in Louisiana. On the Atlantic coast, therefore, Spain and England were the chief rivals. The former manifested little interest to the northward of the Mexican Gulf, and after 1664 England was free to develop her maritime colonies in her own way. In the meantime France was exploring the interior, establishing garrisons, and in other ways strengthening her hold on the most desirable part of the continent. Between the outposts of the two nations collisions were inevitable.

INTER-COLONIAL WARS

It is not possible to discuss here either the causes or the conduct of those wars which in 1763 ended in the complete triumph of British arms. Between 1689 and 1763 four separate struggles took place between these ancient enemies.

King Williams' War. The first, which began in 1689, is known as King William's War, ending in 1697 by the treaty of Ryswick.

Queen Anne's War. The second conflict was Queen Anne's War, known in European history as the War of the Spanish Succession. Though not so widespread as the preceding one, in America it was marked by the same characteristics. In 1710, with the assistance of ships sent from England, Port Royal was again captured. With it the whole of Acadia passed into the hands of the English. The name of the town was changed to Annapolis Royal, in honour of Queen Anne. Acadia became Nova Scotia, or New Scotland. In 1713 this war was ended by the treaty of Utrecht. The extent of

the country designated as Acadia was somewhat vague, and as to the regions included under that name new disputes were destined to arise.

King George's War. The War of the Austrian Succession (1744-1748), occurring in the reign of George II, is known in American history as King George's War. The French promptly swept down on and captured the little town of Canso, in Nova Scotia. They carried off its garrison and then attacked Annapolis, but were repulsed. The most important event of this war was the expedition against Louisburg, on Cape Breton Island. Though Louisburg had been fortified at an expense estimated at \$10,000,000, it was compelled to surrender. Later there came the alarming report that a French armada was on the way to retake Acadia and Louisburg, and to destroy Boston. Though the armada reached American waters, it was dispersed by a tempest off the coast of Nova Scotia, and its crest-fallen crews soon returned to France. At this stage of the war both sides were freely assisted by savages. One of the French expeditions attacked the outpost of Saratoga, killed thirty persons, and took a hundred prisoners. By the treaty of Aix-la-Chapelle in July, 1748, all conquests were mutually restored. The news of the surrender of Louisburg, which had been chiefly won and defended at the expense of New England, caused the greatest dissatisfaction throughout the colonies, and strained somewhat the relations with the mother country.

The French and Indian War. Having emerged from the last war without loss of territory, France went to work more vigorously than ever with her preparations for excluding the British altogether from the Mississippi valley. In 1749 the Governor of Canada despatched C loron de Bienville with a band of men in birch-bark canoes to take formal possession of the Ohio valley, the only highway still unguarded. Once on the Allegheny River, the ceremony of taking possession began. The men were drawn up by their commanders, and Louis XV was proclaimed king of all the country drained by the Ohio. Then the arms of France were nailed to a tree, at the foot of which was buried a leaden plate with an inscription claiming the Ohio and all its tributaries for the King of France. At various points along the Ohio similar plates were hidden. Forts were built along the Allegheny. This activity on the part of the French alarmed Governor Dinwiddie of Virginia. He determined to demand the withdrawal of the French, and for his messenger chose George Washington, then an officer of the Virginia militia. Washington proceeded to Fort Le Boeuf, where he delivered Dinwiddie's letter to the commandant, Saint-Pierre, who promised to forward the letter to the authorities in Canada. In the meantime he would continue to hold the fort.

When Dinwiddie received the reply of Saint-Pierre, he knew that the time for action had come. He sent forward to the forks of the Ohio a party of forty men, who began the erection of a stockade, intended to surround a fort, on the site of the present city of Pittsburgh. On 17 April, 1754, while the English were still engaged at their work, a body of French and Indians from Fort Le Boeuf ordered them to leave the valley. The English commander was allowed to march off with his men. The French then completed the work thus begun, and in honour of the Governor of Canada called it Fort Duquesne. The surrender at the forks of the Ohio was soon known to the governors of Maryland, Virginia, and Pennsylvania. Virginia acted promptly and raised a force, of which Frye was commander, with Washington as lieutenant-colonel. Near a place called Great Meadows,

Washington with a few men killed or captured a small party of French. On 4 July, 1754, he was himself besieged by a party of French and Indians, and after a brave resistance compelled to surrender. Thus was begun what the English colonists called the French and Indian War. The British in 1755 sent over Major-General Braddock as commander-in-chief in America. The colonial governors met him at Alexandria, Virginia. Four expeditions were agreed upon:

- an expedition from New York to Lake Champlain, to take Forts Ticonderoga and Crown Point, and to move against Quebec;
- an expedition to sail from New England and make such a demonstration against the French towns to the north-east as would prevent the French in that quarter from going off to defend Quebec and Crown Point;
- an expedition, starting from Albany, up the Mohawk toward its source, to cross the divide to Oneida Lake, then by the Oswego River to Lake Ontario and the Niagara River;
- an expedition from Fort Cumberland, in Maryland, across Pennsylvania to Fort Duquesne. Braddock himself took command of the fourth expedition.

There was no opposition until his troops had crossed the Monongahela River and had arrived within eight miles of Fort Duquesne. Suddenly they came face to face with an army of the Indians and French. It was not in any sense an ambush, but the French and their Indian allies instantly disappeared behind bushes and trees, and poured a merciless and incessant fire into the ranks of the British. Braddock would not allow his men to fight in Indian fashion; therefore they stood huddled in groups, targets for the Indians and the French, till the extent of his loss compelled him to order a retreat. Had it not been for Washington and his Virginians the British force would probably have perished to a man. Braddock, wounded in the battle, died soon afterwards. The expedition against Niagara was a failure. That against Crown Point was partially successful.

The French Government now appeared to see vaguely the great importance of the contest in America. The demands of the European war had kept the French armies employed at home; therefore, no considerable force could be sent to America. The king, however, sent over the Marquess de Montcalm, the ablest French officer that ever commanded on this continent, and there followed for the British two years of disastrous war. Montcalm won over the Indians to the side of France, captured and burned the post at Oswego, and threatened to send a strong fleet against New England. Until the elder William Pitt became influential in the councils of Great Britain, no progress was made against the French. In the year 1758 the strong fortress of Louisburg surrendered to a joint military and naval force under Amherst and Boscawen. In the same year Washington took Fort Duquesne, which was renamed Fort Pitt. Fort Frontenac, on Lake Ontario was destroyed by a provincial officer named Bradstreet. With the loss of Fort Duquesne this second disaster cut off the Ohio country from Quebec.

On 8 July, 1758, General Abercrombie, with an army of at least 15,000 men, made a furious and persistent assault on the strong post of Ticonderoga. The fort was defended by Montcalm with about 3100 men. The battle raged all day in front of Ticonderoga, its outlying breastworks, and its formidable abattis of fallen trees. When the British, under cover of darkness, withdrew, they left behind them 1944 killed, wounded, and missing. The French reported a loss of 377.

In a fiercely contested battle on the plains of Abraham, 13 Sept., 1759, the French were defeated, and Wolfe and Montcalm were among the dead. In the following year Montreal was taken, and the American phase of the war came to an end. In Europe the conflict continued until peace was made at Paris in February, 1763. By that treaty France gave to Spain for her assistance in the war, all that part of the country lying west of the middle of the Mississippi River from its source to a point almost as far south as New Orleans. To Great Britain she surrendered all her territory east of this line.

After the French and Indian War (1759-1774). From the beginning of the inter-colonial wars, in 1689, the Middle Colonies gave assistance to New England in its expeditions against the French strongholds in Canada. When the last conflict broke out the lower states of the south sent troops into Pennsylvania. Some of these served under Washington at Fort Necessity. Whenever troops from the different colonies acted together, as they frequently did, they used the name "provincials" to distinguish themselves from the British troops. There is a popular notion that all the proposals after 1643, when the United Confederation of New England was formed, were suggested by military necessity. In a measure, but not wholly, such necessity was the sole influence tending toward their union. As early as 1660 an agreement was entered into by Maryland, Virginia, and Carolina to restrict the production of tobacco. Even though nothing came of this commercial agreement, it indicates the existence among the colonies of interests other than military. As early as the eighteenth century (1720) Deputy-governor Keith, of Pennsylvania, submitted to the Lords of Trade and Plantations a plan, or a recommendation, for a union of England's North American colonies. In the treatises on the development of the idea of union this document is overlooked. It will be found, however, among the printed papers of Sir William Keith.

The French and Indian war was the prelude to the American Revolution. It trained officers and men for that struggle. During its campaigns the commander-in-chief in the War for Independence acquired his first knowledge of strategy. This War released the colonies from the pressure of the French in Canada and developed in them a consciousness of strength and unity. Besides it gave to the colonies an unlimited western expansion. In this great acquisition of territory is to be found one of the earliest causes of the quarrel with the mother country. Though the provinces had fought for territorial extension, a royal proclamation was issued (1763) forbidding present land sales west of the Alleghenies, thus reserving the conquered territory as a crown domain. Though they did not clearly perceive it, the war had welded the thirteen colonies into one people. It was in this era that there grew up the feeling that this conquered territory did not belong to the Crown but to the colonies collectively. So afterwards, when independence was achieved, it was contended that these western lands did not belong to the respective states but to the union collectively, because the domain had been won by their joint exertions. By the proclamation of 1763 a line was drawn around the head-waters of all those rivers in the United States which flow into the Atlantic Ocean, and west of that line the colonists were forbidden to settle. All the valley from the Great Lakes to the Florida country and from the proclamation line westward to the Mississippi was set apart for the Indians. Out of the conquered territory England created three new provinces: in Canada the Province of

Quebec; out of the country conquered from Spain, two provinces, namely, East Florida and West Florida. The Appalachicola separated the Floridas. The land between the Altamaha and the St. Mary's was annexed to the Province of Georgia.

In order to provide for the military defence of the colonies, it was decided to enforce the Navigation Acts. These required:

- that colonial trade should be carried on in vessels built and owned in England or in the colonies, these ships to be manned, to the extent of two-thirds of the crew, by English subjects;
- that important colonial products should not be sent to ports other than those of England. Products or goods not named in a certain list might be sent to any other part of the world;
- if a product exported from one colony to another was of a kind that might have been supplied by England, it must either go to the mother country and then to the purchasing colony, or pay an export duty at the port where it was shipped, equal to the import duty it would have to pay in England;
- goods were not allowed to be carried from any place in Europe to America unless they were first landed at a port in England.

Not unconnected with this measure, perhaps, was an intention of establishing permanently in America a body of 10,000 British troops, for whose maintenance it was decided to provide at least in part by a Parliamentary tax in the colonies. These were among the measures which led ultimately to a division of the empire.

While these measures of Grenville's administration were in contemplation, information of the design of the ministry was received in Boston from the colonial agent in England, who asked counsel in the emergency. In the spring of 1764 a Boston town-meeting gave the subject special consideration. For the guidance of newly-elected members a committee was appointed to prepare instructions. This important work was assigned to Samuel Adams. While motives of policy suggested the language of loyalty and dependence, it is not difficult to see behind these instructions of Adams the spirit of a determined patriot who had long and thoughtfully considered the whole question of the relation of the colonies to the mother country, for he furnished Americans with arguments that never ceased to be urged till the separation from Great Britain was complete.

By drawing into question the right of the Crown to put an absolute negative upon the act of a colonial legislature, the Virginian orator merely revived in another form that struggle against prerogative which with varying success had long been maintained on both sides of the Atlantic. The resolutions of the Boston town-meeting, however, had a different purpose, marking, as they do, the first organized action against taxation.

Trade with the French and the Spanish West Indies not only stimulated the prosperity of the commercial centres in every colony, but was a chief source of wealth to all New England. For the abundant supply of timber standing in her forests, for her fish, and for her cattle, these islands furnished a convenient and profitable market. By the vessels engaged in this extensive trade, cargoes of sugar and molasses were unloaded at Boston and other New England ports. A Parliamentary statute of 1733 had imposed on both commodities a prohibitive duty, which but for the connivance of revenue officers would even then have accomplished the ruin of a flourishing commerce. When

this law, after several renewals, was about to expire in 1763, the colonists actively opposed its re-enactment, but Grenville was resolved to improve the finances in his own way, and against the successive remonstrances of colonial agents, of merchants, and of even a royal governor, renewed the act, says Bancroft, in a form "greatly to the disadvantage of America". Commissioners of customs, regarding their places as sinecures, had hitherto resided in England. Now they were ordered at once to their posts; the number of revenue officers was increased, and, to assist in executing the new regulations, warships patrolled the harbours and the coast. These were instructed to seize all vessels suspected of smuggling. Army officers were commanded to co-operate. The jurisdiction of admiralty courts, in which cases were tried without juries, was greatly extended. Both the promise of emolument from confiscated property and the fear of dismissal for neglect of duty sharpened the vigilance of those engaged in enforcing the acts of navigation, and it was soon perceived that their unusual activity and violence threatened to destroy not only contraband, but menaced the very existence of even legitimate trade. At this time 164,000 sterling was the estimated annual value of the Massachusetts fisheries; and to supply the provisions, casks, and sundry articles yearly required in the business, there was needed an additional capital of 23,700. The importance of this industry may be easily estimated from the extent to which it had been carried by a single community. A rigorous execution of the Act of April, 1764, meant to Americans the annihilation of this natural and legal branch of commerce, for if the planters in the French West Indies could not sell their sugar and molasses, they would not buy fish, and any deficiency or any great irregularity in the supply of molasses would have been fatal to the distilleries of Boston and other New England towns. Ships would have been almost worthless on the hands of their owners, and the 5000 seamen employed yearly in carrying fish to Portugal and Spain would have been without an occupation. The severity of the new regulations, by which property amounting to 3000 was soon swept into prize courts, coupled with the declared intention of raising by imperial authority a revenue for the defence of the colonies, created a constitutional question of the gravest character.

Since 1763, when the war ended, the British Government had time to consider a system of revenue. The importunities of British merchants, who were creditors of American importers, as much at least as a feeling of tenderness for the colonists, influenced Grenville to suspend for almost a year his purpose of laying a stamp duty on America. An expectation of mastering the subject was undoubtedly an additional cause of delay. His purpose, however, remained unchanged, and neither petitions nor remonstrances, nor even the solemn pledges of the colonies to honour as hitherto all royal requisitions, availed to overcome his obstinacy, and on 6 Feb., 1765, in a carefully prepared speech, he introduced his fifty-five resolutions for a stamp act. In the colonies this aroused a bitter spirit; the stamp distributors were induced to abandon their offices by persuasion or intimidation, and delegates from nine colonies met in New York to express disapproval.

Patrick Henry, of Virginia, led the opposition with the resolutions: that the first Virginia colonists brought with them "all the privileges and immunities that have at any time been held" by "the people of Great Britain"; that their descendants held these rights; that by royal charters the people of Virginia had been declared entitled to all the rights of Englishmen "born within the realm of

England"; that one of these rights was that of being taxed "by their own assembly"; that they were not bound to obey any law taxing them without consent of their assembly. The Virginia Resolutions were passed 29 May, 1765. This action by the southern colony was followed on the part of Massachusetts by a call for a congress to meet at New York City. This assembly, known as the Stamp Act Congress, began its sessions in New York on 5 Oct., 1765, and was attended by delegates from nine of the colonies. New Hampshire, Virginia, Georgia, and North Carolina were unrepresented. The representatives from six of the nine colonies present (Maryland, Delaware, Pennsylvania, Rhode Island, New York, and Massachusetts) signed a "Declaration of Rights and Grievances", setting forth that the Americans were subjects of the British Crown; that it was the natural right of a British subject to pay no taxes unless he had a voice in laying them; that Americans were not represented in Parliament; that Parliament, therefore, could not tax them, and that any attempt to do so was an attack on the rights of Englishmen and the liberty of self-government. The grievances were five in number: taxation without representation; trial without jury (in the admiralty courts); the Sugar Act; the Stamp Act; restrictions on trade.

The "Sons of Liberty" promptly associated for resistance to that measure. At first they demanded no more than that the stamp distributors should resign their offices. Their refusal was the occasion of violence and serious riots. 1 Nov., 1765, was the day fixed for the Stamp Act to go into force. During the next six months every known piece of stamped paper was seized and burned; handbills were posted denouncing the law, and public meetings were called; mobs frequently paraded the streets, shouting: "Liberty, property, and no stamps!" Merchants pledged themselves not to import English goods till the Stamp Act was repealed. These agreements among the mercantile classes were widespread. The effect was to leave on the hands of British exporters goods intended for America. By its restraint on production it threw out of employment multitudes of English labourers. This led English merchants to flood Parliament with petitions calling for the repeal of the Stamp Act. The distress occasioned in England forced Parliament to yield, and in March, 1766, the law was repealed. Both in America and England rejoicings and votes of thanks greeted the repeal.

The term of rejoicing was brief. In England the king as well as his friends conceived for the authors of that conciliatory measure the most bitter dislike, which expressed itself in the driving from power of the supporters of Rockingham, and soon after, under a more compliant ministry, adopting a new form of taxation. At this unexpected course the indignation among the colonists far surpassed the outbreak which marked the first attempt upon their liberties. The new measures of taxation were known as the Townshend Acts:

- the legislature of New York was forbidden to pass any more laws until it had provided the British troops in the city with shelter, fire, and such articles as salt, vinegar, and candles;
- at Boston a Board of Commissioners of the Customs was established to enforce laws relating to trade;
- taxes were laid on glass, painters' colours, lead, paper, and tea.

Though these taxes were not burdensome, they involved the important principle of the right of Parliament to tax people not represented in it, and once more the colonists rose in resistance; again there were non-importation agreements, correspondence between assemblies, and a revival of the

Sons of Liberty. For the Massachusetts Assembly, Samuel Adams drafted a circular letter, which was sent to the other colonies. It contained expressions of loyalty, re-asserted the rights of the colonists, and appealed for united action in opposing the new taxes. Many of the legislatures were dismissed or dissolved for their connexion with the circular letter, or for complaining of the unfair treatment of some sister colony.

The proroguing of colonial assemblies became frequent. The Massachusetts legislature was dissolved for refusing to recall the letter. In other words, the king had been defied. He ordered two regiments to Boston to assist the authorities in enforcing the new system of taxation. The people of Boston accused the soldiers of corrupting the morals of the town, "of desecrating the Sabbath with fife and drum; of striking citizens who insulted them; and of using language violent, threatening, and profane". This excited state of feeling led to frequent quarrels between the townspeople and the soldiers, and culminated on 5 March, 1770, in a riot known as the "Boston Massacre". More, perhaps, than anything which had yet happened this event hastened the revolution. A few years later (1773) a considerable quantity of tea which had arrived on ships from England was thrown into Boston Harbour. In Charleston, Annapolis, and Philadelphia also there was determined opposition to receiving the consignments of tea, which, though cheap, yet concealed a tax. When tidings of these events reached England, Parliament determined to punish Massachusetts, and proceeded to pass five laws so severe that the colonists called them the "Intolerable Acts". These were: the Boston Port Bill, which closed the port of Boston; the Transportation Bill, which gave the authorities power to send persons, accused of murder in resisting the laws, to another colony or to England for trial; the Massachusetts Bill, which changed the charter of the province, provided for it a military governor, and prohibited the people from holding public meetings for any purpose other than the election of town officers, without permission from the governor; the Quartering Act, which made it lawful to quarter troops on the people; and the Quebec Act, which enlarged the Province of Quebec to include all the territory between the Great Lakes, the Ohio River, the Mississippi River, and Pennsylvania. When the Puritan element in the colonies found that this law practically established the Catholic religion in the new territory, its traditional feeling of intolerance revived.

The news of these Acts of Parliament crystallized almost every element of union in the colonies. When, in May, 1774, the Virginia legislature heard of the passage of the Boston Port Bill, it passed a resolution that the day when the law went into effect in Boston should be one of "fasting, humiliation, and prayer" in Virginia. For this conduct the legislature was at once dissolved by the governor. Before separating, however, the members appointed a committee to correspond with the other colonies on the advisability of holding another general congress. There was a unanimous approval, and New York requested Massachusetts to name the time and place of meeting. To this request she agreed, selecting Philadelphia as the place, and 1 Sept., 1774, as the date. The Congress assembled in that city on 5 Sept. It included delegates from all the colonies except Georgia, and hence is commonly known as the First Continental Congress. It adopted addresses to the king, to the people of the colonies, of Quebec, and of Great Britain; passed a declaration of rights, summing

up the various Acts of Parliament which were believed to be violative of those rights. This body had met, of course, in virtue of no existing law. In other words, it was a revolutionary assembly, though it assumed revolutionary functions slowly. In the matter of the petition it ignored Parliament; it prepared Articles of Association, to be signed by people everywhere, and to be enforced by committees of safety. The members of these committees were to be chosen by the inhabitants of the cities and towns. The articles bound the people to import nothing from Great Britain and Ireland, also to export nothing to those countries. Henceforth the Committees of Safety were to perform an important service in promoting the Revolution. On 8 Oct. the Congress adopted the following resolution: "That this Congress approve the opposition of the inhabitants of the Massachusetts Bay to the execution of the late Acts of Parliament; and, if the same shall be attempted to be carried into execution by force, in such case all America ought to support them in their opposition." Before the Congress adjourned it was ordered that another Congress should meet on 10 May, 1775, in order to consider the result of the petition to the king. It then adjourned.

When the king and his friends heard of the proceedings of the Congress, they were more determined than ever to make them submit. On the other hand, the friends of the colonists exerted themselves to promote conciliation, but neither the influence of Pitt nor the eloquence of Burke could alter the resolution of the king's party. The ultimatum of the First Continental Congress led to considerable military activity. When it was seen that force would be met by force, the people began to arm. As was generally foreseen, the conflict between the people and the royal forces occurred before the meeting of the Second Continental Congress. An encounter was likely to occur anywhere, but most likely to take place in Massachusetts. Up to the meeting of the First Continental Congress there were in America thirteen local governments. From that time there came into existence a new body politic, with aims and with authority superior to the local governments. These several governments had actually formed a new state. The Declaration of Independence was merely an announcement of an established fact.

NATIONAL HISTORY

War of the Revolution. When the Stamp Act was passed, the Congress which assembled acted as an advisory rather than as a legislative body. Perhaps the chief result of its meeting was that it accustomed the colonists to the idea of union. This feeling was confirmed when the First Continental Congress convened (1774). On 10 May, 1775, the Second Continental Congress assembled. By that time the notion of union was much more familiar; besides, the military phase of the war had begun three weeks earlier. Tidings soon came of the taking of Ticonderoga by a force under Ethan Allen. This was the key of the route to Canada. Thus far the chief object of the Americans had been to secure a redress of grievances. Independence was advocated by nobody, and a little earlier John Adams said that it would not have been safe even to discuss it. However, events moved rapidly. Separation was discussed, and on 4 July 1776 a Declaration of Independence was adopted by the Congress, which had already become a revolutionary body. It had ceased to be an advisory assembly, and for some time had been exercising the powers of a national government. A constitution, entitled

"Articles of Confederation and Perpetual Union", was proposed, but it was not until March, 1781, that it was adopted by all the states. For the conduct of the war in which they found themselves engaged they were wretchedly prepared: they had no money, no system of taxation, no navy.

Early in the war Congress sent to Canada a commission to win over its people to the side of the insurgent colonists. This body included Benjamin Franklin, Samuel Chase, and Charles Carroll. A cousin of the last-named, Rev. John Carroll, accompanied the commission to assist in promoting its patriotic purpose. By virtue of the Quebec Act the Canadians were enjoying religious liberty, and they must have wondered what they could gain from an alliance with a people who considered that measure of toleration as a ground of reproach to England. As to the enlargement of the Province of Quebec, already noticed, the people of Canada must have been somewhat indifferent. These and other considerations led them generally to adopt a policy of neutrality. The presence in the American army of one or two small battalions of Canadians did not to any considerable extent affect the sentiments of the French population. During the progress of the war their loyalty was often suspected by British officials, perhaps not without cause.

Under General Montgomery an army also was sent into Canada. A co-operating force under Benedict Arnold reached Canada by way of the Kennebec River and the Maine wilderness. Montgomery had won several small advantages, but the joint attack on Quebec, 31 Dec., 1775, resulted in his death, in the wounding of Arnold, and the defeat of their forces. Then was begun a disastrous retreat toward the State of New York. Either this step of Congress or the plans of the British War Office led to a counter invasion. A force under St. Leger, moving by way of Oswego and Fort Stanwix (Rome), was intended to create a diversion in favour of the main army under Burgoyne, which was advancing leisurely from Canada. With these two commands Clinton was expected to co-operate along the line of the Hudson. St. Leger's army was defeated or dispersed, and, instead of co-operating with Burgoyne, General Clinton had gone off to attack Philadelphia. A detachment from Burgoyne's army was defeated at Bennington, Vermont. This event left nearly all New England free to act on Burgoyne's line of communications. After two severe battles he surrendered, near Saratoga, on 17 Oct., 1777, his entire army of nearly six thousand men. Thus ended the struggle for the possession of the Hudson. The event influenced France to form an alliance, Feb., 1778, with the young Republic.

After the commission had returned from Canada, several agents were sent to represent the United States in Europe, and Franklin's ability had much to do with the establishment of friendly relations with France. When in March, 1776, Washington drove the British from Boston, he brought his army southward and occupied New York and Long Island. That portion of his force in Long Island met with disaster in the following August. To avoid capture, he turned northward, crossed the Hudson, entered New Jersey, and passed over into Pennsylvania. From his camp in that state he surprised a regiment of his pursuers at Trenton, 25 Dec., 1776, recrossed to Pennsylvania, and early in the following year again encountered the enemy at Princeton. This ended the first stage of the struggle for the Delaware. Cornwallis gradually retired towards New York.

In the West, Colonel George Rogers Clark took Kaskaskia, 4 July, 1778. The influence of Father Pierre Gibault, its parish priest, enabled Clark speedily to recruit two companies at that place and in the neighbouring settlement at Cahokia. A generous loan by François Vigo enabled him to complete his equipment for the march on Vincennes, which, after terrible hardships, was surprised and taken. These were the first steps in the winning of the West. That term included the region now covered by Ohio, Indiana, Illinois, Michigan, Wisconsin, and a part of Minnesota. In this great achievement of Clark's, Catholics acted a very praiseworthy part. When that commander arrived at Kaskaskia, he was not unexpected; the terms of enlistment of many of his men had already expired, and in the battalions with which he marched to Vincennes there was a great preponderance of Catholics. In the conquest of that place he was also assisted by the inhabitants of the town. Indeed he felt encouraged during the entire campaign by the friendship of the Spanish governor beyond the Mississippi.

When General Clinton should have co-operated with Burgoyne he set out for the conquest of Philadelphia, the capital of the new union. Transporting his army by the Atlantic and Chesapeake Bay, he landed in Maryland, marched towards Philadelphia and, after defeating Washington's army on the Brandywine, occupied the capital. Though the fighting around Philadelphia was not decisive, the patriot army, as shown in the engagement at Germantown (Oct., 1777), was improving in efficiency. To defend the Continental military stores, as well as to menace Philadelphia, Washington went into winter quarters at Valley Forge. It is unnecessary to repeat the familiar story of the sufferings of the patriot army. One thing, however, was accomplished during that terrible winter. The little army of Washington was rigorously drilled by the German volunteer, Baron Von Steuben. Thereafter the Continentals were a match for the best-drilled troops of England. In the spring of 1778 there was a rumour that a French fleet had sailed for the Delaware. This consideration, together with the improvement in the condition of Washington's army, persuaded the British to return across New Jersey to New York City. During this march a severe engagement occurred at Monmouth Court House, N. J., 28 June, 1778. It was only the treachery of General Charles Lee that prevented Washington from winning a more complete victory.

The alliance with France has been noticed. The operations of its fleet at Newport are popularly regarded in America as having been somewhat useless. As a matter of fact, the activity of the allies put the British on the defensive at the very moment that they had decided to wage aggressive war. At an early stage Beaumarchais had forwarded military supplies to the United States. After Feb., 1778, his government loaned large sums of money (\$6,352,500), used its armies wherever the opportunity offered, and into every quarter of the globe, even into the Indian Ocean, sent its warships to fight England.

When New England and the Middle States were believed to be lost, the British endeavoured to win back the South. This policy brought Cornwallis into the Carolinas. After a crushing defeat of one of his subordinates at King's Mountain he retired into Virginia, watched by the vigilant General Greene. That officer had been sent South to reorganize and to command the army that had been ruined by the incapacity of General Gates. While he won no great victories, Greene found himself

a little stronger after each engagement; the discipline and the equipment of his army also were constantly improving. He succeeded in drawing Cornwallis farther and farther from his base of supplies on the coast. The posts forming Cornwallis's line of communication were successively surprised by partisan bands commanded by such officers as Marion, Sumter, and Pickens. With Greene's army growing stronger, the independent forces more bold, and his own force melting away, nothing appears to have been left for Cornwallis but to fortify himself in Virginia. His army with a smaller force under Arnold (who had deserted to the British) destroyed much private property in that state. A small force under General Lafayette had been sent by Washington to watch the movements of the enemy. It was about this time that there arrived from Europe a great French fleet under the Count de Grasse, perhaps the most powerful armament that had put to sea since the days of the Spanish Armada. It defeated a great British fleet off the capes of the Chesapeake and gave Washington the opportunity for which he had yearned. It then approached the position of Cornwallis at Yorktown. Meanwhile the commander-in-chief was hurrying southward from New York with his own army and a fine French army under General Rochambeau to join the force under Lafayette. Further to embarrass Cornwallis, a French force under the Marquess Saint-Simon was landed. The allied armies under Washington promptly began the siege of Yorktown, which ended, 19 Oct., 1781, in the surrender of the army of Cornwallis. Thus ended the military phase of the War for Independence, and thus culminated a party struggle that had long been in progress on both sides of the Atlantic. The Whigs, whether English or American, had been endeavouring to diminish the power of the king; the Tories, both English and American, would preserve that power unimpaired. The Whig opposition in England and Ireland finally forced George III to apply to Russia for troops, and, when they were refused, to hire Waldeckers, Brunswickers, and Hessians. Besides these foreign soldiers there was in America a large number of Loyalists or Tories. These fought in the armies of the king, and when the war was over, because of the hostility of the patriots, settled in England or in Canada.

When the Revolutionary War began, there were few Catholics in the United States. Perhaps their number did not exceed 26,000. However, members of that faith were to be found on all her borders, and everywhere they were either neutral, as were many in Canada, or friendly, as in the Spanish colonies around the Mexican Gulf and in the French settlements of the Illinois country. The services of the latter have been noticed, while those of the Spaniards of New Orleans would require much space to describe. The reader who desires to examine this neglected phase of the Revolution will find ample materials in the unpublished papers of Oliver Pollock, on file in the Library of Congress. It is well known that Spain declared war against England (1779) and loaned money to the United States. It is known also that the Dutch Republic was friendly to America and that among all the Netherland elements who favoured its independence Catholics were conspicuous. During the progress of the war Frederick the Great had urged the United Provinces, as he had urged France, to join in the war against England. The withholding by George III of the subsidy that had formerly been granted to Prussia incensed its ruler against his former ally.

It has been stated that the colonies were wretchedly prepared for engaging in war with the mother country. In July, 1775, it was voted to issue due bills for 2,000,000 Spanish milled dollars to be sunk by taxes in four successive years, beginning 30 Nov., 1779, the taxes to be levied and collected by the states in proportion to population. These bills Congress petitioned the states to make legal tender. Indifferent ways and at different times this was done, and before 4 July, 1776, \$9,000,000 in due bills were out. To distinguish it from the issues of the states this was called "Continental" currency. From this time forward fiat money got possession of the American people, and by 1779 the issues amounted to \$242,000,000 in a single year. By 1781 the whole mass became worthless.

Up to this time the fatal error was the belief that the credit and currency of continental money could be maintained by acts of compulsion. From this delusion, which affected governments, state and national, few persons were exempt. By October, 1779, Boston was on the verge of starvation; money transactions had nearly ceased, and business was done by barter. In May, 1779, there was a mutiny of certain Connecticut regiments on account of bad pay. In January, 1781, there was a mutiny of the Pennsylvania Line for the same reason. In that disturbance the soldiers killed a captain who tried to bring them to submission. This is not so much to be wondered at when one learns that \$7.00, the monthly pay of an enlisted man, dropped by depreciation to .33. Before Washington could move his army to Yorktown it was necessary to give the soldiers their back pay. To do this, Robert Morris had to borrow hard money from Rochambeau. In March, 1780, there was outstanding \$200,000,000 of continental money. Congress declared this to be worth forty dollars for one dollar of a "new tenor". In other words, of that entire amount Congress repudiated all but \$5,000,000. The "old tenor" fell to 500 to 1 in Philadelphia, when it ceased to circulate. To complete the misfortunes of this experiment, counterfeiters successfully imitated the issues of Congress and hastened the death of paper money. Then hard money sprang to life, and was abundant for all purposes. Much had been hoarded and great quantities had been brought in by the armies and navies of both France and England. As early as 1779 Congress attempted the expedient of specific supplies. Requisitions were made upon the states for meat, flour, forage etc. Because of the defective system of transportation, and for other reasons, it became necessary to abandon this resource. The impressment of horses, wagons etc. was perceived to be dangerous and was soon given up. The income of the Continental Treasury from 1775 to 1783 was \$65,863,825. This was received from domestic loans, foreign loans, taxes, paper money, and from miscellaneous sources. Outstanding certificates of indebtedness amounted to \$16,708,000. Besides these sums, the total cost of the war included the expenditures of the several states.

The Confederation and the Constitution. Though prepared soon after independence was declared, the "Articles of Confederation and Perpetual Union" were not adopted until 1781, when the war was nearly won. This was due chiefly to the opposition of Maryland, which refused to confederate until states having western lands should cede them to the Union; as it was claimed that all such lands had been held only by the joint exertion of the states. Under the Articles all measures of government were directed to the states as corporations; there was no national executive; the

Congress was a body of only one chamber; the states paid, and had the power to recall, their delegates; in theory it was difficult to amend this constitution, and in practice it had proved impossible; finally there was no efficient system for obtaining a federal revenue. In other words, the government under the confederation had no independent income, but depended entirely upon the contributions of the various states. These defects soon produced consequences so alarming that the leading patriots brought about a constitutional convention which attempted to amend the fundamental law. When this was found to be impossible, they framed a new constitution of government (1787). This provided for a national executive, a national legislature, and a national judiciary; also for a simpler method for its own amendment. It gave to Congress the power to lay and collect taxes, duties, imposts, and excises for federal purposes.

The Congress was further empowered to borrow money on the credit of the United States; to establish a uniform rule of naturalization and uniform laws on the subject of bankruptcies throughout the United States; to coin money and regulate the value thereof; to regulate commerce with foreign nations, with the Indian tribes, and among the several states. To the National Legislature was also given power to declare war; to maintain and equip an army and a navy; to exercise exclusive legislative power over such tract as may, by cession of particular states become the capital of the United States; to make all needful rules and regulations respecting the territory and other property of the United States. The body vested with the powers just enumerated was a bicameral one. In its upper house (Senate) each state has two senators, while in the lower house each has representatives in proportion to population. The House of Representatives is merely a legislative body. The Senate, on the other hand, performs a threefold function. Primarily it assists the house in making laws; in ratifying treaties or confirming nominations to office it performs executive functions; in trying an impeachment it acts as a judicial body. The duration of a session of Congress is two years, the term for which representatives are elected. Senators are chosen for a term of six years. In construing an act of the National Legislature one is to assume that it has no power to pass such act unless the authority is conferred by the Constitution, or may be fairly derived from some grant of powers enumerated therein. In examining the constitutionality of a state law one is to assume that the state legislature has power to pass all acts whatever, unless they are prohibited by the Constitution of the United States or by the constitution of the state.

Under the Articles of Confederation there was no national executive. The Constitution, however, vests the supreme executive authority in a President of the United States, who, with a vice-president, is chosen for a term of four years. Both officers are chosen by an electoral college. In this college each state has a number of electors equal to its whole number of senators and representatives in Congress. Originally the electors of president and vice-president looked over the country and selected some distinguished public character for each office. In a little while, however, they ceased to exercise such discretion, and nominations for both the presidency and vice-presidency were made in congressional caucuses. The contest of 1824 brought this method into disfavour. Thereafter, for a brief period, many of the states nominated some favourite son. An evident disadvantage of this system was the great number of candidates, of whom none was likely to receive, as the

Constitution requires, a majority of all the votes cast. About 1831 there began to take shape the present system of a national nominating convention. In this extra-constitutional institution the states are represented according to population, each sending twice as many delegates as it has senators and representatives in Congress. The District of Columbia, the Territory of Alaska, and some of the insular possessions are also entitled to send delegates. To obtain the nomination in a Republican National Convention a majority of the delegates is sufficient, whereas in that held by the Democratic party a two-thirds vote is necessary.

Presidential electors are chosen on the Tuesday after the first Monday in November of every fourth year. No person except a natural-born citizen is eligible to the office of president or of vice-president. The president shall be commander-in-chief of the army and navy of the United States, and of the militia of the several states when called into the actual service of the United States. He has power to grant reprieves and pardons for all offences against the United States, except in cases of impeachment; by and with the advice and consent of the Senate he has the power to make treaties, provided two-thirds of the Senators present concur. In addition to these powers he can nominate, and, by and with the advice and consent of the Senate, appoint ambassadors, other public ministers and consuls, judges of the United States Supreme Court, and all other officers of the United States whose appointments are not otherwise provided for in the Constitution. He is empowered to convoke Congress in special session and to dissolve that body when the two houses are unable to agree upon a time for adjournment. Like other civil officers, the president and vice-president may be removed from office on impeachment for and conviction of, treason, bribery, and other high crimes and misdemeanours.

By the Constitution the judicial power of the United States is vested in a supreme court, and such inferior courts as the Congress may, from time to time, ordain and establish. In order to secure the independence of the judiciary the judges of both the supreme and inferior courts hold their offices during good behaviour, and, for their services, receive a compensation which shall not be diminished during their continuance in office. The judicial power is commensurate with the legislative, and extends to all cases, in law and equity, arising under the Constitution, the laws of the United States, and the treaties made, or which shall be made, under their authority. It also extends to cases affecting foreign representatives (ambassadors, ministers, and consuls), to cases of admiralty and maritime jurisdiction, to controversies to which the United States shall be a party, to controversies between two or more states, etc. In all cases affecting ambassadors, other public ministers and consuls, and those in which a state shall be a party, the Supreme Court shall have original jurisdiction. In all other cases it possesses appellate jurisdiction, both as to law and fact, with such exceptions and under such regulations as Congress shall make.

In addition to the division of political power among the three departments mentioned, the Constitution also provides for inter-state comity. For example, it is provided that full faith and credit shall be given in each state to the public acts, records, and judicial proceedings of every other state. It also provides that the citizens of each state shall be entitled to all privileges and immunities of citizens in the several states; for the return of fugitives from justice and for the admission of new

states. By the Constitution the United States is required to guarantee to every state in this Union a republican form of government, and to protect each of them against invasion, and, in certain circumstances, against domestic violence. Amendments to the Constitution may be proposed by two-thirds of both houses of Congress or by the legislatures of two-thirds of the states. Amendments proposed in either manner become valid as parts of the Constitution, when ratified by the legislatures of three-fourths of the several states, or by conventions in three-fourths of them. Congress is empowered to propose the method of ratification. The schedule provided that the ratification by conventions of nine states should be sufficient for the establishment of this Constitution between the states ratifying the same.

Owing to the opposition to its adoption, especially in Virginia and New York, it was agreed by the friends of the Constitution that a bill of rights should be added to it. Accordingly, many amendments were proposed; these were grouped under ten heads, familiar as the first ten amendments, and known to students of the Constitution as the Bill of Rights. The eleventh amendment, declared a part of the Constitution in 1798, interprets a part of Article III, and prevents the citizens of a state from suing another state, or a foreign citizen or subject from bringing suit against one of the states. The twelfth amendment, which became a part of the Constitution in 1804, makes a change in the method of choosing a president. It made the ballot of the elector more definite, and in case the election went into the House of Representatives, it restricted the choice of that body to the three candidates highest on the list. The remaining amendments, the thirteenth, fourteenth, and fifteenth, grew out of the Civil War. Contrary to a popular notion, the framers of the Federal Constitution had had considerable experience in the making of constitutions before they set about the establishment of their crowning work. Shortly after independence was declared, the states were advised to prepare constitutions of government. All complied promptly, except Rhode Island and Connecticut, both of which retained their liberal colonial charters. The establishment of any state religion is prohibited by the Constitution. The regulation of charities, education, marriages, land tenures, religious corporations, etc., about which it says nothing, is reserved, by inference, to the various states.

The period from 1783, when the definitive treaty of peace was signed, until 1789, is known as the critical era of American history. The federal government was in distress; many of the states were on the verge of civil war. Relations, external and internal, were highly unsatisfactory. Indeed, the situation was worse than at any time during the progress of military operations. When George III, for himself and his successors, acknowledged the independence of the United States, the several commonwealths, claiming to be sovereign, adopted policies more or less selfish. This disposition begot a number of domestic quarrels. In addition to dissension at home, foreign relations were not too harmonious. The young republic had nearly forfeited the confidence of its own citizens, and was beginning to incur the contempt of the world outside. It was these alarming symptoms that forced upon a few leaders the idea of amending the fundamental law. When, however, the Constitution was submitted to the people, a majority of them appeared to oppose its adoption. This opposition was overcome by the influence and activity of the leading patriots. In this great work

the services of Washington cannot be overestimated. His brilliant lieutenants, Hamilton and Madison, ably supported his efforts in conventions and in the Press. The names of the friends of the Constitution would make a considerable list, and no list would be complete. Of course, all those who signed the instrument worked for its adoption. The Constitution also had friends who were not members of the Convention. Among the ablest and the most useful of these was Pelatiah Webster, an able student of public finance and of constitutional systems. In 1788 the proposed Constitution was ratified by the requisite number of states (nine), and on 4 March, 1789, the first Congress assembled under it. Much of its time and energy was devoted to considering means for improving the public credit and to organizing the various departments of government. In this work Congress was greatly assisted by Alexander Hamilton, Secretary of the Treasury. On 30 April, 1789, General Washington had been inaugurated president. John Adams had been chosen vice-president. Internal relations and external relations were speedily improved by the wisdom of Washington. The measures of his administration soon established domestic tranquillity and general prosperity.

Starting the Government. In his exercise of the appointing power Washington observed the greatest care. His nominations to office were remarkable for their accuracy. He set an example, however, which none of his successors has seen fit to imitate. He appointed to the most important position in his cabinet Thomas Jefferson, the head of an opposition which a little later assumed more definite form. Ultimately Hamilton and Jefferson quarrelled, and both resigned from the administration. Hamilton, however, had done his work. His report on manufactures, a remarkable document, and one still consulted by statesmen, among other things justifies the tariff policy then adopted. Measures involving a still broader construction of the Constitution were enacted. One was the organization of the First United States Bank. To its establishment there was social, sectional, and constitutional opposition. There was also considerable hostility toward the measure for assuming the Revolutionary debts of the states. The enactment of these laws was chiefly responsible for the rise of a new political party, the Republican party of Jefferson. The revenue system established by Congress led to an insurrection in western Pennsylvania. That outbreak was suppressed in 1794 by sending the militia of New Jersey, Maryland, and Virginia, and some troops of Pennsylvania, into the troubled region. This indicated the energetic policy that was adopted by the new government. Armies under Generals Harmer and St. Clair were defeated by the Miamis. In 1795, after their defeat by General Wayne, the tribe made a cession of nearly the whole of Ohio. In 1794-95 John Jay, Chief Justice of the United States Supreme Court, negotiated a very unpopular treaty with Great Britain. After the people of France had put their king and queen to death, President Washington issued his Neutrality Proclamation, thus taking the first step in the foreign policy of the United States. Though Washington was honoured by a second election, his administration continued to be attacked with considerable energy and great bitterness. After enacting the laws referred to, tracing the foreign policy of his country, and organizing its departments, Washington determined to retire from public life. Before doing so he issued his "Farewell Address". Washington's refusal of a third term was, perhaps, not unconnected with the attacks upon him by the coarse journalists of that time.

John Adams, who had served two terms as vice-president, was chosen to succeed Washington. His majority over Jefferson, who was elected to the vice-presidency, was very slight. An effort of this administration to negotiate a commercial treaty with France resulted in the celebrated "XYZ" correspondence. In portions of the country there was opposition to the new taxes. A graver problem with the administration was the question of dealing with those citizens and resident aliens who attacked the president and the members of his administration. The Alien and Sedition Laws were designed to meet the emergency. By a majority of the people the Sedition Law was regarded as a violation of the First Amendment of the Constitution, which guarantees freedom of speech and of the Press. By the legislatures of Virginia and Kentucky these measures were criticised, and the latter came near to proclaiming nullification as the rightful remedy. Madison was the author of the Virginia resolutions, while Jefferson prepared those passed by Kentucky. These resolutions connect with the Hartford Convention, Nullification, and Secession. In the third presidential election the administration was embarrassed by the taxes necessary for building up a navy, by the Alien and Sedition Laws, and by dissension among the Federalist leaders. Hamilton attacked President Adams with great severity, and contributed to the defeat of the Federalist party, of which he had been the intellectual head.

Early Political Parties. In the Constitutional Convention at Philadelphia there were many discrepant elements. We are now concerned with only two, viz., those who favoured the *foedus*, or union, under the proposed system and those who opposed it. The former were known as Federalists, the latter as Anti-Federalists. When the Constitution was finally adopted, the Anti-Federalists became "strict constructionists" and the Federalists "loose constructionists". President Washington had generally acted with the Federalists. Adams also belonged to that party. It was during his presidency that Congress enacted the celebrated Alien and Sedition Laws. These measures were unpopular, and, combined with the attitude of the Federalists during the War of 1812, led to their complete overthrow. They had organized the government and given it its tendency, but after the administration of Adams they became little more than a party of protest. In 1800 the followers of Jefferson, then known as Republicans, won the presidency. They had previously obtained control of Congress. At that time the conflict in progress between England and France divided the American people on the question of foreign relations. The Federalists, who were strongest in New England, favoured England, while the Republicans generally sympathized with France, the late ally of the United States. After the War of 1812 party lines had been almost effaced. President Monroe was practically the unanimous choice of the American people. The rivalry of Andrew Jackson and Henry Clay led, after 1829, to the rise of a new political party. The followers of Clay were known as Whigs, those of Jackson as Democrats. Clay and his friends favoured internal improvements at federal expense, and the continuance of the United States Bank, an institution first chartered by the Federalists. They also favoured a tariff for protection. These principles formed what is known as the "American" system. Of course, the Whigs were "loose constructionists" of the Constitution. To these principles the Democrats were opposed. That organization is generally regarded as being identical with the Jeffersonian party. William Henry Harrison, the first Whig

president, served for one month. His successor, Vice-President Tyler, though an admirer of Henry Clay, was a "strict constructionist". Again in 1848 the Whigs elected General Zachary Taylor and Millard Fillmore. This was their last victory. Their attitude toward the Fugitive Slave Law impaired their popularity, and in 1852 they met with a crushing defeat. In 1856 a new organization, composed chiefly of anti-slavery elements nominated Fremont and Dayton, the first candidates of the Republican party. They were defeated. After 1860, however, they won all the presidential elections except those of 1884 and 1892, when Grover Cleveland, the Democratic candidate, was chosen. The third parties, generally parties of moral ideas, will be noticed presently.

Territorial Accessions. After 1800 the successive acquisitions of territory are to be noticed. In point of time the Louisiana Purchase, in 1803, came first. This was acquired from France after she had lost the important colonial possession of Hayti, and when Napoleon had decided to renew the war with England. Florida was acquired from Spain in 1821, when the United States surrendered any claim they may have had to the Texan country. At that time and by the same purchase the United States succeeded to Spain's rights in the Oregon country. Having achieved her independence from Mexico, Texas was annexed in 1845 by a joint resolution of both Houses of Congress. The constitutionality of that act has been challenged. The settlement of the Oregon dispute was a contemporary event. To that country America had several distinct titles. Oregon was claimed by right of Captain Gray's discovery of the Columbia River, which he named after his ship; when President Jefferson had bought Louisiana he sent Lewis and Clark to explore that region; in 1811 the fur-trading station Astoria was established there. The right acquired with the purchase of Florida has already been mentioned. These claims, reinforced by American occupation, ultimately gave the vast Oregon country to the United States. The Treaty of Guadalupe Hidalgo (1848), which concluded the war with Mexico, gave to the United States an immense region in the southwest. This included the whole of California, Nevada, Utah, a small part of Wyoming, more than a third of Colorado, and considerable portions of Arizona and New Mexico. In 1853 the Gadsden Purchase from Mexico completed the boundary of the United States in that region. Alaska was purchased in 1867 for \$7,200,000 from Russia. In our own time (1899) Porto Rico and the Philippine archipelago were acquired, as a result of the war with Spain. Less important insular possessions in the Pacific (Hawaiian Islands, Guam, Samoan Islands) were also acquired about this time.

Foundations of Foreign Policy. The Neutrality Proclamation of President Washington has been mentioned. A second important step in the development of America's foreign policy was taken in 1823 when President Monroe sent to Congress his annual message. Between 1816 and 1822 a revolutionary government had been established in each of the Spanish colonies from the Rio Grande to Cape Horn. Upon due consideration, the United States had acknowledged their independence. After the overthrow of Napoleon the Holy Alliance had restored absolutism on the continent of Europe. The project was then considered of restoring to Spain her lost dependencies in South America. England, however, was opposed to such intervention. Her attitude was chiefly determined by the profitable commercial interests which had sprung up since the overthrow of Spanish dominion in that region. It was in these circumstances that Canning, the British Minister of Foreign Affairs,

proposed to Dr. Rush, the United States Minister in England, that the two powers issue a joint declaration against the proposed intervention of the Holy Alliance. Another element in the situation was the attitude of Russia, which had been establishing trading posts in the North-West. It was feared that she would endeavour to extend her dominion farther down the coast. John Quincy Adams, Secretary of State, protested against this action, and informed the Russian Minister that the United States would assume the position that the American continents were no longer open to future colonization by European nations.

President Monroe sought the advice of ex-Presidents Jefferson and Madison, and was encouraged by both in the stand which he was about to take. In his message to Congress, Dec., 1823, the president, in speaking of America's foreign policy, said that hitherto the United States had not interfered in the internal affairs of the Allied Powers; that "We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers, to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we have not interfered, and shall not interfere. But with the governments who have declared their independence and maintained it, and whose independence we have, on great consideration and just principles, acknowledged, we could not view any interposition for the purpose of oppressing them or controlling in any other manner their destiny, by any European power in any other light than as the manifestation of an unfriendly disposition towards the United States". And, "It was impossible that the Allied Powers should extend their political system to any portion of either continent without endangering our peace and happiness; nor could any one believe that 'our Southern brethren', if left to themselves, would adopt it of their own accord. It was equally impossible, therefore, that we should behold such interposition in any form with indifference". The part of the message referring to Russia declared that "occasion has been judged proper for asserting, as a principle in which the rights and interests of the United States are involved, that the American Continents, by the free and independent condition which they have assumed and maintained, are henceforth not to be considered as subjects for future colonization by any European power". These announcements of the president have since been collectively known as the "Monroe Doctrine". When these bold declarations were made, the United States felt confident of the support of Great Britain. Their joint navies would have made it impossible for the Allied Powers to conduct any military operations in the western hemisphere.

Sectional Conflict. In the Constitutional Convention (1787) it was clear that the North and the South had interests which were somewhat different. Notwithstanding this fact, they agreed upon a fundamental law by adopting a number of compromises. In the endeavour to administer the government other compromises were adopted between 1789 and 1860 when the Southern States were convinced that further compromises would be useless. It has already been stated that one form of opposition to the establishment of the First United States Bank was sectional. It was regarded as a Northern measure; was supported chiefly by Northern members of Congress, and received few votes from the South. In 1820 the difference between the sections assumed a very different form.

At that time it was bound up with the institution of slavery. In 1818 the Territory of Missouri applied for admission into the Union as a state. That application had not been acted upon in 1819 when Representative Tallmadge, of New York, proposed an amendment to the effect "that the further introduction of slavery or involuntary servitude be prohibited, and that all children of slaves born within the said state after the admission thereof into the Union shall be free at the age of twenty-five". This raised an important constitutional question, namely, whether under the Constitution, Congress had the power to impose conditions upon the admission of new states which were not imposed by the Constitution on the original states. The amendment of Tallmadge passed the House, but failed in the Senate. The discussions on the anti-slavery amendment created the greatest excitement throughout the country. The matter was finally settled by the first of the great compromises between the sections. Missouri was admitted without any restrictions upon slavery, but in all other territory north of its southern boundary (36 30' N. lat.) slavery was prohibited forever. Bound up with this controversy was the application of the District of Maine, which since 1691 had been a part of Massachusetts. Maine was admitted as a free state, thus preserving in the United States Senate the balance between the two sections. The Missouri constitution contained a provision excluding free negroes. This was a palpable violation of the Federal Constitution, which guarantees to the citizens of each state the privileges and immunities of citizens of the several states. This part of the controversy was set at rest by the influence of Henry Clay. It was provided that this discrimination of the Missouri constitution would not be enforced. This ended the first controversy over the question of slavery. In the division of the Louisiana Territory thus effected, the North gained much more territory than the South.

Grave as was the constitutional question that arose on the application of Missouri for admission to the Union, that which grew up about 1830 was much more alarming. After the war of 1812 the successive Congresses enacted tariff laws. So great was the opposition to that which was passed in 1828 that it was called the "Tariff of Abominations". The feeling between the sections showed itself when Senator Foote, of Connecticut, introduced a resolution proposing an inquiry as to whether or not it was desirable temporarily to suspend the sale of public lands, excepting such as were already surveyed. It also proposed to abolish the office of surveyor-general. Senator Hayne, of South Carolina, chose to regard this as a manifestation of the Eastern jealousy of the West. He made Foote's resolution the occasion of a general and energetic attack upon New England and a pretence for expounding the doctrine of nullification. By "nullification", in American history, is meant the claim by a state of the right to suspend within her own territory the operation of any act of Congress which the state deems injurious to her own interests. Hayne's brilliant oration was replied to by Webster (1830) in, perhaps, the greatest speech ever delivered in the Senate. It has been said that Webster took ground on a position toward which the greater part of the nation was steadily advancing, that is in the direction of nationalism. Hayne's sentiments found favour in the South alone. The theory which he had championed South Carolina soon sought to put into practice. In 1832 Congress passed a new tariff law, which omitted many of the objectionable features of the Act of 1828, though it still contained the principle of protection.

In South Carolina, where the objection to the law was strongest, the governor convoked the legislature in special session. That body issued a call for a state convention to meet at Columbia 19 Nov., 1832, and on 24 Nov. there was passed by that convention the famous Ordinance of Nullification. This declared the tariff law null and void so far as concerned South Carolina, forbade the payment of duties after 1 Feb., 1833, and prohibited appeals arising under the law from being taken to the United States courts. If Congress attempted to reduce the state to obedience, South Carolina would regard her connexion with the Union as dissolved. The legislature passed several laws to carry the ordinance into effect. Among them was an act that provided for placing the state on a war footing for the purpose of resisting the authority of the United States. Another act provided a test oath for all officers of the state, by means of which Union men were to be excluded from holding positions of honour or trust under South Carolina. President Jackson, who had been re-elected in 1832, does not appear to have been alarmed at the condition of affairs in South Carolina. He instructed the collector of customs at Charleston to perform the duties of his office, and, if necessary, to use force. He also issued an address to the Nullifiers. In it he urged them to yield; he likewise told them that "the laws of the United States must be executed. . . . Those who told you that you might peacefully prevent their execution deceived you. . . . Their object is disunion, and disunion by armed force is treason". When Congress met in December, 1832, the president wanted the passage of an act giving him power to collect tariff duties by force of arms. A great debate followed on this measure, which was known as the Force Act. Speaking for the South, Calhoun asserted the right of a state to nullify acts of Congress deemed injurious to her interests, and also the right to secede from the Union. Webster denied the right of nullification and secession, and upheld the Union and the Constitution. Henry Clay, fearing a civil war now came forward with a compromise. He proposed that the tariff of 1832 should be reduced gradually till 1842, when on all imported articles there should be an *ad valorem* duty of twenty per cent. This Compromise Tariff became a law in March, 1833. A second convention met in South Carolina, and repealed the Ordinance of Nullification.

The acquisition of territory from Mexico led to another great controversy between North and South, or rather between the free and the slave states. In August, 1846, President Polk asked Congress for \$2,000,000 "for the settlement of the boundary question with Mexico". Mexico had abolished slavery long before (1827), and David Wilmot of Pennsylvania moved that the money should be granted, provided that neither slavery nor involuntary servitude should exist in any territory that might be acquired from Mexico. The bill passed the House of Representatives, the Southern members voting almost solidly against it; in the Senate it never came to a vote. When finally the measure did pass, the Wilmot proviso was stricken out. Later it was sought to attach this anti-slavery provision to other bills. While it did not pass, it aroused the most bitter feeling in the South. At a meeting of Southern members of Congress an address written by Calhoun was adopted and signed, and then circulated throughout the country. Among other things it complained of the constant agitation of the slavery question by the Abolitionists. In 1849 the legislature of Virginia adopted resolutions of which one declared that "the attempt to enforce the Wilmot Proviso" would rouse the people of

Virginia to "determined resistance at all hazards and to the last extremity". The Missouri legislature also protested against the principle of the Wilmot proviso. One of the toasts at a dinner to Senator Butler, in South Carolina, was "A Southern Confederacy". Besides this general Southern opposition to the Wilmot proviso, that section complained of the difficulty of recovering slaves who had escaped to the free states. In almost every part of the South there was a demand that the territories be opened to slavery. Some of the legislatures contended that the abolition of the slave trade in the District of Columbia would be a direct attack on the institutions of the Southern States.

In the North, public sentiment was not less excited. The legislatures of the free states, except Iowa, resolved that Congress had the power and was in duty bound to prohibit slavery in the territories. Many states instructed their congressmen to do everything possible toward abolishing the slave trade in the District of Columbia. When Congress met in December, 1849, it had serious business on hand. It then seemed as if the Union were about to be broken up, and that in its place there were to be two republics—one composed of free states and one made up of slave states. As in the excitement of 1832, so now again Henry Clay came forward as a peacemaker. In his patriotic task he was assisted by both Webster and Calhoun. Several bills were at last passed by Congress. Collectively they are known as the Compromise Measures of 1850. By this treaty between the sections it was provided that California be admitted as a free state, and that the slave trade, but not the institution of slavery, be prohibited in the District of Columbia. These bills were agreeable to the North. The measures in which the South was interested were: territorial governments for Utah and New Mexico without any restriction on slavery; and the payment to Texas of \$10,000,000. for abandoning her claim to considerable neighbouring territory, and for having surrendered her revenue system to the United States at the time of her annexation. The measure in which the South was most interested, however, was a more stringent law for the return of fugitive slaves. During the debates on the measure, President Taylor died (9 July, 1850). He was succeeded by the vice-president, Millard Fillmore. A law relative to the return of fugitive slaves had been passed in the administration of President Washington (1793). The new law empowered United States commissioners to turn over a coloured person to anybody who claimed him as an escaped slave. It also provided that the negro could not give testimony. It further provided that all citizens, when summoned to do so, were required to assist in the capture of the slave, or, if it seemed necessary, in delivering him to his owners. Any citizen who harboured a fugitive slave or prevented his recapture was liable to fine and imprisonment. The Compromise of 1850 was expected to last forever. As we shall see, it became the very seed-plot of graver troubles. Slave catchers in great numbers invaded the North and hunted up negroes who had escaped twenty years, or even a generation before, and with the assistance of the United States marshals took them back to slavery. Both the free negroes and the whites in the North interfered with the officers in the performance of their duties. In this way many negroes regained their liberty. Disturbances occurred in many Northern cities, and some negroes were restored to their owners only after enormous expense. Northern States began promptly to pass Personal Liberty bills, for the protection of negroes who were claimed as slaves. In the South these laws were regarded as a violation of the Compromise.

Slavery Controversy. In colonial America slavery was general in the English possessions. In the South nearly all the unskilled labour was performed by negro slaves; in the North much of that work was done by a class of men known as "Redemptioners". For the latter class there was a prospect of entire freedom and even of social importance. For the most part the negro was doomed to toil forever; he had no hope of freedom and, perhaps, scarcely dreamt of wealth. When the War of Independence began, negro slavery existed in all the rebellious colonies. For economic and other reasons negroes were not numerous in the North. In the diversified industries of that section slave labour was not regarded as efficient. In the South, on the other hand, life was largely agricultural. On the large plantations the negro could be employed to advantage. His mind was adapted to the simple operations required in the tobacco and rice fields, while his body was well suited to its semi-tropical climate. There he thrived in spite of malaria. While the South was the section peculiarly interested in the institution of negro slavery, the North was not less interested in importing them from Africa. In the Declaration of Independence, Jefferson in his indictment of George III charged him, among other counts, with "suppressing every legislative attempt to prohibit or restrain this execrable commerce". In so doing he had "waged cruel war against human nature itself, violating its most sacred rights in the person of a distant people who had never offended him". Out of deference to the wishes of some Southern delegates in Congress, especially those from South Carolina and Georgia, Jefferson's denunciation was stricken from the final draft of the Declaration.

In the North the principles of 1776 were applied early. In 1777 Vermont, whose territory was still claimed by both New Hampshire and New York, adopted a constitution which declared that no person ought to be held as a slave after attaining to the age of maturity. In 1780 Pennsylvania enacted that the children of slaves born after that date should be free. A principle of the Massachusetts constitution of 1780 was interpreted by the supreme court of that state as abolishing slavery. In 1783 New Hampshire, and in 1784 Connecticut and Rhode Island all adopted measures looking to the gradual emancipation of their slaves. New York and New Jersey came later. At the time of the adoption of the Constitution (1785), slavery had almost disappeared in the North. Even in parts of the South it was unpopular. The great patriots and statesmen of Virginia, Washington, Jefferson, Madison, Mason, and others, hoped to see the institution quietly disappear. The Constitution recognized the existence of slavery and permitted the importation of negroes until 1 January, 1808. It also provides that in a census of the people three-fifths of the negroes be counted. This provision gave rise to two systems of enumeration. For state purposes every human being was counted, that is, if he were an inhabitant. For Federal purposes all whites were counted, three-fifths of the negroes, and any Indians who paid taxes. Thus the population of the state was not the same as its "Federal numbers". At the same time that the Constitution was being framed, the Continental Congress enacted the famous Ordinance of 1787. Section 6 forever prohibits slavery in the territory north-west of the Ohio River. This measure was re-enacted by the Congress under the Constitution.

When benevolent people and wise statesmen of the South expected the gradual extinction of slavery, the invention of the cotton gin created an industrial revolution in that section. Slavery became a source of extraordinary profit and was soon regarded as an economic necessity. Thereafter

cotton-raising became the chief industry of the South. There was an immense demand for negroes, and all thought of emancipation was forgotten. The Constitution conferred upon Congress no authority over the subject of slavery except in the territories and in the District of Columbia. After the admission of Maine as a free state, almost to the time of the Civil War, slave states and free states were admitted to the Union alternately. This preserved a sort of balance between the two sections. The American Colonization Society was organized at Washington in 1817. The object of this association was to organize settlements on the western coast of Africa for free negroes who would volunteer to go thither. During the forty years ensuing, 8000 emancipated blacks emigrated to Africa. The promoters of this society, whose officers were largely Southern men, were disappointed in the slender success of the movement. At that time there were a number of abolition societies in the South, though very few in the North. After 1829 abolition societies began to be organized in the North. These demanded the extinction of slavery not only in the territories but in the states. Periodicals appealing to this constituency and endeavouring to win converts were now undertaken from time to time.

Among the pioneers in this movement was one Benjamin Lundy, a New Jersey Quaker. He had resided in East Tennessee, whence he removed to Baltimore. In that city he published the "Genius of Universal Emancipation". There also he made the acquaintance of William Lloyd Garrison. The hostility of the pro-slavery element compelled them to leave the city. In 1831 Garrison began publishing the "Liberator" in Boston. The "Liberator" denounced the slaveholders as criminals, and demanded the immediate emancipation of slaves throughout the United States. As a defensive measure it was excluded from circulation in the South. While the effect of Garrison's teachings was feared in the slave states, they were not very acceptable in Boston. In 1835, while addressing an anti-slavery meeting at the City Hall, he was taken from the building and dragged through the streets with a rope about his body. For personal safety it was necessary to lodge him in jail. As a result of Garrison's teachings anti-slavery societies were formed in the North. The first of these was the "New England Anti-Slavery Society", organized in 1831. A few years later a national organization was formed in Philadelphia. The membership of these early anti-slavery organizations included Wendell Phillips, Gerrit Smith, Emerson, Dr. Channing, Theodore Parker, Henry Ward Beecher, and other persons equally well-known. Anti-slavery meetings were often dispersed by Northern mobs. A Connecticut teacher, Miss Crandall, who opened her school to negro girls, was thrown into jail, while her school was broken up by the mob. An Illinois Abolitionist editor, Rev. Elijah P. Lovejoy, was killed by a pro-slavery mob.

In 1831 occurred in Southampton County, Virginia, the Nat Turner insurrection, when the slaves rose against their masters and massacred sixty persons. In the South this was ascribed, without much reason, to the influence of Abolitionist literature. Large rewards were offered, below Mason and Dixon's Line, for the delivery of the prominent anti-slavery leaders. Northern legislatures were called upon to suppress the Abolitionist societies by law. They continued, however, to flood the South with their literature, and appear to have seriously expected to convince the slave-holders of the evils of human servitude. The South demanded the exclusion from the mails of this obnoxious

literature, but the postmaster-general claimed that he had no authority to exclude objectionable matter from the mails. In the summer of 1835 the people of Charleston took the matter into their own hands, intercepted the mails, seized the Abolitionist literature and made a public bonfire of it. The House of Representatives refused to receive petitions in any way relating to slavery, or rather voted to lay them on the table. In Congress ex-President John Quincy Adams acted as the spokesman of the Abolitionists. In the brief space of four years he presented two thousand anti-slavery petitions. The more the House endeavoured to discourage such petitions, the more active became the Abolitionists. That body therefore on 28 Jan., 1840, declared that "no petition, memorial, resolution or other paper praying for the abolition of slavery in the District of Columbia or any State or Territory, or the slave trade between the States and the Territories of the United States in which it now exists, shall be received by this House or entertained in any way whatever". About twenty members from the free states supported this resolution. For a long time petitions poured into the House praying for the repeal of the "gag rule", but it was not until 1844 that this was done.

In 1840 the Abolitionists nominated James Gillespie Birney a Southerner, as their first candidate for the presidency. He received 7000 votes. Four years later (1844) 62,000 voters supported another Abolitionist candidate. When it is remembered that many of the anti-slavery party were so radical that they refused to participate in such contests, their increase in numbers must have convinced the South that they were destined soon to be a menace to slavery. In Congress the discussion of slavery aroused much bitterness, and henceforth that issue coloured almost every question in the tide of events. Slavery had been recognized by the Constitution, but that instrument gave to Congress authority over the subject only in the District of Columbia and in the territories, and it was not until vast areas had been acquired by the United States that Southern statesmen perceived any danger to their own section in such agreements as the Compromise on the admission of Missouri. After the acquisition of the South-West from Mexico, they insisted that the restriction of slavery in the territories was a discrimination against those Southern citizens who were interested in the institution. The territories were open to the citizens of the North with their property; why not allow the citizens of the South the same privilege? To this the North replied that negro slavery was a moral wrong and ought to be restricted rather than extended. The civilized world, said that section, has condemned slavery as an evil. If, then, the institution could not be abolished, it should not be further extended. Moreover, if the citizens of a commonwealth could take into one of the territories all the kinds of property recognized by the laws of that commonwealth, the citizens of other states could insist upon the same privilege. In this case everything would be property in one of the territories which was so regarded in any one of the states. This is entirely inconsistent with any Congressional regulation of the subject. Perhaps not more than one-third of the Southern people were interested in the institution of slavery, but the large slave-holders formed a powerful aristocracy. Though in number they may not have exceeded 10,000, they were influential enough to name governors, congressmen, and state legislators, and for a time to determine important questions of foreign and domestic policy. In the South their opinions were not often questioned. In many of the Southern States it was forbidden to teach slaves to read and write, but oftentimes the more humane masters

taught them the meaning of the Scripture and even the elements of knowledge. Naturally the influence of the more intelligent among the negroes was feared. Southern statesmen of the generation before the Civil War expressed opinions that are not now held in that section.

The Kansas-Nebraska Bill. From the results of the presidential election of 1852 the Whig party never recovered. The great Democratic victory of that year is generally ascribed to the attitude of that party toward the Compromise measures, especially its position on the Fugitive Slave Law. Though in the beginning it met with much opposition, that act was now enforced quietly. When Franklin Pierce was inaugurated, 4 March, 1853, the nation was enjoying something like a state of tranquillity. The new president apparently believed that the slavery agitation had permanently sunk to rest. In the midst of this repose a measure was introduced into Congress which plunged the nation into a sectional strife more bitter than any which preceded it. Stephen A. Douglas, of Illinois, Chairman of the Senate Committee on Territories, introduced a bill to organize a government for that part of the Louisiana Territory between Missouri and the Rocky Mountains. Senator Douglas has been accused of having been influenced by his personal ambition. He could have added to his popularity by assisting in the acquisition of Cuba, a project agreeable to the South, but he was not in the president's cabinet. In the way of increasing his popularity he could have made himself acceptable to that section by a better tariff law, but he had little talent for mathematics or economics. The position which he occupied, as Chairman of the Committee on Territories, he proceeded to turn to account. He maintained that the part of the Compromise of 1850 referring to Utah and New Mexico established "certain great principles", which were intended to be of "general application". In his second bill it was provided that the country mentioned would be divided into two territories, one to be called Kansas and the other Nebraska. It expressly repealed that section of the Missouri Compromise restricting slavery, and opened up to slavery territory which was already free soil.

The true intent and meaning of this act, said the law, is, "not to legislate slavery into any territory or state nor to exclude it therefrom, but to leave the people thereof perfectly free to form and regulate their domestic institutions in their own way, subject only to the Constitution of the United States". There began at once a seven years' struggle for Kansas. From the North the free state men and from the South the slave state men rushed into Kansas and began a struggle for its possession. The slave State of Missouri promptly attempted to colonize the new territory, and settled at a place which was called Atchison in honour of a pro-slavery Senator of Missouri. On the other hand, the North was not idle. The New England Emigrant Aid Society sent a band of free state men, who settled west of Atchison at a place named Lawrence. Strife began in November, 1854, at the election of a territorial delegate to Congress. Armed bands of Missourians crossed the border into Kansas, took possession of the polls, and, though they had no right to vote, elected a pro-slavery delegate. According to the principle of the Kansas-Nebraska Bill the people dwelling in the territory were to decide whether it should be a free or a slave territory. Therefore each side endeavoured to elect a majority of members to the territorial legislature. The election took place in March, 1855. As election day approached, armed Missourians entered Kansas "in companies, squads, and parties, like an invading army, voted, and then went home to Missouri". In this manner was elected a

legislature of which every member save one was a pro-slavery man. It promptly adopted the slave laws of Missouri and applied them to Kansas. The free state men repudiated this legislature, held a convention at Topeka, and made a free state constitution, which they submitted to popular vote. Pro-slavery men refrained from voting but the free state people ratified the proposed constitution. Later they elected a governor and a legislature. When that body assembled, senators were elected, and Congress was asked to admit Kansas into the Union.

The old leaders of the Whig party, Clay and Webster, were dead, but that organization lost not only leaders but thousands of voters in the free states. As early as 1841 a state convention in Louisiana founded the Native American or Knownothing party. The Kansas-Nebraska Act and its execution led to a breaking up of the old political parties. As early as 1854 there was formed a new organization established on anti-slavery principles. The new party, named Republican, was joined by Free-soilers, Whigs, and anti-Nebraska Democrats. The first National Nominating Convention of this party (1856), its candidates, and some of its principles have been noticed in the sketch of political parties. In that election the Democratic nominees, Buchanan and Breckinridge, were chosen. Whigs and Knownothings then disappeared from national politics. In his inaugural address President Buchanan referred to a forthcoming decision of the United States Supreme Court, which would set at rest the slavery agitation. This was in the case of *Dred Scott v. Sanford*. The question in this celebrated case was whether a slave became free if taken by his master to, and permitted to reside in, a free state. The opinion of the majority decided;

- that Dred Scott was not a citizen, and therefore could not sue in the United States courts. His residence in Minnesota had not made him free;
- that Congress could not exclude from the territories slave property any more than other sort of property;
- the Missouri Compromise of 1820 was null and void. The dissenting opinion of Justice Curtis in this case was destined to become the legal basis of the Thirteenth Amendment.

The effect of this decision was to split the Democratic party in the North and to attract great numbers of anti-slavery men to the new Republican organization. In Kansas the struggle between free-state and slave-state men continued, the administration giving its support to the latter. To this era belong the celebrated joint debates between Senator Douglas and Abraham Lincoln for the United States senatorship for the State of Illinois. The legislature which was to elect a successor to Senator Douglas was itself to be chosen in 1858. One candidate was an advocate of squatter sovereignty, the other was opposed to the extension of slavery into the territories. Before the people of seven towns in their state the rival leaders discussed their respective platforms. Though Lincoln was defeated for the United States Senate, his remarkable speeches made him a national character and won for him the Republican nomination in the great contest for the presidency in 1860. In that era John Brown, who hated slavery and who had opposed it in Kansas, settled on the Maryland side of the Potomac River not far from Harper's Ferry with about twenty followers. In October, 1859, they seized the United States armoury at that town and freed a number of slaves in its vicinity. The negroes did not rise as Brown had expected; his force was soon overpowered by United States troops; Brown himself was captured, tried for treason against the State of Virginia, and convicted

of promoting a servile insurrection. In December, 1859, he was hanged. In some localities of the North there was sympathy for his fate, but other communities looked on with indifference.

To many people in America the administration of President Buchanan appeared to be perfectly tranquil. Nevertheless, there were at work unseen but powerful forces. As we have seen, as early as 1832 there was talk of disunion; after 1850 the notion of secession became familiar. In 1860 the excuse for this step was the election of Abraham Lincoln, the candidate of the Republican party who was regarded by the South as a sectional candidate, now a sectional president-elect. The party to which Lincoln belonged was a minority one. Indeed, there were cast against him almost a million more votes than were cast for him. In the Presidential contest of 1860 Breckinridge and Lane expected the support of the Southern States; Douglas was the choice of the Northern Democrats. The Constitutional Unionists nominated Bell and Everett. It was this split in the Democratic party that made possible, in November, 1860, the election of Abraham Lincoln and Hannibal Hamlin.

The Legislature of South Carolina, which had assembled for the purpose of appointing electors of president and vice-president, called a convention, which met at Charleston on 20 Dec., 1860, and passed an ordinance of secession. According to the Southern theory, this act severed the relations of that state with the Union. Other states followed her example, and in Feb., 1861, at Montgomery, Alabama, organized the Confederate States of America. A provisional constitution was adopted, and agents were sent into other Southern States to persuade them to join the slave-holding confederacy. At different dates until May, 1861, other commonwealths cast their fortunes with the new government. In all, the seceding states numbered eleven. The President of the Southern Confederacy was Jefferson Davis, of Mississippi; Alexander H. Stephens, of Georgia; was chosen vice-president. The constitution differed but slightly from the Constitution of the United States. Its preamble stated that the Confederate States acted in their sovereign and independent capacity.

Civil War. While the people of the South were organizing a government, President Buchanan did nothing to preserve the Union. In his view the states had no right to secede, but, if they did so, there was no authority conferred by the Constitution of the United States to prevent such action. On 4 March, 1861, Lincoln took the oath of office as president and delivered a very temperate address, in the course of which he stated that he had no purpose to interfere with the institution of slavery in the states where it existed, and he believed that he had no lawful right to do so. Nevertheless, he had formed a resolution to enforce the laws and to protect the property of the United States. It was in his endeavour to carry out this policy that the great Civil War began. In their eagerness to extend their authority over the entire South the Confederate officials decided to seize Fort Sumter, which was the property of the United States. On 12 April 1861, a considerable army under General Beauregard began its siege. The little garrison under Major Anderson was compelled to surrender. The first important battle between the sections took place at Bull Run, Virginia, 21 July, 1861, when the same Confederate general defeated the Union army under General McDowell. For the conflict thus inaugurated the South, which had long been preparing, was much better equipped than was the North. After looking into the law and consulting the precedents, President Lincoln in a proclamation called forth the militia of the several states.

The policy adopted in Washington was to divide the Confederate States along the line of the Mississippi, to blockade their ports and to take their capital, which had been removed to Richmond after the secession of Virginia. The Confederates won another battle, at Ball's Bluff, in Oct., 1861. Meanwhile a large army was being brought together at Washington. This was placed under the command of General George B. McClellan, who later advanced toward Richmond from Yorktown. In May, 1862, his army was close to the Confederate capital. Thereafter occurred heavy fighting until the beginning of July. Later in the season the Union forces were again defeated near the old Bull Run battle-ground. This succession of victories persuaded General Robert E. Lee, then in command of the Army of Northern Virginia, to make his first invasion of the North. On 16-17 Sept., 1862, he was defeated at Antietam by a superior Union force under General McClellan, and compelled to retreat into Virginia. The approach of winter found him occupying a strong position in the vicinity of Fredericksburg. There he was attacked by General Burnside, who had superseded McClellan in the command of the Federal army Lee inflicted immense loss on his opponents, and in May, 1863, at Chancellorsville won perhaps a still greater victory. These advantages effaced every recollection of his defeat at Antietam, and induce him to make another invasion of the North. During May and June, 1863, his victorious troops marched leisurely through Virginia and Maryland, and during the first three days of July following fought at Gettysburg, Pennsylvania, the greatest battle of the New World. The defeat of General Lee by General George G. Meade, the Commander of the Army of the Potomac, was a disaster to the South, and marked the turning-point of the war. General Lee never again commanded so splendid an army; in fact the Confederacy could not furnish one. Perhaps a greater military leader than Meade would have annihilated the remnant of the Army of Northern Virginia before it arrived at the Rappahannock a second time. As it was, Lee escaped and was able to protract the struggle for more than another year. When the war was renewed in Virginia, Lee and his famous captains were opposed to Generals Sheridan and Grant.

The mention of these officers reminds one of the progress of the Federal armies in the West. The problem of opening up the Mississippi was begun in the south by General Benjamin F. Butler in command of an army, and Commodore D. G. Farragut, who co-operated with a powerful fleet. In April, 1862, New Orleans was permanently occupied by the Federals. Farther north the river had been freed from Confederate control by the victories of General Pope, General Grant, and Commodore Foote. The capture of Forts Henry and Donelson brought Grant's army into the heart of Tennessee and led to the flight of its legislature to Memphis, where the Confederates still had a foothold. Later that general directed his attention to the remaining obstacles to the free navigation of the Mississippi, namely Vicksburg and Port Hudson. However, his first movements were not altogether successful. Sherman and some of his other officers met with reverses. In fact, there was little in the first attempts that would lead one to foretell a glorious conclusion of the campaign. Grant decided to run past the batteries at Vicksburg; landed a large army below that place, and in the interior of Mississippi defeated both Pemberton and Johnston, the Confederate commanders. The army of the former general, over 37,000 strong, which was forced into the city of Vicksburg, surrendered on 4 July, 1863. This loss occurring on the day after the great defeat at Gettysburg was

too much for the resources of the South. Within about five days Port Hudson also fell into the hands of the Federals, and the Mississippi was open from its source to the Gulf.

A large Union force under General Rosecrans was stationed near Murfreesboro, Tennessee, where also was the Confederate General Bragg with a fine army. In that vicinity was fought one of the great battles of the war. Bragg was defeated 31 Dec., 1862, and 2 Jan., 1863, and was finally forced to enter Georgia, where he was greatly strengthened. On 19 and 20 September, 1863, these armies fought at Chickamauga the most desperate battle that had yet taken place in Tennessee. The military genius of General George H. Thomas saved the Union army from destruction after Rosecrans had left the field. Though his fame was to come later, even here Sheridan displayed great ability. Though still in command, Rosecrans remained inactive, and pressed the administration for reinforcements. When it was feared that he would surrender the army, President Lincoln sent General Grant to the headquarters of Rosecrans; Sherman came later with a small force. As we have seen, Sheridan and Thomas already belonged to that army. General Hooker was sent west from the Army of the Potomac, which was following Lee. This was the only occasion during the war when nearly all the great Union commanders took part in any battle. The Federal cause had the benefits of their services at Missionary Ridge and Lookout Mountain, 23-25 Nov., 1863. In these great battles Bragg, after much loss, was forced into Georgia, where his command was turned over to General Joseph E. Johnston. He retreated slowly toward Atlanta, followed by Sherman and Thomas. Grant and Sheridan came east; the former, commander-in-chief of all the Federal armies, took up his headquarters with Meade's army, while the latter was given an independent command in West Virginia. This brought him later into the Shenandoah Valley, where he destroyed a fine Confederate army under General Early during the summer and autumn of 1864.

After winning a number of small battles from Johnston, who had continued to retire before him, Sherman finally reached Atlanta. There his command was energetically attacked by General J. B. Hood, who had superseded Johnston. The aggressive system of the new leader destroyed an excellent army and left the State of Georgia at the mercy of Sherman's veterans. To draw the Federal commander away from the interior of the commonwealth, Hood entered Tennessee, intending, no doubt, to alarm the people of the Middle West by a demonstration of force in the direction of the Ohio River. This policy, however, failed to divert Sherman from his purpose of marching to the sea and destroying en route whatever would be of value to the Confederate armies. This was very thoroughly, Southern people think ruthlessly, done. By December, 1863, Sherman captured Fort McAllister, and later made President Lincoln a Christmas present of Savannah. As he marched northward through the Carolinas, General Hardee hurried away from the city of Charleston lest his little army might be captured. When Hood invaded Tennessee, Sherman left Thomas to deal with him. In an evil hour for the Confederacy, Hood threatened Thomas at Nashville. The Union commander came from behind his defences, captured the Confederate guns and soldiers behind their intrenchments and annihilated Hood's army. After this, all the available troops in the lower South were entrusted once more to General Johnston. Great though that officer's genius undoubtedly was, it was not sufficient to sustain the declining fortunes of the South. Grant had begun at the

Wilderness 4 May, 1864, his advance toward Richmond and Petersburg. Sheridan, as already stated, had destroyed the army of Early in the Shenandoah Valley, and of his own account joined the great army under Grant. In the beginning of 1865 there was an attempt to end the war by a conference of Southern statesmen and President Lincoln, with his Secretary of State, at Hampton Roads, Virginia. Nothing came of this attempt. The South made an expiring effort, but its resources were exhausted. Grant forced Lee out of Richmond; he was hurrying toward the western part of Virginia, and was compelled at Appomattox Court House to surrender the remnant of his small army. Grant was in his rear and Sheridan squarely in his path. The end, which had long been foreseen, came on 9 April. Less than three weeks later Johnston surrendered to Sherman near Raleigh, North Carolina. The small Confederate forces still in arms soon dispersed or surrendered.

The Confederate navy was built chiefly in England. Cruisers equipped in that country inflicted much damage on American commerce, and for her failure to refrain from these indirect acts of hostility Great Britain was later compelled to pay the United States the sum of \$15,500,000. This was distributed among those American citizens whose property and ships had been destroyed by vessels of the class of the "Alabama", the "Florida", and the "Shenandoah". For a time England refused to pay any attention to the demands of the United States, but finally entered into a treaty, and consented to leave the settlement of the matter to an arbitration court, which convened at Geneva in 1872, with the result mentioned. These vessels inflicted great damage on American commerce, and British officials in the Bahamas, the Bermudas, and the West Indies permitted ships known as blockade runners to land immense quantities of English goods in Southern ports. This had much to do with the desperate resistance of the South. The Federal navy, however, was efficient, and during the war captured or destroyed 1504 ships engaged in this perilous trade. In the beginning of the conflict the South built ironclads like the "Merrimac," and destroyed many of the wooden ships of the United States navy. After 1862 the Federal Government began to construct a new type of warship known as "Monitors", which were found effective in coping with the Southern ironclads, and resulted in the maintenance of the blockade of the Southern ports. The first of those so named was invented by an engineer named Ericsson, also the inventor of the screw propeller. When the war began, the vessels of the United States navy were scattered over the globe.

Reconstruction. When the Virginia secession convention decided to support the Confederate States, the citizens in the western part of the "Old Dominion" took steps to establish a loyal state of Virginia. A governor was chosen, senators and representatives were elected, and finally admitted to seats in Congress. The new commonwealth, which was called West Virginia, was proclaimed a member of the Union, 20 June, 1863. As soon as Tennessee was beginning to slip from the hands of the Confederacy, President Lincoln appointed Andrew Johnson as military governor of that state. Immediately after his arrival in Nashville he began to organize the Union elements, and took steps toward the building up of a loyal state government. He also exerted himself to persuade men to enlist, and after providing them with arms sent them to the front. His attempts to establish a government friendly to the United States were constantly interrupted by Confederate armies. It was during the severe fighting in that state that the president issued his proclamation of amnesty and

reconstruction. He sought to apply the same system to the States of Arkansas and Louisiana. His plan of restoring loyal governments in those states was as follows: a duly qualified person was to take a census of those who were willing to take an oath of allegiance to the United States. If their number was equal to ten percent of the voters of the state in the presidential election of 1860, they were empowered to take steps toward the formation of a loyal government. This nucleus would be recognized by the president as the state, and would receive the protection of the army and navy of the United States while they were organizing it. Of the states reconstructed according to this plan only Tennessee was recognized by Congress. On this important subject the National Legislature was not in harmony with the executive, and after the assassination of President Lincoln, that body soon disagreed with his successor, Andrew Johnson. When the 39th Congress met in December, 1865, it refused to admit to the seats which they claimed those senators and representatives who came from states reconstructed under the direction of President Johnson during the preceding summer. Instead the Congress appointed a joint committee, which was empowered to inquire into the condition of the states recently in rebellion, and determine whether any of them were entitled to representation in Congress.

On 18 Dec., 1865, the thirteenth amendment was proclaimed a part of the Constitution. This abolished slavery in every part of the United States. The president's proclamation, which became operative on 1 Jan., 1863, had freed the slaves only in the seceding states, and of them certain parishes of Louisiana, a few counties in Virginia and the entire State of Tennessee were excepted. There was also a doubt in the minds of some lawyers as to whether the proclamation of President Lincoln, which was issued as a military measure, was perfectly valid. To free the slaves everywhere in the Union, and to set at rest the scruples of constitutional lawyers, it was deemed necessary to make this change in the fundamental law. The Joint Committee suggested the submission to the states of the fourteenth amendment. This, which was adopted in July, 1868, nationalized citizenship, disfranchised certain classes who had participated in rebellion, and prohibited the payment of the Confederate debt. To entitle a state to restoration in its former place, these amendments had to be adopted. Those states that did not do so promptly were required to adopt still another amendment, the fifteenth, which in effect gave the freedmen the franchise. Mr. Lincoln would have conferred the suffrage upon the more intelligent of the negroes and those who had fought gallantly in the Union ranks. Beyond that he was not prepared to go. The enfranchisement of the entire body of males twenty-one years and over among the freedmen was the result of the adoption by Congress of a plan of reconstruction very different from that of Mr. Lincoln. It was shaped to a great extent by Charles Sumner and Thaddeus Stevens. In pushing their measures through Congress they were constantly opposed by President Johnson, who was a Democrat and a "strict constructionist" of the Constitution. When he violated the Tenure of Office Act, he was promptly impeached of high crimes and misdemeanours. The managers of the impeachment lacked one vote of the two-thirds necessary to convict. One by one the erring states returned. The Congressional plan of reconstruction provided for a division of the South into eleven military districts, and the establishment in each of troops commanded by a major-general. Far earlier there had been established a Bureau of Freedmen

Refugees, and Abandoned Lands. The army and the Freedmen's Bureau assisted in preserving order during the interval up to the spring of 1877, when the last of the Federal troops were withdrawn from the South. This was the end of the era of Reconstruction. It is impossible even to estimate the destruction of wealth that had resulted from four years of war, or the confusion that succeeded.

Burdens of War. In the administration of President Jackson the public debt of the United States was about \$37,000. By 1861 it had risen to \$90,000,000. The total revenue was then only \$41,000,000 a year. When the war began it was necessary to adopt a method more productive. Early in the conflict Congress increased the duties on imports; imposed a tax of 3 percent on all incomes over \$800; created an internal revenue; taxed trades, professions, occupations, and even sales and purchases. From such sources there was collected between 1862 and 1865 the sum of \$780,000,000. By reason of its constitutional authority Congress borrowed money "on the credit of the United States" by selling bonds. The extent to which advantage was taken of this grant of power will be apparent from the fact that between 1 July, 1861, and 31 Aug., 1865, there was sold to the people of the United States \$1,109,000,000 worth of bonds, to raise money to carry on the war. United States notes, bearing interest, were issued to the amount of \$577,000,000. There were also notes bearing no interest. These included the "old demand notes", the "fractional currency", and the "national bank notes". Though the amount of money paid out in the course of the war was immense, there was a public debt of \$2,845,000,000 on 31 Aug., 1865. Besides the Federal debt there were state debts of almost \$500,000,000. A generation after the war had passed away the National Government was still paying out annually in pensions from \$150,000,000 to \$160,000,000, at that time about one-third of its entire expenses. At the distance of half a century from the beginning of the great conflict vast sums are still paid in pensions to the disabled survivors and the dependents of deceased Union soldiers. It has been estimated that 300,000 men lost their lives in the war for the Union. In the cause of secession the loss of life must have been quite as great, and the amount of suffering very much greater, because the South, in the era preceding the war, obtained almost everything in the way of manufactures from the North or from Europe. The outbreak of the rebellion found the people within the Confederacy almost destitute of the skill or the machinery to make the goods which they consumed, and the stringent enforcement of the blockade by the United States ships soon caused embarrassment ever where in the South. Instead of healing the wounds of war the Congressional plan of reconstruction, which contained vindictive elements, served only to aggravate them. It was, however, believed to be necessary, and was, therefore, supported by patriotic and enlightened men in the North.

New States. The south-western part of the United States was acquired from Mexico at the close of the Mexican War. California, which was included in that cession and admitted to the Union as a free state by a provision of the Compromise of 1850, rapidly developed. The rumour that gold had been discovered there was soon known throughout the world, and from the countries and the islands of the Pacific there arrived many settlers. From Mexico and from every part of the United States came multitudes. The rush was greatest in 1849, but it continued long after. Indeed, it has been only in comparatively recent times that it has nearly ceased. Even yet some of its rapidly

growing cities receive large accessions from the older states. In 1858, ten years after the discovery in California, tidings reached Missouri that gold had been found on the eastern slope of the Rocky Mountains. A mining camp was soon established on Cherry Creek, in what was then the Territory of Kansas. Later it was named Denver, in honour of the governor. Within a year the place had a population of 1000. In the interior of the mountains some silver-mining camps were in 1864 erected into the State of Nevada. In the space between that state and the Territory of Colorado the Mormons after having been driven out of Illinois, settled in 1848, when they established the community of Deseret, later known as Utah. Montana and Idaho, as well as Colorado were made territories, while Arizona was separated from New Mexico. In 1876 Colorado became a state; The camp on Cherry Creek, Denver, is now a populous city.

On 2 Nov., 1889, the Dakotas came into the Union as states; Montana was admitted on 6 Nov., and three days later the Territory of Washington became a state. In 1907 Oklahoma was admitted as the forty-sixth state. In 1912 Arizona and New Mexico were admitted as states. The accession of new states suggests the territorial expansion of the original Union. It does not, however, give one a definite idea of the national increase in population, in wealth, and in power since 1789.

End of Reconstruction. The two administrations of President Grant formed a period of recuperation and industrial progress. His second term was marked by much corruption in the bureaus of the general government. This condition may have been due to his training, which was chiefly military. Perhaps it was this limitation that enabled dishonest men to win his confidence. During the war the Democratic party formed a very small minority in Congress, but it was strong enough to watch the opposition and to take note of the political scandals. Just at that moment this minority party came under the leadership of Samuel J. Tilden, of New York. With great ability as a lawyer and an unquestioned record as a reformer, he was influential enough to persuade his party to accept the Civil War amendments of the Constitution. In the summer of 1876 he was nominated for the presidency. At the same time Thomas A. Hendricks, of Indiana, was nominated for the vice-presidency. Two weeks earlier the Republican national nominating convention had named Governor R. B. Hayes, of Ohio, and William A. Wheeler, of New York, as its candidates for the presidency and vice-presidency, respectively. On 6 Nov. the election took place, and on the following morning most of the Republican leaders conceded the election of the Democratic candidates. Zachariah Chandler, the campaign manager of the Republican party, did not, however, admit it, but promptly claimed for the nominees of his party 185 electoral votes, and their election by a majority of one vote. On the face of the returns it appeared that the Democratic candidates had carried all the Southern States; also New York, New Jersey, and Indiana. There was no question that Tilden received 184 votes, or one less than the majority required by the Constitution. The 185 claimed by the Republican manager could be made up only by including the electoral votes of Florida, South Carolina, and Louisiana. The Republican "returning boards" of those states had it in their power to determine the result of the election by throwing out the votes of any places where, in their judgment, fraud or intimidation had occurred. One of the Republican electors of Oregon was said to have been disqualified under the Constitution, because he was an officer of the United

States. The governor gave the certificate in this case to the Democrat having the highest vote. If Tilden could get this disputed vote his election was assured. This disqualification was merely a technical one, for the Republicans had undoubtedly carried that state.

It seems to have been otherwise in the case of the three Southern States. The constitution says that the presiding officer of the Senate "shall open all the certificates and the votes shall then be counted", but it does not say who is to do the counting. In 1876 the Senate was Republican and the House was Democratic. Two sets of certificates had been sent to Washington. In November and the months following there was much excitement throughout the country, and some persons thought of attempting to seat Mr. Tilden by force. To suppress any disorder, President Grant strengthened the military forces around the capital. In this action the Democrats perceived an attempt at intimidation. So grave was the situation that Congress decided to submit the disputed points to an Electoral Commission. This was to consist of five United States senators, five representatives, and five justices of the United States Supreme Court. There were three Republican and two Democratic senators; the House had appointed three Democratic and two Republican representatives. Congress had elected two Republican and two Democratic justices, and they were to choose a fifth. It is perfectly clear that this member could determine the entire question. Mr. Justice Bradley, a Republican, was the person chosen. This made up a commission of eight Republicans and seven Democrats. Every important question before the Commission was decided by a strict party vote. By many independent persons it is regarded as an established fact that the Democrats had been counted out in the election of 1876 by "carpet baggers" and the negroes, who were under their guidance. On 2 March the election of Hayes and Wheeler was announced by the president of the Senate. Amongst Democrats there was extreme disappointment, but Mr. Tilden himself advised obedience to the law.

An early act of the new president, often referred to by orators and newspapers as a fraudulent Executive, was the withdrawal of the Federal troops from the South. The "carpet bag" governments soon came to an end, and also the wild political orgies that disgraced them. This also was the era of strikes, Chinese agitation, and epidemics. Before the administration of President Hayes began, an important question of foreign relations was settled. In 1861 Great Britain, Spain, and France each sent an army to Mexico to collect debts due their respective subjects. When it became apparent that Napoleon III had ulterior designs, Great Britain and Spain withdrew. The French troops remained. Seeing that the United States was engaged in war, Napoleon overturned the Mexican Republic and made Maximilian, a brother of the Emperor of Austria, Emperor of Mexico. The United States protested against this violation of the principles of the Monroe Doctrine, but nothing was done till the war was over. Then General Sheridan was sent to the Rio Grande with 50,000 veterans. The French army was promptly withdrawn in 1867, and Maximilian fell into the hands of the Mexicans, by whom he was shot. The republic was then restored.

Recent History. In the election of 1880 the Republican candidates, General James A. Garfield and Chester A. Arthur: were successful. The new executive had scarcely entered upon the duties of his office when he was shot by Charles J. Guiteau, a disappointed office-seeker. This event took

place on 2 July, 1881, but the president lingered on till 19 Sept., 1881, when he died at Elberon, New Jersey, where he had been taken in the hope that he might recover. The forty-sixth Congress had ceased to exist on 4 March, and the forty-seventh would not meet till December. Had President Arthur died or been killed during the interval, there would have been no national executive. It was this condition which suggested the passage in 1886 of the Presidential Succession Act. Thereafter, in case of the occurrence of vacancies in both offices, the heads of departments would succeed to the presidency in the order in which those departments had been established, viz., State, Treasury, War, Justice, Post Office, Navy, Interior. No other departments existed at that time. Of course, the secretary succeeding to the presidency must have the qualifications enumerated in the Constitution. In the administration of President Arthur there was passed a law for the suppression of polygamy in Utah; also an act to regulate appointments to the Civil Service of the United States. Hitherto most of those appointments had been bestowed as a reward for partisan services. The new law was designed to make appointments to public office on the ground of fitness. Since its passage in 1883 much progress has been made in the matter of making appointments, but the system is still crude.

In the presidential contest of 1884 the Republicans nominated James G. Blaine and John A. Logan as their candidates, while the Democrats selected Grover Cleveland and Thomas A. Hendricks. The nomination of Blaine was the signal for a secession from the Republican ranks. Independents within the party, then known as "Mugwumps", refused to support the ticket, and contributed much toward its defeat. In the first administration of Grover Cleveland there were passed several important laws: an anti-contract labour law (1885), which prohibited the importation of aliens into the United States under contract to perform labour or service; the Interstate Commerce Act (1887), which placed railways under the supervision of a commission. That body has to see that charges for the transportation of merchandise and passengers are reasonable and just; also that no rebates, special rates, or unjust discriminations are made for one shipper in preference to another. A second Chinese Exclusion Act was passed in 1888. This prevented the return to the United States of any Chinese labourer who had once left this country. A Bureau of Labour was created in the same year. Questions of public finance also received the attention of the administration. In twenty years the public debt had been reduced by \$1,100,000,000. Every bond that could be cancelled was called in and paid at its face value. There were other bonds, but they had many years to run. The Government could indeed buy them at a high rate or allow them to run. It did not appear sound policy to buy them at a high rate, while if they were permitted to run, the Government did not need its present income, for a surplus was rapidly accumulating in the Treasury. This was the condition which led to the proposal to enact a new tariff law. This conclusion was reached toward the close of President Cleveland's administration. When, therefore, the presidential election of 1888 came round, it found the Democrats supporting the policy of a tariff for revenue. On the other hand, the Republicans desired to retain the protective tariff. They proposed to reduce the revenue by lowering the taxes on tobacco and on spirits used in manufactures. They would also admit free of duty articles of foreign manufacture, if the United States did not manufacture a similar class of articles. Benjamin Harrison and Levi P. Morton were chosen as Republican candidates. When this party was again in

control of the government, it began at once to take measures for the redemption of its promises. The McKinley Tariff Act was passed in 1890, and on 27 June in the same year a dependent pension bill. Hitherto the laws granted pensions only to those who had sustained an injury or contracted a disability in the service and in line of duty. The new law allowed a pension to all those who had served ninety days in the army or the navy, and were disabled, whether they contracted that disability in the service or not. The maximum allowance under this law was \$12, and the minimum \$6 a month. This law increased the names on the pension rolls to 970,000. It was in the administration of President Harrison that the Sherman Act became a law. It provided that the Secretary of the Treasury should buy each month 4,500,000 ounces of silver; that he should pay for the bullion thus purchased with treasury notes; that on demand of the holder the secretary must redeem these notes in gold or silver; after a fixed date, 1 July, 1891, the silver need not be coined, but might be stored in the treasury, and silver certificates issued. The Farmers Alliance and the People's Party belong to this era.

In 1892 Cleveland was once more elected. This time the Democratic party had control of the two political departments of the government, its first complete triumph since 1856. At the time of his inauguration, 4 March, 1893, the business of the country appeared to be in a very prosperous state, but during the succeeding summer and autumn there swept over the country a financial and industrial panic which wrecked banks and commercial establishments. Manufactories shut down everywhere, and over 300 banks suspended or failed. This was the beginning of a period of great distress. Believing that the compulsory purchase of silver by the Secretary of the Treasury was responsible, to some extent, for the alarming conditions, the president convoked Congress in special session, and asked for the repeal of that clause of the Sherman Act which required a monthly purchase of silver. On 1 November, after a considerable struggle, the compulsory clause was repealed. Industry, however, did not revive. In December, 1893, the Democratic Congress met and passed the Wilson Bills a tariff measure in harmony with Democratic principles. As it was foreseen that the revenue from such a tariff would not produce a revenue sufficient to pay the expenses of the Government, one section of the act provided for a tax of two per cent on all incomes above \$4000. This part of the law was afterward declared by the United States Supreme Court to be unconstitutional.

In the matter of foreign relations there occurred during the second administration of President Cleveland a grave controversy between the United States and Great Britain over the boundary between Venezuela and British Guiana. England claimed territory which had hitherto been regarded as belonging to Venezuela, and in this claim the president believed that he perceived a purpose on the part of England to ignore the principles of the Monroe Doctrine. The excitement both in England and the United States was extreme, and some people looked for a war as the outcome. On 2 Feb., 1897, however, a treaty of arbitration was signed at Washington between Venezuela and Great Britain. While the controversy was pending a commission appointed by the president had examined the boundary question and made a report on the subject.

President Cleveland inherited from his predecessor the results of a revolution in the Hawaiian Islands, a revolution in which the United States was involved. In January, 1893, Queen Liliuokalani was deposed by her subjects, who then set up a provisional government, and sent commissioners to Washington to prepare a treaty of annexation to the United States. On 15 February this was sent to the Senate for approval. During the progress of these negotiations the president had heard that a force of men from a United States vessel had landed and given assistance to the revolutionists. This consideration led him to recall the treaty from the Senate and also to send to the islands an agent to investigate the entire affair. The report of this commissioner set forth that the queen had been practically deposed by United States officials. The president then sent another representative to the islands. He was instructed to seek for the restoration of the deposed queen on certain conditions, namely that she would grant full amnesty to all persons concerned in the events by which she had been deposed. To this she demurred, and expressed a purpose to behead the leaders and to confiscate their property. Upon receipt of this reply the president instructed his representative to cease all communication with her until she would agree to grant an amnesty. To this she consented in December, 1893. President Dole was then requested to surrender the government to the queen, but he refused to do so, denying the right of the President of the United States to interfere in the domestic affairs of the islands. Mr. Cleveland, doubting his authority to employ force, referred the entire matter to Congress, where it was investigated by the Senate Committee on Foreign Relations. Construing this action as a purpose to leave the islands to take care of themselves, the revolutionists framed a constitution and organized a republic, 4 July, 1894. The new government was promptly recognized by President Cleveland, and the deposed queen, to whom he had promised a restoration, abandoned the contest for her throne. Though the United States was chiefly responsible for her deposition, succeeding Congresses have ignored her repeated applications for indemnity.

In the presidential election of 1896 the Republican party nominated William McKinley and Garret A. Hobart, and in its platform declared its opposition to "the free coinage of silver except by international agreement". Upon this announcement there took place a secession of twenty-one delegates from the convention. These represented the states which were then the chief producers of silver namely Colorado, Idaho, Montana, Nevada, South Dakota, and Utah. The Democratic convention was held in July, and after a very exciting session chose William J. Bryan and Arthur Sewall and declared for "the free and unlimited coinage of both silver and gold at the present legal ratio of 16 to 1, without waiting for the aid or consent of any other nation". Following this declaration of the convention, many leaders of the party refused to give it their support, scores of newspapers withheld their assistance, and finally in the month of September a convention of "gold Democrats" nominated John M. Palmer and Simon B. Buckner on a platform which declared for a gold standard. In the meantime the silver party had endorsed the Democratic candidates (Bryan and Sewall), and the Populists had nominated Bryan and Thomas E. Watson. There were also other tickets in the field, namely: the Prohibitionists, the National Party, the Socialist Labour Party. After a very serious discussion of the issues McKinley was elected. Immediately following his inauguration, 4 March,

1897, he convoked Congress in special session to revise the tariff. During the course of the same summer the Dingley Tariff became a law.

Cuban Question—War with Spain. More serious than the tariff question was the situation in the neighbouring Island of Cuba. In February, 1895, for the sixth time in half a century, the natives of Cuba, weary of the misrule of Spain, rose in revolt and founded a republic. In 1868 there was an insurrection in the island which lasted for ten years. By 1878 it had collapsed, but broke out in 1895 on a larger scale. General Campos attempted to suppress the rebellion, but was soon superseded by General Weyler, whose methods were drastic. The chief feature of his policy was to bring the non-combatants into the towns, so that they could not give any further aid to the insurgents. Penned in camps which soon became filthy, and poorly fed, they died in great numbers. Of course, this policy interrupted production and, if continued, would soon depopulate the island. In his annual message, 7 Dec., 1896, President Cleveland noticed the progress of the insurrection, and declared that the United States could not be expected to maintain that attitude indefinitely. In Cuba upwards of \$50,000,000 of American capital were invested in plantations, mines, railways and other lines of business. A trade amounting to about \$100,000,000 was being destroyed. The wretched condition of the *reconcentrados* excited the sympathy of the American people, and they began to send food and medical aid to the stricken island. President Cleveland declared that when it became evident that Spain was unable to subdue the rebellion, American obligations to Spain would be superseded by obligations still higher.

When McKinley became president, he demanded the release of American prisoners in Cuba, and requested the Spanish Government to put an end to the conditions existing in the island. At that time it was costing the United States much money to enforce the neutrality laws. A new administration in Spain led to the recall of General Weyler, and to the promise of local autonomy for Cuba; also to the release of the American prisoners and to an amelioration of the state of the *reconcentrados*. These concessions, however, did not pacify the insurgents, and they rejected the offers almost unanimously. In his message to Congress, 6 Dec., 1897, President McKinley expressed the opinion that the time for intervention on the part of the United States had not yet come. He believed that Spain should be given a reasonable time in which to prove the efficiency of the new system. The Spanish Government had agreed to admit free of duty articles contributed by Americans for the relief of the *reconcentrados*. In February, 1898, there was published by the Cuban junta in New York a private letter of the Spanish Ambassador to Washington, Señor Dupuy de Lome, in which the diplomat referred to President McKinley as "a pot-house politician and caterer to the rabble", who was endeavouring to stand well with the Spanish Minister and the Jingoës of his party.

An incident more grave than this, which was settled by the resignation of Señor de Lome, was the destruction of the battleship "Maine" and about 260 of her officers and crew, by a mine in Havana harbour. It was generally believed to have been the work of Spain, and, of course, the Cubans did not attempt to remove that idea. A war between the United States and Spain was what the natives of Cuba were eager to bring about. A court of inquiry was unable, however, to fix the responsibility for the explosion, which has since been shown to have been an external one. Congress

voted \$50,000,000 for strengthening the national defences and buying ships and material of war. On 19 April, 1898, Congress adopted a resolution declaring for the freedom of Cuba, demanding the withdrawal of Spain from the island, and authorizing the president to compel such withdrawal by force. Diplomatic relations were broken off by Spain on 21 April. A few days later Congress declared war, and 200,000 volunteers were enlisted. On 1 May, 1898 Commodore Dewey destroyed the Spanish fleet and captured the forts in Manila Bay, and took possession of Cavité. A joint land and naval force then invested the city of Manila. Another Spanish fleet, under Admiral Cervera, took refuge in the harbour of Santiago de Cuba, where it encountered the American fleet, under Rear-Admirals Sampson and Schicy. Cervera lost all his crews and vessels. Besides the loss in killed and wounded, the Spanish admiral and about 1800 of his men were taken prisoners. On 14 July, 1898, General Toral surrendered Santiago and his army of 25,000 men. General Miles landed a force on the Island of Porto Rico just as hostilities came to an end. Before the tidings had reached the Philippines, Dewey's fleet and an army, under General Merritt, had taken Manila and 7000 Spanish prisoners.

By the treaty of peace, signed 10 Dec., 1898, at Paris, it was provided that Spain should relinquish her title to Cuba, cede Porto Rico, Guam, and the Philippines to the United States, and that the United States should pay \$20,000,000 to Spain. On 6 Feb., 1899, the treaty was ratified by the United States Senate. It was also accepted by Spain, and the \$20,000,000 was promptly paid. Diplomatic relations were soon resumed. During the progress of the war with Spain the people of the United States began to take a different view of territorial expansion. Though the inhabitants of Hawaii had made repeated applications for annexation to the United States, it was only on 7 July 1898, that the president signed the joint resolution of Congress which provided for annexation. The formal transfer took place on 12 August.

The natives of the Philippines, who had been restless under Spanish rule, expected their political independence after the success of the Americans. Their failure to receive it led them on 4 Feb., 1899, to attack the United States troops at Manila. A war, disastrous for the natives and their leader Aguinaldo, ensued and continued for more than a year. Peace was finally imposed on all the discontented elements in the islands, and in 1900 a commission was sent thither by the president to organize civil government in such localities as appeared to be ready to receive it. On 1 May, 1900, a system of civil government went into operation in Porto Rico also. Cuba continued under the military control of the United States for many months. In June, 1900, however, the city governments in the island were turned over to the people, and on 5 Dec. a constitutional convention assembled.

In the presidential election of 1900, McKinley and Roosevelt, the Republican nominees, defeated Bryan and Stevenson, the Democratic candidates. While holding a reception during the summer of 1901, at the Pan-American Exposition at Buffalo, President McKinley was shot by an anarchist, and died on 14 September. In succeeding to the presidency, Mr. Roosevelt announced his intention of continuing the policy and retaining the cabinet of his predecessor. The new executive recommended several new laws, but Congress did not pass many at that session. He used his influence during a great strike to bring about a compromise between the coal operators and the mine-workers in the anthracite region of Pennsylvania. Upon the president's recommendation a Department of Commerce and Labour was established in December, 1902. Soon afterwards (18 Oct., 1903), a dangerous controversy with Great Britain over the Alaska boundary was settled at London. Another dispute was arbitrated with Mexico. Relations with the United States of Colombia were not so cordial.

During President Roosevelt's administration was passed an act authorizing the construction of a ship canal across the narrow isthmus connecting North and South America. After expending \$250,000,000 in digging a canal between Panama and Colon, a French company was declared bankrupt. In 1889 a new company was organized and was said to have completed two-fifths of the work. At that stage this corporation offered to sell to the United States for \$40,000,000 all its rights and property. In June, 1902, Congress empowered the president to accept this offer and to complete the canal at a cost not to exceed \$120,000,000. For the necessary concessions generous terms were offered to Colombia but, under a belief that a much larger sum could be obtained, that Government failed to ratify the proposed treaty. This action was the signal for a revolt in Panama, and for the establishment there of a separate state. In November, 1903 the people of that province proclaimed their independence, and set up a republican government. The United States prevented Colombia from suppressing this rebellion, and promptly acknowledged the independence of the new state. With it a treaty was soon concluded containing the concessions demanded by the United States for the completion of the canal. At this stage Colombia was willing to concede, free of cost, all that the Americans had asked, provided she were allowed to reassert her sovereignty over her lost province. The Colombian envoy was informed, however, that it was now too late. The \$10,000,000 which had been offered to Colombia was promptly accepted by the new republic; also a perpetual annuity of \$250,000, beginning nine years after ratifying the treaty. In return, the United States secured jurisdiction over a zone of territory five miles wide on each side of the canal, and any other land necessary for its construction and maintenance. The Panama policy of President Roosevelt was denounced by many Democratic senators in Congress, but was nevertheless approved by a vote of 66 to 14. Colombia's efforts to stir up complications in Europe came to naught.

In 1904 Mr. Roosevelt was elected president, with Charles W. Fairbanks as vice-president. The Democratic candidates were Judge Alton B. Parker and Henry G. Davis. During his second term President Roosevelt was thwarted by the Senate in his endeavours to regulate railway rates and to advance the cause of arbitration. A prosperity almost unparalleled marked the beginning of the year 1907; at its close business was greatly depressed. In October a panic swept banks and trust companies into the hands of receivers. Relief did not come till the beginning of 1908. The subject of the Federal control of corporations was very fully discussed in the president's message of 3 Dec., 1907. He recommended the enactment of more stringent laws on this subject. On 16 June, 1908; at Chicago, the Republican National Nominating Convention selected as its candidates for the presidency and vice-presidency William H. Taft and James S. Sherman. Bryan and Kern were the Democratic nominees. In the November elections the Republicans were successful. (See articles on the various states of the Union and the Catholic dioceses. CHARLES H. MCCARTHY

Unity (As a Mark of the Church)

Unity (as a Mark of the Church)

The marks of the Church are certain unmistakeable signs, or distinctive characteristics which render the Church easily recognizable to all, and clearly distinguish it from every other religious society, especially from those which claim to be Christian in doctrine and origin. That such external signs are necessary to the true Church is plain from the aim and the purpose which Christ had in view when He made His revelation and founded a Church. The purpose of the redemption was the salvation of men. Hence, Christ made known the truths which men must heed and obey. He

established a Church to which He committed the care and the exposition of these truths, and, consequently He made it obligatory on all men that they should know and hear it (Matthew 18:17). It is obvious that this Church, which takes the place of Christ, and is to carry on His work by gathering men into its fold and saving their souls, must be evidently discernible to all. There must be no doubt as to which is the true Church of Christ, the one which has received, and has preserved intact the Revelation which He gave it for man's salvation. Were it otherwise the purpose of the Redemption would be frustrated, the blood of the Saviour shed in vain, and man's eternal destination at the mercy of chance. Without doubt, therefore, Christ, the all-wise legislator, impressed upon His Church some distinctive external marks by which, with the use of ordinary diligence, all can distinguish the real Church from the false, the society of truth from the ranks of error. These marks flow from the very essence of the Church; they are properties inseparable from its nature and manifestive of its character, and, in their Christian and proper sense, can be found in no other institution. In the Formula of the Council of Constantinople (A.D. 381), four marks of the Church are mentioned -- unity, sanctity, Catholicity, Apostolicity -- which are believed by most theologians to be exclusively the marks of the True Church. The present article considers unity.

I. Some False Notions of Unity

All admit that unity of some kind is indispensable to the existence of any well-ordered society, civil, political, or religious. Many Christians, however, hold that the unity necessary for the true Church of Christ need be nothing more than a certain spiritual internal bond, or, if external, it need be only in a general way, inasmuch as all acknowledge the same God and reverence the same Christ. Thus most Protestants think that the only union necessary for the Church is that which comes from faith, hope, and love toward Christ; in worshipping the same God, obeying the same Lord, and in believing the same fundamental truths which are necessary for salvation. This they regard as a unity of doctrine, organization, and cult. A like spiritual unity is all the Greek schismatics require. So long as they profess a common faith, are governed by the same general law of God under a hierarchy, and participate in the same sacraments, they look upon the various churches -- Constantinople, Russian, Antiochene, etc. -- as enjoying the union of the one true Church; there is the common head, Christ, and the one Spirit, and that suffices. The Anglicans likewise teach that the one Church of Christ is made up of three branches: the Greek, the Roman, and the Anglican, each having a different legitimate hierarchy but all united by a common spiritual bond.

II. True Notion of Unity

The Catholic conception of the mark of unity, which must characterize the one Church founded by Christ, is far more exacting. Not only must the true Church be one by an internal and spiritual union, but this union must also be external and visible, consisting in and growing out of a unity of faith, worship, and government. Hence the Church which has Christ for its founder is not to be characterized by any merely accidental or internal spiritual union, but, over and above this, it must unite its members in unity of doctrine, expressed by external, public profession; in unity of worship, manifested chiefly in the reception of the same sacraments; and in unity of government, by which all its members are subject to and obey the same authority, which was instituted by Christ Himself.

In regard to faith or doctrine it may be here objected that in none of the Christian sects is there strict unity, since all of the members are not at all times aware of the same truths to be believed. Some give assent to certain truths which others know nothing of. Here it is important to note the distinction between the habit and the object of faith. The habit or the subjective disposition of the believer, though specifically the same in all, differs numerically according to individuals, but the objective truth to which assent is given is one and the same for all. There may be as many habits of faith numerically distinct as there are different individuals possessing the habit, but it is not possible that there be a diversity in the objective truths of faith. The unity of faith is manifested by all the faithful professing their adhesion to one and the same object of faith. All admit that God, the Supreme Truth, is the primary author of their faith, and from their explicit willingness to submit to the same external authority to whom God has given the power to make known whatever has been revealed, their faith, even in truths explicitly unknown, is implicitly external. All are prepared to believe whatever God has revealed and the Church teaches. Similarly, accidental differences in ceremonial forms do not in the least interfere with essential unity of worship, which is to be regarded primarily and principally in the celebration of the same sacrifice and in the reception of the same sacraments. All are expressive of the one doctrine and subject to the same authority.

III. The True Church of Christ Is One

That the Church which Christ instituted for man's salvation must be one in the strict sense of the term just explained, is already evident from its very nature and purpose; truth is one, Christ revealed the truth and gave it to His Church, and men are to be saved by knowing and following the truth. But the essential unity of the true Christian Church is also explicitly and repeatedly declared throughout the New Testament:

- Speaking of His Church, the Saviour called it a kingdom, the kingdom of heaven, the kingdom of God (Matthew 13:24, 31, 33; Luke 13:18; John 18:36);
- He compared it to a city the keys of which were entrusted to the Apostles (Matthew 5:14; 16:19),
- to a sheepfold to which all His sheep must come and be united under one shepherd (John 10:7-17);
- to a vine and its branches,
- to a house built upon a rock against which not even the powers of hell should ever prevail (Matthew 16:18).
- Moreover, the Saviour, just before He suffered, prayed for His disciples, for those who were afterwards to believe in Him -- for His Church -- that they might be and remain one as He and the Father are one (John 17:20-23); and
- He had already warned them that "every kingdom divided against itself shall be made desolate: and every city or house divided against itself shall not stand" (Matthew 12:25).

These words of Christ are expressive of the closest unity.

St. Paul likewise insists on the unity of the Church.

- Schism and disunion he brands as crimes to be classed with murder and debauchery, and declares that those guilty of "dissensions" and "sects" shall not obtain the kingdom of God (Galatians 5:20-21).
- Hearing of the schisms among the Corinthians, he asked impatiently: "Is Christ divided? Was Paul then crucified for you? or were you baptized in the name of Paul?" (I Cor. 1:13).

- And in the same Epistle he describes the Church as one body with many members distinct among themselves, but one with Christ their head: "For in one Spirit we are all baptized into one body, whether Jews or Gentiles, whether bond or free" (I Cor. 12:13).
- To show the intimate union of the members of the Church with the one God, he asks: "The chalice of benediction, which we bless, is it not the communion of the blood of Christ? And the bread, which we break, is it not the partaking of the body of the Lord? For we, being many, are one bread, one body, all that partake of one bread" (I Cor. 10:16-17).
- Again in his Epistle to the Ephesians he teaches the same doctrine, and exhorts them to be "careful to keep the unity of the Spirit in the bond of peace", and he reminds them that there is but "one body and one spirit—one Lord, one faith, one baptism, one God and Father of all" (Ephesians 4:3-6).
- Already, in one of his very first Epistles, he had warned the faithful of Galatia that if anybody, even an angel from heaven, should preach unto them any other Gospel than that which he had preached, "let him be anathema" (Galatians 1:8).

Such declarations as these coming from the great Apostle are clear evidence of the essential unity which must be characteristic of the true Christian Church.

The other Apostles also persistently proclaimed this essential and necessary unity of Christ's Church (cf. I John 4:1-7; Apoc. 2:6, 14-15, 20-29; II Peter 2:1-19; Jude 5:19). And although divisions did arise now and then in the early Church, they were speedily put down and the disturbers rejected, so that even from the beginning the Christians could boast that they were of "one heart and one soul" (Acts 4:32; cf. Acts 11:22; 13:1).

Tradition is unanimous to the same effect. Whenever heresy threatened to invade the Church, the Fathers rose up against it as an essential evil.

- The unity of the Church was the object of nearly all the exhortations of St. Ignatius of Antioch ("Ad Ephes.", n. 5, 16-17; "Ad Philadelph.", n. 3).
- St. Irenaeus went even further, and taught that the test of the one true Church, in which alone was salvation, was its union with Rome (Adv. haeres., III, iii).
- Tertullian likewise compared the Church to an ark outside of which there is no salvation, and he maintained that only he who embraced every doctrine handed down by the Apostolic Churches, especially by that of Rome, belonged to the true Church (De praescript., xxi).
- The same contention was upheld by Clement of Alexandria and by Origen, who said that outside the one visible Church none could be saved.
- St. Cyprian in his treatise on the unity of the Church says: "God is one, and Christ one, and one the Church of Christ" (De eccl. unitate, xxiii); and again in his epistles he insists that there is but "One Church founded upon Peter by Christ the Lord" (Epist. 70, ad Jan.) and that there is but "one altar and one priesthood" (Epist. 40, v).

Many more testimonies of unity might be adduced from Saints Jerome, Augustine, Chrysostom, and the other Fathers, but their teachings are only too well known. The long list of councils, the history and treatment of heretics and heresies in every century show beyond doubt that unity of doctrine of cult, and of authority, has always been regarded as an essential and visible mark of the true Christian Church. As shown above, it was the intention of Christ that His Church should be one, and that, not in any accidental internal way, but essentially and visibly. Unity is the fundamental mark of the Church, for without it the other marks would have no meaning, since indeed the Church

itself could not exist. Unity is the source of strength and organization, as discord and schism are of weakness and confusion. Given one supernatural authority which all respect, a common doctrine which all profess, one form of worship subject to the same authority and expressive of the same teaching, centred in one sacrifice and in the reception of the same sacraments, and the other marks of the Church necessarily follow and are easily understood.

That the mark of unity which is distinctive of and essential to the true Church of Christ is to be found in none other than the Roman Catholic Church, follows naturally from what has been said. All the theories of unity entertained by the sects are woefully out of harmony with the true and proper concept of unity as defined above and as taught by Christ, the Apostles, and all orthodox Tradition. In no other Christian body is there a oneness of faith, of worship, and of discipline. Between no two of the hundreds of nonCatholic sects is there a common bond of union; each one having a different head, a different belief, a different cult. Nay more, even between the members of any one sect there is no such thing as real unity, for their first and foremost principle is that each one is free to believe and do as he wishes. They are constantly breaking up into new sects and subdivisions of sects, showing that they have within themselves the seeds of disunion and disintegration. Divisions and subdivisions have ever been the characteristics of Protestantism. This is certainly a literal fulfilment of the words of Christ: "Every plant which my heavenly Father hath not planted shall be rooted up" (Matt 15:13); and "every kingdom divided against itself shall be made desolate: and every city or house divided against itself shall not stand" (Matthew 12:25).

CHARLES J. CALLAN

Universalists

Universalists

A Liberal Protestant sect -- found chiefly in North America -- whose distinctive tenet is the belief in the final salvation of all souls. The doctrine of universal salvation found favor among members of various Christian Churches (see APOCATASTASIS for its treatment anterior to the foundation of the Universalist Church). The present article will exclusively consider Universalism as a separate denomination.

I. DOCTRINAL PRINCIPLES

The historic creed of this religious body is the profession of belief adopted by the General Convention at Winchester, New Hampshire, in 1803. It contains the following articles:

1. We believe that the Holy Scriptures of the Old and New Testaments contain a revelation of the character of God and of the duty, interest, and final destination of mankind.
2. We believe that there is one God whose nature is Love, revealed in one Lord, Jesus Christ by one Holy Spirit of grace, who will finally restore the whole family of mankind to holiness and happiness.

3. We believe that holiness and true happiness are inseparably connected, and that believers ought to be careful to maintain order and practise good works; for these things are good and profitable unto men.

To meet the objections raised by some Universalists to parts of the foregoing articles, a briefer statement of essential principles was adopted in 1899 by the General Convention held at Boston. It required for admission to fellowship the belief in the following articles:

- the universal fatherhood of God,
- the spiritual authority and leadership of His Son Jesus Christ;
- the trustworthiness of the Bible as containing a revelation from God;
- the certainty of just retribution for sin;
- the final harmony of all souls with God.

To the admission of these principles must be added "the acknowledgment of the authority of the General Convention and assent to its laws". The Trinity is usually rejected by present-day Universalists. The reception of the sacraments is not enjoined; but baptism (according to the mode preferred by the candidate) and the Lord's Supper are administered. The infliction of temporal punishment for sin insufficiently atoned for on earth is now generally admitted. A usage of distinctly Universalist origin is the observance of "Children's Sunday." A special day (the second Sunday in June) is set apart for the baptism of children and their dedication to God's service. This observance has been taken over by other Protestant churches. For many years, the several Universalist congregations administered their own affairs independently, and the General Convention enjoyed merely advisory powers. The functions of this body were enlarged in 1866 and further extended in 1870, until it became the highest legislative authority for the United States and Canada.

II. HISTORY & INSTITUTIONS

The first Universalist congregation was organized in 1750 in London by Rev. James Relly, who ministered to its spiritual needs until his death (1778). In spite of this early establishment few Universalist churches exist at present in Europe; but Universalism is undoubtedly believed in outside of the denomination. The stronghold of the sect is in America, where the first church was established by Rev. John Murray. He landed in New Jersey in September, 1770, preached the doctrine of Universalism along the Atlantic seaboard, and in 1779 formed with fifteen other persons the first American congregation of that faith at Gloucester, Massachusetts. Other preachers of the same doctrine arose about this time: Elhanan Winchester, a former Baptist minister, taught Universalism at Philadelphia, and Adams Streeter and Caleb Rich spread it in New England. More marked in its success and wider in the range of its influence was the propaganda of the Rev. Hosea Ballou (1771-1852), whose Unitarian views triumphed in the denomination over the Sabellian conception of the Trinity taught by Murray. His teaching of universal salvation immediately after death, however did not meet with unanimous approval, and caused the secession of eight ministers and some members who, under the name of Restorationists, founded a separate sect. But the existence of this new creation was short-lived (1831-41), while the parent body spread during Ballou's lifetime not only in the United States but also to Canada. Its progress was slowed by the Civil War, but the

propaganda subsequently carried on, chiefly under the direction of the board of trustees and the state conventions, was crowned with some success, and the denomination spread throughout the United States.

The denomination founded the following educational institutions:

- Tufts College (founded in 1852) Medford, Mass.;
- Lombard College (1852), Galesburg, Illinois;
- St. Lawrence University (1856), Canton, New York;
- Buchtel College (1872), Akron, Ohio.

A school of divinity is connected with the first three institutions named. Academies are maintained at Franklin Massachusetts (Dean Academy); Barre, Vermont (Goddard Seminary); and Portland, Maine (Westbrook Seminary).

N.A. WEBER

Universals

Universals

The name refers on the one hand to the inclination towards uniformity (*uni-versus*) existing in different things, in virtue of which different things may be represented by a single idea applicable to all in the same way; and on the other hand to this one idea which is applicable to the different things (*unum versus alia*).

DEFINITION

Universals are those ideas which, while excluding whatever constitutes the difference of things of the same genus or species, represent that which is necessary to their constitution, is essential, and is therefore common to all, remaining fixed in all vicissitudes (*universalia post rem, in re*). Universals are thus merely an expression of those Divine ideas which are concerned with the universal (*universalia ante rem*). Universal ideas are opposed to sense impressions, which represent that which is merely individual and contingent in a concrete phenomenon, and thus that which changes with circumstances in corporeal things of the same kind. These sense impressions correspond to those Divine ideas which are concerned with the corporeal individual.

SUBDIVISION

In so far as the nature of a thing is the object of a direct act of perception, it contains no relation to individuals, but is recognized in itself only according to its essential parts. When, however, the intellect has represented to itself the essential form of a thing (whether this be a substance or an accident), it can by reflection make this representation of the essence the object of its perception. It can apply the idea to various individuals of the same kind, can compare it with other ideas, and thus determine relationship and differences. The *universale directum* thus appears as an embryo, which is developed, ever more clearly arranged, and constantly more nearly perfected by reflection and various logical operations. It is but another way from the imperfect idea which an entomologist

formed when as a boy he first saw an ant, to that perfected idea of the animal which he now possesses as the result of all his investigations and studies.

The means to arrive at a perfect idea and an exact definition is the clear distinction between the parts of a thing, which are grasped directly, if obscurely, by the perception. It should here be remarked that our intellect proceeds from the more general and thus less precise ideas to the less general and more precise. In the direct recognition of a corporeal being, it grasps first its reality, the idea of existence. This is the most universal of all ideas, but it is no true universal, since existence pertains to different things in different ways, and consequently cannot be predicated equivocally of all of them. While the senses are grasping what is individual in the phenomena, the intellect presses onward to the essence or nature of the thing, and grasps especially that which is most universal, its independence, and forms the idea of substance. It simultaneously seizes the notes of existence pertaining to and borne by the substance (accidents), which in the individual phenomenon are the object of the senses. Meanwhile it does not escape the intellect that quality and quantity are possessed by the substance which they determine in an entirely different way from the *actio* (action) and *passio* (passion), and these again in an entirely different way from the *ubi* (where) and *quando* (when), and that relation stands on the extreme border of accidental existence. In short, it grasps the various modes of existence of the above-mentioned accidents in the first substance. It thus comes that the idea of an accident is only analogous, like that of substance, and that it has no greater claim than this to be considered a true universal. The case is otherwise with the idea of substance and the ideas of the individual accidents mentioned above. They are the most universal of universals in the true sense of the word.

If these ideas be applied with the help of reflection to individuals, they become the highest predicates (categories) of concrete substance, and prove also the highest ideas of genera. The intellect is not yet satisfied. If possible, it proceeds step by step from the highest and least determinate idea of genus to the lowest and most determinate, which represents that which is common to two immediately related kinds. Only then is it possible to form a clear and distinct idea of species. This having been accomplished, one can distinguish the difference constituting the species, and by noting this lowest species and this difference, supply an exact definition. But in many cases, the intellect must remain content with the greatest possible approximation to the definition. For this purpose are employed description, the characteristics, explanation, and discussion. The final object in this is to give the lowest clearly recognizable species and that which, in the notes added to the substance, is proper (*proprium, idion*) to all the individuals of the same kind. Consequently, the connection of the accidents with the substance must be established to discover which of those accidents necessarily and of themselves arise from the substance (and from this alone), as speech in the case of man. Other properties are to be referred to fortuitous external influences, as lameness in the case of individual men. We thus obtain the logical accident, which indeed must be distinguished from the metaphysical, which, in accordance with what was said above, may be a *proprium*, or logical accident. One may even inquire into the genus, species, and specific difference of a metaphysical accident (e.g. of continued quantity).

In summary

According to their origin in a direct act of perception or in reflection, universals are divided into direct and reflex universals.

The direct universal, waiving, as it does, the question of the reality of the perceived being in nature, is metaphysical. In it lies only the possibility of being applied to many things, but the relation of universality is not recognized in it. Consequently, it is also known as the "material universal".

The reflex universal includes the relation to individuals, and is thus known as the *universale logicum*, or also as the "formal universal", since it is recognized as universal.

The *universale directum* is divided into the categories, since these represent the various modes of existence in the actual being. Recognized by reflection as the highest species, the categories are included under the *universale logicum*, which is divided into the five predicables: genus, species, specific difference, proprium, and logical accident.

IMPORTANCE OF THE PROBLEM OF THE UNIVERSALS

Science in general, inasmuch as it is the knowledge of the necessary and permanent drawn from the nature of things, is impossible without the recognition of the universals. Without such recognition, it is degraded into the description of successive individual impressions. The war between the pure Darwinists and the physicists, who recognize natural species which, in consequence of their mode of development and the influence of conditions, can be arranged into various systematic species, has been already designated a new phase of the Scholastic controversy concerning universals. In physics and chemistry the constancy of the laws of nature depends on the constancy of the nature of things. In psychology the existence of universals has led to the recognition of the intellect as a faculty fundamentally distinct from the senses. It is self-evident that metaphysics and logic would be an impossibility without universals. Without universals, ethics and aesthetics would also be surrendered to a relativism ungoverned by principles, and thus to annihilation. Without universals, impressionism in art and individual autonomy in life must attain undisputed sway. To these tendencies correspond in religion the exclusive validity of religious experiences, the belief in the changing content of dogmas, and the complete displacement of dogmatic by historical mode of thought. A history of the controversy concerning the universals and their relation to existence must necessarily be a presentation of the most fundamental differences of all philosophical systems. It would reveal that a deviation from Aristotelean Thomistic moderate Realism leads, on the one side, over Conceptualism and Nominalism to Scepticism and Agnosticism, or to barren Empiricism and Materialism, and on the other side over extreme Realism to false Idealism and Pantheism.

ALOIS PICHLER

Universe

Systems of the Universe

Universe (or "world") is here taken in the astronomical sense, in its narrower or wider meanings, from our terrestrial planet to the stellar universe. The term "systems" restricts the view to the general structure and motions of the heavenly bodies, but comprises all the ages of the world the present, past, and future.

I. HISTORIC TIMES OF THE UNIVERSE

The present system, in the widest sense of the term, forms the subject of universal cosmography. Descriptions of this kind were made by Lambert, the two Herschels, Laplace, Newcomb, and others. The present section treats only of the solar system, and in particular of the disputed theories of Ptolemy and Copernicus, and the proofs in favour of the latter.

A. Ptolemaic and Copernican Systems

(1) *Greek astronomy*

The earliest astronomical systems are found in the Greek school. No planetary system can be discerned in Chinese or Babylonian records.

The astronomical knowledge of the Greeks shows three periods. Its infancy is represented by Philolaus and Eudoxus, of the fifth and fourth century B.C. The earth is the common centre of the universe, within the celestial sphere of the fixed stars. The great luminaries, sun and moon, and the five planets have each their concentric spheres, upon which they slide in two directions, longitude and latitude, keeping constantly the same distance from the earth.

The flourishing period of Greek astronomy extends from Heraclides Ponticus in the fourth century B.C. to Hipparchus in the second. Observation was made its basis. The different degrees of brilliancy observed in the nearest planets, Mercury, Venus, and Mars, at the times of the opposition and conjunction with the sun, pointed to heliocentric orbits, and analogy demanded the same arrangement for Jupiter and Saturn. The hypothesis was then established, probably by Heraclides himself, that the sun revolved annually, with the five planets, around the earth, while the moon remained on her sphere as before. Heraclides also made an important step in advance by asserting the diurnal rotation of the earth. His system was afterwards known as that of Tycho Brahé. Even the annual motion of the earth around the sun is mentioned by Heraclides as held by some of his contemporaries. The heliocentric system was certainly pronounced and defended by Aristarchus of Samos, although his writings are lost, and known only through Archimedes, whose works were published a year after Copernicus's death (Basle, 1544).

The period of decline had commenced when Hipparchus flashed up as the last genius among the Greek astronomers. The precession of the equinoxes, which he discovered, was made to fit the geocentric system, then prevailing, only a century after Aristarchus. The philosophical schools, in particular the Stoics, began to prefer astrology to observational astronomy. The geometrical knowledge that apparent or relative motion remains unaffected by an interchange of its component motions, as was correctly demonstrated by Apollonius, paved the way to the confusion of the solar system. It must be remembered that the apparent planetary motions are epicyclical, each planet revolving in its own orbit, the epicycle, around the sun, and with the sun, as centre of the epicycle,

apparently around the earth in a common orbit, which is called the deferent orbit. These are the correct ideas, and will ever form the basis of spherical astronomy.

The decadence of astronomical concepts among the Greek philosophers appeared in two ways: First, they applied the geometrical fiction of Apollonius to the physical planetary system, supposing that the epicycle must always be the smaller of the two components in apparent motion; and, secondly, they believed that a physical planet could revolve, all alone, around a fictitious point in space. For the outer planets, Mars, Jupiter, and Saturn, the apparent orbit of the sun is the smaller component—the common deferent orbit. It cannot be made the epicycle, without introducing into the system three new circles each with a fictitious centre. This was done, but worse was to come for the inner planets, Venus and Mercury. There was no need for them to dislodge the common deferent circle, or solar orbit, as it was larger than the two planetary epicycles. And yet the centre of the deferent was moved from the sun towards the earth, at the cost of introducing into the system two new circles and two ideal centres of motion. The precession of the equinoxes discovered by Hipparchus even lent support to the concept of fictitious pivots. It seemed to swing the pole of the ecliptic around the pole of the celestial sphere. In this shape the Greek system of the heavenly bodies came down to posterity during the second century of our era through Ptolemy's *Syntax*. The two fundamental propositions of the geocentric system viz. that the earth has no axial rotation and no translation in space form the sixth chapter of the first book. The *Syntax* did not pass directly from the Alexandrian school to Europe. Greek astronomy made its round through Syria, Persia, and Tataria, under Albatignius Ibn-Yunis, Ulugh-Beg. The Ptolemaic system was accepted by the Arabic astronomers without criticism and was made known in Europe through their translations. An unintelligible Latin *Almagest* had taken the place of the Greek *Syntax* and rested like a tombstone on European astronomy.

(2) *European astronomy*

New astronomical life awoke in the fifteenth century in Germany. Nicholas of Cusa rejected the axioms of Ptolemy Peurbach and Muller restored the text of Ptolemy's *Syntax* and Copernicus made it his life-work to disentangle the cycles and epicycles of the Greek system. The task of Copernicus was harder than that of his predecessor Aristarchus on account of the unanimous acceptance of the geocentric system for more than a thousand years. The first book of Copernicus's great work *On the Revolutions of the Celestial Bodies* is directed against the Ptolemaic axioms on the centre of the universe and the stability of the earth. He rightly observes that the universe has no geometrical centre. He then gives clear definitions of relative and apparent motion and applies the Apollonian principle of interchanging the component motions in the opposite sense of Ptolemy. The complex heavenly machinery was explained by a triple motion of the earth one around its axis another around the sun and a third a conical motion around the axis of the ecliptic in periods of respectively one day, one year, and 2.5xxxxx816 years. Ptolemy's negative arguments against a moving earth were answered in a masterly manner:

- It had been objected that a disastrous centrifugal force would be created on the surface of the earth. Copernicus retorts that a far greater centrifugal force must be admitted in the outer planets and the fixed stars if they revolved around the earth.

- The resistance of the atmosphere which it was urged would sweep away every object from a moving earth was disposed of by Copernicus exactly as it is today: each planet condenses and carries its own atmosphere.
- A third difficulty was raised about necessary changes in the appearance of the constellations or in modern language about large parallaxes of the stars when viewed from opposite points of the earth's orbit. Copernicus correctly thought the stars so far away as to make the terrestrial orbit comparatively too small to show any effect in the instruments then available.

The negative arguments of Ptolemy being dispelled there remained only one positive argument in favour of Copernicus.

(3) *Reaction to Copernicus*

The simplicity of the heliocentric system had sufficient weight to convince a genius like Copernicus. He never called his system an hypothesis. The first who exercised censorship on the work *De revolutionibus* was the Reformer, Osiander. Dreading the opposition of the Wittenberg school he put the word *Hypothesis* on the title-page and substituted for the preface of Copernicus one of his own—all without authorization. It was more than half a century later that the Congregation of the Index pointed out nine sentences that had either to be omitted or expressed hypothetically before the book might be read freely by all.

The argument of simplicity was greatly strengthened by Kepler when he discovered the ellipticity of planetary orbits. Copernicus had found by long years observation that the inequalities of planetary motion could not be accounted for, after Ptolemaic fashion by simply placing the circular orbits excentrically. Not being prepared to abandon the circle he resorted to small epicycles. Their final removal greatly enhanced the simplicity of the Copernican system. Then came the discoveries of the aberration of light and of stellar parallaxes. While they appeared as natural consequences of the orbital motion of the earth they threw on the Ptolemaic system the condemnation of an almost infinite complexity. The fixed stars were recognized to vibrate in double ellipses their major axes parallel to the ecliptic in periods of exactly one year. The double ellipses are the images of the terrestrial orbit projected on the celestial sphere by the parallactic displacement of the stars and by the finite velocity of light. The former kind is much the smaller of the two and in most cases dwindles to immeasurable dimensions. Some twelve hundred of them have actually been observed. The aberration-ellipses have their apparent major axes all of equal length. The geocentric system not only has no explanation for these phenomena, but cannot even represent them without two epicycles for each star in the firmament. The Copernican argument of simplicity thereby received an overwhelming corroboration.

B. Direct Proofs of the Copernican System

While the argument of greater simplicity is only an indirect criterion between the two opposing systems mechanics has furnished more direct proofs. Copernicus actually had them in mind when he maintained that centrifugal force in a daily rotating celestial sphere would have to be enormous that the atmosphere is condensed around the terrestrial globe and that single planets cannot revolve around fictitious points that have no physical meaning. Kepler was too much preoccupied with geometrical studies and with the favourite idea of cosmical harmonics (*Harmonices mundi*) to

recognize in the common focus of his elliptical orbits a governing power. It was reserved for Newton and Laplace to formulate the mechanical laws of celestial motion.

(1) The annual revolution of the earth around the sun is a necessary consequence of celestial mechanics.

(a) Newton computed from the velocity and distance of our satellite the amount of attraction that the earth must exercise upon it to maintain its orbital revolution. Learning then from French geometers the exact dimensions of the earth he found the force that keeps the moon in her orbit to be identical with terrestrial gravity divided by the square of the distance from the centre. The discovery led to the computation of the masses of sun and planets inclusive of the earth the latter turning out more than three hundred thousand times lighter than the sun. The mechanical conclusion is that the lighter body revolves around the heavier and not the reverse; or, in more scientific language that both revolve around their common centre of gravity which in this case lies inside the solar sphere.

(b) Our satellite furnishes another more direct proof of the annual revolution of the earth. Carl Braun shows in the *Wochenschrift für Astronomie* X (1867) 193 that the moon is attracted nearly three times more forcibly by the sun than by the earth. Our satellite would therefore leave us unless we revolved with it around the sun. The earth is only able to give the annual lunar orbit a serpentine shape so as to have the satellite alternately outside and inside her own orbit.

(c) Newton also alludes to comets and shows that in the Ptolemaic system each of them needs an epicycle parallel to the ecliptic to turn its orbit towards the sun. With our present cometary knowledge of comets the argument can be made stringent. Numerous comets have their orbits well determined. Over two hundred of them have passed the ecliptic within the earth's orbit, and some, like Halley's comet at its last appearance, almost in line between sun and earth. Most of the comets, including Halley's, come to us from distances beyond the orbit of Neptune. Now, computation shows that they all have their common focus in the sun and that the earth is, as a rule, outside their orbits. In the case of Halley's comet the earth was, at one time, even on the convex side of the orbit. The mechanical conclusion is as follows: If, without any regard to the earth, the comets obey the sun, the earth must do the

(2) The daily rotation of the earth

The daily rotation of the earth around its axis is demonstrated in many ways. Once the annual revolution is proved, the daily rotation becomes a matter of course. If the earth has not the power to swing the sun around its own centre once a year, it will be far less able to do so in one day; and if it cannot swing around one sun, what could it do with the countless suns of the universe? Yet, we have direct and special proofs of the diurnal rotation. They all rest on mechanics, partly celestial, partly terrestrial. Celestial mechanics has turned into proofs what formerly seemed to be difficulties. This occurred in the case of stellar parallaxes, the absence of which had been objected by Ptolemy, and the existence of which was shown by Bessel. The precession of the equinoxes also has changed its role. Laplace showed it to be due to the action of the sun on the protuberant equatorial regions of the rotating earth. The similar result of the action of the moon upon the earth is called nutation.

Laplace's demonstration was based upon the flatness of the earth, which had been measured in the seventeenth century, and was also theoretically deduced by him from the existence of centrifugal force. We have here a complex reverse of roles. The consequences of centrifugal force, so strongly urged against diurnal rotation by Ptolemy, turned out to be the cause of precession, known to Hipparchus, and of several phenomena, discovered only after the time of Copernicus. Precession was still a matter of special difficulty to Copernicus, and the one of the three terrestrial motions that he could not explain. To him it was the resultant of two annual, slightly different, conical rotations of opposite direction, to which no cause could be assigned.

So much about the proofs from celestial mechanics. There are others, by means of instruments, so-called laboratory experiments. They commenced immediately after the time of Galilei and seem to have received the impulse from his trial. The experiments may be classified chronologically in five periods or groups. From 1640 to 1770 they were crude trials without result. The years from 1790 to 1831 were a period of experiments with falling bodies. The twenty years from 1832 to 1852 were a time of pendulum experiments. Then followed a period, 1852-80, of experiments with more elaborate apparatus; and the last, since 1902, may be called that of modern methods.

- The first period is represented by the names of Calignon, Mersenne, Viviani, and Newton. Calignon (1643) experimented with plumb lines, without knowing what their variations should tell. Mersenne (1643) had pieces of artillery directed to the zenith, rightly expecting a westerly deviation of the balls. Foucault's pendulum experiment was materially forestalled by Viviani at Florence (1661) and Poleni at Padua (1742), but was not formally understood. The easterly deviation of falling bodies was explicitly announced by Newton, but unsuccessfully tried by Hooke (1680). Galilei had alluded to it before, in his "Dialogo" (*Opere*, VII 1897), in a contradictory manner. In one place (p. 170) he denied the possibility of the experiment, in another (p. 259) he affirmed it. Lalande missed the opportunity of first making Newton's experiment at the Paris observatory. The honour was reserved to Abbate Guglielmini.
- The second period comprises the experiments with falling bodies, made by Guglielmini at Bologna (1790-2), by Benzenberg at Hamburg (1802) and Schlegel (1804), and by Reich at Freiburg (1831) The general drift of the balls towards the east side of the meridian was unmistakable. It proved the rotation of the earth from west to east, but only in a qualitative manner. Quantitative proofs were obtained in the next period.
- Three kinds of pendulum experiments filled the third period. The horizontal pendulum was invented and tried by Hengler, in 1832, for the effects of the centrifugal force. The instrument is still waiting for a more delicate manipulator. Foucault's vertical pendulum dates from 1851, and was tried first in a cellar, then in the Paris Observatory, and last in the Pantheon. The deviation of the pendulum from the original vertical plane was clockwise, as expected by Foucault, but no quantitative measures were ever published by him. They were made in many places, chiefly in large cathedrals. The best results known are those of Secchi in Rome (1851) and of Garthe in Cologne (1852). Secchi experimented in San Ignazio, in presence of many Italian scientists, and Garthe in the cathedral, before Cardinal Geissel, royal princes, and numerous spectators. The counterproof in the southern hemisphere, where the deviation of the pendulum must be counter-clockwise, has not been made to this day. The attempt at Rio de Janeiro (1851) cannot be regarded as such. A conical pendulum was set in motion by Bravais in the same meridian room of the observatory and

in the same year as the vertical pendulum of Foucault. The experiment had the advantage of being reversible. Swinging clockwise, the pendulum appeared to move faster than in the opposite sense, for the reason that the theodolite, in which it was observed, followed the rotation of the earth. Two pendulums used simultaneously, and moving in opposite directions, yielded the correct value of the diurnal rotation within a tenth of one per cent, a result never reached by Foucault's pendulum.

- The second half of the nineteenth century, the fourth period, is remarkable for complicated experiments and profound theories. The instruments were the gyroscope and the compound pendulum. The invention of the former is due to Foucault, and furnished a new proof of the diurnal rotation. It was constructed by him in three forms: the universal, the vertical, and the horizontal gyroscope, so called according to their degrees of freedom. The vertical gyroscope was perfected by Gilbert (1878) into his barogyroscope, while the horizontal gyroscope was lately introduced on warships as an astronomical compass. The proofs of Foucault and Gilbert could only be qualitative, for want of electric motors. The delicate experiment made in 1879 with the compound pendulum by Kamerlingh Onnes, comprises those of Foucault and Bravais as special cases, and in general all the movements between the plane and the circular pendulum vibrations (see "Specola Vaticana", I, 1911, Appendix 1).
- The fifth and last period of experiments falls within the early twentieth century and presents no less than four proofs, all widely different among themselves. The difficult experiment with falling bodies was brought within the walls of the physical laboratory by E. H. Hall in 1902. Under improved facilities, a fall of only twenty-three metres showed the easterly deviation better than all the preceding trials with heights from three to seven times as large. In 1904 the gyroscope was made to yield quantitative results by Föppl. An electric motor gave to a double wheel of 160 pounds a speed of over two thousand turns a minute. The rotation of the earth was strong enough to deviate the horizontal axis, which was suspended on a triple wire, six and a half degrees from the primevertical. A novel scheme had been tried by Perrot in 1859. He made a liquid flow through the central orifice of a circular vessel, and rendered the currents visible by means of floating dust. We have to take his word, that the currents were spiral-shaped, and ran counter-clockwise. The experiment was repeated by Tumlirz in Vienna (1908), and its result photographed and compared with theory. While the experiments of Hall, Föppl, and Tumlirz are repetitions of former ones, with improved methods, the next proof of the diurnal rotation is new as an experiment, although forecast in the idea by Poinsoot as early as 1851. It was carried out at the Vatican Observatory in 1909. Its principle is that of equal areas described in equal times, applied to a horizontal beam suspended in form of a torsion balance, on which heavy masses can be moved. The shifting of the masses from extremity to centre will make the beam turn faster than the earth; the opposite will happen in the reverse case. The last proof had never been proposed before, and consists in observing the thread of the Atwood machine in a telescope. Viewed in the meridian, the thread of the falling weight is seen to come down east of the plumb-line, but viewed in the prime vertical it remains exactly plumb. This experiment was likewise carried out at the Vatican Observatory in 1912 (see "Specola Vaticana", I, 1911, appendix II, 1912).

Some writers have expressed surprise that Catholic scientists were allowed to take part in the experiments, e.g. that Bonfioli, domestic prelate to Pius VI assisted Guglielmini in measuring the

impressions of the balls on the plate of wax, or that Secchi demonstrated the rotation of the earth in Rome "before all the people" (Wolf, "Handbuch", I, Zurich, 1890, no. 262 c). We must remember, however, that what was condemned in a former age was not the experiment but a then gratuitous assertion.

II. PAST AND FUTURE OF THE WORLD

How the world has developed into its present shape, and how it will pass out of it, science may never tell. Cosmogony is the accepted name for all the hypotheses on the past (from *kosmos* world, and *gignesthai* to originate). A corresponding form from the Greek, to designate the speculations on the future of the world, cosmothany (world's death), has been used; more correct formations are perhaps: cosmophthory (*phthora*, corruption) or cosmodysy (*dysis*, *occusus*, decline). *World* must here be taken in all its narrower or wider meanings, as earth, solar system, stellar system, universe.

A. Cosmogony

No cosmogony can really claim to be a scientific theory or even hypothesis, in the proper sense of a systematic development of the details from a definite number of assumed principles. Proposition and rejection are alike vague and uncertain, and must be so, as processes of extrapolation from laboratory laws to the fabric of the Creator.

For more information on mythical cosmogony, the reader is referred to the article COSMOGONY. For Biblical cosmogony, see HEXAEMERON.

B. Cosmodysy

This is the proposed name for all the hypotheses on the future of the world. The literature on cosmodysy is far less extensive than that on cosmogony. The youth of the world seems to exert a stronger charm on human speculation than its old age and decline. There does not seem to exist any mythical cosmodysy, and very little can be found on scientific cosmodysy. So much the more explicit and detailed is Biblical cosmodysy (see JUDGMENT, DIVINE, IV). And yet, from a scientific point of view, the prospective conclusion from the known premises of the present world would seem to be better warranted than retrospective speculations upon cosmical conditions entirely unknown.

One such theory is the extinction theory. This theory rests on a certain irreversible process, common to all natural phenomena, called entropy. While the sum total of cosmical energy is supposed to remain constant, the amount of potential energy is steadily diminishing. It is the unstable condition of potential energy that animates all activity in the universe. Drifting as it is towards stability. it will end in exhaustion and repose. The process is not reversible and consequently not cyclical. Applying it to the earth but abstracting from organic life, it will mean the extinction of its interior plutonic power and of its rotary speed. The raising and shifting of continents, the continual tremors, occasional earthquakes and volcanic eruptions, the gradual shrinkage of the crust and the wandering of the polar ice caps, are so many irretrievable losses of potential energy.

Our scanty science of cosmodysy might be a temptation to look for further information in the Scripture. Will the darkening of sun and moon, and the falling of stars, lend support to the extinction

theory, for instance? The like question may be raised in cosmogony. Can Genesis be consulted to decide between the various hypotheses?

The answer is given by an attempt, made three centuries ago, in cosmography. The Scriptural decision of the controversy, whether the solar system be geocentric or heliocentric, was bound to be a failure either way. Cosmogonic revelation was given to impress on the human race its physical and moral dependency upon the Creator. Likewise has cosmodynic revelation the purpose of holding out to mankind the final administration of justice. Purely scientific curiosity will find no satisfaction in Scripture.

J.H. HAGEN

Universities

Universities

The principal Catholic foundations have been treated in special articles; here the general aspects of the subject are presented:

- I. Origin and organization;
- II. Academic work and development;
- III. Renaissance and Reformation;
- IV. Modern period;
- V. Catholic action.

I. ORIGIN AND ORGANIZATION

Although the name *university* is sometimes given to the celebrated schools of Athens and Alexandria, it is generally held that the universities first arose in the Middle Ages. For those that were chartered during the thirteenth century, dates and documents can be accurately given; but the beginnings of the earliest are obscure, hence the legends connected with their origin: Oxford was supposed to have been founded by King Alfred, Paris by Charlemagne, and Bologna by Theodosius II (A.D. 433). These myths, though they survived well on into modern times, are now generally rejected, and the historian's only concern with them is to discover their sources and trace their development. It is known, however, that during the eleventh and twelfth centuries a revival of studies took place, in medicine at Salerno, in law at Bologna, and in theology at Paris. The medical school at Salerno was the oldest and the most famous of its kind in the Middle Ages; but it exerted no influence on the development of the universities. At Paris, the study of dialectics received a fresh impetus from teachers like Roscellin and Abelard, and eventually it displaced the study of the Classics which, especially at Chartres, had constituted an energetic though short-lived humanistic movement. The dialectical method, moreover, was applied to theological questions and, mainly through the work of Peter Lombard, was developed into Scholasticism (q.v.). This meant not only that all sorts of questions were taken up for discussion and examined with the utmost subtlety, but

also that a new basis was provided for the exposition of doctrine and that theology itself was cast into the systematic form which it presents in the works of St. Thomas, and above all, in the great "Summa". At Bologna, the new movement was practical rather than speculative, it affected the teaching, not of philosophy and theology, but of civil and canon law. Previous to the twelfth century, Bologna had been famous as a school of arts, while in regard to legal science it was far surpassed by other cities, e.g. Rome, Pavia, and Ravenna. That it became within a comparatively short time the chief centre of the teaching of law, not in Italy alone but in all Europe, was due mainly to Irnerius and to Gratian (q.v.). The former introduced the systematic study of the whole *Corpus juris civilis*, and differentiated the course in law from that in the Liberal Arts; the latter, in his "Decretum", applied the scholastic method to canon law, and secured for this science a distinct place apart from theology. In consequence, Bologna, long before it became a university, attracted large numbers of students from all parts of the Empire, and its teachers, as they became more numerous, also attained unrivalled prestige.

The school growing thus vigorously from within was further strengthened by the privileges which the emperor granted. In the "Authentic" *Habita* issued in 1158, Frederick I took under his protection the scholars who resorted to the schools of Italy for the purpose of study, and decreed that they should travel without hindrance or molestation, and that, in case complaint was lodged against them, they should have the option of defending themselves either before their professors or before the bishop. This grant naturally turned to the profit of Bologna; but it also served as the basis of many privileges subsequently accorded to this and to other schools. That Paris also enjoyed similar protection and immunities from an early date is highly probable, though the first grant of which there is record was made by Philip Augustus in 1200. To these two factors of internal growth and external advantage, a third had to be added before Paris or Bologna could become a university: it was necessary to secure a corporate organization. Both cities by the middle of the twelfth century possessed the requisite elements in the way of schools, scholars, and teachers. At Paris three schools were especially prominent: Saint Victor's, attached to the church of the canons regular; Sainte-Geneviève-du-Mont, conducted first by seculars and later by canons regular; and Notre-Dame, the school of the Cathedral on the "Island". According to one account these three schools united to form the university; Denifle, however (*Die Universitäten*, 655 sqq.), maintains that it originated in Notre-Dame only, and that this school therefore was the cradle of the University of Paris. This does not imply that the cathedral school as an institution was elevated to the rank of a university by royal or pontifical charter. The initiative was taken by the professors who, with the licence of the chancellor of Notre-Dame and subject to his authority, taught either at the cathedral or in private dwellings on the "Island". When these professors, in the last quarter of the twelfth century, united in one teaching body, the University of Paris was founded (For the older view, see PARIS, UNIVERSITY OF).

This *consortium magistrorum* included the professors of theology, law, medicine, and arts (philosophy). As the teachers of the same subject had special interests, they naturally formed smaller groups within the centre body. The name "faculty" originally designated a discipline or branch of

knowledge, and was employed in this sense by Honorius III in his letter (18 Feb., 1219) to the scholars of Paris; later, it came to mean the group of professors engaged in teaching the same subject. The closer organization into faculties was occasioned in the first instance by questions which arose in 1213, regarding the conferring of degrees. Then came the drafting of statutes for each faculty whereby its own internal affairs were regulated and lines of demarcation drawn between its sphere of action and those of the other faculties. This organization must have been completed within the first half, or perhaps first quarter, of the thirteenth century, since Gregory IX in the Bull "Parens scientiarum" (1231) recognizes the existence of separate faculties. The scholars, on their part, just as naturally fell into different groups. They belonged to various nationalities, and those from the same country must have realized the advantage, or even the necessity, of banding together in a city like Paris to which they came as strangers. This was the origin of the "Nations", which probably were organized early in the thirteenth century, though the first documentary evidence of their existence dates from 1249. The four Nations at Paris were those of the French, the Picards, the Normans, and the English. They were distinctively student associations, formed for purposes of administration and discipline, whereas the faculties were organized to deal with matters relating to the several sciences and the work of teaching. The Nations, therefore, did not constitute the university, nor were they identical with the faculties. The masters in arts were included in the Nations and at the same time belonged to the faculty of arts, because the course in arts was simply a preparation for higher studies in one of the superior faculties, and hence arts formed an "inferior" faculty, whose masters were still classed as scholars. The professors of the superior faculties did not belong to the Nations.

Each Nation elected from among its members a masters of arts as procurator (*proctor*), and the four procurators elected the rector, i.e. the head of the Nations, not, at first, the head of the university. As, however, the faculty of arts was closely bound up with the Nations, the rector gradually became the chief officer of that faculty, and was recognized as such in 1274. His authority extended later to the faculties of law and medicine (1279) and finally (1341) to the faculty of theology; thenceforward the rector is the head of the entire university. On the other hand, the office of rector did not confer very large powers. From the beginning the chief authority had been exercised by the chancellor, as the pope's representative; and though this authority, by reason of conflicts with the university, had been somewhat reduced during the thirteenth century, the chancellor was still sufficiently powerful to overshadow the rector. Before the university came into existence, the chancellor had conferred the licence to teach, and this function he continued to perform all though the process of organization and after the faculties with their various officials were fully established.

At Bologna, towards the close of the twelfth century, voluntary associations were established by the foreign, i.e., non-Bolognese, students for purposes of mutual support and protection. These students were not boys, but mature men; many of them were beneficed clergymen. In their organization they copied the guilds of travelling tradesmen; each association comprised a number of Nations, enacted its own statutes, and elected a rector who was assisted by a body of *consilarii*. These student-guilds were known as *universitates*, i.e. corporations in the accepted legal sense, not

teaching bodies. Originally four in number they were reduced by the middle of the thirteenth century to two: *universitas citramontanorum* and *universitas ultramontanorum*. Neither the Bolognese students nor the doctors, being citizens of Bologna, belonged to a "university". The doctors were employed, under contract, and paid by the scholars, and were subject, in many respects, to the statutes framed by the student-bodies. In spite of this dependence, however, the professors retained control of strictly academic affairs; they were the *rectores scholarum*, while the heads of the universities were *rectores scholarium*; in particular, the right of promotion, i.e. conferring degrees, was reserved to the doctors. These also formed associations, the *collegia doctorum*, which probably existed at or before the time of the founding of the student "universities". At first the doctors had full charge of examinations and in their own name granted the licence to teach. But in 1219 Honorius III gave the Archdeacon of Bologna exclusive authority to confer the doctorate, thus creating an office equivalent to that of the chancellor at Paris. The doctorate itself, as implying the right to membership in the *collegium*, was gradually restricted to the narrower circle of the *doctores legentes*, i.e. actually teaching. On the other hand, the student control was lessened by the fact that, in order to offset the inducements offered by rival towns, the city of Bologna, towards the end of the thirteenth century, began to pay the professors a regular salary in place of the fees formerly given, in such amounts as they saw fit, by the scholars. As a result the appointment of the professors was taken over by the city, and eventually by the *reformatores studii*, a board established by the local authority. Meantime the two "universities" were being drawn together in one body and this was brought into closer relations with the college of doctors; so that Clement V (10 March, 1310) could speak of a *magistorum et scholarium universitas* at Bologna. At the beginning of the sixteenth century there was only one rector.

The growth of Oxford followed, in the main, that of Paris. In the middle of the twelfth century the schools were flourishing: Robert Pullen (q.v.), author of the "Sentences" on which the more famous work of Peter Lombard is largely based, and Vacarius, the eminent Lombard jurist, are mentioned as teachers. The number of students, already considerable, was swelled in 1167 by an exodus from Paris. There were two Nations: the Boreales (Northern) included the English and Scottish students; the Australes (Southern), the Welsh and Irish. In 1274 these coalesced in one Nation, but the two proctors remained distinct. In 1209, owing to difficulties with the town, 3000 scholars dispersed. On their return, the papal legate Nicholas issued (1214) an ordinance enjoining that the town should pay an annual sum for the use of poor scholars and that "in case a clerk should be arrested by the townsmen, he should at once be surrendered on the demand of the Bishop of Lincoln, or the archdeacon of the place or his official or the chancellor, or whomsoever the Bishop of Lincoln shall depute to this office" (Muniments, I, p. 2). The first statutes were enacted in 1252, and confirmed by Innocent IV in 1254. The chancellor at first was an independent official appointed by the Bishop of Lincoln to act as ecclesiastical judge in scholastic matters. Gradually, however, he was absorbed into the university and became its head.

The development at Paris and Bologna explains the term by which the university was first designated, i.e. *studium generale*. This did not originally and essentially mean a school of universal

learning, nor did it include all the four faculties; theology was often omitted or even excluded by the early charters. It first appears at Bologna in 1360, at Salamanca towards the end of the fourteenth century, at Montpellier in 1421; yet each of these schools was a *studium generale* in the original sense of the term, i.e. a school which admitted students from all parts, enjoyed special privileges, and conferred a right to teach that was acknowledged everywhere. This *jus ubique docendi* was implied in the very nature of the *studium generale*; it was first explicitly conferred by Gregory IX in the Bull for Toulouse, 27 April, 1233, which declares that "any master examined there and approved in any faculty shall everywhere have the right to teach without further examination".

Universitas, as understood in the Middle Ages, was a legal term; it got its meaning from the *Corpus juris civilis*, and it denoted an association taken as a whole, i.e. in its corporate capacity. Employed with reference to a school, *universitas* did not mean a collection of all the sciences, but rather the entire group of persons engaged at a given institution in scientific pursuits, i.e. the whole body of teachers and students: *universitas magistrorum et scholarium*. This is the meaning of the term in official documents relating to Paris and Bologna; thus Alexander IV (10 Dec., 1255) states expressly that under the name university he understands "all the masters and scholars residing at Paris, to whatever society or congregation they may belong." Gradually, however, the terms *universitas* and *studium* came to be used promiscuously to denote an institution of learning: *Universitas Ozoniensis* and *Studium Oxoniense* were both applied to Oxford. There is mention as early as 1279 of *delicta in universitate Oxoniae perpetrata* (Munimenta, I, 39), and in the next century such phrases occur as (1306) in *universitate Oxoniae studere* (ibid., 87 sqq.). That the terms had become practically synonymous at the beginning of the fourteenth century appears from a statement of Clement V, 13 July, 1312, to the effect that the Archbishop of Dublin, John Lech, had reported that in those parts there was no *scolarium universitas vel studium generale*. About 1300 also the expression *mater universitas* was used by the Oxford masters, and these may have taken it from a document of Innocent IV (6 Oct., 1254) in which the pope speaks of Oxford as *faecunda mater*. Later, the expression *alma mater* was applied, e.g. to Paris in 1389; Cologne, 1392; Oxford, 1411. *Alma* was probably suggested by the liturgical use, as e.g. in the hymn beginning "Alma redemptoris mater".

The earliest universities had no charters; they grew *ex consuetudine*. Out of these others quickly developed, by migration, or by formal establishment. As the universities in the beginning possessed no buildings like our modern halls and laboratories, it was an easy matter for the students and professors, in case they became dissatisfied in one place, to find accommodations in another. Conflicts with the town often led to such migrations, especially where some rival town offered inducements: hence the secessions from Bologna to Vicenza (1204), to Arezzo (1213), to Padua (1222), the "great dispersion" from Paris (1229), and the migration (1209) from Oxford to Cambridge. But causes of a less tumultuous sort were also operative. The privileges enjoyed by the first universities lead other cities to seek similar advantages in order to keep their own scholars at home, and possibly attract outsiders, thereby adding to the local prosperity and prestige. Bologna and Paris served as patterns for the new organizations, and the desired privileges were sought from

pope or civil ruler. It became, indeed, usual for the papal charter to include a set formula granting the new university "the same privileges, immunities, and liberties which are enjoyed by the masters and scholars of Paris" (or Bologna); thus Oxford, Cambridge, St. Andrews, and Aberdeen were to a large extent modelled on Paris and Glasgow on Bologna. The Parisian type was also reproduced at the earliest German universities, Prague, Vienna, Erfurt, and Heidelberg; but these soon began to depart from the original. The Nations were of less importance; the rector might be chosen from any faculty; the authority was vested in permanent and endowed professors who predominated in the university council; and the colleges were under the control of the university, which kept the teaching in its own hands.

In Ireland the first step towards establishing a university was taken by John Lech, Archbishop of Dublin. At his instance, Clement V issued, 11 July, 1113, a Bull for the erection of a university near Dublin; Lech, however, died a year later, and nothing was accomplished until his successor, Alexander de Bicknor, in 1320 established a university at St. Patrick's Cathedral with the approval of Pope John XXII. The first chancellor was William Rodiart, Dean of St. Patrick's, and the first graduates William de Hardite, O.P., Edward of Karwarden, O.P., and Henry Cogry, O.F.M. Lectures were still given in 1358; in that year Edward II issued letters-patent protecting the members of the university on their travels, and in 1364, Lionel, Duke of Clarence, founded a lectureship. The university failed from want of endowment, as did also the one founded by the Irish Parliament at Drogheda in 1465.

The Founders: Popes and Civil Rulers

In view of the importance of the universities for culture and progress, it is quite intelligible that there should be considerable discussion and divergence of opinion regarding the authority which should receive credit for their foundation. It has, e.g. been maintained that only the pope could establish a university; contrariwise, it has been held that such an establishment was the exclusive prerogative of the civil rulers, i.e. emperor and king. These, however, are extreme positions, neither of which accords with the facts, while both are based on a study of a limited group of universities and, in large measure, on a failure to appreciate the relations of Church and State in the thirteenth century. From misunderstandings on the latter point erroneous conclusions have been drawn, not only regarding the origins of universities, but also the general attitude of the age towards the papacy and vice versa. Once it is settled, e.g. that, according to the view prevalent in the thirteenth century, only the pope could found a university, it is easy to interpret any similar foundation by a monarch or any initiative taken by a municipality, as evidence of hostility to the Holy See and as a first move towards that "emancipation" which actually came to pass in the sixteenth century. By the same sort of reasoning the inference is drawn that the pope resented the action of the civil power in granting charters and repressed all attempts at freedom on the part of the universities themselves. To set these conclusions in the proper light, it is sufficient to glance at the various modes of foundation.

Previous to the Reformation 81 universities were established. Of these 13 had no charter; they developed spontaneously *ex consuetudine*; 33 had only the papal charter; 15 were founded by imperial or royal authority; 20 by both papal and imperial (or royal) charters. Once the oldest

universities, especially Paris and Bologna, had grown to fame and influence so that their graduates enjoyed the *licentia ubique docenti*, it was recognized that a new institution, in order to become a *studium generale*, required the authorization of the supreme authority, i.e. of the pope as head of the Church or of the emperor as protector of all Christendom. Thus in "Las Siete Partidas" (1256-1263), Alfonso of Sabio declares that a "studium generale must be established by mandate of the pope, the emperor, or the king"); and St. Thomas (Op. contra impugn. relig., c. iii): "ordinare de studio pertinet ad eum qui praestitit reipublicae, et praecipue ad auctoritatem apostolicae sedis qua universalis ecclesia gubernatur, cui per generale studium providetur", i.e. in the matter of universities the authority belongs to the chief ruler of the commonwealth and especially to the Apostolic See, the head of the universal Church, "the interest of which is furthered by the university". These last words contain the essential reason for seeking authorization from the pope: the university was not to be a merely local or national institution; its teaching and its degrees were to be recognized throughout the Christian world. On the other hand, in the civil order, the emperor was supreme; hence he conferred on the universities founded by him, without any papal charter, the right to grant degrees in all the faculties, theology and canon law included. The imperial charters were recognized by the popes and, whenever necessary, additional privileges were granted. It cannot then be said that the action of Maximilian I in founding (1502) the University of Wittenberg was an epoch-making event; Charles IV had long before done the same for Siena, Arezzo, and Orange, and the charters with which he founded Pavia and Lucca preceded by twenty years the papal grants.

The kings were not on the same plane as the emperor. They could indeed found a university, appoint the chancellor, and authorize him to confer degrees; but they could not establish a *studium generale* in the full sense of the term; what they founded was a university *respectu regni*, i.e. the degrees it granted were valid only within the limits of the kingdom. This was the situation at Naples, founded (1224) by Frederick II, and especially in the Spanish universities. The kings themselves were aware of their limitations in this respect, and accordingly sought the papal authorization. The popes on their part recognized the royal charters as valid, and added to them the character of university required for a *studium generale*. In some cases the papal intervention was necessary and was sought, not simply to confirm what the king had established, but to save or revive the university: such e.g. were the measures taken by Honorius III (1220) for Palencia, by Clement VII (1379) for Perpignan, and by Julius II (1464) for Huesca — all royal foundations which showed no vitality until the pope came to their assistance. The power of bishops and municipalities was, of course, still more restricted. They could take the initiative by calling professors, establishing courses of study, and providing endowments; but sooner or later they were obliged to seek authorization from the pope. This was notably the case in Italy where the free and enterprising cities (Treviso, Pisa, Florence, Siena), stimulated by Bologna's example, undertook the founding of their own universities. At Siena, it seemed at first that the attempt to get on without either imperial or papal charter would succeed; the *studium*, inaugurated in 1275, had ample funds and a large body of professors and students which was continually increased by an emigration from Bologna (1312); yet in 1325 it was on the verge of collapsing, and its existence was not secured until it obtained university

privileges from Charles IV in 1457 and papal grants from Gregory XII in 1404. St. Andrews in Scotland was more fortunate. It was founded by Bishop Henry Wardlaw in 1411; but shortly after its opening the bishop in a document addressed 27 Feb., 1412, to the masters and scholars speaks of the "universitas a nobis salva tamen sedis apostolice auctoritate de facto instituta et fundata". Six months later (28 Aug., 1412), Benedict XIII (Avignon) issued the charter of foundation, and appointed Wardlaw as chancellor.

There is no ground, then, for the inference that the founding of universities by the civil power and their organization by laymen for lay students was a symptom of antagonism to the Holy See or an attempt at emancipation from the authority of the Church. Such an interpretation of the facts merely projects modern ideas back into a period in which an entirely different spirit prevailed. That spirit was one of co-operation, even of emulation, in a common cause; and neither the spirit nor the cause would have been possible but for the unity of faith and of hierarchical jurisdiction which held the West together in one Church. Had this unity included all Christendom, the East would doubtless have had its share in the university movement; at any rate, it is significant that in Russia and the other countries dominated by the schismatic Greek Church, no university was established during the Middle Ages.

Besides issuing charters the popes contributed in various ways to the development and prosperity of the universities. (1) Clerics who held benefices were dispensed from the obligation of residence, if they absented themselves in order to attend a university. Both lay and clerical students enjoyed certain exemptions, e.g. from taxation, from military service, from the jurisdiction of the ordinary courts, and from citation to courts at a distance from Paris (*privilegium fori*). To safeguard these privileges was the special duty of the conservator Apostolic, usually a bishop or archbishop appointed by the pope for this purpose. (2) By the Bull "Parens scientiarum" (1231), the magna charta of the university of Paris, Gregory IX authorized the masters, in the event of an outrage committed by any one on a master or a scholar and not redressed within fifteen days, to suspend their lectures. This right of cessation was frequently made use of in conflicts between town and gown. (3) On various occasions the popes intervened to protect the scholars against the encroachments of the local civil authorities: Honorius III (1220) took the part of the scholars at Bologna when the *podestà* drew up statutes that interfered with their liberties; Nicholas IV (1288) threatened to disrupt the *studium* at Padua unless the municipal authorities repealed within fifteen days the ordinances they had framed against the masters and scholars. Even the chancellor of Paris, when he demanded of the masters an oath of obedience to himself, was checked by Innocent III (1212), and his powers were greatly reduced by the action of later popes. It became in fact quite common for the university to lay its grievances before the Holy See, and its appeal was usually successful. (4) In many instances, especially in Germany, the endowment of the universities was drawn, largely if not entirely, from the revenues of the monasteries and chapters. More than once the pope intervened to secure the payment of their salaries to the professors, e.g. Boniface VIII (1301) and Clement V (1313) at Salamanca; Clement VI (1346 at Valladolid: and Gregory IX (1236) at Toulouse, where Count Raymond had refused to pay the salaries. The popes also set the example of endowing colleges,

and these, founded by kings, bishops, priests, nobles, or private citizens, became not only residential halls for students but also the chief financial support of the university.

II. ACADEMIC WORK AND DEVELOPMENT

The Academic Year

In the earlier period lectures were given throughout the year, with short recesses at Christmas, Easter, and Pentecost and a longer vacation in summer. At Paris this vacation was limited by order of Gregory IX (1261) to one month, but by the end of the fourteenth century it had been extended for the arts faculty from 25 June to 25 Aug., for theology and canon law from 28 June to 15 Sept. The year really began on 1 Oct., and was divided into two periods; the grand ordinary, from 1 Oct. to Easter, and the little ordinary, from Easter to the end of June. At Bologna the vacation began 7 Sept., and the scholastic year opened again on 19 Oct.; this, however, was interrupted for ten days at Christmas, two weeks at Easter, and three weeks at carnival. In Germany, there was considerable difference between the calendars of the various universities and even between those of the faculties at the same university. In general, the year began about the middle of October and closed about the middle of June. But at Cologne, Heidelberg, and Vienna there was a little ordinary from 25 Aug., to 9 Oct. The vacation, however, was not a complete suspension of academic work; the extraordinary lectures, given for the most part by bachelors, were continued, and credit was given to students who attended them. About the middle of the fifteenth century, the division of the year into two semesters, summer and winter, was introduced at Leipzig, and eventually was adopted by the other German universities.

Lectures

Both the annual calendar and the daily schedule took into account the distinction between ordinary and extraordinary or cursory lectures. This originated at Bologna where certain books of the civil law ("Digestum Vetus" and "Code") were ordinary, while others ("Infortiatum", "Digestum novum", and the smaller textbooks) were extraordinary. In canon law, the ordinary books were the Decretum and the five books of the Decretals (Gregory IX); the extraordinary were the Clementines and Extravagants. Ordinary lectures were reserved to doctors, and were given in the forenoon; extraordinary lectures, known at Paris as cursory, and given by masters or by bachelors, were assigned to the afternoon during the year; in the vacation they might be given at any time of the day, as the ordinary lectures were then suspended. Cursory meant either that the lecture was followed by the *cursores*, i.e. candidates for the licence, or that it ran rapidly over the subject-matter, whereas the treatment in the ordinary lecture was more thorough.

In all the faculties the work of teaching centred about books, i.e. the texts, compilations, and glosses which were regarded as the chief authorities in each subject. At the beginning of the year (or semester) the books were distributed among the professors, who were obliged to use them in accordance with the regulations established by each faculty regarding the daily schedule, the length of the course, the hall to be used, the academic dress to be worn, and the method to be followed. The lecture was in the strict sense a *praelectio* (whence the German *Vorlesung*); the professor had

to read the text; in the ordinary lectures, he was not allowed to dictate anything beyond the divisions and conclusions and such corrections of the text as he deemed necessary. The scholars were supposed to have their own copies of the text; if they were too poor to procure the books, the professor might dictate the text to them, not in the regular lecture but at special classes or exercises (repetitions). The plan of the lecture was analytic: careful explanation and definition of terms (*ponere et determinare*); division of the matter and discussion of the several points followed by a summary of the essential (*scindere et summare*); presentation of problems suggested by the text (*quaestiones*), and solution of objections. In lectures on law the reading of the glosses was an important feature, and cases were frequently proposed to illustrate principles. At the ordinary lectures, the scholars were not supposed to ask questions; at the extraordinary, greater freedom was permitted, the scholars being encouraged to express their doubts as to the meaning of the texts and to request further information on obscure matters. More thorough training, however, was given in the resumption and repetitions which the masters held at stated times for the treatment of special problems. The exercises, conducted in dialectical form, afforded full opportunity for discussion between scholar and master; and they served as examinations by which the progress of the scholar was tested. But the most important of the academic exercises was the disputation. This was of two kinds: *d. ordinaria* and *d. de quodlibet*. The ordinary disputation took place every week and lasted from morning till noon, or till evening according to the number of participants. On the day set apart for this purposes the lectures and other exercises were suspended, so that all the masters, bachelors, and scholars might be present at the disputation. One of the masters (*disputans*) announced, in the form of question or thesis, the subject of the debate; other masters (*opponentes*) presented arguments against the thesis; answers to the arguments were given by two or three bachelors (*respondentes*) appointed for the occasion. The number of arguments were fixed by statute or was fixed by the dean of the faculty whose duty it was to preside. Throughout the disputation the syllogistic form was employed. The *disputation de quodlibet* was held only once a year, but with greater solemnity than the ordinary, and over a wider range of topics. The master elected or appointed for the occasion, and known as the *quodlibetarius*, had to debate a separate question with each of the other masters who chose to enter the lists. The disputation lasted several days, sometimes a fortnight. The arguments and their solutions were written out and preserved in book form. A specimen may be found in the "Quodlibetales" of St. Thomas. It was mainly out of these lectures, repetitions, and disputations that the works of the medieval doctors grew; so that the various commentaries, *summae*, and books of "sentences" afford the best idea of university teaching both as to content and as to method.

Courses of Study: Degrees

The distribution of the subjects to be studied and of the books to be read in the course was regulated in view of the degrees, i.e. of the various steps (*gradus*) by which the student advanced from the stage of a simple scholar to that of a master or doctor. The system of degrees developed out of the necessity of restricting the right to teach, and consequently of fixing the qualifications which the teacher should possess. It did not, any more than the university itself, spring suddenly into existence, nor did it everywhere present the same details. Three degrees, however, were

generally recognized: baccalaureate, licentiate, and doctorate or mastership. The requirements for these varied at different periods and in different universities; each faculty, moreover, had its own regulations regarding the length of courses and the subjects of study; in particular, there was a rather broad division between the faculty of arts and the superior faculties of theology, medicine, and law. For the courses of study in arts, see ARTS, BACHELOR OF; ARTS, THE FACULTY OF; ARTS, MASTER OF.

In theology, the texts were the Bible and the "Sentences" of Peter Lombard; in law, the books mentioned above; in medicine, the works of Galen, Avicenna, and other writers prescribed for Montpellier by Clement V in 1309. The medical course included also practical work in anatomy, for which the "Anatomia" of Mondino (1275-1237) of Bologna and a similar text by Henri de Mondeville (1260-1320) of Montepplier, served as guides. The student was further required, before graduation, to accompany the professor on the latter's visits to the sick for the purpose of clinical study. For degrees in the higher faculties, see DOCTOR.

Students

The most conspicuous feature of the student body as a whole was its cosmopolitan character. This is evidenced by the division into Nations mentioned above. The University of Bologna owed its origin mainly to associations of foreign students, and among these the Germans enjoyed exceptional privileges. At Paris the English nation was prominent, and Irish scholars were found in the continental universities long before they were expelled from the English universities in 1423. What the total number was at any of the older universities is a debated question. According to Odofredus, Bologna, at the close of the twelfth century, had 10,000; Oxford, according to Richard Fitz Ralph (d. 1360), had at one time 30,000 and in his own day 6,000, while Wyclif (d. 1384) placed the "heroic" number at 60,000, in his own day at 3,000; the earlier accounts gave Paris between 20,000 and 40,000. Recent estimates have reduced these numbers, allowing Paris a maximum 6000-7000, Bologna about the same, Oxford 1500-3000 (Rashdall, *op. cit. infra*). For the German universities, the numbers are still smaller; in 1380-1389 Prague had 1027, in the second half of the sixteenth century Vienna had 933, in 1450-1479 Cologne had 852, in 1472 Leipzig had 662; while Greifswald in 1465-1478 had only 103 and Freiburg, in 1460-1500, only 143 (Paulsen). In respect of age the differences were considerable. A boy could begin arts at between twelve or fifteen years of age and graduate at twenty or twenty-one. The students of the superior faculties were, of course, older men. Candidates for the doctorate in theology at Paris must have been over thirty; and it was not uncommon for priests who had already spent some time in the ministry, to matriculate at the university; an abbot, a provost, or even a bishop might become a student without any sacrifice of his dignity.

The frequent use of the work *clericus* or "clerk" to designate a university student, does not imply that every student was an ecclesiastic. At Bologna the distinction was clearly drawn between the *scolaris* and the *clericus*; the statutes concerning the rector provide that he must be a scholar of Bologna and, in addition, "an unmarried cleric, wearing the clerical dress and not belonging to any religious order". Similar provisions are found at Florence, Perugia, and Padua. Long before

the rise of the universities, clerics enjoyed certain privileges and immunities, and these were extended, when the universities had been established, to all the students, lay and clerical alike. The layman would naturally wear the clerical garb not merely as an academic costume but as an evidence that he was entitled to clerical privileges. Even at Paris and Oxford, where the ecclesiastical element dominated, the enjoyment of these privileges was not dependent on the reception of tonsure, i.e. on admission to the clerical state in the canonical sense (Rashdall, II, 646). Celibacy, however, was obligatory on all scholars and masters; as a rule, a master who married lost his position, and though married scholars are sometimes mentioned, e.g. at Oxford, they were disqualified for taking degrees. Still, celibacy was not universally enforced; there were married professors of medicine at Salerno, and at the university of the Roman Curia, which was under the direct supervision of the pope, the masters of law had their wives and children. One of the famous canonists of Bologna was Joannes Andrea (1270-1328, whose daughter Novella sometimes lectured in his stead. At Paris the obligation of celibacy for masters in medicine was removed by Cardinal Estouteville in 1452, for those in law by the statutes of 1600. The first rector at Greifswald (1456) was married, as was also the rector at Vienna in 1470. In other German universities the requirement of celibacy remained longer in force, owing in part, at least, to the fact that many of the chairs were endowed with the revenue of canonries; but this did not imply that laymen were excluded from university positions.

An important element in the student body and in the entire life of the university was contributed by the religious orders. In Italy they had long been the recognized teachers of theology, and when the faculty of theology was established at Bologna in 1260, they supplied the professors and the majority of the students. The Dominicans settled at Paris in 1217 and at Oxford in 1221; the Franciscans at Paris in 1230 and at Oxford in 1224. At both universities the Carmelites and Augustinians also had their convents. The members of these orders in their community life enjoyed many advantages; a permanent home in which their material needs were provided for, regular hours of study, discipline, and religious practice; and for each order the bond of membership was a source of strength and solidarity. It is not then surprising that the regulars took high rank as scholars and teachers. Of the secular clerks some lived in apartments, others with their masters, and other again, the "martinets", with the townsmen. The students frequently banded together and lived in a rented hall (*hospicium*) under the management of one of their own number, a bachelor or a master elected by them as principal. For the poorest students colleges were established and endowed with burses by generous founders. Between 1200 and 1500 Paris had six colleges; Oxford, eleven; Cambridge, thirteen. The founders were mostly bishops, canons, or other ecclesiastics; but the laity, including the sovereigns, did their share (see OXFORD, UNIVERSITY OF: I. *Origin and History*). At Bologna the most famous was the College of Spain founded by Egidio Albornoz, Cardinal Archbishop of Toledo (d. 1367). The colleges at the German universities were primarily for the benefit of the teachers, though scholars also were received. The college residents at Paris were students in arts or theology; they were known as *socii* (fellows) and were governed by a master, or by several masters if the students belonged to different faculties. The masters were required to hold repetitions on the subjects treated in the university schools and "faithfully to instruct the scholars

in life and in doctrine". This tutoring gradually became more important than the university lectures, and attracted to the colleges large numbers of students besides the holders of burses or scholarships; by the middle of the fifteenth century almost the whole university resided in the colleges, and the public lecture halls served only for determination and inceptions. In this way the Sorbonne, originally a hospice for poor clerks, became the centre of theological teaching at Paris. The university, however, claimed and exercised the right of visitation and of disciplinary enactments; in 1457 it obliged the martincts to live in or near some college, and forbade the migration of scholars from one master's home to another; and in 1486 it enacted that teachers in colleges should be appointed by the faculty of arts.

With the founding of the colleges, discipline improved. The earlier university regulations dealt chiefly with academic matters, leaving the students quite free in other respects. According to all accounts this freedom meant licence in various forms — fighting, drinking, and graver offences against morality. With due allowance for the exaggeration of some writers who charge the scholars with every crime, it is clear from the college statutes that there was much need of reform. It should, however, be remembered that in any age the boisterous and lawless elements are more conspicuous than the serious, conscientious student; and it is doubtless to the credit of the medieval university, as a social factor, that it succeeded in imposing some sort of discipline upon the motley throngs which it undertook to teach. When the reform did come, it fairly rivalled, in minuteness and strictness, the monastic way of life. But it did not prevent the survival of certain practices, e.g. the initiation or deposition of the *bejaunus* (yellow-bill), the medieval form of hazing; nor did it establish perfect tranquility in the university.

Agitations of a more serious nature affected the development of the universities. Both Paris (1252-1261) and Oxford (1303-1320) were embroiled in struggles with the mendicant friars. Repeated conflicts with the town, notably the "Slaughter" of 1354 at Oxford, turned eventually to the benefit of the university, which, as Rashdall says (II, 407) "thrived on her own misfortunes". It was the chancellor who profited most and whose jurisdiction was gradually extended until, in 1290, it included "all crimes committed in Oxford where one of the parties was a scholar, except pleas of homicide and mayhem" (Rashdall, II, 401). In 1395, a Bull of Boniface IX exempted the university from all episcopal and archiepiscopal jurisdiction; but in consequence of the archbishop's opposition the Bull was revoked by John XXIII in 1311, only to be renewed by Sixtus IV in 1479. The conflict between Nominalism and Realism was in itself a scholastic feud; yet it was closely connected with the "reform" inaugurated by Wyclif; and while Wyclif may be regarded as a champion of intellectual freedom, it is interesting to note among his errors condemned at Constance (1415) and by Martin V (1418), the proposition that "universities with their studies, colleges, graduations, and masterships, were introduced by vain heathenism; they do the Church just as much good as the devil does" (Denzinger-Bannwart, "Enchiridion", n. 609).

In the calmer appreciation of modern historians the medieval university was a potent factor for enlightenment and social order. It aroused enthusiasm for learning, and enforced discipline. Its training sharpened the intelligence, yet subjected reason to faith. It was the centre in which the

philosophy and the jurisprudence of antiquity were restored and adapted to new requirements. From it the modern university has inherited the essential elements of corporate teaching, faculty organization, courses of study, and academic degrees; and the inheritance has been transmitted through the manifold upheavals which submerged the ancient learning and rent Christendom itself asunder.

III. RENAISSANCE AND REFORMATION

The effect of the "new learning" on the German universities was revolutionary. At first the Humanist professors got on fairly well with the rest of the faculty; but when they asserted their superiority as representatives of the only real knowledge, bitter attacks and recriminations ensued. The Humanists ridiculed the barbarous Latin of the university and the wretched translations of Aristotle used in commentaries and lectures. Then they assailed the Scholastic method of teaching with its endless hair-splitting and disputations, and strove to substitute rhetoric for dialectic. Finally they struck at the content itself, declaring that much time was spent in gaining very little knowledge of hardly any value. All the charges were drawn up in publications marked by brilliant style and sharp invective; e.g. the "Epistolae obscurorum virorum", written against the professors of arts and theology, especially those of Leipzig and Cologne. This violent satire contained much that was false or exaggerated, and therefore calculated rather to add new disturbance than to effect the reform which was really needed. The better days of Scholasticism, in fact, had passed; the universities had no longer such leaders of thought as the thirteenth century had produced; both studies and discipline were on the decline. Humanism triumphed, in the first place, because, as a reaction and a novelty, it appealed to the younger men who were anxious to be free from the dryness of Scholastic exercises and the restrictions imposed by college statutes. Their unruly conduct and their ceaseless brawls with the townsfolk afforded the princes and the city authorities a pretext to undertake university reforms; and the reforming was accomplished by placing the Humanists in control. These conflicts and remedial measures, however, were only the surface of a much deeper movement. Before it asserted itself in the universities, Humanism had won over the higher and more influential classes of the people by catering, in the form of literature, to the spirit of luxury which the growth and increasing wealth of the cities had engendered. There was no doubt a charm in the elegant diction of the Humanists; but their attractive force lay in the rehabilitation of those views and ideals of life which the naturalism of the pagan world had expressed in perfect form and which brought men back to themselves and to earth. Aristotle had triumphed in the thirteenth century; he was overcome in the fifteenth by the orators and poets.

The Renaissance, originating in Italy, had thence spread to the northern countries. Its introduction into the universities of Italy and France did not lead to revolt against the Church; the popes were its patrons, and many distinguished Humanists remained loyal to Catholicism. In Germany and England, on the contrary, the Renaissance coalesced with another movement which had far more serious consequences. Luther, though not in sympathy with Humanism, was bent on sweeping away Scholastic theology by returning, as he claimed, to the pure teaching of the Gospel; and he would

have made an end to the universities, which he denounced as the devil's workshops. The violent theological discussions aroused by the reform doctrine had a disastrous effect, not only on Humanism but also on the life of the universities. Some of them closed their doors, and nearly all were in danger of dissolution for want of students. Melanchthon declared that philosophy was the worship of idols and that the only knowledge necessary for a Christian was to be obtained from the Bible. But the reformers soon realized that their cause could not dispense with the higher education; and it was Melanchthon himself who reformed the existing universities and organized the new, i.e. Protestant, foundations, Marburg (1527), Königsberg (1544), Helmstadt (1574). The endowment was supplied chiefly from the revenues of confiscated monasteries and other church properties; Classic philology and the new theology took the place of Scholasticism; and the universities became state institutions under the control of secular princes.

As a result, the universities lost in great part their international character. In place of the medieval *studium generale*, there arose a multitude of institutions each limited to its own territory and devoted to the creed of its founders. During the sixteenth and seventeenth centuries, the traditional organization was preserved; but Classical culture was on the wane, and there was little progress in other lines. "At the end of the seventeenth century the German universities had sunk to the lowest level which they ever reached in the public esteem and in their influence upon the intellectual life of the German people . . . Academic science was no longer in touch with reality and its controlling ideas; it was held fast in an obsolete system of instruction by organization and statutes and toilsome compliance was the sole result of its activity. Added to this was the prevailing coarseness of the entire life. The students had sunk to the lowest depths, and carousals and brawls, carried to the limits of brutality and bestiality, largely filled their days" (Paulsen, "The German Universities", p.42).

When Erasmus came to England in 1497, Classical studies imported from Italy were already cultivated at Oxford by men like Colet, Groeyn, Lynacre, and Sir Thomas More. In 1516, Richard Fox, Bishop of Winchester, endowed the first lectureship in Greek and founded Corpus Christi College. In 1525, Wolsey founded Cardinal College and engaged eminent teachers to "cultivate the new literature in the service of the old Church" (Huber). But his princely designs were checked by the question of Henry's divorce from Catherine of Aragon. At Cambridge also the Renaissance movement was furthered by the teaching of Erasmus and the exertions of Bishop Fisher; but at the same time the writings of Luther were being studied by a group of scholars under Tyndale and Latimer, and it was Cranmer, then a fellow of Jesus College, who suggested that the legality of Henry's marriage should be referred to the universities of Christendom. After some opposition both Oxford and Cambridge gave an opinion favourable to the king; and finally they declared for the separation from Rome which was consummated by the Act of 1534. By the Royal Injunctions of 1535, the teaching of canon law and of the Sentences was abolished; Aristotle, however, was retained, and the study of civil law, Hebrew, mathematics, logic, and medicine was encouraged. The spoliation of the monasteries, which had sheltered many of the poorer scholars, reduced the numbers at the universities. In 1549 a royal visitation eliminated from the statutes every trace of

popery, and abolished numerous stipends that had formerly been given for Masses. In a spirit of iconoclasm, altars, images, and statues were torn from the college chapels, and many valuable manuscripts of the libraries were burned. Under Mary's brief rule the Protestants in turn suffered; Cranmer, Ridley, and Latimer perished at the stake at Oxford, and the anti-Catholic statutes were repealed. During Elizabeth's reign and Leicester's chancellorship, every Oxford student above sixteen years of age was obliged at matriculation to subscribe to the Thirty-Nine Articles and the Royal Supremacy, a measure which made the university an exclusively Church of England institution. At Cambridge a royal mandate in 1613 required all candidates for B.D. or for the doctorate in any faculty to subscribe to the Three Articles. In both universities, Puritanism was a disturbing element, and a number of its adherents were obliged to withdraw from Cambridge. In 1570 the Elizabethan statutes were enacted "on account of the again increasing audacity and excessive licence of men" as the preamble declares. These new regulations circumscribed the powers of the proctors and provided that they should be elected, not as formerly, by the regents, but according to a cycle of colleges. The Elizabethan code remained in force for nearly three centuries. Under Charles I similar provisions were made for Oxford by the Laudian statutes (1636), and the whole administration of the university was entrusted to the vice-chancellor, the proctors, and the heads of colleges. "This statute effectually stereotyped the administrative monopoly of the colleges, and destroyed all trace of the old democratic constitution which had been controlled only by the authority of the medieval Church" (Brodrick). Oxford was governed by this code until 1854.

In Scotland, after the abolition of papal jurisdiction and ratification of Protestant doctrine in 1560, the universities suffered severely. "To St. Andrews, as to the other universities, the Reformation did serious injury. Their constitution and organization were upset by ecclesiastical dissent; their income was sadly reduced by the rapacity of the nobles who appropriated the lion's share of the patrimony of the Church. From a greatly diminished income they had to uphold the stipends of the parishes which belonged to them. This was necessarily accompanied by a reduction of the salaries of the professors, for which certain grants by successive administrations made small but inadequate amends. The attendance of students was also injuriously affected" (Kerr, p. 108). Though various schemes of reform were proposed, especially by Knox, they proved ineffectual owing to the tumults about religion and the alternations between presbytery and episcopacy. The universities became institutions of the state in 1690 and religious tests were enforced for all teachers and officials. Curricula and organizations, however, retained for a long time their medieval features. During the seventeenth and eighteenth centuries, various modifications were introduced in the courses of study; new chairs were founded and the financial condition improved.

At Paris this period witnessed the long struggle between the university and the Jesuits (*see* SOCIETY OF JESUS: *History; France*), the inroads of Gallicanism and Jansenism, and the substitution of royal for papal supremacy. As far back as 1475, Charles VII had placed the university under the jurisdiction of the Parlement; by the end of the sixteenth century the secularization was complete. If Richelieu, by rebuilding the Sorbonne, and Mazarin, by establishing the Collège des Quatre-Nations, enhanced the outward splendour of the university, they did not endow it with vitality

sufficient to check the new philosophical movement which culminated in the work of the Encyclopedists and the Revolution. In 1793 the university was suppressed and with it all the other universities of France. Napoleon I reorganized them as faculties under the one imperial university situated at Paris; and this arrangement continued until, in 1896, the faculties were restored to university rank.

IV. MODERN PERIOD

In Germany, the eighteenth century brought decided changes which some authors (Paulsen) regard as the origin of the modern university. From Halle, founded in 1694, Christian Wolff's rationalistic philosophy spread to all the Protestant universities, and from Göttingen (1737) the new Humanism, especially the study of Greek. Freedom of research became the characteristic feature of the university; the systematic lecture replaced the exposition of texts; the seminar exercises supplanted the disputation; and German was used instead of Latin as the vehicle of instruction. The foundation of the University of Berlin (1800) was another advance in the way of free scientific culture. Philosophy became the leading subject of study. Next in importance was philology, Classical Romance, and German. The development of the historical method and its application in all lines of research are among the principal achievements of the nineteenth century. In the natural sciences laboratory training was recognized as indispensable, and the study of medicine was put on a new basis by improved methods of investigation. Specialized research with producing scholarship, rather than accumulation of knowledge, was held up as the aim of university work. As a result the departments of science multiplied and in each the number of courses rapidly increased. This was the case especially in the faculty of philosophy, which came to include practically everything that did not belong to theology, medicine, or law. The B.A. degree disappeared, the M.A. was merged with the doctorate in philosophy, and this had its chief significance as a requisite for teaching. Great importance was attached to the preparation of teachers for the schools and gymnasia, while in the university itself, the recruiting of professors was provided for by the system of *Privatdozents*, i.e. instructors who have the privilege of teaching but no official duties or salaries. These instructors often teach at various universities before being promoted to a professorship, and thus acquire a wide experience as well as an acquaintance with conditions in different parts of the empire. The students also are encouraged to pass from one university to another. They no longer live in colleges, nor are they exempt from municipal control and military service. Most of them, however, are members of some *Verein* or *Verbindung* which develops the social spirit, though it often encourages duelling, drinking, and other practices hardly conducive to moral or intellectual advance.

In England and Scotland the nineteenth century was marked by numerous and far-reaching changes. A succession of statutes revised the system of examinations and degrees: religious tests were abolished at the English universities in 1871, at the Scottish in 1892; many of the traditional oaths disappeared, and the restrictions imposed by the Elizabethan code were in large part removed. The tendency of legislation (Acts of 1854, 1856, 1877) was in line with the reforms advocated by the Royal Commission in 1852, i.e. "the restoration in its integrity of the ancient supervision of the

university over the studies of its members by the enlargement of its professorial system, by the addition of such supplementary appliance to that system as may obviate the undue encroachments of that of private tuition . . . the removal of all restriction upon elections to fellowships and scholarships . . . an adequate contribution from the corporate funds of the several colleges towards rendering the course of public teaching, as carried on by the university itself, more efficient and complete". This movement toward a revival of the authority of the university has been furthered by Lord Curzon in his "Principles and Methods of University Reform" (1909). The monopoly of higher education so long enjoyed by Oxford and Cambridge was broken by the creation of new universities; Durham was established in 1832, and the University of London, founded in 1825 and chartered as an examining and degree-conferring institution in 1838, was reorganized on a broader basis in 1889. The university extension movement, inaugurated at Cambridge in 1867, was taken up by Oxford also. Women were admitted to examinations and degrees at London in 1878, Cambridge in 1881, and Oxford in 1884. The Scottish universities were remodelled in 1858 and in 1889; the system of studies and degrees was reorganized and greater uniformity in government was secured. At Aberdeen and Glasgow, however, the rector is still elected by the matriculated students, who are divided into four nations as in the Middle Ages. Women were admitted as students in 1892.

For the earliest foundations in America see UNIVERSITIES, SPANISH-AMERICAN. In the United States the oldest universities grew out of colleges modelled on those of England; Harvard (1636), Yale (1701), Princeton (1726), Washington and Lee (1749), University of Pennsylvania (1751), King's, i.e. Columbia (1754), Brown (1764). The first step towards university instruction was the addition of graduate studies pursued by resident students (mentioned at Harvard towards the end of the eighteenth century). During the first quarter of the nineteenth century, American students began to study in Germany and they naturally, on returning to their own country, sought to introduce elements from the German universities. It was not, however, until 1861 that the doctorate in philosophy was conferred (Yale); since that time, the universities have developed rapidly but not according to any uniform plan of organization. In all these institutions there is a combination of graduate with undergraduate study, and in many of them departments of pure science exist alongside of professional schools; but it would be impossible to select any one of them as the typical American university, and difficult to group them on any purely educational basis. This diversity is largely owing to the fact that the American institutions, especially the more recent, have been organized to meet actual needs rather than to perpetuate traditions; and since these needs are constantly changing, it is quite intelligible that new forms of university organization should appear and that the older forms should be frequently readjusted. Apart, however, from details, what may be called the university situation presents certain features that are noteworthy.

(1) The oldest universities were established and endowed by private individuals, and they have retained their private character. Even where the states have organized universities of their own, no measures have been taken to prevent private foundations; the latter in fact are as a class more influential than those controlled by the State, and, on the other hand, the private universities are

empowered to give degrees through charters granted by the State. This freedom is far more in accordance with the spirit of American institutions and more essential to the national welfare than any hard and fast uniformity under state domination.

(2) From the beginning, as the oldest charters explicitly declare, the furthering of morality and religion, not merely in a general way, but in accordance with the belief of some Christian denomination, was an avowed purpose of the founders; and divinity schools are still maintained at Harvard, Yale, and Princeton. But the state universities and nearly all the more recently founded private universities exclude theology. There is a decided tendency with powerful financial support to make the university non-sectarian by eliminating all religious tests and removing denominational influence.

(3) Besides the state appropriations, vast sums of money are contributed by individuals to the endowment of universities and the establishment of institutes for scientific research. Such liberality is an evidence of the practical interest taken in education, which is considered as the best means of improving moral, social, and economic conditions. Whether the final result will be the application of a money test in deciding what is and is not a university, must depend largely on the standards of scholarship which are adopted and the idea of its functions as a social power that is formed by the institution to which so much wealth is entrusted.

(4) The practical character of university training is shown by the attention that is paid to technical instruction in all its forms. The preference for applied science manifested by many students has a serious effect not only on university policies and curricula but also on the work of secondary and elementary schools, in which the relative value of cultural and vocational studies is keenly debated.

(5) As the efficiency of the university is in part determined by the quality and extent of the student's previous education, one of the chief problems demanding solution at present is the relation between the university and the preparatory schools. In the endeavour to secure satisfactory relations between college, high school, and elementary school, the university exerts an influence which becomes more permeating as the educational system is more thoroughly articulated. The entire question of adjustment will probably be settled not so much by discussion or legislation as by the training of teachers, which now holds a prominent place in each of the larger universities.

(6) Although women have long formed the majority of teachers in elementary and public schools, they were not admitted to the universities until about the middle of the nineteenth century. The co-educational movement began in the state universities of the West, received a fresh impetus at the University of Michigan in 1870, and then spread rapidly through the East. In some universities all departments of instruction are now open to women on the same footing as men; in others, women are excluded from the courses in law, medicine, and engineering, and receive separate instruction in affiliated colleges.

(7) Within recent years, university extension, correspondence courses, and local examinations have enabled the university to widen out its sphere of activity. It might seem indeed that the centripetal movement which in the Middle Ages brought students from all parts to the *studium generale*, were now to be reversed or at least to be reflected in the opposite direction.

V. CATHOLIC ACTION

The universities of France, Italy, and Spain, though affected to some extent by the Reformation, had remained loyal to the Catholic Faith, and preserved their chairs of ecclesiastical science. Louvain especially, while it developed Humanistic sciences to a high degree, resisted the encroachments of Protestantism. The Council of Trent ordained that provision should be made for the study of Scripture, that beneficed studying at universities should enjoy their traditional privileges, that bishops and other dignitaries should be selected by preference from among university professors and graduates (Sess. V, can. i; VII, xiii; XIV, v; XXII, ii; XXIII, vi; XXIV, viii, xii, xvi, xvii). It also provided for the education of priests by its decrees regarding the establishment of ecclesiastical seminaries. (See SEMINARIES, ECCLESIASTICAL.) But the Church did not lose interest in the universities or desist from establishing new ones. In spite of the loss of revenue from the confiscation of church properties, Catholic universities or academies were founded at Dillingen (1549), Würzburg (1575), Paderborn (1613), Salzburg (1623), Osnabruck (1630), Bamberg (1648), Olmutz (1581), Graz (1586), Linz (1636), Innsbruck (1672), Breslau (1702), Fulda (1732), Münster, (1771). To this period also belong the French universities at Douai (1559), Lille (1560), Pont-a-Mousson, later Nancy (1572), and Dijon (1722); the Italian at Macerata (1540), Cagliari (1603), and Camerino (1721); the Spanish at Granada (1526) and Oviedo (1574); Manila in the Philippines (1611), and the South American foundations (see UNIVERSITIES, SPANISH-AMERICAN). Most of these new universities were entrusted to the Jesuits, whose colleges in regard to Classical studies rivalled, and in matters of discipline, surpassed the universities. After the suppression of the Society (1773), the chairs which they had held were either abolished or transferred to secular professors. Among the papal documents bearing on universities should be mentioned: the Constitution, "Imperscrutabilis", addressed by Clement XII (4 Dec., 1730) to Philip V of Spain regarding the University of Cervera; the "Quod divina sapientia", published, 28 Aug., 1824, by Leo XII for the reformation of university studies in the Papal States and some other provinces of Italy; the Brief by which Gregory XVI, 13 Dec., 1833, approved the action of the Belgian bishops in restoring the University of Louvain; and the Apostolic Letter of Pius IX, 23 March, 1852, approving the statutes of the University of Dublin, the founding of which had been decided upon by the Irish episcopate at the Council of Thurles in 1850.

During the latter half of the nineteenth century the Spanish and Italian universities were taken over by the State, and the faculties of theology disappeared. In France, under the present system, there is no faculty of theology in any state university; the Catholic faculties at Paris, Bordeaux, Aix, Rouen, and Lyons were abolished in 1882, and the Protestant faculties at Pais and Montaubon became free theological schools in 1905. In 1875, however, the French bishops established independent Catholic universities or institutes at Angers, Lille, Lyons, Paris, and Toulouse. In Germany, though all universities are state institutions, there are Catholic faculties of theology at Bonn, Breslau, Freiburg, Munich, Münster, Strasburg, Tübingen, and Würzburg. The professors are appointed and paid by the State, but they must be approved by the bishop, who also has the

right to superintend the teaching. The Austrian universities, though injured in the eighteenth century by Jansenism and modified in the nineteenth by various reforms, have still retained the teaching of theology in the faculties of Graz, Innsbruck, Cracow, Lemberg, Prague, Olmutz, Salzburg, and Vienna; and in Hungary at Agram and Budapest. It should be noted, however, that in Germany and Austria the existence of a faculty of Catholic theology does not make the whole university Catholic; the other faculties may include members who profess no creed. This situation naturally gives rise to difficulties for Catholic students, especially in philosophy and history. In countries where a larger freedom is enjoyed, the Holy See has encouraged new foundations. Pius IX gave a charter to Laval, Canada (1876); Leo XIII to Beirut, Syria (1881), and to Ottawa, Canada (1889). The University of Fribourg, Switzerland, established in 1889, was warmly approved by Leo XIII. The project of founding a Catholic university in the United States was suggested at the Second Plenary Council of Baltimore in 1866; its execution was resolved on at the Third Plenary Council in 1884, and the statutes of the Catholic University of America were approved by Leo XIII in the Apostolic Letter of 7 March, 1889.

Present Law of the Church

The principal laws now in force regarding universities are as follows:

- For the establishment of a complete Catholic university, including the faculties of theology and canon law, the authorization of the pope is necessary; and this alone suffices if the foundation is made with ecclesiastical funds or private endowment. If public funds of the state are also used for the purpose, authorization must likewise be obtained from the civil power. The Church, moreover, recognizes the right of the State, or corporations or individuals under control of the State, to establish purely secular facilities, e.g. of law or medicine (Clement XII, Const. "Imperscrutabilis", 1730).
- The Church requires that in universities founded by the civil power for Catholics, the faculties of theology and canon law, once they are canonically established, shall remain subject to the supreme ecclesiastical authority, and moreover, that professors in the other faculties shall be Catholic and that their teaching shall accord with Catholic doctrine and sound moral principles.
- As appears from recent papal charters, the university enjoys autonomy e.g. in the appointment of instructors, the regulation of studies, and the conferring of degrees in accordance with the statutes.
- By the Constitution "Sapienti Consilio", 29 June, 1908, the Congregation of Studies is charged with all questions regarding the establishment of new Catholic universities and important changes in those already founded.
- Degrees in theology and canon law conferred without examination by the Holy See through the Congregation of Studies, give the recipient the same rights and privileges as the degrees conferred after examination by a Catholic university (Cong. Stud., 19 Dec., 1903; Roviano, "De Jure ecclesiae in universitatibus studiorum", Louvain, 1864; Wernz, "Jus Decretalium", III, Rome, 1901).

Information regarding all the universities of the world is given in Minerva (Strasburg), of which the Handbuch (vol. I, 1911) describes the organization, and the Jahrbuch, now in the twentieth year, contains annual announcements of courses, equipment, and statistics.

EDWARD A. PACE

University of St. Francis Xavier's College

University of St. Francis Xavier's College

The University of St. Francis, Antigonish, Nova Scotia, was founded in 1885, under the name of St. Francis Xavier's College, by Rt. Rev. Dr. MacKinnon, Bishop of Arichat (now the Diocese

of Antigonish). A legislative enactment of 1866 empowered it to confer degrees. A statute of 1882 granted full university powers. The new charter (enacted in 1909) gave it all the powers, rights, and privileges that any university could reasonably demand from the State, including the right to confer all the usual university degrees, and to acquire and hold real and personal property to any value or extent whatsoever. The supreme governing body is a board of twelve governors, of which the Bishop of Antigonish is ex-officio chairman. There are at present (1912) twenty-five professors, lecturers, and tutors. In 1911-12 there were 356 students, the majority of whom came from the eastern provinces of Canada, the New England States, and Newfoundland, and a few from Western Canada, the Pacific States, and Great Britain. Four-year courses lead, respectively, to the degrees of Bachelor of Arts, Bachelor of Science, and Bachelor of Letters. After the sophomore year, excellent opportunities are given to students anxious to devote some of their time to special preparation for scientific pursuits, or for one of the professions. The course in philosophy extends over three years. A short course in law is given, which counts as a year for the degree of LL.B. in the Halifax Law School. The two-year course in engineering admits to the third-year class in any of the leading schools of engineering in Canada or the United States. Some university extension work has been done. Two summer sessions, five weeks each, have been held. Some of the courses were especially designed to meet the needs of teachers in the public schools. Intended for the education of laymen as well as ecclesiastics, St. Francis Xavier's has given to the State many useful and brilliant men — judges, legislators, physicians, engineers, and to the Church a large number of priests and several bishops. Two archbishops and two other bishops are still living. The late Dr. Cameron, Bishop of Antigonish, and Dr. MacNiel, late Archbishop of Vancouver, are among the presidents whose learning, ability, and zeal have, despite many disadvantages, rendered service to the cause of Catholic education in Eastern Canada. The present Bishop of Victoria, Rt. Rev. Dr. Alexander MacDonald, was for nineteen years one of the professors.

A.J.G. MacECHEN

University of St. Joseph's College (Canada)

University of St. Joseph's College

Memramcook, New Brunswick, Canada

Founded in 1864 by Rev. Camille Lefebvre, C.S.C. The institution owes its inception partly to the desire of the late Bishop Sweeny, of St. John, N.B., to secure for the youth of his diocese the advantages of a secondary education, of Memramcook (1852-64); for the intellectual development of the French Acadians entrusted to his care. The college was incorporated, with degree-conferring powers, by an Act of the New Brunswick Legislature in 1868; and, thirty years later, by an amendment to that act, it received its present title. In addition to the faculties of arts and theology, commercial courses in English and French have always occupied a well defined place in the curriculum. It is mainly owing to St. Joseph's that within the past half-century the French inhabitants of Canada's maritime provinces have steadily advanced to a position of acknowledged social,

industrial, and professional equality with their fellow-provincialists of other racial descent. Scarcely less notable has been St. Joseph's role in furthering the interests, enlarging the prospects, and elevating the ideals of New Brunswick's English-speaking Catholics. At present, practically all the priests of the Diocese of St. John, including its bishop, are sons of New Brunswick and graduates of St. Joseph's; other graduates hold prominent rank in commerce, law medicine, the Provincial Legislature, and the Federal Parliament.

ARTHUR BARRY O'NEILL

Catholic University of Ireland

Catholic University of Ireland

The project of a Catholic University for Ireland was launched at the Synod of Thurles in 1850. To revive true learning was essential for the well-being of Irish Catholics; the suggestion of Pius IX and the example of Louvain were inspiring; and, above all, it was necessary to provide a seat of higher education on Catholic lines for lay students who kept away from the condemned Queen's Colleges, where religion had no official or collegiate recognition and the governing and academic bodies, as regards Cork and Galway, were foreign to the religious convictions of the people they were intended to educate. The Holy See gave approval in 1852; liberal contributions poured in, and property was acquired in Dublin for university purposes. The bishops had secured John Henry Newman as rector for a short term of years. At their meeting in May, 1854, the hierarchy gave solemn effect to the papal letters regarding the erection of the university. On the Feast of Pentecost following Dr. Newman took the oath of office at a function in the metropolitan church, where Archbishop Cullen delivered an address. Statutes, framed for the government of the university, were sanctioned by the Holy See; papal authority was granted to confer degrees; and in November of the same year the work of the university began. The Irish hierarchy, acting through a committee, constituted the supreme governing body. Among its authorities the senate was the body representative of the university; and the rectorial council was the rector's ordinary adviser. The university had five faculties, viz.-theology, law, medicine, philosophy and letters, science. Newman was careful to secure the services of various distinguished men as professors and lecturers. The first appointments to professorial chairs comprised the names of Edmund O'Reilly, S.J., Dr. P. Leahy, Eugene O'Curry, T.W. Allies, and D.F. McCarthy; and gradually a considerable number of students, including some in high rank, from different European countries, began to frequent the halls of the new university. But the institution itself and its students laboured under the greatest disadvantages. The university had no charter from the State to confer degrees, nor were its lectures recognized elsewhere in Ireland as leading to a degree. It had to depend entirely on voluntary contributions for its revenue. In the immediate issue these obstacles were not to be adequately surmounted even by the fame and genius of Newman, the eminence of the professors, the devoted loyalty of Irish students, and the constant

efforts of the bishops. But the determination of Irish Catholics produced highly important results. The Government, confronted with their standing protest, after a time deemed it expedient to attempt to deal with their grievance in the matter of university education. The Liberal plan of a Supplemental Charter, incorporating the Catholic University as a college, not as a university, and enabling the students educated in its halls to obtain degrees from an enlarged Queen's University, failed in 1866; the Conservative scheme of chartering an unendowed Catholic university was announced, considered, and abruptly withdrawn in 1868; Mr. Gladstone's proposal of one Irish university, comprising Catholic and other colleges without public endowment as well as Trinity College and two of the Queen's Colleges with their endowments continued, was defeated in 1873 by an adverse majority of three votes in the House of Commons. But in 1879, on the second reading of a University Bill introduced by the O'Connor Don, the Beaconsfield administration announced that they would themselves introduce a University Bill for Ireland; and the promised Bill became an Act of Parliament in that year. It abolished the Queen's University, while sparing its colleges, and set up in its place the Royal University of Ireland, an examining body entitled to give degrees to all comes on condition of passing the prescribed examinations, and to award prizes for distinguished answering. Moreover, an arrangement was made to provide a small indirect endowment to help the work of the Catholic University through fellowships to be held by a certain number of its professors.

It was for the purpose of arranging the Catholic colleges of higher education in an associated group, to stand against the endowed Queen's Colleges in the competition of the Royal University, that the framework of the Catholic University was considerably modified in 1882. In that year the teaching institution in St. Stephen's Green became University College and the Catholic University, of which Maynooth since 1876 had been constituted a college, was made to embrace an association of colleges, each retaining its own independent collegiate organization. The success of the Catholic colleges cleared the way for Mr. Birrell's University Act in 1909. University College, under the management of the Jesuits from 1883, gave a fine lead in conjunction with the Catholic University School of Medicine. This school, which in 1892 was placed under a governing body of its own, had been founded by the bishops in 1855 in Cecilia St., Dublin, and, unendowed though it was, had been a success from the start, owing to the advantage it enjoyed, in that its teaching was recognized as qualifying a student to stand the examinations for a license to practise. It now merges, like University College, in the new University College, Dublin, which is the leading constituent college of the National University established in 1909. This constituent college has utilized the buildings of the Catholic University. The Catholic University church, built by Dr. Newman, has been made available by the bishops for the catholic members of the National University; but the Catholic University itself still exists, as was affirmed in an important judicial decision by the Master of the Rolls in 1911.

Dr. Newman, who retired in 1858, was succeeded in the rectorial Chair by Dr. Woodlock, Dr. Neville, Dr. Molloy, and Dr. O'Donnell. It is said that £250,000, subscribed mainly in Ireland and America, was collected and expended upon the university. After providing buildings and equipment, that sum would allow little over £8000 a year during the quarter of a century that elapsed before

the fellowships of the Royal University were made available. The ideals sustained and the reformed achieved in higher education amply justify the effort. Archbishop Walsh and John Dillon were its students; the "Atlantis" and O'Curry's Lectures were its products. Even in its last years it had among its professors such men as Aubrey De Vere, Dr. Casey, George Sigerson, Dr. Molloy, James Stewart, and Robert Ornsby.

PATRICK O'DONNELL

Catholic University: University College, Dublin

University College, Dublin

A constitutional college of the National University of Ireland. By its charter, granted 2 Dec., 1908, in accordance with the Irish Universities Act of that year, members of the college include every graduate of the Royal University of Ireland who was a matriculated student of "University College, St. Stephen's Green, Dublin, or of the Medical School, Cecilia Street, Dublin". Thus the history of the existing college is linked with the story of Newman's foundation in Ireland. From 112 November, 1883, when the Irish Jesuits opened University College, St. Stephen's Green, Dublin, in the old Arts School of the Catholic University, to 1 November, 1909, when the new college began its work, the history of Irish Catholic and national university education centred mainly in the St. Stephen's Green institution. The college had two purposes to fulfil; first, to show by its success in the competitive field that Irish Catholics had the material and capacity, given equal opportunity, to establish a university of their own upon the highest academic level; second, to afford a university training to young Irish Catholics, whom conscience prevented from availing of Trinity College, with its Protestant Episcopalian atmosphere, or of the Queen's Colleges, with their secularist atmosphere. The first president of University College was Rev. William Delany, S.J. With an interval filled by Rev. Robert Carbery, S.J., Father Delany continued in office until the new college was founded. His colleagues of the Society at the beginning were Rev. Thomas Finlay, philosopher and economist, Rev. Denis Murphy, Irish historian, Rev. James J. O'Carroll, Gaelic scholar and linguist, Rev. Gerard Hopkins, Oxford Classicist and poet, and Rev. Robert Curtis, mathematician. Of Newman's old guard and their first successors there still remained Thomas Arnold, son of the Master of Rugby, Robert Ornsby, the biographer of Hope Scott, James Stewart, a Cambridge rector who had followed Newman, John Casey, the Irish mathematician, Dr. John Egan, afterwards Bishop of Waterford, and Abbe Polin. Among the assistant professors selected by Father Delany were Mr. William J. Starkie, a Cambridge scholar, now Resident Commissioner of National Education, and Mr. (now Sir) Joseph Magrath, the present registrar of the National University. Father Delany began practically without endowment. The only public assistance received was indirect. Beaconsfield's University Act empowered the senate of the Royal University to appoint Fellows, with a salary of

400 pounds a year out of the university revenues, on condition of their examining for the university and lecturing at certain assigned colleges. Fourteen Fellows, out of twenty-eight, were assigned to University College, the remainder to the Queen's Colleges, already endowed to the extent of 12,500 pounds a year each. Two of the first Fellows were Jesuit Fathers; some years later the number was increased to five, and with their salaries the equipment and maintenance of the college were undertaken.

At the end of the first academic year a hundred of the distinctions awarded by the Royal University were won by Queen's College, Belfast; seventy-nine by University College, Dublin, twenty by Queen's College, Cork, and eight by students of Queen's College, Galway. This success of the unendowed college could not be ignored. In the Parliamentary session following (1885) the Irish Party raised the university question under the new aspect it had assumed. The Chief Secretary (Sir Michael Hicks-Beach) at once admitted the necessity for government action. For the Government he promised that, if they held office in the next session, he would "make some proposal which might deal in a satisfactory way with this most important matter". The year 1886, however, brought its change of Government, Gladstone's first Home Rule Bill, the Liberal Irish Alliance, and its developments; and the university question as a question of practical politics was shelved for a generation.

The University College continued its work with ever-increasing success. Year by year the tabulated results of the examinations of the Royal University showed that the unrecognized Catholic University College was not only doing better than even the most successful of the well-endowed Queen's Colleges, but that it was ever increasing its lead until it far out-distanced the three together. The following table shows the relative endowments of the colleges and the first-class distinctions won by each college in the year 1898 compared with those ten years later.

University College, Dublin
<i>Endowments</i> : £6,000
<i>Prizes and Honours (1898)</i> : 40
<i>Prizes and Honours (1908)</i> : 99
Queen's College, Belfast
<i>Endowments</i> : £11,400

Queen's College, Galway
<i>Endowments</i> : £11,400
<i>Prizes and Honours (1898)</i> : 5
<i>Prizes and Honours (1908)</i> : 5
Queen's College, Cork
<i>Endowments</i> : £11,400
<i>Prizes and Honours (1898)</i> : 1

Prizes and Honours (1908):

In scholarship, in literature, in the public service, past students began to win honour for their college. Even in the department of scientific research, hampered as was the staff by lack of equipment, the work of Preston, M'Clelland, and Conway established the name of the college in the annals of scientific advance. Murphy's work for Irish history, Hogan's in the Irish language, and Finlay's in the field of practical Irish economics were also far-reaching. An aim of Father Delany had been to train a thoroughly competent staff to meet the time when justice should be done and a wider field opened. This, too, was fulfilled; and the men selected for the first appointments to the chartered college by the commissioners entrusted with the work, unfettered though the commissioners were in their discretion, include, in all the chief departments, a large majority of men who had been educated in University College.

In 1904 Mr. Balfour and Mr. Wyndham made acknowledgement of the Catholic claims; two royal commissions had reported in their favour; but the ministers were deterred by Orange influence from its settlement. Mr. Bryce took up the question in courageous fashion during his brief chief secretaryship. It was left to Mr. Birrell to carry a measure granting facilities for University education under conditions fairly satisfactory to Catholics. The Jesuits facilitated the reform in every way and, though they might have put forward a title to special consideration, they sought no peculiar recognition. Cardinal Logue declared the settlement to be largely due to their labours. The Archbishop of Dublin expressed his admiration for "the fidelity, constancy, and undaunted courage" which they had shown in the enterprise. Many years before, in 1886, when jealous criticism was afoot, Father Delany had already defined their interest to be to establish "a central College, which should be national in its Constitution; should be governed by a body representative of the whole Catholic people, with all its interests; where the main condition of appointments to posts should be excellence of qualification, the best man winning whether priest or layman". The new constitution of the college approaches that ideal. Mr. Birrell, when introducing his University Bill, bore testimony to "the patriotism" of Father Delany's attitude. The passing of the University Act coincided with the silver jubilee of the old college; and when the new college came into existence the Jesuits, in order to facilitate its commencement, surrendered to it, with the approval of the Irish bishops, the old buildings of the Catholic University.

The new Irish Universities Act of 1908 is based on the principle of the non-recognition of theological or religious teaching. No part of the public endowment can be applied for the purpose of such teaching. But the university may recognize a theological faculty or a religious chair provided by private endowment. The indifferentist principle was accepted by Irish Catholics because the scheme of government embodied in the charters both for the National University and for its constituent colleges enabled a sympathetic government to be established. The first senate and the first governing bodies were nominated, and the governing body of University College, Dublin, now consists of twenty-seven Catholics and three Protestants. When it ceases to hold office the new governing body will be constituted mainly of persons elected by the college corporation itself, and

by the General Council of Irish County Councils, which represents Irish opinion. In the first appointment of deans of residence two Catholic priests were among those appointed. They voluntarily provide religious lectures in addition to discharging the duties of their office. The bishops of Ireland have also in hand (1912) a scheme for the establishment of a lectureship in theology in the college and have selected Rev. Peter Finlay, S.J., for the office. The growth of this side of the college work would complete its activities as a university institution. All the other faculties are adequately provided for, and include arts, philosophy, Celtic studies (including archæology, history, and philology), science, law, medicine, and engineering. The staff consists of the president (Dr. D.J. Coffey, dean of the old successful medical school), forty-three professors, and eight lecturers. All the professors of philosophy are Catholics. The public endowment of the college is £32,000 a year and the total revenue in 1910-11 was £40,357. Six hundred and ninety-five students were in attendance in that year. The first plan of buildings provides for eight hundred students. One hundred and ten thousand pounds of public grant is available for their erection and equipment, but it will certainly prove inadequate, and must be supplemented from either public or private sources. So far, though the college is open to all, ninety-eight per cent of the students are Catholics.

ROBERT DONOVAN

Spanish-American Universities

Spanish-American Universities

The University of St. Mark's at Lima enjoys the reputation of being the oldest in America; it has the distinction of having first begun its course by royal decree. The university in Santo Domingo in the West Indies was the first to be established by a papal Bull. Other similar institutions soon arose all over Spanish America, flourishing during the colonial period, under the joint auspices of Church and State. Then, when the Revolution came, they passed from the direct control of the former to that of the latter, with the exception of the University of Havana, which remained in possession of a religious order until late in the nineteenth century. It was in 1538 that a Bull of Paul III established the pontifical University of St. Thomas in Santo Domingo, at the request of the Dominicans. However, the institution was not definitively established, until Philip II gave it legal existence in 1558, seven years after the foundation of St. Mark's in Peru. The University of Santo Domingo had faculties of theology, jurisprudence, philosophy, and medicine, and lasted throughout the colonial period. The University of Lima was founded by decree of Charles V in 1551 in the monastery of the Holy Rosary, remaining under the direction of the Dominicans until 1571, when, being confirmed by Pope Pius V, it passed into the hands of seculars. The Dominicans still continued, however, to occupy posts of honour. For centuries the university exercised an influence that spread

over all the colonies of Spain in South America, and many eminent men went out from its lecture-rooms. The renowned Pedro Peralta and the French savant, Godin, were among its professors in the eighteenth century, while such men as the poets Oña, Castellanos, and Olmedo, and the first American bibliographer, Leon Pinelo, were among its students. The faculties of the university included theology, jurisprudence, philosophy, medicine, and, for a time, the language of the Incas.

The next in importance of the Peruvian universities was that of Cuzco, founded, in 1598, as the University of San Antonio Abad. In the seventeenth century the University of Guamanga in Peru was established with the same faculties as that of Cuzco. In the meantime, university studies had been inaugurated at Quito with the establishment, in 1586, of the University of San Fulgencio, under the Augustinian fathers, by a Bull of Sixtus V. A second University of Quito, the one which gained the greatest prominence in the colonial period, was that of St. Gregory the Great, founded by the Jesuits in 1620. The early seventeenth century was a period of considerable literary activity and educational work in Spanish America, and several universities were founded. In 1627 the Dominicans succeeded in establishing their royal and pontifical University of Santo Tomas, at Santa Fe de Bogotá, while the Jesuits continued their old College of San Luis, founded in 1592, as the Xavierian University. The University of Santo Tomas obtained renown through such eminent jurists as Luis Brochero, and such linguists as the Dominican, Bernardo de Lugo. The celebrated historian of New Granada, Fernández de Piedrahita, Bishop of Panama, was a doctor of this university.

The Jesuits arrived in Chile in 1593 and at once inaugurated higher studies with chairs of philosophy and theology. However, the honour of founding the first university in Santiago belongs to the Dominicans. It was established in the Monastery of the Holy Rosary, under the title of Santo Tomas in 1619, by a Bull of Paul V, that permitted its existence for ten years. In 1684 its privileges were renewed by Innocent XI for a period to last until Santiago should possess a public university. The faculties included logic, history, mental philosophy, physics, mathematics, canon law, and theology. In the meantime, as early as 1621, the Jesuits had obtained from Pope Gregory XV the Bull "In eminenti" which granted the privilege of conferring degrees for ten years. This privilege was renewed by Urban VIII for another ten years, and finally granted without limitation in 1634. There were thus two pontifical universities in Santiago. Finally, in the first half of the eighteenth century, Santiago beheld the foundation of its Royal University of San Felipe by a decree of Philip IV in 1738, with chairs of theology, canon and civil law, mathematics, cosmography, anatomy, medicine, and Indian language. About the time that the Jesuit and Dominican universities were established at Santiago, Caracas, in Upper Peru, now Bolivia, beheld a university arise in that of St. Francis Xavier, founded in 1623. This became one of the most famous in the New World. Towards the end of the eighteenth century, however, the spirit of this university had grown to be quite anti-clerical. Yet it produced a number of distinguished men, such as Mariano Moreno, Bernardo Monteagudo, José Ignacio Gorriti, and Jose Mariano Serrano. In 1622 the Jesuit college at Córdoba del Tucuman, founded a few years earlier in what is now the Argentine Republic, was raised to the rank of a university by a Bull of Gregory XV and a decree of Philip III. After the

expulsion of the Jesuits, it passed for a brief period to the Franciscans, until towards the end of the eighteenth century it was taken over by seculars. Two universities were established in the eighteenth century, the one in Venezuela, the other in Cuba. In 1722 the old seminary of Santa Rosa, founded at Caracas by Don Diego de Baños y Sotomayor, was raised to the rank of a royal and pontifical university by a decree of Philip V and a Bull of Innocent XIII, the faculties of civil law and medicine being added to those that already existed. The year before the granting of the faculties to the University of Venezuela, the Dominicans of Havana had obtained from the same pope the privilege of establishing a university, which owing to some misunderstanding with the bishop, did not finally begin in the Dominican monastery until 1728. The title of Royal and Pontifical University was accorded to it in 1734.

Such was the condition of university education in the West Indies and South America up to the Revolution. Most of the old universities continued, but no longer under the direct control of the Church, passing generally, in course of time, to the Department of Public Instruction. St. Mark's at Lima still exists, and preserves its autonomy, with the old title of pontifical, and with a faculty of theology, though it is said that in its secular departments, its religious influence has passed away. The University of Cuzco occupies to-day a portion of the former Jesuit college. That of San Cristobal at Guamanga became extinct in 1878. The University of St. Augustine at Arequipa still exists, and Trujillo, where a college was founded in 1621, enjoys to-day the benefits of a university. The University of Sucre (Characas) is still regarded as the best in Bolivia, where the Universities, also, of La Paz, Santa Cruz, and Cochabamba exist. The Bolivian universities have faculties of theology, subject to ecclesiastical control.

Colombia has to-day a national university at Bogotá, consisting of faculties in separate colleges. There are also universities at Cauca, Antioquia, Nariño, and Cartagena. At Quito higher education is imparted in the Central University of Ecuador, priests, among them Jesuits, being permitted to hold chairs. Venezuela has actually two universities, the Central University and that of Los Andes. The old Jesuit University of Córdoba is to-day one of the three national universities of Argentina. At Santiago de Chile, the convictorium of St. Francis Xavier has become the Instituto Nacional, that serves as a preparatory school for the National University which is the historical sequel of San Felipe. The University of Havana remained in charge of the Dominicans until 1842, when it was secularized. It still exists, with faculties of letters and science, law, and medicine. At present there are two Catholic universities in South America, the one of Santiago de Chile, founded by Archbishop Casanova in 1888, and the other at Buenos Aires. The former has faculties of law, mathematics, agriculture and industry, and engineering. The Catholic University of Buenos Aires, still in the formative period, has faculties of law and social science. The tendency of South American universities to-day is rather practical than theoretical and classical, much stress being laid upon such studies as engineering and others of a practical nature.

CHARLES WARREN CURRIER

Columbia University

Columbia University

Portland, Oregon

Columbia University, formerly known as Portland University, is located on the east bank of the Willamette River in northern Portland, and is conducted by the Congregation of Holy Cross, whose mother-house is at Notre Dame, Indiana. In 1898 Portland University, conducted by a local Methodist association, failed and was obliged to close its doors. For three years the buildings were unoccupied. In 1901 the schools buildings and property of this institution were acquired by most Reverend Alexander Christie, D.D., Archbishop of Oregon City. For one year the school, now called Columbia University, was conducted by the diocesan clergy. In 1902 Archbishop Christie appealed for teachers to Rev. J.A. Zahm, then provincial of the Congregation of Holy Cross, who at once sent some of his religious to take charge of the new institute. In 1909 the university was incorporated under the laws of Oregon, and empowered to teach collegiate and university courses and to confer certificates, diplomas, honours, and degrees in the arts, sciences, philology, literature, history, mathematics, and other university branches. To meet the need of a thorough preparatory school in the North-West an academic department was founded at Columbia. The first faculties organized were those of arts and letters and science. To-day, besides the college department and preparatory school, Columbia has chairs of philosophy, history and economics, mathematics and languages. There have been three presidents of the university. Rev. E. P. Murphy, of Portland, was chosen as first president; Rev. Michael Quinlan, C.S.C., and Rev. Joseph Gallagher, C.S.C., were

his successors. At present (1912) about two hundred students are registered. The faculties are made up of twenty professors including a few laymen. The erection of Christie Hall, recently, has made accommodations for an additional one hundred and fifty students.

J.C. McGINN
De Paul University

De Paul University

De Paul University, Chicago, is the outgrowth of St. Vincent's College, which opened in Sept., 1898. The university was incorporated, 25 Dec., 1907, by ten Vincentian priests and five Catholic laymen. Besides the usual collegiate studies, De Paul offered, at the time of incorporation, courses in mechanical, civil, and electrical engineering, also special work in science. Thirteen priests and six laymen constituted its faculty. The origin of St. Vincent's College may be traced to the desire of Archbishop Feehan to have a Catholic institution for young men on the "North Side" of Chicago. The Vincentians had been here for twenty years, and the Very Rev. T. J. Smith, C.M., with three of his priests, became incorporated as St. Vincent's College in June, 1898. Among the first professors were: Rev. Thomas Finney, C.M., T. F. Levan, C.M., P. A. Finney, C.M., J. Murray, C.M., M. Le Sage, C.M., P. H. McDonnell, C.M., and D. J. McHugh, C.M. In Jan., 1899, Rev. P. V. Byrne, C.M., became president. A man of high ideals, he soon desired to enlarge the educational work, and was warmly seconded by Rev. J. A. Nuelle, C.M., prefect of studies. Engineering courses were accordingly begun in Sept., 1906. No expense was spared in equipping for scientific pursuits the building erected the following year. Pre-medical studies were then undertaken. In July, 1910, the Very Rev. F. X. McCabe, C.M., LL.D., became rector of De Paul university. With the approval of Archbishop Quigley, De Paul entered a new field in 1911, that of enabling women to gain credits and university degrees. The summer school of 1911 was attended by one hundred sisters and lay teachers. Twice this number are now pursuing extension work. The students numbered 550 in 1911. The faculty includes sixteen Vincentian priests, and almost the same number of laymen. In the spring of 1912 the Illinois College of Law became the Law Department of De Paul, and library and classes were removed to the university buildings; 150 students were thus added.

DANIEL J. McHUGH
Fordham University

Fordham University

Fordham University developed out of Saint John's College, founded by Bishop Hughes upon the old Rose Hill Farm at Fordham, then in Westchester County, and formally opened on St. John the Baptist's Day, 24 June, 1841. This same year the theological seminary of the New York diocese was moved from Lafargeville, Jefferson Co., to Fordham. In April, 1846, an act of incorporation passed by the New York Legislature granted it the power to "confer such literary honours, degrees

or diplomas as are usually granted by any university, college or seminary of learning in the United States". In June, 1846, the Fathers of the Society of Jesus purchased the property from the diocese. The first Jesuit president was the Rev. Augustus Thebaud who, with other members of the early Jesuit faculty, came from St. Mary's College, Marion County, Kentucky. St. Mary's was practically transferred to Fordham, and, as it had been incorporated in 1820 with all the powers of a university, the history of the present college must be considered to begin with its foundation in that year. Under such presidents as Fathers Thebaud, Larkin, Tellier, Doucet, and Tissot, S.J., the college rapidly gained in attendance. In the early fifties there were 200 students. There was a falling off at the time of the Civil War, but in the year 1869-70 there were 257. After a phase of less attendance in the late seventies, there were 327 in 1889 and 1890. The number rose to 500 in the early part of the present decade. Many Fordham students of the early times reached distinction. Among them were: John La Farge the painter; Ignatius Donnelly, the author; John R.G. Hassard; the MacMahon brothers, James, Arthur, and Martin, two of whom died nobly in the Civil War, while the third, though badly injured, survived for distinction on the bench in New York City; Thomas B. Connery for many years editor-in-chief of the "Herald"; Gen. James O'Beirne; Judges Morgan O'Brien, Amend, Hendricks, of the Supreme Court; and many well-known lawyers, Anthony Hirst of Philadelphia, Philip van Dyke, and William B. Moran of Detroit, the latter on the Supreme Bench of Michigan at his death; John A. Mooney of New York, a well-known writer; Ignatius and Thomas McManus, of Mexico, and Michael F. Dooley, of Providence, bankers. Many of Fordham's brightest students have entered the clergy and reached positions of great influence. Among them are Cardinal Farley, Bishop Hoban, Bishop Rosecrans of Columbus, Monsignori Van Dyke (Detroit), O'Connor (Charleston), Lynch (Utica), Mooney (New York), and many distinguished Jesuits. On 21 June, 1904, with the consent of the regents of the University of the State of New York, the board of trustees of St. John's College, during the presidency of Father (now Bishop) John Collins, authorized the opening of a school of law and a school of medicine. The law department rapidly increased until, in 1911, there were 230 on its rolls. The university now (1912) numbers 548 students under 124 professors, distributed as follows: law, 224 students, 12 professors; medicine, 164 students, 96 professors; academical department, 160 students, 16 professors. The Fordham University Press, whose historical publications have a wide diffusion, completes the university organization.

JAS. J. WALSH

Loyola University (Chicago)

Loyola University, Chicago

Loyola University is the outgrowth of St. Ignatius College, founded by the Jesuits in 1869 for the higher education of the Catholic youth of Chicago, and empowered by the Legislature of Illinois (30 June, 1870) to confer the usual degrees in the various faculties of a university. On 21 November, 1909, Loyola University was chartered and St. Ignatius College became the department of arts and sciences. The law department was established in September, 1908, and is now located in the centre

of Chicago's business district. The engineering department opened September, 1911, with courses in civil, electrical, chemical, and mechanical engineering. the medical department was founded in 1868 and became a part of the university in June, 1909. The pharmacy school has taken its place among the recognized institutions of the country. The private library of the institution, consisting of 47,000 volumes, is meant primarily for the use of the faculty and the allied schools.

A.J. BURROWES

Loyola University (New Orleans)

Loyola University (New Orleans)

Loyola University, New Orleans, Louisiana, is (1912) the only Catholic university in what is popularly designated "The Old South". From a small college of arts and sciences founded by the Jesuit Fathers in 1904 it has grown into an institution with plans under way to organize all the departments of a modern university. The cornerstone of Marquette Hall, the main building of the university group, was laid, 13 November, 1910, by Archbishop Blenk, assisted by fourteen members of the American hierarchy. On the same day ground was broken for the Louise C. Thomas Hall by the Apostolic delegate, Monsignor Falconio. The building dedicated to Father Marquette will always bear witness to the generous cooperation of the clergy and laity of the Archdiocese of New Orleans, who, on the invitation and under the leadership of the Rev. Albert Biever, S.J., president of Loyola College, formed an association on 17 February, 1906, known as "The Marquette Association for Higher Education", which made it its aim to arouse interest in Catholic education while soliciting the financial aid necessary for the upbuilding of a well-equipped Catholic University. The Louise C. Thomas Hall has its name from the devoted lady who subscribed \$50,000 towards its erection. The beauty and nobility of her gift is expressed in the stately architecture, which combines artistic qualities with usefulness. Both structures, connected by a graceful arcade or cloister, are in the Tudor Gothic style and stand on the beautiful site which fronts St. Charles Avenue, where that handsome driveway passes Audobon Park.

P.A. RYAN

Unyanyembe

Unyanyembe

Vicariate apostolic in German East Africa, separated from the Vicariate Apostolic of Nyanza by a Decree of Propaganda, 30 December, 1886. Its limits, as fixed on 10 December, 1895, were: on the N. the Vicariate Apostolic of Southern Nyanza; on the S. a line drawn from Lake Manjara (36°E.) along the mountain ridges to the N. W. of Ugago; on the S. the northern limits of Ujanzi, Ugunda, Ugetta, Uvenza, and Ujiji; on the W. Lake Tanganika and the eastern boundary of the Congo Free State to the village of Ruanda. This district was originally included in the Vicariate of Tanganika; in 1879 R.P. Ganachan of the White Fathers penetrated this hitherto unknown region

and endeavoured to settle at Tabora, but was unsuccessful; two years later R.P. Guillet succeeded and opened an orphanage there, which was shortly afterwards transferred to Kipalapala one league distant; in 1844 R.P. Lourdel settled at Djiue-la-Singa, but the post was abandoned on 13 March, 1885. On 11 January, 1887, the mission of Unyanyembe was separated from Tanganika, with R.P. Girault as superior of the provicariate; on 23 August, 1887, Mgr Charbonnier was consecrated bishop in the Kipalapala orphanage chapel by Mgr Livinhac of Uganda; this was the first episcopal consecration in Equatorial Africa. The station at Kipalapala was destroyed in 1889 by the natives. Two years later it was restored, and another was opened at Uchirombo. Towards the close of 1897 five Sisters of Notre-Dame d'Afrique arrived at Uchirombo. In 1900 there were in this mission 20 priests, 6 nuns, 49 catechists, 1842 neophytes, 6000 catechumens, and 150 children in the schools. A German scientist, Dr. Kandt, a Protestant, was so impressed by the good work of the Catholic missionaries that he presented his estate at Tabora to the vicar Apostolic to found a school and hospital. The present and first vicar Apostolic, Mgr François Gerboin, of the White Fathers, born in 1847 and consecrated titular Bishop of Turbuto in 1897, resides at Ushirombo.

Mission statistics (1905): 33 priests; 7 lay brothers; 6 nuns; 72 catechists; 26 schools with 966 pupils; 11 hospitals; 5 leper houses; 17 orphanages with 325 children rescued from slavery; 3,000,000 infidels; 3678 Catholics; 2889 catechumens.

A.A. MACERLEAN

Marquette University

Marquette University

Marquette University of Milwaukee, Wisconsin, is an outgrowth of Marquette College, which was opened in 1881, although it had been planned by Right Rev. John Martin Henni as far back as 1850. In 1848, while in Europe, the bishop met the Chevalier J.G. de Boeye, of Antwerp, who gave him \$16,000 to help to found an institution under the care of the Jesuits. The foundation was to be made in the bishop's diocese, in the far North-West, a country first visited by the missionaries Allouez and Marquette. In 1855 Rev. P.J. de Smet, S.J., and Rev. F.X. de Coen, S.J., arrived at Milwaukee, commissioned by the Provincial of Missouri to co-operate with the bishop in his plans for the proposed institution. St. Gall's parish was placed under the care of the Jesuit Fathers. Two years later, Rev. Stanislaus P. Lalumiere, S.J., commenced the St. Aloysius Academy, which was soon abandoned. It was resuscitated in 1864, under the name of St. Gall's Academy, under the management of Rev. J. T. Kuhlman, S.J. This school existed until 1872, when it was also abandoned. The project of establishing a college had not been relinquished, and in 1864 a charter was obtained by a special act of the legislature. Marquette College was dedicated, 15 Aug., 1881. The degree of bachelor of arts was conferred for the first time in 1887, and when in 1906 Marquette celebrated its silver jubilee, the college had conferred the degree upon 186 students, Master of Arts on 38, and Bachelor of Science upon one.

In 1907, owing to the munificence of the late Robert A. Johnson, of Milwaukee, who built and donated the structure on Grand Avenue, between Eleventh and Twelfth Streets, Marquette College was enabled to enlarge its usefulness. The charter was amended by the legislature, and the college became a university. That year it affiliated temporarily with the Milwaukee Medical College, which comprised a school of medicine, a school of dentistry, and one of pharmacy. In 1908 the Milwaukee Law School became the Marquette University College of Law. In the same year the College of Applied Sciences and Engineering was opened. In 1910 the Robert A. Johnson College of Economics was organized. It consists of two schools; one of business administration, and another of journalism. In 1911 the Marquette Conservatory of Music was established.

J.E. COPUS

Niagara University

Niagara University

Niagara University, situated near Niagra Falls, New York, is conducted by the Vincentians. It was founded by Rev. John F. Lynch, C.M., later first Archbishop of Toronto, and was chartered by the Legislature, 20 April, 1863, as the Seminary of Our Lady of Angels. The original building was completely destroyed by fire in December, 1864; in April, 1865, one wing of the present building was built, and in 1869, the structure was completed. On 7 August, 1883, the Regents of New York State erected the Seminary of Our Lady of Angels into a college by the name of Niagara University. A medical school was established at Buffalo, and during its existence (1883-1898), it did much to further the study of medicine, and inauguarated the movement which has resulted in requiring four years' study for the doctor's degree in New York State. In 1898 the Niagara medical school was merged into that of the Buffalo University, as was also, in 1891, the Niagara law school. Niagara University has now complete seminary, college, and high school departments, embracing courses in philosophy, higher mathematics, science languages, commerce, and music. The university possesses over 300 acres of ground, a museum, laboratories for scientific work, and a library, containing about 35,000 volumes, begun by Bishop Timon, C.M.

GRACE, Niagara Index (1870-19912); Golden Jubilee Volume.

EDWARD J. WALSH

Saint John's University

St. John's University

The legal title of a Catholic boarding-school at Collegeville, Minnesota, conducted by the Benedictine Fathers of St. John's Abbey, which is situated at the same place. It is the oldest Catholic college in the North-West, having been founded in 1857 by the late Archabbot Boniface Wimmer, then Abbot of St. Vincent's Abbey at Beatty, Pennsylvania. Early in 1856 Abbot Wimmer sent Demetrius de Marogna, a capitular of St. Vincent's Abbey, to Minnesota to establish a monastery

and an educational institution in what was then the Diocese of St. Paul, whither the Benedictines had been invited by Bishop Cretin, at the instance of the Indian missionary Father Piera. De Marogna was accompanied by two Benedictine clerics, Cornelius Wittmann and Bruno Riss, and two lay brothers. The institution was originally called St. John's Seminary, which name was changed to St. John's University by an Act of the State Legislature, 17 Feb., 1863. In March, 1869, the school was empowered by the State to confer all college and university degrees, and on 16 June, 1878, Leo XIII authorized Abbot Alexius Edelbrock, then president of the University, to confer the degree of doctor in philosophy, theology, and canon law. The institution comprises a theological seminary, a school of arts and science, a high-school, a school of commerce and a preparatory school.

Among its presidents deserving of mention are: Rupert Seidenbusch (1867-1875), who in 1875 was appointed vicar Apostolic of the newly-created Vicariate of Northern Minnesota, and titular Bishop of Halia (d. 3 June, 1895); Alexius Edelbrock (1875-89), who erected the main university building and the beautiful church (d. 18 May, 1908, as rector of St. Anselm's Church, New York City), Bernard Locnikar (1890-94), who made the theological course a model of its kind (d. 7 Nov., 1894). Since 1894, under the presidency of Peter Engel, the university has grown rapidly. The buildings include the main university building, the science hall, the library, the observatory, the gymnasium, and the infirmary. The faculty is composed of 42 professors and instructors, all of whom, except the physical instructor, are Benedictines and members of St. John's Abbey. The number of students during the year 1911-12 in all departments was 441.

HOFFMANN, St. John's University: a sketch of its history (Collegeville, Minnesota, 1907);

MICHAEL OTT

Upper Nile

Upper Nile

Vicariate apostolic; separated from the mission of Nyanza, 6 July, 1894, comprises the eastern portion of Uganda, that is roughly east of a line from Fauvera on the Nile (about 2°13' N. lat.), north-east to the Kaffa mountains, and of a line south from Fauvera past Munynyu near Lake Victoria Nyanza to 1° S. lat. Of the native tribes, the Baganda, partly Caucasian, are much superior intellectually to the others. Their religion was spiritualistic, acknowledging a Divine Providence *Katonda*, who, being good, was neglected, while the *loubalis*, or demon, and *mzimus*, or departed souls, were propitiated. Totemism was prevalent, the *mziro*, or totem, being usually an animal, rarely a plant. The first Catholic missionaries, the White Fathers arrived in Uganda in 1878. Father Lourdel obtained leave from King Mtesa to enter; on 26 June, 1879, the fathers reached Roubaga.

On Easter Saturday, 27 March, 1880, the first catechumens were baptized; two years later the Arabs induced Mtesa to expel the missionaries; they returned under his successor, Mwanga, 14 July, 1885. Religion spread rapidly, but the Protestants and Arabs stirred up the king to begin a persecution. Joseph Mkasa, chief of the royal pages, was the proto-martyr; on 26 May, 1886, thirty

newly baptized Catholics, on refusing to apostatize, were burnt to death; soon more than seventy others were martyred. Then the Arabs plotted to depose Mwanga, but the Catholics by the advice of Father Lourdel remained loyal. The Arabs thereupon expelled the missionaries, who, however, returned in 1889: Father Lourdel endeavoured to induce Mwanga to submit to the advancing British Company; on 12 May, 1890, worn out by his labours this pioneer of the Gospel died. His confrères continued to reap a rich harvest, but were opposed by Captain Luard, the British Company's agent. On 23 May, 1893, Uganda passed under the protection of the British Government and the Church gained comparative peace. Mgr Livinhac, now Superior General of the White Fathers, obtained the erection of the eastern portion of Uganda into a separate vicariate under the care of the English congregation of Foreign Missions, Mill Hill, London.

The first vicar Apostolic was Mgr. Henry Hanlon, b. on 7 Jan., 1862, consecrated titular Bishop of Teos in 1894, went to Uganda in 1895; after labouring there for seventeen years, he returned to England for the general chapter of his Society, and retired from active missionary work. He was succeeded (June, 1912) by Mgr. John Biermans, titular Bishop of Gargara. Coming to Uganda in 1896 he proved himself a valuable auxiliary to Mgr. Hanlon. The episcopal residence is at Mengo, Buganda, near Entebbe, capital of Uganda. In the mission there are 24 priests, 6 Missionary Franciscan Sisters of Mary; 15 churches; 12 schools with 1649 pupils; and about 20,000 Catholics. The missionaries have recently compiled and printed in Uganda, a grammar phrase-book, and a vocabulary of a Nilotic language, Dhö Levo, spoken in Kavirondo. The language had not previously been reduced to writing. Some primers, catechisms, and prayer-books also in Dhö Levo have been printed.

A.A. MACERLEAN

Upper Rhine

Upper Rhine

Ecclesiastical province; includes the Archdiocese of Freiburg and the suffragan Dioceses of Fulda, Mainz, Limburg, and Rottenburg. The German Church was secularized by the Imperial Delegates Enactment of 25 Feb., 1803, confirmed by the German Empire on 24 March, and by the emperor on 27 April. All bishoprics and religious foundations, abbeys, and monasteries, immediate or mediate, were used to compensate those rulers who had been obliged to yield their possessions on the left bank of the Rhine to France. A part of the Archdiocese of Mainz was preserved for the primate Karl Theodore von Dalberg and was transferred to the cathedral church of Ratisbon. Hanover, Brunswick, and Oldenburg also received ecclesiastical lands. None of these thought of providing for the needs of their Catholic subjects by establishing new dioceses. The organization of the Confederation of the Rhine, the dissolution of the Holy Roman Empire, and the supremacy

in southern Germany of Napoleon, who had no desire for the settlement of the ecclesiastical confusion in Germany, made it impossible to conclude a concordat.

The condition of the Church grew desolate. New bishops were not elected when the old bishops died, and the cathedral chapters were combined. Besides Dalberg, those who laboured in the districts which now belong to the ecclesiastical Province of the Upper Rhine were: the former Bishop of Speyer, Walderdorf, at Bruchsal (up to 1810), and Joseph Ludwig Colmar, at Mainz (1802-18); in the Duchy of Nassau J. von Hommer, cathedral vicar of Trier; Hubert Corden, at Limburg. There were also vicars of the primate Dalberg at Worms, Ellwangen (from 1817 at Rottenburg), and Constance. From 1800 the vicar-general at Constance was Ignaz Heinrich von Wessenberg (q.v.), a Josephinist, who advocated a national German Church independent of the pope and introduced many anti-clerical innovations.

The Catholics of Germany looked to the Congress of Vienna for the removal of their difficulties. This they hoped all the more, as those territories had been won again from France in compensation for which all landed possessions had been taken from the Church. Cardinal Consalvi, the papal representative at the congress, Wessenberg, the representative of the primate Dalberg, von Wambold, dean of the cathedral of Worms, formally syndic of the collegiate church of St. Andreas at Worms, presented to the congress a number of memorials and statements on restoration of the earlier rights of the Church, the re-endowment of dioceses, and the founding of seminaries and parishes. The congress maintained an unbroken silence; moreover, it disposed of the church lands on the recovered left bank of the Rhine. As the congress also divided the territories of the primate Dalberg, after its session closed the Church was poorer than before. In vain Dalberg sought through his representative Wessenberg at the congress, and afterwards at the Diet of the Confederation at Frankfort, to bring it about that the church affairs of the Catholics should be made one of the matters to be settled by the Confederation. The reorganization of the Church and its equipment was left to the good will of the individual rulers. This was most disadvantageous, as Catholic principles were regarded with strong disfavour by Protestants and Freemasons, and by adherents of Febronianism and Josephinism.

After Bavaria and Prussia had begun the negotiations with Rome that led to the concordats of 1818 and 1821, the envoys of several Protestant rulers met at Frankfort in March, 1818, at the instance of Würtemberg, to confer concerning the condition of the Catholic Church in their respective countries, and to discuss the general principles which should be followed by the German states in concluding a concordat. This conference was attended by representatives of Würtemberg, of the Grand Duchies of Baden, Mecklenburg, and Hesse, of the Electoral Principality of Hesse, the Duchy of Nassau, Frankfort, and of several North German states which later withdrew. In the opening address on 24 March, 1818, the envoy of the Roman See the responsibility for the fact that ecclesiastical affairs were not yet in an organized condition in Germany; then he urged a close union of the Protestant governments in their position towards Rome, and announced that the governments would take up the national Church schemes of Febronius in case Rome was not willing to agree to the "favourable conditions" offered by the various countries. He called the church law devised by Febronius and Joseph II, with its episcopal system, the "only salvation" of the Catholic

Church. The ends to be attained in negotiations with Rome were: first, the reorganization of religious conditions "without endangering the *jura principum circa sacra* or granting rights to the Roman Court whereby it could have a disadvantageous effect upon the peace, civil order, and civilization of the states"; secondly, "the introduction of a church system which would bring church affairs more into harmony with the constitution of the State and the present position of enlightenment, in order to set boundaries to the papal system which has lately threatened the states with obscurantism and all its consequences". In the seventeenth session it was decided that a concordat with the Holy See was not to be sought, but that the governments were to communicate to the pope in a "Declaration" what they were ready to concede to the Church; the claims of the state *circa sacra* were embodied in an "Organic Statute", that was kept secret at first and was to be given to the new bishops of the respective countries at the close of the negotiations.

The "Declaration", in which Baden, Würtemberg, the two Hesses, Nassau, and Frankfort had agreed, were presented to Pius VII, 23 March, 1819, by the ambassadors of the combined governments. On 10 Aug. this declaration was answered by Cardinal Consalvi in a celebrated report, and rejected by the Holy See. As, however, the pope had requested the governments to take in hand, at least provisionally, the circumscription and filling of new dioceses. The representatives of the governments assembled once more at Frankfort, where new negotiations lasted from 22 April, 1820, to 24 Jan., 1821. The proposal for the circumscription of new dioceses was accepted by the governments, and they further agreed among themselves to urge the founding of special dioceses for each country, and to demand that these dioceses should not be exempt, but should be under a metropolitan. The hope was that a church province with an archbishop would be more independent of Rome than exempt, isolated bishops. The church Province of the Upper Rhine, that was to be erected, was to include the Dioceses of Freiburg, Fulda, Limburg, Mainz, and Rottenburg, with the metropolitan see at Freiburg. The desire of the pope to have the archiepiscopal See of St. Boniface re-established at Mainz failed of accomplishment, on account of the opposition of Würtemberg and Nassau. In March, 1821, the draft of an organization and the documents which designated the amounts necessary for the endowment of the sees were sent to the pope. On the basis of these documents Pius VII issued, 16 Aug., 1821 the Bull of circumscription "Provida sollersque" suppressing the Bishopric of Constance and the provostship of Ellwangen, and canonically erecting the church Province of the Upper Rhine with the dioceses already mentioned.

Although the governments were only partially satisfied with the Bull, still it was accepted by their representatives at Frankfort; its publication, however, was postponed. The principles and schemes of the combined governments as to national Churches, concerning which no agreement had been reached with Rome, were set forth by the assembled diplomats in the "Fundamental Instrument" and the "Church Pragmatic". These two documents demanded the complete control of the Church system by the State. It was the intention of the governments, as soon as Rome had established the new dioceses, to force upon the new bishops this right of the State over the Church, which under no circumstances could have received the approval of Rome. In a secret treaty between the states, 8 Feb., 1822, it was agreed that the "Church Pragmatic" was to be made binding upon

the new bishops and canons. The governments also hastened to select their candidates for the new sees, some states asking the advice of the deans of the chapters. The candidates thus chosen were bound to observe the "Church Pragmatic". The Holy See, when informed of these proceedings by Vicar General von Kempff, who was under consideration as Bishop of Fulda, rejected on 13 June, 1823, both the candidates nominated for bishops and the whole of the "Church Pragmatic". Negotiations were again broken off. However, the necessity, which was every day more apparent, of reestablishing settled church relations and the lack of agreement among the governments led Baden, first of all, to open new and confidential negotiations for itself with Rome. The results of these negotiations were four propositions which were sent as the ultimatum of the Holy See to the Government of Baden on 8 Dec., 1824. These propositions regulated the method of filling the archiepiscopal see, the first and later appointments of the metropolitan chapter, and the founding of a seminary for priests; they also demanded a freer intercourse with Rome for the archbishop, and the free exercise of ecclesiastical jurisdiction according to the canons of the Church. Baden accepted these propositions, with some changes conceded by the pope. Divided into six articles these propositions were communicated after this, on 6 July, 1825, to the other courts that had negotiated with the Holy See. The united governments accepted the articles, 4 Aug., 1826, and communicated their acceptance to the pope, 4-7 Sept., demanding, however, the omission of the articles which treated of the endowment of the seminaries and guaranteed the freedom of the administration of the Church. According to their own declarations these reservations of the governments did not imply the validity of the principles of the "Church Pragmatic", and, as the governments made no reply to the explanations which the Pope gave to these points, the pope assumed that the doubts of the Governments over these points had disappeared. Consequently on 11 April, 1827, he issued the supplementary Bull, "Ad Dominici gregis custodiam", which incorporated the articles in their entirety. Upon this the two Bulls, "Provida sollersque" and "Ad Dominici gregis custodiam", were published in full by the Governments of Baden, Hesse-Darmstadt, Hesse-Cassel, Würtemberg, and Nassau. The Bulls received the approval of the Governments only "so far as such have for their object the formation of the ecclesiastical province of the Upper Rhine, the circumscription, equipment, and founding of the five dioceses belonging to it with their cathedral chapters, also the filling of the archiepiscopal see, the episcopal sees, and the offices of the cathedral foundations".

After the Bulls had been proclaimed by the Governments, the new bishops were elected. After the Government of Baden had dropped its former candidate, Wessenberg, the first archbishop was Bernhard Boll, parish priest of Münster; the Bishop of Limburg was Brand; of Rottenburg, J. B. Keller; of Fulda, Rieger; of Mainz, Burg. The ecclesiastical province of the Upper Rhine was now established, and the episcopal sees filled, but satisfactory relations between Church and State had not yet been attained. The Governments did not abandon their plan to extend the rights of the State in ecclesiastical questions as far as possible. No determined resistance was to be expected from most of the new bishops, who were either weak men or confidants of the Governments. Consequently, on 30 Jan., 1830, the Governments issued jointly an "Ordinance respecting the exercise of the

constitutional right of the State to protect and supervise the Catholic national Church", containing thirty-nine articles, which were essentially only a revised form of the "Church Pragmatic" of Frankfort. The pope protested at once, although in vain. The Bishop of Fulda and his cathedral chapter also courageously opposed the ordinance, and obtained the mitigation of the most severe regulations. The bishops of the other dioceses accepted at first without opposition the publication of the ordinance of the sovereign. Still, in their dioceses also there were later violent struggles between Church and State.

JOSEPH LINS

Upsala

Ancient See of Upsala

When St. Ansgar, the Apostle of the North, went to Sweden in 829 the Swedes were still heathen and the country contained many sacrificial groves and temples for the worship of idols. One of the most celebrated of the latter was the temple at Upsala in what is now called Old Upsala, the centre of idolatrous worship not only for Sweden but for all Scandinavia. Even after Christianity had spread through Sweden, heathen sacrifices were still maintained at Upsala. The "Bishops' Chronicle", written by Adam of Bremen in the years 1072-76, says, "The Swedes have a well-known heathen temple called Upsala", and adds, "Every ninth year, moreover, a great feast is celebrated at Upsala, which is observed in common by all the provinces of Sweden. None is permitted to avoid participation in the feast . . . More horrible than any punishment is that even those who have become Christians must purchase exemption from participation in the feast . . . The sacrifices are made thus: Nine heads are offered for every living creature of the male sex. By the blood of these the gods are appeased. The bodies are hung up in a grove not far from the temple. Dogs and horses may be seen hanging close by human beings; a Christian told me he had seen seventy-two bodies hanging together."

An episcopal see was established at Old Upsala. One of the bishops was St. Henry, who took part in the Crusade to Finland led by St. Eric and suffered martyrdom there in 1157. The bishops of Sweden were first suffragans of the Archdiocese of Hamburg-Bremen, of which see St. Ansgar was archbishop when he died. Afterwards the Swedish bishops were suffragans of the Archbishop of Lund, Primate of Scandinavia. In 1152 Cardinal Nicholas of Albano, later Pope Adrian IV, visited Sweden and held a provincial synod at Linköping. He had been commissioned to establish

an independent Church province in Sweden, but the matter was deferred, as the Swedes could not agree upon the see of the archbishop.

However, in 1164, Pope Alexander III established a separate ecclesiastical province of Sweden with the see at Upsala. The suffragans were the Bishops of Skara, Linköping, Strengnäs, and Westerås; at a later date the dioceses of Wexiö and Åbo in Finland were added. The first Archbishop of Upsala was Stephen, a Cistercian monk from the celebrated monastery of Alwastra. Cardinal William of Sabina came as papal legate to Sweden during the archiepiscopate of Jarler, a Dominican monk (1235-55). The legate had been commissioned, among other things, to establish cathedral chapters wherever such were lacking, and to grant them the exclusive right of electing the bishops. Another important matter which the legate had been ordered to carry out was the enforcement of the law of clerical celibacy. At a provincial synod held at Skenninge in 1248 under the presidency of the cardinal, the rules as to celibacy were made more severe. The pious and energetic Archbishop Jarler and his successor Laurentius (1257-67), a Franciscan, constantly strove to elevate the clergy and to enforce the law of celibacy. A century later the great saint of Sweden, St Bridget (d. 1373), laboured zealously for the enforcement of the same law.

A new era arose in the history of the archdiocese when Archbishop Folke (1274-77) transferred the see from Old Upsala to Aros, a town near by on the Fyris which was given the name of Upsala. This change was approved by the pope, the king, and the bishops. The relics of the national saint, St. Eric, were also transferred to the new see. The cathedral of Upsala, the most important church of Sweden and the largest in Scandinavia, was built by the French architect Etienne de Bonnuille in 1287. It was a masterpiece of the Gothic style, and is a monument of what Catholic art and Catholic self-sacrifice were able to create under the leadership of zealous archbishops and prelates. The labours of the archbishops extended in all directions. Some were zealous pastors of their flocks, such as Jarler and others; some were distinguished canonists, such as Birger Gregerson (1367-83) and Olof Larsson (1435-8); others were statesmen, such as Jöns Bengtsson Oxenstjerna (d. 1467), or capable administrators, such as Jacob Ulfsson Örnfot, who was distinguished as a prince of the Church, royal councillor, patron of art and learning, founder of the University of Upsala, and an efficient helper in the introduction of printing into Sweden. He died in the Carthusian monastery of Mariefred (Mary's Peace) in 1522. There were also scholars, such as Johannes Magnus (d. 1544), who wrote the "*Historia de omnibus gothorum sueonumque regibus*" and the "*Historia metropolitanae ecclesiae upsaliensis*", and his brother Olaus Magnus (d. 1588), who wrote the "*Historia de gentibus septentrionalibus*" and who was the last Archbishop of Upsala.

The archbishops and secular clergy found active co-workers among the regulars. Among the orders represented in Sweden were the Benedictines, Cistercians, Dominicans, Franciscans, Brigittines (with the mother-house at Wadstena), Carthusians, etc. The monks not only laboured in things spiritual, but were also the teachers of the people in agriculture and gardening. Still greater credit is due the members of the orders, both men and women, for their services in the intellectual training of the people of Sweden. A Swedish Protestant investigator, Carl Silfverstolpe, writes: "The monks were almost the sole bond of union in the Middle Ages between the civilization of the

north and that of southern Europe, and it can be claimed that the active relations between our monasteries and those in southern lands were the arteries through which the higher civilization reached our country." The beneficial labours of the Catholic Church were forgotten in the stormy days of the Reformation, but in the present era they have been once more recognized by more dispassionate investigators. Dr. Claes Annerstedt, the historian of the University of Upsala, says: "One of the finest results of modern research is that the highly important labours of the Roman Church have received proper recognition by the exhibition of its services in the preservation and spread of civilization."

GUSTAF ARMFELT

University of Upsala

University of Upsala

The oldest and most celebrated university of Sweden. Even today the arrangement of its buildings in the city of Upsala (about 23,000 inhabitants) shows that it is the creation of the Catholic Church. The venerable Gothic cathedral, which contains in a silver reliquary the remains of St. Eric the King (d. 1161), is surrounded by the colleges, houses of the "nations", clinical hospitals, infirmaries, astronomical observatory, and library. The proposal to call foreign scholars to Upsala to give lectures is said to have been made at the church synod held at Arboga in 1417. It is certain that the bishops were commissioned by the Synod of Söderköping (1441) to take measures to obtain a *studium generale*. Shortly after this Denmark sought to establish a university at Copenhagen. This led Archbishop Jakob Ulfsson, primate of the Swedish Church (470-1515), a man who did much for Sweden, to seek from the pope the privilege of founding a university. In the summer of 1477 the envoy of the archbishop and the royal council, Canon Ragvald Ingemundi, returned from Rome bringing with him from Pope Sixtus IV a Bull, dated 27 February, 1477, granting the charter. The university was to be modelled on that of Bologna, to have the same privileges and liberties, and to include the faculties of theology, canon and civil law, medicine, and philosophy. The Archbishop of Upsala was to be the licentiate, doctor, and master. After receiving the Bull, the archbishop and his six suffragans, the administrator of the kingdom, Sten Sture I, and the twenty-three members of the royal council of Strengon 2 July, 1477. The lectures began in the autumn of the same year, and the university developed and flourished greatly.

Religious schism appeared at the university during the rectorship of Laurentius Petri, who had studied at Wittenberg under Luther, and who, as the first Protestant Archbishop of Upsala, introduced the Reformation into Sweden. In consequence of the schism the university was closed in 1580. Its place was taken, for Catholics, by a *collegium regium*, at Stockholm, where the instruction was given for a time by Jesuits. In 1593 the University of Upsala was revived by order of the General Council of Sweden. Originally, it was only intended to have the faculties of Protestant theology and philosophy, but the others were added later. The university also received its old privileges, so that it was able to maintain its independence until modern times, notwithstanding all the violent changes in the kingdom. Its second period of prosperity began during the reign of King Gustavus II Adolphus, who endowed it with his valuable landed property. Among the university professors of the eighteenth century was the well-known natural scientist Karl von Linnæus, who received the honorary title of *Botanicorum princeps*. In the nineteenth century the most distinguished professor was the historian and poet, Eric Gustav Geijer. The students are distributed, according to the district they come from, among the thirteen "nations", all of which, in the middle of the past century, united into one student body. As in other Swedish institutions of higher education, the organization and instruction are regulated by the royal statutes of 10 January, 1876. The presiding officer is a chancellor elected for three years by the council of professors and confirmed by the king; the substitute for the chancellor is the Lutheran archbishop. In the year 1911-12 there were 68 professors, 70 dozenten, and 2261 students.

KARL HOEBER

Uranopolis

Uranopolis

A titular see of Asia Minor, suffragan of Ancyra in Galatia Prima. It is vainly sought in any "Notitiæ episcopatum" or in any geography, ancient or modern, profane or ecclesiastical. It is a faulty spelling or variation of Verinopolis, so named in honour of Verina, mother-in-law of the Emperor Zeno. Le Quien (*Oriens christ.*, I, 481) mentions three bishops: Stephen, present at the Trullan Council, 692; Anthimus, at the second Council of Nice, 787; Sisinnius, at the Councils of Constantinople, 869, 878. The diocese is described, about 640, in the "Ecthesis" of pseudo-Epiphanius (Gelzer, "Ungedruckte . . . Texte der Notitiæ episcopatum", 536); about 900, in the "Notitia episcopatum" of Leo the Philosopher (Gelzer, *op. cit.*, 552), under the name of Stauros; and about 940, in the "Notitia" of Constantine Porphyrogenitus (Georgii Cyprii, ed. Gelzer, "Descriptio orbis romani", 63). Stauros is not a substitute for Verinopolis, but rather the name of a neighbouring locality. Ramsay (*Asia Minor*, 247) and Anderson (*Studia Pontica*, 25) say that Verinopolis is the Byzantine name of Evagina, a station described by the "Tabula Peutinger" (X, I) and by Ptolemy (V, iv, 7) under the altered name of Phubagina. The ruins of Evagina-Verinopolis were discovered a little to the south-west of Keuhne, a nahiË in the sandjak of Yuzgad, vilayet of Angora.

MÜLLER, ed. DIDOT, *Notes on Ptolemy*, I, 852; RAMSAY, *Asia Minor* (London, 1890), 247 sq.; ANDERSON, *Studia Pontica* (Brussels, 1903), 25-29; PAULY-WISSOWA, *Real-Encyclopädie der classischen Altertumswissenschaft* (3d ed.), s.v. *Evagina*.

S. VAILHÉ

Pope Urban I

Pope Urban I

Reigned 222-30, date of birth unknown; died 23 May, 230. According to the "Liber Pontificalis," Urban was a Roman and his father's name was Pontianus. After the death of Callistus I (14 October, 222) Urban was elected Bishop of Rome, of which Church he was the head for eight years, according to Eusebius (Hist. eccl., VI, 23). The document called the Liberian catalogue of popes puts the beginning of his pontificate in the year 223 and its close in the year 230. The dissension produced in the Roman Church by Hippolytus (q.v.) continued to exist during Urban's pontificate. Hippolytus and his adherents persisted in schism; it was probably during the reign of Urban that Hippolytus wrote his "Philosophumena", in which he attacked Pope Callistus severely. Urban maintained the same attitude towards the schismatical party and its leader that his predecessor had adopted. The historical authorities say nothing of any other factious troubles in the life of the Roman Church during this era. In 222 Alexander Severus became Roman emperor. He favoured a religious eclecticism and also protected Christianity. His mother, Julia Mamaea, was a friend of the Alexandrine teacher Origen, whom she summoned to Antioch. Hippolytus dedicated his work on the Resurrection to her. The result of the favourable opinion of Christianity held by the emperor and his mother was that Christians enjoyed complete peace in essentials, although their legal status was not changed. The historian Lampridius (Alex. Sever., c. xxii) says emphatically that Alexander Severus made no trouble for the Christians: "Christianos esse passus est." Undoubtedly the Roman Church experienced the happy results of these kindly intentions and was unmolested during this emperor's reign (222-235). The emperor even protected Roman Christians in a legal dispute over the ownership of a piece of land. When they wished to build a church on a piece of land in Rome which was also claimed by tavern-keepers, the matter was brought before the imperial court, and Severus decided in favour of the Christians, declaring it was better that God should be worshipped on that spot (Lampridius, "Alex. Sever.", c. xlix).

Nothing is known concerning the personal labours of Pope Urban. The increase in extent of various Roman Catacombs in the first half of the third century proves that Christians grew largely in numbers during this period. The legendary Acts of St. Cecilia connect the saint, as well as her husband and brother-in-law, with Urban, who is said to have baptized her husband and her brother-in-law. This narrative, however, is purely legendary, and has no historical value whatever; the same is true of the Acts of the martyrdom of Urban himself, which are of still later date than the legend of St. Cecilia. The statement of the "Liber Pontificalis" that Urban converted many by his sermons, rests on the Acts of St. Cecilia. Another statement on the same authority, that Urban

had ordered the making of silver liturgical vessels, is only an invention of the later editor of the biography early in the sixth century, who arbitrarily attributed to Urban the making of certain vessels, including the patens for twenty-five titular churches of his own time. The particulars of the death of Urban are unknown, but, judging from the peace of his era, he must have died a natural death. The "Liber Pontificalis" states that he became a confessor in the reign of Diocletian; the date added is without authority. His name does not appear in the "Depositio Episcoporum" of the fourth century in the "Kalendarium Philocalianum".

Two different statements are made in the early authorities as to the grave of Urban, of which, however, only one refers to the pope of this name. In the Acts of St. Cecilia and the "Liber Pontificalis" it is said that Pope Urban was buried in the Catacomb of Praetextatus on the Via Appia. The Itineraries of the seventh century to the graves of the Roman martyrs all mention the grave of an Urban in connexion with the graves of several martyrs who are buried in the Catacomb of Praetextatus. One of the Itineraries gives this Urban the title "Bishop and Confessor." Consequently, from the fourth century, all Roman tradition has venerated the pope of this name in the Urban of the Catacomb of Praetextatus. In excavating a double chamber of the Catacomb of St. Callistus, De Rossi found, however, a fragment of the lid of a sarcophagus that bore the inscription *OUPBANOCE [piskopos]*. He also proved that in the list of martyrs and confessors buried in the Catacomb of St. Callistus, drawn up by Sixtus III (432-40), the name of an Urban is to be found. The great archaeologist De Rossi therefore came to the conclusion that the Urban buried in St. Callistus was the pope, while the saint of the same name buried in St. Praetextatus was the bishop of another see who died at Rome and was buried in this catacomb. Most historians agree with this opinion, which, however, chiefly founded on the Acts of St. Cecilia. The lettering of the above-mentioned epitaph of an Urban in St. Callistus indicates a later period, as a comparison with the lettering of the papal epitaphs in the papal crypt proves. In the list prepared by Sixtus III and mentioned above, Urban is not given in the succession of popes, but appears among the foreign bishops who died at Rome and were buried in St. Callistus.

Thus it seems necessary to accept the testimony that Pope Urban was buried in the Catacomb of Praetextatus, while the Urban lying in St. Callistus is a bishop of a later date from some other city. This view best reconciles the statements of the "Martyrologium Hieronymianum". Under date of 25 May (*VIII kal. Jun.*) is to be found the notice: "Via nomentana miliario VIII natale Urbani episcopi in cimiterio Praetextati" ("Martyr. Hieronym.", ed. De Rossi-Duchesne, 66). The catacomb on the Via Nomentana, however, is that which contains the grave of Pope Alexander, while the Catacomb of Praetextatus is on the Via Appia. Duchesne has proved (*Lib. Pontif.*, I, xlvi-xlvi) that in the list of graves of the popes from which this notice is taken a line dropped out, and that it originally stated that the grave of Pope Alexander was on the Via Nomentana, and the grave of Pope Urban on the Via Appia in the Catacomb of Praetextatus. Consequently 25 May is the day of the burial of Urban in this catacomb. As the same martyrology contains under the date of 19 May (*XIV kal. Jun.*) a long list of martyrs headed by the two Roman martyrs Calocerus and Partenius,

who are buried in the Catacomb of St. Callistus, and including an Urban, this Urban is apparently the foreign bishop of that name who lies buried in the same catacomb.

J. P. KIRSCH

Pope Bl. Urban II

Pope Bl. Urban II

(Otho, Otto or Odo of Lagery), 1088-1099, born of a knightly family, at Châtillon-sur-Marne in the province of Champagne, about 1042; died 29 July, 1099. Under St. Bruno (afterwards founder of the Carthusians) Otho studied at Reims, where he later became canon and archdeacon. About 1070 he retired to Cluny and was professed there under the great abbot St. Hugh. After holding the office of prior he was sent by St. Hugh to Rome as one of the monks asked for by Gregory VII, and he was of great assistance to Gregory in the difficult task of reforming the Church. In 1078 he became Cardinal Bishop of Ostia and Gregory's chief adviser and helper. During the years 1082 to 1085 he was legate in France and Germany. While returning to Rome in 1083 he was made prisoner by the Emperor Henry IV, but was soon liberated. Whilst in Saxony (1084-5) he filled many of the vacant sees with men faithful to Gregory and deposed those whom the pope had condemned. He held a great synod at Quedlinburg in Saxony in which the antipope Guibert of Ravenna and his adherents were anathematized by name. Victor III had already been elected when Otho returned to Rome in 1085. Otho appears to have opposed Victor at first, not through any animosity or want of good will, but because he judged it better, at so critical a time, that Victor should resign the honour he was unwilling to retain. After Victor's death a summons was sent to as many bishops of the Gregorian party as possible to attend a meeting at Terracina. It was made known at this meeting that Otho had been suggested by Gregory and Victor as their successor. Accordingly, on 12 March, 1088, he was unanimously elected, taking the title of Urban II. His first act was to proclaim his election to the world, and to exhort the princes and bishops who had been loyal to Gregory to continue in their allegiance: he declared his intention of following the policy and example of his great predecessor--"all that he rejected, I reject, what he condemned I condemn, what he loved I embrace, what he considered as Catholic, I confirm and approve".

It was a difficult task which confronted the new pope. To enter Rome was impossible. The Normans, on whom together with Matilda he could alone rely, were engaged in civil war. Roger and Bohemund had to be reconciled before anything could be done, and to effect this the pope set out for Sicily. He met Roger at Troina, but history is silent as to what took place between them. The year following, however, saw peace between the two princes, and Urban's first entry into Rome in November, 1088, is said by some to have been made possible by Norman troops. His plight in Rome was truly pitiable; the whole city practically was in the hands of the antipope, and Urban had to take refuge on the Island of St. Bartholomew, the approach being guarded by Pierleone, who had turned the theatre of Marcellus on the left bank of the river into a fortress. Nor was the outlook in Germany calculated to hold out hopes of the triumph of the papal party; its stoutest adherents in

the episcopate had died, and Henry was steadily gaining ground. From amidst the poverty and want of his wretched island, Urban launched sentence of excommunication against emperor and antipope alike. Guibert retorted by holding a synod in St. Peter's before which he cited Urban to appear. The troops of pope and antipope met in a desperate encounter which lasted three days; Guibert was driven from the city, and Urban entered St. Peter's in triumph. He was now determined to unite his partisans in Italy and Germany. The Countess Matilda had lost her first husband, Godfrey of Lorraine. She was now well advanced in years, but this did not prevent her marriage with Count Welf of Bavaria, a youth of eighteen, whose father, Duke of Welf IV of Bavaria, was in arms against Henry. Urban now turned his steps southwards again. In the autumn of 1089 seventy bishops met him in synod at Melfi, where decrees against simony and clerical marriage were promulgated. In December he turned back to Rome, but not before he had effected a lasting peace between Roger and Bohemund, and had received their full allegiance. The fickle Romans had again renounced him on the news of Henry's success against Matilda in north Italy, and had summoned Guibert back to the city. The latter celebrated Christmas in St. Peter's whilst Urban anathematized him from without the walls.

For three years Urban was compelled to wander an exile about southern Italy. He spent the time holding councils and improving the character of ecclesiastical discipline. Meanwhile Henry at last suffered a check from Matilda's forces at Canossa, the same fortress which had witnessed his humiliation before Gregory. His son Conrad, appalled, it is said, at his father's depravity, and refusing to become his partner in sin, fled to the faction of Matilda and Welf. The Lombard League--Milan, Lodi, Piacenza, and Cremona--welcomed him and he was crowned king in Milan, the centre of the imperial power in Italy. The way was now clear for Urban's entry into Rome, but still the partisans of Guibert held the strong places of the city. This time the pope took up his residence in the fortress of the Frangipani, a family which had remained faithful to him and which was entrenched under the Palatine near the Church of Sta. Maria Nuova. His condition was piteous, for he had to depend on charity and was already deeply in debt. A French abbot, Gregory of Vendôme, hearing of Urban's plight, hurried to Rome "that he might become a sharer of his sufferings and labour and relieve his want". In return for this he was created Cardinal Deacon of Sta. Prisca. Shortly before Easter, 1094, the governor of the Lateran palace offered to surrender it to Urban on payment of a large sum of money. This money Gregory of Vendôme supplied by selling certain possessions of his monastery; Urban entered the Lateran in time for the Paschal solemnity, and sat for the first time on the papal throne just six years after his election at Terracina.

But it was no time for tarrying long in Rome. Henry's cause was steadily growing weaker, and Urban hurried north to hold a council at Piacenza in the interests of peace and reform. The unfortunate Praxedis, Henry's second wife, had suffered wrongs which were now the common property of Christendom. Her cause was heard, Henry not even attempting to defend himself. She was publicly declared innocent and absolved from any censure. Then the case of Philip of France, who had repudiated his wife Bertha and espoused Bertrada, the wife of Fulk of Anjou, was dealt with. Several bishops had recognized the union, but Archbishop Hugh of Lyons had had the courage

to excommunicate Philip for adultery. Both king and archbishop were summoned to the council, and both failed to appear. Philip was granted a further respite, but Hugh was suspended from his office. At this council Urban was able to broach the subject of the Crusades. The Eastern Emperor, Alexius I, had sent an embassy to the pope asking for help against the Seljuk Turks who were a serious menace to the Empire of Constantinople. Urban succeeded in inducing many of those present to promise to help Alexius, but no definite step was taken by Urban till a few months later, when he summoned the most famous of his councils, that at Clermont in Auvergne. The council met in November, 1095; thirteen archbishops, two hundred and twenty-five bishops, and over ninety abbots answered the pope's summons. The synod met in the Church of Notre-Dame du Port and began by reiterating the Gregorian Decrees against simony, investiture, and clerical marriage. The sentence, which for some months had been threatening Philip of France, was now launched against him, and he was excommunicated for adultery. Then the burning question of the East was discussed. Urban's reception in France had been most enthusiastic, and enthusiasm for the Crusade had spread as the pope journeyed on from Italy. Thousands of nobles and knights had met together for the council. It was decided that an army of horse and foot should march to rescue Jerusalem and the Churches of Asia from the Saracens. A plenary indulgence was granted to all who should undertake the journey *pro sola devotione*, and further to help the movement, the Truce of God was extended, and the property of those who had taken the cross was to be looked upon as sacred. Those who were unfitted for the expedition were forbidden to undertake it, and the faithful were exhorted to take the advice of their bishops and priests before starting. Coming forth from the church the pope addressed the immense multitude. He used his wonderful gifts of eloquence to the utmost, depicting the captivity of the Sacred City where Christ had suffered and died--"Let them turn their weapons dripping with the blood of their brothers against the enemy of the Christian Faith. Let them--oppressors of orphans and widows, murderers and violators of churches, robbers of the property of others, vultures drawn by the scent of battle--let them hasten, if they love their souls, under their captain Christ to the rescue of Sion." When the pope ceased to speak a mighty shout of *Deus lo volt* rose from the throng. His most sanguine hopes had not anticipated such enthusiasm as now prevailed. He was urged repeatedly to lead the Crusade in person, but he appointed Ademar, Bishop of Le Puy, in his stead, and leaving Clermont travelled from city to city in France preaching the Crusade. Letters were sent to bishops who had been unable to attend the council, and preachers were sent all over Europe to arouse enthusiasm. In every possible way Urban encouraged people to take the cross, and he did not easily dispense from their obligations those who had once bound themselves to undertake the expedition.

In March, 1096, the pope held a synod at Tours and confirmed the excommunication of the French king, which certain members of the French episcopate had endeavoured to remove. In July, 1096, the king, having dismissed Bertrada, was absolved by Urban in a synod held at Nîmes, but having relapsed, he was again excommunicated by the pope's legate in 1097. Some of the greater prelates of France had now to be brought to subjection to the pope, amongst them being the Archbishop of Vienne, who had refused to abide by the papal decision regarding the jurisdiction

of the Bishop of Grenoble, and the Archbishop of Sens, who had declined to recognize the Archbishop of Lyons as papal legate. After a triumphal progress through France, Urban returned to Italy. On his way to Rome he met the crusading princes at Lucca, and bestowed the banner of St. Peter upon Hugh of Vermandois. It is said by some that this crusading host enabled Urban to enter Rome, which at this time was again held by the antipope. If this was so, the entry appears, according to the statement of an eyewitness to have been effected without fighting. No doubt the presence of well-disciplined troops, under the most distinguished knights of Christendom, struck terror into the wild partisans of Guibert. But Urban's final triumph over the "imbecile" was now assured. Northern and central Italy were in the power of Matilda and Conrad, and Henry was at last forced to leave Italy. A council was held in the Lateran in 1097, and before the end of the year Urban was able to go south again to solicit help from the Normans to enable him to regain the Castle of S. Angelo. The castle capitulated in August, 1098. He was now enabled to enjoy a brief period of repose after a life of incessant activity and fierce strife, which had brought exile and want. His friendship with the Normans was strengthened by the appointment of Count Roger as papal legate in Sicily, where the Church had been almost swept away by the Saracens; the antipope was within his Archbishopric of Ravenna, and Henry's power, though strengthened by Count Welf, who had forsaken Matilda, was not strong enough to be any longer a serious menace.

In October, 1098, the pope held a council at Bari with the intention of reconciling the Greeks and Latins on the question of the *filioque*; one hundred and eighty bishops attended, amongst whom was St. Anselm of Canterbury, who had fled to Urban to lay before him his complaints against the Red King. The close of November saw the pope again in Rome; it was his final return to the city. Here he held his last council in April, 1099. Once more he raised his eloquent voice on behalf of the Crusades, and many responded to his call. On 15 July, 1099, Jerusalem fell before the attack of the crusaders, but Urban did not live to hear the news. He died in the house of Pierleone which had so often given him shelter. His remains could not be buried in the Lateran because of Guibert's followers who were still in the city, but were conveyed to the crypt of St. Peter's where they were interred close to the tomb of Adrian I. Guibert of Nogent asserts that miracles were wrought at the tomb of Urban, who appears as a saint in many of the Martyrologies. Thus there seems to have been a cult of Urban II from the time of his death, though the feast (29 July) has never been extended to the Universal Church. Amongst the figures painted in the apse of the oratory built by Calixtus II in the Lateran Palace is that of Urban II with the words *sanctus Urbanus secundus* beneath it. The head is crowned by a square nimbus, and the pope is represented at the feet of Our Lady. The formal act of beatification did not take place till the pontificate of Leo XIII. The cause was introduced by Mgr Langenieux, Archbishop of Reims, in 1878, and after it had gone through the various stages the decision was given by Leo XIII on 14 July, 1881.

R. URBAN BUTLER

Pope Urban III

Pope Urban III

Reigned 1185-87, born at Milan; died at Ferrara, 19 October, 1187. Uberto, of the noble Milanese family of the Crivelli, was created cardinal by Lucius III in 1182 and Archbishop of Milan in 1185. On 25 November of this year Lucius died at Verona, and the archbishop was elected to succeed him on the same day; he was crowned on 1 December. This haste was probably due to fear of imperial interference. Urban inherited from his predecessor a legacy of feud with the great Emperor Frederick Barbarossa, and this was embittered by personal enmity, for at the sack of Milan in 1162 the emperor had caused several of the pope's relatives to be proscribed or mutilated. It has been noticed that the breach between Lucius III and Frederick coincided with the arrival in Northern Italy (August, 1185) of Constance, the heiress of the Kingdom of Sicily, who was betrothed to Frederick's son Henry. The marriage, which was celebrated at Milan on 4 Jan., 1186, six weeks after Urban's accession, "constituted for the papacy the gravest check it had suffered for a long time. By it was ruined the whole political edifice so laboriously raised by the popes of the eleventh and twelfth centuries to keep in check the power of the Emperors in Italy and to assure the independence of the Papal States" (Chalandon, II, 390). By this marriage was lost that Norman support on which the papacy had so long relied in its contest with the empire. Nor was this the only cause of quarrel. The treaty of 1177 had left unsettled the question of the succession to the estates of Matilda of Tuscany, while Frederick had seized the revenues of vacant German bishoprics and suppressed nunneries for the sake of their property.

Urban maintained the refusal of Lucius III to crown Henry, and the Patriarch of Aquileia was induced by the emperor to perform the office, although it belonged to the pope in right of the Archbishopric of Milan which he had retained, possibly to that end, after his election. Urban replied by excommunicating the patriarch and the bishops who had assisted at the ceremony. On 31 May he promoted to the cardinalate the archdeacon Folmar, and next day consecrated him as Archbishop of Trier, contrary to a promise he had made to the emperor, for though Folmar had been canonically elected, Frederick had granted investiture to Rudolf, the candidate of the minority. The emperor crossed the passes of the Alps against the pope's messengers to Germany, and sent Henry to ravage the Papal States. Urban had hoped for support from the German bishops, but at the Diet of Gelnhausen (April or May, 1187), from which the papal legate, Philip von Heinsberg, Archbishop of Cologne, was excluded, Frederick won the bishops to his side and caused them to send letters to the pope urging him "to do justice to the Emperor in those things which were justly demanded of him" (Arnold of Lübeck, III, 18). Urban replied by summoning the emperor to appear before his tribunal at Verona, and was only prevented from pronouncing excommunication against him by the Veronese, who, as Frederick's subjects, would not permit the sentence to be promulgated in their city. Urban set out for Venice, where he would have been able to carry out his threat, but died at Ferrara, after a pontificate of a year and eleven months. His death is ascribed by Benedict of Peterborough to grief at the news of the utter defeat of the crusaders at the battle of Hattin, and it

is commonly stated that it was caused by the news of the fall of Jerusalem, but William of Newburgh assures us that the report of the disaster of Hattin (3-4 July) did not reach the Holy See till after the election of Gregory VIII, so it is hardly probable that Urban III ever heard of the surrender of the Holy City which took place on 2 October.

A curious story is told by Peter of Blois, Archdeacon of Bath, who claims to have been intimate with the pope ("in scholis Urbani socius et discipulus fueram Maldybyrig") and connects his death with his wrath against Baldwin, Archbishop of Canterbury. At the very beginning of his pontificate Urban had granted the request made to his predecessor by Henry II of England, and appointed Baldwin Apostolic legate in the Province of Canterbury, but in the latter's quarrel with the monks of his cathedral the pope had taken the part of the monks, and the archbishop had proved obdurate. Perhaps this was not the only cause of the pope's anger; for Baldwin, moved probably by jealousy, had persuaded the king to conduct back to Normandy the legates sent to crown John as King of Ireland (Benedict of Peterborough, "Gesta regis Henrici Secundi"). The pope even sent a gold crown ("coronam auro contextam") for this purpose. He exerted himself to bring about peace between England and France, and on 23 June, 1187, his legates by threats of excommunication prevented a pitched battle between the armies of the rival kings near Châteauroux, and brought about a two years' truce. Urban's letters show zeal for the Holy Land and a desire to promote peace among the quarrelling Christian potentates of Syria. Unfortunately, it cannot be ascertained whether the interesting letter addressed to Philip of France (Jaffé, "Regesta", 15,924) really belongs to this pope. The number of privileges in favour of the Knights Hospitallers is remarkable. The letters and privileges of Urban III are given in P.L., CCII. His tomb, "a handsome sarcophagus resting on four columns" (Gregorovius), may still be seen in Ferrara cathedral.

RAYMUND WEBSTER

Pope Urban IV

Pope Urban IV

Reigned 1216-64 (Jacques Pantaléon), son of a French cobbler, born at Troyes, probably in the last years of the twelfth century; died at Perugia, 2 Oct., 1264. He became a canon of Laon and later Archdeacon of Liège, attracted the attention of Innocent IV at the Council of Lyons (1245), and in 1247 was sent on a mission to Germany. There his chief work was the restoration of ecclesiastical discipline in Silesia and the reconciliation of the Teutonic Knights with their Prussian vassals. He became Archdeacon of Laon two years later, and in 1251 was sent into north Germany with the commission to obtain recruits for the cause of William of Holland, the papal candidate for the empire. He was made Bishop of Verdun in 1253 and Patriarch of Jerusalem in 1255, at a time of great difficulty and distress for the Christians of the Holy Land. On the death of Alexander IV (25 May, 1261) he had returned to the west and was at Viterbo. After a three months' conclave, protracted by the jealousies of the eight cardinals who composed the whole Sacred College, the Patriarch of Jerusalem was elected on 29 August, 1261. Alexander IV, the feeblest and most pacific

of the popes who were engaged in the struggle with the imperial house of Germany, had left two heavy tasks for his successor to accomplish: the wresting of Sicily from the Hohenstaufen and the restoration in Italy of the influence which the Holy See had lost through his indecision. The Latin Empire of Constantinople came to an end with the capture of the city by the Greeks a fortnight before Urban's election, and for a while he intended a crusade for its re-establishment; but he felt that the tasks near home had the first claim on him. In 1268 Conradin, the last of the Hohenstaufen, died on the scaffold at Naples; it was Urban IV's action in calling Charles of Anjou into the field against Manfred that brought this about. "The fact", says Ranke, "that Urban IV contrived this combination, places him among the important popes."

His experience of affairs and his personal character fitted him for his work. He had had an excellent education and was active, capable, self-reliant, and always ready for any work that presented itself. His life was a full one, yet business had not banished piety. "The Pope does what he will", reports a Sieneese ambassador, "there has been no Pope since Alexander III so energetic in word and deed . . . There is no obstacle to his will . . . he does everything by himself without taking advice" (Pflug-Harttung, "Iter Italicum", 675). Had his reign been longer, he would have been one of the most striking figures in the history of the papacy. Urban's great antagonist was Manfred, son of Frederick II, and usurper of the Sicilian crown. Manfred's chief gift was tact; as an administrator he had his father's highly centralized system to rely on, but as a warrior he was lacking in decision and boldness. After the battle of Montaperti, he became the hero of half Italy, the centre of the Ghibelline party and of all opposition to the papacy. He was anxious for peace and recognition from the pope, and Urban was able to keep him in play until the long drawn-out negotiations with Charles of Anjou were nearly complete. Within less than a year of his election the pope created fourteen new cardinals. Of these six were relatives or dependents of the eight who had elected him, but seven were Frenchmen, including his own nephew and three who had been St. Louis's counsellors. Thus Urban was sure of a majority in the Sacred College, but he brought into being a French party which was a principal factor in ecclesiastical policy for the rest of the thirteenth century and in the fourteenth century became practically the whole College. Among the new cardinals were the three future popes, Clement IV, Martin IV, and Honorius IV, who were to have the greatest share in finishing and defending his work.

Urban's first step towards the restoration of his power in Italy was to put the finances in order and pay his predecessor's debts. He changed the bankers of the Apostolic Camera, employing a Sieneese firm whose services did much to assure the ultimate success of his plans. Urban's Italian policy gives a complete picture of his statesmanship--astute and diplomatic on occasions, but with a marked predilection for energetic measures. He aroused dissensions between rival Ghibelline cities and, by an adroit use of the then generally acknowledged right of the Holy See to declare null all obligations towards persons excommunicate, was able to throw their commercial affairs into confusion (for some curious details see Jordan, "Origines", 337 sq.). He established an ascendancy over his partisans and raised up a new Guelph party bound to him by personal interest, which eventually furnished Charles of Anjou with monetary support without which his expedition

must have failed. In the Papal States new officers were appointed, important points fortified, and the defensive system of Innocent III restored. At Rome Urban obtained the recognition of his sovereignty, but he never risked a visit to the city. In Lombardy his most important act was the strengthening of the traditional alliance between the Holy See and the House of Este. By the middle of 1263 the general results of Urban's extra-Sicilian Italian policy were seen in the almost complete restoration of order in the Papal States, the weakening of Manfred's alliances in Lombardy, and the resurrection in Tuscany of the crushed Guelphs.

A foreign conqueror for Sicily was necessary to attain the expulsion of Manfred, for after the defeat of Alexander IV's forces at Foggia (20 Aug., 1255) all hope was lost of a direct conquest by the papacy. In 1252 Innocent IV had granted the crown of Naples to the English Henry III for his second son, Edmund; but the king had his hands too full at home and was himself too prodigal to allow him to embark on the very costly Sicilian adventure. Charles of Anjou, though he had refused the offer of Innocent IV, had both the power and the ambition necessary for such an undertaking. St. Louis's scruples as to the rights of Conradin and Edmund were overcome, and though he refused the crown for himself or his sons, he finally permitted its offer to his brother. In the mind of the holy king the Sicilian expedition appeared as a preliminary to a great crusade: he saw that Sicily would, in the hands of a French prince, be an ideal starting-point. Yet Louis had been desirous of peace between the pope and Manfred, and even the pope for a time seemed prepared to recognize him as King of Sicily, but the negotiations finally failed. Urban made it his business to prove that the fault lay with his opponent, for European opinion was interested in a struggle in which great princes such as Alphonsus of Aragon and Baldwin, the exiled Latin Emperor of Constantinople, had intervened on the side of peace. It was about May, 1263, that St. Louis made up his mind, and shortly afterwards the envoy of Charles of Anjou appeared in Rome. The chief conditions laid down by Urban were as follows: Sicily must never be united to the empire, its king must pay an annual tribute, take an oath of fealty to the pope, and abstain from acquiring any considerable dominion in Northern Italy; the succession also was strictly regulated. The treaty in fact "was to be the last link in the long chain of acts which had established the suzerainty of the Holy See over Sicily" (Jordan, 443).

The negotiations dragged on slowly as long as the pope felt no acute need of French intervention in Italy, but by May, 1264, the fortunes of the Church were threatening to decline quickly, in face of the rising activity and fortunes of the Ghibellines. Urban sent the French Cardinal Simon de Brion to France as his legate with power to concede certain disputed points: he was, however, to insist on a guarantee that Charles would not retain in perpetuity the Senatorship of Rome; vows to go on a crusade to the Holy Land were to be commuted for the crusade against Manfred and his Saracens, which was to be preached throughout France and Italy. Urban's position was daily growing more dangerous in spite of the incomprehensible inactivity of Manfred. He feared a simultaneous attack from north and south, and even attempts to assassinate himself and Charles of Anjou by the emissaries of Manfred's reputed ally, the "Old Man of the Mountains". In August St. Louis's last objections to the treaty were overcome, and various concessions made to Charles's demands. The

legate held several synods to obtain from the French clergy the tithes granted by the pope for the expedition. In Italy fortune continued to favour the Ghibellines; a Guelph army was defeated in the Patrimony, and Lucca deserted to the enemy. Sienese intrigue threatened Urban's security at Orvieto, and on 9 Sept. he set out for Perugia, where he died.

"Thus the man, whose bold initiative was to influence so greatly the destinies of three great countries, to bring to a close the most glorious period of medieval Germany by the ruin of the Hohenstaufen, to introduce a new dynasty into Italy, and to direct French policy in a direction as yet unknown, quitted the stage before he had seen the consequences of his acts at the very hour when the negotiations, commenced at his accession and continued throughout his reign, had reached completion" (Jordan, *op. cit.*, 513).

If Urban's treatment of Manfred appear harsh and unscrupulous, it must be remembered how the Church had suffered at the hands of the Hohenstaufen ever since the days of Frederick I. In the eyes of feudal law Manfred was a usurper without rights: he had callously seized his nephew Conradin's crown, and even that nephew could not inherit from a grandfather who had been deprived of his fief for rebellion against his suzerain. At this period, too, the papal Government, owing in part to its very weakness, stood for municipal freedom, while the Hohenstaufen had in Sicily substituted for the aristocratic hierarchy of feudalism a bureaucratic despotism supported by the arms of their devoted Saracens.

Two other points in Urban's policy must be noted: his dealings with the Byzantine Empire and with England. Manfred's designs on the territories of Palaeologus, together with the exiled Baldwin's secret attempt to reconcile Manfred with St. Louis, made the Greek emperor, politically, at least, the natural ally for a pope fearful of an increase in the power of the Sicilian king. Urban sought an understanding with Michael Palaeologus, and here too gave a lasting direction to papal policy, setting it on the path which led to the union (inoperative though it was) of Lyons in 1274. In England Urban's collectors of money were exceedingly busy; like St. Louis, he supported Henry III against the barons. He absolved the king from his promise to observe the Provisions of Oxford, declared oaths taken against him to be unlawful, and condemned the rising of the barons. He was buried in the cathedral at Perugia. The Feast of Corpus Christi (q.v.) was instituted by Urban IV.

Pope Bl. Urban V

Pope Bl. Urban V

Guillaume de Grimoard, born at Grisac in Languedoc, 1310; died at Avignon, 19 December, 1370. Born of a knightly family, he was educated at Montpellier and Toulouse, and became a Benedictine monk at the little priory of Chirac near his home. A Bull of 1363 informs us that he was professed at the great Abbey of St. Victor at Marseilles, where he imbibed his characteristic love for the Order of St. Benedict; even as pope he wore its habit. He was ordained at Chirac, and after a further course of theology and canon law at the universities of Toulouse, Montpellier, Paris,

and Avignon, he received the doctorate in 1342. He was one of the greatest canonists of his day; was professor of canon law at Montpellier, and also taught at Toulouse, Paris, and Avignon; he acted successively as vicar-general of the Dioceses of Clermont and Uzès, was at an unknown date (before 1342) affiliated to Cluny, became prior of Notre-Dame du Pré (a priory dependent on St. Germain d'Auxerre), and in 1352 was named abbot of that famous house by Clement VI. With this date begins his diplomatic career. His first mission was to Giovanni Visconti, Archbishop and despot of Milan, and this he carried out successfully; in 1354 and 1360 he was employed on the affairs of the Holy See in Italy; in 1361 he was appointed by Innocent VI to the Abbacy of St. Victor at Marseilles, but in 1362 was once more dispatched to Italy, this time on an embassy to Joanna of Naples. It was while engaged on this business that the abbot heard of his election to the papacy. Innocent VI had died on 12 Sept. The choice of one who was not a cardinal was due to jealousies within the Sacred College, which made the election of any one of its members almost impossible. Guillaume de Grimoard was chosen for his virtue and learning, and for his skill in practical affairs of government and diplomacy. He arrived at Marseilles on 28 Oct., entered Avignon three days later, and was consecrated on 6 November, taking the name of Urban because, as he said, "all the popes who had borne the name had been saints". The general satisfaction which this election aroused was voiced by Petrarch, who wrote to the pope, "It is God alone who has chosen you".

On 20 November King John of France visited Avignon; his main purpose was to obtain the hand of Joanna of Naples, ward of the Holy See, for his son Philip, Duke of Touraine. In a letter of 7 November Urban had already approved her project of marriage with King James of Majorca, a king without a kingdom; by so doing the pope safeguarded his own independence at Avignon, which would have been gravely imperilled had the marriage of Joanna, who was also Countess of Provence, united to the Crown of France the country surrounding the little papal principality. The letter written by Urban to Joanna on 29 Nov., urging the marriage with Philip, was probably meant rather to appease the French king than to persuade the recipient. The betrothal of the Queen of Naples to James of Majorca was signed on 14 Dec. The enormous ransom of 3,000,000 gold crowns, due to Edward III of England from John of France by the treaty of Bretigny, was still in great part unpaid, and John now sought permission to levy a tithe on the revenues of the French clergy. Urban refused this request as well as another for the nomination of four cardinals chosen by the king. John also desired to intervene between the pope and Barnabò Visconti, tyrant of Milan. He was again refused, and when Barnabò failed to appear within the three months allowed by his citation, the pope excommunicated him (3 March, 1363). In April of the same year Visconti was defeated before Bologna. Peace was concluded in March, 1364; Barnabò restored the castles seized by him, while Urban withdrew the excommunication and undertook to pay half a million gold florins.

The Benedictine pope was a lover of peace, and much of his diplomacy was directed to the pacification of Italy and France. Both countries were overrun by mercenary bands known as the "Free Companies", and the pope made many efforts to secure their dispersal or departure. His excommunication was disregarded and the companies refused to join the distant King of Hungary

in his battles with the Turks although the Emperor Charles IV, who came to Avignon in May, 1365, guaranteed the expenses of their journey and offered them the revenues of his kingdom of Bohemia for three years. War now broke out between Pedro the Cruel of Navarre and his brother Henry of Trastamare. Pedro was excommunicated for his cruelties and persecutions of the clergy, and Bertrand Duguesclin, the victor of Cocherel, led the companies into Navarre; yet they visited Avignon on their way and wrung blackmail from the pope. The Spanish war was quickly ended, and Urban returned to his former plan of employing the companies against the Turk. The Count of Savoy was to have led them to the assistance of the King of Cyprus and the Eastern Empire, but this scheme too was a failure. Urban's efforts were equally fruitless in Italy, where the whole land was overrun with bands led by such famous *condottieri* as the German Count of Landau and the Englishman Sir John Hawkwood. In 1365, after the failure of a scheme to unite Florence, Pisa, and the Italian communes against them, the pope commissioned Albornoz to persuade these companies to join the King of Hungary. In 1366 he solemnly excommunicated them, forbade their employment, and called on the emperor and all the powers of Christendom to unite for their extirpation. All was in vain, for though a league of Italian cities was formed in September of that year, it was dissolved about fifteen months later owing to Florentine jealousy of the emperor.

Rome had suffered terribly through the absence of her pontiffs, and it became apparent to Urban that if he remained at Avignon the work of the warlike Cardinal Albornoz in restoring to the papacy the States of the Church would be undone. On 14 September, 1366, he informed the emperor of his determination to return to Rome. All men rejoiced at the announcement except the French; the king understood that the departure from Avignon would mean a diminution of French influence at the Curia. The French cardinals were in despair at the prospect of leaving France, and even threatened to desert the pope. On 30 April, 1367, Urban left Avignon; on 19 May he sailed from Marseilles, and after a long coasting voyage he reached Corneto, where he was met by Albornoz. On 4 June the Romans brought the keys of Sant' Angelo in sign of welcome, and the Gesuati carrying their branches in their hands and headed by their founder, Blessed John Colombini, preceded the pope. Five days later he entered Viterbo, where he dwelt in the citadel. The disturbed state of Italy made it impossible for Urban to set out to Rome until he had gathered a considerable army, so it was not till 16 Oct. that he entered the city at the head of an imposing cavalcade, under the escort of the Count of Savoy, the Marquess of Ferrara, and other princes.

The return of the pope to Rome appeared to the contemporary world both as a great event and as a religious action. The pope now set to work to improve the material and moral condition of his capital. The basilicas and papal palaces were restored and decorated, and the Papal treasure, which had been preserved at Assisi since the days of Boniface VIII, was distributed to the city churches. The unemployed were put to work in the neglected gardens of the Vatican, and corn was distributed in seasons of scarcity; at the same time the discipline of the clergy was restored, and the frequentation of the sacraments encouraged. One of Urban's first acts was to change the Roman constitution, but it may be questioned whether "the sacrifice offered to the Pontiff as the reward of his return was the liberty of the people" (Gregorovius).

On 17 October, 1368, the emperor joined the pope at Viterbo. Before leaving Germany he had confirmed all the rights of the Church, and Urban hoped for his help against the Visconti, but Charles allowed himself to be bribed. On 21 Oct. the pope and emperor entered Rome together, the latter humbly leading the pontiff's mule. On 1 Nov. Charles acted as deacon at the Mass at which Urban crowned the empress. For more than a century pope and emperor had not appeared thus in amity. A year later the Emperor of the East, John V Palaeologus, came to Rome seeking assistance against the infidel; he abjured the schism and was received by Urban on the steps of St. Peter's. These emperors both of West and East were but shadows of their great predecessors, and their visits, triumphs as they might appear, were but little gain to Urban V. He felt that his position in Italy was insecure. The death of Albornoze (24 Aug., 1367), who had made his return to Italy possible, had been a great loss. The restlessness of the towns was exemplified by the revolt of Perugia, which had to be crushed by force; any chance storm might undo the work of the great legate. At heart, too, the pope had all a Frenchman's love for his country, and his French entourage urged his return to Avignon. In vain were the remonstrances of the envoys of Rome, which had gained "greater quiet and order, an influx of wealth, a revival of importance" from his sojourn; in vain were the admonitions of St. Bridget, who came from Rome to Montefiascone to warn him that if he returned to Avignon he would shortly die. War had broken out again between France and England, and the desire to bring about peace strengthened the pope's determination. On 5 Sept., 1370, "sad, suffering and deeply moved", Urban embarked at Corneto. In a Bull of 26 June he had told the Romans that his departure was motivated by his desire to be useful to the Universal Church and to the country to which he was going. It may be, too, that the pope saw that the next conclave would be free at Avignon but not in Italy. Charles V joyfully sent a fleet of richly adorned galleys to Corneto; the pope did not long survive his return (24 Sept.) to Avignon. His body was buried in Notre-Dame des Doms at Avignon but was removed two years later, in accordance with his own wish, to the Abbey Church of St. Victor at Marseilles. Miracles multiplied around his tomb. His canonization was demanded by King Waldemar of Denmark and promised by Gregory XI as early as 1375, but did not take place owing to the disorders of the time. His cultus was approved by Pius IX in 1870.

Urban V was a man whose motives cannot be called in question: his policy aimed at European peace; shortly before his death he had given orders that preparations should be made to enable him personally to visit and reconcile Edward III and Charles V. He had shown great zeal for the Crusade. On 29 March, 1363, Pierre de Lusignan, King of Cyprus and titular King of Jerusalem, appeared at Avignon to appeal for assistance against the Turks, and on 31 March (Good Friday) Urban preached the Crusade and gave the cross to the Kings of France, Denmark, and Cyprus; the chivalrous King John, who was to have been chief commander, died a quasi-prisoner at London in 1364, and though the King of Cyprus captured Alexandria (11 Oct., 1365), he was unable to hold the city. The crusading spirit was dead in Europe. In an age of corruption and simony Urban stood for purity and disinterestedness in church life: he did much for ecclesiastical discipline and caused many provincial councils to be held; he refused to bestow place or money on his relatives, and even

caused his own father to refund a pension bestowed on him by the French king. His brother, whom he prompted to the cardinalate, was acknowledged by all to be a man most worthy of the dignity. The pope's private life was that of a monk, and he was always accessible to those who sought his aid.

But Urban was a patriotic Frenchman, a defect in the universal father of Christendom. He estranged the English king by the help given to his rival, and aroused hostility in Italy by the favour shown to men of his own race whom he made his representatives in the States of the Church. He was a great patron of learning, founded universities at Cracow (by a Bull of 1364) and at Vienna (by a Bull of 1365), and caused the emperor to create the University of Orange; he revised the statutes of the University of Orléans; and gave great assistance to the universities of Avignon and Toulouse. At Bologna he supported the great college founded by Albornoz and paid the expenses of many poor students whom he sent thither. He also founded a *studium* at Trets (later removed to Manosque), but his greatest foundations were at Montpellier. His buildings and restorations were considerable, especially at Avignon, Rome, and Montpellier. He approved the orders of Brigittines and Gesuati, and canonized his godfather, St. Elzéar of Sabran.

Pope Urban VI

Pope Urban VI

Bartolomeo Prignano, the first Roman pope during the Western Schism, born at Naples, about 1318; died at Rome, 15 October, 1389; according to many he was poisoned by the Romans. At an early age he went to Avignon, where he gained many powerful friends. On 21 March, 1364, he was consecrated Archbishop of Acerenza in the Kingdom of Naples, and on 14 April, 1377, Gregory XI transferred him to the archiepiscopal See of Bari, on the coast of the Adriatic. Meanwhile the Cardinal Vice-Chancellor, Peter of Pampelon, remaining at Avignon, Prignano was given the management of the papal chancery. After the death of Gregory XI the Conclave proposed him as a candidate for the tiara. Not only his business ability, integrity, and knowledge of law, but also his being a subject of Queen Joanna of Naples favoured his eligibility. The Conclave of 1378, which opened on 7 April (nine days after Gregory's death), was influenced by the public opinion of Rome; it consisted of four Italian cardinals, five French, and seven belonging to the Limoges faction. The Italian and French cardinals, though anxious to push forward their own candidates, unanimously determined to oppose one of the Limoges party. The latter were not strong enough to advance a candidate, but they hoped to make an alliance with the less important parties and so attain their end. Their plan, however, was frustrated, the French and Italians having previously resolved to choose a prelate outside the Sacred College. Robert of Geneva (one of the French cardinals) even resigned his claim in favour of Prignano, and Pedro de Luna (Robert's successor in the See of Avignon) did the same. In this way Prignano's chances increased considerably. An Italian, though not a Roman, he was supported by the rivalry of the parties. Perhaps the French and Italian cardinals

expected that, not being a cardinal, he would be an obedient pope, and for this reason some of the Limoges party, uneasy about the coalition between the French and the Italian cardinals, were drawn to this candidature.

This conclave was one of the shortest in history. When the cardinals entered the Vatican some of the populace stole into the palace and tried to extort the promise that an Italian pope would be chosen. Cardinal d'Aigrefeuille declared that the cardinals could not make any such concessions, but the disappointed people remained in the Vatican the whole night, drinking the wine and crying: "Romano lo volemo, o al manco Italiano." The next morning, while the cardinals were at Mass, the tocsin was rung, and suddenly the bells of St. Peter mingled their tones with it. Fear and disorder overtook the cardinals; the guardian of the conclave besought them to hasten, saying that the people wanted a Roman or an Italian, and that the resistance would be dangerous. Then Pedro de Luna (Benedict XIII) proposed the election of the Archbishop of Bari, adding that he was, as they all knew, a saintly, learned man, of mature age. This proposal obtained the desired effect. After some hesitation, the cardinals, excepting Orsini (who declared himself not sufficiently free), agreed to accept Prignano, but preferred to keep their choice secret until certain that the latter would accept. Prignano was requested to repair to the Vatican accompanied by several other prelates, so as to conceal from the people the person chosen. The uproar did not abate, and the cardinals began to fear that their choice would not satisfy the multitude. During a comparative calm they went to breakfast and renewed the election of Prignano. The lawfulness and renewed choice thus having been established, Orsini announced the election of a pope to the people, omitting to mention the name. Various suppositions soon ran through the crowds, some saying that the chosen one was Tebaldeschi (an aged Italian cardinal) and others that Jean de Bar (one of the most detested servants of Gregory) was elected. The confusion increased. Suddenly the cardinals took a desperate resolution. They presented Tebaldeschi, in the papal insignia, to the people and commenced the "Te Deum", paying no attention to his refusal and protests. Meanwhile, Prignano had reached the Vatican and declared that he accepted the papal dignity and the homage of all the cardinals. One fact seems evident: the moment the cardinals regarded the choice of Prignano as valid, they removed all doubt by a re-election and honoured him as the rightful successor of St. Peter.

It is to be regretted that after his election Prignano did not show the good qualities which had distinguished him before. Soon he quarrelled with the Sacred College. Desirous of reforming the Church in head and members, he began aright by a reform of the Curia, though perhaps not with the necessary prudence. It was unwise to abuse the cardinals and high dignitaries of the Church and to insult Otto of Brunswick (husband of Joanna of Naples). Nevertheless, public opinion was in the beginning favourable to him, and not only the cardinals in Rome, but also the six who remained at Avignon submitted to him. However the tempest, which broke out at Fondi in September of the same year, was already brewing at Rome a few weeks after his election. Urban's ambassadors, doubtless inspired by the French and Limousin cardinals, left Rome too late, when the calumnies concerning the illegitimacy of the pope's election were widespread. The ground having thus been prepared, the opposition was strengthened at Rome; Castel Sant'Angelo never hoisted Urban's

colours, and the discontented found there a refuge and the protection of armed soldiers. The heat of early May afforded the dissatisfied cardinals a pretext for leaving Rome for Anagni, but no public sign of rebellion showed itself, Urban's opponents preferring, perhaps, to conceal their project for the present. The pope's suspicions were eventually aroused, and in June he requested the three Italian cardinals who had not followed the others to join their colleagues and to try and restore kinder feelings. The French cardinals renewed their protestation of fidelity to the pope, but assembled the same day to establish the unlawfulness of the April election. Moreover they eventually won over the Italian members of the Sacred College.

Meanwhile, in the name of the pope, the aforesaid cardinals proposed two expedients to settle the differences, a general council or a compromise. Both these means were made use of at the time of the Western Schism. But the opponents of Urban resolved on violent measures and declared their intentions in a letter of the utmost impertinence. On 2 August this letter was followed by the famous "Declaration", a document more passionate than exact, which assumed at once the parts of historian, jurist, and accuser. Seven days later they published an encyclical letter, repeating false and injurious accusations against Urban, and on 27 August left Anagni for Fondi, where they enjoyed the protection of its lord (Urban's arch-enemy), and were near Joanna of Naples; the latter at first had shown great interest in Urban, but was soon disappointed by his capricious ways. On 15 September the three Italian cardinals joined their colleagues, influenced, perhaps, by the hope of becoming pope themselves, or perhaps frightened by the news that Urban was about to create twenty-nine cardinals in order to supply the vacancies left by the thirteen French ones. Charles V of France, more and more doubtful of the lawfulness of Urban's election, encouraged the Fondi faction to choose a rightful pope and one more agreeable to France. A letter from him arrived on 18 September, and hastened a violent solution. On 20 September Robert of Geneva was chosen pope, and on this day the Western Schism began.

The Italians abstained from the election but were convinced of its canonical character. Robert assumed the name of Clement VII. The obediences of the two popes assumed definite limits between September, 1378, and June, 1379. All Western Europe (except England, Ireland, and the English dominions in France) submitted to Clement VII; the greater part of Germany, Flanders, and Italy (with exception of Naples) recognized Urban. The obedience of Urban was more numerous, that of Clement more imposing. Meanwhile, Urban created twenty-eight cardinals, four of whom refused to accept the purple. It is very difficult to decide exactly how far the schism is to be attributed to Urban's behaviour. Indisputably the long exile at Avignon was its principal cause, as it diminished the credit of the popes and inversely increased the ambition of the cardinals, who were always striving to obtain more influence in the government of the Church. Whatever may have been the causes of this event, it is certain that the election of Urban was lawful, that of Clement uncanonical.

If the first days of Urban's pontificate were unhappy, his whole reign was a series of misadventures. It is true that he was successful in reducing Castel Sant' Angelo and subduing a revolt of the Romans, but these are the only successes of his reign. Naples was soon in turmoil. Queen Joanna went over to the Clementines and was deposed by Urban. Charles of Durazzo took

her place. He arrested the queen and took possession of the kingdom, but soon lost favour with the pope for not fulfilling his engagements towards Francesco Prignano (Urban's unworthy and immoral nephew), in whose regard Urban is not free from nepotism. The pope now went to the south of Italy, against the advice of his cardinals, was received at Aversa by the king himself, but imprisoned on the night of his arrival (30 Oct., 1383). Through his cardinals a compromise was reached, and Urban left Aversa for Nocera. Here he had to endure the most unworthy treatment from Margaret, the wife of Charles. The misunderstanding between Urban and Charles increased after the death of the latter's enemy, Louis of Anjou; the pope, obstinate and intractable, continued in a half-hostile, half-dependent, attitude towards Charles, and created fourteen cardinals, only the Neapolitans accepting the dignity. He became daily more estranged from the older members of the Sacred College. No one conversant with the ideas current at this time in the Sacred College will wonder that the example of 1378 found imitation. Highly irritated by Urban's inconsiderate behaviour, the Urbanist cardinals mediated a more practical way of proceeding; they proposed to depose or, at least, arrest him. But their plot was revealed to him, and six of them were imprisoned and their possessions confiscated. Those who did not confess were tortured, and the King and Queen of Naples, being suspected as accomplices, were excommunicated. In consequence Nocera was besieged by the king. Urban courageously defended the place, two or three times a day anathematizing his foes from the ramparts. After nearly five months, Nocera was relieved by the Urbanists, Urban escaping to Barletta, whence a Genoese fleet transported him and the imprisoned cardinals to Genoa. During the voyage the Bishop of Aquila, one of the conspirators, was executed, and the cardinals, excepting Adam Aston, were put to death at Genoa, in spite of the intervention of the doge. It may be taken for certain that the cardinals had conspired against Urban, with a view of deposing him; that they intended to burn him as an heretic may be a fantastic rumour. At all events he acted very unwisely by treating them so cruelly, for he then alienated faithful adherents, as is proved by the manifesto of the five cardinals, who remained at Nocera and renounced his obedience.

After King Charles was murdered in Hungary (February, 1386) Urban again undertook to establish his authority in that kingdom; he left for Lucca, refused to treat with the dowager-queen Margaret, and declined the proposal of a general council, which some German princes proposed at the insistence of Clement VII, though he himself had formerly proposed the same expedient. He insulted the ambassadors and pressed the German king, Wenceslaus, to come to Rome. In August, 1387, he proclaimed a crusade against Clement, and in September he set out for Perugia, where he remained till August, 1388, recruiting soldiers for a campaign against Naples, which had again fallen into the hands of the Clementines, and the possession of which was very important for his own safety. The soldiers, not receiving their pay, deserted, and Urban returned to Rome, where his refractory temper brought him into difficulties that could only be removed by an interdict. It was at Rome, also, that he fixed the interval between the jubilees at thirty-three years, the first of which was to be celebrated the next year, 1390. But he did not live to open it. Urban might have been a good pope in more peaceful circumstances; but he certainly was unable to heal the wounds which

the Church had received during the exile of Avignon. If the genius of a Gregory VII or an Innocent III was scarcely able to triumph over the ambition of the cardinals, the bad conduct of the higher and lower clergy, and the unruliness of the laity, these impediments could not but shipwreck the inconstant and quarrelsome Urban.

WILLIAM MULDER

Pope Urban VII

Pope Urban VII

Giambattista Castagna, born at Rome, 4 Aug., 1521; elected pope, 15 September, 1590; died at Rome, 27 September, 1590. His father, Cosimo, was a Genoese nobleman; his mother, Costanza Ricci, was a Roman and sister of Cardinal Jacovazzi. He studied civil and canon law at various universities of Italy and graduated as doctor of both laws at Bologna. Soon after he became auditor of his uncle, Cardinal Girolamo Verello, whom he accompanied as datary on a papal legation to France. On his return to Italy, Julius III made him referendary of the *Segnatura di Giustizia* and on 1 March, 1553, appointed him Archbishop of Rossano. He was ordained priest 30 March, and consecrated bishop by Cardinal Verello, 4 April. Julius III sent him as governor to Fano in 1555, and under Paul IV he was for a short time Governor of Perugia and Umbria. During the reign of Pius IV he settled satisfactorily a long-standing boundary dispute between the inhabitants of Terni and Spoleto. From 1562 to 1563 he assisted at the Council of Trent, where he was made president of various congregations and manifested great prudence and learning. In 1565 he accompanied the cardinal-legate Buoncompagni (afterwards Gregory XIII) to Spain, where he remained seven years as papal nuncio at the Court of Philip II. On his return to Italy he voluntarily resigned the archiepiscopal See of Rossano in January, 1573, and was sent by Gregory XIII as nuncio to Venice, whence he was transferred as governor to Bologna in 1577. A year later he was sent as legate extraordinary to Cologne, to represent Gregory XIII at the peace conference between Philip II and the United Provinces. Upon his return to Rome he was appointed Consultor of the Holy Office and the Ecclesiastical State. On 12 December, 1583, Gregory XIII created him cardinal priest with the titular Church of S. Marcello, and on 8 October, 1584, appointed him legate of Bologna. During the reign of Sixtus V (1585-90) he was highly influential. On 19 November, 1586, he became Inquisitor-General of the Holy Office.

Sixtus V having died 27 August, 1590, the cardinals, 54 in number, entered the conclave at the Vatican on 7 September, and elected Cardinal Castagna as pope on 15 September. The news of his election was a cause of universal joy. The new pontiff was not only highly esteemed for his piety and learning, he had also, in the many important and difficult positions which he filled as archbishop and cardinal, manifested extraordinary prudence and administrative ability. He chose the name *Urban* in order that this name, which in Latin signifies "kind", might be a continuous reminder to him to show kindness towards all his subjects. One of his first acts was to have a list made of all the poor in Rome that he might alleviate their needs. He also gave liberal alms to those cardinals

whose income was insufficient, paid the debts of all the *monts-de-piété* in the Ecclesiastical State, and ordered the bakers of Rome to make larger loaves of bread and sell them cheaper, indemnifying their losses out of his own purse. Desirous of checking the luxury of the rich, he forbade his chamberlains to wear silk garments. In order to give occupation to the poor, he ordered the completion of the public works that had been commenced by his predecessor. He appointed a committee of cardinals, consisting of Paleotti, Fachinetti, Lancelotti, and Aldobrandini, for the reform of the Apostolic Datar. Strongly opposed to nepotism, he expressed his purpose never to appoint any of his relatives to an office in the Curia and forbade them to make use of the title "Excellence", which it was customary to give the nearest relatives of the pope. A few days after his election he became seriously ill. The faithful united in prayers for his recovery; public processions, expositions of the Blessed Sacrament, and other pious exercises were conducted. The pope confessed and communicated every day of his illness. He once expressed a desire to remove to the Quirinal, where the air was purer and more wholesome, but, when told that it was not customary for the pope to be seen in the city before his coronation, he remained in the Vatican. He died before the papal coronation could take place and was buried in the Vatican Basilica. On 22 September, 1606, his remains were transferred to the Church of S. Maria sopra Minerva, where a magnificent monument was erected in his honour. His temporal possessions, consisting of 30,000 *scudi*, he bequeathed to the Archconfraternity of the Annunciation to be used as dowries for poor girls.

MICHAEL OTT

Pope Urban VIII

Pope Urban VIII

Maffeo Barberini, born at Florence in April, 1568; elected pope, 6 August, 1623; died at Rome, 29 July, 1644.

His father Antonio Barberini, a Florentine nobleman, who died when Maffeo was only three years old, his mother, Camilla Barbadoro, brought him to Rome at an early age. He lived with his uncle, Francesco Barberini, who was then prothonotary Apostolic, and was educated at the Collegio Romano under the direction of the Jesuits. In 1589 he graduated from Pisa as Doctor of Laws, and returning to Rome he became abbreviator Apostolic and referendary of the Segnatura di Giustizia. In 1592 Clement VIII made him Governor of Fano, then prothonotary Apostolic, and in 1601 papal legate to France to present his felicitations to King Henry IV on the birth of the dauphin, the future King Louis XIII. In 1604 he was appointed Archbishop of Nazareth and sent as nuncio to Paris, where he became very influential with Henry IV. In recognition of his services in France, Paul V created him cardinal-priest, 11 September, 1606, with the titular Church of S. Pietro in Montorio, which he exchanged for that of S. Onofrio, 5 September, 1610. On 17 October, 1608, he was transferred to the See of Spoleto, where he convened a synod, completed the seminary, and built two other diocesan seminaries, at Spello and Visso. In 1617 Paul V made him legate of Bologna

and prefect of the *Segnatura di Giustizia*. On 19 July, 1623, fifty-five cardinals entered conclave to elect a successor to Gregory XV; on 6 August Cardinal Maffeo Barberini received fifty votes. The new pope took the name of Urban VIII. Being attacked by the fever which was raging in Rome, he was obliged to postpone his coronation until 29 September. It is related that, before allowing himself to be vested in the pontifical robes, he prostrated himself before the altar, praying that God might let him die if his pontificate would not be for the good of the Church.

He began his reign by issuing on the very day of his election the Bulls of canonization of Philip Neri, Ignatius Loyola, and Francis Xavier, who had been canonized by Gregory XV. Urban himself canonized Elizabeth of Portugal, 25 May, 1625; and Andrew Corsini, 22 April, 1629. He beatified:

- James of the Marches, a Minorite, 12 August, 1624;
- Francis Borgia, a Jesuit, 23 November, 1624;
- Andrew Avellino, 10 June, 1625;
- Felix of Cantalice, a Minorite, 1 October, 1625;
- Mary Magdalen de' Pazzi, 8 May, 1626;
- Cajetan, the founder of the Theatines, 8 October, 1629;
- John of God, 21 September, 1630; and
- Josaphat Kuncsevyc, 16 May, 1643.

He reserved the beatification of saints to the Holy See and in a Bull, dated 30 October, 1625, forbade the representation with the halo of sanctity of persons not beatified or canonized, the placing of lamps, tablets, etc., before their sepulchres, and the printing of their alleged miracles or revelations. In a later Bull, dated 13 September, 1642, he reduced the number of holy days of obligation to thirty-four, besides Sundays. Urban introduced many new offices into the Breviary. He composed the whole proper Office of St. Elizabeth and wrote the hymns, as they are in the Breviary, for the feasts of St. Martina, St. Hermenegild, and St. Elizabeth of Portugal. A book of poems, written by him before he became pope, was published during his pontificate under the title: "*Maphei Cardinalis Barberini poemata*" (Rome, 1637). In 1629 he appointed a committee for the reform of the Breviary. Their incomplete and often ill-advised corrections were approved by Urban, 19 September, 1631, and embodied in the official edition of the Roman Breviary which was issued the following year (see *BREVIARY -- Reforms of the Breviary*). In 1627 Urban gave the final shape to the celebrated Bull, "*In Coena Domini*." In 1634 he enjoined upon all ruling bishops, including cardinals, to observe the episcopal residence as decreed at the Council of Trent. During Urban's pontificate occurred the second trial and condemnation of Galileo by the Roman Inquisition. On 6 March, 1642, he issued the Bull, "*In eminenti*," condemning the "*Augustinus*" of Jansenius (q. v.).

Urban was a great patron of Catholic foreign missions. He erected various dioceses and vicariates in pagan countries and encouraged the missionaries by word and financial assistance. He extended the sphere of activity for the Congregation of Propaganda (q. v.), and in 1627 founded the Collegium Urbanum, whose object was the training of missionaries for foreign countries. For the Maronites he had already founded (1625) a college on Mount Lebanon. In order to increase the number of missionaries in China and Japan he opened these two countries to all missionaries in 1633, although Gregory XIII had given the Jesuits the exclusive right to those missions in 1585. In a Bull, dated

22 April, 1639, he strictly prohibited slavery of any kind among the Indians of Paraguay, Brazil, and the entire West Indies. In his efforts to restore Catholicism in England Urban had little success. In 1624 he sent Richard Smith as vicar Apostolic to that country, but the latter's imprudent insistence on exercising full episcopal authority in England and Scotland brought him into public conflict with the Jesuits and other missionaries of religious orders. The Government issued new hostile measures against the Catholics, and in 1631 Smith was obliged to flee. Three years later Urban sent Gregorio Panzani to England. Having gained greater liberty for the Catholics, he was succeeded in 1638 by George Conn, an Englishman, who had previously been secretary to Cardinal Francesco Barberini. Forced to return to Rome in 1639, on account of ill-health, he was replaced by Rossetti. Repeated requests made through him to the pope for financial aid in the war brewing between the king and Parliament were refused by Urban except on condition of the king's conversion. The ensuing war put an end to all negotiations. (See the letters of Panzani, Conn, and Rossetti to Cardinal Barberini in the Record Office Transcripts.) The religious orders found a zealous promoter in Urban. In 1628 he approved the Congregation of Our Saviour, a reformed branch of Augustinian canons, founded by Peter Fourier in 1609, and in 1632, the Lazarists or Priests of the Mission, a secular congregation founded by Vincent of Paul. He also approved the following sisterhoods: Canonesses of the Holy Sepulchre, 1631; Sisters of the Incarnation, 1633; Nuns of Our Lady of Nancy, 1634; and Sisters of Our Lady of Mercy, 1642. The Jesuitesses, founded by the Englishwoman Mary Ward in 1609, he suppressed in 1631 for insubordination.

Urban's greatest fault was his excessive nepotism. Three days after his coronation he created Francesco Barberini, his nephew, cardinal; in 1627 he made him librarian of the Vatican; and in 1632 vice-chancellor. Francesco did not abuse his power. He built the large Barberini Palace and founded the famous Barberini Library which was acquired and made part of the Vatican Library by Leo XIII in 1902. Urban's nephew, Antonio Barberini, the Younger, was created cardinal in 1627, became *camerlengo* in 1638, then commander-in-chief of the papal troops. He was legate at Avignon and Urbino in 1633; at Bologna, Ferrara, and Romagna in 1641. Urban's brother Antonio, who was a Capuchin, received the Diocese of Senigaglia in 1625, was created cardinal in 1628, and later appointed grand penitentiary and librarian of the Vatican. A third nephew of Urban, Taddeo Barberini, was made Prince of Palestrina and Prefect of Rome. It is scarcely credible what immense riches accrued to the Barberini family through Urban's nepotism. Finally, tormented with scruples concerning his nepotism, Urban twice appointed a special committee of theologians to investigate whether it was lawful for his nephews to retain their possessions, but each time the committee decided in favour of his nephews. Among the members of the second committee were Cardinal Lugo and Father Lupis.

In the government of the Papal territory Urban, as a rule, followed his own judgment; even his nephews had little influence during the first ten years of his pontificate. He honoured the cardinals by ordering them to give precedence only to crowned heads, and in a Decree of 10 June, 1630, bestowed upon them the title of "Eminence," their former title having been "Illustrious and Most Reverend." In 1626 he extended the Papal territory by inducing the aged Duke Francesco Maria

della Rovere to cede his Duchy of Urbino to the Church. Towards the end of his pontificate his nephews involved him in a useless war with Odoardo Farnese, the Duke of Parma, with whom they had quarrelled on questions of etiquette during his visit to Rome in 1639. In revenge they induced Urban to prohibit the exportation of grain from Castro to the Roman territory, thus depriving Farnese of an income without which he could not pay the interest on his *monti*, or bonds. The duke's creditors complained to the pope, who took forcible possession of Castro, 13 October, 1641, in order to assure the payment. This proved ineffective, and on 13 January, 1642, Urban excommunicated Farnese and deprived him of all his fiefs. Backed by Tuscany, Modena, and Venice, the duke set out towards Rome at the head of about 3000 horsemen, putting to flight the papal troops. Peace negotiations were concluded near Orvieto, but not accepted by the pope. In 1643 hostilities were renewed and continued without decisive success until the pope finally concluded a disgraceful peace on 31 March, 1644. He was obliged to free the duke from the ban and restore all the places taken by the papal troops.

Urban spent heavy sums on armaments, fortifications, and structures of every kind. At Castelfranco he erected the costly but unfavourably situated Fort Urbano, established an extensive manufactory of arms at Tivoli, and transformed Civitavecchia into a military port. He strongly fortified the Castel of Sant' Angelo, Monte Cavallo, and built various fortifications on the right side of the Tiber in Rome. He erected the beautifully situated papal villa at Castle Gandolfo, founded the Vatican Seminary, built various churches and monasteries, beautified streets, piazzas, and fountains. The three bees in his escutcheon attract the attention of every observant visitor in Rome. In the Basilica of St. Peter he erected the baldachin over the high altar, the tomb of Countess Matilda, translating her remains from Mantua, and his own tomb, opposite that of Paul III. For some of these structures he used bronze from the roof of the Pantheon, thus causing the well-known but unwarranted pasquinade: "Quod non fecerunt Barbari, fecerunt Barberini."

The pontificate of Urban extended over one of the most critical periods in the history of the Catholic Church, the Thirty Years War. Ranke and Gregorovius attribute Urban's actions in this war to his intention to humiliate the two Houses of Habsburg (Austria and Spain), whose too great power was a constant menace to Italy and Rome; hence, they declare, he favoured France and did not subsidize Emperor Ferdinand II in his war against Gustavus Adolphus and the Protestants. An unbiased study of the situation will lead to a different conclusion. Neither as pontiff not as temporal ruler could Urban remain a disinterested onlooker, and he had no other motive than the welfare of the Catholic Church. As the common Father of Christendom he interposed concerning the Valtellina, a strategically important valley between Venice and the Grisons, which was eagerly coveted by France as well as Spain. He refused to join the alliance which France had made with Venice and Savoy against Spain in 1624, and was instrumental in bringing about the Treaty of Monzon, 5 March, 1626, which gave equal rights upon the Valtellina to France and Spain. He also refused to enter the league which France had concluded with Venice and Savoy at the beginning of the war of the Mantuan succession in 1629. "It is impossible for me," he writes to Nagni, the French nuncio, 2 April, 1629, "to put in jeopardy the common fatherhood and, in consequence, to be no longer

able to heal and pacify, which is the proper business of the pope as vicar of Christ" (Nunziatura di Francia, Vat. Lib. Cod. 71, and Nicoletti, III, 1451-58).

Equally false are the accusations of Ranke and Gregorovius that Urban opposed the election of Ferdinand's oldest son as King of Rome and advocated the dismissal of Wallenstein as commander-in-chief of the imperial army through his nuncio at the Electoral Diet of Ratisbon in 1630. The first accusation was already branded as a calumny by Cardinal Francesco Barberini in a conference with the imperial ambassador Savelli on 16 March, 1629 (Nunziatura di Germania, Cod. 118, fol. 89); the second is refuted by Urban himself, who on 17 January, 1632, congratulated Wallenstein on his reassumption of the command and sent him the Apostolic blessing (Registrum brevium, XXXI, 87). It is, however, true that Urban did not subsidize the imperial army and the Catholic League as liberally as he could and should have done. Nevertheless, he sent (1632-34) two million francs out of his own means to the Catholic troops in Germany. Urban did not join the League of the Catholic Estates, which was planned by the emperor, as the League was directed not only against Gustavus Adolphus, but also against France; hence it could not be joined by the pope as the common father of Catholics. He urged Louis XIII and Richelieu to desist from subsidizing the King of Sweden, but refused to excommunicate them, as he feared a repetition of what had occurred in England under Henry VIII and Elizabeth (Nunziatura di Germania, Cod. 127, fol. 266).

The greatest calumny that has been spread about Urban is his alleged sympathy with Gustavus Adolphus, whose death he is said to have mourned and for whose soul he is said to have celebrated a Requiem Mass. What Urban thought of the Swedish king and how he mourned his death is manifest from a Brief, addressed to Ferdinand on 14 December, 1632, when the pope received the news that Gustavus Adolphus had fallen in battle (16 November, 1632). The Brief is published in the original Latin by Ehses. The following quotation will suffice: "We give eternal thanks to the Lord of vengeance because he rendered retribution to the proud and shook from the neck of the Catholics their most bitter enemy." The Mass which he is said to have celebrated in the German National Church, the Anima, at Rome on 11 December, was in reality a Mass of thanksgiving, of which Alaleone, the papal master of ceremonies, says expressly: "This Mass was celebrated in thanksgiving upon receiving the message of the death of the King of Sweden" (Cod. Vat. 9252, II, 71 sq.). On the next day the "Te Deum" was sung in the Sistine Chapel in presence of the pope, "ob laetitiam necis regis Sueciae interfecti," after which the pope himself chanted the versicles and orations.

It is as yet difficult to pass a correct judgment on Urban from every point of view. His life remains still to be written fairly. His private life was beyond all reproach, and the common welfare of the Church seems to have been the mainspring of his pontifical labours. His one fault was squandering money on his nephews, army, and fortifications, while stinting Ferdinand and the Catholic League in Germany.

MICHAEL OTT

Urbi Et Orbi

Urbi et Orbi

The term *Urbi et Orbi* (which means "for the city and for the world") signifies that a papal document is addressed not only to the City of Rome but to the entire Catholic world. This phrase is applied especially to the solemn blessing with plenary indulgence which, before the occupation of Rome, the pope was accustomed to impart on certain occasions from the balcony of the chief basilicas of the city. This blessing was given annually at St. Peter's on Holy Thursday, Easter, and the feast of Sts. Peter and Paul; at St. John Lateran on the Ascension; at St. Mary Major on the Assumption. It was imparted also on extraordinary occasions, as at St. Peter's when the pope was crowned, at St. John's when he was enthroned, at various times during the holy year, or jubilee, for the benefit of pilgrims. The blessing *Urbi et Orbi* of Ascension Day was sometimes postponed till Pentecost on account of the inclemency of the weather, illness of the pope, etc. Innocent X in the jubilee of 1650 on the Epiphany, Pentecost, and All Saints, as well as later popes, including Pope Pius IX, for special reasons, gave this solemn blessing from the balcony of the Quirinal Palace.

ANDREW B. MEEHAN

Archdiocese of Urbino

Archdiocese of Urbino

(URBINATENSIS)

Province of Pesaro and Urbino, Italy. The city of Urbino is situated on a hill between the valleys of the Metaurus and Foglia, in a mountainous but well-cultivated country. The cathedral, near the ducal palace, was designed by Count Federico da Montefeltre; but was completely transformed in the nineteenth century, as the cupola added in the sixteenth century and a large portion of the edifice were ruined in 1789. Some valuable pictures are still preserved there, a "Last Supper" and a "San Sebastiano of Barocci" in the sacristy, the "Scourging" by Pier della Francesca, in the oratory of the crypt a "Pietà" of Giovanni da Bologna. Other churches; S. Francesco (completed in 1350), partly Roman, partly Gothic, contains exquisite sculptures of Constantino Trappola, paintings by Barocci, Procaccini, and others. S. Domenico (1365), originally Gothic, but completely transformed in 1732; over the main door is a high relief of Lucca della Robbia. S. Agostino was also Gothic. The frescoes in the oratory of S. Giovanni Battista by Jacopo and Lorenzo Sanseverino, including a "Crucifixion", are important in the history of painting: S. Spirito (standards of Luca Signorelli), S. Bernardino (Bramante), S. Giuseppe (Adoration of the Magi, a relief by Brandini). The ducal palace was erected by Duke Federico, with Luciano di Laurana (1447) as architect; illustrious sculptors and painters were engaged to adorn it, but many of their works are now in foreign museums. Among those remaining are the statue of Duke Federico; the carvings on the edges of the doors, windows, and chimney-pieces; paintings by Margaritone, Antonio da Ferrara ("Crucifixion", "Baptism of Christ"), Paolo Uccello ("Profanation of the Host"), Giusto di Grand ("Last Supper"),

Giovanni Santi, Raphael's father ("Timoteo Viti"); Titian ("Resurrection"). The duke's study, with its magnificent inlaid door and its ceiling, contains two oratories. The Castracane palace has an important collection of paintings. Urbino has a university with faculties of law, mathematico-physics, and a school of pharmacy and obstetrics, and a hospital founded in 1265. Urbino is the native place of Bartolommeo Carusi, theologian and professor at Bologna and Paris; Federico Commandini (1509), mathematician; Bernardini Baldi (seventeenth century), poet; Ludovio della Vernaccia (thirteenth century), poet; Laura Battiferri-Ammanati (seventeenth century), poet; the archeologist, Mgr. Fabretti (1619); the painters, Raffaello Sanzio and Federico Barocci; Bramante and Genga, father and son, architects; the sculptor, Federico Brandani, and Clement XI.

Urbino is the ancient *Urbinum Mataurense*, a Roman *municipium*. The city and its environs are rich in inscriptions, one of which is certainly Christian. Urbino was held by the Goths, but was captured by Belisarius (538). Under Pepin it became part of the pontifical domain. By the eleventh century it had a commune. Becoming the capital of the counts of Montefeltre, it increased in importance. In 1213 Bonconte di Montefeltro was elected *podestà* of Urbino. The Urbinese rebelled, formed an alliance with the commune of Rimini (1228), and by 1234 were masters of the city. He and his descendants were leaders of the Ghibellines of the Marches and the Romagna. Montefeltrano succeeded (1214-55), and Guido (1255-86 and 1293-6). Boniface VIII absolved him from censures and employed him against Palestrina and the Colonna. Federico I (1296-1322) increased his domains by taking from the Holy See Fano, Osimo, Recanati, Gubbio, Spoleto, and Assisi. His exorbitant taxes led to his murder, and the city recognized the papal supremacy. But in 1323 his son Nolfo (1323-59) was proclaimed lord of Urbino. In 1355, on the coming of Cardinal Albornoz, the papal sovereignty was again recognized, but not without loss of territory. Federico II was entirely despoiled. His son, Antonio (1377-1403), profited by the rebellion of the Marches and Umbria against the Holy see (1375) to restore his authority in Urbino. Guido Antonio (1403-43) was appointed by Martin V (1419) ruler of the Duchy of Spoleto, and carried on war against Braccio di Montone with varying fortune. Oddo Antonio, after a few months' government, was assassinated for his crimes. The Urbinese then offered the lordship to Federico III (1444-82), the illegitimate son of Guido Antonio, a pupil of Vittorino da Feltre's school and a lover of art. Under him Urbino became the resort of the brightest minds of the Renaissance. He was implicated in the wars against Sigismondo Malatesta, the pope, Rene of Anjou, and Florence. Sixtus IV conferred on him the title of Duke of Urbino (1474). Guidubaldo I (1492-1508) escaped by flight the plots of Caesar Borgia. He adopted Francesco Maria della Rovere (1508-38), his sister's child, and thus the *signoria* of Sinigaglia was united to Urbino. He aided Julius II in reconquering the Romagna. Leo X deprived him of his territory, which was given to Lorenzo de' Medici, and later to Giovanni Maria Varano (1516-21). On Leo's death Federico III reascended the throne. The internal government was almost entirely in the hands of duchess Eleonora Gonzaga. Guidubaldo II (1538-74), by his marriage with Giullia di Varano, obtained the Ducy of Camerino, which he had to cede in 1539 to Paul III for 60,000 *scudi*. In 1572 the Urbinese rebelled against taxation, but were suppressed. Francesco Maria II (1574-1631) endeavoured to reduce the taxes imposed by his father. In 1606 and 1626 he withdrew

from the government to study natural sciences, and appointed a commission of eight to rule. On the assassination of his only son, Federico Ubaldo, in 1624, he placed his domains under the Holy See.

The first known bishop of Urbino is Leontius, to whom St. Gregory entrusted the Diocese of Rimini (592). Other bishops: Theodoricus, who in 1021 transferred the cathedral within the city (the ancient cathedral was outside); Blessed Mainardo (1057). Under Bishops Egidio (1288) and Carrado, O. S. A. (1309), Blessed Pelnigotto, a Franciscan Tertiary and Blessed Clare of Rimini lived in the city. Marco Boncioni, O. P. (1342); Fra Bartolommeo Carusi, O. S. A. (1347), theologians. Under Francesco, O. Min. (1379), the hermitage of the Gerolamini on Monte Cesana was established; Oddone Colonna (1380), later Martin V; Gian Pietro Arrivabeni (1491), learned writer and restorer of discipline; Cardinal Gregorio Cortese, O. S. B. (1542); Felice Tiranni (1551), reformer of religious life. In 1563 Pius IV made the see metropolitan, with the suffragans, Cagli, Sinigaglia, Pesaro, Forssombrone, Montefeltro, and Gubbio. Under Antonio Giannotti (1578) the seminary was opened; Ascanio Maffei (1646) restored many churches; Ignazio Ranaldi, oratorian (1819), restored the discipline of the seminary and the religious orders. The archdiocese has now, as suffragans, S. Angelo in Vado, Cagli, and Pergola, Fossambrone, Pesaro, Senigallia; it contains 99 parishes; 32,600 inhabitants; 130 secular and regular priests; 1 house of religious (men); 4 convents of nuns; 4 educational institutions for boys and 2 for girls.

CAPPELLETTI, *Le chiese d' Italia*, III (Venice, 1845); LIPPARINI, *Urbino in Italia artistica*, VI (Bergamo, 1907); UGOLINO, *Storia dei conti e dei duchi di Urbino* (Florence, 1859); ALBANI, *Memorie concernenti la citta di Urbino* (Rome, 1724); GUERRINI, *Degli womini illustri di Urbino* (Urbino, 1879); DENNISTOWN, *Memories of the Dukes of Urbino illustrating the arms, arts, and literature of Italy from 1440 to 1630* (London, 1851); DELABORDE, *Les ducs et la cour d'Urbino in revue des Deux Mondes*, II (1851), 393-440.

U. BENIGNI

Urbs Beata Jerusalem Dicta Pacis Visio

Urbs Beata Jerusalem dicta pacis visio

The first line of a hymn of probably the seventh or eighth century, comprising eight stanzas (together with a doxology) of the form:

Urbs beata Jerusalem, dicta pacis visio,
Quæ construitur in coelo vivis ex lapidibus,
Et angelis coronata ut sponsata comite.

Sung in the Office of the Dedication of a Church, the first four stanzas were usually assigned to Vespers and Matins, the last four to Lauds. In the revision by the correctors under Urban VIII (see BREVIARY) the unquantitative, accentual, trochaic rhythm was changed into quantitative, iambic metre (with an addition syllable), and the stanza appears in the Breviary with divided lines:

Coelestis Urbs Jerusalem,
 Beata pacis visio,
 Quæ celsa de viventibus
 Saxis ad astra tolleris,
 Sponsæque ritu cingeris
 Mille Angelorum millibus.

The original hymn for Lauds (*Angularis fundamentum lapis Christus missus est*) was changed into "*Alto ex Olympi vertice*", etc. Hymnologists, Catholic and non-Catholic alike, criticise adversely the work of the correctors in general. Of this hymn in particular some think that, where as it did not suffer as much as some others, yet it lost much of its beauty in the revision; others declare that it was admirably transformed without unduly modifying the sense.

However this may be, the changed rhythm and the additional syllable did not deter the editors of the Ratisbon Antiphony from including a melody, which fitted admirably the rhythm of the "*Pange lingua gloriosi*", but which was greatly marred and rendered hardly singable when updated to the reversed rhythm of the "*Coelestis Urbs Jerusalem*". A different textual revision, ascribed to Sebastian Besnault, appeared in the *Sens Breviary* of 1626:

Urba beata, vera pacis Visio Jerusalem,
 Quanta surgit! celsa saxis Conditor viventibus:
 Quæ polivit, hæc cooptat Sedibus suis Deus.

Neale thinks this is inferior to the original, but superior to the Roman revision. Roundell admits the blemishes in the original that would suggest emendation, but thinks that the Roman revision left out "most of the architectural imagery", and notes that the *Sens Breviary* omitted "the whole conception of the Heavenly City 'as a bride adorned for her husband'". He nevertheless considers the revisions, if looked at as new hymns, "spirited and attractive". The *Parisian Breviary* of 1736 gives the form:

Urbs Jerusalem beata Dicta pacis visio
 Quæ construitur in coelis Vivis ex lapidibus,
 Et ovantum coronata Angelorum agmine.

The hymn finds its Scriptural inspiration in Eph., ii, 20; I Pet., ii, 5; Apoc., xxi. Including all forms of the hymn, there are about thirty translations into English verse.

H.T. HENRY

Andres Urdaneta

Andrés Urdaneta

Augustinian, born at Villafranca, Guipúzcoa, Spain, 1498; died in the City of Mexico, 1568.

He had studied Latin and philosophy, but having been left an orphan resolved to devote himself to military life, and in the Italian wars obtained the rank of captain. Returning to Spain he took up

the study of mathematics and astronomy, which gave him an inclination for a seafaring life, and induced him to accompany Jofre de Loaiza in an expedition to the Molucca Islands in 1525. He served there for eleven years. On his return to Europe he landed in Lisbon, where he was prosecuted by the Portuguese Government for having told the story of his voyage to the islands when he passed through New Spain. Charles V did not give him a very favourable reception, and, wearied by his many adventures, he returned to the City of Mexico and entered the Augustinian Order.

At the death of the viceroy, D. Luis de Velasco, in 1564, New Spain had passed under the government of the *Audiencia*, one of whose first cares was to equip an expedition for the conquest and colonization of the Philippine Islands. This had been ordered by Philip II in 1559, Fray Andrés de Urdaneta having been designated as the commander, and the viceroy had the matter under consideration at the time of his death. Urdaneta was considered a great navigator, and especially fitted for cruising in Indian waters. Philip II wrote urging him to join the expedition, and offering him the command. Urdaneta agreed to accompany the expedition but refused to take command, and the *adelantado*, Don Miguel López de Legazpi, was appointed commander. The expedition, composed of the "Capitana", which carried on board Legazpi and Urdaneta, the galleons "San Pablo" and "San Pedro", and the tenders "San Juan" and "San Lucas", set sail on 21 November, 1564.

After spending some time in the islands Legazpi determined to remain, and sent Urdaneta back for the purpose of finding a better return route and to obtain help from New Spain, for the Philippine colony. He left the Island of Cebu in July, 1565, and was obliged to sail as far as 36 degrees North latitude to obtain favourable winds. Urdaneta had to assume command in person, fourteen of his crew died, and when the ship reached the port of Acapulco on 3 October, 1565, only Urdaneta and Felipe de Salcedo, nephew of Legazpi, had strength enough to cast the anchors. From Mexico he went to Europe to make a report on the expedition, and returned to New Spain, intending to continue on to the Philippines, but he was dissuaded by his friends. He wrote two accounts of his voyages; the one giving the account of the Loaiza expedition was published; the other, which gives the account of his return voyage, is preserved in manuscript in the archives of the Indies.

[*Editor's note:* Dr. J.H.F. Sollewijn Gelpke, a noted expert on the early history of New Guinea and the Moluccas, offers this supplement in 1998:

"This article contains an error where it states that in Lisbon in about 1536/7 he ran into trouble for having told about 'the islands' (apparently the Spice Islands Ternate and Tidore) 'when he passed through New Spain.'

At that time the Spaniards in the Moluccas were evacuated by the Portuguese and sent home around Africa, not by way of America. In fact, their big problem was to find the way back from the Moluccas to New Spain, and this search led to the discovery by Saavedra of the island which Ortíz de Retes baptised as New Guinea in 1545. As the entry correctly states, the North Pacific route was found only in 1564 (by Arellano on an unauthorized journey), and shortly afterwards by Urdaneta, who got the credit for this discovery.

Urdaneta being prosecuted in Lisbon for sending information to (New?) Spain, would seem to fit well in the cloak and dagger atmosphere around the Moluccas in the years 1525-1540 under the 6th and 7th Portuguese Captains Tristao de Ataíde and António Galvao. Actually, however, after Emperor Charles V had mortgaged his claim to the Moluccas in 1529 to Portugal, the Portuguese didn't any longer strictly impose the 1504 decree of secrecy on nautical information.

My field being the (proto-)history of New Guinea and the Moluccas, I regret being unable to tell you what really happened to Urdaneta in Lisbon."]

CAMILLUS CRIVELLI

Urgel

Urgel

(URGELLENSIS).

Diocese in Spain, suffragan of Tarragona; bounded on the N. by France; E. by the Provinces of Gerona, Barcelona, and LÈrida; S. and W. by LÈrida, which includes most of the diocese, the latter, however, extends to some towns of Gerona, Huesca, and the valleys of Andorra. The capital, Seo de Urgel, is situated in the northern part of LÈrida, between the Segre and Balira, and has 4000 inhabitants. The city, one of the most ancient of Spain, belonged to the Ilergetas and is called Orgia or Orgelia on the Iberian coins.

Christianity was introduced into Urgel at a very early period. St. Justus, Bishop of Urgel, attended the Second Council of Toledo in 527. He also attended the First Council of LÈrida, 546, and wrote on the Canticle of Canticles a work dedicated to Sergius, Archbishop of Tarragona. St. Isidore mentions him and his three brothers in his "Varones ilustres". Simplicius, Bishop of Urgel, figures in the Third Council of Toledo and the names of his successors, in later councils of Tarragona, and the Second Council of Barcelona. Lubericus, at the time of the Mohammedan invasion, attended the Sixteenth Council of Toledo. The line of bishops continued uninterruptedly during the period of the Mohammedan dominion. The city, however, was totally destroyed, a district called *Vicus Urgelli* alone surviving. Reconquered and taken possession of by the French the see was governed by Felix who with Elipandus of Toledo propagated Adoptionism (q. v.), a heresy in which it appears he died, notwithstanding the fact that he had several times abjured it. Learned and except for his heretical tendencies, virtuous, he died in exile in León, 804, and for this reason the people of Urgel in ancient times venerated him as one of their seven holy bishops. About 885 Bishop Ingobert was expelled from his see by the intruder Selva, who, under the protection of the Count of Urgel, was consecrated in Gascony. This usurper also unlawfully placed Hermemiro over the See of Gerona. In 892 a synod was held in the Church of Santa María in Urgel; the two usurpers were deposed, their vestments rent, their crosiers broken over their heads, and they were deprived of their sacerdotal faculties. Bishop Saint Amengol died on 3 Nov., 1035. Another saint and Bishop of Urgel was Odo, son of Count de Pallas (1095-1122). Arnaldus of Perexens retired to the monastery of Bellpuig in 1194. His successor Bernardo de Castelló attended the Third Council of the Lateran, and in 1198

retired to the monastery of Aspir in the Diocese of Elne. In the last century JosÈ Caixal, who distinguished himself at the Vatican Council and was so cordially detested by the Liberals, was Bishop of Urgel (1853-79). When Seo de Urgel was captured by Martínez Campos during the civil war the bishop was taken prisoner, exiled and died at Rome.

ANDORRA

The bishops of Urgel have from very ancient times been sovereign princes of the Andorra valleys. When Charlemagne liberated the City of Urgel from the Saracen yoke he conferred on its bishop Posidonius I the right to one tenth of the tithes of the valleys. When the territory was reconquered and colonized by Louis the Pious he conferred the sovereignty on the Count of Urgel. These counts and the bishop contended for the rights over the Andorran valleys until 26 Oct., 1040, when on the occasion of the dedication of the cathedral of Urgel the Countess Constanca accompanied by her son Armengol, a minor, ceded to Bishop Eribaldus her right of sovereignty over Andorra. The contentions, however, were renewed between Count Armengol and Bishop Bernardo de Castelló. The latter had recourse to Raimundo Roger I, Count of Foix, promising to share with him the government of Andorra. Relying on this agreement Roger Bernardo III, Count of Foix, in 1264, invaded the estates of the Bishop of Urgel. This war was ended by arbitration. Jatvert, Bishop of Valencia, acting with the other arbitrators, drew up an agreement known as the "Pariatges", which was accepted by the Count de Foix on 7 Sept., 1278, and later confirmed by Martin IV. This convention still forms the Constitution of Andorra, a neutral territory, known as a republic. According to it the valleys recognized as their lawful sovereigns the Count de Foix and the Bishop of Urgel, each of whom appointed a *veguer* (vicar), who jointly administered the government. The rights of the counts of Foix passed to the Bourbons, kings of France, and subsequently to the French Government; the bishops of Urgel still retain a nominal suzerainty and the title of "principes soberanos" of Andorra.

The ancient cathedral of Andorra was destroyed; the present cathedral dates from the time of Bishop Eribaldus and was consecrated in 1040, although the building was continued until late into the thirteenth century. It is an example of the Romanesque of the second period resembling the transition period architecture of France. Adjoining the church is a twelfth-century cloister, restored in the sixteenth century. The cathedral possesses a rich collection of ancient jewelled altar-vessels and ornaments. The archives contain a famous collection of very ancient documents, some of which date from the time of the Frankish kings. Inside the cathedral is the parish of St. Odo, and outside are the churches of San Miguel and San Agustín. To the east of the city are situated the citadel, the castle, and the tower of Solsona, which figured prominently in the late civil wars. The first seminary was erected by a Bull of Clement VIII, 13 August, 1592; the new seminary was built by Bishop Caixal and is one of the finest buildings in the city. The episcopal palace is also striking. There are two hospitals, military and civil, the latter being installed in the former Convent of the Augustinians. There is a convent of sisters devoted to Christian education, a foundling and an orphan asylum. The cathedral was declared a minor basilica on 9 Dec., 1905. The diminutive

republic (6000) is governed by a popularly elected council of ex-members and a syndic or president, elected by the council for life. Its inhabitants are mostly shepherds, and speak Catalan.

Statistics

The present Bishop of Urgel is Mgr. Juan Bennloch y Vivo, b. at Valencia, Spain, 30 Dec., 1864; ordained, 25 Feb., 1888; Vicar-General of Segovia in 1899; named titular Bishop of Hermopolis Major, 12 Dec., 1901, and Apostolic Administrator of Solsona, consecrated, 2 Feb., 1902, and transferred to Urgel, 6 Dec., 1906, in succession to Mgr. Juan JosÈ Lagnarda y Fenollera. There are about 100,000 Catholics; 19 archpriests; 600 priests; 395 parishes; 400 churches; 575 chapels. The religious (male) include the Franciscans, Trappists, Missionaries of the Immaculate Conception, and Piarists (with 3 colleges). Among the nuns there are: Carmelites, Poor Clares, Little Sisters of the Poor, Dominican Tertiaries, Carmelite Sisters of Charity, and Sisters of the Holy Family (with 14 schools), of the Holy Guardian Angel, and of St. Joseph; there are 3 hospitals in care of nuns.

RAMÓN RUIZ AMADO

Urim and Thummim

Urim and Thummim

The sacred lot by means of which the ancient Hebrews were wont to seek manifestations of the Divine will. Two other channels of Divine communication were recognized, viz. dreams and prophetic utterance, as we learn from numerous passages of the Old Testament. The three forms are mentioned together in 1 Kings, xxvii, 6. "And he (Saul) consulted the Lord, and he answered him not, neither by dreams, nor by priests (Hebrew, *Urim*, LXX *delois*), not by the prophets." There can be no doubt that in this instance the Douay translation of "priests" is wrong, based on the mistaken rendering "*sacerdotes*" of the Latin Vulgate. The etymological signification of the words, at least as indicated by the Masoretic punctuation, is sufficiently plain. *Urim* is derived from the Hebrew for "light", or "to give light", and *Thummim* from "completeness", "perfection", or "innocence". In view of these derivations it is surmised by some scholars that the sacred lot may have had a twofold purpose in trial ordeals, viz. *Urim* served to bring to light the guilt of the accused person, and *Thummim* to establish his innocence. Be that as it may, the relatively few mentions of *Urim* and *Thummim* in the Old Testament leave the precise nature and use of the lot a matter more or less plausible conjecture, nor is much light derived from the ancient versions in which the term is subject to uncertain and divergent renderings. In the xxvii chapter of Exodus ("P") where minute directions are given concerning the priestly vestments, and in particular concerning the "rational" (probably "pouch" or "breastplate") we read (v. 30): "And thou (Moses) shalt put in the rational of

judgement doctrine and truth (Heb. the *Urim* and the *Thummim*), which shall be on Aaron's breast when he shall go in before the Lord; and he shall bear the judgment of the children of Israel on his breast in the sight of the Lord always." From this it appears that at least towards the close of the Exile, the *Urim* and *Thummim* were considered as something distinct from the ephod of the high priest and the gems with which it was adorned. It also shows that they were conceived of as material objects sufficiently small to be inserted in the "rational" or "pouch", the main purpose of which seems to have been to receive them. In Leviticus, viii, 7-8 we read: "He (Moses) vested the high priest with the strait linen garment, girding him with the girdle, and putting on him the violet tunick, and over it he put the ephod, and binding it with the girdle, he fitted it to the rational, on which was doctrine and truth" (Heb. the *Urim* and the *Thummim*). Again in Numbers xxvii, 21: "If anything be to be done, Eleazar the priest shall consult the Lord for him" (Heb. "and he [Eleazar] shall invoke upon him the judgment of *Urim* before the Lord"). These passages add little to our knowledge of the nature and use of the oracle, except perhaps the importance attached to it as a means of the Divine communication in the post-Exilic period.

Some of the earlier Old-Testament passages are more instructive. Among these may be mentioned 1 Kings, xiv, 41-2. After the battle with the Philistines during which Jonathan had unwittingly violated the rash oath of his father, Saul, by tasting a little wild honey, the latter consulted the Lord but received no answer. Desiring to ascertain the cause of the Divine displeasure, Saul calls together the people in order that the culprit may be revealed and thus addresses the Lord: "O Lord God of Israel, give a sign, by which we may know, what the meaning is, that thou answerest not thy servant today. If this iniquity be in me, or in my son, Jonathan, give a proof (Vulgate *da ostensionem* = *Urim*): or if this iniquity be in they people, give holiness (Vulgate *da sanctitatem* = *Thummim*). And Jonathan and Saul were taken, and the people escaped. And Saul said: Cast lots between me and Jonathan my son. And Jonathan was taken." The above rendering of the Vulgate is confirmed by the Greek recension of Lucian (see ed. Lagarde), and by the evidently corrupt Massoretic *thamim* at the end of verse 41. From this and various other passages which it would be too long to discuss here (v.g. Deut. Xxxiii, 8, Heb., I Kings, xiv, 36, I Kings, xxiii, 6-12 etc.) we gather that the *Urim* and *Thummim* were a species of sacred oracle manipulated by the priest in consulting the Divine will, and that they were at times used as a kind of Divine ordeal to discover the guilt or innocence of suspected persons. The lots being two in number, only one question was put at a time, and that in a way admitting of only two alternative answers (see I Kings, xiv, 41-42; *ibid.*, xxiii, 6-12). Many scholars maintain that in most passages where the expression "consult the Lord" or its equivalent is used, recourse to the *Urim* and *Thummim* is implied (v.g. Judges, I, 1-2; *ibid.*, xx, 27-28; I Kings, x, 19-22; II Kings, ii, 1, etc.). The speculations of later Jewish writers including Philo and Josephus teach us nothing of value concerning the *Urim* and *Thummim*. They are often fanciful and extravagant, as is the case with many other topics (see "Jewish Encyclopedia", s.v.). The only instance in the New Testament of anything resembling the use of the sacred lot as a means to discover the Divine will occurs in the Acts (I, 24-26) in connection with the election of Matthias.

GIGOT, "Outlines of Jewish Hist." (New York, 1903); 87, 316; MUSS-ARNOLT, "The Urim and Thummim, a Suggestion as to their original Nature and Significance" in "American Journal of Semitic Literature, XVI (Chicago, 1900), 218 seq.

JAMES F. DRISCOLL

Urmiah

Urmiah

A residential see in Chaldea, in the Province of Adherbaidjan, Persia. The primitive name of this city seems to have been Urmui, or rather Urmedji (Barbier de Meynard, "Dictionnaire de la Perse", 27). It is said, but with little truth, that it is the native place of Zoroaster, and that he lived in a grotto near by. Nothing is known of its primitive history. Some wrongly locate at Urmiah Bishop John of Persa, or Perha, present at the Council of Nicae in 325 (Gelzer, "Patrum Nicænorum nomina", xxxix and lxxvii). The "Synodicon" of the Chaldean Church during several centuries has no mention of Urmiah. On the other hand there existed from A.D. 420 to the thirteenth century, a See of Adherbaidjan, a suffragan of Arbela (Le Quien, "Oriens Christianus", II, 1283). But there is no proof that its bishop resided at Urmiah rather than in any other city of this province. In the sixteenth century the Nestorian Metropolitan of Ielu, Seert, and Salamas embraced Catholicism; he was recognized by Rome in 1582 as the Chaldean patriarch, under the name of Simeon, and fixed his residence at Urmiah. His successors took the name of Mar Seman, and remained Catholics until 1670; then they returned to Nestorianism, and established themselves at Kotchannes in Kurdistan, where they may be found today (Assemani, "Bibliotheca orientalis", I, 621; II, 457; III, 621; Le Quien, op. cit., II, 1327). The present Chaldean Diocese of Urmiah was established by Rome in 1890; it has 5000 Catholics, 42 priests, 44 churches and chapels, 70 secondary stations, several schools for boys and girls under the direction of the Lazarists and the Sisters of Charity. The Lazarists established themselves at Urmiah in 1838; the Sisters of Charity in 1856. The first possess a seminary and a Syrian printing press, where P. Bedjan has published many editions of the ancient texts. The city contains 40,000 inhabitants, and is the centre of the American Protestant missions. It is situated on the Tchahar-Tchai, near Lake Urmiah.

MORGAN, Mission scientifique en Perse, I (Paris, 1891), 289-355; Revue de l'Orient chretien (Paris, 1896), 451; PIGLET, Les missions catholiques francaises au XIX siecle, I (Paris), 202-209; Missiones catholicae (Rome, 1907), 813.

S. VAILHÉ

Juan Jose Urraburu

Juan José Urráburu

Scholastic philosopher, born at Ceanuri, Biscay, 23 May, 1844; died at Burgos, 13 August, 1904. He entered the Society of Jesus on 3 May, 1860, at Loyola (Guipúzcoa). He was professor

of rhetoric, and after having finished his own studies he taught philosophy in the Jesuit house of studies, and later theology at Poyanne, France. In the Scholastic revival promoted by Leo XII, Urráburu was called to Rome (1878) to teach philosophy in the Gregorian University. He remained there nine years and on his return was made rector of the College of Valladolid (1887-90); of the Colegio Maximo, Oña (1891-97); and of the seminary of Salamanca (1898-1902). His principal work is entitled "Institutiones philosophiæ quas Romæ in Pontificia Universitate Gregoriana tradiderat . . .", Valladolid: I, Logica, 1890; II, Ontologia, 1891; III, Cosmologia, 1892; IV, Psychologiæ part 1, op. 1894; V, Psychologiæ part 2, 1896; VI, Psychologiæ part 2 (continuation), 1898; VII Theodiceæ vol. I, 1899; VIII, Theodiceæ vol. II, 1900. Other works are: "Compendium philosophiæ scholasticæ . . .", 5 vols., Madrid 1902-1904; "El verdadero puesto de la filosofía entre las demás ciencias", articles published in "Razón y Fe", I, 57, 137 (1901); "El principio vital y el materialismo ante la ciencia ya la filosofía", *ibid.*, VIII 313 (1904); IX, 180, 325 (1904); X, 219 (1904); XI, 54 (1905); posthumous: "La mente de la Compañía acerca de las doctrinas escolásticas que se refieren á la constitución de los cuerpos. Pláctia familiar" (Oña, printed privately). Two chapters (Disputat., XI) of "Psychologia fusior", translated into Spanish by Antonio Madariaga, were published at Madrid, 1901, with the title "Principios fundamentales de antropologia". The value of Urráburu's philosophical work is fully attested by the favour with which it was received and the care with which it was examined by the most competent critics. The influence of his teaching has been notable, especially among the members of his order; the "Institutiones" has been constantly consulted by professors and students (new edition, "Logica", 1908); the "Compendium" is the textbook used at present in the Jesuit scholasticates of Spain and other countries. Father Carlos Delmas published an exhaustive appreciation in the "Etudes bibliograph.", March, 1893, in "Etudes", LXXXVIII, 123. Father José Epsí contributed a serious study, "Un nuevo libro de filosofía escolástica" in "Razon y Fe", IV, 51. To these articles may be added Nadal's notice, "La psicología del P. Urráburu" in "Razón y Fe", XIV, 314. Urráburu's work, a lasting monument to the School in general, and particularly to that of Suárez, is solid, learned, uncompromising towards error, moderate in expression, and well-balanced by common sense.

ANTONIO NADAL

Ursperger Chronicle

Ursperger Chronicle

A history of the world in Latin that begins with the Assyrian King Ninius and extends to the year 1229. At the present day it can hardly be doubted that the chronicle was written by Burchard of Biberach. Burchard was born in the latter half of the twelfth century in Biberach, an imperial free city of Swabia. He spent the years 1198-99 in Italy and was ordained priest at Constance in 1203. In 1205 he entered the Premonstratensian monastery, Schussenried, and in 1209 he became its provost. In 1215 he was called as provost to Ursperg, where he died in 1230. He began to collect material for his work at an early age and, in particular, made use of his stay at Rome to examine

the papal Regesta. The basis of the first part of his work is the chronicle of the world written by Ekkehard of Aura which he copied almost word for word; for a later period he used the records concerning the Guelphs made by the monk of Weingarten, and for the time of Frederick I Barbarossa the records of the priest John of Cremona. Burchard's original work does not begin until the last years of Henry I; from this point on he narrates independently but in clumsy language the events in which he has taken part himself, or concerning which he has gained reliable information. He does not disguise his adherence to the Hohenstaufen party, and often speaks bitterly of the papal policy. The chronicle was last edited by Abbel and Weiland in the "Mon. Germ. Hist.: Script." XXIII, 337-83; also separately for school use (Hanover, 1874).

PATRICIUS SCHLAGER

St. Ursula and the Eleven Thousand Virgins

St. Ursula and the Eleven Thousand Virgins

The history of these celebrated virgins of Cologne rests on ten lines, and these are open to question. This legend, with its countless variants and increasingly fabulous developments, would fill more than a hundred pages. Various characteristics of it were already regarded with suspicion by certain medieval writers, and since Baronius have been universally rejected. Subsequently, despite efforts more ingenious than scientific to save at least a part, the apocryphal character of the whole has been recognized by degrees. Briefly, for the solid reconstruction of the true history of the virgin martyrs, there is only the inscription of Clematius and some details furnished by ancient liturgical books. Unfortunately, these latter are very meager, and the inscription is in part extremely obscure. This document, carved on a stone which may be seen in the choir of the Church of St. Ursula at Cologne, is couched in the following terms:

DIVINIS FLAMMEIS VISIONIB. FREQVENTER
 ADMONIT. ET VIRTVTIS MAGNÆ MAI
 IESTATIS MARTYRII CAELESTIVM VIRGIN
 IMMINENTIVM EX PARTIB. ORIENTIS
 EXSIBITVS PRO VOTO CLEMATIVS V. C. DE
 PROPRIO IN LOCO SVO HANC BASILICA
 VOTO QVOD DEBEBAT A FVNDAMENTIS
 RESTITVIT SI QVIS AVTEM SVPER TANTAM
 MAIESTATEM HVIVS BASILICÆ VBI SANC
 TAE VIRGINES PRO NOMINE. XPI. SAN
 GVINEM SVVM FVDERVNT CORPVS ALICVIIVS
 DEPOSVERIT EXCEPTIS VIRCINIB. SCIAT SE
 SEMPITERNIS TARTARI IGNIB. PVNIENDVM

Its authenticity, which is accepted beyond the shadow of a doubt by the most eminent epigraphists (de Rossi, Ritschl), has sometimes been suspected without good reason, and Domaszewski (C. I. L., XIII, ii, 2, no. 1313) is mistaken in asserting that the stone was not carved until the fifteenth century. It belongs indisputably to the fifth century at the latest, and very probably to the fourth. The recent hypothesis of Reise, according to which the first eight lines, as far as RESTITVIT, belong to the fourth century, while the rest were added in the ninth, is more elegant than solid. With still greater reason must we reject as purely arbitrary that of J. Ficker, which divides the first eight lines into two parts, the first being of pagan origin and dating from before the Christian Era, the second dating from the second century. But despite its authenticity the inscription is far from clear. Many attempts have been made to interpret it, none of them satisfactory, but at least the following import may be gathered: A certain Clematius, a man of senatorial rank, who seems to have lived in the Orient before going to Cologne, was led by frequent visions to rebuild in this city, on land belonging to him, a basilica which had fallen into ruins, in honour of virgins who had suffered martyrdom on that spot.

This brief text is very important, for it testifies to the existence of a previous basilica, dating perhaps from the beginning of the fourth century, if not from the pre-Constantinian period. For the authentic cult and hence for the actual existence of the virgin martyrs, it is a guarantee of great value, but it must be added that the exact date of the inscription is unknown, and the information it gives is very vague. It does not indicate the number of the virgins, their names, or the period of their martyrdom. Nor does any other document supply any probable details on the last point. Our ignorance on the first two is lessened to a certain extent by the mention on 21 Oct. in various liturgical texts (martyrologies, calendars, litanies) of virgins of Cologne, now five, now eight, now eleven, for example: Ursula, Sencia, Gregoria, Pinnosa, Martha, Saula, Britula, Saturnina, Rabacia, Satura, and Palladia. Without doubt none of these documents is prior to the ninth century, but they are independent of the legend, which already began to circulate, and their evidence must not be entirely overlooked. It is noteworthy that in only one of these lists Ursula ranks first.

After the inscription of Clematius there is a gap of nearly five hundred years in our documents, for no trace of the martyrs is found again until the ninth century. The oldest written text, "Sermo in natali sanctarum Coloniensium virginum", which seems to date from this period, serves to prove that there was at Cologne no precise tradition relating to the virgin martyrs. According to this, they were several thousand in number, and suffered persecution during the reign of Diocletian and Maximian. The names of only a few of them were known, and of these the writer gives only one, that of Pinnosa, who was then regarded as the most important of the number. Some persons, probably in accordance with an interpretation, certainly questionable, of the inscription of Clematius, considered them as coming from the East, and connected them with the martyrs of the Theban Legion; others held them to be natives of Great Britain, and this was the opinion shared by the authors of the "Sermo". Apparently some time after the "Sermo" we find the martyrology of Wandalbert of Prum, compiled about 850, which speaks of several thousand virgins. On the other hand Usuard, in his martyrology dating from about 875, mentions only "Martha and Saula with

several others". But as early as the end of the ninth century or the beginning of the tenth, the phrase "the eleven thousand virgins" is admitted without dispute. How was this number reached? All sorts of explanations have been offered, some more ingenious than others. The chief and rather gratuitous suppositions have been various errors of reading or interpretation, e.g., "Ursula and her eleven thousand companions" comes from the two names Ursula and Undecimillia (Sirmond), or from Ursula and Ximillia (Leibniz), or from the abbreviation XI. M. V. (*undecim martyres virgines*), misinterpreted as *undecim millia virginum*, etc. It has been conjectured, and this is less arbitrary, that it is the combination of the eleven virgins mentioned in the ancient liturgical books with the figure of several thousand (*millia*) given by Wandalbert. However it may be, this number is henceforth accepted, as is also the British origin of the saints, while Ursula is substituted for Pinnosa and takes the foremost place among the virgins of Cologne.

The experiences of Ursula and her eleven thousand companions became the subject of a pious romance which acquired considerable celebrity. Besides the subsequent revisions of this story there are two ancient versions, both originating at Cologne. One of these (*Fuit tempore pervetusto*) dates from the second half of the ninth century (969-76), and was only rarely copied during the Middle Ages. The other (*Regnante Domino*), also compiled in the ninth century, had a wide circulation, but adds little of importance to the first. The author of the latter, probably in order to win more credence for his account, claims to have received it from one who in turn heard it from the lips of St. Dunstan of Canterbury, but the serious anachronisms which he commits in saying this place it under suspicion. This legendary account is well known: Ursula, the daughter of a Christian king of Great Britain, was asked in marriage by the son of a great pagan king. Desiring to remain a virgin, she obtained a delay of three years. At her request she was given as companions ten young women of noble birth, and she and each of the ten were accompanied by a thousand virgins, and the whole company, embarking in eleven ships sailed for three years. When the appointed time was come, and Ursula's betrothed was about to claim her, a gale of wind carried the eleven thousand virgins far from the shores of England, and they went first by water to Cologne and thence to Basle, then by land from Basle to Rome. They finally returned to Cologne, where they were slain by the Huns in hatred of the Faith.

The literary origin of this romance is not easy to determine. Apart from the inscription of Clematius, transcribed in the *Passion "Fuit tempore"* and paraphrased in the *"Regnante Domino"* *Passion* and the *"Sermo in natali"*, the writers seem to have been aware of a Gallic legend of which a late version is found in Geoffrey of Monmouth: the usurper Maximus (as Geoffrey calls the Emperor Maximian), having conquered British Armorica, sent there from Great Britain 100,000 colonists and 30,000 soldiers, and committed the government of Armorica to his former enemy, now his friend, the Breton prince, Conanus Meriadocus. The latter decided to bring women from Great Britain to marry them to his subjects, to which end he appealed to Dionotus, King of Cornwall, who sent him his daughter Ursula, accompanied by 11,000 noble virgins and 60,000 other young women. As the fleet which carried them sailed towards Armorica, a violent storm destroyed some of the ships and drove the rest of them to barbarian islands in Germany, where the virgins were

slain by the Huns and the Picts. The improbabilities, inconsistencies, and anachronisms of Geoffrey's account are obvious, and have often been dealt with in detail: moreover the story of Ursula and her companions is clothed with a less ideal character than in the Passions of Cologne. However, this account has been regarded by several writers since Baronius as containing a summary of the true history of the holy martyrs. Like the Passions of Cologne, it has been subjected to the anti-scientific method, which consists in setting aside as false the improbabilities, impossibilities, and manifest fables, and regarding the rest as authentic history. As a consequence two essential traits remain: the English origin of the saints and their massacre by the Huns; and then, according as adherence is given to the "Sermo in natali", Geoffrey of Monmouth, or the Passion "Regnante Domino", the martyrdom of St. Ursula is placed in the third, fourth, or fifth century. In order to account for all the details, two massacres of virgins at Cologne have been accepted, one in the third century, the other in the fifth. The different solutions with their variations suggested by scholars, sometimes with levity, sometimes with considerable learning, all share the important defect of being based on relatively late documents, unauthoritative and disfigured by manifest fables.

No conclusion can be drawn from these texts. Nevertheless, the fables they contain are insignificant in comparison with those which were invented and propagated later. As they are now unhesitatingly rejected by everyone, it suffices to treat them briefly. In the twelfth century there were discovered in the *Ager Ursulanus* at Cologne, some distance from the Church of St. Ursula, skeletons not only of women, but of little children, and even of men, and with them inscriptions which it is impossible not to recognize as gross forgeries. All this gave rise to a number of fantastic legends, which are contained in the accounts of the vision of St. Elizabeth of Schonau, and of a religious who has been regarded as identical with Blessed Hermann Joseph of Steinfeld. It may be remarked in passing that visions have played an important part in the question of the Eleven Thousand Virgins, as may be seen in those of Clematius and of the nun Helintrude contained in the Passion "Regnante Domino". Those of the twelfth century, in combination with the inscriptions of the *Ager Ursulanus*, resulted in furnishing the names of a great many of the male and female companions of Ursula, in particular -- and this will suffice to give an idea of the rest -- that of a Pope Cyriacus, a native of Great Britain, said to have received the virgins at the time of their pilgrimage to Rome, to have abdicated the papal chair in order to follow them, and to have been martyred with them at Cologne. No doubt it was readily acknowledged that this Pope Cyriacus was unknown in the pontifical records, but this, it was said, was because the cardinals, displeased with his abdication, erased his name from all the books. Although the history of these saints of Cologne is obscure and very short, their cult was very widespread, and it would require a volume to relate in detail its many and remarkable manifestations. To mention only two characteristics, since the twelfth century a large number of relics have been sent from Cologne, not only to neighbouring countries but throughout Western Christendom, and even India and China. The legend of the Eleven Thousand Virgins has inspired a host of works of art, several of them of the highest merit, the most famous being the paintings of the old masters of Cologne, those of Memling at Bruges, and of Carpaccio at Venice.

The Order of Ursulines, founded in 1535 by St. Angela de Merici, and especially devoted to the education of young girls, has also helped to spread throughout the world the name and the cult of St. Ursula.

For the inscription of Clematius, often published and commentated see KRAUS, *Die Christliche Inshriften der Rheinlande*, I (1890), 143-47. The Latin accounts of the Eleven Thousand Virgins, with mention of all editions, have been catalogued by the Bollandists in *Bibliotheca hagiographica latina*, no. 8426-51. See also KROMBACH, *S. Ursula vindicata* (Cologne, 1847), a large but uncritical compilation; RETTBERG, *Kirchengeschichte Deutschlands*, I (1846), III, 23; SCHADE, *Die Sage von der heiligen Ursula* (Hanover, 1854), an essay in which the exegesis is unfortunately mythological; DE BUCK in *Acta SS.*, Oct. III, 73-303; FRIEDRICH, *Kirchengeshichte Deutschlands*, I (1867), 141-66; KLINKENBERG in *Jahrb=81cher des Vereins von Alterthumsfreunden im Rheinland*, LXXXVIII (1889), 79- 95; LXXXIX (1890), 105-34; XCIII (1892), 130-79; D=9ANTZER, *ibidem* (1890), 150-63; DELPY, *Die Legende von der heiligen Ursula in der K=94lner Malerschule* (Cologne, 1901); TOUT, *Legend of St. Ursula in Historical Essays*, by members of Owens College, Manchester (London, 1902), 17-56; MAIN, *L'inscription de Clematius in M=82langes Paul Fabre* (Paris, 1902), 51-64; HAUCK, *Kirchengeschichte Deutschlands*, I (1887), 24-25 (3rd-4th ed., 1904), 25; REISE, *Die Inschrift des Clematius in Bonner Jahrb=81cher*, CXVIII (1909), 236-45; ZILLIKEN, *ibid.*, CXIX (1910) 108-09; cf. *Analecta bollandiana*, X, 476; XVI, 97-99; XXII, 109-11; XXIII, 351-55; XXX, 339; 362-63.

ALBERT PONCELET

Society of the Sisters of St. Ursula of the Blessed Virgin

Society of the Sisters of St. Ursula of the Blessed Virgin

Religious congregation of women founded in 1606 at Dôle (then a Spanish possession), France, by the Venerable Anne de Xaintonge (1587-1612). Its aim is twofold: the sanctification of its members by the observance of the vows of religion (simple and perpetual), and the salvation and sanctification of their neighbours. The latter is specially attained by teaching, as well as by works of mercy, spiritual and corporal. At a time when the education of girls was more than neglected, Mademoiselle de Xaintonge, amid extraordinary trials, realized her inspired thought to do for girls what St. Ignatius had done for boys. This idea was then an unusual one. Anne de Xaintonge may be called a pioneer in the education of girls. The classes opened at Dôle, on 16 June, 1606, were public, without distinction of rich or poor, and absolutely free. From Dôle, the institute spread rapidly to France, Switzerland, and Germany. With the Church it suffered persecution, but on being driven from one country, the Ursules found children and freedom of teaching in another. During the French Revolution, their houses were closed and the religious compelled to return to the world; as soon as peace was restored, however, they resumed their former life. Mother de Verse reopened the convent at Dôle, and Mother Roland de Bussy (formerly of Dôle) upon the advice of Father de Clorivière, S.J., and with the blessing of Pius VII (then a prisoner at Fontainebleau), founded a new

house at Tours (1814). A number of new foundations were made from Tours, until, through the anti-religious laws of 1901, the nuns were expelled and their property confiscated. The mother house of Tours was transferred to Haverloolez-Bruges (Belgium). Foundations were successively made: in New York, 1901, (branch house, Providence, Rhode Island, 1911); Rome, 1904; Sluis (Holland), 1911. Besides in Belgium, Italy, and the United States of North America, the sisters are now carrying on their work in Switzerland, Germany, and England.

The society was formally approved by a Brief of Innocent X (1648), which was confirmed by Innocent XI (1678). The Constitutions are those of St. Ignatius as far as they apply to women; the first draft was begun by Mother de Xainctonge aided by Father Guyon, S.J., rector of the college at Dôle, but was finished only in 1623, after her death. These Constitutions were observed until the Revolution, but when the various houses re-opened, the bishops of the different dioceses modified them according to their own views. In 1898, upon request of the religious of Tours, the original Constitutions, revised conformably to the new regulations of the Church for religious orders, were definitively approved by Leo XIII, and their branch erected as a generalate. In 1902 the words "Of the Blessed Virgin", were added to the title to distinguish the non-cloistered daughters of Anne de Xainctonge from the cloistered daughters of St. Angela.

The system of teaching employed by the order is similar to that of the Jesuits; the plan of studies conforms to the requirements of the Board of Education in each country.

MOTHER HELENE MARIE

The Ursulines

The Ursulines

A religious order founded by St. Angela de Merici for the sole purpose of educating young girls. It was the first teaching order of women established in the Church, and up to the present date has adhered strictly to the work of its institute. Though convinced of her divinely appointed mission to lay the foundations of an educational order, Angela for seventeen years could do no more than direct a number of young women who were known as "The Company of St. Ursula" but who continued to live in the midst of their own families, meeting at stated times for conferences and devotional exercises. The many difficulties that hindered the formation of the new institute gave way at last, and in 1535, twelve members were gathered together in a community with episcopal approbation, and with St. Angela de Merici as superioress. The movement was taken up with great enthusiasm and spread rapidly throughout Italy, Germany and France. Within a few years the company numbered many houses, each independent. Constitutions suited to the special work of the institute were developed and completed shortly before the death of the foundress in 1540. In 1544 the first approbation was received from Paul III, and the Rule of St. Augustine adopted. Many important details were left unsettled at this time, and, as a result, several congregations developed, all calling themselves Ursulines but differing widely in dress and customs. The largest and most influential of these were the Congregation of Paris and the Congregation of Bordeaux. In 1572 St.

Charles Borromeo, Cardinal Archbishop of Milan, obtained for the new congregation the status of a monastic order with enclosure. In some of the older European convents, in Canada and Cuba, strict enclosure is still observed; in other sections, though nowhere entirely abolished, the enclosure has been modified to meet local conditions. A Bull of final approbation was given in 1618 by Paul V.

In the early part of the seventeenth century an appeal was made from Canada for bands of religious women to undertake the arduous task of training the Indian girls to Christian habits of life. It met with an instant and generous response. In 1639 Madame de la Peltrie, a French widow of comfortable means, offered herself and all that she had to found a mission in Canada. In May of that year she sailed from Dieppe accompanied by three Ursulines and three hospital sisters. At Quebec the latter founded a Hôtel-Dieu, the former, the first Ursuline convent on the western continent. The superioress of the new foundation was mother Marie de l'Incarnation Guyard, whose heroic virtues won from the Holy See the title of venerable in the year 1877, and the process of whose canonization is about to be presented. The earliest establishment of the Ursulines in the United States also owes its origin to French initiative. In 1727 Mother Marie Tranchepain, with then companions, embarked from L Orient to found their convent at New Orleans. After years of struggle a firm foothold was secured, and the Ursulines still flourish in the city of their original foundation. A notable feature of Ursuline labours in the United States may be found in the history of the Rocky Mountain Missions where for years they have laboured for the Indians, and have established ten flourishing centres. From these western foundations have sprung two branches in Alaska. In accordance with the wish of Leo XIII, a congress of Ursulines from all parts of the world convened at Rome during the fall of the year 1900. Representatives were sent from the United States, South America, Java, and all parts of Europe. Under the auspices of the Sacred Congregation of Bishops and Regulars, the Roman Union of Ursulines was then formed, with the most reverend Mother Mary of St. Julien as the first mother-general. Cardinal Satolli was appointed the first cardinal protector. To this union belong over a hundred communities; aggregations are made from year to year. The united communities are divided into eight provinces as follows: Italy; Austro-Hungary; Hungary; the East of France; the West of France; Holland-Belgium-England-German; the North of the United States; the South of the United States; Spain and Portugal. Many large and important communities still retain their independent organization. Of late years the Ursulines have suffered severely in France and Portugal. The members of the expelled communities have become affiliated to other foundations both in Europe and the United States.

The habit of the order is of black serge, falling in folds, with wide sleeves. On ceremonial occasions a long train is worn. The veil of the professed religious is black, of the novice white. The guimpe and bandeau are of plain white linen. the cincture of black leather. There are two grades in each community; the choir religious, so called from their obligation to recite the office daily in choir; and the lay sisters. The former are occupied in teaching, the latter in domestic duties. Candidates for either grade pass six months probation as postulants in the community in which

they desire to become stabilitated. This period is followed by two years of preparation in a central novitiate, at the expiration of which the three vows of religion are pronounced temporarily, for a term of three years. At the end of the third year the profession is made perpetual. In some Ursuline communities solemn vows are taken, and there papal enclosure is in force. The vows of the Ursulines in the United States, though perpetual, are simple. From their earliest foundations the Ursulines have been thorough and progressive teachers. Their system might be termed eclectic, utilizing the effective points of all methods. The European houses are fore the most part boarding schools; in the United States, combinations of boarding and day-schools. The nuns also conduct many parochial schools, which, like the others, comprise all grades: elementary, academic and college courses. The first Catholic college for women in New York State was founded by the Ursulines at New Rochelle [New York] in 1904. The Ursulines in several other parts of the United States have followed the precedent, and are labouring practically to further the higher education of women. The German Ursulines, who were expelled through the influence of the Kulturkampf and re-admitted after an exile of ten years, are permitted to resume their teaching, but for pupils of high-school grade only. In Europe and America alike the Ursulines make it a point to secure State approval, and avail themselves of every advantage offered by the public institutions.

URSULINES OF QUEBEC, *Glimpses Of the Monastery* (1897); O'REILLY, *Life Of St. Angela* (1880); *Circular Letters of the Mother-General* (1904-11); HUBERT, *Die heilige Angela Merici* (Mainz, 1891).

MOTHER MARY FIDELIS

The Ursulines of Quebec

The Ursulines of Quebec

The Ursuline monastery of Quebec is the oldest institution of learning for women in North America. Its history begins on 1 August, 1639, when its first members landed in Canada, thirty-one years after Champlain had founded Quebec (1608) and only four after his death. The monastery was established by Marie Huyard de l'Incarnation, declared Venerable by the Holy See (1874), and Madame de la Peltrie, a rich widow of Alen on in Normandy. The former, after ten years of widowhood, had joined the Ursulines at Tours. Her first biographer was her son, Dom Claude Martin, a Benedictine, who died in the odour of sanctity, in 1696. His "Life of the Venerable Mother of the Incarnation" was approved (1677), by the venerable Bishop Laval. Bossuet (*Etats d'oraison*, IX) calls Marie de l'Incarnation "the Theresa of her time and of the New World." The letters royal sanctioning the foundation and signed by Louis XIII are dated 1639. After three years spent in the Lower Town, near Champlain's *Habitation*, the nuns entered (1642) the convent built on the ground they still occupy, conceded to them (1639) by the Company of New France. Their first pupils were Indians, with whom they succeeded better than the Jesuits with their native boys. Marie de l'Incarnation mastered the difficult Indian languages thoroughly, composed dictionaries in Algonquin and Iroquois, also a sacred history in the former, and a catechism in the latter idiom. The first

monastery was burned in 1650, but was soon rebuilt. The Constitutions, written by Father Jérôme Lalemant, uncle of the Jesuit martyr, Gabriel Lalemant, combined the rules of the two Congregations of Paris and Bordeaux, and were observed until Bishop Laval decided (1681) in favor of the former, which binds its members by a fourth vow to teach girls.

The monastery shared at all times the country's fate. It was threatened by the Iroquois in 1661-2, when one of its chaplains, the Sulpician Vignal, was slain and devoured near Montreal by those savages. It underwent the siege and bombardment of Quebec by Phips (1690) and by Wolfe (1759). After the fateful battle of 13 Sept., 1759, the French hero, Montcalm, was buried by night in the convent chapel. The first English governor, Murray, used part of the monastery as his headquarters. On that occasion the rations served to the nuns for nursing the wounded and sick saved them from perishing of starvation. The governors and viceroys, both English and French, were always friendly to the institution.

The foundress, who died in 1672, one year after Madame de la Peltrie, practised devotion to the Sacred Heart of Jesus, and had established it in the cloister years before the revelation to the blessed Margaret Mary. The first celebration of the feast in the New World took place in the monastery 18 June, 1700 (*Mandement* of Bishop de St-Vallier, 30 March, 1700. The register of the Confraternity of the Sacred Heart begins in 1716. Clement XI (1718) enriched it with indulgences. The first superior elected (1760) after the conquest was Esther Wheelwright, a New England captive, rescued from the Abenakis by the Jesuit Bigot, and a protégée of the first governor, Vaudreuil. Besides the French, the Irish, Scotch and American elements in Canada have given distinguished subjects to this cloister, prominent among whom was mother Cecilia O'Conway of the Incarnation, the first Philadelphia nun, one of Mother Seton's earliest associates. The list of alumnae is not less remarkable. Conspicuous among its pupils were Jeanne Le Ber, the saintly "recluse of Montreal", and Venerable Mother D'Youville, foundress of the Grey Sisters at Montreal. The Quebec monastery founded convents at Three Rivers (1697), Roberval (1882), Stanstead (1884), and Rimouski, with normal school (1906), besides sending missionaries to New Orleans (1822), Charlestown (Boston) (1824), Galveston (1849), and Montana (1893). During the Revolution several French refugees were chaplains to the monastery, the most notable being Abbé L.-P. Desjardins, who died in France, Vicar-General of Paris. Through him were procured the valuable paintings by Philippe de Champaigne, Lebrun, Collin de Vermont, Peter of Cortona, and others, that adorn the chapel.

Glimpses Of The Monastery (Quebec, 1897); CHAPOT, *Histoire de la V n. Marie de l'Incarnation* (Paris, 1892); *Les Ursulines de Qu bec* (Quebec, 1863); RICHAUDEAU, *Lettres de la Vén. Marie de l'Incarnation* (Tournai, 1876); CASGRAIN, *Histoire de la Vén. M. del Incarnation* (Quebec, 1864); *La Vén. Marie de l'Incarnation* (Paris, 1910).

LIONEL LINDSAY

St. Ursus

St. Ursus

Patron of the principal church of Solothurn (Soleure) in Switzerland, honoured from very early times, as a martyr of the Theban Legion, and recorded in the Roman Martyrology, with St. Victor, on 30 September. Relics of him are shown in many churches of Switzerland, and since the twelfth century the baptismal name Ursus is very common in the neighbourhood of Solothurn. The legend, by St. Eucher of Lyons (*Acta SS.*, Sept. VIII, 461), classed by Delehaye ("*Legends of the Saints*," New York, 1907, p. 120) among the historical romances, says that Ursus, after many cruel torments suffered for his constancy in refusing to sacrifice to the idols, was beheaded c. 286 under the Emperor Maximian Herculeus and the Governor Hyrtacus. Between the years 473 and 500 the body of St. Victor was brought to Geneva by the Burgundian Queen Theudesinde; it is probably that about the same time a church was built over the remains of St. Ursus. In 1519 the old coffin was found and the event was commemorated at Solothurn and Bern. The Roman urn containing the relics bears the inscription:

Conditus hoc sanctus
Tumulo Thebaidus Ursus.
(Buried in this tomb is the holy Ursus the Theban.)

FRANCIS MERSHMAN
Urubamba

Urubamba

(MISIONES DE SANTO DOMINGO DE URUBAMBA Y MADRE DE DIOS)

This prefecture apostolic was created by a Decree of the Holy See in 1899 at the request of the Peruvian Government. On 10 April, 1902, three Dominican Fathers of the Spanish province took charge of the missions, their number being gradually increased to eleven, which is the number at present working there, ten Spaniards, and one Peruvian. Still more recruits for this work are expected, the vastness of the territories and the class of people to be civilized and evangelized requiring a still greater number for the work. All these missionaries are under the jurisdiction of the prefect Apostolic, the Rev. Fray Ramon Zubieta, to whose efforts so much of the progress in civilization, as well as the religious and geographical survey of the Montana region in the eastern part of Peru, is due. The territorial limits of these missions cannot be determined with certainty, but they are about one-eighth of the entire area of Peru. They are bounded on the north by Brazil and Bolivia; on the south by Puno and Cuzco; on the east by the Department of the Ucayabi and Cuzco; on the west by Bolivia. The inhabitants are for the most part savages, numbering about 60,000. The remaining are whites or *mestizos* who devote themselves to the exploitation of the india rubber industry and commercial pursuits. Some of these have preserved some vestiges of the Catholic Faith, but for the greater part they live in a state of complete indifference. The savages have no religion whatsoever, preserving only a vague sort of superstition concerning a supreme being and a spirit of evil.

These missions, after passing through many vicissitudes and surmounting great difficulties, have been able to establish six stations: in Cuzco, Challabamba, San Jacinto, Sto Domingo, San Vicente, and San Luis. Of these the four last mentioned besides their chapels have free schools, the only ones among the savages. In 1911, 360 baptisms, 241 confirmations, and 22 marriages were registered. The greatest good, however, that the missionary exercises in these regions is to uplift and maintain a moral level among these people, who without him would fall into the most hopeless demoralization. He is the sole representative of right, of humanity, and of religion.

VICTORINO OSENDE

Uruguay

Uruguay

(REPUBLICA ORIENTAL DEL URUGUAY).

The smallest independent state in South America, extending from latitude 30° to 35 degrees S. and from longitude 53° to 58° 30' W., lies south of the Province of Río Grande do Sul, Brazil, and east of the Río Uruguay, hence its local name, Banda Oriental, given in the old Spanish days. Its boundaries are; west, the Río Uruguay; south the Río Uruguay, south the Río de la Plata, which separate it from the Argentine Republic for a distance of 425 miles, south also and east, the Atlantic ocean for 200 miles, and Lago Mirim, a lagoon dividing Uruguay from the southeast of Brazil. The northern boundary, 450 miles in extent, was definitively settled by treaty with Brazil on 15 May, 1852, as the Río Quarim, the Cuchilla de Santa Ana to the Río San Luis, thence to the Río Jaguarão, and the western shore of Lago Mirim. Uruguay's greatest length is about 350 and breadth 300 miles, and its area 72,170 square miles, approximately six times the size of Belgium, or double the size of the State of Indiana, U.S.A. The capital, Montevideo (properly San Felipe y Santiago de Montevideo) is situated in latitude 34 degrees 54' S. and longitude 58° 32' W.

Natural Features

The northern portion of the republic is hilly, the ranges being continuations of the Brazilian mountains; though the hills are termed *cuchillas* (knives), the summits are not sharp, but gently rounded. The chief groups are the Cuchilla de Santa Ana, 80 miles long and 1600 feet high on the border of Brazil, the Cuchilla Grande, 210 miles long and 1500 feet high, running south-east across the country, and the Cuchilla de Haedo in the northwest, 275 miles long. The culminating point is Acequa in the Cuchilla Grande near the Brazil frontier, with an elevation of 2040 feet. The country lying along the Atlantic is low, dismal, swampy, and sandy, and contains many lagoons. The west and south is composed of beautiful fertile plains, not quite level like the Argentine pampas lying west of the Río Uruguay, but undulating gently. This region is intersected by numerous *arroyos*, or small streams, rendering it suited for agricultural and pastoral pursuits, while vegetation is very thick in the neighbourhood of the rivers. The most important rivers rise in Brazil and are the Río Uruguay, 1000 miles long, and its tributary the Río Negro, which flows south-west for 350 miles, almost bisecting the country. There are a few islands in the Río de la Plata belonging to Uruguay,

one of which, Flores, serves as a quarantine station for Montevideo; Lobos, lying to the south-east of Uruguay, in the Atlantic off Maldonado, is a centre of the sealing industry. There are no good natural harbours in Uruguay, but the port of Montevideo has been deepened so as to admit ships drawing 24 feet of water; the Government is developing the port of La Paloma. The climate is very healthy, epidemics being almost unknown; the northern regions are subject to extremes of heat and cold, but in the south the temperature is moderate, varying ordinarily between a maximum of 86 degrees and a minimum of 35° F. Very severe sudden storms known as *pamperos* blow frequently from the south-west. The mean annual rainfall is 43 inches.

Though the river banks are well wooded, there are no extensive forests in Uruguay. Excellent timber for cabinet work is found in the west; the most noteworthy native trees are the algarobo, the quebracho, and the nandubay, which is much used for fuel, and has a facility for petrifying. Palms are found in the valleys of the Sierra José Ignacio and in Maldonado, Minas, and Paysandu. Aromatic shrubs are plentiful and over 400 species of medicinal plants are found. Many European trees have been introduced—acacia, alder, aloe, mulberry, oak, and willow, but the eucalyptus and poplar thrive best. The chief wild animals are the deer; fox, tapir, ounce, puma, and wild cat; rattlesnakes are found occasionally especially in Minas; poisonous spiders are common. The American ostrich-rhea is still plentiful, as are parakeets, partridges, quails, and water-birds. Seals breed on the Lobos and Castillos islands in the Atlantic; the sealing industry is very strictly preserved by the Government, but during the season the killing is carried out without judgment, and the industry is in danger of perishing. The mineral wealth of Uruguay is as yet unknown; silver, copper, and iron ores have been found; gold is mined to a small extent at Cunapiru; coal has been discovered in Santa Lucia, Cerro Largo, and Montevideo but has not been worked; crystals, gems, and diamonds also occur.

Religion

By articles 130 and 132 of the Constitution religious freedom is granted to everyone, but article 5 provides that Catholicism is the state religion. There is a small government grant in favour of religion; the civil power is unsympathetic when not actively hostile to the activities of the Church. Almost the entire population is at least nominally Catholic, there being only about 6000 Protestants, chiefly Swiss German Evangelicals, Waldensians, and Anglicans. At present the entire republic forms one ecclesiastical unit—the Archdiocese of Montevideo. In 1878 Montevideo was created a diocese, Mgr. Vera being appointed bishop; in 1897 it was made an archdiocese, and two suffragan sees Melo (q.v.) and Salta (q.v.) were erected, but owing to political troubles no appointments to them have yet been made. There are, however, two auxiliary bishops at Montevideo, Mgr. Ricardo Isasa (b. in the capital, 7 Feb., 1847; appointed 15 Feb., 1891) and Mgr. Pio Cajentano Stella (b. at Paso del Molino, 7 Aug., 1857; appointed 22 Dec., 1893). The former has been administering the diocese since 26 Sept., 1908, when the first archbishop, Mgr. Mariano Soler, died. Mgr. Soler was born at San Carlos, Maldonado, 25 March, 1846, studied at Santa Fe and Rome. On his return he established a paper "El Bueno", and a Catholic club at Montevideo. He was elected to the House of Representatives, was made bishop, 29 Jan., 1891, and archbishop, 19 April, 1897. He was six

times a pilgrim to the Holy Land, where he founded a celebrated convent and sanctuary, "Hortus Conclusus", a little south of Bethlehem. He was an able writer, and published among other works in Spanish an account of his travels, the "Ruins of Palmyra", "A Voyage in the Land of the Bible", and social writings such as "The New Spirit", "The Social Question". He went to Rome for the jubilee of Pius X, but fell ill in Italy and died off Gibraltar on his return journey. His obsequies took place at Montevideo in presence of the president and the cabinet. The diocesan seminary at Montevideo is entrusted by the archbishop to the Jesuits; the most noteworthy churches in the capital are the Cathedral of Saints Philip and James, with its towers 133 feet high, in the Plaza Constitucion; it is in the Renaissance style and was built in 1803-4, becoming the cathedral in 1878; it was renovated in 1905; also the churches of the Capuchins (Renaissance), Redemptorists (Romanesque), and Jesuits (Renaissance). There are many communities of nuns: Perpetual Adoration, Dominican, Good Shepherd, Mercy, and Charity, most of them with schools or charitable institutes. The Sisters of Charity have care of the great Hospital de Caridad, founded in 1788 by Francisco Antonio Maciel. It has 600 beds and is supported by a government lottery. There are a foundling hospital, a beggars asylum, and over 40 charitable associations in the metropolis. Concerning marriage it may be noted that a law of 1885 makes civil marriage obligatory; this may account practically for the high rate of illegitimacy mentioned below; divorce; however is not recognized for any cause. At Montevideo on 5-8 November, 1911, the Fourth National Catholic Congress was held under the presidency of Mgr. Isasa. There were present 360 delegates representing over 500 parishes, associations etc. The Unión Católica, founded in 1889, was dissolved to form three new unions—Social, Economic, and Civic—each with a directive committee of five members; a central committee consisting of the three presidents and two members elected by each of the unions was appointed. The Congress received a special blessing from Pius X.

History

Uruguay was discovered in 1512 by Juan Diaz de Solis, *Piloto mayor* of the Kingdom of Castille, who on a second visit in 1516 landing in Colonia at Martin Chico, was slain by the Charruas. It was visited by Magalhães in 1519-20, and by Sebastian Cabot in 1526-7. At the time of its discovery Uruguay was inhabited by about 4000 Indians, the Charruas who dwelt on the north shore of the Río de la Plata as far as the Río San Salvador, the Yaros, Bohanes, Arachanes, Guenoas, and Chanas. The last named were converted by the Franciscan pioneers, but the others proved more intractable. The Charruas were very dark in colour, thick-lipped, small-eyed, and very warlike, but were not cannibals as has been asserted. They made constant war on the other Indians, and were a source of terror to the Spaniards, whom they prevented for over a century from establishing colonies. Early in the seventeenth century the Jesuits began to convert and civilize the Indians (for the wonderful results of their labours see REDUCTIONS OF PARAGUAY). After the expulsion of the Jesuits (1767), the Indians, deprived of their teachers and protectors, rapidly dwindled, through the violence of the whites, and finally General Rivera, first President of Uruguay, slaughtered all the Charruas in 1832. The first permanent settlement in Uruguay was made by the Spaniards who followed the Jesuits to Santo Domingo de Soriano on the Río Negro in 1624. Colonia (del Sacramento) was

founded by the Portuguese in 1680; for nearly a century Portugal, relying on the Treaty of Tordesillas (7 June, 1494), disputed with Spain for possession of Uruguay, but finally recognized the Spanish claims by the Treaty of San Ildefonso (1 Oct., 1777). Montevideo was established in 1726 by Mauricio Zabala, Governor of Buenos Aires, to thwart the efforts of the Brazilian traders. It was captured by the British on 23 Jan., 1807, but was soon evacuated, on Whitelocke's defeat before Buenos Aires. On the declaration of independence by the Argentine, 23 May, 1810, Uruguay became part of the united provinces of Río de la Plata. In 1811 the Spaniards were routed by José Gervasio de Artigas, but held Montevideo, till their fleet was destroyed by Almirante Brown, in May, 1814, while General Alvear attacked the city by land. In 1816 the Portuguese attacked Uruguay but were driven off. In 1821, however, Brazil, having become independent, annexed Uruguay as the Provincia Cisplatina. In 1825 thirty-three exiles at Buenos Aires—the *Treinta y Tres*—returned to Florida under Lavalleja, raised the standard of revolt, and with the assistance of the Argentine defeated the Brazilians, Brown destroying the latter's fleet in February, 1827, while their land forces were overthrown at Ituzaingo. Uruguay's independence was soon recognized by both the Argentine and Brazil in the Treaty of Montevideo, 27 August, 1828.

In November, 1828, José Rondeau was appointed provisional governor at San José. The Constitution was promulgated on 18 July, 1830. General Fructuoso Rivera was elected first president on 25 October, 1830, and inaugurated twelve days later. Unfortunately the rival political leaders soon plunged the country in bloodshed. The history of Uruguay for the next seventy years was a series of revolutions and civil wars, one of which lasted practically from 1835 to 1851, when Manuel Oribe, the chief of the *Blancos*, rebelled with the assistance of the tyrant Rosas of Buenos Aires, and subjected Montevideo to what is known as the "nine year siege". From 1864 till 1870 president Flores, aided by the Argentine and Brazil made war on Paraguay. The country was eventually brought to the verge of ruin and bankruptcy, but President Cuesta (1897-1902) succeeded in placing it on a firmer financial basis. On 1 March, 1911, José Batlle y Ordóñez, who had already been president (1903- 1907), was again placed in power. He is agitating for the adoption of a new constitution like that of Switzerland. The two chief political parties in Uruguay for years have been the *Colorados* (Red) and *Blancos* (Whites), so called from the emblems worn by the adverse parties in the struggles caused by Oribe. The former, who represent the landed proprietors more than the peasant class, have generally been in power; there is practically no difference in the policies of the two parties, the struggle being merely for the emoluments derived from being in office.

Government and Justice

The republican Constitution of Uruguay sworn to on 18 July, 1830, is still unchanged. The Legislature consists of a Senate and a House of Representatives, meeting from 15 February to 15 July yearly. In the interim two senators and five representatives act with the presidents, a permanent administrative committee. Senators must be over 32 years of age and possess property worth \$10,000 or its equivalent. There are 19 in number, one for each department, and are chosen by an electoral college elected by popular vote. They hold office for six years, one-third of their number retiring every second year. The vice-president of the republic is ex-officio chairman of the Senate. The

representatives, one for every 3000 adult literate males, are elected for 3 years. They now number 75. The president, who is chosen by the Senate and Representatives, receives an annual salary of \$35,000 and may not be elected for successive terms. The departments are administered by governors appointed by the Executive, and by a locally elected council. Slavery was abolished in Uruguay in December, 1843. There is a Supreme Court of five judges, appointed by the chambers; its president is elected annually by its members from their own number. There are two inferior courts of appeal, with three judges each. Montevideo has eleven local courts of first instance. Each department has a departmental court, and there are smaller judicial sections (205) with justices of the peace and alcaldes. Uruguayan laws are based on the *Code Napoléon*. The death penalty was abolished in 1907, penal servitude for a maximum of 40 years being substituted. In 1908 an extradition treaty with the United States became law. Provision is being made of a pension system, and laws regulating child and female labour.

Population and Education

On 31 December, 1909, Uruguay had 1,094,688 inhabitants, or 15.1 persons per square mile, of whom 291,465 resided at Montevideo, the most thickly populated departments after Montevideo being Canelones, Colonia, and Maldonado. Over 25 per cent of the population is foreign, principally Italian (73,000), Spanish (58,000), and Brazilian (28,000). For the years 1906-10 the annual number of immigrants averaged 144,897, and emigrants 127,161. In 1910 there were 6818 marriages; 16,515 deaths; 35,927 living births (25.9 per cent illegitimate), and 1317 still-birth the figures in 1900 being respectively 4549; 13,882; 31,593; and 1004. The Uruguayans from a physical point of view are the finest South American people. Among the country-folk there are some (Chinos) who give clear evidence of Indian blood. The Gauchos or farm hands seem to have some Charruan blood, which may account for their indifference to animal and even human suffering; they are restless and willingly join in any uprising, forming as a rule the main body of the revolutionary forces that have almost ruined the country. Uruguayan education is in a very backward state, though primary education is nominally obligatory. In 1907-8 there were 671 public free primary and 289 private schools, with only 78,727 children on the rolls, though there were 227,770 children of school age. In 1910 the public schools numbered 788, and the children enrolled 117,000. Teachers averaged 2 per public and 3 per private school. In 1908 the number of illiterates over 6 years of age was 350,547 (of whom 84,502 were foreigners). Montevideo has two normal schools, a state technical school with 185 free students; a university with faculties of law, medicine, mathematics, sociology, agriculture, veterinary sciences, and commerce. In 1905 the university had 112 professors; 530 undergraduates, and 661 students receiving a secondary education. The National Library contains over 47,500 volumes, and 9700 MSS. A pedagogic museum and library with 7000 volumes was founded in 1888 at Montevideo. Religious instruction is given in the public schools.

Commerce and Finance

Uruguay has over 5500 miles of good roads; 1472 miles of railroad in 3 systems running from the capital; 170 of tramway, the system at Montevideo being electric; 319 telegraph and 1018 post offices; there are 2 telephone companies, and 2 wireless stations. The traction systems are almost

entirely in British hands. The chief ports are La Paloma and Maldonado on the Atlantic; Montevideo and Colonia on the Plata; Mercedes on the Río Negro; and Paysandú, Fray Bentos and Salto on the Uruguay. In 1910 over 16,964,000 tons of shipping entered and cleared Montevideo. Vessels of light draught can ascend the Río Negro for 55 miles, and the Río Uruguay for over 200. Imports in 1911 amounted to 9,756,000—chiefly cottons, wools, coal, and iron; exports amounted to 9,476,000—chiefly tallow, and wool, as against 5,041,000 and 5,901,000 respectively in 1901. The public debt in 1910 was \$135,805,784. The Bank of the Republic, whose directors are nominated by the Government, can alone issue notes; on 1 Jan., 1911, it had notes to the value of \$18,076,842 in circulation. In 1912 the Government created a national insurance bank with a monopoly of accident, fire, labour, and life insurance; the fixing of a date for the enforcement of this monopoly is left to the Government's discretion. Only foreign gold is in circulation, the standard silver coin is the *peso* or dollar (\$1.034 in United States currency). In 1897 the use of the metric system was made compulsory. Uruguay's well-watered alluvial soil and undulating plains made it primarily an agricultural and pastoral country. Sheep-farming is carried on especially in Durazno and Soriano, and an excellent variety of wool is exported. The centre of the cattle industry is in Salto, Paysandú, and Río Negro; the beasts, chiefly of English stock, are destined chiefly for the *saladero* trade, that is sun-dried salted meat or jerked beef, which is exported to Brazil and Cuba. Fray Bentos is the headquarters of large factories for the manufacture of extract of beef. Vineyards were introduced into Salto about 1874, and have spread to Montevideo, Colonia, and Canelones; the production of wine amounting to over 4 million gallons in 1908. Wheat and other cereals, as well as tobacco, are extensively grown, but not yet in sufficient quantity to develop an export trade.

A.A. MACERLEAN
Diocese of Uruguayana

Uruguayana

(URUGUAYANESIS)

Diocese; suffragan of Porto Alegre, Brazil. By a Decree dated 15 August, 1910, the See of Sao Pedro Do Rio Grande was raised to archiepiscopal rank, with the title of Porto Alegre, three new dioceses being separated from its territory. Fifteen parishes were allotted to the Diocese of Uruguayana, which includes the western portion of Rio Grande do Sul, bounded on the south by the Provinces of Artigas and Rivera (Uruguay) and on the west by the Rio Uruguay. This fertile territory has important stock breeding and dried beef industries. The town of Uruguayana (14,000

inhabitants) is situated on the Rio Uruguay, 360 miles west of Porto Alegre, with which it is connected by rail; it lies opposite the Argentine town of Restauración and has extensive trade by river and rail with Montevideo and Buenos Aires. It was founded in 1843 by order of the revolutionary Government of Rio Grande. On 5 August, 1865, it was taken by the invading Paraguayan army, but on 18 September following, the invaders, numbering 6000 men, had to capitulate to the allied forces of Brazil, Argentina, and Uruguay. The two other chief towns are Allergen (9000 inhabitants) on the left bank of the Rio Ibirapuitan, and Quarry (6500 inhabitants) opposite the town of Santo Eugenia (Uruguay). Numerous flourishing missions were founded by the Jesuits in this territory along the eastern banks of the Rio Uruguay from 1632 to 1707, but the fruits of their labors were lost on the expulsion of the order (see REDUCTIONS OF PARAGUAY). The first bishop of the new see is Mgr. Hermes Joseph Pinheiro, b. at Traipu, in the Diocese of Alagoas, 1871; he studied at Olinda, was ordained in 1901, appointed parish priest at Boa Vista and canon of Olinda, and nominated Bishop of Uruguayana on 12 May, 1911. The cathedral church is dedicated to St. Anne.

GALANTI, *Compendio de historia do Brazil* (San Paulo, 1896-1905).

A.A. MACERLEAN

Ushaw College

Ushaw College

(College of St. Cuthbert)

A combined college and seminary for the six dioceses that were comprised in the old Northern Vicariate of England. The government is vested in a united board of the bishops of these dioceses, with a president, a vice-president, and staff of about 30 professors. The average number of students is over 300, divided into three courses: the preparatory course, including about 80 boys, the humanity course with about 130, and the philosophical and theological with about 100.

History

The suppression of the "Grands Anglais" at Douai the seminary which for 200 years had meant the Catholic Faith to England, was only one of the many far-reaching results that the French Revolution brought in its train. The immediate necessity under which the English Catholics found themselves of providing for the continuation of its work led to a project of establishing one college for the whole of England on English soil. Many difficulties supervened and finally the question arranged itself by the division of the refugee students from Douai into two bodies, one of which found shelter at Old Hall near Ware, while the remainder (mainly composed of students who were destined for the Northern Vicariate), after temporary sojourns at Tudhoe and Pontop, two villages in the vicinity of Durham, settled on 15 Oct., 1794, at Crook Hall, about eleven miles N.W. of that city. There they re-established Douai for the north of England, and it lived its life under the guidance of one of its former professors, Thomas Eyre, of John Lingard, the future historian, and of John Daniel, the actual president of Douai at its suppression, who seems to have been formally installed as president for a few days. Ten years' growth made Crook Hall inadequate for its purpose, and in

1804 Bishop William Gibson began the buildings at Ushaw to which four years later, the colony finally migrated, the first detachment on 19 July, the rest on 2 August, 1808. There they found three sides of a massive quadrangle, with a frontage of about 170 feet and a depth of 220, ready for their habitation. The fourth side of this quadrangle was not added till 1819, under the president who succeeded Eyre in 1811, Dr. John Gillow; but no further material addition was made to the buildings until the fourth president, Charles Newsham, succeeded in 1837. He realized that, if Ushaw was adequately to continue its career, no pains nor expense must be spared to enlarge its capacity and to bring its arrangements into line with more modern requirements. The pioneers of the Gothic revival were at hand to assist him in this, and from the plans of the two Pugins and the two Hansoms the second church with its attendant chapels, the library, infirmary, museum, exhibition hall, lavatories, kitchens, and farm buildings, and a separate establishment for the younger boys, all sprang up around the old Georgian quadrangle.

In much more than a convention sense Monsignor Newsham may be called the founder of modern Ushaw; and the best evidence of how far-seeing were his plans and achievements lies in the fact that for twenty years after his death, in 1863, practically no addition was made to the fabric. In 1883 Monsignor Wrennal found it necessary to build a third church. Under Bishop Wilkinson, who assumed the presidency in 1890, which he held conjointly with the Bishopric of Hexham and Newcastle till his death in 1909, a fresh period of activity began. A covered swimming bath, a gymnasium, two new dormitories, and over forty new living rooms, the enlargement of the exhibition hall, the elaborate decoration of the church with the erection of a new high altar, are all the products of his nineteen years of presidency. Two presidents have held office since his death: Monsignor Joseph Corbishly, who survived him only a year, and Monsignor William Henry Brown, under whom new lecture rooms have been erected to accommodate the largely increased numbers of philosophy and divinity students. Altogether the present blocks of buildings, with their enclosed courts, cover a rectangle 880 feet long by 420 feet broad; the outbuildings, grounds, and campus cover over 100 acres, and the whole estate, with its home and outlying farms, includes between 1200 and 1300 acres.

Many objects of historical and artistic interest are preserved in the college. Lingard bequeathed to it all his books and papers, which included an early MS. and the proof sheets of his "History of England" with about 1500 of his letters; Wiseman is represented by the MSS. of "Fabiola" and the "Hidden Gem", and of many sermons, lectures, and letters, while Eyre gathered for it a valuable collection of documents dealing with the English Catholic history of the seventeenth and eighteenth centuries, and intended for a continuation of Dodd's "Church History". The library, in which these are stored, contains about 45,000 volumes, mainly of theological and historical interest. It is especially rich in early printed liturgical books and in seventeenth-century controversy. Examples of Wynken de Worde's "York Manual", Higden's "Polychronicon", the "Nuremburg Chronicle", the "Ulm Cosmographs", the "Complutensian Polyglot", are found on its shelves, and, perhaps more interesting than all, about forty works that belonged to the pre-Reformation library of Durham Abbey and which still retain the original monastic bindings. The manuscripts include, in addition

to the collection already mentioned, a large number of old English missals, psalters, and books of hours, as well as many documents connected with the history of the colleges at Douai, Lisbon, and Valladolid, and with the progress of Catholicism in the north of England. The museum, too, is rich in relics of persecution times, several missals and altar stones and an old wooden crozier that belonged to Bishop Dicconson being among the most remarkable. The church treasury contains several splendid examples of church plate, a chalice assigned to Benvenuto Cellini taking the place of honour. It also preserves a chasuble that tradition connects with Westminster Abbey and another that belonged to Cuthbert Tunstall, the last Catholic Bishop of Durham. The collection of relics is one of the largest extant in private hands, and includes a large relic of the True Cross and a ring that was taken from the body of St. Cuthbert when the tomb at Durham was rifled during the Reformation.

Education

In her system of education Ushaw has clung tenaciously, though progressively, to the traditions she inherited from the "Alma Mater Duacensis" which she was founded to replace. No other college in England has found it possible permanently to retain, throughout the whole of its career, the essential characteristic of the Douai system -- the co-education of clerical and lay students throughout their humanities. The classical element still predominates in the course, and even the old class names, rhetoric, poetry, syntax, grammar, and figures, are still retained. For nearly fifty years after leaving France the Douai authors were read and the Douai time-table observed with scarcely an alteration. Then the second spring began to make its influence felt in education as in all other things Catholic. Catholic colleges were affiliated to London University in 1840, and Catholic scholarship was at last able to find a criterion to test its standing. Ushaw found she had no reason to shrink from the comparison. Her first two candidates for a degree in arts obtained a first class, and their example was so persistently followed that twenty years later the London examinations in arts were made the standard for the course. Roughly speaking, during the thirty-three years from 1863 to 1896, three-fourths of the candidates presented were successful, the exact numbers being 574 and 717. But in the latter year several causes combined to make another standard of comparison desirable, and, in accordance with a general movement among the Catholic colleges, Ushaw substituted the Oxford local and certificate papers for the London examinations. About the same time, availing herself of the privilege newly granted by the Holy See, Ushaw utilized the university training which she found close at hand. The college was affiliated to Durham University in 1900, and during the next ten years 22 students took the degree of arts, 16 obtaining classical honours at the final examination, and 27 scholarships of the aggregate value of over 1000 have been secured. But once more the necessity of spending much time on uncongenial subjects has compelled a change of front and the college has returned to the London University course, which during the interval has been entirely remodelled.

The history of the philosophical and theological courses, which occupy two and four years respectively, follows on very similar lines. The Douai theses and the customs of "dictates" held for the first quarter of the nineteenth century. The value of the course was soon recognized. By a Brief

dated Feb., 1813, Pius VII gave Ushaw and old Hall the power of granting degrees in theology, through there is no record of the privileges ever having been exercised. The introduction of more modern methods began with Monsignor Newsham and today the various chairs are held by professors who have received their training at Ushaw and graduated at foreign universities. With very few exceptions professors have always been chosen from former alumni. Generally speaking, the more promising students are selected for special training at the end of their humanities, then, after studying philosophy, they teach the lower schools for three years, with the title of "minor" professors. They then proceed to their divinity, where a further selection is made for specialized study, which is generally taken at some university on the Continent. Long experience has shown the advantage of this system of training professors; another inheritance from the traditions of Douai.

Prominent Alumni

The roll of alumni (1912) includes close on to 5000 names. It embraces over 1000 priests, 30 bishops, 5 archbishops, and 4 cardinals: Wiseman, De la Puente, Bourne, Cardinal Archbishop of Westminster, and the Cardinal Secretary of State, Merry del Val, who was not only a student but also a "minor" professor at Ushaw. prominent names in almost every profession and almost every country can be found there. Law is represented in England by Mr. Justice Shee, the first Catholic post-Reformation judge; by Judge O'Connor, former deputy chairman of committees in the House of Commons; in India by Mr. Justice John Power Wallis, Judge of the High Court of Madras; in Canada by the Hon. James Foy, Attorney-general of Ontario; in the United States by Joseph Scott of Los Angeles, a prominent official of the Knights of Columbus. Statesmanship is represented by the present Under-Secretary for the Home Office, William Patrick Byrne, C. B.; the services by General Montague Gerard, K. C. B., Major Miles O'Reilly; commander of the Irish Brigade at Castelfidardo, and Commodore Edward f. Charlton, Commodore of the Eastern Destroyer Flotilla; art by Charles Napier Hemy, the Royal Academician; architecture by George and Edward Goldie and the youngest Pugin; literature by such names as Lingard the historian, Francis Thompson the poet, Wilfred Ward the present editor of the "Dublin Review", and Joseph Gillow, the compiler of the well-known "Bibliographical Dictionary of the English Catholics".

LAING, Ushaw College, A Centenary Memorial (Newcastle, 1894); BUTLER, Records and Recollections of Ushaw (Durham, 1885); J. Miscellany, III (1824); Catholic University Bulletin (1908).

E. BONNEY

Usilla

Usilla

A titular see of Byzacena in Africa. Nothing is known of the history of this city; it is mentioned by Ptolemy (IV, 3, 10) and with variations in the spelling of the name by the Peutinger Tables (ii) which call it a municipality, and by other ancient geographical documents, according to which it was thirty-two miles from Thysdrus (today El Djem) and twenty-eight miles from Thaenae (Benshir Tina). The ruins are known as *Inshilla*, among them being the remains of a Byzantine basilica. We have the names of six bishops of Usilla: Felix, present at the Council of Carthage (256); Cassianus, at the Council of Carthage (349); Theodore, one of the Donatist partisans of Maximianus, who at the Council of Cabarsussi (393) condemned Primianus, and in turn at the Council of Bagai (394) was condemned by the partisans of the latter, as one of the consecrators of Maximianus; Privatus, present at the Conference of Carthage (411); Victorinus, exiled by Huneric (484); Laurentius, a signer of the letter addressed by the Council of Byzacene (641), to the Byzantine emperor against the Monothelites.

SMITH, Dict. of Greek and Roman Geogr., s. v. Usilla; MULLER, Notes on Ptolemy, ed. DIDOT, I, 623; TOULOTTE, Geog. de l' Afrique chretienne, Byzacene et Tripolitaine (Montreuil, 1894), 227-29.

S. PÉTRIDÈS

Martyrology of Usuard

Martyrology of Usuard

Usuard was a Benedictine monk of the Abbey of St-Germain-des-Prxs, Paris. He seems to have died about the year 875, and the prologue in which he offers to Charles the Bald his most important work, the "Martyrology", which he had undertaken at that monarch's instigation, was apparently written very shortly before the author's death. Usuard was a prominent member of his order and he had been sent on a mission to Spain in 858 to procure certain important relics, of which journey an account is still preserved (see Acta SS., July, VI, 459). The "Martyrologium" which bears his name, a compilation upon which the existing Roman Martyrology depends very closely, remained throughout the Middle Ages the most famous document of its kind, and is preserved to us in innumerable manuscripts, of which Dom Quentin gives a partial list (Martyrologes historiques, 1908, pp. 675-7). The rather complicated history of the evolution of the early medieval martyrologia culminating in Usuard's work has for the first time been accurately told by Dom Quentin in the book just cited. It has, however, long been known that Usuard provided what was substantially an abridgement of Ado's "Martyrology" (see ADO OF VIENNE) in a form better adapted for practical liturgical use. In certain points, however, Usuard reverted to a Lyonese recension of Bede's augmented "Martyrology", which was attributed to the famous archdeacon Florus. But the story of the relation of these texts, unravelled for the first time by Dom Quentin, is too complicated to be detailed here. The text of Usuard's "Martyrologium" was carefully edited by Dom Bouillant (Paris, 1718) from manuscript Latisi 13745 at Paris, which, if not the autograph of the author, dates at any

rate from his time. A still more elaborate edition was brought out by the Bollandist Du Sollier in Acta SS., June, VI. It has been reprinted in P.L., CXXIII-CXXIV.

HERBERT THURSTON

Usury

Usury

In the article INTEREST we have reserved the question of the lawfulness of taking interest on money lent; we have here to consider first, usury as condemned by all honest men.

Plato (Laws, v. 742) and Aristotle (Politics, I, x,xi) considered interest as contrary to the nature of things; Aristophanes expressed his disapproval of it, in the "Clouds" (1283 sqq.); Cato condemned it (see Cicero, "De officiis, II, xxv), comparing it to homicide, as also did Seneca (De beneficiis, VII, x) and Plutarch in his treatise against incurring debts. So much for Greek and Roman writers, who, it is true, knew little of economic science. Aristotle disapproved of the money trader's profit; and the ruinous rates at which money was lent explain his severity. On the other hand, the Roman and Greek laws, while considering the *mutuum*, or loan for consumption, as a contract gratuitous in principle, allowed a clause, stipulating for the payment of interest, to be added to the bond. The Law of the Twelve Tables allowed only *unciarium fenus*, probably one-twelfth of the capital, or 8.33 per cent. A plebiscitum, *lex Ganucia*, 412 a.u.c. went so far as to forbid all interest whatever, but, at a later period, the Roman law allowed interest at 1 per cent monthly, or 12 per cent per annum. Justinian laid down as a general rule that this maximum should be reduced by half (L. 26, I, c. De usuris, IV, 32). Chaldea allowed interest on loans (cf. Law of Hammurabi, 48 sqq.). No absolute prohibition can be found in the Old Testament; at most, Exod., xxii, 25, and Deut., xxiii, 19, 20, forbid the taking of interest by one Jew from another.

In the Christian era, the New Testament is silent on the subject; the passage in St. Luke (vi, 34, 35), which some persons interpret as a condemnation of interest, is only an exhortation to general and disinterested benevolence. A certain number of authors, among them Benedict XIV (De synodo diocesana, X., iv, n. 6), believed in the existence of a Patristic tradition which regarded the prohibitory passages of Holy Scripture as of universal application. Examination of the texts, however, leads us to the following conclusions: Until the fourth century all that can be inferred from the Fathers and ecclesiastical writers is that it is contrary to mercy and humanity to demand interest from a poor and needy man. The vehement denunciation of the Fathers of the fourth and fifth centuries were called forth by the moral decadence and avarice of the time, and we cannot find in them any expression of a general doctrine on this point; nor do the Fathers of the following centuries say anything remarkable on usury; they simply protest against the exploitation of misfortune, and such transactions as, under the pretence of rendering service to the borrower, really threw him into great distress. The question of moderate rates of interest seems scarcely to have presented itself to their minds as a matter of discussion. The texts bearing on the question are collected in Vermeersch, "Questiones morales de justitia" II, n. 359. The councils condemned in the first place clerics who

lent money at interest. This is the purpose of the 44th of the Apostolic Canons; of the Council of Arles (314), and of the 17th canon the First Council of Niceaea (325). It is true that a text of the Council of Elvira (305 or 306) is quoted which, while ordering the degradation of clerics, would also have punishment inflicted on laymen, who obstinately persisted in usurious practices; but the mention of layman is of extremely doubtful authenticity. It may then be said that until the ninth century canonical decrees forbade this profit, shameful as it was considered, only to clerics.

Nevertheless, the 12th canon of the First Council of Carthage (345) and the 36th canon of the Council of Aix (789) have declared it to be reprehensible even for laymen to make money by lending at interest. The canonical laws of the Middle Ages absolutely forbade the practice. This prohibition is contained in the Decree of Gratian, q. 3, C. IV, at the beginning, and c. 4, q. 4, C. IV; and in 1. 5, t. 19 of the Decretals, for example in chapters 2, 5, 7, 9, 10, and 13. These chapters order the profit so obtained to be restored; and Alexander III (c. 4, "Super eo", eodem) declares that he has no power to dispense from the obligation. Chapters 1, 2, and 6, eodem, condemns the stratagems to which even clerics resorted to evade the law of the general councils, and the Third of the Lateran (1179) and the Second of Lyons (1274) condemn usurers. In the Council of Vienne (1311) it was declared that if any person obstinately maintained that there was no sin in the practice of demanding interest, he should be punished as a heretic (see c. "Ex gravi", unic. Clem., "De usuris", V, 5).

It is a curious fact that for a long time impunity in such matters was granted to Jews. The Fourth Council of the Lateran (1215), c. 27, only forbids them to exact excessive interest. Urban III, c. 12, "De usuris" (V. 19) and St. Louis in twenty-three of his regulations extended the prohibition to the Jews. With the exception of c. 27 of the Fourth Council of the Lateran, we know of no canon law which takes into consideration the question of moderate interest; and canon law nowhere states distinctly that interest is, under any circumstances whatsoever, contrary to justice.

Theologians and canonists of the Middle Ages constructed a rational theory of the loan for consumption, which contains this fundamental statement: The *mutuum*, or loan of things meant for immediate consumption, does not legalize, as such, any stipulation to pay interest; and interest exacted on such a loan must be returned, as having been unjustly claimed. This was the doctrine of St. Thomas and Scotus; of Molina, Lessius, and de Lugo. Canonists adopted it as well as the theologians; and Benedict XIV made it his own in his famous Encyclical "Vix pervenit" of 1 November, 1745, which was promulgated after thorough examination, but addressed only to the bishops of Italy, and therefore not an infallible Decree. On 29, July, 1836, the Holy Office incidentally declared that this Encyclical applied to the whole Church; but such a declaration could not give to a document an infallible character which it did not otherwise possess. The schismatic Greeks, at least since the sixteenth century, do not consider the taking of interest on loans as intrinsically bad.

While Luther, Melancthon, and Zwingle condemned loaning for interest, Calvin permitted interest on money advanced to rich persons; his disciple Salmasius gave effect to this opinion by a systematic code of rules. By degrees a certain number of Catholic writers relaxed their severity.

Scipio Maffei, a friend of Benedict XIV, wrote a celebrated treatise, "Dell' impiego del danaro", to justify an opinion which in this matter resembles that of Calvin. Economists generally uphold the theoretical lawfulness of interest on loans. For a long time civil law was in agreement with canon law; but as early as the sixteenth century, Germany allowed interest at 5 percent; in France, on the contrary, interest on loans was forbidden until the Decree of 2 and 3 October, 1789. Contemporary laws always consider the loan for consumption as gratuitous in principle, but allow a stipulation for the payment of interest to be added. In modern legislation two questions remain to be decided:

- whether it is desirable to establish a maximum legal rate; and
- by what means usurious exactions may be prevented.

The Holy See admits practically the lawfulness of interest on loans, even for ecclesiastical property, though it has not promulgated any doctrinal decree on the subject. See the replies of the Holy Office dated 18 August, 1830, 31 August, 1831, 17 January, 1838, 26 March, 1840, and 28 February, 1871; and that of the Sacred Penitentiary of 11 February, 1832. These replies will be found collected in "Collectio Lacensis" (*Acta et decreta s. conciliorum recentiorum*), VI, col. 677, Appendix to the Council of Pondicherry; and in the "Enchiridion" of Father Bucceroni.

Everyone admits that a duty of charity may command us to lend gratuitously, just as it commands us to give freely. The point in question is one of justice: Is it contrary to the equity required in mutual contracts to ask from the borrower interest in addition to the money lent? It may be remarked that the best authors have long since recognized the lawfulness of interest to compensate a lender for the risk of losing his capital, or for positive loss, such as the privation of the profit which he might otherwise have made, if he had not advanced the loan. They also admit that the lender is justified in exacting a fine of some kind (a conventional penalty) in case of any delay in payment arising from the fault of the borrower. These are what are called extrinsic grounds, admitted without dispute since the end of the sixteenth century, and justifying the stipulation for reasonable interest, proportionate to the risk involved in the loan. Another discussion, which has not been closed, but only suspended, relates to the question whether the civil law creates a new and real title, whether the State can, in order to extend and promote credit for the good of the community, permit interest on loans. We think it can. But there will scarcely be any need for such a law except in circumstance which already justify the general practice of lending for interest. (On these extrinsic rights see: Funk, "Geschichte des kirchlichen Zinsverbotes"; Lehmkühl, "Theologia moralis", I, n. 1306 sqq., 11th ed.)

The precise question then is this: if we consider justice only, without reference to extrinsic circumstances, can the loan of money, or any chattel which is not destroyed by use, entitle the lender to a gain or profit which is called interest? To this question some persons, namely the economists of the classic school, and some Catholic writers, answer "yes, and always"; others, namely Socialists and some Catholic writers, answer, "no, never"; and lastly some Catholics give a less unconditional answer, "sometimes, but not always"; and they explain the different attitudes of the Church in condemning at one time, and at another authorizing, the practice of taking interest on loans, by the difference of circumstances and the state of society.

The principal argument in favour of the first opinion is that the lender does the borrower a service which should be paid for. This is, of course, a materialistic view of human service, which when rendered in a spirit of active benevolence is repaid by gratitude: only onerous service, which costs or represents some trouble or privation, is sold or hired for money. Now, at times when opportunities for investing money in commercial undertakings or converting it into revenue-producing property were comparatively rare, a loan made to a solvent person, instead of being onerous to the lender, was rather an advantage, in giving him full security for his money, for the borrower insured him against its accidental loss. And we have just shown that the loan of things for immediate consumption was not, as such, a source of revenue. Father Ballarini, (*Opus morale*, III, pt. III, ii) thought that the justice or injustice of taking interest depends on one's intention; thus, we may give credit gratuitously, or we may give the use of our money for a consideration. In the first case the contract is essentially gratuitous; and as formerly this gratuitous contract was the ordinary practice, the Church was opposed to all claim of interest. However, as the use of money has its value, like the use of anything else, the Church on this ground at the present day permits the lending of money for interest. In spite of the assent of many authors to this explanation, we do not approve it. In Roman Law, gratuitousness was not essential to the *mutuum*, but only presumed in the absence of any stipulation to the contrary. Persons who openly or secretly demanded interest proved conclusively that they were not actuated by motives of benevolence; and the Church, in condemning them, did not raise the question of their intention. The answer to Ballarini is that rent is a price paid for the use of a thing not destroyed by use. The expenditure of money may be productive, and the person lending money and so depriving himself of profit may claim a compensation for that privation; but this is a question of extrinsic circumstances, not of justice itself.

Others with Claudio-Jannet (*Le capital, la spéculation et la finance*, iii, II and III) distinguish between the loan for consumption and the loan for production: we may ask interest from the borrower who takes money or credit in order to produce or gain money; but not from one who borrows under pressure of necessity, or for some unproductive expenditure. The increased frequency of loans for production considered in the connection with the different extrinsic circumstances would seem to justify the demand for interest on such loans at the present day. In a spirit that is not irreconcilable with the rulings of the Fathers in the matter, this system contains this element of truth, that the lender of a sum of money which is intended for productive use may refuse to lend except on condition of being made a partner in the undertaking, and may claim a fixed interest which represents that share of the profit, which he might reasonably expect to receive. The system, nevertheless, is formally condemned by the Encyclical "*Vix pervenit*", and contradicts the principle of the just value; it tends in fact to make the borrower pay the special advantage, while the compensation is regulated by the general advantage procured by the possession of a thing, not by the special circumstances of the borrower. Others justify the existing practice by a presumption of extrinsic circumstances, which is confirmed, according to some persons, by the permission of the civil law. This explanation appears to us to be unsatisfactory. The extrinsic circumstances do not always

exist, while we can always lend at interest, without any scruple on the score of justice. And what is there to show that modern legislators pass laws merely to quiet men's consciences?

But we may correct this last opinion by the aid of the general principles of contractual justice; and we shall then more fully understand the strictness of the laws of earlier times, and the greater liberty allowed at the present day. The just price of a thing is based on the general estimate, which depends not in all cases on universal utility, but on general utility. Since the possession of an object is generally useful, I may require the price of that general utility, even when the object is of no use to me. There is much greater facility nowadays for making profitable investment of savings, and a true value, therefore, is always attached to the possession of money, as also to credit itself. A lender, during the whole time that the loan continues, deprives himself of a valuable thing, for the price of which he is compensated by the interest. It is right at the present day to permit interest on money lent, as it was not wrong to condemn the practice at a time when it was more difficult to find profitable investments for money. So long as no objection was made to the profitable investment of capital in industrial undertakings, discouragement of interest on loans acted as an encouragement of legitimate trade; it also led to the creation of new contractual associations, such as insurance companies, which give a reasonable hope of gain without risk. The action of the Church has found distinguished defenders, even outside her own pale, among the representatives of contemporary economic science. We may mention three English authors: Marshall, professor of political economy at the University of Cambridge (*Principles of Economics*, I, I, ii, secs. 8 etc.); Ashley, professor at the new university of Birmingham (*An Introduction to English Economic History and Theory*, I, I, i, sec. 17); and the celebrated historian of political economy, Professor Cunningham (*Growth of English Industry and Commerce*, I, II, vi, sec. 85, third edition). Even at the present day, a small number of French catholics (Abbé Morel, "Du prêt à intérêt"; Modeste, "Le prêt à intérêt; dernière forme de l'esclavage") see in the attitude of the Church only a tolerance justified by the fear of greater evils. This is not so. The change in the attitude of the Church is due entirely to a change in economic matters that require the present system. The Holy See itself puts its funds out at interest, and requires ecclesiastical administrators to do the same. One writer, Father Belliot of the friars minor, denounces in loans for interest "the principal economic scourge of civilization", though the accumulation of wealth in the hands of a few capitalists, which he deplures so much, does not arise so much from lending money at proper interest as from industrial investments, banking operations, and speculations, which have never been condemned as unjust in principle. There has never been at any time any prohibition against the investment of capital in commercial or industrial undertakings or in the public funds.

Lending money at interest gives us the opportunity to exploit the passions or necessities of other men by compelling them to submit to ruinous conditions; men are robbed and left destitute under the pretext of charity. Such is the usury against which the Fathers of the Church have always protested, and which is universally condemned at the present day. Dr. Funk defined it as the abuse of a certain superiority at the expense of another man's necessity; but in this description he points to the opportunity and the means which enable a man to commit the sin of usury, rather than the

formal malice of the sin itself. It is in itself unjust extortion, or robbery. The sin is frequently committed. In some countries are found the exaction of interest at 30, 50, 100 percent and more. The evil is so great in India that we might expect legal provisions to fight against such ruinous abuse. The exorbitant charges of pawnbrokers for money lent on pledge, and, in some instances, of persons selling goods to be paid for by installments, are also instances of usury disguised under another name. As a remedy for the evil, respectable associations for mutual lending have been instituted, such as the banks known by the name of their founder, Raiffeisen, and help has been sought from legislators; but there is no general agreement as to the form which legislation on this subject should take.

A. VERMEERSCH

Utah

Utah

The thirty-second state admitted to the Union, takes its name from an Indian tribe known as the Utes or Yutas -- a Shoshonian offshoot -- whose hunting grounds embraced three-fourths of the territory enclosed by the boundaries of the State of Utah. It is 350 miles long and 275 miles wide. Its area is 84990 square miles (54,390,000 acres) and of these square miles 2780 are of water surface. The population according to the thirteenth census is 373,351. The state extends westerly to the Nevada line, and on the east to Colorado and Wyoming, on the south it is bounded by Arizona, and on the north by Idaho and Wyoming.

PHYSIOGRAPHY

The Wasatch and Uintah Ranges of the Rocky Mountain system traverse the state from north to south with collateral elevations stretching across the face of the land forming a picturesque variety to the basins and valleys. These mountains are furrowed with gorges and canyons through which the waters, formed by melting snow and rain, rush to the lowlands where they are diverted into irrigating canals. These canyons range in depth from 400 to 5000 feet. There are crests of the Wasatch Range from 12,000 to 14,000 feet above sea level. The Great Salt Lake -- the largest body of inland water in the United States west of the Missouri -- rests in the north central part of Utah. The lake has a surface measurement of 2,125 square miles, is 75 miles long by 50 wide, and is 4210 feet above sea level. With Sevier and Utah Lakes, Great Salt Lake is all that remains of Bonneville Sea, a great inland body of water that at some period in the past covered nearly all Utah. Sevier Lake is a saline body of water of varying dimensions which in dry seasons practically evaporates, leaving a crystalline residuum of impure sodium chloride and sulphates, five inches in depth. Jordan River, draining the fresh water lake, Utah, the Weber and Bear Rivers and many small streams flow into Salt Lake and compensate for the evaporation which has been in uninterrupted progress for ages and has made of the waters of Silt Lake a nearly saturated brine.

The mean annual temperature of Utah is 49 degrees. The highest temperature ever recorded was 115 degrees above, and the lowest 36 degrees below zero. Humid air currents travelling eastward from the Pacific Ocean air currents travelling eastward from the Pacific Ocean suffer a condensation of their vapours, and when they pass over the state become drying winds.

MATERIAL SOURCES

About two-thirds of Utah's population engage in agriculture. There are 2,135,000 acres of land under irrigation, with 10,000,000 more ready for irrigation. There are large farms which grow nothing but grain, but these are known as dry or arid farms. Those which are under irrigation are necessarily small, and the product is extra-ordinarily large. Three crops of alfalfa are harvested in the same year. The production and value of the leading crops in 1910 was as follows: corn, 394,000 bushels, valued at \$331,000; wheat, 5,108,006 bushels \$4,795,000; oats, 2,494,000 bushels, \$1,197,000; barley, 468,000 bushels, \$281,000; potatoes 2,130,000. The first irrigating canals were opened in Utah fifty years ago. One that carries water forty miles from Utah lake to Salt Lake City was built more than forty years ago and still furnishes water for irrigating large stretches of land. About one-third of the area of state is capable of cultivation, or is serviceable as ranges for sheep and cattle. Probably two-fifths of the area is covered by mountain ranges filled with precious metals. The remainder is desert land. Utah, which was the pioneer of irrigation in the inter-mountain states, has been converted from deserts and sage-brush wastes into fertile fields. This followed from the conservation of water, impounding it in great reservoirs, and distributing the water scientifically over the land.

In 1909 the state produced gold valued at \$4,243,907; and the production of silver amounted to 11,242,301 ounces; the lead production in 1910, according to local estimates, was 112,209,256 pounds valued at \$4,985,831; in the same year the copper production was 125,000,000 pounds valued at \$15,937,500; the zinc product was 15,337,367 pounds valued at \$851,243. The total value of metal, for 1910 was \$33,028,909. The coal production of the state has steadily increased, amounting in 1909 to 2,266,899 tons valued at \$3,757,060. Oil is developed San Juan County, and in southeastern Utah; about 265,000 barrels of oil are produced annually:

HISTORY

Long before Utah had a name or the region was even geographically placed, the Franciscan Fathers began their missionary labours in this region. In those days the missionary regions of the Southwest lay outside the jurisdiction of any Mexican or Spanish bishop. The Franciscan fathers labouring in these unexplored lands enjoyed, by special pontifical indult, exceptional privileges. There can be no doubt that if this immense territory, including Utah, Idaho, Colorado, and Wyoming, had remained under the control of Spain, the roving and sedentary tribes would have been converted to the Faith, civilized, and made useful citizens. From the time of the consecration of Fray Juan de Zumaraga as Bishop of Mexico, 2 Sept, 1530, until November, 1823, when Mexico won its independence and declared for a republic, the present State of Utah was Spanish territory. On 29

July, 1776, two Franciscan priests, Spaniards, Silvestre Velez de Escalante and Atanazio Dominguez, left Santa Fe, N. Mex., explored portions of Colorado, entered Utah, and were the first white men to look out upon the pleasant waters of Utah Lake. They remained with the Laguna tribe for some days, preaching to them and instructing them in Christian doctrine. Leaving here, 25 Sept. 1776, they continued on through southern Utah; crossed from the east, for the first time by white men, the Grand Canyon of the Colorado, and returned to Santa Fe, 2 January, 1777. They charted the explored lands, described the tribes they had visited the botany of the country, named the rivers and mountains, and bequeathed to us a valuable history of their expedition. From 1823 until 2 Feb., 1848, Utah belonged to the Republic of Mexico, and when the Mormons, American citizens, settled, July, 1847, in the valley of the Great Salt Lake they became, unconsciously, intruders on Mexican soil. By the Treaty of Peace, signed 2 Feb., 1848, by the American and Mexican representatives at Guadalupe-Hidalgo, the home-town of the famous shrine and pilgrimage of Our Lady of Guadalupe -- Utah came under the territorial jurisdiction of the United States. So that in less than one hundred years the region now known as the State of Utah was possessed by three separate nations.

It matters not to the present age or to Utah's future greatness whether Brigham Young and his hardy followers were directed to Salt Lake Valley by the great missionary, Father De Smet, by chance, or, as the Mormons claim, by Divine revelation. They came, they toiled; their settlement attracted many of their faith, and many who did not accept that faith. A territory was organized, a fine city was laid out, the mountain streams diverted over the arid land, and the land that was arable brought under cultivation. On 15 September, 1847, the American troops under General Winfield Scott took possession of Mexico City, and on 2 Feb., 1848, the Treaty of Guadalupe-Hidalgo was signed, ceding for a consideration of \$15,000,000 all territory north and east of the of the two republics, including the states California, Arizona, New Mexico, and Utah. The Latter Day Saints now, 1848, became subjects of the United States and, after organizing a provisional government, applied for admission into the Union under the title of the State of Deseret. Pending the will of Congress, the Mormons established their own mint and issued gold pieces of the value of 2.50, 5, 10, and 20 dollars. They also put in circulation paper currency and organized as a quasi-independent state. In the spring of '49 Utah's political history opened with the adoption of a constitution for the State of Deseret. Ignoring the application of the Mormons for statehood, Congress passed an act granting to Utah territorial rights. The bill was signed by President Millard Fillmore, 9 September, 1850. The boundaries of the new territory were defined in the Congressional Act to be: Oregon on the north, California on the west, the summit of the Rocky Mountains on the east, and the 37th parallel of latitude on the south. By the decree of the President of the United States, Brigham Young, the Mormon hierarch and head of the Church of the Latter Day Saints, was appointed first Governor of the Territory of Utah, 28 Sept., 1851, thus establishing a theocratic form of government, or an *imperium in imperio*, within the limits of the republic.

On the first Monday in April, 1851, the first municipal election was held in Salt Lake City. A charter for the city had been granted by the Assembly of Deseret, and on 9 Jan., 1851, the city was incorporated. By order of Congress the Legislature of Deseret was dissolved 5 April, 1851, when

a territorial legislature for Utah was established and a delegate to Congress elected. At that time, according to a census taken in April, 1851, the population of Utah was 11,354. Polygamy, which had been proclaimed -- and publicly for the first time at a special conference held in Salt Lake City, 28 August, 1852 -- was abolished by the "manifesto" of the October conference held in 1890 signed on 8 May, 1895 by Wilford Woodruff, President of the Church of Jesus Christ of Latter Day Saints. The Constitution was framed and adopted by popular vote, 5 Nov., 1895. By proclamation of the President of the United States, signed 4 January, 1896, Utah was admitted as a state of the Union. Salt Lake, the capital of Utah, is one of the most picturesque and attractive cities of America. Its streets are 132 feet wide and its population in 1910 was 92,777. Ogden, Provo, Logan, Murray, and Park City are prosperous towns of the state.

LEGISLATION

The Legislature for Utah consists of 63 members elected by the people: 45 in the House of Representatives and 18 in the Senate. Population forms the basis of representation both for the local Legislature and for Congress where Utah is represented by two senators chosen by the Legislature and one congressman elected, by popular vote. Under the criminal law murder is punished by death, the criminal having the choice of death by hanging or shooting. Blasphemy, arson, and perjury are statutory offenses, but blasphemy only when it constitutes a breach of the peace. Polygamy and bigamy are crimes against society and those proved guilty of either are punished by imprisonment not exceeding five years or by a fine of \$500. Under the civil law all priests and ministers attached to churches, all judges, mayors of cities, and justices of the peace are empowered to marry applicants, who must have the consent of parents or guardians if they are under age, that is 21 years for male and 16 for female. Cruelty, desertion, impotency, adultery, permanent insanity, habitual drunkenness, and conviction of felony are legal causes for divorce in Utah. Sunday is a legal holiday. School attendance is compulsory for all children between the ages of eight and sixteen. Clergymen, lawyers and doctors are privileged witnesses under state law.

EDUCATION

The school population of Utah (1910) was 108,924. A larger percentage of the population of Utah is within the school age than can be found in any other state of the Republic. There are two universities, the University of Utah, and the University of the Latter Day Saints, thirty-five high schools, a state Normal school, State School of Mines, State Agricultural College, State School for Deaf and Dumb, the Brigham Young Colleges at Provo and Logan, a Presbyterian college, the All Hallows (Catholic) College, St. Mary's Academy (Holy Cross Sisters), Salt Lake City, the Academy of the Holy Cross Sisters, Ogden, many private institutions of learning and 670 common schools. To have an accurate idea of the educational standing of Utah it is well to remember that, according to a late report of the State Superintendent of Education, there are only six states of the Union which expend more per capita of the total population for schools, than does the State of Utah. The

expenditure for educational purposes was \$2,832,273 in 1910, and the valuation of school property was \$5,902,801.

RELIGIOUS DENOMINATIONS

Sectarian Protestantism is represented in Utah by many ecclesiastical bodies including Protestant Episcopal, Presbyterian, Lutheran, Scientist, Bible Christian, Methodist, Methodist Episcopal, Congregational, Baptist, Theosophist, Spiritist, Unitarian, Latter Day Saints, Reorganized Latter Day Saints, Adventists, and other minor bodies. It is estimated that fully 30 per cent of the population of Utah attend no place of worship, and as divorce is increasing and becoming a menace to the stability of society, particularly in the cities and towns, the church population is threatened with more serious emaciation. Ecclesiastical property in the state is vested in corporations organized for ecclesiastical or charitable purposes, in a bishop properly incorporated, or it is held in trust under law by matured persons.

ECCLESIASTICAL HISTORY

We have seen that as early as 1776 two Spanish Franciscan priests left Santa Fe, New Mexico, and, crossing south-western Colorado, discovered Utah Lake, instructed the Laguna family of Utes, crossed the State of Utah from north to south preaching to the tribes on their way, and, returning to Santa Fe, January, 1776, made known the existence -- of the great inland body of water, now known as Salt Lake. Not till 1841 do we again read of a Catholic priest visiting Utah. In that year the heroic Jesuit missionary and explorer, Father Pierre-Jean de Smet, passed through the valley of Salt Lake on his way to Green River, Wyoming. This remarkable priest was, in the autumn of 1846, the guest of the Mormon leader, Brigham Young, who was wintering with his followers near Council Bluffs, preparing to enter the Great American Desert in the spring of 1847. As the Mormon president had not yet determined where he and his people would finally settle, he was greatly impressed with Father de Smet's description of Salt Lake and Cache Valleys stretching away from the Wasatch Mountains. "They asked me a thousand questions about the regions I had explored", writes the priest to his nephew, "and the valley which I have just described to you pleased them greatly from the account I gave them of it. Was this what determined them to settle there? I would not dare to affirm it. They are there!" In the summer of 1863, sixteen years after the Mormons entered Utah, that exemplary priest, John Baptist Ravardy, came from Denver, Colorado, and passed some days in Salt Lake City. He was the guest of General Patrick Edward Connor, then in command of the troops at Fort Douglas, built on a bench a little to the east of the city. Father Ravardy found no Catholics in Salt Lake and, after administering the Sacraments of Penance and Holy Communion to some soldiers at the military post, he returned to Denver, where he died, 18 November, 1889. Early in June, 1866, Rev. Edward Kelly visited Salt Lake by request of Bishop O'Connell of Sacramento, who believed his jurisdiction extended over the entire State of Utah. Father Kelly offered up the Holy Sacrifice -- the first Mass said in Salt Lake City -- on the morning of 29 June,

1866, in the Assembly Hall of the Latter Day Saints, courteously placed at his disposal by the president, Brigham Young.

On 5 Feb., 1868, Colorado and Utah were erected by Papal Brief into a vicariate Apostolic and the Very Rev. Joseph P. Machebeuf of Denver was, on 16 August of the same year, raised to the episcopate and entrusted with the vicariate. On 30 Nov., 1868, Bishop Machebeuf, having already appointed Rev. James P. Foley missionary rector of Salt Lake, visited the Mormon stronghold and confirmed fourteen soldiers. The bishop, during his visit of ten days, was the guest of General Connor, who accompanied him in some of his visits to the few Catholics then in Salt Lake. Father Foley remained in the city two years and on a lot purchased by his predecessor, Rev. Patrick Walsh, built in 1869 an unpretentious church, the first Catholic church erected in the State of Utah. In 1870, the Holy See, on the urgent pleading of Bishop Machebeuf, placed Utah under the jurisdiction of Archbishop Alemany of San Francisco, who entrusted the mission to the care of the Rev. Patrick Walsh. Father Walsh began his sacerdotal duties in Salt Lake early in 1871. He remained on the mission for two years, organized a parish in the city, destroyed the little adobe chapel of Father Foley and built a brick church under the patronage of St. Mary Magdalene. On 14 Aug., 1873, Rev. Lawrence Scanlan, missionary rector of Petaluma, Archdiocese of San Francisco, succeeded Father Walsh, and with him the history of the Church in Utah practically begins. When Father Scanlan entered Salt Lake he became missionary rector over the largest parish in extent in the United States. In a state population of 87,000 there were, perhaps, 800 Catholics. In Salt Lake and Ogden there were, by actual count, 90 Catholics; the remainder were dispersed along railroad divisions, in mining camps, and on the ranches. The little brick church to which he fell heir carried a debt of \$6000. It was the only Catholic church in a region of 85,000 square miles. Father Scanlan soon began, on foot and on horseback, a visitation of his immense charge, the hardships of which taxed to the limit the vital forces of a splendid physique. On 29 June, 1887, he was, in recognition of his administrative ability and of fidelity to the duties of his priestly mission, appointed vicar Apostolic over all Utah and a large area of Nevada. He was later consecrated Bishop of Larandum in the Cathedral of San Francisco by Archbishop Riordan, assisted by Bishops O'Connell and Minogue. In 1891 the Vicariate Apostolic of Utah and Nevada was canonically constituted a diocese, and bishop Scanlan fixed his cathedral in Salt Lake City. The newly erected diocese embraced the, as it does now, 153 square miles, constituting it the largest diocese in the United States.

The era of Gentile -- as distinguished from the Mormon -- emigration practically began with the building of the Union Pacific to Ogden in March, 1869, and with the elevation to the episcopal throne of the Very Reverend Lawrence Scanlan in 1887, Catholicism entered Utah as an organized religion. Since then, the Church, so far as adverse conditions have permitted, has kept step with the educational, industrial; and political expansion of the state. For one not familiar with conditions as they existed in Utah until the present, it would be next to impossible to understand the almost insuperable difficulties which opposed, and are yet opposing, the spiritual and material expansion of religion in Utah. The state is enclosed by the mineral belt of the South-west, and mining is one of the most important of its industries. When a report is heard on the streets of Salt Lake that gold

or silver has been uncovered in one of the gulches, canyons, or streams of the Wasatch Range, there is at once a rush for the "diggings". If facts verify the rumour, a mining camp is established which, in time, becomes a town of three or four thousand energetic men; among them will be many Catholics clamouring for a church and a priest. The bishop goes in person, to inspect conditions, is satisfied with the encouragement he receives, and, returning to Salt Lake, commissions one of his priests to take up his residence and build a church at "Silver Reef" or "Goldville". A year after the church is built and partially paid for, the "workings" give out and the town is abandoned, leaving the church vacant and the priest a pastor without a flock. This is not an incident in the experience of Bishop Scanlan, it is a repetition in his episcopal life. Many towns and villages, of from two to seven thousand souls, are entirely Mormon and are outside the influence of the Catholic Church. The Catholic population of Utah is sparse; nevertheless, the bishop has achieved marvels. He brought the Sisters of the Holy Cross from Indiana to Salt Lake City, to Ogden, to Park City, and Eureka. In Park City and Eureka the Sisters teach select and parochial schools; in Ogden they conduct the Sacred Heart Academy; in Salt Lake City the Sisters conduct St. Mary's Academy and also Holy Cross Hospital. The Kearns' St. Ann's Orphanage, built by Senator and Mrs. Kearns, has, since its completion in 1900 been under the care of eleven Sisters of the same order. In 1885 Bishop Scanlan founded and built the All Hallows College now one of the leading Catholic colleges of the South-west, and in 1889 he invited the Marist fathers to take charge of the institution. On 15 August, 1909, St. Mary Magdalene's Cathedral was dedicated by Cardinal Gibbons. In January, 1910, Bishop Scanlan introduced into his diocese the Sisters of Mercy and placed under their charge the "Judge Memorial Home", which was built, at a cost of \$175,000 by the late Mrs. Mary Judge, and given to the bishop to be used as a hospital and home for aged and disabled miners.

Confronted with unfavorable localities and uncertainties of the permanency of mining towns, the Bishop of Salt Lake has succeeded in establishing in his diocese permanent parishes, outside of Salt Lake and Ogden, at Park City, Eureka, Helper, and Green River, Utah; and at Austin, Tonopah and Eureka, Nevada. Annexed to these parishes are some forty missions and mining stations visited by the diocesan priests at measured intervals.

Uthina

Uthina

A titular see of Africa Proconsularis, suffragan of Carthage. Uthina is mentioned by Ptolemy (IV, 3, 34), Pliny (V, 4), and the Peutinger Tables. Pliny and an inscription call it a colony. From the accounts given by geographers the site seems to be the ruins known as Henshir Oudna, near a station on the railway from Tunis to Kef, Tunisia. These ruins occupy a surface nearly three miles

in circumference, covering a hilly plateau, and commanding the left bank of the Milian *wādys*; there are the remains of a fortress, cisterns, an aqueduct, triumphal arch, theatre, amphitheatre, basilica with a circular crypt, bridge, etc. Many beautiful mosaics are to be found there. Uthina had a bishop in the time of Tertullian by whom he was severely criticized (*De Monogamia*, xii). Five others are known: Felix, present at the Council of Carthage (256); Lampadius, at the Council of Arles in Gaul (314); Isaac, at the Conference of Carthage (411), where he had as rival the Donatist, Felicianus; Gallonius, at the Council of Carthage (419); and Quietus at that of 525.

S. PÉTRIDÈS

Utica

Utica

A titular see in Africa Proconsularis. The city was founded by Tyrian colonists at the mouth of the Bagradas River in the vicinity of rich mines, 1110 B.C. or 287 years before Carthage. It had two harbours, and during the Punic Wars was the ally rather than the vassal of Carthage. In 212 B.C., it was seized and plundered by the Roman, Ottacilius. After the fall of Carthage, 146 B.C., Utica became the capital of the Roman province of Africa, and was a *civitas libera* (free city), perhaps even *immunis* (exempt from taxes). It was here that Cato the Younger, called Cato of Utica, killed himself after his defeat at Thapsus, 46 B.C. Augustus granted the right of citizenship to the inhabitants of Utica, which under Adrian became a colony, under the name of Colonia Julia Ælia Hadriana Augusta Utica, and under Septimius Severus and Caracalla, a *colonia juris italici*. When Carthage again became the capital of Roman Africa, Utica passed to the second rank. On 24 Aug., 258 A.D., more than 153 martyrs, according to Saint Augustine, and according to Prudentius about 300, suffered for the Faith at Utica; they are known under the name of *Massa candida*, and later a basilica was built there in their honour (Monceaux, "Histoire littéraire de l'Afrique Chrétienne", II, 141-147). A number of bishops are mentioned by historians (Morcelli, *Africa Christiana*", I, 362, II, 150; Gams, "Series Episcoporum", I, 470; Toulotte, "Géographie de l'Afrique Chrétienne, Proconsulaire", 318-323). The oldest-known bishop, Aurelius, was present at the Council of Carthage, 256; the last, Potentinus, in 684, at the Council of Toledo in Spain, where he had taken refuge after the Arab invasion. This invasion and the choking up of its harbours with sand washed in by the Bagradas, hastened the downfall of Utica. Its ruins are at Bou-Chateur, not far from Porto-Farina, with which it is sometimes wrongly confounded. One may see here large reservoirs, an amphitheatre, and some remains of a wall.

S. VAILHÉ

Utilitarianism

Utilitarianism

(Lat. *utilis*, useful).

Utilitarianism is a modern form of the Hedonistic ethical theory which teaches that the end of human conduct is happiness, and that consequently the discriminating norm which distinguishes conduct into right and wrong is pleasure and pain. In the words of one of its most distinguished advocates, John Stuart Mill,

the creed which accepts as the foundation of morals, utility or the greatest happiness principle, holds that actions are right in proportion as they tend to promote happiness, wrong as they tend to produce the reverse of happiness. By happiness is intended pleasure and the absence of pain; by unhappiness, pain and the privation of pleasure (*Utilitarianism*, ii, 1863).

Although the term *Utilitarianism* did not come into vogue until it had been adopted by Bentham, and until the essential tenets of the system had already been advocated by many English philosophers, it may be said that, with the important exception of Helvetius (*De l'esprit*, 1758), from whom Bentham seems to have borrowed, all the champions of this system have been English. The favour which it has enjoyed in English speculation may be ascribed in a great measure to the dominance of Locke's teaching, that all our ideas are derived exclusively from sense experience. This epistemological doctrine, hostile to all shades of intentionalism, finds its ethical complement in the theory that our moral ideas of right and wrong, our moral judgments, and conscience itself are derived originally from the experienced results of actions.

Tracing the stream of Utilitarian thought from its sources, we may start with Hobbes (*Leviathan*, 1651), whose fundamental ethical axiom is that right conduct is that which promotes our own welfare; and the social code of morals depends for its justification on whether or not it serves the wellbeing of those who observe it. A Protestant divine, Richard Cumberland (*De legibus naturæ*, 1672), engaged in the refutation of Hobbes's doctrine, that morality depends on civil enactment, sought to show that the greatest happiness principle is a law of the Gospel and a law of nature: "The greatest possible benevolence of every rational agent towards all the rest constitutes the happiest state of each and all. Accordingly common good will be the supreme law." This view was further developed by some other theologians of whom the last and most conspicuous was Paley (*Principles of Moral and Political Philosophy*, 1785), who reasoned that since God wills the happiness of all men it follows that if we would conform our conduct to God's will we must act so as to promote the common happiness; and virtue consists in doing good to all mankind in obedience to the will of God and for the sake of everlasting happiness. Moral obligation he conceived to be the pressure of the Divine will upon our wills urging us to right action. More in harmony with the spirit of the later Utilitarians was Hume, the slightest of whose preoccupations was to find any religious source or sanction of morality. In his *Inquiry concerning the Principles of Morals* (1751)

he carried out an extensive analysis of the various judgments which we pass upon our own character and conduct and on those of others; and from this study drew the conclusion that virtue and personal merit consist in those qualities which are useful to ourselves and others. In the course of his speculation he encounters the question which is the irremovable stumbling block in the path of the Utilitarian theorist: How is the motive of self-interest to be reconciled with the motive of benevolence; if every man necessarily pursues his own happiness, how can the happiness of all be the end of conduct? Unlike the later thinkers of this school, Hume did not discuss or attempt systematically to solve the difficulty; he dismissed it by resting on the assumption that benevolence is the supreme virtue.

In Hartley (*Observations of Man*, 1748) we find the first methodical effort to justify the Utilitarian principle by means of the theory of association to which so large a part in the genesis of our moral judgments is assigned by subsequent speculators, especially those of the Evolutionist party. From sensations and the lower elementary or primary emotions, according to Hartley, result higher feelings and emotions, different in kind from the processes out of which they have arisen. The altruistic motives, sympathy and benevolence, are then accounted for. With Bentham arises the group of thinkers who have appropriated the name of Utilitarians as their distinctive badge. The leaders after Bentham were the two Mills, the two Austins, and Godwin, who are also known as the Philosophic Radicals. While the members of this party devoted considerable thought to the defence and development of theoretical Utilitarianism and made it the starting-point of their political activity, they became remarkable less as philosophic speculators than as active reformers of social and economic conditions and of legislation. The keynote of their doctrines and policy is struck by Bentham in the opening of his *Principles of Morals and Legislation* (1789):

Nature has placed mankind under the governance of two sovereign masters, pain and pleasure. It is for them alone to point out what we ought to do as well as what we shall do. On the one hand the standard of right and wrong, on the other the chain of cause and effect are linked to their throne. They govern us in all we do, every effort we can make to throw off their subjection will serve but to demonstrate and confirm it. In a word man may pretend to abjure their empire; but in reality he will remain subject to it all the while. The principle of utility recognizes this subjection, and assumes it for the foundation of that system the object of which is to rear the fabric of felicity by the hand of reason and law.

Staunchly standing by the principle of unqualified egoism, Bentham rids himself of the task of reconciling self-interest and altruism:

Dream not that men will move their little finger to serve you, unless their advantage in doing so is obvious to them. Men never did so and never will while human nature is made of its present materials. But they will desire to serve you when

by so doing they can serve themselves, and the occasions on which they can serve themselves by serving you are multitudinous (*Deontology*, ii, 1834; posthumous work).

In the hands of Bentham and his disciples Utilitarianism dissociates morality from its religious basis and, incorporating Determinism with its other tenets, becomes pronouncedly Positivistic, and moral obligation is resolved into a prejudice or a feeling resulting from a long-continued association of disagreeable consequences attending some kinds of actions, and advantages following others. The word *ought* Bentham characterizes as an authoritative impostor, the talisman of arrogance, indolence, and ignorance. It is the condemnation of Utilitarianism that this estimate of duty is thoroughly consistent with the system; and no defender of the utility theory has been able, though some have tried, to indicate the claims of moral obligation on Positivistic Utilitarian grounds. Bentham drew up a curious scheme for computing the worth or weight to be assigned to all sorts of pleasures and pains, as a practical norm to determine in the concrete the moral value of any action. He assumes that all pleasures are alike in kind and differ only in quantity, that is in intensity, certainty, duration, etc. His psychological analysis, besides the original defect of making self-interest the sole motive of human action, contains many errors. Subsequent writers have abandoned it as worthless for the very good reason that to calculate, as its employment would demand, all the results of every action, and to strike a balance between the advantages and disadvantages attendant upon it, would require an intellect much more powerful than that with which man is endowed.

The classic expression of the system is John Stuart Mill's *Utilitarianism*, which endeavours to raise the Utilitarian ideal to a higher plane than that of the undisguised selfishness upon which Bentham rested it. As the foundation of his structure Mill asserts that every man necessarily acts in order to obtain his own happiness; but finding this ground logically insufficient to furnish a basis for an adequate criterion of conduct, and prompted by his own large sympathies, he quickly endeavours to substitute "the happiness of all concerned" for "the agent's own happiness". The argument over which he, the author of a formidable work on logic, endeavours to pass from the first to the second position, may serve as an example suitable to submit to the beginner in logic when he is engaged in the detection of sophisms. The argument, in brief, is that, as each one desires and pursues his own happiness, and the sum total of these individual ends makes up the general happiness, it follows that the general happiness is the one thing desirable by all and provides the Utilitarian standard of what is right in conduct. "As well might you argue", says Martineau, "that because of a hundred men each one's hunger is satisfied by his dinner, the hunger of all must be satisfied with the dinner of each." To escape some of the criticisms urged against the doctrine as stated by Bentham, who made no distinction in the various kinds of pleasure, Mill claimed that Utilitarianism notes that pleasures differ in quality as well as quantity; that in the judgment of those who have experience of different pleasures, some are preferable to others, that it is better to be a human being dissatisfied than a pig satisfied, better to be Socrates dissatisfied than a fool satisfied. Then he slips from "preferable" to "higher", thus surreptitiously introducing a moral classification

among pleasures. The only legitimate grounds for attaching higher and lower moral values to various pleasures, is to estimate them according to the rank of the faculties or of the kinds of action to which they belong as results. But to do this is to assume some moral standard by which we can measure the right or wrong of action, independently of its pleasurable or painful consequences. To answer the objection that virtue is desired for its own sake, and men do right frequently without any calculation of the happiness to be derived from their action, Mill enlists the association theory; as the result of experience, actions that have been approved or condemned on account of their pleasurable or disagreeable consequences at length come to be looked upon by us as good or bad, without our actually adverting to their pleasant or painful result.

Since Mill's time the only writer who has introduced any modification into strictly Utilitarian thought is Sidgwick (*Methods of Ethics*, 1874), who acknowledges that the pleasure-and-pain standard is incapable of serving universally as the criterion of morality; but believes it to be valuable as an instrument for the correction of the received moral code. The general happiness principle he defends as the norm of conduct but he treats it rather as a primary than a demonstrable one. Although he vigorously denounced Utilitarianism, Herbert Spencer's ethical construction (*Data of Ethics*, 1879), which may be taken as the type of the Evolutionist school, is fundamentally Utilitarian. True, instead of happiness he makes the increase of life, that is, a fuller and more intensive life, the end of human conduct, because it is the end of the entire cosmic activity of which human conduct is a part. But he holds pleasure and pain to be the standard which discriminates right from wrong so that in reality he looks upon the moral value of actions as entirely dependent upon their utility. His account of the genesis of our moral ideas, of conscience, and of our moral judgments is too lengthy and complicated to enter into here. Suffice it to say that in it he sets forth the influence of association with that of heredity as the source of our moral standards and judgments. Our sense of moral obligation is but a transitory feeling, generated by the confluence of our inherited racial experience of the results of action with another feeling that the remote present themselves to our consciousness as possessing more "authoritativeness" than the immediate results. The arguments urged against Hedonism in general are effective against Utilitarianism. Its own peculiar weakness lies in its failure to find a passage from egoism to altruism; its identification of self-interest and benevolence as a motive of conduct; and its claim that the ideas *morally right* and *useful* are identical at bottom.

JAMES J. FOX

Utopia

Utopia

(Greek *ou* no or not, and *topos* place), a term used to designate a visionary or an ideally perfect state of society. The name was first used by Sir Thomas More in his work entitled "De optimo reipublicae statu deque nova insula Utopia" (Louvain, 1615), and has since been used as a generic term for political romances. Such a romance, to which More was indebted for many of his ideas,

is Plato's "Republic". In this work Plato prescribes a communistic mode of life for the guardians and auxiliaries (not for the productive classes) of the State. The superior qualities of the guardian and auxiliary class were to be maintained by the practice of stirpiculture and state control of the bringing up of children. In the "Republic", the ends sought are political rather than economic. Sir Thomas More, on the other hand, does not confine his attention to the governing class but includes the whole social structure in his plan. He puts most of his narrative into the mouth of a certain Raphael Hythloday, a Portuguese traveller, who criticizes trenchantly the laws and customs of European states, and paints in glowing colours the ideal institutions which he had observed in a five years' sojourn among the Utopians. Hythloday contends that English laws are badly administered. The thief and the murderer alike are punished with death with no consequent diminution of the crime of theft. Means should be taken rather to see that men are not driven to steal. The servant class, for example, should learn trades, so that they need not have recourse to highway robbery when dismissed by their masters. Also some provision should be made for agricultural labourers that they might not follow a like profession when the arable lands were converted into sheep runs, a crying evil in England at that time. He contended further that most of the difficulties of European government grew out of the institution of private property. The objection is made that a nation cannot be prosperous where all property is common because there would be no incentive to labour, men would become slothful, and violence and bloodshed would result. Hythloday answers this objection by giving an account of the institutions and customs of the Utopians.

In the Island of Utopia lying south of the equator there are fifty-four cities of which no two are nearer together than twenty-four miles. The government is representative in form. From each city three wise and experienced men are sent each year to the capital to deliberate on public affairs. The rural population live in farm-houses scattered throughout the island, each of which contains at least forty persons besides two slaves. For every thirty farm-houses there is a leader called a philarch. Ten philarchs together with their groups of families are under an officer called a chief philarch. The prince of the island is chosen for life by the philarchs from four candidates nominated by the people. He may be deposed if he is suspected of tyranny. The laws are few in number and seldom violated. Among the Utopians agriculture is a science in which all are instructed. The children in the schools learn its history and theory. From each group of thirty farms twenty persons are sent annually to the neighbouring cities to make room for an equal number who come from the city to the country. In the course of time all have a taste of farm life. In addition to agriculture each person is taught a trade. Usually he selects his father's trade, but if he desires to learn another he is allowed to do so. The Utopians work only six hours a day but this is sufficient to provide them with all the necessaries and comforts of life, for the reason that there are so few idlers and that no time is spent in supplying useless or vicious luxuries. In the cities groups of families have common dining-halls, although anyone who chooses to do so may dine at his own house. The menial service in these dining-rooms is performed by slaves, while the women of the various families by turns superintend the preparation of the meals. When the Utopians have produced a supply sufficient to last them for two years, they use any surplus which they may have to carry on commerce with neighbouring

nations, securing from them gold, silver, iron, and such other things as they need. They do not use gold and silver as money, since they have common ownership of property, but they procure it principally in order to hire mercenaries from among their neighbours. In music, arithmetic, and geometry they are not surpassed by the Europeans, and in astronomy and meteorology they far outstrip them.

There are different varieties of religion, but their public worship is of such a general nature that they are able to worship together. All beliefs except Atheism are tolerated. Their ethics is Hedonistic and very few of them are attracted by an ascetic life. Those convicted of heinous crimes are reduced to slavery, and persons sentenced to death in other countries are also procured as slaves. Children of slaves do not retain the status of their parents. Persons afflicted with incurable and painful diseases are advised by the priests and magistrates to take their own lives. If they do not wish to do so, however, they are not compelled to. Those who commit suicide without the consent of the priests and magistrates are given dishonourable burial, and those who meet death cheerfully have their bodies cremated as a mark of honour. Women are not allowed to marry under the age of eighteen nor men under the age of twenty-two. Much care is taken to make those contracting marriage acquainted with each other so as to avoid unhappy unions. Divorces are permitted for one cause, and only the innocent party may remarry. The Utopian priests are of extreme holiness but their numbers are small. They are elected by the people by secret ballot. Women are not excluded from the priesthood, though few of them - and these widows and old women - are chosen. The priesthood is held in high honour. The traveller concludes his account by attributing the happiness and concord prevailing in Utopia to the absence of private property.

It is sometimes asked whether More meant to have the proposals in the Utopia taken seriously. Undoubtedly he did not. They were merely a means by which he could call attention to some of the abuses of his day without being taken to task by the king for his freedom. While he shows that he appreciates the weakness of communism, he allows Hythloday to present only its strength. Since More's day many ideal commonwealths in imitation of the Utopia have flourished in literature.

Among the best known are:

- Bacon's "New Atlantis" (1624), in which the author dreams of the happiness of mankind attained through the progress of the natural sciences;
- Campanella's "City of the Sun" (1637), which emphasizes community of property and stirpiculture;
- Harrington's "Oceana" (1656); Fénelon's "Telemaque" (1699); Cabet's "Voyage in Icaria" (1840);
- Bellamy's "Looking Backward" (1889);
- William Morris's "News from Nowhere" (1890);
- Hertzka's "Freiland" (1891); and
- H. G. Wells's "A Modern Utopia" (1905) and "New Worlds for Old" (1908).

Morley's "Ideal Commonwealths" contains an English translation of More's "Utopia" as well as of Bacon's "New Atlantis", Campanella's "City of the Sun", and other imaginary states.

FRANK O'HARA

Ut Queant Laxis Resonare Fibris

Ut Queant Laxis Resonare Fibris

The first line of a hymn in honour of St. John the Baptist. The Roman Breviary divides it into three parts and assigns the first, "Ut queant laxis", etc., to Vespers, the second, "Antra deserti teneris sub annis", to Matins, the third, "O nimis felix, meritique celsi", to Lauds, of the feast of the Nativity of St. John (24 June). With hymnologists generally, Dreves ascribes the authorship to Paulus Diaconus and expresses surprise at the doubt of Duemmler, for which he can see no reason. The hymn is written in Sapphic stanzas, of which the first is famous in the history of music for the reason that the notes of the melody corresponding with the initial syllables of the six hemistichs are the first six notes of the diatonic scale of C. This fact led to the syllabic naming of the notes as Ut, Re, Mi, Fa, Sol, La, as may be shown by capitalizing the initial syllables of the hemistichs:

UT queant laxis REsonare fibris
 MIra gestorum
 FAmuli tuorum,
 SOLve polluti LABii reatum, Sancte Ioannes.

Guido of Arezzo showed his pupils an easier method of determining the sounds of the scale than by the use of the monochord. His method was that of comparison of a known melody with an unknown one which was to be learned, and for this purpose he frequently chose the well-known melody of the "Ut queant laxis". Against a common view of musical writers, Dom Pothier contends that Guido did not actually give these syllabic names to the notes, did not invent the hexachordal system, etc., but that insensibly the comparison of the melodies led to the syllabic naming. When a new name for the seventh, or leading, note of our octave was desired, Erich Van der Putten suggested, in 1599, the syllabic BI of "labii", but a vast majority of musical theorists supported the happier thought of the syllable SI, formed by the initial letters of the two words of the last line. UT has been generally replaced by DO because of the open sound of the latter. Durandus says that the hymn was composed by Paul the Deacon on a certain Holy Saturday when, having to chant the "Exsultet" for the blessing of the paschal candle, he found himself suffering from an unwonted hoarseness. Perhaps bethinking himself of the restoration of voice to the father of the Baptist, he implored a similar help in the first stanza. The melody has been found in a manuscript of the tenth century, applied to the words of Horace's Ode to Phyllis, "Est mihi nonum superantis annum". The hymn offers exegetical difficulties in the stanza "Ventris obstruso", etc. Littledale's version, used in Bute's "The Roman Breviary", refers the "uterque parens" to Mary and Elizabeth:

"Pent in the closet of the womb, thy Saviour
 Thou didst adore within His chamber shrined:
 Thus did each parent in their unborn offspring
 Mysteries find."

Caswall translates similarly: "What time Elizabeth and Mary sang." Pauly refers the two words to Zachary (for his canticle of the Benedictus) and Elizabeth (for her address to Mary: "Blessed art

thou among women", etc.); and "uterque" would better support this view. Also, "Mysteria find" is a poor version of "Abdita pandit", since it conceals the allusion to the twofold "utterance" of the parents. Greater difficulty is found in the interpretation of the stanza "Serta ter denis", etc. A sufficiently close rendering would be:

"Some crowns with glory thirtyfold are shining;
Others, a double flower and fruit combining:
Thy trinal chaplet bears an intertwining
Hundredfold fruitage."

This is an evident allusion to the parable of the sower (Matt., xiii, 8) whose seed fell upon good ground and brought forth fruit, "some an hundredfold, some sixtyfold, and some thirtyfold"; but the composer of the hymn clearly adds the thought of a triple crown -- perhaps that of Precursor, Prophet, Martyr; perhaps that of Prophet, Virgin, Martyr.

H. T. HENRY

Utraquism

Utraquism

The principal dogma, and one of the four articles, of the Calixtines or Hussites. It was first promulgated in 1414, by Jacob of Mies, professor of philosophy at the University of Prague. John Hus was neither its author nor its exponent. He was a professor at the above-named university, which required its bachelors to lecture on the works of a Paris, Prague, or Oxford doctor; and in compliance with this law, Hus, it seems, based his teaching on the writings of John Wyclif, an Oxford graduate. The opinions of Wyclif -- which were a cause of Utraquism -- were imbibed by the students of Prague, and, after Hus had been imprisoned, the Wycliffian influence showed itself in the Hussites' demand for Communion under both forms as necessary for salvation. This heresy was condemned in the Councils of Constance, Basle, and Trent (Denzinger-Bannwart, 626, 930 sqq.).

Utraquism, briefly stated, means this: Man, in order to be saved, must receive Holy Communion when he wishes and where he wishes, under the forms of bread and wine (*sub utraque specie*). This, said the Hussite leader, is of Divine precept. For, "Except you eat the flesh of the Son of man, and drink his blood, you shall not have life in you" (John, vi, 54). To receive only the Sacred Host is not "drinking" but "eating" the Blood of Christ. That this is of Divine precept, continued the Hussite, is further evident from tradition, as up to the eleventh or twelfth century the Chalice and the Host were offered to the faithful when they communicated. Add to this, that more grace is conferred by the reception of the Eucharist under both forms, and it is clear, so Jacob of Mies maintained, that communion *sub utraque specie* is obligatory. This conclusion the Council of Constance rejected (Denzinger-Bannwart, 626). Then followed the Hussite wars. To make peace, the Council of Basle (1431) allowed Communion under both forms to those who had reached the age of discretion and were in the state of grace, on the following conditions: that the Hussites

confess that the Body and Blood, Soul and Divinity of Christ were contained whole and entire both under the form of bread and under that of wine; and that they retract the statement that Communion under both forms is necessary for salvation (Mansi, XXX). To this some of the Hussites agreed, and were known as the Calixtines, from their use of the chalice. The others, led by Ziska, and called Taborites, from their dwelling on a mountain top, refused and were defeated by George Podiebrad in 1453, from which date Utraquism in Prague has been practically an empty symbol. But it is still a tenet of Anglicanism, and is enumerated among "The Plain reasons against joining the Church of Rome" (London, 1880). The Catholic Church has never said that Communion under both forms is of itself either sinful or heretical. The Church has withheld the chalice from the laity out of reverence for the Precious Blood, and condemned the Hussites because they argued it was essential to salvation, and threatened to revive a heresy.

The Nestorians were condemned in the patristic period, and the heretics in the Council of Trent, because they denied that the Real Presence was whole and entire under each form (Denzinger Bannwart, 930 sqq.; Mansi, XXX). The Nestorians had denied that the Real Presence was wholly and entirely under each form. The bread, they said, contained only the Body of Christ and the wine only His Blood. This is heretical. Because, as the Church quotes (and the text is the authentic Greek), "whosoever shall eat this bread, or drink the chalice of the Lord unworthily, shall be guilty of the body and of the blood of the Lord" (I Cor., xi, 27). For, "Christ rising again from the dead, dieth now no more" (Rom., vi, 9). Separation of flesh and blood is death, and hence Christ's presence whole and entire under each species is a dogma of Catholic belief. Catholic theology offers this explanation: By the words of consecration, Christ's Body is under the appearance of bread, and His Blood under the appearance of wine. The Body and Blood, Soul and Divinity of Jesus Christ form one indivisible Person, and must be found together. That virtue or force which unites the body to the blood, and vice versa, in the Eucharist, is known in Catholic theology under the term *concomitance*. Utraquism tended to undo this dogma, because it declared communion under both forms essential to salvation. This was virtually to deny that Christ was whole and entire under each form. It went further, in declaring that Communion-the reception of the Eucharist-was absolutely necessary to salvation.

Theologians distinguish two kinds of necessity: that of means and that of precept. Necessity of means is that absolutely obligatory use of those things required to attain a purpose. It is an "imperative must" that arises from the very nature of things. Necessity of precept is an obligation imposed by a command, and for good reasons that which is prescribed may be dispensed with. The Hussites contended that the Eucharist was a necessary means to salvation, so that those who died without having received the Eucharist, e.g. the insane, the young could not, according to the Hussites, be saved. All this they inferred from Christ's words: "Except you eat the flesh of the Son of man, and drink his blood you shall not have life in you" (John, vi, 54). Now the Catholic Church denies that the Eucharist is necessary as a means to salvation. She commands the faithful to receive the Eucharist, emphasizes its importance, and declares it wellnigh impossible for one to continue long in the state of grace without it. This is a precept; from it dispensations are possible. Hence if any

one died without this sacrament, his eternal 1088 would not, merely for this reason, be a necessary consequence. This is clear from the practice of the Early Church. Even when Communion under both forms prevailed, some received under only one species. To the sick it was thus often given, and the Church has never considered them lost. As to the text which seems to oblige Communion under both forms, it is a question of interpretation. The Catholic Church is the only authoritative interpreter of Christ's doctrine; to none other has this power been granted. Omitting here the many meanings Catholic theologians attribute to the verse, "Except you eat the flesh of the Son of man, and drink his blood, you shall not have life in you" (John, vi, 54), it should be noted that the Catholic Church has officially declared that these words do not make Communion under both forms obligatory (Denzinger-Bannwart, 930). This conclusion is substantiated by Scripture: "If any man eat of this bread, he shall live for ever; and the bread that I will give, is my flesh, for the life of the world" (John, vi, 52). It is true that some theologians believe more grace is conferred by Communion under both forms. But this question is speculative, not practical. It does not affect the Church's dogma, nor is this opinion by any means common to all Catholic theologians.

B. HUGHES

Archdiocese of Utrecht

Archdiocese of Utrecht

Situated in the Netherlands, includes the Provinces of Utrecht, Friesland, Overijssel, Drenthe, Groningen, the larger part of Gelderland, and a small part of North Holland. In 1911 the archdiocese contained 17 deaneries, 282 parishes, 578 secular priests, 390 churches and chapels, and 383,000 Catholics. The cathedral chapter consists of a provost and 8 canons; the Government has no part in the nomination of the archbishop. The archiepiscopal seminary is divided into two sections: one at Driebergen with five professors, the other at Culenberg with twelve. The religious orders and congregations are: Augustinians, Carmelites, Capuchins, Dominicans, Franciscans, Trappists, Redemptorists, Brothers of Mercy, Brothers of Our Lady of the Sacred heart, and Brothers of St. John of God, with altogether 15 houses; Sisters of Our Lady of Mercy, Tertiaries of St. Francis, Tertiaries of St. Dominic, Sisters of Konigsbusch, Sisters of the Society of Jesus of Bois-le-Duc, Sisters of St. Joseph, Benedictine Nuns of the Perpetual Adoration, Sisters of St. Charles Borromeo, Sisters of the Good Shepherd, Carmelite Nuns of the Strict Observance, Daughters of Mary and Joseph, Sorores Matris Boni Succursus, Poor Sisters of the Child Jesus, Poor School Sisters, Sisters of Mercy, Sisters of the Sacred Hearts of Jesus and Mary, and Ursuline Nuns; altogether about 80 houses. The principal church of the diocese is the Cathedral of St. Catherine, built in the Gothic style in 1524; the former Catholic Cathedral of St. Martin, built 1251-67 in Gothic style, now belongs to the schismatic Jansenists.

The founding of the Diocese of Utrecht dates back to the Frankish era. In 695 St. Willibrord was consecrated at Rome Bishop of the Frisians. Towards the close of the seventh century, with the consent of the Frankish king, he settled at the market-town of Utrecht and built two churches

there, the Church of Our Saviour, and that of St. Martin. The conversion of the Frisians to Christianity, though, progressed very slowly. After Willibrord's death St. Boniface repeatedly gave his attention to the Church of Utrecht without, however, being its bishop. Under the guidance of his friend St. Gregory, the school founded by St. Willibrord became a noted centre of Christian education for the northern part of the Frankish kingdom. During the early years of its existence the diocese suffered greatly from the incursions of the heathen Frisians, and in the ninth and tenth centuries from the plundering expeditions of the Normans, who traversed the territory robbing and burning as they went. Better times appeared during the supremacy of the Saxon emperors, who esteemed the Bishops of Utrecht highly, and frequently summoned them to attend the imperial councils and diets. Through the grants of land and privileges bestowed by these emperors the Bishops of Utrecht became secular princes, and were among the most powerful feudal lords of the north-western part of the empire. In this way, like the other German bishops, they became involved in the quarrels of the emperors and popes. Bishop William (1057-76) was an unswerving partisan of the Emperor Henry IV during the Strife of Investitures. He took part in the synod of Worms which pronounced the deposition of Pope Gregory VII, and signed the decree of deposition directly after the Archbishop of Mainz. His successor Konrad (1078-99) was also a zealous adherent of the emperor. The Concordat of Worms (1122) annulled the emperor's right of investiture, and the cathedral chapter received the right to the free election of the bishop. It was, however, soon obligated to share this right with the four other collegiate chapters which existed in the city of Utrecht. The Counts of Holland and Geldern, between whose territories the lands of the Bishops of Utrecht lay, also sought to acquire influence over the filling of the episcopal see. This often led to disputes at the election of the bishops, and it was but seldom that capable and worthy men gained the See of St. Willibrord. Consequently the Holy See frequently interfered in the election, and after the middle of the fourteenth century repeatedly appointed the bishop directly without regard to the five chapters.

The Great Schism of the West in the latter quarter of the fourteenth century also affected the Diocese of Utrecht. Bishop Arnold II of Horn (1371-78) was opposed by a rival bishop, Floris of Wevelinkhofen (1378-93). The latter was generally recognized when Arnold, in return for a large sum of money, renounced his claims to Utrecht, and was raised to the See of Liege. During the episcopate of Floris, Gerhard Groote, who traversed the diocese as a preacher of repentance, was very successful in his efforts to bring about reforms. Floris was succeeded by one of the best bishops of Utrecht, Frederick of Blankenheim (1392-1423). Frederick's excellent administration was followed by a schism that lasted twenty-five years. Pope Martin V would not recognize Rudolph of Diepholz (1423-55), who had been elected by the chapters, and appointed Rabanus, Bishop of Speyer, as bishop, and, after his resignation, the cathedral provost of Utrecht, Zweder of Culenberg. After Zweder's death in 1433 his brother, Walraf of Mors, was appointed bishop by Pope Eugene IV. As the neighbouring secular rulers took part in the quarrel over the diocese, the country suffered terribly until the general recognition of Rudolph put an end to the schism. After his death the chapters elected Gijsbrecht of Brederode, but Philip of Burgundy was able to obtain at Rome the appointment of his illegitimate son David. During the entire period of his episcopate David (1457-94) maintained

himself with difficulty against his enemies, namely the knights of the diocese and the city of Utrecht. He was succeeded by Frederick of Baden (1496-1516) a protégé of Maximilian of Austria, and Philip of Burgundy (1518-24), who did much for the encouragement of art and to improve church discipline. Henry of Bavaria (1524-28) who was also Bishop of Freising and Worms, resigned the see in 1528 with the consent of the chapter, and transferred his secular authority to Charles V, who was also Duke of Brabant and Count of Holland. Thus Utrecht came under the sovereignty of the Hapsburgs; the chapters voluntarily transferred their right of electing the bishop to Charles V, and Pope Clement VII gave his consent to the proceeding. The first bishop appointed by Charles, Cardinal William Enckevoort, died in 1533 without having ever entered his diocese.

In 1550 at the instance of Philip II, the church organization of the Netherlands was entirely changed by forming new dioceses and reorganizing the old ones. Utrecht was taken from Cologne, of which it had been a suffragan, and raised to the rank of an archdiocese and metropolitan see. Its suffragan dioceses were Haarlem, Bois-le-Duc, Middleburg, Deventer, Leeuwarden, and Groningen. But the new ecclesiastical province had not a long existence. During the administration of the first archbishop, Frederick Schenk of Toutenberg (1561-80), Calvinism spread rapidly, especially among the nobility, who viewed with disfavour the endowment of the new bishoprics with the ancient and wealthy abbeys. When the northern provinces of the Netherlands revolted, the archdiocese fell, with the overthrow of the Spanish power. As early as 1573, under the supremacy of the Calvinists, the public exercise of the Catholic faith was forbidden. Proof of the persecution which the Catholics suffered is given by the death of the nineteen martyrs of Gorkum. The two successors appointed by Spain did not receive canonical confirmation, neither could they enter their diocese on account of the opposition of the States-General. From the end of the sixteenth century their place was taken by vicars Apostolic for the United Netherlands, who, however, were generally driven from the country by the States-General and forced to administer their charge from abroad. Although, in addition to this, there was a great lack of priests, still a very large part of the population of the Netherlands remained loyal to the Catholic religion. Among these vicars Apostolic, who were generally made titular archbishops, was John of Neercassel (1662-86), a friend of the Jansenists Arnold and Quesnel, who had fled from France and was inclined to Jansenism himself. His successor, Petrus Cobde (1688-1704), was suspended in 1702 by Clement XI on account of his Jansenistic opinions and his stubborn opposition to the papal see, and in 1704 the pope deposed him. The cathedral chapter of Utrecht, though, illegally elected first a vicar-general (1706), then in 1723 with the approval of the States-General chose the parish priest of Utrecht, Cornelius Steenhoven, as archbishop. Steenhoven was excommunicated by Pope Benedict XIII. This was the origin of the Jansenistic Church of Utrecht, which, however, was joined by only a very small part of the Catholic clergy and laity, although the state favoured it entirely. As the pro-vicars appointed by the pope were not permitted by the Government to enter the country, both the Catholic Church of Utrecht and that of the entire Netherlands was administered until the French Revolution by papal internuncios of Cologne and Brussels.

Owing to the occupation of Holland by the French in 1795, the Catholics obtained somewhat more freedom. Still, there was no proper organization of church affairs, not even after the uniting of the Netherlands with Belgium by the Congress of Vienna in 1815. The concordat made with the pope in 1827 was not carried out. In 1833 a vicar for the Netherlands was appointed once more. The Constitutions of 1848 granted the Catholics at last complete parity with the other confessions, and gave the church authorities almost unlimited freedom in purely religious matters and in the administration of the property of the Church. The pope could now plan the restoration of the ecclesiastical hierarchy in the Netherlands. After long negotiations the most essential regulations of the Concordat of 1827 were put into force. The Bull "Ex qua die" of 4 March, 1853, organized the Church of the Netherlands anew. Utrecht was raised once more to an archbishopric, and received the four suffragan dioceses of Haarlem, Bois-le-Duc, Breda, and Roermond. John Zaijsen was appointed the first archbishop; as administrator he also ruled the Diocese of Bois-le-Duc. The archbishop took up with great energy and caution the organization of the new dioceses, the division into deaneries, the settling of the boundaries of the individual parishes. The administration of the lands of the parishes, of the lands of the Church, and the management of the benevolent institutions. By numerous excellent decrees he provided for the improvement of church discipline, for the encouragement of orders and of church associations, for the training of a competent clergy (1857, a seminary for priests was opened), for the establishment of Catholic schools independent of the State, for the improvement of the Press, etc. In 1858 the cathedral chapters of the dioceses were organized and in 1864 the first provincial synod was held. In 1868 the archbishop resigned the archdiocese on account of age, retaining only the direction of the Diocese of Bois-le-Duc. His successors were Andreas Ignatius Schaepman (1868-82), during whose administration the large archiepiscopal museum was established; Petrus Matthias Snickers (1883-95), and Henry van de Wetering (since 1895).

BROM, "Bullarium trajectense" (2 vols., The Hague, 1891-96); "Neerlandia catholica seu provinciae ultrajectensis historia et conditio" (Utrecht, 1887); ALBERS, "Geschiedenis van het herstel der Hierarchie in de nederlanden" (2 vols., Nimwegen, 1903-04); "Archief voor de geschiedenis van het Aartsbisdom Utrecht" (Utrecht, 1874--); BLOK, "Geschiedenis van het Nederlandsche Volk" (6 vols., Groningen, 1892-1904); "Onze Pius Almanak" (Alkmaar, 1911); "Naamlist der Dekens, Pastoors etc. van het Aartsbisdom van Utrecht" (St. Michiels e-Gestel, 1911).

JOSEPH LINS

Abbey of Saint Vaast

Abbey of Saint Vaast

Situated at Arras, the ancient capital of Artois, Department of Pas-de-Calais, France; founded in 667. St. Vaast, or Vedast, was born in western France about 453; and died at Arras in 540. Having lived for some years as a recluse in the Diocese of Toul, he was ordained priest by St. Remi (Remigius), Archbishop of Reims, who deputed him to prepare Clovis for the reception of the Sacrament of Baptism. After this he remained at Reims and acted as archdeacon for St. Remi. In 499 that prelate consecrated him first Bishop of Arras, and his labours in planting the faith in those parts were blessed by many miracles. Ten years later St. Remi committed to him the care also of the Diocese of Cambrai, and these two sees remained united until the eleventh century. At the death of St. Remi he was chosen to succeed him but declined the honour. His own death occurred in 540 and he was buried in his cathedral at Arras. In 667 St. Aubert, the seventh bishop of that see, commenced to build an abbey for Benedictine monks on the site of a little chapel which St. Vedast had erected in honour of St. Peter. St. Vedast's relics were transferred to the new abbey, which was completed by St. Aubert's successor and munificently endowed by King Theodoric, who together with his wife was afterwards buried there. This Abbey of St-Vaast flourished for many centuries and held an important position amongst the monasteries of the Low Countries. It was ruled by many distinguished abbots, a list of whom, numbering seventy-nine, is given in "Gallia christiana". It was exempt from episcopal jurisdiction and maintained its independence until 1778 when it was aggregated to the Congregation of Cluny. At the Revolution it was suppressed and the conventual buildings became first a hospital and then a barrack. In 1838 the barrack was purchased by the down, a portion being used as a museum and archivium, and the rest becoming the residence of the bishop. The church, which had been desecrated and partially destroyed, was rebuilt and consecrated in 1833 and now serves as the cathedral.

G. CYPRIAN ALSTON

Vacancy

Vacancy

The state of being vacant, free, unoccupied: a term applied to an office or position devoid of an incumbent, as a vacant benefice, bishopric, parish, professorship, etc. Vacancies occur by the voluntary act of the incumbent or by compulsion. Generally speaking any cleric, even the pope, for just reasons may resign his office, the resignation being effective when duly accepted by the competent superior. As the pope has no superior, Celestine V, who renounced the papacy, published a special Constitution (L. I, tit. 7 in 6^o) declaring that the College of Cardinals is competent to accept the formal abdication of the pope. Under certain conditions with approval of proper authority, an exchange of benefices or offices is permitted. Certain acts, licit or illicit, are equivalent to tacit

renunciation, for example, when one accepts a promotion, makes a solemn religious profession, violates the canons concerning a plurality of benefices, renounces the clerical state. Under compulsion one loses his incumbency by death or removal. Some vacancies are provided for before they actually occur; for example, coadjutors may be named with the right of succession, the pope may make an appointment to go into effect at the death of the present incumbent, an exercise of the so-called *jus praeventionis*, at one time quite common. Removal ordinarily is a punishment, and no one should be punished without cause (*sine culpa, nisi subsit causa, non est aliquis puniendus*. Reg. 23 in 6°). The cause is usually, though not always, a crime committed. When removal is a penalty, the crime for which it is inflicted must be proven juridically. If the reason for dismissal be merely unfitness (*causa non criminosa*), a juridical trial is not generally obligatory, though certain formalities are necessarily observed to establish the existence of sufficient warrant for removal, as well as to give the occupant an opportunity of being heard. This is particularly true of the administrative removal of parish priests or rectors in accordance with the Decree "Maxima cura" (S.C. Consist., 20 Aug., 1910). This decree permits such removal (without juridical trial) on account of insanity; inexperience or ignorance of such nature as seriously to impede a pastor in his work; deafness, blindness or other ailment, physical or mental, incapacitating a rector for a long time, unless provision can be made for a coadjutor; hatred or ill will on the part of the people, though unjust and not universal; loss of reputation among men of repute; maladministration of temporal affairs; continual neglect after one or two admonitions of parochial duties of moment; disobedience after warning of the bishop's precepts in grave matters.

Some, like removable rectors, are transferable at the will of the bishop. Care however should be taken not to transfer such persons against their will to inferior posts, as this would be considered a punishment. Vicars-general and deans lose their office by the death or resignation of the bishop or the cessation for any reason whatever of his jurisdiction. A vicar capitular or administrator of a vacant see retains his office till the papal Bulls appointing a new bishop are duly presented. No serious change of moment in the status of a diocese is permitted during an interregnum in accordance with the prohibition: *Ne sede vacante aliquid innovetur* (Decr. L., III, tit. 9).

In liturgy a Sunday is said to be vacant when no mention of it is made in the Office or Mass; such are the Sundays that fall on the feast or the Octave of Christmas, St. Stephen, St. John Evangelist, Holy Innocents, Epiphany or the vigil of Epiphany. Days too are liturgically vacant or free when unoccupied by a feast, privileged vigil or privileged ferial office; they are days to which no special Office is assigned.

ANDREW B. MEEHAN
Abbey of Vadstena

Abbey of Vadstena

Motherhouse of the Brigittine Order, situated on Lake Wetter, in the Diocese of Linköping, Sweden. Though the abbey was founded in 1346 by St. Bridget with the assistance of Magnus II

and Blanche of Namur, St. Catherine, on arriving there in 1374, with the relics of her mother St. Bridget, found only a few novices under an Augustinian superior. They chose St. Catherine as their abbess. She died in 1381, and it was not till 1384 that the abbey was blessed by the Bishop of Linköping. The canonization of St. Bridget in 1391 and her translation in 1394 added greatly to the fame and riches of her abbey. In 1400 Eric of Pomerania was invested at Vadstena by his aunt, Queen Margaret, with full royal rights over Denmark, Norway, and of Sweden. The Brigittine literature consisted mostly of translations into Swedish of portions of the Bible or of the legends of the saints. Such writings as are extant have been published for the most part by the Old Swedish Texts Society (*Svenska Fornskrift-Sällskap*) of Stockholm. Of these authors the best known belonging to Vadstena are perhaps Margaret Clausdotter, abbess (1473-1496), author of a work on the family of St. Bridget (printed in "Scriptores Rerum Svecicarum", III, I, 207-16), and Nicholas Ragvaldi, monk and general confessor (1476-1514), who composed several works. When he died, end of the abbey was near at hand. It was plundered by Gustavus Vasa in 1523, and lost most of its lands about 1527. In 1540 the larger part of the books and valuables were taken. The little community struggled on in spite of persecution. John III (1569-1592) restored and enriched the abbey, and Possevin, as papal legate, reformed it in 1580. In 1594 it was seized and destroyed by Charles, Duke of Sudermanland, afterwards Charles IX. The abbess, Catherine Olofsdotter, and most of the nuns, fled to the Brigittine nunnery at Danzig. Now only the chapter house and a few cells of the convent of the sisters remain, and form part of a lunatic asylum. A general hospital occupies the site of the convent of the brothers. The abbey church is still standing; it contains a few memorials of St. Bridget. (See BRIGITTINES; CATHERINE OF SWEDEN, SAINT.)

A.W. TAYLOR

Vaga

Vaga

A titular see of Numidia, frequently mentioned by historians and ancient geographers. Before the Roman conquest it was an important commercial centre. Delivered to the Carthaginians by Massinissa, it was incorporated with the Numidian kingdom, and at a later date became part of Numidia Proconsularis. Metellus destroyed it, but it soon rose from its ruins, and under Septimius Severus was known as *Colonia Septimia Vaga*. Justinian fortified it, and in honour of his wife Theodora, named it Theodorias=2E It is to-day the small city of Beja, centre of a civil district of about 100,000 inhabitants in Tunisia, and a railroad station in the heart of that rich agricultural region. The halls of Justinian still exist, but are greatly modified; the large tower of the Kasba was the donjon of the ancient citadel; one of its gates dates also from the sixth century and there are the remains of a large reservoir. Among the inscriptions of Beja several are Christian; from one we learn that the walls were built by Count Paul; from another that the principal mosque is an ancient Christian basilica, restored under Valentinian and Valens. The bishops known to us are: Libosus, present at the Council of Carthage, 256; Crescens at that of 349; Ampelius and Primulus, both at

the Conference of Carthage, 411; the second had been a Donatist, but having abjured his error remained bishop conjointly with the first.

SMITH, Dict. Of Gr. And Rom. Geog., s.v., Vacca; MULLER, Notes on Ptolemy, ed. DIDOT, I, 643; TOULOTTE, Geog. De l'Afrique chretienne. Proconsulaire (Paris, 1892), 330-33; DIEHL, L'Afrique byzantine (Paris, 1896), 157, 220, 416, 530, 583.

S. PÉTRIDÈS

Francois Vaillant de Gueslis

François Vaillant de Gueslis

Jesuit missionary, born at Orlxans, 20 July, 1646; died at Moulins, 24 Sept., 1718. He entered the Society of Jesus, 10 Nov., 1665; came to Canada in 1670; and was ordained priest at Quebec, 1 Dec., 1675. He first evangelized the Mohawks (1679-84). In the beginning of 1688 he was chosen by the Canadian authorities as ambassador to Thomas Dongan, Governor of New York. He was also the first missionary to work among the Indians at Detroit; but he remained only a few months, not entering into the plans of Sieur de Lamothe Cadillac. After the conclusion of peace between the French and the Iroquois he evangelized the Senecas (1702-07). There he contributed not a little to defeat the efforts of Colonel Schuyler at Onondaga who was trying to induce the Five Nations to drive out the French missionaries. The two principal scenes of his zeal in Canada were Quebec and Montreal. At Quebec (1685-91; 1697-1702), he filled the important posts of minister; procurator of the mission, and preacher, and at Montreal (1692-96; 1709-15), he was the first superior of the residence established by the Jesuits in 1692. He founded the Men's Congregation of Villemarie which exists to the present day. He returned to France in 1715.

ARTHUR MELANXON

Alfonso de Valdes

Alfonso de Valdés

Spanish Humanist and chancellor of the Emperor Charles V, born at Cuenca in Castile about 1500; died at Vienna in October, 1532. His talents gave him early advancement and he accompanied Charles V in 1520 on the journey from Spain to the coronation at Aachen, and in 1521 to the Diet of Worms. From 1522 he was a secretary of the imperial chancellery and as secretary wrote a number of important state papers: in 1525, he drew up the report of the battle of Pavia; in 1526 the energetic, graphic, and at times deliberately sarcastic state paper addressed to Pope Clement VII, in which the faithlessness of the pope is stigmatized, and an appeal is made for the convoking of an Ecumenical Council. After the capture and pillage of Rome in 1527, Valdés wrote the dialogue "Lactantius" in which he violently attacked the pope as a disturber of the public peace, an instigator of war, and a perfidious deceiver, declared the fate of Rome the judgment of God, and called the States of the Church the worst governed dominion in the world. The dialogue was printed in 1529

and was widely read. The papal nuncio at Madrid, Baldassare Castiglione, brought an accusation before the Inquisition, but the trial amounted to nothing because Charles V took his servant under his protection, while the grand inquisitor also declared that it was not heretical to speak against the morals of the pope and the priests. Consequently it was decided that the dialogue was not calumnious. Valdés was full of enthusiasm for the ideas of Erasmus of Rotterdam and sought to gain currency for them in Spain. In 1529 he accompanied the emperor to Italy, Germany, and the Netherlands. At the Diet held at Augsburg in 1530 he was an influential negotiator with Melancthon and the Protestants, and met them in a pacific and conciliatory spirit; yet it cannot be said that he shared their views or showed that he understood Luther's motives; his point of view was solely that of a statesman. In October, 1531, he wrote from Brussels the letter of congratulation to the Catholic of Switzerland after the victory over Zwingli. He was the brother of Juan Valdés, the heretical movement in Naples, many of whose followers became apostates.

KLEMENS LÖFFLER

Diocese of Valence

Diocese of Valence

(VALENTINENSIS).

Comprises the present Department of Drome. It was re-established by the Concordat of 1802, being formed of the ancient Diocese of Valence, less the portion comprised in the new Diocese of Viviers, and of various portions of the Diocese of Die, Saint Paul-Trois-Châteaux, Vienne (see ARCHDIOCESE OF LYONS), Orange, Vaison, Gap, Sisteron (see DIOCESE OF DIGNE). From 1802 to 1821 Valence was a suffragan of Lyons; since 1821 it has been dependent on Avignon.

Ancient Diocese of Valence

A tradition of the early sixth century attributes the establishment of Christianity at Valentia to the three missionaries sent from Lyons by St. Irenaeus; the priest St. Felix and the deacons Sts. Achilles and Fortunatus, all martyrs. The "Chronicles of the Bishops of Valence", probably compiled about the middle of the twelfth century, gives only confused information with regard to bishops prior to the ninth century. The first historically known bishop was St. AEmilianus (second half of the fourth century), who signed at the Council of Valence in 374. St. Sextus, martyred during the invasion of Chrocus, was erroneously introduced into the list of bishops by the Carthusian Polycarpe de la Riviere. In 450 Pope St. Leo made Valentia a suffragan of Vienne. St. Apollinaris, brother of St. Avitus, occupied the see for thirty-four years during the first half of the sixth century, and after the conversion of Sigismund, King of Burgundy, was exiled by the latter; he is the patron of the diocesan cathedral. Other bishops were: Maximus II (567), during whose episcopate the city was delivered from besieging Lombards by the prayers of St. Galla, a virgin of Bourg-les-Valence; Gontard (1082), who received Urban II at Valence, 1095; St. John I (1141-6), formerly a Cistercian Abbot of Bonnevaux, disciple of St. Peter of Tarentaise; Bl. Humbert de Miribel (1200-20); Gérold (1220-27), formerly Abbot of Cluny, later Patriarch of Jerusalem; St. Boniface of Savoy (1240-42),

later Archbishop of Canterbury; Amadeus II, Cardinal of Saluces (1383-89); John VI, Cardinal of Lorraine (1521); Francois-Guillaume de Castelnau, Cardinal of Clermont-Lodève (1524-31); Jean de Montluc, brother of the historian Blaise, who assisted in the nomination of the Duke of Anjou as King of Poland (1553-79), and was suspected of Protestant tendencies. During the Middle Ages Valence recognized only the sovereignty of the emperor, as King of Burgundy and Arles; under him the bishops exercised real dominion. The neighbouring territories bore the title of Countship and Duchy of Valentinois. In 950 Gontard, of the house of the counts of Poitiers, made himself master of the Countship of Valentinois, which passed to the Duke of Savoy in 1419, and to the Dauphin Louis, son of Charles VII, in 1446, becoming united to the Crown of France. In 1498 Louis XII made Valentinois a ducal peerage which he gave to Caesar Borgia.

Diocese of St-Paul-Trois-Châteaux

According to a legend of the fifteenth century, St. Restitutus, first Bishop of St-Paul-Trois-Châteaux, was the man born blind, mentioned in the Gospel. Local traditions also make Sts. Eusebuis, Torquatus, Paulus, Amantius, Sulpicius, Bonifatius, Castorinus, and Michael early bishops of St-Paul-Trois-Châteaux. Mgr. Duchesne regards St. Paulus (fourth or sixth century), patron of the city, as the only known bishop. Owing to Saracen ravages (827-29) the Church of St-Paul-Trois-Châteaux, by Decree of Gregory IV, was united with the Church of Orange until the end of the eleventh century, when the Diocese of Orange was re-established. The Diocese of St-Paul-Trois-Châteaux was always dependent on Arles. Among its bishops were Heraclius (525-42), correspondent of St. Avitus; Saint Martin des Ormeaux (seventh century), who became a solitary.

Diocese of Die

The Carthusian Polycarpe de la Riviere gives St. Martinus (220) as first Bishop of Die. The oldest historically known bishop is St. Nicasius, who attended the Council of Nicaea in 325. After him are mentioned: St. Petronius, followed by his brother St. Marcellus (c. 463), confessor and miracle-worker; Lucretius (541-73), to whom St. Ferreolus of Uzès dedicated his monastic rule. For various reasons Abbé Jules Chevalier omits from the episcopal list: St. Maximus (sixth century); Wulphinus (end of eighth century); Exuperius and Saturninus (ninth century). Other bishops were: Hugh (1073-83), consecrated at Rome by Gregory VII, became a legate of the latter, presided over numerous councils for the reform of the Church, and subsequently became Bishop of Lyons; St. Ismido (1098-1115) of the noble house of Sassenage; Bl. Uric (1129-42), who opposed the Petrobrusian heresy in his diocese and became a Carthusian; Bl. Bernard (1173-76); St. Stephen (1203-8), formerly a Carthusian at the monastery of Portes; Bl. Didier (Desiderius) de Lans (1213-20). After the eleventh century the Diocese of Die, long disputed between the metropolitans of Vienne and Arles, became dependent on Vienne. By Bull of 25 September, 1275, in order to strengthen the Church of Valence in its struggle with the House of Poitiers, Gregory X united the Diocese of Die with that of Valence. This union, which lasted four centuries, was unfortunate for Die. It was annulled in 1687 by Louis XIV, who, to combat Protestantism, appointed a Bishop of Die.

Councils were held at Valence in: 374, at which measures were taken for ecclesiastical discipline; 530, against Pelagianism; 585, King Gontran's donations to the Church were confirmed; 855, against Gottschalk's heresy; 890, Louis, son of Boson, was proclaimed King of Provence; 1100, the Bishop of Autun was suspended as a simoniac; 1209, dealt with the conditions on which the Count of Toulouse should be admitted to absolution. A so-called Council of Valence, held at Montelimar (1248), anathematized Emperor Frederick II and organized the Inquisition in Southern France. The Benedictine Abbey of Notre-Dame-d'Aiguebelle, which was founded in 1045 through Hughes Adhemar, Baron de Grignan, and visited by Paschal II in 1107, subsequently fell to decay. In 1137 the Cistercians of Morimond were summoned by Gontard Dupuy, Lord of Rochefort, to found a new abbey in the neighbourhood of the first. From the end of the fifteenth century it belonged to commendatory abbots. Since 1816, when Pierre-Francois de Paul Malmy (Pere Etienne), a Trappist, secured possession of it, there has been a Trappist congregation at the Abbey d'Aiguebelle. The Canons Regular of St. Rufus, founded at Avignon in 1039, opened at Valence in 1158 a house which became their mother house in 1210, were secularized in 1774. Among the canons were: Anastasius IV, Adrian IV, and Julius II.

Among the saints of the diocese were: May (Marius), Abbot of Bodon (d. 550); Barnard (778-842), Archbishop of Vienne, who became a solitary at Romans, where he founded a large Benedictine monastery and built a church which still stands; Hugh (1053-1132), formerly a canon of Valence and Bishop of Grenoble, one of the founders of the Carthusians; Hugh, Abbot of Lioncel, nephew of the preceding (twelfth century), Blessed Bertrand of Garrigue, companion of Saint Dominic, died at Bouchet in the Diocese of St-Paul-Trois-Châteaux during a mission (1230); Blessed Humbert of Romans, general of the Dominicans, author of ascetical writings, died at the convent of Valence (1277). Adhémar de Monteil, a native of Grignan, Bishop of Le Puy, was accompanied on the First Crusade by Bernard of Valence, first patriarch of Antioch in the new Latin Kingdom of Jerusalem, and by Raymond des Agiles, a native of St-Paul-Trois-Châteaux, one of the historians of the crusade. Marie Teyssonier, called Marie de Valence (1576-1648), had such a reputation for piety that Cardinal de Berulle, St. Francis de Sales, Olier, Father Cotton, and Louis XIII visited her. Christophe d'Authier de Sigaud (1609-67), founder in 1632 of the Congregation of Missionary Priests of the Blessed Sacrament, founded the seminary in 1639.

Two women warriors played an important part in the history of this region: Marguérite de Laye triumphantly led the inhabitants of Montélimar against the Calvinist troops of Coligny; Philis de la Tour du Pin la Charce in 1696 successfully led the inhabitants of Lyons and the neighbouring communes against the invasion of the Duke of Savoy. Madame de Sevigne, the famous writer of letters, died in 1696 in the Chateau de Grignan which belonged to her son-in-law. At Romans Gambretta delivered a famous discourse (18 Sept., 1878) in which he outlined the whole anti-clerical policy of the Third Republic. In the cathedral of Valence a Requiem Mass is sung yearly on 29 August, for the soul of Pius VI, who died at Valence, 29 August, 1799, during his confinement in the citadel. The chief pilgrimages of the diocese are: Notre-Dame-de-Bonne-Combe at St-Germain d'Hauterives, dating from the twelfth century; Notre-Dame-de Chatenay at Lens-Lestang;

Notre-Dame-de Consolation at Arpavon; Notre-Dame-de-Mont-Carmel at Chateauneuf-de-Mazenc; Notre-Dame-la Blanche at Mollans.

Before the application of the Associations Law of 1901 there were at Valence: Assumptionists, Capuchins, Marists, Lazarists, Carmelites, and Redemptorists, Oblates of St. Francis de Sales, and various orders of teaching Brothers.

Several orders of women are native to the diocese: Trinitarians, nursing and teaching sisters, established at Valence since 1695; Sisters of the Most Blessed Sacrament, hospital and teaching sisters, founded by Father Vigne, a convert, with mother-house at Romans, 1715; the teaching Sisters of St. Martha, founded in 1815 by Mlle du Vivier with mother-house at Romans; Sisters of the Sacred Hearts of Jesus and Mary, founded by Baroness de Mont-Rond and Abbé Née in 1851 for the supervision of work-rooms and studios, with mother-house at Recoubeau. At the end of the nineteenth century the religious orders had in the Diocese of Valence: 28 infant schools, 1 institution for deaf-mutes, 1 infirmary for dependent children, 1 orphanage for boys, 15 orphanages for girls, 3 industrial schools, 1 protective society, 3 reformatories, 12 houses of religious for the care of the sick in their homes, 1 asylum for idiots and epileptics, 10 hospitals. In 1905 the diocese had: 297,321 inhabitants, 37 parishes, 314 succursals, 68 vicariates. The present bishop, Mgr. Jean-Victor-Emile Chesnelong, b. at Orthez, 6 April, 1856, studied at Saint-Sulpice, was ordained at Paris, 1879, and consecrated by Pius X at Rome, 25 Feb., 1906.

Gallia christiana (nova), I (1715), 703-36, instr., 119-129; nova, XVI (1865), 289-344, instr., 101-42, 185-218; ALBANES, Gallia christiana (novissima), St-Paul-Trois-Châteaux (Montbeliard, 1909); ULYSSE CHEVALIER, Notice chronologico-historique sur les eveques de Valence (Valence, 1857); IDEM, Quarante annees de l'histoire des eveques de Valence au moyen-age (Paris, 1869); PERRIER, Histoire des eveques de Valence (Monaco, 1887); NADAL, Histoire hagiologique du diocese de Valence (Valence, 1855); IDEM, Histoire des seminaires du diocese de Valence (Valence, 1895); JULES CHEVALIER, Essai historique sur l'eglise et la ville de Die (Valence, 1888-1909).

GEORGES GOYAU

University of Valence

University of Valence

Erected 26 July, 1452, by letters patent from the Dauphin Louis, afterwards Louis XI, who was very fond of Valence. Pius II approved its erection in the Bull of 3 May, 1459. In February, 1541, the Canon Pierre Morel opened a college for thirteen poor students. In the sixteenth century Valence was famous for its teaching of law, entrusted to Italian professors or to those who had studied in Italy. The Portuguese jurist, Govea, taught at Valence, 1554-55; the French jurist, Cujas (1522-90), from December 1557 to 1559; and Francois Hotman from the end of 1562 until August 1568. It was at the instigation of Hotman that Bishop Montluc obtained from Charles IX the Edict of 8 April, 1565, which united the Universities of Grenoble and Valence. Cujas again filled a chair at Valence, August, 1567-75; he had among his auditors the learned Scaliger, the historian

Jacques-Auguste de Thou, the jurist Pithou. The university was a centre of Protestant tendencies. Hotman was a determined Protestant; Cujas passed from Protestantism to Catholicism, but it is doubtful if his conversion was inspired entirely from religious motives. In view of these new tendencies the theological teaching was inadequate, and consequently in 1575 Montluc founded at Valence a college of Jesuits, but this was of short duration. In the seventeenth and eighteenth centuries the University of Valence was of only minor importance. From 1738 to 1764 its transfer to Grenoble was contemplated but this project was abandoned. It disappeared during the Revolution.

GEORGES GOYAU

Archdiocese of Valencia

Archdiocese of Valencia

(VALENTINA).

Located in Spain; comprises the civil Provinces of Valencia, Alicante, and Castellón. The city of Valencia is in the region known in ancient days as Edetania, and has 173,000 inhabitants. Florus says that Junius Brutus, the conqueror of Viriathus, transferred thither (140 B.C.) the soldiers who had fought under the latter. Later it was a Roman military colony. In punishment for its adherence to Sertorius it was destroyed by Pompey, but was later rebuilt, and Pomponius Mela says that it was one of the principal cities of Hispania Tarraconensis.

Nothing positive is known about the introduction of Christianity into Valencia, but at the beginning of the fourth century when Dacianus brought the martyrs St. Valerius, Bishop of Saragossa, and his deacon, St. Vincent of Huesca, to Valencia, the Christians seem to have been numerous. St. Vincent suffered martyrdom at Valencia; the faithful obtained possession of his remains, built a temple over the spot on which he died, and there invoked his intercession. It is said that at the time of the Moorish invasion the people of Valencia placed the saint's body in a boat and that the boat landed on the cape which is now called San Vincente. The King of Portugal, Alfonso Enriquez, found the body and transferred it to Lisbon. The first historically known Bishop of Valencia is Justinianus (531-46), mentioned by St. Isidore in his "Viri illustres". Justinianus wrote "Responsiones", a series of replies to a certain Rusticus. Bishops of Valencia assisted at the various councils of Toledo. Witisclus, present at the fourteenth Council of Toledo, was the last bishop before the Mohammedan invasion. Abdelazid, son of Muzza, took the city and, breaking the terms of surrender, pillaged it; he turned the churches into mosques, leaving only one to the Christians. This was without doubt the present Church of San Bartolomé or that of San Vincente de la Roqueta.

Valencia was in the power of the Moors for more than five centuries. The Cid (Rodrigo Diaz de Vivar) reconquered it for the first time on 15 June, 1094, turned nine mosques into churches, and installed as bishop the French monk Jérôme. On the death of the Cid (July, 1099), his wife, Doña Ximena, retained power for two years, when Valencia was besieged by the Almoravids;

although the Emperor Alfonso drove them from the city, he was not strong enough to hold it. The Christians set fire to it, abandoned it, and the Almoravid Masdali took possession of it on 5 May, 1109. Jaime the Conqueror, with an army composed of French, English, Germans, and Italians, laid siege to Valencia in 1238, and on 28 September of that year forced a surrender. 50,000 Moors left the city and on 9 October the king, followed by his retinue and army, took possession. The principal mosque was purified, Mass was celebrated, and the "Te Deum" sung. The see was re-established, ten parishes being formed in the city; the Knights Templar and Hospitallers who had helped in the conquest, also Dominicans, Franciscans, Augustinians, Mercederians, and Cistercians, opened houses. The Church of San Vicente outside the walls was rebuilt and beside it a hospital.

The consecration of the Dominican Berenguer de Castellbisbal, bishop-elect of the See of Valencia after the reconquest, was prevented because of the dispute between the Archbishops of Toledo and Tarragona for jurisdiction over the new see. Gregory IX decided in favour of Tarragona, and, as Berenguer had been appointed Bishop of Gerona in the meantime, Ferrer de San Martín, provost of Tarragona (1239-43), was appointed Bishop of Valencia. He was succeeded by the Aragónese Arnau de Peralta (1243-48) who drove the Bishop of Segovia, Pedro Garcés, from his see. The third Bishop of Valencia, the Dominican Andrés Albalat (1248-76), founder of the Carthusian monastery, began the construction of the cathedral; this was continued and finished by his successors: Gasperto de Botonach, Abbot of San Felin (1276-88); the Aragónese Dominican, Raimundo de Pont (1288-1312); the Catalonian Raimundo Gastón (1312-48); Hugo de Fenolet, formerly Bishop of Vich (1348-56); and Vidal de Blanes (1356-69). Jaime de Aragón, Bishop of Tortosa and first cousin of Pedro IV, succeeded to the see in 1369. Hitherto the chapter had elected the bishops, but owing to the dissensions at the death of Bishop Blanes, Urban IV reserved the right to name the bishops until 1523, when the right of presentation was granted to the Spanish kings. At the death of Jaime (1396), the antipope Benedict XIII kept the see vacant for more than two years, and then appointed Hugo de Lupia, Bishop of Tortosa (1398-1427). He was succeeded by Alfonso de Borja (Calixtus III). The latter appointed Rodrigo de Borja (Alexander VI) to the See of Valencia; Rodrigo obtained from Innocent VIII the rank of metropolitan for his see (1492) and, after he was raised to the papacy, confirmed this decree. He also raised the studium generale of Valencia to the rank of a university, conferring upon it all the privileges possessed by other universities. Cesar Borgia bore the title of Archbishop of Valencia, and was succeeded by Juan de Borja y Llansol, Pedro Luis de Borja, and Alfonso de Aragón, illegitimate son of Ferdinand the Catholic and also Archbishop of Saragossa (1512-20).

The episcopate of the Augustinian St. Thomas of Villanova (1544-55), founder of the Colegio de la Presentación de Ntra. Señora, called also de Santo Tomás, was one of the most notable in the history of Valencia. St. Thomas was beatified (1619) by Paul V, and canonized (1658) by Alexander VII. His successors, Francisco de Navarra and Martín de Ayala, who attended the Council of Trent, were also men of distinction. Perhaps the most noted of all the archbishops of Valencia was the Patriarch Juan de Ribera (1569-1611). He decided to expel the Moors from the city, after exhausted

all possible means to bring them to submission. He founded the Colegio de Corpus Christi and furthered the work of monastic reform, especially among the Capuchins, whom he had brought to Valencia. Many holy men shed lustre upon this era, including St. Louis Bertram, the Franciscan Nicolás Factor, the Carmelite Francisco de Niño Jesús, and the Minim Gaspar Bono. The archbishop and inquisitor general, Juan Tomás Rocaberti, publicly punished the Governor of Valencia for interfering in ecclesiastical jurisdiction: Andrés Mayoral (1738-69) improved the system of charities and public instruction, founded the Colegio de las Escuelas Pías, and the Casa de Enseñanza for girls. He collected a library of 12,000 volumes; this was burnt in the war of independence. The See of Valencia has had two cardinals, Barrio y Fernández and Monescillo y Sancho.

The cathedral in the early days of the reconquest was called *Iglesia Mayor*, then *Seo (Sedes)*, and at the present time, in virtue of the papal concession of 16 October, 1866, it is called the *Basilica metropolitana*. It is situated in the centre of the ancient Roman city where some believe the temple of Diana stood. In Gothic times it seems to have been dedicated to the most Holy Saviour; the Cid dedicated it to the Blessed Virgin; Jaime the Conqueror did likewise, leaving in the main chapel the image of the Blessed Virgin which he carried with him and which is believed to be the one which is now preserved in the sacristy. The Moorish mosque, which had been converted into a Christian church by the conqueror, appeared unworthy of the title of the cathedral of Valencia, and in 1262 Bishop Andrés de Albalat laid the cornerstone of the new Gothic building, with three naves; these reach only to the choir of the present building. Bishop Vidal de Blanes built the magnificent chapter hall, and Jaime de Aragón added the tower, called "Miguelete" because it was blessed on St. Michael's day (1418), which is about 166 feet high and finished at the top with a belfry. In the fifteenth century the dome was added and the naves extended back of the choir, uniting the building to the tower and forming a main entrance. Archbishop Luis Alfonso de los Cameros began the building of the main chapel in 1674; the walls were decorated with marbles and bronzes in the over-ornate style of that decadent period. At the beginning of the eighteenth century the German Conrad Rudolphus built the façade of the main entrance. The other two doors lead into the transept; one, that of the Apostles in pure pointed Gothic, dates from the fourteenth century, the other is that of the Paláu. The additions made to the back of the cathedral detract from its height. The eighteenth century-restoration rounded the pointed arches, covered the Gothic columns with Corinthian pillars, and redecorated the walls. The dome has no lantern, its plain ceiling being pierced by two large side windows. There are four chapels on either side, besides that at the end and those that open into the choir, the transept, and the presbyterium. It contains many paintings by eminent artists. A magnificent silver reredos, which was behind the altar, was carried away in the war of 1808, and converted into coin to meet the expenses of the campaign. Behind the Chapel of the Blessed Sacrament is a very beautiful little Renaissance chapel built by Calixtus III. Beside the cathedral is the chapel dedicated to the "Virgen de los desamparados".

In 1409 a hospital was founded and placed under the patronage of Santa María de los Inocentes; to this was attached a confraternity devoted to recovering the bodies of the unfriended dead in the city and within a radius of three miles around it. At the end of the fifteenth century this confraternity

separated from the hospital, and continued this work under the name of "Cofradia para el ámparo de los desamparados". Philip IV and the Duke de Arcos suggested the building of the new chapel, and in 1647 the Viceroy Conde de Orpesa, who had been preserved from the bubonic plague, insisted on carrying out their project. The Blessed Virgin under the title of "Virgen de los desamparados" was proclaimed patroness of the city, and Archbishop Pedro de Urbina, on 31 June, 1652, laid the corner-stone of the new chapel of this name. The archiepiscopal palace, a grain market in the time of the Moors, is simple in design, with an inside cloister and a handsome chapel. In 1357 the arch which connects it with the cathedral was built. In the council chamber are preserved the portraits of all the prelates of Valencia.

Among the parish churches those deserving special mention are: Sts. John (Baptist and Evangelist), rebuilt in 1368, whose dome, decorated by Palonino, contains some of the best frescoes of Spain; The Temple (El Templo), the ancient church of the Knights Templar, which passed into the hands of the Order of Montessa and which was rebuilt in the reigns of Ferdinand VI and Charles III; the former convent of the Dominicans, at present the headquarters of the "capital general", the cloister of which has a beautiful Gothic wing and the chapter room, large columns imitating palm trees; the Colegio del Corpus Christi, which is devoted to the exclusive worship of the Blessed Sacrament, and in which perpetual adoration is carried on; the Jesuit college, which was destroyed (1868) by the revolutionary Committee, but rebuilt on the same site; the Colegio de San Juan (also of the Society), the former college of the nobles, now a provincial institute for secondary instruction.

The seminary was built in 1831; from 1790 it was situated at the former house of studies of the Jesuits. Since the Concordat (1851) it ranks as a central seminary with the faculty of conferring academic degrees. There have been in Valencia, since very remote times, schools founded by the bishops and directed by ecclesiastics. In 1412 a *studium generale* with special statutes was established. Alexander VI raised it to the rank of a university on 23 January, 1500. Ferdinand the Catholic confirmed this two years later. In 1830 the building was reconstructed; a statute of Luis Vivés adorns the corridor. Among the hospitals and charitable institutions may be mentioned: the Casa de Misericordia; the Provincial hospital; the orphan asylum of San Vicente; and the Infant Asylum of the Marqués de Campo. In Gandi there was a university, and the palace of St. Francis Borgia, now the novitiate of the Society of Jesus, is preserved.

RAMÓN RUIZ AMADO

University of Valencia

University of Valencia

At the request of Jaime I the Conqueror, Innocent IV in 1246, authorized by a Bull the establishment of *estudios generales* in Valencia. Although in virtue of this Bull some university courses were followed in Valencia, the university itself was not founded until 1411. Its foundation was due to the zeal of St. Vincent Ferrer and to the donation of a building by Mosen Pedro Vilaragut. Only very meagre accounts have been preserved of the practical workings of the university. From the time of its foundation the courses included Latin, Greek, Hebrew, Arabic, philosophy, mathematics, and physics, theology, canon law, and medicine. The closing years of the seventeenth, and the whole of the eighteenth century, witnessed the most prosperous era of the university, Greek, Latin, mathematics, and medicine being specially cultivated. Among the names of illustrious students that of Tosca, Torricelli's friend, noted physicist and author of important mathematical works, stands out prominently. Escolano says that it was the leading university in mathematics, the humanities, philosophy, and medicine. Large anatomical drawings were made by the students. Valencia was the first university of Spain to found a course for the study of herbs. Many of the Valencian graduates of medicine became famous. Pedro Ximeno discovered the third small bone of the ear. He was professor at Alcalá and had for a pupil the celebrated Vallés. Luis Collado, professor of botany, made some valuable discoveries and carried on exhaustive studies of the plants of the Levant; Vicente Alonzo Lorente wrote works on botany; and the famous botanist Cavanilles was also a student of this university. In the seventeenth century the university divided into two factions, the Thomists and the anti-Thomists. The discussions were heated and aroused partisan feelings throughout the entire Kingdom of Valencia. The university possessed a library of 27,000 volumes which was destroyed by the soldiers under the command of General Suchet. Among the most noted professors of the university was D. Francisco Pérez Bayer, a man of wide culture and great influence in the reign of Charles III. Around the university several colleges for poor students sprang up: the first was founded by St. Thomas of Villanova in 1561 and then followed those founded by Doña Angela Alonsar, and Mosen Pedro Martín. The most famous, called Corpus Christi, was founded by Blessed Juan de Ribera; Philip II founded that of San Jorge; and Melchor de Villena founded the last in 1643.

TEODORO RODRIGUEZ

Flavius Valens

Flavius Valens

Emperor of the East, b. in Pannonia (now Hungary) c. 328; d. near Adrianople, in Thrace, August, 378. Little is known of his origin, which, in spite of the Roman gentile name adopted by him in common with his brother, Valentinian, the Emperor of the West, was most probably barbarian. His elevation to the throne in 364 was due to Valentinian's favour. Valens, however, soon displayed some degree of warlike ability, as well as a barbarous cruelty, in dealing with Procopius, who, alleging as his title a bequest of the Emperor Julian, seized the throne. Having defeated and captured Procopius, Valens caused his rival's legs to be bound to two bent saplings, which were then released, so that the victim's body was torn asunder. A pagan at the time of his elevation, this emperor was baptized, about the year 367, by Eudoxius, the Arian Patriarch of Constantinople. His necessary ignorance of the fundamentals of Christianity, while, in the circumstances, not blameworthy, does not excuse his persecution of the Eastern Catholics from about the year 369 until the end of his reign. The most infamous example of this was in the case of Sts. Urbanus, Theodorus, and other ecclesiastics, to the number of eighty, whose martyrdom is commemorated on 5 September. This company of bishops and priests, having come to Constantinople, in 370, to plead for freedom of Catholic worship, were, by the emperor's orders, embarked on a vessel which then sailed for the coast of Bithynia; on nearing that coast, the crew, still acting upon the imperial instructions, set fire to the ship and abandoned it, leaving St. Urbanus and his companions to perish.

With this ferocity, Valens also evinced the crudely superstitious instincts of the savage. On a journey through Cappadocia, he visited, at Caesarea, St. Basil the Great (q. v.), whom he intended to drive into exile as a conspicuous foe of Arianism; but, the emperor's son falling sick, the bishop was called upon to restore him to health. This Basil agreed to attempt, on condition that the child should be baptized as a Catholic. In the event, an Arian performed the rite, the child died, and the saint escaped the threatened exile. In 347, at Antioch, there was a curious anticipation of modern "spirit rapping": a spirit, asked to spell the name of him who should succeed Valens, was supposed to have rapped out the Greek letters *THETA-ETA-OMICRON-DELTA* which begin the name *Theodorus*. The lives of Theodorus, an official of the imperial Court, and of those who had prepared this manifestation were forfeited, though the spirit may have meant to indicate Theodosius.

Throughout his reign, Valens had to defend his frontiers against formidable enemies. From 367 to 369 the Goths battled with the imperial forces, until an agreement was reached, fixing the Danube as the southern boundary of their settlements. Frequent incursions of the Isaurians demanded attention. In 373 Sapor (Shapur) II, King of Persia, having invaded Armenia, was driven back beyond the Tigris. The Huns and Alans were meanwhile pressing upon the rear of the Goths north of the Danube. In 376 the latter obtained permission to settle south of the river as peaceable colonists, unarmed; but when the imperial commissioners abused their authority to plunder the strangers, these turned in exasperation to make common cause with their fellow-barbarians from whom they had but recently fled. Huns, Alans, and Goths under Frigidern were surprised and defeated in 378 by Sebastian, the imperial general, and Valens himself hastened from his capital to complete the conquest before his nephew Gratian, who had succeeded Valentinian, could reach the enemy. As the emperor was leaving Constantinople, a monk openly prophesied his speedy death. Valens caused

the prophet of evil to be imprisoned pending his return from Thrace. But the emperor never returned. Defeated by the barbarians near Adrianople, he took refuge in a country house and there perished in the conflagration with which the Goths or their allies unwittingly avenged the death of St. Urbanus and his companions.

St. Valentine

St. Valentine

At least three different Saint Valentines, all of them martyrs, are mentioned in the early martyrologies under date of 14 February. One is described as a priest at Rome, another as bishop of Interamna (modern Terni), and these two seem both to have suffered in the second half of the third century and to have been buried on the Flaminian Way, but at different distances from the city. In William of Malmesbury's time what was known to the ancients as the Flaminian Gate of Rome and is now the Porta del Popolo, was called the Gate of St. Valentine. The name seems to have been taken from a small church dedicated to the saint which was in the immediate neighborhood. Of both these St. Valentines some sort of *Acta* are preserved but they are of relatively late date and of no historical value. Of the third Saint Valentine, who suffered in Africa with a number of companions, nothing further is known.

Saint Valentine's Day

The popular customs associated with Saint Valentine's Day undoubtedly had their origin in a conventional belief generally received in England and France during the Middle Ages, that on 14 February, i.e. half way through the second month of the year, the birds began to pair. Thus in Chaucer's *Parliament of Foules* we read:

For this was sent on Seynt Valentyne's day
Whan every foul cometh ther to choose his mate.

For this reason the day was looked upon as specially consecrated to lovers and as a proper occasion for writing love letters and sending lovers' tokens. Both the French and English literatures of the fourteenth and fifteenth centuries contain allusions to the practice. Perhaps the earliest to be found is in the 34th and 35th *Ballades* of the bilingual poet, John Gower, written in French; but Lydgate and Clauvowe supply other examples. Those who chose each other under these circumstances seem to have been called by each other their Valentines. In the *Paston Letters*, Dame Elizabeth Brews writes thus about a match she hopes to make for her daughter (we modernize the spelling), addressing the favoured suitor:

And, cousin mine, upon Monday is Saint Valentine's Day and every bird chooses himself a mate, and if it like you to come on Thursday night, and make provision that you may abide till then, I trust to God that ye shall speak to my husband and I shall pray that we may bring the matter to a conclusion.

Shortly after the young lady herself wrote a letter to the same man addressing it "Unto my rightwell beloved Valentine, John Paston Esquire". The custom of choosing and sending valentines has of late years fallen into comparative desuetude.

HERBERT THURSTON

Pope Valentine

Pope Valentine

Date of birth unknown; died about October, 827. Valentine was by birth was Roman, belonging to the Via Lata district. While still a youth he entered the service of the Church. His biographer in the "Liber pontificalis" (ed. Duchesne, II, 71-2) praises his piety and purity of morals, which won him the favour of Paschal I (817-24). Paschal ordained him at the Lateran palace, and placed him as archdeacon at the head of the Roman diaconate. Valentine retained his influential position during the pontificate of Eugene II (824-7), and after Eugene's death (27 August, 827) was unanimously elected his successor by the clergy, nobles, and people of Rome. The election had taken place at the Lateran whence the entire company proceeded to Sancta Maria Maggiore, where Valentine was tarrying in prayer. He was led to the Lateran basilica and placed upon the papal throne. After this, probably on the succeeding Sunday, he was consecrated bishop at St. Peter's, and then enthroned as pope. No information has been preserved of his brief reign, he died after he had occupied the papal see forty days according to the *Liber pontificalis*", and barely a month according to the testimony of the "Annales" of Einhard (*ad an.* 827).

J.P. KIRSCH

Valentinian I

Valentinian I

(FLAVIUS VALENTINIANUS).

Emperor of the West, 364-75. Born at Cibalis (probably Mikanovici), Pannonia, Hungary, of humble parents, in 321; d. at Bregetio, near Pressburg, 17 Nov., 375. He entered the army early, became a tribune of the *scutarii* about 360, and accompanied Julian the Apostate to Antioch, whence in 464 he was exiled to Gaul for refusing to honour idols. On Jovian's death Valentinian was proclaimed emperor (26 Feb., 364), and at once appointed his brother Valens ruler of the East. In 265 he went again to Gaul to stop the inroads of the Alammani and Burgundians; the former were defeated at Charpeigne and Châlons-sur-Marne, but in 367 captured Mainz. A little later they

were overthrown by Valentinian at Solicinium, but with heavy Roman losses. In 374 Valentinian concluded a treaty with their king Macrianus. In 368 the Picts and Scots were driven back from Britain, and the province of Valentia formed. While in Gaul Valentinian repudiated his first wife Valeria Severa, or at least he married a Sicilian, Justina, who became the mother of Valentinian II. In June, 374, the emperor was called to Illyricum by the incursions of the Quadi and Sarmatians; he made his headquarters at Bregetio, where during the negotiations with the Quadi he died from apoplexy. He was buried at Constantinople.

Though a sincere Christian, Valentinian generally abstained from interfering in religious questions, unless public interests forced him to act; probably in his endeavours to observe impartiality, he bestowed more favours on the Arians and heathens; his conduct contrasted strongly with that of Valens who ardently supported the Arians. Valentinian revoked Julian's edict, which forbade Christians to teach. He prohibited nocturnal sacrificial practices and magic, probably because they were causes of public disorder, for at the request of Praetextatus, proconsul of Achaia, he tolerated the mysteries of Eleusis and in 371 declared *haruspicia* legal. Constantius had formerly applied the property of the pagan temples to Christian churches, and Julian had given the church property to the temples, but Valentinian claimed all this transferred property, possibly from a desire of wealth, as well as from a wish to be impartial to all religions and also to reduce public taxation. He restored the cross and the name of Christ to the *labarum* from which Julian had removed them, supported Pope Damasus against Ursinus in the dispute concerning the papal election, forbade judicial proceedings on Sundays, exempted Christian soldiers from guarding pagan temples, or Christians from being made gladiators. On the other hand, he increased the privileges of the provincial priests of paganism (as the old Roman religion now began to be called), restricted the right of asylum, forbade the Christian clergy to receive legacies from Christian women unless they were their heirs; though no corresponding restriction was placed on pagan priests. Moreover, lest the wealthy should become clerics to enjoy clerical immunity, he prohibited them from receiving orders unless they first renounced their patrimony; but he ordered bishops to be tried by their peers. The Manichaeans he considered political disturbers and in 372 forbade their meetings at Rome, confiscated their houses, and punished their teachers. He supported the Arian Bishop of Milan, Auxentius, when excommunicated, believing him to be orthodox; however, he confirmed the decrees of the Synod of Illyria (375) against the Pneumatomachians and addressed a special letter to the bishops of Asia, ordering the homousian doctrine of the Trinity to be taught, notwithstanding, as he said, the example and practice of Valens; but his untimely end prevented him from enforcing his instructions on this point. Valentinian was affable and kind, but vain; he was a courageous, skilful soldier, and was ready to profess his faith openly when called upon; he wished to restore matters to the condition in which Constantine had left them, but in doing so abstained from emphasizing his own views; his legislative activity was very great, not the least interesting of his edicts being one in 368, by which he appointed fourteen physicians at Rome to care for the poor at the public expense.

A.A. MACERLEAN

Valentinian II

Valentinian II

(FLAVIUS VALENTINIANUS)

Reigned 375-392; born in Gaul, about 371, murdered at Vienne, Dauphiny, Gaul, 15 May, 392. Son of Valentinian I and his second wife Justina. He was never much more than a merely nominal ruler, for while Gratian ruled in the East, most of the West was under the control of Magnus Maximus. Italy was all that was left to him, and even there the real ruler was his mother Justina, with whom he resided at Milan. In 387 Maximus, who had usurped the northern provinces in 383, invaded Italy and Justina and Valentinian fled to Thessalonica to seek the aid of Theodosius, Emperor of the East. Maximus was defeated, but Justina soon died, and Valentinian fell under the evil influence of Arbogast, who had him assassinated later. Valentinian was weak, but just, and loved peace. Justina was opposed to the orthodox party; she endeavoured to set up an Arian bishop at Milan and to procure a church for his followers, but was thwarted by St. Ambrose, who protested that the churches belonged to the bishop not to the emperor. And when the Roman senate attempted in 384 and 391 to restore the altar of victory and the pagan rites, it was St. Ambrose again who triumphed. On 23 January, 386, Valentinian published an edict protecting the Arian supporters of the Council of Ariminum, but this was overruled by Theodosius. On the other hand he supported Pope Damasus against his enemy Ursinus. With Gratian he reaffirmed the exemption of the clergy from the jurisdiction of the civil tribunals in religious matters. In 386 he issued an edict for the erection of the Basilica of St. Paul and directed Sallust, the prefect of Rome, to co-operate with Pope Siricus in this matter. The basilica was consecrated in 390. After Justina's death Valentinian abandoned Arianism, became a catechumen, and invited St. Ambrose to come to Gaul to administer baptism to him, but was not spared to receive it. His body was brought to Milan, where the saint delivered his funeral oration, "*De obitu Valentiniani consolatio*", in which he dwells on the efficacy of baptism of desire (P.L., XVI).

A.A. MACERLEAN

Valentinian III

Valentinian III

Reigned 425-55, b. at Ravenna, 3 July, 419; d. at Rome, 16 March, 455; son of Constantius III and Galla Placidia, daughter of Theodosius, succeeded Emperor Honorius. In 437 he married his cousin Eudoxia at Constantinople. During his reign the Western Empire hastened to decay. Britain was abandoned in 446, Ætius failed to hold Gaul against the Franks, Burgundians, and Huns, while Africa was lost in 439 by Boniface, who was defeated by the Vandals under Huneric, later married to Valentinian's daughter Eudoxia. On 17 July, 425, all schismatics were ordered to leave Rome; in the same year the immunity of the clergy from civil jurisdiction was reaffirmed, though Valentinian abrogated this privilege later in 452; on 8 April, 4236, the Jews were forbidden to disinherit their children who became Christians. Valentinian was a strong adversary of the Manichaeans and in 445 declared them guilty of sacrilege, forbade them to reside in cities, and pronounced them incapable of performing any judicial acts. When appealed to by Leo I in the dispute with St. Hilary of Poitiers concerning the latter's metropolitan rights, he addressed a constitution to Ætius, Governor of Gaul, strongly supporting Leo. In it he emphasized the papal supremacy, founded on the position of St. Peter as head of the episcopacy, and pointed out the necessity of one supreme head for the spiritual kingdom, and ordered the civil authorities to bring to Rome any bishop who refused to come there when called by the pope. In 447 he issued an edict to prevent the violation of sepulchres. He was at Rome, with his wife and mother, in February, 450, for the celebration of the feast of the Chair of St. Peter, and after consultation with Pope Leo took active steps for the calling of a general Council, which met at Chalcedon in October, 451. Valentinian presented Xystus III with 2000 lbs. of silver to construct a tabernacle in the Lateran basilica, and in addition with a large golden ornament representing Christ and his Apostles, for the Confessio of St. Peter. As he grew older Valentinian displayed a vindictive, feeble, hesitating character; his training seems to have been purposely neglected by his mother, the real ruler. On the approach of Attila he fled from Ravenna, his imperial residence, to Rome, which was saved later, as is known by Pope St. Leo. After his mother's death (450), he gave way to his passions. In 454 he caused Ætius and his friends to be murdered; at last he was assassinated while attending the chariot races in the Via Labicana, Rome, near the tomb of St. Helena, at the instigation, it is said, of a Roman senator, Petronius Maximus, whose wife he had wronged.

A.A. MACERLEAN

Valentinus and Valentinians

Valentinus and Valentinians

Valentinus, the best known and most influential of the Gnostic heretics, was born according to Epiphanius (*Haer.*, XXXI) on the coast of Egypt. He was trained in Hellenistic science in Alexandria. Like many other heretical teachers he went to Rome the better, perhaps to disseminate his views.

He arrived there during the pontificate of Hyginus and remained until the pontificate of Anicetus. During a sojourn of perhaps fifteen years, though he had in the beginning allied himself with the orthodox community in Rome, he was guilty of attempting to establish his heretical system. His errors led to his excommunication, after which he repaired to Cyprus where he resumed his activities as a teacher and where he died probably about 160 or 161. Valentinus professed to have derived his ideas from Theodas or Theudas, a disciple of St. Paul, but his system is obviously an attempt to amalgamate Greek and Oriental speculations of the most fantastic kind with Christian ideas. He was especially indebted to Plato. From him was derived the parallel between the ideal world (the *pleroma*) and the lower world of phenomena (the *kenoma*). Valentinus drew freely on some books of the New Testament, but used a strange system of interpretation by which the sacred authors were made responsible for his own cosmological and pantheistic views. In working out his system he was thoroughly dominated by dualistic fancies.

He assumed, as the beginning of all things, the Primal Being or *Bythos*, who after ages of silence and contemplation, gave rise to other beings by a process of emanation. The first series of beings, the aeons, were thirty in number, representing fifteen syzygies or pairs sexually complementary. Through the weakness and sin of Sophia, one of the lowest aeons, the lower world with its sujection to matter is brought into existence. Man, the highest being in the lower world, participates in both the psychic and the hylic (material) nature, and the work of redemption consists in freeing the higher, the spiritual, from its servitude to the lower. This was the word and mission of Christ and the Holy Spirit. The Christology of Valentinus is confusing in the extreme. He seems to have maintained the existence of three redeeming beings, but Christ the Son of Mary did not have a real body and did not suffer. The system of Valentinus was extremely comprehensive, and was worked out to cover all phases of thought and action. While Valentinus was alive he made many disciples, and his system was the most widely diffused of all the forms of Gnosticism. His school was divided into two branches, the Oriental and the Italian. The former was spread through Egypt, Syria, and Asia Minor, the latter in Rome, Italy, and Southern Gaul. Among the more prominent disciples of Valentinus, who, however, did not slavishly follow their master in all his views, were Heracleon, Ptolemy, Marcos, and Bardesanes. Many of the writings of these Gnostics, and a large number of excerpts from the writings of Valentinus, are still in existence. Tertullian ascribes to him the apocryphal Gospel of Valentinus, which, according to Irenaeus, was the same as the "Gospel of Truth".

PATRICK J. HEALY

Valerian

Valerian

(Publius Aurelius Licinius Valerianus).

Roman emperor (253-60). Member of a distinguished family, he had held several offices before the army proclaimed him emperor in 253 at Rhaetia. Weak and irresolute, his abilities were unequal to the difficulties of the times; his son and coregent, Gallienus, was lacking also in force. Christian tradition regards him as the originator of the persecution of the Christians under Decius. Though kindly disposed towards the Christians as emperor he was driven to in severe measures by the hostile party, whose leader, the general Macrianus, aimed only to gain advantages for himself through the difficulties internal disturbances would cause the emperor. In 257 Valerian issued a rescript, in kindly language, taking from Christians the right to hold assemblies or to enter the subterranean places of burial, and sending the clergy into exile. In 258, by a new and absolutely merciless edict, bishops, priests, and deacons were executed immediately, men of senatorial and equestrian rank were punished with degradation and confiscation of goods to be followed by death if they refused to offer heathen sacrifice, women were threatened with confiscation of their property and exile, and Christians in the imperial household were sent in chains to perform forced labour on the imperial domains. In this persecution Christian Rome and Carthage lost their leaders: Pope Sixtus was seized on 6 August, 258, in one of the Catacombs and was put to death; Cyprian of Carthage suffered martyrdom on 14 September. Another celebrated martyr was the Roman deacon, St. Lawrence. In Spain Bishop Fructuosus of Tarragona and his two deacons were put to death on 21 January, 259. There were also executions in the eastern provinces (Eusebius, VII, xii). Taken altogether, however, the repressions were limited to scattered spots and had no great success. Valerian was finally captured by the Persians and died a prisoner. Macrianus and his two sons were killed in the struggle for the throne. Gallienus, who became Valerian's successor, annulled at once all his father's laws hostile to Christianity.

KLEMENS LÖFFLER

Validation of Marriage

Validation of Marriage

May be effected by a simple renewal of consent when its nullity arises only from a defective consent in one or both parties. When, however, matrimony is invalid on account of the existence of some ecclesiastical impediment, it may be revalidated by simple dispensation or by that known as *Sanatio in Radice*.

(1) In the first method, as soon as a simple dispensation from the impediment has been obtained, a renovation of consent of both parties will validate the marriage. When the impediment had affected only one of the parties and the other was unaware of the impediment, it is probably that both must renew their consent. That a true renovation of consent be obtained, it is requisite that the parties be made aware of the nullity of their marriage, unless *sanatio in radice* be resorted to. The renovation must be made before the authorized ecclesiastical authority and witnesses when the impediment has been public.

(2) The dispensation called *sanatio in radice* consists in the revalidation of a marriage by reason of a consent formerly given, but ineffective at the time owing to some ecclesiastical impediment. When the impediment is removed, the consent is *ipso facto* ratified and no renovation is required. In such a case, it is requisite that the consent of both parties to the marriage had not ceased and that their wedlock had had the external appearance of a true marriage. *Sanatio* is resorted to when there is urgent reason for not acquainting the parties with the nullity of their marriage, or when one of the parties alone is cognizant of the impediment and the other cannot be informed without grave consequences, or when one party would be unwilling formally to renew a consent that is presumably existent. The pope has power to give the dispensation called *sanatio in radice* for all marriages which are invalid in consequence of an ecclesiastical impediment. Bishops generally have no such power, even when by particular indult they can dispense in diriment impediments. For the granting of *sanatio in radice* a special apostolic faculty is required. In the United States, the ordinaries may grant such dispensation, under certain limitations, when only one of the parties to the marriage is aware of the impediment.

WILLIAM H.W. FANNING

Lorenzo Valla

Lorenzo Valla

(DELLA VALLE).

Humanist and philosopher, b. at Rome, 1405; d. there, 1 Aug., 1457. His father came from Placentia. He studied Latin under Leonardo Bruni (Aretino) and Greek under Giovanni Aurispa. At the age of 24 he wished to obtain a position in the papal secretariate, but was considered too young. After his father's death he accepted a chair of eloquence in the University of Pavia, where he wrote his treatise "De voluptate" (1431), an emended edition of which appeared later under the title, "De vero bono". On account of his open letter attacking the jurist Bartolo (1433) and ridiculing the contemporary jurisprudence he was forced to leave Pavia. He went to Milan and later to Genoa, made another effort to succeed at Rome, and finally settled at Naples (1433), where he became secretary to Alfonso of Aragon, whose Court, frequented by the most distinguished writers, was a hotbed of licentiousness and debauchery. Lorenzo confesses that his life there, like his previous life, was not free from moral stain. At Naples he wrote "De libero arbitrio", "Dialecticae disputationes", "Declamazione contro la donazione di Constantino" (1440), "De professione

religiosorum" (1442, not printed until by Vahlen in 1869). In 1444 he had a controversy with Fra Antonio da Bitonto on the question of the composition of the Apostles' Creed by each of the Apostles. His philosophical and theological elucubrations caused him to be tried for heresy by the Curia at Naples, but the trial was discontinued through the intervention of King Alfonso. His standard work is "De elegantia linguae latinae", which first placed the study of Latin on a scientific basis. He had laboured on it from 1435, and in 1444 it was published through the indiscretion of Aurispa. The Humanists who preceded him had formed their Latin style rather empirically, and consequently had admitted many constructions peculiar to popular Latin. Though Valla had refrained from personalities, all the literary writers considered his work a provocation, and hurled invectives against the author. This controversy is one of the most unpleasant pages in the history of the Italian Renaissance. The fiercest aggressor was Poggio Bracciolini, who did not confine himself to pointing out errors of style in Valla's works, but accused him of the most degrading vices. Valla's no less virulent answers are collect in his "Invectiviarum libri sex". Poggio's invectives could not but create a bad impression at Rome; as Valla still hoped to obtain a position in the Curia, he wrote an "Apologia ad Eugenio IV", excusing himself for his faults and promising amendment. But it was only after the election of Nicholas V that he found favour (1448), obtaining first the position of *scriptor*, and later of Apostolic secretary. Callistus III bestowed on him a canonry in St. John Lateran, which he was able to hold but for a few years. By order of Nicholas V he translated various Greek authors.

His philosophical and theological works are interesting. In his "Disputazioni dialettiche" he bitterly opposes Aristotle and the Scholastics, but he treats his subject superficially, and rather as a grammarian than as a philosopher. He made no positive contribution to philosophy, but only helped to discredit Scholasticism. His most discussed work is the dialogue "De voluptate". In this Leonardo Bruni (Arentino) defends the Stoic doctrine that a life conformed to nature is the *summum bonum*; Antonio Beccadelli (Panormita) strongly favours Epicureanism, declaring that the desire of pleasure is to be restrained only lest it might be an obstacle to a greater pleasure and that continence is contrary to nature; finally, Niccolo Niccoli speaks against both in favour of Christian hedonism, holding that perpetual happiness is the *summum bonum*, and that virtue is practised only as a means of obtaining it. It is uncertain whether Beccadelli or Niccoli (who is declared victor by the onlookers) expresses Valla's personal opinion. It would seem that he had not then (1431) come to a definitive opinion. He confines himself to expounding the three opinions, but gives Epicureanism the most ardent and eloquent defender. The way in which his "Apologia" extenuates what had been said in "De voluptate", arguing on the meaning of the Latin word *voluptas*, shows that he was undecided.

In the "Declamazione contro la donazione di Costantino", probably inspired by Alfonso, who was at war with Eugene IV for possession of the Kingdom of Naples, Valla exhorted the Romans to rebel and their leaders to deprive the pope of his temporal power, which he deems the cause of all the evils then afflicting Italy. The "Annotazioni sul testo latino del Nuovo Testamento" deals chiefly with the Latinity, and less frequently with the translation itself. In the "De professione

religiosorum" he denies that the religious state is the most perfect, as there is greater merit in acting spontaneously than in fulfilling what one is obliged to do by vow, and he taxes the monks with arrogance for calling themselves religious, as if other Christians were not so; he refrains, however, from trying to discredit them by relating salacious stories as the other Humanists delighted in doing. In the "De libero arbitrio" he concedes that the foreknowledge of God is not incompatible with free will, but maintains that our intellects are unable to comprehend this truth. Valla first gave expression to many ideas that were taken up later, especially by the reformers. Like the other Humanists of his age he lacked firmness of character.

U. BENIGNI

Archdiocese of Valladolid

Archdiocese of Valladolid

(VALLISOLETANA).

Bounded on the north by Palencia, east by Burgos and Segovia, south by Avila and Salamanca, and west by Zamora. Excepting two towns, it comprises the civil Province of Valladolid, and has in its territory six towns which are alternately one year under its jurisdiction and the next under that of the Diocese of Avila. Its suffragan dioceses are Astorga, Avila, Segovia, Salamanca, Zamora, and Ciudad Real. Valladolid (60,000) is built on the site of an ancient Roman city, and remains of Roman ruins are to be found, but it does not seem to be the Pintia which Antoninus says was 106 miles from Astorga. Probably it was founded by the Moors and given the name of Ulid or Walid. The first mention of it is found in the "Cronica de Cardeña" as one of the towns which Sancho II offered to his sister Doña Urraca in exchange for Zamora, the seigniorship of which had been conferred upon her by her father. The real founder of Valladolid was the Castilian Count Ansúrez to whom Alfonso VI ceded it in 1074. He built the churches of Santa María la Antigua and Santa María la Mayor, founded the parish of San Nicolas, but he seems to have found already existing the churches of San Julián and San Pelayo. He built the great bridge over the Pisuerga and two hospitals near his own palace. On 21 May, 1095, the Church of Santa María la Mayor was dedicated by D. Bernado, Archbishop of Toledo, assisted by the Archbishops of Palencia, and many other bishops and noted personages. Ansúrez and his wife Eylo conferred vast territories upon the abbot and chapter of the collegiate church, for purposes of colonization. This grant consisted of the monasteries of San Julian and San Pelayo, lands in Tierra de Campos, and a great stretch of land between the branches of the River Esgueva.

The first abbots of Valladolid in the twelfth century were Saltus or Agaldus; Hervaeus; Pedro; Martín; Juan; Miguel; and Domingo; in the thirteenth, Juan Domínguez, counsellor of St. Ferdinand;

D. Felipe, son of St. Ferdinand; D. Sancho de Aragon, son of Jaime I; D. Martín Alonso, illegitimate son of Alfonso the Wise; and Gómez García of Toledo; in the fourteenth, Juan Fernández de Limia, later Archbishop of Santiago; and Fernando Alvarez de Albornoz, cousin of the celebrated cardinal; in the fifteenth, Diego Gómez de Fuensalida; Cardinal Pedro de Fonseca; the famous Alfonso de Madrigal, called "el Tostado", Cardinal Fr. Juan de Torquemada; Cardinal D. Pedro de Mendoza; and in the sixteenth century, D. Fernando Enríquez, son of the admiral, D. Alfonso Enriquez Villarroel; and D. Alfonso de Mendoza. In 1124, with the assistance of the Cardinal legate Adeodatus, a council of all the prelates of the kingdom was held at Valladolid, and in 1137 another, presided over by Cardinal Guido. On 1 July, 1217, St. Ferdinand III was proclaimed king in this city, on the abdication of his mother Doña Berenguela.

In 1238 another council was held, over which the legate Bishop of Sabina presided. In order to terminate the disputes with Palencia, Philip II, who was born at Valladolid, wished to have it constituted a diocese, and Clement VIII erected it on 25 Sept., 1595, and the king conferred on it a city charter. The first bishop was D. Bartolomé de la Plaza, 1597, and among his successors D. Martin Delgado Cenarro (1743-53) deserves mention. By the Concordat of 1851 the elevation of Valladolid to the rank of a metropolitan was stipulated, and Pius IX at the request of Isabella II issued the Decree for its erection on 4 July, 1857. The first archbishop was D. Luis de Lastra y Cuesta, and his successors were Cardinal Juan Ignacio Moreno, Cardinal Benito Sanz y Fores, and the prelate who has just been raised to the cardinalial dignity, D. José Cos y Macho. Many noted events have taken place at Valladolid: the marriage of Alfonso X and Dona Violante de Aragon and that of Alfonso XI to Dona Constanza; Columbus died there; and D. Alvaro de Luna was decapitated. The first *auto da fe* of the Spanish Inquisition was carried out at Valladolid, and the Cortes met there many times. The city owes much to the famous Dona María de Molina, wife of Sancho the Brave, regent during the minorities of Ferdinand IV and Alfonso XI. The latter conferred many distinctions upon Valladolid and gave it its university. The Court resided several times at Valladolid, the last time from 1601 to 1606 by wish of Philip III, who was much attached to the city.

Churches

Santa María la Antigua was the parish church of the counts of Valladolid and was in existence as early as 1088. Behind the modern cathedral are the remains of the ancient cathedral of Santa María la Mayor, not as founded by the Conde Ansúrez, but as restored a century and a half later. Bishop Lucas of Tuy says that the Abbot Juan, chancellor of St. Ferdinand, later Bishop of Osma, rebuilt and redecorated it, transferring the chapter meanwhile to Santa María la Antigua (1226). Its architecture is of the Transition period. Antolínez de Burgos, who lived in the sixteenth century, describes with enthusiasm its magnificent cloister. When the diocese was erected, Philip II engaged Juan de Herrera, the famous architect of the Escorial, to make the plans of the new cathedral. Herrera began the construction, but was obliged to go back to the Escorial, and was succeeded by D. Alberto da *Churriguera*, from whom the Spanish style of architecture Churrigueresco (Baroque) takes its name. Notwithstanding this, the influence of Herrera can be traced in the exterior. The principal

façade has four Doric half columns, which support the entablature of the first story; between each column rises a magnificent arch overhanging a rectangular door over which is placed the figure of the Assumption, the titular of the cathedral. In the inter-columnar spaces are statues of Sts. Peter and Paul, and a door at each side. Two towers were to have finished the principal facade; of these one was never built beyond the first story, and the other which was finished collapsed in 1841. The interior is imposing; along the top is an open gallery finished with a balustrade. The tabernacle built by Juan de Arfe (1590) and the choir stalls, which were brought from the Dominican church, are two of the precious possessions of this cathedral.

The Dominican Convent of San Pablo, founded in 1276 by Doña Violante, wife of Alfonso X, the Wise, deserves special mention. Juan II lived there, and was temporarily buried there until his remains could be transferred to the Cartuja de Miraflores. It is a Gothic building, the most notable feature of which is the facade of its church, built at the expense of Cardinal Juan de Torquemada and Fr. Alonso de Burgos, Bishop of Palencia. Beside it is the Dominican College of San Gregorio, founded in 1488 by Fr. Alonso de Burgos, confessor of Isabella the Catholic. The famous Luis de Granada studied there. Its facade is the best of its kind on account of its original designs. Its cloister, with a double gallery, is also notable. The ancient College of Santa Cruz, founded by Cardinal Mendoza, a building in the plateresque style, has been converted into a museum, and contains many beautiful samples of religious sculptures. The ancient *palacio real* serves as a court building. This has a beautiful facade, with a tower at each side, and finished with a colonnade of alternating arches having square openings. The episcopal palace is a handsome building, and the conciliar seminary, founded by D. Bartolomé de la Plaza in 1597 and rebuilt in 1847 by D. José Antonio Ribadeneyra, was made a pontifical university by Leo XIII in 1897.

Valladolid has secondary and normal schools, archaeological and art museums, and a library of 30,000 volumes. The Spanish cavalry school is situated here also. Among the charitable establishments may be mentioned the Hospital de la Resurrección; the military hospital, formerly a convent of the Carmelites; the hospital de Esgueva; the Casa de Misericordia, occupying the ancient palace of the counts of Benavente; the asylums for mendicants.

RAMON RUIZ AMADO

University of Valladolid

University of Valladolid

The name of the founder and the date of foundation of the University of Valladolid are not known with certainty. Its origin probably dates from 1260-64; in 1293 the university was in a most flourishing condition. Alfonso XI was the patron of Valladolid, just as Alfonso the Wise had been

that of Salamanca. He provided a fixed revenue for the *estudios*, of one third the tithes received from Valladolid and its surrounding hamlets, conferred many honours on its professors, and finally petitioned Clement VI for papal authorization, which was given in the Bull of 30 July, 1346. All the courses embraced by the great universities, including medicine and surgery, were installed, the latter branch being later separated and constituted a special course. According to Morejón (see bibl.), medical science in Spain substituted the system of Hippocrates for Arab methods much earlier than foreign writers have asserted. In 1513 the physician Barnadino Montana de Monserrata, in his book "Libro de la anatomia del hombre" (folio 3), said that to study surgery it was necessary to go to either Montpellier, Bologna, or Valladolid. At Valladolid the lectures were so famous that Montana at the age of seventy was carried in a litter to hear the lectures of Prof. Alfonso Rodriguez de Guevara. The professor of surgery made twenty-five dissections in the general hospital each term. The professor and students of botany went into the country to make a practical study of plant life. The influence of the university was very great in both State and Church.

From the catalogue of famous students in the "Historia de Valladolid" the following names are taken: Juan Auves, doctor of canon law, librarian of Santa Cruz, and Bishop of Ciudad (d. 1549); Antolinez de Burgos, first historian of the city; Augustin Antolinez, Augustinian, professor of the university and of that of Salamanca; Tomás Arizmendi, counsellor of Castile; Lorenzo Arrazola, chief counsellor of the Crown; Pedro Avila y Soto, professor of the university, counsellor of the Indies and of Castile, criminal prosecutor of the Crown, and counsellor of the army; Gaspar R. Bravo de Somonte, professor and physician to Philip IV and Charles II; Breton y Simancas, Bishop and Viceroy of Naples; Pedro Cevallos, minister of Ferdinand VII; Augustin Esteban Collantes, minister of Isabella II; Dionisio Daza y Chacón, distinguished physician who rendered valuable services at Augsburg during the plague of 1564, was surgeon to Maximilian, the princess Dona Juana, physician of Don Carlos and Don Juan of Austria in the battle of Alpujarra; Diego Escudero, compiler of the "Nueva Recopilación"; José Larra (Figaro), celebrated *litterateur*; Luis Mercado, prof., and physician to Philip II during the last twenty years of his life, an eminent writer greatly misunderstood by Sprengel; Claudio Moyano, educational reformer, professor, and afterwards minister under Isabella II; José Zorrilla, noted poet. The controversy between the Jesuits and the Dominicans with regard to grace and free will, which interested all the universities of Spain, involved the University of Valladolid even more deeply, as Diego Alvarez, one of its professors, and Avendaño, both Dominicans, opposed the doctrine of Molina. Of all the religious orders the Augustinians alone maintained an independent position. Their moderation contributed to dissipate much ill feeling aroused by the discussion. In 1770 certain royal privileges gave rise to heated controversy.

The early days of the university were mostly unpretentious; it had only seven courses, the deplorable state of the times not permitting anything else. The residence of the Court of Valladolid contributed to its development. In the various grants of privileges given by the kings the services rendered by this university to the Crown are explicitly stated. In the time of Charles V and Philip II the rank of university was conferred upon it. In the time of Charles III the colleges which had

grown up around the university were dealt their death blow by the ministry of Roda, and since then the university has suffered from the changes, reforms, and systems which the central government of Spain has imposed on all the universities.

TEODORO RODRIGUEZ

Dominic Vallarsi

Dominic Vallarsi

An Italian priest, born at Verona, 13 November, 1702; died there, 14 August, 1771. He studied with the Jesuits at Verona and after his elevation to the priesthood occupied himself chiefly in archæological and Patristic studies. In his searches for manuscripts and other antiquities he was aided financially by the City of Verona and its bishop, as well as by Benedict XIV, who gave him a benefice in the Diocese of Vicenza and appointed him reviser for the Oriental languages at the Holy Office. He was also highly respected for his archæological learning by such men as Muratori, Zeno, Mazzuchelli, and others. His one fault was his great dogmatism in expressing his opinions and his lack of appreciation of the learning of others. His chief work is an edition of St. Jerome; "S. Hieronymi opera omnia post monachorum e congregatione S. Mauri recensionem quibusdam ineditis monumentis aliisque lucubrationibus aucta, notis et observationibus illustrata," (11 vols., Verona, 1734-42; revised and enlarged, Venice, 1766-72, reprinted in P.L., XII-XXX). Though in many respects an improvement upon the Maurist edition by Martinay and Pouget (Paris, 1693-1706), it was still very imperfect. In the opinion of Reifferscheid ("*Bibl. Patr. Lat. Italica*", Vienna, 1865, p. 66), Vallarsi in many cases neglected to correct the text of former editions in accordance with the excellent manuscripts that were at his disposal. Vallarsi also assisted Scipio Maffei in his revision of the Maurist edition of St. Hilary (Verona, 1730) and brought out an incomplete edition of the works of Rufinus (Verona, 1745). The second volume, which was to contain the Latin translations of Rufinus, did not appear.

MICHAEL OTT

Pietro Della Valle

Pietro della Valle

Italian traveller in the Orient, b. at Rome, 2 April, 1586; d. there, 21 April, 1652. He belonged to a noble family and received an excellent education. As a young man he was a poet, orator, a soldier in the papal service, and a member of the Roman Academy of the Umoresti. In 1611 he took

part in a campaign against the Barbary States. An unfortunate love-affair was the cause of a pilgrimage, lasting eleven years. On 8 June, 1614, he started from Venice by sea and went first to Constantinople where he remained a year and learned both Turkish and Arabic. On 25 September, 1615, he traveled to Alexandria, thence to Cairo, and in the spring of 1616 on to Jerusalem. After visiting the Holy Places he continued his journey to Damascus, Aleppo, and Bagdad. Here he married a Syrian Christian named Maani who accompanied him on his travels during the succeeding years. It was probably on account of his marriage that he visited Persia, for the parents of his wife had been robbed by Kurds. In 1618 he was hospitably received in Northern Persia by the Shah Abbas the Great whom he followed to the capital Ispahan. He acted as mediator between the shah and the Christians of Persia. During the next four years he explored Persia; then in October, 1621, he started for Perseopolis and Schiras. He was prevented from continuing his journey as far as India by the war between the Portuguese and Persians. His wife died on 30 December, 1621, and he kept her body with him until his return. In 1622 he took part in the siege of Ormus from which the Portuguese were driven. He then spent two years (1623-24) in India, where his headquarters were Surat and Goa. In 1625 he started on the return journey by way of Muscat, Basra, Aleppo, Cyprus, and Naples, and arrived at Rome, 28 March, 1626. Urban VIII appointed him a papal chamberlain. The rest of Valle's life was fairly peaceful. His second wife was a Georgian orphan Mariuccia, who had accompanied him on his travels. The most important of his works is his account of his travels (*Viaggi*) in fifty-four friendly letters (*Lettere famigliari*) addressed to Mario Schipano, a professor of medicine at Naples. They appeared first at Rome in three volumes (1650-53) and were translated later into English, French, German, and Dutch. The narrative is distinguished by learning and keen observation but inclines to credulity and stories of marvellous occurrences.

The Travels of Pietro della Valle, ed. GREY (London, 1892); CIAMPI, *Della vita e delle opere di Pietro della Valle* (Rome, 1880).

KLEMENS LÖFFLER

Charles-Louis-Joseph-Xavier de la Vallée-Poussin

Charles-Louis-Joseph-Xavier de la Vallée-Poussin

Professor of geology and mineralogy at the Catholic University of Louvain (1863), doctor *honoris causa* of the same university (1876), foreign member of the Académie Royale de Belgique (1885), vice president of the directing council of the geological map of Belgium (1903), born at Namur in 1827; died at Brussels, 1903. De la Vallée Poussin made his humanities at the Collège Notre-Dame-de-la-Paix, Namur, studied mathematics in Paris, and for ten years devoted himself to literature and philosophy. He attracted attention by his literary and scientific criticisms in various reviews. Appointed professor in 1863 on the recommendation of Omalius d'Halloy, he was the real creator of the teaching of geology and mineralogy at the University of Louvain. His scientific publications, scattered through numerous reviews from 1876 till 1903, placed him in the foremost ranks on Belgian geologists and crystallographers. Especially noteworthy were his memoirs on the

microscopic study of the crystalline rocks of Belgium and French Ardennes, several in collaboration with A.F. Renard, particularly the first (1876), which was crowned by the Royal Academy of Belgium and has become a classic; his numerous notes on Belgian carboniferous limestone, which fix the true stratigraphical relations of its beds and destroy Dupont's theory of lacunæ; his researches concerning the formation of the Valley of the Meuse; and his popularizing articles, which rank him with the first promoters of physical geography; finally his share in the preparation of the official geological chart of Belgium.

C. DE LA VALLÉE-POUSSIN

Diocese of Valleyfield

Diocese of Valleyfield

(CAMPIVALLENSIS.)

Valleyfield is a thriving city of about 10,000 inhabitants, situated at the outlet of Lake St. Francis, on the south shore of the St. Lawrence. Founded in 1855, under the name of St. Cecilia, in 1874 it became legally known as Salaberry of Valleyfield. The first pioneers were chiefly fisherman and lumbermen. Today Valleyfield had developed into an important manufacturing centre (cotton, paper, bronze, powder, etc.), the motive energy being derived from one of the most beautiful water powers of the Province of Quebec. The Diocese of Valleyfield (erected 5 April, 1892) comprises the counties of Beauharnois, Chateauguy, Huntingdon, Vaudreuil, and Soulanges. The first and present bishop is Mgr Joseph-Médard Emard (b. as St. Constant, 31 March, 1853, educated at St. Thérèse and Montreal seminaries, ordained priest, 10 June, 1876, appointed curate at Mile End). He completed his theological studies at Rome, and after three years received the degrees of Doctor of Theology and of Canon Law. He was appointed curate at St. Joseph's Church, Montreal, 1880, summoned by the late Archbishop Fabre to the palace, 1881, when he fulfilled the duties of vice-chancellor, gave lectures on ecclesiastical history at Laval University, became chancellor of the archdiocese, 1891, and was consecrated Bishop of Valleyfield, 9 June 1892. He is the author of: "Voyage en Terre Sainte"; several "Messages"; and many important pastoral letters on "l'Eglise", "La justice", "Devoir électoral", "Temperance", "Le serment", "L'autorité paternelle", "La femme chrétienne", "Communion fréquente", "Congrès Eucharistique de Montreal", which last was quoted at length by Cardinal Vanutelli during the festivities of the Eucharistic Congress held at Montreal, 1910.

Bishop Emard founded a classical college affiliated to Laval University, a "jardin de l'enfance", a monastery for cloistered nuns (Clarisses), and a normal school for young ladies, took an active part in the first Plenary Council of Quebec (1909), and is supervising the restoration of the cathedral of the diocese, which contains admirable life-size portraits of the twenty-two popes who established the Catholic Church in Canada, and is conspicuous for its beauty or architecture. The Diocese of Valleyfield is composed chiefly of French Canadian families distributed among forty parishes. There are many Irish Catholic families in the parishes of Valleyfield, Huntingdon, Ormston,

Hemmingford, where the service are largely given in English. The descendants of the Iroquois Indians are ministered to by a resident missionary priest at St. Regis. There are in the diocese: 14 convents and academies, 2 classical colleges, 1 seminary, 4 asylums, and 3 orphanages. The education of children in the parochial schools and other institutions is confided to lay and religious professors and to secular priests. The religious orders are men -- Frères Viateurs; women -- Soeurs de la Congrégation Notre Dame; Soeurs de Jésus Marie; Soeurs de la Providence; Soeurs Grises; Soeurs de Ste Anne; Soeurs Clarisses (cloistered), and Soeurs de la Ste Famille. Among the secular organizations are: the St. Vincent de Paul Society; Les Artisans; Société St. Jean Baptiste; Catholic Foresters; and Knights of Columbus.

J. DORAIS

Thomas de Vallgornera

Thomas de Vallgornera

Dominican theologian and ascetical writer, renowned for his learning and piety, born in Catalonia about 1595; died 15 September, 1665. He was a member of the convent of Barcelona, and for some time, while Catalonia was subject to the French, was its vicar-general, about 1642. His principal work is a mystical theology first published at Barcelona in 1662 under the title "Mystica theologia D. Thomæ, utriusque theologiæ scolasticæ et mysticæ principis", etc. Three years later, 1665, a new and augmented edition appeared. The second edition exceeded the first by eighty-five pages. The work having become rare and difficult to obtain, a new edition was brought out by the Dominican Father Berthier at Turin, 1890. The latest edition contains the text of the original edition of 1662 in the body of the work, and the editions which appeared in the edition of 1665 in the form of added notes are given in an appendix. The doctrine of the book is the doctrine of St. Thomas, of which the author writes in his prologue, "The mystical doctrine of St. Thomas is of such great authority, precisely because it is founded on Scholastic doctrine, that it can scarcely be expressed in words. That mystic doctrine which is not repugnant to the principles of scholastic doctrine has a firm foundation, and therefore readers who study mystical theology in St. Thomas find it firm and well-established; on the contrary, those who read it in other books which treat of mystical matters alone, without any teacher or guide, under the appearance of devotion in somewhat severe words, absorb material for errors." Besides his "Mystical Theology" Vallgornera is the author of a book on the Rosary of the Blessed Virgin, "De Rosario B. Marix Virginis", which appeared at Barcelona about 1662. It consists of pious meditations.

A.C. O'NEIL

Valliscaulian Order

Valliscaulian Order

("Vallis Caulium", or "Val-des-Choux", the name of the first monastery of that order, in Burgundy).

Founded towards the end of the twelfth century by Viard, a lay brother of the Carthusian priory of Loubigny, in the Diocese of Langres. Viard was permitted by his superior to lead the life of a hermit in a cavern in a wood, where he gained by his life of prayer and austerity the reputation of a saint. The Duke of Burgundy, in fulfilment of a vow, built a church and monastery on the site of the hermitage; Viard became prior in 1193, and framed rules for the new foundation drawn partly from the Carthusian and partly from the Cistercian observance. The order of the "Brethren of the Cabbage- Valley" was formally confirmed by Pope Innocent III, on 12 February, 1265, in a rescript preserved in one of the Scottish houses) in the Register of Moray, and entitled "Protectio Apostolica". In the same year Odo III, Duke of Burgundy, gave the brethren a large grant of forest land round the priory, which was further endowed by the Duke's successors, by the Bishops of Langres, and other benefactors. Helyot states, on the authority of Chopin (*Traite des droits religieux et des monastres*, II, tit. i, no. 20), that there were thirty dependent houses of the order, but he names of only twenty are known. Seventeen of these were in France, the principal one being at Val-Croissant, in the Diocese of Autun; and the remaining three were in Scotland. References in the statutes of 1268 and elsewhere show that priories of the order existed also in Germany. A complete list of the priors-general has been preserved, from the founder Viard (also styled Guido), who died after 1213, to Dorothee Jallontz, who was also abbot of the Cistercian house of Sept-Fons, and was the last grand-prior of Val-des-Choux before the absorption of the Valliscaulian brotherhood into the Cistercian Order. In the middle of the eighteenth century there were but three inmates of the mother-house; the revenues had greatly diminished, and there had been no profession in the order for twenty-four years. Gilbert, Bishop of Langres, strongly urged the remaining members to unite with the Cistercians, whose rule they had originally, in great part, adopted. The proposal was agreed to, the change was authorized by a Bull of Clement XIII in 1764, and Val-des-Choux was formally incorporated with Sept-Fons in March, 1764, the Parliament of Burgundy having previously ratified the arrangement. For the next quarter of a century the monastery flourished under its new conditions; but it was swept away in the Revolution of 1789, with the other religious houses of France. Of the three Scottish houses of the order, Ardchattan, Beaulieu, and Pluscarden, the first two became Cistercian priories, and the third a cell of the Benedictine Abbey of Dunfermline, a century before the dissolution of the monasteries in Scotland. (See ARDCHATTAN, THE PRIORY OF; PLUSCARDEN PRIORY).

(London, 1900); HELYOT, *Histoire des ordres monastiques*, VI (Paris, 1718), 178-80; MIGNARD, *Histoire des principales fondations en Bourgogne* (Paris and Dijon, 1864), 200, 207, 218, 221, etc.; MACPHAIL, *Hist. of the Religious House of Pluscardyn* (Edinburgh, 1881), with illustrations of Val-des-Choux in 1833; BATTEN, *The Charters of the Priory of Beaulieu* (Edinburgh, 1877); *Registr. Episcopatus Moraviensis* (Edinburgh, 1837), 331, 332.

D.O. HUNTER-BLAIR

Vallumbrosan Order

Vallumbrosan Order

The name is derived from the motherhouse, Vallombrosa (Latin *Vallis umbrosa*, shady valley), situated 20 miles from Florence on the northwest slope of Monte Secchieta in the Pratomagno chain, 3140 feet above the sea.

I. THE FOUNDER

St. John Gualbert, son of the noble Florentine Gualbert Visdomini, was born in 985 (or 995), and died at Passignano, 12 July, 1073, on which day his feast is kept; he was canonized in 1193. One of his relatives having been murdered, it became his duty to avenge the deceased. He met the murderer in a narrow lane and was about to slay him, but when the man threw himself upon the ground with arms outstretched in the form of a cross, he pardoned him for the love of Christ. On his way home, he entered the Benedictine Church at San Miniato to pray, and the figure on the crucifix bowed its head to him in recognition of his generosity. This story forms the subject of Burne-Jones's picture "The Merciful Knight", and has been adapted by Shorthouse in "John Inglesant". John Gualbert became a Benedictine at San Miniato, but left that monastery to lead a more perfect life. His attraction was for the cenobitic not eremitic life, so after staying for some time with the monks at Camaldoli, he settled at Vallombrosa, where he founded his monastery. Mabillon places the foundation a little before 1038. Here it is said he and his first companions lived for some years as hermits, but this is rejected by Martène as inconsistent with his reason for leaving Camaldoli. The chronology of the early days of Vallombrosa has been much disputed. The dates given for the founder's conversion vary between 1004 and 1039, and a recent Vallumbrosan writer places his arrival at Vallombrosa as early as 1008. We reach surer ground with the consecration of the church by Bl. Rotho, Bishop of Paderborn, in 1038, and the donation by Itta, Abbess of the neighbouring monastery of Sant' Ellero, of the site of the new foundation in 1039. The abbess retained the privilege of nominating the superiors, but this right was granted to the monks by Victor II, who confirmed the order in 1056. Two centuries later, in the time of Alexander IV, the nunnery was united to Vallombrosa in spite of the protests of the nuns.

The holy lives of the first monks at Vallombrosa attracted considerable attention and brought many requests for new foundations, but there were few postulants, since few could endure the extraordinary austerity of the life. Thus only one other monastery, that of San Salvi at Florence, was founded during this period. But when the founder had mitigated his rule somewhat, three more monasteries were founded and three others reformed and united to the order during his lifetime. In the struggle of the popes against simony the early Vallumbrosans took a considerable part, of which the most famous incident is the ordeal by fire undertaken successfully by St. Peter Igneus in 1068 (see PETER IGNEUS, BLESSED, and Delarc, *op. cit.*). Shortly before this the monastery of S.

Salvi had been burned and the monks ill-treated by the anti-reform party. These events still further increased the repute of Vallombrosa.

II. DEVELOPMENT OF THE ORDER

After the founder's death the order spread rapidly. A Bull of Urban II in 1090, which takes Vallombrosa under the protection of the Holy See, enumerates fifteen monasteries besides the motherhouse. Twelve more are mentioned in a Bull of Paschal II in 1115, and twenty-four others in those of Anastasius IV (1153) and Adrian IV (1156). By the time of Innocent III they numbered over sixty. All were situated in Italy, except two monasteries in Sardinia. About 1087 Bl. Andrew of Vallombrosa (d. 1112) founded the monastery of Cornilly in the Diocese of Orléans, and in 1093 the Abbey of Chezal-Benoît, which became later the head of a considerable Benedictine congregation. There is no ground for the legend given by some writers of the order of a great Vallumbrosan Congregation in France with an abbey near Paris, founded by St. Louis. The Vallumbrosan Congregation was reformed in the middle of the fifteenth century by Cassinese Benedictines, and again by Bl. John Leonardi at the beginning of the seventeenth century. In 1485 certain abbeys with that of San Salvi at Florence at their head, which had formed a separate congregation, were reunited to the motherhouse by Innocent VIII. At the beginning of the sixteenth century an attempt was made by Abbot-General Milanese to found a house of studies on university lines at Vallombrosa; but in 1527 the monastery was burned by the troops of Charles V. It was rebuilt by Abbot Nicolini in 1637, and in 1634 an observatory was established. From 1662-80 the order was united to the Sylvestrines. In 1808 Napoleon's troops plundered Vallombrosa, and the monastery lay deserted till 1815. It was finally suppressed by the Italian Government in 1866. A few monks remain to look after the church and meteorological station, but the abbey buildings have become a school of forestry founded in 1870 on the German model, the only one of its kind in Italy. Vallombrosa is also a health resort.

The decline of the order may be ascribed to the hard fate of the motherhouse, to *commendams*, and to the perpetual wars which ravaged Italy. Practically all the surviving monasteries were suppressed during the course of the eighteenth and nineteenth centuries. The present Vallumbrosan monasteries, besides Vallombrosa itself, are: Passignano, where St. John Gualbert is buried; S. Trinità at Florence, where the abbot-general resides; Sta Prassede, in Rome; Galloro in the Diocese of Albano, with the sanctuary of Bl. Benedict Ricasoli (d. 1107); and the celebrated sanctuary of Montessoro in the Diocese of Leghorn. The modern monastery of Signol near Loriol, Drôme, France, was suppressed by the Ferry laws in 1880. The present abbot-general is Fedele Tarani. The monks now number about 100. The shield of the order shows the founder's arm in a tawny-coloured cowl grasping a golden crutch-shaped crozier on a blue ground. The services rendered by the order have been mostly in the field of asceticism. Besides the Vallumbrosan saints alluded to in other parts of this article there may also be mentioned: Bl. Veridiana, anchoress (1208-42); Bl. Giovanni Dalle Celle (feast, 10 March); the lay brother Melior (1 Aug.). By the middle of the seventeenth century the order had supplied twelve cardinals and more than 30 bishops. F. E. Hugford

(1696-1771), born at Florence of English parents, is well known as one of the chief promoters of the art of *scagliola* (imitation of marble in plaster). Abbot-General Tamburini's works on canon law are well known. Galileo was for a time a novice at Vallombrosa and received part of his education there.

III. RULE

St. John adopted the Rule of St. Benedict but added greatly to its austerity and penitential character. His idea was to unite the ascetic advantages of the eremitic life to a life in community, while avoiding the dangers of the former. Severe scourging was inflicted for any breach of rule, silence was perpetual, poverty most severely enforced. The rule of enclosure was so strict that the monks might not go out even on an errand of mercy. The main point of divergence lay in the prohibition of the manual work, which is prescribed by St. Benedict. St. John's choir monks were to be pure contemplatives and to this end he introduced the system of lay-brothers who were to attend to the secular business. He was among the first to systematize this institution, and it is probable that it was largely popularized by the Vallumbrosans. The term *conversi* (lay brothers) occurs for the first time in Abbot Andrew of Strumi's *Life of St. John*, written at the beginning of the twelfth century. The Vallumbrosans do not, strictly speaking, form a separate order, but a Benedictine congregation, though they are not united to the confederated congregations of the Black Monks. The oldest extant MS. of the customs of Vallombrosa shows a close relationship with those of Cluny. The Vallumbrosans should be regarded only as Benedictines who followed the customs observed at that time by the Black Benedictines throughout Europe. "Horror of simony was a special bond between them and Cluny, and it was only special circumstances which caused them later to be looked upon as a peculiar institute within the Benedictine order" (Albers, *op. cit. infra*). The habit, originally grey, then tawny coloured, is now that of the Black Monks. The abbots were originally elected for life but are now elected at the general chapter, held every four years. The Abbot of Vallombrosa, the superior of the whole order, had formerly a seat in the Florentine Senate and bore the additional title of Count of Monte Verde and Gualdo.

IV. NUNS

Shortly after the founder's death we find attached to the monastery of Vallombrosa lay sisters who, under the charge of an aged lay brother, lived in a separate house and performed various household duties. This institute survived for less than a century, but when they ceased to be attached to the monasteries of monks, these sisters probably continued to lead a conventual life. Bl. Bertha (d. 1163) entered the Vallumbrosan Order at Florence and reformed the convent of Cavriglia in 1153. St. Umiltà is usually regarded as the foundress of the Vallumbrosan Nuns. She was born at Faenza about 1226, was married, but with the consent of her husband, who became a monk, entered a monastery of canonesses and afterwards became an anchoress in a cell attached to the Vallumbrosan church of Faenza, where she lived for twelve years. At the request of the abbot-general she then founded a monastery outside Faenza and became its abbess. In 1282 she founded a second convent

at Florence, where she died in 1310. She left a number of mystical writings. In 1524 the nuns obtained the Abbey of S. Salvi, Florence. There are still Vallumbrosan nunneries at Faenza and S. Gimignano, besides two at Florence. The relics of Bl. Umiltà and her disciple Bl. Margherita are venerated at the convent of Spirito Santo at Varlungo. The habit is similar to that of the Benedictine Nuns.

RAYMUND WEBSTER

Henri Valois

Henri Valois

(HENRICUS VALESIIUS).

Philologist, b. at Paris, 10 Sept., 1603; d. at Paris, 7 May, 1676. He belonged to a family of Norman gentlemen settled near Bayeux and Liseux; his grandfather, the youngest of the family, became rich in trade in Paris. Henri Valois made excellent studies with the Jesuits, first at Verdun and then at the Collège de Clermont at Paris, where he had Pétau as professor of rhetoric. He studied law at Bourges (1622-24) and returned to Paris, where, to please his father, he practised law against his inclination for seven years. When he regained his liberty he plunged into study, which he had never entirely abandoned. Peirese had purchased a MS. in Cyprus containing the work of Constantine Porphyrogenitus on virtue and vice. Valois took from it numerous unedited fragments which he published in 1634: "Polybii, Diodori Siculi. . . Nicolai Damasceni, Dionysii Halicarn., Appiani, Alexandri, Dionis et Ioannis antiocheni excerpta". In 1636 he edited "Ammiani Marcellini rerum gestarum lib. XVIII", with abundant notes which illumined all the history of that period and its institutions. He succeeded in recognizing the rhythm of the phrases in the establishment of the text, at the same time making no display of his discovery. In 1650 the assembly of the French clergy commissioned him to publish the ecclesiastical historians, after Mgr. Monchal of Toulouse was compelled to resign the task. In 1659 he issued Eusebius of Caesarea's ecclesiastical history and biography and panegyric of Constantine, as well as Constantine's discourse in the assembly. The text was accompanied by a new Latin translation, scholarly notes, four dissertations on Donatism, Anastasius, the Septuagint, and the Roman Martyrology. In 1668 he published Socrates and Sozomen with three books of observations on the history of St. Athanasius, on that of Paul, Bishop of Constantinople, and the sixth canon of Nicaea (against Lamouy). In 1673 he completed his book with Theodoret, Evagrius, and the excerpts from Philostorgius and Theodore the Lector. In 1664 he had married a young girl who bore him seven children. At first he had only the slender means left him by his father, but later pensions from President de Mesmes, the clergy of France, Mazarin, and Louis XIV provided him with the necessary leisure and the assistance of a secretary, for his sight was never good, and as early as 1637 he ceased to have the use of his right eye. Yet he did important work, and though the MSS. at his disposal were not always the best, we cannot but admire the tact and certainty of his criticism. His temperately and sanely learned notes are excellent documents of the French learning of the seventeenth century. Valois was associated with the greatest

scholars of his time, with whom however he always maintained his liberty of judgment. He wrote the funeral eulogies of Sirmond, Pierre Depuy, and Pétau. He also wrote several occasional Latin poems, but to posterity he is the learned and exact editor of the Greek ecclesiastical historians.

DE VALOIS, *De vita Henrici Valesii* in the 2nd ed. of EUSEBIUS (Paris, 1677), also in the Cambridge edition (1720); SCHWARTZ, *Eusebius Werke, Die Kirchengesch.*, III (Leipzig, 1909).

PAUL LEJAY

Valona

Valona

Titular see, suffragan of Dyrrachium, in Epirus Nova. The ancient name was Aulon, mentioned for the first time by Ptolemy (*Geographia*, III, xii, 2). Other geographical documents, such as Peutinger's "Tabula" and the "Synecdemus" of Hierocles, also mention it. Among the known bishops are Nazarius, in 458, and Soter, in 553 (Farlati, "Illyricum sacrum", VII, 397-401). The diocese at that time belonged to the Patriarchate of Rome. In 733 it was annexed, with all eastern Illyricum, to the Patriarchate of Constantinople, and yet it is not mentioned in any "Notitiae episcopatum" of that Church. The bishopric had probably been suppressed, for, though the Bulgarians had been in possession of this country for some time, Aulon is not mentioned in the "Notitiae episcopatum" of the Patriarchate of Achrida. During the Latin domination a Latin see was established, and Eubel (*Hierarchia catholica medii aevi*, I, 124) mentions several of its bishops. Valona, or Vlora, in Albania, is now a *caza* of the sandjak of Berat in the vilayet of Janina. The city, which has a port on the Adriatic, has about 10,000 inhabitants; there is a Catholic parish, which belongs to the Archdiocese of Durazzo. Several of the Latin bishops mentioned by Le Quien (*Oriens christianus*, III, 855-8), and whom Eubel (*op. cit.*, I, 541) mentions under the See of Valanea in Syria, belong either to Aulon in Greece (now Salona) or to Aulon in Albania (Valona).

S. VAILHÉ

Hyacinthe de Valroger

Hyacinthe de Valroger

French Oratorian, born at Caen, 6 January, 1814; died 10 October, 1876. He first studied medicine, and was later ordained priest (1837), and made director of the lesser seminary of Bayeux. In 1847 he became titular canon of the cathedral of Bayeux. In 1852 he joined Père Gratry in the work of restoring the French Oratory, where he became professor of theology, master of novices, and assistant general. He was a man of great learning, but being equally modest, always hesitated to publish his works lest they should not be opportune or sufficiently exact. Besides many articles in Catholic reviews he published: "Etudes critiques sur le rationalisme contemporain" (Paris, 1846); "Essai sur la crédibilité de l'histoire évangélique en réponse au Dr. Strauss" (Paris, 1847); "Du christianisme et du paganisme dans l'enseignement" (Paris, 1852); "Introduction historique et

critique aux livres du Nouveau Testament" (Paris, 1861); "L'âge du monde et de l'homme d'après la Bible et l'église" (Paris, 1869); "La genèse des espèces, études philosophiques et religieuses" (Paris, 1873); "Pensées philosophiques et religieuses du Comte de Maistre" (Paris, 1879).

A.M.P. INGOLD

Dioceses of Valva and Sulmona

Dioceses of Valva and Sulmona

(VALVEN. ET SULMONEN.)

Located in Italy; united *aeque principaliter*. Valva, a medieval castle belonging to the Bishop of Sulmona, Baron of Valva, is situated near the ancient Corfinium, chief town of the Peligni, A Samnite tribe. In the Social War it was the capital of the Italic, who called it Italia, a name found on some coins. Of the ancient city there remains the Church of S. Pelino, which recalls the race of the Peligni rather than a saint. The ruins contained a great number of inscriptions. Corfinium, like Valva, had apparently its own bishop; S. Pelino was the cathedral. In the vicinity of Valva is the sanctuary of S. Michele, near which is a large natural grotto. Sulmona, formerly Sulmo, is situated in a fertile plain, watered by the Gizzio, a tributary of the Pescara, at the base of the Maiella and Monte Morrone. The inhabitants are engaged in agriculture, the manufacture of liquors, confetti, and musical strings, and tanning. Among the churches are S. Maria della Tomba, the Annuziata, S. Francesco. Near the city is the monastery of the Spirito Santo, erected by Celestine V for his monks; it is noted for its architecture. The town hall dates from the fifteenth century. Sulmona was a Pelignian city, and is first mentioned in the wars of Hannibal, during which it remained faithful to the Romans. In the Social War it was destroyed by Sulla. Ovid, who celebrates the salubrity of its climate, was born there. There are ruins of temples and ancient buildings in the vicinity. In the Lombard period the city was subject to the Duchy of Spoleto; later it belonged to the counts of the Marsi. When the Normans conquered the Abruzzi, Sulmona increased in importance. Frederick II made it the capital of the "Gran Giustizierato" of the Abruzzi. In 1451 Alfonso of Aragon defeated there Count Ruggierone, an ally of Rene of Anjou; the city was regained by Piccinino, who was later defeated and slain by Ferdinand I.

Legend associates the evangelizing of the district with the name of St. Britius, Bishop of Spoleto, in the second century. The first known Bishop of Sulmona is Palladius (499); in 503 a Fortunatus Valvensis is mentioned. St Pamphilus, Bishop of Valva, renowned for his sanctity and miracles, died about 706; as he was buried in the cathedral of Sulmona, the sees had possibly been united then. Four or five other bishops of Valva are known, but none of Sulmona until 1054, when Leo IX named as Bishop of Valva, the Benedictine Domenico, and determined the limits of the Dioceses of S. Pelino (Valva) and S. Pamphilus (Sulmona), which were to have only one bishop, elected by the two chapters. Under Bishop Giacomo di Penne, a monk of Casa Nova (1252), it was arranged that the two chapters should unite in making the election, as frequent disputes had arisen when they acted separately. Other bishops were: Bartolomeo of Tocco (1402), highly esteemed for his learning

by Innocent VII, who gave him his own mitre; Donato Bottini (1448), an Augustinian, who enriched the cathedral; Pompeo Zambecari (1547), nuncio in Poland, who restored the episcopal residence; Francesco Bonapaduli (1638), who founded the seminary; Pietro Antonio Corsignani (1738), the historian of the Abruzzi. During the dispute between the Holy See and the Kingdom of Naples the see remained vacant from 1800 till 1818. The See of Sulmona is immediately subject to the Holy See. It contains; 58 parishes; 150,000 inhabitants, 200 secular, and 48 regular, priests; 3 houses of monks; 3 convents of nuns; 2 educational institutes for boys, and 1 for girls.

CAPPELLETTI, *Le chiese d'Italia*, XXI; DI PIETRO, *Memorie storiche della citta di Sulmona* (Naples, 1804); CORSIGNNI, *Regia marsicana* (Naples, 1738).

U. BENIGNI

Vincent de Valverde

Vincent de Valverde

Born at Oropesa, Spain towards the close of the fifteenth century; d. at the Island of Puná, near Guayaquil, 31 Oct., 1541. He was the son of Francisco de Valverde and Ana Alvarez de Vallegada, and was related to many noble families, in particular, to that of Pizarro, the conqueror of Peru, and that of Cortes, the conqueror of Mexico. Valverde became a professed member of the Dominicans at the convent of San Esteban, Salamanca, April, 1524. In 1529 he accompanied Pizarro as a missionary, on his intended voyage of conquest to Peru. Before the battle of Caxamarca, 16 Nov., 1532, Valverde endeavoured to obtain Atahualpa's peaceful submission; later he instructed and baptized the unfortunate Inca monarch. When Charles V learned of Pizarro's victories, he named Valverde first Bishop of Cuzco, the royal city of the Peruvian kings; Paul III ratified his choice in a consistory held in January, 1537. The new bishop found his spiritual duties arduous, for he had already been charged with the office of Protector of the Natives. This forced him to cross the rude soldiery constantly, as the adventurers who made up the Spanish armies had no thought of justice or mercy to the Indians. He strove to settle the feud between Almagro and Pizarro and after the assassination of the latter was forced to flee from Peru. Making his way to Panama, he halted for a brief stay at the Island of Puná, where he was put to death by the Indians. The fame of Bishop Valverde depends on his conduct at Caxamarca. If the tradition be true that the Spanish monk addressed Atahualpa with haughtiness and disdain, and when his words were not heeded called his compatriots to attack the unoffending Peruvians, then Valverde merits general condemnation. The great religious historians, however, such as Valera, Melendez, Remesal, deny the charge as false. Xerez, an eye-witness, in his account (Seville, 1534) states that when the Inca refused to yield, Valverde returned and informed Pizarro, who then ordered his men to advance; he makes no mention of anything unworthy in the friar's conduct, nor does Pedro Pizarro, one of the earliest writers (his "Relacion" being dated 1571). Particularly bitter to Valverde are Alonzo Enrique and Oviedo, who gives the account of Diego de Molilna, a soldier of the expedition, but both of these were partisans of Almagro. Later writers take differing views. The case is not proven either way.

In consideration of the extraordinary completeness of the details of Valverde's actions, one must conclude that they are not authentic but the result of political or personal bias.

Cf. all early histories of Spanish America.

JOSEPH V. MOLLOY

Ludwig van Beethoven

Ludwig Van Beethoven

Born at Bonn, probably on 16 December, 1770; died at Vienna, 26 March, 1827. The date of his birth has never been positively ascertained but is inferred from the fact that the baptismal registry of his parish church gives 17 December as the date of his baptism, and that it is customary in Catholic countries to baptize infants the day following their birth.

Beethoven's father was tenor singer in the court chapel of the Prince-Archbishop of Cologne, where his grandfather, a native of Holland, had for a number of years the post of musical director. He was therefore brought up from his earliest youth in a musical atmosphere. While the father was rigorous and not always reasonable in his rule over the young genius, his mother was often over-lenient with him, a fact which may account for some of the traits of character the young man developed later on.

At the age of five years his father began to instruct him in violin playing, and at eight the musical director, Pfeifer, undertook his training on the piano, while the court organist Van den Eden, and his successor, Christian Gottlob Neefe, instructed him in organ playing, harmony, and composition. As a pianist he made such rapid progress that in a few years he was able to interpret Bach's "Well-tempered Clavichord" and improvise in a masterly fashion. At thirteen years of age he gave forth his first compositions, a set of six sonatas. These and some other productions of his early youth he later repudiated and destroyed. When he was fifteen, Elector Maximilian, whose assistant court organist he had in the meantime become, enabled young Beethoven to visit Vienna. A short sojourn in the imperial city served the good purpose of causing him to realize the incompleteness of his musical as well as his general education. A few years later, in 1792, his patron sent him anew to Vienna with the avowed plan of studying with Joseph Haydn. Instruction under this master did not continue with any system or for any length of time, owing to a radical difference of temperament between the two men.

Beethoven soon found his way to the great contrapuntist, Albrechtsberger, through whose guidance and the private study of J.J. Fux's treatise of theory and counterpoint, "Gradus ad Parnassum", he acquired the solidity and freedom of style which soon commanded the admiration of the musical world. Assiduous study of the works of Handel, Haydn, and Mozart completed what Bach had begun for him in the creative domain. The protection of his patron, the Elector Maximilian, brother of Joseph II, and his striking gifts as player and improviser served to secure for him, in a comparatively short time, a prominent position in the social and artistic world of Vienna. Archduke Rudolph, afterwards a cardinal, became his pupil and lifelong friend, while numerous music-loving

nobles patronized him. As a composer he attracted more and more attention, not only in Austria and Germany but throughout the world. Beethoven's position in life at this time was probably more congenial and agreeable than was that of any contemporary or preceding master. He was enabled to live in comparative ease without the necessity of accepting a fixed engagement or of regularly giving instruction; he was much sought after as an instructor, but he entertained an intense aversion to teaching. His productions of this period, while bearing more and more the stamp of his individuality, yet reflect the influence and manner of his contemporaries, Mozart and Haydn. It was probably more on account of the success of the oratorios of the latter than because he realized the sublimity of the subject that Beethoven undertook the composition of a work in this form, his "Christ on the Mount of Olives". It is well known that in after years he regretted having published it. Especially was he dissatisfied with his treatment of the part of Christ. He had not yet risen to the height of his capacity, or superior to the conventional standard of his superficial surroundings.

When Beethoven was about thirty years old, he contracted a cold which at first impaired his hearing and at length, through neglectful treatment and his careless and irregular manner of living, resulted in almost total deafness. This affliction was destined to have a momentous effect on his life and to determine in a large measure the character of his productions. To be shut off to a great extent from social intercourse, for which, on account of his generous nature, he always had a craving, and to be unable to hear even his own creations, was his painful lot till the end of his days. The isolation and suffering brought about by his infirmity, the deception on the part of people whom he had trusted, and the misconduct of the nephew whom he had adopted, involving him in all kinds of money troubles, caused him to experience periods of depression which almost bordered on despair. Extreme sensitiveness, irritability, and a suspicion of almost everybody he was obliged to have dealing with, added to his increasing misfortunes. General ill health gradually developed into dropsy. In the last stages he was operated on four times without obtaining relief; but through all this time of trial he never ceased composing. Even on his death-bed he sketched a new symphony. He died during a terrific hailstorm after having devoutly received the last sacraments.

Beethoven has left us some 135 works, among them chamber music in every form, 9 symphonies, 1 oratorio, 1 opera, and 2 Masses. Most of these creations must be classed with the greatest music compositions the human mind has produced. In Beethoven, instrumental music, the vehicle of subjectivism *par excellence*, finds its culmination after a gradual development extending over almost three centuries. In his hands it became the most powerful voice of the prevailing *Zeitgeist*. Living in an age and atmosphere of religious liberalism, when Hegelian pantheism pervaded the literature of the day, especially Goethe's fiction and poetry, he could not escape their befogging influence. His statement that "thoroughness and religion are non-debatable questions", indicates both the spirit of the times and his own attitude; it also explains his other saying that "music must strike fire out of the mind of man."

It has been pointed out that in most of his instrumental works no less than in his opera "Fidelio" and the Ninth Symphony, the latter ending with a choral finale on Schiller's "Ode to Joy", Beethoven reveals and depicts the inner struggle against and triumphant victory over doubt. His two Masses

bear the same subjective character. They are great works of religious art, but they must be considered apart from liturgical service, to which they do not subordinate themselves. While the first and shorter one in C major, ordered by Prince Esterhazy, does not exceed in length and form what was customary in his day and contains passages of exceptional devotion and beauty, it is still, taken as a whole, too individual and too violent in expression to be admitted for liturgical use. This is true in a far greater degree of his "Missa Solemnis" in D major at the composition of which he laboured for almost two years. This monumental work has been designated as a St. Stephen's Cathedral in tones. Its extreme length and the extensive requirements needed for its adequate performance -- orchestra, organ, solo, quartet, and large chorus, together with almost superhuman endurance on the part of the sopranos and tenors -- are alone sufficient reasons for excluding it from liturgical service. Performed under proper conditions in the concert hall, it is a mighty profession of faith in a personal God by one of the greatest geniuses of all times, who composed it in the midst of the growing doubt and impending moral and spiritual disintegration of his age.

Schaffen* (Berlin, 1875); *Beethovens Briefe* (Vienna and Leipzig, 1911); THAYER-DEITERS-RIEMANN, *Ludwig van Beethovens Leben* (Leipzig, 1911); AMBOS, *Cultur-histor. Bilder aus dem Musikleben der Gegenwart, Das etische u. religöse Moment in Beethoven* (Leipzig, 1860).

JOSEPH OTTEN

Pierre-Joseph van Beneden

Pierre-Joseph Van Beneden

Born at Mechlin, Belgium, 19 Dec., 1809; died at Louvain, 8 Jan., 1894. Educated for the medical profession, he was appointed curator of the natural history museum at the University of Louvain in 1831. Five years later he became professor of zoology and comparative anatomy in the Catholic University at Louvain. This chair he held until the time of his death. He was thus able to celebrate the jubilee of his appointment to his chair and the occasion was duly honoured both in his native and his university cities. Throughout his life he was a most diligent worker, and the list of his contributions to scientific periodicals amounts to over two hundred papers. In the earlier part of his career he directed his attention especially to invertebrates and particularly to marine invertebrates, which he studied during many vacations spent at Ostend. In 1843 he established at his own expense a marine laboratory and an aquarium for the further prosecution of these studies, and this institution is believed to have been one of the earliest if not actually the first example of a place of study of its kind in any part of the world. Associated with this part of his work were his classical studies in connection with parasitic worms, the development, transformation, and life-histories of which he very fully investigated; indeed, as early as 1858 a memoir of his on this subject was successful in gaining the "Grand prix des sciences physiques" of the Institute of France.

It was issued in the "International Scientific Series" (1875), under the title "Les commensaux et les parasites dans le regne animal", and was translated into English and German.

The other direction in which van Beneden's activities found a vent was connected with the vertebrate division of the animal kingdom. During the excavations rendered necessary by the fortifying of Antwerp a number of bones of fossil whales were exposed to view. These attracted van Beneden's attention and led him to undertake a detailed study of the group, whose characteristics were at that time very imperfectly known. On the subject of the cetacea, living and extinct, he published a number of papers and several large works. The most important of these is his "Ostéographie des cétacés vivants et fossiles", which was written in collaboration with Paul Gervais and published between 1868 and 1880. His papers on the extinct species found near Antwerp were published in the "Annales du musée royal d'histoire naturelle de Bruxelles", and with them was incorporated a description of the fossil seals which were discovered in the same neighbourhood. Van Beneden attended the celebration of the tercentenary of Edinburgh University, and was there made an honorary LL.D. He was a foreign member of the Royal Society and also of the Linnæan, Geological, and Zoological Societies of London. He was president of the Royal Belgian Academy in 1881, and was created Grand Officer of the order of Leopold on the occasion of his professorial jubilee. He was always a devout and convinced adherent of the Catholic Church, though, as the writer of his obituary for the Royal Society particularly states, always exhibiting "the widest toleration for the views of others".

Obituary Notice in Transactions of the Royal Society, LVII (1894-95), p. Xx; KEMNA, P.J. van Beneden, *La vie et l'oeuvre d'un zoologiste* (Antwerp, 1897).

B.C.A. WINDLE

William Home van Buren

William Home Van Buren

Distinguished American surgeon, b. at Philadelphia, 5 April, 1819; d. at New York, 25 March, 1883. His grandfather was Abraham Van Buren, a son of John Beuren, a pupil of Boerhaave who emigrated to New York from Beuren, near Amsterdam, in 1700. Van Buren entered Yale College in 1834. Before graduation he left to take his medical education at the University of Pennsylvania, finishing his studies before the legal age at which a diploma could be awarded him. He spent some eighteen months in Paris and returned to receive his degree in medicine at the University of Pennsylvania in 1840, with a graduation thesis on "The Starch and Dextrin Bandage", the technic of which he had learned in Paris. He entered the army, passing the highest competitive examination. In 1842 he married the daughter of Dr. Valentine Mott, and in 1845 received the appointment as pro-sector to the medical department of the University of New York under Dr. Mott. In 1852 he became professor of anatomy and remained in that position until the burning of the college building in 1865. He attempted to reorganize the university medical school after the fire, insisting on the erection of a building near Bellevue Hospital. His plans, all adopted later, being rejected, Dr. Van

Buren resigned. In 1868 he became professor of surgery in the Bellevue Hospital Medical College, a position which he retained until his death. In 1854 he translated from the French Morel's "Histology" and afterwards, Bernard and Huette's "Operative Surgery". This latter work was furnished by the United States Government to the army surgeons during the Civil War. President Lincoln offered to make Van Buren surgeon general at the time of the war, and on his refusal consulted him with regard to the appointment. In 1865 he published "Contributions to Practical Surgery", in 1870 "Lectures on Diseases of the Rectum", and in 1874 in conjunction with Dr. Edward L. Keyes, a text-book on genito-urinary surgery. His contributions to medical periodical literature were frequent. He became a Catholic early in his medical career and died in the profession of the Faith. He was consulting surgeon to many of the prominent New York City hospitals, and had been president of the Pathological Society, vice-president of the New York Academy of Medicine, and corresponding member of the Société de Chirurgie of Paris, an honour that had been conferred of only one American before him.

KEYES, New York Academy of Medicine Memorial Address in N. Y. Med. Journal, XXXVII (1883); SMITH, Surgery of New York, Mid-nineteenth century in N.Y. Med. Record (July 2, 1910).

JAMES J. WALSH

Vancouver

Vancouver

(VANCOUVERIENSIS).

Archdiocese; includes that part of the mainland of the Province of British Columbia south of 54° N. lat. and west of the Straits of Georgia, together with the Queen Charlotte Islands. It comprises about 150,000 square miles. The first resident of what is now British Columbia was a Catholic and so were the great explorers, Simon Fraser and his lieutenant, J.M. Quesnel. The numerous Catholics in the service of the Hudson Bay Company gave the natives their first idea of Christianity. Later on, Father De Smet visited the Kootenays. In 1843 Father Demers had made an extensive trip through the inland lakes, visiting in turn the Okanagans, the Shuswaps, and the Carriers. In 1843 this district was included in the Vicariate Apostolic of Columbia, under Rt. Rev. A. Blanchet, titular. Three years later a Jesuit, Father Nobili, went as far north as Bahine Lake. In 1847 Rt. Rev. M. Demers, Bishop of Vancouver Island, called the Oblates of Mary Immaculate, already working in Oregon, to the mainland of British Columbia. These missionaries founded a mission in Okanagan in 1859. About this time, immediately after the discovery of gold in the Cariboo district, the city of New Westminster was founded on the estuary of the Fraser, and here the Oblates organized a central mission in 1860, followed by St. Mary's Mission, 60 miles inland, in 1863, from which they evangelized the lower Fraser Indians and the Sechelts and the Aquamish of the coast.

Father L.J. D'Herbomez, O.M.I., was consecrated Bishop of Melitopolis, 9 October, 1864, and appointed to the Vicariate Apostolic of British Columbia which included the mainland from 49 degrees to 60 degrees N. lat. In 1867 he established a mission 300 miles north of New Westminster

at William's Lake, for twenty-two reserves of Shuswp, Chilcotin, and Carrier Indians, and in 1873 another mission, 600 miles north, at Stuart's Lake, for thirteen villages of Babines, Sekanais, Nahanaais, and Skeenas. In 1876 the Kootenay mission at the foot of the Rockies was founded for thirteen bands of Kootenays and Okanagan, and in 1878, Kamloops Mission, 250 miles east of New Westminster, was established for twelve villages of Nicolas, Shuswaps, and Thompsons. To meet the needs of the influx of eastern Canadians, Americans, and British, a pro-cathedral was built in 181 at new Westminster, a college in 1866, a hospital in charge of the Sisters of Providence, and an academy for girls in charge of the Sisters of St. Ann. In twenty- five years Bishop D'Herbomez, assisted by pioneer Oblates, mostly from France, completed the conversion of all the tribes of the coast and interior, built chapels for each band, and established three industrial schools.

At the death of Bishop D'Herbomez, 3 June, 1890, Rt. Rev. Paul Durieu, O.M.I., who had been appointed Bishop of Marcopolis and coadjutor, 24 October, 1875, took charge. The vicariate was made the diocese of New Westminster by a Brief of Leo XIII, dated 2 September, 1890. The regime of Bishop Durieu was characterized by a rare insight and Apostolic gifts; his strict discipline enabled the Indian tribes to resist the contaminating influence of the invading logger and miner, to a degree that makes their annals reminiscent of the early ages of the Faith. In the nine years of his episcopate, churches were built in the mining districts at Fernie, Cranbrook, Greenwood, Nelson, Revelstoke, Sandon, Rossland, and also at Vernon, Lumby, and Kelowna. In 1887 he erected a church, a hospital in charge of the Sisters of Providence, and St. Ann's Academy, in the growing railroad-terminal city of Vancouver. Father Augustin Dontenwill, O.M.I, b. at Bishwiller, Strasbourg, 4 June, 1857, ordained 30 May, 1885, professor in the Faculty of Arts at the University of Ottawa, was appointed Bishop of Germanicopolis and coadjutor, 22 Aug., 1897, succeeding to the see, 1 June, 1899. He carried on the work of his predecessor, giving special attention to educational needs, and established a Catholic weekly, a Children's Aid Society, an orphanage in charge of the Sisters of Providence, an academy at Nelson, and hospitals at Greenwood and Rossland in charge of the sisters of St. Joseph of Peace. He also erected a monumental church at Vancouver and three parish churches in the suburbs.

On 25 June, 1903, a separate ecclesiastical province was formed in British Columbia, with Victoria as metropolitan see, and Most Rev. Bertram Orth was consecrated Archbishop of Victoria. By a Brief, dated 7 Sept., 1908, that part of the diocese north of 54 ° N. lat., exclusive of the Queen Charlotte Islands, was added to the Yukon Vicariate, and Bishop Dontenwill was appointed first Archbishop of Vancouver, Victoria reverting to the status of suffragan diocese. On 29 Sept., 1908, he was elected Superior General of the Oblate Congregation and resigned the archbishopric, 21 Sept., 1908, being appointed later titular Archbishop of Ptolemais, and since then resident at Rome. Rt. Rev. Neil McNeil, Bishop of St. George's, Newfoundland, was transferred to the See of Vancouver and raised to the archiepiscopal dignity, January, 1910. Since his arrival in Vancouver, six parochial churches and five mission chapels have been erected, and the Religious of the Sacred Heart placed in charge of the higher education of girls in Vancouver. Archbishop McNeil was born in Hillsborough, Nova Scotia, 23 Nov., 1851. He is a son of the late Malcolm McNeil and Ellen

Meagher, was educated at St. Francis Xavier College, Antigonish, and in 1873 sent to the College of Propaganda, Rome. He was ordained priest in 1879, joined the teaching staff of St. Francis Xavier College in 1880, became rector of the college in 1884, and Bishop of Nilopolis and Vicar-Apostolic of St. George s Newfoundland, in 1891. He was consecrated at Antigonish, 20 October, 1895.

Statistics

The diocesan property is by Act of the Provincial Legislature, owned by a corporation:- Title, "The R.C. Archbishop of Vancouver". There are in the diocese: 15 secular, and 34 religious priests, 26 churches with resident priests; 50 missions with churches; 60 chapels where Mass is said; 1 college, 40 students; 8 industrial schools for Indians, 500 students; 3 academies for girls, and 8 parochial schools, with 800 pupils; 1570 young people under Catholic care; 5 hospitals; 1 orphanage; 1 House of Refuge; and about 35,000 Catholics.

MORICE, History of the Catholic Church in Western Canada (2 vols., Toronto, 1910); COOKE, Sketches of the life of Mgr. De Mazenod (2 vols., London, 1879); Annales des Oblats; Catholic Directory (New York, 1912); Catholic Year Book for B.C. (1911).

WM. P. O'BOYLE

Albert Vandal

Albert Vandal

French writer, b. at Paris, 7 July, 1853; d. there, 30 Aug., 1910. His father was director general of the postal service under the second Empire. At first Albert Vandal entered the Council of State as auditor. Of moderate temperament and liberal opinions, the Government found that his family traditions prevented him from being devoted with sufficient warmth to Republican institutions and obliged him to resign. At this period Albert Sorel was professor of diplomatic history at the Ecole des Sciences Politiques. Vandal was his disciple and later his friend, prior to replacing him as chair. His first book is entitled "En Karriole à travers la Suède et la Norvège" (1876). It was followed by an important historical work, "Louis XV et Elisabeth de Russie" (1882). Vandal subsequently published "Pacha Bonneval" (1885), "Une ambassade française en orient sous Louis XV" (1887). But the work which permanently established his reputation was "Napoléon et Alexandre I". This splendid book twice won the Gobert *grand prix* and opened to Vandal the door of the French Academy, which he entered without competition (1897). He afterwards published "Les voyage du marquis de Naointel" (1901), and a very important book, "L'avènement de Bonaparte". He was a colleague and friend of Brunetière, and one of those Catholics who, after the passage of the law separating Church and State, wrote to the pope asking him to accept the *associations cultuelles*.

GEORGE BERTRIN

Vandals

Vandals

A Germanic people belonging to the family of East Germans. According to Tacitus, they were originally settled between the Elbe and Vistula. At the time of the War of the Marcomanni (166-81) they lived in what is now Silesia, and in about 271 the Roman Emperor Aurelian was obliged to protect the middle course of the Danube against them. Constantine the Great (about 330) granted them lands in Pannonia on the right bank of the Danube. Through the Emperor Valens (364-78) they accepted Arian Christianity, yet there were also some scattered orthodox Vandals, among whom was Stilicho the minister of the Emperor Honorius. In 406 the Vandals advanced from Pannonia by way of Gaul, which they devastated terribly, into Spain, where they settled in 411. From 427 their king was Genseric (Gaiseric), who in 429 landed in North Africa with about 80,000 of his followers. It is a disputed point whether or not he was called to Africa by the Roman governor Boniface on account of the intrigues of Aetius. Peace was made between the Romans and Vandals in 435 but it was broken by Genseric in 439, who made Carthage his capital after he had thoroughly plundered it. During the next thirty-five years with a large fleet he ravaged the coasts of the Eastern and Western Empires. In 455 he plundered Rome itself during two weeks. It is asserted that the Empress Eudoxia had asked him to free her from her hated marriage with the Emperor Petronius Maximus, the murderer of her husband Valentinian III. This story, however, is probably a fable. It is said that on 2 June, 455, Leo the Great received Genseric and implored him to abstain from murder and destruction by fire, and to be satisfied with pillage. Whether the pope's influence saved Rome is, however, questioned; moreover, the Vandals had only booty in mind, nor was the plundering as extreme as later tradition and the expression "Vandalism" would imply. From 462 the Vandal kingdom included Africa and the islands of the Mediterranean, that is Sicily, Sardinia, Corsica, and the Balearic Islands, but like the other Germanic kingdoms on Roman soil the kingdom of the Vandals in Africa began to decay from the lack of unity of religion and of race among the two populations.

The Vandals treated the Catholics more harshly than other German peoples. Catholic bishops were punished by Genseric with deposition, exile, or death, and laymen were excluded from office and frequently suffered confiscation of their property. It is said of Genseric himself that he was originally a Catholic and had changed to Arianism about 428; this, however, is probably an invention. He protected his Catholic subjects when his relations with Rome and Constantinople were friendly, as during the years 454-57, when the Catholic community at Carthage, being without a head, elected Deogratias bishop. The same was also the case during the years 476-77 when Bishop Victor of Cartenna sent him, during a period of peace, a sharp refutation of Arianism and suffered no punishment. Genseric was one of the most powerful personalities of the era of the Migrations, and was the terror of the seas. He died at a great age on 25 January, 477. According to the law of succession which he had promulgated, not the son but the oldest male member of the royal house was to succeed to the throne (law of seniority). He was succeeded by his incompetent son Hunerich

(477- 484), who at first protected the Catholics, owing to his fear of Constantinople, but from 482 he persecuted them in the most terrible manner. King Guntamund (484-96), his cousin and successor, protected them once more, and while Thrasamund (496- 523), owing to his religious fanaticism, was hostile to Catholics, still he contented himself with bloodless persecutions. Hilderich (523-30) favoured the Catholics and granted religious freedom; consequently Catholic synods were once more held in North Africa. Hilderich's policy was opposed by his cousin Gelimer, who raised the banner of national Arianism. Hilderich was deposed and murdered in 533. This was taken as an excuse for interference by the Byzantine Emperor Justinian. Gelimer was defeated in 533 and 534 by Belisarius, the commander of the armies of the Eastern Empire, and North Africa became a Roman province, from which the Vandals were expelled. Gelimer was honourably treated and received large estates in Galicia. He was also offered the rank of a patrician but had to refuse it because he was not willing to change his Arian faith.

KLEMENS LOFFLER

Theodore J. van Den Broek

Theodore J. Van den Broek

Priest and missionary, b. at Amsterdam, Holland, 5 Nov., 1783; d. at Little Chute, Wisconsin, 5 Nov., 1851. He made his studies in Holland, was ordained in Germany in 1809, and was received into the Dominican Order in 1817. In 1819 he was appointed to Alkmaar, where he published "Sermons for all Sundays and Holidays". On 15 Aug., 1832, with seven other missionaries, he arrived in Baltimore, and thence went to Cincinnati. The missionaries were sent to different places, and Father Van den Broek eventually went to the convent of St. Rose in Kentucky. After a short stay at St. Rose he was removed to Somerset, Ohio. Hearing of the sad condition of the Indians in Michigan (now Wisconsin), he obtained permission from Bishop Purcell of Cincinnati to go to them, and arrived at Green Bay, 4 July, 1834. He found there only ten Catholic families, but laboured zealously among the whites and Indians. He completed the church and priest's house begun by Father Mazzuchelli, and devoted himself to the Indians during an epidemic of cholera, aided by two self-sacrificing religious, Sisters Clara and Theresa Bourdalou. In 1836, at the request of the Indians of Little Chute, he took up his residence with them. He taught his Indian neophytes the alphabet, and they could soon read Bishop Baraga's prayer-books and catechisms. The following year he built a log church thirty by twenty-two feet and in 1839 he built an addition thereto of twenty feet. As the mission at Green Bay was for some time without a resident priest, Father Van den Broek frequently

said Mass on Sundays at each place, walking the intervening distance of twenty- two miles even in the severest weather. He made arduous and dangerous journeys of two hundred miles, to minister to his Menominee and Winnebago Indians.

He had no income outside of his own resources; he built his first church himself, with the aid of his Indians. He was both priest and physician to the Indians at Buttes des Morts, Fort Winnebago, Fond du Lac, Prairie du Chien, Lake Poygan, Calumet, and even the Indian village on the Milwaukee River. He civilized the Indians, worked with them, showed them the use of tools, how to cultivate the land, and with their help he built a church seventy feet long, which he dedicated to St. John Nepomueene. Between 1836 and 1844 he converted and baptized over eight hundred Indians. In 1847 having obtained a priest to temporarily replace him, he sailed for Holland, arriving at Amsterdam, 13 August, 1847. In 1848 he returned with three shiploads of Dutch immigrants, whose descendants now form the population of north-eastern Wisconsin, and are distinguished by their zealous faith, industry, thrift, and good order. The influence of their missionary work has extended into Minnesota, Iowa, Michigan, Nebraska, South Dakota, North Dakota, Oregon, and other states.

J.H.M. WIGMAN

Maximilian van Der Sandt

Maximilian Van der Sandt

(SANDAUS).

Born at Amsterdam, 17 April, 1578; d. at Cologne, 21 June, 1656. He entered the novitiate of the Society of Jesus, 21 Nov., 1597; taught philosophy at Würzburg, and Sacred Scripture at Mainz. He became superior of the episcopal seminary at Würzburg. He wrote many works on philosophy and theology, among others a notable controversial reply to the Batavian Calvinist Lawrence in defence of the moral teaching of the Jesuits, "Castigatio conscientiae Jesuiticae cauteriata. . . a Jacobo Laurentio", Würzburg, 1617. It was said of him that he left a book for every one of the seventy-eight years of his life, several devotional treatises on the Blessed Virgin, and many ascetical and mystical treatises.

SOMMERVOGEL, *Bibliothèque de la Compagnie de Jesus*, XII (Paris, 1896); POULAIN, *Des Graces d'oraison* (6th ed., Paris); *The Graces of Interior Prayer*, tr. SMITH (London, 1911).

GERTRUDE DANA STEELE

Rogier van Der Weyden

Rogier Van der Weyden

Painter, b. at Tournai, 1399 or 1400; d. at Brussels, 1464. His original name was De la Pasture, which was transformed in Flemish into Van der Weyden. His family, settled in Tournai since 1260, were people of means. He is believed to have commenced his artistic life as a goldsmith, and his figures show that he understood some kind of sculpture. He was apprenticed to Robert Campin in

1427, became a master painter, was admitted into the Guild of St. Luke in 1432, and three years later was painter in ordinary to the municipality of Brussels. He only had the appointment, however, for a year, when the office of town painter was abolished. He was said to have been a pupil of van Eyck, e.g. by Vasari and other writers, but the researches of Weale in Flemish documents proved this incorrect, and showed that Campin was Rogier's master. His work is far more religious than that of van Eyck, and the figures in his pictures much more dramatic, animated, and at times almost tragic. He was full of employment and obtained high prices. He lived at Brussels, and had four children, Cornelius, who became a Carthusian, Peter, who was a painter, John, who was a goldsmith, and one daughter, Margaret. He was a generous benefactor, especially to Carthusian houses. One of his important altar-pieces, now in Berlin, was painted for the Cartuja of Miraflores in Spain, another, now in the Escorial, for the Carthusian house at Scheut, a third, at Antwerp, for the Bishop of Tournai, who desired to give it to a Carthusian house, and a fourth for the Carthusian monastery of Herinnes, where Cornelius resided. The "Joys and Sorrows of our Lady of Pity", now at Berlin, the "Seven Sacraments", at Antwerp, the "Adoration of the Magi", at Berlin, and the marvellous triptych in the Prado, are his greatest works. There are also paintings by him at Frankfort and Munich, and others attributed to him elsewhere.

WEALE in Le Belfroi, passim.

GEORGE CHARLES WILLIAMSON

Peter van de Velde

Peter van de Velde

(PEDRO CAMPAÑA).

Painter, b. at Brussels, 1503; d. in that city in 1580. This artist should really be grouped under the head of the Spanish School, and is more generally known by his Spanish name. His actual birth-name was Pieter de Kempeneer, translated into French as Champagne. His early life appears to have been passed in Italy, where he carefully studied the paintings of Raphael, and declared himself as his pupil. In 1530 he was at work at some scene-painting, representing a triumphal arch to be erected on the occasion of the coronation of Charles V, and he then left for Spain, on the advice, it is said, of Cardinal Grimani, and passed the rest of his life in that country, only returning to Brussels about 1563 or 1565. Between 1537 and 1562 he was associated with Luis de Vargas and the Italian sculptor Torregiano in establishing a school of painting in Seville, which eventually became the academy of the place; amongst the pupils educated in it was the celebrated Morales. He painted for the monastery of St. Mary of Grace, Church of Santa Cruz, in the city, an altar-piece representing the "Descent from the Cross", which is now in the cathedral, having been removed there when the church fell into ruins. This is dated 1548, and is regarded as his masterpiece. There are other works by the same painter in Seville cathedral, especially two representing the "Purification of the Virgin" and the "Resurrection"; and the various churches of the city, S. Isidoro, S. Pedro, S. Catalina, and S. Juan, all possess paintings by this artist. One of his last works was the restoration

and repainting of a chapel belonging to Hernando de Jaen, an important resident in Seville. Murillo requested that he be buried near Campana's picture, and his burial took place in the Church of Santa Cruz, close underneath the "Descent from the Cross", but the whole building was burned to the ground during the French war, and the tomb perished.

GEORGE CHARLES WILLIAMSON

Augustine van de Vyver

Augustine Van De Vyver

Sixth Bishop of Richmond, Virginia; b. at Haesdonck, East Flanders, Belgium, 1 Dec., 1844; d. at Richmond, 16 Oct., 1911. His parents were John Ferdinand Van de Vyver and Sophia (De Schepper). He was educated in the city of St. Nicholas, Belgium, and at the American College, Louvain (1867-70). Ordained priest, 24 July, 1870, he served successively as assistant at St. Peter's Cathedral, Richmond, pastor of Harper's Ferry (1875-81), pastor of the cathedral, and vicar-general of the Diocese of Richmond (1881-89). Assigned with him at the cathedral for a time was the Rev. Dennis J. O'Connell, D.D., who was destined to be his successor in the See of Richmond. Father Van De Vyver's appointment by Rome to succeed Bishop Keane as Bishop of Richmond, 16 July, 1889, was furthered by a petition of the priests of the diocese. He was consecrated, 20 October, 1889, having as consecrating prelates his two predecessors, His Eminence James Cardinal Gibbons and Bishop J.J. Keane (afterwards archbishop), then rector of the Catholic University, Washington. During Bishop Van De Vyver's administration Mr. and Mrs. Thomas Fortune Ryan of New York donated the Sacred Heart Cathedral, the former the building, the latter the furnishings, at a cost of nearly a half million dollars. His Eminence, Cardinal (then Apostolic Delegate and Archbishop) Diomedea Falconio, laid the corner stone of the new cathedral, 4 June, 1903, and consecrated the same, 29 November, 1906. In a quasi-synod held by the bishop, 12 November, 1907, new laws were enacted to meet the needs of the diocese. Guided by a spirit of deep humility, Bishop Van De Vyver made several ineffectual attempts to resign his see. The first, in 1903, and the second, in 1905, were frustrated by the Church authorities, priest and people being ignorant of his intention. The bishop's third and almost successful attempt to resign (1908) came to the knowledge of the people, who held a great mass meeting of protest, their cause being materially aided by the public Press. The efforts of clergy and laity caused the final withdrawal of his resignation.

In 1910 Bishop Van De Vyver acted as spiritual director of a pilgrimage to Rome. He had already made two "ad limina" visits to the Eternal City, one shortly after consecration, the other in 1905. Among the later works which he inaugurated may be mentioned the erection of the McGill Catholic Union and the Knights of Columbus home. At his suggestion Mrs. and Mrs. Thomas F.

Ryan gave to the diocese large sums for charitable, educational, and other purposes of a religious nature. Mrs. Ryan has donated churches, schools, and convents in various parts of the state. After a farewell visit to his relatives in Belgium, followed by two weeks of illness on his return, and having calmly prepared himself by the reception of the last sacraments, Bishop Van De Vyver passed to his eternal reward. He was buried, 20 October, on the 22nd anniversary of his consecration. By his own request, the burial was in Mount Calvary Cemetery, Richmond, which he as vicar-general had purchased. With the exception of Bishop McGill, he was the only Bishop of Richmond who died as bishop there, the others having been transferred to other sees. He was revered as a kind father and sympathetic friend, having a wide acquaintance amongst people of all ranks and denominations. His private life was simple, humble, and democratic. During his regime, Catholicism made marked progress within the diocese. (See RICHMOND, DIOCESE OF; VIRGINIA.)

F. JOSEPH MAGRI

Thomas Vane

Thomas Vane

The place and time of his birth and death are not known; but he was educated at Christ's College, Cambridge, and took the degree of Doctor of Divinity in that university. Having taken Anglican orders, he was made chaplain extraordinary to King Charles I and rector of Crayford. On becoming a Catholic, he resigned these preferments, and went with his wife to Paris, where he practised as a physician, taking the degree of M.D. there or at some other foreign university. At Paris he wrote an account of his conversion, the preface being dated 4 August, 1642, which was published in 1643 under the title, "A Lost Sheep returned Home: or the Motives of the Conversion of Thomas Vane." This book ran through several editions and was answered by the Anglican writer Edward Chisenhall (1653). He also wrote "An answer to a libell written by D. Cosens against the great Generall Council of Laterane under Pope Innocent III" (Paris, 1646), and "Wisdom and Innocence or Prudence and Simplicity in the examples of the Serpent and the Dove, propounded by our Lord" (s.l. 1652).

EDWIN BURTON

Diocese of Vannes

Diocese of Vannes

(VENETENSIS).

Comprises the Department of Morbihan, and was re-established by the Concordat of 1802; it was formed: (1) from the former Diocese of Vannes, excluding the parishes situated east of the Oust River, which were annexed to the Archdiocese of Rennes; (2) from the District of Roce-Bernard, detached from the Diocese of Nantes; (3) from the southern part of the former Diocese of St. Malo; (4) from the District of Gourin, detached from the Diocese of Quimper. It was a suffragan of Tours until 1859 and, since that time, of Rennes. The Department of Morbihan is that part of France where the greatest number of monuments of the old Gallic worship are preserved; the long avenues of menhirs at Carnac are famous.

According to tradition, St. Clair, first Bishop of Nantes, died in the third century during the course of his preaching in the Diocese of Vannes. The synodical epistle of the Council of Angers, on 4 October, 453, gives the names of four Breton prelates, one of whom was certainly Bishop of Vannes. St. Paternus, whose origin is much discussed by hagiographers, and who became bishop between 461 and 490, is the chief patron of the diocese. No document previous to the Charter of Quimperlé, which dates from the twelfth century, gives as bishops of Vannes, the saints Doininius, Clemens, Amans, Saturninus, Guinninus (Guenin), Vigorocus, Budocus, Hinguethenus, Meriadocus, Meldrocus, Comeanus, and Justocus who probably, without episcopal character, were engaged in evangelizing the country. Bishop Susannus was expelled from his see by the Breton king Nominoe (8484) because the latter wished to reorganize ecclesiastical Brittany. Among the subsequent bishops are mentioned: Pierre de Foix (1476-90), cardinal in 1476; Cardinal Laurent Pucci (1514-31); Cardinal Antoine Pucci (1531-44); Charles de Marillac (150-60), ambassador of the King of France in Turkey and in England.

St. Gildas "the Wise", or "Badonicus", born in Great Britain in 494, left there about 527, went to the Island of Houat, then to the Peninsula of Rhuis, where he founded the monastery of St. Gildas, and wrote two treatises which are a valuable source for the ancient history of the Britons; he died in 570. In the tenth century, the Northmen destroyed the monastery, then under the Abbot Dave. Abbot Dave brought the bodies of Saints Patricius, Albon, and Paternus to Bourg Deols in Berri, and there erected a monastery under the name of St. Gildas. In 1008, Geoffrey I, Duke of Brittany, asked Gauzlin, Abbot of Saint Benoit on the Loire, for religious to re-establish the monastery of St. Gildas of Rhuis. It was re-established by Abbot Felix, who died in 1038. Abelard, Abbot of Rhuis in 125, soon left the abbey, but retained the title of abbot until his death. Eudes de Kerlivio d'Hennebont, disciple of St. Vincent de Paul, and Father Huby, S.J., contributed greatly to the religious revival of the Diocese of Vannes, by the foundation of the seminary (1681). In the fourteenth century, during the wars in which Venerable Charles of Blois supported by Charles V and Jean de Montfort, aided by the English, contested the sovereignty of Brittany, Vannes was several times besieged. The battle of Auray (29 September, 1364), in which Venerable Charles of Blois was killed, put an end to the struggle between the two families of Blois and of Montfort. An army of *émigrés*, commanded by Puisaye, Sombreuil, and d'Hervilly, landed, June, 1795, on the Peninsula of Quiberon, was there joined by 10,000 Chouans, and was attacked by Hoche, who completely annihilated it, 16 July, 1795. Hercé, Bishop of Dol, was shot at Vannes by the Republican

troops, on 3 July, 1795; 900 *émigrés*, who had landed at Quiberon, were shot at Blech, near Auray; their bones are kept at the Carthusian monastery of Auray, the ancient collegiate church founded in the fourteenth century by Jean de Montfort.

Councils were held at Vannes in 461 or 465, 818, 846. The Viscountship of Rohan, in the diocese, was erected in 1603, by Henri IV, into a duchy-peerage for Henri de Rohan (1574-1638), who became one of the leaders of the Protestant party under Louis XIII. A certain number of saints are connected with the history of the diocese: St. Eguiner or Guyomard (Guignerius), martyr at Ploudery in 499; St. Albinus (Aubin), Bishop of Angers from 529 to 549, native of the Diocese of Vannes; St. Salomon, Duke or King of the Bretons, martyr (ninth century); St. Goustan (Sulstanus), lay brother of the monastery of St. Gildas, d. about 1009; St. Vincent Ferrer (1357-1419), who died at Vannes, where he is buried, is patron of the episcopal city; Blessed Françoise d'Amboise, Duchess of Brittany, who, having become a widow, refused the brilliant marriage which Louis XI suggested to her, founded the Carmelites of Vannes, and died in 1485. The chief pilgrimages of the diocese are: Notre-Dame de Larmor; Notre-Dame de Queleven, at Guern; Notre-Dame du Roncier, at Josselin; Notre-Dame du Voëu, at Hennebont; and above all the pilgrimage of Saint Anne d'Auray. From the earliest centuries, Brittany had erected a chapel to Saint Anne; it was destroyed at the close of the eighth century, but popular tradition forbade the sowing of the field of Bocenno, where the chapel had been erected. In 1623 and 1624, after visions, the farmer Yves Nicolazic obtained from the bishop permission for a new chapel. The image of St. Anne, which was venerated there, was burned in 1793; but a new statue of Saint Anne was solemnly consecrated by order of Pius IX, 30 September, 1868.

Before the application of the Law of 1901 to the congregations, there were in the Diocese of Vannes, Capuchins, Jesuits, missionary priests of the Society of Mary, Eudists, Picpusiens, Fathers of the Holy Spirit and of the Sacred Heart of Mary, and lay Brothers of St. Francis Regis. The powerful society of the Brothers of Christian Instruction had its mother-house at Ploermel, in the diocese. Many communities of women were originally of the diocese: the Sisters of Charity of St. Louis, hospitallers and teachers, founded in 1803 by Mme de Malesherbes, widow of the defender of Louis XVI, and her daughter Mme Molé, with the mother-house at Vannes; the Daughters of Jesus, with the mother-house at Kermaria. At the end of the nineteenth century, the religious congregations conducted in the Diocese of Vannes: 2 infant asylums; 44 day nurseries; 1 school for deaf mutes; 3 orphan asylums for boys; 8 orphan asylums for girls; 4 industrial rooms; 1 home for unprotected young girls; 18 hospitals or refuges; more than 150 houses of religious for the care of the sick at their homes; 1 insane asylum. The Diocese of Vannes had in 1905 (at the end of the administration of the Concordat): 563,468 inhabitants; 38 livings; 238 parochial chapels; 279 vicariates, recompensed by the State.

Gallia christiana, XIV nova, (1856), 915-40, instr. 209-224; DUCHESNE, *Fastes épiscopaux*, II (Paris, 1894-9); TRESVAUX, *L'Eglise de Bretagne* (Paris, 1839); LALLEMAND, *Les origines historiques de Vannes* (Vannes, 1904); LE MENE, *Hist. archeologique, féodale et religieuse des provinces du diocèse de Vannes* (2 vols., Vannes, 1894); LUCO, *Fouille historique de l'ancien*

GEORGES GOYAU

Andrea Vanni

Andrea Vanni

Painter and statesman, b. at Siena, 1320; d. 1414. He entered politics after the democratic overthrow of the government of the city. A letter written to him by St. Catherine, his countrywoman and friend, concerning the administration of the country, is still preserved. He was elected to the Grand Council and sent as Sienese ambassador to the pope at Avignon and Naples. As an artist he was a weak imitator of Simone Martini and of Lorenzetti. With his brother Lippo Vanni, Bartolo di Fredi, and Taddeo di Bartolo, he introduced early Sienese art into the fifteenth century. His chief authenticated work is a large polyptych in the Church of Santo Stefano at Siena. This painting depicts the Virgin enthroned between Sts. Stephen, James the Less, John the Baptist, and Bartholomew; in the niches above are the figures of the Evangelists, while several saints and an Annunciation are painted in five higher projecting compartments. The small heads and the gestures betray a certain stiffness. A very agreeable and carefully painted picture is a "Madonna and Child" in the Church of San Michele. A "Birth of the Virgin", representing James, Catherine, Bartholomew, and Elizabeth, in the gallery at Siena, is the joint work of Vanni and Bartolo di Fredi, who often worked together both in art and politics. A "Crucifixion" with two saints by Vanni is in the Academy at Siena, an "Annunciation" in two panels in the Palazzo Saraceni, and a "St. Sebastian" at the museum. Vanni celebrated St. Catherine in the frescoes of San Domenico at Siena. He also painted at Naples.

G. GIETMANN

Francesco Vanni

Francesco Vanni

Painter, b. at Siena, 1565; d. there, 1609. Vanni was one of the better class of artists of the Eclectic School of painting of his era. He shared, indeed, in the weaknesses of this school, yet many regard him as the restorer of Italian painting in the sixteenth century. The artistic value of his work does not always equal his fertility in production. However, by teaching and example he exerted a lasting influence, and trained capable pupils, among whom were his sons Michelangelo and Raffaello Vanni. His first teachers were Salimbene and Passarotti, and at an early age he studied the works

of Raphael at Rome under the direction of de' Vecchi. But at Siena the style thus created did not prove popular. He then went to Parma and Bologna and adopted the style of Baroccio, the Umbrian leader in the Baroque style of painting. After this, on the recommendation of Baronius, he was called to Rome by Pope Clement VIII and commissioned to paint the great altar picture for St. Peter's, "Simon Magus rebuked by St. Peter". It is his best work; a remarkable fact is the good preservation of the colours in this very carefully painted picture. The pope rewarded him richly and made him a knight. He was less successful at Rome in the execution of some other pictures, as "The Assumption of the Virgin", two pictures of St. Cecilia, etc. A large number of Vanni's frescoes and panel paintings are to be found at Siena, among these are "The Sieneese on the Crusade", "The Council of Siena", "The Demoniac", "Calvary", "St. Galgano in the Wilderness", "St. Francis Xavier", "Baptism of Constantine", "Martyrdoms of Sts. Lucia and Catherine", etc. His works are also to be found at Pisa, Pistoja, Perugia, Genoa, Florence, and various cities outside Italy. Highly esteemed among his engravings are a "Madonna and Child", a "St. Francis in Ecstasy", and a "St. Catherine Receiving the Stigmata". Vanni had also a reputation as architect and mechanic, but of his architectural work nothing important remains.

MILANESI, Documenti per la Storia dell' arte senese (Siena, 1854-56); see also the general histories of art.

G. GIETMANN

Luis de Vargas

Luis de Vargas

Painter, b. at Seville, in 1502; d. there in 1568. He has two claims upon our attention; he was not only a great painter, but was also a man of strong devotional temperament, and known as a holy man. His great desire was to use his talent for the glory of God, and it was his habit before painting one of his great altar-pieces to go to confession and receive Holy Communion. It is also stated by one of his contemporaries that he kept a coffin in his room to remind him of the approach of death, and that one of his pictures, "Christ Bearing the Cross", a fresco, painted in a street in Seville (known as the Street of Bitterness, "La Calle de la Amargura"), was so notable in the city that condemned criminals were brought there on the way to the scene of execution in order to make their devotions before it and to receive the last offices of the Church. De Vargas lived a simple and almost hermit-like life; he was quiet, mild, benevolent, disliked by many of the people of his own rank, but worshipped by the poor, to whom he was extremely generous.

He was trained in Seville, and the works of Campana greatly influenced him. He first painted on the rough canvas curtains used to cover up the pictures on the altars in Holy Week, but owing to the generosity of a friend he was able to visit Italy. There, during his stay of twenty-eight years, mainly spent in Rome, he closely studied the works of Perino del Vaga, one of Raphael's favourite pupils, and came into contact with Vasari. The first picture he painted after his return is still in Seville Cathedral; it is dated 1555, and in the records of the chapter it is said to have been discovered

by Bermudez. Of his fresco work very little remains. His two greatest pictures represent the "Purification of the Virgin" and the "Temporal Generation of Our Lord," the latter being an allegorical composition showing Adam and Eve adoring the Infant Christ, Who is in the arms of the Virgin. This is the picture generally known as "La Gamba" because of the wonderful foreshortening of the leg of Adam. The Italian artist Perez de Alesio, when painting (1548) the giant figure of St. Christopher on the southern portal of the cathedral, exclaimed, that the whole of his figure was of less merit than was the leg of Adam in the "Generation" by De Vargas. De Vargas was one of the few Spanish artists who were really eminent in draughtsmanship. He painted many portraits, but none of them is of any special merit.

See the writings of BERMUDEZ on the Spanish artists, notably the Carta Cadiz, 1806), the Cathedral Guide (Seville, 1804), and the Dictionary (6 vols., Madrid). MAXWELL, Annals of the Artists of Spain; MADRAZO in Espana (1878); HARTLEY, Spanish Painting (London, 1904), and various works on Murillo.

GEORGE CHARLES WILLIAMSON

Francisco de Vargas y Mexia

Francisco de Vargas y Mexia

Spanish diplomat and ecclesiastical writer, b. at Madrid, date unknown; d. At the Hieronymite monastery of la Cisla in 1566. He belonged to an old family of the lower nobility and studied law at the University of Alcalá, receiving the degree of licentiate in law. He became a government official, and by his energy and education, especially by his excellent knowledge of law, rose to the position of fiscal of the Council of Castile (*Fiscal del Consejo de Castilla*), that is, attorney-general. In 1545 Charles V sent him to the Council of Trent. In January, 1548, he protested, as Charles's representative at the council, against its transfer to Bologna, and in 1551 he congratulated the council on its return to Trent. During the years 1552-59 he was the Spanish ambassador at Venice; in 1558 he negotiated at Rome with Paul IV regarding the recognition of Ferdinand I as emperor, and in references to the founding of new dioceses in the Netherlands. From 1559 he succeeded Gigueroa as the Spanish ambassador to the Curia. As such he took an important part in the election of Pius IV. When Pius IV brought suit against the relatives of Paul IV, Vargas exerted himself to save the Caraffa. For some time was not regarded favorably by the pope, who tried to have him recalled by Spain; however, Vargas again obtained the confidence of Pius IV, and was commissioned by the latter in 1563 to prepare an opinion on the question of the papal jurisdiction, as to which the Council of Trent had become involved in a dispute. The document Vargas prepared was published at Rome in the same year under the title of "De episcoporum jurisdictione et de pontificis maximi auctoritate responsum". In this Vargas speaks as a strict supporter of the papacy. Another theological question that he took up was that of granting the cup to the laity; to this he was decidedly opposed. His reports and letters are important for the information they contain on the doings of the Council of Trent; still, he cannot be regarded as an entirely unprejudiced witness, because his interest was

that of a diplomat in the service of his king. His keen powers of observation were also chiefly directed to the scrutiny of earthly motives, and of the evidence of human weaknesses and shortsightedness. He was prominent in the affairs of the council for the last time when, in conjunction with the Spanish ambassador at Trent, he tried to postpone the close of the council. After his return to Spain he was made state councillor, but soon resigned all his offices and retired to the Hieronymite monastery of la Císla near Toledo, in order to prepare himself for death. His contemporaries praise him as a highly educated man and a patron of learning. He was also a zealous, skilful, and conscientious servant of his king and a pious Christian.

KLEMENS LOFFLER

Giorgio Vasari

Giorgio Vasari

Painter, architect, and writer, b. at Arezzo, 1511; d. at Florence, 1574. Although an artist of considerable repute, Vasari depends for immortality on his remarkable work, "Vite de' più eccell. pittori, scultori et archit," on the lives of the most eminent painters, sculptors, and architects, a work of stupendous industry and the most important record of the greatest epoch of the world's art. Inaccurate in places, owing to the writer's prejudice against certain painters, it is on the whole a marvel of good writing and accuracy, and, with all its defects, is the great treasure-house to which all writers have gone and must go for information respecting the early artists of Italy. Its first edition appeared in 1550 at Florence. It was succeeded by editions in 1567, 1568, 1760, 1811, etc. In 1864 Milanesi published his alphabetical list of the lives, and followed it in 1868 by his important annotated edition, adding considerable information to Vasari's original work. The book was translated into English by Mrs. Foster, and published in Bohn's Library in 1846, 1850, and 1852. In 1884 the sixth volume of the commentary by Richter was issued, and sections of the original work, comprising selected lives, were issued by Ellis in 1895, but notably by Blashfield and Hopkins in 1897, with very important notes and appendixes. A new and sumptuous edition of Vasari's work was projected in 1896, to be edited and annotated by Venturi, but only one volume, dealing with Gentile da Fabriano and Pisanello, was issued. A still more important edition, to be known as the Quattrocentenary edition in ten volumes, with a translation by Gaston de Vere, is (1912) being prepared. Vasari's lesser writings, his letters and "Ragionamenti", published in 1588 after his death, and the account of the decorations he prepared for the wedding of Francesco de' Medici, are contained

in the Milanesi edition. During the last two years a large number of letters and documents by and relating to Vasari have been discovered; a summary of these private archives at Florence, belonging to Count Luciano Rasponi-Spinelli, was published in April, 1910. In 1912 Mr. Sidney J. A. Churchill, of Naples, has issued, for private circulation, his "Bibliografia Vasariana", the first serious attempt to make an accurate bibliography of the works of Vasari, and chronicling 197 separate editions, as well as references to his drawings, engravings, and manuscripts.

We now come to Vasari's paintings. Vasari was a kinsman of Luca Signorelli, and Luca's words, "Study well, little kinsman", were remembered by him all his life, although spoken when he was only a child, and when his father submitted to the old painter some drawings by the little boy. He was trained at Arezzo; he was an infant prodigy, exhibiting some of his drawings to Cardinal Passerini when only twelve years old, and reciting a great part of Virgil's *Æneid*. At Florence, young Vasari was placed under Michelangelo, and later became a great friend of Baccio Bandinelli. Afterwards he went to Rome with Cardinal de' Medici, worked there for some time, and then returned to Arezzo in poor health; eventually he went back to Florence in 1541. He met Cardinal Farnese at Rome, and he it was who urged the painter to write his famous book, which was dedicated to Cosimo de' Medici, the Duke of Florence, whose service Vasari entered in 1553, and whom he served faithfully to the end of his life. He was responsible for the greater part of the historical decoration of the Sala Regia at Rome, and commenced frescoes for the cupola of the cathedral at Florence, which he never completed. Several buildings at Pistoia were built after his designs, and his architectural work was intimately associated with the Church of Santa Maria Novella at Florence, with the Palace of the Uffizi and the celebrated corridor connecting it with the Pitti which he built across the Arno, and with some rather unsatisfactory work in the Church of Santa Croce. His pictures can best be studied at Florence, but there are fine examples also at Bologna, Lucca, Madrid, Rome, Vienna, Paris, and Dresden.

GEORGE CHARLES WILLIAMSON

Gabriel Vasquez

Gabriel Vasquez

Theologian, b. at Villaescusa de Haro, near Belmonte, Cuenca, 1549 or 1551; d. at Alcalá, 23 Sept., 1604. He made his primary and grammar studies at Belmonte, and went to Alcalá for philosophy, where he entered the Society of Jesus on 9 April, 1569. Having completed his novitiate he continued his theological studies there, closing with a public defense of his thesis. At the Fifth Provincial Congregation at Toledo he also defended a thesis. Between these events he lectured to the Jesuit students on the "De Anima", and returned to Alcalá to study Hebrew. Following this he taught moral theology two years at the college of Ocana, two more at Madrid, and for some time at Alcalá. From there, although not yet thirty years of age, he was called to Rome to fill the same post at the Roman College. Before his departure he made his profession at Belmonte. He remained six years in Rome, then returned to Alcalá, where he taught theology until his death. In him,

according to Haringer, virtue competed with doctrine, obedience with genius, and piety with learning. The Duke de Lerma, favourite of Philip III, frequently consulted him in the most important matters, and Benedict XIV called him the luminary of theology. He was noted for his exact knowledge of the opinions and theories of the different Schools and authors, and commendable for clearness of expression and a strict philosophical method. He made a complete study of the writings of St. Augustine, for whom he professed great devotion, as well as those of the other Fathers of the Church and St. Thomas.

In matters of opinion he sometimes differed from the general view of the Schools, defending private opinions, among which the following deserve to be mentioned: (1) The natural law consists in rational nature considered in itself and in the recognition that certain actions are necessarily in accord with it and others are repugnant to it. Nevertheless, he does not deny that the natural law might also have cognizance of what the Divine law enjoins, and that it might, therefore, be the principle of a Divine obligation. In this he is in opposition to Kant, who holds that all the binding force of the moral law should come from man and from man alone. (2) The Divine ideas are not the essence of God, in so far as that essence or nature is known as imitable or to be imitated, but only as they are the knowledge, the word, the *species expressa* of possible and future creatures. These ideas thereby concur remotely in the creation of beings; their proximate principle being the Divine active potency by which God actually and effectually creates. (3) In the section dedicated to the discussion of the existence of God he cites the ontological proof of St. Anselm, the legitimacy and demonstrative value of which he appears to accept absolutely. Eternity is, according to him, *duratio permanens, uniformis, sine principio et fine, mensura carens*, a definition that differs somewhat from that adopted by Boethius and followed in the Schools.

(4) Grace is necessary for performing all good actions and overcoming temptation. By grace he understands all good impulses which efficaciously urge to right action. It may proceed from natural causes, but as these are regulated by Divine Providence, if they are so regulated as to produce efficacious good impulses, it is grace, because man does not himself merit it, and to many it is denied. It is to be considered as a gift from God, since it is granted through the merits of Christ and for a supernatural end. Hence it is called grace. (5) Predestination, he maintains, is *post praevisa merita*, but children who die without its being in any way whatsoever possible for them to receive baptism were not, after original sin was foreseen, included in the salvific will of God. (6) In Christology he held the following opinions: that the Adoptionists are not Nestorians; that Christ cannot be called the servant of God; that Christ was under a command to die, but that He was free to choose the circumstances of his death; that the regular or formal dignity of the priesthood of Christ will last forever, because Christ is a priest according to His substance, and this remains immutable. (7) The *ratio formalis* of the Sacrifice of the Mass lies in the mystic separation of the Body and Blood of Christ effected by the words of consecration. (8) It is probable that in the new birth of baptism the guilt of sin is not pardoned *ex opere operatio*, but only the punishment. Since the death of Christ, baptism is for children the only means of salvation; for them martyrdom has the virtue of justification *instar baptism*; but in adults it justifies only on account of the act of

charity. (9) Episcopal consecration does not imprint a new character, nor does it in reality extend or increase the sacerdotal character; a new and distinct power is thereby conferred, which is nothing else than the Divine appointment to a new ministry. (10) In the Sacrament of Matrimony the bodies of the contracting parties constitute the matter, and their consent, expressed verbally or by signs, the form. In treating the existence of God he notes the number of atheists who lived in his time, and attributes it to the influence of Protestantism. he also mentions the political atheists who consider God and religion only as governmental expedients to hold the people in check.

Vasquez was a rival of Suárez, whom he sometimes designates as one of the moderns. He established a School, and the disputes between his disciples and those of the Dominican Juan de Santo Tomas concerning there is in God between the Divine knowledge and the Divine idea were, according to Menéndez y Pelayo, curious. Luis de Torres and Diego de Alarcon were the most notable disciples of the School, and, although it was short-lived, all modern theologians hold Vasquez in high esteem and frequently quote him. Two principal charges are urged against him: his independent opinion and his discussion of useless questions. It cannot be denied that these censures have some foundation. His independence, as Hurter remarks, led him at times to defend less safe and even erroneous opinions. His first volume on the first part of St. Thomas was held back two years by the censors of the Society. Among the questions he discussed such as the following are to be found: "An Deus extra coelum, vel in vacuo intra coelum esse possit, aut ante mundi creationem alicubi fuerit". Nicolás Antonio, who thoroughly examined the questions and characteristics of those times when all theologians discussed questions which are to-day considered useless, says that some excuse can be made for this defect if one considers the energy and vigour of his genius, *vir fuit acerrimo ingenio*.

Works: (1) "De cultu adorationis libri tres et disputationes duae contra errores Felicis et Elipandi", Alcalá, 1594; Mainz, 1601, 1604; (2) "Commentariorum ac Disputationum in (partes) S. Thomae", Alcalá, 8 vols., 1598-1615. Later abridged editions were published at Alcalá, Ingolstadt, Vienna, and more complete ones at Lyons in 1620 and Antwerp in 1621. (3) "Paraphrases et compendiaría explicatio ad nonnullas Pauli Epistolas", Alcalá, 1612; Ingolstadt, 1613; Lyons, 1630. Vives undertook to print all his works, but only got as far as the first volume (Paris, 1905). "Metaphysicae disputationes" (Madrid, 1617; Antwerp, 1618) comprises the philosophical questions dispersed throughout his works, and is a rare and exceptionally valuable book. Some of his manuscripts are preserved in the National Library of Madrid.

NIEREMBERG, Varones ilustres, VIII (Bilbao, 1891), 355; GUILHERMY, Menologe de la C. de J., Assistance d'Espagne, III (Paris, 1902), 111; SOUTHWELL, Bibl. Script. (Rome, 1676), 271; GONZALEZ, Hist. de la Filosofia, III (Madrid, 1866), 140; MENENDEZ Y PELAYO, Hist. de las Ideas Esteticas, II (Madrid, 1884), 207; SOMMERVOGEL, Bibliothéque, VIII (Brussels, 1898), 513.

ANTONIO PEREZ GOYENA
Francois Vatable

François Vatable

(Or better WATEBLED, the name is also written GASTEBLED or OUATEBLE).

French Hellenist and Hebraist of the eighteenth century, b. at Gamaches (85 miles north-west of Paris), Picardy, probably in the latter years of the fifteenth century; d. in Paris, 16 March, 1547. He was for a time rector of Bramet in Valois, in 1530 or 1531. King Francis I appointed him to the chair of Hebrew in the newly-founded (1530) "College of the Three Languages", afterwards better known as "College de France". At a later date a royal grant conferred upon Vatable the title of Abbot of Bellozane, with the benefices attached thereto. Vatable is justly regarded as the restorer of Hebrew scholarship in France, and his lectures in Paris were largely attended, even by Jews. Yet he published nothing during his lifetime. He had, however, completed a Latin translation of Aristotle "Meteorologica", which appeared at Lyons in 1548, and another of the same author's "Parva naturalia", which was published in Paris (1619). From the lecture notes taken by Vatable's pupils Robert Stephens drew the material for the *scholia* which he added to his edition of the new Latin translation of the Bible by Leo of Juda (4 vols., Paris, 1539-45); but it has been proven beyond doubt that these notes had been shamefully garbled by the Protestants of Zurich. The Sorbonne doctors sharply inveighed against the Lutheran tendencies of the notes of Stephen's Bible, and Vatable himself disowned them; yet, as they are a model of clear, concise, literary, and critical exegesis, the Salamanca theologians, with the authorization of the Spanish Inquisition, issued a new thoroughly-revised edition of them in their Latin Bible of 1584. From the edition of 1729 Migne republished, in his "Scripturae sacrae cursus completus" (XII, Paris, 1841), the *scholia* on the Books of Esdras and Nehemias. The (garbled) notes on the Psalms, re-edited in R. Stephens's "Liber Psalmorum Davidis" (1557), were printed again, together with remarks of H. Grotius, by Vogel under the misleading title: "Francisci Vatabli annotationes in Psalmos" (Halle, 1767).

SAINTE-MARTHE: Gallorum doctrina illustrium elogia (Paris, 1598); HURTER, Nomenclator literarius; CALMET, Bibliotheque sacree, IV (Paris, 1730); DUPIN, Table universele des auteurs ecclesiastiques, I (Paris, 1704); FELLER, Dictionnaire historique, VIII (Paris, 1822), 311; LICHTENBERGER, Encyclopedie des sciences religieuses, XII (Paris, 1877-82), 307; SIMON, Hist. crit. du Vieux Testament, III (Paris, 1680), 15; HANEBERG, Gesch. der bibl. Offenb. (4th ed., Ratisbon, 1876), 849.

CHARLES L. SOUVAY

The Vatican

The Vatican

This subject will be treated under the following heads:

I. Introduction;

- II. Architectural History of the Vatican Palace;
- III. Description of the Palace;
- IV. Description of the Gardens;
- V. The Chapels of the Vatican;
- VI. The Palace as a Place of Residence;
- VII. The Palace as a Treasury of Art;
- VIII. The Palace as a Scientific Institute;
- IX. The State-Halls of the Vatican;
- X. The State Staircases of the Vatican;
- XI. The Administrative Boards of the Vatican;
- XII. The Juridical and Hygienic Boards of the Vatican;
- XIII. The Policing of the Vatican;
- XIV. The Vatican as a Business Centre;
- XV. The Tipografia Poliglotta Vaticana;
- XVI. The Legal Position of the Vatican.

Inasmuch as by this disposition of the subject analogous things may be treated together regardless of their various locations in the Palace, this has an advantage over others which follow a topographical and historical method.

I. INTRODUCTION

The territory on the right bank of the Tiber between Monte Mario and Gianicolo (Janiculum) was known to antiquity as the Ager Vaticanus, and, owing to its marshy character, the low-lying portion of this district enjoyed an ill repute. The origin of the name Vaticanus is uncertain; some claim that the name comes from a vanished Etruscan town called Vaticum. This district did not belong to ancient Rome, nor was it included within the city walls built by Emperor Aurelian. In the imperial gardens situated in this section was the Circus of Nero. At the foot of the Vatican Hill lay the ancient Basilica of St. Peter. By extensive purchases of land the medieval popes acquired possession of the whole hill, thus preparing the way for building activity. Communication with the city was established by the Pons Ælius, which led directly to the mausoleum of Hadrian. Between 848 and 852 Leo IV surrounded the whole settlement with a wall, which included it within the city boundaries. Until the pontificate of Sixtus V this section of Rome remained a private papal possession and was entrusted to a special administration. Sixtus, however, placed it under the jurisdiction of the urban authorities as the fourteenth region.

II. ARCHITECTURAL HISTORY OF THE VATICAN PALACE

It is certain that Pope Symmachus (498-514) built a residence to the right and left of St. Peter's and immediately contiguous to it. There was probably a former residence, since, from the very beginning, the popes must have found a house of accommodation necessary in the vicinity of so

prominent a basilica as St. Peter's. By the end of the thirteenth century the building activity of Eugene III, Alexander III, and Innocent III had developed the residence of Symmachus into a *palatium* which lay between the portico of St. Peter's and the Vatican Hill. Nicholas III began building on the Vatican Hill a palace of extraordinary dimensions, which was completed by his immediate successors. He also secured land for the Vatican Gardens. The group of buildings then erected correspond more or less with the ancient portions of the present palace which extend around the Cortile del Maresciallo and the eastern, southern, and western sides of the Cortile del Papagallo. These buildings were scarcely finished or fitted when the popes moved to Avignon and from 1305 to 1377 no pope resided permanently in the Vatican Palace. Urban V spent a short time in Rome, and Gregory XI died there. When Urban V resolved to return to Rome, the Lateran Palace having been destroyed by fire, the ordinary papal residence was fixed at the Vatican. The apartments, roofs, gardens, and chapels of the Vatican Palace had to be entirely overhauled, so grievous had been the decay and ruin into which the buildings had fallen within sixty years (*see* Kirsch, "Die Rückkehr der Päpste Urban V. u. Gregor. XI.", Paderborn, 1908). The funds devoted to the repairs of the Vatican during the residence at Avignon had been entirely inadequate.

Urban VI (1378) and his successors restored to the palace a degree of comfort as a place of residence, so that, when Martin V came from Constance to Rome (28 September, 1420), little remained to be undertaken except some rearrangement of the apartments. Nicholas V erected buildings on the east and north sides of the Cortile del Papagallo, on the spot where the Loggia of Raphael and the Appartamento Borgia and the Stanze stand to-day. Alexander added to the Palace of Nicholas V the Torre Borgia, which bears his name. Pius II and Paul II beautified the buildings of the south aide, and Innocent VIII effected such alterations in the old palace in the portico of St. Peter's at the foot of the hill that it was henceforth known as the Palazzo di Innocenzo VIII. Directly south, in the direction of Sant' Angelo, Nicholas V erected a mighty bastion (called the Torrione di Niccolò V), running down from the summit of the hill to Sant' Angelo. The space mounting the hill in a northerly direction was enclosed by a wall and served as a garden (*viridarium, vigna*). At a distance of about 700 metres from the palace, Innocent VIII erected a fairly large villa, which may be seen to-day, and which was remodelled by Clement XIV and Pius VI into one of the most stately portions of the museum of sculpture. Sixtus IV, who dwelt in the apartments of the Cortile del Papagallo, made important alterations in the rooms of the ground floor to accommodate there the Bibliotheca Palatina.

The wing to the south (Galleria delle iscrizioni and Museo Chiaramonti) was built by Julius II; the northern wing (picture-gallery and library), by Pius IV. A little later both wings were fully developed into their present form. The large Loggia (*il gran nicchione*) near the villa of Innocent VIII was erected by Pius IV. Pius V erected the apartments to the north of the Torre Borgia, and built the three chapels, situated one over the other, in the western portion of the northern wing. One of these chapels is attached to the library (that on the ground floor) and one to the picture-gallery on the second floor. Pius V and his successor Gregory XIII extended the palace by the construction

of the wing running southwards to the Torrione. The present papal palace was begun by Sixtus V and completed by his successors, Urban VII, Innocent XI, and Clement VIII.

The buildings extending along the southern slope of the hill to Piazza S. Pietro, occupied to-day by the maestro di camera and the majordomo, were erected by Julius III, and completed under Pius IX with the construction of the magnificent Scala Pia. The buildings branching off from the northern wing toward the gardens, in the vicinity of the chapels of Pius V, were built by Paul V. Sixtus V established connection between the two longitudinal wings of the palace by erecting in the middle the Salone Sistino, in which he housed the library. A second transverse building, constructed by Pius VII in the eastern court, contains the Braccio Nuovo, one section of the museum of sculpture. All the other museum buildings at the eastern end of the palace were erected or remodelled by Pius VI and Pius VII. The casino constructed by Leo XIII on one of the towers of Leo IV in the gardens now serves as the Vatican Observatory. This broad sketch of the architectural history of the Vatican and the following description of the various edifices will afford a fairly exact idea of the gradual growth of this vast collection of buildings.

III. DESCRIPTION OF THE PALACE

The Vatican Palace is situated on the eastern sections of the Vatican Hill. Behind it rises the summit of the hill with the gardens; at the highest points may still be seen the only remains of the Leonine Wall with its two mighty towers. The palace is approached by the road leading around St. Peter's and by the Scala Pia, which extends from the Portone di Bronzo to the Court of St. Damasus. The covered way which leads from the Cortile di Belvedere to the Cortile della Sentinella and thence to the exit door situated at the back of the palace is used only for official purposes. From the Portone di Bronzo downwards run the powerful buttresses of the palace around the eastern and northern sides of the hill as far as the Galleria Lapidaria (Corridoio delle Iscrizioni). These buttresses are interrupted by the Torrione, which was formerly of great strategic importance and now serves as a magazine. At the rear of the Cortile del Forno is the entrance to the Nicchione and the museum buildings, which are the most elevated portions of the palace.

From the cupola of St. Peter's may be seen the whole collection of buildings included under the name of Vatican Palace, a long stretch of edifices with many courts, ending in a row of smaller connected buildings before which stands a great loggia, known as the Nicchione. To the right and left of the loggia and at right angles to it are two narrow buildings, which are connected transversely by the Braccio Nuovo at a distance of 328 feet from the loggia. These four buildings enclose the Giardino della Pigna, so called because in the loggia stands a gigantic pine-cone of bronze, preserved from old St. Peter's. Except the few unsightly buildings lying immediately to the left, all the buildings behind the loggia are given over to the museum -- especially to sculptures and to the Egyptian and Etruscan museums. In the longitudinal wing to the left are accommodated a portion of the library, the Galleria dei Candelabri, and Raphael's tapestries; the right wing forms the Museo Chiaramonti, while the transverse building, or Braccio Nuovo, also belongs to the museum of sculpture. After the Giardino della Pigna succeeds the Cortile della Stamperia, a narrow building deriving its name

from the fact that it served as the seat of the Vatican Press (founded by Sixtus V) until 1909. At the back of this court stands the Braccio Nuovo; to the left lie the library, the Galleria delle Carte Geografiche, and the Torre dei Quattro Venti; to the right the library and the Galleria Lapidaria; and in the transverse building in front the Library. The third huge court, Cortile di Belvedere, lies on a much lower level in an exact line with the other two. At the rear and to the left is the library, to the right the Galleria Lapidaria, and in the transverse wing in front the Appartamento Borgia, the Stanze of Raphael, and the Museum of Modern Paintings.

Between these long stretches of the palaces with the three courts and the Basilica of St. Peter lie a large number of courts, surrounded in a somewhat irregular fashion by a group of buildings of which we shall mention the most important. The Sistine Chapel to the extreme left adjoins the Cortile della Sentinella, and the Cortile del Portoncino; opposite to this ends the left wing of the library. To the right from the chapel is the Sala Regia, beyond which, extending towards St. Peter's, is the Cappella Paolina. Running somewhat obliquely from the Sala Regia is the Sala Ducale, which, with the Stanze di Raffaello and the Appartamento Borgia, encloses the Cortile del Papagallo on the north and south sides. The eastern side of this court is bordered by the group of buildings containing the Camere dei Paramenti (with the Loggie di Giovanni da Udine extending in front) and the Cappella di Niccolò V (one story higher), situated before which is the Loggie di Raffaello. The above-mentioned loggie form the western side of the Cortile di San Damaso; the northern side is also composed of loggie, behind which, on the second floor, is the Sala Matilde and on the third a portion of the old picture-gallery. The eastern side of the loggie stands in front of that portion of the palace occupied by the pope and the secretary of state. There are some lesser courts on the east side.

The exterior of the palace presents an imposing ensemble. Architectonic decorativeness is found nowhere. Extreme simplicity characterizes the exterior walls. According as necessity dictated, æsthetic effect being little considered, new buildings and annexes were erected, roofs raised, external passages laid out, lofty halls divided horizontally and pierced for the upper-half of windows which disfigure the lines of the buildings. Those who seek for uniformity find much to censure in the palace, but the general effect, viewed from an historical standpoint, is most pleasing. The Cortile di San Damaso, the view towards St. Peter's of graceful arcades opening out before the staircase leading to the Sala Regia by the Portal of Paul II, the lofty entrance door to the library of Sixtus IV, in the Cortile del Papagallo, the Cortili del Portoncino and della Sentinella are all magnificent. The Portone della Sentinella leads to the Cortile di Belvedere, decorated with a beautiful fountain. The view to the right from the windows and galleries of the Appartamento Borgia and the Stanze di Raffaello is admirable. An added story replaced the turret of the *Palace of Nicholas V*; the adjacent Torre Borgia has lost its ancient windows, its roof thereby losing the character of a tower. Above the transverse wing is the Torre dei Quattro Venti, where was the Specola Gregoriana, the observatory dating from the days of Gregory XIII, with its paintings by the Zuccari.

The Giardino della Pigna, lying to the north, is beautifully laid out. In the centre of the court has stood since 1886, mounted on a marble column, a bronze statue of St. Peter, in commemoration

of the Vatican Council of 1870; numerous fragments of statues and reliefs are artistically placed standing or flat along the walls. The quarters of the Swiss Guards on the east side consist of two narrow parallel buildings, which, with the Sistine Palace and the Torrione di Niccolò V, form two courts. The inner court is adjacent to the palace, in the other is a gate leading directly to the city by the colonnades. Beyond this gate is the covered passage from the palace to Sant' Angelo, now walled up at the point where it leaves the Vatican territory. A tablet and Inscription and a large coat of arms give evidence that Alexander VI initiated here extensive works of improvement and decoration. In the immediate vicinity of the Torrione di Niccolò V earlier lay the Cavallerizza, the riding ground for the Noble Guard. Between this building and the quarters of the Swiss Guards is another gate leading to the town. The Cavallerizza was entirely reconstructed three years ago to accommodate the Stamperia Segreta (the private press of the Vatican) and the Tipografia Vaticana. On this occasion Pius X introduced extensive reforms in the printing, bringing it to the highest level attained by modern technic. North of the printing offices and parallel to the eastern longitudinal wing of the palace is the huge house which Pius X reconstructed for the married officials and the servants of the palace. It is solidly built, conveniently divided and fitted with the best sanitary requirements.

The palace forms a special parish, the administration of which is entrusted to the Monsignor Sagrista, sacristan of the pope, assisted by the sottosagrista, who has charge of all the vestments and vessels used in the five chapels of the palace. The chaplain of the Swiss Guards attends to the vestments of their chapel. The Cappella Paolina is regarded as the parish church, and is thus one of the churches of Rome where the Forty Hours' Adoration is inaugurated at the beginning of each ecclesiastical year. By the Bull, "Ad sacram ordinis", of 15 October, 1497, the ancient custom of selecting the Prefect of the Apostolic Chapel (the sagrista) from the Augustinian Order was given a legal foundation. The sagrista is Titular Bishop of Porphyreon, assistant at the throne, and domestic prelate, and before 1870 was pastor of the Vatican Palace, of the Quirinal, and of the Lateran. The Quirinal was provisionally attached in 1870 to the parish of SS. Vincenzo ed Anastasio, and in the Lateran the sagrista was represented in parochial affairs by the pastor of the basilica. In addition to other privileges the sagrista has the right of administering Extreme Unction to the dying pope. Since the reign of Pius IV he is an ex-officio member of the Conclave. Although, as a bishop, the sagrista enjoys the use of the rochet, he wears it only in very exceptional cases, always wearing the mozzetta over the manteletta. His appointment is for life, so that he is not affected by a change of pontificate.

IV. THE VATICAN GARDENS

Enclosed between the city walls, the zecca (the mint) with the adjacent houses, and the Viale del Museo, lie the Vatican Gardens, or Boscareccio, into which visitors are admitted only with the special permission of the sub-Prefect of the Vatican Palace. They are reached through the museum entrance on the western side of the palace. To the left of the entrance below is the English Garden, in which the *palma grande* (the tallest palm in Rome) and fine citron and orange trees grow under

a protecting roof. At the end of the broad path to the right is a walk, bordered by boxwood trees fifteen to twenty feet high, which leads between oaks and ilex trees up the hill on which stands the Casino of Leo XIII, resting on one of the huge towers of the Leonine Wall (*see* VATICAN OBSERVATORY). The pavilion, to the right of the Casino, is on a level with the roof of St. Peter's. In this section of the garden vineries have been laid out, and vegetables are cultivated. Before the first Leonine tower a terrace affords a wide view across the Valle dell' Inferno, from whose ancient brick-works half of Rome has been built. To the left of the tower is an oak grove where wild flowers grow. Ancient fragments of marble are strewn everywhere, the paths are kept in entirely rural fashion, so that this small grove forms an especially enchanting portion of the gardens. One of the rough walks leads to the Fontana di Paolo Quinto, which is fed with water from the Lago di Bracciano. The arms of the Borghese proclaims it the work of Paul V. In the immediate vicinity are the barracks of the papal gendarmes entrusted with the guarding of the gardens. A few hundred feet below is the Fontana del Santissimo Sacramento, a fountain so called because in the centre stands a monstrance whose rays are formed by the water; on either side rise three vertical streams of water, which represent the candles. A path bordered by boxwood leads to the court of the Casino of Pius IV, a double building erected by Pirro Ligorio in 1560, with walls decorated with flint mosaic work. Women were there received in audience until they were allowed admission to the papal apartments by Pius IX. Thousands of artistic addresses received by Pius IX, Leo XIII, and Pius X have been transferred from the library to this Casino, where they are now preserved (cf. Bouchet, "La Villa Pia des Jardins du Vatican, architecture de Pirro Ligorio", Paris, 1837). The paintings in the Casino are by Baroccio, Federigo Zuccaro, and Santi di Titi. Immediately before the casino opens the subterranean passage which Pius X had constructed so that he might pass with as little inconvenience as possible from the palace to the gardens. The appearance of the surrounding park has been altered by excavations, but the trees have been untouched. The distribution of numerous species of trees and flowering shrubs makes this portion of the gardens very picturesque. The stretch of the gardens to the right of the entrance consists of a thick, magnificent alley of ilex trees, in which some cages may still be seen; these formerly sheltered ibexes and other animals. The view from here towards Monte Mario over the circular fountains, and to the right towards the Prati di Castello with Soracte in the background, is admirable. Scattered around the garden are four other cages for animals, which contained until a few years ago the lions presented to the pope by King Menelik, and also ostriches, gazelles, and a number of species of poultry. All these animals have died, have been given away, or sold, since their maintenance and care demanded too much attention. The Vatican Gardens are the only place in which the pope can take exercise in the open air. (Cf. Friedlander, "Das Kasino Pius des Vierten. Kunstgeschichtliche Forschungen", ed. Royal Prussian Historical Institute, III, Leipzig, 1912; Donovan, "Rome, Ancient and Modern, and its Environs", II, Rome, 1844.)

V. THE CHAPELS OF THE VATICAN

In the papal palace there are a large number of chapels which serve various purposes. By far the largest and the most famous of these is the Sistine Chapel.

A. The Sistine Chapel

The Sistine Chapel is the palatine and court chapel, where all papal ceremonies and functions and papal elections are held. It was built between 1473 and 1481 by Giovanni de' Dolci at the commission of Sixtus IV. In length 133 feet and in breadth 46, it has at each side six stained-glass windows, given by the Prince Regent Leopold of Bavaria in 1911. The lower third of the chapel is separated from the rest by beautiful marble barriers, which divide the space reserved for invited visitors on the occasion of great solemnities from that reserved for the pope, the cardinals, and the papal family. On the wall to the right is the box for the singers of the famous Sistine Choir. The marble barriers and the balustrade of the box are by Mino da Fiesole and his assistants.

The rear wall of the chapel is now without a window, being broken only by a small door on the right, which leads to the sacristy of the chapel. Almost the whole of this space is occupied by the painting of the Last Judgment (*see* MICHELANGELO BUONARROTTI). The frescoes on the side walls were executed between 1481 and 1483 by Florentine and Umbrian masters. On the left side are given, as the prototypes, scenes from the life of Moses, and on the right scenes from the life of Christ -- beginning in both cases from the high altar and meeting at the entrance door. Perugino, Pinturicchio, Botticelli, Pier di Cosimo, Rosselli, Signorelli, della Gatta, Ghirlandajo, and Salviati were the collaborators in the wonderful cycle of paintings. Fiammingo, Matteo da Lecce, and Diamante are also here immortalized. Some years ago the ceiling frescoes by Michelangelo were thoroughly cleansed by Ludwig Seitz, and all the plasterwork blisters which by falling away threatened to work irremediable damage to the paintings, were again skilfully fastened to the masonry. To lessen the effect on the paintings caused by any great change of temperature, Leo XIII installed in the chapel a system of central heating which prevents the walls from becoming icy cold in winter. (*See Steinmann "Die Sixtinische Kapelle"*, 2 vols. and atlas, Munich, 1900-05.)

B. The Cappella Paolina
